[**External Email**. Do not open links or attachments from untrusted sources. Learn more]

Hi Bethelhem,

The Santa Clara Valley Water District (Valley Water) has reviewed the draft environmental impact report (DEIR) for the proposed warehouse project at 1605 South 7th Street, received on November 14, 2025.

Based on our review, we have the following comments:

1. Valley Water does not have any right of way or facilities at or adjacent to the project site. Therefore, in accordance with Valley Water's Water Resources Protection Ordinance, a Valley Water encroachment permit is not required for the project.
2. According to Valley Water's records, there are no active wells on the subject property. While Valley Water has records for most wells locate din the County, it is always possible that a well exists that is not in Valley Water's records. If previously unknown wells are found on the subject property during development, they must be property destroyed under permit from Valley Water or registered with Valley Water and protected from damage.
3. The subject property is within the inundation zone for the Leroy Anderson Dam. Analysis of the potential hazards of failure of Anderson Dam were not included in this DEIR. https://www.valleywater.org/accordion/anderson-dam-and-reservoir

4. A number of the plantings shown in Figure 2.3-8: Landscape Plan are considered invasive. Valley Water recommends the following species be removed from the planting list along with some possible replacements in parentheses.
    a. Tristaniopsis laurina 'Elegant' – (coast live oak or valley Oak)
    b. Ulmus hyb. 'True Green' – (CA Buckeye, hollyleaf cherry, or CA redbud)
    c. Ulmus parvifolia 'Drake - (CA Buckeye, hollyleaf cherry, or CA redbud)
    d. Zelkova serrata 'Green Vase' – (Mexican blue elderberry)
    e. Callistemon v. 'Little John' – (California native Salvia species)
    f. Pennisetum orientale – (purple needlegrass)
    g. Cotoneaster dammeri 'Lowfast' – (toyon)
    h. Lantana hyb. 'Spreading Sunshine' - (Salvia "Bees Bliss')

Thank you for the opportunity to provide comments on the 1605 South 7th Street project. We request that any additional documents prepared for this project be sent to us as they are available for our review. This project has been assigned to Valley Water File 31511.

Thank you,

MATT SASAKI

NOTICE OF AVAILABILITY OF
A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR)
AND PUBLIC COMMENT PERIOD
(SCH# 2024100562)

A Draft Environmental Impact Report (Draft EIR) for the **1605 South 7th Street Project** is now available for public review and comment. The project is a Site Development permit for the demolition of all existing structures on-site and the construction of an approximately 152,078 square foot concrete tilt-up

warehouse building, including an 8,694 square feet of incidental office use and an approximately 36,613 square feet canopy structure for the external staging and loading area. The Project is designed to support the "last mile" distribution of packages. There will be 24-hour operation of outdoor use in the loading zones.

Location: The project site is located at 1605 South 7th Street, on the southern corner of East Alma Avenue and South 7th Street.

APNs: 477-08-037

Council District: 7

File No.: H24-031 and ER24-153

The proposed project will have potentially significant environmental effects with regard to air quality, biological resources, noise, and tribal cultural resources. The California Environmental Quality Act (CEQA) requires this notice to disclose whether any listed toxic sites are present at the project location. The project location is contained on a list of hazardous materials sites maintained by the State in accordance with California Public Resources Code Section 65962.5.

The Draft EIR and documents referenced in the Draft EIR are available for review online at the City of San José's "Active EIRs" website at www.sanjoseca.gov/activeeirs and are also available at the following locations:

Department of Planning, Building, and Code Enforcement
200 East Santa Clara St., 3rd Floor
San José, CA 95113
(408) 535-3555

Dr. MLK Jr. Main Library
150 E. San Fernando St.,
San José, CA 95112
(408) 277-4822

Biblioteca Latinoamericana
921 South First Street,
San José, CA 95110
(408) 294-1237

The public review period for this Draft EIR will be 45 days, between **November 14, 2025 and January 5, 2026.** Written comments must be received at the Planning Department by **5:00 p.m. on January 5, 2026**, in order to be addressed as part of the formal EIR review process.

Comments and questions should be referred to Bethelhem Telahun in the Department of Planning, Building and Code Enforcement via e-mail at Bethelhem.Telahun@sanjoeseca.gov, or by regular mail at the following mailing address:

Department of Planning, Building, and Code Enforcement
200 E. Santa Clara Street, 3rd Floor
Attn: Bethelhem Telahun
San José, CA 95113

For the official record, **please email or mail your written comment letter and reference File No. H24-031.**

Following the close of the public review period, the Director of Planning, Building, and Code Enforcement will prepare a Final Environmental Impact Report that will include responses to comments received during the review period. At least ten days prior to the public hearing on the EIR, the City's responses to comments received during the public review period will be available for review and will be sent to those who have commented in writing on the Draft EIR during the public review period.

CHRISTOPHER BURTON, Director
Planning, Building and Code Enforcement

Circulation period: November 14, 2025 and January 5, 2026

Subject: 1605 South 7th Street Project, Draft Environmental Impact Report, SCH No. 2024100562; City of San Jose, Santa Clara County

Dear Mr. Telahun:

The California Department of Fish and Wildlife (CDFW) received a draft Environmental Impact Report (EIR) from the City of San Jose (City) for the 1605 South 7th Street Project (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

CDFW is submitting comments on the draft Environmental Impact Report (EIR) to inform the City, as the Lead Agency, of our concerns regarding potentially significant impacts to sensitive resources associated with the proposed Project. CDFW is providing these comments and recommendations regarding those activities involved in the Project that are within CDFW's area of expertise and relevant to its statutory responsibilities (Fish and G. Code, § 1802), and/or which are required to be approved by CDFW (CEQA Guidelines, §§ 15086, 15096 and 15204).

CDFW ROLE

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (*Id.*, § 1802). For purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting comments as a **Responsible Agency** under CEQA Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority over the Project pursuant to the Fish and Game Code. For example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority, if the Project impacts the bed, channel or bank of any

Docusign Envelope ID: BDA14606-4D1A-4A80-A6B7-817C4410FA65

river, stream or lake within the State (Fish & G. Code, § 1600 et seq.). Likewise, to the extent the Project may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

REGULATORY REQUIREMENTS

California Endangered Species Act

A CESA Incidental Take Permit (ITP) must be obtained from CDFW if the Project has the potential to result in "take" of plants or animals listed under CESA, either during construction or over the life of the Project. Under CESA, "take" means "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill" (Fish & G. Code, § 86). CDFW's issuance of an ITP is subject to CEQA and to facilitate permit issuance, any project modifications and mitigation measures must be incorporated into the CEQA document analysis, discussion, and mitigation monitoring and reporting program. If the Project will impact CESA listed species, early consultation is encouraged, as significant modification to the Project and mitigation measures may be required in order to obtain a CESA Permit.

California Environmental Quality Act

CEQA requires a mandatory finding of significance if a project is likely to substantially impact threatened or endangered species (Pub. Resources Code, §§ 21001, subd. (c) & 21083; CEQA Guidelines, §§ 15380, 15064 & 15065). In addition, pursuant to CEQA, the lead agency cannot approve a project unless all impacts to the environment are avoided or mitigated to less-than-significant levels, or the lead agency makes and supports findings of overriding consideration for impacts that remain significant despite the implementation of all feasible mitigation. Findings of consideration under CEQA, however, do not eliminate the Project proponent's obligation to comply with the Fish and Game Code.

Lake and Streambed Alteration

CDFW requires a Lake or Streambed Alteration (LSA) Notification, pursuant to Fish and Game Code section 1600 et seq., for Project activities affecting river, lakes or streams and associated riparian habitat. Notification is required for any activity that may substantially divert or obstruct the natural flow; change or use material from the bed, channel, or bank (including associated riparian or wetland resources); or deposit or dispose of material where it may pass into a river, lake, or stream. Work within ephemeral streams, drainage ditches, washes, watercourses with a subsurface flow, and floodplains is generally subject to notification requirements. In addition, infrastructure installed beneath such aquatic features, such as through hydraulic

Docusign Envelope ID: BDA14606-4D1A-4A80-A6B7-817C4410FA65

directional drilling, is also generally subject to notification requirements. Therefore, any impact to the mainstems, tributaries, or floodplains or associated riparian habitat caused by the proposed Project will likely require an LSA Notification. CDFW may not execute a final LSA Agreement until it has considered the final EIR and complied with its responsibilities as a responsible agency under CEQA.

Migratory Birds and Raptors

CDFW has authority over actions that may result in the disturbance or destruction of active bird nest sites or the unauthorized take of birds. Fish and Game Code sections protecting birds, their eggs, and nests include section 3503 (regarding unlawful take, possession, or needless destruction of the nests or eggs of any bird), section 3503.5 (regarding the take, possession, or destruction of any birds-of-prey or their nests or eggs), and section 3513 (regarding unlawful take of any migratory nongame bird). Migratory birds are also protected under the federal Migratory Bird Treaty Act (MBTA).

PROJECT DESCRIPTION AND LOCATION SUMMARY

Proponent: City of San Jose

Objective: The Project would construct an approximately 106,752-square-foot new one-story concrete tilt-up warehouse/industrial use building. An approximately 36,613 square-foot prefabricated canopy structure would be installed over the loading zone along the east elevation. The maximum height of the building would be 46 feet. Approximately 8,694 square feet of the total 106,752-square-foot building would be incidental office use. Four access driveways would provide ingress and egress to the Project. The Project would provide approximately 178 employee parking stalls, 10 accessible stalls, 413 van parking stalls, 18 electric vehicle(EV) parking stalls, 72 EV capable stalls with the ability support future EV equipment, 18 bicycle parking stalls, and 5 motorcycle parking stalls. Project implementation would remove existing vegetation on site, including 36 trees. A total of 179 new shade, accent, and street trees would be planted.

Location: GPS Latitude: 37°19'0.6492"N, Longitude: 121°52'7.6368"W; Cross streets of South 7th Street and East Alma Avenue in the City of San Jose, in the County of Santa Clara, California.

Timeframe: July 2026 – December 2027

ENVIRONMENTAL SETTING

Sufficient information regarding the environmental setting is necessary to understand any potentially significant impacts on the environment of the proposed Project and any alternatives identified in the draft EIR (CEQA Guidelines, §§15125 & 15360). **CDFW**

Docusign Envelope ID: BDA14606-4D1A-4A80-A6B7-817C4410FA65

recommends the draft EIR provide baseline habitat assessments for special-status plant, fish and wildlife species located and potentially located within the Project area and surrounding lands, including all rare, threatened, and endangered species (CEQA Guidelines, §15380). The draft EIR should describe aquatic habitats, such as wetlands or waters of the U.S. or State, and any sensitive natural communities or riparian habitat occurring on or adjacent to the Project site (for sensitive natural communities see: https://wildlife.ca.gov/Data/VegCAMP/NaturalCommunities#sensitive%20natural%20communities), and any stream, riparian, or wetland set back distances the City may require. Fully protected, threatened or endangered, candidate, and other special-status species or sensitive natural communities that are known to occur, or have the potential to occur in or near the Project area include, but are not limited to: the species listed in **Attachment A**.

Habitat descriptions and species profiles included in the draft EIR should include robust information from multiple sources: aerial imagery; historical and recent survey data; field reconnaissance; scientific literature and reports; U.S. Fish and Wildlife Service's (USFWS) Information, Planning, and Consultation System; California Aquatic Resources Inventory; and findings from "positive occurrence" databases such as California Natural Diversity Database (CNDDB). Only with sufficient data and information can the City adequately assess which special-status species are likely to occur in the Project vicinity.

CDFW recommends surveys be conducted for special-status species with potential to occur, following recommended survey protocols if available. Survey and monitoring protocols and guidelines are available at: https://www.wildlife.ca.gov/Conservation/Survey-Protocol.

Botanical surveys for special-status plant species, including those listed by the California Native Plant Society (http://www.cnps.org/cnps/rareplants/inventory/), should also be conducted during the blooming period for all sensitive plant species potentially occurring within the Project area and include the identification of reference populations. Please refer to CDFW protocols for surveying and evaluating impacts to rare plants available at: https://www.wildlife.ca.gov/Conservation/Plants.

IMPACT ANALYSIS AND MITIGATION MEASURES

The CEQA Guidelines (§15126.2) necessitate the draft EIR discuss all direct and indirect impacts (temporary and permanent) that may occur with implementation of the Project. This includes evaluating and describing impacts such as:

- Land use changes that would reduce open space or agricultural land uses and increase residential or other land use involving increased development;

Docusign Envelope ID: BDA14606-4D1A-4A80-A6B7-817C4410FA65

- Potential for impacts to fully protected and special-status species;
- Permanent and temporary habitat disturbances associated with ground disturbance, noise, lighting, reflection, air pollution, traffic or human presence;
- Obstruction of movement corridors, fish passage, or access to water sources and other core habitat features;
- Water quality impacts resulting from construction and operation of the Project; and
- Impacts to the bed, channel, and bank, in the reservoirs and creeks downstream of the Project;

The CEQA document also should identify existing and reasonably foreseeable future projects in the Project vicinity, disclose any cumulative impacts associated with these projects, determine the significance of each cumulative impact, and assess the significance of the Project's contribution to each impact (CEQA Guidelines, §15355). Although a project's impacts may be insignificant individually, its contributions to a cumulative impact may be considerable; a contribution to a significant cumulative impact (e.g., reduction of available habitat for a listed species) should be considered cumulatively considerable without mitigation to minimize or avoid the impact.

The CEQA Guidelines direct the City, as the lead agency, to consider and describe in the draft EIR all feasible mitigation measures to avoid and/or mitigate potentially significant impacts of the Project on the environment based on comprehensive analysis of the potential direct, indirect, and cumulative impacts of the Project (CEQA Guidelines, §§ 15021, 15063, 15071, 15126.2, 15126.4 & 15370). This should include a discussion of take avoidance and minimization measures for special-status species, which are recommended to be developed in early consultation with the USFWS, the National Marine Fisheries Service, and CDFW. These measures can then be incorporated as enforceable Project conditions to reduce potential impacts to biological resources to less-than-significant levels.

Fully protected species may not be taken or possessed at any time except in limited circumstances (Fish & G. Code, §§ 3511, 4700, 5050, & 5515). Therefore, the draft EIR should include measures to completely avoid "take" of fully protected species.

COMMENTS AND RECOMMENDATIONS

CDFW offers the following comments and recommendations to assist the City in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources, including:

Docusign Envelope ID: BDA14606-4D1A-4A80-A6B7-817C4410FA65

Comment 1: Migratory Birds and Nesting Raptors

Issue: The draft EIR acknowledges there is foraging bird habitat and potential nesting habitat on the Project site that may be impacted by Project disturbance. The draft EIR indicates site disturbance may occur during the nesting bird season (February 1 through August 31). Avoidance and minimization measure BIO-1 specifies a Qualified Biologist shall conduct a habitat assessment and pre-construction nesting bird and ground nesting species no more than fourteen (14) days prior to initiation of work and that "if an active nest is found within 250 feet of the work areas to be disturbed by tree removal, demolition, and construction (whichever occurs first), the qualified ornithologist shall determine the extent of a construction-free buffer zone to be established around the nest, (typically 250 feet for raptors and 100 feet for other birds)." CDFW has additional recommendations related to Qualified Biologist authority and raptor behavior, as the draft EIR allows construction and vegetation removal to occur with relatively small nest buffers for raptor bird species. These buffers are not biologically protective for many species and risk nest abandonment, reduced productivity, and unlawful "take" under California Fish and Game Code and the MBTA.

Evidence that the impact would be significant: Raptors are highly sensitive to human disturbance during courtship, incubation, and fledging. Repeated flushes and noise/activity near nests are linked to lower nesting success. Spatial and temporal buffers are necessary to prevent disturbance, and effective distances vary by species and site conditions, often exceeding a few hundred feet (Richardson and Miller 1997). CDFW emphasizes that all raptors are protected under state law (Fish & G. Code §§3503, 3503.5, 3513) and inadequate buffers that cause nest failure or harassment would constitute a significant impact and potential violation (CDFW 2019). Additional raptor research underscores that buffer-setting should account for species traits and local visibility/line-of-sight; conservative distances and seasonal restrictions reduce disturbance risk (White et al. 2022).

Recommendations: The City should revise the draft EIR's mitigation to adopt species-specific, seasonally appropriate, and enforceable measures, including:

1. **Minimum no-disturbance buffers:** General raptors should have a buffer of greater than or equal to 500 feet with direct line-of-sight, which may only be reduced with screening and Qualified Biologist approval (Richardson and Miller 1997). For species like Swainson's hawk, there should be at least a 0.5-mile buffer until fledging is confirmed by a Qualified Biologist (CDFW 2000).

2. **Protocol surveys & timing:** Conduct protocol-level raptor surveys within at least 1,000 feet of disturbance footprint before any work during nesting season.

Docusign Envelope ID: BDA14606-4D1A-4A80-A6B7-817C4410FA65

3. **Seasonal work windows:** Schedule tree removal and high-noise activities outside the nesting season where feasible; if not feasible, implement full buffers and monitoring (Richardson and Miller 1997).

4. **Regulatory coordination:** Consult with CDFW/USFWS when active raptor nests are within buffer zones.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations (Pub. Resources Code, § 21003, subd. (e)). Accordingly, please report any special-status species and natural communities detected during Project surveys to CNDDB. The CNNDB field survey form can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/Submitting-Data#44524420-pdf-field-survey-form. The types of information reported to CNDDB can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/Plants-and-Animals.

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying Project approval to be operative, vested, and final (Cal. Code Regs., tit. 14, § 753.5; Fish and Game Code, § 711.4; Pub. Resources Code, § 21089).

CONCLUSION

CDFW appreciates the opportunity to comment on the draft EIR to assist the City in identifying and mitigating Project impacts on biological resources. If you have any questions, please contact Emily Galli, Environmental Scientist, at Emily.Galli@wildlife.ca.gov; or Jason Faridi, Senior Environmental Scientist (Supervisory), at Jason.Faridi@wildlife.ca.gov.

Sincerely,

The Amah Mutsun Tribal Band of San Juan Bautista & AMTB

Letter of Response

To whom it may concern:

It is our pride and privilege to be of service for any Native American Cultural Resource Monitoring, Consulting and/ or Sensitivity Training you may need or require. We take our Heritage and History seriously and are diligent about preserving as much of it as we can. Construction is a constant in the Bay Area and with that new discoveries are bound to happen. If you choose our services, we will gladly guide all personnel through proper procedures to safely protect and preserve: Culture, Heritage, and History.

It is highly recommended, if not previously done, to search through Sacred Lands Files (SLF) and California Historical Resource Information Systems (CHRIS) as well as reaching out to the Native American Heritage Commission (NAHC) In order to determine whether you are working in a Cultural and/ or Historic sensitivity.

If you have received any positive cultural or historic sensitivity within 1 mile of the project area here are A.M.T.B Inc's and Amah Mutsun Tribal Band of San Juan Bautista's recommendations:

- All Crews, Individuals and Personnel who will be moving any earth be Cultural Sensitivity Trained.
- A Qualified California Trained Archaeological Monitor is present during any earth movement.
- A Qualified Native American Monitor is present during any earth movement.

If further Consultation, Monitoring or Sensitivity Training is needed please feel free to contact A.M.T.B. Inc. or Myself Directly. A.M.T.B. Inc. 650-851-7747

Amah Mutsun Tribal Band of San Juan Bautista
&
AMTB

2451 Tyrolean Way, Sacramento CA 95821

Our rates for 2025 are

$200.00 per hour.

4 hours minimum

Cancellations not 48 hours (about 2 days) prior will be charged as a 4-hour minimum. There is a round trip mileage charge if canceled after they have traveled to site.

Anything over 8 hours a day is charged as time and a half.

Weekends are charged at time and a half.

Holidays are charged at double the time.

For fiscal year (FY) 2025, standard per diem rate of $425. ($333. lodging, $92 M&IE).

M&IE Breakdown FY 2025

M&IE Total	Continental Breakfast/ Breakfast	Lunch	Dinner	Incidental Expenses	First & Last Day of Travel
$92.00	$23.00	$26.00	$38.00	$5.00	$69.00

Beginning 2025, the standard mileage rates for the use of a car round trip (also vans, pickups or panel trucks) will be: $.70 cents per mile driven for business use or what the current federal standard is at the time.

Our Payment terms are 5 days from date on invoice.

Our Monitors are Members of the Amah Mutsun Tribal Band of Mission San Juan Bautista.

If you have any questions, please feel free to contact the A.M.T.B. Inc. at the below contact information.

Sincerely,

Irenne Zwierlein

Provisions to Address Discovery of a Tribal Cultural Resource During Construction

Tribal Cultural Resources Sensitivity Training. The project sponsor, in consultation with any Cultural Resources Team if one is available, shall retain the services of an Ohlone Native American representative and/or archeological consultant from the Qualified List of Archaeological Consultants to provide cultural sensitivity and archeological awareness training to all work crews who will be involved in ground disturbing activities at the project site. The training shall inform all project contractors, subcontractors and work crew members to be on the alert for evidence of the presence of potential tribal cultural resource(s), of how to identify the evidence of such a resource(s), and of stop work, resource protection, and notification requirements in the event of suspected discovery of a tribal cultural resource by construction crew members.

Stop Work and Notification Upon Discovery. Should any indication of a tribal cultural resource be encountered during any soils-disturbing activity of the project, the project Head Foreperson and/or project sponsor shall immediately notify tribe and shall immediately suspend any soils-disturbing activities in the vicinity of the discovery until the Cultural Monitor and a qualified archeological consultant from the Qualified Archeological Consultants List have assessed the find and the respective parties have determined whether and what additional measures should be undertaken.

Preservation in Place. In the event of the discovery of a tribal cultural resource, the cultural resource team (if one is present on job), the project sponsor, the archeological consultant, and the Ohlone representative shall consult to determine whether preservation in place would be feasible and effective in preserving the values represented by the resource. The archeological consultant, in consultation with the Ohlone representative, shall document the find to current professional standards. The tribe may also require that the project sponsor immediately implement a site security program if the resource is at risk from vandalism, looting, or other damaging actions.

If it is determined that preservation-in-place of the tribal cultural resource would be both feasible and effective, the archeological consultant shall prepare a Resource Preservation Plan (RPP) in consultation with the Ohlone representative, for review, which shall be implemented by the project sponsor during construction.

If it is determined that preservation in place would not be feasible or effective, then archeological assessment and treatment shall be implemented and in consultation with the Ohlone representative, as detailed below.

Archeological Treatment. If it is determined, in consultation with the Ohlone representative and the project sponsor, determines that preservation-in-place of the tribal cultural resources is not a sufficient or feasible option to preserve the values represented by the resource, then the archeological consultant, in consultation with the Ohlone representative, shall conduct archeological assessment to determine

the significance of the find and determine whether it retains sufficient integrity to warrant additional treatment. If the tribal cultural resource is determined to be a significant archeological resource, the archeological consultant, in consultation with the Ohlone representative, shall recommend appropriate archeological treatment to preserve the data and values of the tribal cultural resource, which may include archeological data recovery. Data recovery shall be implemented in consultation with the Ohlone representative and shall include appropriate analyses and reporting. If an archeological interpretive, monitoring, and/or testing program is required, it shall be consistent with Standard guidelines for such programs and shall be implemented immediately.

Human Remains and Funerary Objects. The treatment of any human remains, and funerary objects discovered during any soils disturbing activity shall comply with applicable State laws, including Section 7050.5 of the Health and Safety Code and Public Resources Code 5097.98. If human remains or suspected human remains are encountered during construction, the contractor and project sponsor shall ensure that ground-disturbing work within 50 feet of the remains is halted immediately and shall arrange for the protection in place of the remains until appropriate treatment and disposition have been agreed upon and implemented in accordance with this section. The project sponsor shall immediately notify the Medical Examiner of the County in which the job resides and the Tribe of the find. In the event of the Medical Examiner's determination that the human remains are Native American in origin, the Medical Examiner will notify the California State Native American Heritage Commission (NAHC) within 24 hours and all provisions of Public Resources Code 5097.98 will be followed.

Interpretive Program. If it is determined, in consultation with Ohlone representative and the project sponsor, determines that preservation-in-place of the tribal cultural resource is not a sufficient or feasible option, the project sponsor, in consultation with local Native American representatives, shall prepare a Cultural Resources Public Interpretation Plan (CRPIP) to guide the interpretive program. The CRPIP shall be submitted for review and approval prior to implementation of the program. The interpretive program may but is not limited to artist installations, preferably by local Native American artists, oral histories with local Native Americans, cultural displays, educational panels, or other interpretive elements agreed upon by the sponsor, and Ohlone Native American representatives, and shall include an on-site acknowledgement that the project is built on traditional Ohlone land. The plan shall identify, as appropriate, proposed locations for installations or displays, the proposed content and materials of those displays or installation, the producers or artists of the displays or installation, and a long-term maintenance program. Upon approval of the CRPIP and prior to project occupancy, the interpretive program shall be implemented by the project sponsor. The project sponsor shall work with the tribal representative to identify the scope of work by the tribal representative to fulfill the requirements of this mitigation measure, which may include participation in preparation and review of deliverables (e.g., plans, interpretive materials, artwork). Tribal representatives shall be compensated for their work as identified in the agreed upon scope of work.

Re: Comments on Draft EIR for 1605 South 7th Street Project Site Development Permit File No. H24-031 and ER24-153

SCH# 2024100562

Dear Ms. Telahun,

I submit these comments on the Draft Environmental Impact Report (DEIR) for the 1605 South 7th Street Project. My concern is that the DEIR does not analyze the actual travel corridor that project traffic will use on South 7th Street between the project site, East Alma Avenue, and the I-280 ramps. This omission affects both heavy-truck and high-volume van/car traffic and prevents a full understanding of safety, noise, and congestion impacts on an already heavily used residential connector.

---

1. The DEIR analyzes only the South 7th Street segment south of the project site (Alma–Phelan), not the segment north of the site that connects to I-280.

The Noise and Vibration section models "Existing Traffic Noise" on only three roadway segments near the project site and reports existing average daily trips (ADT) and noise levels in Table 3.6-5: Existing Traffic Noise (p. 164). For South 7th Street, the only segment analyzed is:

- South 7th Street, East Alma Avenue to Phelan Avenue: 10,604 ADT, 60.4 dBA Ldn.

This is a two-way segment south of the project site, selected because it lies within the 1,000-foot study area.

Later, the DEIR evaluates "Existing and Project Traffic Noise" in Table 3.6-10 (p. 179). That table shows:

- South 7th Street, East Alma Avenue to Phelan Avenue: 10,604 ADT existing, 11,587 ADT with project, an increase of 983 daily trips (from 60.4 to 61.0 dBA Ldn).

The Opening Year analysis in Table 3.6-12/3.6-11 (p. 180) likewise evaluates only this same Alma–Phelan segment.

Nowhere in the DEIR is there a corresponding traffic or noise analysis for the two-way South 7th Street segment north of the project site between the project, Alma Avenue, and the I-280 ramps, even though this is the corridor that must provide freeway access for project-generated trips in both directions. The omission results from the 1,000-foot transportation study radius, which captures Alma–Phelan but not the longer connector to I-280.

---

2. The DEIR shows that project operations generate two major daily traffic functions, and both depend on the two-way corridor north of the site.

The Project Description (p. 22) describes the facility as a “last mile” e-commerce distribution

The same section provides the key operational volumes:

- Inbound line-haul trucks: “A total of 52 daily truck trips are expected to deliver packages to the Project site each day, between 12:00 AM and 7:00 AM.”
- Outbound delivery vans: “Approximately 265 delivery vans will load and depart from the Project site between 9:30 AM and 12:00 PM, at an average rate of approximately 53 vans every 30 minutes.”
- Independent contractor vehicles: “Approximately 75 traditional passenger vehicles, associated with independent contractors, would enter the delivery facility between 4:30 PM and 5:30 PM.”
- Total daily trips: “In total, the Project is expected to generate a baseline total of 1,588 trips per day.”

The Transportation section later reiterates that site-specific trip generation “includes passenger cars, vans, and truck trips” and confirms that “the Project is expected to generate a baseline total of approximately 1,588 trips per day.”

In practice, both of these major traffic functions:

1. Inbound heavy trucks (52/day), and
2. Outbound delivery vans plus contractor/passenger vehicles (at least 265 + 75 per day, plus workers),

will need to use South 7th Street between the project entrances and the I-280 ramps, in both directions, to access the regional freeway system. Yet there is no ADT, level-of-service, or noise analysis for this two-way connector segment north of the site.

---

3. The DEIR's own truck-route map shows trucks on South 7th Street connecting to I-280, but that corridor is not analyzed.

Figure 2.3-7: Project Truck Routes (pp. 2.3-? / graphic on PDF lines 100–153) depicts the planned truck routes, including South 7th Street and I-280, labeled as "Project Truck Routes" and "San José Primary Truck Routes."

The Transportation section states:

"The Project would utilize the truck routes identified in Figure 2.3-7: Project Truck Routes, which utilize the City's Primary Truck Routes identified in the General Plan."

By the DEIR's own description, project trucks will travel on South 7th Street and connect to I-280 using designated truck routes. The only viable way to do that from 1605 South 7th Street is by using the two-way South 7th Street corridor between the project, Alma Avenue, and the I-280 ramps. That corridor:

- is where both directions of heavy truck traffic will concentrate,
- is where outbound vans and return trips must access and leave the freeway, and
- is adjacent to residential properties.

Despite this, no traffic volumes, no noise levels, and no safety metrics are provided for this connector segment. All of the numerical analysis is confined to intersections and to the Alma–Phelan segment south of the site.

---

4. The DEIR's traffic noise analysis is based on the wrong segment and underplays corridor-level effects.

The Noise and Vibration section concludes that project traffic will not significantly increase noise because modeled increases are below 3 dBA on the three study roadway segments.

For South 7th Street (Alma–Phelan), Table 3.6-10 shows:

- Existing (2024): 10,604 ADT, 60.4 dBA Ldn
- With Project: 11,587 ADT, 61.0 dBA Ldn

- Change: +983 ADT, +0.6 dBA Ldn

So even within the limited study area, the DEIR shows the project adding nearly 1,000 daily trips to an existing 10,604-ADT segment, an increase on the order of 9–10%. The Opening Year analysis for the same Alma–Phelan segment (Table 3.6-12/3.6-11) shows a similar jump from 10,610 to 11,593 ADT with the project.

However:

- These ADT changes are calculated only on the short Alma–Phelan segment south of the site,
- The DEIR then generalizes its findings to "Project area roadways," and
- The longer and more critical connector segment between the project, Alma Avenue, and I-280 is never quantified.

If, as the DEIR states, the project is expected to generate approximately 1,588 trips per day

and this traffic must use the South 7th Street corridor to reach I-280, then the potential increase on a connector segment with volumes on the order of 10,000 ADT could reasonably be on the order of 15%. That is substantially more than the 0.6 dBA modeling result would suggest, and it warrants explicit corridor-level analysis rather than being assumed to be "less than significant" by analogy to a different segment.

---

5. The DEIR addresses nighttime truck noise using a hypothetical scenario that is inconsistent with actual, legal truck operations on the corridor.

The DEIR includes a "Nighttime Traffic Noise" discussion that models a worst-case case where 60% of project trucks use 7th Street at night:

"Per the Project Traffic Study, the Project would generate 52 truck trips and, at most, 60 percent of those trips (i.e., 31 truck trips) would occur along 7th Street."

It then calculates that adding 31 nighttime trucks to 7th Street would result in a combined 63.2 dBA, a 2.8 dBA increase over no-project conditions, still just under the 3 dBA significance threshold.

On the actual corridor between the project, Alma, and I-280, there is a posted 5-ton truck restriction between 8:00 p.m. and 6:00 a.m. This means:

- Heavy trucks are not legally allowed on that corridor segment during the nighttime hours used in the DEIR's worst-case scenario.

- In reality, project truck operations will necessarily be concentrated during the daytime on this two-way corridor, when existing heavy-truck activity is already substantial.

Despite that, there is no daytime truck-noise analysis for the connector segment in either direction, and the only explicit truck-noise calculations in the DEIR are anchored in a hypothetical nighttime configuration that would violate posted restrictions.

From the perspective of nearby residents, the real-world impact is not a hypothetical overnight truck scenario but the daytime cumulative increase in heavy-truck and high-volume van traffic along a two-way residential connector. That scenario is not analyzed.

---

6. Existing daytime heavy-truck volumes on this two-way corridor are already high and will be compounded by both project traffic functions.

Based on direct observation, the South 7th Street corridor between Alma Avenue and I-280 currently carries dozens of heavy trucks per hour in each direction during the day, in addition to substantial passenger-vehicle traffic. This is not an informal “shortcut”; it is a de facto connector between residential neighborhoods and the freeway.

Against that backdrop, the project adds:

- 52 heavy truck trips per day (line-haul deliveries),
- Approx. 265 outbound delivery vans per day,
- Approx. 75 contractor/passenger vehicles per day,
- Plus hundreds of worker arrivals and departures, for a total of 1,588 daily trips.

All of these movements must use the two-way corridor north of the project site to reach or return from I-280. Yet:

- There is no ADT forecast for this connector segment,
- No breakdown between heavy trucks and light vehicles along it,
- No analysis of two-way safety impacts (driveway conflicts, crossing pedestrians, cyclists), and
- No cumulative corridor-level noise and vibration assessment.

This is a significant analytical gap given the scale of added traffic relative to an already heavily used two-way residential connector.

---

7. Requested revisions to the DEIR

To comply with CEQA's requirement for meaningful disclosure and analysis of reasonably foreseeable impacts, the DEIR should be revised to:

1. Define and study the actual South 7th Street corridor used by the project to access I-280, in both directions, from the project entrances to the freeway ramps, not just the Alma–Phelan segment south of the site.
2. Provide ADT forecasts and level-of-service analysis for this corridor segment, including separation of heavy-truck and light-vehicle volumes for both directions of travel.
3. Analyze daytime heavy-truck noise and vibration along this corridor, reflecting posted nighttime truck restrictions and existing daytime truck activity, instead of relying on a hypothetical nighttime scenario that would be inconsistent with legal operations.
4. Evaluate safety impacts related to two-way truck and van operations along a residential connector, including conflicts with local traffic, driveways, pedestrians, and cyclists.
5. Develop and disclose mitigation measures that address:
    - routing and scheduling of heavy trucks;
    - management of outbound van and contractor-vehicle flows;
    - potential restrictions or improvements to reduce corridor-level impacts on the South 7th Street segment between the project site, Alma Avenue, and the I-280 ramps.

Conclusion

The DEIR's transportation and noise analyses focus on a short segment of South 7th Street south of the project site and a limited set of nearby intersections, while omitting the longer, two-way corridor segment north of the site that is essential for freeway access and already carries substantial heavy-truck activity. At the same time, the DEIR's own text and figures show that the project will generate 1,588 daily trips, including 52 heavy trucks and hundreds of vans and contractor vehicles, and that its trucks will use South 7th Street and the City's designated truck routes to reach I-280.

Because the Draft EIR does not quantify or analyze corridor-level impacts on South 7th Street between the project site, Alma Avenue, and I-280, it does not provide decision-makers or the public with a complete picture of traffic, safety, noise, and cumulative heavy-vehicle effects on

this residential connector. A revised and expanded analysis is warranted before the project is approved.

Thank you for your consideration of these comments.

Sincerely,

Patrick Thomas

You don't often get email from javierc2000@yahoo.com. Learn why this is important

Good afternoon Bethehem Telahun et al,

At a recent public meeting at Kelly Park, we were presented with the proposed plan on 7th Street Amazon distribution center. I just want to provide small comments and feedback based solely on the information that was provided:

1. Any individual project on its own can be a near "non-impactful" to the surrounding area per the environmental report, but taken collectively with other developments, it can add up, much like a trickle, trickle, trickle of a leaky roof. It is with this fact, that I am interested in the particulate release and sound increase from such a project once complete and in operation.

2. Due to the cutting of funding to various organizations by the government, I behoove you to seriously consider obtaining your trees from ourcityforest.org who are a local group dedicated to the greening through the use of trees and a green approach. They offer a number of services that not only include providing trees, but in converting land into a more native and drought tolerant conversion to existing areas. At minimum, you may get better pricing and it helps such organizations to improve the Bay Area in general. This collaboration looks great on your own website and to your reputation to being partner for a greener and brighter future. The eventual use of trees that are taller will also aid in aesthetics and in aiding in maintaining a more energy efficient operation.

3. Although you're just one building, the individual contribution to easing climate change can be done passively, by just painting the roof white to increase the planet's albedo as well as to preventing heat from building-up in the building.

4. I am well aware that this is a distribution building, but the aesthetics of a building, especially one that is going to be around in the foreseeable future is important. From the architectural drawings, it is essentially just a "box" with little to no redeemable visual that adds to a neighborhood despite the investment. I encourage the use of paint design, exterior material accents, plants to "blend" and be a visual focal point that makes not only employees proud, but adds to the neighborhood's visual appeal and value despite it being commercial.

Just some quick thoughts for your consideration.

Regards,

Javier Castro

Subject: EIR Public Comments - File Nos: H24-031 "1605 South 7th Street Project" (Amazon warehouse)

[**External Email**. Do not open links or attachments from untrusted sources. Learn more]

Regarding "TR-7.1" in the "GHGRS Project Compliance Checklist" in "Appendix G - Greenhouse Gas Emissions Assessment" (pdf page 112): I don't believe there are strong enough measures to bring about the required reduction in Vehicle Miles Traveled:

- There are only 18 bicycle parking stalls, in a project with 178 employee car parking stalls. Of the 196 stalls (178+18), less than 10% are bicycle parking. Over 90% of the employees will be unable to bike to work, due to parking limitations.
- To avoid discouraging biking to work, the bicycle parking stalls must be secure (metal lockers, or bike rooms, etc). It is not specified whether the bicycle parking stalls are secure, or are regular outdoor bike racks.
- The EIR mentions "designated spaces for carpool/vanpool near the building entrance", which is a great measure. But without a commitment to a certain number of these spaces, it isn't possible to determine if this is a sufficient number to achieve the TDM outcomes.
- Ride-share like taxis/Ubers/Lyfts does not "reduce vehicle trips and vehicle miles" compared to an employee driving themself straight to work. It increases VMT, in the form of the extra driver who has to drive to/from their home, and who has to drive around with an empty vehicle waiting for passengers. So a "ride-share drop off lane" will increase VMT, not reduce VMT.
    - If Amazon can provide monetary incentives for employees to use carpool ride-share (where the driver is also driving to their own place of employment in San Jose) and

disincentivize taxis/Ubers/Lyfts, that would have the correct impact on VMT.
Thank you for funding bike/ped/transit projects along the project frontage and within the project area.

I appreciate that "Project would include new shade, accent and street trees to help mitigate urban heat island effect. The proposed shade trees are intended to [...] provide a minimum 50 percent shade coverage within the parking lot." I still encourage the developers to reduce the number of employee car parking spaces, increase bicycle parking spaces, and commit to paid transit passes and bicycle incentives, so that the amount of asphalt can be minimized.

Thank you,
Jordan Moldow

RE: File Number H24-031, SCH #2024100562 ("1605 South 7th Street Project")

This letter is submitted on behalf of Joint Council 7 of the International Brotherhood of Teamsters, which together represent nearly 100,000 workers in the logistics and other industries in Northern California. Teamster members form the backbone of the logistics and package delivery industry in the United States and have direct and practical experience of the operations and impacts of this industry on communities where they work and live, including San José and the surrounding area. Teamster members have actively engaged with proposed logistics and package delivery facilities not only as workers in this industry but as residents in the working-class communities most impacted by this industry. As this industry continues to grow, Teamsters feel it is their responsibility to help communities make the most informed possible decisions as well as consider all possible options to address the adverse impacts of the industry. This

letter does not waive any rights the locals, joint council, or individual members may have under applicable state law.

Location and Nature of the Project

The 1605 South 7th Street Project (Project) is located in central San José (City), in Santa Clara County, California. This is the latest in a string of recent developments of "last-mile" delivery facilities in the region, including two in the City of Milpitas. The Project will operate as a "last-mile" delivery station for Amazon, the largest e-commerce retailer in the United States.

The Applicant Does Not Disclose Key Assumptions and Undercounts the Vehicle Miles Traveled

Several residents who responded to the initial Notice of Preparation ("NOP") raised serious concerns about the increase in truck and van traffic on South 7th, South 10th, and South 11th Streets, impacting the nearby Spartan Keyes community. Residents were concerned because those streets are already overburdened by commercial traffic and the roads show significant wear and tear.

The Draft EIR does not appear to be sensitive to these concerns. To the contrary, the Vehicle Miles Traveled ("VMT") analysis concludes that adding hundreds of vans which will be delivering as far as Santa Cruz, an approximately 65 mile round trip, will result in a net reduction of vehicle miles traveled, because the new facility will supposedly be cannibalizing deliveries currently being made from the Milpitas last-mile delivery stations. (DEIR, Appendix J2 Attachment L at 6).

According to the applicant, despite the fact that the facility is adding 528 van trips and 150 "Flex" (personal vehicle delivery) trips from the facility, and that 40% of trips will be to a region

bounded by Los Gatos to the northeast, Davenport to the southeast, Santa Cruz to the south, and Saratoga to the north, the total VMT will only be 13.1 miles per employee. This is achieved through a formula that relies on "user-provided data," a process that was "approved by the City."

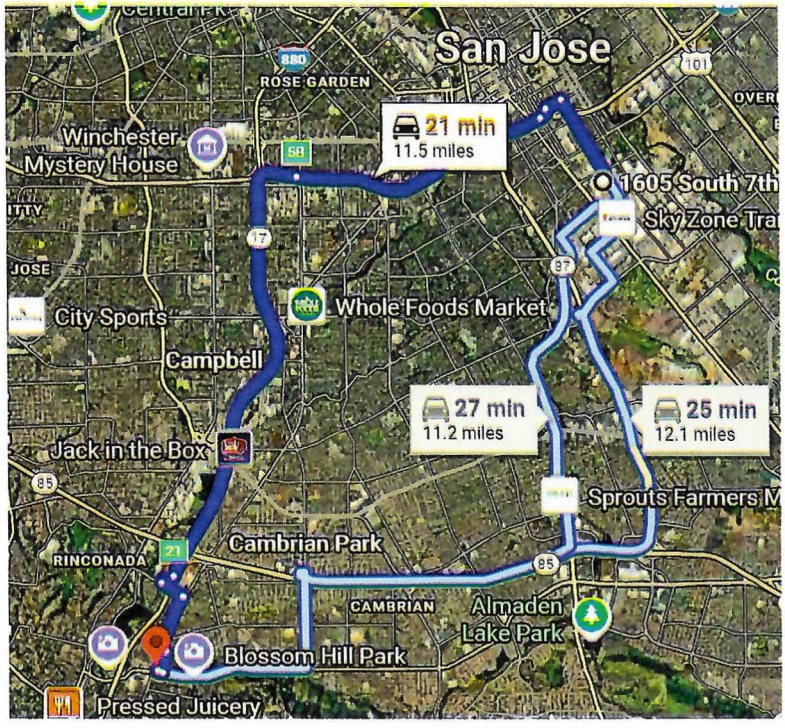

While the City may have approved the use of Amazon's internal data, CEQA does not allow EIRs to shield their assumptions in this way. Assumptions for "unique land uses" should be "documented." (*See* Association of Bay Area Governments, "Quick Guide for VMT Policy Adoption," at page 4). The Project applicant achieved this reduction in VMT by subtracting the "future" VMT from the "existing" VMT, calculated via this formula: Van VMTex = Σ (Current Van Trips to Zip Code x Dist. To Zip Code x 2) - Van VMTfuture = Σ (Future Van Trips to Zip Code x Dist. To Zip Code x 2).

The City, and the public, are asked to simply trust that the addition of an entire new 86,000 square foot facility, and hundreds of additional vans and private vehicle drivers, are not being added to address additional demand, but simply to move operations closer to where packages are being delivered.

The City, and the public, are also being asked to take on faith the number of van trips to each zip code and the distances to the zip code, without any disclosure of what these proportions are, or how they are being arrived at other than that they were provided by the "user" (i.e., Amazon). The VMT analysis discloses the user-provided ***trip*** counts by hour (Appendix J2, Attachment L, at Attachment A) but does not seem to include anywhere the basis for the calculation of vehicle miles traveled.

Prima facie, it is difficult to accept the applicant's figures, given that forty percent of the packages are going to be delivered to a zone that is, minimally, at least 11 miles away (i.e., the distance from 1605 S 7th Street to the city of Los Gatos). The furthest distance, Santa Cruz, as

stated above, is some 33 miles away. If 40 percent of the 678 van and personal vehicle trips (150 personal vehicle trips, 528 van trips) are composed of trips to this region and back, and assuming a midpoint distance of 19 miles to Lexington Hills, that would be (678 * .40) * 19 (or calculated a different way, forty percent of 339 one-way trips traveling 19 miles, and then doubled for the return trip). That alone equals 5,152 miles per day. It should be noted that that is extremely conservative, because the two most populous towns in the "southwest region" of the delivery zone are between Scotts Valley and the Santa Cruz area, and presumably the bulk of these 40% of trips will be going the full distance. While exact numbers are difficult to calculate--especially without disclosure of how the zip codes were chosen for the VMT analysis–the following would be reasonable: if the Santa Cruz area (including Capitola, Live Oak, etc.) accounts for 65% of the packages delivered to this zone based on its share of the population, then ((678 * .40)*.65)*33) would be the more accurate way to make this calculation; in other words, 5,817 miles per day.

The VMT analysis estimates that the VMT per day for this facility will be 9,342 miles per day. If 40% of the packages are to be delivered to this southwest region, even using the conservative 5,152 miles estimate, then the total VMT would have to be closer to 12,880 miles per

day, at a minimum (i.e., 5,152 / 0.4). That is a difference of 3,538 from the DEIR's prediction, a discrepancy of 38%. If the VMT was underestimated by 38%, then the VMT per employee would be at least 18.1 (i.e., 13.1 miles currently estimated multiplied by 1.38). That is at least two miles above the threshold of significance of 16.53. (Appendix J2 at 3).

Admittedly, all of the foregoing are loose estimates, because they have to be. The DEIR does not disclose at least the following:

(1) The basis for the user's (i.e., Amazon's) estimates;

(2) The basis for assuming that the new facility will solely replace trips made by existing facilities;

(3) The specific zip codes being used for measurement;

(4) Whether the distances were calculated by road miles traveled or "crows flies" distances, particularly important in the southwest region which is hilly and mountainous;

(5) The proportions of packages going to which zip codes;

(6) How, if at all, the increased capacity will drive increased demand and increase the gross number of packages to be delivered.

Number (6) is of particular importance, because CEQA's cumulative impacts and future impacts analyses requirements would counsel for an applicant that is using their own proprietary data to include growth assumptions. Put another way, it is a reasonable assumption that the user, here Amazon, is building a multi-million dollar facility and hiring hundreds of new employees for a purpose other than wanting to reduce the local VMT. It is a reasonable assumption that the addition of so much more capacity is either to accommodate increasing demand, which means

there will be more packages to deliver and therefore more trips to be made, *or,* it is being done to increase efficiency, i.e., to reduce delivery times by moving a facility closer to the addresses where there is an increase in orders. That reduction in delivery time itself could account for an increase in demand by the mere fact that consumers can count of faster delivery of consumer goods.

In any case, the DEIR is relying on obscured assumptions and calculations, and projecting a total reduction in VMT because the new last mile delivery station is closer to a major delivery area, and therefore simply "cannibalizing" existing VMT. So the City and the public are expected to accept a projection that assumes not a single extra package will be delivered as a result of the construction of this facility. This is on top of the other undisclosed assumptions that resulted in the seeming under-counting of VMT.

Request to Extend Comment Period

We would like to request that the City extend the comment period by 15 days, to accommodate the holiday season. The comment period covered the Thanksgiving and winter holidays. While organizations and institutions with resources and staff may have been able to adequately review what amounted to an 8,900 page record and prepare meaningful comments for review, members of the public, including the residents and their home owners' association, may not have had adequate time to review the record and identify organizations or experts to help them review the materials and prepare substantive comments given the intervening holidays. An extension of fifteen days would make the total time for comment sixty days, a not-unreasonable period for comment given the holiday season.

Conclusion

For the reasons stated above, we would ask the City to return the DEIR for more review and disclosure of the critical data so that the City and the public can make informed decisions as required by CEQA.

Thank you for your attention to this matter.

Sincerely,

Peter Finn

President
