| Create a jurisdiction-specific ZEV ecosystem to support deployment of ZEVs statewide (such as building standards that exceed state building codes, permit streamlining, infrastructure siting, consumer education, preferential parking policies, and ZEV readiness plans) | |

**Table 4. 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies**

| Strategy/Action | Potential Conflicts |
|---|---|
| **VMT Reduction** | |
| Reduce or eliminate minimum parking standards | **Potential Conflict.** Changes to parking requirements can only be implemented through updates to the Monterey County Code (County Code) and would apply to the entire UMC, which is beyond the HEU6's scope. However, the HEU6 does include some options to reduce parking below standards. Goal H-3 allows for adjusting parking standards for small developments below the Density Bonus law threshold when affordable units for the older adults or people with disabilities are provided. Goal H-5 allows for consideration of reduced parking as a development incentive to encourage the creation of affordable housing for special needs groups. Although the 2022 Scoping Plan encourages reducing parking requirements, this key project attribute could potentially conflict with the 2022 Scoping Plan priority to provide new EV charging stations. Therefore, MM-GHG-OBJ-1 and MM-GHG-CONS-2 both prioritize the provision of ample EV infrastructure and require that developments not provide more parking than the County's existing requirements. As such, the project would potentially conflict with this 2022 Scoping Plan strategy. |
| Implement Complete Streets policies and investments, consistent with general plan circulation element requirements | **No Conflict.** This strategy would be implemented by the County. Complete Streets are streets that are designed and operated to enable safe access for all users and for all modes of travel including non-motorized users and transit riders. Future development with 25 or more units associated with the project would require compliance with Section 20.64.250 and 21.64.250 of the County Code, which establishes requirements to reduce vehicle trips by ensuring that new developments, redevelopment, and expansion of existing developments contain infrastructure and programs to reduce vehicle travel and encourage alternative modes of travel. For instance, these sections require developers of applicable developments to submit a Trip Reduction Checklist with measures, such as providing ridesharing, installing bicycle amenities, and providing pedestrian facilities linking transit stops and common areas, as part of the ministerial or discretionary permit application materials for the proposed applicable development. The checklist and site development shall identify the proposed design elements and facilities that encourage alternative transportation usage by residents, employees, and customers of that development. Further, future development associated with the project would be required to evaluate consistency with the 2010 General Plan policies related to alternative transportation, such as Circulation Element Policies C-2.6, C-3.5, C-4.3, C-4.5, C-6.5, C-9.2, C-9.3, and C-9.6, which support the development and use of alternative transportation infrastructure. |
| Increase access to public transit by increasing density of development near transit, improving transit service by increasing service frequency, creating bus priority lanes, reducing or eliminating fares, micro-transit, etc | **No Conflict.** Improving transit service frequencies, reducing fares, and creating bus priority lanes would be implemented by local transportation agencies. However, as described above, future development associated with the project would require compliance with Sections 20.64.250 and 21.64.250 of the County Code and applicable policies of the 2010 General Plan Circulation Element to support the development and use of alternative transportation infrastructure. This would allow the project to contribute its fair share to GHG reductions. |

**Table 4. 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies**

| Strategy/Action | Potential Conflicts |
|---|---|
| Increase public access to clean mobility options by planning for and investing in electric shuttles, bike share, car share, and walking | **No Conflict.** This strategy would be implemented by the County. As described above, Sections 20.64.250 and 21.64.250 of the County Code require a Trip Reduction Checklist to be submitted as part of the ministerial or discretionary permit application materials for future development with 25 or more units associated with the project. The Trip Reduction Checklist must include measures to reduce vehicle trips, such as providing ridesharing, park-and-ride facilities, carpools, and vanpools. The checklist and site development shall identify the proposed design elements and facilities that encourage alternative transportation usage by residents, employees, and customers of that development. This would allow the project to contribute its fair share to GHG reductions. |
| Implement parking pricing or transportation demand management pricing strategies | **Potential Conflict.** As described above, Sections 20.64.250 and 21.64.250 of the County Code require a Trip Reduction Checklist with transportation demand management measures to be submitted as part of the ministerial or discretionary permit application materials for future development with 25 or more units associated with the project. Transportation demand management measures to be included in the Trip Reduction Checklist could include providing ridesharing, installing bicycle amenities, and providing pedestrian facilities linking transit stops and common areas. The checklist and site development shall identify the proposed design elements and facilities that encourage alternative transportation usage by residents, employees, and customers of that development. This would allow the project to contribute its fair share to GHG reductions. Nevertheless, the project would not implement parking pricing or transportation demand management pricing strategies for all future development associated with the project; therefore, the project would potentially conflict with this 2022 Scoping Plan strategy. |
| Amend zoning or development codes to enable mixed-use, walkable, transit-oriented, and compact infill development (such as increasing the allowable density of a neighborhood) | **No Conflict.** The proposed HEU6 would accommodate additional housing adjacent to the existing housing development. For example, Opportunity Sites 32 through 34 in the Central Salinas Valley Area Plan area and Opportunity Site 48 in the North County Coastal Land Use Plan area are near existing housing and schools. However, the sites are not necessarily near commercial or employment areas that would result in mixed-use, walkable, and compact development consistent with the Scoping Plan vision for infill development. For example, Opportunity Sites 40 and 45 are in an area with existing residential development in the Greater Monterey Peninsula Area Plan area, but not an existing commercial or employment center. Nevertheless, the project would amend the 2010 General Plan, Land Use Plans and Coastal Implementation Plans, and Zoning Ordinance to facilitate the development of mixed-use and higher density residential development. This would allow for more development in areas close to existing development and infrastructure to increase walkability and use of transit. |

**Table 4. 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies**

| Strategy/Action | Potential Conflicts |
|---|---|
| Preserve natural and working lands by implementing land use policies that guide development toward infill areas and do not convert "greenfield" land to urban uses (e.g., green belts, strategic conservation easements) | **Potential Conflict.** The conversion of agricultural land as a result of the HEU6 is evaluated in Section 4.2, Agriculture and Forestry Resources, of the Program Environmental Impact Report (PEIR). As described therein, implementation of the project would result in the conversion of 0.16 percent of land identified as Important Farmland by the California Department of Conservation's Farming Mapping and Monitoring Program. In addition, buildout of the project would result in residential development on land that is currently zoned for uses that allow for agricultural activities, conservatively estimated as a loss of approximately 0.0003 percent of the total land zoned for agriculture in Monterey County. While these percentages are small, the impacts are considered to be potentially significant because the land would be permanently removed from the potential for agricultural production.<br>Chapter 21.92 of the County Code provides Regulations to Mitigate for Development on Farmland, including the requirement for a Farmland Mitigation Plan for any conversion of agricultural use to a non-agricultural use. There is no important farmland located on opportunity sites in the coastal zone. The Farmland Mitigation shall include Farmland Conservation Easements or Farmland Deed Restrictions, in-lieu fees, or alternative and complementary mitigation to the satisfaction of the Agricultural Advisory Committee. As evaluated in Section 4.2 of the PEIR, the only way to fully avoid impacts on important farmland and agriculturally zoned land would be to eliminate all opportunity sites on these lands. However, doing so would substantially reduce the flexibility for County decision-makers to meet regional housing needs and specific affordability targets. Therefore, impacts on agricultural resources would remain significant and unavoidable.<br>MM-BIO-OBJ-1, MM-BIO-OBJ-2, MM-BIO-CONS-3 through MM-BIO-CONS-5, MM-BIO-OBJ-6, MM-BIO-CONS-7, MM-BIO-OBJ-8, MM-BIO-CONS-9, MM-BIO-CONS-10, and MM-BIO-CONS-11 would require protective measures for sensitive plants, wildlife, vegetation communities, jurisdictional aquatic resources, and other habitat to avoid impacts on sensitive biological resources from future development. As described further in Section 4.4, Biological Resources, of the PEIR, implementation of these mitigation measures would mitigate all direct and indirect permanent and temporary impacts on biological resources to a less than significant level.<br>Further, the County is in the process of updating its 2010 General Plan Conservation and Open Space Element in compliance with Senate Bill 1425 to address climate resilience, equitable access to open space, and the preservation, enhancement, and expansion of an integrated open space network.<br>It should also be noted that the HEU6 includes Policy H-3.2 "Place first priority on planning for residential growth in Community Areas near existing or planned infrastructure to ensure conservation of the County's agricultural and natural resources." Nevertheless, the significant and unavoidable impact on agricultural lands results in a potential conflict with this strategy. |

**Table 4. 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies**

| Strategy/Action | Potential Conflicts |
|---|---|
| **Building Decarbonization** | |
| Adopt all-electric new construction reach codes for residential and commercial uses | **Partially Met.** AB 130 limits the County's ability to update building codes to apply more restrictive standards to housing development, including green building standards, effective October 1, 2025, through June 1, 2031. The County is exploring how restrictions on natural gas may be adopted as part of CCAAP implementation; however, the CCAAP is not yet adopted, and the details of potential future restrictions are unknown. As such, the AB 130 limitation is assumed to be in place for the entirety of the HEU planning cycle. However, the goal of this strategy is to increase the use of electricity and reduce fossil fuel emissions. The primary energy provider for Monterey County, including the UMC, is Central Coast Community Energy (3CE), which has to comply with state renewable energy portfolio targets, including receiving 60 percent renewable energy by 2030 and zero carbon sources by 2045. Further, 3CE procures electricity from clean and renewable energy sources such as wind, solar, and geothermal, and purchases electricity from the grid to meet the energy demand. In addition, future development associated with the project would be required to comply with the most recent Title 24 energy standards for energy efficiency. The 2025 Title 24 Energy Efficiency Standards require new single-family and multi-family residential to be electric-ready for heat pumps, cooktops, and clothes dryers. The 2025 CALGreen includes the use of electric heat pumps for heating and electric-ready requirements for kitchen appliances in single-family homes and increased electric-ready requirements for multi-family homes. Electric-ready appliances have the potential to be easily converted to electric in the future without requiring significant construction activities.<br>The County Code includes existing requirements to reduce energy use, including low-flow plumbing fixtures (Chapter 18.44, Residential and Commercial Water Conservation Measures) and renewable energy generation requirements for new structures greater than 25,000 square feet (Section 18.11.040, Renewable Energy Generation Requirements). In addition, the 2010 General Plan includes Goal OS-9 to promote efficient energy use and Policies OS-9.1 through OS-9.8 to support this strategy.<br>Also consistent with reducing energy use from reducing water usage, Chapter 16.63 (Standards for Landscaping) of the County Code requires drought-tolerant plants and other water conservation and energy efficiency measures for all landscapes. Project operations and waste management methods would be consistent with waste reduction and diversion requirements, such as Chapter 10.45 (Organic Waste Disposal Reduction) of the County Code and CALGreen construction and demolition recycling requirements.<br>The County has not adopted all-electric new construction standards, so this analysis identifies a partial conflict. If permissible under AB 130 and as a result of future CCAAP measures, the County may consider such requirements, which, if adopted, would result in a no conflict determination. |

**Table 4. 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies**

| Strategy/Action | Potential Conflicts |
|---|---|
| Adopt policies and incentive programs to implement energy efficiency retrofits for existing buildings, such as weatherization, lighting upgrades, and replacing energy-intensive appliances and equipment with more efficient systems (such as Energy Star-rated equipment and equipment controllers) | **No Conflict.** This strategy would apply to existing buildings. Future development associated with the project may include renovations and expansion of existing development. Future development, redevelopment, and expansions would be required to comply with Title 24 energy standards for energy efficiency. The County Code required reduced energy use, including low-flow plumbing fixtures (Chapter 18.44, Residential and Commercial Water Conservation Measures) and renewable energy generation requirements for new structures greater than 25,000 square feet (Section 18.11.040, Renewable Energy Generation Requirements). In addition, the 2010 General Plan includes Goal OS-9 to promote efficient energy use and Policies OS-9.1 through OS-9.8 to support this strategy. |
| Adopt policies and incentive programs to electrify all appliances and equipment in existing buildings such as appliance rebates, existing building reach codes, or time of sale electrification ordinances | **No Conflict.** As described above, future development associated with the project would be required to comply with the most recent Title 24 energy standards for energy efficiency. The 2022 Title 24 Energy Efficiency Standards require new single-family and multi-family residential to be electric-ready for heat pumps, cooktops, and clothes dryers. The 2025 CALGreen standards include electric heat pump and electric-ready requirements for kitchen appliances in single-family homes and increased electric-ready requirements for multi-family homes. Electric-ready appliances have the potential to be easily converted to electric in the future without requiring significant construction activities.<br>In addition, the primary energy provider for Monterey County is 3CE, which has to comply with state renewable energy portfolio targets, including receiving 60 percent renewable energy by 2030 and zero carbon sources by 2045. 3CE procures electricity from clean and renewable energy sources such as wind, solar, and geothermal. 3CE also purchases electricity from the grid to meet the energy demand. |
| Facilitate deployment of renewable energy production and distribution and energy storage on privately owned land uses (e.g., permit streamlining, information sharing) | **No Conflict.** The proposed HEU6 would facilitate the development of residential development to meet Monterey County's future housing needs and would not conflict with future deployment of renewable energy production, distribution, and energy storage on privately owned land uses. As described above, future development associated with the project would be required to comply with the most recent Title 24 energy standards for renewable energy. For instance, all new single-family residential and multi-family residential buildings up to three habitable stories are required to install photovoltaic solar panels to meet energy demand. Therefore, all new developments associated with the project would require photovoltaic solar panels for renewable energy production and would not conflict with this strategy. This would allow the project to contribute its fair share to GHG reductions. |
| Deploy renewable energy production and energy storage directly in new public projects and on existing public facilities<br>(e.g., solar photovoltaic systems on rooftops of municipal buildings and on canopies in public parking lots, battery storage systems in municipal buildings) | **Not Applicable.** This strategy is not applicable to the project, which would facilitate the development of private residential development to meet Monterey County's future housing needs. The project would not facilitate the development of new public facilities, such as municipal buildings. |

**Source:** CARB 2022.

In addition to the Priority GHG Reduction Strategies, Table 3 of the 2022 Scoping Plan Appendix D identifies key residential and mixed-use project attributes that reduce GHGs as a guide to identify if a development is clearly consistent with the State of California's climate goals. Table 5, 2022 Scoping Plan Appendix D Key Residential and Mixed-Use Project Attributes that Reduce Greenhouse Gases, evaluates whether future developments associated with the project would be able to meet the key residential and mixed-use project attributes that reduce GHGs identified in Table 3 of the 2022 Scoping Plan Appendix D.

**Table 5. 2022 Scoping Plan Appendix D Key Residential and Mixed-Use Project Attributes that Reduce Greenhouse Gases**

| Strategy/Action | Potential Conflicts |
|---|---|
| **Transportation Electrification** | |
| Provides EV charging infrastructure that, at a minimum, meets the most ambitious voluntary standards in CALGreen at the time of project approval | **Met.** This would be required of future development associated with the project (refer to MM-GHG-OBJ-1 and MM-GHG-CONS-2). |
| **VMT Reduction** | |
| Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer) | **Partially Met.** The proposed HEU6 would accommodate additional housing adjacent to the existing housing development. However, although opportunity sites are near existing development, not all sites are necessarily near existing urban uses that would result in mixed-use, walkable, and compact development consistent with the Scoping Plan vision for infill development. Nevertheless, the project would amend the Local Coastal Plan, General Plan, and Zoning Ordinance to facilitate the development of mixed-use and higher density residential development and would allow for more development in areas close to existing development and infrastructure to increase walkability and use of transit. Identification of opportunity sites prioritized sites presently served by existing utilities and essential public services. |
| Does not result in the loss or conversion of natural and working lands | **Partially Met.** As described in Table 4, the conversion of agricultural land as a result of the project would result in significant and unavoidable impacts on agricultural land (refer to Section 4.2, Agriculture and Forestry Resources, of the PEIR). However, Chapter 21.92 of the County Code provides Regulations to Mitigate for Development on Farmland, including the requirement for a Farmland Mitigation Plan for any conversion of agricultural use to a non-agricultural use. There is no important farmland located on opportunity sites in the coastal zone. The Farmland Mitigation shall include Farmland Conservation Easements or Farmland Deed Restrictions, in-lieu fees, or alternative and complementary mitigation. In addition, the County is in the process of updating its 2010 General Plan Conservation and Open Space Element in compliance with Senate Bill 1425 to address climate resilience, equitable access to open space, and the preservation, enhancement, and expansion of an integrated open space network.<br>Further, MM-BIO-OBJ-1, MM-BIO-OBJ-2, MM-BIO-CONS-3 through MM-BIO-CONS-5, MM-BIO-OBJ-6, MM-BIO-CONS-7, MM-BIO-OBJ-8, MM-BIO-CONS-9, MM-BIO-CONS-10, and MM-BIO-CONS-11 would require protective measures for sensitive plants, wildlife, vegetation communities, jurisdictional aquatic resources, and other habitat to avoid impacts on sensitive biological resources from future development. As described further in Section 4.4, Biological Resources, of the PEIR, implementation of these mitigation measures would mitigate all direct and indirect permanent and temporary impacts on biological resources to a less than significant level. |

**Table 5. 2022 Scoping Plan Appendix D Key Residential and Mixed-Use Project Attributes that Reduce Greenhouse Gases**

| Strategy/Action | Potential Conflicts |
|---|---|
| Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre), or is in proximity to existing transit stops (within a half mile), or satisfies more detailed and stringent criteria specified in the region's SCS | **Met.** The proposed zoning for all opportunity sites is HDR/205 or HDR/30(High Density Residential at 25 or 30 dwelling units per acre) except Opportunity Site 51, which is planned as Mixed-Use Zoning. Site 51 is within 0.5 mile of existing transit stops. These sites, however, would all consist of transit-supportive densities (a minimum of 20 residential dwelling units per acre). |
| Reduces parking requirements by:<br>○ Eliminating parking requirements or including maximum allowable parking ratios (i.e., the ratio of parking spaces to residential units or square feet); or<br>○ Providing residential parking supply at a ratio of less than one parking space per dwelling unit; or<br>○ For multi-family residential development, requiring parking costs to be unbundled from costs to rent or own a residential unit | **Partially Met.** Changes to parking requirements can only be implemented through updates to the County's Code of Ordinances and would apply to the entire UMC, which is beyond the HEU6's scope. However, the HEU6 does include some options to reduce parking below standards. Goal H-3 allows for adjusting parking standards for small developments below the Density Bonus law threshold when affordable units for the older adults or people with disabilities are provided. Goal H-5 allows for consideration of reduced parking as a development incentive to encourage the creation of affordable housing for special needs groups. Although the 2022 Scoping Plan encourages reducing parking requirements, this key project attribute could potentially conflict with the 2022 Scoping Plan priority to provide new EV charging stations. Therefore, MM-GHG-OBJ-1 and MM-GHG-CONS-2 prioritize the provision of ample EV infrastructure and require that developments not provide more parking than the County's existing requirements. |
| At least 20 percent of units included are affordable to lower-income residents | **Met.** The project identifies sites for capacity of up to 999 units in the Extremely Low/Very Low-Income category and 726 units in the Low-Income category in opportunity sites. This represents 39 percent of the reasonable capacity total of 4,434 units planned for under the project in opportunity sites. Therefore, the project provides an opportunity for at least 20 percent of total units included under the HEU6 to be affordable to lower-income residents. |
| Results in no net loss of existing affordable units | **Met.** This would be required of future development associated with the project (refer to MM-GHG-OBJ-1 and MM-GHG-CONS-2). In addition, the proposed HEU6 identifies sites for capacity of up to 999 units in the Extremely Low/Very Low-Income category and 726 units in the Low-Income category. Further, the project includes housing policies and programs to facilitate the development of new units and preserve existing housing for residents at all income levels. |
| **Building Decarbonization** | |
| Uses all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking | **Partially Met.** AB 130 limits the County's ability to update building codes to apply more restrictive standards to housing development, including green building standards, effective October 1, 2025, through June 1, 2031. As such, this limitation would be in place for the entirety of the HEU planning cycle. However, future development associated with the project would be required to comply with the most recent Title 24 energy standards for energy efficiency, which include increasingly stringent requirements on the use of natural gas. The 2022 Title 24 Energy Efficiency Standards require new single-family and multi-family residential to be electric-ready for heat pumps, cooktops, and clothes dryers. The 2025 CALGreen includes the use of electric heat pumps for heating and electric-ready requirements for kitchen appliances in |

**Table 5. 2022 Scoping Plan Appendix D Key Residential and Mixed-Use Project Attributes that Reduce Greenhouse Gases**

| Strategy/Action | Potential Conflicts |
|---|---|
| | single-family homes and increased electric-ready requirements for multi-family homes. Electric-ready appliances have the potential to be easily converted to electric in the future without requiring significant construction activities.<br>The County has not adopted all-electric new construction standards, so this analysis identifies a partial conflict. If permissible under AB 130 and as a result of future CCAAP measures, the County may consider such requirements, which, if adopted, would result in a no conflict determination. |

**Source:** CARB 2022.

## Transportation Electrification

The provision of EV charging infrastructure is a project-specific design requirement. While EV charging infrastructure is required for new construction under CALGreen, additional requirements that meet the most ambitious voluntary standards in CALGreen may be incorporated into the County's Zoning Code or CCAAP. Unless and until this design requirement is codified, implementation of MM-GHG-OBJ-1 and MM-GHG-CONS-2 would require that all future developments associated with the HEU6 provide EVSE that, at a minimum, meets the most ambitious voluntary standard in CALGreen at the time of project approval. This would allow the project to contribute its fair share to GHG reductions. Additionally, the County has adopted the Zero Emissions Shared Mobility Study to identify innovative, accessible, and sustainable transportation options, especially for residents in low-income, rural, and historically underserved communities. This effort aims to address transportation gaps by exploring shared zero-emissions mobility solutions, such as e-bikesharing, ridesharing with EVs, car or van pooling, among others, that are reliable, affordable, and non-polluting. The project would not conflict with this County effort.

## VMT Reduction

Increased housing availability is a key focus of the 2022 Scoping Plan Appendix D. However, the focus of the 2022 Scoping Plan as it relates to housing is the opportunity for land use plans to eliminate barriers to infill development, such that meeting the ongoing need for additional housing is integrated with climate goals.[3] For instance, in Appendix D, CARB states, "In many cases, land use strategies that support more compact development in infill areas, particularly those already displaying efficient resident travel patterns, have the greatest potential to reduce emissions while also reducing combined housing and transportation costs for Californians and infrastructure costs for local governments due to avoided new roads, public schools, and other sprawl supporting infrastructure. Infill housing development alleviates pressure to develop on the urban periphery, preserving natural and working lands and areas often at risk of wildfire." However, the HEU6 must balance the need for infill development with the State of California's requirements for Affirmatively Furthering Fair Housing, which aims to combat housing discrimination, eliminate racial bias, undo historic patterns of segregation, and lift barriers that restrict access to foster inclusive communities and achieve racial equity, fair housing choice, and opportunity for all Californians. Additionally, the UMC is not urbanized, and there are not enough existing opportunities for infill development to meet RHNA targets. As described in Tables 4 and 5, while the proposed HEU6 would accommodate additional housing adjacent to existing housing development, the sites are not necessarily near commercial or employment areas that would result in mixed-use, walkable, and compact development consistent with the Scoping Plan vision for infill development. The site selection process for HEU6 prioritized sites near

[3] The 2022 Scoping Plan prioritizes "more compact, transportation-efficient development in infill areas and increasing transportation choices with the goal of reducing VMT" to reduce demand for transportation fuel, require less energy for buildings, and help to conserve natural and working lands that sequester carbon (CARB 2022).

existing development consistent with the State of California's infill priorities, but the project cannot demonstrate that all future development facilitated by the HEU6 would meet the 2022 Scoping Plan Appendix D key project attributes related to infill development.

The recommended target in the 2022 Scoping Plan Appendix D related to VMT is to reduce VMT per capita by 25 percent below 2019 levels by 2030 and 30 percent below 2019 levels by 2045. The Draft Greenhouse Gas Emissions Inventory Report conducted for the County CCAAP calculated an annual VMT of 1,050,848,408 and a population of approximately 106,197 for the UMC in 2019, resulting in a daily VMT per capita of approximately 27 miles (County of Monterey 2024). The Transportation Analysis for the project determined that project VMT per capita would be 20.9 miles, and 31.7 miles per employee in 2031 (Kimley-Horn 2026b) under the theoretical maximum buildout capacity of 12,497 housing units. VMT would be reduced compared to 21.5 VMT/capita and 30.4 VMT/employee estimated for the year 2031 without project implementation. However, VMT per capita would not achieve the 30 percent reduction metric recommended by the 2022 Scoping Plan. Project VMT would also exceed the applicable Governor's Office of Land Use and Climate Innovation VMT guidelines, as outlined in the Transportation Analysis (Kimley-Horn 2026b). As such, the Transportation Analysis determined the impacts related to VMT would be significant. It therefore recommended VMT-reducing design principles such as transit-oriented development, and transportation demand management measures such as improved bicycle facilities. It should be noted that most of the housing units accommodated by the HEU6 would be within 0.5 mile of bicycle and/or transit facilities. However, the quality of these bicycle and transit facilities is often poor, with limited networks, connections, and hours of operation, as well as infrequent headways for transit service. Further, the effect of planned VMT-reducing design principles and future project-specific design features cannot be determined at the programmatic level. Consequently, the project's impact related to VMT would be significant and unavoidable (Kimley-Horn 2026b). As such, the HEU6 would potentially conflict with 2022 Scoping Plan priorities related to infill development and VMT reduction.

### Building Decarbonization

The use of electric appliances is a project-specific design requirement. The use of all-electric appliances may be incorporated into future applicable local or state regulations; however, as described in Table 4, AB 130 limits the County's ability to adopt a local decarbonization ordinance during the HEU6 planning cycle. The 2025 CALGreen standards include the use of electric heat pumps for heating and electric-ready requirements for kitchen appliances in single-family homes and increased electric-ready requirements for multi-family homes. Electric-ready appliances have the potential to be easily converted to electric in the future without requiring significant construction activities. Further, as described in Table 4, future development would be required to incorporate water conservation and renewable energy measures in accordance with the Monterey County Code (County Code), Chapter 18.44, Residential and Commercial Water Conservation Measures, and Section 18.11.040, Renewable Energy Generation Requirements. The County is exploring how restrictions on natural gas may be adopted as part of CCAAP implementation; however, the CCAAP is not yet adopted, and the details of potential future restrictions are unknown. If adopted, applicable natural gas regulations for CCAAP consistency would result in decarbonization efforts consistent with 2022 Scoping Plan priorities. However, because building a decarbonization mandate cannot be demonstrated to be implemented during the HEU6 planning cycle, there are potential conflicts with the 2022 Scoping Plan priorities related to building decarbonization.

### Summary

Given that the project would result in significant and unavoidable impacts related to agricultural resources and VMT, and is precluded by AB 130 from mandating building decarbonization, the project cannot demonstrate that it would result in no conflicts with all 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies and key project attributes. Alternatively, the 2022 Scoping Plan notes that developments that result in net-zero GHG emissions would be considered to have a less than significant impact related to GHG emissions. However, this cannot be demonstrated at the programmatic level.

Until CARB's key project attributes are codified, future residential development under the HEU6 would need to demonstrate either no conflicts with the 2022 Scoping Plan key project attributes or net-zero GHG emissions to determine a less than significant impact related to GHG emissions. Since the project cannot demonstrate no conflicts with all 2022 Scoping Plan key project attributes or net-zero GHG emissions, the project's impact related to GHG emissions would be potentially significant.

## Mitigation Measures

Implementation of Mitigation Measure (MM-) GHG-OBJ-1, MM-GHG-CONS-2, MM-AG-OBJ-1, MM-AG-CONS-2, MM-AG-OBJ-3, MM-AG-CONS-4, MM-AG-OBJ-5, MM-AG-CONS-6, MM-BIO-OBJ-1, MM-BIO-OBJ-2, MM-BIO-CONS-3 through MM-BIO-CONS-5, MM-BIO-OBJ-6, MM-BIO-CONS-7, MM-BIO-OBJ-8, MM-BIO-CONS-9, MM-BIO-CONS-10, MM-BIO-CONS-11, and MM-TRA-OBJ-1 would result in implementation of key attributes outlined in the 2022 Scoping Plan Appendix D to the extent feasible.

AB 130 limits the County's ability to enact more restrictive standards for residential development to require implementation of the 2022 Scoping Plan key design features, including building decarbonization, Additionally, there are not enough sites available in the UMC that meet the 2022 Scoping Plan standards for infill and natural/working land requirements and also accommodate sufficient housing under the RHNA. MM-GHG-OBJ-1 and MM-GHG-CONS-2 include project design features based on the 2022 Scoping Plan Appendix D Table 3, Key Residential and Mixed-Use Project Attributes that Reduce GHGs). These features do not exceed the voluntary building standards that are codified under the California Green Building Standards Code and therefore do not put additional limitations on residential development that would conflict with AB 130.

However, not all future developments associated with the HEU6 would be able to individually demonstrate consistency with the key project attributes for infill sites surrounded by urban uses, no loss or conversion of natural and working lands, at least 20 percent affordable units, transit-supportive densities, and no use of natural gas. It would be infeasible to limit future residential development to sites that meet these criteria while also providing housing consistent with housing targets. However, it should be noted that although not all individual sites may achieve the 20 percent affordable unit target, the project as a whole plans for 39 percent of the opportunity site capacity to be affordable for low-income residents. In addition, changes to parking requirements can only be implemented through updates to the County Code. Such changes would apply to all development in the UMC[4], not only the potential development areas identified in the HEU6. As such, these requirements would be beyond the HEU6's scope.

Further, although the 2022 Scoping Plan encourages reducing parking requirements, this could potentially conflict with the key project attribute to provide new EV charging stations. Therefore, MM-GHG-OBJ-1 and MM-GHG-CONS-2 meet this key project attribute to the extent feasible by prioritizing the provision of ample EV infrastructure and requiring that developments do not provide more parking than the County's existing requirements. MM-AG-OBJ-1, MM-AG-CONS-2, MM-AG-OBJ-3, MM-AG-CONS-4, MM-AG-OBJ-5, MM-AG-CONS-6, MM-BIO-OBJ-1, MM-BIO-OBJ-2, MM-BIO-CONS-3 through MM-BIO-CONS-5, MM-BIO-OBJ-6, MM-BIO-CONS-7, MM-BIO-OBJ-8, MM-BIO-CONS-9, MM-BIO-CONS-10, MM-BIO-CONS-11, and MM-TRA-OBJ-1 would also reduce impacts related to the 2022 Scoping Plan consistency by reducing impacts on natural and working lands and VMT. However, impacts related to agricultural land and VMT would remain significant and unavoidable. Once adopted, the CCAAP would include additional actions that reduce GHG emissions in the UMC, but the timing of future residential development requirements is currently unknown.

Therefore, MM-GHG-OBJ-1, MM-GHG-CONS-2, MM-AG-OBJ-1, MM-AG-CONS-2, MM-AG-OBJ-3, MM-AG-CONS-4, MM-AG-OBJ-5, MM-AG-CONS-6, MM-BIO-OBJ-1, MM-BIO-OBJ-2, MM-BIO-CONS-3 through MM-BIO-CONS-5, MM-BIO-OBJ-6, MM-BIO-CONS-7, MM-BIO-OBJ-8, MM-BIO-CONS-9, MM-BIO-CONS-10, MM-BIO-CONS-11, and MM-TRA-OBJ-1 require implementation of the 2022 Scoping Plan key attributes to the extent feasible, but

[4] Opportunity Site 53 is in the City of Marina and standard Monterey County Code will not be applicable.

individual projects would potentially result in conflicts related to agricultural resources, VMT, and building decarbonization.

**MM-GHG-OBJ-1:** Prior to approval of a grading permit for new development streamlining under the Objective Process, developers shall demonstrate consistency with key project attributes based on the 2022 Scoping Plan Appendix D, Key Residential and Mixed-Use Project Attributes that Reduce GHGs (Table 3 of the 2022 Scoping Plan Appendix D).[5] The development shall either ensure consistency with all of the following key project attributes or identify and quantify project features that would result in equivalent GHG emissions reductions:

- Provides electric vehicle charging infrastructure that, at a minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval; and
- Does not provide parking beyond the minimum required parking; and
- Results in no net loss of existing affordable housing.

Final project design shall incorporate the above design measures or an equivalent GHG emissions reduction feature in the construction of the residential units. The County of Monterey shall ensure that these items are included in project construction documents.

**MM-GHG-CONS-2:** Future residential developments that would streamline under the Consistency Process shall demonstrate consistency with key project attributes based on the 2022 Scoping Plan Appendix D, Key Residential and Mixed-Use Project Attributes that Reduce GHGs (Table 3 of the 2022 Scoping Plan Appendix D).[6] The development shall either ensure consistency with all of the following key project attributes or identify and quantify project features that would result in equivalent GHG emissions reductions:

- Provides electric vehicle charging infrastructure that, at a minimum, meets the most ambitious voluntary standard in the California Green Building Standards Code at the time of project approval; and
- Does not provide parking beyond the minimum required parking; and
- Results in no net loss of existing affordable housing.

Final project design shall incorporate the above design measures or an equivalent GHG emissions reduction feature in the construction of the residential units. The County shall ensure that these items are included in project construction documents.

## Conclusion

Implementation of the project would result in a net increase in GHG emissions and would have the potential to result in conflicts with plan-level recommendations of the 2022 Scoping Plan related to infill development, VMT reduction, building decarbonization, and preserving natural and working lands. Future residential development would need to implement key project-specific design attributes to demonstrate consistency with statewide emissions reduction goals as outlined in the 2022 Scoping Plan. Implementation of MM-GHG-OBJ-1, MM-GHG-CONS-2, MM-AG-OBJ-1, MM-AG-CONS-2, MM-AG-OBJ-3, MM-AG-CONS-4, MM-AG-OBJ-5, MM-AG-CONS-6, MM-BIO-OBJ-1, MM-BIO-OBJ-2, MM-BIO-CONS-3 through MM-BIO-CONS-5, MM-BIO-OBJ-6, MM-BIO-CONS-7, MM-BIO-OBJ-8, MM-BIO-CONS-9, MM-BIO-CONS-10, MM-BIO-CONS-11, and MM-TRA-OBJ-1 would reduce impacts related to future development under the HEU6. However, GHG emissions related to VMT, natural gas use, and loss of agricultural land are not anticipated to be mitigated to less than significant impacts for all development under the HEU6. As such, the project would potentially conflict with these 2022 Scoping Plan priorities, and the project's impact related to GHG emissions would remain significant and unavoidable.

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 1/2/2023 | 1/26/2026 | 5.00000 | 800.000 | — |
| Site Preparation | Site Preparation | 1/27/2026 | 11/30/2027 | 5.00000 | 480.000 | — |

| | | | | | | |
|---|---|---|---|---|---|---|
| Grading | Grading | 12/1/2025 | 8/30/2030 | 5.00000 | 1,240.00 | — |
| Building Construction | Building Construction | 1/2/2023 | 12/31/2031 | 5.00000 | 2,348.00 | — |
| Paving | Paving | 6/1/2028 | 10/15/2031 | 5.00000 | 880.000 | — |
| Architectural Coating | Architectural Coating | 6/1/2028 | 10/15/2031 | 5.00000 | 880.000 | — |

## 5.2. Off-Road Equipment

### 5.2.1. Unmitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Concrete/Industrial Saws | Diesel | Average | 1.000000 | 8.00000 | 33.0000 | 0.73000 |
| Demolition | Rubber Tired Dozers | Diesel | Average | 2.00000 | 8.00000 | 367.000 | 0.40000 |
| Demolition | Excavators | Diesel | Average | 3.00000 | 8.00000 | 36.0000 | 0.38000 |
| Site Preparation | Tractors/Loaders/Backhoes | Diesel | Average | 4.00000 | 8.00000 | 84.0000 | 0.37000 |
| Site Preparation | Rubber Tired Dozers | Diesel | Average | 3.00000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Graders | Diesel | Average | 1.000000 | 8.00000 | 148.000 | 0.41000 |
| Grading | Rubber Tired Dozers | Diesel | Average | 1.000000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Tractors/Loaders/Backhoes | Diesel | Average | 2.00000 | 8.00000 | 84.0000 | 0.37000 |
| Grading | Excavators | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Grading | Scrapers | Diesel | Average | 2.00000 | 8.00000 | 423.000 | 0.48000 |
| Building Construction | Cranes | Diesel | Average | 1.000000 | 7.00000 | 367.000 | 0.29000 |
| Building Construction | Forklifts | Diesel | Average | 3.00000 | 8.00000 | 82.0000 | 0.20000 |
| Building Construction | Tractors/Loaders/Backhoes | Diesel | Average | 3.00000 | 7.00000 | 84.0000 | 0.37000 |
| Building Construction | Generator Sets | Diesel | Average | 1.000000 | 8.00000 | 14.0000 | 0.74000 |
| Building Construction | Welders | Diesel | Average | 1.000000 | 8.00000 | 46.0000 | 0.45000 |
| Paving | Pavers | Diesel | Average | 2.00000 | 8.00000 | 81.0000 | 0.42000 |
| Paving | Rollers | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Paving | Paving Equipment | Diesel | Average | 2.00000 | 8.00000 | 89.0000 | 0.36000 |
| Architectural Coating | Air Compressors | Diesel | Average | 1.000000 | 6.00000 | 37.0000 | 0.48000 |

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Concrete/Industrial Saws | Diesel | Average | 1.000000 | 8.00000 | 33.0000 | 0.73000 |
| Demolition | Rubber Tired Dozers | Diesel | Average | 2.00000 | 8.00000 | 367.000 | 0.40000 |
| Demolition | Excavators | Diesel | Average | 3.00000 | 8.00000 | 36.0000 | 0.38000 |
| Site Preparation | Tractors/Loaders/Backhoes | Diesel | Average | 4.00000 | 8.00000 | 84.0000 | 0.37000 |
| Site Preparation | Rubber Tired Dozers | Diesel | Average | 3.00000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Graders | Diesel | Average | 1.000000 | 8.00000 | 148.000 | 0.41000 |
| Grading | Rubber Tired Dozers | Diesel | Average | 1.000000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Tractors/Loaders/Backhoes | Diesel | Average | 2.00000 | 8.00000 | 84.0000 | 0.37000 |
| Grading | Excavators | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Grading | Scrapers | Diesel | Average | 2.00000 | 8.00000 | 423.000 | 0.48000 |
| Building Construction | Cranes | Diesel | Average | 1.000000 | 7.00000 | 367.000 | 0.29000 |
| Building Construction | Forklifts | Diesel | Average | 3.00000 | 8.00000 | 82.0000 | 0.20000 |
| Building Construction | Tractors/Loaders/Backhoes | Diesel | Average | 3.00000 | 7.00000 | 84.0000 | 0.37000 |
| Building Construction | Generator Sets | Diesel | Average | 1.000000 | 8.00000 | 14.0000 | 0.74000 |
| Building Construction | Welders | Diesel | Average | 1.000000 | 8.00000 | 46.0000 | 0.45000 |
| Paving | Pavers | Diesel | Average | 2.00000 | 8.00000 | 81.0000 | 0.42000 |
| Paving | Rollers | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Paving | Paving Equipment | Diesel | Average | 2.00000 | 8.00000 | 89.0000 | 0.36000 |
| Architectural Coating | Air Compressors | Diesel | Average | 1.000000 | 6.00000 | 37.0000 | 0.48000 |

## 5.3. Construction Vehicles

### 5.3.1. Unmitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Demolition | Worker | 15.0000 | 9.47000 | LDA,LDT1,LDT2 |
| Demolition | Vendor | — | 6.03000 | HHDT,MHDT |
| Demolition | Hauling | 0.00000 | 20.0000 | HHDT |
| Demolition | Onsite truck | — | — | HHDT |
| Site Preparation | Worker | 17.5000 | 9.47000 | LDA,LDT1,LDT2 |
| Site Preparation | Vendor | — | 6.03000 | HHDT,MHDT |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Apply dust suppressants to unpaved roads | 84% | 84% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |
| Sweep paved roads once per month | 9% | 9% |

## 5.5. Architectural Coatings

| Phase Name | Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|---|
| Architectural Coating | 26,824,811 | 8,941,604 | 0.00000 | 0.00000 | — |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (Ton of Debris) | Material Exported (Ton of Debris) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Site Preparation | 0.00000 | 0.00000 | 135.000 | 0.00000 | 0.00000 |
| Grading | 831,810 | 419,400 | 699.000 | 0.00000 | 0.00000 |
| Paving | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 2 | 61% | 61% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Phase Name | Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|---|
| Paving | Condo/Townhouse | — | 0% |
| Paving | Condo/Townhouse | — | 0% |
| Paving | Condo/Townhouse | — | 0% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2025 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2026 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2027 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2028 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2029 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2030 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2031 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2023 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2024 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |

## 5.9. Operational Mobile Sources

### 5.9.1. Unmitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

| Land Use | Hearth Type | Unmitigated (number) | Mitigated (number) |
|---|---|---|---|
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 6,000 | 6,000 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 6,000 | 6,000 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |

| | | | |
|---|---|---|---|
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 497 | 497 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 26,824,811 | 8,941,604 | 0.00000 | 0.00000 | — |

### 5.10.3. Landscape Equipment

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 21,249,912 | 386.830 | 0.0330 | 0.0040 | 241,382,999 |
| Condo/Townhouse | 21,249,912 | 386.830 | 0.0330 | 0.0040 | 241,382,999 |
| Condo/Townhouse | 1,760,201 | 386.830 | 0.0330 | 0.0040 | 19,994,558 |

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 21,253,137 | 386.830 | 0.0330 | 0.0040 | 0.00000 |
| Condo/Townhouse | 21,253,137 | 386.830 | 0.0330 | 0.0040 | 0.00000 |
| Condo/Townhouse | 1,763,426 | 386.830 | 0.0330 | 0.0040 | 0.00000 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 20,778,129 | 0.00000 |

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 20,778,129 | 0.00000 |

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 367.501 | 0.00000 |

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 367.501 | 0.00000 |

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

| Land Use | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |
| Condo/Townhouse | Household refrigerators and/or freezers | R-134a | 1,430.00 | 0.11538 | 0.60000 | 0.00000 | 1.000000 |
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 6.75000 | annual days of extreme heat |
| Extreme Precipitation | 4.10000 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 31.3300 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |

| | | | | |
|---|---|---|---|---|
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 0 | 0 | 0 | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 1 | 1 | 1 | 2 |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

## 6.4. Climate Risk Reduction Measures

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 13.6154 |
| AQ-PM | 2.92470 |
| AQ-DPM | 26.3846 |
| Drinking Water | 38.7161 |
| Lead Risk Housing | 56.6982 |
| Pesticides | 0.00000 |
| Toxic Releases | 0.53763 |
| Traffic | 27.0500 |
| Effect Indicators | — |
| CleanUp Sites | 82.9787 |
| Groundwater | 87.4813 |
| Haz Waste Facilities/Generators | 30.5890 |
| Impaired Water Bodies | 77.2995 |
| Solid Waste | 59.1753 |
| Sensitive Population | — |
| Asthma | 35.8549 |
| Cardio-vascular | 13.0982 |
| Low Birth Weights | 19.9256 |
| Socioeconomic Factor Indicators | — |
| Education | 24.1205 |
| Housing | 63.9670 |
| Linguistic | 24.7665 |
| Poverty | 26.6709 |
| Unemployment | 37.7147 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 64.9557295 |
| Employed | 60.78532016 |
| Median HI | 46.47760811 |
| Education | — |
| Bachelor's or higher | 81.58603875 |
| High school enrollment | 100 |
| Preschool enrollment | 1.873476197 |
| Transportation | — |
| Auto Access | 57.21801617 |
| Active commuting | 87.89939689 |
| Social | — |
| 2-parent households | 65.78981137 |
| Voting | 70.98678301 |
| Neighborhood | — |
| Alcohol availability | 40.65186706 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 22.0000 |
| Healthy Places Index Score for Project Location (b) | 67.0000 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

### 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

## 8.1. Justifications

| Screen | Justification |
|---|---|
| Characteristics: Utility Information | 3CE serves Monterey County for electricity |
| Construction: Construction Phases | Revised to fit in planning years of 2023-2031 |
| Construction: Dust From Material Movement | Based on CalEEMod suggested estimates |
| Construction: On-Road Fugitive Dust | Site are located adjacent to existing roadways and development. Accessible primarily from paved roads. |
| Operations: Vehicle Data | Mobile emissions calculated separately |

## 8.2. Project Characteristics

### 8.2.1. Project Details

| Model Parameter | Default Value | New Value |
|---|---|---|
| Electric Utility | Pacific Gas & Electric Company | Central Coast Community Energy |

## 8.4. Construction

### 8.4.1. Construction Phases

| Phase Type | Phase Name | Model Parameter | Default Value | New Value |
|---|---|---|---|---|
| Grading | Grading | Start Date | 12/1/2027 | 12/1/2025 |
| Grading | Grading | End Date | 9/1/2032 | 8/30/2030 |
| Building Construction | Building Construction | Start Date | 9/2/2032 | 1/2/2023 |
| Building Construction | Building Construction | End Date | 3/14/2080 | 12/31/2031 |

| | | | | |
|---|---|---|---|---|
| Building Construction | Building Construction | Work Days per Phase | 12,400.0 | 2,348.00 |
| Paving | Paving | Start Date | 3/15/2080 | 6/1/2028 |
| Paving | Paving | End Date | 7/30/2083 | 10/15/2031 |
| Architectural Coating | Architectural Coating | Start Date | 7/31/2083 | 6/1/2028 |
| Architectural Coating | Architectural Coating | End Date | 12/14/2086 | 10/15/2031 |

## 8.4.4. Dust from Material Movement

| Phase Name | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Site Preparation | Material Imported | Ton of Debris | — | 0.00000 |
| Site Preparation | Material Exported | Ton of Debris | — | 0.00000 |
| Site Preparation | Total Acres Graded | acres | 720.000 | 135.000 |
| Grading | Material Imported | Ton of Debris | — | 831,810 |
| Grading | Material Exported | Ton of Debris | — | 419,400 |
| Grading | Total Acres Graded | acres | 3,720.00 | 699.000 |

## 8.4.7. On-Road Fugitive Dust

| Phase Name | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Demolition | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Demolition | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Demolition | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Building Construction | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Building Construction | Vendor Trip Paved | % | 52.0000 | 100.0000 |

| | | | | |
|---|---|---|---|---|
| Building Construction | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Hauling Trip Paved | % | 52.0000 | 100.0000 |

## 8.5. Operations

### 8.5.1. Mobile Sources

#### 8.5.1.1. Vehicle Data

| Land Use | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Condo/Townhouse | Weekday Trip Rate | size/day | 7.32000 | 0.00000 |
| Condo/Townhouse | Saturday Trip Rate | size/day | 8.14000 | 0.00000 |
| Condo/Townhouse | Sunday Trip Rate | size/day | 6.28000 | 0.00000 |
| Condo/Townhouse | Weekday Trip Rate | size/day | 7.32000 | 0.00000 |
| Condo/Townhouse | Saturday Trip Rate | size/day | 8.14000 | 0.00000 |
| Condo/Townhouse | Sunday Trip Rate | size/day | 6.28000 | 0.00000 |
| Condo/Townhouse | Weekday Trip Rate | size/day | 7.32000 | 0.00000 |
| Condo/Townhouse | Saturday Trip Rate | size/day | 8.14000 | 0.00000 |
| Condo/Townhouse | Sunday Trip Rate | size/day | 6.28000 | 0.00000 |

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year

2.2.1. Total Construction Emissions by Year, Unmitigated

2.2.2. Onsite Construction Emissions by Year, Unmitigated

2.2.3. Offsite Construction Emissions by Year, Unmitigated

2.2.4. Total Construction Emissions by Year, Mitigated

2.2.5. Onsite Construction Emissions by Year, Mitigated

2.2.6. Offsite Construction Emissions by Year, Mitigated

2.3. Operations Emissions Compared Against Thresholds

2.4. Operations Emissions by Sector, Unmitigated

2.5. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2023)

3.1.1. Onsite - Unmitigated

3.1.2. Offsite - Unmitigated

3.1.3. Onsite - Mitigated

3.1.4. Offsite - Mitigated

3.2. Demolition (2024)

3.2.1. Onsite - Unmitigated

3.2.2. Offsite - Unmitigated

3.2.3. Onsite - Mitigated

3.2.4. Offsite - Mitigated

3.3. Site Preparation (2024)

3.3.1. Onsite - Unmitigated

3.3.2. Offsite - Unmitigated

3.3.3. Onsite - Mitigated

3.3.4. Offsite - Mitigated

3.4. Grading (2024)

3.4.1. Onsite - Unmitigated

3.4.2. Offsite - Unmitigated

3.4.3. Onsite - Mitigated

3.4.4. Offsite - Mitigated

3.5. Grading (2025)

3.5.1. Onsite - Unmitigated

3.5.2. Offsite - Unmitigated

3.5.3. Onsite - Mitigated

3.5.4. Offsite - Mitigated

3.6. Grading (2026)

3.6.1. Onsite - Unmitigated

3.6.2. Offsite - Unmitigated

3.6.3. Onsite - Mitigated

3.6.4. Offsite - Mitigated

3.7. Building Construction (2023)

3.7.1. Onsite - Unmitigated

3.7.2. Offsite - Unmitigated

3.7.3. Onsite - Mitigated

3.7.4. Offsite - Mitigated

3.8. Building Construction (2024)

3.8.1. Onsite - Unmitigated

3.8.2. Offsite - Unmitigated

3.8.3. Onsite - Mitigated

3.8.4. Offsite - Mitigated

3.9. Building Construction (2025)

3.9.1. Onsite - Unmitigated

3.9.2. Offsite - Unmitigated

3.9.3. Onsite - Mitigated

3.9.4. Offsite - Mitigated

3.10. Building Construction (2026)

3.10.1. Onsite - Unmitigated

3.10.2. Offsite - Unmitigated

3.10.3. Onsite - Mitigated

3.10.4. Offsite - Mitigated

3.11. Building Construction (2027)

3.11.1. Onsite - Unmitigated

3.11.2. Offsite - Unmitigated

3.11.3. Onsite - Mitigated

3.11.4. Offsite - Mitigated

3.12. Building Construction (2028)

3.12.1. Onsite - Unmitigated

3.12.2. Offsite - Unmitigated

3.12.3. Onsite - Mitigated

3.12.4. Offsite - Mitigated

3.13. Building Construction (2029)

3.13.1. Onsite - Unmitigated

3.13.2. Offsite - Unmitigated

3.13.3. Onsite - Mitigated

3.13.4. Offsite - Mitigated

3.14. Building Construction (2030)

3.14.1. Onsite - Unmitigated

3.14.2. Offsite - Unmitigated

3.14.3. Onsite - Mitigated

3.14.4. Offsite - Mitigated

3.15. Building Construction (2031)

3.15.1. Onsite - Unmitigated

3.15.2. Offsite - Unmitigated

3.15.3. Onsite - Mitigated

3.15.4. Offsite - Mitigated

3.16. Paving (2028)

3.16.1. Onsite - Unmitigated

3.16.2. Offsite - Unmitigated

3.16.3. Onsite - Mitigated

3.16.4. Offsite - Mitigated

3.17. Paving (2029)

3.17.1. Onsite - Unmitigated

3.17.2. Offsite - Unmitigated

3.17.3. Onsite - Mitigated

3.17.4. Offsite - Mitigated

3.18. Architectural Coating (2029)

3.18.1. Onsite - Unmitigated

3.18.2. Offsite - Unmitigated

3.18.3. Onsite - Mitigated

3.18.4. Offsite - Mitigated

3.19. Architectural Coating (2030)

3.19.1. Onsite - Unmitigated

3.19.2. Offsite - Unmitigated

3.19.3. Onsite - Mitigated

3.19.4. Offsite - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

# 1. Basic Project Information

## 1.1. Basic Project Information

| Data Field | Value |
|---|---|
| Project Name | Monterey HEU - Reasonable Capacity |
| Construction Start Date | 1/2/2023 |
| Operational Year | 2025 |
| Lead Agency | — |
| Land Use Scale | Plan/community |
| Analysis Level for Defaults | County |
| Windspeed (m/s) | 2.80000 |
| Precipitation (days) | 27.6000 |
| Location | Monterey County, CA, USA |
| County | Monterey |
| City | Monterey |
| Air District | Monterey Bay ARD |
| Air Basin | North Central Coast |
| TAZ | 3238 |
| EDFZ | 6 |
| Electric Utility | Central Coast Community Energy |
| Gas Utility | Pacific Gas & Electric |
| App Version | 2022.1.1.43 |

## 1.2. Land Use Types

| Land Use Subtype | Size | Unit | Lot Acreage | Building Area (sq ft) | Landscape Area (sq ft) | Special Landscape Area (sq ft) | Population | Description |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 4,434.00 | Dwelling Unit | 277.125 | 4,700,040 | 0.00000 | 0.00000 | 14,721.0 | — |

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Energy | E-15 | Require All-Electric Development |

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 395.064 | 75.0020 | 213.388 | 0.20144 | 2.22345 | 31.5414 | 33.7649 | 2.05566 | 9.63667 | 11.6923 | — | 49,916.6 | 49,916.6 | 2.60269 | 3.69242 | 137.406 | 51,219.5 |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 394.610 | 87.1156 | 204.653 | 0.20144 | 2.22642 | 31.5414 | 33.7649 | 2.07075 | 9.63667 | 11.6923 | — | 49,347.7 | 49,347.7 | 2.96981 | 3.80696 | 3.77017 | 50,560.2 |
| Average Daily (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 279.884 | 55.4064 | 140.435 | 0.14389 | 1.52958 | 21.2106 | 22.7402 | 1.41579 | 6.16989 | 7.58567 | — | 34,777.1 | 34,777.1 | 1.96024 | 2.63745 | 42.5093 | 35,654.6 |
| Annual (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 51.0789 | 10.1117 | 25.6293 | 0.02626 | 0.27915 | 3.87093 | 4.15008 | 0.25838 | 1.12600 | 1.38439 | — | 5,757.75 | 5,757.75 | 0.32454 | 0.43666 | 7.03790 | 5,903.02 |

## 2.2. Construction Emissions by Year

### 2.2.1. Total Construction Emissions by Year, Unmitigated

Includes both onsite and offsite emissions.

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Year | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily - Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| 2023 | 21.9523 | 67.0310 | 213.388 | 0.11891 | 1.87898 | 23.8584 | 25.7374 | 1.73875 | 5.69280 | 7.43154 | — | 39,563.9 | 39,563.9 | 2.12414 | 2.40659 | 135.591 | 40,469.8 |
| 2024 | 21.3236 | 72.9881 | 210.159 | 0.13528 | 2.22345 | 31.5414 | 33.7649 | 2.05566 | 9.63667 | 11.6923 | — | 40,865.6 | 40,865.6 | 2.10949 | 2.42252 | 128.011 | 41,768.3 |

### 4.7.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.8. Stationary Emissions By Equipment Type

### 4.8.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Removed | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 1/2/2023 | 2/26/2024 | 5.00000 | 300.000 | — |
| Site Preparation | Site Preparation | 2/27/2024 | 11/5/2024 | 5.00000 | 180.000 | — |
| Grading | Grading | 11/6/2024 | 8/19/2026 | 5.00000 | 465.000 | — |
| Building Construction | Building Construction | 1/2/2023 | 12/31/2031 | 5.00000 | 2,348.00 | — |
| Paving | Paving | 6/17/2028 | 9/21/2029 | 5.00000 | 330.000 | — |
| Architectural Coating | Architectural Coating | 9/23/2029 | 12/29/2030 | 5.00000 | 330.000 | — |

## 5.2. Off-Road Equipment

### 5.2.1. Unmitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Concrete/Industrial Saws | Diesel | Average | 1.000000 | 8.00000 | 33.0000 | 0.73000 |
| Demolition | Excavators | Diesel | Average | 3.00000 | 8.00000 | 36.0000 | 0.38000 |
| Demolition | Rubber Tired Dozers | Diesel | Average | 2.00000 | 8.00000 | 367.000 | 0.40000 |
| Site Preparation | Rubber Tired Dozers | Diesel | Average | 3.00000 | 8.00000 | 367.000 | 0.40000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Site Preparation | Tractors/Loaders/Backhoes | Diesel | Average | 4.00000 | 8.00000 | 84.0000 | 0.37000 |
| Grading | Excavators | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Grading | Graders | Diesel | Average | 1.000000 | 8.00000 | 148.000 | 0.41000 |
| Grading | Rubber Tired Dozers | Diesel | Average | 1.000000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Scrapers | Diesel | Average | 2.00000 | 8.00000 | 423.000 | 0.48000 |
| Grading | Tractors/Loaders/Backhoes | Diesel | Average | 2.00000 | 8.00000 | 84.0000 | 0.37000 |
| Building Construction | Cranes | Diesel | Average | 1.000000 | 7.00000 | 367.000 | 0.29000 |
| Building Construction | Forklifts | Diesel | Average | 3.00000 | 8.00000 | 82.0000 | 0.20000 |
| Building Construction | Generator Sets | Diesel | Average | 1.000000 | 8.00000 | 14.0000 | 0.74000 |
| Building Construction | Tractors/Loaders/Backhoes | Diesel | Average | 3.00000 | 7.00000 | 84.0000 | 0.37000 |
| Building Construction | Welders | Diesel | Average | 1.000000 | 8.00000 | 46.0000 | 0.45000 |
| Paving | Pavers | Diesel | Average | 2.00000 | 8.00000 | 81.0000 | 0.42000 |
| Paving | Paving Equipment | Diesel | Average | 2.00000 | 8.00000 | 89.0000 | 0.36000 |
| Paving | Rollers | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Architectural Coating | Air Compressors | Diesel | Average | 1.000000 | 6.00000 | 37.0000 | 0.48000 |

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Concrete/Industrial Saws | Diesel | Average | 1.000000 | 8.00000 | 33.0000 | 0.73000 |
| Demolition | Excavators | Diesel | Average | 3.00000 | 8.00000 | 36.0000 | 0.38000 |
| Demolition | Rubber Tired Dozers | Diesel | Average | 2.00000 | 8.00000 | 367.000 | 0.40000 |
| Site Preparation | Rubber Tired Dozers | Diesel | Average | 3.00000 | 8.00000 | 367.000 | 0.40000 |
| Site Preparation | Tractors/Loaders/Backhoes | Diesel | Average | 4.00000 | 8.00000 | 84.0000 | 0.37000 |
| Grading | Excavators | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Grading | Graders | Diesel | Average | 1.000000 | 8.00000 | 148.000 | 0.41000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Grading | Rubber Tired Dozers | Diesel | Average | 1.000000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Scrapers | Diesel | Average | 2.00000 | 8.00000 | 423.000 | 0.48000 |
| Grading | Tractors/Loaders/Backhoes | Diesel | Average | 2.00000 | 8.00000 | 84.0000 | 0.37000 |
| Building Construction | Cranes | Diesel | Average | 1.000000 | 7.00000 | 367.000 | 0.29000 |
| Building Construction | Forklifts | Diesel | Average | 3.00000 | 8.00000 | 82.0000 | 0.20000 |
| Building Construction | Generator Sets | Diesel | Average | 1.000000 | 8.00000 | 14.0000 | 0.74000 |
| Building Construction | Tractors/Loaders/Backhoes | Diesel | Average | 3.00000 | 7.00000 | 84.0000 | 0.37000 |
| Building Construction | Welders | Diesel | Average | 1.000000 | 8.00000 | 46.0000 | 0.45000 |
| Paving | Pavers | Diesel | Average | 2.00000 | 8.00000 | 81.0000 | 0.42000 |
| Paving | Paving Equipment | Diesel | Average | 2.00000 | 8.00000 | 89.0000 | 0.36000 |
| Paving | Rollers | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Apply dust suppressants to unpaved roads | 84% | 84% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |
| Sweep paved roads once per month | 9% | 9% |

## 5.5. Architectural Coatings

| Phase Name | Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|---|
| Architectural Coating | 9,517,581 | 3,172,527 | 0.00000 | 0.00000 | — |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (Ton of Debris) | Material Exported (Ton of Debris) | Acres Graded (acres) | Material Demolished (sq. ft.) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00000 | 0.00000 | 0.00000 | — | 0.00000 |
| Site Preparation | 0.00000 | 0.00000 | 135.000 | 0.00000 | 0.00000 |
| Grading | 365,330 | 184,200 | 699.000 | 0.00000 | 0.00000 |
| Paving | 0.00000 | 0.00000 | 0.00000 | 0.00000 | — |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 2 | 61% | 61% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Phase Name | Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|---|
| Paving | Condo/Townhouse | — | 0% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2025 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2026 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2027 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2028 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2029 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2030 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2031 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |

| | | | | |
|---|---|---|---|---|
| 2023 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2024 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |

## 5.9. Operational Mobile Sources

### 5.9.1. Unmitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

| Land Use | Hearth Type | Unmitigated (number) | Mitigated (number) |
|---|---|---|---|
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 4,434 | 4,434 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 9,517,581 | 3,172,527 | 0.00000 | 0.00000 | — |

### 5.10.3. Landscape Equipment

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 15,703,685 | 386.830 | 0.0330 | 0.0040 | 178,382,036 |

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 15,706,910 | 386.830 | 0.0330 | 0.0040 | 0.00000 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 185,372,681 | 0.00000 |

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 185,372,681 | 0.00000 |

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 3,278.78 | 0.00000 |

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 3,278.78 | 0.00000 |

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

| Land Use | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Household refrigerators and/or freezers | R-134a | 1,430.00 | 0.11538 | 0.60000 | 0.00000 | 1.000000 |

### 5.14.2. Mitigated

| Land Use | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |
| Condo/Townhouse | Household refrigerators and/or freezers | R-134a | 1,430.00 | 0.11538 | 0.60000 | 0.00000 | 1.000000 |

## 5.15. Operational Off-Road Equipment

### 5.15.1. Unmitigated

### 5.15.2. Mitigated

## 5.16. Stationary Sources

### 5.16.1. Emergency Generators and Fire Pumps

### 5.16.2. Process Boilers

## 5.17. User Defined

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

| Vegetation Land Use Type | Vegetation Soil Type | Initial Acres | Final Acres |
|---|---|---|---|

#### 5.18.1.2. Mitigated

| Vegetation Land Use Type | Vegetation Soil Type | Initial Acres | Final Acres |
|---|---|---|---|

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

| Biomass Cover Type | Initial Acres | Final Acres |
|---|---|---|

#### 5.18.1.2. Mitigated

| Biomass Cover Type | Initial Acres | Final Acres |
|---|---|---|

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

#### 5.18.2.2. Mitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 6.75000 | annual days of extreme heat |
| Extreme Precipitation | 4.10000 | annual days with precipitation above 20 mm |

| | | |
|---|---|---|
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 31.3300 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 0 | 0 | 0 | N/A |
| Wildfire | 0 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 0 | 0 | 0 | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |

| | | | | |
|---|---|---|---|---|
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 1 | 1 | 1 | 2 |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

## 6.4. Climate Risk Reduction Measures

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 13.6154 |
| AQ-PM | 2.92470 |
| AQ-DPM | 26.3846 |
| Drinking Water | 38.7161 |
| Lead Risk Housing | 56.6982 |
| Pesticides | 0.00000 |
| Toxic Releases | 0.53763 |
| Traffic | 27.0500 |
| Effect Indicators | — |

| | |
|---|---|
| CleanUp Sites | 82.9787 |
| Groundwater | 87.4813 |
| Haz Waste Facilities/Generators | 30.5890 |
| Impaired Water Bodies | 77.2995 |
| Solid Waste | 59.1753 |
| Sensitive Population | — |
| Asthma | 35.8549 |
| Cardio-vascular | 13.0982 |
| Low Birth Weights | 19.9256 |
| Socioeconomic Factor Indicators | — |
| Education | 24.1205 |
| Housing | 63.9670 |
| Linguistic | 24.7665 |
| Poverty | 26.6709 |
| Unemployment | 37.7147 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 64.9557295 |
| Employed | 60.78532016 |
| Median HI | 46.47760811 |
| Education | — |
| Bachelor's or higher | 81.58603875 |
| High school enrollment | 100 |
| Preschool enrollment | 1.873476197 |
| Transportation | — |

| | |
|---|---|
| Auto Access | 57.21801617 |
| Active commuting | 87.89939689 |
| Social | — |
| 2-parent households | 65.78981137 |
| Voting | 70.98678301 |
| Neighborhood | — |
| Alcohol availability | 40.65186706 |
| Park access | 81.35506224 |
| Retail density | 93.41716925 |

|---|---|
| 2016 Voting | 74.8 |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 22.0000 |
| Healthy Places Index Score for Project Location (b) | 67.0000 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

## 8.1. Justifications

| Screen | Justification |
|---|---|
| Characteristics: Utility Information | 3CE serves Monterey County for electricity |
| Construction: Construction Phases | Revised to fit in planning years of 2023-2031 |
| Construction: Dust From Material Movement | Based on CalEEMod suggested estimates |

# NOISE TECHNICAL MEMORANDUM

**To:** County of Monterey
**From:** Sharon Toland, AICP, Senior Technical Specialist, Harris & Associates
**RE:** **Noise Technical Memorandum for the County of Monterey Draft General Plan Housing Element Sixth Cycle (2023–2031) Update**
**Date:** January 14, 2025
**CC:** Darin Neufeld, AICP, Director, Environmental + Planning Consulting, and Elizabeth Kim, Senior Project Manager, Harris & Associates
**Att:** 1, FHWA Noise Prediction Model Results

## Introduction

This memorandum provides the results of Harris & Associates' analysis of the potential vehicle noise impacts from implementation of the County of Monterey General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law (project). The project area encompasses the unincorporated Monterey County (UMC), the geographic area overseen by the County and covered by the HEU6.

"HEU6" refers to the draft HEU6 document circulated for public review and submitted to the California Department of Housing and Community Development, while the "project" refers to HEU6 along with other components and related actions intended to implement HEU6.

For the purposes of this analysis, the following definitions are used herein:

- County of Monterey Government (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

Monterey County is on the central coast and consists of approximately 3,282 square miles of land. It is bounded by the Pacific Ocean to the west and San Benito County to the east. Monterey County is accessible by State Route (SR-) 1 and U.S. Route 101 from the north and south and SR-146 and SR-198 from the east. The project area includes 56 opportunity sites throughout Monterey County. Each opportunity site is assigned a number (e.g., Opportunity Site 1). Opportunity sites are spread among the County's nine Land Use Plan areas. These include the areas within the North County Inland Area Plan, North County Coastal Land Use Plan, Greater Salinas Area Plan, Greater Monterey Peninsula Area Plan, Ford Ord Master Plan, Toro Area Plan, Carmel Valley Master Plan, Carmel Area Land Use Plan, and Central Salinas Valley Area Plan.

The HEU6 includes the capacity for at least 5,897 residential units, comprising opportunity sites (4,434 units), pipeline sites (1,117 units), and accessory dwelling units (ADUs) (346 units). Pipeline sites are sites where housing

has been proposed and/or entitled, and where development is expected to receive a building permit or certificate of occupancy. ADUs would involve additional units on existing housing sites. For California Environmental Quality Act (CEQA) analysis, the operational traffic noise modeling included in this Noise Technical Memorandum evaluates the theoretical maximum total capacity of 12,497 new housing units on 56 opportunity sites, consistent with the assumptions of the vehicle miles traveled analysis.

The Federal Highway Administration (FHWA) Traffic Noise Prediction Model was used to estimate near-term and long-term traffic noise levels with and without project implementation. Traffic volumes and roadway characteristics with buildout of the project used in the FHWA Traffic Noise Prediction Model were obtained from Kimley-Horn (Kimley-Horn 2026).

## Noise Analysis Background

The California Department of Transportation (Caltrans) defines "noise" as sound that is loud, unpleasant, unexpected, or undesired. Sound pressure levels are quantified using a logarithmic ratio of actual sound pressures to a reference pressure squared, called "bels." A bel is typically divided into tenths, or decibels (dB). Sound pressure alone is not a reliable indicator of loudness because frequency (or pitch) also affects how receptors respond to sound. To account for the pitch of sounds and the corresponding sensitivity of human hearing to them, the raw sound pressure level is adjusted with a frequency-dependent A-weighting scale that is stated in units of decibels (dBA) (Caltrans 2013).

A receptor's response to a given noise may vary depending on the sound level, duration of exposure, character of the noise sources, time of day during which the noise is experienced, and activity affected by the noise. Activities most affected by noise include rest, relaxation, recreation, study, and communications. In consideration of these factors, different measures of noise exposure have been developed to quantify the extent of the effects from various noise levels. The Community Noise Equivalent Level (CNEL) is the average equivalent A-weighted sound level over a 24-hour period. This measurement applies weights to noise levels during evening and nighttime hours to compensate for the increased disturbance response of people at those times. CNEL is the equivalent sound level for a 24-hour period with a +5 dBA weighting applied to sound occurring between 7:00 p.m. and 10:00 p.m. and a +10 dBA weighting applied to sound occurring between 10:00 p.m. and 7:00 a.m.

The dB level of a sound decreases (or attenuates) as the distance from the source of that sound increases. For a single point source, such as a piece of mechanical equipment, the sound level typically decreases by approximately 6 dBA for each doubling of distance from the source. Sound that originates from a linear (or "line") source, such as vehicular traffic, attenuates by approximately 3 dBA per doubling of distance. Other contributing factors that affect sound reception include ground absorption, natural topography that provides a natural barrier, meteorological conditions, and the presence of human-made obstacles, such as buildings and sound barriers (Caltrans 2013).

Noise-sensitive land uses include noise receptors (receivers) where an excessive amount of noise interferes with normal activities. Noise-sensitive land uses typically consist of residences, hotels, offices, places of worship, hospitals, schools, and libraries. The Monterey County General Plan (2010 General Plan) Safety Element identifies principal noise sources in Monterey County as transportation facilities, industrial and food-packing plants, mining operations, Laguna Seca Raceway, and Moss Landing Power Plant. Transportation-related noise sources include roadways, the Union Pacific Railroad Coast Line, and airports. Roadway noise sources providing north–south connections include SR-1 between the Cities of Marina and Monterey, and U.S. Route 101 between the Cities of Prunedale and Salinas, and Gonzales to Greenfield. Roadway noise sources providing east–west connections include SR-68 between the Cities of Monterey and Salinas and SR-156 between the Cities of Castroville and the U.S. Route 101 connection in Prunedale. Airport noise sources in Monterey County include the Monterey Regional Airport, Salinas Municipal Airport, Marina Municipal Airport, and Mesa Del Rey Airport (County of Monterey 2010).

# Regulatory Setting

## Local

### 2010 General Plan

The 2010 General Plan Safety Element establishes noise and land use compatibility standards and outlines goals and policies to achieve these standards (County of Monterey 2010). New projects in the UMC are required to meet the noise exposure compatibility standards listed in Table S-2 in the Safety Element, shown in Table 1, 2010 General Plan Safety Element Land Use Compatibility for Community Noise (dB CNEL), when evaluating the land use of proposed development projects. The following goals and policies listed in the Safety Element are applicable to the project:

- **Goal S-7:** Maintain a healthy and quiet environment free from annoying and harmful sounds.
  - **Policy S-7.2:** Proposed development must incorporate design elements necessary to minimize noise impacts on surrounding land uses and to reduce noise in indoor spaces to an acceptable level.
  - **Policy S-7.3:** Development may occur in areas identified as "normally unacceptable" provided effective measures to reduce both the indoor and outdoor noise levels to acceptable levels are taken.
  - **Policy S-7.6:** Acoustical analysis shall be part of the environmental review process for projects when:
    - Noise sensitive receptors are proposed in areas exposed to existing or projected noise levels that are "normally unacceptable" or higher according to the County's Land Use Compatibility Standards (Table 1).
    - Proposed noise generators are likely to produce noise levels exceeding the levels shown in the adopted Community Noise Ordinance when received at existing or planned noise-sensitive receptor.
  - **Policy S-7.7:** All proposed discretionary residential projects that are within roadway or railroad noise contours of 60 CNEL or greater shall include a finding of consistency with the provisions of the Noise Hazards section of the Safety Element. If found that roadway noise exceeds the 60 CNEL within the project site, a project-specific noise impact analysis shall be required. If impacts are identified, the applicant shall conduct mitigation analysis using published Caltrans/FHWA guidelines and implement mitigation measures as required. Mitigation measures may include, but are not limited to sound walls, adjacent roadway design, dual pane glass, building location or design, etc. Any proposed mitigation measures shall be concurrently implemented with the implementation of the project.
  - **Policy S-7.9:** No construction activities pursuant to a County permit that exceed "acceptable" levels listed in Table 1 shall be allowed within 500 feet of a noise sensitive land use during the evening hours of Monday through Saturday, or anytime on Sunday or holidays, prior to completion of a noise mitigation study. Noise protection measures, in the event of any identified impact, may include but not be limited to:
    - Constructing temporary barriers, or
    - Using quieter equipment than normal.

As shown in Table 1, in low-density residential areas, ambient noise levels up to 60 dB CNEL are considered normally acceptable. In multi-family residential areas, ambient noise levels up to 65 dB CNEL are considered normally acceptable. Land uses in areas where ambient noise levels are identified as "normally acceptable" are considered satisfactory based on the assumption that buildings involved are of normal conventional construction, without any special noise insulation requirements. Land uses in areas that experience a noise level that falls into the "conditionally acceptable" range require a detailed analysis of the noise reduction requirements, and noise insulation features must be included in the design—conventional construction but with closed window and fresh air supply systems or air conditioning will normally suffice. For land uses where exterior noise levels fall within the "normally unacceptable" range, new construction or development should generally be discouraged. If new construction or development proceeds, a detailed analysis of the noise reduction requirements must be made, and needed noise insulation features must be included in the design. For land uses where the exterior noise levels fall within the "clearly unacceptable" range, new construction generally shall not be undertaken (County of Monterey 2010).

**Table 1. 2010 General Plan Safety Element Land Use Compatibility for Community Noise (dB CNEL)**

| Land Use Category | Normally Acceptable | Conditionally Acceptable | Normally Unacceptable | Clearly Unacceptable |
|---|---|---|---|---|
| Residential – Low-Density Single Family, Duplex, Mobile Homes | <55–60 | 55–70 | 70–75 | 75–80 |
| Residential – Multi-family | <55–65 | 60–70 | 70–75 | 75–80 |
| Transient Lodging – Motels, Hotels | <55–65 | 60–70 | 70–80 | 80+ |
| Schools, Libraries, Churches, Hospitals, Nursing Homes | 55–70 | 60–70 | 70–80 | 80+ |
| Auditoriums, Concert Halls, Amphitheaters | NA | 55–70 | 65–80 | NA |
| Sports Arena, Outdoor Spectator Sports | NA | 55–75 | 70–80 | NA |
| Playground, Neighborhood Parks | 55–70 | <65–70 | <70–80 | NA |
| Golf Courses, Riding Stables, Water Recreation, Cemeteries | 55–75 | 70–80 | NA | 80+ |
| Office Buildings, Business Commercial and Professional | 55–70 | <65–75 | 75–80 | NA |
| Industrial, Manufacturing, Utilities and Agriculture | 55–70 | 70–75 | >75 | NA |

**Source:** County of Monterey 2010.
**Notes:** CNEL = community noise equivalent level; dB = decibel; NA = not applicable

## Significance Thresholds

Implementation of the project would result in a significant direct impact if it resulted in an increase in vehicle noise levels exceeding the normally acceptable noise standard for residences. Per 2010 General Plan Safety Element Policy S-7.7 and Table 1, 60 dBA CNEL is an acceptable noise standard for both single- and multi-family residences. The HEU6 would accommodate various housing types and densities; therefore, 60 dBA is used at the threshold for this analysis, although noise levels up to 65 dBA CNEL are within the normally compatible range for multi-family residences. A significant impact would also occur if the project would result in a noticeable (more than 3 dBA) increase in noise levels on roadways exceeding 60 dBA CNEL without the project. The project would also result in a significant impact if it resulted in the development of new sensitive receptors in areas exposed to noise levels in excess of the compatibility standards listed in Table 1.

## Impact Analysis

The following analysis includes an analysis of increases in vehicle noise that may result from project implementation and the potential for new sensitive receptors to be exposed to incompatible noise levels.

### Permanent Increase in Vehicle Noise

The potential for implementation of the project to permanently increase ambient noise levels as a result of increased traffic was assessed using standard noise modeling equations adapted from the FHWA Noise Prediction Model (Attachment 1, FHWA Traffic Noise Prediction Model Results). The modeling calculations take into account the posted vehicle speed, median width, average daily trip volume, and estimated vehicle mix. Traffic volumes and roadway characteristics with buildout of the project were obtained from Kimley-Horn (Kimley-Horn 2026). Noise levels were calculated at 50 feet from the centerline of each roadway segment. Generally, noise from heavily traveled roadways experience a decrease of approximately 3 dBA for every doubling of distance. The actual sound level at any receptor location depends on such factors as the source-to-receptor distance and the presence of intervening structures, barriers, vegetation, and topography; therefore, the result of the calculations is the worst-case scenario.

The 10 transportation analysis study area segments that would experience the greatest percent increase in vehicle trips as a result of project implementation are modeled to represent the potential changes in traffic noise conditions compared to future conditions without the project. Timing of new housing in the UMC is unknown, and buildout is assumed to occur through the year 2031, during which regional growth and development elsewhere in Monterey County will occur. The project would implement planned growth, but growth under the HEU6 in the transportation analysis is evaluated to identify HEU6-level community impacts (Kimley-Horn 2026). As such, attributing the increase in vehicle trips to the project is conservative.

Table 2, Future Traffic Noise Levels (Year 2031), provides long-term increases in noise levels with project implementation. As shown in Table 2, implementation of the project would not result in a more than 3 dBA increase on any roadway segment. Project implementation would cause two roadway segments to exceed 60 dBA CNEL at 50 feet from the roadway centerline by less than 1 dBA:

- Olmstead Road from SR-68 to Via Malposo
- The future extension of El Dorado Drive from San Juan-Natividad Collector to East Boronda Road

However, as shown in Attachment 1, the 60 dBA CNEL contour for these roadways would be 55 feet or less from the roadway centerline. As such, there is limited potential for new single-family residential structures to be within the future 60 dBA CNEL contour. There are no existing sensitive receptors within this contour distance on either roadway segment. Under the HEU6, Opportunity Site 52, located adjacent to Olmstead Road, would be split zoned for High Density Residential at 30 dwelling units per acre (HDR/30) and Resource Conservation (RC) and would be normally compatible with noise levels up to 65 dBA CNEL. Additionally, a noise level of 60.4 or 60.6, is functionally the same as 60 dBA CNEL as related to actual experience in the noise environment and, therefore, consistent with the 60 dBA CNEL threshold for noise exposure. As described in the Caltrans Technical Noise Supplement (Caltrans 2013), a trained, healthy human ear may discern changes in sound levels of 1 dBA when exposed to steady noise under controlled conditions in an acoustics laboratory. Therefore, noise levels that are less than a 1 dBA change from 60 dBA CNEL would generally be experienced as 60 dBA CNEL even under a conservative controlled laboratory condition. Therefore, the project would not result in a significant direct vehicle noise impact.

**Table 2. Future Traffic Noise Levels (Year 2031)**

| Roadway | Segment | Future Noise Level (dBA CNEL) | Future + Project (dBA CNEL) | Increase in Noise Level | Significant Impact? |
|---|---|---|---|---|---|
| Russell Road | Bahia Avenue to Van Buren Avenue | 69.7 | 72.1 | 2.4 | No |
| San Juan Grade Road | Van Buren Avenue to Russell Road | 66.7 | 67.9 | 1.2 | No |
| Old Stage Road | Goat Road to Chualar Road | 56.1 | 56.8 | 0.7 | No |
| Olmsted Road | Salinas Highway (SR-68) to Via Malposo | 58.4 | 60.4 | 2.0 | No |
| Josselyn Canyon Road | Sylvan Road to Oak Crest Circle | 49.4 | 51.1 | 1.7 | No |
| Broadway Avenue | Ancon Street to Yosemite Street | 55.7 | 56.7 | 1.0 | No |
| N Main Street | South of Russell Road | 68.8 | 70.7 | 1.9 | No |
| Frontage Road | Esperanza Road to Payson Street | 57.5 | 59.1 | 1.6 | No |

**Table 2. Future Traffic Noise Levels (Year 2031)**

| Roadway | Segment | Future Noise Level (dBA CNEL) | Future + Project (dBA CNEL) | Increase in Noise Level | Significant Impact? |
|---|---|---|---|---|---|
| Independence Boulevard | Russell Road Extension to East Boronda Road | 60.3 | 62.1 | 1.8 | No |
| El Dorado Drive Extension | San Juan-Natividad Collector to East Boronda Road | 58.2 | 60.6 | 2.4 | No |

**Source:** Refer to Attachment 1.
**Notes:** CNEL = community noise equivalent level; dBA = A-weighted decibel; SR- = State Route

## Noise Incompatibilities with New Sensitive Receptors

In addition to the potential to increase vehicle noise as a result of future development, implementation of the project would have the potential to result in the placement of new sensitive receptors in areas that would be exposed to vehicle noise levels in excess of the County's noise and land use compatibility standards. As shown in Table 2 vehicle noise on several modeled segments would be within the normally acceptable noise level range of up to 60 dBA CNEL at 50 feet from roadway centerlines under existing and future conditions. Therefore, conventional construction—such as wall, insulation, and window design consistent with current building codes—would generally be sufficient to reduce noise exposure to an acceptable level. However, noise levels higher than 60 dBA CNEL are calculated for Russell Road from Bahia Avenue to Van Buren Avenue (60 dBA CNEL up to 322 feet from centerline), San Juan Grade Road from Van Buren Avenue to Russel Road (60 dBA CNEL up to 169 feet from centerline), North Main Street south of Russell Road (60 dBA CNEL up to 258 feet from centerline), and Independence Boulevard from Russell Road Extension to East Boronda Road (69 dBA CNEL up to 69 feet from centerline). As described above, modeled segments of Olmsted Road and El Dorado Drive are calculated to exceed 60 dBA up to 55 feet from centerline. These segments are modeled to represent the project's impact on roadways but are not the only roadway in the UMC that could expose new residence to noise levels above 60 dBA CNEL. Modeled roadways that are calculated to result in noise levels below 60 dBA generally experience 2,200 average daily traffic (ADT) or less when posted speed limit is 45 miles per hour (mph), and 7,800 ADT or less when posted speed limit is 25 mph. As such, future residences along higher-speed roadways experiencing 1,200 ADT or more would have the potential to be in an area that exceeds the County's normally acceptable standard for residential development. For example, Opportunity Sites 1–3 are along Russell Road, and new development would likely be exposed to noise levels above 60 dBA CNEL.

Development streamlining under the Consistency Process of the HEU6 would be required to comply with 2010 General Plan Safety Element Noise Policies S-7.2, S-7.3, S-7.6, and S-7.7 and 1982 General Plan Policy 22.2.2, provided above in Regulatory Setting. These policies require proposed new sensitive receptors to include a site-specific evaluation of potential noise exposure and installation of noise attenuation if the new receptors will be in an area where interior noise levels may exceed 60 dBA CNEL. Policy S-7.6 specifically requires an acoustical analysis for projects where noise-sensitive receptors are proposed in areas exposed to existing or projected noise levels that are "normally unacceptable" or higher, and Policy S-7.7 requires an acoustical analysis where roadway noise would exceed 60 dBA CNEL. Policies S-7.2-, S-7.3, and S-7.7 specially require that new development projects incorporate measures to ensure noise compatibility for interior and exterior noise, such as implementation of sound walls, dual pane glass, or changes to building location on a site. Additionally, all new residential development in the project area would be subject to existing state requirements to demonstrate that interior noise levels of 45 dBA CNEL would be achieved in areas potentially exposed to traffic noise above compatible noise levels. This requirement is also found in 1982 General Plan Policy 22.2.2. Title 24 of the California Code of Regulations requires that residential structures be designed to prevent the intrusion of exterior noise so that the interior noise, with windows closed, attributable to exterior sources shall not exceed 45 dBA CNEL in any habitable room. The regulations also specify that acoustical studies must be prepared whenever a multi-family residential building or structure may be exposed to exterior noise levels of 60 dBA CNEL or greater. With this existing state

and County framework, future development under the HEU6 would be required to demonstrate that appropriate noise attenuation has been incorporated into project design to achieve noise compatibility.

To ensure compliance with policy requirements in 2010 General Plan Safety Element Policies S-7.2, S-7.3, S-7.6, and S-7.7 or 1982 General Plan Policy 22.2.2 for residential projects streamlining under the Objective Process, implementation of MM-NOI-OBJ-3 would require preparation of acoustical studies, if required based on location, and incorporation of noise reduction measures in compliance with Policies S-7.2, S-7.3, S-7.6, and S-7.7 of the 2010 General Plan Safety Element.

**MM-NOI-OBJ-3:** For by-right development, the County shall include MM-NOI-OBJ-3 in the by-right housing ordinance. Prior to approval of a grading permit for new development streamlining under the Objective Process, developers shall submit a Noise Screening Package with a description of the project, construction plans, land use maps, and roadway and (if applicable) railroad noise contours. The Noise Screening Package shall provide evidence that the development would not include noise-sensitive receptors proposed in areas exposed to existing or projected noise levels that are higher than "normally acceptable" according to Table S-2 (Land Use Compatibility for Community Noise) in the 2010 General Plan Safety Element (greater than 60 Community Noise Equivalent Level (CNEL) for single-family residences or 65 CNEL for multiple-family residences). A project may be in an area exposed to noise levels above normally acceptable if it is within a roadway or railroad noise contours of 60 CNEL or greater. Roadways that may result in noise levels above 60 A-weighted decibel (dBA) at adjacent properties generally experience greater than 2,200 average daily traffic (ADT) when the posted speed limit is 45 miles per hour (mph), and greater than 7,800 ADT when posted speed limit is 25 mph. Roadways that may result in noise levels above 65 dBA at adjacent properties generally experience greater than 6,000 ADT when the posted speed limit is 45 mph, and greater than 23,000 ADT when posted speed limit is 25 mph. A project adjacent to a roadway meeting these criteria may be exposed to noise levels higher than normally acceptable. The County shall ensure that these items are included in project construction documents.

If the project cannot submit evidence that it is outside the 60 dBA CNEL or 65 dBA CNEL or greater contour, as applicable, in the Noise Screening Package, an acoustical study shall be prepared for the development by a certified acoustical engineer and submitted to the County prior to approval of grading permit, or if no grading permit is required, prior to beginning earthwork. The acoustical study shall include a description of the existing noise setting and evaluate the potential for the project to expose noise-sensitive receptors to above normally compatible standards. Should the results of the acoustical study indicate that that exterior noise would exceed normally compatible conditions, the certified acoustical engineer shall include a detailed analysis of noise reduction requirements for the project design to ensure that the interior noise level of any habitable room does not exceed 45 dBA CNEL. The certified acoustical engineer shall require design measures and noise insulation features that may include the following:

- Acoustical paneling or sound walls
- Dual pane glass
- Building location or design
- Roadway design

If it is necessary for windows to be able to remain closed to ensure that interior noise levels meet the interior standard of 45 dBA CNEL, the design for these residences shall include ventilation or an air conditioning system to provide a habitable interior environment with the windows closed.

Final project design shall incorporate the design measures and noise insulation features identified by the certified acoustical engineer in the construction of the residential units. The County shall ensure that these items are included in project construction documents.

## Summary

Implementation of the project would not result in a significant direct impact related to vehicle noise. New sensitive receptors accommodated by the HEU6 would have the potential to be exposed to noise levels in excess of

normally compatible noise standards. For projects that are streamlined under the Consistency Process, compliance with the 2010 General Plan Safety Element and California Building Code requirements would reduce impacts related to exposure to vehicle noise to a less than significant level without mitigation. Implementation of MM-NOI-OBJ-3 would require preparation of acoustical studies that would reduce impacts from projects streamlined under the Objective Process to a less than significant level.

***Re:*** DRAFT: *Monterey County General Plan Housing Element EIR*
Transportation Analysis

**Date:** June 22, 2026

This memorandum documents the California Environmental Quality Act (CEQA) transportation analysis completed for Monterey County General Plan Housing Element Sixth Cycle (2023-2031) Update ("proposed Project" or "Housing Element") located in Monterey County, California. Specifically, this memorandum evaluates how the Project might affect vehicle miles traveled (VMT), active transportation and transit (multimodal), hazards, and emergency access. The analyses were completed based on the following checklist items as identified in the 2024 CEQA Statute Guidelines Appendix G Section XVII:

a) **Multimodal**: Does the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?
b) **Vehicle Miles Traveled (VMT)**: Does the project conflict with, or will it be inconsistent with, CEQA Guidelines 15064.3, subdivision (b)?
c) **Hazards**: Does the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
d) **Emergency Access**: Does the project result in inadequate emergency access?

The proposed Project seeks to address the housing unit shortfall identified in the 6th Cycle Housing Element Regional Housing Needs Assessment (RHNA) by incorporating plans for new housing development. These land use adjustments will comply with the policies set forth in the County's existing General Plan and other adopted plans. The Housing Element includes a total of 56 opportunity sites: Opportunity Sites 1 through 6, 8 through 56, and 64, totaling 4,434 housing units as a reasonable development capacity. However, this Transportation Analysis evaluates the highly unlikely theoretical maximum buildout scenario of 12,497 units to fully disclose the potential environmental consequences associated with the highest intensity of development legally permitted under the proposed rezoning acreage of 445.69 acres for impacts. **Table 1** below provides a summary of the land use totals based on the descriptions within the proposed Project under the theoretical maximum buildout scenario.

**Table 1 –** Project Land Use

| Description | Housing Units |
|---|---|
| Entitled or Pipeline Sites | 1,117 |
| Opportunity Sites | 12,497 |
| Total | 13,614 |

## Vehicle Miles Traveled (VMT) Analysis

With the passage of SB 743 in 2013, and particularly since 2020 when Level of Service (LOS) was eliminated as a CEQA threshold for a significant transportation impact, vehicle miles traveled (VMT) has become an important indicator for determining if new development will result in a significant transportation impact. To determine whether there were significant impacts related to transportation, VMT from residential and employment-based land uses was analyzed as described in the methodology section below.

The most recent version of the Association of Monterey Bay Area Governments Regional Travel Demand Model (AMBAG RTDM), which was released in 2022[1], served as a tool for calculating VMT. The land uses were evaluated based on the following scenarios:

- Baseline – 2023 land use in the incorporated and unincorporated areas of the County
- 2031 No Project – 2031 land uses in the incorporated and unincorporated areas based on the Housing Element update in the County.
- 2031 With Project – 2031 land uses in the incorporated and unincorporated areas based on the Housing Element in the County.

### *Methodology*

The AMBAG RTDM has a base year of 2015 and a future year of 2045, however the baseline year for the proposed Project is 2023 and the horizon year is 2031. Additionally, the AMBAG model is calibrated to a tri-County area. To address the discrepancy in the baseline year and the horizon year, as well as conduct a more locally specific VMT analysis, Replica, a big traffic and mobility data platform, was used to calculate the baseline VMT per capita and VMT per employee. The growth over time was obtained using the AMBAG RTDM by calculating the percent difference in VMT for each land use and applying that percentage as growth to the Replica baseline VMT.

Replica data is provided by Census Block Group rather than by Traffic Analysis Zone (TAZ). To account for this each TAZ was associated with a Block Group. The percent difference was calculated using a weighted average for population and employment within each Block Group. This percent difference was then applied to the Replica VMT per capita and VMT per employee for each Block Group to calculate VMT growth for the 2031 No Project and 2031 with Project scenario.

To obtain residential VMT, the production VMT for all Home-Based trip purposes was combined. VMT for non-residential land uses was computed from the attraction Home-Based Work VMT. As noted previously, Replica data was used to supplement the model. The employment land use VMT was calculated by dividing the number of trips by the share of each employment category. The share of employment was obtained from the model's underlying trip generation rates.

Replica data was also used in the calculation of external VMT. For residential land uses, calibrated trip distances from Replica were multiplied by the total internal-external (I-X) Home-Based trips for each TAZ. For non-residential uses, calibrated trip distances from Replica were multiplied by internal-external (I-X) Home-Based Work trips for each TAZ.

VMT per Capita and VMT per Employee was computed by dividing the residential and non-residential VMT by TAZ by the total population or total employees.

[1] The AMBAG RTDM was provided to Kimley-Horn by AMBAG staff in September 2022.

*Model Inputs*

Development projections for the Housing Element were sourced from the Client and AMBAG staff and required modifications to the AMBAG RTDM land use data. The resulting land use totals for the scenarios are summarized in Table 2 below.

- For the Environmental Impact Review (EIR) to mirror the County's actual conditions, the employment assumptions for the 2023 Baseline were adjusted based on Census, LEHD, and previous work in the region. However, the total employment growth (control total) between 2023 and 2045 was kept consistent.
- Employment growth between 2023 and 2045 was redistributed to the relevant County Traffic Analysis Zones (TAZs) to reflect land use and zoning changes that would be made for implementation of the 2031 Housing Element.
- The growth of housing units (i.e., The growth of households) in the unincorporated County of Monterey from 2023 to 2031 without the Project is 2,326 units. In the incorporated areas of the County, the growth amounted to 20,476 units.
- To estimate VMT more precisely in two particularly expansive TAZs that included new residential developments (TAZ 577 and TAZ 771), zones were split into multiple TAZs that covered smaller areas. The splits were done because otherwise traffic would have been directed to inappropriate roadways, leading to flawed VMT projections.
- The AMBAG RTDM does not feature interim years such as the 2031 analysis year: the model includes a base year of 2015 and a horizon year of 2045. To develop land use inputs for the 2023 year, data from the Census, LEHD, and the County was used for demographics. For 2031 land use, values were interpolated based on the growth observed in the AMBAG RTDM.
- The 2031 No Project scenario includes projected land use changes for 2023-2031 in the cities and across the County, including 1,117 units defined as pipeline sites. The 2031 With Project scenario includes projected land use changes for 2023-2031 across the County, including both pipeline sites and 12,497 additional units as opportunity sites located within the unincorporated areas. Opportunity Sites are sites for which the County has a reasonable expectation that housing development could occur, though no proposals or entitlements have been submitted. The total capacity for each Opportunity Site was developed based on the maximum capacity under the Sites' planned zoning. Pipeline Sites are sites where housing has been proposed and/or entitled, and where development is expected to receive a building permit or certificate of occupancy.

Table 2 – Land Use Inputs

| Scenario | Households (Unincorporated County) | Employment (Unincorporated County) | Households (Entire County) | Employment (Entire County) |
|---|---|---|---|---|
| 2023 Baseline | 35,232 | 55,440 | 132,414 | 212,118 |
| 2031 No Project | 37,191 | 57,759 | 154,8494 | 222,253 |
| 2031 With Project | 49,688 | 57,759 | 167,346 | 222,253 |

The AMBAG RTDM adopted in 2022 provides land uses based on residential and employment classifications. Employment classifications are broken into eleven categories that group together various industries based on similar trip-making characteristics. Note that the eleven employment categories were an expansion compared to the previously adopted AMBAG model, which only contained six employment categories. Table 3 below shows the cross-reference between the North American Industry Classification System (NAICS) industries and AMBAG sectors.

Table 3 – AMBAG RTDM Employment Categories

| Category | Description and NAICS codes |
|---|---|
| Agriculture (AGR) | Agriculture, Forestry, Fishing, and Hunting (11)* |
| Construction (TR_CON) | Construction (23), Utilities (22), Transportation and Warehousing (48-49), Administrative and Support and Waste Management and Remediation Services (56), Public Administration (92)* |
| Manufacturing and Mining (MFG) | Mining (21), Manufacturing (22, 31-33), |
| Wholesale (WHL) | Wholesale Travel (42), Agriculture, Forestry, Fishing, and Hunting (11)* |
| Retail (RET) | Retail Trade (44-45) |
| Finance and Real Estate (FIRE) | Information (51), Finance and Insurance (52), Real Estate Rental and Leasing (53), Professional, Scientific, and Technical Services (54), Management of Companies and Enterprises (55) |
| Education (EDU) | Educational Services (61), Public Administration (92)* |
| Healthcare (HLT) | Health Care and Social Assistance (62) |
| Service (SER) | Art, Entertainment, and Recreation (71), Accommodation and Food Service (72), and Other Services (81) |
| Public (PUB) | Public Administration (92)* |
| Self | Self-Employed |
| *Note: Some NAICS industry sectors have been divided up, based on business operations and transportation demand, across AMBAG sectors. | |

Roadway Network Assumptions

Kimley-Horn updated AMBAG RTDM's baseline and future year roadway network based on the current data available for the AMBAG area, including anticipated roadway network improvements from the 20102010 General Plan. Future roadway projects in Santa Cruz County and San Benito County were sourced from the AMBAG RTDM. The land use and roadway network modifications were based on the County and approved projects/developments.

### *VMT Thresholds of Significance*

In January 2019, the California Natural Resources Agency finalized updates to the CEQA Guidelines including the incorporation of SB 743 modifications. The Guidelines' changes were approved by the Office of Administrative Law and are now in effect. Specific to SB 743, CEQA Guidelines Section 15064.3(c) states, "The provisions apply statewide as of July 1, 2020." To aid lead agencies with SB 743 implementation, the Governor's Office of Planning and Research (OPR), now referred to as the Office of Land Use and Climate Innovation (LCI) produced a VMT Analysis Guidelines[2] document that included detailed guidance about the variety of implementation questions with respect to shifting to a VMT metric.

Analysis was performed for the proposed Project based on the OPR guidelines for the determination of VMT related impacts. The resulting VMT thresholds consider the VMT performance of residential and

[2] *Technical Advisory on Evaluating Transportation Impacts in CEQA.* Governor's Office of Planning and Research, State of California. December 2018.

non-residential components of a project separately, using the efficiency metrics of VMT per capita and VMT per employee, respectively. It should be noted that the County has not officially adopted thresholds. However, the thresholds presented here are based on OPR Guidance. Thresholds of significance are summarized below and in Table 4.

- *Residential* – 15% below baseline (existing) average VMT per capita
- *Employment-based land uses: office, service, professional services* – 15% below baseline (existing) average VMT per employee
- *Retail* – net change

### *OPR Technical Advisory's VMT Screening Criteria*

OPR Technical Advisory identifies the following common screening approaches for land use projects:

- Small Project Screening[3] – Small residential projects generating a limited number of daily vehicle trips (often using a local agency threshold such as fewer than 110 daily trips, consistent with common CEQA screening practices) may be screened from detailed VMT analysis because their contribution to regional VMT is negligible.
- Map-Based Screening – Residential projects located in an area where existing household VMT is at least 15 percent below the regional average may be presumed to have a less-than-significant VMT impact.
- Transit Priority Area Screening – Residential projects located within one-half mile of an existing major transit stop or an existing stop along a high-quality transit corridor may qualify for screening, provided there is no substantial evidence indicating unusual circumstances that would result in above-average VMT.
- Affordable Housing Screening – Residential projects consisting of deed-restricted affordable housing for lower-income households may be presumed to have a less-than-significant VMT impact because lower-income households generally generate less VMT than regional averages.

### *VMT Findings and Mitigation*

Table 4 summarizes VMT results as compared to the thresholds. The thresholds were calculated to be 14.3 VMT per capita for residential uses and 18.9 VMT per employee for employment using the 15% below baseline guideline. The 2031 No Project scenario resulted in a VMT per capita of 21.5 and VMT per employee of 30.4. The 2031 Plus Project scenario resulted in a VMT per capita of 20.9 and VMT per employee of 31.7. VMT per capita value is reduced by 0.6 VMT per capita between the 2031 No Project and 2031 Plus Project scenarios for residential uses. However, the VMT per employee value is increased by 1.3 VMT per employee between the 2031 No Project and 2031 Plus Project scenarios for employment uses. Notably, both 2031 scenarios—whether No Project or With Project—exceed the VMT thresholds.

[3] Cleveland National Forest Foundation v. County of San Diego (2025) 110 Cal.App.5th 543, reaffirmed that the OPR's Technical Advisory is nonbinding guidance and that agencies must support their adopted methodologies with substantial evidence. Accordingly, this information is included for informational purposes only and the this report does not rely on the Technical Advisory's recommended screening criteria.

Table 4 – Vehicle Miles Traveled (VMT) by Scenario

| Jurisdiction | 2031 No Project | | 2031 Plus Project | |
|---|---|---|---|---|
| | VMT/Capita | VMT/Employee | VMT/Capita | VMT/Employee |
| **Threshold** | **14.3** | **18.9** | **14.3** | **18.9** |
| Unincorporated County of Monterey | 21.5 | 30.4 | 20.9 | 31.7 |
| Percent of Threshold | 150.3% | 160.8% | 146.2% | 167.7% |
| **Over Threshold?** | **Yes** | **Yes** | **Yes** | **Yes** |

The proposed Project anticipates the development of a multitude of sites throughout the County. Due to the general nature of the proposed Project, and the absence of specific development proposals, it is not possible to fully account for the effect of specific design principles, policies, and improvements that will reduce VMT for specific projects as part of this analysis. The significant VMT impacts identified in Table 4 reflect the VMT for implementation of the entire proposed Project. Individual sites included in the proposed Project may or may not exceed the threshold of significance and they may include site-specific elements or mitigation measures that reduce VMT to below the threshold of significance. As such the significant impacts identified in Table 4 are unavoidable given known current feasible mitigation options. As there will undoubtedly be mitigation applied at the project level, the findings of the Table 4 should be considered a worst-case scenario.

There are a multitude of VMT-reducing design principles, policies, and improvements that are further described in this section which may ultimately mitigate and/or potentially reduce the VMT impacts outlined in this evaluation in the future. However, the potential VMT-reducing approaches cited in this section will require further planning and development, as well as committed funding sources including those from participants in the development community (many of which may not be identified yet as large areas of land may be further subdivided into specific projects and development). These strategies remain vital when interpreting the outcomes of this VMT assessment, and where relevant, they should be incorporated in future VMT evaluations within the County.

VMT Reducing Design Principles

Project design features that reduce VMT can potentially lower the overall VMT of the proposed Project. Considerations include:

- Compactness of design and transit-oriented development
- Providing a range of housing options
- Incorporation of a mix of uses
- Walkable and bikeable community design
- A variety of mobility and access options

Since the AMBAG RTDM does not inherently account for the effects of many of these design principles, and the specific characteristics, locations, and timelines of these VMT-reducing strategies are uncertain, their additional impacts will need to be assessed at the individual project level. These factors will play a significant role in analyzing individual development projects, with the extent of their influence depending on the selected location and design features.

VMT Reducing Policies and Improvements

There are several approaches and programs that provide opportunities for VMT mitigation including:

- Transportation Demand Measures
- 2045 Regional Transportation Plan & the Sustainable Communities Strategy
- VMT Reducing Design Principles

### *Transportation Demand Measures (TDMs)*

VMT mitigation typically depends significantly on Transportation Demand Measures (TDMs). Generally, these measures encompass two primary strategies: policy-based strategies and infrastructure-related strategies. The California Air Pollution Control Officers Association (CAPCOA) guide for Quantifying Greenhouse Gas Mitigation Measures is one of the primary bases for estimating mitigation effects in California. The most recent version of CAPCOA's Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (Handbook) was published in October 2024[4]. While this resource is of great significance, caution is essential when applying it, especially as some measures were developed based on small sample sets. In addition, many measures are rooted in observations from densely urbanized regions. Depending on the chosen measures, they can pose challenges in terms of mitigation monitoring. Furthermore, they are often not favored by project applicants because of the potential need to be managed and paid for in perpetuity. Due to such constraints lead agencies tend to gravitate towards programmatic strategies for VMT mitigation. The measures[5] from the Handbook were reviewed to determine the most applicable measures for the County. It should be noted that these measures cannot be used in the absolute aggregate to reduce VMT impacts. While certain measures can be applied to specific projects, many are more effective when used systematically.

- *Integrate Affordable and Below Market Rate Housing (T-4):* This measure requires below market rate (BMR) housing. BMR housing provides greater opportunity for lower income families to live closer to job centers and achieve a jobs/housing match near transit. It is also an important strategy to address the limited availability of affordable housing that might force residents to live far away from jobs or school, requiring longer commutes. The quantification method for this measure accounts for VMT reductions achieved for multifamily residential projects that are deed restricted or otherwise permanently dedicated as affordable housing. Multifamily residential units must be permanently dedicated as affordable for lower income families. Lower-income is defined as 80 percent of area median income or below, and affordable housing as costing 30 percent of gross household income or less. This can decrease up to 28.6 percent of GHG emissions from project/site multifamily residential VMT
- *Provide Ridesharing Program (T-8):* This measure would implement a ridesharing program and establish a permanent transportation management association with funding requirements for employers. Ridesharing encourages carpooled vehicle trips in place of single-occupied vehicle trips, thereby reducing the number of trips, VMT, and GHG emissions. This can decrease VMT by up to 8.0 percent of GHG emissions from project/site employee commute VMT.
- *Implement Subsidized or Discounted Transit Program (T-9):* This measure provides subsidized, discounted, or free transit passes for employees and/or residents. This can decrease VMT by up to 5.5%. To achieve the higher end of this reduction the project should be accessible either within 1 mile of high-quality transit service (rail or bus with headways of less than 15 minutes), 0.5 mile

[4] *California Air Pollution Control Officers Association (CAPCOA). Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity. Available at* https://www.caleemod.com/documents/handbook/full_handbook.pdf.

[5] The "T" references in these measures are sourced from the most recent version of CAPCOA's Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity, published in January 2022.

of local or less frequent transit service, or along a designated shuttle route providing last-mile connections to rail service.

- *Provide Electric Vehicle Charging Infrastructure (T-14).* Install onsite electric vehicle chargers in an amount beyond what is required by the California Green Building Standards (CALGreen) at buildings with designated parking areas (e.g., commercial, educational, retail, multifamily). This can decrease VMT by up to 11.9 percent from vehicles accessing the commercial or multifamily housing building.
- *Limit Residential Parking Supply (T-15):* This measure will reduce the total parking supply available at a residential project or site. Limiting the amount of parking available creates scarcity and adds additional time and inconvenience to trips made by private auto, thus disincentivizing driving as a mode of travel. Reducing the convenience of driving results in a shift to other modes and decreased VMT, by up to 13.7% at the Project or site.
- *Unbundle Residential Parking Costs from Property Cost (T-16):* This measure unbundles, or separates, a residential project's parking costs from property costs, requiring those who wish to purchase parking spaces to do so at an additional cost. On the assumption that parking costs are passed through to the vehicle owners/drivers utilizing the parking spaces, this measure results in decreased vehicle ownership and, therefore, a reduction in VMT. This can decrease VMT by up to 15.7%. This measure should be practiced in areas where there is robust access to transit, bicycle and pedestrian facilities to facilitate utilization of alternative modes of transportation.
- *Improve Street Connectivity (T-17):* This measure accounts for the VMT reduction achieved by a project that is designed with a higher density of vehicle intersections compared to the average intersection density in the U.S, reducing VMT by up to 30.0% within the plan area.
- *Provide Pedestrian Network Improvement (T-18):* This measure increases sidewalk coverage to improve pedestrian access. Providing sidewalks and an enhanced pedestrian network encourages people to walk instead of drive. Pedestrian improvements can reduce VMT up to 6.4%, particularly when new or improved sidewalks connect people to an existing network of pedestrian and transit facilities.
- *Construct or improve bike facility (T-19-A)*: This measure involves constructing or improving a single bicycle lane facility (limited to Class I, II, or IV) that connects to a larger existing bikeway network. Enhancing bicycle infrastructure can lead to a VMT reduction of 0.8% per site. The effectiveness depends on the network's extent and its connectivity to key destinations.
- *Construct or Improve Bike Boulevard (T-19-B):* This measure involves constructing or improving a single bicycle boulevard that connects to a larger existing bikeway network. Bicycle boulevard construction can lead to a VMT reduction of 0.2% per site. The effectiveness depends on the network's extent and its connectivity to key destinations.
- *Expand Bikeway Network (T-20):* This measure will increase the length of a city or community bikeway network. A bicycle network is an interconnected system of bike lanes, bike paths, bike routes, and cycle tracks. Enhancing a bicycle network can lead to a VMT reduction of 0.5% per site. The effectiveness depends on the network's extent and its connectivity to key destinations.
- *Implement Conventional Carshare Program (T-21-A):* This measure provides carshare access in the user's community by deploying conventional carshare vehicles. Carsharing offers people convenient access to a vehicle for personal or commuting purposes. Implementing a carshare program can reduce VMT up to 0.15%.
- *Implement Electric Carshare Program (T-21-B): This measure will increase carshare access in the user's community by deploying electric carshare vehicles. Carsharing offers people convenient access to a vehicle for personal or commuting purposes. This helps encourage transportation alternatives and reduces vehicle ownership, thereby reducing VMT, by up to 0.18% within the plan area.*

- *Implement Pedal, Non-Electric, Bikeshare Program (T-22-A):* This measure will establish a bikeshare program. Bikeshare programs provide users with on-demand access to bikes for short-term rentals. This program can reduce VMT by up to 0.02% within the plan area.
- *Implement a bike-share program (T-22-B)*: This measure involves establishing a bike-share program, providing users with on-demand access to bikes for short-term rentals. Bike-share programs can reduce VMT by up to 0.06% in the plan area. These programs are typically more effective in dense urban areas where short trips by car are common.
- *Implement Scooter-share Program (T-22-C):* Scooter-share programs provide users with on-demand access to electric scooters for short-term rentals. This program can reduce VMT by up to 0.07% in the plan area and are more effective in dense urban areas where short trips by car are common.
- *Provide Community-Based Travel Planning (T-23):* This measure will target residences in the plan/community with community-based travel planning (CBTP). CBTP is a residential based approach to outreach that provides households with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles, thereby reducing VMT. A CBTP can reduce GHG up to 2.3% in a plan area depending on the number of residents targeted.
- *Implement Market Price Public Parking On Street (T-24): This measure will price all on-street parking in a given community, with a focus on parking near central business districts, employment centers, and retail centers. Increasing the cost of parking increases the total cost of driving to a location, incentivizing shifts to other modes and thus decreasing total VMT to and from the priced areas, by up to 30.0% within the plan area.*
- *Extend transit network coverage or hours (T-25):* This measure involves expanding the local transit network by either adding or modifying existing transit service or extending the operation hours to enhance the service near the project site. This can decrease VMT by up to 4.6% for a plan area, particularly in more urbanized areas with frequent and reliable transit service.
- *Increase transit service frequency (T-26)*: This measure would increase transit frequency on one or more transit lines serving the plan/community. It can reduce passenger VMT by up to 11.3%.
- *Implement Transit-Supportive Roadway Treatments (T-27):* This measure implements transit-supportive treatments on the transit routes serving the plan/community. Transit-supportive treatments incorporate a mix of roadway infrastructure improvements and/or traffic signal modifications to improve transit travel times and reliability. It can reduce passenger VMT by up to 0.6% in areas with frequent service.
- *Provide Bus Rapid Transit (T-28):* This measure will convert an existing bus route to a bus rapid transit (BRT) system. BRT can increase the transit mode share in a community due to improved travel times, service frequencies, and the unique components of the BRT system. This mode shift may reduce VMT by up to 13.8% within the plan area.
- *Reduce Transit Fares (T-29):* This measure will reduce transit fares on the transit lines serving the plan/community. A reduction in transit fares creates incentives to shift travel to transit from single-occupancy vehicles and other traveling modes, which can reduce VMT up to 1.2%.
- *Provide Transit Shelters (T-46):* For this measure, a local government or transit agency provides amenities that make it safer and more comfortable to wait for the bus. The two interventions that have proven to lead to changes in rider perceptions are adding bus shelters and adding real-time arrival information. Research into transit ridership shows that adding these amenities decreases both the real and the perceived wait time for riders, which impacts riders' willingness to ride, decreasing up to 0.32% VMT within the plan area.
- *Infill Development (T-55):* This measure accounts for the VMT reduction achieved by infill housing development programs that allow residents to live closer to downtown areas where there is greater access to jobs and activities. Residents living at infill development projects typically do not

need to travel as far to access essential destinations. This leads to up to 30% lower project or site based residential VMT.

- *Active Modes of Transportation for Youth (T-56):* This measure accounts for reductions in VMT achieved by projects that provide infrastructure to support any form of active transport among youth. Trips to school and extracurricular activities represent most of the everyday travel taken by youth. Thus, ensuring that children can use active transportation whenever possible can serve to reduce up to 22.2% of school commute based VMT.

These measures are for informational purposes only: the reduction in Vehicle Miles Traveled (VMT) resulting from implementing these measures can vary significantly based on local conditions, the extent of implementation, and how these strategies are integrated with other transportation and land use policies. While there are case studies supporting the high end of the ranges provided in the Handbook, given the complexity and variety of factors, VMT reduction would likely be closer to the low end of the range provided in the Handbook.

### Monterey County Code, Title 12, Vehicle and Traffic

MCC Chapter 12.80 Voluntary Automobiles Trip Reduction, outlines the requirements for the Facilities Trip Reduction Ordinance, which provides land use considerations to help achieve the overall goals of 1.6 percent per year trip reduction, 1.35 average vehicle ridership (AVR), or sixty (60) percent drive alone rate (DAR) for the County. The intent of this chapter is to ensure that new development, redevelopment, and expanse existing development contain the needed infrastructure and programs to, firstly, reduce the need to travel, and, secondly, to encourage alternative modes of travel. In particular, Section 12.80.050 – Responsibilities of residential developers and developments, requires that developers of all residential developments with 25 or more units to submit a Trip Reduction Checklist as part of the discretionary permit review process. The Checklist shall identify proposed design elements and facilities that encourage alternative transportation usage by visitors to the development.

### *2045 Metropolitan Transportation Plan & the Sustainable Communities Strategy*

As required by SB 375, AMBAG develops a Sustainable Communities Strategy (SCS) every four years as part of updating its Metropolitan Transportation Plan (MTP). The AMBAG MTP/SCS outlines a regional approach to reducing VMT. This approach emphasizes the integration of land use planning with transportation enhancements and incorporates the following goals and policies:

- Access and Mobility – Provide convenient, accessible, and reliable travel options while maximizing productivity for all people and goods in the region.
- Economic Vitality – Raise the region's standard of living by enhancing the performance of the transportation system.
- Environment – Promote environmental sustainability and protect the natural environment.
- Healthy Communities – Protect the health of our residents; foster efficient development patterns that optimize travel, housing, and employment choices and encourage active transportation.
- Social Equity – Provide an equitable level of transportation services to all segments of the population.
- System Preservation and Safety – Preserve and ensure a sustainable and safe regional transportation system.

To achieve these goals the 2045 SCS considers various land use and transportation scenarios which are weighed against a variety of performance measures and measured against the goals outlined above. To

achieve the preferred scenario, affordable housing and land use strategies are employed that address the persistent jobs-housing imbalance in the region. The County's Housing Element is one of many housing elements in the region planning for increased affordable housing to address this imbalance.

## Policies and Multimodal Analysis

The following plans, policies, performance metrics, and goals are considered important to considering whether the proposed action would result in a conflict as described in (a) of the 2024 CEQA Statute Guidelines Appendix G Section XVII.

1. 2010 General Plan (Inland):
   The Monterey County General Plan is a guide for future development and land use in Monterey County, California. It sets rules and goals to help make sure that growth is safe, protects the environment, and meets the needs of the community. The Circulation Element of the General Plan identifies the general location and extent of existing and proposed major transportation facilities for vehicle, rail, air, water, and bicycle transportation.

   *The policies relating to transportation are shown in* Table *5* *along with an explanation of whether the Project conflicts with or supports each policy. The General Plan includes a number of policies related to level of service (LOS). However, because LOS is no longer considered to be an impact under CEQA those goals and policies are not included below as part of the transportation impacts analysis included here.*

2. Active Transportation Plan for Monterey County (2018), TAMC
   The 2018 Transportation Agency for Monterey County Active Transportation Plan (ATP) is an update of the 2011 Bicycle and Pedestrian Master Plan, which identified all existing and proposed bicycle and pedestrian facilities in Monterey County. This ATP identifies remaining gaps in the bicycle and pedestrian network and opportunity areas for innovative bicycle facility design. The vision for the ATP is that active transportation will be an integral, convenient and safe part of daily life in Monterey County for residents and visitors of all ages and abilities.

   *The proposed Project does not conflict with the ATP. As development is proposed for construction, the application will be reviewed for required roadway improvements, including consistency with the County ATP, and provide the necessary pedestrian and bicycle facilities improvements, and/or with applicability and assessment of impact fees. The Project would not interfere with, degrade, or prevent the implementation of existing or planned active transportation infrastructure and the opportunity sites do not physically conflict with or obstruct any existing or planned transit stops, stations, or active transportation corridors. Furthermore, approximately 92% of the identified opportunity sites are within a ½ mile vicinity of existing or planned bicycle facilities.*

3. Active Transportation Plan for Caltrans District 5 (2021), Caltrans
   The District 5 Active Transportation Plan (Plan) advances the Vision Statement and Goals in Toward an Active California, the statewide bicycle and pedestrian plan, and is part of a comprehensive planning process to identify locations with walking and bicycling needs in each Caltrans district across California. The Plan includes a prioritized list of bicycle and pedestrian needs along and across the state highway system to help identify opportunities to incorporate bicycle, pedestrian, and transit improvements into projects.

   *The proposed Project does not conflict with the ATP. As development is proposed for construction, the application will be reviewed for required improvements, including consistency with the District 5 ATP, and provide the necessary pedestrian and bicycle*

*facilities improvements, and/or with applicability and assessment of impact fees. The project would not interfere with, degrade, or prevent the implementation of existing or planned active transportation infrastructure and the opportunity sites do not physically conflict with or obstruct any existing or planned transit stops, stations, or active transportation corridors. .*

4. Fort Ord Regional Trail and Greenway
   The purpose of FORTAG is to provide an accessible multi-use path for recreation and active transportation for residents and visitors. FORTAG supports the following objectives that are relevant to the proposed Project:

   - Function as an active transportation artery for commuting and recreation, providing a safe, accessible, and separated alternative to motorized travel that reduces vehicle trips and associated emissions.
   - Connect people to open space and recreational activities from their homes, workplaces, and hospitality bases.
   - Enhance connections between Fort Ord, Monterey Peninsula, and Salinas Valley communities, and provide additional opportunities for physical exercise and stress reduction for residents and visitors.

   *The proposed Project does not conflict with the FORTAG plan. Opportunity sites are not directly adjacent to the proposed future trail system but could use the system.*

5. Marina-Salinas Multimodal Corridor Conceptual Plan (2015), TAMC

   The Marina-Salinas Multimodal Corridor Plan was developed in response to the need for a regional route through the former Fort Ord area that will increase roadway capacity by prioritizing high quality transit, bicycling and walking as viable alternatives to driving.

   *The proposed Project does not conflict with the Marina-Salinas Multimodal Corridor Conceptual Plan. The proposed Project proposes opportunity sites adjacent to the proposed multimodal corridor alignments and encourages the use of multimodal transportation options.*

6. Monterey Bay Area Rail Network Integration Study (2021), TAMC

   This plan envisions an integrated train and bus network to support regional growth and support state and federal climate action and equity goals. The Initial Service scenario creates a regular passenger rail connection between the Monterey Bay Area and San Francisco Bay Area and lays the foundation for future expansion. The phased scenario includes increased passenger rail service and bus connections. The Vision Service scenario is a long-term vision for rail service in Monterey County.

   *The project would not require changes to any of the rail service network infrastructure or services. Additional housing development in the UMC would not interfere with integrating train and bus network to support regional growth. Opportunity sites do not interfere with the existing and proposed intermodal station projects identified in this study and would not conflict with implementation of this study. The project would not conflict with any existing or future rail network pursuant to the Monterey Bay Area Rail Network Integration Study.*

7. Comprehensive Operational Analysis Final Network Plan (2022), MST

Developed by MST, this plan includes a preferred scenario that increases service frequency as well as the number of people located near transit. This service scenario was based on extensive public outreach and direction from the Board of Directors to focus a little more on ridership, to prioritize the travel needs of low-income communities, and to shift more service to Salinas and regional routes.

*The proposed project does not conflict with this plan because the project would not interfere with MST's ability to operate its services and implement various scenarios affecting service frequency and routes. The project also would not interfere with, degrade, or prevent the existing or planned transit infrastructure or service. Fifty-one of the 56 opportunity sites are within a 0.5-mile vicinity of a transit stop. The project would facilitate development of housing units near transit facilities and would benefit from the increased frequency of services and expanded routes proposed under this plan. Therefore, the project would be consistent with the intent of the Comprehensive Operational Analysis Final Network Plan.*

8. Transportation Agency for Monterey County Regional Transportation Plan (2022), TAMC
The Regional Transportation Plan (RTP) for Monterey County is a 20-year plan that outlines how to address the county's transportation needs and includes transportation projects to meet those needs. The following transportation policies are relevant to the proposed project.

- Increase affordability, accessibility and safety between key origins and destinations in the region.
- Reduce greenhouse gas emissions consistent with regional targets.

*The project would facilitate development of various income level housing throughout Monterey County. Increasing housing supply for all income levels, including affordable housing near transportation corridors would not conflict with the planned improvements in the RTP.*

9. Association of Monterey Bay Area Government Metropolitan Transportation Plan (2022), AMBAG
AMBAG is the Metropolitan Planning Organization (MPO) for the Monterey Bay Area and prepares the Metropolitan Transportation Plan (MTP) which is a coordinated 20-year plan outlining transportation needs for San Benito, Santa Cruz and Monterey Counties.

*The project would facilitate the development of various income level housing throughout Monterey County. Increasing housing supply for all income levels, including affordable housing near transportation corridors would not conflict with the planned improvements in the RTP.*

**Table 5** - Monterey County General Plan and Land Use Plan Consistency Analysis

| | |
|---|---|
| Policy C-1.3: Circulation improvements that mitigate Traffic Tier 1 direct on-site and off-site project impacts shall be constructed concurrently (as defined in subparagraph (a) only of the definition for "concurrency") with new development. Off-site circulation improvements that mitigate Traffic Tier 2 or Traffic Tier 3 impacts either shall:<br>a. be constructed concurrently with new development, or<br>b. a fair-share payment pursuant to Policy C-1.8 (County Traffic Impact Fee), Policy C-1.11 (Regional Development Impact Fee), and/or other applicable | Consistent. The project could result in increased demand for on- and off-site circulation improvements due to future housing development. However, while the project plans for future growth, it does not propose any specific development projects within the UMC at this time. As individual developments are proposed, each application will be reviewed for applicability and assessed for any applicable impact fees or necessary improvements. Therefore, the project does not conflict with this policy. |

| | |
|---|---|
| traffic fee programs shall be made at the discretion of the County. | |
| Policy C-2.2: Existing and proposed public transportation facilities shall be protected from the encroachment of incompatible land uses. | Consistent. Housing is a compatible land use with transit and affordable housing is often paired with transit facilities to improve access and mobility for households that have a lower rate of automobile ownership. The project includes planning for housing growth in areas served by alternative modes of transportation, including public transit and bicycle facilities. Site selection strategies focused on planning for growth in areas of UMC that are designated for growth, including in Community Areas, Rural Centers, areas designated with Affordable Housing Overlays and or within proximity to incorporated cities. Therefore, the location of housing provided for in the project there is no conflict with this policy. |
| Policy C-2.3: The safety standards established by transportation-related agencies shall be supported and be used to guide land use to ensure the safe operation of the County's transportation systems. | Consistent. There are no inherent transportation safety issues with high density housing projects. As development is proposed, each project will be reviewed according to adopted safety standards and they are required to comply with applicable County roadway design standards, Caltrans design and access requirements for state facilities, ADA accessibility requirements, emergency access standards, and other applicable transportation engineering and safety standards during subsequent discretionary review. Compliance with these standards would help ensure that future development provides safe access and circulation for motorists, pedestrians, bicyclists, transit users, and emergency responders and would not interfere with the safe operation of the County's transportation system. The HEU6 includes adoption of objective design standards for projects streamlining under the Objective Process to follows. However, they do not include specific design criteria that would conflict with safety standards. No conflict would occur. |
| Policy C-2.4: A reduction of the number of vehicle miles traveled per person shall be encouraged. | Consistent. Occupants of housing projects with an affordability component exhibit lower vehicle ownership rates and 100% affordable housing projects are generally presumed to have a less than significant impact on VMT per statewide guidance and standards. As described in Section 4.16.4, Thresholds of Significance, OPR Technical Advisory includes affordable housing screening, where residential projects consisting of deed-restricted affordable housing for lower-income households may be presumed to have a less than significant VMT impact because lower-income household generally generate less VMT than regional average, and California Air Pollution Control Officers Association (CAPCOA) Guide for Quantifying guide for Quantifying Greenhouse Gas Mitigation Measures, one of the primary bases for estimating mitigation effects in California, identifies integrating affordable and below-market-rate housing (Measure T-4) as potentially reducing up to 28 percent of greenhouse gas (GHG) emissions from multi-family residential projects. The HEU6 promotes high density housing with affordability components, therefore encourages a reduction of VMT per person. The project would not conflict with this policy. |
| Policy C-2.5: Overall land use patterns that reduce the need to travel by automobile shall be encouraged. | Consistent. The proposed HEU6 includes land uses within proximity to bicycle facilities and transit stops and therefore |

| | |
|---|---|
| | supports this policy. Additionally, there are a number of policies within the plan supporting housing development near public transit facilities including policies programs H-2.G, H-5.B. and Policy H-3.8. Program H-2.G includes providing incentives and density bonus concessions for developments that provide transit-oriented development (TOD). Policy H-3.8 states that the County will explore collaboration with cities to prepare growth strategies that provide for housing near jobs and transit. Program H-5.B commits to identifying sites that comply with SB-10 and amending development standards to facilitate development in transit rich areas. The proposed project does not conflict with this policy. |
| Policy C-2.7: New development shall be located and designed with convenient access and efficient transportation for all intended users and, where possible, consider alternative transportation modes. | Consistent. The project includes land uses within proximity to bicycle facilities and transit stops and therefore supports this policy (Refer to Figures 4.16-1 through 4.16-4).Additionally, there are a number of policies within the HEU6 supporting housing development near transit including program H-2.G, and H-5.B and program H-3.8. The proposed project does not conflict with this policy. |
| Policy C-4.2: All new road and interior circulation systems shall be designed, developed, and maintained according to adopted County standards or allowed through specific agreements and plans. | Consistent. The project is an update to the County's Housing Element. Any development proposing new roads or interior circulation systems would be reviewed for consistency according to adopted County standards at the time of application. The project does not conflict with this policy. |
| Policy C-4.3: The needs of bicyclists and pedestrians, as well as provisions for utilities and drainage, shall be considered and, where appropriate, provided in all public rights-of-way in a manner that minimizes impacts on adjacent land uses. | Consistent. The project is an update to the County's Housing Element. Any development proposing new roads or interior circulation systems would be reviewed for consistency according to adopted County standards at the time of application. The project does not conflict with this policy. |
| Policy C-4.5: New public local and collector roads shall be located and designed to minimize disruption of existing development, discourage through auto traffic and provide for bicycle and pedestrian traffic within the right-of-way. | Consistent. The project is an update to the County's Housing Element and does not include any new roadways at this time. Any development proposing new roads would be reviewed for consistency according to adopted County standards at the time of application. The project does not conflict with this policy. |
| Policy C-4.6: Driveways, mid-block access points, intersections and on-street parking along major roads and highways shall be minimized and consolidated. | Consistent. The project is an update to the County's Housing Element. Any development including new driveways would be reviewed for site access and crossings at the time of application. The project does not conflict with this policy. |
| Policy C-4.7: Where appropriate and sufficient public right-of-way is available, bicycle paths shall be separated from major roads and highways and be provided between adjacent communities. | Consistent. The project is an update to the County's Housing Element. Any development proposing new bicycle facilities and right-of-way would be reviewed for at the time of application. The project does not conflict with this policy. |

| | |
|---|---|
| Goal C-5: Maintain and enhance a system of scenic roads and highways through areas of scenic beauty without imposing undue restrictions on private property or constricting the normal flow of traffic. | Consistent. There are opportunity sites that are adjacent to designated scenic roads and highways and areas designated as having scenic sensitivity. However, with proper grading and site and design elements, those opportunity sites would be able to be developed without having significant impacts on scenic vista. Maintaining adequate traffic flow and level of service would be reviewed for consistency according to County standards and regulations at time of application. The project does not conflict with this policy. |
| Policy C-5.4: Land use controls shall be applied or retained to protect the Scenic Highway Corridor and to encourage sensitive selection of sites and open space preservation within such areas. Where land is designated for development at a density that would create a substantial adverse visual impact, the landowner shall be encouraged to voluntarily dedicate a scenic easement to protect the Scenic Highway corridor. | Consistent. This policy protects Scenic Highway Corridors by applying land use controls and to encourage sensitive selection of sites and open space preservation. From a transportation and circulation perspective, the project is consistent because it does not propose any physical alterations to the designated scenic highway right-of-way, nor does it introduce circulation infrastructure that would conflict with the established scenic corridor boundaries or controls. The detailed analysis of the project's visual compatibility and consistency with the Scenic Highway Corridor is addressed in the PEIR Section 4.1, Aesthetics. Project-specific impacts would be reviewed for consistency with County regulations at time of application. The project does not conflict with this policy. |
| Policy C-6.2: Major traffic generating events, activities and development shall provide facilities adequate to meet the anticipated demand and to encourage the use of mass transit options, consistent with the Monterey-Salinas Transit's Designing for Transit manual. | Consistent. The project is an update to the County's Housing Element, however as specific developments are proposed there are sufficient review mechanisms in place to review the proposed facilities for adequacy of demand. Additionally, there are a number of policies within the HEU6 supporting housing development near transit including programs H-2.G and H-5.B, and policy H-3.8. The project does not conflict with this policy. |
| Policy C-6.3: The County shall encourage new development to concentrate along major transportation corridors and near cities to make transit services to these areas more feasible. | Consistent. Approximately 93 percent of the proposed housing units for housing are within 0.5 mile of transit stops. Although these transit facilities do not qualify as high-quality transit stops or corridors pursuant to the CEQA Guidelines, their presence demonstrates that transit service is available to these housing units. The HEU6 also includes opportunity sites located along major transportation corridors and in proximity to the Cities of Salinas, Carmel-by-the-Sea, Marina, and Monterey. In addition, one opportunity site is located within the incorporated limits of the City of Marina. Therefore, the project does not conflict with this policy. |
| Policy C-6.5: The County shall encourage use of public transit and alternative modes of transportation through land use designations and zoning which cluster employment centers with a mix of other uses, and project design that incorporates carpool areas, "park and ride" facilities and similar incentives. | Consistent. The project proposes land uses within 0.5 mile proximity to bicycle facilities and transit stops for most opportunity sites. Additionally, there are a number of policies within the HEU6 supporting housing development near transit including programs H-2.G and H-5.B, and policy H-3.8. The project does not conflict with this policy. |
| Policy C-7.1: The County shall prohibit land use activities that interfere with the safe operation of aircraft. | Consistent. Housing is proposed within the Airport Influence Area for the Marina Municipal Airport and the Monterey Regional Airport. Opportunity Sites 46, 47, and 52 are located within the Airport Influence Area (AIA) of the Monterey Regional Airport Land Use Compatibility Plan (ALUCP) and Opportunity Sites 31 and 53 are located within the AIA of the Marina Municipal Airport ALUCP. The HEU6 |

| | |
|---|---|
| | proposes split zoning for Opportunity Sites 46, 47, and 52 to minimize safety and environmental impacts. Opportunity Sites 31, 47, 52, and 53 are within Safety Zone 7 (AIA). Opportunity Site 46 is partially in Safety Zone 4 – Outer Approach/Departure Zone. Split zoning is proposed for Opportunity Site 46 to rezone portions of the site that are suitable for development and consistent with Part 77 regulations in addition to the density requirements of Safety Zone 4. Within Safety Zone 4, residential development is limited to one dwelling unit per two acres, and additional requirements apply, including airport disclosure notices and airspace review for structures exceeding 70 feet in height. Split Zoning is also proposed for Opportunity Site 47 to avoid impacts on Part 77 Airspace. Development of housing on these opportunity sites within ALUCPs are subject to compliance with applicable compatibility standards, including airport disclosure requirements, airspace review for structures exceeding 100 feet in height, restrictions related to Federal Aviation Administration (FAA) Part 77 Airspace surfaces, and ALUC review for uses involving vulnerable occupants within specified distances from runways. Future development on these sites would remain subject to ALUC review, airport disclosure requirements, airspace compatibility standards, and applicable FAA height restrictions. The HEU6 would allow development in a manner that would not interfere with the safe operation of aircraft. Therefore, the project does not conflict with this policy. The project does not conflict with this policy. |
| Policy C-7.2: Land uses in areas that may be impacted by airport operations shall be compatible with those operations and incorporate measures to mitigate potential safety and noise impacts on those uses. | Consistent. Refer to analysis for Policy C-7.1. Additionally, Opportunity Sites 46, 47, and 52 are outside Monterey Regional Airport's outermost noise contour (65 CNEL), and Opportunity Sites 31 and 53 are outside the outermost noise contour (55 CNEL). Therefore, noise generated by the airport would be less than 65 CNEL at the nearest receptor, consistent with the County's acceptable ambient noise levels for multi-family residential, and impacts would be less than significant. Additionally, the Airport Land Use Commission will recommend a recorded deed notice requirement as a condition of approval pertaining to safety and noise, as applicable. The project does not conflict with this policy. |
| Policy C-7.4: Land uses in the vicinity of public airports shall be consistent and compatible with the airport comprehensive land use plans. | Consistent. As discussed above and in further detail in Section 4.9, Hazards and Hazardous Materials, Opportunity Sites 46 and 47 will be split zoned to avoid impacts on Safety Zone 4 and Part 77 Airspace and ensure compatibility with safety requirements of the Monterey Regional Airport ALUCP. Therefore, the project is not inconsistent with any airport land use plans. |
| Policy C-8.4: The County shall encourage transit-oriented development around existing and future rail, light rail, or bus rapid transit stations. | Consistent. The project proposes land uses within proximity to future rail stations in Castroville and Salinas. Additionally, there are a number of policies within the HEU6 supporting housing development near transit including policy H-2.G, H-3.8, and H-5.B. The project does not conflict with this policy. |

| Land Use Element | |
|---|---|
| LU-1.4: Growth areas shall be designated only where an adequate level of services and facilities such as water, sewerage, fire and police protection, transportation, and schools exists or can be assured concurrent with growth and development. Phasing of development shall be required as necessary in growth areas in order to provide a basis for long-range services and facilities planning. | Consistent. The proposed opportunity sites are located along existing transportation facilities or near such facilities. As development is proposed, the County will review applications and require transportation facilities consistent with current access and mobility standards and regulations. The project does not conflict with this policy. |
| LU-1.19: Community Areas, Rural Centers and Affordable Housing Overlay districts are the top priority for development in the unincorporated areas of the County. Outside of those areas, a Development Evaluation System shall be established to provide a systematic, consistent, predictable, and quantitative method for decision-makers to evaluate developments of five or more lots or units and developments of equivalent or greater traffic, water, or wastewater intensity.[…] | Consistent. The HEU6 proposes additional housing units to priority development areas such as Community Areas, Rural Centers, and Affordable Housing Overlays. Although there are opportunity sites outside of these areas, the project includes General Plan amendments to designate opportunity sites as priority development areas which are not subject to Development Evaluation System requirements. The HEU6 provides a systematic, consistent, predictable, and quantitative analysis of housing needs and challenges based on affordable housing requirements. The project does not conflict with this policy. |
| LU-2.4: Areas designated for residential use shall be located with convenient access to employment, shopping, recreation, and transportation. Higher density residential areas should be located with convenient access to public transit. | Consistent. The HEU6 provides for opportunity sites near transportation facilities and provides detailed information on the number of jobs within a 45-minute commute by transit or vehicle. To the extent feasible and within the constraints of where the County has land use authority, opportunity sites are located near transit. Additionally, there are a number of policies within the HEU6 supporting housing development near transit including program H-2.G and H-5.B, and policy H-3.8. The project does not conflict with this policy. |
| LU-2.5: Adequate circulation rights-of-way shall be delineated within each residential area. | Consistent. The project does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including any necessary right-of-way needs. The project does not conflict with this policy. |
| Conservation and Open Space Element | |
| OS-9.2: Development shall be directed toward cities, Community Areas, and Rural Centers where energy expended for transportation and provision of services can be minimized. | Consistent. The HEU6 prioritizes development within existing and planned Community Areas, Rural Centers, Affordable Housing Overlays and in areas near cities where transportation facilities and services already exist. The project does not conflict with this policy. |
| OS-9.6: Development shall incorporate features that reduce energy used for transportation, including pedestrian and bicycle pathways, access to transit, and roadway design as appropriate. | Consistent. The project does not provide for design of each opportunity site, however as development is proposed, County staff will review the application for consistency with access and transportation regulations and standards including any active transportation facilities. The project does not conflict with this policy. |
| Safety Element | |
| S-4.10: The County shall require the creation of road maintenance agreements for all new private subdivision roads. | Consistent. The project does not provide for design of each opportunity site, however as development is proposed, County staff will review the application for consistency with access and transportation regulations and standards including any necessary right-of-way needs. If new roadways are proposed as part of the development, the County would require road maintenance agreements for |

| | |
|---|---|
| | new private subdivision roads. The project does not conflict with this policy. |
| S-5.17: Emergency Response Routes and Street Connectivity Plans shall be required for Community Areas and Rural Centers, and for any development producing traffic at an equivalent or greater level to five or more lots/units. Said Plan shall include:<br>a. Roadway connectivity that provides multiple routes for emergency response vehicles.<br>b. Primary and secondary response routes in Community Areas and Rural Centers.<br>c. Secondary response routes, which may include existing roads or new roads required as part of development proposals.<br>The County shall review said plans in coordination with the appropriate Fire District. | Consistent. This policy mandates the creation of Emergency Response Routes and Street Connectivity Plans for specific areas and developments of five or more units. The Safety Element is currently being updated to comply with SB 99, AB 747, and AB 1409 to evaluate evacuation routes, their viability and capacity under a range of hazard scenarios, identify evacuation locations, and identify residential areas without two points of egress. The existing area and master plans evaluate circulation in those plan areas. The County's Emergency Operations Plan also discusses evacuation procedures and resources to address various types of hazards. The Mult-Jurisdictional Hazard Mitigation Plan is incorporated by reference into the County's Safety Element and it also discusses evacuation strategies in the County.<br>New residential development would be subject to the standard California Building Code, Fire Code, and local fire districts with jurisdiction reviews for secondary access, turnarounds, and connectivity at the time of application. Additionally, the project's impacts regarding wildfire and emergency evacuation (Thresholds 6 and 7) are discussed in Section 4.19, Wildfire. The project does not conflict with this policy. |
| **Public Services Element** | |
| PS-1.1: Adequate Public Facilities and Services (APFS) requirements shall:<br>a. Ensure that APFS needed to support new development are available to meet or exceed the level of service of "Infrastructure and Service Standards" (Table PS-1) concurrent with the impacts of such development;<br>b. Encourage development in infill areas where APFS are available, while acknowledging the rights of property owners to economically viable use of existing legal lots of record throughout the county; and<br>c. Seek to achieve acceptable level of service (LOS) standards through improvements funded by fair-share impact fees and planned capital improvements (CIFPs). | Consistent. The proposed project would continue to be subject to the APFS requirements as outlined in Table PS-1. Opportunity sites have been selected through a comprehensive screening process intended to identify locations where additional residential capacity could be accommodated, existing or planned availability of adequate infrastructure were one of the site selection criteria. Although LOS is no longer a CEQA issue, therefore, not addressed in this PEIR, it is noted that the County Public Works, Facilities, and Parks, would continue to prioritize roadway improvements based on LOS methodology, and each development project would be required to provide its fair-share impact fees to roadway improvements, including but not limited to planned capital improvements. Additionally, Table PS-1 requires that road intersection level of service, Improvements to be LOS D for Rural Centers and Community Areas. For Rural Centers, Table PS-1 also includes a footnote that states "Development in Rural Centers may proceed, even if the operating level of service is lower than the applicable LOS standard on adjacent roads, if the certified Housing Element in effect at the time requires that the land in question be made available for development to meet the County's Regional Housing Needs Allocation. Development will be required to participate in any applicable regional or local road impact fee program once adopted." The HEU6 provides for meeting the RHNA and therefore falls within the scope of this note. The project does not conflict with this policy. |
| **Carmel Valley Master Plan** | Opportunity Sites 17, 18, 19, 20, 21, 22, 23, 35, 36, 37, 38, 54, 55, 56 |

| | |
|---|---|
| CV-2.1: Public transit should be explored as an alternative to the use of private automobiles and to help preserve air quality. Whenever feasible all new development shall include a road system adequate not only for its internally generated automobile traffic but also for bus (both transit and school), pedestrian, and bicycle traffic, which should logically pass through or be generated by the development. | Consistent. The project does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including right-of-way allocation. The project does not conflict with this policy. |
| CV-2.5: Circulation in the village should emphasize pedestrian access. Walkways and paths are to be provided rather than conventional sidewalks. Pedestrian walkways should be used to provide access among new or remodeled commercial and other higher density uses. | Consistent. The plan does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including providing pedestrian access. Opportunity Site 55 is the only opportunity site that is located in Carmel Valley Village and would therefore be subject to this Policy. Each development application would be reviewed and applicable walkways and paths would be provided, rather than conventional sidewalks, if deemed necessary by the County. The proposed project does not conflict with this policy. |
| CV-2.6: Multiple driveway accesses to Carmel Valley Road should be discouraged. Approval of future development of land having frontage on Carmel Valley Road must be conditioned upon minimizing access to Carmel Valley Road, or denying it if access is otherwise available. | Consistent. The project does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including driveway placement. The project does not conflict with this policy. |
| CV-2.14: New major developments with access adjacent to Carmel Valley Road shall be required to provide space for the transit buses to stop, the parking of cars, and facilities for the safe storage of bicycles. | Consistent. The project does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including right-of-way allocation. The project does not conflict with this policy. |
| CV-3.14: Wherever possible a network of shortcut trails and bike paths should interconnect neighborhoods, developments, and roads. These should be closed to motor vehicles and their intent is to facilitate movement within the Valley without the use of automobiles. | Consistent. The project does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including any active transportation facilities, such as trails and bike paths. Each housing project are required to coordinate with the County Public Works, Facilities, and Parks, to provide the necessary trails and bike paths to connect neighborhoods and roads. Furthermore, the County Public Works, Facilities, and Parks has ongoing planning activities to provide improved active transportation connectivity including coordination with TAMC and Caltrans ATP planning processes. The project does not conflict with this policy. |
| Fort Ord Master Plan | Opportunity Sites 31, 47 |
| Fort Ord Master Plan Objective E: Coordinate the location, intensity, and mix of land uses with alternative transportation goals and transportation infrastructure.<br>Residential Land Use Policy E-1: The County of Monterey shall make land use decisions that support transportation alternatives to the automobile and encourage mixed-use projects and the highest-density residential projects along major transit and public transportation routes.<br>Program E-1.1: The County of Monterey shall prepare one or more specific plans for the UC MBEST Cooperative Planning District. | Consistent. The County has ongoing planning activities to provide improved transportation connectivity including coordination with other jurisdictions in the Fort Ord planning area, CSUMB, TAMC and Caltrans. The project does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations including connectivity to the former Fort Ord planning area. Additionally, there are a number of policies within the HEU6 supporting housing development near transit including program H-2.G and H- |

| | |
|---|---|
| Program E-1.2: The County of Monterey shall prepare one or more specific plans for the East Garrison District and incorporate provisions to support transportation alternatives to the automobile.<br>Program E-1.3: The County of Monterey shall encourage the development of an integrated street pattern for new developments which provides linkages to the existing street network and discourages cul-de-sacs or dead-end streets. | 5.B, and policy H-3.8. The project does not conflict with this policy. |
| Fort Ord Master Plan Fire, Flood, and Emergency Management Policy A-1: The county shall reduce fire hazard risks to an acceptable level by inventorying and assigning risk levels for wildfire hazards and regulating the type, density, location, and/or design and construction of new developments, both public and private. Program A-1.1: The County shall incorporate the recommendations of the Monterey County Regional Fire District for all residential, commercial, industrial, and public works projects to be constructed in high fire hazard areas at the former Fort Ord before a building permit can be issued. Such recommendations shall be in conformity with the current applicable Uniform Building Code Fire Hazards Policies. These recommendations should include standards of road widths, road access, building materials, distances around structures, and other standards for compliance with the UBC Fire Hazards Policies. | Consistent. The project does not provide for design of each opportunity site, however, as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including roadway design. The project does not conflict with this policy. |
| Fort Ord Master Plan Transportation Demand Management Policy A-1: TDM programs shall be encouraged.<br>Program A-1.1: Promote TDM programs at work sites. Specific measures that can be pursued at the work site include: compressed work weeks, staggered/flexible work hours, telecommuting, on-site ridesharing, public transit subsidies, guaranteed ride home, bicycle facilities, and parking pricing.<br>Program A-1.2: Promote TDM programs in residential developments, retail centers, and other activity centers.<br>Program A-1.3: Require new development to incorporate design features that will strengthen TDM programs.<br>Program A-1.4: Enforce Congestion Management Plan trip reduction programs. | Consistent. The project does not provide for design of each opportunity site, however, as development is proposed County staff will review the application for opportunities for TDM. The project does not conflict with this policy. |
| Fort Ord Master Plan Land Use and Transportation Policy A.1: Each jurisdiction with lands at former Fort Ord shall coordinate land use and transportation planning both internally and with adjacent jurisdictions consistent with the Reuse Plan circulation framework.<br>Program A-1.1: Each jurisdiction shall support development of a travel demand model covering lands at former Fort Ord to help evaluate the relationship between land use and transportation system.<br>Program A-1.2: Each jurisdiction with lands at former Fort Ord shall require new developments to conduct a traffic analysis to determine impacts on traffic conditions and require measures, such as TDM programs and traffic impact fees, to mitigate these impacts. | Consistent. Opportunity Sites 31 and 47 are within the Fort Ord Master Plan area and already served by the existing roadway network, and would not modify the overarching circulation framework. The project used AMBAG RTDM for VMT analysis, calibrating and modifying to accommodate the project-specific conditions, which helped evaluate the relationship between land use and transportation system, and satisfying the intent of regional modeling coordination.<br>AMBAG maintains the RTDM in coordination with the cities and counties, including the County of Monterey. As part of the Metropolitan Transportation Plan/Metropolitan Transportation Improvement Program, AMBAG incorporates all approved projects into the RTDM and keep land use and transportation facility data current. Future development on these sites will be subject to project-level, non-CEQA LOS traffic assessment under local regulations to evaluate localized traffic conditions and identify necessary roadway improvements. Future projects will also be |

| | |
|---|---|
| | required to implement TDM programs and pay applicable traffic impact fees. Project-level VMT reduction TDMs are separately addressed under Section 4.16.5.2 (Threshold 2). The project does not conflict with this policy. |
| Fort Ord Master Plan Land Use and Transportation Policy A.2: The transportation system to serve former Fort Ord lands shall be designed to reflect the needs of surrounding land uses, proposed densities of development, and shall include streets, pedestrian access, bikeways and landscaping as appropriate. | Consistent. The project does not provide for design of each opportunity site, however, as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including any required active transportation facilities. The project does not conflict with this policy. |
| Fort Ord Master Plan Air Quality Policy A-3: Integrate the land use strategies of the California Air Resources Board's publication, "The Land Use Air Quality Linkage: How Land Use and Transportation Affect Air Quality," into local land use decisions. | Consistent. The HEU6 considered all reasonable opportunities and constraints as well as best practice principles regarding where to locate housing to minimize impacts on VMT and air quality. The resulting opportunity sites were located based on these principles and the constraints as described in the HEU6. The project does not conflict with this policy. |
| Fort Ord Master Plan Air Quality Program A.3-1: The County shall plan and zone properties, as well as review development proposals to promote the Land Use-Air Quality linkage. This linkage includes, but is not limited to, enhancement of Central Business Districts, compact development patterns, residential densities that average above seven dwelling units per acre, clustered employment densities and activity centers, mixed use development, and integrated street patterns. | Consistent. The HEU6 considered all reasonable opportunities and constraints as well as best practice principles regarding where to locate housing to minimize impacts on VMT and air quality. The resulting opportunity sites were sited based on these principles and the constraints as described in the HEU6. Additionally, the Fort Ord Master Plan designated properties for development or development with restrictions. The opportunity sites located in this planning area are consistent with development envisioned in the Master Plan. Additionally, as development is proposed the County will review the applications for consistency with this policy including integrated street patterns. The project does not conflict with this policy. |
| Fort Ord Master Plan Program A-3.2: The County shall zone high density residential and employment land uses to be clustered in and near activity centers to maximize the efficient use of mass transit. | Consistent. The HEU6 considered all reasonable opportunities and constraints as well as best practice principles regarding where to locate housing to maximize the use of transit. The resulting opportunity sites were located based on these principles and the constraints as described in the HEU6. Additionally, the HEU6 includes Implementation Program H-1.C, Energy Efficiency and Conservation for Goal H-1 which includes promoting transit-oriented, including active transportation, and mixed-use development in Community Areas and Rural Centers near activity centers and transit routes to minimize vehicle trips and transportation energy consumption. Program H-2.G, Comprehensive Suite of Incentives/Concessions for Developers, also include providing TOD of affordable housing near transit hubs. The project does not conflict with this policy. |
| Fort Ord Master Plan Residential Land Use Policy E-1: The County of Monterey shall make land use decisions that support transportation alternatives to the automobile and encourage mixed-use projects and the highest-density residential projects along major transit and public transportation routes. | Consistent. The HEU6 considered all reasonable opportunities and constraints as well as best practice principles regarding where to locate housing to maximize the use of transit. The resulting opportunity sites were located based on these principles and the constraints as described in the HEU6. Additionally, the HEU6 includes Implementation Program H-1.C, Energy Efficiency and Conservation for Goal H-1 which includes promoting transit-oriented, including active transportation, and mixed-use development in Community Areas and Rural Centers near activity centers and transit routes to minimize vehicle trips |

| | |
|---|---|
| | and transportation energy consumption. Program H-2.G, Comprehensive Suite of Incentives/Concessions for Developers, also include providing transit-oriented development (TOD). The project does not conflict with this policy. |
| Fort Ord Master Plan Residential Land Use Policy E-3: In areas of residential development, the County of Monterey shall provide for designation of access routes, street and road rights-of-way, off-street and on-street parking, bike paths, and pedestrian walkways.<br>Program E-3.1: The County of Monterey shall delineate adequate circulation rights-of-way to and within each residential area by creating circulation rights-of-way plan lines.<br>Program E-3.2: The County of Monterey shall prepare pedestrian and bikeway plans and link residential areas to commercial development and public transit. | Consistent. The County has ongoing planning activities to provide improved active transportation connectivity including coordination with TAMC and Caltrans ATP planning processes. The project does not provide for design of each opportunity site, however, as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including roadway design and multimodal circulation and access. The Master Plan envisioned development to be comprehensively planned alongside transportation infrastructure. The project does not conflict with this policy. |
| Greater Monterey Peninsula Area Plan | Opportunity Sites 40, 45, 46, 52 (Opportunity Site 53 is located within City of Marina city limits). |
| GMP-2.4: To minimize traffic safety hazards, creation of new direct access points from single-family residences onto Highway 68 or Laureles Grade shall be prohibited, unless there is no other feasible access. | Consistent: The plan does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards including not creating new direct access points from single-family residences onto Highway 68 or Laureles Grade, unless there is no other feasible access. Opportunity Site 52 is the only site that abuts Highway 68. Access to the site is anticipated to be via Olmstead Road with the potential for an alternative access point for emergency access only. The proposed project does not conflict with this policy. |
| GMP-2.8: Development directly beneath runway approaches of the Monterey Peninsula Airport and Marina Municipal Airport shall:<br>a. be of low intensity,<br>b. not generate electrical interference to radio communication between pilots and the air traffic control tower,<br>c. not contain sources of glare which would blind or confuse pilots, and<br>d. be required to grant aviation easements to the Monterey Peninsula Airport District or other appropriate entity as a condition of development approval. | Consistent: Refer to analysis in C-7.1 and C-7.2 for additional information. The proposed project would not conflict with this policy. |
| Greater Salinas Area Plan | Opportunity Sites 1, 2, 3, 4, 5, 6 |
| GS-2.2: The County shall work with the City of Salinas to design a bypass roadway that provides an alternative route of traffic from SR-101 to Reservation Road along the west side of the City of Salinas (a.k.a. West Side Bypass) and also preserves as much agricultural land west of the City of Salinas as possible. | Consistent. The proposed project would not impede the County's ability to work with the City of Salinas to design a bypass roadway that provides an alternative route of traffic from U.S. Route 101 to Reservation Road. The proposed project would not conflict with this policy. |
| GS-2.3: The SR-101 bypass shall be designated a scenic highway. The bypass design shall incorporate sound deflection berms with appropriate landscaping and such measures shall be held consistent with its "scenic highway" designation. | Consistent. The proposed project would not prevent or obstruct with the County's plan to designate the U.S. Route 101 bypass as a scenic highway. The proposed project would not conflict with this policy. |
| Toro Area Plan | Opportunity Site 24 |

| | |
|---|---|
| T-2.3 Continue to work with the state, local agencies, and citizens groups to alleviate traffic congestion while maintaining the scenic beauty of Highway 68. With the goal of eventually constructing a scenic four-lane divided highway, the County shall support the following measures:<br>a. coordination with Caltrans and TAMC for the construction of a four-lane facility between the Toro interchange and State Route 218; and<br>b. construction of bus stops, pull-outs, and shelters where needed. | Consistent. The plan does not provide for design of each opportunity site, however as development is proposed County staff will review the application and the project would be subject to appropriate traffic improvements, impact fees, and fair-share funding, as applicable. The project is a policy plan that would allow future development, and coordination with Caltrans and TAMC for improving Highway 68 is not part of the project. Opportunity Site 24 is within the Toro Area Plan, and although it is within proximity, it does not abut Highway 68, and construction of bus stops, pull-outs, and shelters along Highway 68 would not be required. The proposed project would not conflict with this policy. |
| T-2.5 Fair-share financial contributions from each new development in the Toro Planning Area shall be required to expedite funding and construction of Highway 68 improvements. | Consistent. The proposed project would be subject to fair-share financial contribution during individual project application process. The proposed project would not conflict with this policy. |
| T-3.1 Within areas designated as "visually sensitive" on the Toro Scenic Highway Corridors and Visual Sensitivity Map (Figure 16), landscaping or new development may be permitted if the development is located and designed (building design, exterior lighting, and siting) in such a manner that will enhance the scenic value of the area. Architectural design consistent with the rural nature of the plan area shall be encouraged. | Consistent. The only opportunity site in the Toro Area Plan is Opportunity Site 24. This site is not designated as "visually sensitive" on the Toro Scenic Highway Corridors and Visual Sensitivity Map (Figure 16). The proposed project would not conflict with this policy. |
| North County Land Use Plan (Coastal) | Opportunity Site 48 |
| General Policy 3.1.2 (5). The major arterial roads in North County should be upgraded as necessary to serve the planned growth of North County. Other local, rural roads should be upgraded only as necessary to serve local traffic and not through-traffic demand. | Consistent. The plan does not provide for design of each opportunity site, however as development is proposed County staff will review the application and the project would be subject to appropriate traffic improvements, impact fees, and fair-share funding, as applicable, which may include upgrading major arterial roads and other local roads. The proposed project would not impede the County's ability to upgrade County roadways. The proposed project would not conflict with this policy. |
| 6. New development in rural areas should be located in areas with sufficient road capacity to accommodate additional transportation demand. Where necessary, the capacities of roads and public transit systems should be expanded to serve the transportation demand of areas specifically planned for concentrated development. In areas with highly congested traffic conditions, coastal-dependent development generating low volumes of traffic shall be preferred. | Opportunity Site 48 is the only site within the North County (Coastal) Land Use Plan (LUP) and this site is fronted by Hall Road to the south and Sill Road to the north. The plan does not provide for design of each opportunity site, however as development is proposed County staff will review the application and the project would be subject to appropriate traffic improvements, impact fees, and fair-share funding, as applicable, to provide sufficient road capacity. There is also a bus stop less than 0.25 mile from the opportunity site. Therefore, the proposed project would not conflict with this policy. |
| Carmel Area Land Use Plan | Opportunity Sites 16 and 43 |
| 3.1.3 SR-1 and Transportation Policies<br>1. To conform to the Coastal Act, most remaining highway capacity should be reserved for coastal priority uses: recreation and visitor-serving facilities, agriculture, and coastal-dependent industry. Commitment to further residential development through subdivision should be extremely limited. Traffic shall be monitored in order to provide a basis for decision-making. | Consistent. Opportunity Site 16 in the Carmel Area LUP is adjacent to SR-1 and proposes HDR/30 zoning with a maximum of 30 units per acre. The policy states that commitment to further residential development through subdivision should be extremely limited, however, the project does not inherently conflict with the Coastal Act's highway capacity policy at this programmatic level. The existing land use is medium density residential and the site is currently developed with an abandoned convalescent |

| | |
|---|---|
| | home. The project is a policy plan and does not actively propose a subdivision and would not displace any coastal priority uses. Therefore, the proposed project would not conflict with this policy. |
| 3.1.3 SR-1 and Transportation Policies<br>7. The number of private roads and recreational access road entrances off SR-1 should be limited whenever possible for traffic safety and management purposes. | Consistent. The HEU6 does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards, including limiting access via SR-1 for safety and management purposes. The proposed project does not conflict with this policy. |
| 3.1.3 SR-1 and Transportation Policies<br>9. Major development projects – both residential and recreation and visitor-serving, including significant expansion of existing facilities – should be required to contribute their "fair-share" toward improvements of SR-1 required as a result of traffic generated by the particular project. | Consistent. The HEU6 does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards, including contributing their fair-share toward improvements of SR-1. The proposed project does not conflict with this policy. |
| Castroville Community Plan[6] | Opportunity Sites 11, 12, 13, 14 15, 30, 41 |
| Goal 3: Promote the redevelopment of the downtown area to create pedestrian friendly, mixed-use areas that positively contribute to the community's character and sense of place.<br>Policy 3.3 – Pedestrian and bicycle connections shall be created between the downtown, Castro Plaza, slough enhancement areas, the Commuter Train Station Area, the high school, and other portions of the community to promote linkages and improve the pedestrian and bicycle accessibility of the community. | Consistent. The HEU6 does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards, including providing pedestrian and bicycle connections where needed and required to promote linkages and improve the pedestrian and bicycle accessibility of the community. The proposed project does not conflict with this policy. |
| Goal 8: Provide safe and convenient access to the new train station for the existing community and commuters.<br>Policy 8.1: The Community Plan circulation improvement program shall be implemented, including installing an intersection improvement project on SR-156 and realigning Castroville Boulevard.<br>Policy 8.2: Roadways in the existing community shall be extended to provide access to the train station and include drop off facilities.<br>Policy 8.3: A safe and attractive pedestrian/bike underpass under the railroad tracks to connect the train platform to the parking facilities on the east side shall be provided. | Consistent. As development is proposed County staff will review the application for consistency with access and transportation regulations and standards. Each development project in Castroville is required to contribute to applicable regional and local development impact fees program to provide safe and convenient access for the community, which may include the listed improvements in these policies related to Goal 8 or other similar improvements. The Caltrans Hwy 156/Castroville Boulevard interchange improvements have been approved. The train station is in the coastal one and the Castroville Community Plan is not certified by the Coastal Commission. The County is in the process of updating the Community Plan including amending circulation policies. As such, the proposed project does not conflict with this policy. |
| Goal 9: Create a safe and convenient pedestrian and bicycle system that connects local and regional destinations.<br>Policy 9.1: Safe pedestrian and bicycle crossings shall be provided at major roadways and the railroad facilities.<br>Policy 9.2: Traffic calming measures shall be implemented to create a safe, pedestrian friendly downtown area. | Consistent. The HEU6 does not provide for design of each opportunity site, however as development is proposed County staff will review the application for consistency with access and transportation regulations and standards, including providing safe and convenient pedestrian and bicycle system that connects local and regional destinations. As Policy 9.4 is related to a portion of the Castroville Community Plan that is located in the Coastal Zone, Artichoke Avenue improvements will not be moving |

[6] The Castroville Community Plan area is located within the North County Area Plan (Inland), which includes Opportunity Sites 8 through 15, 30, 39, 41, 44, 49, 50, 51, and 64. The North County Area Plan (Inland) contains no policies related to transit, roadway, bicycle, or pedestrian facilities, except congestion-related policies that are no longer used for CEQA analysis.

| | |
|---|---|
| Policy 9.3: Adequate signage shall be provided to direct regional bicycle travelers through the community to connect with the various regional bicycle trails.<br>Policy 9.4: The Artichoke Avenue improvement project that will include a bicycle and pedestrian trail along the proposed Tembladero Slough shall be implemented.<br>Policy 9.5: A safe and attractive railroad underpass that connects to pedestrian and bike facilities connecting to North Monterey High School and the Moro Cojo housing development and other community facilities planned for the area east of Castroville Boulevard shall be provided.<br>Policy 9.6: Pedestrian/bike facilities shall be encouraged in required agricultural buffer areas and along slough enhancement areas. | forward as the Coastal Commission has not certified that portion of the Community Plan. The proposed project does not conflict with this policy. |

As described, the County of Monterey has plans and policies in place that encourage transit usage, the construction of safe and user-friendly active transportation facilities, and housing development within a half mile of transit stops throughout UMCUMC. These plans and policies encourage the development of a balanced transportation system that includes safe and convenient multimodal travel.

Figure 1 provides an overview map of the existing MST routes. MST is the public transportation system serving the County of Monterey and provides fixed-route bus services and demand-responsive services within the County, including bus rapid transit. They provide regional routes with service to Santa Cruz County, intercity routes and local routes with service covering 161 square miles and 906 stops throughout the County. Figure 2 shows existing rail service provided by Amtrak.

The rail service is a long-distance passenger rail service providing access to scenic destinations along the California Coast. Figure 3 shows the vision for future rail service in the region,[7] which is elaborated on in the Monterey Bay Area Network Integration Study (TAMC). The plan for future rail services is consistent with the California State Rail Plan which establishes a long-term vision for an integrated, cohesive statewide passenger and freight rail system.

Other transit service in the County includes Greyhound Bus Lines which provides inter-county service linking Monterey County with adjacent counties as well as a regional vanpool service operated by the California Vanpool Authority which organizes both traditional vanpools and vanpools serving agricultural workers.

Bicycle and pedestrian facilities are integral components of Monterey County's multimodal transportation system. Monterey County has approximately 213 miles of maintained bikeways on state, county, and local roads. The majority of bikeways in Monterey County are Class II (bicycle lanes) and Class III (bicycle routes), however large Class I facilities exist along the Monterey Peninsula coastline. Figure 4 and Figure 5 illustrate existing and proposed bicycle facilities. Pedestrian facilities also serve as a critical tool to advance transportation equity in the County. However, comprehensive data is not available for the pedestrian network.

### *Multimodal Methodology*

The impact of the proposed housing units was assessed based on their proximity to transit facilities, bikeway and pedestrian facilities. This included a specific focus on changes within a half-mile radius, and

[7] *2018 California State Rail Plan.*

bikeway and pedestrian connections to those sites. In order to conduct this evaluation, ½ mile buffer zones were created from transit stop data obtained from Monterey Salinas Transit and bicycle facility data provided by the Transportation Agency for Monterey County. There is no known source of comprehensive data on pedestrian facilities. The resulting buffer zones were then compared to the proposed opportunity sites in the Housing Element. The process for creating the buffers and completing the analysis is described in more detail below.

1) Setting Up the Network Dataset
To perform network analysis, a network dataset is required. The following steps outline the creation and setup:

- Create Network Dataset: Using GIS software, create a network dataset from the County's street and transit network data.
- Incorporate Data: Add the transit stop locations and routes, and bikeways into the network dataset.
- Configure Network Analyst: Set up the Network Analyst tool within the GIS software to recognize transit stops and routes.

2) Buffer Zone Creation
Buffer zones are created to represent areas within a specific distance from transit stations and bikeways. The following steps are performed:

- Define Buffer Distance: Establish a buffer distance of a half mile (0.5 miles) around each transit stop.
- Generate Buffers: Create buffer zones around each transit stop. This involves calculating the network distance and straight-line distance to account for actual travel paths.

3) Spatial Analysis
The proximity of proposed housing units to transit stations is analyzed as follows:

- Overlay Analysis: Overlay the buffer zones with the proposed housing unit locations.
- Identify Impacted Units: Identify housing units that fall within the half-mile buffer zones around transit stop.
- Accessibility Assessment: Assess the multi-modal accessibility of the proposed housing units to bike and transit facilities based on their proximity to transit stations and bikeways.be accessibility via

### *Multimodal Assessment*

Figure 6 and Figure 7 provide a map of the transit overlay analysis. It was determined that 94% of the housing units would be within a half mile of the County's existing transit stops. *Figure 4* and Figure 5 provide maps of the bicycle overlay analysis. As shown, 92% of the opportunity sites as identified in the Housing Element would be located within a half mile of bicycle facilities.

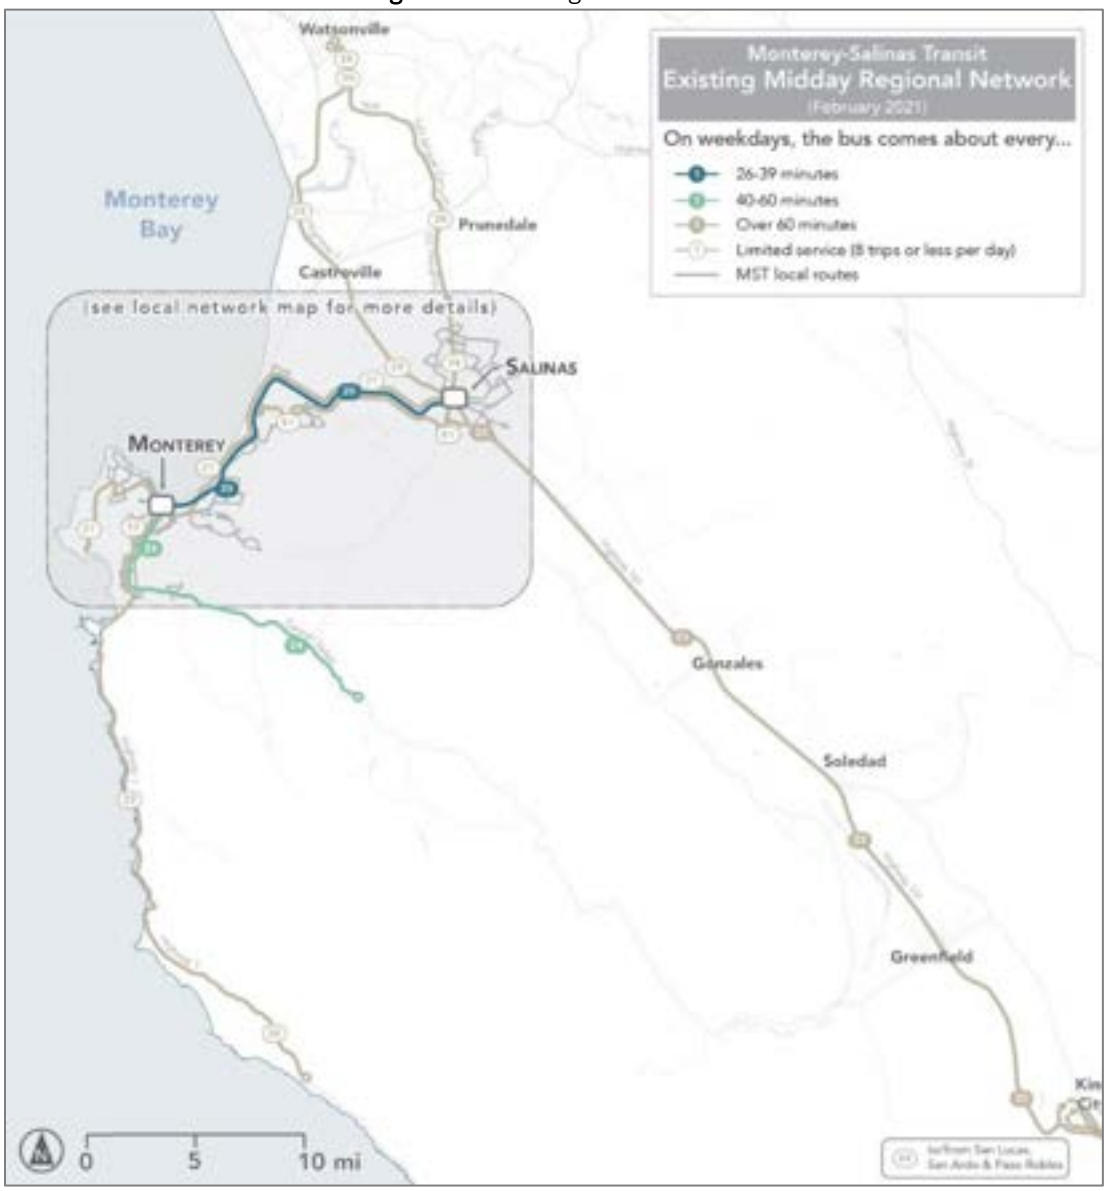
Developments that occur under the Housing Element are expected to comply with County design and guidelines to provide pedestrian access that ensures high connectivity. This includes the implementation of sidewalks, crosswalks, and other pedestrian-friendly infrastructure that links residential areas with activity centers, transit and other residential areas. The overlay analysis and the assessment of the proposed project demonstrate alignment with the County of Monterey's goals and policies for pedestrian connectivity. The Buildout conditions align with the AMBAG MTP performance metrics by promoting development within a half mile of transit stations, thereby enhancing pedestrian access to transit.

*Findings*

Many new residents will have the option to take transit to work or non-work destinations as shown in Figure 6 and Figure 7. Additionally, the proposed project is not expected to result in any adverse effects on any existing transit facilities. Furthermore, 92% of the housing units as part of the Housing Element would be located within a half-mile of bicycle facilities and have access to pedestrian facilities as shown in Figure 4 and Figure 5. The proposed Project is not expected to result in any adverse effects on any existing bike or pedestrian facilities.

The assessment of buffer zones aligns with the County of Monterey's goals and policies, ensuring high connectivity, providing access and mobility while maintaining quality of life, and promoting safe bicycle and pedestrian travel. Furthermore, it supports a balanced transportation system that encourages public transit use and meets the RTP goal for increasing affordability, accessibility, and safety.

As such, it was determined that the proposed Project would result in a less-than-significant multimodal impact and is in accordance with existing plans and policies.



## Hazards

To determine whether the proposed Project will substantially increase hazards, the plan was evaluated for “a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)”. While the proposed Project will result in the modification of existing transportation facilities including the introduction of new site driveways and access points, all new roadway, bicycle, and pedestrian infrastructure improvements constructed due to the Housing Element would be subject to, and designed in accordance with, applicable County of Monterey design and safety standards to avoid creating a geometric design hazard or incompatible uses. Therefore, the proposed Project would be expected to result in a less-than-significant hazard impact.

## Emergency Access

The planning and design of new development resulting from the proposed Project would include considerations for road widths, intersections, and traffic flow to ensure that emergency vehicles can navigate efficiently as required by County of Monterey standards and guidelines. The County will also consider the need for increasing the availability of emergency to service new residents and housing as required. Based on this and the general distribution of proposed housing across the County of Monterey, it is determined that there will be a less-than-significant impact on emergency access.

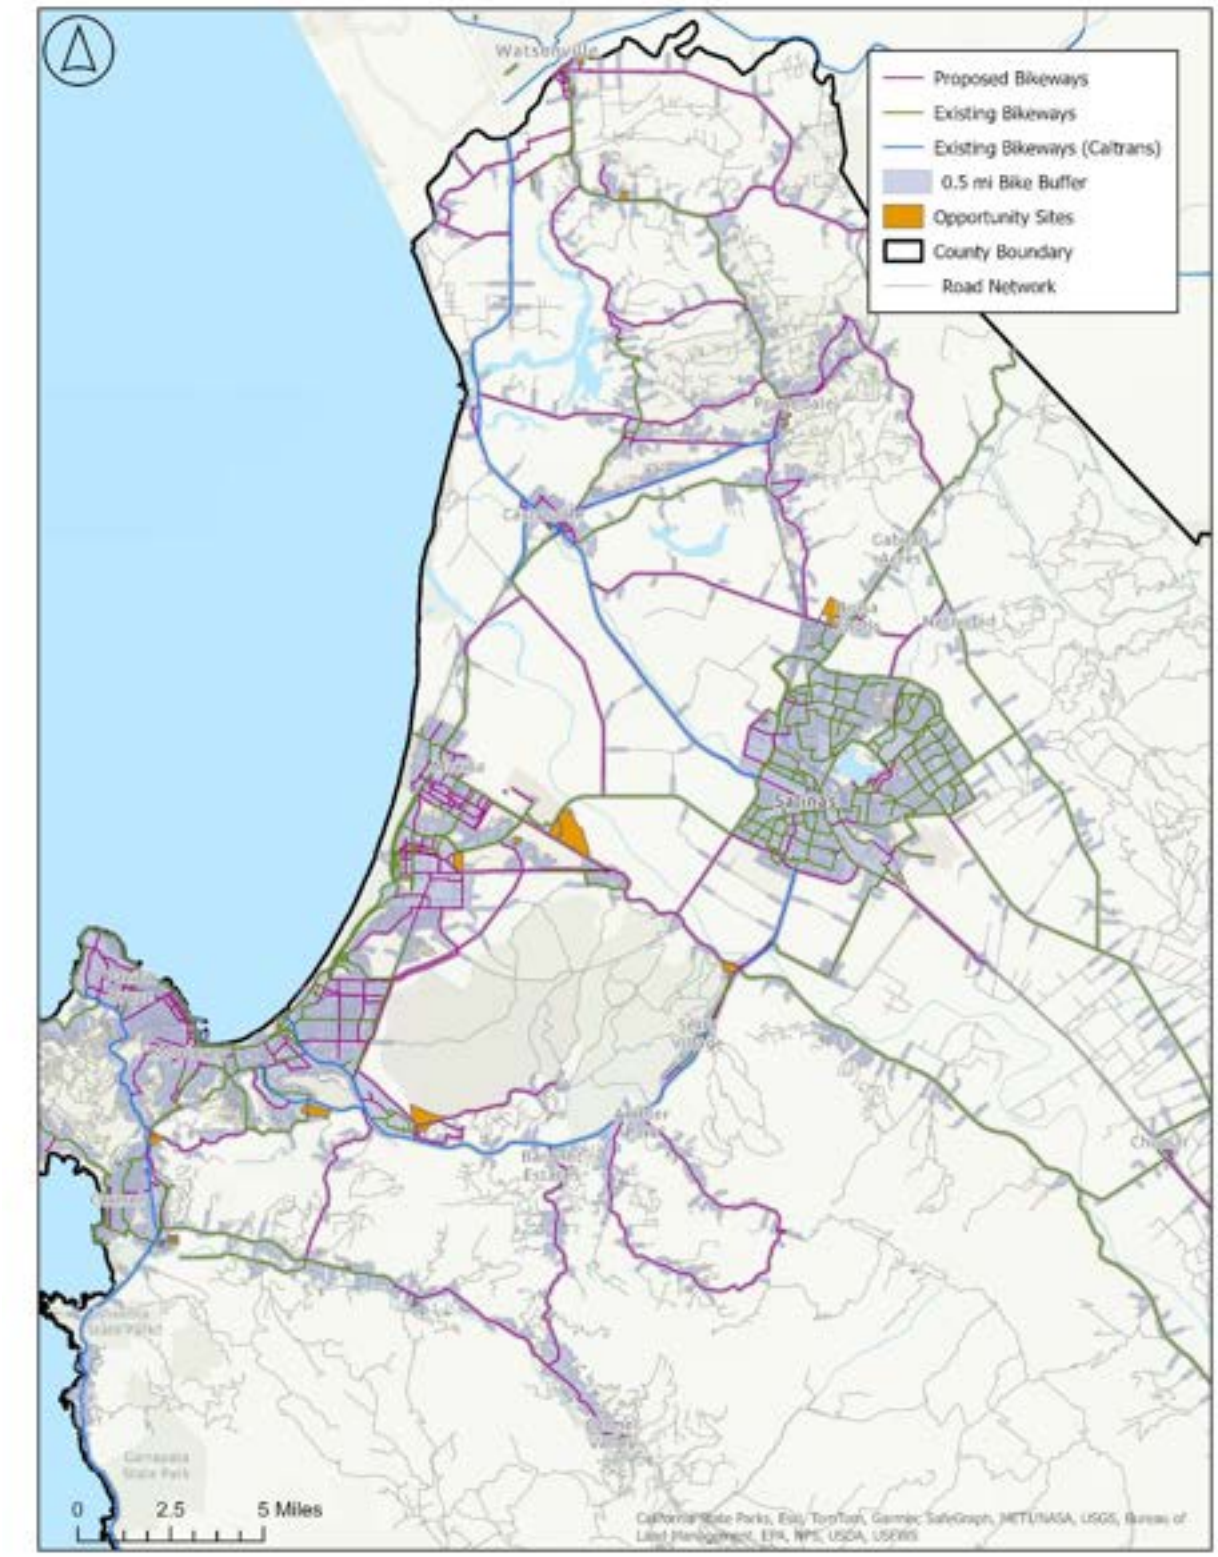

**Figure 5** – South County Bike Network with Buffer

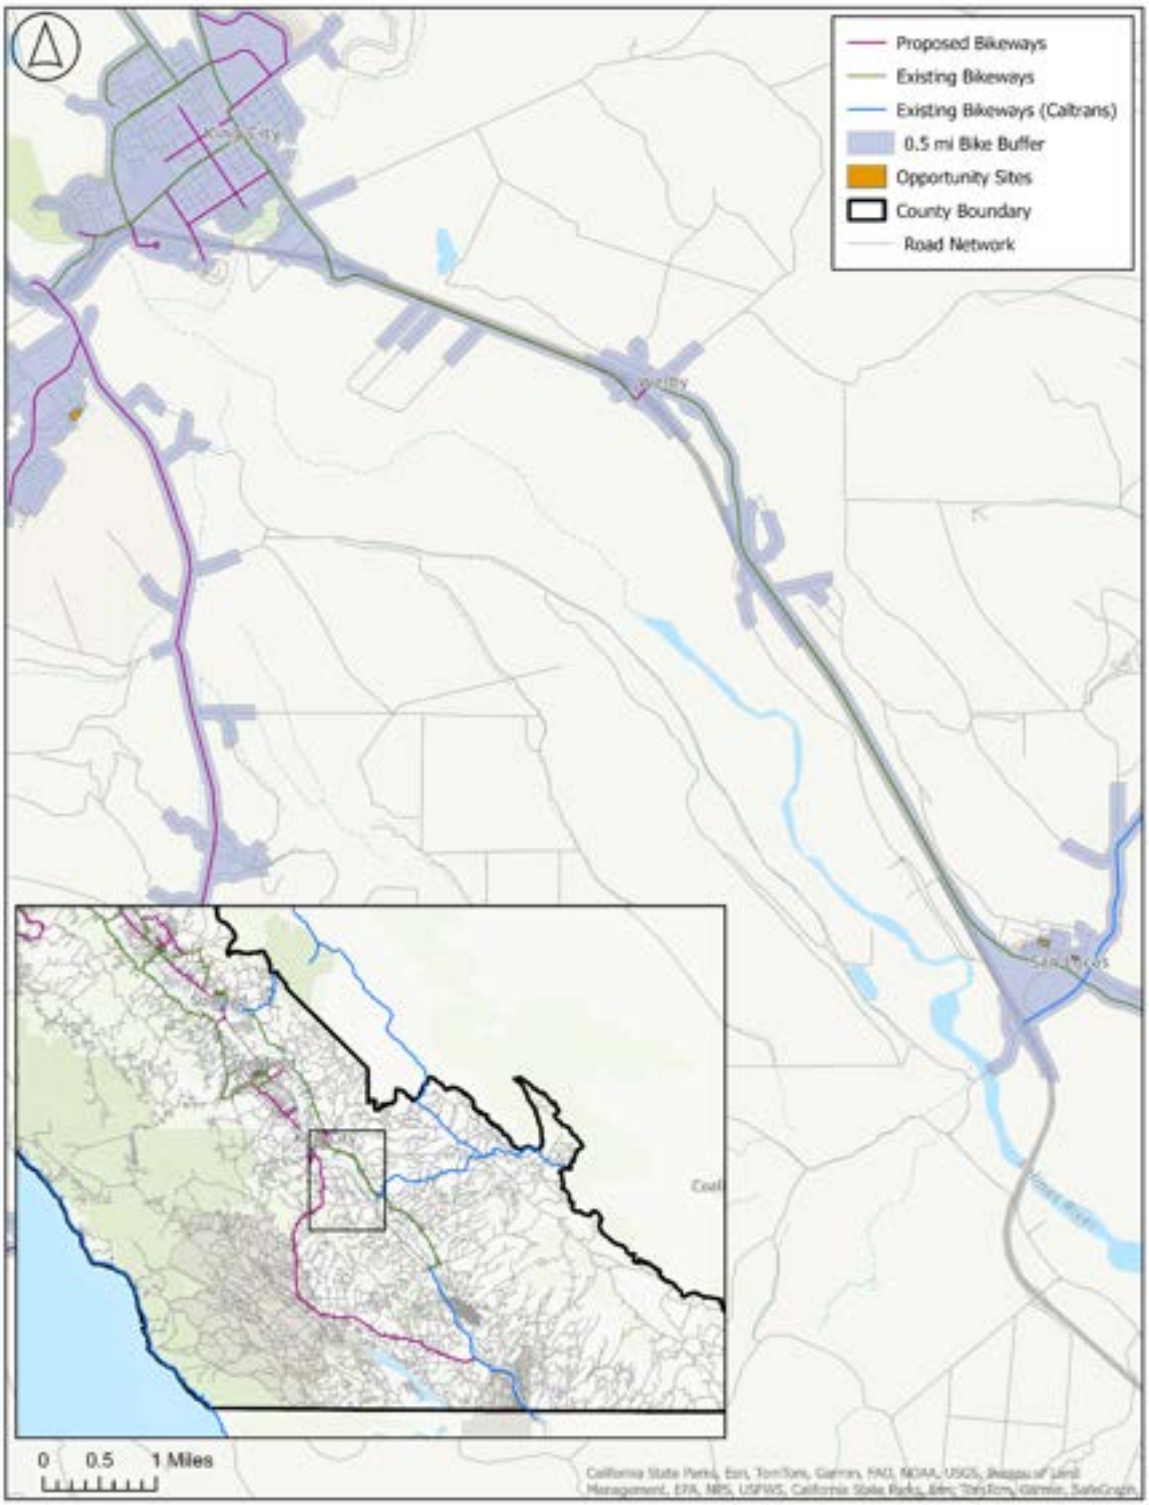

**Figure 6** – North County Transit Network with Buffer

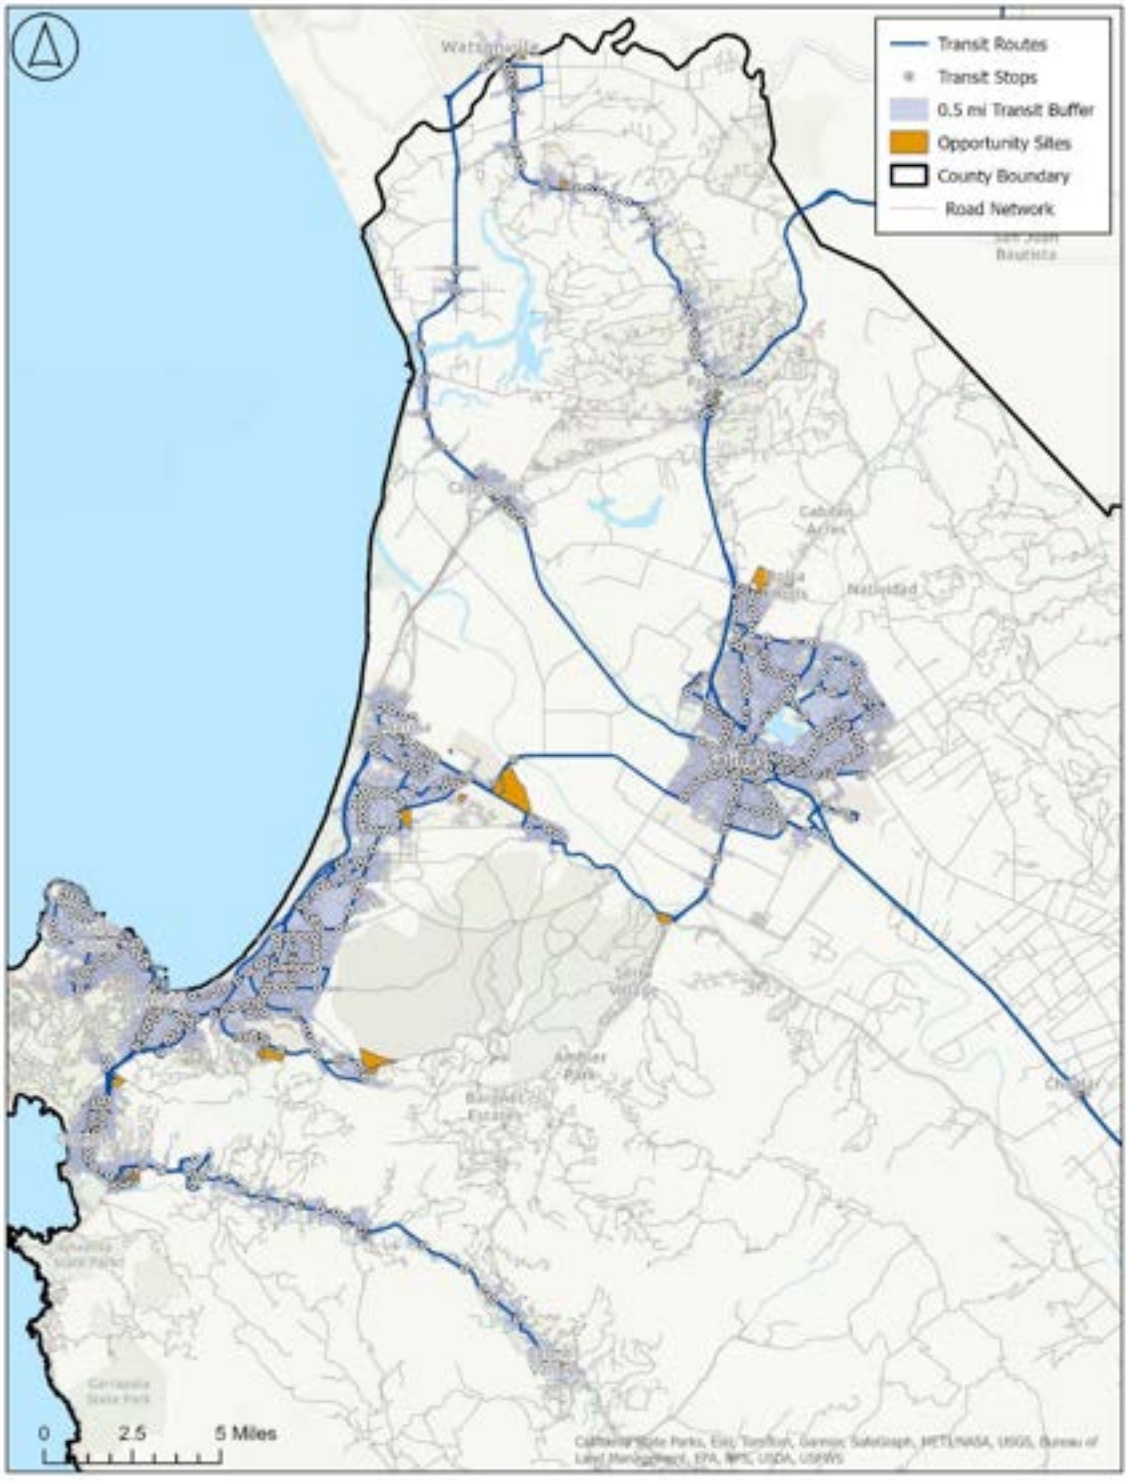

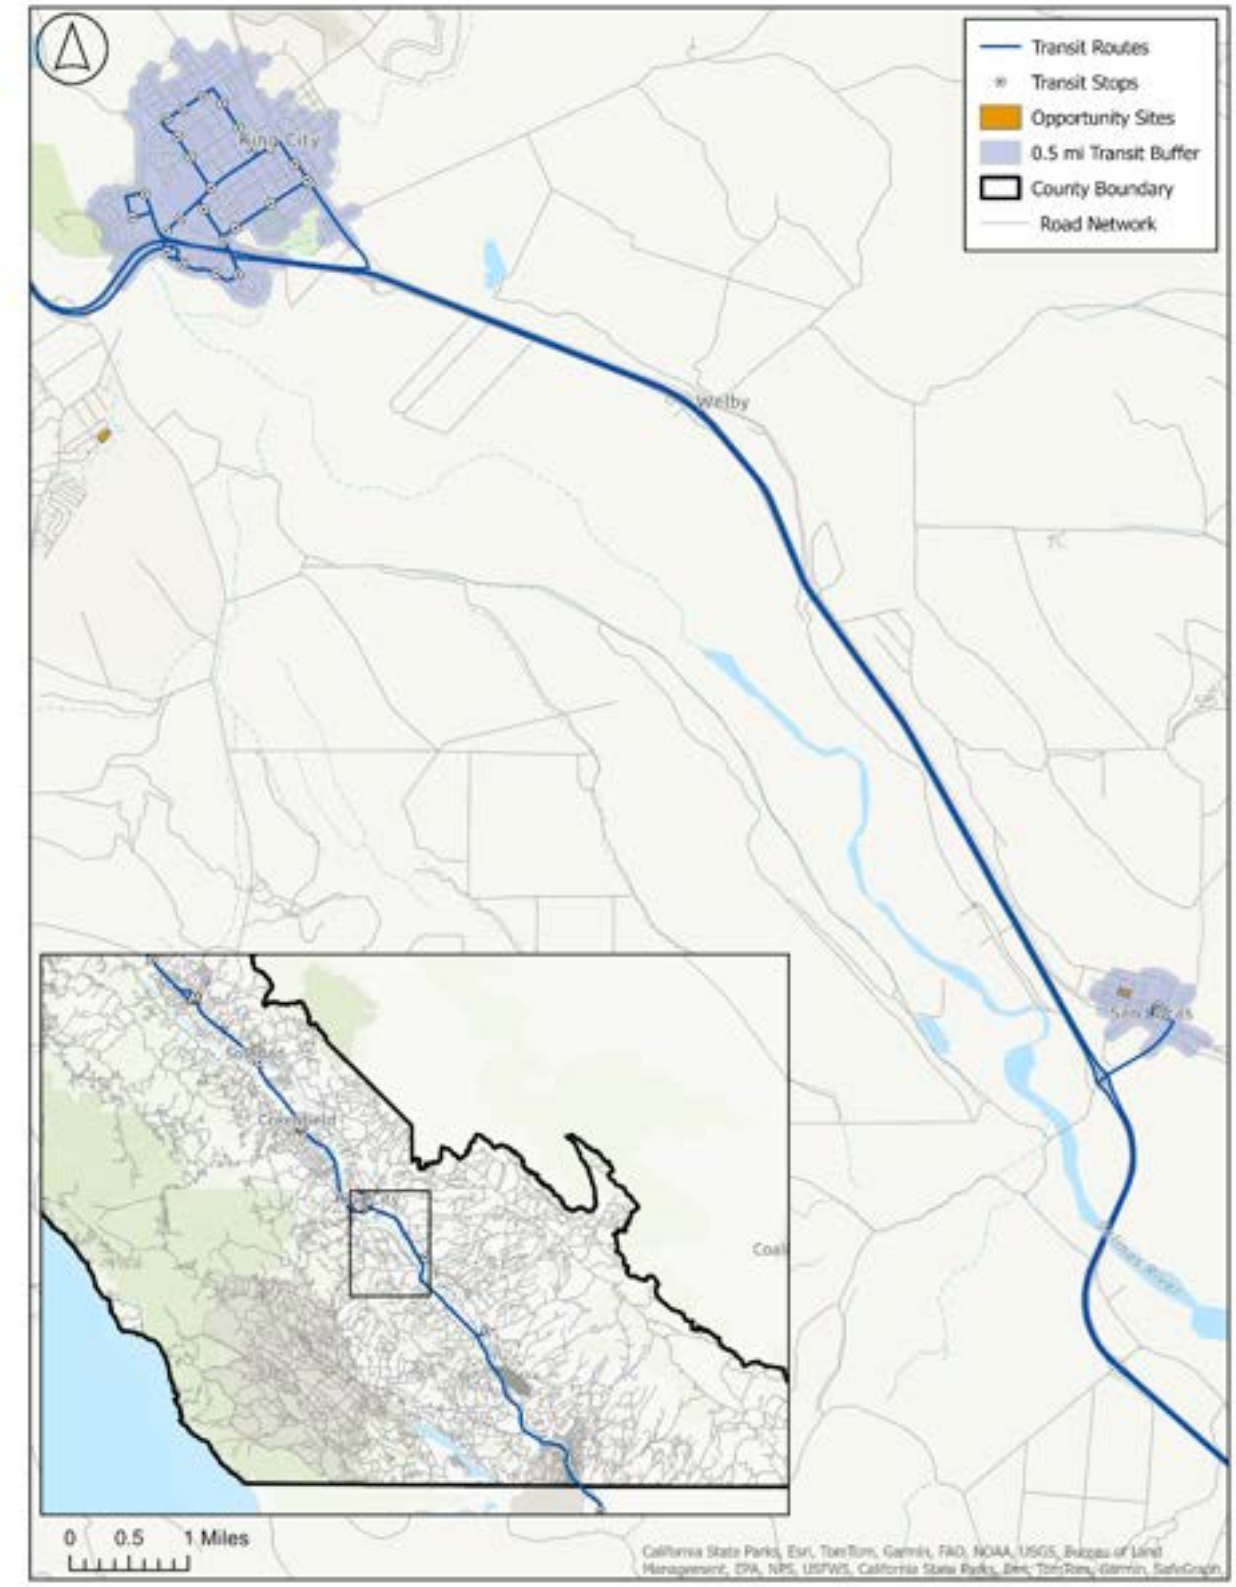

**Figure 7** – South County Transit Network with Buffer

## Findings

Based on the results of this analysis, the following findings are made:

- Based on analysis, the Project is determined to result in an unavoidable significant impact for VMT. In the aggregate, it is likely that this VMT analysis represents a worst-case scenario given that it does not fully represent the effect of planned VMT-reducing design principles or the effect that targeted mitigation measures may ultimately have on development projects. Additionally, the Housing Element Update includes a total of 56 opportunity sites totaling 4,434 housing units as a reasonable development capacity to meet the assigned RHNA target. However, this Transportation Analysis evaluates the theoretical maximum buildout scenario of 12,497 units to fully disclose the potential environmental consequences associated with the highest intensity of development legally permitted under the proposed rezoning acreage of 445.69 acres for impacts. This theoretical maximum was analyzed because the HEU6 proposes rezoning to either the HDR/25 (High Density Residential at maximum of 25 dwelling units per acre) or HDR/30 (High Density Residential at maximum of 30 dwelling units per acre). While these maximum densities are not supported by historical building trends nor align with market demand in UMC, they are legally permitted under the proposed rezoning, therefore, used for modeling VMT.

- As discussed in **Table 5** and in the assessment for Policies and Multimodal Analysis, the proposed Project aligns with the County of Monterey's goals and policies, ensuring connectivity, providing access and mobility while maintaining quality of life, and promoting safe bicycle and pedestrian travel and maintaining access to regional transit travel. The project would also not interfere with, degrade, or prevent the implementation of planned active transportation or transit infrastructure. As such, it was determined that the proposed Project would not conflict with programs, plans, and policies addressing circulation system, including transit, roadway, bicycle, and pedestrian facilities. and impacts would be less-than-significant.

- All new roadway, bicycle, and pedestrian infrastructure improvements constructed as part of the proposed Project would be subject to, and designed in accordance with, applicable County of Monterey design standards to avoid creating a geometric design hazard or incompatible uses. Therefore, the proposed Project would be expected to result in a less-than-significant hazard impact.

- The planning and design of new housing developments would include considerations for road widths, intersections, and traffic flow to ensure that emergency vehicles can navigate efficiently as required by County of Monterey standards and guidelines. The County will also consider the need for increasing the availability of emergency services. Based on this and the general distribution of sites across the County of Monterey, it is determined that there will be a less-than-significant impact on emergency access.

# Welcome to Alert Monterey County

Alert Monterey County is the official emergency alert and warning system for the County of Monterey and it's municipal jurisdictions. This system delivers critical public safety information to the public from the local government and public safety officials. The Alert Monterey County is managed by the County of Monterey Department of Emergency Management and administered by Public Safety Answering Points, Law Enforcement, Fire, Public Health, and Emergency Management agencies.

**Phone Contacts:** Once registered, please **create a new contact in your phone** for "Alert Monterey County" and include the below Text/SMS number, audio phone numbers, and email address.
**Incoming Calls:** Incoming phone call alerts will present as: **831-308-4911**
**Incoming Text Messages:** Text/SMS messages will present as: **65513**
**Incoming Emails:** Email alerts will present as "Alert Monterey County" from email address "**noreply@genasys.com**".
**Troubleshooting:** If you receive "Phone (or Email) is already registered", please **reset your password** and continue.
**Questions:** AlertMontereyCounty@countyofmonterey.gov or visit our FAQS

## Bienvenido a A!erta Condado de Monterey

Alert Monterey County es el sistema oficial de alerta y advertencia de emergencia para el condado de Monterey y sus jurisdicciones municipales. Este sistema brinda información crítica sobre seguridad pública al público proveniente del gobierno local y los funcionarios de seguridad pública. El sistema Alert Monterey County es administrado por el Departamento de Manejo de Emergencias del Condado de Monterey y administrado por los puntos de respuesta de seguridad pública, las agencias del orden público, los bomberos, la salud pública y las agencias de manejo de emergencias.

**Contactos telefónicos:** Una vez registrado, **cree un nuevo contacto en su teléfono** para "Alert Monterey County" e incluya el siguiente número de texto/SMS, números de teléfono de audio y dirección de correo electrónico.
**Llamadas entrantes:** las alertas de llamadas telefónicas entrantes se presentarán como: **831-308-4911**
**Mensajes de texto entrantes:** Los mensajes de texto/SMS se presentarán como: **65513**
**Correos electrónicos entrantes:** las alertas por correo electrónico se presentarán como **"Alerta Condado de Monterey"** desde la dirección de correo electrónico **"noreply@genasys.com"**.

# WILDFIRE EVACUATION CHECKLIST

Learn more at **https://www.readyforwildfire.org/prepare-for-wildfire/go-evacuation-guide/**

If evacuation is anticipated and time allows, follow this checklist to give your family and home the best chance of survival. Complete the Family Communication Plan on the opposite side for each family member and keep in your wildfire and emergency "Go Kit(s)."

## EVACUATION NOTIFICATIONS & INFORMATION *Register for Alert Marin and Nixle to receive evacuation and fire information notices!*

**ALERT MONTEREYCOUNTY** **alertmontereycounty.org when emergency action is needed** at a **specific address**: wildfires, imminent flooding, evacuations, or other public safety incidents where lives may be at risk; critical information about evacuation routes, hazards, and shelters. *Online registration required!*

**NIXLE** www.nixle.com
Used to provide **incident information**. Text MocoOES to 888777 and include any and all zip codes you want to be alerted for in your text. For daily fire updates for the River and Carmel fires text MCFIRES2020 to 888777.

**211**
You can call or text 211. Operators can provide updated fire and evacuation information. You can also text "fire" or "wildfire" to 211-211, add your zip code and receive links to current information.

**EVACUATION ORDER:** Leave now! Evacuate immediately. Do not delay to gather valuables or prepare your home. Follow any directions given in the evacuation order.

**EVACUATION WARNING:** Evacuate as soon as possible. A short delay to gather your *Go Kit* and prepare your home may be OK. Leave if you feel unsafe or conditions change.

**SHELTER IN PLACE:** Stay in your current location or the safest nearby building or unburnable area. May be required when evacuation is impossible, too dangerous, or unnecessary.

## ALWAYS:

### *COMMUNICATIONS*

- ☐ Keep your cell phone fully charged.
- ☐ Notify an out-of-area contact of your phone number, location and status. Update regularly.
- ☐ Leave a note with your contact info and out-of-area contact taped to fridge or inside a front window.
- ☐ Check on or call neighbors to alert them to prepare at first sign of fire.

### *ON YOUR PERSON*

- ☐ Dress all family members in long sleeves and long pants; heavy cotton or wool is best, no matter how hot it is.
- ☐ Wear full coverage goggles, leather gloves, head protection.
- ☐ Cover faces with a dry cotton or wool bandanna or scarf over an N95 respirator. Tie long hair back.
- ☐ Carry a headlamp *and* flashlight (even during the day).
- ☐ Carry car keys, wallet, ID, cell phone, and spare battery.
- ☐ Drink plenty of water, stay hydrated.
- ☐ Put "Go Kits" *(reverse)* in your vehicle.

### *PETS & ANIMALS*

- ☐ Locate your pets and place in carriers NOW. You won't be able to catch them when the fire approaches.
- ☐ Be sure your pets wear tags and are registered with microchips.
- ☐ Place carriers (with your pets in them) near the front door, with fresh water and extra food.
- ☐ Prepare horses and large animals for transport and consider moving them to a safe location early, before evacuation is ordered.

## IF TIME ALLOWS:

### *INSIDE THE HOUSE*

- ☐ Shut all windows and doors (interior too) and leave them *unlocked*.
- ☐ Remove combustible window shades and curtains; close metal shutters.
- ☐ Move furniture to the center of the room, away from windows.
- ☐ Leave indoor and outdoor lights on.
- ☐ Shut off HVAC and ceiling fans.

### *OUTSIDE & IN NEIGHBORHOOD*

- ☐ Place combustible outdoor items (patio furniture, toys, doormats, trash cans, etc.) in garage or 30' from structures (optional: place in a pool).
- ☐ Shut off gas at the meter or propane tank; move small tanks at least 15' away from combustibles.
- ☐ Connect garden hoses with squeeze-grip nozzles to outdoor spigots for use by firefighters.
- ☐ Fill water buckets and place around outside of house, especially near decks and fences.
- ☐ Clean your gutters and blow leaves away from house.
- ☐ Back your car into driveway, loaded, with doors and windows closed.
- ☐ Prop open fence and side gates.
- ☐ Place ladder(s) at the corner(s) of structures for firefighters.
- ☐ Seal attic and ground vents with pre-cut plywood or metal covers (even duct tape will protect from ember entry) if time allows.
- ☐ Patrol your property and monitor conditions. Leave if spot fires ignite or conditions change.

## WHEN YOU LEAVE:

- ☐ Leave immediately if ordered.
- ☐ Don't wait for an evacuation order if you feel unsafe or conditions change; leave early if unsure.
- ☐ Assist elderly or disabled neighbors.
- ☐ Carpool with neighbors to reduce traffic.
- ☐ Take only essential vehicles with adequate fuel.
- ☐ In your car, turn on headlights, close windows, turn on inside air and AC, tune to local radio.
- ☐ Drive slowly and defensively; be observant.
- ☐ The best evacuation route is usually the one you know best. Take the fastest *paved* route to a valley floor, away from the fire if possible.
- ☐ Proceed downhill, away from the fire if possible. Know at least two routes.
- ☐ If roads are impassable or you are trapped: take shelter in a building, car, or an open area; park in an *outside turn* if trapped on a hillside; stay far from vegetation; look for wide roads, parking lots, playing fields, etc.
- ☐ If trapped, you are better protected inside a building or vehicle.
- ☐ Don't abandon your car in the road if passage is impossible. If you must leave your car, park it off the road and consider other options for shelter.
- ☐ Evacuate on foot *only as a last resort*.
- ☐ Don't evacuate by fire road, uphill, or into open-space areas with unburned vegetation.
- ☐ Remain calm - panic is deadly.

# WILDFIRE & EMERGENCY "GO KIT"

Put together an emergency supply kit in advance for each family member and keep it easily accessible. Plan to be away from your home for an extended period of time. Each person should have their own Go Kit. Store kits in backpacks.

- ☐ Bandana, N95 respirator, goggles, leather gloves, long shirt and pants (cotton or wool), boots, hat
- ☐ Flashlight and headlamp with spare batteries
- ☐ Extra car keys, credit cards, cash
- ☐ Map marked with two evacuation routes (if possible)
- ☐ Prescription medications
- ☐ Extra eyeglasses or contact lenses
- ☐ First aid kit
- ☐ Battery-powered radio and extra batteries
- ☐ Copies of important docs (birth certificates, passports, insurance policies, etc.)
- ☐ Pet food and water, leashes, pet supplies and medications
- ☐ Water bottles and food
- ☐ Sanitation supplies
- ☐ Change of clothing
- ☐ Spare chargers for cell phones, laptops, etc.

### Items to take *only if time allows*:

- ☐ Easily carried valuables
- ☐ Family photos, small heirlooms, and other irreplaceable items
- ☐ Personal computer data and digital information backups on hard drives and/or disks

(https://www.readymontereycounty.org/recover)

# Get Ready & Prepare

## Evacuation Warning

### An Evacuation Warning

(i.e. sometimes used interchangeably with the term "Advisory") means those in a specific area should be prepared to evacuate at any time. You do not need to leave your home at this time but please be alert and prepared to leave if an evacuation order is called.

## Evacuation Order

**An Evacuation Order** means those in a specific area should leave immediately.

If you feel that your life is in danger, do not wait for an emergency notification to take action.

**If your situation requires more time to evacuate than an immediate order to leave allows, consider leaving early to avoid delays due to traffic congestion.**

### Evacuation Warning/Order Lifted

**When evacuation orders are lifted**, you may return home but make sure to do so safely! Read up on how to return home safely and clean up after the fires click the Fire Resource Recovery button at the top of this page

### Shelter-in-Place

Shelter-in-place is the act of seeking safety within the building one already occupies, rather than evacuating the area or seeking a community emergency shelter.

## Plan to Evacuate

Many kinds of emergencies can cause you to have to evacuate. In some cases, you may have a day or two to prepare while other situations might call for an immediate evacuation. Planning is vital to making sure that you can evacuate quickly and safely no matter what the circumstances.

## Before an Evacuation

- **Stay informed by registering (https://www.readymontereycounty.org/prepare/stay-informed) for Emergency Alerts** to receive area-specific emergency information, including evacuation orders and sheltering information.
- Learn the types of hazards (https://www.co.monterey.ca.us/government/departments-a-h/administrative-office/office-of-emergency-services/hazard-mitigation) are that are likely in your community and the local emergency, evacuation and shelter plans for each specific disaster.
- Plan (https://www.readymontereycounty.org/prepare/make-a-plan) how you will leave and where you will go if you are advised to evacuate. Come up with a family/household plan to stay in touch in case you become separated; have a meeting place and update it depending on the circumstance.

- Identify several places you could go in an emergency such as a friend's home in another town or a motel. Choose destinations in different directions so that you have options during an emergency.
- If needed, identify a place to stay that will accept pets (https://www.spcamc.org/for-pet-owners/help-caring-for-your-pet/pet-friendly-lodging.html). Most public shelters allow only service animals. Contact the SPCA of Monterey County (https://www.spcamc.org/) to get additional advice and information if you're unsure how to care for your pet in case of an emergency.
- Be familiar with alternate routes and other means of transportation out of your area.
- Always follow the instructions of local officials and remember that your evacuation route may be on foot depending on the type of disaster.
- Assemble supplies that are ready for evacuation. Prepare a"go-bag" (https://www.readymontereycounty.org/prepare/build-a-kit) you can carry when you evacuate on foot or public transportation and supplies for traveling longer distances if you have a car.
- If you have a car:
  - Keep a full tank of gas if an evacuation seems likely. Keep a half tank of gas in it at all times in case of an unexpected need to evacuate. Gas stations may be closed during emergencies and unable to pump gas during power outages. Plan to take one car per family to reduce congestion and delay.
  - Make sure you have a portable emergency kit in the car (https://www.ready.gov/car).
- If you do not have a car, plan how you will leave if needed. Decide with family, friends or your local emergency management office to see what resources may be available.

## During an Evacuation

During an emergency if your life or safety is threatened and you need to evacuate, move away from the threat and follow official instructions. You should assess the situation and listen to officials to make informed decisions about your safety. If you are told by officials to evacuate, you should follow their lawful order. If you feel unsafe or your life is threatened, do not wait for an emergency alert and leave immediately. First responders may not be able to reach you in some emergencies.

Evacuating the area early helps first responders keep roads clear of congestion, and lets them move more freely to do their job. People with disabilities or access and functional needs should consider leaving during an Evacuation Warning to allow for more time.

When evacuating keep the following recommendations in mind:

- Leave early enough to avoid being trapped.
- Take your pets with you but understand that only service animals may be allowed in public shelters.
- Wear sturdy shoes and clothing that provides some protection such as long pants, long-sleeved shirts and a hat.
- If time allows:
  - Call or email the out-of-state contact in your family communications plan (https://www.ready.gov/make-a-plan). Tell them where you are going. Leave a note saying when you left, your route, and destination.
  - Secure your home by closing and locking doors and windows.
  - Unplug electrical equipment such as radios, televisions and small appliances. Leave freezers and refrigerators plugged in unless there is a risk of flooding. If there is damage to your home and you are instructed to do so, shut off water, gas and electricity before leaving.
  - Leave a note telling others when you left and where you are going.
  - Check with neighbors who may need a ride. Carpool when possible to help avoid congestion.
- Follow recommended evacuation routes. Do not take shortcuts,they may be blocked.
- Be alert for road hazards such as washed-out roads or bridges and downed power lines. Do not drive into flooded areas.

Once you have safely evacuated, go to a loved one's home, stay with a friend, or go to a hotel, if possible. Make sure to pick a location that is accessible to all, including pets and those with disabilities. If you have nowhere else to go, go to a evacuation shelter. Public shelters may open to help meet basic needs after large disasters.

If you are trapped, you are better protected inside a building or vehicle. **Evacuate on foot only as a last resort.** Stay calm and use your cell phone to call 911 in order to advise officials on your location.

## After an Evacuation

If you evacuated, check with local officials before you return home.

- If you are returning to disaster-affected areas, after significant events prepare for disruptions to daily activities and remember that returning home before storm debris is cleared is dangerous.
- Let friends and family know before you leave and when you arrive.
- Charge devices and consider getting back-up batteries in case power-outages continue.
- Fill up your gas tank and consider downloading a fuel app to check for outages along your route.
- Bring supplies such as water and non-perishable food for the car ride.
- Avoid downed power or utility lines, they may be live with deadly voltage. Stay away and report them immediately to your power or utility company.
- Only use generators outside and away from your home and NEVER run a generator inside a home or garage or connect it to your home's electrical system.

Emergency, Readiness, Response, and Recovery

Prepare (https://www.readymontereycounty.org/prepare)

Emergency (https://www.readymontereycounty.org/emergency)

Recover (https://www.readymontereycounty.org/recover)

# Get Ready & Prepare

### Step 1

Put a plan together by discussing the questions with your family, friends or household to start your emergency plan

1. What types of hazards (http://www.co.monterey.ca.us/government/departments-a-h/administrative-office/office-of-emergency-services/hazard-mitigation) are most likely where I live, work, and go to school?
2. How will I receive emergency alerts and warnings (https://www.readymontereycounty.org/prepare/stay-informed)?
3. What is my shelter (http://www.ready.gov/shelter) plan?
4. What is my evacuation (http://www.ready.gov/evacuation) route?
5. What is my family/household communication plan (https://www.ready.gov/sites/default/files/2021-02/family-emergency-communication-plan.pdf)?
6. Do I need to update my emergency preparedness kit (https://www.ready.gov/kit)?

### Step 2

Consider specific needs in your household

As you prepare your plan tailor your plans and supplies to your specific daily living needs and responsibilities. Discuss your needs and responsibilities and how people in the network can assist each other with communication, care of children, business, pets or specific needs like operating medical equipment. Create your own personal network for specific areas where you need assistance. Keep in mind some these factors when developing your plan:

- Different ages of members within your household
- Responsibilities for assisting others
- Locations frequented
- Dietary needs
- Medical needs including prescriptions and equipment
- Disabilities or access and functional needs including devices and equipment
- Languages spoken
- Cultural and religious considerations
- Pets or service animals

- Households with school-aged children

## Step 3

Fill out a Family Emergency Plan

Communication networks, such as mobile phones and computers, could be unreliable during disasters, and electricity could be disrupted. Planning in advance will ensure that all members of your household- including children and people with access and functional needs- know how to reach each other and where to meet up in an emergency. Important things to include in your emergency plan include:

- **Phone Numbers:** Post emergency numbers in a central place where they won't be missed. Include the numbers for police, fire, poison control, school, work, child care and important relatives. Include your home address for quick reference since emergency respondents will need to know where to find you.
- **Emergency Contact:** It's often easier to call long distance during an emergency. Choose an out-of-state relative as your family's emergency contact. They'll be the point person you call or text to explain where you are in the event of a natural disaster.
- **Escape Routes:** Go through each room of your home and plan the quickest and safest escape route. Make sure each member of your family knows the plan for each room. Practice the plan, so they know how to act should they need to make a quick escape.
- **Emergency Meeting Spots**: Choose three spots, just to be on the safe side. In case of fire, elect one place near your home. Select another spot outside your neighborhood (such as the fire station or a relative's home). Pick one out-of-town location in case you need to evacuate.
- **Pet Plan:** If your family has pets, include your four-legged family members in your emergency plan. Make sure you have any necessary pet carriers and plenty of food and water on hand to take with you. Learn More (https://www.readymontereycounty.org/prepare/animal-ready) about planning for pets and animals in emergencies.
- **Important Documents**: Put your important documents in a plastic bag. Keep the bag in a fireproof and waterproof box for easy grabbing if you have to evacuate. Learn More (https://www.readymontereycounty.org/prepare/build-a-kit) about which important documents you should include.
- **A "Go-Bag:"** This ready-to-go supply kit can help your family leave home quickly. Learn (https://www.readymontereycounty.org/prepare/build-a-kit) about what to include in your go-bag.

Download and fill out a family emergency plan or use it as a guide to create your own.

Spanish

(https://www.redcross.org/content/dam/redcross/atg/PDF_s/Preparedness___Disaster_Recovery/General_Preparedness___Recovery/H

## Step 4

Practice your plan with your family/household

Preparing your family for a disaster involves more than just creating a plan. Each family member, especially children, needs to know exactly what to do during an emergency. Here are some helpful suggestions to communicate the importance of disaster preparedness to your family.

- **Designate Roles:** Give everyone in your family a responsibility. Each family member is an integral part of the plan and each has an important contribution.
- **Role-Play:** Younger family members may be easily upset if they see a parent worried or panicking. Spend an afternoon pretending an emergency has occurred and allow everyone to practice their designated roles. This will help your family be better prepared for the rush of emotions they may experience during a disaster.
- **Visit Emergency Meeting Places**: Make certain your family is familiar with your designated emergency meeting places. Assist family members in recognizing landmarks (i.e., buildings, signs, curiously shaped trees or other landmarks, etc.) to help remind them of where they are or where they should be going. Ensure all family members memorize emergency rendezvous location addresses.
- **Introduce Your Family to Emergency Contacts:** Young children may not be comfortable talking with strangers, even strangers their parents have designated as safe. Introduce your children to emergency contacts and explain their role in your family's emergency plan. Instruct children regarding safe authority figures, such as firemen, police officers, sheriff's deputies, etc.
- **Practice:** Regularly quiz family members about the family's emergency preparedness plan. Make it a game for younger children. *Who's our local emergency contact? Where do we go when there's an emergency? Who's responsible for watching the dog? What is our address? What are the phone numbers you will call? What will you do if we get separated? Where is the emergency kit stored and what is in it? Where is the water stored? How do you use a cell phone or landline?* The more the family practices the plan, the better family members will be able to recall what to do during an actual emergency.
- **Point Out Emergency Essentials:** Be sure everybody in your family knows the location of your Emergency Supply Kit (https://www.readymontereycounty.org/prepare/build-a-kit). Keep your Emergency Supply Kit in one place, if you move it, let everyone know the new storage location.
- **Be Honest**: Everyone in your family will have questions about preparedness. Take the time to address questions, concerns, and fears, honestly and factually. Discuss mental health concerns, evacuation, sheltering, and returning home. Emphasize, although the situation may be difficult, and there may be loss and/or sadness, the family has made and practiced the plans to survive and recover from any disaster situation.

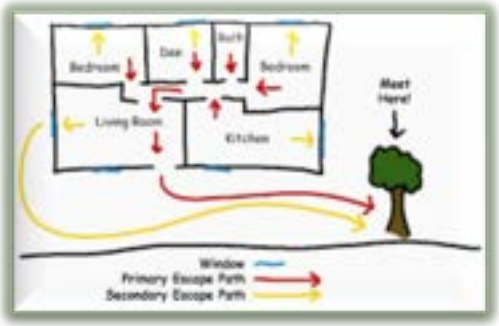
# EVACUATING IN EMERGENCIES

**Evacuate (leave the area) if you are told to by officials or if there is a threat in your area, such as a fire, tsunami or flood. Specific instructions & length of evacuation depends on the emergency. To prepare for evacuation:**

## 1. GATHER SUPPLIES



- ☐ **Have an evacuation kit** with 3 days including water, food and medicine, clothes, sturdy shoes, important documents, and valuable possessions ready to go.
- ☐ **Keep gas tanks at least halfway full**; *gas stations may be closed.*

- ☐ **Have at least two ways out of** your home, school, work, neighborhood, & city. *Know how to manually open/close gates & garages*
- ☐ **Have multiple methods of transportation** to evacuate out of the area
- ☐ **Have designated meeting places** just outside of your home, neighborhood and city, in different directions, so that you have a place to go if you can't return home, no matter where the threat is coming from.
- ♦ Meeting locations should be in **safe, familiar locations and accessible to all**, including pets, where you can stay until it is safe to return home.

## 3. PRACTICE IT

- ☐ **Have evacuation drill** regularly and practice evacuating from all locations you spend a lot of time at.
- ♦ Use different starting points, routes and exits, every time you practice
- ♦ Practice with & without others, and at different times of day/night.

**TERMS TO KNOW**

**EVACUATION ORDER**: Immediate threat to life. This is a lawful order to leave now & close the area to public access. *Some regions also use the term Mandatory Evacuation.*

**EVACUATION WARNING**: Potential threat to life and/or property. Those who require additional time to evacuate, and those with pets and livestock should leave now. *Depending on the emergency, there may not be time to issue an Evacuation Warning.*

# EVACUATING IN EMERGENCIES

**IF TOLD TO EVACUATE, YOU SHOULD:**

**1. LEAVE IMMEDIATELY** if you have been told to evacuate or you feel it is unsafe to remain in your home. *If you have the time:*

- ✓ **Lock doors & windows**
- ✓ **Shutoff utilities** if instructed to by officials
- ✓ **Unplug electrical equipment** (ex. TVs, small appliances) Leave freezers & refrigerators plugged in unless there is a risk of flooding.
- ✓ **Wear sturdy shoes and protective clothing** (ex. Long pants, long-sleeved shirts, hat)
- ✓ **Bring your pets and emergency kit** with you
- ✓ **Take one car per family** when possible to help avoid congestion
- ✓ **Check with neighbors** who may need a ride
- ✓ **Call loved ones and leave a note** saying when you left, your route & destination.

**2. FOLLOW OFFICIAL INSTRUCTIONS**

- × **Don't take shortcuts**; they may be blocked.
- × **Watch for hazards** (ex. flooded areas & downed powerlines).

**3. GO TO A LOVED ONE'S HOME OR HOTEL,** if possible

- ♦ Pick a location that is accessible to all, including pets and those with disabilities
- ♦ Go to a public shelter if you have nowhere else to go.
- ♦ Be patient & cooperative wherever you go.

For information on current emergencies and to find shelters near you go to
**Monterey County Office of Emergency Services website**
https://www.co.monterey.ca.us/office-of-emergency-services
or **Call/Text 211**

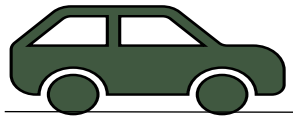
*Public shelters can open to help meet basic needs after large disasters. Keep in mind that:*

**They're confined places**, with many people, & little privacy.

**They don't accept pets**, only service animals *(In Monterey County, SPCA provides animals shelters near public shelters when possible)*

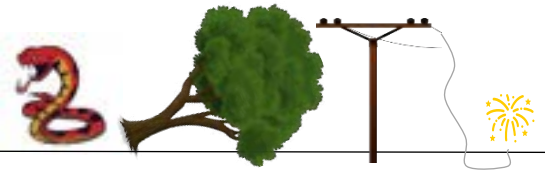
**They don't allow alcohol or weapons & restrict smoking**

**4. STAY INFORMED and DON'T return home until officials say it is safe to do so!**



- ✓ Watch the local news
- ✓ Listen to local and NOAA radios
- ✓ Check your city/county's websites and social media regularly.
- ✓ Follow official instructions

# COMING HOME



**RETURN HOME IN THE DAY AND ONLY AFTER AUTHORITIES SAY IT IS SAFE.**

Expect hazards and utility disruption, proceed with caution, and be prepared to leave again, if officials tell you to.

**Avoid bringing children and pets** on the first trip back home.

**Don't corner, capture, or try to rescue wild animals and never move a dead animal.** Call local animal control or wildlife resource office if an animal is dead, injured, trapped or won't leave your home.

**NEVER enter a building if you doubt it's safety, smell gas/rotten eggs, or see damage, or flooding.** Call a building professional (ex. structural engineers, contractors, plumbers, home inspectors) or FEMA to inspect it before entering.

**Don't turn on lights/flashlights or spark matches/lighters indoors until verifying there is no gas leak or electrical issues.**

**Don't use water until it has been tested by authorities.**

**Don't flush toilets until verifying sewage lines are intact.**

## *BEFORE RETURNING*

- **Inform loved ones** before you leave & when you arrive.
- **Fill up gas tanks and fully charge phones.**
- **Bring supplies**:
  - ☐ Food/Water
  - ☐ Camera/Phone
  - ☐ Protective Clothes (sturdy boots, long sleeve shirts, pants, helmet, safety goggles, dust mask, work gloves)
  - ☐ Flashlight & Portable Radio
  - ☐ Portable Charger & Extra Batteries
  - ☐ Proof of Residency

## *ON THE WAY HOME*

- **Watch for, avoid, and notify authorities & others about hazards** (ex. wild animals, damaged roads/building/overpasses, downed power lines, broken glass, flooding).
- If you encounter an animal in your home, **open a window/provide an escape route**. It will likely leave on its own.
- If bitten by an animal, **seek immediate medical attention, stay calm and try to see and remember the color and shape of the snake.**
- If a power line falls on your vehicle **stay inside the car, call 911, and warn others to stay away.**

## *BEFORE ENTERING YOUR HOME:*

- **Walk carefully around the outside**, checking for structural damage, roof, chimney, or foundation cracks, loose power lines, & gas leaks.
- **Before reentering, call FEMA or a building professional** (ex. structural engineers, contractors, plumbers, home inspectors) to inspect your home.
- **Keep your radio and cell phone on you** in case of emergencies.
- **Bring a flashlight & turn it on before entering the building**.

## *WHEN ENTERING YOUR HOME:*

- **Enter carefully,** open cabinets and doors with caution and watching for hazards (slippery floors, broken glass, loose boards, wild animals, glass)
- If the house has been closed up for several days, enter briefly to **open doors and windows** to let the house air out for a while (at least 30 minutes) before you stay for any length of time.
- **Sniff for gas leaks**, starting at the water heater, **check the electrical system** for sparks, breaks, or frayed wires, and **check for water leaks.**
- **Shutoff damaged gas, power, and water lines** as needed. If in doubt contact, your utility provider
- **Check with local authorities before using any water and pump out wells**; the water could be contaminated.
