APPENDIX G

CONGESTION MANAGEMENT PROGRAM CHECKLIST

Exhibit 5: CMP Monitoring Checklist

CONGESTION MANAGEMENT PROGRAM
(CMP) MONITORING CHECKLIST
LAND USE COORDINATOR COMPONENT

The CMP legislation requires that the CMP Agency monitor the implementation of the Orange County CMP, including CMP land use coordination component requirements. The following is a CMP Monitoring Checklist for the Land Use Coordination Component which has been developed to monitor impacts on CMP Highway System (CMPHS) links and intersections.

1. Project Applicant: Dudek

2. Project Name: Irvine Gateway Village

3. Project Description (Describe proposed land uses, square footage, # of dwelling units, size of parcel, etc.): 1,360 residential units (408 single-family and 952 multi-family units) and 4.8-acre public park (South Park).

4. Previous Approvals:

5. Address/Location: Northeast corner of Jeffrey Road and Portola Parkway

6. Case Number:

7. Date of Case Submittal:

8. Total Average Daily Trips: 10,825

9. Level of Service at CMP intersection: Satisfactory LOS during all Approved and Pending scenarios with and without the project.

Development Project Submittal:

10. Does the proposed development project generate 2,400 or more Average Daily Trips?
    X Yes _____ No

11. Does the proposed development project generate more than 1,600 Average Daily Trips with direct access to, or in close proximity to, a CMP HighwaySystem?
    _____Yes No X

** If you have answered NO to Items 10 and 11, a CMP Traffic Study is not required.

** If you have answered YES to Items 10 and 11, a CMP Traffic Study is required. Please continue.

CMP Traffic Impact Analysis:

12. Did the Traffic Study identify whether any CMP Highway Systemlinks/intersections would exceed their established Level of Service standard as a result of project related traffic?
    _____Yes No X

13. If so, which CMPHS links/intersections and proposed mitigation?
    N/A

14. Which, if any, of these impacted CMPHS links/intersections are located outside the boundaries of the City of Irvine?
    N/A

15. Did the City of Irvine participate in interjurisdictional discussions with the affected jurisdictions to develop a mitigation strategy for each impacted link/intersection?
    _____Yes No X

    If Yes to 15, briefly explain: N/A

Projects Exempt From CMP Requirements:

16. Is the proposed development project exempt from CMP requirements?
_____ Yes _X_ No

17. If so, please identify why the project was exempt from CMP requirements.
N/A

** A brief explanation to those items answered NO should be provided by the Transportation Engineer/Analyst.

Checklist Reviewed By:

Director of Public Works and Transportation Date

APPENDIX H

VMT WORKSHEET

ITAM PROJECT VMT SUMMARY REPORT

V 1.8-080824

	PROJECT INFORMATION	**Project #:**	**2**	
		Name:	**Gateway Village**	
		Description:	**Total 1360 DU (240 DU Affordable)**	
		Type:	**Residential**	
Project Vehicle Miles Travelled (VMT)	ORANGE COUNTY	Total		84,170
		Residential		**75,977**
		Non-Residential		8,193
Project Population and Employment		Population		**2,869**
		Employment		-
		Other VMT Contributor[3]		924
Project VMT Rate		Residential		20.03
		Non-Residential		
VMT Rate Threshold Goal		Residential	**14.88**	
		Non-Residential	**41.36**	
			Applicable Measure(s)	**20.03**
			Threshold Goal	**14.88**
			Net VMT Rate Percentage Increase[1]	**25.71%**
			Significant VMT Impact?	**Yes**

MITIGATION MEASURES		
On-Site		☐ 2.5%
Off-Site		☐ 5.0%
Additional Mitigation[2]		☐
Significant VMT Impact Mitigated?	**25.7%**	**NO**

Notes:

1- For Mixed-Use projects, the "Net VMT Rate Percentage Increase" is based on the higher of Residential or Non-Residential VMT rate.

2- Sufficient justification must be provided to support additional mitigation.

3- Refer to City of Irvine VMT Guidelines for the application of other VMT contributors.

ADT	average daily traffic
CEQA	California Environmental Quality Act
City	City of Irvine
HOV	high-occupancy vehicle
I	Interstate
ITAM	Irvine Transportation Analysis Model
ITAM TC	TransCAD version of the Irvine Transportation Analysis Model
LOS	level(s) of service
MPAH	Master Plan of Arterial Highways
NITM	North Irvine Transportation Mitigation
OCTA	Orange County Transportation Authority
SB	southbound
SR	State Route
v/c	volume-to-capacity
VMT	vehicle miles traveled

FEASIBILITY ANALYSIS STUDY
JEFFREY ROAD EXTENSION PROJECT

A planned extension of Jeffrey Road between Portola Parkway and the State Route (SR) 241 Toll Road is currently designated on the City of Irvine's (City) Circulation Plan; the Orange County Transportation Authority's (OCTA) Master Plan of Arterial Highways (MPAH) indicates that Jeffrey Road is planned to be further extended from SR-241 north to Santiago Canyon Road, which is outside the City's boundary. Figure 35 of the Irvine Gateway Village Comprehensive Traffic Study (all figures from the Comprehensive Traffic Study are provided in Attachment A of this feasibility analysis) shows the location of the Jeffrey Road extension. This feasibility analysis is prepared to evaluate conditions with and without the proposed roadway extension in the Buildout (Approved and Pending) Plus Irvine Gateway Village Project scenarios.

Consistent with the approved Scope of Work for the proposed residential project, LSA conducted two additional TransCAD version of the Irvine Transportation Analysis Model (ITAM TC Version 1.8 [V1.8]) model runs to determine potential impacts associated with the elimination of the planned roadway extension:

- Buildout Approved Plus Irvine Gateway Village Project (without the Jeffrey Road extension from Portola Parkway to SR-241)

- Buildout Pending Plus Irvine Gateway Village Project (without the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road)

BUILDOUT APPROVED PLUS IRVINE GATEWAY VILLAGE PROJECT WITH AND WITHOUT JEFFREY ROAD EXTENSION

This scenario evaluates the potential level of service (LOS) impacts of removing the Jeffrey Road extension from Portola Parkway to SR-241 on intersections, arterial roadways, freeway/tollway ramps, and mainline segments within the study area for the Buildout Approved Plus Irvine Gateway Village Project condition.

Peak-Hour Intersection LOS

Table A presents a summary of the intersection LOS for Buildout Approved Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. LOS worksheets are provided in Attachment B of this feasibility analysis. As this table indicates, all study area intersections are forecast to operate at satisfactory LOS in the Buildout Approved Plus Irvine Gateway Village Project condition (with the Jeffrey Road extension from Portola Parkway to SR-241), except for the following locations:

- **Intersection #388:** Ridge Route Drive/Avenida Carlota (LOS F)
- **Intersection #469:** Jamboree Road/Handy Creek Road (LOS E)
- **Intersection #470:** SR-261 Southbound (SB) Ramps/Handy Creek Road (LOS F)
- **Intersection #486:** SR-133 SB Ramps/Great Park Boulevard (LOS E)

LSA

Δ = change

= exceeds City's level of service (LOS) criteria

CMP = Congestion Management Program

Delay is reported in seconds/vehicle.

HCM = Highway Capacity Manual

ICU = Intersection Capacity Utilization

NB = Northbound

SB = Southbound

N/A = Not applicable (unsignalized intersection)

[1] It is a roundabout.

With the elimination of the Jeffrey Road extension from Portola Parkway to SR-241, all study area intersections are forecast to continue operating at satisfactory LOS, with the exception of the previously stated study area intersections. However, the intersection volume-to-capacity (v/c) ratio increase does not exceed the impact threshold at Ridge Route Drive/Avenida Carlota, Jamboree Road/Handy Creek Road, and SR-261 SB Ramps/Handy Creek Road. The elimination of the Jeffrey Road extension from Portola Parkway to SR-241 can be implemented in a Buildout Approved Plus Irvine Gateway Village Project condition with no peak-hour LOS impacts at those three intersections.

As for SR-133 SB Ramps/Great Park Boulevard, an intersection v/c ratio increase of 0.02 in the a.m. peak hour exceeds the impact threshold. Therefore, the elimination of the Jeffrey Road extension from Portola Parkway to SR-241 requires improvements at this deficient intersection to mitigate the LOS impact in a Buildout Approved Plus Irvine Gateway Village Project condition. A Project Study Report is currently being prepared by the City of Irvine for the SR-133 SB Ramps/Great Park Boulevard interchange. The proposed design of SR-133 SB ramps/Great Park Boulevard interchange includes one SB left-turn lane, one shared lane for through and left-turns, and two SB right-turn lanes. With this city project underway, the LOS impact at this location resulting from the No Jeffrey Extension condition (provided in Attachment B) is improved and therefore adequately mitigated. Therefore, with the proposed design at this new interchange, the elimination of the Jeffrey Road extension from Portola Parkway to SR-241 can be implemented in a Buildout Approved Plus Irvine Gateway Village Project condition with no peak-hour LOS impacts at SR-133 SB Ramps/Great Park Boulevard.

Roadway Segment Volumes and LOS

The average daily traffic (ADT) volumes and v/c ratios for the Buildout Approved Plus Irvine Gateway Village Project (with Jeffrey Road Extension) are illustrated on Figures 16 and 17 of the Irvine Gateway Village Comprehensive Traffic Study (Attachment A), respectively. The ADT volumes and v/c ratios for Buildout Approved Plus Irvine Gateway Village Project (without Jeffrey Road Extension) are illustrated on Figures 1 and 2 of this feasibility analysis, respectively.

Based on the ADT v/c performance criteria discussed before, several arterial roadway segments in the study area are forecast to operate deficiently in the Buildout Approved Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. However, the ADT v/c ratio increase does not exceed the impact threshold for those arterial roadway segments. Therefore, the elimination of the Jeffrey Road extension from Portola Parkway to SR-241 can be implemented in a Buildout Approved Plus Irvine Gateway Village Project condition with no LOS impacts on arterial roadway segments within the study area.

Peak-Hour Freeway/Tollway Ramp LOS

A summary of the freeway/tollway ramp LOS for Buildout Approved Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) is presented in Table B.

Based on the v/c performance criteria discussed above, several freeway/tollway ramps in the study area are forecast to operate deficiently in the Buildout Approved Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. However, the v/c ratio increase does not exceed the impact threshold for those ramp locations. Therefore, the elimination of the Jeffrey Road extension from Portola Parkway to SR-241 can be implemented in a Buildout Approved Plus Irvine Gateway Village Project condition with no peak-hour LOS impacts on freeway/tollway ramps in the study area.

Peak-Hour Freeway/Tollway Mainline LOS

A summary of freeway/tollway mainline LOS for Buildout Approved Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) is presented in Table C.

Based on the v/c performance criteria discussed before, several freeway/tollway mainline segments in the study area are forecast to operate deficiently in the Buildout Approved Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. However, the v/c ratio increase does not exceed the impact threshold for those mainline locations. Therefore, the elimination of the Jeffrey Road extension from Portola Parkway to SR-241 can be implemented in a Buildout Approved Plus Irvine Gateway Village Project condition with no peak-hour LOS impacts on freeway/tollway mainline segments within the study area.

Vehicle Miles Traveled Analysis

A vehicle miles traveled (VMT) analysis was conducted in ITAM TC V1.8 by City of Irvine transportation modeling staff to evaluate the VMT change with and without the Jeffrey Road extension from Portola Parkway to SR-241 within a 3-mile radius of the proposed residential project. Per the City's *Traffic Study Guidelines* (March 21, 2023), a transportation project that results in a net increase in VMT may be deemed significant and may require mitigation.

The VMT results are provided in Attachment C of this feasibility analysis. Table D presents a summary of the VMT analysis results. As shown in Table D, removing the Jeffrey Road extension from Portola Parkway to SR-241 would result in a 0.66 percent increase in VMT and is presumed to have a significant California Environmental Quality Act (CEQA) transportation impact in the Buildout Approved Plus Irvine Gateway Village Project condition.

= exceeds level of service (LOS) criteria

V/C = Volume/Capacity Ratio

NB = Northbound; SB = Southbound

I-5 = Interstate 5; I-405 = Interstate 405

SR-133 = State Route 133; SR-241 = State Route 241; SR-261 = State Route 261

Table D: Buildout Approved Plus Irvine Gateway Village Project With and Without Jeffrey Road Extension VMT Analysis Result (Jeffrey Road Extension from Portola Parkway to SR-241)

Scenario	Total VMT[1] (Within a 3-Mile Radius of the Proposed Project)
Buildout Approved Plus Irvine Gateway Village Project with Jeffrey Road Extension	3,129,215
Buildout Approved Plus Irvine Gateway Village Project without Jeffrey Road Extension	3,149,803
Difference	**20,589 (0.66%)**
Significant Impact?	**Yes**

Source: Compiled by LSA (2024).
[1] VMT results are provided in Attachment C.
SR = State Route
VMT = vehicle miles traveled

BUILDOUT PENDING PLUS IRVINE GATEWAY VILLAGE PROJECT WITH AND WITHOUT JEFFREY ROAD EXTENSION

Peak-Hour Intersection LOS

Table E presents a summary of the intersection LOS for Buildout Pending Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. As this table indicates, all study area intersections are forecast to operate at satisfactory LOS in the Buildout Pending Plus Irvine Gateway Village Project with Jeffrey Road Extension condition except for the following locations:

- **Intersection #34:** Red Hill Avenue/Irvine Boulevard (LOS E)
- **Intersection #291:** Jeffrey Road/Alton Parkway (LOS E)
- **Intersection #327:** Barranca Parkway/Technology (LOS E)
- **Intersection #356:** Pacifica/Irvine Center Drive (LOS E)
- **Intersection #388:** Ridge Route Drive/Avenida Carlota (LOS F)
- **Intersection #469:** Jamboree Road/Handy Creek Road (LOS E)
- **Intersection #470:** SR-261 SB Ramps/Handy Creek Road (LOS E)
- **Intersection #486:** SR-133 SB Ramps/Great Park Boulevard (LOS E)
- **Intersection #565:** Treble/Marine Way (LOS F)
- **Intersection #566:** Marine Way/Barranca Parkway (LOS E)

With the elimination of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road, all study area intersections are forecast to continue operating at satisfactory LOS, with the exception of the previously stated study area intersections. However, the intersection v/c ratio increase does not exceed the impact threshold at Red Hill Avenue/Irvine Boulevard, Jeffrey Road/Alton Parkway, Barranca Parkway/Technology, Pacifica/Irvine Center Drive, Ridge Route Drive/Avenida Carlota, Jamboree Road/Handy Creek Road, SR-261 SB Ramps/Handy Creek Road, Treble/Marine Way, and Marine Way/Barranca Parkway. The elimination of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road can be implemented in a Buildout Pending Plus Irvine Gateway Village Project condition with no peak-hour LOS impacts at the study area intersections, except for SR-133 SB Ramps/Great Park Boulevard.

LSA

Δ = change

= exceeds City's level of service (LOS) criteria

CMP = Congestion Management Program

Delay is reported in seconds/vehicle.

HCM = Highway Capacity Manual

ICU = Intersection Capacity Utilization

NB = Northbound

SB = Southbound

N/A = Not applicable (unsignalized intersection)

"--" = Not existing in the Buildout Pending Plus Project Without Jeffrey Road Extension condition.

[1] It is a roundabout.

As for SR-133 SB Ramps/Great Park Boulevard, an intersection v/c ratio increase of 0.02 in the a.m. peak hour exceeds the impact threshold. The elimination of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road requires improvements at this deficient intersection to mitigate the LOS impact in the Buildout Pending Plus Irvine Gateway Village Project condition. A Project Study Report is currently being prepared by the City of Irvine for the SR-133 SB Ramps/Great Park Boulevard interchange. The proposed design of SR-133 SB ramps/Great Park Boulevard interchange includes one SB left-turn lane, one shared lane for through and left-turns, and two SB right-turn lanes. With this city project underway, the LOS impact at this location resulting from the No Jeffrey Extension condition (provided in Attachment B) is improved and therefore adequately mitigated. Therefore, with the proposed design at this new interchange, the elimination of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road can be implemented in a Buildout Pending Plus Irvine Gateway Village Project condition with no peak-hour LOS impacts at SR-133 SB Ramps/Great Park Boulevard.

Roadway Segment Volumes and LOS

The ADT volumes and v/c ratios for the Buildout Pending Plus Irvine Gateway Village Project (with Jeffrey Road Extension) condition are illustrated on Figures 20 and 21 of Irvine Gateway Village Comprehensive Traffic Study (Attachment A), respectively. The ADT volumes and v/c ratios for the Buildout Pending Plus Irvine Gateway Village Project (without Jeffrey Road Extension) condition are illustrated on Figures 3 and 4 of this analysis, respectively.

Based on the ADT v/c performance criteria discussed before, several arterial roadway segments in the study area are forecast to operate deficiently in the Buildout Pending Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. However, the ADT v/c ratio increase does not exceed the impact threshold for those arterial roadway segments. Therefore, the elimination of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road can be implemented in a Buildout Pending Plus Irvine Gateway Village Project condition with no LOS impacts on arterial roadway segments within the study area.

Peak-Hour Freeway/Tollway Ramp LOS

A summary of freeway/tollway ramp LOS for Buildout Pending Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) is presented in Table F.

= exceeds level of service (LOS) criteria

V/C = Volume/Capacity Ratio

NB = Northbound; SB = Southbound

I-5 = Interstate 5; I-405 = Interstate 405

SR-133 = State Route 133; SR-241 = State Route 241; SR-261 = State Route 261

"--" = Not existing in the Buildout Pending Plus Project condition.

Based on the v/c performance criteria discussed before, several freeway/tollway ramps in the study area are forecast to operate deficiently in the Buildout Pending Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. However, the v/c ratio increase does not exceed the impact threshold for those ramp locations, except for the Interstate (I) 5 SB on-ramp at Jeffrey Road. Therefore, the elimination of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road would require improvements at I-5 SB on-ramp at Jeffrey Road to mitigate the LOS impact. The conversion of the high-occupancy vehicle (HOV) preferential on-ramp to a second metered mixed-flow lane at the I-5 SB on-ramp at Jeffrey Road will increase the on-ramp capacity and reduce the project's LOS impact. This is also identified as a "partially funded" North Irvine Transportation Mitigation (NITM) improvement. As such, the removal of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road will participate in the implementation of this proposed mitigation improvement on a fair-share basis to mitigate its impact utilizing the methodology applied in the NITM program for determining fair share. The fair share calculation is based on the proportion of the forecasted Buildout Pending Plus Irvine Gateway Village Project peak-hour volume ([without Jeffrey Road extension peak-hour volume – with Jeffrey Road extension peak-hour volume]/without Jeffrey Road extension peak-hour volume). As shown in Table F, the Buildout Pending Plus Irvine Gateway Village project with Jeffrey Road Extension a.m. peak-hour volume at this ramp is 1,365 and the Buildout Pending Plus Irvine Gateway Village project without Jeffrey Road Extension a.m. peak-hour volume at this ramp is 1,381, which results in a 1.16 percent fair share contribution.

Peak-Hour Freeway/Tollway Mainline LOS

A summary of freeway/tollway mainline LOS for Buildout Pending Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) is presented in Table G.

Based on the v/c performance criteria discussed before, several freeway/tollway mainline segments in the study area are forecast to operate deficiently in the Buildout Pending Plus Irvine Gateway Village Project (with and without Jeffrey Road Extension) conditions. However, the v/c ratio increase does not exceed the impact threshold for those mainline locations. Therefore, the elimination of the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road can be implemented in a Buildout Pending Plus Irvine Gateway Village Project condition with no peak-hour LOS impacts on freeway/tollway mainline segments in the study area.

VMT Analysis

A VMT analysis was conducted in ITAM TC V1.8 by City of Irvine transportation modeling staff to evaluate the VMT change with and without the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road within a 3-mile radius of the proposed residential project. Per the City's *Traffic Study Guidelines,* a transportation project that results in a net increase in VMT may be deemed significant and may require mitigation.

The VMT results are provided in Attachment C. Table H presents a summary of the VMT analysis results. As shown in Table H, removing the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road would result in a 0.10 percent decrease in VMT and is presumed to have a less than significant CEQA transportation impact in the Buildout Pending Plus Irvine Gateway Village Project condition.

LSA

Table G: Buildout Pending Plus Irvine Gateway Village Project With and Without Jeffrey Road Extension
Freeway/Tollway Mainline LOS Summary

Location	Direction	Lanes	Peak Hour Capacity	With Jeffrey Road Extension						Without Jeffrey Road Extension						V/C Δ		Significant Impact?

Table H: Buildout Pending Plus Irvine Gateway Village Project With and Without Jeffrey Road Extension VMT Analysis Result (Jeffrey Road Extension from Portola Parkway to Santiago Canyon Road)

Scenario	Total VMT[1] (Within a 3-Mile Radius of the Proposed Project)
Buildout Pending Plus Irvine Gateway Village Project with Jeffrey Road Extension	3,332,483
Buildout Pending Plus Irvine Gateway Village Project without Jeffrey Road Extension	3,329,221
Difference	**-3,262 (-0.10%)**
Significant Impact?	**No**

Source: Compiled by LSA (2024).
[1] VMT results are provided in Attachment C.
VMT = vehicle miles traveled

CONCLUSIONS

A feasibility analysis was conducted to determine potential impacts associated with the elimination of the planned Jeffrey Road extension from the City's MPAH for both Buildout Approved and Pending scenarios. The summary of the feasibility analysis is as follows:

- **Buildout Approved Plus Irvine Gateway Village Project With and Without Jeffrey Road Extension:** This scenario evaluates the potential LOS impacts of removing the Jeffrey Road extension from Portola Parkway to SR-241. Based on the LOS analysis results, the elimination of the Jeffrey Road extension from Portola Parkway to SR-241 would create an LOS impact at the intersection of SR-133 SB Ramps/Great Park Boulevard. A Project Study Report is currently being prepared by the City of Irvine for the SR-133 SB Ramps/Great Park Boulevard interchange. The proposed design of SR-133 SB ramps/Great Park Boulevard interchange includes one SB left-turn lane, one shared lane for through and left-turns, and two SB right-turn lanes. With this city project underway, the LOS impact at this location resulting from the No Jeffrey Extension condition (provided in Attachment B) is improved and therefore adequately mitigated. Therefore, the proposed design at this new interchange would mitigate the LOS impact at SR-133 SB Ramps/Great Park Boulevard.

  Removing the Jeffrey Road extension from Portola Parkway to SR-241 would result in a 0.66 percent increase in VMT and would be presumed to have a significant CEQA transportation impact in the Buildout Approved Plus Irvine Gateway Village Project condition.

- **Buildout Pending Plus Irvine Gateway Village Project With and Without Jeffrey Road Extension:** This scenario evaluates the potential LOS impacts of removing the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road. Based on the LOS analysis results, the elimination of the Jeffrey Road extension from Portola Parkway to SR-241 would create an LOS impact at the following locations; however, the corresponding improvements are proposed to mitigate the LOS impact.

  - Intersection of SR-133 SB Ramps/Great Park Boulevard. A Project Study Report is currently being prepared by the City of Irvine for the SR-133 SB Ramps/Great Park Boulevard interchange. The proposed design of SR-133 SB ramps/Great Park Boulevard interchange

includes one SB left-turn lane, one shared lane for through and left-turns, and two SB right-turn lanes. With this city project underway, the LOS impact at this location resulting from the No Jeffrey Extension condition (provided in Attachment B) is improved and therefore adequately mitigated. Therefore, the proposed design at this new interchange would mitigate the LOS impact at SR-133 SB Ramps/Great Park Boulevard.

- I-5 SB on-ramp at Jeffrey Road. The conversion of the HOV preferential on-ramp to a second metered mixed-flow lane at this ramp location will increase the on-ramp capacity and reduce the project's LOS impact. This is identified as an NITM partially funded improvement. The project will participate in the implementation of this proposed mitigation improvement on a fair-share basis to mitigate its impact, and a 1.16 percent fair-share contribution would be required.

Removing the Jeffrey Road extension from Portola Parkway to Santiago Canyon Road would result in a 0.10 percent decrease in VMT and would be presumed to have a less than significant CEQA transportation impact in the Buildout Pending Plus Irvine Gateway Village Project condition.
