Development under the HEU6 would increase demand for telecommunications services. As discussed above in Section 4.18.2.6, mobile phone and broadband internet are available throughout Monterey County. As each individual opportunity site is located proximate to existing development or urbanized areas, it is not anticipated that new telecommunication facilities would be required to provide services. The "middle-mile" network is currently under construction through Monterey County under a separate initiative. Future development in areas where only slower speeds exist would be able to connect to this new broadband internet network. Any connections for telecommunications would be project-specific and small in nature, likely to be located underground within existing developed roadways, alleys, or sidewalks. Any new or expanded telecommunication facilities would be limited to project-specific connections to existing infrastructure. Chapter 15.32 – Underground Utility Facilities, of the County Code, applies to underground utility distribution facilities for communication. Impacts related to telecommunication facilities would be less than significant.

### Significance of Impact

Less than significant impact for electric power, natural gas, and telecommunications.

Potentially significant impact for water and wastewater.

### Mitigation Measures

Preparation and submittal of proof of adequate water and wastewater facilities will be required for all projects processing under the HEU6 through MM-UTL-OBJ-1 and MM-UTL-CONS-2.

**MM-UTL-OBJ-1:** For by-right development the County shall include MM-UTL-OBJ-1 in the by-right housing ordinance.

1. Sites that are located in and able to be serviced by Public Water and/or Public Sewer District.
    a. Applications for multi-family housing projects that are subject solely to objective review and approval and/or objective standards according to state housing law shall be served by public water and wastewater (sewer) districts or agencies, if such service is available and consistent with the County's zoning ordinances (Title 20 and 21), General Plan and Local Coastal Program, as well as the CFC and the California Plumbing Code.

b. The applicant shall provide documentation from the appropriate public water and wastewater districts or agencies demonstrating that adequate water and wastewater services are available to serve the project; this includes water supply, system pressure, and service infrastructure, as well as wastewater conveyance and treatment capacity. Documentation at a minimum should include a quantitative comparison of existing versus proposed water and wastewater usage use and evidence from the water or wastewater service provided stating that adequate service and supply is available.
c. The documentation shall also identify any required service extensions or improvements required to adequately service the project, such as sewer laterals, and main connections adequately sized to convey project wastewater flows, or water mains designed and sized to provide adequate flows and pressure to serve the project's general water demands and fire flows (i.e., pumps), considering the proposed project density.
d. Documentation from the appropriate public water and wastewater districts or agencies shall be obtained by the applicant and submitted as part of project application materials. The applicant shall assume full responsibility for costs incurred in service extensions or improvements that are required as a result of the future proposed project.

2. Sites that require on-site wastewater treatment and/or on-site water systems.
   e. For applications for multi-family housing projects that are subject solely to objective review and approval and/or objective standards according to state housing law that are unable to connect to public water and wastewater systems, the applicant shall provide documentation that on-site septic infrastructure and/or on-site wells are adequately sized and available to serve the project and are consistent with the County's regulations for on-site wells and wastewater improvements. These improvements shall also be consistent with the CFC and the California Plumbing Code. The applicant shall provide documentation to the County as required by County Code Chapter 15.08 – Water Wells and Chapter 15.20.005 – Sewage Disposal and other applicable County regulations.
   f. Documentation shall be provided by the applicant and submitted as part of project application materials. The applicant shall assume full responsibility for costs incurred for necessary improvements that are required because of the future proposed project.
   g. Proof, as supported by evidence, shall be provided that there is a long-term sustainable water supply and adequate water supply system to serve the development. Evidence may include authorized production capacity, source of water supply and nature of water right(s); existing and projected future demand for water and water quality.

h. Proof, supported by evidence, shall be provided that there is a long-term, adequate capacity for wastewater treatment and disposal to serve the development. Evidence may include authorized treatment capacity and existing and projected future demand for wastewater treatment.

3. Sites that require annexation into a water and/or wastewater service district.
   i. For applications for multi-family housing projects that are not located in an existing service district area to connect to public water and wastewater systems nor can provide adequately sized on-site wastewater and water wells require annexation into a service district, authorized by the Local Agency Formation Commission (LAFCO).
   j. Projects that require annexation into a water and/or wastewater service district area would require a discretionary decision and review from LAFCO.

**MM-UTL-CONS-2:** For developments streamlining under the Consistency Process:

1. Sites that are located in and able to be serviced by Public Water and/or Public Sewer District.
   a. Applications for developments streamlining under the Consistency Process shall be served by public water and wastewater (sewer) districts or agencies, if such service is available and consistent with the County's zoning ordinances (Title 20 and 21), General Plan and Local Coastal Program, as well as the CFC and the California Plumbing Code.
   b. The applicant shall provide documentation from the appropriate public water and wastewater districts or agencies demonstrating that adequate water and wastewater services are available to serve the project; this includes water supply, system pressure, and service infrastructure, as well as wastewater conveyance and treatment capacity. Documentation at a minimum should include a quantitative comparison of existing versus proposed water and wastewater usage use and evidence from the water or wastewater service provided stating that adequate service and supply is available.
   c. The documentation shall also identify any required service extensions or improvements required to adequately service the project, such as sewer laterals, and main connections adequately sized to convey project wastewater flows, or water mains designed and sized to provide adequate flows and pressure to serve the project's general water demands and fire flows (i.e., pumps), considering the proposed project density.
   d. Documentation from the appropriate public water and wastewater districts or agencies shall be obtained by the applicant and submitted as part of project application materials. The applicant shall assume full responsibility for costs

incurred in service extensions or improvements that are required as a result of the future proposed project.

2. Sites require on-site wastewater treatment and/or on-site water systems.
    e. For applications for developments streamlining under the Consistency Process that are unable to connect to public water and wastewater systems, the applicant shall provide documentation that on-site septic infrastructure and/or on-site wells are adequately sized and available to serve the project and are consistent with the County's regulations for on-site wells and wastewater improvements. These improvements shall also be consistent with the CFC and the California Plumbing Code. The applicant shall provide documentation to the County as required by County Code Chapter 15.08 – Water Wells and Chapter 15.20.005 – Sewage Disposal and other applicable County regulations.
    f. Documentation shall be provided by the applicant and submitted as part of project application materials. The applicant shall assume full responsibility for costs incurred for necessary improvements that are required because of the future proposed project.
    g. Proof, as supported by evidence, shall be provided that there is a long-term sustainable water supply and adequate water supply system to serve the development. Evidence may include authorized production capacity, source of water supply and nature of water right(s); existing and projected future demand for water and water quality.
    h. Proof, supported by evidence, shall be provided that there is a long-term, adequate capacity for wastewater treatment and disposal to serve the development. Evidence may include authorized treatment capacity and existing and projected future demand for wastewater treatment.
3. Sites that require annexation into a water and/or wastewater service district.
    i. For applications for developments streamlining under the Consistency Process that are not located in an existing service district area to connect to public water and wastewater systems nor can provide adequately sized on-site wastewater and water wells require annexation into a service district, authorized by the Local Agency Formation Commission (LAFCO).
    j. Projects that require annexation into a water and/or wastewater service district area would require a discretionary decision and review from LAFCO.

## Significance of Impact After Mitigation

Even with implementation of MM-UTL-OBJ-1 and MM-UTL-CONS-2 impacts related to new or expanded water and wastewater facilities resulting from the project would remain significant and unavoidable.

### 4.18.5.2 Threshold 2: Water Supply Availability

**Threshold 2:** Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

## Impact Analysis

Construction of future development facilitated by the HEU6 would result in a temporary increase in water use by workers, equipment, and for dust control. Given the temporary nature of construction water use, this discussion focuses on the long-term increase in water demand and its effect on water supply and facilities.

Operation of residential land uses facilitated by the HEU6 would result in the permanent increase in water demand in the long-term from daily water use for cooking, cleaning, and irrigation. Urban water suppliers provide monthly reports to the State Water Resources Control Board, including residential gallons per capita per day. In Monterey County, the average residential gallons per capita per day in 2024 is 65; when averaged over the past 5 years, Monterey County uses 72 gallons per capita per day in the residential sector (SWRCB 2024). According to the Association of Monterey Bay Area Governments (AMBAG) 2022 Regional Growth Forecast, the average household size in UMC was 3.04 people and was forecasted to remain at 3.04 in 2025 (AMBAG 2020). Using a total residential unit amount of 4,434, the average household size of 3.04, and the average per capita per day residential water consumption of 72 gallons, buildout of the HEU6 would result in an additional 0.97 million gallons of water use per day. This equates to approximately 2.98 AF per day, or 1,087 AF per year of water.

Future development would be spread throughout UMC and each individual project would rely on one of the many water service providers and water supplies available in the region. Breaking down the opportunity sites capacities by IRWM region, there are 3,328 units in Greater Monterey, 1,020 units in Monterey Peninsula, and 86 units in the Pajaro River Watershed. This breakdown splits the total estimated 1,087 AF per year into: approximately 816 AF per year in Greater Monterey (California Water Service Company, Castroville Community Services District, Little Bear Water Company, Marina Coast Water District, San Lucas County Water District); 250 AF per year in Monterey Peninsula (Cal-Am); and 21 AF per year in the Pajaro River Watershed (PV Water). These numbers represent a conservative increase in water use as many sites are currently not vacant with some level of existing water use present.

As described in Section 4.18.2.2, water pumped for agricultural uses in the Greater Monterey region accounted for approximately 90 percent of total groundwater pumped for the region at 361,993 AF, and all urban land uses (residential, commercial, institutional, industrial, landscaping) accounted for the remaining 10 percent at 37,250 AF in 2023. Therefore, project buildout demand of 816 AF per year in the Greater Monterey region would account for approximately 2.2 percent of estimated urban groundwater and approximately 0.2 percent of total groundwater pumping using 2023 estimates.

Within PV Water's service area (Pajaro River Watershed region), project buildout water demand of 21 AF per year would account for approximately 0.0004 percent of total water use using 2022 estimates where total water use was estimated at 51,535 AF. Similar to the Greater Monterey region where agricultural use accounted for approximately 90 percent of the total water use, agricultural land is by far the greatest user of water in the PV Water's service area, accounting for approximately 80 percent of total water use. As such, in the Greater Monterey and Pajaro Watershed regions, an increase in residential water demand due to the project buildout would be minor and represent a fraction compared to total water usage in these regions. Some of the opportunity sites are current agricultural lands, and converting these areas to residential uses would decrease water demands for agricultural use.

In contrast, Cal-Am's service area and MPWMD's jurisdiction is more urbanized, composed of several coastal cities. Approximately 23 percent (1,020 units) of the total opportunity sites are located within this region. According to MPWMD's 2022 Supply and Demand Forecast, water demand is estimated for the year 2020 by MPWMD to be 9,725 AF annually (approximately 6,345 AF for residential demand and approximately 3,380 AF for non-residential demand), with supply estimated at 11,468 AF annually, resulting in a difference of 1,743 AF annually (accounting for the expansion of Pure Water Monterey) (MPWMD 2022). Within the service area of MPWMD, project buildout would account for 4 percent of estimated residential demand, using 2020 estimates. MPWMD assessed long-term water supply and demand using, in part, AMBAG's 2022 Regional Growth Forecast, which reflects the Sixth Cycle Regional Housing Needs Allocation for the area. MPWMD determined that even with 200 percent of the growth forecasted by AMBAG, water supplies would be available for over 30 years (MPWMD 2022). Therefore, the increase in water demand attributed to buildout of the HEU6 is accounted for in MPWMD's long-term and conservative supply planning.

Under the HEU6 there is planned capacity for 150 units in the Pajaro Valley Groundwater Sub-basin. Major water supply and quality issues in the Pajaro Valley include sub-basin overdraft; contaminated or poor groundwater quality throughout the watershed; sediment and nutrient in surface water throughout the watershed; and seawater intrusion and nitrate contamination in the Pajaro/Sunny Mesa Community Service area.

The Salinas Valley Groundwater Basin is the source for much of the water throughout the County. Sub-basins include 180/400 Sub-basin, Eastside Sub-basin, Forebay Sub-basin, Langley Sub-basin, Monterey Sub-basin, and Upper Valley Sub-basin. Each sub-basin has some groundwater in storage, but in certain sub-basins groundwater use has exceeded the rate of recharge which leads to overdraft. The 180/400 Sub-basin has been designated as a critically over drafted sub-basin. Overdraft conditions also exist within the Monterey Sub-basin, the Langley Sub-basin, and the Eastside Sub-basin. Under the HEU6 there is planned capacity for: 339 units in the 180/400 sub-basin; 867 units in the Eastside Sub-basin; 250 units in the Langley Sub-basin; 805 units in the Monterey Sub-basin; 51 units in the Upper Valley Sub-basin; and no units in the Forebay sub-

basin. Major water supply and quality issues in the Salina Valley include seawater intrusion, water allocation, sub-basin overdraft, and groundwater contamination.

The largest water service provider within the Monterey Peninsula Areas is California American Water Company (Cal-Am). Cal-Am owns and operates the water system for most of Carmel, all of Del Monte Forest, and much of Carmel Valley and Greater Monterey Peninsula Planning areas. The adjudicated Seaside Sub-basin is the source for much of the water that Cal-Am purveys throughout these areas of the County. Since 1995, Cal-Am has been under a cease-and-desist order from the State Water Resources Control Board to reduce pumping of the Carmel River to the legally established levels. This has resulted in a moratorium on new service connections in the main Cal-Am service area. In anticipation of the completion of an expansion to the Pure Water Monterey project and the projected benefits of this project to provide additional supplies of groundwater recharge, MPWMD has approved new allocations of water to local jurisdictions within the MPWMD area. The County was allocated 72 AF of water in 2025, adding to the approximately 10 AF that the County already had from historical allocations. This allocation of water cannot be used for new lots of record requiring a water meter in the Monterey Peninsula due to the cease-and-desist order in place. Additional allocations may be available in the near future depending on the outcome of the Pure Water Monterey expansion project. Assuming a conservative 0.20 AF of water per unit for future development, approximately 82 AF of water would not be sufficient to accommodate the planned capacity within the MPWMD area even if the cease-and-desist order is lifted or modified. Under the HEU6 there is planned capacity for 468 units in the Carmel Valley Alluvial Basin and 877 units in the adjudicated Seaside Basin.

Under MM-UTL-OBJ-1, the County is required to incorporate requirements in the by-right housing ordinance for all projects to submit proof of a long-term sustainable water supply through an on-site water system or an adequate water supply system from an existing water service provider having jurisdiction. If neither of those are an option, a project may require annexation into a water service provider service area. Annexation is a discretionary process, any project requiring formal annexation into a water service provider service territory would require approval by LAFCO. Additionally, to address water constraints and accommodate growth in the area, the HEU6 includes Program H-2.L. Collaboration with Water Resources Agencies, Program H-2.Q. Ensure Adequate Sewer Resources for New Housing Development, and Policy H-2.12 Assist in infrastructure and public facility improvements that support existing and new affordable housing. These Programs/Policies require the County coordinate with water service providers and suppliers on projects and policies to achieve sub-basin sustainability and water allocations to accommodate future growth. Given the historical and ongoing constraints on water supply throughout Monterey County, even with HEU6 program and policy implementation, impacts related to water supply would be potentially significant.

### Significance of Impact

Potentially significant impact.

### Mitigation Measures

MM-UTL-OBJ-1 and MM-UTL-CONS-2 identified above.

### Significance of Impact After Mitigation

Even with implementation of mitigation measures and HEU6 Programs and policies, impacts related to water supply would remain significant and unavoidable.

#### 4.18.5.3 Threshold 3: Wastewater Treatment Capacity

**Threshold 3:** Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

### Impact Analysis

In concert with an increase demand for water, the project would result in a similar increase in wastewater generation from residential uses including cooking, cleaning, and bathing. Water use can be used as a conservative estimate for wastewater generation, although in reality there would be less wastewater generated compared to water used. Project buildout would potentially result in an increase of water use by 0.97 million gallons per day (mgd).

Sites 8 through 10, 39, and 44 (377 units) are located in Prunedale where no wastewater service provider currently exists. These units are anticipated to require on-site septic systems for wastewater treatment. Future development in this location would be subject to the County Code regarding the siting, sizing, and design for on-site septic systems.

As discussed in Section 4.18.2.2, M1W, CAWD, Pajaro County Sanitation District (pumped to the City of Watsonville), and San Lucas County Water District have an estimated remaining average treatment capacity of 11.6 mgd, 1.9 mgd, 7 mgd, and 15,000 gpd at each treatment facility, respectively. Therefore, sufficient treatment capacity exists for opportunity sites (Sites 1 through 6, 11 through 24, 30 through 38, 41, 43, 46 through 56, and 64) located within these service areas.

Site 42 (27 units) is located in the Pine Canyon area which is served by the Little Bear Water Company. Sites 25 through 29 (128 units) are located in Chualar and would be serviced by the Chualar County Services Area No. 75. As discussed in Section 4.18.2.2, additional wastewater treatment capacity does not exist in these locations. Although treatment capacity does not currently exist, several long-term planning and evaluation efforts are underway to address wastewater treatment. As discussed previously, the Pine Canyon area may be annexed into the wastewater

service area of the King City; however, such annexation is only contemplated at this time and is beyond King City's planning horizon. Similarly, the County is currently underway with evaluating upgrades to Chualar's wastewater treatment facility or connecting to M1W.

Consistent with General Plan Policies PS-1.1, PS-1.3, and PS-1.6, Carmel Area Land Use Plan Policies 3.3.2 and 3.2.3, North County Land Use Plan 3.2.1, 3.2.2, and 3.2.3 and implemented by Title 15 – Public Services and Title 20 – Coastal Implementation Plans, of the County Code, projects will only be approved if it is proven that APFS, including wastewater services, exist or will be provided concurrent with development. The County Code, Chapter 15.20 – Sewage Disposal, requires new wastewater generating development to be connected to an approved sanitary sewer when a sewer main is located within 300 feet of the structure and when parcel abuts the road, street, or alley where the sewer main is located. General Plan policies require that wastewater services for new residential development meet or exceed the "Infrastructure and Service Standards" outlined in Table PS-1 of the General Plan. Construction of new on-site septic system is not permitted for development within existing service area of a regional or subregional wastewater collection and treatment system. As described in Table 4.18-2, not all opportunity sites are within existing service area of a regional or subregional wastewater service area. Where public collection and treatment system exist in the area, annexation to existing service area is preferred method of service, each development project would be required to be reviewed upon development application process to verify that adequate wastewater services and facilities are available or can be provided.

The HEU6 includes commitments to ensure adequate sewer capacity for affordable housing developments implemented under the project. This includes Program H-2.Q. Ensure Adequate Water and Sewer Resources for New Housing Development. Under Program H-2.Q, the County will prioritize sewer service for affordable housing developments and work with sewer providers to address provision of adequate sewer capacity.

Under MM-UTL-OBJ-1, the County is required to incorporate requirements in the by-right housing ordinance for all projects to submit proof of a APFS for wastewater through an on-site wastewater system or an adequate wastewater system from an existing wastewater service provider having jurisdiction. If neither of those are an option, a project may require annexation into a wastewater service provider service area. Annexation is a discretionary process, any project requiring formal annexation into a water service provider service territory would require approval by LAFCO.

### Significance of Impact

Potentially significant impact.

### Mitigation Measures

MM-UTL-OBJ-1 and MM-UTL-CONS-2 identified above.

### Significance of Impact After Mitigation

Even with implementation of mitigation measures and HEU6 Programs and policies, impacts related to wastewater treatment capacity would remain significant and unavoidable.

#### 4.18.5.4 Threshold 4: Solid Waste Generation and Threshold 5: Compliance with Solid Waste Regulations

**Threshold 4:** Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

**Threshold 5:** Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

### Impact Analysis

Projects facilitated by the HEU6 would generate solid waste during both construction (temporary) and operation (permanent and long-term). Construction waste would be composed of excess materials, packaging and containers, demolished materials, worker refuse, and various general debris. During long-term operation, projects would generate regular, daily solid waste typical of residential land uses such as food and organic materials, general refuse (e.g., plastics, cardboard, waste from consumer products), and commercially available hazardous materials (e.g., paints, oils, fuels). As discussed in Section 4.18.7, Conclusion, the two primary landfills permitted by CalRecycle have estimated cease operation dates in the years 2066 and 2107 based on permitted throughput and remaining capacities. All future projects under the HEU6 would be served by these landfills and associated transfer facilities.

In compliance with CALGreen, the County requires all construction and demolition projects to divert at least 65 percent of debris and 100 percent of inert materials from landfills. Diversion of debris can include recycling or reuse of materials. The County enforces this diversion requirement through the approval process for finalized building permits and certificates of occupancy. It is difficult to reasonably estimate the potential amount of construction and demolition related debris that could be generated under the HEU6 because design and

construction details are not yet known at this time. However, compliance with County and CALGreen diversion requirements would minimize the amount of construction waste sent to landfills. Furthermore, consistent with General Plan Policies PS-1.1, PS-1.3, PS-1.4, and PS-1.6, Carmel Area Land Use Plan Policies 3.3.2 and 3.3.3, North County Land Use Plan Policies 3.2.1, 3.2.2 and 3.2.3, no discretionary application for new development would be approved unless the County finds that APFS exist or provided concurrent with the development. General Plan Policy PS-6.5 requires new development projects to conform to state-mandated diversion and recycling goals and site development plans to include adequate solid waste recycling collection areas. Future projects are also required to comply with the provisions of County Code related to solid waste diversion and recycling outlined Title 10 (Health and Safety) and associated requirements for appropriate waste facilities outlined in the Title 21 (Zoning) and Title 20 (Coastal Zoning).

CalRecycle provides a list of resources to estimate solid waste generation by sector; although waste generation rates can vary greatly across the state and due to project-specific circumstance, they are useful for planning purposes. Using the most conservative residential solid waste generation rate of 12.23 pounds per household per day and the anticipated 4,434 units identified within opportunity sites, full buildout of the HEU could produce upwards of 54,228 pounds per day (27.1 tons per day); this conservatively equates to 219 cubic yards of uncompacted mixed solid waste, or 78 cubic yards if compacted (CalRecycle 2019; USEPA 2016). As shown in Table 4.18-3, the Monterey Peninsula Landfill and Johnson Canyon Sanitary Landfill have a combined daily permitted throughput of 5,194 tons per day and combined estimated remaining capacity of 61.3 million cubic yards. In addition, ReGen Monterey's Materials Recovery Facility has continued to extend the capacity of the Monterey Peninsula Landfill through active sorting and diverting materials. The Materials Recovery Facility is capable of recovering up to 75 percent or more of materials from mixed waste, contributing toward state goals and requirements for waste diversion set by the Integrated Waste Management Act and subsequent amendments (ReGen Monterey 2024).

Based on the above, there is sufficient capacity for buildout of projects under the HEU6 during construction and operation. Future projects would also be required to comply with construction diversion mandates during permit application and issuance. Additionally, ongoing countywide programs (CALGreen/County diversion requirements) and facilities (Materials Recovery Facility) described above would continue contributing to state and County landfill diversion goals. Project implementation would not generate solid waste in excess of state or local standards, or in excess of local infrastructure's capacity or conflict with statutes and regulations related to solid waste. Therefore, impacts related to solid waste generation and requirements would be less than significant.

### Significance of Impact

Less than significant impact.

### Mitigation Measures

No mitigation measures are required.

### Significance of Impact After Mitigation

Less than significant impact.

## 4.18.6 Cumulative Impacts

### 4.18.6.1 Cumulative Thresholds 1 through 5: New or Expanded Utilities Facilities, Water Supply Availability, Wastewater Treatment Capacity, Solid Waste Generation, and Compliance with Solid Waste Regulations

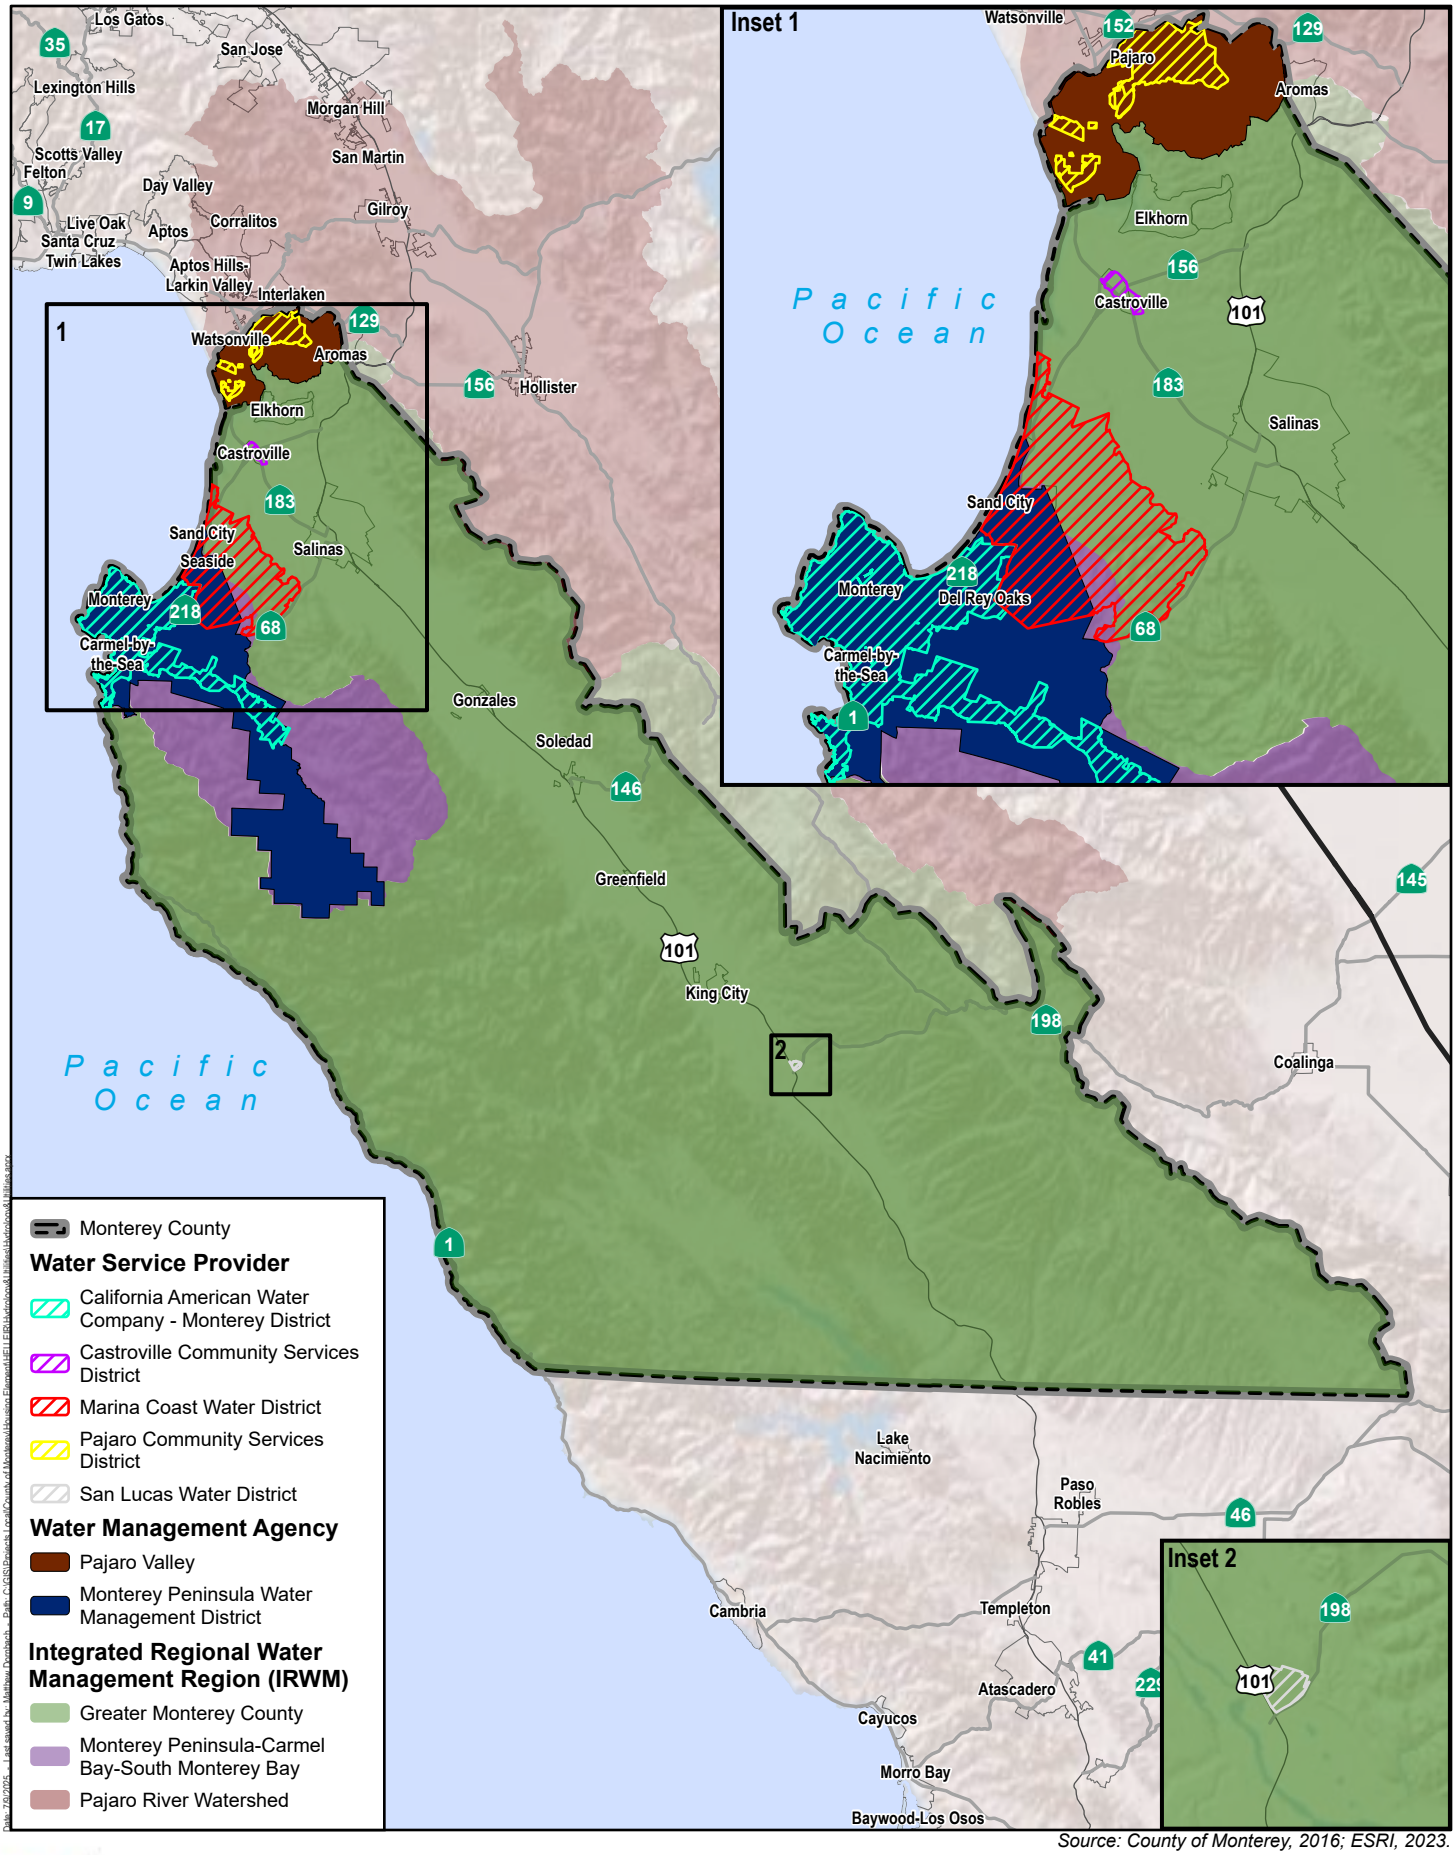
This section addresses various potential cumulative impacts relating to utilities and service systems (i.e., water, wastewater, electric power, natural gas, telecommunication, and solid waste) that could result from implementation of the project. The cumulative setting for the project with respect to utilities include other long-range plans, policies, and programs implemented by the various agencies in Monterey County, as well as reasonably foreseeable development projects. Other land use jurisdictions within Monterey County also recently adopted or are in the process of developing their own Sixth Cycle Housing Element Update in compliance with the California Housing and Community Development Department. Similar to the project, these updates do not directly result in development; rather updates to Housing Elements often contain suites of rezones and identification of underutilized parcels where additional housing could be constructed.

The project would result in cumulatively considerable impacts if it, in combination with other past, present, and reasonably foreseeable plans, policies, programs, and projects would result in substantial adverse impacts related to new or expanded utilities (water, wastewater, electric power, natural gas, and telecommunication), water supply, wastewater capacity, or solid waste capacity. Although the project and other land use plans and programs do not directly result in an increase in demand for public utilities because they would not directly result in the construction of new housing, buildout of development facilitated by the project each cumulative regional plan would incrementally add to a cumulative effect on water supply and utility infrastructure at a regional level. The cumulative effect of regional growth and increases in demand for utilities would reduce the reliability or availability of water supplies, the capacity of water and wastewater conveyance and treatment infrastructure, and the capacity of regional landfill and waste recycling and transfer facilities, such that utilities may not be able to accommodate proposed and reasonably foreseeable cumulative development and regional growth. Managing long-term regional growth and the availability of utilities and water supply is an ongoing, multi-jurisdictional effort. Therefore, cumulative impacts on utilities and service systems would be significant and unavoidable.

### Significance of Impact

Potentially significant impact.

### Mitigation Measures



MM-UTL-OBJ-1 and MM-UTL-CONS-2 identified above.

### Significance of Impact After Mitigation

Even with implementation of mitigation measures and HEU6 Programs and policies, impacts related to wastewater treatment capacity would remain significant and unavoidable.

## 4.18.7 Conclusion

The project would result in less than significant impacts on new or expanded utilities facilities (electrical power, natural gas, and telecommunications) and solid waste generation. The project would result in significant and unavoidable impacts on new or expanded water and wastewater facilities, water supply, and wastewater treatment capacity. Additionally, when considered in combination with cumulative projects, impacts on utilities and service systems would be significant and unavoidable.

County of Monterey General Plan Housing Element Sixth Cycle (2023-2031) Update

*This page intentionally left blank.*

# 4.19 Wildfire

This section evaluates the potential for impacts related to wildfire resulting from implementation of the County of Monterey General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law (project). This analysis addresses potential impacts on implementation of an emergency response or evacuation plan, exposure to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire, temporary or ongoing impacts on the environment from the installation or maintenance of associated infrastructure, and exposure of people or structures to significant post-wildfire risks, such as flooding or landslides.

"HEU6" refers to the draft HEU6 document circulated for public review and submitted to the California Department of Housing and Community Development, while the "project" refers to HEU6 along with other components and related actions intended to implement HEU6, as described in Chapter 3, Project Description.

For the purposes of the Program Environmental Impact Report (PEIR), the following definitions are used herein:

- County of Monterey Government (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

## 4.19.1 Regulatory Setting

This section describes the federal, state, and local regulatory framework adopted to address wildfire.

### 4.19.1.1 Federal

#### Disaster Mitigation Act of 2000: Senate Bill 743

The Disaster Mitigation Act of 2000 requires a state-level mitigation plan as a condition of disaster assistance. There are two different levels of state disaster plans: "Standard" and "Enhanced." States that develop an approved Enhanced State Plan can increase the amount of funding available through the Hazard Mitigation Grant Program. The act also established new requirements for local mitigation plans.

### National Fire Plan

The National Fire Plan was developed in August 2000, following a historic wildfire season. Its intent is to establish plans for active response to severe wildfires and their impacts on communities while ensuring sufficient firefighting capacity. The plan addresses firefighting, rehabilitation, hazardous fuels reduction, community assistance, and accountability.

### International Building Code and International Fire Code

The International Building Code (IBC) and International Fire Code (IFC) are model codes developed by the International Code Council to regulate fire safety in buildings. The IBC focuses on building design and construction, while the IFC addresses fire prevention, fire protection, and life safety in both new and existing buildings. Both codes work together to safeguard life and property from fire and explosion hazards.

## 4.19.1.2 State

### California Office of Emergency Services

Under the California Emergency Services Act, the State of California developed an emergency response plan to coordinate emergency services provided by all governmental agencies. The plan is administered by the California Governor's Office of Emergency Services. The California Governor's Office of Emergency Services coordinates the responses of other agencies, including the U.S. Environmental Protection Agency, the Federal Emergency Management Agency, the California Highway Patrol, regional water quality control boards, air quality management districts, and county disaster response offices. Local emergency response teams, including fire, police, and sheriff's departments, provide most of the services to protect public health. The California Governor's Office of Emergency Services prepares the State of California Multi-Hazard Mitigation Plan. The State of California Multi-Hazard Mitigation Plan identifies hazard risks and includes a vulnerability analysis and a hazard mitigation strategy. The State of California Multi-Hazard Mitigation Plan is federally required under the Disaster Mitigation Act of 2000 for the State of California to receive federal funding. The Disaster Mitigation Act of 2000 requires a State Mitigation Plan as a condition of disaster assistance.

### California Department of Forestry and Fire Protection

The California Public Resources Code (PRC) requires the designation of state responsibility areas (SRAs), which are identified based on cover, beneficial water uses, probable erosion damage, and fire risks and hazards. The financial responsibility of preventing and suppressing fires in an SRA is primarily the responsibility of the state. Fire protection in areas outside SRAs is the responsibility of local or federal jurisdictions and is referred to as local responsibility areas (LRAs) and federal responsibility areas (FRAs), respectively.

The California Department of Forestry and Fire Protection's (CAL FIRE's) Fire and Resource Assessment Program (FRAP) assesses the amount and extent of California's forests and rangelands, analyzes their conditions, and identifies alternative management and policy guidelines. Through the FRAP, CAL FIRE provides high-quality special data, maps, and online data viewers to provide critical information related to forest and wildfire management. CAL FIRE maps fire responsibility areas and Fire Hazard Severity Zones (FHSZs), among other things.

SRAs are lands where the state (primarily CAL FIRE) is financially and operationally responsible for wildfire prevention and suppression. These lands are typically unincorporated, rural lands with significant wildland vegetation. SRAs generally exclude incorporated cities and federally owned lands. All SRA lands are subject to state construction codes and standards and defensible space laws.

LRAs are lands where local government agencies, such as city or county fire departments, are primarily responsible for wildfire protection. These typically include incorporated city boundaries, suburban neighborhoods, and developed urban areas. Local jurisdictions typically adopt and enforce their own hazard maps and building codes, although state laws (e.g., defensible space requirements) often still apply.

All SRA and LRA lands are assigned a tier of fire hazard severity. FHSZs are designated by CAL FIRE's Office of the State Fire Marshal. These mapped areas are categorized as Moderate, High, or Very High based on a science-based model that calculates fuel density (i.e., vegetation), terrain (e.g., slope), climate (e.g., wind patterns), and historical fire behavior. The Very High FHSZ is the highest fire hazard designation determined by the state fire marshal. These zones can exist in either an SRA or an LRA. Properties in a Very High FHSZ trigger strict wildfire-resistant construction standards (including Chapter 7A of the California Building Code (CBC), as described further below), the requirement for 100 feet of defensible space, and mandatory real estate disclosures when selling a home.

In addition to mapping hazards, CAL FIRE serves and safeguards the people and protects the property and resources of over 31 million acres of California's privately owned wildlands in the SRA. CAL FIRE's mission emphasizes the management and protection of California's natural resources; a goal that is accomplished through ongoing assessment and study of the state's natural resources and FRAP. CAL FIRE foresters and fire personnel work closely with other agencies to encourage and implement fuel management projects to reduce the threat of uncontrolled wildfires. CAL FIRE provides varied emergency services to 36 counties via contracts with local governments. CAL FIRE's Fire Prevention Program consists of multiple activities, including wildland pre-fire engineering, vegetation management, fire planning, education, and law enforcement. Typical CAL FIRE prevention projects include brush clearance, prescribed fires, defensible space inspections, emergency evacuation planning, fire prevention education, fire hazard severity mapping, and fire-related law enforcement activities.

## California Fire Plan

The California Strategic Fire Plan for California (2018) is a cooperative effort between the State Board of Forestry and Fire Protection and CAL FIRE. The plan serves as the state's road map for reducing the risk of wildfire by emphasizing preventive action before a fire starts. The California Fire Plan reduces firefighting costs and property losses, increases firefighter safety, and contributes to ecosystem health. Eight goals outlined by the California Fire Plan include:

1. Identify and evaluate wildland fire hazards and facilitate the collaborative development and sharing of such analyses and data collection.
2. Promote and support local land use planning processes as they relate to protection from wildfire and landowner responsibility.
3. Support and participate in the collaborative development and implementation of local, county, and regional plans that address fire protection and landowner objectives.
4. Increase fire prevention awareness, knowledge, and actions implemented by individuals and communities to reduce human loss, property damage, and impacts on natural resources from wildland fires.
5. Integrate fire and fuels management practices with landowner/land manager priorities across jurisdictions.
6. Determine the level of resources necessary to effectively identify, plan, and implement fire prevention using adaptive management strategies.
7. Determine the level of fire suppression resources necessary to protect the values and assets at risk identified during planning processes.
8. Implement post-fire assessments and programs for the protection of life, property, and natural resource recovery.

## California Fire Code

The California Fire Code (CFC) is Part 9 of 13 parts of the official building regulations to the California Code of Regulations (CCR). This code is also referred to as CCR Title 24, or the California Building Standards Code. The CFC establishes the minimum requirements consistent with nationally recognized good practices to safeguard public health, safety, and general welfare from fire and other hazards in new and existing buildings, structures, and premises, and to provide safety and assistance to firefighters and emergency responders during emergency operations. The CFC applies to the construction—including the presence of fire service features and fire apparatus access roads—alteration, movement, enlargement, replacement, repair, equipment, use, occupancy, means of egress, evacuation plans, location, maintenance, and demolition and removal of every building or structure or any appurtenances connected or attached to such building structures throughout the state. In UMC, the CFC is administered by the Chief Building Official of Monterey County.

In addition, CCR Title 14 establishes the State Minimum Fire Safe Regulations, which constitute the minimum wildfire protection standards of the California Board of Forestry and Fire Protection.

### California Building Code

Building standards for high fire hazard areas are identified in the CBC, which is administered by the Monterey County Housing & Community Development, Building Services, in addition to the CFC. Chapters 6–9 of the CBC establish standard building fire prevention systems, fire and smoke protection features, interior finishes, and fire protection and life safety systems. Chapter 7A outlines mandatory, state-enforced materials and construction methods for exterior wildfire exposure to harden buildings against ember intrusion and radiant heat in any FHSZ within SRAs, Very High FHSZs within LRAs, or any wildland-urban interface (WUI) area. Chapter 49 of the CFC establishes minimum standards for the protection of life and property by increasing the ability of a building in any FHSZ within SRAs, Very High FHSZs within LRAs, or any WUI area to resist the intrusion of flames or burning embers projected by a vegetation fire, and contributes to a systematic reduction in conflagration losses. The current 2025 CBC became effective ON January 1, 2026.

### California Health and Safety Code, Section 13000 et seq.

State fire regulations are set forth in Section 13000 et seq. of the California Health and Safety Code, which include regulations concerning building standards (as also set forth in the CBC), fire protection and notification systems, fire protection devices such as extinguishers and smoke alarms, high-rise building and childcare facility standards, and fire suppression training. The state fire marshal enforces these regulations and building standards in all state-owned buildings, state-occupied buildings, and state institutions throughout California.

### California Residential Code, Chapter 3, Building Planning, Section R337, Material and Construction Methods for Exterior Wildfire Exposure

This section establishes minimum standards for the protection of life and property by increasing the ability of a building in any FHSZ or WUI area within SRAs or in Very High FHSZs within LRAs to resist the intrusion of flame or burning embers projected by a vegetation fire and contributes to a systematic reduction in conflagration losses.

### California State Multi-Hazard Mitigation Plan

The purpose of the California State Hazard Mitigation Plan is to significantly reduce deaths, injuries, and other losses attributed to natural- and human-caused hazards in California. The California State Hazard Mitigation Plan guides hazard mitigation activities, emphasizing partnerships among local, state, and federal agencies, as well as the private sector (Cal OES 2023).

### Governor's Office of Land Use and Climate Innovation Fire Hazard Planning Technical Advisory

The Governor's Office of Land Use and Climate Innovation's (formerly the Governor's Office of Planning and Research, or OPR) technical advisory provides context relating to wildfire risk and environmental and regulatory settings, as well as general planning guidance. Guidance topics include outreach and engagement, fire hazard and risk assessment, policy development, and example policies (OPR 2022). The goal of the technical advisory is to provide a robust planning framework for addressing fire hazards, reducing risk, and increasing resilience across California's diverse communities and landscapes. To accomplish this goal, local agencies (i.e., cities and counties) must develop and incorporate effective policies and implementation programs in their general plans and integrate their general plans with other relevant hazard and risk reduction policies, plans, and programs. This technical advisory guides those policies and programs and is also intended to assist city and county planners in discussions with professionals from fire hazard prevention and mitigation, disaster preparedness, and emergency response and recovery agencies.

### California Government Code, Sections 51175–51189 and 66474.02

California Government Code, Sections 51175–51189, designates responsibility to local agencies to identify areas in the state as Very High FHSZ falling under local protection with the LRA. Classification of Very High FHSZ must be consistent with statewide criteria. Designation of Very High FHSZ is based on fuel loading, slope, weather, and other relevant factors, including winds identified as causing wildfire spread. Once identified, information on Very High FHSZ is mapped and made available to the public. The CAL FIRE director periodically reviews the LRA and, as necessary, makes recommendations relative to the designated Very High FHSZ. This section also outlines brush clearance and defensible space maintenance for buildings in the FHSZ, as well as the necessary permit process for building construction and reconstruction. CAL FIRE guides fuel management and defensible space requirements.

CAL FIRE published updated LRA FHSZ maps for UMC in March 2025. To comply with California Government Code, Section 51179, the County adopted these maps by ordinance in August 2025.

In 2012, Senate Bill (SB) 1241 added Section 66474.02 to Title 7 Division 2 of the California Government Code, commonly known as the Subdivision Map Act. The statute prohibits subdivision of parcels designated in Very High FHSZ in an LRA, or that lie in the SRA, unless certain findings are made before approval of the tentative map. The statute requires that a city or county planning commission make three new findings regarding fire hazard safety before approving a subdivision proposal. The three findings are, in brief:

- The design and location of the subdivision and its lots are consistent with defensible space regulations found in the PRC Sections 4290 and 4291;
- Structural fire protection services will be available for the subdivision through a publicly funded entity; and
- Ingress and egress road standards for fire equipment are met per any applicable local ordinance and PRC Section 4290.

## California Public Resource Code

**PRC Section 30253(a)** is a section of the Coastal Act that requires new development to minimize risks to life and property in areas of high geologic, flood, and fire hazard.

**PRC Section 4119** authorizes the U.S. Forest Service, the U.S. Department of the Interior, Bureau of Land Management, and CAL FIRE to inspect properties to determine if they comply with state forest and fire laws, regulations, or use permits.

**PRC Sections 4201–4204** direct CAL FIRE to map areas of significant fire hazards in SRAs. Classification is based on fuels, terrain, weather, and other relevant factors, and falls under either Moderate, High, or Very High. The director of CAL FIRE is required to designate, review, and revise, as necessary, FHSZs and assign to each zone a rating reflecting the degree of fire hazard severity expected to prevail in the zone.

**PRC Section 4290** requires the adoption of minimum fire safety standards related to defensible space that apply to SRA lands under the authority of CAL FIRE and to lands classified and designated as Very High FHSZ in an LRA. These regulations apply to the perimeters and access to all residential, commercial, and industrial building construction in SRAs approved after January 1, 1991, and within lands classified and designated as Very High FHSZ in an LRA after July 1, 2021. The regulations shall include all of the following:

1. Road standards for fire equipment access.
2. Standards for signs identifying streets, roads, and buildings.
3. Minimum private water supply reserves for emergency fire use.
4. Fuel breaks and greenbelts.

**PRC Section 4290.5** requires the California Board of Forestry and Fire Protection, in consultation with the state fire marshal, to identify existing subdivisions with more than 30 dwelling units in the SRA or a Very High FHSZ in an LRA, identified pursuant to Section 51178 of the California Government Code, without a secondary means of egress route that are at significant fire risk. Additionally, the Board, in consultation with the state fire marshal and the local government that identified the subdivisions, shall develop recommendations to improve the subdivisions' fire safety.

**PRC Section 4291** requires a person who owns, leases, controls, operates, or maintains a building or structure in, upon, or adjoining a mountainous area, forest-covered lands, brush-covered lands, grass-covered lands, or land that is covered with flammable material to maintain defensible space of 100 feet (or up to the property line, whichever is less) from each side and the front and rear of the structure. Fuels shall be maintained in a condition so that a wildfire burning under average weather conditions would be unlikely to ignite the structure. Here, "fuel" means any combustible material, including petroleum-based products and wildland fuels. The intensity of fuel management may vary within the 100-foot perimeter of the structure, the most intense being within the first 30 feet around the structure. A greater distance may be required by state law or local ordinances, program standards, rules, or regulations. Clearance beyond the property line may only be required if the state law or local ordinances, program standards, rules, or regulations include findings that the clearing is necessary to significantly reduce the risk of transmission of flame or heat sufficient to ignite the structure, and there is no other feasible mitigation measure possible to reduce the risk of ignition or spread of wildfire to the structure. Clearance on the adjacent property shall only be conducted following written consent by the adjacent landowner. This section does not apply to single specimens of trees or other vegetation that are well-pruned and maintained to effectively manage fuels and not form a means of rapidly transmitting fire from other nearby vegetation to a structure or from a structure to other nearby vegetation. In addition, Section 4291(a) of the PRC requires a minimum of 100 feet of defensible space around all residential, commercial, and industrial buildings in SRAs approved after January 1, 1991. Additionally, Section 4291(a) requires removal of trees that extend within 10 feet of chimneys or stovepipes, removal of dead or dying wood adjacent to or overhanding a building, maintaining clean roofing (i.e., removing leaves, needles or other vegetative materials from roofs), and that prior to construction of a new building or structure, or rebuilding a building or structure damaged by fire a certificate is obtained by a local building official that the dwelling structures comply with building standards including those described in Section 51189 of the California Government Code.

**PRC Section 4427** limits the use of any motor, engine, boiler, stationary equipment, welding equipment, cutting torches, tar pots, or grinding devices from which a spark, fire, or flame may originate when the equipment is on or near land covered by forest, brush, or grass. Before such equipment may be used, all flammable material, including snags, must be cleared away from the area around such operation for a distance of 10 feet. A serviceable round-point shovel with an overall length of not less than 46 inches and a backpack pump water-type fire extinguisher, fully equipped and ready for use, must be maintained in the immediate area during the operation.

**Under PRC Section 4741**, per policies established by the State Board of Forestry and Fire Protection, CAL FIRE shall assist local governments in preventing future wildland fire and vegetation management problems by making its wildland fire prevention and vegetation management expertise available to local governments to the extent possible within the

department's budgetary limitations. CAL FIRE recommendations shall be advisory in nature, and local governments shall not be required to follow such recommendations.

#### 4.19.1.3 Local

### 2010 General Plan (Inland)

#### *Safety Element*

The Monterey County General Plan (2010 General Plan) Safety Element presents policies that address wildfire risk and post-wildfire risk (e.g., flooding) in the inland areas of Monterey County (County of Monterey 2010). The County is currently updating the Safety Element to comply with current state law as a separate project. There are numerous policies from the 2010 General Plan Safety Element that are applicable to the project. For instance, Goal S-4 and Policies S-4.1 through S-4.33 are intended to minimize risks from fire. In particular, Policies S-4.1 and S-4.2 encourage and support public education programs and materials on fire hazards and citizen awareness and responsibility in preventing fires. Policies S-4.4 through S-4.6 recommend periodically updating fire hazard and fire risk data and mapping. Several policies include development requirements to reduce fire risk (Policies S-4.7, S-4.11, S-4.12, S-4.15, S-4.20 through S-4.22, S-4.26, S-4.28, and S-4.29). There are also several policies related to ensuring safe and adequate access along roadways and bridges (Policies S-4.8 through S-4.10 and S-4.16 through S-4.19). Policies S-4.13, S-4.14, and S-4.30 support adequate water supply availability for fire suppression. Policies S-4.24, S-4.25, and S-6.7 require intuitive addresses (i.e., sequential house numbering, non-repetitive street naming, standardized lettering of house numbers in subdivision design) and adequate views of posted property addresses. Additionally, Policies S-4.31 through S-4.33 include requirements for fuel modification zones to protect development.

Goals S-2 and S-3 and related policies are intended to reduce risk to life, property, and the environment from storm drainage and flooding, which can be exacerbated in areas that have recently burned. Goal S-5 and applicable policies are intended to help the County anticipate, respond, and recover from emergencies, such as fires and post-fire flooding or slope instability. Specifically, Policies S-5.9, 5.14, and 5.17 support adequate access for emergency response and evacuations. Policy S-5.17 requires Emergency Response Routes and Street Connectivity Plans for Community Areas and Rural Centers and for any development producing traffic at an equivalent or greater level to five or more lots/units.

#### *Open Space Element*

Policies OS-3.3 and OS-3.5(b) encourage best management practices and design considerations for new development to avoid impacts related to steep slopes, erosion, drainage, and other geologic hazards.

#### *Public Services Element*

The Public Services Element provides policies to address critical infrastructure and service issues. The Element includes requirements for Adequate Public Facilities and Services (Policies PS-1.1, PS-1.3, and PS-1.4). Policies PS-1.5 and PS-1.6 ensure adequate public services for new development by calling for an infrastructure phasing plan requiring the installation of infrastructure improvements with each phase of new development and allowing only developments that have or can provide adequate public services and facilities. Additionally, Table PS-1 provides maximum emergency response times for the creation of new residential lots based on land type.

### Area and Master Plans

#### *Toro Area Plan*

Policy T-4.1 prohibits land uses and practices that may contribute to significant increases of siltation, erosion, and flooding in the Toro area.

#### *Fort Ord Master Plan*

Fire, Flood, and Emergency Management Policies A-1, A-2, A-3, and A-4 are intended to support public safety by minimizing the risk from fire hazards. In particular, Policies A-3 and A-4 encourage the evaluation of fire stations, fire suppression staff, and facilities to provide acceptable emergency response time and operations. Fire, Flood, and Emergency Management Policy C-1 requires the County to develop an emergency preparedness and management plan, in conjunction with the City of Marina, City of Seaside, and appropriate fire, medical, and law enforcement agencies.

### Community Plans

#### *Castroville Community Plan*

Goal 10 and Policies 10.1 and 10.2 support the provision of adequate levels of public services and infrastructure to meet the needs of new and existing development.

### 1982 General Plan (Coastal)

The 1982 General Plan presents policies that address wildfire risk in the coastal areas of Monterey County (County of Monterey 1982). Policies 17.1.1 and 17.1.3 encourage community outreach materials at convenient locations from the fire protection agencies and the inclusion of fire protection agencies in the 911 Monterey Countywide telephone emergency system. Policies 17.2.1 and 17.2.2 require continuous updating of fire hazard and fire risk mapping. Policies 17.3.10, 17.3.11, and 17.3.14 provide development standards for access roads and driveways to ensure adequate emergency access. Policy 17.4.4 requires visible house numbers that must be posted when construction begins. Policies 17.6.1 and 17.6.4 encourage coordination with fire protection agencies and CAL FIRE to assure efficient response and to meet peak fire demands.

## Monterey County Local Coastal Program – Land Use Plans

### *North County Land Use Plan (Coastal)*

Specific Policy 2.5.5.A.5 recommends the development of a fuel reduction program for North County's oak woodland and chaparral. Key Policy 2.8.1, General Policies 2.8.2, and Specific Policies 2.8.3 regulate land uses and development in areas of high geologic, flood, tsunami, and fire hazard through best available planning practices. In particular, General Policies 2.8.2 require development siting and design as well as preparation of an environmental report for development in high hazard areas to minimize risk from geologic, flood, tsunami, or fire hazards to a level generally acceptable to the community. Specific Policies 2.8.3.C.3 allows development in portions of a parcel characterized by high to very high fire hazard only if no less hazardous portion of the site is suitable for development and the development will not increase the threat of fire to the public. Specific Policies 2.8.3.C.4 and 5 require development standards in high and very high fire hazard areas, such as adequate access roads for residential development, as well as the use of fire-resistant materials for exterior wall construction and fire-retardant materials for roof construction.

In addition, Specific Policies 4.3.6.D.1 and 2 allow medium and high density residential only where urban services (e.g., water, sewer, roads, transit, fire protection) are available and require residential land divisions to be approved at a density determined by site evaluation and cumulative impact criteria established in the North County Land Use Plan.

### *Carmel Area Land Use Plan*

Key Policy 2.7.2, General Policies 2.7.3, and Specific Policies 2.7.4 regulate land uses and development in areas of high geologic, flood, and fire hazard through best available planning practices. In particular, General Policies 2.7.3 require development siting and design as well as preparation of an environmental report for development in high hazard areas to minimize risk from geologic, flood, tsunami, or fire hazards to a level generally acceptable to the community. All recommended mitigation measures and criteria in the Carmel Area Land Use Plan policies must be required as conditions of coastal permits for County approval. Specific Policies 2.7.4 (Fire Hazards) require all new development to have an adequate water supply for fire suppression and additional development standards in high and very high fire hazard areas, such as adequate access roads for residential development, as well as the use of fire-resistant materials for exterior wall construction and fire-retardant materials for roof construction. In addition, Specific Policies 4.4.3.E.2 allow medium density residential only where urban services (e.g., water, sewer, roads, transit, fire protection) are available and only two units per acre for new subdivisions. As a condition of development, covenants must acknowledge agricultural use on the adjacent parcel and holding the owner harmless for any nuisance due to the agricultural use.

### Monterey County Code – Inland and Coastal

Title 18 of the Monterey County Code (County Code) establishes the County's building and construction regulations, including regulations related to fire. Relevant chapters of Title 18 include County Code Chapter 18.09, which adopts the 2025 CFC, CCR Title 24, Part 9, and the 2018 IFC with applicable amendments from the State of California, and the local amendments of this chapter, as the County's Fire Code. County Code Chapter 18.09.030 establishes local amendments to the 2025 CFC, which include design standards, requirements, and standard fire conditions for development. For example, Appendix R, Roofs, Section R101, General, includes a requirement that all roofs for new buildings in Very High FHSZs shall be a minimum of Class "A" roof assembly as defined by the IBC.

Chapter 18.56 of the County Code adopts Section 4290 et seq. of the PRC, which requires incorporating wildfire protection standards in conjunction with building, construction, and development in designated SRAs and establishes additional fire prevention regulations necessary to meet local conditions of weather, vegetation, or other fire hazards in accordance with Section 4117 of the PRC. Chapter 18.56 of the County Code provides design standards and regulations for emergency access, adequate signing and building numbering, emergency water supply, and fuel modifications as wildfire protection measures. County Code Section 18.56.040 outlines requirements for review of development permit applications for compliance with any recommendations of the Reviewing Authority (Director of the Board of Forestry and Fire Protection, or their designee, including local fire districts, sharing jurisdiction in SRAs) and all applicable regulations of Chapter 18.56 of the County Code prior to development, as well as inspection of the development for compliance with all applicable regulations and fire conditions.

Sections 21.64.230 and 20.64.230 of the County Code establish regulations for all proposed development on slopes in excess of 30 percent (or excess of 25 percent for properties in the North County Land Use Plan [LUP] area). The section requires a use permit or a coastal development permit for all development on these slopes and identifies allowable development and conditions for development.

Sections 16.63.050 and 16.63.060 of the County Code include requirements for submittals for minor and major landscape packages to the County Chief of Planning for review and approval. Section 16.63.070 of the County Code requires water-efficient and fire-resistant landscaping. In particular, Section 16.63.070(B)(8) requires landscape planting to include the use of fire-resistant plant species and be consistent with fire-safe landscaping required by the designated fire district and, as applicable, Chapter 18.56 (Wildfire Protection Standards in State Responsibility Areas) of the County Code.

Section 19.10.090 and 19.10.095 of the County Code require that adequate fire access be provided and that undergrounding of utilities in certain circumstances be provided in new subdivisions.

Ordinance No. 5437, adopted by the County Board of Supervisors on August 19, 2025, updated Fire Hazard Severity Zone maps for inland and coastal areas in the UMC to comply with the requirements of California Government Code, Section 51178.

#### *Title 20 – Coastal Zoning (Coastal)*

Section 20.66.020 refers to Part 2 (North County), Part 3 (Big Sur), Part 4 (Carmel), or Part 5 (Del Monte Forest) of the Monterey County Coastal Implementation Plan for standards related to hazardous areas.

#### *Coastal Implementation Plan*

North County (Part 2) Section 20.144.100 (Hazardous Area Development Standards – Fire Hazards) provides development standards that regulate land use and development, using the best available planning practices to minimize risk to life and property and damage to the natural environment. In particular, Section 20.144.100(C) requires that all development projects in areas of high or very high fire hazard undergo review and incorporate recommendations by the County Fire Warden and/or local fire district into project design. This section also requires that development conform to fire-related policies in the 1982 General Plan.

Carmel Area (Part 4) Section 20.146.080 (Hazardous Area Development Standards – Fire Hazards) provides development standards that regulate land uses and development in areas of high geologic, flood, and fire hazards to minimize risks to life and property and damage to the natural environment. In particular, Section 20.146.080(C)(3) states that new land divisions which create commitment to new or intensified development of each proposed parcel and construction of the proposed access roads shall not create nor significantly contribute to geologic, flood, or fire hazards, nor require construction of new protective devices which would substantially alter natural landforms.

### Monterey County Department of Emergency Management

The County Department of Emergency Management (DEM) coordinates all emergency preparedness, response, and recovery functions and responsibilities as necessary to carry out the direction of the County Board of Supervisors and the provisions of Chapter 2.68 of the County Code. The County DEM has established an Emergency Operations Center that serves as a physical or virtual location designed to support emergency response, business continuity, and crisis communications activities. Staff meet at the Emergency Operations Center to manage preparations for an impending event or manage the response to an ongoing incident. To respond effectively to all types of emergencies, County DEM maintains the County Emergency Operations Plan (EOP) (discussed further below) on behalf of the Operational Area. The Monterey County Operational Area encompasses the County's boundaries and all its political subdivisions, including special districts. The lead agency of the Operational Area facilitates and coordinates information, resources, and decisions regarding priorities among local governments in the Operational Area.

## Monterey County Emergency Operations Plan

The County EOP describes the Operational Area's emergency organization; the roles, responsibilities, and authorities within its boundaries; and the actions that should be taken during an emergency. The County EOP is the overarching emergency planning document, with additional specific annexes that describe response activities and coordination during a particular hazard, threat, or incident-specific emergency. Although the annexes are considered part of the County EOP, they represent stand-alone plans and are not included in the County EOP itself (County of Monterey 2020). The County EOP addresses the entire spectrum of contingencies, ranging from relatively minor incidents to large-scale disasters.

### *Evacuation and Transportation Plan Annex*

The County EOP Evacuation and Transportation Plan Annex provides strategies for managing evacuations that exceed the day-to-day capabilities of the various public safety agencies in Monterey County. As dictated by the County EOP, the local law enforcement agency is charged with the responsibility of evacuation in response to a major event threatening the life safety of residents of and visitors to the Monterey County Operational Area. With a special emphasis placed on wildfire threat, the strategies outlined in the plan are designed using an all-hazards approach to preparing for and managing evacuations. "Life safety" is the highest priority in incident management. The County EOP is designed to be applied during any emergency event that precipitates the need to evacuate an area, regardless of the threat or hazard. The purpose of the annex is to provide a guide for using mass transportation resources in the Operational Area to (1) support the evacuation of populations affected by an incident; and (2) support the inbound movement of emergency service workers.

The annex divides evacuation routes in each evacuation zone into primary and secondary routes. Maps of primary and secondary routes, including specific roadways, are found in each individual zone section. Zone-specific evacuation routes included in the County EOP provide a more specific and detailed description of evacuation routes than the 2010 General Plan. The individual plans do not contradict the 2010 General Plan guidelines or policies for emergency evacuation routes.

## Monterey County Community Wildfire Protection Plan

On December 13, 2010, the County Board of Supervisors adopted the Monterey County Community Wildfire Protection Plan, which was last updated on March 1, 2016. The Community Wildfire Protection Plan was prepared by the Monterey Fire Safe Council in collaboration with various public agencies, including CAL FIRE, the U.S. Forest Service, and the Bureau of Land Management, along with other stakeholders, in accordance with the Healthy Forests Restoration Act. The Community Wildfire Protection Plan is an advisory document that guides wildfire prevention and preparation activities throughout Monterey County. The purposes of the plan include providing wildfire planning recommendations; providing recommendations for hazardous

fuel assessment and reduction, particularly in the WUI zones; reducing the potential for ignitability of structures and addressing human activities that may cause wildfires; and reducing the spread of wildfires in WUI zones (Monterey Fire Safe Council 2016).

### Monterey County Multi-Jurisdictional Hazard Mitigation Plan

The Monterey County Multi-Jurisdictional Hazard Mitigation Plan presents environmental hazard analysis, describes important transportation and utility infrastructure, as well as populations at risk from environmental hazards, describes emergency evacuation systems, and provides mitigation actions to protect Monterey County populations and infrastructure from environmental hazards. One of the primary environmental hazards discussed in the Monterey County Multi-Jurisdictional Hazard Mitigation Plan is wildfire. The Monterey County Multi-Jurisdictional Hazard Mitigation Plan complies with all requirements set forth under the Disaster Mitigation Act of 2000 and includes information also relevant to the Safety Element.

## 4.19.2 Environmental Setting

The following sections describe the environmental setting for the project as it relates to wildfire.

### 4.19.2.1 Wildfire Behavior and Contributing Factors

Wildfire behavior is a product of several variables—primarily climate, vegetation, topography, and human influences—that intermix to produce local and regional fire regimes that affect how, when, and where fires burn. The fire regime in any area is defined by several factors, including fire frequency, intensity, and severity and area burned. An understanding of each of these factors is important for determining how the variables that affect fire behavior produce fire risk. "Fire frequency" refers to the number of fires that occur in a given area over a given period, "fire intensity" refers to the speed at which fire travels and the heat that it produces, "fire severity" refers to the extent to which ecosystems and existing conditions are affected or changed by a fire, and "area burned" refers to the size of the area burned by wildfire (California Board of Forestry and Fire Protection 2019). Human influence on wildfire is broad and can be substantial. It includes direct influences, such as the ignition and suppression of fires, and indirect influences, such as alterations in land use patterns that support modified vegetative regimes and increased development in the WUI.

Wildfires are a significant threat in California, particularly in recent years as the landscape responds to climate change and decades of fire suppression. As climate change persists, it is anticipated to produce increasing temperatures and drier conditions that would generate abundant dry fuels. All wildfires (those initiated by both natural and human-made sources) tend to be larger under drier atmospheric conditions and when fed by drier fuel sources (Balch et al. 2017). In addition, climate change has led to the exacerbation of wildfire conditions during a longer period of the year as the spring season warms, driving earlier spring snowmelt and as winter precipitation

decreases overall (Westerling et al. 2006). Further, wildfire activity is closely related to temperature and drought conditions, and in recent decades, increasing drought frequency and warming temperatures have led to an increase in wildfire activity (Westerling et al. 2006; Schoennagel et al. 2017). In particular, the western United States, including California, has seen increases in wildfire activity in terms of area burned, the number of large fires, and fire season length (Westerling et al. 2006; Abatzoglou and Williams 2016). The topography, vegetation, and climatic conditions associated with Monterey County combine to create a unique situation capable of supporting large-scale, often damaging wildfires.

### 4.19.2.2 Wildfire Protection Responsibility Areas

Local, state, Tribal, and federal organizations all have legal and financial responsibility for wildfire protection. Monterey County contains federal, state, and local wildfire protection responsibility areas, which are classified as FRA, SRA, and LRA, respectively.

FRAs are wildfire-prone areas owned or managed by a federal agency. Primary financial and rule-making jurisdictional authority rests with the relevant federal land agency. The following agencies control federal lands in Monterey County:

- **U.S. Forest Service:** Los Padres National Forest
- **National Park Service:** Pinnacles National Park
- **U.S. Department of Defense:** Fort Hunter Liggett, Defense Language Institute, and Presidio of Monterey
- **Bureau of Land Management:** Fort Ord National Monument, California Coastal National Monument, Williams Hill
- **California National Guard:** Camp Roberts

SRAs are lands where the CAL FIRE has legal and financial responsibility for wildfire protection and administers fire hazard classifications and building standard regulations. They include forested land and land that is generally considered wildland. SRAs do not include incorporated cities or federal lands (i.e., FRAs). The CAL FIRE San Benito-Monterey Unit (BEU) provides wildland fire protection to the 2.1 million acres of SRA land in the UMC, located along the central coast between San Luis Obispo County on the south and Santa Cruz and Santa Clara Counties on the north (County DEM 2023; Figure 4.19-1, Monterey County Fire Hazard Severity Zones, and Figures 4.19-1a through 4.19-1i, Opportunity Sites in Fire Hazard Severity Zones).

LRAs may include flammable vegetation and WUI areas where the financial and jurisdictional responsibility for improvement and wildfire protection is held by a local government agency. LRAs include land in cities, cultivated agriculture lands, non-flammable lands in unincorporated areas, and lands that do not meet the criteria for SRA or FRA. Fire protection services in LRAs in the UMC are provided by the Aromas Tri-County Fire Protection District, Big Sur Volunteer Fire

Brigade, Cachagua Fire Protection District, Carmel Highlands Fire Protection District, Cypress Fire Protection District, Gonzales Rural Fire Protection District, Greenfield Fire Protection District, Mid-Coast Volunteer Fire Brigade, Mission Soledad Rural Fire Protection District, Monterey County Regional Fire Protection District, North County Fire Protection District of Monterey County, Pebble Beach Community Services District, South Monterey County Fire Protection District, CAL FIRE, and other participating fire agencies in the Monterey County Fire Service Mutual Aid system. The Monterey County Fire Service Mutual Aid system is a coordinated framework that allows fire agencies (i.e., regional fire protection districts, local fire departments, Tribal firefighters, and CAL FIRE) to share resources, personnel, and equipment when local capabilities are overwhelmed. City fire departments or fire protection districts are responsible for fire protection in most incorporated cities in the LRA of Monterey County.

The Monterey County Community Wildfire Protection Plan outlines the various aspects that affect fire behavior in the UMC, including topography, vegetation and fuels, and climate and weather conditions (refer to Section 4.19.1.3). The plan also incorporates the various factors in wildland fire severity factors, in addition to homes and property in the WUI. Both wildland and WUI areas account for a substantial amount of land in UMC, as described further in Section 4.19.2.3.

### 4.19.2.3 Fire Hazard Severity Zones, Wildland-Urban Interface, and Steep Slopes

#### Fire Hazard Severity Zones

CAL FIRE has identified FHSZs that designate areas (based on factors such as fuel/vegetation, slope/terrain, and fire weather) with varying degrees of fire hazard (i.e., Moderate, High, and Very High), which are mapped as part of its FRAP. FHSZs identify areas where wildfire hazards could be more severe and, therefore, are of greater concern. The FHSZ model inputs frequency of fire weather, ignition patterns, expected rate of spread, and past fire history. It also accounts for flying ember production based on the area of influence where embers are likely to land and cause ignitions. Although FHSZ classifications do not predict when or where a wildfire will occur, they do identify areas where wildfire hazards could be more severe and therefore are of greater concern.

CAL FIRE also maps fire threat, which combines expected fire frequency with potential fire behavior. About 80 percent of land in UMC is categorized as having a high, very high, or extreme fire threat (County DEM 2022). Moderate, High, and Very High FHSZs in the UMC are primarily in rural areas, such as Carmel Valley, Big Sur and coastal mountains, and the mountains and hills on the eastern border of the Salinas River. Although sharing a border and similar characteristics with the FRAs of Big Sur and the LRAs, the FRAs are not included in the CAL FIRE FHSZ mapping, and there are no other publicly available fire hazard designations for FRAs.

Several opportunity sites are in High and Very High FHSZs, as shown in Table 4.19-1, Opportunity Sites Moderate, High, and Very High FHSZs, and on Figures 4.19-1a through 4.19-1i. The remainder of the opportunity sites not shown in Table 4.19-1, Opportunity Sites Moderate, High, and

Very High Fire Hazard Severity Zones, (Opportunity Sites 1 through 6, 11 through 15, 20, 25 through 30, 32, 41, 42, 49 through 51, and 64) are not designated as Moderate, High, or Very High FHSZs.

**Table 4.19-1. Opportunity Sites Moderate, High, and Very High Fire Hazard Severity Zones**

| Opportunity Site No. | SRA FHSZ | LRA FHSZ |
|---|---|---|
| 8 | Moderate | — |
| 9 | High and Moderate | — |

**Notes:** FHSZ = Fire Hazard Severity Zone; LRA = local responsibility area; SRA = state responsibility area

### Wildland-Urban Interface

The WUI is the zone of transition between unoccupied land and human development. It is the line, area, or zone where structures and other human development meet or intermingle with undeveloped wildland or vegetative fuels (U.S. Fire Administration 2025). CAL FIRE's WUI designation dataset is derived from the 2015 Assessment of Forest and Rangelands, produced by the FRAP. CAL FIRE advises that this layer is not suited for WUI designations for individual houses or neighborhoods, and a field review process is still required. WUI designations include Interface, Intermix, and Influence Zone, which are defined based on housing density classes, as described further below.

Following are the housing density classes (DEN4) used in the WUI definitions:

- **Class 1:** Less than one house per 20 acres
- **Class 2:** One house per 20 acres to one house per 5 acres
- **Class 3:** More than one house per 5 acres to 1 house per acre
- **Class 4:** More than 1 house per acre

The **Interface** consists of dense housing adjacent to vegetation that can burn in a wildfire. Interface areas meet the following criteria:

- DEN4 Class 2, 3, or 4
- In Moderate, High, or Very High Fire Hazard Severity Zone
- Not dominated by wildland vegetation
- Spatially contiguous groups of 30-meter cells that are 10 acres and larger

The **Intermix** consists of housing development interspersed in an area dominated by wildland vegetation subject to wildfire. Intermix areas meet the following criteria:

- Not Interface
- DEN4 Class 2
- DEN4 Class 3, 4 dominated by wildland vegetation
- In Moderate, High, or Very High Fire Hazard Severity Zone
- Improved Parcels only
- Spatially contiguous groups of 30-meter cells that are 10 acres and larger

The **Influence Zone** consists of wildfire susceptible (i.e., wildland) vegetation up to 1.5 miles from Interface or Intermix.

Figure 4.19-2, Monterey County Wildland-Urban Interface, depicts the WUI areas in Monterey County. Only Opportunity Sites 2, 3, 13, 25, 26, 27, 28, 29, 49, 50, and 51 are completely outside the WUI as shown on Figures 4.19-2a through 4.19-2i, Wildland-Urban Interface. Opportunity sites that are within or even partially within one of the WUI zones are listed in Table 4.19-2, Opportunity

Sites in WUI Designations, ordering the WUI zone from the one that encompasses the most to the least land within the site. If an opportunity site was found to be even slightly within a WUI zone, it is listed in Table 4.19-2, Opportunity Sites in Wildland-Urban Interface Designations. For context of the fire threat, the FHSZ the site is within is also listed.

**Table 4.19-2. Opportunity Sites in Wildland-Urban Interface Designations**

| Opportunity Site No. | WUI Zone | SRA FHSZ | LRA FHSZ |

## Steep Slopes

According to CAL FIRE, fire typically burns more quickly and intensely up steep slopes. CAL FIRE identifies slopes less than 20 percent as flat or mild slopes, 20–40 percent as mild to moderate slopes, and greater than 40 percent as moderate to steep slopes (CAL FIRE 2025c). The County identifies slopes greater than 25 percent as slopes requiring avoidance or restrictions for development regulations (Sections 20.64.230 and 21.64.230 of the County Code and 2010 General Plan Policy OS-3.5). However, opportunity sites within, partially within, or adjacent to slopes 25 percent or greater in UMC are conservatively identified in Table 4.19-3, Opportunity Sites in or Adjacent to Slopes 25 Percent or Greater, along with the FHSZ the site is mapped within for context. There are 31 opportunity sites that are within, partially within, or adjacent to slopes 25 percent or greater. If an opportunity site was found to be even slightly in an area identified with steep slopes, it is listed in Table 4.19-3. The remaining opportunity sites not listed in Table 4.19-3 are not within or immediately adjacent to steep slopes.

**Table 4.19-3. Opportunity Sites in or Adjacent to Slopes 25 Percent or Greater**

| Opportunity Site No. | Proximity to Slopes | SRA FHSZ | LRA FHSZ |
|---|---|---|---|
| 4 | Partially Within | — | — |

### 4.19.2.4 Historic Wildfires in Monterey County

The frequency, intensity, and impact of large wildland fires in Monterey County have increased in recent years, specifically in the Santa Lucia Range. The 1977 Marble Cone Fire, which was started by lightning, burned from Cone Peak to Carmel Valley and consumed most of the vegetation within the entire Big Sur and Little Sur River watersheds. While the fire burned more than 173,000 acres, no lives were lost or structures destroyed. Refer to Table 4.19-4, Large (Over 1,000-Acre) Historic Wildfires in Monterey County (1975–2025).

Several notable fires have occurred in WUI zones in Monterey County, which generate increased risk of fire spreading to residential uses and other populated areas. The Gallery/Basin Complex Fire, a large wildfire near Big Sur in 2008, burned more than 163,000 acres, destroyed 58 structures, and damaged an additional nine structures. The fire burned most of the Ventana Wilderness. The Indians Fire, which occurred during this same period, burned an additional 76,460 acres, leaving 15 structures destroyed and one damaged. These combined events made 2008 the most destructive year in recorded history for fires in Monterey County.

In 2013, the Pfeiffer Fire burned 917 acres near Big Sur and damaged or destroyed 38 structures, including 34 residential structures and four outbuildings. In July 2016, the Soberanes Fire began as an illegal campfire in Garrapata State Park in Monterey County. Fueled by winds and dry, unmanaged vegetation resulting from several years of extreme drought, the fire quickly spread beyond the park and threatened lives, homes, property, and the environment. The Soberanes Fire burned a total of 132,104 acres in the Santa Lucia Range. The year 2020 was another record year for fires in Monterey County, with numerous wildfires burning at the same time. For example, in August 2020, the River, Carmel, and Dolan Fires occurred in different locations across Monterey County at the same time, burning a total of 181,738 acres (County DEM 2023).

**Table 4.19-4. Large (Over 1,000-Acre) Historic Wildfires in Monterey County (1975–2025)**

| Year | Fire Name | Acres Burned |
|---|---|---|
| 2025 | Salt | 25,554 |
| 2024 | Metz | 1,055 |
| 2024 | Boone | 17,615 |

### 4.19.2.5 Wildfire Management

Wildfire protection and response in California are the responsibility of the federal, state, or local government. On federally owned land, or FRAs, fire protection is provided by the federal government, often in partnership with local grants and contracts. In SRAs, CAL FIRE has a legal responsibility to provide fire protection. In LRAs, wildfire protection and response are the responsibility of city fire departments, fire protection districts, counties, or, in some cases, CAL FIRE under contract to local government.

As previously mentioned, the CAL FIRE BEU provides wildland fire protection to the 2.1 million acres of SRA land in UMC and has Cooperative Fire Protection Agreements with several fire protection districts. The special districts providing fire protection services cover approximately 958,080 acres (almost half of the land area) in Monterey County, and include the following (County DEM 2023):

- Aromas Tri-County Fire Protection District (agreement with BEU)
- Big Sur Volunteer Fire Brigade

- Cachagua Fire Protection District
- Carmel Highlands Fire Protection District (agreement with BEU)
- Cypress Fire Protection District (agreement with BEU)
- Gonzales Rural Fire Protection District
- Greenfield Fire Protection District
- Mid-Coast Volunteer Fire Brigade
- Mission Soledad Rural Fire Protection District (agreement with BEU)
- Monterey County Regional Fire Protection District
- North County Fire Protection District
- Pebble Beach Community Services District (agreement with BEU)
- South Monterey County Fire Protection District (agreement with BEU)

#### 4.19.2.6 Emergency Response and Evacuation

### Emergency Operations

The Monterey County Sheriff's Office is the lead agency regarding evacuation events in unincorporated areas in Monterey County. As the lead agency, the Sheriff's Office is responsible for issuing evacuation orders in coordination with the County Executive for Sheriff's jurisdictions; providing situational information from patrol beats, as well as from the public through the emergency dispatch center; providing contractual security to the County Public Works, Facilities, and Parks Department and Monterey-Salinas Transit; and providing security to the populations under its jurisdiction.

Other agencies playing a primary role in emergency operations are the County DEM; County Public Works, Facilities, and Parks Department; Monterey-Salinas Transit; American Medical Response; fire protection districts; and County Housing and Community Development (HCD), Building Services. The County DEM is responsible for coordinating organized planning efforts with County departments, local cities, and special districts before and during disasters, as well as maintaining the Operational Area Emergency Operations Center. Monterey County Public Works, Facilities, and Parks Department is responsible for the operations of the County's non-state roads and bridges and UMC roads and bridges, and provides resources for road maintenance, surveying, and construction operations. During large-scale events, field-level command and control of transportation resources is conducted by Monterey-Salinas Transit. American Medical Response is the largest Advanced Life Support ground transportation provider for Monterey County. When not transporting patients in life-threatening emergencies, its special transportation capabilities are used for paratransit to, from, and between shelters. The fire protection districts provide search, rescue, and recovery operations and emergency medical services during and following emergency events. Additionally, County HCD Building Services provides damage assessment, conducts emergency building inspections, and facilitates the emergency permitting process for repairs after disasters.

State agencies that play a role in emergency response operations include, but are not limited to, the California Highway Patrol, California Governor's Office of Emergency Services, and the California Department of Transportation. Under a state of emergency, these agencies operate under the power of the state governor and are coordinated between state and local operation centers. Other federal and state agencies are also engaged depending on the type of emergency.

## Evacuation Operations

The County DEM (formerly Office of Emergency Services) maintains the EOP for the Operational Area, which encompasses Monterey County and all its political subdivisions, including special districts (refer to Section 4.19.2.5). The EOP contains additional specific annexes that describe response activities and coordination during a particular hazard, threat, or incident-specific emergency. The EOP Transportation and Evacuation Annex is the adopted emergency evacuation plan for Monterey County and outlines the evacuation procedures (County of Monterey 2022a).

The County EOP Evacuation and Transportation Annex contains guidelines for evacuation phases. These phases consist of eight generally accepted evacuation phases:

1. **Initial Incident and On-Scene Response:** Local jurisdiction first responders routinely issue shelter-in-place and small-scale evacuation recommendations.
2. **Situation Analysis and Evaluation:** Efforts focus on developing situational awareness of the impacts of the event, supporting evacuation decision-making by senior leaders, and allowing initial planning for developing evacuation operations.
3. **Decision to Evacuate:** The situational awareness developed previously is used to determine the location of populations who need to be evacuated and the priority for conducting evacuations.
4. **Mobilization:** This is the process of notifying agencies, people, and systems to mobilize resources in order to conduct the evacuations, including incident command and management structures, public works, transportation, care and shelter, etc.
5. **Notification:** After a decision has been made to evacuate populations, notification messages are developed, coordinated, and delivered from initial evacuation operations to return operations.
6. **Evacuation:** Includes the re-establishment of the transportation system to facilitate movement of affected populations out of affected areas and the movement of resources into affected areas. This phase encompasses the movement of evacuees in and outside the affected area. Operations address the provision of transportation services to those requiring mass transit, targeted transportation services for people with access and functional needs, traffic management on priority transportation routes, and the provision of support services (e.g., fuel, food, water) along designated routes.

7. **Care and Shelter:** After initial evacuation, various populations will have follow-on transportation needs, primarily tourists who require transportation outside the area to return home, and individuals with access and functional needs that require transportation to obtain support services. Additionally, because many of the evacuees may not be able to return to their residences, they will need follow-on transportation to interim housing.
8. **Return and Recovery:** Operations support the gradual movement of evacuees back into affected areas once the areas and homes are habitable again.

The decision to evacuate or shelter-in-place is based on an analysis of the situation by public safety and emergency management officials based on the unique conditions of the specific incident. Public safety and emergency management professionals must use the best information available, their training and knowledge, and a sound decision-making process to determine when and for whom an evacuation is necessary.

A complete incident analysis should include consideration of:

- The nature of the hazard (i.e., magnitude, source, and expected duration);
- Weather and environmental conditions;
- At-risk populations (including numbers, demographics, special needs, and transportation requirements); and
- The geography and infrastructure at risk.

In addition, the EOP Transportation and Evacuation Annex identifies the following factors as having direct bearing on emergency evacuations:

- Number of people evacuated
- Population density of area evacuated
- Time available for evacuation
- Distance of travel necessary to reach safety
- Any impediments to evacuation routes
- Weather/temperature
- Time of day/year and day of week
- Availability and capacity of evacuation routes
- Vulnerability of evacuation routes due to the hazard or threat
- Availability of resources to support evacuation
- Risk to evacuation personnel (e.g., law enforcement, fire, transportation personnel)

An imminent threat to life and safety will require an evacuation order or warning when the risk to the population is greater if they remain in place. Ultimately, law enforcement and fire officials at the field level have the authority to determine the extent and implementation of evacuations; they

often work together in a unified command structure. An evacuation warning (sometimes used interchangeably with the term "advisory") means those in a specific area should be prepared to evacuate at any time. People do not need to leave the structure immediately, but should be alert and prepared to leave if an evacuation order is issued. An evacuation order is issued when danger is imminent, and conditions exist that seriously imperil or endanger lives. When an evacuation order is issued, those in identified areas should leave immediately and relocate to a safer location.

The first step in a managed evacuation is to assess the situation and determine the precise area of evacuation, the appropriate ingress and egress routes, and the location of reception center(s). Once a decision to evacuate or shelter-in-place has been determined, extensive efforts will be undertaken to alert the public through all available means. It is expected that most of the affected individuals will evacuate using private cars. Evacuees requiring transportation will be directed to a pick-up point (like a bus stop) to await transportation. Pick-up points are locations where individuals can gather to await mass transit. People who are unable to get to a pick-up point will be given instructions to call 911 or another number to request assistance at their location.

The EOP Transportation and Evacuation Annex divides Monterey County into seven evacuation regions: Big Sur, Carmel Valley, North County, Peninsula, Salinas, Salinas Valley, and South County (refer to Figure 4.19-3, Monterey County Operational Area Evacuation Regions). The annex further subdivides the evacuation regions into evacuation zones to allow jurisdictions to prioritize evacuation orders for the most vulnerable zones first and limit the need to evacuate large areas not under the threat. Evacuation and shelter-in-place zones promote phased, zone-based evacuation targeted to the most vulnerable areas, which allows jurisdictions to prioritize evacuation orders to the most vulnerable zones first and limit the need to evacuate large areas not under the threat. Evacuation regions and zones were collaboratively developed by Monterey County DEM, fire protection districts, and law enforcement agencies representing their respective areas of responsibility and spheres of influence. Criteria used in the development of the evacuation zones include:

- Severe hazard threats (e.g., tsunami or wildfire)
- Population density
- Ingress and egress
- Transportation corridors
- Access and Functional Needs (i.e., vulnerable) Populations
- Natural boundaries (e.g., waterways and mountains)
- Community dynamics

For each unique emergency incident, Incident Command/Unified Command will identify which pre-developed evacuation zones in the regions will be under a shelter-in-place, evacuation warning, or evacuation order. Using these zones will allow alert and warning notifications to be

targeted more precisely and reduce evacuation fatigue in the community. If the evacuation zone is not appropriate, Incident Command/Unified Command will modify or establish an outer perimeter that prevents access to the affected area. This perimeter will be established outside the hazard zone and will remain in place until the evacuation order is rescinded.

The 2010 General Plan Safety Element identifies U.S. Route 101, State Routes (SR-) 1, 25, 68, 129, 146, 156, 183, 198, and 218 as evacuation routes as well as numerous County roads (Policy S-5.14). Policy S-5.14 also clarifies that all public thoroughfares, private roads, and deeded emergency accesses shall be considered potential evacuation routes and that these routes may be employed during tactical situations at the discretion of the Monterey County Sheriff and/or the Incident Commander. As described in the EOP Transportation and Evacuation Annex, Incident Command/Unified Command will identify additional priority routes for local transportation based on the following roadway characteristics and factors:

- Location of affected populations;
- Shortest route to the designated destination areas (possible shelter locations);
- Roadways that are not expected to become disabled while the evacuation is in progress;
- Ability to increase capacity and traffic flow using traffic control strategies;
- Maximum number of lanes that provide continuous flow through the evacuation area;
- Availability of infrastructure to disseminate real-time conditions and messages to evacuees en route, such as changeable message signs; and
- Minimal number of potentially hazardous points and bottlenecks, such as bridges, tunnels, and lane reductions.

The EOP Transportation and Evacuation Annex states that managing traffic flow is key to efficient evacuation, allowing a jurisdiction to evacuate more people from a community in an efficient manner, which reduces the burden on jurisdiction personnel and resources. Failure to organize efficient traffic management efforts increases resource burdens, causes longer evacuation times, could lead to increased accidents and higher congestion, and could leave evacuating residents in vulnerable conditions during an incident. In some cases, roads into and out of a given area are very limited, potentially forming “islands” needing evacuation. The EOP Transportation and Evacuation Annex recommends preparation of a Traffic Control Plan by the Command and General Staff in conjunction with the Public Works agency having jurisdiction during an incident, time permitting. The Traffic Control Plan should contain traffic control points, the responsible agency for providing staffing and operational control, barricade plans (including location and staffing), and potential one-way/reverse lane operations.

Soft and hard road closures are often used to limit access in the evacuation zone. Hard closures are closed to all traffic except fire and law enforcement. Soft closures are closed to all traffic except fire, law enforcement, and critical incident resources (e.g., California Department of Transportation or

those needed to repair or restore infrastructure). In some cases, contraflow lane reversal (typically used on controlled-access highways) is necessary to alter the normal flow of traffic to aid in an emergency evacuation. Contraflow lane reversal roughly doubles the number of lanes available for evacuation traffic. Crossover sections are used to move outgoing traffic to these lanes. All incoming traffic is blocked until the end of the evacuation. A significant number of law enforcement are needed to manually direct traffic during a lane reversal, especially at interchanges, where ramp traffic in the wrong direction must intersect with other roadways that are operating normally.

### Emergency and Evacuation Resources

Alert Monterey County is the official emergency alert and warning system for Monterey County and its municipal jurisdictions. This system delivers critical public safety information to the public from the local government and public safety officials. The Alert Monterey County is managed by the County DEM and administered by Public Safety Answering Points, Law Enforcement, Fire, Public Health, and Emergency Management agencies. Upon signing up for Alert Monterey County, residents may select to receive alerts through landline calls, cell phone text messages, or pre-recorded verbal messages and email. The system also works with telephone devices for the deaf. In addition, Monterey County residents may receive notifications via Wireless Emergency Alerts through push notifications on phones; Emergency Alert System through broadcast satellite providers, cable television systems, and wireless cable systems; and the National Oceanic and Atmospheric Administration Weather Radio through National Oceanic and Atmospheric Administration radios (County DEM 2025).

The County DEM provides several evacuation programs to help Monterey County residents prepare for and participate in the process of evacuations (included as Appendix M):

- **Evacuation Checklist:** As part of the Alert Monterey County program, the DEM provides an Evacuation Checklist focused on evacuation in the event of a wildfire (County of Monterey 2026a).
- **Evacuation Guide:** The DEM also provides an evacuation guide for Monterey County residents. This evacuation guide recommends Monterey County residents make a plan to evacuate with recommendations for actions to take before, during, and after an evacuation (County of Monterey 2026b).
- **Make a Plan:** Steps for making a plan are also provided on the DEM's website (County of Monterey 2026c).
- **Tips for Evacuations:** A flyer with tips for evacuating in emergencies is also available online, provided by the DEM (County of Monterey 2026d).
- **Know Your Zone:** Know Your Zone is a public education campaign implemented by the DEM to inform the residents, businesses, and visitors of Monterey County of the pre-planned evacuation zones (refer to Figure 4.19-3).

### Evacuation Constraints

Due to the rural nature of much of the land in Monterey County, and UMC in particular, there are many areas with unpaved roads, trails, or areas with only one egress route.

The rural nature of UMC, distance between unincorporated communities in UMC, and lack of public transit routes and times limit the ability of residents to evacuate from hazard areas by transit, bicycle, or on foot. The state of the roads throughout Monterey County influences the viability of evacuation infrastructure and presents a potential barrier to evacuation for drivers, bikers, and people taking public transit (i.e., buses). Due to poor road conditions, debris on the roadways, and general maintenance activities, there are short-term and long-term road closures in Monterey County. Major scheduled road and lane closures are provided to the public via the Transportation Agency for Monterey County Cone Zone Report and the Monterey County Public Works Road Traffic Advisories, Closures & Information webpage (TAMC 2026; County of Monterey 2026e). The Traffic Advisories, Closures & Information webpage also includes an interactive web map of road closures.

In addition to poor road conditions and road closures, several areas of UMC are constrained by a lack of access roads, capacity on existing roads, and substantial vehicle congestion on the roads. For instance, the Big Sur coast is only accessed by SR-1 (also known as Highway 1), which is primarily a two-way, two-lane road along this stretch of the coast and is often closed due to natural hazards, such as fires, floods, and debris flows. The primary egress road for Carmel Valley is Carmel Valley Road, which can become substantially congested by vehicle traffic and adversely affect the ability of residents to evacuate this area. Similarly, the S R-68 corridor is a highly congested highway that constrains evacuation access for residents.

### Emergency Access

The County has established several policies related to maintaining adequate emergency access (refer to Section 4.19.1.3). An important consideration for emergency access is providing secondary ingress/egress to residential developments. Single-egress residential developments consist of 30 or more lots in the SRA or a Very High FHSZ in LRA areas without a secondary exit route from the development (PRC 4290.5). According to the California Board of Forestry and Fire Protection, there are a total of 12 existing single-egress residential developments in UMC, most of which are between the communities of Carmel and Aromas.

## 4.19.2.7 Secondary Wildfire Hazards

### Air Pollution

Smoke and air pollution from wildfires can be a health hazard, especially for sensitive populations, including children, older adults, and those with respiratory and cardiovascular diseases. Smoke generated by wildfire contains visible and invisible emissions comprising particulate matter such as

soot and tar; gases such as carbon monoxide, carbon dioxide, and nitrogen oxides; and toxics such as formaldehyde and benzene. Emissions from wildfires depend on the type of fuel, the moisture content of the fuel, the efficiency or temperature of combustion, and the weather. Wildfire may also threaten the health and safety of those fighting the fires. First responders are exposed to the dangers from the initial incident and after-effects from smoke inhalation and heat stroke (County DEM 2022).

### Mudflow and Debris Flow

Fires can have devastating effects on watersheds through loss of vegetation and soil erosion, which may impact Monterey County by changing runoff patterns, increasing sedimentation, reducing natural and reservoir water storage capacity, and degrading water quality. Wildfires strip the land of vegetation and destroy forest resources. Exposed soils erode quickly and enhance siltation of rivers and streams, thereby enhancing flood potential, harming aquatic life, and degrading water quality. Wildfires can also bake soils, thus increasing the imperviousness of the ground. This increases the amount and speed of the runoff generated by storm events, further increasing the chance of flooding and mudflow or debris flow. Given that slopes stripped of vegetation are exposed to greater amounts of runoff, this can weaken soils and cause failures on slopes. The soils in a burn scar are highly erodible so floodwaters can contain significant amounts of mud, boulders, and vegetation (County DEM 2022).

The Big Sur area is one of the most landslide-prone stretches of the California coast, with over 1,500 mapped historic large landslides. For example, in 2021, an atmospheric river resulted in a post-fire debris flow washing out a 150-foot-long stretch of SR-1 near Rat Creek below the Dolan Fire burn scar. Flows also damaged another 60 locations along the highway (County DEM 2022).

Besides the Big Sur coastline, other mountainous areas of Monterey County are vulnerable to debris flows. Throughout the 1997–1998 El Niño season, a series of debris slides failed along the northern flank of Saddle Mountain in Carmel Valley and impacted Saddle Mountain Recreation Area. A landslide in Las Lomas in rural north Monterey County caused several homes to be destroyed and resulted in a project that involved buying out the affected homes and preserving the land as perpetual open space. The 2017 storms caused flooding and debris flows in Prunedale and Spreckels, resulting in mud and rocks covering various sections of roadway, including U.S. Route 101, SR-68, Crazy Horse Canyon Road, Live Oak Road, Garin Road, and Elkhorn Road. In 2019, heavy rainfall caused large rocks to block Carmel Valley Road at Laureles Grade. Following the record fires in 2020, annual winter storms in 2021 caused flash floods and debris flows in the River Fire burn scar (County DEM 2022).

Areas of highest susceptibility to large landslides include Carmel Valley, the Arroyo Seco district, and the foothills of southern Salinas Valley, due to weakened rocks through faulting, fracturing, and uplift. As previously mentioned, landslides are most common along the steep slopes of the Big Sur coast. During the winter months, Big Sur receives both heavy rainfall (as much as 80 inches

per year) and high wave energy. In summer and fall, occasional wildfires remove vegetation, making the area's slopes more vulnerable to erosion. Currently, an area of particular concern is the burn scars of the 2020 Dolan, River, and Carmel fires. Structures located anywhere near a burn area should be considered potentially at risk during and following high-intensity rainfall events until the vegetation is restored (County DEM 2022).

An Emergency Stabilization-Burned Area Emergency Response is a rapid assessment of burned watersheds that identifies imminent post-wildfire threats to human life and safety, property, and critical natural or cultural resources. The Emergency Stabilization-Burned Area Emergency Response identifies emergency stabilization measures that can be implemented before the first post-fire damaging events. Emergency Stabilization-Burned Area Emergency Response measures include actions such as mulching, seeding, installation of runoff control structures, temporary barriers to protect recovering areas, and the installation of warning signs. The U.S. Geological Survey also conducts post-fire debris flow hazard assessments for select fires using geospatial data related to basin morphometry, burn severity, soil properties, and rainfall characteristics to estimate the probability and volume of debris flows that may occur in response to a storm (County DEM 2022).

### 4.19.3 Method of Analysis

The analysis of environmental impacts related to wildfire considers the potential for new or increased wildfire risk from implementation of the project, including exposing people or structures to wildfire-related pollutant concentrations or the uncontrolled spread of wildfire, and post-fire risks, such as slope instability or landslides. The analysis also evaluates the effects of the project on emergency planning and evacuation in the event of a wildfire or other natural hazard, as well as any conflicts with existing emergency plans and policies. The analysis contained herein addresses potential wildfire risks from a programmatic-level and Monterey Countywide approach, recognizing that the project will not directly result in construction or new development. Rather, future individual projects at various sites around UMC would be facilitated by the project through identification and rezoning to encourage residential development. Where appropriate and possible, individual opportunity sites are discussed.

The analysis of potential project impacts related to emergency response or emergency evacuation plans includes a quantitative approach that evaluates a conservative estimate of vehicles evacuating areas of Monterey County based on buildout of the reasonable development capacity. Given that the remaining thresholds of significance in this section are primarily based on the location, roadway capacity, and terrain conditions of each site (refer to Section 4.19.4, Thresholds of Significance), this section also evaluates each of the opportunity site parcels to determine impacts related to wildfire.

## 4.19.4 Thresholds of Significance

According to Appendix G of the California Environmental Quality Act (CEQA) Guidelines, the project would have a significant impact on wildfire if in or near SRAs or lands classified as Very High FHSZ, and it would:

- **Threshold 1:** Substantially impair an adopted emergency response plan or emergency evacuation plan.
- **Threshold 2:** Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.
- **Threshold 3:** Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.
- **Threshold 4:** Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

In addition, Threshold 7 from Section 4.9, Hazards and Hazardous Materials, has been added as Threshold 5 in this section:

- **Threshold 5:** Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires (Threshold 7 from Section 4.9).

The following Threshold 6 from Section 4.9 is covered by Threshold 1 of this section:

- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.

## 4.19.5 Project Impacts and Mitigation

The following sections address various potential impacts relating to wildfire that could result from implementation of the project.

### 4.19.5.1 Threshold 1: Emergency Response or Evacuation Plans

**Threshold 1:** Would the project be in or near state responsibility areas or lands classified as Very High FHSZ, and substantially impair an adopted emergency response plan or emergency evacuation plan?

#### Impact Analysis

Future housing enabled under the HEU6 may be vulnerable to wildfire and subject to emergency response and evacuation orders. For example, several opportunity sites are in the Carmel Valley

region, an area that has been subject to multiple historic wildfires. Increasing residential density at sites in SRAs and in LRAs classified as Very High FHSZs, as well as others that lie within the WUI, would increase the number of people who could be affected by future evacuation orders and rely upon existing road corridors for evacuation.

When evacuations are ordered, residents leave affected areas using existing roads and highways. As noted in Section 4.19.2.6, some areas of UMC can have substantial roadway congestion from heavy vehicle traffic, including Carmel Valley Road, which is the primary egress route for residents in the Carmel Valley region, and SR-68. Buildout of the HEU6 would result in a reasonable development capacity of 4,434 housing units, which would increase vehicle traffic and congestion (refer to Section 4.16, Transportation). The increase of vehicle traffic along already congested roadways and highways in the UMC could exacerbate vehicle congestion during emergency evacuations, thereby reducing the efficiency of evacuation operations.

The EOP Transportation and Evacuation Annex divides Monterey County into seven evacuation regions or zones that promote phased, zone-based evacuation targeted to the most vulnerable areas, which allows jurisdictions to prioritize evacuation orders to the most vulnerable zones first and limit the need to evacuate large areas not under the threat (refer to Figure 4.19-3). Evacuation regions and zones were collaboratively developed by Monterey County DEM, fire protection districts, and law enforcement agencies representing their respective areas of responsibility and spheres of influence.

To evaluate the number of vehicles that would be added to Monterey County roadways and highways under buildout of the HEU6, this analysis has applied a conservative average of two vehicles per housing unit. The number of opportunity sites, housing units under the reasonable development capacity scenario, and associated vehicles are organized by evacuation region to determine the number of vehicles that would be added to each evacuation region upon buildout of the HEU6 (Table 4.19-5, Number of Vehicles Added by Evacuation Zone). This assumption is consistent with and on the conservative end of the U.S. Census Bureau's data for the average number of vehicles per household in Monterey County (U.S. Census Bureau 2022). The analysis is also conservative for the following three reasons:

- The opportunity sites included in the HEU6 would be developed incrementally rather than simultaneously, resulting in a slower increase in number of vehicles added by the project,
- Evacuation orders would be distributed to prioritize the most vulnerable areas first rather than to evacuate the entire evacuation region at once, and
- Some households would evacuate with only one car for a quicker and easier departure during an emergency scenario.[1]

[1] A study sponsored by the University of California evaluated key evacuation choices of survey respondents impacted by the 2017 October Northern California Wildfires and the 2017 December Southern California Wildfires, as well as the 2018 Carr Wildfire. The results of the survey showed that between 40.5 percent (Northern California Wildfires) and 45.1 percent (Southern California

Evacuation Region A is the region that would be most affected by buildout of the HEU6. Assuming two vehicles per household, buildout of the project under the reasonable development capacity would add 3,968 vehicles to the region. Region C would have the second-highest number of added vehicles (2,570), followed by Region D (986) (Table 4.19-5).

**Table 4.19-5. Number of Vehicles Added by Evacuation Zone**

| Evacuation Region | Number of Opportunity Sites Added to the Evacuation Region | Number of Housing Units Added to the Evacuation Region | Number of Vehicles Added to the Evacuation Region |
|---|---|---|---|
| A | 9 | 1,984 | 3,968 |
| B | 13 | 349 | 698 |
| C | 11 | 1,285 | 2,570 |
| D | 14 | 493 | 986 |
| E | 5 | 128 | 256 |
| F | 0 | 0 | 0 |
| G | 4 | 51 | 102 |

According to the EOP Evacuation and Transportation Annex, the 2020 Wildfires resulted in the evacuation of approximately 35,000 people. Subsequently, the 2021 Winter Storms resulted in post-fire debris and flood flows, prompting the evacuation of approximately 6,000 evacuees. As such, the County Sheriff's Office and other emergency operations personnel are experienced in evacuating large numbers of people during emergency situations.

The EOP is the adopted emergency response plan for Monterey County, and the EOP Transportation and Evacuation Annex is the adopted emergency evacuation plan for Monterey County. The EOP Transportation and Evacuation Annex outlines general evacuation procedures for emergencies in Monterey County. Nevertheless, because wildfire behavior varies dramatically based on location and conditions, specific emergency response and evacuation orders are provided by the Monterey County Sheriff's Office in response to each wildfire event to ensure orderly and timely evacuation of potentially affected residents. In addition, the County DEM is responsible for coordinating organized planning efforts with County departments, local cities, and special districts before and during disasters, as well as maintaining the Operational Area Emergency Operations Center. Law enforcement agencies including the Sheriff's Office, the California Highway Patrol, and local police departments are responsible for implementing emergency evacuations.

As described in Section 4.19.2.6, the decision to evacuate or shelter-in-place is based on an analysis of the situation by public safety and emergency management officials based on the unique

Wildfires) of respondents evacuated with one personal vehicle and between 40.6 percent (Southern California Wildfires) and 43.2 percent (Northern California Wildfires) of respondents evacuated with two personal vehicles. Between 8.6 percent (Southern California Wildfires) and 13.5 percent (Northern California Wildfires) of respondents evacuated with more than two personal vehicles (Wong et al. 2020). Another publication by the University of California, Los Angeles (UCLA) notes that "most existing studies of wildfire evacuations focus on vehicle-owning householders and assume that evacuees will use their vehicles while evacuating. No previous studies have collected near real-time data on transit riders' evacuation behavior or their adaptation behavior immediately post-evacuation, and therefore, research on this group remains sparse." (UCLA 2025).

conditions of the specific incident. Public safety and emergency management professionals first complete an incident analysis that considers the nature of the hazard (i.e., magnitude, source, and expected duration), weather and environmental conditions, at-risk populations (including numbers, demographics, special needs, and transportation requirements), and the geography and infrastructure at risk before determining the location of populations who need to be evacuated and the priority for conducting evacuations. Following this incident analysis and decision to evacuate is the process of notifying agencies, people, and systems to mobilize resources to conduct the evacuations, including incident command and management structures, public works, transportation, care and shelter, etc. Notification messages are then developed, coordinated, and delivered from initial evacuation operations to return and recovery operations.

The enforcement agencies and County departments described above have established various communication pathways to inform the public of emergencies and recommended protective actions, such as evacuations and sheltering in place. These pathways are frequently used concurrently to amplify emergency information throughout the community and reach vulnerable individuals who may need additional information and resources to take action, including people with disabilities, people with access and functional needs, commuters, and visitors. During emergencies, the Sheriff's Office and other County departments may disseminate emergency notifications through landline calls, cell phone text messages, or pre-recorded verbal messages, email, telecommunications devices for the deaf and hearing-impaired, Wireless Emergency Alerts, Emergency Alert System messages, and the National Oceanic and Atmospheric Administration Weather Radio. Notifications may also be delivered directly to residents via door knocks and evacuation sirens on law enforcement vehicles. Incident information can also be posted on the County's emergency preparedness website: www.readymontereycounty.org/emergency, shared on social media platforms (e.g., X and Facebook), through print, radio, and TV media, and accessed through 2-1-1 and Call Center hotlines. The project would not impair these established communication pathways for emergencies in Monterey County.

Additionally, compliance with existing regulatory requirements related to emergency access and evacuation would ensure adequate emergency access is provided for new residential development associated with future development. For instance, all residential development in the UMC would be subject to the CFC, Chapters 18.09 and 18.56 of the County Code, and policies of the 2010 General Plan Safety Element, which require adequate and unobstructed emergency access for fire department apparatus and personnel to buildings, structures, hazardous occupancies, or other premises. Compliance with all applicable state and local design standards and regulations would be required to be shown on development plans and permit applications for review and approval by County Housing & Community Development Building Services and, in SRAs, the Director of the Board of Forestry and Fire Protection or their designee, including local fire districts. Specifically, Section 19.10.090 of the County Code requires designs for adequate turnaround areas for emergency vehicles and adequate emergency access to the satisfaction of the local fire district

and/or CAL FIRE. Section 18.56.060 of the County Code provides standards for roadway width, surface, grades, radius, turnarounds, and turnouts in SRAs to provide for safe access for emergency wildland fire equipment and civilian evacuation concurrently. Additionally, Section 18.56.070 of the County Code regulates signing, property addresses, and building numbering in SRAs to facilitate locating a fire and to avoid delays in emergency response time. Policy S-4.24 of the Safety Element requires property addresses to be posted in accordance with Chapter 18.56 of the County Code. Similarly, Policies S-4.16 and S-4.19 of the Safety Element require new or reconstructed bridges and all gates on emergency access roadways to be constructed in accordance with Chapter 18.56 of the County Code and the CFC, as amended. Policy S-6.7 of the Safety Element also requires public safety measures, including sequential house numbering, non-repetitive street naming, standardized lettering of house numbers in subdivision design, lighting, and park designs, that allow for adequate view of residences from streets. Specific Policies 2.8.3.C.5 of the North County Land Use Plan (Coastal) and Specific Policies 2.7.4 of the Carmel Area Land Use Plan similarly require adequate roadways for emergency vehicles and visible house numbers. Further, Policy S-5.9 of the Safety Element requires more than one access route for emergency response and evacuation for new residential development of three units or more unless exempted by the fire jurisdiction. These regulations ensure new development provides adequate access during a wildfire to allow emergency response and evacuation of the site. All existing roadway modifications and new roadways that could occur with implementation of the project must be constructed based on state and County design standards. Therefore, the project would not substantially impair emergency access and evacuation or implementation of the EOP Transportation and Evacuation Annex.

Residents in single-egress residential developments face greater wildfire hazard risk due to the lack of options for evacuation in the event of a wildfire and the potential for a wildfire to impede access to the sole evacuation route. As described in Section 4.19.2.6, the California Board of Forestry and Fire Protection identified single-egress residential developments that consist of at least 30 lots in the SRA or a Very High FHSZ in the LRA without a secondary exit route from the development (PRC 4290.5). According to the California Board of Forestry and Fire Protection, Monterey County has 12 existing single-egress residential developments of 30 lots or greater. However, as previously described, new development associated with the project would be required to comply with all applicable regulations related to emergency access and evacuation.

The County's established and ongoing planning efforts for emergency response and evacuation take into consideration the location, density, and use types of existing and future development in Monterey County. These planning efforts would also consider the location, density, and use types of any future residential growth resulting from the buildout of the HEU6 (refer to Table 4.14-6 in Section 4.14, Public Services, which shows whether the emergency response standard would be met based on the distance of each opportunity site to its responding fire station). The project includes a rezoning effort of all opportunity sites to HDR/25 and HDR/30, which do not allow for

unique or unusual uses that would involve non-typical evacuation efforts (e.g., evacuation of horses). As a result of future residential growth, the County Sheriff's Office may issue more conservative emergency evacuation orders (e.g., evacuation orders that are provided earlier and extended farther); however, any future emergency response or emergency evacuation would continue to be carried out under the existing emergency response and evacuation plans (i.e., the Monterey County EOP and EOP Transportation and Evacuation Annex, respectively).

To reduce potential impacts related to the increase of additional vehicles on roadways and highways during evacuations, Mitigation Measure (MM)-WF-OBJ-1 and MM-WF-CONS-2 would require developments streamlining under the Objective Process and Consistency Process to submit an evacuation map packet for review by the County in coordination with the fire authority having jurisdiction. The evacuation map packet would need to include the proposed housing site, all points of egress, distance to a high-capacity roadway or highway, potential evacuation routes with their roadway classifications, and the estimated population of the housing site. Additionally, MM-WF-OBJ-3 and MM-WF-CONS-4 would require developments to disseminate evacuation educational materials included in Appendix M to this PEIR to tenants/buyers as part of move-in materials. This information would increase public awareness of evacuation procedures and tips for evacuation to help residents be prepared. It is acknowledged that the implementation of MM-WF-OBJ-3 and MM-WF-CONS-4 would be limited, due to the feasibility of disseminating materials without a homeowners association or other entity to ensure dissemination of materials to residents, and the difficulty of enforcing implementation of the mitigation, particularly during subsequent sales of the properties. However, as described above, all future development under the HEU6 would be required to comply with state and County requirements for emergency access and evacuation, including the requirement for providing at least two points of egress. With implementation of MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, and MM-WF-CONS-4, as well as compliance with all applicable regulations pertaining to emergency access and evacuation, the project would not impair an emergency response plan or emergency evacuation plan, and impacts would be less than significant.

### Significance of Impact

Potentially significant impact.

### Mitigation Measures

Preparation and submittal of an evacuation map packet and dissemination of evacuation educational materials will be required for all projects streamlining under the HEU6 through MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, and MM-WF-CONS-4 below. The by-right housing ordinance requires implementation of MM-WF-OBJ-1 and MM-WF-OBJ-3 for future by-right development projects that will be streamlined under the Objective Process.

**MM-WF-OBJ-1: Evacuation Map Packet.** Applicants for by-right residential developments streamlining under the Objective Process shall be required to submit an evacuation map packet as part of the development application for review by the County of Monterey (County) in coordination with the fire authority having jurisdiction. The evacuation map packet for the residential development shall be required to include the following:

- A map of the proposed housing site;
- All (at least two) points of egress from the proposed housing site;
- The distance from the proposed housing site to a high-capacity roadway (i.e., arterial road) or highway;
- Potential evacuation routes with their roadway classifications; and
- Estimated population of the proposed housing site.

**MM-WF-CONS-2: Evacuation Map Packet.** Applicants for developments streamlining under the Consistency Process shall be required to prepare and submit an evacuation map packet as part of the development application for review by the County of Monterey (County) in coordination with the fire authority having jurisdiction. The evacuation map packet for the residential development shall include the following:

- A map of the proposed housing site;
- All (at least two) points of egress from the proposed housing site;
- The distance from the proposed housing site to a high-capacity roadway (i.e., arterial road) or highway;
- Potential evacuation routes with their roadway classifications; and
- Estimated population of the proposed housing site.

**MM-WF-OBJ-3: Evacuation Educational Materials.** Applicants for by-right residential developments on opportunity sites shall be required to provide the evacuation educational materials included in Appendix M to this Program Environmental Impact Report (PEIR) to tenants/buyers as part of move-in materials. The County of Monterey (County) shall make this a standard condition of approval for developments on all opportunity sites. The evacuation educational materials for the residential development shall be required to include the following:

- The County Department of Emergency Management's (DEM's) Evacuation Checklist;
- DEM's Evacuation Guide;
- The list of steps for making a household emergency plan;

- DEM's flyer with tips for evacuating in emergencies; and
- The web address and summary of the Know Your Zone campaign to inform residents, businesses, and visitors of Monterey County of the pre-planned evacuation zones.

**MM-WF-CONS-4: Evacuation Educational Materials.** Applicants for developments streamlining under the Consistency Process shall be required to provide the evacuation educational materials included in Appendix M to this Program Environmental Impact Report (PEIR) to tenants/buyers as part of move-in materials. The County of Monterey (County) shall make this a standard condition of approval for developments on all opportunity sites. The evacuation educational materials for the residential development shall be required to include the following:

- The County Department of Emergency Management's (DEM's) Evacuation Checklist;
- DEM's Evacuation Guide;
- The list of steps for making a household emergency plan;
- DEM's flyer with tips for evacuating in emergencies; and
- The web address and summary of the Know Your Zone campaign to inform residents, businesses, and visitors of Monterey County of the pre-planned evacuation zones.

### Significance of Impact After Mitigation

Less than significant impact with mitigation incorporated.

### 4.19.5.2 Threshold 2: Pollutant Concentrations

**Threshold 2:** Would the project be in or near state responsibility areas or lands classified as Very High FHSZ, and due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

### Impact Analysis

Nearly 85 percent of wildland fires in the United States are caused by humans. Human-caused fires result from campfires left unattended, the burning of debris, equipment use and malfunctions, negligently discarded cigarettes, and intentional acts of arson (National Park Service 2022). In addition, new residential development in wildfire hazard areas and the WUI may exacerbate wildfire ignition risks due to increased human activity, potentially combustible building materials used in home construction, flammable landscaping and natural vegetation fuel sources, and buildings on or adjacent to existing steep slopes. Further, new development in areas subject to high winds may exacerbate pollution exposure from wildfire smoke. As such, the construction and

occupancy of new residential and mixed-use development in or near designated Very High FHSZs and WUI areas would increase the potential for wildfire ignition and wildfire risks, including loss of life, exposure to harmful pollutants, and destruction of property and environmental resources.

Implementation of the project would result in the development of housing in and adjacent to Very High FHSZs and the designated WUI, particularly in the Carmel Valley, Carmel, Fort Ord, and Greater Monterey Peninsula planning areas (refer to Figures 4.19-1a through 4.19-1i and Figures 4.19-2a through 4.19-2i). For example, Opportunity Sites 23, 36, 55, and 56 are in both Very High FHSZ and WUI areas nestled between the Santa Lucia Range adjacent to undeveloped sloped areas with highly combustible vegetation. Other opportunity sites in or near Very High FHSZ include Opportunity Sites 16, 18, 24, 37, 38, 40, 43, 45 through 48, 55, and 56 (refer to Table 4.19-1 and Figures 4.19-1a through 4.19-1i). In addition, the project would result in the development of 31 opportunity sites within, partially within, and adjacent to slopes greater than 25 percent (refer to Table 4.19-3). In the event of a wildfire in the WUI and steep slope areas, nearby residents would be vulnerable to wildfire pollution concentrations and the direct effects of uncontrolled wildfire on life and property.

However, future development enabled under the project would be required to comply with the applicable fire safety requirements that help to reduce wildfire risks and the exposure of people to uncontrollable wildfire spread. These include the IFC, IBC, CFC, CBC, PRC, Title 18 of the County Code, and policies of the 2010 General Plan Safety Element, Area and Master Plans, Community Plans, and Land Use Plans, which address the siting, construction, occupancy, and protection of development and people as it relates to wildfire hazards (refer to Section 4.19.1, Regulatory Setting). Future residential development would be required to include fire protection measures, such as automatic sprinkler systems, fire detection and alarm systems, fire breaks, fire-retardant building materials, fuel modification measures, water storage tanks, alternative access routes, and adequate emergency access; thereby reducing the risk of damage from fire.

Specifically, Policies S-4.21 and S-4.22 of the Safety Element require all new development facilitated under the project to be constructed to meet the minimum requirements specified in the most recent CBC, CFC, County Code, Chapter 18.56, and other nationally recognized standards and incorporate requirements of the fire authority having jurisdiction. Policy S-4.11 of the Safety Element requires that all new development would be required to provide automatic fire protection systems, such as fire breaks, fire-retardant building materials, automatic fire sprinkler systems, or water storage tanks, as approved by the fire jurisdiction. Policy S-4.31 of the Safety Element requires new development in fire hazard areas to include a zone that can inhibit the spread of wildfire, such as irrigated greenbelts, streets, or fuel modification zones, and Policy S-4.32 of the Safety Element requires property owners in high, very high, and extreme fire hazard areas to prepare a Fuel Modification Zone plan in conjunction with permits for new structures, subject to approval and to be performed in conjunction with CAL FIRE and other fire protection agencies.

Furthermore, Policy S-4.15a of the Safety Element requires that all new development be annexed into the appropriate fire district. Where no fire district exists, applicants are required to provide verification from the most appropriate local fire authority of the fire protection services that exist. Project approvals require a condition for a deed restriction notifying the property owner of the level of service available and acceptance of associated risks to life and property. Where annexations are mandated, the County is required to negotiate a tax share agreement with the affected fire protection district. Additionally, Policy S-4.7 of the Safety Element requires the County and authorities having jurisdiction to develop and maintain a procedure to inform potential developers of the requirements for development in high and very high fire hazard areas, and that this information is made available through the County Housing & Community Development Department.

Chapter 18.09.030 of the County Code establishes local amendments to the 2025 CFC, which include design standards, requirements, and standard fire conditions for development. For example, Appendix R, Roofs, Section R101, General, includes a requirement that all roofs for new buildings in Very High FHSZs shall be a minimum of Class "A" roof assembly as defined by the IBC.

Sections 20.64.230 and 21.64.230 of the County Code establish regulations for all proposed development on slopes in excess of 30 percent. These sections encourage avoidance of development and require a Use Permit or Coastal Development Permit for all development on these slopes, as well as identify allowable development and conditions for development. Similarly, 2010 General Plan Policy OS-3.5 applies a more restrictive standard prohibiting development without a discretionary permit on slopes greater than 25 percent. The County applies this more restrictive standard to regulate development on steep slopes in inland areas of the UMC. Additionally, a waiver from the Chief of Planning is required for proposed development on steep slopes in North County LUP area (25 percent) and Carmel LUP area (30 percent). As such, projects streamlining under the Objective Process would not be able to develop on slopes in excess of 25 percent (or 30 percent in the Carmel LUP area) to maintain an objective permitting process. To avoid requiring a Use Permit or Coastal Development Permit for projects that are eligible for streamlining under the Objective Process, MM-WF-OBJ-5 includes objective standards consistent with Section 21.64.230(C)(2)(b-c) of the County Code for these projects that are on steep slopes. Projects that streamline under the Consistency Process would be subject to requirements for development on steep slopes in Sections 20.64.230 and 21.64.230 of the County Code, 2010 General Plan Policy OS-3.5, the North County LUP, and/or the Carmel LUP, as applicable.

Specifically in SRAs, Section 4291(a) of the PRC requires a minimum of 100 feet of defensible space around all residential, commercial, and industrial buildings, and Chapter 18.56 of the County Code provides design standards and regulations for emergency access, adequate signing and building numbering, emergency water supply, and fuel modifications as wildfire protection measures. Section 18.56.040 outlines requirements for review of development permit applications for compliance with applicable regulations and any recommendations of the Reviewing Authority

(Director of the Board of Forestry and Fire Protection, or their designee, including local fire districts, sharing jurisdiction in SRAs) prior to development, as well as inspection of the development for compliance with all applicable regulations and fire conditions.

All new water supply systems must comply with County Code, Chapter 18.56, NFPA Standard 1142, or other nationally recognized standard, and must be reviewed by the fire authority having jurisdiction, the County Departments of Planning and Building Services, and all other regulatory agencies to determine the adequacy and location of water supply and storage to be provided (Policy S-4.13 of the Safety Element). Further, Policy S-4.14 of the Safety Element requires water systems constructed, extended, or modified to serve a new land use or a change or intensification of land use to be designed to meet peak daily demand and recommended fire flow.

In addition, landscaping associated with new residential developments could increase flammable vegetation in proximity to homes and other fuels. However, the County Code and 2010 General Plan Safety Element include several policies intended to ensure that all new landscaping is fire-safe. For example, Section 16.63.070(B)(8) of the County Code requires landscape planting to include the use of fire-resistant plant species and be consistent with fire-safe landscaping required by the designated fire district and, as applicable, Chapter 18.56 of the County Code. All minor and major landscape packages are required to be submitted to the Chief of Planning for review and approval prior to County issuance of a grading permit, building permit, or design approval in accordance with Sections 16.63.050 and 16.63.060 of the County Code. To facilitate development compliance with these sections of the County Code, the County provides a list of acceptable fire-resistant plants and plants that should not be used in landscaping on the County's website (County of Monterey 2022b).

Collectively, these codes and regulations, as specified above, would reduce the risk of the uncontrolled spread of a wildfire and associated pollutant concentrations that would result from new development facilitated by the project. Because Section 18.56.040 of the County Code outlines requirements for a discretionary approval process in which the Reviewing Authority provides recommendations for development permit applications based on fire conditions, this review would need to be completed prior to the County application process for by-right projects on opportunity sites in the SRA that are streamlining under the Objective Process. MM-WF-OBJ-6 would ensure that developments on opportunity sites in the SRA streamlining under the Objective Process comply with all applicable regulations of Chapter 18.56 of the County Code and other state and local ordinance code and requirements to reduce wildfire risk (e.g., PRC Section 4291). MM-WF-OBJ-6 would also require that development permit applications be submitted to the Board of Forestry and Fire Protection (or their designee) for review and approval, and documentation of this approval shall be provided to the County prior to the County's approval of the building permit to ensure an objective permitting process. Consistency Process residential projects in the SRA would also be required to comply with all applicable laws and regulations

related to fire hazards and follow the discretionary permitting process in accordance with Section 18.56.040 of the County Code through implementation of a CEQA Guidelines, Section 15183, exemption checklist. With existing federal, state, and local regulatory requirements for development as well as implementation of MM-WF-OBJ-5 and MM-WF-OBJ-6, implementation of the project would result in a less than significant impact related to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.

### Significance of Impact

Potentially significant impact.

### Mitigation Measure

To avoid requiring a use permit or coastal development permit for projects that are eligible for streamlining under the Objective Process and located on slopes greater than 25 percent (or 30 percent in the Carmel LUP area), MM-WF-OBJ-5 includes objective standards consistent with Section 21.64.230(C)(2)(b-c) of the County Code.

Given that the Objective Process includes an objective permitting process by the County, the review process outlined under Section 18.56.040 of the County Code must be completed prior to the County application process for by-right projects in the SRA, as described in MM-WF-OBJ-6 below.

**MM-WF-OBJ-5: Steep Slope Requirements.** The applicant shall demonstrate on grading and construction plans that the proposed development is not located on steep slopes, defined as in excess of 25 percent (or 30 percent in the Carmel Land Use Plan area). If the project cannot avoid development on steep slopes, a geotechnical report shall be prepared and submitted to the County of Monterey (County) at the time of application submittal. The geotechnical report shall contain evidence of compliance with the following objective standards, consistent with Section 20.64.230(C)(2)(b-c) (Coastal) or Section 21.64.230(C)(2)(b–c) (Inland) of the County Code:

- For excavations on human-made slopes:
  - The excavation shall not exceed 100 cubic yards;
  - The excavation shall not exceed 2 feet in depth; and
  - The excavated slope shall not be steeper than the one and one-half horizontal to one vertical;
- For fills on human-made slopes:
  - The fill shall contain earth material only;
  - The fill shall not exceed 100 cubic yards;

- The fill shall not exceed 2 feet in depth; and
- The fill shall not be placed on a human-made slope in excess of one and one-half horizontal to one vertical.

If the applicant cannot show compliance with the objective standards listed above, the project would not be eligible for streamlining under the Objective Process and may streamline under the Consistency Process instead. Under the Consistency Process, an applicant shall demonstrate compliance with Section 20.64.230 (Coastal) or Section 21.64.230 (Inland) prior to issuance of a grading or construction permit.

At time of application submittal, grading and construction plans shall be submitted to the fire authority that has jurisdiction for review. The County shall verify that the grading and construction plans demonstrate that the proposed development is either not located on steep slopes or demonstrates compliance with the objective standards listed above.

**MM-WF-OBJ-6: State Responsibility Area Regulation Compliance.** By-right development projects on opportunity sites in the state responsibility area (SRA) shall be required to comply with the development standards and requirements established under state law (California Government Code, Sections 51175–51189, California Public Resources Code, Sections 4290, 4291, and 4427), applicable policies of the 2010 and 1982 Monterey County General Plans and relevant Area/Master and Community Plans, and relevant Local Coastal Program – Land Use Plans, as well as the County Code (Sections 18.56.050 through 18.56.090). Section 18.56.050 explains the exceptions and regulations for alternative standards or measures. Section 18.56.060 includes development standards for emergency access. Section 18.56.070 includes development standards for signing and building numbering. Section 18.56.080 includes development standards for emergency water systems. Section 18.56.090 includes fuel modification standards to reduce the volume and density of flammable vegetation. Compliance with Sections 18.56.050 through 18.56.090 of the County Code shall be shown on relevant project plans.

By-right residential developments on opportunity sites in the SRA shall be required to submit development permit applications showing compliance with applicable development standards and requirements to the California Board of Forestry and Fire Protection (or their designee) for review and approval. This review process must be completed prior to the County's approval of the entitlement (e.g., tentative map approval) to ensure an objective permitting process. The County shall verify that the development application materials include documentation of the California Board of Forestry and Fire Protection's (or their designee's) review and approval.

### Significance of Impact After Mitigation

Less than significant impact with mitigation incorporated.

### 4.19.5.3 Threshold 3: Installation or Maintenance of Associated Infrastructure

**Threshold 3:** Would the project be in or near state responsibility areas or lands classified as Very High FHSZ, and require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

### Impact Analysis

As described in Table 2-2 in Chapter 2, Environmental Setting, 20 of the opportunity sites are considered vacant, and 36 of the opportunity sites are considered non-vacant. However, the non-vacant portion of the majority of these sites represents only a portion of the overall site. For instance, each non-vacant site may still have a large portion of undeveloped land. Therefore, future housing development under implementation of the project would likely require the installation or maintenance of associated infrastructure to facilitate housing development (e.g., roads and driveways, power lines, and other utilities) that could result in ongoing impacts on the environment. Similarly, fire protection facilities, including fuel breaks, emergency access roads, or emergency water, may also be required.

Future development, particularly in high fire risk areas of Monterey County, would be required to comply with existing regulations developed by the state (e.g., CFC, CBC, PRC) and County (e.g., County Code, 2010 General Plan Safety Element, Area and Master Plans, Community Plans, Local Coastal Program – Land Use Plans), which include various provisions for siting, construction, occupancy, and protection of development as it relates to wildfire hazards and reducing wildfire risks, wildfire exposure, and the uncontrolled spread of wildfires (refer to Section 4.19.1, Regulatory Setting). As discussed in Section 4.19.5.2, the development regulations and construction of infrastructure necessary to comply with these regulations would reduce the overall risk of wildfire hazards and associated impacts. These required improvements, however, could have adverse effects on biological, cultural, and Tribal Cultural Resources. For example, the required infrastructure improvements for residential development (e.g., roads, utilities) and wildfire prevention and preparedness measures (e.g., fuel breaks, emergency water supply tanks) may have adverse impacts on key resources found in the WUI and High/Very High FHSZ areas in the UMC. As described in Section 4.4, Biological Resources, improvements associated with future residential development may result in temporary or ongoing secondary impacts related to vegetation removal, loss of sensitive habitats, and disturbance or loss of special-status species. Additionally, as described in Section 4.5, Cultural Resources, the construction or maintenance of this development would result in ground disturbance that could disturb known or unknown buried cultural resources. As a result, the installation or maintenance of infrastructure associated with the

project could have potentially significant temporary or permanent impacts on the environment. This is a potentially significant impact.

Implementation of MMs identified in Section 4.4, Section 4.5, and Section 4.17, Tribal Cultural Resources, would reduce impacts related to biological resources, cultural resources, and Tribal Cultural Resources. Therefore, with implementation of these mitigation measures, the installation or maintenance of infrastructure associated with the project would not substantially exacerbate fire risk or result in temporary or ongoing impacts on the environment.

### Significance of Impact

Potentially significant impact.

### Mitigation Measures

Refer to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, and MM-BIO-CONS-12 in Section 4.4.

Refer to MM-CUL-OBJ-1, MM-CUL-CONS-2, MM-CUL-OBJ-3, MM-CUL-CONS-4, MM-CUL-OBJ-5, MM-CUL-CONS-6, MM-CUL-OBJ-7, and MM-CUL-CONS-8 in Section 4.5.

### Significance of Impact After Mitigation

Less than significant impact with mitigation incorporated.

## 4.19.5.4 Threshold 4: Flooding or Landslides

**Threshold 4:** Would the project be in or near state responsibility areas or lands classified as Very High FHSZ, and expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

### Impact Analysis

As described in Section 4.19.2.6, the lack of vegetation and highly erodible soils in a burn scar can cause significant amounts of mud, boulders, and vegetation to be carried by floodwaters, resulting in mudflow and debris flow. Areas of particular concern for risk of post-fire flooding or landslides include structures and roadways located anywhere near a recent burn area. However, mudflows and debris flows have the potential to occur Monterey Countywide wherever heavy rain occurs on steep, exposed slopes, particularly following wildfires. This is particularly common along and south of the Big Sur coast, where forested areas in the FRAs or SRAs designated as Very High FHSZs have steep slopes that extend down to cliffs along the coastline.

As previously described, several of the opportunity sites are in or near Very High FHSZs (Figures 4.19-1a through 4.19-1i and Table 4.19-1), the WUI (Figures 4.19-2a through 4.19-2i and Table

4.19-2), and steep slopes (Table 4.19-3) and would therefore face a higher risk of wildfire and potential post-wildfire hazards, such as flooding, mudflow, and debris flow. However, places that are most susceptible to debris flow consist of areas downslope of steep WUI areas (refer to Figures 4.19-1a through 4.19-1i and Figures 4.19-2a through 4.19-2i), near drainage corridors, and within expanded floodplains (refer to Figures 4.10-2a through 4.10-2i). Several of the opportunity sites are in areas that are prone to post-fire flooding, mudflow, or debris flow. For example, sites in the Carmel and Carmel Valley planning areas are along the Carmel River, within and near steep topographic areas associated with the Santa Lucia Range. As previously described, there are 31 opportunity sites that are within, partially within, or adjacent to areas of 25 percent slope or greater and could be prone to post-fire flooding, mudflow, or debris flow (refer to Table 4.19-3). Other opportunity sites are generally located away from Very High FHSZs or steep topographic areas, and, therefore, are not at risk of flooding, mudflow, or debris flows from a post-fire flood event.

As previously discussed, all potential future development in wildfire-prone areas in the UMC would also be required to comply with CFC, CBC, PRC, and other state and local regulations addressing the development and design of habitable structures to safeguard public health and reduce fire hazards. All future residential development, including at opportunity sites in the Carmel and Carmel Valley planning areas, would be required to follow standards and practices aiming to prevent post-wildfire hazards, such as those in Title 18 of the County Code and 2010 General Plan Safety Element, which require existing and new development to be adequately protected from potential flooding or landslides through careful site planning, design, and construction (refer to Section 4.19.1). For example, Policies S-2.1, S-2.7, S-2.8, and S-2.9 of the Safety Element aim to minimize development within the floodplain and flood-prone areas. Policies S-2.5, S-2.6, S-2.10, and S-2.11 of the Safety Element require mitigations (e.g., building elevation) for development in the floodplain. Further, Policy S-4.19 of the Safety Element requires drainage details for roads and driveways to conform to current engineering practices, including erosion control best management practices. Both the North County Land Use Plan (Coastal) and Carmel Area Land Use Plan require development siting and design as well as preparation of an environmental report for development in high hazard areas to minimize risk from geologic, flood, or fire hazards. Additionally, North County (Part 2) Section 20.144.100 and Carmel Area (Part 4) Section 20.146.080 of the Coastal Implementation Plan provide development standards that regulate land uses and development in areas of high geologic, flood, and fire hazards to minimize risks to life and property and damage to the natural environment. Sections 20.64.230 and 21.64.230 of the County Code, as well as 2010 General Plan Policy OS-3.5, establish regulations for all proposed development on slopes in excess of 25 percent. These sections encourage avoidance of development and require a use permit for all development on these slopes, as well as identifying allowable development and conditions for development. These sections would apply to projects that qualify for streamlining under the Consistency Process. For projects that qualify for streamlining under the Objective Process, MM-

WF-OBJ-5 includes objective standards consistent with Section 21.64.230(C)(2)(b-c) of the County Code to avoid hazards related to development on steep slopes.

In addition, as discussed in Section 4.10, Hydrology and Water Quality, future development associated with the project would be subject to stormwater management regulations, which require structural stormwater control measures (e.g., retention basins and stormwater conveyance infrastructure) to be adequately sized for substantial rainfall events. Additionally, development within floodplains is subject to the requirements of Chapter 16.16, Regulations for Floodplains in Monterey County, of the County Code, which regulates development in special flood hazards areas. The County requires review of all development permit applications subject to Chapter 16.16 of the County Code to determine that all federal, state, and local requirements are met, and if the proposed development adversely affects the flood capacity of the area. As a result, impacts relating to flooding were determined to be less than significant in Section 4.10, and impacts related to post-wildfire hazards would be less than significant.

### Significance of Impact

Less than significant impact.

### Mitigation Measures

No mitigation measures are required.

### Significance of Impact After Mitigation

Less than significant impact.

#### 4.19.5.5 Threshold 5: Risk of Loss, Injury, or Death

**Threshold 5:** Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

### Impact Analysis

As described under Section 4.19.5.2, new residential development in wildfire hazard areas, the WUI, and on or near steep slopes could expose people and structures to wildfire hazards, including risk of loss, injury, or death. Implementation of the project would result in the development of housing within and adjacent to Very High FHSZs and the designated WUI, including Opportunity Sites 16, 18, 23, 24, 36, 37, 38, 40, 43, 45 through 48, 55, and 56 (refer to Figures 4.19-1a through 4.19-1i and Table 4.19-1). In addition, the project would result in the development of housing within, partially within, and adjacent to slopes 25 percent or greater, as shown in Table 4.19-3. Future development at these sites has a higher risk for exposure to wildfires than development in other areas of Monterey County (e.g., urban built environments). As described above, Sections 20.64.230 and 21.64.230 of the County Code, as well as 2010 General Plan Policy OS-3.5,

establish regulations for all proposed development on slopes in excess of 25 percent. These sections encourage avoidance of development and require a use permit for all development on these slopes, as well as identifying allowable development and conditions for development. These sections would apply to projects that qualify for streamlining under the Consistency Process. For projects that qualify for streamlining under the Objective Process, MM-WF-OBJ-5 includes objective standards consistent with Section 21.64.230(C)(2)(b-c) of the County Code to avoid hazards related to development on steep slopes.

In addition, future development enabled under the project would be required to comply with the applicable fire safety requirements that help to reduce wildfire risks and the exposure of people to uncontrollable wildfire spread. These include the IFC, IBC, CFC, CBC, PRC, Title 18 of the County Code, and policies of the 2010 General Plan Safety Element, Area and Master Plans, Community Plans, and Local Coastal Program – Land Use Plans, which address the siting, construction, occupancy, and protection of development and people as it relates to wildfire hazards (refer to Section 4.19.1). For example, future residential development would be required to include fire protection measures, such as automatic sprinkler systems, fire detection and alarm systems, fire breaks, fire-retardant building materials, fuel modification measures, fire-resistant landscaping, adequate water supply, appropriate signage and building numbering, alternative access routes, and adequate emergency access. Refer to Section 4.19.5.2 for further discussion of state and local fire prevention and protection regulations that would apply to future development facilitated by the project. Additionally, MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, and MM-WF-CONS-4 would reduce potential impacts associated with increased roadway congestion during emergency evacuations, and MM-WF-OBJ-5 and MM-WF-OBJ-6 ensure that Objective Process by-right housing developments comply with the regulations for fire safety that apply to Consistency Process projects. Collectively, these codes, regulations, and mitigations would reduce the risk of loss, injury, or death from wildfire for new residential developments potentially resulting from the project. Therefore, with existing regulatory requirements and previously identified mitigations, implementation of the project would result in a less than significant impact related to exposure of people or structures to a significant risk of loss, injury, or death involving wildland fires.

### Significance of Impact

Potentially significant impact.

### Mitigation Measure

MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, MM-WF-CONS-4, MM-WF-OBJ-5, and MM-WF-OBJ-6 would apply.

### Significance of Impact After Mitigation

Less than significant impact with mitigation incorporated.

## 4.19.6 Cumulative Impacts

The following sections address various potential cumulative impacts relating to wildfire that could result from implementation of the project. Refer to Chapter 4, Environmental Analysis, for further discussion of the methodology used for the cumulative analysis.

### 4.19.6.1 Cumulative Threshold 1: Emergency Response or Evacuation Plans

Cumulative impacts on emergency response or evacuation plans could occur if the project, in combination with other cumulative projects, substantially impaired implementation of emergency response or evacuation efforts in Monterey County. As described in Section 4.19.5.1, buildout of the project under the reasonable development capacity would add 3,968 vehicles to Evacuation Region A. This region also includes several incorporated cities (i.e., Cities of Marina, Sand City, Del Rey Oaks, Monterey, Del Monte Forest, and Carmel-by-the-Sea) that are planning for residential growth in their respective Housing Elements of their comprehensive General Plans in accordance with their Regional Housing Needs Allocations. With implementation of MM-WF-OBJ-1, MM-CONS-2, MM-WF-OBJ-3, and MM-WF-CONS-4, all residential projects streamlining under the HEU6 would require the preparation and submittal of an evacuation map packet and the dissemination of evacuation educational materials. Just as future development facilitated by the project would be required to comply with the state and County requirements for adequate emergency access, it is reasonable to assume that cumulative projects would be subject to the same or similar standards. Therefore, emergency response and evacuation would be addressed on a project-by-project basis, with each potential project complying with regional and local access requirements. With implementation of the project mitigation measures and compliance with state and County requirements for adequate emergency access, the project would not contribute to impairment of an emergency response or evacuation plan. Therefore, cumulative impacts on emergency response and evacuation would be less than significant.

### Significance of Impact

Less than significant impact.

### Mitigation Measure

No mitigation measures are required.

### Significance of Impact After Mitigation

Less than significant impact.

#### 4.19.6.2 Cumulative Threshold 2: Pollutant Concentrations

Cumulative projects, in combination with future development facilitated by the HEU6, in the WUI, in High or Very High FHSZs, and on steep slopes could result in an increase in the risk of ignitions. Each cumulative project requiring development permits would likely undergo design review to determine what, if any, fire protection measures would be required for the project, depending on the site-specific location. For example, future residential development in the UMC would be required to include fire protection measures, such as automatic sprinkler systems, fire detection and alarm systems, fire breaks, fire-retardant building materials, fuel modification measures, fire-resistant landscaping, adequate water supply, appropriate signage and building numbering, alternative access routes, and adequate emergency access. For the same reasons as the project, cumulative project compliance with state and local fire protection requirements and standards would reduce the risk of the uncontrollable spread of wildfire and associated pollutant concentrations. The project includes mitigation measures to ensure that Objective Process by-right housing developments comply with the same regulations for fire safety that apply to Consistency Process projects (i.e., MM-WF-OBJ-5 and MM-WF-OBJ-6). Therefore, the project's contribution to cumulatively considerable impacts related to fire risk would be less than significant.

##### Significance of Impact

Potentially significant impact.

##### Mitigation Measure

MM-WF-OBJ-5 and MM-WF-OBJ-6 would apply.

##### Significance of Impact After Mitigation

Less than significant impact with mitigation incorporated.

#### 4.19.6.3 Cumulative Threshold 3: Installation or Maintenance of Associated Infrastructure

Cumulative projects, in combination with future development facilitated by the HEU6, in the WUI, in High or Very High FHSZs, and on steep slopes would require development of associated infrastructure and could exacerbate fire risk by increasing the risk of ignitions. However, the opportunity sites were chosen, in part, based on proximity to existing urban development and public services and utilities to grow areas where there is existing infrastructure and already identified growth areas and to avoid sprawl or haphazard development. Each cumulative project requiring development permits would likely undergo design review to determine what, if any, fire protection measures would be required for the project, depending on the site-specific location. For the same reasons as the project, cumulative project compliance with state and local fire protection requirements and standards would reduce fire risk.

Although the implementation of the project and cumulative projects could result in ongoing impacts on the environment, such as impacts on biological, cultural, and Tribal Cultural Resources, as with implementation of the project, other cumulative projects are also anticipated to be required to implement applicable mitigation measures for biological resources, cultural resources, and Tribal Cultural Resources to reduce impacts to less than significant levels. Therefore, cumulative impacts on the environment from the installation or maintenance of infrastructure associated with the project would be less than significant.

### Significance of Impact

Less than significant impact.

### Mitigation Measure

Refer to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, and MM-BIO-CONS-12 in Section 4.4.

Refer to MM-CUL-OBJ-1, MM-CUL-CONS-2, MM-CUL-OBJ-3, MM-CUL-CONS-4, MM-CUL-OBJ-5, MM-CUL-CONS-6, MM-CUL-OBJ-7, and MM-CUL-CONS-8 in Section 4.5.

### Significance of Impact After Mitigation

Less than significant impact with mitigation incorporated.

#### 4.19.6.4 Cumulative Threshold 4: Flooding or Landslides

All development, including future residential development facilitated by the HEU6 and cumulative projects, in areas downslope of steep WUI areas, near drainage corridors, and within expanded floodplains are susceptible to wildfire and potential post-wildfire hazards, such as flooding and landslides. As described in Section 4.10, cumulative projects, in combination with future development facilitated by the HEU6, would result in an incremental increase in impervious surfaces, changes in localized drainage, and possible development within a floodway. However, future development would be required to follow standards and practices aiming to prevent post-wildfire hazards, such as those in Title 18 of the County Code and 2010 General Plan Safety Element, which require existing and new development to be adequately protected from potential flooding or landslides through careful site planning, design, and construction (Section 4.10.1, Regulatory Setting). Cumulative projects involving new development within flood hazard areas would require site design review to determine if any adverse effects to hydrology and flooding would occur, depending on the site-specific location, in accordance with Chapter 16.16 of the County Code (refer to Section 4.10). Cumulative project compliance with flooding and drainage regulations, as well as wildfire protection requirements, on a project-by-project basis would reduce

the potential for flooding and landslides. Therefore, cumulative impacts on post-wildfire flooding or landslides would be less than significant.

### Significance of Impact

Less than significant impact.

### Mitigation Measure

No mitigation measures are required.

### Significance of Impact After Mitigation

Less than significant impact.

#### 4.19.6.5 Cumulative Threshold 5: Risk of Loss, Injury, or Death

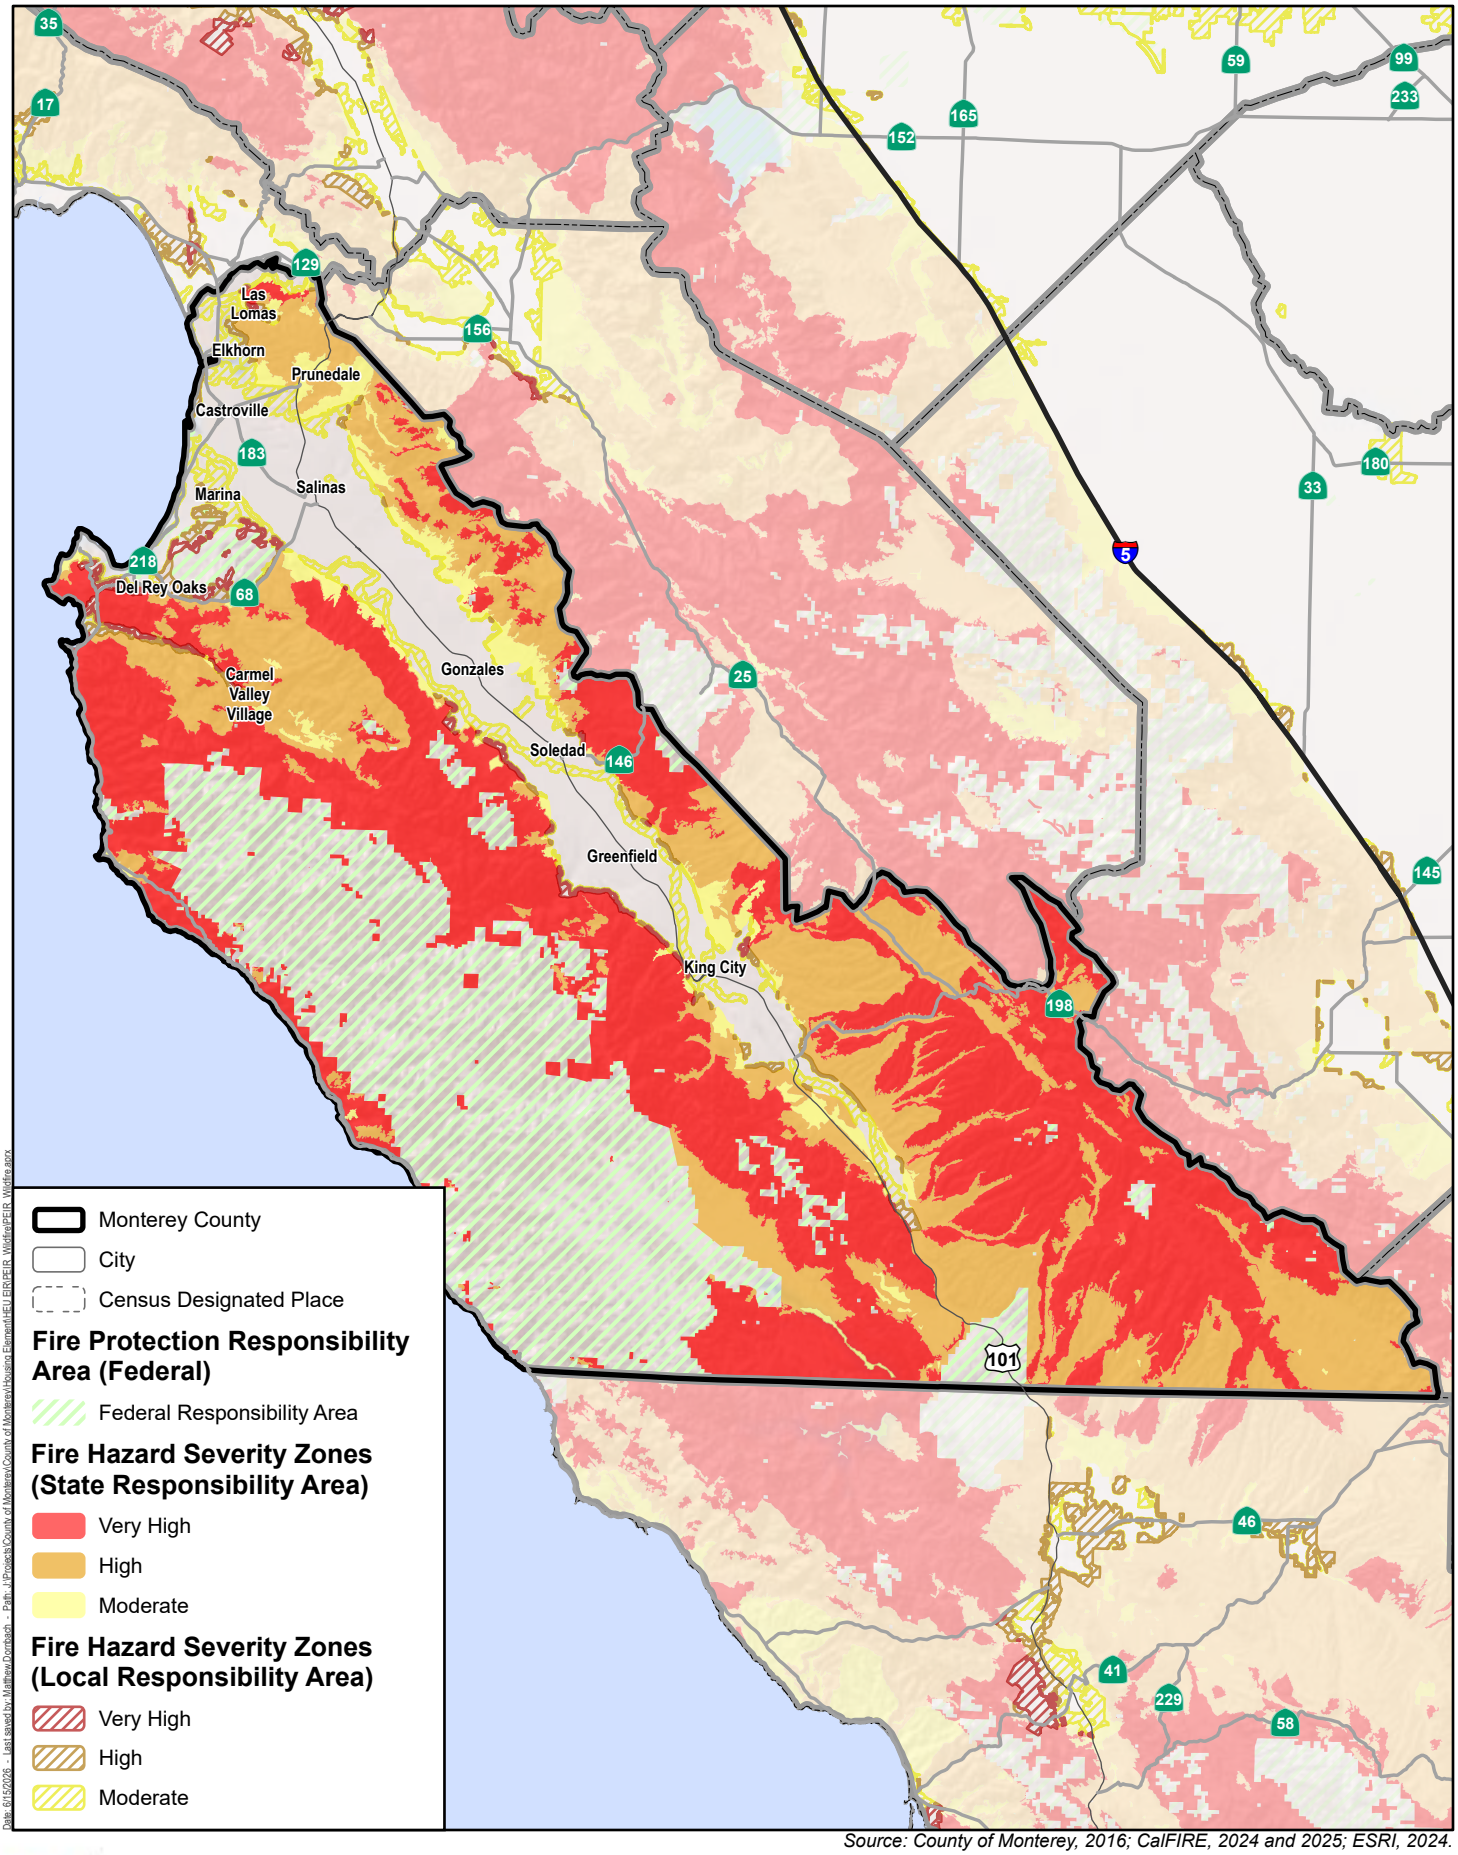
Cumulative projects, in combination with future development facilitated by the HEU6, in the WUI, in High or Very High FHSZs, and on steep slopes could result in an increase in the risk of exposure to wildfire. Cumulative projects in the SRA would require review by the Director of the Board of Forestry and Fire Protection, or their designee, to determine if all applicable fire protection measures required for the project and other recommendations by the fire authority have been adequately incorporated in accordance with Section 18.56.040 of the County Code. For example, future residential development in the UMC would be required to include fire protection measures, such as automatic sprinkler systems, fire detection and alarm systems, fire breaks, fire-retardant building materials, fuel modification measures, fire-resistant landscaping, adequate water supply, appropriate signage and building numbering, alternative access routes, and adequate emergency access. Additionally, all new construction projects requiring a grading permit, building permit, or design approval would require submittal of a minor or major landscape package to the Chief of Planning for review and approval to ensure the use of fire-resistant plant spaces as shown on project plans. For the same reasons as the project, cumulative project compliance with state and local fire protection requirements and standards would reduce the risk of loss, injury, or death involving wildland fires. The project includes mitigation measures to reduce potential impacts associated with increased roadway congestion during emergency evacuations (i.e., MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, and MM-WF-CONS-4) and ensure that Objective Process by-right housing developments comply with the same regulations for fire safety that apply to Consistency Process projects (i.e., MM-WF-OBJ-5 and MM-WF-OBJ-6). Therefore, the project's contribution to cumulatively considerable impacts related to fire risk would be less than significant.

### Significance of Impact

Potentially significant impact.

### Mitigation Measure

MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, MM-WF-CONS-4, MM-WF-OBJ-5, and MM-WF-OBJ-6 would apply.



### Significance of Impact After Mitigation

Less than significant impact with mitigation incorporated.

## 4.19.7 Conclusion

Implementation of MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, MM-WF-CONS-4, MM-WF-OBJ-5, and MM-WF-OBJ-6, as well as mitigation measures identified for other issue areas in this PEIR, would reduce potential impacts pertaining to wildfire to a less than significant level.

# Chapter 5 Other CEQA Considerations

Section 15128 of the California Environmental Quality Act (CEQA) Guidelines requires that an Environmental Impact Report (EIR) contain a brief statement disclosing the reasons why various possible significant effects of a project were found not to be significant and, therefore, would not be discussed in detail in the EIR. The County of Monterey, as lead agency, reviewed the proposed County of Monterey Draft General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law, against the environmental issue areas set forth in Appendix G of the CEQA Guidelines.

"HEU6" refers to the draft HEU6 document circulated for public review and submitted to the California Department of Housing and Community Development, while the "project" refers to HEU6 along with other components and related actions intended to implement HEU6, as described in Chapter 3, Project Description.

For the purposes of the Program EIR (PEIR), the following definitions of Monterey County are used to convey its different meanings:

- County of Monterey (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

All environmental issue areas, including those found to have potentially significant impacts, are addressed in Chapter 4, Environmental Analysis, of this PEIR, except Geology and Soils (all threshold topics except paleontological resources or unique geologic features) and Population and Housing. These environmental issue areas were determined to result in less than significant impacts from implementation of the project and, therefore, are addressed separately in Chapter 7, Effects Found Not to Be Significant.

In addition, Section 15126 of the CEQA Guidelines requires that all aspects of a project be considered when evaluating its impact on the environment, including planning, acquisition, development, and operation. As part of this analysis, the PEIR must identify the following five components, which are also addressed in this chapter:

- Significant environmental impacts of the project (Section 15126.2[a] of the CEQA Guidelines; addressed in Chapter 4).
- Energy impacts of the project (Section 15126.2[b] of the CEQA Guidelines; addressed in Section 4.6, Energy).

- Significant environmental impacts that could not be avoided if the project is implemented (Section 15126.2[c] of the CEQA Guidelines; addressed in Section 5.1, Significant and Unavoidable Environmental Impacts).
- Significant, irreversible environmental impacts that would result from the project should it be implemented (Section 15126.2[d] of the CEQA Guidelines; addressed in Section 5.2, Significant and Irreversible Environmental Impacts).
- Growth-inducing impacts of the project (Section 15126.2[e] of the CEQA Guidelines; addressed in Section 5.3, Growth-Inducing Impacts).

## 5.1 Significant and Unavoidable Environmental Impacts

Section 15126.2(c) of the CEQA Guidelines requires that an EIR describe any significant impacts that could not be avoided, even with the implementation of feasible mitigation measures. The environmental effects of the project on various aspects of the environment are discussed in detail in Chapter 4 of this PEIR. Based on the analysis presented in this PEIR, the project would create significant and unavoidable impacts related to the following issue areas:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Greenhouse Gas Emissions
- Hydrology and Water Quality (groundwater recharge and supply)
- Land Use and Planning
- Transportation (vehicle miles traveled)
- Utilities and Service Systems (water infrastructure and supply)

Refer to the following sections for a complete description of significant and unavoidable impacts to these environmental issue areas:

- Section 4.1, Aesthetics
- Section 4.2, Agriculture and Forestry Resources
- Section 4.3, Air Quality
- Section 4.4, Biological Resources
- Section 4.8, Greenhouse Gas Emissions
- Section 4.10, Hydrology and Water Quality
- Section 4.11, Land Use and Planning
- Section 4.16, Transportation
- Section 4.18, Utilities and Service Systems

All other significant impacts identified in Chapter 4 of this PEIR can be reduced to below a level of significance with either implementation of the mitigation framework identified in Chapter 4 and/or through compliance with applicable federal, state, regional, and local regulations.

Under CEQA Guidelines, Section 15065(c)(4), when an EIR demonstrates that a proposed project will cause significant and unavoidable impacts that cannot be fully mitigated, but the lead agency nevertheless intends to adopt the proposed project, it must first adopt a Statement of Overriding Considerations (SOC). Under CEQA Guidelines, Section 15093, an SOC is a policy statement that the decision-making agency must adopt whenever it intends to approve a proposed project that would cause significant, unmitigable impacts. In the SOC, the decision-making agency must affirmatively (1) identify the project's policy benefits, including its specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits; (2) make a finding that these benefits outweigh the project's unavoidable, adverse environmental effects; and (3) support this finding with written "specific reasons to support its action based on the final EIR and/or other information in the record. The [SOC] shall be supported by substantial evidence in the record" (CEQA Guidelines, Section 15093).

Here, if it intends to approve the project, the County would be required to adopt a SOC to address the significant impacts identified above and discussed in detail in Chapter 4. The County may weigh the long-term benefits of the project, such as enhancing the affordability, diversity, quantity, and quality of the housing supply, promoting, encouraging, and facilitating housing for special needs groups, preserving the affordable housing stock, and helping to overall address the local housing crisis, against the identified significant, unavoidable impacts.

To facilitate consideration of these issues, this PEIR discloses potential impacts and provides a range of alternatives to the project that could more fully alleviate environmental concerns. In addition, Section 4.11, Land Use and Planning, provides an overview of the County's policy context, including information on how the project would meet several important County policy objectives and describes how the project may implicate concerns as to its potential consistency with other County policies. The County should review all this information when considering the project.

### 5.1.1 Reasons the Project is Being Proposed Notwithstanding Its Significant and Unavoidable Impacts

In addition to identifying a project's significant unavoidable impacts, CEQA Guidelines, Section 15162.2(c), requires decision-making agencies to specify which such impacts, if any, "cannot be alleviated without imposing an alternative design," and to describe both the "implications" of these impacts and the "reasons why the project is being proposed, notwithstanding their effect. . . ." As described in Chapter 1, Introduction, and Chapter 3, the Housing Element is one of seven state-mandated General Plan Elements. Among other requirements, the Housing Element must identify, analyze, and make adequate provision for the existing and projected housing needs of

all economic segments of the community. California Government Code, Sections 65580–65589.8, require that communities prepare and update the Housing Element every 8 years. The County's Housing Element for the UMC was updated in 2016 for the Fifth Cycle (2015–2023). With the Fifth Cycle Housing Element Update concluded, the County must now plan for the Sixth Cycle Housing Element Update for the 2023–2031 planning period. The HEU6 would serve as the County's Housing Plan for the 2023–2031 planning period, setting clear goals, policies, and programs to meet state requirements by providing for the housing needs of all segments of the population while affirmatively furthering fair housing and preventing the displacement of existing residents. As required by state law, the HEU6 must be adopted locally and certified by the California Department of Housing and Community Development. If the California Department of Housing and Community Development determines that a Housing Element fails to substantially comply with the state housing law, there are potentially serious consequences, including limited access to state funding, as well as the potential for lawsuits. When a jurisdiction's Housing Element is found to be out of compliance, its General Plan is at risk of being deemed inadequate and therefore invalid. If a jurisdiction is sued over an inadequate General Plan, the court may impose requirements for land use decisions until the jurisdiction brings its General Plan, including its Housing Element, into compliance with state housing law. Additionally, because the project was not approved and certified by its state-mandated deadline of December 15, 2023, the County is subject to provisions of the Housing Accountability Act known as the "Builder's Remedy."[1] The Builder's Remedy significantly limits the County's ability to deny housing developments in the UMC. These provisions of the Housing Accountability Act apply Monterey Countywide until the Housing Element is found to be in compliance with state law. Builder's Remedy projects can lead to unplanned and scattered residential and mixed-use growth that is inconsistent with the County's adopted Monterey County General Plan (2010 General Plan) policies and zoning regulations (refer to Section 6.2.1, Alternative 1: No Project Alternative).

## 5.2 Significant and Irreversible Environmental Impacts

Section 15126.2(d) of the CEQA Guidelines requires a discussion of any significant, irreversible environmental changes that would be caused by the project should it be implemented. Generally, a project would result in significant, irreversible environmental impacts if the following occurred:

[1] The "Builder's Remedy" refers to a provision under the Housing Accountability Act that prevents local jurisdictions without a state-certified Housing Element from denying certain housing projects that meet specific affordability criteria, even if the project does not comply with the local General Plan or zoning. Generally, there is no limit on the maximum size of a Builder's Remedy project in state law, although the minimum size is two dwelling units and recently enacted legislation imposes some density limits. When processing Builder's Remedy applications, the County is still required to adhere to the California Coastal Act, implemented through the County's Local Coastal Program, and CEQA (Section 65589.5[e]). However, it is possible that a Builder's Remedy project may be combined with ministerial streamlining, such as Senate Bill 2011 or Senate Bill 35 to process ministerially.

- The project would involve a large commitment of nonrenewable resources (i.e., biological habitat, agricultural land, mineral deposits, water bodies, energy resources, and cultural resources).
- The primary and secondary impacts would generally commit future generations to similar uses (e.g., a highway improvement that provides access to a previously inaccessible area).
- The project would involve uses in which irreversible damage could result from any potential environmental accidents associated with the project.
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Compliance with all state and local regulations, development standards, and applicable building codes would ensure that natural resources are conserved to the maximum extent feasible. The potential for the project to result in the irreversible consumption of natural resources and irreversible environmental damage is described in Section 5.2.1, Irreversible Consumption of Resources, and Section 5.2.2, Irreversible Environmental Damage. Overall, while the project may result in significant, irreversible consumption of natural resources, it does not unreasonably consume non-renewable resources or involve substantial environmental hazards.

### 5.2.1 Irreversible Consumption of Resources

Implementation of the project would require the irreversible consumption of natural and working lands, natural resources, and energy. Natural resources consumption could include sand and gravel, lumber and other forest products, asphalt, steel, copper, other metals, and water. Infrastructure materials, while perhaps recyclable in part at some long-term future date, for practical purposes, would be permanently consumed. The commitment of natural resources and energy required for the construction and operation of the project would be irreversible and would limit the availability of such resources for future generations or for other uses during the life of the project.

#### 5.2.1.1 Agricultural and Forest Land

The conversion of agricultural or forestry lands to non-agricultural or non-forest uses generally constitutes an irreversible commitment of land resources. For instance, converting land mapped as Important Farmland (Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as mapped by the California Department of Conservation's Farmland Mapping and Monitoring Program) or forest land to urban uses commits future generations to these altered land uses. Once high-value agricultural soil is paved over or graded for development, its ability to support farming is permanently compromised. Additionally, converting timberland or forest land to non-forest uses results in the irretrievable loss of commercial timber and vital biological carbon sinks. As described in Section 4.2. Further, extending infrastructure (e.g., roads, water, and power lines) to

support residential development into previously undeveloped, rural agricultural areas may encourage additional development, compounding the irreversible loss of adjacent farmlands.

#### 5.2.1.2 Cultural and Tribal Cultural Resources

Both cultural and Tribal Cultural Resources are often non-renewable and irreplaceable. For example, if these resources are destroyed by a development project without adequate Tribal consultation and avoidance, preservation, or data recovery measures, they could be lost forever. The physical demolition, destruction, or substantial alteration of cultural resources (including historical buildings, archaeological sites, and human remains) can permanently erase the data and historical context they hold. However, mitigation measures identified in this PEIR include requirements for Phase I and Phase II historical resources assessments; historical resources protection measures; Phase I, Phase II, and Phase III archaeological resources assessment reports; and avoidance, preservation, and data recovery measures. With implementation of Mitigation Measures (MM-) CUL-OBJ-1, MM-CUL-CONS-2, MM-CUL-OBJ-3, MM-CUL-CONS-4, MM-CUL-OBJ-5, MM-CUL-CONS-6, MM-CUL-OBJ-7, and MM-CUL-CONS-8, impacts on cultural and Tribal Cultural Resources would be reduced to a less than significant level. Nevertheless, the original context and integrity of a resource may be irreparably altered by future residential development facilitated by the project.

#### 5.2.1.3 Energy

Energy derived from non-renewable sources, such as fossil fuels, would be consumed during construction and as a result of operational lighting, heating, cooling, and equipment and transportation uses. Electricity would be consumed for power tools, electric equipment, and lighting. Additionally, non-renewable fuels would be used by construction equipment, haul trucks, and worker vehicles. This commitment of energy resources would be irreversible and would limit the availability of such resources for other uses. However, the amount and rate of consumption of these resources would not result in the inefficient or wasteful use of resources, as further described in Section 4.6, Energy. In addition, consumption of such resources is associated with any development in the region and is not unique or unusual to the project. Further, new technologies or systems may emerge in the future, or become more cost-effective or user-friendly, to further reduce the reliance on non-renewable natural resources, such as solar photovoltaic energy and other renewable energy sources.

#### 5.2.1.4 Groundwater Resources

As described in Section 4.10, groundwater is of critical importance to Monterey County as it is the primary source of water supply to meet potable water demand. Development facilitated by the project may result in significant, irreversible impacts to groundwater supplies due to both an increase in demand and interference with groundwater recharge from the increase in impervious surfaces that could reduce stormwater infiltration into groundwater basins. Further, the project

may result in significant, irreversible groundwater impacts associated with permanently lowering the water table in a way that irreversibly impairs local ecosystems or potable water supplies, inducing irreversible subsidence due to excessive pumping that can permanently destroy aquifer storage capacity, and triggering irreversible saltwater intrusion in coastal or basin aquifers that can contaminate the freshwater quality for future generations. Although construction and operation of residential development projects would incorporate water conservation measures and site design with runoff retention and infiltration basins to encourage groundwater recharge, impacts on groundwater recharge and supplies in critically over-drafted or high-priority groundwater basins would be significant and unavoidable (refer to Section 4.10 and Section 4.18).

#### 5.2.1.5 Mineral Resources

Buildout of the opportunity sites included in the HEU6 would occur in areas mapped as Mineral Resource Zone (MRZ)-2, MRZ-3, and MRZ-4 (refer to Section 4.12, Mineral Resources). As described in Section 4.12, it is unlikely that these sites would be used for mineral resource production in the future, even without project implementation, due to land ownership and existing incompatible land uses at the sites and surrounding areas. Nevertheless, development of residential uses on these sites would eliminate the potential for future extraction of mineral resources. Therefore, the project would result in minor irreversible environmental changes related to the consumption of natural resources and energy, and the elimination of mineral resources extraction sites.

### 5.2.2 Irreversible Environmental Damage

The CEQA Guidelines also require a discussion of the potential for irreversible environmental damage caused by environmental accidents associated with the project. The project would not be expected to result in environmental accidents that have the potential to cause irreversible damage to the natural or human environment. The project primarily involves the development of residential projects, which do not generate substantial hazardous materials. While construction for new development would result in the limited use, transport, storage, and disposal of common hazardous materials, all activities would comply with applicable federal and state laws related to hazardous materials transport, use, and storage, which would significantly reduce the likelihood and severity of accidents that could result in irreversible environmental damage. Further, the implementation of MM-HAZ-OBJ-1, MM-HAZ-CONS-2, MM-HAZ-OBJ-3, MM-HAZ-CONS-4, MM-HAZ-OBJ-5, and MM-HAZ-CONS-6 would ensure impacts related to the potential release of hazardous materials into the environment would be less than significant. (Refer to Section 4.9, Hazards and Hazardous Materials, for a more detailed discussion of these issues.)

## 5.3 Growth-Inducing Impacts

As required by Section 15126.2(e) of the CEQA Guidelines, an EIR must discuss ways in which a proposed project could foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. Additionally, the EIR must

discuss the characteristics of the project that could encourage and facilitate other activities that could significantly affect the environment either individually or cumulatively. Growth can be induced in a number of ways, such as through the elimination of obstacles to growth, the stimulation of economic activity in the region, or the establishment of policies or other precedents that directly or indirectly encourage additional growth. Under CEQA, this growth is not to be considered necessarily detrimental, beneficial, or of significant consequence. Induced growth would be considered a significant impact if it can be demonstrated that the potential growth, directly or indirectly, significantly affects the environment.

In general, a project could foster economic or population growth in a geographic area if the project removes an impediment to growth (e.g., the establishment of an essential public service, the provision of new access to an area, or a change in zoning or General Plan Amendment approval) or economic expansion or growth occurs in an area in response to the project (e.g., changes in revenue base or employment expansion). These circumstances are further described below.

### 5.3.1 Elimination of Obstacles to Growth

Elimination of obstacles to growth refers to the extent to which a proposed project removes infrastructure limitations or provides infrastructure capacity, or removes regulatory constraints that could result in growth unforeseen at the time of project approval.

The elimination of either physical or regulatory obstacles to growth is considered a growth-inducing effect, although not necessarily a significant one. A physical obstacle to growth typically involves the lack of public service infrastructure. The extension of public service infrastructure, including roadways, water mains, and sewer lines, into areas that are not currently provided with these services would be expected to support new development. Similarly, the elimination or change to a regulatory obstacle, including existing growth and development policies, could result in new growth.

As described in Chapter 3, the HEU6 would amend development standards and enact new programs to facilitate the production of housing (e.g., by-right housing ordinance), particularly affordable housing, as necessary to meet the County's Regional Housing Needs Allocation. State law requires that the County provide the capacity and the regulatory framework to accommodate its Regional Housing Needs Allocation "fair share" of the region's housing needs, which cannot be achieved without the proposed revisions to existing development standards and new programs to support housing. The project does not approve the construction of specific development projects; therefore, the project would not directly induce growth but would anticipate and encourage growth by addressing the UMC's existing needs so that the UMC can grow in ways that enhance the quality of life, improve access to jobs, transportation, and housing, and not adversely impact the environment. However, the project would allow increased development intensity compared to existing conditions to meet the Regional Housing Needs Allocation. Further, several opportunity sites are on the boundaries of existing cities and developed communities as well as the boundaries of water and

sewer services areas (e.g., Opportunity Sites 1 through 4, 24 through 26, 52). It is reasonably foreseeable that site access and public services may be extended to serve future housing developments on those sites, which would induce growth in those areas. Therefore, the project could be considered to remove regulatory obstacles to growth and is considered growth-inducing.

However, it should be noted that the County considered sites in priority planning areas and infill when selecting opportunity sites to grow areas where there is existing infrastructure and already identified growth areas, to avoid sprawl or haphazard development, and to avoid development on natural and working lands (e.g., agricultural and forest lands).

### 5.3.2 Economic Expansion or Growth

Economic effects refer to the extent to which a proposed project could cause increased activity in the local or regional economy. Economic effects can include such effects as the "multiplier effect." A "multiplier" is an economic term used to describe interrelationships among various sectors of the economy. The multiplier effect provides a quantitative description of the direct employment effect of a project and the indirect and induced employment growth. The multiplier effect acknowledges that the on-site employment and population growth of each project is not the complete picture of growth caused by the project.

The project would affect the local economy through the construction of new residences that would encourage people to live in the UMC and would help encourage people to stay in the UMC to take advantage of the proximity to local shops, restaurants, and other amenities in nearby urban areas.

## 5.4 Conclusion

The project is a long-term planning document that would result in significant and unavoidable impacts to aesthetics, agriculture and forestry resources, air quality, biological resources, greenhouse gas emissions, hydrology and water quality (groundwater recharge and supply), land use and planning, transportation (vehicle miles traveled), and utilities and service systems (water infrastructure and supply). The project would also result in significant and irreversible environmental impacts due to the irreversible consumption of natural resources and energy and growth-inducing impacts due to the buildout of residential development and associated infrastructure on 56 opportunity sites.

*This page intentionally left blank.*

# Chapter 6 Alternatives

Section 15126.6 of the California Environmental Quality Act (CEQA) Guidelines requires that an Environmental Impact Report (EIR) describe a reasonable range of alternatives to the project that could feasibly attain most of the project objectives while avoiding or considerably reducing one or more of the significant impacts of the project. The "range of alternatives" is governed by the "rule of reason," which requires the EIR to set forth only those alternatives necessary to permit an informed and reasoned choice by the lead agency and to foster meaningful public participation (Section 15126.6[f] of the CEQA Guidelines). CEQA generally defines "feasible" to mean an alternative that is capable of being accomplished in a successful manner within a reasonable period of time while also taking into account economic, environmental, social, technological, and legal factors (Section 15126.6[f][1] of the CEQA Guidelines). CEQA does not require either that an EIR analyze alternatives at the same level of detail as the project or that an EIR consider and analyze every conceivable alternative.

Through this process, the County of Monterey identified nine possible alternatives to the proposed County of Monterey General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law (project). Of these, six were dismissed from further consideration because they either did not meet most project objectives or were not considered potentially feasible. Two were identified as project alternatives to be evaluated, in addition to the No Project Alternative required by CEQA. This chapter describes how the project alternatives were developed, evaluates the alternatives in comparison to the project, and identifies the environmentally superior alternative.

"HEU6" refers to the draft HEU6 document circulated for public review and submitted to the California Department of Housing and Community Development, while the "project" refers to HEU6 along with other components and related actions intended to implement HEU6, as described in Chapter 3, Project Description.

For the purposes of the PEIR, the following definitions are used herein:

- County of Monterey Government (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

# 6.1 Development of Alternatives

## 6.1.1 Criteria for Selection

The criteria for the selection and analysis of alternatives are provided in Section 15126.6(c) of the CEQA Guidelines. The County selected its alternatives based on such criteria, all of which are listed below:

- The extent to which the alternative would feasibly accomplish most or all of the basic objectives (Section 15126.6[a] of the CEQA Guidelines);
- The feasibility of the alternative, taking into account site suitability, economic viability, availability of infrastructure, General Plan consistency, and consistency with other applicable plans and regulatory limitations (Section 15126.6[a] of the CEQA Guidelines);
- The extent to which the alternative would avoid or substantially lessen any of the identified significant environmental impacts of the project (Section 15126.6[a] of the CEQA Guidelines);
- Any alternatives that were suggested during the scoping period for the project;
- The appropriateness of the alternative in contributing to a "reasonable range" of alternatives necessary to permit a reasoned choice (Section 15126.6[c] of the CEQA Guidelines); and
- The requirement of the CEQA Guidelines to consider a "no project" alternative and to identify an "environmentally superior" alternative in addition to the No Project Alternative (Section 15126.6[e] of the CEQA Guidelines).

### 6.1.1.1 Project Objectives

As described in Section 3.1, Project Objectives, the fundamental purpose of the project is to meet state housing law and comply with the Association of Monterey Bay Area Governments Final Sixth Cycle Regional Housing Needs Allocation (RHNA) Plan 2023–2031. The County, as the lead agency, identified the following objectives for the project:

1. Prepare a compliant Housing Element that meets the state-required RHNA for the HEU6 throughout the planning period of 2023 to 2031 while balancing economic, environmental, and social concerns.
2. Develop housing policies and programs to facilitate development of new units and preserve existing housing for residents at all income levels to address factors contributing to the statewide housing shortage.
3. Meet the housing needs of all economic segments of community members who live in the UMC areas in a manner that affirmatively furthers fair housing and supports the overall goal of providing safe and decent housing.
4. Provide a range of housing opportunities as near as possible to jobs, transit, services, and schools.

5. Provide adequate buffer with additional RHNA units to comply with the purpose of Senate Bill 166 (No Net Loss Law) and ensure implementation of the HEU6.
6. Update the 2010 General Plan, LCP, Monterey County Code (County Code) (Inland and Coastal Zoning), and other applicable County Code regulations to implement the goals, policies, and objectives of the HEU6 and bring the 2010 General Plan, LCP, and County Code into conformance with state housing law.
7. Provide CEQA streamlining for housing development consistent with the HEU6, 2010 General Plan, LCP, and County Code.

#### 6.1.1.2 Feasibility

Section 15126.6(f)(1) of the CEQA Guidelines identifies the factors to consider to determine the feasibility of potential project alternatives: site suitability; economic viability; availability of infrastructure; General Plan consistency; other plans or regulatory limitations; jurisdictional boundaries; and whether the project proponent can reasonably acquire, control, or otherwise have access to the alternative site. None of these factors establishes a fixed limit on the scope of reasonable alternatives. Finally, an alternative need not be considered if its environmental effects cannot be reasonably ascertained, and if implementation of such an alternative is remote or speculative.

#### 6.1.1.3 Evaluation of Significant Impacts

The CEQA Guidelines, Section 15126.6 (f), states that "alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project." Alternatives that do not avoid or substantially lessen at least one significant impact of the project do not need to be analyzed in an EIR.

As described in Chapter 4, Environmental Analysis, and summarized in Table ES-1 in the Executive Summary, the project would result in potentially significant impacts (before mitigation) for the following CEQA resource topics: aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, geology and soils (paleontological resources), greenhouse gas (GHG) emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, public services, recreation, transportation, Tribal Cultural Resources, utilities and service systems, and wildfire. Impacts related to aesthetics, agriculture and forestry resources, air quality, biological resources, GHG emissions, hydrology and water quality (groundwater recharge and supply), land use and planning, transportation (vehicle miles traveled [VMT]), and utilities and service systems (water supply) would remain significant and unavoidable. All other significant impacts identified in Chapter 4 of this PEIR would be reduced to below a level of significance through the implementation of the mitigation framework identified in Chapter 4 and through compliance with applicable federal, state, regional, and local law and regulations.

The project would result in less than significant impacts without mitigation for the following resource topics: energy, geology and soils (except paleontological resources), mineral resources, and population and housing.

### 6.1.2 Alternatives Suggested During the Scoping Process

The Notice of Preparation for the project was issued on October 21, 2024, and a public scoping meeting was held on November 7, 2024. The Notice of Preparation, written comments received, and a summary of the comments are included in Appendix A.

The scoping comments included the following suggested project alternatives and features. The description below also indicates if the alternative has been carried forward for evaluation or dismissed from further consideration.

One public scoping comment from LandWatch Monterey County suggested the need to remove several opportunity sites from the Sites Inventory to avoid significant adverse impacts related to agriculture, transportation (VMT), GHG and air pollutant emissions, biological resources, and "other impacts related to development in rural Greenfield areas rather than urbanized infill areas." The opportunity sites suggested for removal include Sites 1, 2, 24 through 26, 40, 47, 48, and 52.[1] The alternatives evaluated below consider elimination of the majority of the sites suggested for removal by LandWatch Monterey County.

### 6.1.3 Alternatives Considered and Eliminated During the Project Planning Process

Section 15126.6(c) of the CEQA Guidelines provides that an EIR should both identify alternatives that were considered by the lead agency but were rejected and briefly state the reasons underlying the lead agency's determinations. Among the factors that may be used to eliminate alternatives from detailed consideration in the EIR are the failure to meet most of the basic project objectives, infeasibility, or inability to avoid significant environmental effects.

The following section describes alternatives or alternative concepts that were given consideration by the lead agency but rejected from further analysis in the PEIR.

The project objective to "meet the state-mandated Sixth Cycle RHNA for the County" was given particular importance because not doing so could have potentially serious consequences for the County, including limited access to state funding as well as potential for lawsuits. When a jurisdiction's Housing Element is found to be out of compliance, its General Plan is at risk of being deemed inadequate and, therefore, invalid. If a jurisdiction is sued over an inadequate General

[1] The public scoping comment from LandWatch Monterey County referred to a previous iteration of Opportunity Site 52, which was removed and replaced with a new Opportunity Site 52 in a different location. The public controversy regarding new Opportunity Site 52 is discussed under Potential Areas of Controversy and Issues to Be Resolved in the Executive Summary of this PEIR.

Plan, the court may impose requirements for land use decisions until the jurisdiction brings its General Plan, including its Housing Element, into compliance with state housing law.

#### 6.1.3.1 RHNA Only Alternative

As described in Chapter 3, Project Description, the California Housing and Community Development Department (CA HCD) recommends a buffer of 15 to 30 percent or more units in each income category to account for potential site-specific constraints or delays in development, particularly for lower-income housing. This buffer complies with the purpose of Senate Bill 166 (No Net Loss Law) to ensure that the County maintains adequate capacity throughout the 8-year planning period. This alternative would include only enough opportunity sites in the Sites Inventory to meet the state-mandated RHNA; it would not provide a buffer for additional units in any of the income categories. This alternative was rejected from further consideration because the proposed reduction in overall units would not meet the project objective to "provide adequate buffer with additional RHNA units to comply with the purpose of Senate Bill 166 (No Net Loss Law)" and would result in an unapproved Housing Element by CA HCD. Further, this alternative would be inconsistent with the No Net Loss Law.

#### 6.1.3.2 Alternative Sites Inventory Alternative

This option is an "Off-Site" or "Alternative Sites" alternative. An "Alternative Sites" alternative would include a revised Sites Inventory with different opportunity site locations in the UMC, as well as potentially different densities and other zoning assumptions. There are theoretically infinite possible alternative site choices for opportunity sites. This option was rejected primarily because of the nature of the project. The RHNA was mandated specifically for the UMC. The opportunity sites and proposed zoning were chosen to comply with state housing law and local requirements, to ensure a compliant Housing Element. To do so, sites and zoning were chosen based on proximity to existing urban development and public services and utilities, and to provide sufficient housing capacity to meet the RHNA target with a reasonable capacity buffer. There are a number of sites that were considered for the Sites Inventory and ultimately excluded for various reasons. For instance, Site 7 is a feasible alternative site but was removed from the Sites Inventory and replaced by Site 53 at the request of the City of Marina.[2] Other sites considered were eliminated due to impacts on resources (e.g., visual resources, biological resources), infrastructure (e.g., water, sewer) constraints, urban sprawl, and property owner requests. In addition, the County conducted a robust community engagement process to refine and balance site selection. Therefore, there are several sites that County staff may not have considered originally but were ultimately added to or eliminated from the Sites Inventory based on community input and at the request of property owners. This deliberative process occurred primarily before the HEU6 was submitted for review by CA HCD.

[2] Both Site 7 and Site 53 are owned by the University of California.

#### 6.1.3.3 Expansion into Open Space Alternative

The Expansion into Open Space Alternative would focus more opportunity sites on peripheral sites and undeveloped land, both to reduce neighborhood opposition from increased density and to allow for easier lot consolidation or land assemblage of large housing sites.[3] However, this alternative was rejected from further consideration because it would increase sprawl, VMT, GHG emissions, infrastructure costs, and potential wildfire exposure.

#### 6.1.3.4 Infill Only Alternative

This alternative would focus all opportunity sites in infill areas of the UMC only. These could include vacant urban parcels, commercial conversions, and urban or "downtown" areas of the UMC. The Infill Only Alternative supports the intent of Senate Bill 375, smart growth, and other climate goals since it would focus development closer to existing commercial uses (e.g., employment, shopping, restaurants), thereby encouraging active transportation, transit use, shorter vehicle trips for reduced VMT and associated criteria air pollutants (air quality), and GHG emissions. This alternative would also reduce potential impacts related to wildfire since it would focus development in already developed areas of the UMC rather than in the Wildland-Urban Interface (WUI). However, this alternative was rejected from further consideration due to insufficient housing capacity to meet the RHNA target with a reasonable capacity buffer and potential displacement of existing urban uses in infill areas. For instances, communities within UMC with capacity for infill development include Pajaro, Castroville, Chuluar, Boronda, San Ardo, San Lucas, and Bradley, which are generally small communities. The Sites Inventory includes infill sites in these communities where opportunity exists. However, the capacity of these sites alone is insufficient to meet the County's RHNA. Additionally, all of the unincorporated communities listed above are considered disadvantaged communities,[4] and locating opportunity sites exclusively in these areas would conflict with state requirements for Affirmatively Furthering Fair Housing.[5] Given that all housing units would be in existing urbanized areas, this alternative would meet neither state requirements nor the project objective to meet housing needs of all economic segments of community members, furthering fair housing.

#### 6.1.3.5 Transit-Oriented Development Alternative

The Transit-Oriented Development Alternative would focus opportunity sites around existing and planned transit facilities. This alternative was considered as a potential option to reduce impacts

[3] Lot consolidation or assemblage typically facilitates increased residential development capacity (CA HCD 2020).

[4] Disadvantaged communities are defined by Senate Bill 1000 as those disproportionally burdened by multiple sources of pollution and with population characteristics that make them more sensitive to pollution. The Governor's Office of Land Use and Climate Innovation updated its General Plan Guidelines to provide guidance on the preparation of General Plan Environmental Justice Elements in compliance with SB 1000, including recommendations on screening methods to identify disadvantaged communities. The County uses these screening methods in its Draft Environmental Justice Element to identify disadvantaged communities within UMC.

[5] The Affirmatively Furthering Fair Housing Act (Assembly Bill 686) requires that a jurisdiction's Housing Element promote inclusive communities and further housing choice through government programs, policies, and operations that recognize existing racial and economic disparities and remediate these disparities.

related to VMT. However, this alternative was rejected from further consideration because there are no high-quality transit facilities or hubs in UMC. As described in Section 4.11, Land Use and Planning, and Section 4.16, Transportation, not all opportunity sites have convenient access to public transit because some areas in the UMC are not adequately served by the existing transit system. Of the 56 opportunity sites included in the Sites Inventory, 51 sites are within 0.5 mile of existing transit stops; however, several opportunity sites are in areas that have gaps in the pedestrian network and do not currently provide direct connections to established transit networks, and even for sites that do have connections, the transit network is not considered high quality. In some cases, transit facilities such as bus stops may be nearby, but bus routes and service frequencies are limited. Therefore, implementation of the Transit-Oriented Development Alternative would not adequately address VMT-related impacts.

#### 6.1.3.6 Reduced Wildfire Risk Alternative

This alternative would avoid opportunity sites in WUI areas, Very High Fire Hazard Severity Zones (FHSZs), and on slopes greater than 25 percent to reduce the risk of exposure to the uncontrolled spread of a wildfire. The Reduced Wildfire Risk Alternative was rejected from further consideration because many of the opportunity sites and other potential housing locations in UMC are in WUI areas, Very High FHSZs, and/or on slopes greater than 25 percent. Consequently, removing these sites from the Sites Inventory would preclude the County from providing sufficient housing capacity to meet the RHNA target with a reasonable capacity buffer. Further, implementation of existing federal, state, and local laws and regulations, as well as the mitigation measures identified in Section 4.19, Wildfire, were determined to reduce the wildfire impact to less than significant. Therefore, there are no significant and unavoidable impacts related to wildfire.

## 6.2 Alternatives Evaluated in the Draft EIR

The following alternatives are analyzed in this chapter:

- **Alternative 1:** No Project Alternative
- **Alternative 2:** Agricultural Preservation Alternative
- **Alternative 3:** Water Conservation Alternative

The alternatives considered were evaluated for their potential feasibility and their ability to achieve most of the project objectives and reduce project impacts. These alternatives were determined to adequately represent the range of feasible alternatives required under CEQA for the project. The No Project Alternative is included, as required by CEQA Guidelines, Section 15126.6(e), although it would not meet the basic project objectives. Both Alternative 2 and Alternative 3 are potentially feasible options that could meet or partially meet all of the project objectives. Detailed descriptions of the alternatives are presented below, along with an evaluation of their environmental impacts.

### 6.2.1 Alternative 1: No Project Alternative

The discussion of the No Project Alternative must examine the existing conditions and reasonably foreseeable future conditions that would exist if the project were not approved based on current plans and consistent with available infrastructure and community services (Section 15126.6[e] of the CEQA Guidelines). The No Project Alternative assumes that the project would not take place. In this scenario, the 56 opportunity sites would not be incorporated into the HEU6 Sites Inventory and there would be no change in zoning or General Plan land use designations on any sites. The No Project Alternative in this case represents the continuation of existing zoning and General Plan designations and full buildout under those existing designations is assumed to occur under this Alternative. Typical development assumptions are included in the analysis of this alternative below, including compliance with applicable regulations or typical County-required measures.

However, as a consequence of non-compliance with state-mandated requirements, this alternative assumes that some housing projects in the UMC would use "Builder's Remedy" provisions of state housing law and not comply with existing zoning requirements.[6] Without an adopted, substantially compliant Housing Element, "Builder's Remedy" law allows for applicants to propose housing development projects (including mixed-use projects) in any zoning district, at densities that would not typically be allowed, or that otherwise do not comply with local standards. As such, the No Project Alternative could result in some housing projects in the UMC proceeding through use of the "Builder's Remedy" in addition to other Housing Accountability Act tools or court orders. Development accommodated by these tools rather than a certified Housing Element could result in inconsistencies with the General Plan and potentially undesirable patterns of development, such as urban sprawl and development in areas of UMC where growth is not planned or in areas without water, sewer, and other public services or public transportation. Alternatively, Builder's Remedy projects could result in lower than ideal housing densities in areas already served by water and sewer utilities.[7]

While some Builder's Remedy projects may be larger and include more intensive development than is allowed under existing zoning and land use designations, other Builder's Remedy projects may be consistent with or smaller/less intensive than the planned density. Because the No Project Alternative would not rezone any sites to High Density Residential (HDR) as the project would,

[6] The "Builder's Remedy" refers to a provision under the Housing Accountability Act that limits local jurisdictions without a state-certified Housing Element ability to deny certain housing projects that meet specific affordability criteria, even if the project does not comply with the local General Plan or zoning. Generally, there is no limit on the maximum size of a builder's remedy project in state law, although the minimum size is two dwelling units and recently enacted legislation imposes some density limits. When processing builder's remedy applications, the County is still required to adhere to the California Coastal Act, implemented through the County's Local Coastal Program, and CEQA (refer to California Government Code, Section 65589.5[e]). However, it is possible that a Builder's Remedy project may be combined with ministerial streamlining, such as SB 2011 or SB 35, allowing the County to process it ministerially (County HCD 2026).

[7] The County can deny Builder's Remedy applications if it is found that the housing development or emergency shelter would have a specific adverse impact on public health and safety, and there is no way to mitigate or avoid the impact without making the development unaffordable. The impact must be based on objective, written public health or safety standards in place when the application was deemed complete.

individual projects proposed under the No Project Alternative could be smaller than the density and intensity of development assumed for opportunity sites under the project. Additionally, the No Project Alternative would not facilitate housing developments to the same extent as the proposed project without implementation of the housing programs included in the HEU6 that are specifically designed to encourage and facilitate a variety of housing types in UMC. County processing for Builder's Remedy projects could require significant staff resources thereby competing with resources needed to permit large residential projects exceeding the planned density and intensity of development. Because of the reasons described above, this PEIR assumes that, overall, both fewer and smaller residential developments would occur under the No Project Alternative compared to the project.

This alternative would not accomplish any of the project objectives (refer to Table 6-2, Ability of Project Alternative to Meet the Project Objectives). Additionally, the Builder's Remedy projects that would occur under the No Project Alternative would allow for unplanned housing growth that could result in significant impacts on several resource areas, such as aesthetics, agricultural and forest resources, biological resources, cultural resources, GHG emissions, land use and planning, and transportation, as described further below. However, the PEIR evaluates the No Project Alternative because it is required by Section 15126.6(e) of the CEQA Guidelines. As described in Section 6.3, Environmentally Superior Alternative, the County would face serious consequences if the No Project Alternative is implemented (i.e., no compliant Housing Element is adopted).

#### 6.2.1.1 Impact Analysis

### Aesthetics

As described above, some Builder's Remedy projects could develop at higher densities than is allowed by existing land zoning and land use designations; however, without the rezoning or implementation of the HEU6 programs designed to encourage and facilitate housing development included as part of the project, this analysis assumes that the No Project Alternative would result in development of fewer and smaller housing units compared to the proposed project. As such, the No Project Alternative could result in reduced impacts on visual resources. As described in Section 4.1, Aesthetics, applicable General Plan and Local Coastal Program – Land Use Plans (LCP – LUP) policies, zoning regulations, design standards, CEQA review process, and project-level review procedures are intended to minimize visual incompatibilities, reduce potential obstruction of scenic vistas, and preserve significant natural features. However, Builder's Remedy would allow for development proposals that do not comply with applicable General Plan, zoning regulations, and design standards. Therefore, these regulatory requirements, intended to reduce the severity of incremental visual changes in the UMC, may not be applied to future development under the No Project Alternative. Discretionary housing developments under this alternative would be evaluated for potential impacts on visual resources and mitigated, as necessary, on a project-by-project basis under CEQA.

Although the scale of development would be substantially reduced under the No Project Alternative compared to the project, Builder's Remedy projects could result in significant impacts related to aesthetics because compliance with applicable General Plan, zoning regulations, and other local design standards would not be required for projects that meet certain affordability criteria. Furthermore, Mitigation Measure (MM-) AES-OBJ-1, MM-AES-OBJ-2, and MM-AES-CONS-3, which require objective design standards and visual protection measures, would not be applied to future housing projects under the No Project Alternative. Therefore, impacts on aesthetics could be significant and unavoidable and would be increased from the project.

### Agriculture and Forestry Resources

As described in Section 4.2, Agriculture and Forestry Resources, none of the opportunity sites are currently under Williamson Act Contract. However, Opportunity Sites 1 and 2 are zoned F/40 (Farmland, 40 acres per dwelling unit), and Opportunity Sites 5 and 6 are zoned MDR/4-A-UR (Medium Density Residential/4 units per acre-Limited Agricultural-Urban Reserve) with the Limited Agricultural overlay district. The No Project Alternative would not rezone these sites as HDR. Therefore, the No Project Alternative may substantially reduce this impact compared to the project, given that no agriculturally zoned sites would be rezoned to HDR. However, it should be noted that Site 1 was included in the Sites Inventory because the property owner is highly interested in residential development on that site.

Additionally, because this alternative would not result in a compliant Housing Element, possible Builder's Remedy projects could develop on properties zoned for agriculture under this alternative. As noted in Section 4.2, the County considered sites in priority planning areas and infill when selecting opportunity sites to grow areas where there is existing infrastructure and already identified growth areas, to avoid sprawl or haphazard development, and to avoid development on agricultural lands. Sites with agricultural resources and forest land or timberland resources included in the Sites Inventory were only chosen if in already identified growth areas and adjacent to urbanized areas. The No Project Alternative would allow for Builder's Remedy projects that could result in conversion of farmlands and forest lands in other areas of UMC that are not adjacent to urbanized areas.

Moreover, buildout of the No Project Alternative would still include residential development on sites either mapped as Important Farmland or considered forest land and/or timberland, which are currently zoned for residential development (e.g., Sites 3, 5, 8, 16, 18 through 22, 26, 37, 40, 43, 45, 48, and 56). In addition, opportunity sites with active agricultural uses could still be developed with residential uses and take active agriculture out of production, given that some existing zoning designations allow for residential development (e.g., at Sites 19, 26, and 37), although this could be a lesser scale than the project due to the reduced scale of development that would likely occur under the No Project Alternative. Therefore, impacts on agricultural resources could be reduced compared to the project due to the reduced scale of development and because this alternative would

not directly rezone sites to HDR. However, because the No Project Alternative could result in Builder's Remedy development on properties zoned for agriculture, mapped as Important Farmland, or considered forest land and/or timberland, this alternative would still result in significant and unavoidable impacts on agriculture and forestry resources.

### Air Quality

The No Project Alternative would continue to allow development under existing zoning and land use designations. As described in Section 6.2.1, Alternative 1: No Project Alternative, some Builder's Remedy projects could develop at higher densities than what is allowed by existing land zoning and land use designations; however, without the HDR rezones or implementation of the HEU6 programs designed to encourage and facilitate housing development included as part of the project, this analysis assumes that the No Project Alternative would result in development of fewer housing units compared to the proposed project. Therefore, buildout of the No Project Alternative may not exceed the growth projections used in the Monterey Bay Air Resources District 2012–2015 Air Quality Management Plan, as the project would. Additionally, due to the reduction in scale of development that would likely occur under the No Project Alternative, temporary construction-related air quality impacts from grading and construction activities and long-term air quality impacts from building operation (e.g., energy usage, maintenance) would be lower than those described for the project. As such, air quality impacts would be reduced compared to the project. However, without detailed air quality modeling to estimate projected criteria air pollutant emissions under this alternative and due to the potential for large Builder's Remedy projects, the PEIR conservatively assumes that total daily emissions would not be reduced to below the Monterey Bay Air Resources District emissions thresholds because a finding of no impact cannot be made without evidence. Therefore, impacts related to criteria air pollutant emissions would remain significant and unavoidable, similar to the project.

### Biological Resources

The No Project Alternative would result in substantially less overall future residential growth in the UMC than the project (refer to Section 6.2.1). Such growth would be constrained by existing adopted plans, policies, and regulations, including the County's adopted development standards for biological resource protection. Residential development would continue to be subject to the applicable policies and standards in the 2010 General Plan, Community and Area/Master Plans, 1982 General Plan (for coastal areas), the County's zoning ordinances, LCP – LUP, and other applicable regulations of the County Code. Future residential development within 100 feet of an environmentally sensitive habitat would be subject to the County's biological survey requirements under County Code, Sections 20.66.020 (coastal) and 21.66.020(C) (inland). Additionally, Section 21.64.260 of the County Code, as well as Sections 20.144.050 and 20.146.060 of the Coastal Implementation Plan, provide procedures and requirements for tree removal. Several Community and Area/Master Plans also include policies and development standards for environmentally

sensitive habitat and trees, such as setbacks, avoidance, and construction requirements. Additionally, County Code, Sections 20.66.020 (coastal, set forth in Parts 2-5 of the Monterey Coastal Implementation Plan) and 21.66.020(D) (inland, in the Code section), set forth development standards protecting biological resources, including requiring the use of native species consistent with and found in the project area, conditions of approval to avoid significant impacts on rare, threatened and endangered birds during their breeding and nesting seasons, and limiting removal of Indigenous vegetation and land disturbance within 100 feet of environmentally sensitive habitats. Continued compliance with these plans, policies, and regulations, as well as the overall reduction in development, would ensure that impacts on biological resources under the No Project Alternative would be less adverse than those described for the project in Section 4.4, Biological Resources. Therefore, development under the No Project Alternative would be less than significant with implementation of state and County laws and regulations.

### Cultural Resources

The No Project Alternative would allow development at a smaller scale than under the project but could still entail ground disturbance or excavation activities on vacant or undeveloped sites. Further, the project selected opportunity sites based on proximity to existing urban development, public services, and utilities to grow areas where there is existing infrastructure and already identified growth areas, to avoid sprawl or haphazard development. Under the No Project Alternative, residential development would occur in existing residentially zoned sites and could also occur in zones where residential use is not allowed through Builder's Remedy applications. Therefore, the No Project Alternative leaves the potential for applicants to develop in rural areas of the UMC, which could contain previously undisturbed, buried archaeological resources and human remains. Ground disturbance from development allowed under existing zoning would still have potential impacts on archaeological resources and human remains. Additionally, the potential for the No Project Alternative to result in impacts on historical resources would be similar to the project, although future residential developments would likely undergo environmental review under the CEQA process to ensure direct impacts of residential development would be mitigated to the greatest extent feasible. Therefore, impacts would be similar to the project.

### Energy

As described in Section 6.2.1, some Builder's Remedy projects could develop at higher densities than what is allowed by existing land zoning and land use designations; however, without the HDR rezones or implementation of the HEU6 programs designed to encourage and facilitate housing development included as part of the project, this analysis assumes that the No Project Alternative would result in development of fewer housing units compared to the proposed project. Therefore, construction- and operation-related energy use from development allowed under the No Project Alternative would be less than under the project. Impacts would be reduced compared to the project and would remain less than significant.

### Geology and Soils (Paleontological Resources)

The No Project Alternative would allow for development involving construction or ground disturbance that could expose and loosen soils and increase the potential for erosion. While the opportunity sites are outside Alquist-Priolo fault zones, development under the No Project Alternative could occur in other areas of the UMC. As described for future construction under the project, development under the No Project Alternative would be required to comply with California Building Code requirements, ensuring the stability of new structures during seismic events or due to expansive soils. Further, the County could deny Builder's Remedy projects that have a significant, adverse impact on public health and safety as it relates to geological and soil stability of the site and proposed development.

Development allowed under the No Project Alternative, similar to development facilitated by the project, would occur in areas of high paleontological sensitivity; however, development allowed under the No Project Alternative would be typically smaller in scale and scope than allowed under the project (refer to Section 6.2.1). Additionally, developers with projects in the inland UMC would be required to complete Phase I (reconnaissance level) paleontological reviews in any formation known to yield important elements of the fossil record in accordance with Policy OS-7.1 of the 2010 General Plan Conservation and Open Space Element. Developers with projects in the coastal UMC would be required to comply with development standards in the applicable Coastal Implementation Plan. In the North County Coastal and Carmel Area LUP areas, mitigation plans are required for where construction on or reconstruction impacts on an identified archaeological or paleontological site cannot be avoided. Impacts would be similar to the project.

### Greenhouse Gas Emissions

As described in Section 6.2.1, some Builder's Remedy projects could develop at higher densities than what is allowed by existing land zoning and land use designations; however, without the HDR rezones or implementation of the HEU6 programs designed to encourage and facilitate housing development included as part of the project, this analysis assumes that the No Project Alternative would result in development of fewer housing units compared to the proposed project. Temporary construction-related GHG emissions that result from grading and construction of new development and long-term impacts resulting from building operation (e.g., energy use, maintenance, and traffic) would be lower than under the project. Rather than being streamlined under the HEU6, residential developments under the No Project Alternative would likely undergo environmental review under the CEQA process with a project-specific analysis and project-specific mitigation measures as necessary to minimize potential effects of the development. Therefore, impacts would be reduced compared to the project.

### Hazards and Hazardous Materials

Under the No Project Alternative, the transport, storage, and use of hazardous materials associated with construction and operation of development, such as paints and solvents, would be required to occur in accordance with applicable regulations, similar to the project. Where known soil or groundwater contamination exists, remediation and compliance with federal, state, and local regulations would be required and enforced by the Certified Unified Program Agency (i.e., County Hazardous Materials Management Services) to allow for development. However, the No Project Alternative could result in impacts related to previously undiscovered soil or groundwater contamination without the implementation of the Phase I Environmental Site Assessments (ESAs) and Phase II ESAs and soil sampling, as necessary, under MM-HAZ-OBJ-1, MM-HAZ-CONS-2, MM-HAZ-OBJ-3, MM-HAZ-CONS-4, MM-HAZ-OBJ-5, and MM-HAZ-CONS-6. Nevertheless, under the No Project Alternative, the location of residential developments would be evaluated for potential hazardous materials sites on a project-by-project basis. Moreover, discretionary projects would undergo environmental review under the CEQA process to ensure impacts related to hazardous materials would be mitigated to the greatest extent feasible. Further, the County could deny Builder's Remedy projects that have a significant, adverse impact on public health and safety as it relates to hazardous materials contamination at or beneath the specific site.

Similar to the project, any sites in airport safety zones would be required to comply with applicable height and development restrictions to avoid safety hazards to aircraft and airport operations, or to prepare a Notice of Intent to Overrule an Airport Land Use Commission Determination. Impacts would therefore be less than significant, slightly reduced from the project's impacts.

### Hydrology and Water Quality

The No Project Alternative would allow development that could include construction activities that would loosen and expose soils, otherwise increase the potential for soil erosion and sedimentation, and create new or additional impervious surfaces. Due to the more limited extent of development that can occur under the No Project Alternative (refer to Section 6.2.1), these impacts would be less than those under the project. Similar to the project, development allowed under the No Project Alternative would be required to comply with federal, state, and local regulations for stormwater management, erosion control, site drainage, and flood control (e.g., National Pollutant Discharge Elimination System Construction General Permit, municipal separate storm sewer system permit, Stormwater Pollution Prevention Plan, Monterey County Stormwater Ordinance, Monterey County Erosion Control Ordinance, Post-Construction Stormwater Management Requirements [PCRs]). As such, impacts related to surface and groundwater quality, site drainage and hydrology, and flood hazards would be less than significant as described for the project. The smaller total buildout allowed under existing zoning would result in slightly reduced severity of impacts on groundwater recharge and supplies than the project. However, given the critical importance of groundwater in UMC, any new development could result in impacts on

groundwater recharge and supplies. While implementation of MM-HYD-OBJ-1 and MM-HYD-CONS-2 would not occur under the No Project Alternative, development projects would likely be evaluated on a project-by-project basis under the CEQA process. Further, the County could deny Builder's Remedy projects that have a significant, adverse impact on public health and safety, including a lack of sufficient groundwater supply to support the development. Therefore, impacts would be similar to and slightly reduced compared to the project. However, impacts on groundwater recharge and supplies would remain significant and unavoidable.

### Land Use and Planning

Under the No Project Alternative, the opportunity sites would retain their existing zoning, allowing future buildout in accordance with that zoning. Similar to the project, the No Project Alternative would not alter connectivity with adjacent areas or divide established communities. Future development under the No Project Alternative would be required to comply with federal, state, and local laws and regulations, similar to the project. However, without an adopted Housing Element under the No Project Alternative, Builder's Remedy projects could proceed, allowing for development proposals that do not comply with applicable General Plan and zoning regulations and design standards. Therefore, impacts on land use and planning would be increased compared to the project and would still be significant and unavoidable.

### Mineral Resources

The No Project Alternative would allow development under existing zoning on residentially zoned sites, which are not on mineral resources extraction sites. As described for the project, potential housing sites throughout the UMC are mapped in or partially in MRZ-2, which denotes areas where adequate information indicates that significant mineral resources are present or likely to be present, and MRZ-3, which represents areas where the significance of mineral resources cannot be evaluated due to limited data. However, these sites are unlikely to be used for mineral resource production, even without future residential development on the sites, due to existing zoning, current on-site and adjacent uses, and ownership of the sites. Under the No Project Alternative, applicants for each individual residential project in UMC that would eliminate the potential for extraction of mineral resources would need to prepare a Statement of Reasons to extinguish mineral resources, in accordance with California Public Resources Code (PRC), Sections 2762 and 2763. With preparation of a Statement of Reasons for any development that would eliminate the potential for extraction of the mineral resources, impacts on mineral resources would be less than significant, similar to the project.

### Noise

As described in Section 6.2.1, some Builder's Remedy projects could develop at higher densities than what is allowed by existing land zoning and land use designations; however, without the HDR rezones or implementation of the HEU6 programs designed to encourage and facilitate housing

development included as part of the project, this analysis assumes that the No Project Alternative would result in development of fewer housing units compared to the proposed project. As such, reduced impacts associated with temporary construction-related noise would result from grading and construction of development. Less intensive long-term noise impacts resulting from building operation would also occur. Future residential development projects in the UMC would be required to comply with applicable noise regulations, including 2010 General Plan Safety Element policies and best management practices in compliance with County Code Chapter 10.60, Noise Control. Therefore, noise impacts would be both less than significant and reduced compared to the project.

### Public Services

Development allowed under the No Project Alternative would incrementally increase demand for public services compared to existing conditions; however, this increase in demand would be substantially less than under buildout of the project due to the reduced scale of development allowed. The No Project Alternative would not include mitigation measures, requiring payment of development impact fees for future residential projects (MM-PS-OBJ-1, MM-PS-CONS-2, MM-PS-OBJ-3, and MM-PS-CONS-4); however, the capacity of existing public services to meet future demand of individual housing projects would be evaluated on a project-by-project basis. Due to the reduction in projected housing units (and associated demand for public services), impacts under the No Project Alternative would be substantially reduced compared to the project. Further, the County could deny Builder's Remedy projects that have a significant, adverse impact on public health and safety, including the inability of the existing fire and police services to meet increased demand. Therefore, impacts related to public services would remain less than significant under the No Project Alternative.

### Recreation

Development allowed under the No Project Alternative would incrementally increase demand for recreational facilities compared to existing conditions; however, this increase in demand would be substantially less than under buildout of the project due to the reduced scale of development allowed. The No Project Alternative would not include mitigation measures, requiring provision of on-site parkland/open space or payment of fair share in-lieu fees for future residential projects (MM-REC-OBJ-1 and MM-REC-CONS-2); however, the ability of existing recreational facilities to meet future demand of individual housing projects would be evaluated on a project-by-project basis. Due to the reduction in projected housing units (and associated demand for recreational facilities), impacts under the No Project Alternative would be substantially reduced compared to the project. Therefore, impacts related to public services would less remain than significant under the No Project Alternative.

### Transportation

Under the No Project Alternative, temporary construction-related traffic impacts from worker vehicle trips and vendor/hauling trips and long-term transportation impacts from operational vehicle trips would be substantially lower than for the project. No additional impacts related to hazardous design features or inadequate emergency access would occur under the No Project Alternative because discretionary projects would be subject to CEQA environmental review and would require mitigation to reduce potential significant impacts on the extent feasible. Further, the County can deny Builder's Remedy applications if it is found that the housing development or emergency shelter would have a specific adverse impact on public health and safety, and there is no way to mitigate or avoid the impact without making the development unaffordable. Therefore, as described for the project, impacts related to these topics would be less than significant.

The No Project Alternative would allow for Builder's Remedy projects, which could occur outside planned growth areas away from existing and planned multimodal facilities. Therefore, the No Project Alternative could increase impacts related to multimodal facilities and associated impacts on VMT. The No Project Alternative assumes a business as usual VMT scenario; therefore, it is unlikely that buildout under the No Project Alternative would achieve 15 percent below existing average VMT per capita. Due to the less intensive development expected to occur under the No Project Alternative, impacts would be reduced compared to the project. Nevertheless, without comprehensive transportation modeling to estimate projected VMT under this alternative, this PEIR conservatively assumes that VMT would not be reduced to 15 percent below existing average VMT per capita because a finding of reduced impact cannot be made without evidence. Therefore, impacts would remain significant and unavoidable.

### Tribal Cultural Resources

The No Project Alternative would allow development at a smaller scale than under the project but could still entail ground disturbance or excavation activities on vacant or undeveloped sites. Further, the project selected opportunity sites based on proximity to existing urban development, public services, and utilities to grow areas where there is existing infrastructure and already identified growth areas, to avoid sprawl or haphazard development. Under the No Project Alternative, residential development would occur in existing residentially zoned sites and could also occur in zones where residential use is not allowed through Builder's Remedy applications. Therefore, the No Project Alternative leaves the potential for applicants to develop in rural areas of the UMC, which could contain previously undisturbed, buried Tribal Cultural Resources (TCRs). Ground disturbance from development allowed under existing zoning would still have potential impacts on TCRs. However, future residential developments would likely undergo environmental review under the CEQA process to ensure direct impacts of residential development would be mitigated to the greatest extent feasible. Tribes would be consulted on a project-by-project basis, as applicable for the site location. Therefore, impacts would be similar to and slightly reduced from the project.

### Utilities and Service Systems

Development allowed under existing zoning would occur under the No Project Alternative. Such development would incrementally increase demand for water, wastewater, electricity, natural gas, telecommunications, and solid waste service compared to existing conditions. This increase in demand would be substantially less than under buildout of the project due to the reduced scale of development allowed under existing zoning. However, the expansion of water and wastewater infrastructure would still be required for sites not already adjacent to existing infrastructure. As described in Section 4.18, Utilities and Service Systems, water supply in Monterey County is heavily constrained. The No Project Alternative would not include Housing Element programs or policies that require County coordination with water service providers and suppliers to achieve sub-basin sustainability and water allocations to accommodate future growth. Further, the No Project Alternative would not include mitigation measures, requiring development applications to prove adequate long-term water supply and wastewater treatment capacity (MM-UTL-OBJ-1 and MM-UTL-CONS-2). Consistent with 2010 General Plan Policies PS-1.1, PS-1.3, PS-1.6, PS-3.1, and implemented by Title 15 – Public Services, of the County Code, all discretionary projects will only be approved if the applicant proves that adequate public facilities and services either exist or will be provided concurrent with development, and that adequate long-term water supplies and wastewater services exist to serve the development. Due to the reduction in projected housing units (and associated water demand and wastewater generation), impacts on utilities and service systems under the No Project Alternative would be substantially reduced compared to the project. Further, the County could deny Builder's Remedy projects that have a significant, adverse impact on public health and safety, including a lack of sufficient water supply to support the development. However, given that water supply in Monterey County is heavily constrained, impacts related to water supply would remain significant and unavoidable under the No Project Alternative.

### Wildfire

Under the No Project Alternative, development would be allowed on sites that are mapped in or near state responsibility areas, the WUI, and High or Very High FHSZs, similar to the project. Construction would require building permits and would be required to comply with applicable fire code regulations, including the International Fire Code, International Building Code, California Fire Code, California Building Code, PRC, Title 18 of the County Code, and policies of the 2010 General Plan Safety Element, Areas and Master Plans, Community Plans, and LCP – LUP, which address the siting, construction, occupancy, and protection of development and people as it relates to wildfire hazards. As for the project, future residential development would be required to include fire protection measures, such as automatic sprinkler systems, fire detection and alarm systems, fire breaks, fire-retardant building materials, fuel modification measures, water storage tanks, alternative access routes, and adequate emergency access; thereby reducing the risk of damage from fire. The No Project Alternative would not mandate either evacuation map packets or evacuation educational

materials, as required by MM-WF-OBJ-1, MM-WF-CONS-2, MM-WF-OBJ-3, and MM-WF-CONS-4. Furthermore, Builder's Remedy applications could propose development in the state responsibility areas, WUI, High or Very High FHSZs, and properties with steep slopes. While the No Project Alternative would not include mitigation measures for projects on steep slopes or in state responsibility areas (MM-WF-OBJ-5 and MM-WF-OBJ-6), discretionary projects under the No Project Alternative would still be subject to County Code requirements for development on steep slopes and review by the Board of Forestry and Fire Protection for projects in the state responsibility area. Due to the reduction in development assumed under the No Project Alternative, it is likely that this alternative would reduce impacts related to vehicle congestion during emergency evacuations and development in the state responsibility areas, WUI, and High or Very High FHSZs. Therefore, with compliance with existing state and County laws and regulations, impacts would be both less than significant and decreased compared to the project.

### Cumulative Impacts

The contribution of the No Project Alternative to cumulatively considerable impacts would be slightly reduced compared to the project's contribution to cumulative impacts for the majority of resource areas. However, cumulative impacts would remain significant and unavoidable for aesthetics, agriculture and forestry resources, and land use and planning due to the potential for Builder's Remedy projects to develop in areas not planned for growth and development. Cumulative impacts related to water supply (hydrology and water quality, utilities and service systems) would remain significant due to the critical importance of groundwater in UMC. Additionally, cumulative impacts on air quality, GHG emissions, and transportation may be reduced under the No Project Alternative compared to the project due to the reduced scale of development overall; however, without detailed modeling to estimate projected emissions and VMT under this alternative, the PEIR assumes cumulative impacts would remain significant and unavoidable.

#### 6.2.1.2 Conclusion and Relationship to Project Objectives

Under the No Project Alternative, the HEU6 would not be implemented by the County. This alternative would continue to allow new residential development under the existing applicable County plans and policy framework. However, future housing production within UMC would not address changes to state housing law since the Fifth Cycle (2015–2023) Housing Element, and the County would not achieve the state-required RHNA for the HEU6. This alternative would not accomplish the project objectives to bring the 2010 General Plan or Zoning Ordinance (Inland and Coastal) into conformance with state housing law, including by providing adequate buffer with additional RHNA units to comply with the purpose of Senate Bill 166 (No Net Loss Law). Further, the No Project Alternative would not provide the necessary framework to promote affordable housing production in Monterey County to the same extent as the project. For example, as described in Section 3.5.1, Sites Inventory, the County increased its 2023–2031 RHNA buffer to 17 percent for the extremely low/very low income category and to 34 percent for the low income category, as

recommended by CA HCD.[8] Without the programs and incentives included in the HEU6, the residential development enabled under the No Project Alternative would not achieve the state-mandated lower- and moderate-income affordability targets. Further, the No Project Alternative would not provide CEQA streamlining for housing development consistent with the HEU6, LCP, 2010 General Plan, Zoning Ordinance (Inland and Coastal), and other applicable County regulations.

As described above, the No Project Alternative would not eliminate the significant and unavoidable impacts associated with the proposed project. Additionally, the No Project Alternative would not achieve project objectives and would be inconsistent with state housing and General Plan laws mandating the adoption and implementation of a Housing Element Update for the Sixth Cycle planning period.

### 6.2.2 Alternative 2: Agricultural Preservation Alternative

The Agricultural Preservation Alternative (Alternative 2) would remove selected opportunity sites that are currently zoned for farmland (i.e., F/40), have a Limited Agricultural overlay district, or are currently in use with agricultural activities to reduce the significant and unavoidable impact on agricultural resources described as project impacts in Section 4.2. There are two opportunity sites (Sites 1 and 2) that are currently zoned F/40 and two opportunity sites (Sites 5 and 6) that are currently zoned MDR/4-A-UR with the Limited Agricultural overlay district. Opportunity sites that support agricultural operations include Sites 1, 2, 19, 20, 21, 22, 24, 25, 26, and 37. However, a 74-unit residential project has recently been approved on Sites 20, 21, and 22 through a Builder's Remedy application; therefore, these sites are assumed for buildout under this alternative. The nine remaining opportunity sites that are currently zoned for farmland (i.e., F/40), have a Limited Agricultural overlay district, or support agricultural operations (Sites 1, 2, 5, 6, 19, 24, 25, 26, and 37), totaling 1,153 units, would be removed from the list of opportunity sites under this alternative to reduce significant and unavoidable impacts on agricultural resources.

It should be noted that the CA HCD recommends a buffer of 15 to 30 percent or more units in each income category to account for potential site infeasibility or delays in development, particularly for lower-income housing. This buffer complies with the purpose of Senate Bill 166 (No Net Loss Law) to ensure that the County maintains adequate capacity throughout the 8-year planning period. To maintain a 15 percent buffer for each income category as recommended by CA HCD, this Alternative would need to replace a total of 95 units in the extremely low/very low income category that would be removed due to the elimination of nine opportunity sites under the alternative. All other income categories would have sufficient units to maintain the 15 percent buffer above the RHNA; however, it is important to note that additional housing units in the other income categories would realistically be included with the extremely low/very low income units in replacement

[8] The CA HCD recommends a 15–30 percent buffer for lower-income (extremely low/very low and low) sites to protect the County from the "no net loss" provision.

housing projects for developers to gain a return on their investment. Therefore, CA HCD requires the Sites Inventory to include assumptions for RHNA distribution among all income categories, rather than assuming developments in the extremely low/very low income category only. To avoid speculating on the number of units needed in other income categories to replace 95 units in the extremely low/very low income category, this alternative includes replacement of the 1,153 total units that would be removed due to elimination of Sites 1, 2, 5, 6, 19, 24, 25, 26, and 37.

To replace the units that would be removed under this alternative, some areas currently zoned as Visitor Serving/Professional Office (VO) in the UMC would be rezoned as High Density Residential with a maximum of 25 dwelling units per acre (HDR/25) or 30 dwelling units per acre (HDR/30). Areas of UMC currently zoned as VO are primarily located along State Route (SR-) 68 and the Carmel River. As such, intensifying development in these areas could result in impacts and concerns related to infrastructure (e.g., water and sewer) constraints, vehicle traffic/congestion, and Affirmatively Furthering Fair Housing considerations. Additionally, VO zoned areas are likely to already be developed with existing uses, and CA HCD limits the percentage of already developed sites that can be included in the Sites Inventory. However, the areas proposed for this zoning change would be focused in more urban areas that have a higher likelihood of existing utilities and public infrastructure in place at or near the VO zoned sites. This would allow the County to provide more housing in areas already planned for development and to avoid development of housing on sites zoned for farmland or currently in use with agricultural activities.

The entire acreage of VO zoning districts would not be buildable due to slope, environmental constraints, and other factors; however, there would be more than enough capacity to replace enough units to maintain the 15 percent buffer. For instance, there are currently 387.8 acres of VO zoning districts in UMC. If all 387.8 acres were replaced with HDR/25 zoning, this would provide capacity for 9,695 units, which is well above the 1,153 units needed to replace the units removed to reduce impacts on agricultural resources. Therefore, to meet the 15 percent buffer for each income category as recommended by CA HCD, this alternative would need to rezone a smaller percentage of the total acreage of VO zoning districts in UMC as HDR/25 or HDR/30.

Although Sites 20, 21, and 22 are currently zoned Low Density Residential, these sites are currently used for agricultural operations. Given that Alternative 2 cannot eliminate impacts on agricultural resources associated with buildout of these three sites due to the approved Builder's Remedy project, the impact on agricultural resources would be reduced in severity but would remain significant and unavoidable, as described further below.

#### 6.2.2.1 Impact Analysis

### Aesthetics

Of the nine opportunity sites that would be eliminated under Alternative 2, three (Sites 19, 24, and 37) are currently located wholly or partially in the Design Control (D) zoning district and are

identified as having sensitive or highly sensitive visual sensitivity. As such, Alternative 2 would reduce impacts on aesthetics by not rezoning these opportunity sites or otherwise removing the existing Design Control (D) zoning overlays and associated protective provisions of the County Code applicable to development on these parcels. Other opportunity sites identified in the HEU6, including those currently located wholly or partially in special visual zoning overlays, would be rezoned under this alternative; therefore, the existing zoning overlays would be removed from these sites, rendering the protective provisions of County Code Chapters 20.44, 21.44, and 20.46 inapplicable to future development on these parcels.

Sites in VO zoning districts are likely to already be developed and/or focused in more urban areas of UMC; therefore, replacement sites in these areas could be considered less visually sensitive. However, the VO zoning districts are predominantly located within Carmel Valley and along State Route 68, which are considered visually sensitive areas (refer to Figure 4.1-2b and Figure 4.1-2c, Visual Sensitivity Areas). Additionally, State Route 68 is a designated State Scenic Highway. By replacing units removed under Alternative 2 with sites in the VO zones, this Alternative could increase impacts to scenic vistas, scenic resources within a State Scenic Highway, and visual character or quality associated with buildout of residential units within Carmel Valley and along State Route 68. Similarly, buildout of replacement units in the two areas of the VO zoning district outside existing urban areas (one is west of Greenfield and the other is southeast of King City, as shown on Figure 6-1, Visitor Serving/Professional Office Zones in Unincorporated Monterey County) could increase impacts to scenic vistas and visual character or quality associated with residential development on rural, undeveloped land.

As described for the project, proposed future development would be required to comply with the amended zoning code for HDR/25 or HDR/30, and go through project-level staff review during the application process for compatibility with surrounding visual resources by using appropriate siting, design, materials, and landscaping. Also, if the opportunity sites under Alternative 2 have the potential to result in adverse impacts on visual resources, MM-AES-OBJ-1, MM-AES-OBJ-2, and MM-AES-CONS-3 would be incorporated to reduce visual impacts and ensure compatibility with surrounding environment through objective design standards (ODS), tree removal standards, site and building design, building materials, colors, landscaping, and grading, building height, massing, setback, and orientation. MM-AES-OBJ-4 and MM-AES-CONS-5 would require fencing or screening material around active construction areas to reduce visual impacts by obstructing direct public views of construction activities. MM-AES-OBJ-6 would require that new development apply exterior lighting design standards to reduce potential lighting and glare impacts.

However, as described for the proposed project, specific impacts on particular scenic vistas and visual resources are unknown and would be speculative to analyze without project-specific details and fully developed ODS for each area plan, master plan, land use plan, and community plan areas. Therefore, significant and unavoidable aesthetic impacts would remain.

### Agriculture and Forestry Resources

Alternative 2 would preserve nine selected opportunity sites that are currently zoned for farmland (i.e., F/40), have a Limited Agricultural overlay district, or are currently in use with agricultural activities (i.e., Sites 1, 2, 5, 6, 19, 24, 25, 26, and 37) and would replace these sites with other development areas currently zoned for VO. Given that opportunity sites currently zoned for agriculture (Opportunity Sites 1 and 2) would be removed under this alternative, MM-AG-OBJ-1 and MM-AG-CONS-2 would not be required to mitigate impacts on land zoned for agriculture. No impacts would occur to agriculturally zoned sites under this alternative.

While Opportunity Sites 20, 21, and 22 are currently used for agricultural operations, a 74-unit residential project has recently been approved on these sites through a Builder's Remedy application and, therefore, must be assumed for buildout under this alternative. Alternative 2 would substantially reduce the severity of impacts on agricultural uses compared to the project due to the preservation of nine sites that are currently either zoned for farmland (i.e., F/40), have a Limited Agricultural overlay district, or are currently in use with agricultural activities. However, the conversion of existing agricultural uses at Sites 20, 21, and 22 to non-agricultural use would be a potentially significant impact because the land would be permanently removed from the potential for agricultural production. Additionally, while Alternative 2 would preserve nine opportunity sites with agricultural resources, there are an additional seven opportunity sites (i.e., Sites 3, 4, 12, 14, 15, 18, and 50; not including Sites 20, 21, and 22) included in this alternative that are at least partially mapped as Important Farmland (Prime Farmland, Farmland of Statewide Importance, or Unique Farmland) by the California Department of Conservation's Farmland Monitoring and Mapping Program. Therefore, impacts on existing agricultural operations and land mapped as Important Farmland would still occur under Alternative 2.

MM-AG-OBJ-3 and MM-AG-CONS-4, which require a Land Evaluation and Site Assessment report to quantitatively evaluate potential impact on agricultural resources for residential developments on opportunity sites with existing agricultural operations or land mapped as Important Farmland, would apply to Alternative 2. If the Land Evaluation and Site Assessment report determines that impacts on agricultural resources would be significant, a Farmland Mitigation Plan would be required as described under MM-AG-OBJ-1 and MM-AG-CONS-2. Additionally, MM-AG-OBJ-5 and MM-AG-CONS-6, which require compliance with agricultural buffer zone requirements, would apply to this alternative.

The only way to fully avoid impacts on agricultural resources would be to eliminate the potential for future development on all opportunity sites that are currently zoned or used for agricultural operations. Given that Alternative 2 would not eliminate impacts associated with buildout of Sites 20, 21, and 22, the impact on agricultural resources, while reduced in severity, would remain significant and unavoidable.

Additionally, development of opportunity sites that could be considered forest land or timberland would result in similar impacts on those described for the project in Section 4.2. As described therein, this impact would be significant because the forest land and timberland would be permanently removed. MM BIO-OBJ-1, MM BIO-CONS-2, and MM-BIO-CONS-5 would partially mitigate for impacts on forest vegetative communities by requiring the identification of sensitive vegetation communities (including forest and woodland vegetation) on each site and implementation of habitat creation, restoration, enhancement, or preservation. As such, although impacts on agriculturally zoned sites and existing agricultural uses would be substantially reduced, Alternative 2 would result in similar impacts on Important Farmland and forestry resources compared to the project. Impacts would remain significant and unavoidable.

### Air Quality

As explained above, buildout of Alternative 2 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites with agricultural resources and replaced in the VO zone. Because the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced associated mobile emissions. Therefore, impacts would be reduced compared to the project. However, without detailed air quality modeling to estimate projected criteria air pollutant emissions under this alternative, the PEIR conservatively assumes that total daily emissions would not be reduced to below the Monterey Bay Air Resources District emissions thresholds. Impacts related to criteria air pollutant emissions would remain significant and unavoidable, similar to the project.

### Biological Resources

The elimination of nine opportunity sites (i.e., Sites 1, 2, 5, 6, 19, 24, 25, 26, and 37) under Alternative 2 could reduce impacts on sensitive habitats and special-status species. For example, Sites 1 and 19 currently support annual grassland, Site 24 contains freshwater marsh, and Site 37 supports mixed conifer forest. Freshwater marsh and mixed conifer forest are considered sensitive vegetation communities. These sites would be removed under Alternative 2. Therefore, no impacts would occur to vegetation communities and the sensitive species supported at these sites under this alternative. Further, since the replacement housing units would be in areas currently zoned as VO, it is assumed that the majority of these units would be in existing urbanized or developed areas that do not support sensitive biological resources to the same extent as vacant or undeveloped sites. Nevertheless, there are two areas in the VO zoning district that are outside existing urban areas in UMC (one is west of Greenfield and the other is southeast of King City, as shown on Figure 6-1, Visitor Serving/Professional Office Zones in Unincorporated Monterey County). Given the location of these VO zones in rural, undeveloped areas of UMC, as well as the remaining opportunity sites included in Alternative 2 that support sensitive habitats and biological resources, this alternative could facilitate residential development on sites that support sensitive biological resources, similar

to the project. As such, residential development facilitated under Alternative 2 would impact sensitive habitats and special-status species on several opportunity sites. Similar to the project, implementation of the MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, MM-BIO-CONS-12, as well as MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 would reduce potential impacts on sensitive biological resources and potential conflicts with adopted local plans, policies, or ordinances for the protection and conservation of biological resources; however, impacts resulting from projects that qualify for streamlining under the Objective Process would remain significant and unavoidable because the County would not be able to condition these projects to reduce environmental effects. Consequently, impacts would be significant and unavoidable, similar to the project.

### Cultural Resources

As described for the project in Section 4.5, Cultural Resources, none of the opportunity sites contain a known historical resource as defined under CEQA Guidelines, Section 15064.5(a), although there are historical resources near the opportunity sites. Some of the opportunity sites, as well as replacement sites in the VO zoning district, may contain structures or resources that are at least 50 years old that could be eligible for inclusion in the California Register of Historical Resources, National Register of Historic Places, or Monterey County Local Register of Historic Resources. As such, implementation of this alternative could potentially cause a substantial adverse change in the significance of a historical resource and result in a potentially significant impact. As described for the project, implementation of MM-CUL-OBJ-1, MM-CUL-CONS-2, MM-CUL-OBJ-3, and MM-CUL-CONS-4 would minimize the potential for adverse effects to historical (built) resources. Compliance with the Secretary of the Interior's Standards for the Treatments of Historic Properties would mitigate potential impacts to below the level of significance.

Additionally, ground-disturbing activities have the potential to encounter previously unrecorded archaeological resources. Activities such as clearing, trenching, and grading could damage or destroy archaeological resources that may be present on or below the ground surface. Therefore, site-specific analysis would be required to ensure that adequate protection of archaeological resources is provided. Unevaluated cultural resources may require additional research, evaluation, or testing to determine their eligibility for inclusion in the California Register of Historical Resources or the National Register of Historic Places. To reduce the potential for direct impacts from damage and disturbance to significant archaeological resources, MM-CUL-OBJ-5, MM-CUL-CONS-6, MM-CUL-OBJ-7, and MM-CUL-CONS-8 would apply.

As with the project, although ground disturbance associated with the implementation of the project could potentially disturb or destroy Native American human remains, compliance with state law would reduce the potential impacts to a less than significant level. Therefore, impacts would be similar to those described for the project.

### Energy

As discussed above, buildout of Alternative 2 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites with agricultural resources and replaced in the VO zone. Because the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced associated vehicle fuel use. As such, impacts would be reduced compared to the project, but would still be less than significant.

### Geology and Soils (Paleontological Resources)

As described in Section 4.7, Geology and Soils (Paleontological Resources), the opportunity sites are composed of Holocene- to Miocene-aged deposits, which may include geologic formations capable of yielding paleontological resources. While Alternative 2 would remove selected opportunity sites with agricultural resources, the remaining opportunity sites and replacement sites would also include geologic formations capable of yielding paleontological resources. Therefore, replacement sites under Alternative 2 could disturb potentially significant paleontological resources, similar to the project. Alternative 2 would require a reconnaissance-level paleontological review, and a project-specific paleontological resource monitoring and mitigation plan as needed, submitted to the County as part of the development application package to determine the level of paleontological resource sensitivity and mitigate potential impacts on paleontological resources (MM-GEO-OBJ-1 and MM-GEO-CONS-2). As such, impacts related to paleontological resources under Alternative 2 would be less than significant with mitigation, similar to those for the project.

### Greenhouse Gas Emissions

As discussed above, buildout of Alternative 2 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites with agricultural resources and replaced in the VO zone. Because the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced associated mobile emissions. Additionally, this alternative would align more closely than the project with the 2022 Scoping Plan Appendix D, Priority GHG Reduction Strategy, for preserving natural and working lands. MM-GHG-OBJ-1 and MM-GHG-CONS-2, which ensure consistency with specific key project attributes from the 2022 Scoping Plan, would apply to this alternative. However, similar to the project, this alternative cannot demonstrate that it would result in no conflicts with all 2022 Scoping Plan Appendix D, Priority GHG Reduction Strategies, and key project attributes. This is both because it would result in significant and unavoidable impacts related to agricultural resources (natural and working lands) and VMT and because this alternative would be precluded by Assembly Bill 130 from mandating building decarbonization. Although impacts related to GHG

emissions would be reduced compared to the project for the reasons described above, impacts would remain significant and unavoidable.

### Hazards and Hazardous Materials

Alternative 2 would preserve nine selected opportunity sites (i.e., Sites 1, 2, 5, 6, 19, 24, 25, 26, and 37) and would replace these sites with other development areas currently zoned for VO. Similar to the project, Alternative 2 would enable potential future residential development of lands within 0.25 mile of active hazardous materials sites, including at Opportunity Sites 28, 29, 46, 47, 49, 50, 52, and 64. Given the proximity of these hazardous sites to opportunity sites where future residential development may occur, buildout of these opportunity sites may have the potential to create a hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Additionally, this alternative would facilitate future residential development of lands that have the potential for unknown soil or groundwater contamination that could result in hazardous materials upset. Therefore, implementation of Alternative 2 would result in a potentially significant impact related to release of hazardous materials, similar to the project.

It should be noted that Alternative 2 would preserve nine selected opportunity sites that are currently zoned for farmland (i.e., F/40), have a Limited Agricultural overlay district, or are currently in use with agricultural activities; therefore, this alternative would reduce (but not eliminate) the potential for disturbance of previously undiscovered soil or groundwater contamination due to application of pesticides or other potentially hazardous materials at existing agricultural sites. Similar to the project, Alternative 2 would require the preparation of a project-specific Phase I ESA for opportunity sites that are either within 0.25 mile of a listed hazardous site or have historically supported or currently support industrial or agricultural uses (MM-HAZ-OBJ-1 and MM-HAZ-CONS-2). A Phase II ESA and soil sampling may also be required if the need is identified as part of the Phase I ESA (MM-HAZ-OBJ-3, MM-HAZ-CONS-4, MM-HAZ-OBJ-5, and MM-HAZ-CONS-6).

Additionally, Alternative 2 would similarly split zone Opportunity Sites 46 and 47 to ensure consistency with airport compatibility requirements. Therefore, Alternative 2 would result in similar impacts related to hazardous materials compared to the project. Impacts would remain less than significant with mitigation.

### Hydrology and Water Quality

As described in Section 4.10, Hydrology and Water Quality, agricultural uses can result in increased erosion and sedimentation, nitrate contamination from irrigation runoff, and seawater intrusion. Alternative 2 would preserve nine sites that are currently zoned for farmland (i.e., F/40), have a Limited Agricultural overlay district, or are currently in use with agricultural activities. Therefore, the agricultural activities at these sites under Alternative 2 could increase erosion and sedimentation, nitrate contamination from irrigation runoff and seawater intrusion.

Additionally, agricultural sites rely heavily on groundwater from wells and generally have a higher water demand per acre than residential uses. Because Alternative 2 would preserve nine sites with agricultural resources, the continued agricultural activities at these sites under Alternative 2 would increase use of groundwater compared to the project, which would convert these sites to HDR.

Similar to the project, this alternative could include construction activities that would loosen and expose soils, otherwise increase the potential for soil erosion and sedimentation, and create new or additional impervious surfaces. Development allowed under Alternative 2 would be required to comply with federal, state, and local regulations for stormwater management, erosion control, site drainage, and flood control (e.g., National Pollutant Discharge Elimination System Construction General Permit, municipal separate storm sewer system permit, Stormwater Pollution Prevention Plan, Monterey County Stormwater Ordinance, Monterey County Erosion Control Ordinance, Post-Construction Stormwater Management Requirements [PCRs]). As such, impacts related to surface and groundwater quality, site drainage and hydrology, and flood hazards would be less than significant, similar to the project.

Given the critical importance of groundwater in UMC, any new development could result in impacts on groundwater recharge and supplies. Implementation of MM-HYD-OBJ-1 and MM-HYD-CONS-2 would occur under this alternative, as described for the project. Therefore, impacts under Alternative 2 would be similar to the project impacts. However, impacts on groundwater recharge and supplies would remain significant and unavoidable.

### Land Use and Planning

Similar to the project, Alternative 2 would not alter connectivity with adjacent areas or physically divide established communities. Future development facilitated by Alternative 2 would continue to be subject to applicable County regulations, objective development standards, environmental review requirements, and mitigation measures identified in this PEIR, as applicable. Similar to the project, future development facilitated by Alternative 2 could, in some instances, not fully conform to certain area, master, or community plan policies or design guidelines. For example, the implementation of this alternative would require the County to revise several Area and Master Plan policies that limit the number of units that be created in the plan area. While amendments to the policies as part of the project would address the project's land use and planning conflicts with those existing policies, the conflicts could result in significant environmental impacts related to groundwater sustainability and water supply (refer to Hydrology and Water Quality; Utilities and Service Systems). Therefore, impacts on land use and planning under Alternative 2 would remain significant and unavoidable, similar to the project.

### Mineral Resources

Potential housing sites throughout the UMC are mapped, fully or partially, in MRZ-2 areas, areas where adequate information indicates that significant mineral resources are either present or likely

to be present. Similarly, some sites are mapped in MRZ-3 areas, in which the significance of mineral resources cannot be evaluated due to limited data. Alternative 2 would not eliminate any opportunity sites mapped as MRZ-2, but would remove several sites mapped as MRZ-3, including Sites 19 and 37. Therefore, this alternative could incrementally reduce the potential for impacts on mineral resources. Replacement sites needed to achieve sufficient housing capacity to meet the RHNA target with a reasonable capacity buffer could also be in areas mapped as MRZ-2 or MRZ-3. However, it is reasonable to assume that the replacement sites would be unlikely to be used for mineral resource production, even without future residential development on the sites, due to their location in existing urbanized areas in the VO zone and incompatible surrounding land uses. Therefore, existing zoning, current on-site and adjacent uses, and ownership of the sites would likely preclude these replacement sites from mineral resource production, similar to the opportunity sites included in the project. Similar to the project, a Statement of Reasons would need to be prepared to eliminate the potential for extraction of the mineral resource(s), in accordance with PRC Sections 2762 and 2763. Therefore, impacts on mineral resources would be less than significant, similar to those described for the project.

### Noise

Buildout of Alternative 2 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites with agricultural resources and replaced in the VO zone. Because the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would be closer to jobs and other commercial uses, which typically consist of a louder ambient noise environment and fewer surrounding noise-sensitive receptors than potential housing sites zoned Farmland or Low Density Residential, such as several of the opportunity sites that would be removed under this alternative. MM-NOI-OBJ-1 and MM-NOI-CONS-2, which require compliance with County noise regulations, and MM-NOI-OBJ-3, which requires preparation of acoustical studies and incorporation of noise reduction measures, would apply to this alternative. Additionally, MM-NOI-OBJ-4 and MM-NOI-CONS-5, which include best management practices to limit groundborne vibration levels during construction at nearby receptors, would apply. Therefore, although Alternative 2 would reduce noise and vibration impacts compared to the project, impacts would still be less than significant with mitigation.

### Public Services

Buildout of Alternative 2 would result in the same number of housing units as the project; therefore, Alternative 2 would result in the same increase in demands on fire protection and emergency services, police protection, schools, and other public facilities in UMC. However, because replacement sites in the VO zone would primary be in Carmel Valley and along SR-68, these areas would be disproportionately impacted by increased demand on public services. Similar to the project, impacts on fire protection services and schools under Alternative 2 would be mitigated through payment of development impact fees for future residential projects (MM-PS-

OBJ-1, MM-PS-CONS-2, MM-PS-OBJ-3, and MM-PS-CONS-4). In addition, future demand for additional sheriff services as a result of the project would be funded through the County's annual budget review and allocation, as well as various federal or state funds and grants. As such, impacts would be less than significant with mitigation, similar to the project.

### Recreation

Because buildout of Alternative 2 would result in the same number of housing units as the project, Alternative 2 would result in the same increase in demands on recreational facilities. Replacement sites in the VO zone would primary be in Carmel Valley and along SR-68; therefore, these areas would be disproportionately impacted by increased demand on recreational facilities. Similar to the project, impacts on recreational facilities under Alternative 2 would be mitigated through provision of on-site parkland/open space or payment of fair share in-lieu fees for future residential projects (MM-REC-OBJ-1 and MM-REC-CONS-2). As such, impacts would be less than significant with mitigation, similar to the project.

### Transportation

Alternative 2 would not introduce any components or changes to the project that would result in a conflict with a program, plan, ordinance, or policy addressing the circulation system. Alternative 2 would result in less than significant impacts related to multimodal facilities, hazardous design features, and emergency access, as described for the project.

As discussed above, buildout of Alternative 2 would result in the same number of housing units as the project. Therefore, temporary construction-related transportation impacts from worker vehicle trips, and vendor/hauling trips and long-term transportation impacts from operational vehicle trips would be the same under Alternative 2 as described for the project. Since the replacement housing units would be in areas currently zoned as VO, these units would generally be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced VMT. However, if replacement units are placed in the two VO zoning districts in rural, undeveloped areas of southern UMC, Alternative 2 could result in increased VMT compared to the project. Additionally, the majority of areas in the VO zoning district are in Carmel Valley and along SR-68, which are two of the most heavily trafficked areas of UMC. Therefore, replacing opportunity sites in the VO zoning district could exacerbate existing vehicle congestion in these areas. Without comprehensive transportation modeling to estimate projected VMT under this alternative, this PEIR conservatively assumes that VMT would not be reduced to 15 percent below existing average VMT per capita. Therefore, while Alternative 2 would reduce VMT impacts compared to the project due to replacement sites in the VO zone, impacts on VMT would remain significant and unavoidable.

### Tribal Cultural Resources

As described for the project, ground-disturbing activities under Alternative 2 have the potential to encounter previously unrecorded TCRs. Activities such as clearing, trenching, and grading could damage or destroy TCRs that may be present on or below the ground surface. Therefore, site-specific analysis would be required to ensure that adequate protection of TCRs is provided. To reduce the potential for direct impacts from damage and disturbance to significant TCRs, MM-CUL-OBJ-5, MM-CUL-CONS-6, MM-CUL-OBJ-7, and MM-CUL-CONS-8 would apply. Therefore, impacts would be similar to those described for the project.

### Utilities and Service Systems

Similar to the project, Alternative 2 would result in less than significant impacts on new or expanded electric power, natural gas, and telecommunications facilities and solid waste generation. However, Alternative 2 would cause potentially significant impacts related to new or expanded water and wastewater facilities as well as long-term water supply and wastewater treatment capacity. Since the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would already be served by existing utilities infrastructure. However, the majority of areas in the VO zoning district are in Carmel Valley, which includes many sites reliant on septic systems, and along SR-68, an area with notable water supply constraints. Further, there are two areas in the VO zoning district that are outside existing urban areas in UMC (one is west of Greenfield and the other is southeast of King City, as shown on Figure 6-1). Given the location of these VO zones in rural, undeveloped areas of UMC, there is likely no existing public utilities infrastructure to support residential units at these sites. Therefore, replacing opportunity sites in the VO zoning district could exacerbate existing concerns related to water supply and water and wastewater infrastructure. Because buildout of Alternative 2 would result in the same number of housing units as the project, temporary construction-related water demand and long-term wastewater generation would be the same under Alternative 2 as described for the project. However, given that Alternative 2 would preserve existing agricultural uses which have a higher water demand than residential, long-term operational water demand would be increased compared to the project. Similar to the project, Alternative 2 would include programs or policies that require County coordination with water service providers and suppliers on projects and policies to achieve sub-basin sustainability and water allocations to accommodate future growth. Further, Alternative 2 would include mitigation measures requiring development applicants to prove both adequate long-term water supply and wastewater treatment capacity (MM-UTL-OBJ-1 and MM UTL-CONS-2). Nevertheless, as described in Section 4.18, water supply in Monterey County is heavily constrained. Even with the implementation of mitigation measures and HEU6 programs and policies, impacts related to water supply would remain significant and unavoidable.

### Wildfire

Of the nine opportunity sites that would be removed under Alternative 2 (i.e., Sites 1, 2, 5, 6, 19, 24, 25, 26, and 37), two (Sites 24 and 37) are in very high FHSZs, six (Sites 1, 5, 6, 19, 24, and 37) are in the WUI, and two (Sites 6 and 24) are adjacent to slopes 25 percent or greater. As such, Alternative 2 would incrementally reduce the potential for exposure to risk related to wildfires at these sites. Replacement sites would be in areas currently zoned for VO, which are more likely to be in urban areas farther from very high FHSZs and the WUI. However, the majority of areas in the VO zoning district are in Carmel Valley and along SR-68, two of the most heavily trafficked areas of UMC. The Carmel Valley and SR-68 areas are in Evacuation Regions A, C, and D (refer to Figure 4.19-3), which are the evacuation regions with the highest numbers of new housing units (and associated vehicles), as identified in the Sites Inventory (refer to Table 4.19-5). Therefore, replacing opportunity sites in the VO zoning district would exacerbate existing vehicle congestion and could affect the efficiency of emergency evacuation in these areas. Similar to the project, Alternative 2 would include requirements for evacuation map packets under MM-WF-OBJ-1 and MM-WF-CONS-2 and for evacuation educational materials under MM-WF-OBJ-3 and MM-WF-CONS-4. Similar to the project, compliance with existing codes and regulations related to emergency access and evacuation, as well as the mitigations listed above, would ensure adequate emergency access is provided for new residential development associated with future development. Nevertheless, impacts on emergency response and evacuation under Alternative 2 would be greater compared to the project.

Alternative 2 would also include MM-WF-OBJ-5 and MM-WF-OBJ-6, to ensure that by-right uses comply with the same regulations for fire safety that apply to other projects. Overall, impacts would be increased compared to the project but less than significant with mitigation.

### Cumulative Impacts

The contribution of Alternative 2 to cumulatively considerable impacts would be greater than the project's contribution to transportation hazards, emergency access, and evacuation due to the concentration of replacement sites in the VO zoning district areas in Carmel Valley and along SR-68, two areas adversely affected by existing vehicle traffic and congestion. Alternative 2 would also increase cumulative impacts on existing public utilities infrastructure due to the reliance on septic systems in Carmel Valley, the water supply constraints along SR-68, and the lack of existing public utilities infrastructure to support residential units at the two VO zoning districts in rural, undeveloped areas of southern UMC. Given that Alternative 2 would preserve existing agricultural uses which have a higher water demand than residential, Alternative 2's contribution to cumulative operational water demand would be increased compared to the project. Cumulative impacts on air quality, energy, GHG emissions, and VMT under Alternative 2 would be slightly reduced compared to the project because the replacement sites in the VO zone would generally be closer

to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced VMT (and associated criteria air pollutant and GHG emissions, as well as vehicle fuel use).

#### 6.2.2.2 Conclusion and Relationship to Project Objectives

Given that Alternative 2 would provide the same number of housing units and implement the same HEU6 programs as the project, this alternative would meet the project objectives to facilitate development of new units and preserve existing housing for residents at all income levels (Objective 2); provide a range of housing opportunities as near as possible to jobs, transit, services, and schools (Objective 4); provide adequate buffer with additional RHNA units (Objective 5); and provide CEQA streamlining for housing development (Objective 7). Alterative 2 would also update applicable County plans and regulations to implement the goals, policies, and objectives of the HEU6 and bring the 2010 General Plan and LCP into conformance with state housing law (Objective 6). Alternative 2 would not meet the housing needs of all economic segments of community members who live in UMC areas in a manner that affirmatively furthers fair housing (Objective 3) to the same extent as the project because 1,153 replacement housing units would all be in the VO zoning district, which is composed of areas concentrated in Carmel Valley and along SR-68. Additionally, because Alternative 2 would require the County to revise the Sites Inventory and submit a revised Housing Element to CA HCD for approval, this alternative does not include a compliant Housing Element (Objective 1) as the project does. Revising the Sites Inventory and Housing Element would push the County further out from their goal of adopting a compliant Housing Element during the Sixth Cycle (2023–2031) planning period.

### 6.2.3 Alternative 3: Water Conservation Alternative

There are four groundwater basins in Monterey County identified by the California Department of Water Resources (DWR) as high priority: Corralitos – Pajaro Valley, Salinas Valley – 180/400 Foot, Salinas Valley – East Side, and Salinas Valley – Langley Area aquifers.[9] Further, the Salinas Valley – 180/400 Foot, and Corralitos – Pajaro Valley aquifers are identified by DWR as critically over-drafted.[10] This alternative would remove specific sites in groundwater basins identified as high priority (prioritizing removal of sites in critically over-drafted basins) to reduce significant and unavoidable direct impacts on groundwater recharge and supplies, as described in Section 4.10, and significant and unavoidable cumulative impacts on future water supply as described in Section 4.18.

Opportunity sites that are overlying aquifers identified as critically over-drafted in Monterey County (i.e., Salinas Valley – 180/400 Foot Aquifer, and Corralitos – Pajaro Valley) include Sites 5, 6, 11, 12, 13, 14, 15, 25, 26, 27, 28, 29, 30, 41, 48, 49, 50, 51, and 64. However, it should be noted that

[9] Basin Prioritization is a technical process that uses the best available data and information to classify California's groundwater basins into one of four categories (i.e., high-, medium-, low-, or very low-priority) based on several factors (DWR 2025a).

[10] Overdraft occurs where the average annual amount of groundwater extraction exceeds the long-term average annual supply of water to the basin. As defined by the Sustainable Groundwater Management Act (SGMA), "A basin is subject to critical overdraft when continuation of present water management practices would probably result in significant adverse overdraft-related environmental, social, or economic impacts" (DWR 2025b).

Sites 12 and 13 are in the Castroville Community Plan area and were suggested for inclusion in the project by CA HCD staff; therefore, these sites are assumed for buildout under this alternative. The remainder of sites in critically over-drafted groundwater basins, totaling 464 units, would be eliminated under the Water Conservation Alternative (Alternative 3), reducing significant and unavoidable direct and cumulative impacts on groundwater recharge and future water supply.

To maintain a buffer of 15 percent of units in each income category as recommended by CA HCD, this alternative would need to replace a total of 97 units in the extremely low/very low income category. All other income categories would have sufficient units to maintain the 15 percent buffer above the RHNA; however, additional housing units in the other income categories would realistically be included with the extremely low/very low income units in replacement housing projects for developers to gain a return on their investment. Therefore, CA HCD requires the Sites Inventory to include assumptions for RHNA distribution among all income categories, rather than assuming developments in the extremely low/very low income category only. To avoid speculating on the number of units needed in other income categories to replace 97 units in the extremely low/very low income category, this alternative includes replacement of the 464 total units that would be removed due to elimination of Sites 5, 6, 11, 14, 15, 25, 26, 27, 28, 29, 30, 41, 48, 49, 50, 51, and 64 (Figure 6-3, Alternative 3: Water Conservation Alternative).

This would be accomplished by rezoning some of the UMC areas that are currently zoned as VO and located outside the high priority groundwater basins to HDR/25 or HDR/30. The areas proposed for this zoning change would be focused in more urban areas that have a higher likelihood of existing utilities and public infrastructure in place. Areas of UMC currently zoned as VO are primarily located along SR-68 and the Carmel River. As such, intensifying development in these areas could result in impacts and concerns related to infrastructure (e.g., water and sewer) constraints, vehicle traffic/congestion, and Affirmatively Furthering Fair Housing considerations. Additionally, VO zoned areas are likely to already be developed with existing uses, and CA HCD limits the percentage of already developed sites that can be included in the Sites Inventory. However, the areas proposed for this zoning change would be focused in more urban areas that have a higher likelihood of existing utilities and public infrastructure in place at or near the VO zoned sites. This would allow the County to both provide more housing in areas already planned for development and to avoid development on sites overlying critically over-drafted groundwater basins.

The entire acreage of VO zoning districts would not be buildable due to slope, environmental constraints, and other factors; however, there would be more than enough capacity to replace enough units to maintain the 15 percent buffer. For instance, there are currently 387.8 acres of VO zoning districts in UMC and 386.6 acres of VO zoning districts outside the high priority and critically over-drafted groundwater basins. If all 386.6 acres were replaced with HDR/25 zoning, this would provide capacity for 9,665 units, well above the 464 units needed to replace the sites removed under Alternative 3. Therefore, to meet the 15 percent buffer for each income category

as recommended by CA HCD, this alternative would need to rezone a smaller percentage of the total acreage of VO zoning districts in UMC as HDR/25 or HDR/30.

Alternative 3 would reduce the severity of impacts on groundwater recharge and associated supply due to the removal of 464 units from areas in critically over-drafted groundwater basins. However, given that this alternative would still result in new development (associated with buildout of Sites 12 and 13) in critically over-drafted groundwater basins, the management of which extends beyond the County's jurisdiction, groundwater impacts would remain significant and unavoidable, as discussed further below.

#### 6.2.3.1 Impact Analysis

### Aesthetics

Of the 17 opportunity sites that would be eliminated under Alternative 3, none are currently either wholly or partially in special visual zoning overlays. As such, this alternative would not reduce impacts on aesthetics compared to the project because the same number of visually sensitive sites would be rezoned, and the existing Design Control (D), Site Plan Review (S), and Visual Sensitivity (VS) zoning overlays would be removed from these sites, rendering the protective provisions of County Code Chapters 20.44, 21.44, and 20.46 inapplicable to future development on these parcels.

Additionally, sites in VO zoning districts are likely to already be developed and/or focused in more urban areas of UMC; therefore, replacement sites in these areas could be considered less visually sensitive. However, the VO zoning districts are predominantly located within Carmel Valley and along State Route 68, which are considered visually sensitive areas (refer to Figure 4.1-2b and Figure 4.1-2c, Visual Sensitivity Areas). Additionally, State Route 68 is a designated State Scenic Highway. By replacing units removed under Alternative 3 with sites in the VO zones, this Alternative could increase impacts to scenic vistas, scenic resources within a State Scenic Highway, and visual character or quality associated with buildout of residential units within Carmel Valley and along State Route 68. Similarly, buildout of replacement units in the two areas of the VO zoning district outside existing urban areas (one is west of Greenfield and the other is southeast of King City, as shown on Figure 6-1, Visitor Serving/Professional Office Zones in Unincorporated Monterey County) could increase impacts to scenic vistas and visual character or quality associated with residential development on rural, undeveloped land.

As described for the project, proposed future development would be required to comply with the amended zoning code for HDR/25 or HDR/30, and go through project-level staff review during the application process for compatibility with surrounding visual resources by using appropriate siting, design, materials, and landscaping. Also, if the opportunity sites under Alternative 3 have the potential to result in adverse impacts on visual resources, MM-AES-OBJ-1, MM-AES-OBJ-2, and MM-AES-CONS-3 would be incorporated to reduce visual impacts and ensure compatibility with surrounding environment through ODS, tree removal standards, site and building design,

building materials, colors, landscaping, and grading, building height, massing, setback, and orientation. MM-AES-OBJ-4 and MM-AES-CONS-5 would require fencing or screening material around active construction areas to reduce visual impacts by obstructing direct public views of construction activities. MM-AES-OBJ-6 would require that new development apply exterior lighting design standards to reduce potential lighting and glare impacts.

However, as described for the proposed project, specific impacts on particular scenic vistas and visual resources are unknown and would be speculative to analyze without project-specific details and fully developed ODS for each area plan, master plan, land use plan, and community plan areas. Therefore, significant and unavoidable aesthetic impacts would remain.

### Agriculture and Forestry Resources

Alternative 3 would remove opportunity sites in aquifers identified as critically over-drafted, including Sites 5, 6, 11, 14, 15, 25, 26, 27, 28, 29, 30, 41, 48, 49, 50, 51, and 64. Several of these sites, including, Sites 5, 14, 15, 25, 26, and 50, are mapped as Important Farmland. Additionally, Sites 5 and 6 are currently zoned MDR/4-A-UR with the Limited Agricultural overlay district, and Sites 25 and 26 are currently used for agricultural operations. Therefore, implementation of Alternative 3 would preserve seven sites that are either mapped as Important Farmland, are currently zoned with the Limited Agricultural overlay, or are used for agricultural operations. Therefore, this alternative would decrease the severity of impacts on agricultural resources compared to the project. Furthermore, since Alternative 3 would remove several sites in critically over-drafted groundwater basins, existing and future agricultural uses on these sites in these groundwater basins would continue to rely on groundwater wells for more sustainable groundwater management than under the project.

Although Alternative 3 would reduce impacts on agricultural resources compared to the project, implementation of Alternative 3 would rezone opportunity sites to HDR/25 or HDR/30. Consequently, future residential development projects at these sites would not trigger the requirement in County Code Chapter 21.92 for a Farmland Mitigation Plan. MM-AG-OBJ-1 and MM-AG-CONS-2 would reduce potential impacts on agricultural uses by protecting other existing agricultural operations in the UMC. However, the Farmland Mitigation Plan required for MM-AG-OBJ-1 and MM-AG-CONS-2 would provide only partial mitigation for the impact on existing agricultural operations because the mitigation would not replace these existing agricultural uses elsewhere in the UMC. MM-AG-OBJ-3 and MM-AG-CONS-4 would apply to this alternative too. These mitigation measures require a Land Evaluation and Site Assessment report to quantitatively evaluate the potential impacts of residential development on opportunity sites with existing agricultural operations or land mapped as Important Farmland. Additionally, MM-AG-OBJ-5 and MM-AG-CONS-6, which require compliance with agricultural buffer zone requirements, would apply this alternative.

The only way to fully avoid impacts on Important Farmland and agricultural resources would be to eliminate all opportunity sites on land designated as Important Farmland or currently zoned or used for agriculture from future development. Given that Alternative 3 would not eliminate all impacts on Important Farmland, agricultural uses, and agriculturally zoned sites, the impact on agricultural resources, while reduced in severity, would remain significant and unavoidable.

Additionally, development of opportunity sites that could be considered forest land or timberland would result in similar impacts to those described for the project in Section 4.2. As described therein, this impact would be significant because the forest land and timberland would be permanently removed. MM BIO-OBJ-1, MM BIO-CONS-2, and MM-BIO-CONS-5 would partially mitigate for impacts on forest vegetative communities by requiring the identification of sensitive vegetation communities (including forest and woodland vegetation) on each site and implementation of habitat creation, restoration, enhancement, or preservation. As such, although impacts on Important Farmland would be substantially reduced, Alternative 3 would result in similar impacts to existing agricultural uses and forestry resources compared to the project. Impacts would remain significant and unavoidable.

### Air Quality

As discussed above, buildout of Alternative 3 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites in critically over-drafted groundwater basins and replaced in the VO zone outside high priority groundwater basins. Because the replacement housing units would be in areas currently zoned as VO, these units would generally be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced associated mobile emissions. Therefore, impacts would be slightly reduced compared to the project. However, without detailed air quality modeling to estimate projected criteria air pollutant emissions under this alternative, the PEIR conservatively assumes that total daily emissions would not be reduced to below the Monterey Bay Air Resources District emissions thresholds because a finding of no impact cannot be made without evidence. As such, impacts related to criteria air pollutant emissions would remain significant and unavoidable, similar to the project.

### Biological Resources

The elimination of 17 opportunity sites under Alternative 3 could reduce impacts on sensitive habitats and special-status species. For example, Sites 11, 14, and 15 include freshwater and annual grassland. Site 48 supports oak woodland and annual grassland. Freshwater and oak woodland are sensitive vegetation communities. These sites would be removed under Alternative 3. Therefore, no impacts would occur to vegetation communities and the sensitive species supported at these sites under this alternative. Further, since the replacement housing units would be in areas currently zoned as VO, it is assumed that the majority of these units would be in existing urbanized or developed areas that do not support sensitive biological resources to the same extent as vacant or undeveloped

sites. Nevertheless, there are two areas in the VO zoning district that are outside existing urban areas in UMC (one is west of Greenfield and the other is southeast of King City, as shown on Figure 6-1). Given the location of these VO zones in rural, undeveloped areas of UMC, as well as the remaining opportunity sites included in Alternative 2 that support sensitive habitats and biological resources, this alternative could facilitate residential development in opportunity sites that support sensitive biological resources, similar to the project. As such, residential development facilitated under Alternative 2 would impact sensitive habitats and special-status species on several opportunity sites. Similar to the project, implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, MM-BIO-CONS-12, as well as MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 would reduce potential impacts on sensitive biological resources and potential conflicts with adopted local plans, policies, or ordinances for the protection and conservation of biological resources; however, impacts resulting from projects that qualify for streamlining under the Objective Process would remain significant and unavoidable because the County would not be able to condition these projects for environmental concerns. Impacts would be significant and unavoidable, similar to the project.

### Cultural Resources

As described for the project in Section 4.5, none of the opportunity sites under this alternative contain a known historical resource as defined under CEQA Guidelines, Section 15064.5(a), although there are historical resources near the opportunity sites. Some of the opportunity sites, as well as replacement sites in the VO zoning district, may contain structures or resources that are at least 50 years old that could be eligible for inclusion in the California Register of Historical Resources, National Register of Historic Places, or Monterey County Local Register of Historic Resources. As such, implementation of this alternative could potentially cause a substantial adverse change in the significance of a historical resource and result in a potentially significant impact. As described for the project, implementation of MM-CUL-OBJ-1, MM-CUL-CONS-2, MM-CUL-OBJ-3, and MM-CUL-CONS-4 would minimize the potential for adverse effects to historical (built) resources. Compliance with the Secretary of the Interior's Standards for the Treatments of Historic Properties would mitigate potential impacts to below the level of significance.

Additionally, ground-disturbing activities have the potential to encounter previously unrecorded archaeological resources. Activities such as clearing, trenching, and grading could damage or destroy archaeological resources that may be present on or below the ground surface. Therefore, site-specific analysis would be required to ensure that adequate protection of archaeological resources is provided. Unevaluated cultural resources may require additional research, evaluation, or testing to determine their eligibility for inclusion in the California Register of Historical Resources or the National Register of Historic Places. To reduce the potential for direct impacts

from damage and disturbance to significant archaeological resources, MM-CUL-OBJ-5, MM-CUL-CONS-6, MM-CUL-OBJ-7, and MM-CUL-CONS-8 would apply.

As described for the project, although ground disturbance associated with the implementation of the project could have the potential to disturb or destroy Native American human remains, the required compliance with state law would reduce the potential impacts to a less than significant level. Therefore, impacts would be similar to those described for the project.

### Energy

As discussed above, buildout of Alternative 3 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites in critically over-drafted groundwater basins and replaced in the VO zone outside high priority groundwater basins. Because the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced associated vehicle fuel use. As such, impacts would be slightly reduced compared to the project, but would still be less than significant.

### Geology and Soils (Paleontological Resources)

As described in Section 4.7, the opportunity sites are composed of Holocene- to Miocene-aged deposits, which may include geologic formations capable of yielding paleontological resources. While Alternative 3 would remove selected opportunity sites in critically over-drafted groundwater basins, the remaining opportunity sites and replacement sites would also include geologic formations capable of yielding paleontological resources. Therefore, replacement sites under Alternative 3 could disturb potentially significant paleontological resources, similar to the project. Alternative 3 would require a reconnaissance-level paleontological review, and a project-specific paleontological resource monitoring and mitigation plan as needed, submitted to the County as part of the development application package to determine the level of paleontological resource sensitivity and mitigate potential impacts on paleontological resources (MM-GEO-OBJ-1 and MM-GEO-CONS-2). As such, impacts related to paleontological resources under Alternative 3 would be less than significant with mitigation, similar to those described for the project.

### Greenhouse Gas Emissions

As discussed above, buildout of Alternative 3 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites in critically over-drafted groundwater basins and replaced in the VO zone outside high priority groundwater basins. Because the replacement housing units would be in areas currently zoned as VO, these units would likely be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced associated mobile emissions. MM-GHG-OBJ-1 and MM-GHG-CONS-2, which ensure consistency with specific key project attributes from the 2022 Scoping Plan, would apply to this

alternative. However, similar to the project, this Alternative cannot demonstrate that it would result in no conflicts with all 2022 Scoping Plan Appendix D, Priority GHG Reduction Strategies, and key project attributes because it would result in significant and unavoidable impacts on agricultural resources (natural and working lands) and VMT, and is precluded by Assembly Bill 130 from mandating building decarbonization. Although impacts related to GHG emissions would be reduced compared to the project for the reasons described above, impacts would remain significant and unavoidable.

### Hazards and Hazardous Materials

Alternative 3 would remove several opportunity sites that are in critically over-drafted groundwater basins, including several opportunity sites within 0.25 mile of active hazardous materials sites, including at Opportunity Sites 28, 29, 49, 50, and 64. Therefore, this alternative would reduce (but not eliminate) the potential for disturbance of previously undiscovered soil or groundwater contamination due to proximity to active hazardous materials sites. Similar to the project, Alternative 3 would still enable potential future residential development of lands within 0.25 mile of active hazardous materials sites, including Sites 46, 47, and 52. Given the proximity of these hazardous sites to opportunity sites where future residential development may occur, buildout of these opportunity sites may have the potential to create a hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Additionally, this alternative would facilitate future residential development of lands that have the potential for unknown soil or groundwater contamination that could result in hazardous materials upset. Therefore, implementation of Alternative 3 would result in a potentially significant impact related to release of hazardous materials, similar to the project.

It should be noted that Alternative 3 would preserve four opportunity sites that currently either have a Limited Agricultural overlay district (Sites 5 and 6) or are used for agricultural activities (Sites 25 and 26); therefore, this alternative would reduce (but not eliminate) the potential for disturbance of previously undiscovered soil or groundwater contamination due to application of pesticides or other potentially hazardous materials at existing agricultural sites.

Similar to the project, Alternative 3 would require the preparation of a project-specific Phase I ESA for opportunity sites that are either within 0.25 mile of a listed hazardous site or have historically supported or currently support industrial or agricultural uses (MM-HAZ-OBJ-1 and MM-HAZ-CONS-2). A Phase II ESA and soil sampling may also be required if the need is identified as part of the Phase I ESA (MM-HAZ-OBJ-3, MM-HAZ-CONS-4, MM-HAZ-OBJ-5, and MM-HAZ-CONS-6).

Additionally, Alternative 3 would similarly split zone Opportunity Sites 46 and 47 to ensure consistency with airport compatibility requirements. Therefore, Alternative 3 would result in

similar impacts related to hazardous materials compared to the project. Impacts would remain less than significant with mitigation.

### Hydrology and Water Quality

Similar to the project, Alternative 3 could include construction activities that would loosen and expose soils, otherwise increase the potential for soil erosion and sedimentation, and create new or additional impervious surfaces. Similar to the project, development allowed under Alternative 3 would be required to comply with federal, state, and local regulations for stormwater management, erosion control, site drainage, and flood control (e.g., National Pollutant Discharge Elimination System Construction General Permit, municipal separate storm sewer system permit, Stormwater Pollution Prevention Plan, Monterey County Stormwater Ordinance, Monterey County Erosion Control Ordinance, Post-Construction Stormwater Management Requirements [PCRs]). As such, impacts related to surface and groundwater quality, site drainage and hydrology, and flood hazards would be less than significant, similar to the project.

Alternative 3 would remove specific sites in groundwater basins identified as critically over-drafted and would replace these sites with other development areas currently zoned for VO and located outside high priority groundwater basins. Specifically, Alternative 3 would remove 17 sites from the Salinas Valley – 180/400 Foot, and Corralitos – Pajaro Valley aquifers. Therefore, Alternative 3 would reduce the severity of impacts on groundwater recharge and future water supply compared to the project. However, given that Sites 12 and 13 are in the Castroville Community Plan area and were suggested for inclusion in the project by CA HCD staff, Alternative 3 would not remove all opportunity sites from critically over-drafted groundwater basins, and impacts would remain significant and unavoidable. Additional sites in other high priority groundwater basins in Monterey County (i.e., Salinas Valley – East Side, and Salinas Valley – Langley Area aquifers) would be built out under this Alternative to maintain enough housing capacity to meet the state-mandated RHNA. Given the critical importance of groundwater in UMC, any new development could result in impacts on groundwater recharge and supplies. Implementation of MM-HYD-OBJ-1 and MM-HYD-CONS-2 would require preparation of groundwater recharge/hydrology analyses for all developments in Sustainable Groundwater Management Act-designated high priority (critically over-drafted) groundwater basins, high priority groundwater basins, or the adjudicated Seaside Groundwater Basin, as described for the project. Therefore, impacts would be similar to but slightly reduced compared to the project. However, impacts on groundwater recharge and supplies would remain significant and unavoidable.

### Land Use and Planning

Similar to the project, Alternative 3 would not alter connectivity with adjacent areas or physically divide established communities. Future development facilitated by Alternative 3 would continue to be subject to applicable County regulations, objective development standards, environmental review

requirements, and mitigation measures identified in this PEIR, as applicable. Similar to the project, future development facilitated by Alternative 3 could, in some instances, not fully conform to certain area, master, or community plan policies or design guidelines. For example, the implementation of this alternative would require the County to revise several Area and Master Plan policies that limit the number of units that be created in the plan area. While amendments to the policies as part of the project would address the project's land use and planning conflicts with those existing policies, the conflicts could result in significant environmental impacts related to groundwater sustainability and water supply (refer to Hydrology and Water Quality; Utilities and Service Systems). Therefore, impacts on land use and planning under Alternative 3 would be significant and unavoidable, similar to the project.

### Mineral Resources

As described for the project, potential housing sites throughout the UMC are mapped fully or partially in MRZ-2, which denotes areas where adequate information indicates that significant mineral resources are present or likely to be present, and MRZ-3, which represents areas where the significance of mineral resources cannot be evaluated due to limited data. Alternative 3 would not eliminate any opportunity sites mapped as MRZ-2 or MRZ-3. Further, replacement sites needed to achieve sufficient housing capacity to meet the RHNA target with a reasonable capacity buffer could also be in areas mapped as MRZ-2 or MRZ-3. However, it reasonable to assume that the replacement sites would be unlikely to be used for mineral resource production, even without future residential development on the sites, due to their location in existing urbanized areas in the VO zone and incompatible surrounding land uses. Therefore, existing zoning, current on-site and adjacent uses, and ownership of the sites would likely preclude these replacement sites from mineral resource production, similar to the opportunity sites included in the project. Similar to the project, a Statement of Reasons would need to be prepared to eliminate the potential for extraction of the mineral resource(s), in accordance with PRC Sections 2762 and 2763. Therefore, impacts on mineral resources would be less than significant, similar to those described for the project.

### Noise

As discussed above, buildout of Alternative 3 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites in critically over-drafted groundwater basins and replaced in the VO zone outside high priority groundwater basins. Because the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would be closer to jobs and other commercial uses, which typically consist of a louder ambient noise environment and fewer surrounding noise-sensitive receptors compared to other more rural areas of UMC. MM-NOI-OBJ-1 and MM-NOI-CONS-2, which require compliance with County noise regulations, and MM-NOI-OBJ-3, which requires preparation of acoustical studies and incorporation of noise reduction measures, would apply to this alternative. Additionally, MM-NOI-OBJ-4 and MM-NOI-CONS-5, which include best management practices to limit groundborne vibration levels during construction at nearby receptors, would apply. Therefore, although

Alternative 3 would reduce noise and vibration impacts compared to the project, impacts would still be less than significant with mitigation.

### Public Services

Buildout of Alternative 3 would result in the same number of housing units as the project; therefore, Alternative 3 would result in the same increase in demands on fire protection and emergency services, police protection, schools, and other public facilities in UMC. However, because replacement sites in the VO zone would primary be in Carmel Valley and along SR-68, these areas would be disproportionately impacted by increased demand on public services. Similar to the project, impacts on fire protection services and schools under Alternative 3 would be mitigated through payment of development impact fees for future residential projects (MM-PS-OBJ-1, MM-PS-CONS-2, MM-PS-OBJ-3, and MM-PS-CONS-4). In addition, future demand for additional sheriff services as a result of the project would be funded through the County's annual budget review and allocation, as well as various federal or state funds and grants. As such, impacts would be less than significant with mitigation, similar to the project.

### Recreation

Because buildout of Alternative 3 would result in the same number of housing units as the project, Alternative 3 would result in the same increase in demands on recreational facilities. Replacement sites in the VO zone would primary be in Carmel Valley and along SR-68; therefore, these areas would be disproportionately impacted by increased demand on recreational facilities. Similar to the project, impacts on recreational facilities under Alternative 2 would be mitigated through provision of on-site parkland/open space or payment of fair share in-lieu fees for future residential projects (MM-REC-OBJ-1 and MM-REC-CONS-2). As such, impacts would be less than significant with mitigation, similar to the project.

### Transportation

Alternative 3 would not introduce any components or changes to the project that would conflict with a program, plan, ordinance, or policy addressing the circulation system. Additionally, Alternative 3 would result in less than significant impacts related to multimodal facilities, hazardous design features, and emergency access, as described for the project.

As discussed above, buildout of Alternative 3 would result in the same number of housing units as the project, although a portion of the housing units would be removed from sites in critically over-drafted groundwater basins and replaced in the VO zone outside high priority groundwater basins. Therefore, temporary construction-related transportation impacts from worker vehicle trips and vendor/hauling trips and long-term transportation impacts from operational vehicle trips would be the same under Alternative 3 as described for the project. Since the replacement housing units would be in areas currently zoned as VO, these units would likely be closer to jobs and other commercial

uses, resulting in fewer or shorter vehicle trips and reduced VMT. However, if replacement units are placed in the two VO zoning districts in rural, undeveloped areas of southern UMC, Alternative 3 could result in increased VMT compared to the project. Additionally, the majority of areas in the VO zoning district are in Carmel Valley and along SR-68, which are two of the most heavily trafficked areas of UMC. Therefore, replacing opportunity sites in the VO zoning district could exacerbate existing vehicle congestion in these areas. Without comprehensive transportation modeling to estimate projected VMT under this alternative, this PEIR conservatively assumes that VMT would not be reduced to 15 percent below existing average VMT per capita. Therefore, while Alternative 3 would substantially reduce VMT impacts compared to the project due to the reduction in scale of development, impacts on VMT would remain significant and unavoidable.

### Tribal Cultural Resources

As described for the project, ground-disturbing activities under Alternative 3 have the potential to encounter previously unrecorded TCRs. Activities such as clearing, trenching, and grading could damage or destroy TCRs that may be present on or below the ground surface. Therefore, site-specific analysis would be required to ensure that adequate protection of TCRs is provided. To reduce the potential for direct impacts from damage and disturbance to significant TCRs, MM-CUL-OBJ-5, MM-CUL-CONS-6, MM-CUL-OBJ-7, and MM-CUL-CONS-8 would apply. Therefore, impacts would be similar to those described for the project.

### Utilities and Service Systems

Similar to the project, Alternative 3 would result in less than significant impacts on new or expanded electric power, natural gas, and telecommunications facilities and solid waste generation. However, potentially significant impacts related to new or expanded water and wastewater facilities as well as long-term water supply and wastewater treatment capacity would occur. Since the replacement housing units would be in areas currently zoned as VO, it is assumed that these units would be in areas already served with existing utilities infrastructure. However, the majority of areas in the VO zoning district are in Carmel Valley, which includes many sites reliant on septic systems, and along SR-68, an area with notable water supply constraints. Further, there are two areas in the VO zoning district that are outside existing urban areas in UMC (one is west of Greenfield and the other is southeast of King City, as shown on Figure 6-1). Given the location of these VO zones in rural, undeveloped areas of UMC, there is likely no existing public utilities infrastructure to support residential units at these sites. Therefore, replacing opportunity sites in the VO zoning district could exacerbate existing concerns related to water supply and wastewater infrastructure. Because buildout of Alternative 3 is assumed to result in the same number of housing units as the project, temporary construction-related water demand and long-term operational water demand and wastewater generation would be the same under Alternative 3 as described for the project.

Similar to the project, Alternative 3 would include programs or policies that require County coordination with water service providers and suppliers on projects and policies to achieve sub-basin sustainability and water allocations to accommodate future growth. Further, Alternative 2 would include mitigation measures requiring development applications to include evidence of adequate long-term water supply and wastewater treatment capacity (MM-UTL-OBJ-1 and MM UTL-CONS-2). Nevertheless, as described in Section 4.18, water supply in Monterey County is heavily constrained. Even with the implementation of mitigation measures and HEU6 programs and policies, impacts related to water supply would remain significant and unavoidable.

### Wildfire

Of the 17 opportunity sites that would be removed under Alternative 3 (i.e., Sites 5, 6, 11, 14, 15, 25, 26, 27, 28, 29, 30, 41, 48, 49, 50, 51, and 64), one (Site 48) is in a very high FHSZ, nine (Sites 5, 6, 11, 14, 15, 30, 41, 48, and 64) are in the WUI, and six (Sites 6, 14, 15, 25, 48, and 64) are in or adjacent to slopes 25 percent or greater. Since Alternative 3 would remove several sites in these areas with potentially higher fire risk, this alternative would incrementally reduce the potential for exposure to wildfire risk. Replacement sites would be in areas currently zoned for VO, which are more likely to be in urban areas farther from very high FHSZs and the WUI. However, the majority of areas in the VO zoning district are in Carmel Valley and along SR-68, two of the most heavily trafficked areas of UMC. The Carmel Valley and SR-68 areas are in Evacuation Regions A, C, and D (refer to Figure 4.19-3), which are the evacuation regions with the highest numbers of new housing units (and associated vehicles), as identified in the Sites Inventory (refer to Table 4.19-5). Therefore, replacing opportunity sites in the VO zoning district would exacerbate existing vehicle congestion and could affect the efficiency of emergency evacuation in these areas. Alternative 3 would include requirements for both evacuation map packets under MM-WF-OBJ-1 and MM-WF-CONS-2 and for evacuation education materials under MM-WF-OBJ-3 and MM-WF-CONS-4, as described for the project. Similar to the project, compliance with existing codes and regulations related to emergency access and evacuation, as well as the mitigations listed above, would ensure adequate emergency access is provided for new residential development associated with future development. Nevertheless, impacts on emergency response and evacuation under Alternative 3 would be greater compared to the project.

Additionally, Alternative 3 would include MMWF-OBJ-5 and MM-WF-OBJ-6, which would ensure that by-right uses comply with the same regulations for fire safety that apply to all other projects. Overall, impacts would be increased compared to the project but still less than significant with mitigation.

### Cumulative Impacts

The contribution of Alternative 3 to cumulatively considerable impacts would be greater than the project's contribution to transportation hazards, emergency access, and evacuation due to the

concentration of replacement sites in the VO zoning district areas in Carmel Valley and along SR-68, two areas adversely affected by existing vehicle traffic and congestion. Alternative 3 would also increase cumulative impacts on existing public utilities infrastructure due to the reliance on septic systems in Carmel Valley, the water supply constraints along SR-68, and the lack of existing public utilities infrastructure to support residential units at the two VO zoning districts in rural, undeveloped areas of southern UMC. However, Alternative 3 would substantially reduce the cumulative impact on groundwater basins compared to the project by removing the majority of opportunity sites from critically over-drafted groundwater basins and replacing these units outside high priority groundwater basins in UMC. Cumulative impacts on air quality, energy, GHG emissions, and VMT under Alternative 3 would be slightly reduced compared to the project because the replacement sites in the VO zone would generally be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced VMT (and associated criteria air pollutant and GHG emissions, as well as vehicle fuel use).

#### 6.2.3.2 Conclusion and Relationship to Project Objectives

Given that Alternative 3 would provide the same number of housing units and implement the same HEU6 programs as the project, this alternative would meet the project objectives to facilitate development of new units and preserve existing housing for residents at all income levels (Objective 2); provide a range of housing opportunities as near as possible to jobs, transit, services, and schools (Objective 4); provide adequate buffer with additional RHNA units (Objective 5); and provide CEQA streamlining for housing development (Objective 7). Alterative 2 would also update applicable County plans and regulations to implement the goals, policies, and objectives of the HEU6 and bring the 2010 General Plan and LCP into conformance with state housing law (Objective 6). Similar to Alternative 2, Alternative 3 would not meet the housing needs of all economic segments of community members who live in UMC areas in a manner that affirmatively furthers fair housing (Objective 3) to the same extent as the project because 464 replacement housing units would all be in the VO zoning district, which is composed of areas concentrated in Carmel Valley and along SR-68. Additionally, because Alternative 3 would require the County to revise the Sites Inventory and submit a revised Housing Element to CA HCD for approval, this alternative does not include a compliant Housing Element (Objective 1) as the project does. Revising the Sites Inventory and Housing Element would push the County further out from their goal of adopting a compliant Housing Element during the Sixth Cycle (2023–2031) planning period.

## 6.3 Environmentally Superior Alternative

Section 15126.6(e)(2) of the CEQA Guidelines requires that a lead agency, together with its alternatives analysis, identify an environmentally superior alternative among those evaluated in the EIR. The environmentally superior alternative is the alternative with the fewest or least severe adverse environmental impacts. The lead agency is not, however, obligated to select the environmentally superior alternative for implementation if it would either not accomplish the basic

project objectives or is infeasible (Section 15126.6[a], [c], and [f] of the CEQA Guidelines). In many cases, the No Project Alternative would have the fewest or least intense impacts. However, Section 15126.6(e)(2) of the CEQA Guidelines states that when the No Project Alternative is the environmentally superior alternative, the EIR must also identify an environmentally superior alternative from among the other alternatives.

Selection of the environmentally superior alternative may be difficult for a planning and policy document such as the HEU6, especially when the differences between the impacts of the alternatives involve trade-offs between types of impacts. An alternative may reduce environmental impacts on certain resource areas and increase impacts on other resource areas compared to the project, while another alternative may reduce different environmental impacts. Although CEQA does not provide specific guidance in this matter, where an alternative is anticipated to result in reduced impacts for the majority of resource areas or substantially reduced impacts in especially critical resource areas, this can support a finding that the alternative is environmentally superior. In such instances, the PEIR may disclose the differences between the alternatives and identify how each alternative may be superior. Table 6-1, Comparison of Potentially Significant Impacts for Alternatives to the Project, provides a summary comparison of the alternatives with the project to highlight if each alternative would result in a similar, greater, or lesser impact regarding potentially significant impacts. This assessment considers the overall advantages and disadvantages associated with the alternatives analyzed relative to the project. In evaluating alternatives under CEQA, different weights may be assigned to the relative importance of specific environmental impacts. In comparing the alternatives to the project, "more weight" was given to agricultural resources, biological resources, land use and planning, groundwater basins, water supply, transportation, water and wastewater infrastructure, and evacuation/wildfire hazards than to other resource area impacts, primarily considering the importance of these issue areas to have the most significant and irreversible impacts and the County's overall policy context for the management of these resources.

In addition to the comparison of impacts assessed in Table 6-1, consideration must be given to how and to what extent each of the alternatives accomplishes the purpose and objectives of the project (refer to Section 6.2.2.2 and Section 6.2.3.2). Table 6-2, Ability of Project Alternative to Meet the Project Objectives, provides a summary comparison of the alternatives with the project to determine if each alternative would meet the project objectives.

As shown in Table 6-2, the No Project Alternative would not accomplish any of the project objectives. Under the No Project Alternative, the HEU6 would not be implemented by the County. This alternative would continue to allow new residential development under the County's 2010 General Plan and existing zoning regulations. However, without implementation of a compliant Housing Element that meets the state-required RHNA and provides housing policies and programs to facilitate development of new units, the No Project Alternative would not meet any of the project objectives, as shown in Table 6-2. This alternative would not bring the 2010 General Plan or

Zoning Ordinance (Inland and Coastal) into conformance with state housing law and would severely constrain the County's ability to encourage development of lower-income housing. Further, the No Project Alternative would not provide CEQA streamlining for housing development consistent with the HEU6, LCP, 2010 General Plan, Zoning Ordinance (Inland and Coastal), and other applicable County regulations.

While the No Project Alternative would reduce impacts to a greater degree than all other alternatives, it is not likely to be a feasible alternative for the County due to the repercussions the County would face without an adopted, compliant Housing Element. As described in Section 6.2.1, if CA HCD determines that a Housing Element fails to substantially comply with the state's Housing Element Law, its General Plan is at risk of being deemed inadequate, and therefore invalid. Local governments with noncompliant housing elements are vulnerable to litigation from housing rights' organizations, developers, and CA HCD. Potential consequences of lawsuits include mandatory compliance, suspension of local control on building matters, and court approval of housing developments. Therefore, while the No Project Alternative would substantially reduce impacts on many of the resource areas analyzed in this PEIR, the No Project Alternative is not the environmentally superior alternative.

Alternative 3, the Water Conservation Alternative, has been selected as the environmentally superior alternative. Alternative 3 would replace only 464 units in the VO zoning district compared to 1,153 units under Alternative 2. As such, Alternative 3 would have reduced impacts compared to Alternative 2 related to concentrating replacement sites in Carmel Valley and along SR-68, including impacts on aesthetics, transportation hazards, emergency access, evacuation, and utilities infrastructure. For instance, due to the visual sensitivity of Carmel Valley and along State Route 68, which comprise the majority of the VO zoning districts, replacement units in these areas could increase impacts to scenic vistas and visual character and quality. In addition, due to the reliance of septic systems in Carmel Valley, the water supply constraints along SR-68, and the lack of existing public utilities infrastructure to support residential units at the two VO zoning districts in rural, undeveloped areas of southern UMC, the concentration of replacement sites in the VO zone could exacerbate existing impacts and constraints related to water and wastewater infrastructure. Alternative 3 would have a smaller impact on these communities that have VO zoning districts because it would involve placing less than half of the replacement sites under Alternative 2 in these areas.

Alternative 2 would maintain operational water demand by preserving agricultural operations in UMC, which have a higher water demand than residential uses. On the other hand, Alternative 3 would reduce strain on the critically overdraft and high priority groundwater basins in UMC by removing the majority of sites in critically over-drafted basins and replacing them in areas outside high priority basins. Therefore, Alternative 3 would result in reduced impacts on groundwater supplies, conflict with a sustainable groundwater management plan, and water supply availability.

Similar to Alternative 2, Alternative 3 may reduce impacts on air quality, energy, GHG emissions, and VMT compared to the project because the replacement sites in the VO zone would generally be closer to jobs and other commercial uses, resulting in fewer or shorter vehicle trips and reduced VMT (and associated criteria air pollutant and GHG emissions, as well as vehicle fuel use). Given the smaller number of replacement units needed under Alternative 3, this alternative may not reduce impacts on these resource areas to the same extent as Alternative 2. However, it should be noted that replacing sites in the VO zoning district could also increase impacts on air quality, energy, and GHG emissions if concentrated in Carmel Valley and along SR-68 due to the existing vehicle traffic and congestion in these areas. Additionally, if replacement units are placed in the two VO zoning districts in rural, undeveloped areas of southern UMC, both Alternative 2 and Alternative 3 could result in increased VMT compared to the project.

When taken together and compared against the other alternatives considered for analysis, Alternative 3, the Water Conservation Alternative, makes the most sizable reduction in physical environmental impacts and, therefore, would be the environmentally superior alternative to the project.

**Table 6-1. Comparison of Potentially Significant Impacts for Alternatives to the Project**

| Impact | Project | | Alternatives | | |
|---|---|---|---|---|---|
| | Without Mitigation | With Mitigation | No Project | Alterative 2 | Alternative 3 |

# Chapter 7 Effects Found Not to Be Significant

The California Environmental Quality Act (CEQA) provides that an Environmental Impact Report (EIR) shall focus on the significant effects on the environment, discussing the effects with emphasis in proportion to their severity and probability of occurrence. The environmental topics concluded to be clearly insignificant and unlikely to occur need not be discussed further in an EIR unless information inconsistent with this finding is subsequently received.

CEQA Guidelines, Section 15128, and California Public Resources Code, Section 21100(c), require that an EIR contain a brief statement disclosing the reasons why various possible significant effects of a project were determined not to be significant and were, therefore, not discussed in detail in the Program EIR (PEIR; California Public Resources Code, Section 21000 et seq.).

Note that "HEU6" refers to the draft HEU6 document circulated for public review and submitted to the County's Housing and Community Development (County HCD) Department, while "the project" refers to HEU6 along with other components and related actions intended to implement HEU6, as described in Chapter 3, Project Description. HEU6 includes a total of 56 opportunity sites: Opportunity Sites 1 through 6, 8 through 56, and 64.

For the purposes of the Program Environmental Impact Report (PEIR), the following definitions are used herein:

- County of Monterey Government (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

Based on review concepts identified in the CEQA Guidelines, the County determined that the project would not result in potentially significant impacts related to some or all of the CEQA Guidelines Appendix G Environmental Checklist questions as they relate to the following environmental resources:

- Geology and Soils
- Population and Housing

In substantial conformance with CEQA Guidelines Appendix G, each environmental topic below answers the CEQA Environmental Checklist questions used to determine why the project's impacts were found not to be significant. Impacts found not to be significant include those determined to be "less than significant" or to have "no impact."

## 7.1 Geology and Soils

According to Appendix G of the CEQA Guidelines, the project would have a significant impact on geology and soils if it would:

**a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:**

**i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault. Refer to Division of Mines and Geology Special Publication 42.**

**Less than Significant Impact.** Monterey County lies in a region of high seismic activity in the form of frequent medium earthquakes with nearby epicenters, as well as infrequent major earthquakes. The Salinas Valley, although underlain by granite, contains several thousand feet of sediment that has a greater seismic hazard. The San Andreas Fault runs through the southeastern portion of Monterey County for approximately 30 miles and poses the single greatest seismic hazard to Monterey County. Two other active faults affecting Monterey County include the Palo Colorado-San Gregorio Fault Zone and the Monterey Bay Fault Zone. The Palo Colorado-San Gregorio Fault Zone connects the Palo Colorado Fault near Point Sur, south of Monterey, with the San Gregorio Fault near Point Año Nuevo in Santa Cruz County. The Monterey Bay Fault lies seaward of the City of Seaside, extending northwesterly to the Pacific Ocean.

The project involves construction of residential units to accommodate future population growth in Monterey County. A few opportunity sites are on or adjacent to mapped earthquake faults, including Opportunity Sites 16, 24, 40, 55, and 57 (Figure 7-1a through Figure 7-1i, Earthquake Faults). With the increase in residential units accommodated by HEU6 and associated residents in Monterey County, the project would increase exposure to earthquake fault rupture. However, compliance with federal, state, and local requirements would reduce impacts related to earthquake fault rupture. For example, Section 21.66.040 of the Monterey County Code (County Code) requires preparation of a geological report by a registered geologist or certified engineering geologist for certain types of development and for any development in an area of geologic hazards (e.g., landslide areas, near a potentially active fault, on slopes), as defined therein. All report recommendations are required to be incorporated into project design. All future development projects in the inland planning areas would be required to comply with applicable seismic and geologic hazards policies established in the applicable area or master plan for which the development project is in (e.g., all development projects in the Fort Ord Master Plan Area need to comply with seismic and geologic hazards policies established in the Fort Ord Master Plan). Similarly, all future development in the Coastal Zone would be required to comply with geologic report requirements established in the applicable Coastal Implementation Plan for which the development project is located, pursuant to Section 20.66.040 of the County Code. Further, all

structures in UMC, including the residential units accommodated by the proposed HEU6, are required to be designed in accordance with the latest edition of the California Building Code. As a result, the final design of project-related improvements would be required to comply with the requirements of the applicable provisions of the California Building Code in effect at the time of building permit issuance. Similarly, Chapter 16.08, Grading, of the County Code sets rules and regulations to control grading, including excavations, earthwork, road construction, fills, and embankments; establishes the administration procedure for issuance of permits; and provides for approval of plans and inspections of grading construction. The County Grading Ordinance generally regulates grading activities that involve more than 100 cubic yards of excavation and fill. An excavation which does not exceed 100 cubic yards, and which is less than 2 feet in depth, or which does not create a cut slope greater than 5 feet in height and steeper, is exempt from grading regulations. Pursuant to the Monterey County Grading Ordinance, no grading permit shall be issued in any case where the Building Official determines that the grading proposed by the applicant will be hazardous by reason of geological hazard, seismic hazard, or unstable soils, among other hazards. The Monterey County Grading Ordinance requires a soil engineering report and engineering geology report (Section 16.08.110: Permit – Soil Engineering and Engineering Geology Reports [Ordinance 4029, 1999; Ordinance 2534, Section 110, 1979]), unless waived by the Building Official because information of record is available showing such data is not needed. The soil engineering report shall include data regarding the nature, distribution, and strength of existing soils, conclusions and recommendations for grading procedures and design criteria for corrective measures when necessary, and opinions and recommendations covering the adequacy of sites to be developed by the proposed grading. The engineering geology report shall include an adequate description of the geology of the site, conclusions and recommendations regarding the effect of geologic conditions on the proposed development, and opinions and recommendations covering the adequacy of sites to be developed by the proposed grading. Both of these plans are required to be approved by the Building Official in accordance with the County Grading Ordinance. Additionally, the design of project-related improvements would also be required to comply with the recommendations included in the soils engineering and engineering geology reports, which are required to be incorporated into the grading plans and specifications. Therefore, with compliance with all federal, state, and local requirements, project impacts related to exposure to earthquake fault rupture would be less than significant.

**ii. Strong seismic ground shaking.**

**Less than Significant Impact.** Refer to Section 7.1(a)(i). To ensure the structural integrity of all buildings and structures, the project must conform to the seismic requirements as outlined in the California Building Code. Section 21.66.040 of the County Code requires preparation of a geological report by a registered geologist or certified engineering geologist for certain types of development and for any development in an area of geologic hazards (e.g., landslide areas, near a potentially active fault, on slopes), as defined therein. All report recommendations are required to be incorporated into

the project design. All future development projects in the inland planning areas would be required to comply with applicable seismic and geologic hazards policies established in the applicable area or master plan for which the development project is located (e.g., all development projects in the Fort Ord Master Plan Area need to comply with seismic and geologic hazards policies established in the Fort Ord Master Plan). Similarly, all future development in the Coastal Zone would be required to comply with geologic report requirements established in the applicable Coastal Implementation Plan for which the development project is, pursuant to Section 20.66.040 of the County Code. The Monterey County Grading Ordinance requires a soil engineering report and engineering geology report (Section 16.08.110: Permit – Soil Engineering and Engineering Geology Reports [Ordinance 4029, 1999; Ordinance 2534, Section 110, 1979]) to be approved before the issuance of a building permit. The project grading also must conform to the grading requirements outlined in Chapter 16.08 of the County Code and may be inspected by the Building Official prior to the completion of grading activities. Therefore, compliance with the California Building Code, Monterey County Grading Ordinance, and soil engineering report and engineering geology report recommendations would ensure the project would not result in a potentially significant impact from the exposure of people or structures to potential adverse effects from strong seismic ground shaking.

#### iii. Seismic-related ground failure, including liquefaction.

**Less than Significant Impact.** Liquefaction typically occurs when a site is in a zone with seismic activity, on-site soils are cohesionless (such as sand or gravel), groundwater is encountered within 50 feet of the surface, and soil relative densities are less than about 70 percent. Nearly half of the opportunity sites and pipeline sites are within or partially within areas identified by the Federal Emergency Management Agency (FEMA) as having high liquefaction susceptibility, including Opportunity Sites 3, 11 through 15, 17, 21, 24, 40, 42, 45, 48, 51, 54 through 56, 58 through 60, and 62 through 64 (Figure 7-2a through Figure 7-2i, Liquefaction Susceptibility).

Development resulting from the project has the potential to occur in places or in a manner that would result in the exposure of development and future residents to seismic-related ground failure, including liquefaction. However, numerous state and local regulations exist that would apply to all future development resulting from the HEU6, which adequately address these hazards. For instance, all development would be subject to compliance with the California Building Code, Monterey County Grading Ordinance, and required soil engineering report and engineering geology report recommendations, among others, to reduce or prevent impacts associated with seismic-related ground failure. For instance, pursuant to Section 16.08.110 of the County Code, applicants for a proposed use triggering the need for a grading or building permit for site improvements would be required to prepare and submit a soil engineering report and engineering geology report for review and approval by the County Building Official. The soil engineering report shall include data regarding the nature, distribution, and strength of existing soils, conclusions and recommendations for grading procedures and design criteria for corrective measures when necessary, and opinions and

recommendations covering the adequacy of sites to be developed by the proposed grading. The engineering geology report shall include an adequate description of the geology of the site, conclusions and recommendations regarding the effect of geologic conditions on the proposed development, and opinions and recommendations covering the adequacy of sites to be developed by the proposed grading. Recommendations included in the reports and approved by the Building Official are required to be incorporated in the grading plans and specifications. Section 21.66.040 of the County Code similarly requires preparation of a geological report by a registered geologist or certified engineering geologist for certain types of development and for any development in an area of geologic hazards (e.g., landslide areas, near a potentially active fault, on slopes), as defined therein. All report recommendations are required to be incorporated into the project design. All future development in the Coastal Zone would also be required to comply with geologic report requirements established in the applicable Coastal Implementation Plan for which the development project is located, pursuant to Section 20.66.040 of the County Code. All future development projects in the inland planning areas would be required to comply with applicable seismic and geologic hazards policies established in the applicable area or master plan for which the development project is located. The project does not include any plans, policies, or programs that would modify these existing regulations or exempt future residential development from mandatory compliance with these requirements. Therefore, the implementation of the project would have less than significant impacts related to seismic-related ground failure, including liquefaction.

**iv. Landslides.**

**Less than Significant Impact.** Landslide-prone areas are generally defined by steep slopes, weak or fractured bedrock, and heavy moisture. Portions of UMC are mapped as susceptible to landslides, including portions of the Carmel Valley Master Plan Area, Central Salinas Valley Plan Area, the Greater Monterey Peninsula Plan Area, and the Toro Plan Area. None of the opportunity sites are within or even partially within areas identified by FEMA as having high landslide susceptibility (Figure 7-3a through Figure 7-3i, Landslide Susceptibility). However, several opportunity sites are in areas mapped as having moderate landslide susceptibility and could result in a moderate potential to increase exposure of future residents to risk from landslides.

Numerous state and local regulations would apply to all future development resulting from the HEU6, which adequately address this hazard. For instance, all development would be subject to compliance with the California Building Code, Monterey County Grading Ordinance, and required soil engineering report and engineering geology report recommendations, among others, to reduce or prevent impacts associated with landslides. Pursuant to Section 16.08.110 of the County Code, applicants for a proposed use triggering the need for a grading or building permit for site improvements would be required to prepare and submit a soil engineering report and engineering geology report for review and approval by the County Building Official. Recommendations included in the reports are required to be incorporated into the grading plans

and specifications. Section 21.66.040 of the County Code similarly requires preparation of a geological report by a registered geologist or certified engineering geologist for certain types of development and for any development in an area of geologic hazards (e.g., landslide areas, near a potentially active fault, on slopes), as defined therein. All report recommendations are required to be incorporated into the project design.

In addition, Policy OS-3.5(b) of the Monterey County General Plan (2010 General Plan) requires development on slopes greater than 25 percent to incorporate adequate special erosion control and construction techniques into project design, which would reduce the potential for landslide hazards. Furthermore, all future development in the Coastal Zone would also be required to comply with geologic report requirements established in the applicable Coastal Implementation Plan for which the development project is located, pursuant to Section 20.66.040 of the County Code. All future development projects in the inland planning areas would be required to comply with applicable seismic and geologic hazards policies established in the 2010 General Plan or applicable area or master plan for which the development project is located. The project does not include any plans, policies, or programs that would modify these existing regulations or exempt future residential development from mandatory compliance with these code requirements. Therefore, the implementation of the project would have less than significant impacts related to landslides.

**b. Result in substantial soil erosion or the loss of topsoil.**

**Less than Significant Impact.** Construction of residential units accommodated by the proposed HEU6 could result in substantial soil erosion or the loss of topsoil. Development of individual projects would likely require grading to facilitate the construction of project-related infrastructure. As a result, site preparation and construction activities would disturb soil and increase its susceptibility to erosion. Removal of soils by wind or water can undermine buildings, roads, and other development and contribute to the siltation of local streams or water bodies. Erosion impacts can result from both short-term construction activities and long-term operational conditions where vegetative cover is not re-established following development. The removal and disturbance of soil during grading activities would directly affect the rate of erosion. All ground-disturbing activities would be subject to Monterey County erosion control requirements, including re-planting of disturbed areas, watering, and other physical erosion control methods. For example, Chapter 16.12, Erosion Control, of the County Code sets forth required provisions for project planning, preparation of erosion control plans, runoff control, land clearing, and winter operations, and establishes procedures for administering those provisions. This chapter (and Policy OS-3.5[b] of the 2010 General Plan) requires that specific design considerations be incorporated into projects to reduce the potential of erosion and that an Erosion Control Plan be approved by the County prior to initiation of grading activities. Therefore, prior to the issuance of any grading permit for individual projects, project applicants would be required to prepare and submit an Erosion Control Plan and standard construction best management practices to minimize temporary increases in

erosion during construction consistent with the requirements of County Code, Chapters 16.08 and 16.12. Furthermore, any development involving clearing, grading, or excavation that causes soil disturbance of one or more acres is subject to the National Pollutant Discharge Elimination System Construction General Permit provisions. Compliance with the National Pollutant Discharge Elimination System Construction General Permit would trigger preparation and compliance with an approved Stormwater Pollution Prevention Plan that would consider the full range of erosion control best management practices. Therefore, in addition to the Erosion Control Plan, project applicants would be required to prepare and submit a Stormwater Pollution Prevention Plan in accordance with Regional Water Quality Control Board standards. The Erosion Control Plan and Stormwater Pollution Prevention Plan would be required to incorporate best management practices consistent with the requirements of the National Pollutant Discharge Elimination System and County Code, Section 16.12.80, Land Clearing, to ensure that contaminated runoff and sediment are minimized during site preparation, construction, and post-construction periods. Individual project applicants would be required to submit the Erosion Control Plan and a copy of the approved Stormwater Pollution Prevention Plan, including the Waste Discharge Identification Number, to County HCD – Environmental Services for review and approval prior to the issuance of any grading permit.

All future development projects in the inland planning areas would be required to comply with applicable erosion control policies established in the applicable area or master plan for which the development project is located. Further, all future development in the Coastal Zone would also be required to comply with applicable erosion control policies established in the applicable Land Use Plan and associated Coastal Implementation Plan for which the development project is located. For instance, the North County Land Use Plan includes Land Disturbance Target requirements to control erosion and sedimentation to estuarine systems. The North County Coastal Implementation Plan requires a Land Disturbance Target Evaluation and a determination as to whether development is in a Watershed Restoration area for all proposed development in the North County Land Use Plan Area before the application can be determined complete.

Compliance with County Code requirements and the National Pollutant Discharge Elimination System Construction General Permit would ensure that potential construction-related erosion is minimized and that standard best management practices would be implemented during construction. Furthermore, as discussed in Section 7.1(a)(i), individual project applicants would be required to submit detailed project-level grading plans to the County consistent with County Code, Section 16.08.100. Moreover, as noted above, all future development would be required to comply with the recommendations of site-specific soils engineering and engineering geology reports. Therefore, with compliance with all federal, state, and local requirements, project impacts related to erosion or loss of topsoil would be less than significant.

**c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.**

**Less than Significant Impact.** Development resulting from the project has the potential to occur in places or in a manner that would be exposed to hazards due to soil instability. However, numerous state and local regulations exist that would apply to all future development resulting from the HEU6, which adequately address this hazard. For instance, all development would be subject to compliance with the California Building Code, Monterey County Grading Ordinance, and required soil engineering report and engineering geology report recommendations, among others, to reduce or prevent impacts associated with soil instability. Pursuant to Section 16.08.110 of the County Code, applicants for a proposed use triggering the need for a grading or building permit for site improvements would be required to prepare and submit a soil engineering report and engineering geology report for review and approval by the County Building Official. Recommendations included in the reports are required to be incorporated in the grading plans and specifications. Section 21.66.040 of the County Code similarly requires preparation of a geological report by a registered geologist or certified engineering geologist for certain types of development and for any development in an area of geologic hazards (e.g., landslide areas, near a potentially active fault, on slopes), as defined therein. All report recommendations are required to be incorporated into the project design. All future development in the Coastal Zone would also be required to comply with geologic report requirements established in the applicable Coastal Implementation Plan for which the development project is located, pursuant to Section 20.66.040 of the County Code. Further, all future development projects in the inland planning areas would be required to comply with applicable seismic and geologic hazards policies established in the applicable area or master plan for which the development project is located.

Compliance with the California Building Code, Monterey County Grading Ordinance, and required soil engineering report and engineering geology report recommendations would identify potential for hazards related to soil conditions on individual sites so the project can be designed to reflect site-specific geologic and soils conditions and prevent risks due to lateral spreading, subsidence, liquefaction, or collapse. Impacts would be less than significant. The project does not include any plans, policies, or programs that would modify these existing regulations or exempt future residential development from mandatory compliance with these requirements. Therefore, the implementation of the project would have less than significant impacts related to expansive soils.

**d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property.**

**Less than Significant Impact.** Refer to Section 7.1(c). All development would be subject to compliance with the California Building Code, Monterey County Grading Ordinance, and required soil engineering report and engineering geology report recommendations, among others, to reduce or

prevent impacts associated with expansive soils. Pursuant to Section 16.08.110 of the County Code, applicants for a proposed use triggering the need for a grading or building permit for site improvements would be required to prepare and submit a soil engineering report and engineering geology report for review and approval by the County Building Official. Recommendations included in the reports are required to be incorporated into the grading plans and specifications. Section 21.66.040 of the County Code similarly requires preparation of a geological report by a registered geologist or certified engineering geologist for certain types of development and for any development in an area of geologic hazards (e.g., landslide areas, near a potentially active fault, on slopes), as defined therein. All report recommendations are required to be incorporated into the project design. All future development in the Coastal Zone would also be required to comply with geologic report requirements established in the applicable Coastal Implementation Plan for which the development project is, pursuant to Section 20.66.040 of the County Code. Further, all future development projects in the inland planning areas would be required to comply with applicable seismic and geologic hazards policies established in the applicable area or master plan for which the development project is located. The project does not include any plans, policies, or programs that would modify these existing regulations or exempt future residential development from mandatory compliance with these requirements. Therefore, with compliance with the California Building Code, Monterey County Grading Ordinance, and required soil engineering report and engineering geology report recommendations, implementation of the project would have less than significant impacts related to expansive soils.

**e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.**

**Less Than Significant Impact.** Development resulting from the project has the potential to occur in places with soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater. However, numerous state and local regulations exist that would apply to all future development resulting from the HEU6, which adequately address this hazard. For instance, the 2010 General Plan's Public Services Element states that construction of new on-site septic systems is not permitted for development in the existing service area of a regional or subregional wastewater collection and treatment system. Public Services Element Policies PS-4.1, PS-4.2, PS-4.3, and PS-4.5 promote the use of wastewater collection and treatment systems for new development and deter the use of septic and alternative wastewater systems.

Further, all development would be subject to the California Plumbing Code, the County's Local Agency Management Program for Onsite Wastewater Treatment Systems, and Chapter 15.20, Sewage Disposal, of the County Code, which establish application and site evaluation requirements, among others, for on-site treated non-potable water systems and on-site wastewater treatment systems (OWTS). Similarly, development in the Coastal Zone would be required to comply with applicable policies and development standards related to septic systems established in the applicable

Coastal Implementation Plan for which the development project is located (e.g., Section 20.144.130 – Wastewater Management Facilities Development Standards). All developments that would require sewer service via a new OWTS would be required to obtain an OWTS installation permit from the Monterey County Health Department, Environmental Health Bureau. The permit would require site evaluation (i.e., an assessment of the property's soil characteristics, including soil profile analysis and absorptive characteristics, topography, and groundwater level) by a qualified professional. The permit application must include a summary of site evaluation activities, including conclusions and recommendations that specifically state if the proposed OWTS (or proposed lots of record, in the case of new subdivisions of land) meet(s) the standards in Chapter 15.20 of the County Code and the Local Agency Management Program. The site evaluation is required to include specific recommendations about the location and design of the OWTS(s), including soil application rate for each dispersal system area. In addition, the Carmel Valley Master Plan, which would apply to Opportunity Sites 17 through 23, 35 through 38, 54, and 56, states that development projects that include an OWTS shall provide geologic and soil surveys that assess if conditions could preclude or restrict the possibility of satisfactorily locating the OWTS where it would not pose a threat of contamination to the aquifer. This policy would specifically require review for proper siting and design in accordance with the standards of the Carmel Valley Wastewater Study.

The project does not include any plans, policies, or programs that would modify these existing regulations or exempt future residential development from mandatory compliance with these requirements. Therefore, compliance with the California Plumbing Code, the Local Agency Management Program, and Chapter 15.20 of the County Code would ensure that project impacts related to the use of septic tanks or alternative wastewater disposal systems would be less than significant.

**f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.**

**Less than Significant Impact with Mitigation Incorporated.** Refer to Section 4.7, Geology and Soils, for discussion of the project's potential to disturb potentially significant paleontological resources. As described therein, impacts related to disturbance of potentially significant paleontological resources would be less than significant with mitigation.

## 7.2 Population and Housing

According to Appendix G of the CEQA Guidelines, the project would have a significant impact on population and housing if it would:

**a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).**

**Less than Significance Impact.** The California Department of Housing and Community Development (CA HCD) issues a Regional Housing Needs Determination to the Association of

Monterey Bay Area Governments (AMBAG) for Monterey and Santa Cruz Counties,[1] which includes an overall housing need number, as well as a breakdown of the percentage of units required in four income distribution categories (i.e., very low, low, moderate, and above moderate). AMBAG is required to distribute this overall regional allocation number to the jurisdictions in the region for the eight-year planning period (i.e., 33,274 housing units) for the creation of housing units. These quantified numbers are known as the Regional Housing Needs Allocation (RHNA). AMBAG developed the Final 6th Cycle RHNA Plan 2023–2031 pursuant to California housing law (California Government Code, Section 65580 et seq.) to assign existing and projected housing needs to jurisdictions in the Monterey Bay Area region, including the County of Monterey. Based on the final RHNA plan, the County was allocated 3,326 housing units across four income categories. The HEU6 establishes programs, policies, and actions to further the goal of meeting the existing and projected housing needs for residents of all income levels throughout UMC. The purpose of the HEU6 and other necessary approvals to implement HEU6 (project) are to accommodate the RHNA assigned to the County for the 8-year planning period from 2023 to 2031. The Sites Inventory provided in the HEU6 is adequate for the development of housing to meet the RHNA target with a reasonable capacity buffer[2], and the County will rezone opportunity sites to create enough capacity to meet the RHNA target.

#### Population Growth Forecasts

Monterey County has experienced and continues to experience population growth, as shown in Table 7-1, Monterey County and Unincorporated Monterey County Population Growth. From 2010 to 2020, the total population in UMC increased by 4.26 percent.

**Table 7-1. Monterey County and Unincorporated Monterey County Population Growth**

| Year | Total Monterey County Population | Percent Increase | UMC Population | Percent Increase |
|---|---|---|---|---|
| 1980 | 290,444 | — | 84,497 | — |
| 1990 | 355,660 | 22.45% | 100,479 | 18.9% |
| 2000 | 401,762 | 12.96% | 100,252 | -0.23% |
| 2010 | 415,057 | 3.31% | 100,213 | 0.04% |
| 2020 | 439,035 | 5.78% | 104,482 | 4.26% |

**Source:** County of Monterey 2025.

[1] The state mandate for distributing the RHNA is tied to the state designation of a Council of Governments (COG). Each COG is expected to distribute the RHNA to their member jurisdictions. AMBAG is the Metropolitan Planning Organization for the Counties of San Benito, Santa Cruz, and Monterey and has prepared a 2045 MTP/SCS for the tri-county region. However, it is the COG for only the Counties of Santa Cruz and Monterey. For this reason, HCD makes a separate determination for San Benito County and tasks the San Benito County Council of Governments (SBtCOG) with developing its own RHNA Plan. AMBAG does coordinate with SBtCOG so that its RHNA Plan is consistent with the 2045 MTP/SCS.

[2] HCD recommends a buffer of 15 to 30 percent or more units in each income level to account for potential site-specific constraints or delays in development, particularly for lower-income housing. This buffer complies with the purpose of Senate Bill 166 (No Net Loss Law) to ensure that the County maintains adequate capacity throughout the 8-year planning period. The reasonable capacity buffer for HEU6 includes 17 percent of gross RHNA numbers for the very low-income level, 34 percent for the low-income level, and 70 percent for the moderate-income level above the County's RHNA targets so that the County maintains adequate capacity to meet its targets.

AMBAG's Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) provides a jobs-based approach to forecasting trends in growth for the region. According to AMBAG, Monterey County's population is projected to reach 110,326 by the 2045 MTP/SCS horizon year, as shown in Table 7-2, AMBAG MTP/SCS Growth Forecasts. The HEU6 anticipates that the growth will continue, thereby increasing the demand for various housing types and sizes to accommodate this growth.

**Table 7-2. AMBAG MTP/SCS Growth Forecasts**

| | 2023[1] | 2025 | 2030 | 2035 | 2040 | 2045 |
|---|---|---|---|---|---|---|
| Population | 104,555 | 108,432 | 109,976 | 110,170 | 110,277 | 110,326 |
| Housing | 40,529 | 40,271 | 40,620 | 40,908 | 41,271 | 41,408 |
| Employment | 60,346 | 60,574 | 61,553 | 62,439 | 63,396 | 64,395 |

**Source:** AMBAG 2024, Revised Draft 2026 Subregional Growth Forecast, AMBAG Region and Jurisdictions.

**Plus Project Growth Projections**

As described in Chapter 3, this PEIR evaluates a reasonable development capacity of 4,434 housing units on 56 opportunity sites for the majority of analyses in Chapter 4, Environmental Analysis. However, given that the project would rezone a portion of each of the opportunity sites as HDR/25 (high density residential at 25 dwelling units per acre) and HDR/30 (high density residential at 30 dwelling units per acre), a theoretical maximum total capacity of 12,497 new housing units on 56 opportunity sites is technically permitted (although highly unlikely) under the proposed zoning. This upper bound scenario was used for technical analyses that require conservative modeling, including for vehicle miles traveled (Section 4.16, Transportation), air emissions (Section 4.3, Air Quality), greenhouse gas emissions (Section 4.8, Greenhouse Gas Emissions), and noise (Section 4.13, Noise), to ensure the PEIR fully discloses the potential environmental consequences of the project by analyzing the highest intensity of development legally permissible under the proposed zoning. However, this theoretical maximum capacity assumption is not used for the majority of chapters in this PEIR because it is an unreasonable expectation of future growth.[3]

While the PEIR uses the higher theoretical density, where applicable, to ensure that all potential environmental impacts are accounted for, development of 12,497 new housing units is not supported by historical building trends nor would it align with market demand in the UMC. For instance, as described in HEU6 Section 2.5.6, Housing Units Permitted, building permits for only 1,848 housing units were issued in UMC during the Fifth Cycle Housing Element planning period. Additionally, Chapter 3, Housing Constraints, of the HEU6 lists a host of constraints to residential development in UMC due to a range of financial, environmental, and governmental factors, such as land and construction costs; availability of financing; conservation of biological resources; the

[3] Each section in Chapter 4, Environmental Analysis, of the PEIR identifies in the introduction the assumptions used in the analysis, either buildout of a reasonable development capacity of 4,434 housing units, the theoretical maximum capacity of 12,497 housing units, or the location of the opportunity site parcels, to determine impacts on the environment.

suitability of land for development due to potential exposure to seismic, flooding, wildfire, and drought conditions; development standards; and zoning. While the HEU6 includes a range of programs and policies to aggressively address these development constraints, it will be challenging for development trends in UMC to increase from only 1,848 housing units during the Fifth Cycle Housing Element planning period to more than 4,434 housing units during the Sixth Cycle Housing Element planning period (a nearly 140 percent increase). Additionally, the zoning capacity is proposed as HDR/25 and HDR/30 to help the County accommodate enough capacity to meet the RHNA plus the reasonable capacity buffer. Therefore, it is unreasonable to assume development at the theoretical maximum capacity in the UMC during the Sixth Cycle Housing Element period (2023-2031). As such, the reasonable development capacity of 4,434 housing units is used in the analysis below to estimate future population growth with implementation of the project.

Table 7-3, Existing Plus Project Growth Projections, compares the project's anticipated housing and population growth to existing 2023 conditions. As indicated in Table 7-3, the project would increase Monterey County's housing stock by approximately 9.9 percent (adding 4,434 dwelling units) and its population by approximately 11 percent (adding 12,859 people). With pipeline sites and Accessory Dwelling Units (ADUs), which could be developed independently of the HEU6, an additional 4,243 people could be anticipated. However, the projected growth is attributed to meeting state-mandated RHNA targets, plus a 15–30 percent buffer to ensure compliance with No Net Loss provisions. As such, the growth is not considered unplanned. This RHNA has been mandated by the state to accommodate the existing and projected future housing needs for residents in UMC. Moreover, according to the U.S. Census Bureau's American Community Survey, which tracks geographical movement over the past year, the 5-year average estimate for 2023 data indicates that an estimated 40,103 (9.7 percent) of the 411,511 Monterey County residents moved, while the remainder stayed in the same residence (U.S. Census Bureau 2023). Of the 40,103 people who moved, 21,824 people (54 percent) moved in Monterey County, and others moved to a different county or state. Based on this geographical mobility trend, it is anticipated that the majority of new housing units processed under the HEU6 would likely be occupied by people already residing in Monterey County, including in-migration from incorporated cities, rather than from outside Monterey County or state. Therefore, the stated increase of 12,859 people (or 11 percent) overstates the actual population growth; the true increase would represent only a fraction of that total. However, it is important to note that the median sales and rental prices in UMC have continued to increase over the last several years and are unaffordable for most people currently living and working in UMC. As noted in the HEU6, home sales price data, median home prices in Monterey County were recorded at $825,005 in June 2024. From 2020 to 2024, median home prices increased 39 percent from $600,000 to $800,000 (Zillow 2024). Additionally, Zillow rentals showed the median rent cost increased 23 percent from $2,131 to $2,622. While median income has increased slightly (50 percent), this increase has not kept pace with rental (73 percent increase between 2015 and 2024) and sales price (95 percent increase since 2014) increases (Zillow

2024). As such, out-of-area migration and purchasing of homes in UMC is expected and included in the population increases noted above and in Table 7-3. Additionally, while this PEIR assumes buildout of the HEU6 to evaluate the potential impacts of the project, the project would facilitate housing development through implementation of a policy document and would not directly result in actual construction of development projects that would induce direct growth or roadway or other infrastructure construction to induce indirect growth.

**Table 7-3. Existing Plus Project Growth Projections**

| Description | Housing (Dwelling Units) | Population |
|---|---|---|
| 2023 Estimate/Existing[1] | 40,529 | 104,555 |
| 2031 Estimated Project | 4,434 | 12,859[2] |
| **2023 Existing Plus Project** | **44,963** | **117,414** |
| **% Change** | **9.9%** | **10.9%** |
| 2031 Estimated Pipeline and ADUs | 1,463 | 4,243[2] |
| **2023 Existing Plus Project Plus Pipelines and ADUs** | **46,426** | **121,657** |
| **% Change** | **12.7%** | **14.1%** |

ADUs = Accessory Dwelling Units

[1] AMBAG 2024.

[2] Based on 2.9 people per household (State of California Department of Finance 2020).

Table 7-4, AMBAG MTP/SCS Plus Project Growth Projections, extrapolates AMBAG's 2045 forecast back to 2031 to align with the RHNA planning period (2023–2031). Based on this extrapolation and a calculated annual growth rate, Monterey County's population in 2031 would be approximately 119,513 with project implementation, approximately 10.8 percent higher than AMBAG's extrapolated forecast for that year. With pipeline sites and ADUs, which could be developed independently of the HEU6, approximately 120,976 people are anticipated. However, the housing element, as a policy document, does not propose any specific housing development. Instead, it identifies policies and programs to facilitate future development that aligns with state-mandated housing needs. Furthermore, as explained above, this figure overstates the actual population increase in UMC, as most homebuyers or renters would represent intra-county relocation rather than net new arrivals from outside Monterey County or the state.

**Table 7-4. AMBAG MTP/SCS Plus Project Growth Projections**

| Description | Housing (Dwelling Units) | Population |
|---|---|---|
| 2023 Estimate/Existing[1] | 40,529 | 104,555 |
| 2045 AMBAG Forecast | 41,408 | 110,326 |
| Change 2023 to 2045 | | +5,771 |
| Change per Year 2023 to 2045 | | +262.32 |
| Extrapolated AMBAG 2031 Population[2] | | 106,654 |
| 2031 Estimated Project | 4,434 | 12,859[3] |
| **Extrapolated AMBAG 2031 Plus Project** | | **119,513** |
| **% Change from AMBAG Forecast in 2031** | | **10.8%** |

**Table 7-4. AMBAG MTP/SCS Plus Project Growth Projections**

| Description | Housing (Dwelling Units) | Population |
|---|---|---|
| **Extrapolated AMBAG 2031 Plus Project Plus Pipelines and ADUs** | | **120,976** |
| **% Change from AMBAG Forecast in 2031** | | **11.8%** |

[1] AMBAG 2024

[2] Change per year population of 263 x 8 years (2023 to 2031) + Existing 2023 population of 104,555 = 106,654.

[3] Based on 2.9 people per household (State of California, Department of Finance, Table 2: E-5 City/County Population and Housing Estimates, 4/1/2020. https://dof.ca.gov/forecasting/demographics/estimates/e-5-population-and-housing-estimates-for-cities-counties-and-the-state-2020-2025/)

**Planned Population Growth**

While the project would indirectly contribute to population growth as described above, this growth is not considered unplanned given that these units are mandated by state law and included in the AMBAG Final 6th Cycle RHNA Plan 2023–2031. Additionally, per California Government Code, Section 65584.01, RHNA is determined based on projected housing need, not constrained by past development trends or regional forecasts. Therefore, RHNA targets often exceed the growth projections of Metropolitan Planning Organizations such as AMBAG, and such exceedances do not constitute substantial unplanned growth. The HEU6 is consistent with the County's RHNA plus a reasonable capacity buffer as recommended by CA HCD and would accommodate projected population growth and associated housing demand to minimize overcrowding, high cost burdens, and homelessness.

As described above, based on historical geographical mobility trends, the majority of new housing units processed under the HEU6 would likely be occupied by people already residing in Monterey County rather than from outside Monterey County or state. Additionally, development facilitated by the project is intended to be dispersed throughout Monterey County to create managed and planned levels of growth in specific areas. The opportunity sites were chosen, in part, based on proximity to existing urban development and public services and utilities to grow areas where there is existing infrastructure and priority growth areas identified in the 2010 General Plan (e.g., Community Areas, rural Centers, Affordable Housing Overlays) and to avoid sprawl or haphazard development. It is also important to note that future housing development would occur incrementally depending on market conditions and other factors, such as availability of utilities (e.g., water supply and sewer capacities) and public services (e.g., fire and police), so that unplanned growth does not occur. As discussed in Section 4.18, Utilities and Service Systems, only projects with adequate infrastructure would be permitted, ensuring that substantial unplanned growth does not occur. All future development projects must also comply with Monterey County Code requirements and other applicable regulations.

As the growth resulting from the project is considered and evaluated throughout this PEIR, and the project would be adopted as a mandated element of the County's 2010 General Plan and Local Coastal Program, the population growth resulting from the project would not be unplanned. Upon

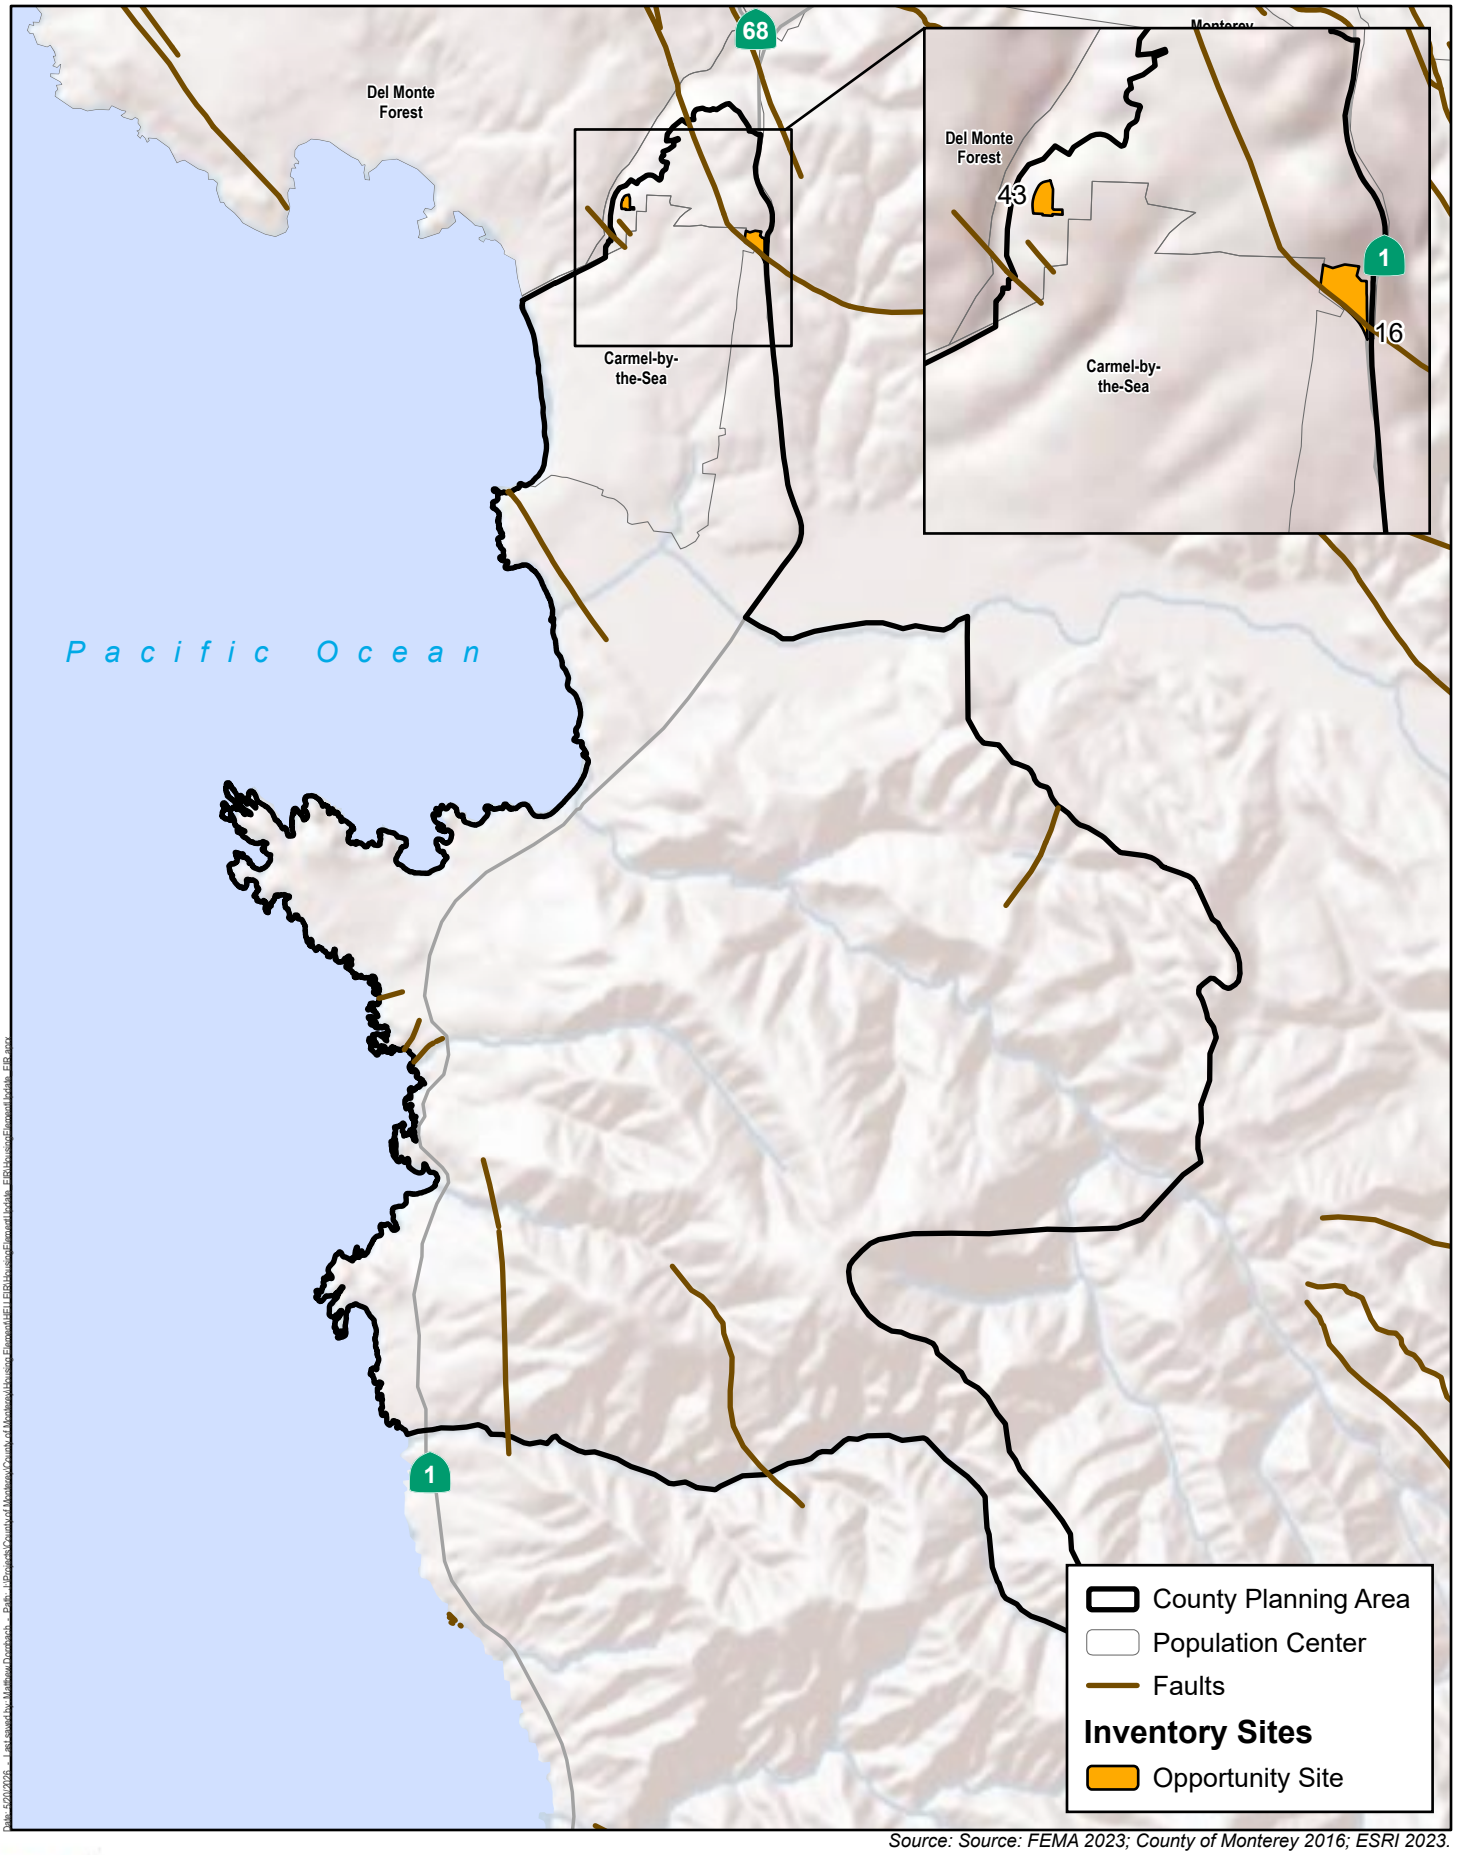
project approval, future housing facilitated by the project would be considered planned development that helps the County meet its RHNA goals. Therefore, impacts would be less than significant.

Furthermore, the State of California requires that all local governments adequately plan to meet the housing needs of their communities, including planning to accommodate RHNA. Given that the State of California is currently in an ongoing housing crisis due to an insufficient housing supply, the additional units added under the project would further assist in addressing the existing crisis and in meeting the housing needs of Monterey County's residents. Furthermore, the project has been submitted to the CA HCD for review and approved to ensure that it would adequately address the housing needs and demands of Monterey County.

**b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.**

**Less than Significant Impact.** The project would allow for greater residential densities in opportunity sites than are currently allowed on these sites. Although some of the opportunity sites contain existing residential units, HEU6 indicates these units do not impede redevelopment, as they do not necessarily need to be demolished; areas excluding them could still be developed to achieve the proposed densities for the opportunity sites. Furthermore, the California Legislature has adopted three state laws, the Density Bonus Law, Housing Element law, and the Housing Crisis Act of 2019, to ensure that new housing developments do not reduce the total number of existing dwellings and do not reduce the number of dwellings housing lower-income individuals. For instance, replacement housing requirements dictate that housing projects must create at least as many housing units as will be demolished. Projects must also replace units rented by lower-income households with units affordable to lower-income tenants and provide relocation and other benefits to lower-income tenants who are displaced by the new construction (ABAG 2025).

Specifically, projects that demolish existing units or build on a site that has had units demolished in the last five years are required to "include at least as many residential dwelling units as the greatest number of residential dwelling units that existed on the project site within the last five years." New projects are also required to include deed-restricted, affordable units if there are or have been any "protected units" on the project site. "Protected Units" include:



1. Any units that had a low-income deed-restriction for any of the previous five years
2. Any units that were subject to local rent control for any of the previous five years
3. Any units that were rented by a tenant who was low income for any of the previous five years
4. Any units that were removed from the market per the Ellis Act (Section 7060) in the previous ten years

If the site includes protected units, the developer is required to replace those units by creating at least as many new deed-restricted, affordable units as the number of protected units that existed

on the project site in the last 5 years. The affordability of the new units must be equal to the income category level of any existing or prior tenants, or if unknown, the units must be affordable for the low-income category (CA HCD 2020).

Replacement housing requirements apply to any site listed in a jurisdiction's Sixth Cycle Housing Element. The Housing Crisis Act of 2019 and amendments effective January 1, 2022, expanded that requirement to any housing development containing one or more units that proposed to demolish any existing units. The purpose of the replacement requirements is to prevent the loss of housing units and the displacement of lower-income households. State law does not allow local agencies to approve housing unless the proposed development complies with the applicable replacement housing requirements (ABAG 2025). Therefore, in compliance with state replacement housing requirements, residential developments streamlining under the HEU6 would be required to replace existing units to be demolished at an equivalent affordability level. The project would not displace a substantial number of existing people or housing; rather, it would facilitate an increase in housing supply to meet the state-mandated RHNA. Impacts would be less than significant.

# Chapter 8 List of Preparers

This chapter lists the lead agency and consultants who prepared this Program Environmental Impact Report (PEIR) and technical reports.

## 8.1 Environmental Impact Report Preparation

### 8.1.1 Lead Agency

#### County of Monterey

Craig Spencer, Director of Housing and Community Development

Kelly L. Donlon, Chief Assistant County Counsel

Robert I. Brayer, Deputy County Counsel

Melanie Beretti, AICP, Chief of Planning

Sarah Wikle, Principal Planner

### 8.1.2 Consultants

#### Harris & Associates

Darin Neufeld, AICP, Senior Director

William Halligan, Esq., Senior Director/Senior Environmental Counsel

Elizabeth Kim, Senior Project Manager

Sydnie Margallo, LEED GA, Senior Environmental Planner

Andrew Talbert, AICP, Senior Planner

Sharon Toland, AICP, Senior Air Quality, Greenhouse Gas, and Noise Specialist

Kelsey Hawkins, PMP, Environmental Analyst

Emily Mastrelli, Director of Natural Resources

Katie Deodat, Senior Aquatic Biologist and Permitting Specialist

Donna Beddow, RPA, Senior Archaeologist

Alexis Bueno, Project Manager

Lindsey Messner, Senior Technical Editor

Leona Vander Molen, Technical Editor

Randy Deodat, GISP, GIS Analyst

### Kimley Horn

Ayberk Kocatepe, PhD. PTP, Senior Transportation Engineer

Asher Cipinko, Planning Analyst

Frederik Venter, PE, Senior Vice President

Michael Schmitt, AICP CTP, PTP, RSP

## 8.2 Technical Reports

### 8.2.1 Air Quality Technical Memorandum – Harris & Associates

Sharon Toland, AICP, Senior Air Quality and Greenhouse Gas Specialist

Kelsey Hawkins, PMP, Air Quality and Greenhouse Gas Analyst

### 8.2.2 Biological Resources Technical Report – Harris & Associates

Emily Mastrelli, Director of Natural Resources

Katie Deodat, Senior Aquatic Biologist and Permitting Specialist

Erika Eidson, Biology Manager/Principal Biologist

### 8.2.3 Cultural Resources Technical Report – Harris & Associates

Donna Beddow, RPA, Senior Archaeologist

### 8.2.4 Fuel Use Worksheet – Harris & Associates

Sharon Toland, AICP, Senior Air Quality and Greenhouse Gas Specialist

### 8.2.5 Greenhouse Gas Emissions Technical Memorandum – Harris & Associates

Sharon Toland, AICP, Senior Air Quality and Greenhouse Gas Specialist

Kelsey Hawkins, PMP, Air Quality and Greenhouse Gas Analyst

### 8.2.6 Noise Technical Report – Harris & Associates

Sharon Toland, AICP, Senior Noise Specialist

Kelsey Hawkins, PMP, Noise Analyst

### 8.2.7 Vehicle Miles Traveled Memorandum – Kimley Horn

Ayberk Kocatepe, PhD. PTP, Senior Transportation Engineer

Asher Cipinko, Planning Analyst

Frederik Venter, PE, Senior Vice President

Michael Schmitt, AICP CTP, PTP, RSP

# NOTICE OF PREPARATION OF A DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT AND NOTICE OF A SCOPING MEETING

**PROJECT TITLE: County of Monterey Sixth Cycle Housing Element (2023-2031) Project**

**PROJECT LOCATION: Monterey County (Unincorporated Countywide)**

**PUBLIC NOTICE**: Notice is hereby given that the County of Monterey ("County") is seeking written comments on the Notice of Preparation ("NOP") of a Program Environmental Impact Report ("PEIR") for the County of Monterey Sixth Cycle Housing Element (2023-2031) Project ("Project") in accordance with the California Environmental Quality Act ("CEQA"). The 30-day public review period will begin on October 21, 2024, and end November 19, 2024. **All comments must be received no later than November 20, 2024.** The County is soliciting public and agency input on the scope and content of the environmental information to be included in the PEIR. The project description, location, and potential environmental effects of the Project are summarized, with additional details provided in the attached Environmental Scoping Supplement.

**PROJECT DESCRIPTION: County of Monterey General Plan Sixth Cycle Housing Element (2023-2031) update and associated General Plan amendments, rezone, and various approvals to implement the housing element and comply with state law.**

The County of Monterey, as the Lead Agency under CEQA, has determined that the Project, as described below, will require the preparation of a PEIR in compliance with CEQA. In accordance with California Code of Regulations, Title 14, Chapter 3 ("CEQA Guidelines") Section 15082, the County has issued this NOP to serve as a public notice of a PEIR to provide responsible agencies, trustee agencies, and other interested parties with information describing the Project and its potential environmental effects, and to solicit comments and suggestions regarding the scope and content of the PEIR to be prepared.

The Project involves amending the County of Monterey General Plan to update the Housing Element for the Sixth Cycle 2023-2031 planning period ("HEU6"), as well as amending other components of the General Plan, including the Circulation Element, Conservation and Open Space Element, Land Use Element, Public Services Element, Carmel Valley Master Plan ("CVMP"),

Central Salinas Valley Area Plan ("CSVAP"), Fort Ord Master Plan ("FOMP"), Greater Monterey Peninsula Area Plan ("GMPAP"), Greater Salinas Area Plan ("GSAP"), North County Area Plan ("NCAP"), Toro Area Plan ("TAP"); and to Local Coastal Program ("LCP") components, including the Carmel Area Land Use Plan ("CALUP") and North County Land Use Plan ("NCLUP"), amendments to the Monterey County Zoning Code (Title 20 Coastal Zone and Title 21 Inland Areas), and other approvals as necessary to implement the HEU6 and comply with state law.[1]

The draft HEU6 establishes programs, policies, and actions to further the goal of meeting the existing and projected housing needs for residents of all income levels throughout the unincorporated areas of Monterey County. The HEU6 explains processes by which the County proposes to accommodate the Regional Housing Needs Allocation ("RHNA") assigned to the County through the year 2031. The required RHNA assigned for unincorporated Monterey County for the Sixth Cycle totals 3,326 units over the 8-year planning period (2023-2031). The RHNA is assigned to the County by the Association of Monterey Bay Area Governments ("AMBAG") under the oversight of the California Housing and Community Development Department.

Comments from agencies and the public regarding the scope and content of the environmental information is considered prior to the preparation of the PEIR. Agency and public comments should, at a minimum, identify significant environmental issues, reasonable alternatives, and/or mitigation measures that should be considered for inclusion in the PEIR. In compliance with CEQA Guidelines Sections 15060(d) and 15082, the County will not be preparing an initial study and will begin work directly on the Draft PEIR.

**LEAD AGENCY: County of Monterey Housing and Community Development Department**

**NOP AND ENVIRONMENTAL SCOPING SUPPLEMENT AVAILABLE:** The County has made a copy of the NOP and the Environmental Scoping Supplement available for review at various locations throughout the County.

- County of Monterey Housing and Community Development Department
  1441 Schilling Place, 2nd Floor South, Salinas, CA 93901
  (831) 755-5025
- Castroville Branch - Andy Ausonio Library - Monterey County Free Libraries
  11160 Speegle St., Castroville, CA 95012
- King City Branch - Monterey County Free Libraries
  402 Broadway St., King City, CA 93930
- Carmel Valley Branch – Monterey County Free Libraries
  65 W. Carmel Valley Rd.

[1] The PEIR is intended to apply to all listed project approvals as well as to any other approvals necessary or desirable to implement the Project. The County's Safety Element is being updated and a new Environmental Justice Element is being prepared pursuant to Government Code Section 65302(g) and 65302(h), respectively. The Safety Element Update and new Environmental Justice Element are a separate project with separate environmental review.

- Marina Branch – Monterey County Free Libraries
  190 Seaside Cir, Marina, CA 93933

Or

www.countyofmonterey.gov/GeneralPlanUpdates

The NOP and Environmental Scoping Supplement is available in a CD for purchase from the County of Monterey County Housing and Community Development Department at the above address.

**PUBLIC REVIEW PERIOD: October 21, 2024, through November 20, 2024**

**POTENTIAL ENVIRONMENTAL EFFECTS:** In accordance with Section 15082 of the CEQA Guidelines, the County of Monterey has prepared this NOP to provide agencies, organizations, and interested parties with information describing the Project and its potential environmental effects. Pursuant to CEQA Guidelines Section 15060(d), the Project may result in significant environmental impacts in the following areas: **Agricultural and Forestry Resources; Air Quality; Biological Resources; Cultural Resources; Energy; Geology and Soils; Greenhouse Gas Emissions; Hazards & Hazardous Materials; Hydrology/Water Quality; Land Use and Planning; Noise; Public Services; Transportation; Tribal Cultural Resources; Utilities and Service Systems; and Wildfire.**

**SCOPING MEETING**: Pursuant to California Public Resources Code Section 21083.9 and CEQA Guidelines Section 15082(c)(1), the Lead Agency will conduct a public scoping meeting for the purpose of soliciting written comments from interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, transportation agencies, and involved federal agencies, as to the appropriate scope and content of the PEIR.

**The public scoping meeting will be held on Thursday, November 7, 2024, at 6:00 PM.** The meeting will be in **virtual format only**. The scoping meeting will provide an opportunity to disseminate information, identify environmental issues, and discuss the scope of review to be included in the PEIR. County staff and environmental consultants will be available during this meeting.

The County encourages all interested individuals and organizations to attend this meeting. No decisions about the Project will be made at the Public Scoping Meeting.

**Join Zoom Meeting**
https://montereycty.zoom.us/j/94189045104

Dial by your location
+1 213 338 8477 US (Los Angeles)
+1 669 219 2599 US (San Jose)
+1 669 900 6833 US (San Jose)
+1 312 626 6799 US (Chicago)
+1 929 205 6099 US (New York)

Meeting ID: 941 8904 5104

**TO SUBMIT COMMENTS**: The County welcomes your comments during the public review period regarding the proposed scope of the Draft PEIR. All comments must be received by **November 20, 2024**. You may submit your comments in hard copy to:

County of Monterey Housing and Community Development Department
Attn: Jaime Scott Guthrie, AICP, Senior Planner
1441 Schilling Place, 2nd Floor South
Salinas, California 93901

The County also accepts comments electronically via e-mail, and requests following these instructions to ensure that the County has received your comments. To submit your comments by e-mail, please send a complete document including all attachments to:

CEQAcomments@CountyofMonterey.gov

Any e-mailed document should contain the name of the person or entity submitting the comments and contact information such as phone number, mailing address and/or e-mail address and include any and all attachments referenced in the e-mail and include **"CEQA for HEU6" in the subject line**. If you do not wish to send a follow-up hard copy, then please send a second e-mail requesting confirmation of receipt of comments with enough information to confirm that the entire document was received. If you do not receive e-mail confirmation of receipt of comments, then please submit a hard copy of your comments to the name and address listed above to ensure inclusion in the environmental record or contact the County to ensure the County has received your comments.

Responsible and Trustee agencies are requested to indicate their statutory responsibilities in connection with this Project when responding. A Draft PEIR incorporating public input will be prepared and distributed for the public to review and comment.

**TO RECEIVE PUBLIC NOTICES OR ADDITIONAL INFORMATION:** In addition to a scoping meeting, public hearings will be held during the public review period for the Draft PEIR being prepared for this Project. The hearings will be held at a time and place to be specified by legal advertisement in a local newspaper of general circulation.

If you would like to be notified of the hearings or would like additional information, please send an email to GeneralPlanUpdates@countyofmonterey.gov or call Jaime Scott Guthrie, AICP, Advanced Planning at (831) 796-6414 or send your request by mail to the name and address above.

Please note that if you are already on the public email distribution list to receive notices regarding housing element update (HEU6), you will automatically be included in public notices for the Draft PEIR.

This Notice was published in the **Monterey County Weekly** and distributed for public review on **October 21, 2024**.

# Environmental Scoping Supplement to the NOP
# November 7, 2024 – Online Public Meeting

## County of Monterey Draft General Plan Housing Element Sixth Cycle (2023-2031) Update

### Project Description

The County of Monterey ("County") Draft General Plan Housing Element Sixth Cycle (2023-2031) Update ("HEU6") is required to identify sites and zoning designations that can accommodate housing developments capable of satisfying the County's Regional Housing Needs Allocation ("RHNA") of 3,326 housing units distributed across four Income levels (1,070 Very Low, 700 Low, 420 Moderate, and 1,136 Above Moderate). Along with facilitating the County's RHNA, the update to the HEU6 must identify and analyze significant disparities in access to opportunity (AB 686 – Affirmatively Furthering Fair Housing ("AFFH") Act). The AFFH Act requires that a jurisdiction's housing Element promote inclusive communities and further housing choice through government programs, policies, and operations that recognize existing racial and economic disparities and remediate these disparities.

The County includes the capacity for at least 6,233 units, comprising opportunity sites (4,479 units), pipeline sites (1,484 units), and accessory dwelling units (ADUs, 270 units). Table 1, Capacity Determination, summarizes the County's assessment that sufficient capacity exists to accommodate the RHNA across all income levels. Table 2, Affordability Income Ranges, shows the affordability income categories, income ranges, area median income ("AMI") for the County. The existing and planned zoning, the vacant/non-vacant status, and total unit capacity assumed for each of the Opportunity Sites are summarized in Table 3, Opportunity Sites Summary. Opportunity Sites are sites for which the County has a reasonable expectation that housing development could occur, though no proposals or entitlements have been submitted. Pipeline Sites are sites where housing has been proposed and/or entitled, and where development is expected to receive a building permit or certificate of occupancy. Although the 56 Opportunity Sites have not yet been approved by the California Housing and Community Development Department ("CA HCD"), these sites represent a conservative scenario for environmental review purpose. No new sites would be added though some sites may be eliminated.

**Table 1. Capacity Determination**

| | VLI | LI | Mod. | Above Mod. | Total |
|---|---|---|---|---|---|
| RHNA | 1,070 | 700 | 420 | 1,136 | 3,326 |
| **Alternative Methods to Meet the RHNA (Credits)** | | | | | |
| Entitled or Proposed Projects | 257 | 206 | 205 | 816 | 1,484 |
| Accessory Dwelling Unit Potential | 0 | 9 | 0 | 261 | 270 |
| Subtotal | 257 | 215 | 205 | 1,077 | 1,754 |

**Table 1. Capacity Determination**

| | VLI | LI | Mod. | Above Mod. | Total |
|---|---|---|---|---|---|
| **Opportunity Sites** | | | | | |
| Total from Opportunity Sites | 1,561 | 1,063 | 731 | 1,124 | 4,479 |
| **Total (Credits & Site Inventory)** | **1,818** | **1,278** | **936** | **2,201** | **6,233** |
| Surplus/(Shortfall) | 748 | 578 | 516 | 1,065 | 2,907 |
| **TOTAL RNHA BUFFER** | **70%** | **83%** | **123%** | | |

**Note**: VLI = very low income, LI = low income, Mod = moderate income

**Table 2. Affordability Income Ranges**

| Income Category | % Median | Income Range | | RHNA | % of Total |
|---|---|---|---|---|---|
| | | Minimum | Maximum | | |
| Extremely Low/Very Low | 0-50% | $0 | $60,200 | 1,070 | 32% |

## Project Location

The HEU6 will apply to the entire geographic area located within the unincorporated boundaries of Monterey County. Monterey County covers more than 3,300 square miles. Figure 1, Regional Location, shows the boundaries of Monterey County within the Northern California region. The draft HEU6 includes 56 Opportunity Sites (Sites 1 through 51, 53 through 56, and 64) as listed in Table 2, Opportunity Sites Summary, representing 4,479 units. These are sites for which the County has reasonable expectation that development of housing would occur from implementation of the updated Housing Element. These sites are subject to change following review by CA HCD, other agencies, and the public. Opportunity Sites are identified in the following nine areas of the County: North County Inland Area Plan, North County Coastal Land Use Plan, Greater Salinas Valley Area Plan, Greater Monterey Peninsula Area Plan, Fort Ord Master Plan, Toro Area Plan, Carmel Valley Master Plan, Carmel Area Land Use Plan, and Central Salinas Valley Area Plan. Opportunity Sites are shown on Figures 2a through 2i.

**Table 3. Opportunity Sites Summary**

| Site No. | Assessor's Parcel Number(s) | Current Zoning | Planned Rezone | Vacant/ Non-Vacant | Total Capacity[1] |
|---|---|---|---|---|---|
| **North County Inland Area Plan Sites** | | | | | |
| 8 | 125-501-002 | LDR/2.5 | HDR/20 | Vacant | 68 |
| 9 | 125-171-029 | RDR/5 | HDR/20 | Vacant | 66 |
| 10 | 125-171-047 | LC | HDR/20 | Non-Vacant | 98 |

| 55 | 187-442-010 through -012, 187-442-019 | VO-D-S-RAZ, 30-ft setback from CV Rd. per CV Village Devel. Criteria (3.1), and LDR/1-D-S-RAZ | HDR/20 | Non-Vacant | 23 |
| 56 | 169-131-025 | LDR/1-D-S-RAZ, LDR/B-6-D-S-RAZ, To be retained as one building site pursuant to CVMP Figure 2. | HDR/20 | Non-Vacant | 33 |
| **Carmel Area Land Use Plan Sites** | | | | | |
| 16 | 009-061-003 | MDR/2-D(CZ) | HDR/20(CZ) | Non-Vacant | 52 |
| 43 | 009-111-005 | MDR/2-D(CZ) | HDR/20(CZ) | Non-Vacant | 23 |
| **Central Salinas Valley Area Plan Sites** | | | | | |
| 25 | 145-151-001 | PQP | HDR/20 | Non-Vacant | 57 |
| 26 | 145-161-085 | HDR/10 | HDR/20 | Non-Vacant | 12 |
| 27 | 145-161-086 | HDR/10 | HDR/20 | Vacant | 14 |
| 28 | 145-161-087 | HDR/10 | HDR/20 | Vacant | 35 |
| 29 | 145-161-088 | HDR/10 | HDR/20 | Vacant | 10 |
| 32 | 231-024-005, 231-024-011, 231-024-010, 231-024-006, 231-024-007, 231-024-001 | HDR/5 | HDR/20 | Vacant | 16 |
| 33 | 231-038-014, 231-038-012, 231-038-010 | LDR/1 | HDR/20 | Vacant | 5 |
| 34 | 231-038-013, 231-038-011 | LDR/1 | HDR/20 | Vacant | 3 |
| 42 | 221-155-021 | HDR/8-UR | HDR/20 | Vacant | 27 |
| **Total Number of Opportunity Sites = 56 Sites** | | | | | |
| **Total Capacity = 4,479 Units** | | | | | |

**Note:**

[1] The determination of opportunity sites utilizes the proposed zoning changes and capacity expectations as described in the Draft Housing Element Sixth Cycle Update.

LDR = Low Density Residential, MDR = Medium Density Residential, HDR = High Density Residential,

RDR = Rural Density Residential, C = Commercial, LC = Light Commercial, HC = Heavy Commercial, MU = Mixed Use, HI = Heavy Industrial, CGC (CZ) = Coastal General Commercial, F = Farmlands, UR = Urban Reserve, D = Design Control, S = Site Plan Review, PQP = Public/Quasi-Public, RAZ = Residential Allocation, VO = Visitor Serving/Professional Office, B = Building Site

## Project Background

California law requires that a housing element be included in the general plan as one of the eight mandatory "elements," or chapters, which express the community's values, goals, and vision for the future. The County's Housing Element updates cover an eight-year planning period beginning December 31, 2023, and ending December 31, 2031 (the "Sixth Cycle" planning period) and accomplishes the following:

- Presents a comprehensive assessment of local housing conditions and lays out a series of goals, policies, and programs to assist the County in meeting the housing needs of current and future residents at all income levels in unincorporated Monterey County (UMC).
- Identifies and analyzes the UMC's existing and projected housing needs as calculated using the Association of Monterey Bay Area Governments (AMBAG) model for estimated population growth.
- Addresses numerous requirements resulting from a slate of new state housing laws designed to address factors contributing to the statewide housing shortage.
- Provides programs for the preservation, improvement, and development of housing, including how and where the UMC can accommodate its RHNA assessment assigned by AMBAG.

Guthriejs@countyofmonterey.gov

RE: Notice of Preparation ("NOP") of a Draft Program Environmental Impact Report ("DPEIR") for the Draft Sixth Cycle (2023-2031) Housing Element Update ("HEU6")

Dear Ms. Guthrie,

The Draft Sixth Cycle (2023-2031) Housing Element Update ("HEU6") includes the following sites outside of urbanized areas in locations that would eliminate farmland, increase vehicle miles traveled (VMT) and associated greenhouse gas (GHG) and air pollutants, and, in some instances, cause biological resource and other impacts related to development in rural greenfield areas rather than urbanized infill areas. Monterey County should remove these sites from HEU6. At minimum, the DPEIR should include and evaluate an alternative that removes them.

Specifically, we urge removal of sites 1, 2, 24, 25, 26, 40, 47, 48, and 52:

- **Sites 1 and 2** involve extensive development on agricultural land. The sites are not within a highly developed area and have a correspondingly low TCAC score, rendering them unsuitable for affordable housing due to the failure to affirmatively further fair housing. They are outside of the community areas and rural centers designated under the 2010 General Plan Update.
- **Site 24** also involves extensive development on agricultural land and has a low TCAC score of 8.
- **Sites 25 and 26** consist of sprawl development in Chualar, also on agricultural land, and with a low TCAC score of 12.
- **Site 40** involves development of forested area and environmentally sensitive natural habitat.

- **Site 47** should be removed because it is environmentally sensitive natural lands on the former Fort Ord. The development consists primarily of market rate housing. SB 2295 doesn't apply because it's a private school. Therefore, the landowner, York, does not have the right to develop this parcel without rezoning, and rezoning is not appropriate in this location because it is on environmentally sensitive lands. Moreover, Marina Coast Water District cannot provide water to the site under the settlement agreement between Marina Coast Water District, LandWatch and Keep Fort Ord Wild.
- **Site 48**, on Sill Rd., would consist of development in an environmentally sensitive area that was previously the subject of litigation - litigation which ultimately halted the development. According to the County's site map, it has a TCAC score of 0. The County Housing Element should not facilitate more market rate housing on environmentally sensitive open space. Rather, it should encourage infill development near urban areas.
- **Site 52** involves development of farmland. There are plenty of other sites in Pajaro, for example, sites 49-51, so this one is not needed.

The 2010 General Plan EIR's impact analyses specifically relied on the County's plan to concentrate future development in infill areas and identified growth areas. It found that 80% of future residential development would be in urbanized infill like the Community Areas, Rural Centers, and Affordable Housing Overlays, and only 20% outside these areas. (2010 GP FEIR, pp. 2-118 et seq, Master Response 7, New Urban Development Outside Focused Growth Areas, available at https://www.countyofmonterey.gov/home/showpublisheddocument/45384/636389278167500000. The County found that a number of impacts from the 2010 General Plan would be less than significant based specifically on the assumption that at least 80% of future residential development would be in urbanized infill like the Community Areas, Rural Centers, and Affordable Housing Overlays.

The 2010 GP FEIR specifically found that the assumption of this 80/20 development pattern was justified by its assumptions about population distribution and trends, the 2010 GP policies themselves, and the need to accommodate affordable housing under RHNA through 2030.

> In summary, the assumption utilized in the DEIR impact analysis (80% of new growth would occur in focused growth areas; 20% outside of these areas) was derived from each of the factors described above, individually and collectively. Population distribution trends were the primary factor in deriving these assumptions. The remaining factors were applied to confirm whether the assumption was realistic. The combination of population distribution and composition trends, changes in community preferences over time, key principles and constraints in General Plan policies and State regulatory requirements for affordable

> housing suggest development between 2006 and 2030 will occur primarily in the Community Areas, Rural Centers and AHOs. These land use designations established in the General Plan are most able to provide affordable housing, employment, services and transportation options.

(Id. at 2-121.)

The 2010 GP FEIR cites a number of General Plan Policies that are intended to ensure that the County accommodates growth primarily in urbanized infill and designated growth areas. These include prioritization of Community Areas and Rural Centers under Policies LU-1.19), 2.21, and 2.30; the constraints of the Development Evaluation System under Policy LU-1.19; policies requiring Adequate Public Facilities and Services (Policies PS-1.1 through 1.6); and policies requiring proof of long-term sustainable water supplies and wastewater treatment (Policies PS-3.1 and PS-4.9). (Id. at 2-122.)

> These policies individually and collectively establish rigorous requirements for approval and a clear process for determining whether a proposal meets General Plan policy. By placing a priority on focused growth areas, by imposing an evaluation system for development outside these focused growth areas with minimum affordability requirements as well as other stringent criteria, and by requiring that new growth be adjacent to existing growth that has adequate services, growth outside focused growth areas would be extremely unlikely to exceed DEIR assumptions.

(Id. at 2-122 to 2-123.)

The 2010 GP FEIR cites its mitigation provisions that require preparation of a climate action plan as an additional assurance that the County will maintain compact growth to minimize impacts:

> The components of a "Greenhouse Gas Reduction Plan (Mitigation Measure CC-1a) and a "Climate Change Preparedness Plan" (Mitigation Measure CC-13) would by necessity rely on strategies that focus growth. The Climate Change Preparedness Plan would include provisions for limited growth in areas that could be more severely impacted by wildfire, sea level rise, and flooding. These requirements would further reduce the likelihood that new development, especially sprawl in the more remote areas of the County, would be supported.

(Id. at 2-123.)

The 2010 GP FEIR specifically provides that the County will reconsider the scope of the focused growth areas if changes to their boundaries are needed to ensure that at least 80% of future residential growth occurs in the focused growth areas and urban infill:

> Mitigation Measures BIO-1.4 and BIO 1.5 were revised to track actual growth against what was projected in the DEIR and make policy adjustments if current expectations are not met. These policies were revised to ensure that before growth in excess of the AMBAG 2004 growth projections for residential and commercial development occurs, the County will consider the expansion of focused growth areas or designation of new focused growth areas. These expanded or focused growth areas would be designed to keep the 80%/20% split between compact growth in cities and focused growth areas and growth outside focused areas.

(Id. at 2-123.) Accordingly, the County should designate the mouth of the Carmel Valley as a Community Area because it is clear that growth must be focused in this area to meet the RHNA obligations under HEU6.

The 2010 GP FEIR concludes that its policies will be effective in limiting growth to the focused growth areas.

> General Plan policies have been drafted specifically to limit growth outside focused growth areas. Commenters have not provided any evidence that the policies in the General Plan that restrict growth will not be followed other than conjecture about future policy decisions that could be made contrary to General Plan policies. By focusing growth through the development of community plans, infrastructure and finance plans, and imposing requirements for significant amounts of affordable housing as a prerequisite to approval of subdivisions outside of these areas, it is reasonable to expect that future growth will focus in compact development patterns near cities or in focused growth areas.

(Id. at 2-123 to 2-124.)

Because of this assumption, the 2010 GP FEIR does <u>not</u> assume the kind of sprawl development that would be permitted if Sites 1, 2, 24, 25, 26, 40, 47, 48, and 52 are designated for development. Development of these sites would be inconsistent with the General Plan policies intended to preclude just this kind of development and to avoid its environmental impacts.

Furthermore, if the County includes these sites, it could not tier from the 2010 GP EIR in preparing a programmatic EIR for the housing element because the 2010 GP EIR does not assume this kind of development. If these sites are included, the program EIR for the housing element would have to evaluate much more complex changes to the assumptions and impacts in the 2010 GP EIR. And the program EIR would likely cost more, take much longer to prepare, and be much more vulnerable to legal challenges.

For all of the foregoing reasons, LandWatch urges the County to omit these sprawl sites from the housing element's site inventory. The County should also adopt a policy designating the opportunity sites at the mouth of the Carmel Valley as a Community Area.

Thank you for your consideration.

Regards,

Michael DeLapa
Executive Director

Subject: County of Monterey Draft Housing Element Sixth Cycle Update, Response to Landwatch comments September 2024

Dear Mr. McDougall and Ms. Lee,

I am writing on behalf of York School in response to Landwatch's communication in September 2024, which opposed the inclusion of our Parcel—Site 47, APN 031-131-006-000—in the proposed Monterey County Housing Element for rezoning to high-density residential. We appreciate the opportunity to clarify some key points regarding this site.

1. **Current Use of the Land**: It is important to note, as outlined in the proposed Housing Element, this parcel is **not** considered vacant land. The site currently hosts a soccer field, football field, and track, all of which serve our students and hence the local community.
2. **Availability of Services**: The letter asserts that there are no services on the land which is a wholly inaccurate claim. We have a working potable well on-site and an agreement that allows us to utilize 32 acre-feet of groundwater. Additionally, we have commitments from Marina Coast Water (MCWD) to meet any incremental water and sewer needs should they arise. MCWD represented to us that they are contractually obligated to provide these services to our parcel and intend to fulfill this commitment. Contrary to Landwatch's claims, MCWD reviewed 3 different options with us for how they would bring additional water to the property as needed. Furthermore, the site is already equipped with electric service.
3. **Location and Surroundings**: Our site is strategically located, out of view from main roads and adjacent to the Ryan Ranch business complex on one side and residential housing on the other, and we stand ready to begin the development process once the housing element is approved and hence are confident that this land can be developed within the time period contemplated by the Housing Element.
4. **Community Needs**: We believe that many individuals who work in the Ryan Ranch area and throughout Monterey commute from Salinas and other surrounding regions due to the high cost of living in Monterey. By developing affordable and moderate-income housing on this site, we aim to provide local workers with better access to housing closer to their workplaces, ultimately benefiting the community and the environment by reducing commuting distances.

We urge you to rely on the leadership and expertise of the County in their recommendation to include our site in the housing element. York School has been a committed member of the community, and we are dedicated to continuing this legacy through our plans for developing this property.

Thank you for considering our position. We look forward to your support and are eager to contribute to the housing needs of our community.

Sincerely,

Doug Key
Head of School
York School, Monterey

Appendix B – Amendments to Monterey County Land Use Regulations and Code Amendments required to implement the County's Sixth Cycle (2023-2031) Housing Element ("HEU6").

The following list contains the anticipated amendments to the Monterey County Code, 2010 General Plan, and Local Coastal Program to implement the County's HEU6 (the "Project"). This list is may not be comprehensive and is intended to disclose the key topics that need to be addressed to implement the Project.

Adoption via Resolution

- Adoption of County of Monterey Objective Design Standards for multifamily development projects

Amendments to Monterey County Code

***Title 21 – Zoning (Inland)***

- Adoption of a By-Right Housing Ordinance for Opportunity Sites
- Amendments to HDR District Regulations to incorporate Objective Design Standards for qualifying developments
- Amendments to HDR District Regulations to allow for development of sites up to 25 or 30 dwelling units to the acre on Opportunity Sites
- Amend Zoning Sectional Maps

***Title 20 – Zoning (Coastal)***

- Adoption of a By-Right Housing Ordinance for Opportunity Sites
- Amend HDR Regulations to allow for development of sites up to 25 or 30 dwelling units to the acre on Opportunity Sites
- Amend Coastal Implementation Plans (CIPs) for North County and Carmel Area to allow for By-Right Development on select Opportunity Sites
- Amend Zoning Sectional Maps

Amendments to 2010 General Plan

***Land Use Maps***

Amend Land Use Designation Maps to reflect rezoning of sites to HDR/25 or HDR/30, and to reflect split land uses for safety or environmental reasons.

**Land Use Element** - The following policies in the Land Use Element will be amended to implement the Project: LU-1.19, LU-1.20, LU-2.3, LU-2.10, LU-2.11, LU-2.25, LU-2.28, LU-2.29, LU-2.30, and LU-2.33b.

**Circulation Element –** No anticipated amendments to implement the project.

**Public Services Element –** No anticipated amendments to implement the Project.

**Agriculture Element –** No anticipated amendments to implement the Project.

**Conservation and Open Space Element –** No anticipated amendments to implement the Project.

**Circulation –** No anticipated amendments to implement the project.

***Area Plan, Master Plan, and Community Plans***

**Carmel Valley Master Plan –** The following policies in the Carmel Valley Master Plan are anticipated be amended to implement the Project: CV-1.6, CV-1.10, CV-1.11, CV-1.13, CV-1.20, CV-1.24.

**North County Inland Area Plan –** The following policies in the North County Inland Area Plan are anticipated to be amended to implement the Project: NC-1.5.

**Greater Salinas Area Plan -** The following policies in the Greater Salinas Area Plan are anticipated to be amended to implement the Project: GS-1.13.

**Greater Monterey Peninsula Area Plan –** The following policies in the Greater Monterey Peninsula Area Plan are anticipated to be amended to implement the Project: GMP-1.1, and GMP-1.5.

**Toro Area Plan –** No anticipated amendments to implement the Project.

**Central Salinas Area Plan** - No anticipated amendments to implement the Project.

**Fort Ord Master Plan -** The following policies in the Fort Ord Master Plan are anticipated to be amended to implement the Project: Description of Base Land Use Designations – High Density Residential, Policy A-1.

**Castroville Community Plan -** The following policies and sections in the Castroville Community Plan are anticipated to be amended to implement the Project: Land Use Designation for Opportunity Sites, HDR Land Use Designation, and incorporate of By-Right Ordinance and County Design Standards by reference.

<u>Amendments to Local Coastal Program</u>

***Land Use Designation Maps***

Amend Land Use Designation Maps to reflect rezoning of sites to HDR/25 or HDR/30, and to reflect split land uses for safety or environmental reasons (as needed).

***Land Use Plans***

**North County Land Use Plan –** The following policies and sections of the North County Land Use Plan are anticipated to be amended to implement the Project: Various sections and policies that need to be modified to allow for the Project (rezoning of one Opportunity Site 48), and amendments to buildout numbers (as needed) to allow for the development called for in the Project.

**Carmel Area Land Use Plan -** The following policies and sections for the Carmel Area Land Use Plan anticipated to be amended to implement the project: Creation of an HDR land use designation, amendments to build out numbers (as needed) to allow for the development called for in the Project (rezoning of Opportunity Sites 16 and 43).

AN ORDINANCE OF THE COUNTY OF MONTEREY, STATE OF CALIFORNIA, ADDING ____ TO THE MONTEREY COUNTY CODE RELATING TO APPROVAL PROCESS FOR BY-RIGHT AFFORDABLE HOUSING DEVELOPMENT

ORDINANCE NO. ___

County Counsel Summary

The Board of Supervisors of the County of Monterey ordains as follows:

**SECTION 1:** Findings [to come: refer to implementation of Housing Element, goal of streamlining and expediting the approval process for affordable housing]

**SECTION 2:** Chapter 21.55 is added to the Monterey County Code to read as follows:

**CHAPTER 21.55**

**BY-RIGHT APPROVAL**

**21.55.010 Purpose.**

**21.55.020 Applicability.**

**21.55.030 Definitions.**

**21.55.040 Permit requirements.**

**21.55.050 Development standards.**

**21.55.070 Adoption of development standards.**

**Section 21.55.010 – Purpose.**

The purpose of this chapter is to establish procedures for approval of affordable housing developments that meet certain criteria and that are located on certain sites identified in the 2023-2031 Sixth Cycle Housing Element, in accordance with California Government Code sections 65583.2(i), 65913.4, and 65913.6, to be treated as "uses by right". The procedures herein are intended to implement Programs H-2.D, H-2.H, and H-3.A of said Housing Element to streamline and expedite the approval process for housing affordable to lower income households.

DRAFT

**Section 21.55.020 – Applicability.**

This chapter applies to "use by right" as defined in Government Code Section65583.2(i), which includes, but is not limited to, the following:

A. Opportunity Sites identified in the 2023-2031 Sixth Cycle Housing Element that meet an affordability requirement of 20% lower-income household and meets a project density of 20 dwelling units to the acre;
B. Opportunity Sites identified in the 2023-2031 Sixth Cycle Housing Element that are located in a Community Plan area, Rural Center, or Affordable Housing Overlay as identified by the 2010 General Plan with a housing development project that is designated 100% affordable;
C. Housing development projects that are 100% affordable on properties within a Community Plan area, Rural Center, or Affordable Housing Overlay as identified by the 2010 General Plan;
D. Housing development projects on land owned by a religious institution or a non-profit independent institution of higher education where the project meets the affordability requirements and other requirements of Government Code section 65913.6; and
E. Other "use by right" housing development that may be required by the Legislature, as that term is defined in Government Code Section 65583.2(i), as periodically amended .

**Section 21.55.030 – Definitions.**

For purposes of this chapter, these definitions shall apply:

A. "Lower income household" means persons and families meeting the definition of "lower income household" set forth in California Health and Safety Code section 50079.5.
B. "Moderate income household" means persons and families meeting the definition of "moderate income household" set forth in California Health and Safety Code section 50079.5.
C. "Opportunity Site" means the opportunity sites identified in the 2023-2031 Sixth Housing Element to meet the County's regional housing need allocation (RHNA).
D. "Use by Right". For purposes of this section, "use by right" means the County's review shall not require a Conditional Use Permit, General Development Plan, environmental review under the California Environmental Quality Act, or other discretionary review or approval pursuant to Government Code Section 65583.2(i) and Government Code Section 65589.5 for owner-occupied or multifamily

DRAFT

residential housing. Housing developments shall be subject to all objective standards in Monterey County Code, including the County of Monterey's Model Objective Design Standards as adopted by the Board of Supervisor's resolution and amended from time to time. Any subdivision of a site shall continue to be subject to all laws, including, but not limited to, discretionary review and approval in compliance with County Code Chapter 19 (Subdivisions) and the Subdivision Map Act.

**Section 21.55.040 - Permit Requirements.**

Housing developments that comply with all of the development standards in Section 21.55.050 (Development standards), below, shall be allowed as a use by right subject to the issuance of a Zoning Clearance in compliance with Chapter 21.70 (Zoning Clearances).

**Section 21.55.050 - Development standards.**

Qualifying housing developments listed in Section 21.55.020 above shall comply with the following development standards:

A. Housing Type. The housing development shall consist of owner-occupied and/or rental multifamily residential uses.
B. Affordability. The applicant shall record a restrictive covenant that ensures the continued affordability of all very low, low, and moderate income rental units for 55 years and all very low, low and moderate income for-sale units for 45 years, unless a different affordability term is required by low-income tax credit regulations or other applicable law.
C. Objective standards. The housing development shall comply with all objective land use policies, regulations, development standards, and design review standards in effect at the time a complete application is submitted, including but not limited to objective design standards provided in the County's Objective Design Standards, adopted by the Board of Supervisors by Resolution and amended from time to time, and other applicable sections of the Monterey County Code.
D. Program Environmental Impact Report mitigation measures. The housing development shall comply with all applicable mitigation measures identified as objective ("OBJ") of the Mitigation Monitoring and Reporting Program of the 2023-2031 Housing Element Update Program Environmental Impact Report (State Clearinghouse Number: 2024100963)

DRAFT

E. Replacement Units. Existing or previously existing dwelling units on housing development sites shall be replaced in the manner provided in Government Code Section 65583.2(g)(3), as periodically amended, or successor statute.

**Section 21.55.070 – Adoption of development standards.**

The Board of Supervisors may, by separate resolution, adopt objective, quantifiable, written development standards. Other relevant policies, including standard conditions of approval, that would be applicable to affordable housing development projects, shall be ministerially reviewed and approved under this Chapter.

SECTION 3. E**FFECTIVE DATE.** This ordinance shall become effective on thirty-first day following its adoption.

**AN ORDINANCE OF THE COUNTY OF MONTEREY, STATE OF CALIFORNIA, ADDING ____ TO THE MONTEREY COUNTY CODE RELATING TO APPROVAL PROCESS FOR ZONING CLEARANCES**
**ORDINANCE NO. ___**

**County Counsel Summary**

**The Board of Supervisors of the County of Monterey ordains as follows:**

**SECTION 1:** Findings [to come: refer to processing of ministerial permits including "use by right", goal of streamlining and expediting the approval process for affordable housing]

**SECTION 2:** Chapter 21.71 is added to the Monterey County Code to read as follows:

DRAFT

## CHAPTER 21.71
## REGULATIONS FOR ZONING CLEARANCES

**21.71.010 Purpose.**
**21.71.020 Applicability.**
**21.71.030 Appropriate authority.**
**21.71.050 Application.**
**21.71.070 Action by appropriate authority.**
**21.71.080 Revocation.**
**21.71.100 Expiration.**
**21.71.110 Effect.**
**21.71.130 Filing fee.**
**21.71.140 Extension to zoning clearances.**
**21.71.150 Amendments to zoning clearances.**

### 21.71.010 Purpose.

The purpose of this Chapter is to provide a ministerial process for projects identified as needing approval of a "Zoning Clearance" in the Monterey County Code. The ministerial process will verify that the proposed land use or structure complies with the list of uses allowed in the applicable zoning district, the development standards within Monterey County Code, and is consistent with the County of Monterey regulations.

### 21.71.020 Applicability.

Any development identified within the zoning district regulations as being a permitted use requiring a zoning clearance is subject to the provisions of this Chapter.

**21.71.030 Appropriate authority.**

The Chief of Planning or designee is the Appropriate Authority to consider zoning clearances.

**21.71.050 Application.**

Application for a zoning clearance shall be made to the Appropriate Authority in writing on a form prescribed by the Chief of Planning and shall be accompanied by statements, plans, and elevations necessary to show the detail of the proposed use or structure.

**21.71.070 Action by appropriate authority.**

A. The Appropriate Authority shall deem the permit application complete if it contains all required information, documents, and all required application fees have been paid.

B. In acting on zoning clearance, the Appropriate Authority shall find that the proposed use or development is in conformance with all applicable provisions of this Title or other adopted policies of the County.

**21.71.080 Grounds for revocation.**

A. Any of the following shall be grounds for revocation of a zoning clearance:

1. Any act or omission by an operator in contravention of federal law, state law, or the Monterey County Code;

2. If such clearance was granted on the basis of false material information, written or oral, given willfully or negligently by the operator;

3. If the use or structure is operated or maintained in an unlawful manner or in such a manner as to be a nuisance to the health, safety, or welfare of the public; and

4. Failure to pay all applicable taxes, fees, and penalties required by the County.

B. If the Appropriate Authority determines that grounds for revocation of the zoning clearance exist pursuant to this Section, the Appropriate Authority shall issue a

DRAFT

written notice of intention to revoke the zoning clearance. The notice of intention shall describe the property, the intention to revoke the zoning clearance, the grounds for revocation, the action necessary to abate the violation, and the time limit for compliance.

**21.71.100 Expiration.**

A. Any zoning clearance issued under the terms of this Chapter shall be valid until the date of expiration stated on the zoning clearance. If no date of expiration is stated or any zoning clearance which allows a use without the construction of buildings or other structures, shall expire 180 days from the date of granting the zoning clearance unless use of the property has begun within this period.

B. If no date of expiration is stated, or any zoning clearance granted under this Chapter which allows for the construction of buildings or other structures shall remain valid as long as actual construction has begun within 180 days from the date of the granting of the zoning clearance.

**21.71.110 Effect.**

A zoning clearance shall be obtained before the County issues new or modified Building Permits, Grading Permits, and any other Permits that may be required for operation of the use. Permits shall not be issued, nor any use conducted, otherwise than in accordance with the conditions and terms of the zoning clearance granted by the Appropriate Authority.

**21.71.130 Filing fee.**

The application fee for zoning clearance shall be established from time to time by the Board of Supervisors, a part of such fee shall be refundable, unless said refund is requested in writing concurrent with the withdrawal of zoning clearance and provided that the applicant has not yet been sent written notice of the applications completeness or incompleteness. In such cases, fifty (50) percent of the filing fee shall be refunded.

**21.71.140 Extension to zoning clearances.**

A. The Appropriate Authority may extend a zoning clearance upon receipt of a written request from the applicant, provided such request is made at least 30 days prior to the expiration of the zoning clearance. The written request shall be filed with the Appropriate Authority and set forth reasons supporting the request.

B. The extension request shall be subject to the provisions of Chapter 21.71.040 of this Title.

DRAFT

**21.71.150 Amendments to zoning clearances.**

Proposed amendments to any zoning clearance issued under the provisions of this Chapter shall be submitted to the Appropriate Authority in writing and in sufficient detail to adequately assess the nature of the amendment and any potential impacts of the amendment. Proposed amendments shall be handled in the following manner:

The Appropriate Authority shall determine if the amendment is of a minor nature by reviewing the following standards: 1) the amendment would not result in any environmental impacts, 2) the amendment is consistent with the prior action of the Appropriate Authority, 3) the amendment would result in minimal impacts to the land in relation to the approved zoning clearance, and 4) the amendment would meet all relevant site development standards. If these standards are met, then the amendment shall be approved by the Appropriate Authority. All other amendments are considered major in nature and would require a discretionary permit.

**SECTION 4. SEVERABILITY.** If any section, subsection, sentence, clause, or phrase of this ordinance is for any reason held to be invalid, such decision shall not affect the validity of the remaining portions of this ordinance. The Board of Supervisors hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause and phrase thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared invalid.

**SECTION 5. EFFECTIVE DATE.** This ordinance shall become effective on the thirty-first day following its adoption.

DRAFT

# *County of Monterey Model Objective Design Standards*

## Purpose and Intent

A. **Purpose and Intent.** The purpose of this Chapter is to provide the public, building and design professionals, and decision-makers with objective criteria for multiple-unit and mixed-use housing development projects in the county. The intent is to provide clear design direction that enhances an area's unique character and sense of place, respects existing neighborhood compatibility and privacy, and ensures a high-quality living environment. It is also intended that this Chapter establish "objective" design standards, as that term is defined under state housing law, that apply to multiple-unit residential and mixed-use development projects where state housing law restricts County review of such projects to objective standards, to the fullest extent permitted under state housing law.

B. **Applicability.** The provisions of this Chapter apply to multiple-unit residential and mixed-use development in all Zone Districts, including such development that constitutes a "housing development project" under Government Code Section 65589.5 (Housing Accountability Act), qualifying "multifamily housing development" under Government Code Section 65913.4 (SB 35), and "supportive housing" under Government Code Section 65651 (AB 2162), as well as any other multiple-unit residential or mixed-use development project for which the Department may require compliance with "objective" standards under applicable state housing law.

C. **Consistency with All Objective Standards.** In addition to the objective design standards established in this Chapter, multiple-unit residential and mixed-use development projects shall also comply with all other applicable objective standards and policies, including, but not limited to: development standards as listed in the base zoning district (Title 21 (inland) or Title 20 (coastal), requirements from other departments and outside agencies as outlined in the Monterey County Code, and all adopted design guidelines per the 2010 General Plan, Local Coastal Program, applicable area plans, community plans, and master plans.

   1. **Exception.** Applicants may request concessions, incentives, or waivers of development standards pursuant to Chapter 21.65 (Density Bonus Program).
   2. **Conflicting Standards.** If there is any conflict between the objective standards set forth in this Chapter and any existing County or State objective standards, the objective standard that would permit the allowable maximum density as noted on the sectional district map (i.e. HDR/25 or HDR/30) shall apply.
   3. **Consistency with Design Guidelines.** In addition to compliance with the County's Objective Design Standards, projects shall also be consistent with Design Guidelines outlined in the Castroville Community Plan, Carmel Valley Master Plan, and Carmel Valley Village Development Criteria.
   4. **By-Right Approval and By-Right Uses.** Projects that qualify for processing under Chapter 21.55 (By-Right Approval) shall comply with additional standards identified in that Chapter.

   Nothing in this Chapter is intended to limit the County's discretion, to the fullest extent permitted under law, to condition the approval of multi-unit residential and mixed use development projects, as authorized under state housing law and this code.

D. **Design Review Exemption.** Multi-unit and mixed-use projects that are subject to these Standards, which comply with all applicable objective design review standards, shall not be subject to separate Design Approval under Monterey County Code Title 21. In the event that any other provision of Monterey County Code Title 21, in conflict with this provision, requires Design Approval for a project subject to these Standards, these Standards shall apply. However, a maximum of one non-binding conceptual review by the appropriate appointed authority may occur to improve project design.

DRAFT

E. **Design Standards Compliance.** Department staff may consult with the appropriate department appointed representative, designee, or other design professional to assist in determining a project's compliance with the objective design standards contained in this Chapter.

## Building Design

A. **Building Form, Massing, and Articulation.**

1. **Building Form and Vertical Hierarchy.** Buildings that are three stories or more in height shall be designed to differentiate between a defined base; a middle or body; and a top, cornice, or parapet cap. Buildings two stories or less shall include a defined base and a top, cornice, or parapet cap. All buildings shall achieve this effect through at least two of the following:
    a. Color, texture, or material changes.
    b. Variations, projections, or reveals in the wall plane.
    c. Variations in fenestration size or pattern.
    d. Decorative architectural details, such as cornices and columns.
    e. Landscaping screening
2. **Wall Plane Variation.** Building façades visible from the primary street shall not extend more than 50 feet in length without either an architectural element or a two-foot variation in depth in the wall plane. Architectural elements include: building entrances, front porches, balconies, upper-story setbacks, projections, and recessions, such as stoops, bay windows, overhangs, and trellises.
3. **All-Sided Architecture.** Buildings shall be designed and articulated with common details, articulation, materials, and elements on all sides.
4. **Roof Line Variation.** Roof lines shall not extend more than a length of 50 feet without at least one prominent change as described below:
    a. Variation in roof form, such as hip, mansard, gable, shed, and flat with parapet.
    b. Variation in architectural elements, such as parapets or varying cornices.
    c. Variation of roof height of at least 24 inches for buildings of two stories or less and 30 inches for buildings of three stories or more (as measured from the highest point of each roof line).
5. **Roof Slopes.**
    a. For buildings of three or more stories or roof spans of 30 feet or greater, sloped roofs shall have a minimum pitch of 4:12.
6. **Parapets.**
    a. Where rooftop equipment is located within 10 feet of a roof edge, a parapet shall be provided that is a minimum of six inches taller than all roof-top equipment.
    b. Interior side of parapet walls shall not be visible from a common open space or public right-of-way.
    c. Parapets shall be capped with precast treatment, continuous banding, projecting cornices, dentils, or similar edge treatment.

B. **Building and Dwelling Unit Entrances.**

1. **Primary Building Entrance.**
    a. **Street-Facing Entrance.** Buildings located within 20 feet of the primary street right-of-way shall have a ground-level primary building entrance facing the primary street.

DRAFT

2. **Exterior Individual Dwelling Unit Entrance.**

    a. **General Requirement.** All individual unit entrances shall have either a projected sheltering element or be recessed from the main facade; the projection or recess shall have a minimum depth of 24 inches.

    b. **Visibility.** All individual unit entrances shall be illuminated or shall face towards a common area or public street.

    c. **Street-Facing Unit Entrance.** Each dwelling unit located within 20 feet of a primary street right-of-way shall include at least one street-facing porch, balcony, or patio unless a setback of five feet or less is provided.

    d. **Upper-Floor Unit Entrance.** Exterior entrances to individual dwelling units on upper floors are permitted.

3. **Architectural Treatments.** Entrances for buildings and individual dwelling units shall incorporate at least two of the following architectural treatments:

    a. Feature window details;

    b. Towers;

    c. Decorative veneer or siding;

    d. Porches or stoops; or

    e. Changes in roof line or wall plane.

C. **Windows.**

1. **Privacy.** Where windows are proposed within 10 feet of a window on another building, the design and placement shall avoid unfiltered/direct views into the adjacent site and shall be designed with one or more of the following:

    a. Use non-transparent or obscured glazing, such as frosted/patterned glass. Reflective glazing is not permitted.

    b. Provide permanent architectural screens or affixed louvers at windows.

    c. Offset windows horizontally at least 12 inches from any windows in adjacent buildings (edge to edge), so as not to have a direct line-of-sight into adjacent units.

    d. Permanent landscaping screening.

2. **Window Treatment.**

    a. **Design Treatment.** Windows shall either be recessed at least three inches from the plane of the surrounding exterior wall or shall have a trim or windowsill at least one-half inch in depth.

    b. **Windows Facing a Public Street.** Windows facing a public street shall feature enhanced window treatments, such as decorative architectural brackets, trim, shutters, awnings, and/or trellises.

D. **Materials and Colors.**

1. **Wall Material.** The primary exterior siding material for buildings shall be wood, composite wood, stone, stone veneer, granite, slate, brick, brick veneer, stucco, plaster, fiber cement, vinyl, or metal including aluminum or steel. The use of exposed plywood and reflective materials is prohibited.

2. **Window Consistency.** Window frame materials and color shall be used on all elevations.

3. **Accent Material.** Use of two or more accent materials, such as glass, tile, brick, stone, concrete, wood, metal, or plaster, shall be incorporated to highlight building features.

DRAFT

4. **Colors.** Material colors shall consist of materials and paint shall be consistent with the County's adopted area Design Guidelines and rural character. Paints shall be non-reflective.

5. **Architectural Consistency.** Affordable units and market rate units in the same development shall be constructed of the same exterior materials and details such that the units are not distinguishable from one another in quality and detail.

E. **Parking Structures.**

1. **Wall Plane Variation.** Building façades visible from the primary street shall not extend more than 50 feet in length without at least one of the following: a two-foot variation in depth in the wall plane, architectural element, or other prominent feature that provides visual interest.

2. **Materials and Colors.** The parking structure shall utilize the same colors and materials as the primary buildings.

3. **Articulation.** The exterior of the parking structure shall apply at least one of the following as articulation:

    a. Applied materials, such as brick, stone, and/or siding, which extend at least two inches from the face of the structure to the face of the applied materials. Painted concrete, smooth concrete, or stucco walls shall not be considered sufficient articulation.

    b. Decorative architectural features, such as cut metal screens, awnings, trellises, louvers, and/or decorative security grills.

4. **Vertical Plantings.** Vertical plantings shall be located between openings, entrances, and architectural accent features. Plantings shall be evergreen vegetation that will grow to a minimum height equivalent to 75 percent of the height of the parking structure; container size shall be selected to achieve a height of at least 50 percent of the height of the parking structure within at least two years from the time of installation.

F. **Garages and Carports.**

1. **Garages.**

    a. Garage doors shall be recessed a minimum of six inches from the surrounding wall plane.

    b. Garages shall feature at least one of the following treatments:

        i. Garage door windows.

        ii. Paneled garage door surface.

        iii. Two different colors.

        iv. Alternative architectural materials, finishes, or treatments.

2. **Carports.** Carports shall incorporate the same colors and materials as the primary residential or mixed-use building design.

## Site Design

A. **Building Placement and Orientation.**

1. **Street Facade.** If buildings on adjacent properties establish a contiguous street facades along the primary street frontage, new buildings shall be located to maintain the contiguous street wall, with allowances for variation in facade and entrances which are projected or recessed.

2. **Visibility of Entrances.** On all lots 60 feet or less in width, at least one primary building entrance or individual unit entrance shall be visible from the front or street side lot line.

DRAFT

3. **Buffer for Adjacent Single Family Homes.** When developing multi-family buildings of three or more stories adjacent to single-family residential zones, site design shall utilize parking areas, common open space, landscaping, and/or other site features to provide a buffer for adjacent development.

B. **Vehicular Parking and Access.** Vehicular parking and access shall comply with the provisions of Chapter 21.58 Regulations for Parking of the Monterey County Code. Specific design criteria listed here shall be provided and supersede any conflict requirements in Chapter 21.58:

1. **Primary Access.** Side street or alley access shall serve as the primary vehicular access to parking areas, if available. If not available, the primary street shall serve vehicular access.

2. **Number of Access Points.**

    a. **Normal Lots.** A maximum of one vehicle access point from the street is permitted per 100 feet of street frontage.

    b. **Corner Lots.**

        i. One vehicular access point is permitted per lot where all street frontages are less than 100 linear feet.

        ii. Two vehicular access points are permitted on lots where at least one street has a frontage of 100 linear feet or more.

3. **Parking Location.** Parking areas shall not be located within any front or street side setback.

4. **Mixed-Use Loading and Service Areas.** In addition to the provisions below, loading and service areas shall comply with the standards of Chapter 21.58 Regulations for Parking of the Monterey County Code, as applicable.

    a. All required loading and service areas shall be located adjacent to a façade other than the primary street frontage.

    b. Loading and service areas shall be located so as to not disrupt or block the flow of on-site and off-site vehicular traffic.

    c. Loading and service areas shall not be located adjacent to residential dwelling units or common open space areas.

    d. Loading and service areas shall be screened from view with walls, solid fencing, and/or landscape privacy screening as described in Section E: Landscaping.

    e. On-Site Loading Spaces. Every nonresidential use shall provide and maintain on-site loading and unloading spaces for vehicles as required by Chapter 212.58 Regulations for Parking and Loading.

5. **Enhanced Paving for Entrance Driveways.** Paving treatment using patterned and/or colored pavers, brick, or decorative colored and/or scored concrete shall be used for entrance driveways, a minimum of 14 feet in length, and spanning the width of the entrance driveway.

6. **Vehicle Light Intrusion.** Vehicle headlights shall be obstructed from direct alignment with habitable interior spaces with a minimum 3-foot high evergreen shrub or vine and/or features such as fencing or walls.

C. **Pedestrian Circulation and Access.**

D. **General.** The following pedestrian walkways shall be provided and interconnected within the site:

    a. Pedestrian walkways shall connect residential dwelling units to areas throughout the site, such as vehicle parking areas, bicycle parking areas, common open space, waste and recycling enclosures, and other amenities.

DRAFT

b. Pedestrian walkways shall connect public sidewalks, building entrances, and vehicle parking areas.

c. Pedestrian walkways shall connect building entrances and vehicle parking areas through the site interior to all transit stops directly adjacent to the site.

E. **Pedestrian Walkways.** Pedestrian walkways shall be provided with a minimum width of four feet along their entire length and shall be designed as follows:

a. **Through Lot Connection.** Through lots located more than 300 feet from a street intersection, measured from the closest point of the lot, shall provide a publicly accessible sidewalk or walkway connecting the two streets.

b. **Materials.** Walkways shall be constructed of firm, stable, and slip-resistant materials, such as poured-in-place concrete (including stamped concrete), permeable paving, decomposed granite, or concrete pavers.

c. **Paving for Pedestrian Crossings.** Where an intersection of pedestrian and vehicle access exists, the pedestrian walkway shall be clearly identifiable with a raised crosswalk, a contrasting paving material, striping or similar method.

d. **Maintenance.** Pedestrian walkways shall be maintained in good condition for the life of the project and shall not be allowed to fall into disrepair so as to constitute a nuisance or hazard to the public.

F. **Common Open Space.** Common open spaces for multiple-unit developments shall comply with the minimums required by the base Zone District in which they are located in accordance with Chapter 21. Rooftops may be used to satisfy up to 75% of the common open space requirements.

G. **Landscaping.** Landscaping shall be used for all outdoor areas that are not specifically used for parking, driveways, walkways, or open space.

1. **Additional Landscaping Requirements.** Landscaping must comply with Chapter 16.63 (Landscaping), including all requirements of the State and County's Water Efficient Landscaping Ordinance (WELO) including the submittal of irrigation plans.

2. **Plant Materials.** Plant materials are limited to California native, non-invasive Mediterranean, and other drought-tolerant species.

3. **Parking and Loading Area Landscaping.** Parking and loading area landscaping must comply with the following standards:

a. **Screening between residential and nonresidential uses.** Where nonresidential parking areas abut residentially zoned or developed property, a wall or solid fence not less than five feet in height shall be constructed and maintained between the parking area and the adjoining residentially zoned or developed property.

b. **Existing trees.** The design of the parking area should make the best use of the growth and shade provided by existing trees on the project site.

c. **Screening requirements and authority.** Screening shall be provided adjacent to all lot lines consisting of a five-foot wide strip, planted with sufficient shrubbery to effectively screen the parking area, or a solid fence or wall not less than four feet in height. Fences or walls abutting streets shall be ornamental in texture, pattern, or shadow relief. Planting, fences, or walls abutting streets shall not exceed 30 inches in height for a distance of 25 feet on either side of entrances or exits to the property. This requirement for screening may be waived or modified by the review authority if the adjacent property already has provided a solid wall not less than four feet in height.

DRAFT

d. **Additional requirements for uncovered parking areas exceeding 3,600 square feet.** When the total uncovered parking area on the project site (including adjoining lots over which the project has parking privileges) exceeds 3,600 square feet, the following shall be required, in addition to other provisions of this Section, as part of a landscape plan:1.Trees, shrubbery, and ground cover shall be provided at suitable intervals in order to break up the continuity of the parking area. Planting islands for these trees and shrubs shall be protected from automobile traffic by either asphalt or concrete curbs.2.Landscape islands shall be provided at the ends of all parking lanes.

4. **Landscape Buffer.** A landscape buffer of a minimum width of five feet shall be located between all ground-level restricted open spaces and pedestrian walkways. The buffer shall be planted to create a barrier while ensuring visibility. Plants shall be selected to enhance security (e.g. spines or thorny plants) and shall be demonstrated to grow to a minimum height of four feet.
5. **Pedestrian Walkways.** Pedestrian walkways shall be flanked on at least one side with landscaping, and may include a mix of turf, groundcover, and shrubs. Trees shall be provided along walkways in order to shade at least 50 percent of the overall walkway length at maturity.
6. **Number of Plants.** A minimum of one 15-gallon tree or equivalent box size and 10 five-gallon shrubs shall be planted for every 1,000 square feet of required landscape area.
7. **Groundcover.** Groundcover shall be sized and located to cover at least 75 percent of all landscape areas that are not planted with shrubs or trees within 5 years of installation.
    a. While groundcovers and shrubs are establishing, a minimum layer of 3-inch bark mulch or decorative gravel shall be placed within all landscape areas to provide 100 percent coverage of such landscape areas.
8. **Plant Selection.** Artificial or synthetic plants, except for turf, are prohibited. Artificial turf is not permitted in front or street side setbacks.
9. **Solar Access.** Landscaping shall not obstruct solar access to adjacent solar collectors for water heating, space heating or cooling, or electricity generation.
10. **Privacy.** Landscape screening shall obscure direct sight lines into dwelling units and open space areas from communal areas such as parking areas, common mailboxes, and pedestrian walkways. Landscape screening may be used in combination with walls, fencing, and/or trellises to screen views.
    a. **Location.** Landscape screening shall fit within associated planting areas and canopy sizes must not overlap with building foundations or eaves.
    b. **Plant Selection.** Landscape screening shall use evergreen trees, shrubs, and/or vines located and sized to buffer views. Deciduous species, perennials, and grasses or grass-like plants are not permitted for privacy screening.
    c. **Minimum Sizes.** Landscape screening and vegetation shall use the following minimum container sizes at the time of planting:
        i. Trees 15-gallon size.
        ii. Shrubs 5-gallon size.
        iii. Vines 5-gallon size.

## Mixed Use Standards

A. **Ground Floor Height.** The ground floor of a mixed-use building shall have a minimum floor height of 12 feet, measured from the finished ground floor to the bottom of the finished second floor.

B. **Ground Floor Transparency.** Exterior walls facing a public street shall include transparent windows and doors for at least 50 percent of the building wall area located between three and seven feet above the

DRAFT

elevation of the sidewalk. Parking garages are not required to meet the ground floor transparency requirement.

C. **Street-Facing Setbacks.** Street-facing setbacks shall be landscaped and/or prepared for use by pedestrians. The setback area on each lot shall contain at least two amenities per 50 linear feet, such as benches, drinking fountains, shade structures, or other design element (e.g., public art, planters, kiosks, etc.).

D. **Street-Facing Entrance.** Mixed-use buildings located within 20 feet of a primary street right-of-way shall incorporate at least one primary building entrance directly from the public sidewalk or right-of-way. The primary building entrance shall include weather protection that is a minimum of six feet wide and four feet deep by recessing the entrance or providing an awning or similar weather protection element.

## Utilitarian Elements

A. **Bicycle Parking.** Bicycle parking shall be provided as follows:

1. **Parking Spaces Required.** One (1) space for every two (2) dwelling units. A minimum of two (2) spaces shall be provided.

2. **Parking Location.** Bicycle parking must be located on the same lot as the use it serves.

    a. Located at surface levels near main pedestrian entrances to nearby facilities or structures, or in the parking garages of such facilities or structures;

    b. Located so as not to block pedestrian entrances, walkways, or circulation patterns in or around nearby facilities or structures;

    c. Accessible to and from nearby public streets and sidewalks for the target users of the bicycle parking;

    d. Accessible only to residents and owners, operators, and managers of a residential facility when the involved use is residential.

3. **Size and Accessibility.** Each bicycle parking space must be a minimum of two feet in width and six feet in length and must be accessible without moving another bicycle. Two feet of clearance must be provided between bicycle parking and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways, and at least five feet from vehicle parking spaces.

4. **Anchoring and Security.**

    a. Bicycle parking must be located in one or more of the following:

        i. An enclosed bicycle locker;

        ii. An illuminated, fenced, covered, and locked or guarded bicycle storage area;

        iii. A secure area within a building or structure.

    b. Bicycle Locker. When using bicycle lockers, they shall be:

        i. Of sufficient size to hold an entire bicycle; and

        ii. Securely anchored to a permanent surface.

    c. Bicycle Rack. When using bicycle racks, they shall be:

        i. Located and installed to support an entire bicycle, including the frame and wheels, so that the frame and wheels can be locked without damage when using a customary, heavy-duty cable, or U-shaped bicycle lock, or any other security device.

B. **Trash, Recycling, and Green Waste Container Enclosures.** Enclosures for recycling, green waste, and any other waste containers required by law are required for multiple-unit and mixed-use developments, and shall comply with the provisions of Chapter 10.41 (Solid Waste Collection and Disposal) and the applicable zoning district regulations in Section 21.10.070 (HDR Special Regulations) or Section 21.12.070 (MDR Special Regulations). Enclosures shall be located within a building, incorporated into the exterior building design, or located within a detached enclosure designed and placed as follows:

1. **Location.** The enclosure shall be located to the rear or side of the building(s) and located outside of view from a public right-of-way.
2. **Materials.** The enclosure shall incorporate the materials and colors of the primary residential or mixed-use building design.

C. **Fences and Walls.** Fences and walls shall comply with the provisions of Title 21 applicable to Fences and Walls and the following standards:

1. Fences can be a maximum of 6 feet in height and shall comply wit the setbacks for accessory structures as defined in the HDR and MDR regulations.

D. **Lighting.** Lighting shall comply with the provisions of Section 21.63.020 (Design Guidelines for Exterior Lighting).

E. **Screening of Mechanical Equipment.** The following development standards shall apply to new development projects subject to this Chapter, as well as to the replacement or provision of new equipment that is added to serve existing building(s) that are subject to this Chapter.

1. **General Requirements.** All exterior mechanical equipment, whether on a roof, on the side of a structure, or located on the ground, must be screened from public view. Exterior mechanical equipment to be screened includes, without limitation, heating, ventilation, air conditioning, refrigeration equipment, plumbing lines, ductwork, transformers, smoke exhaust fans, water meters, backflow preventers, service entry sections, and similar utility devices.
    a. Screening must be architecturally integrated into the main structure with regard to materials, color, shape, and size to appear as an integral part of the building or structure.
    b. Equipment must be screened on all sides.
    c. The use of expanded metal lath or chain link for the purpose of screening is prohibited.
2. **Requirements for Specific Types of Mechanical Equipment.** The following additional screening standards apply to the specified types of mechanical equipment.
    a. **Ground-Mounted Equipment.** Ground-mounted equipment that faces a public viewing area must be screened to a height of 12 inches above the equipment and designed and painted to blend in with the surrounding area, unless such screening conflicts with utility access, in which case screening shall comply to the greatest extent that is technically feasible. Acceptable screening devices consist of decorative walls, berms, and/or plant materials.
    b. **Exterior Wall Equipment.** Screening for wall-mounted equipment, (e.g., electrical meters, cable-connection boxes, electrical distribution cabinets, etc.) must incorporate elements of the building design (e.g., shape, color, texture, material, etc.). For screen walls that are three feet in height or lower, vegetative materials may be substituted for the screening device. This requirement does not apply to equipment that has accessibility and visibility requirements for health and safety.

F. **Vents and Exhaust.** All wall-mounted vent and exhaust elements shall be located at interior corners of building walls or behind building elements that conceal them from public view. All flashing, sheet metal vents, exhaust fans or ventilators, and pipe stacks shall be painted a color to match the adjacent roof or wall material.

DRAFT

## Definitions.

For the purpose of the County of Monterey Design Standards, the following definitions apply. Any terms used in the Design Standards that are undefined below, but that are defined in Chapter 21.06 (Definitions), shall have the meaning ascribed to them in Chapter 21.06.

**Bracket.** A projection from a vertical surface providing structural or visual support, typically found under cornices, balconies, windows, or any other overhanging element.

**Cornice.** A projecting shelf along the top of a wall supported by a series of brackets; the exterior trim where a roof and wall meet, consisting of soffit, fascia, and crown molding.

**Fenestration.** The arrangement, proportioning, and design of windows, doors, and other exterior openings in a building.

**Groundcover.** Low-growing herbaceous or woody vegetation, other than turf, which typically grows less than two feet high and is used for understory planting under shrubs and trees. Generally grows with a creeping or spreading habit and is used to cover bare soil areas within landscape planter areas.

**Multiple-Unit.** A housing development that contains two or more residential units (See Section 21.06.390 (Dwelling, duplex.) and Section 21.06.410 (Dwelling, multiple family.))

**Objective Design Standard.** A standard that involves no personal or subjective judgment by a public official and is uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the development applicant and the public official prior to submittal.

**Parking Structure.** A wholly or partly enclosed structure, comprised of one or more stories, used exclusively for the parking and storage of vehicles. A parking structure may be totally below-grade or subterranean, partially above-grade, or totally above-grade.

**Reveal.** An inner surface of an opening or recess in a wall, typically in relation to a window or door.

**Roof, Gable.** A roof which slopes downward in two opposite directions from an upper, central ridge.

**Roof, Hip.** A roof which slopes downward in four directions from an upper, central point.

**Roof, Mansard.** A roof with a steep lower slope and flatter upper slope on all sides, either of convex or concave shape.

**Roof, Shed.** A roof which slopes downward in one direction and has no hips, ridges, or valleys.

**Street Facade.** The wall plane or facade of buildings facing a street, comprised of one or more contiguous buildings. Often used to describe a pedestrian-oriented environment.

2. Lead Agency Name and Address

County of Monterey
Housing and Community Development
1441 Schilling Place, 2nd Floor
Salinas, California 93901

3. Contact Person and Phone Number
4. Project Location
5. Project Sponsor's Name and Address
6. General Plan Designation
7. Zoning
8. Surrounding Land Uses and Setting
9. Project Description
10. Other Public Agencies Whose Approval is Required

DRAFT

# Environmental Factors Potentially Affected

The project would potentially affect the environmental factors checked below with an impact that is "Potentially Significant" or "Less than Significant with Mitigation Incorporated" that was not studied in the prior EIR as indicated by the checklist on the following pages.

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture and Forestry Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Energy |
| ☐ Geology and Soils | ☐ Greenhouse Gas Emissions | ☐ Hazards and Hazardous Materials |
| ☐ Hydrology and Water Quality | ☐ Land Use and Planning | ☐ Mineral Resources |
| ☐ Noise | ☐ Population and Housing | ☐ Public Services |
| ☐ Recreation | ☐ Transportation | ☐ Tribal Cultural Resources |
| ☐ Utilities and Service Systems | ☐ Wildfire | ☐ Mandatory Findings of Significance |

DRAFT

# Determination

Based on this initial evaluation:

☐ I find that the project WOULD NOT result in: 1) a peculiar impact that was not identified as a significant impact under the prior EIR; 2) a significant impact that was not analyzed as significant in the prior EIR; 3) a potentially significant offsite impact or cumulative impact not discussed in the prior EIR; or 4) a more severe impact due to substantial new information that was not known at the time of the prior EIR. Pursuant to CEQA Guidelines section 15183, the project is consistent with a Community Plan or Zoning. New effects would be substantially mitigated under uniformly applicable development policies or standards. NO FURTHER REVIEW is required.

☐ I find that the project WOULD result in: 1) a peculiar impact that was not identified as a significant impact under the prior EIR; 2) a significant impact that was not analyzed as significant in the prior EIR; 3) a potentially significant offsite impact or cumulative impact not discussed in the prior EIR; or 4) a more severe impact due to substantial new information that was not known at the time of the prior EIR. I find that FURTHER ENVIRONMENTAL REVIEW is necessary to analyze those effects that are subject to CEQA, and therefore, this project is not consistent with a Community Plan or Zoning pursuant to CEQA Guidelines Section 15183.

| Signature | Date |
|---|---|
| Printed Name | Title |

This report follows a checklist format that outlines performance standards for projects eligible for streamlined review under the California Environmental Quality Act (CEQA). A consistency checklist is prepared by a lead agency to streamline the environmental review process for eligible projects by limiting the topics subject to review at the project level where the effects of development have been addressed in a previous community plan. Pursuant to *CEQA Guidelines* Section 15183, if the project would result in new specific effects or more significant effects, and uniformly applicable development policies or standards would not substantially mitigate such effects, those effects are subject to CEQA. With respect to the effects that are subject to CEQA, the lead agency is to prepare an EIR if the written checklist shows that the effects of the project would be potentially significant.

To provide a thorough and conservative analysis of potential impacts associated with the modified project, this consistency checklist addresses all 20 environmental issue areas suggested by Append G of the *CEQA Guidelines*. This includes tribal cultural resources, an issue area added to the *CEQA Guidelines* in September 2016 pursuant to Assembly Bill 52, after certification of the County of Monterey's 2010 General Plan EIR. This also includes energy and wildfire, which were added to the *CEQA Guidelines* in December 2018.

DRAFT

The checklist concludes that the project would not have any significant effects on the environment that either have not already been analyzed in a prior EIR or are more significant than previously analyzed, or that uniformly applicable development policies would not substantially mitigate. Pursuant to Public Resources Code Section 21094.5, such effects are exempt from CEQA regulations.

California Public Resources Code Section 21083.3 also limits the application of CEQA to effects on the environment which are peculiar to the parcel or to the project and which were not addressed as significant effects in the prior environmental impact report, or which substantial new information shows will be more significant than described in the prior EIR when projects are consistent with the development density established by existing zoning, community plan or general plan policies for which an EIR was certified (*CEQA Guidelines*, Section 15183[a], also Public Resources Code, Section 21083.3[b]: Exemption applies to "a development project [that] is consistent with the general plan of a local agency [if] an environmental impact report was certified with respect to that general plan.)

This *CEQA Guidelines* Section 15183 Consistency Checklist has been prepared pursuant to Public Resources Code Section 21000 et seq. and the *CEQA Guidelines*, California Code of Regulations Section 15000 et seq.

DRAFT

# Environmental Checklist

Pursuant to *CEQA Guidelines* Section 15183, CEQA mandates that projects that are consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified may not require additional review unless there may be project-specific effects that are peculiar to the project or site that were not adequately addressed in the EIR for the 2010 General Plan. In approving a project meeting the requirements of Section 15183 of the *CEQA Guidelines*, a public agency shall limit its examination of environmental effects to those the agency determines, in an Initial Study or other analysis:

1. Are peculiar to the project or the parcel on which the project would be located
2. Were not analyzed as significant effects in a prior EIR on the zoning action, general plan, or community plan, with which the project is consistent
3. Are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan or zoning action
4. Are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR

The purpose of this checklist is to assess consistency between the project and 2010 General Plan and to compare the project with the effects above to determine if additional environmental review is required under CEQA in accordance with *CEQA Guidelines* Section 15183.

## *Section 15183 Format*

The table columns at the beginning of each resource section in the following analysis are used to document and categorize the environmental impacts of a proposed project in relation to prior environmental review and existing mitigation frameworks. The "Significant Impact" column identifies areas where the project may cause substantial adverse effects on the environment, potentially requiring additional analysis or mitigation. The "Less than Significant or Less than Significant with Mitigation Incorporated" column is used when impacts are either minor or can be reduced to a less than significant level through mitigation measures already identified and incorporated into the project design. The "No Impact" column confirms that the project would not affect the environmental resource in question.

The remaining columns support streamlined review pursuant to *CEQA Guidelines* Section 15183. The "Analyzed in the Prior EIR" column indicates that the impact was previously evaluated in a certified Environmental Impact Report, and no further analysis is needed unless new information or changed circumstances arise. The "Substantially Mitigated by Uniformly Applicable Development Policies" column is used when existing local policies or regulations, such as grading ordinances, California Building Code, or fire safety codes, are sufficient to reduce the impact to a less than significant level. These columns demonstrate that the project's impacts would be consistent with previous environmental review.

DRAFT

# Relationship of the Project to Previous EIR Analysis

The County of Monterey adopted the 2010 General Plan on October 26, 2010. The 2010 General Plan includes goals and policies that address the existing and future land use for the large rural areas that are used predominantly for agricultural purposes as well as for the diversity of unincorporated communities. The 2010 General Plan also includes geographically smaller plans to provide more specific policies unique to particular geographical areas. The 2010 General Plan EIR was certified in 2010 and assessed impacts from implementation of the 2010 General Plan.

## Consistency of the Project with Adopted County Plans and Ordinances

DRAFT

# 1 Aesthetics

| | Significant Impact | Less than Significant or Less than Significant with Mitigation Incorporated | No Impact | Analyzed in the Prior EIR | Substantially Mitigated by Uniformly Applicable Development Policies |
|---|---|---|---|---|---|
| Except as provided in Public Resources Code Section 21099, would the project: | | | | | |
| a. Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☐ | ☐ | ☐ |
| b. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☐ | ☐ |
| c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality? | ☐ | ☐ | ☐ | ☐ | ☐ |
| d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area? | ☐ | ☐ | ☐ | ☐ | ☐ |

DRAFT

## Analysis in Previous Environmental Documents

## Project-specific Impacts

*a. Would the project have a substantial adverse effect on a scenic vista?*

*b. Would the project substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

*c. Would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

*d. Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?*

| f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☐ | ☐ |
| g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires? | ☐ | ☐ | ☐ | ☐ | ☐ |

## Analysis in Previous Environmental Documents

## Project-specific Impacts

*a. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

*b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

*c. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?*

DRAFT

*d. Would the project be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

*e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

*f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

*g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?*

# AIR QUALITY TECHNICAL MEMORANDUM

**To:** County of Monterey
**From:** Sharon Toland, AICP, Senior Technical Specialist, Analyst, Harris & Associates
**RE:** **Air Quality Technical Memorandum for the County of Monterey Draft General Plan Housing Element Sixth Cycle (2023–2031) Update**
**Date:** July 13, 2026
**CC:** Darin Neufeld, AICP, Director, Environmental + Planning Consulting, and Elizabeth Kim, Senior Project Manager, Harris & Associates
**Att:** 1, CalEEMod Results; 2, Mobile Emissions Calculations

## Introduction

This memorandum provides the results of Harris & Associates' analysis of the potential air quality impacts from implementation of the County of Monterey General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law (project). Regional access to Monterey County (unincorporated and incorporated geographical area) is provided by the U.S. Route 101 traveling north–south and State Route (SR-) 198 and SR-146 running east–west. SR-1 also provides regional access along the Pacific coastline and SR-218, SR-68, and SR-183 are other major roadways serving Monterey County.

"HEU6" refers to the draft HEU6 document circulated for public review and submitted to the California Department of Housing and Community Development, while the "project" refers to HEU6 along with other components and related actions intended to implement HEU6.

For the purposes of this analysis, the following definitions are used herein:

- County of Monterey Government (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

The UMC is divided into seven sub-areas: North County, Greater Salinas, Central Salinas Valley, Greater Monterey Peninsula, Toro, Cachagua, and South County. Additionally, two master plans have been adopted within the Greater Monterey Peninsula Area Plan, the Carmel Valley Master Plan and the Fort Ord Master Plan, and the County's Local Coastal Program consists of four planning areas: North County (Coastal), Del Monte Forest, Carmel Area, and Big Sur Coast.

The HEU6 includes the capacity for at least 5,897 residential units, comprising opportunity sites (4,434 units), pipeline sites (1,117 units), and accessory dwelling units (ADUs; 346 units). Pipeline sites are sites where housing has been proposed and/or entitled and where development is expected to receive a building permit or certificate

of occupancy. ADUs would involve additional units on existing housing sites. For California Environmental Quality Act (CEQA) analysis, this Air Quality Technical Memorandum assumes both the theoretical maximum capacity of 12,497 new housing units on 56 opportunity sites, and the reasonable development capacity of 4,434 units for construction and 4,910 units for operation on the 56 opportunity sites is provided for comparison and informational purposes.

## Air Quality Analysis Background

Air quality laws and regulations have historically divided air pollutants into two broad categories: criteria air pollutants and non-criteria air pollutants, or toxic air contaminants. The purpose of this memorandum is to evaluate the potential criteria air pollutant impacts of the project. Criteria air pollutants are a group of common air pollutants regulated by federal and state governments through ambient air quality standards based on criteria regarding the health and environmental effects of pollution. The criteria air pollutants pertinent to the analysis in this memorandum are carbon monoxide (CO), nitrogen oxides ($NO_x$), ozone ($O_3$), particulate matter (particulate matter measuring no more than 10 microns in diameter [$PM_{10}$] and particulate matter measuring no more than 2.5 microns in diameter [$PM_{2.5}$]), and sulfur dioxide ($SO_2$). The following describes the health effects of these criteria air pollutants.

### Carbon Monoxide

CO is a colorless, odorless, poisonous gas produced by combustion processes, primarily mobile sources. When CO gets into the body, it combines with chemicals in the blood and prevents blood from providing oxygen to cells, tissues, and organs. Because the body requires oxygen for energy, high-level exposure to CO can cause serious health effects, including death (USEPA 2024a).

### Nitrogen Oxides

$NO_x$ is a general term pertaining to compounds including nitric oxide (NO), nitrogen dioxide ($NO_2$), and other $NO_x$. $NO_x$ is produced from burning fuels, including gasoline, diesel, and coal. $NO_x$ reacts with volatile organic compounds (VOCs) to form ground-level $O_3$ (smog). $NO_x$ is linked to a number of adverse respiratory system effects (USEPA 2024b).

### Ozone

Ground-level $O_3$ is not emitted directly into the air but is formed by chemical reactions of “precursor“ pollutants ($NO_x$ and VOCs) in the presence of sunlight. Major emission sources include $NO_x$ and VOC emissions from industrial facilities and electric utilities, motor vehicle exhaust, gasoline vapors, and chemical solvents. $O_3$ can trigger various health problems, particularly for sensitive receptors, including children, older adults, and people of all ages who have lung diseases, such as asthma (USEPA 2024c).

### Particulate Matter

Particulate matter includes dust, metals, organic compounds, and other tiny particles of solid materials that are released into and move around in the air. Particulates are produced by many sources, including the burning of diesel fuel by trucks and buses, industrial processes, fires, and windblown dust. Particulate pollution can cause nose and throat irritation and heart and lung problems. Particulate matter is measured in microns, which are 1 millionth of 1 meter in length (or 1 thousandth of 1 millimeter). $PM_{10}$ is small (i.e., respirable) particulate matter measuring no more than 10 microns in diameter, while $PM_{2.5}$ is fine particulate matter measuring no more than 2.5 microns in diameter (CARB 2025a).

### Sulfur Dioxide

$SO_2$ is formed primarily by the combustion of sulfur-containing fossil fuels, especially at power plants and industrial facilities. $SO_2$ is linked to a number of adverse effects on the respiratory system (USEPA 2025a).

## Existing Ambient Air Quality

The UMC is within the North Central Coast Air Basin (NCCAB). The Monterey Bay Air Resources District (MBARD) manages air quality in the NCCAB. The MBARD operates a network of ambient air monitoring stations throughout the NCCAB. The purpose of the monitoring stations is to measure ambient concentrations of pollutants and determine whether ambient air quality meets the California Ambient Air Quality Standards (CAAQS) and the National Ambient Air Quality Standards (NAAQS). There are three monitoring stations in the Monterey County. Given that opportunity sites are in different regions of the UMC, distances between monitoring stations and opportunity sites vary. As such, data for each of the three air monitoring stations is listed below.

Monitoring stations closest to opportunity sites include the Salinas station on 855 East Laurel Drive in the City of Salinas, which measures $O_3$, CO, $NO_2$ and $PM_{2.5}$; the Carmel Valley monitoring station on 34 Ford Road in Carmel Valley, which measures $O_3$, CO, $NO_2$ and $PM_{2.5}$; and the King City monitoring station on 415 Pearl Street in King City, which measures $O_3$, $PM_{10}$, and $PM_{2.5}$ concentrations. Concentrations of monitored pollutants for $O_3$, $NO_2$, $PM_{10}$, and $PM_{2.5}$ are presented in Table 1, Monitored Ambient Air Quality at the Salinas Monitoring Station; Table 2, Monitored Ambient Air Quality at the Carmel Valley Monitoring Station; and Table 3, Monitored Ambient Air Quality at the King City monitoring station.

Concentrations of 1-hour and 8-hour $O_3$ did not exceed CAAQS in 2021, 2022, or 2023. The monitored 24-hour $PM_{2.5}$ values were exceeded in 2023 at the Salinas monitoring station. The monitored 24-hour $PM_{10}$ CAAQS were exceeded in 2021, 2022, and 2023. The 1-hour and annual NAAQS and CAAQS for $NO_2$ were not exceeded. No CO data or $SO_2$ data is available from monitoring sites in Monterey County.

**Table 1. Monitored Ambient Air Quality at the Salinas Monitoring Station**

| Pollutant | Standard | 2021 | 2022 | 2023 |
|---|---|---|---|---|
| **$O_3$** | | | | |
| Maximum 1-hour concentration (ppm) | | 0.064 | 0.057 | 0.064 |
| Number of days exceeded | State: > 0.12 ppm | 0 | 0 | 0 |
| Maximum 8-hour concentration (ppm) | | 0.057 | 0.052 | 0.056 |
| Number of days exceeded | State: > 0.07 ppm | 0 | 0 | 0 |

# Regulatory Setting

## Federal and State

The federal Clean Air Act (CAA) of 1970 required the U.S. Environmental Protection Agency (USEPA) to establish the NAAQS while retaining the option for states to adopt more stringent standards or to include other specific pollutants. The NAAQS were developed for six criteria air pollutants: $O_3$, $NO_2$, CO, $SO_2$, particulate matter, and lead. The 1990 CAA Amendments require each state to have an Air Pollution Control Plan called a State Implementation Plan. A State Implementation Plan includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The 1990 CAA Amendments dictate that states containing areas violating the NAAQS revise their State Implementation Plans to include extra control measures to reduce air pollution. The USEPA reviews the State Implementation Plans to determine whether the plans conform to the 1990 CAA Amendments and achieve the established air quality goals.

The USEPA has classified air basins (or portions thereof) as being in "attainment," in "non-attainment," or "unclassified" for each criteria air pollutant based on whether the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data was available as a basis for a non-attainment or attainment designation. Table 4, North Central Coast Air Basin Attainment Status, lists the attainment status of the NCCAB for the criteria air pollutants. The USEPA classifies the NCCAB as in attainment with criteria air pollutants with respect to the NAAQS. The State of California, under the California CAA, established standards for criteria air pollutants that are generally stricter than federal standards. As shown in Table 4, the NCCAB is currently in state non-attainment status for $PM_{10}$.

**Table 4. North Central Coast Air Basin Attainment Status**

| Pollutant | California Standards | Federal Standards |
|---|---|---|
| $O_3$ (1-Hour) | Attainment | Attainment |
| $O_3$ (8-Hour) | Attainment | Attainment |
| $PM_{10}$ | **Non-attainment** | Attainment |
| $PM_{2.5}$ | Attainment | Attainment |
| CO | Monterey County – Attainment<br>San Benito County – Unclassified[a]<br>Santa Cruz County – Unclassified[a] | Attainment |
| $NO_2$ | Attainment | Attainment |
| Lead | Attainment | Attainment |
| $SO_2$ | Attainment | Attainment |

**Source:** MBARD 2024.

**Notes:** CO = carbon monoxide; $NO_2$ = nitrogen dioxide; $O_3$ = ozone; $PM_{10}$ = particulate matter smaller than or equal to 10 microns in diameter; $PM_{2.5}$ = particulate matter smaller than or equal to 2.5 microns in diameter; $SO_2$ = sulfur dioxide

[a] = Unclassified; indicates that data is not sufficient for determining attainment or non-attainment.

## Local

### Monterey Bay Air Resources District

The MBARD has jurisdiction over air quality programs in Monterey County, Santa Cruz County, and San Benito County. State and local government projects, as well as projects proposed by the private sector, are subject to MBARD requirements if the sources are regulated by the MBARD (MBARD 2025).

The MBARD is also responsible for establishing and enforcing local air quality rules and regulations that address the requirements of federal and state air quality laws. Development projects in the UMC are typically subject to the following MBARD rules; other rules may apply depending on the proposed specific operations:

- **Rule 402, Nuisance.** Prohibits emissions that may cause injury, detriment, nuisance, or annoyance to any considerable number of people or to the public; endanger the comfort, repose, health, or safety of any such people or the public; or cause injury or damage to business or property.
- **Rule 403, Particulate Matter.** Establishes limits to the discharge of any particulate matter from non-stationary sources.
- **Rule 425, Use of Cutback Asphalt.** Established limits for the manufacture and use of high-VOC asphalt, including cutback, slow cure, and emulsified asphalt.
- **Rule 426, Architectural Coatings.** Establishes limits to the VOC content for coatings applied in the MBARD.

## 2010 General Plan (Inland)

***Conservation and Open Space Element***

Goal OS-10 and Policies OS-10.1 through OS-10.15 of the Conservation and Open Space Element of the Monterey County General Plan (2010 General Plan) calls for the protection and enhancement of Monterey County's air quality without constraining routine and ongoing agricultural activities. Policy OS-10.7 supports the use of best available technology for reducing air pollution emissions. Policy OS-10.8 is intended to protect air quality from naturally occurring asbestos by requiring mitigation measures to control dust and emissions during construction, grading, quarrying, or surface mining operations.

***Circulation Element***

The Circulation Element includes goals and policies related to achieving an acceptable level of service (LOS) of LOS D by 2030 for County roads and intersections (Policy C-1.1). Policy C-1.2 outlines ways in which the goal of Policy C-1.1 could be achieved. Policy C-1.3 requires circulation improvements that reduce direct on- and off-site project traffic impacts to be provided concurrently with new development. Policy C-1.4 requires projects that would reduce LOS below LOS D to phase construction in a manner that maintains the acceptable LOS D for all affected UMC roads. Circulation Element policies that encourage alternative transportation would reduce criteria air pollutant emissions from mobile sources. For example, Policy C-2.6 encourages bicycle and automobile storage facilities in conjunction with public transportation facilities. Policy C-3.5 encourages transportation alternatives such as bicycles, carpools, public transit, and compact vehicles within and outside the public right-of-way. Policy C-4.3 requires consideration of the needs of bicyclists and pedestrians in all public rights-of-way. Policy C-4.5 requires new public local and collector roads to be and designed to minimize disruption of existing development, discourage through auto traffic and provide for bicycle and pedestrian traffic within the right-of-way. Policy C-6.5 encourages use of public transit and alternative modes of transportation through land use designations and zoning which cluster employment centers with a mix of other uses, and project design that incorporates carpool areas, "park-and-ride" facilities and similar incentives. Policy C-9.2 requires construction or expansion of roadways within major transportation corridors to consider improved bike routes. Policy C-9.3 requires the County to promote the safe integration of bicycle systems with other public transportation modes. Policy C-9.6 requires new and improved multimodal transfer facilities, such as transit centers and park-and-ride lots, to include adequate bicycle access and secure bicycle parking facilities.

***Environmental Justice Element***

The County is currently in the process preparing a new Environmental Justice Element. The purpose of the Environmental Justice Element is to establish goals and policies intended to mitigate inequities for people who are disproportionately impacted by environmental hazards and health impacts. The Draft Environmental Justic Element includes policies focused on reducing exposure to toxic air contaminants, specifically diesel particulate matter and stationary sources from industrial activities. Draft Policy EJ-2.1 is to maintain and improve both indoor and outdoor air quality by identifying the sources of air pollution impacting disadvantaged communities and vulnerable populations and reducing emissions from these sources. Draft Policy EJ-2.2 is to coordinate with regional agencies to require stronger pollution controls at industrial and agricultural facilities in or near disadvantaged communities, to the extent feasible, and minimize the risk of exposure to, or contamination by, hazardous materials, prioritizing facilities in northern areas of Monterey County. Draft Policy EJ-2.3 is to expand

programs and partnerships to inform and educate disadvantaged communities and vulnerable citizens about adverse health impacts associated with poor indoor and outdoor air quality, and direct resources toward programs to provide equipment and supplies to protect residents' and workers' health and safety.

## Monterey County Community Climate Action and Adaptation Plan

The County is currently preparing a Community Climate Action and Adaptation Plan (CCAAP). A draft of the CCAAP was released to the public in April 2026 (County of Monterey 2026). The CCAAP is an effort to reduce greenhouse gas (GHG) emissions in line with the targets set by the State of California through 2045. Strategies to reduce GHG emissions include the following sectors: buildings and energy, including energy efficiency, clean energy, and electrification; on-road transportation, including land use planning, and clean and active transportation; off-road vehicles and equipment; solid waste; and water and wastewater. Although the purpose of the CCAAP is reducing GHG emissions, the CCAAP strategies would result in a co-benefit of reducing criteria air pollutant emissions from energy and transportation.

## Area and Master Plans

### *Carmel Valley Master Plan*

To explore public transit as an alternative to the use of private automobiles and help preserve air quality, Policy CV-2.1 requires new development to include a road system adequate not only for its internally generated automobile traffic but also for bus (both transit and school), pedestrian, and bicycle traffic, which should logically pass through or be generated by the development.

### *Fort Ord Master Plan*

Objective A, Air Quality Policies A-1 through A-3, the programs thereunder support the protection of and improvements to air quality. Specifically, Air Quality Policy A-1 calls on the County to participate in regional planning efforts to improve air quality, such as continuing to cooperate with the MBARD in carrying out the regional Air Quality Management Plan and with the Transportation Agency of Monterey County to carry out the Congestion Management Plan (Programs A-1.1 and A-1.2). Air Quality Policy A-2 calls on the County to promote local efforts to improve air quality, such as avoiding or mitigating air quality impacts through the CEQA process and using the Transportation Demand Management Ordinance and similar transportation measures to encourage commute alternatives (Programs A-2.1 and A-2.2). Air Quality Policy A-1 and Programs A-3.1 and A-3.2 promote the integration of efficient land use strategies into planning and zoning to improve air quality. These include, but are not limited to, the enhancement of Central Business Districts, compact development patterns, residential densities that average above seven dwelling units per acre, clustered employment densities and activity centers, mixed use development, and integrated street patterns.

### *Toro Area Plan*

Policy T-2.10 states that increasing the accessibility of Toro residents to mass transit, either through maintenance of existing park-and-ride lots or new bus service, particularly in the Corral de Tierra, San Benancio, and River Road areas, should be studied and implemented.

### *Greater Monterey Peninsula Area Plan*

Policy GMP-2.9 encourages construction and expansion of all highways and major arterials to provide for bike paths, and states that it is desirable that bike paths be physically separate from motorized traffic.

## Community Plans

### *Castroville Community Plan*

The Castroville Community Plan Program Environmental Impact Report (PEIR) includes the following mitigation measures related to air quality that are required to be incorporated into the design of future development as necessary:

- Implement best-available control measures (BACM) to reduce emissions of particulate matter, as recommended by MBARD and in accordance with Policy 20.2.5 of the 1982 General Plan during construction activities.

- Implement BACM to reduce emissions of toxic air contaminants, as recommended by MBARD and in accordance with Policy 20.2.5 of the 1982 General Plan during construction activities.
- Implement BACM to reduce criteria air pollutants of ROG [reactive organic gas], $NO_X$ [oxides of nitrogen], CO and $PM_{10}$ as recommended by MBARD and in accordance with Policy 20.2.5 of the 1982 General Plan 1982, during operations.

***North County Land Use Plan***

Land Use Plan Key Policy 3.1.1 focuses on uncongested flow of traffic but states that public transportation should be expanded to provide a viable transportation alternative.

***Carmel Area Land Use Plan***

Recommended Action 3.1.4 encourages initiation of a program by Monterey Peninsula Transit or other public carriers, in cooperation with appropriate recreational agencies, the County, and community representatives, to provide bus stops at appropriate access points and to expand bus service to recreation areas and visitor-serving facilities. Bus routes should be scheduled to serve residents' needs as well as the needs of visitors.

**1982 General Plan (Coastal)**

Goal 20 and the objectives and policies thereunder aim to provide for the protection and enhancement of Monterey County's air quality through land use planning (Objective 20.1 and Policies 20.1.1 through 20.1.5) and regulating pollution sources and adopting programs to improve air quality (Objective 20.2 and Policies 20.2.1 through 20.2.7).

Goal 37 and the objectives and policies thereunder aim to promote a safe, effective, and economical transportation system that will service the existing and future land uses of Monterey County. It includes Policy 37.2.1 that requires transportation demands of proposed development to not exceed an acceptable LOS for existing transportation facilities, unless appropriate increases in capacities are provided for; Policy 37.4.1 that requires the County to encourage overall land use patterns that reduce the need to travel; and Policy 37.4.2 that encourages the provision, where feasible, of bicycle and automobile storage facilities to be used in conjunction with public transportation.

Goal 38 aims to minimize the negative impacts of transportation in Monterey County. Objective 38.1 is to plan for transportation modes and strategies that ensure good air quality, reduce noise, reduce the consumption of fossil fuels, and reduce the need to devote additional lands to transportation use, and Policy 38.1.1 requires the County to support the implementation of measures for reducing air pollution from transportation sources.

## Significance Thresholds

Appendix G of the CEQA Guidelines states that significance criteria established by the applicable air quality management or air pollution control district may be relied on to make impact determinations. The County has not adopted significance thresholds to evaluate the significance of air quality impacts once a report has been deemed necessary. In lieu of any set quantitative air quality significance thresholds, the thresholds outlined in the MBARD's CEQA Air Quality Guidelines are used to determine the potential significance of air quality impacts. According to MBARD, potential local air quality impacts would occur if a project would generate 82 pounds per day or more of $PM_{10}$ during construction activities. Quantitative thresholds for construction emissions of $PM_{2.5}$, $NO_x$, $SO_x$, CO, and VOCs have not been adopted by MBARD. Instead, emissions of $PM_{2.5}$, $NO_x$, $SO_x$, CO, and VOCs that would result during construction are evaluated qualitatively for potential air quality impacts based on guidance from MBARD. Table 5, Significance Thresholds for Air Quality Impacts, provides the applicable MBARD thresholds for project operation.

**Table 5. Significance Thresholds for Operational Air Quality Impacts**

| Pollutant | Emission Rate (pounds/day) |
|---|---|
| $PM_{10}$ | 82 |
| $PM_{2.5}$ | 55 |
| $NO_X$ | 137 |
| $SO_X$ | 150 |
| CO | 550 |
| VOC | 137 |

**Sources:** MBARD 2008.
**Notes:** CO = carbon monoxide; $NO_X$ = nitrogen oxides; $PM_{10}$ = particulate matter less than 10 microns; $PM_{2.5}$ = particulate matter less than 2.5 microns; $SO_X$ = oxides of sulfur oxides; VOC = volatile organic compounds

The thresholds listed in Table 5 represent screening level thresholds that can be used to evaluate if project-related emissions cause a significant impact on air quality. Emissions below the screening level thresholds do not cause a significant impact. For non-attainment pollutants ($O_3$, with $O_3$ precursors $NO_x$ and VOCs, and $PM_{10}$), if emissions exceed the thresholds in Table 5, the HEU6 would result in a cumulatively considerable net increase in these pollutants and, thus, would have a significant impact on ambient air quality.

## Construction Impact Analysis

Construction of future projects under the HEU6 would result in temporary air pollutants associated with soil disturbance, dust emissions, employee and material delivery vehicle exhaust, off-gassing from paving and coating activities, and combustion pollutants from off-road construction equipment. Construction-related air pollution emissions can vary from day to day, depending on the level of activity, type of activity, and prevailing weather conditions. The primary air pollutants of concern from construction activities are particulate matter (including both $PM_{10}$ and $PM_{2.5}$), CO, and $O_3$ precursors (including $NO_x$ and VOCs).

Maximum daily construction emissions were estimated using the California Emissions Estimator Model (CalEEMod), Version 2022.1. The project is a land use policy plan and does not propose any specific construction projects, and the details of future construction under the HEU6 are currently unknown. Therefore, estimated maximum daily construction emissions were estimated using CalEEMod default assumptions. Mobile emissions typically account for the majority of land development emissions. As such, air quality modeling includes evaluation of the theoretical maximum buildout capacity of 12,497 units, consistent with the assumptions of the vehicle miles traveled (VMT) analysis (Kimley-Horn 2026). However, development of 12,497 new housing units is not supported by historical building trends nor would it align with market demand in the UMC. Therefore, a modeling scenario that assumes a reasonable capacity of 4,434 housing units is also provided for informational and comparison purposes.

Modeling assumes a buildout planning year of 2031. The recommended default assumption of 600 tons of export material per acre and 1,190 tons of import per acre was used to estimate total earthwork and demolition export for the project, based on the CalEEMod estimate for total project acreage (Ramboll 2023). Modeling assumes dust control measures would be implemented as required by MBARD Rule 402 and Rule 403. Dust control measures include watering on site two times per day, application of dust suppressant to unpaved roads, limits on vehicle speeds, and sweeping of paved roads. These assumptions were made for the theoretical maximum buildout capacity of 12,497 housing units and a more reasonable buildout scenario of 4,434 housing units as approved by the California Department of Housing and Community Development. Detailed assumptions and modeling datasheets are provided in Attachment 1, CalEEMod Results. Estimated maximum daily construction emissions for the theoretical maximum total capacity of 12,497 new housing units are provided in Table 6, Estimated Theoretical Capacity Maximum Daily Construction Emissions (pounds/day). Table 7, Reasonable Capacity Estimated Average Daily Construction Emissions (pounds/day) provides maximum daily construction emissions for the net increase in units under the reasonable capacity scenario (4,434 units).

**Table 6. Estimated Theoretical Capacity Maximum Daily Construction Emissions (pounds/day)**

| Construction Phase | VOC | $NO_x$ | CO | $SO_x$ | $PM_{10}$ | $PM_{2.5}$ |
|---|---|---|---|---|---|---|
| Demolition | 3 | 27 | 24 | <1 | 1 | 1 |

| Paving | 1 | 7 | 10 | <1 | <1 | <1 |
| *MBARD Threshold*[1] | — | — | — | — | *82* | — |
| **Significant?** | — | — | — | — | No | — |

**Source:** CAPCOA 2022. Refer to Attachment 1 for model output.
**Notes:** CO = carbon monoxide; $NO_x$ = oxides of nitrogen; $PM_{10}$ = particulate matter less than 10 microns in diameter; $PM_{2.5}$ = particulate matter less than 2.5 microns in diameter; $SO_x$ = sulfur oxides; VOC = volatile organic compounds
[a] MBARD has only adopted a numeric threshold for $PM_{10}$ for construction emissions. Emissions for other pollutants are provided for informational purposes.

As shown in Table 6 and Table 7, maximum emissions estimates indicate that construction activities anticipated under the HEU6 would not result in significant levels of $PM_{10}$ air emissions. These maximum emissions assume the most intense construction that would be required for concurrent construction of all housing units accommodated under the plan. In reality, various construction phases would occur on a smaller scale throughout the UMC on a given day. Because future housing development would occur throughout the UMC and over the multi-year planning period, it is unlikely that development of multiple projects would occur in the same area simultaneously such that individual construction activities would combine to exceed the MBARD $PM_{10}$ threshold. Under the reasonable capacity scenario, even if building construction at two adjacent opportunity sites would occur simultaneously, combined emissions would not exceed the $PM_{10}$ threshold. As previously described, it is highly unlikely that the level of construction assumed for the theoretical maximum capacity scenario would occur during the HEU6 planning period. The greatest contributor to $PM_{10}$ emissions during building construction is personal vehicle trips associated with construction workers. CalEEMod estimates these trips based on the total number of dwelling units input for the theoretical maximum capacity, resulting in a default assumption of almost 9,000 daily vehicle trips associated with worker trips under this scenario (refer to Attachment 1). A combined construction scenario requiring more than the approximately 9,000 daily workers trips modeled for the maximum capacity scenario would not occur. Therefore, similar to the reasonable capacity scenario, emissions are unlikely to combine to exceed the MBARD threshold under the maximum capacity scenario.

As previously mentioned, the MBARD does not identify quantitative thresholds for other criteria air pollutants during construction. Based on MBARD guidance, construction projects in the NCCAB that would use typical construction equipment, such as dump trucks, scrapers, bulldozers, compactors, and front-end loaders, are considered to be accommodated in the emission inventories of state- and federally required air plans and are assumed not to have a significant impact on the attainment and maintenance of $O_3$ AAQS. Construction details, including the equipment needed, for projects completed under the HEU6 is not known at this time. However, construction is anticipated to require only construction equipment typical of residential development projects. The identified opportunity area and pipeline sites do not include features that would require unusual equipment, such as a remote location requiring use of helicopter material delivery. Additionally, the timing of most projects would be spaced out over the Sixth Cycle buildout period (5 years remaining until 2031), and emissions would be released periodically throughout the buildout period. Individual project emissions would generally not exceed the estimated daily average emissions shown in Table 6. It should also be noted that these results reflect default modeling assumptions for the total amount of growth accommodated by the HEU6 under the theoretical maximum capacity and reasonable capacity scenarios rather than an actual construction project. While project-specific details are not known at this time, projects under the HEU6 would be required to comply with MBARD Rule 426, which establishes limits to the VOC content for architectural coatings. Projects under the HEU6 would incorporate dust control measures, as described above (i.e., MBARD Rule 402 and Rule 403). Compliance with MBARD Rule 426 and implementation of the dust control measures would reduce fugitive dust emissions from ground disturbance and VOC emissions associated with architectural coatings for projects implemented under the HEU6. As such, construction of future development consistent with the project would not result in significant criteria air pollutant emissions during construction, and impacts would be less than significant.

## Operational Impact Analysis

Long-term air pollutant emissions impacts are those associated with stationary sources and mobile sources involving any project-related changes. Stationary sources of emissions include the use of architectural coatings, consumer products, landscape equipment, and energy use. Area sources of air pollutant emissions associated with future development under the HEU6 include fuel combustion emissions from space and water heating, fuel combustion emissions from landscape maintenance equipment, VOC emissions from periodic repainting of interior and exterior surfaces, and natural gas use. Increased traffic volumes also contribute to regional emissions of criteria air pollutants.

The net increase in estimated operational emissions from implementation of the HEU6 was calculated using CalEEMod (Version 2022.1) for emission sources other than mobile emissions using default assumptions for residential development. As described above, modeling includes a theoretical maximum development capacity scenario of 12,497 units, and a reasonable capacity scenario of 4,910 housing units. The 4,910-unit scenario and associated VMT data were derived from a previous iteration of the traffic model prior to project revisions. This VMT estimate closely aligns with the current reasonable buildout scenario of 4,434 housing units and provides a conservative assumption for mobile emissions. This scenario is provided only for comparison and informational purposes only. Operational impact finding is based on the theoretical maximum buildout capacity scenario. CalEEMod default assumptions include natural gas hearths for new residential units. Energy use estimates are conservative because CalEEMod assumes compliance with 2019 Title 24 energy efficiency standards. Residential development would be required to comply with increasingly stringent Title 24 Standards, including the current 2022 standards. Estimated maximum daily operational emissions are provided in Table 8, Theoretical Capacity Maximum Daily Net Change in Project Operational Emissions (pounds/day). Maximum daily emissions under the reasonable capacity scenario are provided in Table 9, Reasonable Capacity Maximum Daily Net Change in Project Operational Emissions (pounds/day).

Development would also generate mobile source emissions from motor vehicle trips. The project does not propose any specific future development projects. The project's impact on regional emissions related to vehicle emissions is based on its impact on Monterey Countywide VMT data for buildout (2031) conditions from Kimley-Horn (2026). Criteria air pollutant emissions associated with the project's increase in VMT were calculated using

the EMFAC2025 (V2.1.0) Emissions Inventory (refer to Attachment 2, Mobile Emissions Calculations). EMFAC2025 V2.1.0 reflects federal actions to disapprove the USEPA's actions to grant California waivers for several regulations in the model, including Advanced Clean Cars II, Advanced Clean Trucks, Zero-Emission Airport Shuttle, Heavy-Duty Vehicle and Engine Emission Warranty and Maintenance Provisions (Warranty Phase 1), and Heavy-Duty Omnibus (Omnibus), although these actions are being contested by the state (CARB 2026a). Existing Monterey Countywide VMT is approximately 3,267,663 and is estimated to increase to 3,968,469 by 2031 without project implementation. For informational purposes, a Monterey Countywide VMT estimate of 4,174,693 VMT provided by Kimley-Horn for the development of up to 4,910 units was used to estimate emissions under a conservative reasonable buildout scenario for vehicle emissions (Kimley-Horn 2024). The 4,910-unit scenario and associated VMT data were derived from a previous iteration of the traffic model prior to project revisions. This VMT estimate closely aligns with the current reasonable buildout scenario of 4,434 housing units and provides a conservative assumption for mobile emissions. The net increase in regional mobile emissions attributable to the project in 2031 is shown in Table 8.

**Table 8. Theoretical Capacity Maximum Daily Net Change in Project Operational Emissions**

| Source | Air Pollutant Emissions (pounds/day) | | | | | |
|---|---|---|---|---|---|---|
| | VOC | $NO_x$ | CO | $SO_x$ | $PM_{10}$ | $PM_{2.5}$ |
| Area | 376 | 7 | 707 | <0.1 | <1 | <1 |
| Energy | 7 | 126 | 54 | 0 | 10 | 10 |
| Mobile | 146 | 140 | 2,356 | 1 | 20 | 8 |
| **Total Daily Emissions** | **529** | **273** | **3,117** | **1** | **30** | **18** |
| *MBARD Threshold* | *137* | *137* | *550* | *150* | *82* | *55* |
| **Significant?** | **Yes** | **Yes** | **Yes** | **No** | **No** | **No** |

**Source:** CAPCOA 2022. Refer to Attachment 1 for model output.
**Notes:** CO = carbon monoxide; $NO_x$ = nitrogen oxides; $PM_{2.5}$ = particulate matter measuring no more than 2.5 microns in diameter; $PM_{10}$ = particulate matter measuring no more than 10 microns in diameter; $SO_x$ = sulfur oxides; VOC = volatile organic compound

**Table 9. Reasonable Capacity Maximum Daily Net Change in Project Operational Emissions**

| Source | Air Pollutant Emissions (pounds/day) | | | | | |
|---|---|---|---|---|---|---|
| | VOC | $NO_x$ | CO | $SO_x$ | $PM_{10}$ | $PM_{2.5}$ |
| Area | 133 | 2 | 251 | <0.1 | <1 | <1 |
| Energy | 3 | 45 | 19 | <1 | 4 | 4 |
| Mobile | 97 | 93 | 1,573 | 1 | 13 | 5 |
| **Total Daily Emissions** | **233** | **140** | **1,843** | **1** | **17** | **9** |
| *MBARD Threshold* | *137* | *137* | *550* | *150* | *82* | *55* |
| **Significant?** | **Yes** | **Yes** | **Yes** | **No** | **No** | **No** |

**Source:** CAPCOA 2022. Refer to Attachment 1 for model output.
**Notes:** CO = carbon monoxide; $NO_x$ = nitrogen oxides; $PM_{2.5}$ = particulate matter measuring no more than 2.5 microns in diameter; $PM_{10}$ = particulate matter measuring no more than 10 microns in diameter; $SO_x$ = sulfur oxides; VOC = volatile organic compound

As shown in Table 8 and Table 9, operational emissions for HEU6 buildout would generally not exceed the MBARD thresholds for $SO_X$, $PM_{10}$, and $PM_{2.5}$. However, operational emissions would exceed MBARD thresholds for VOC, $NO_x$, and CO emissions, mainly attributed to mobile emissions and area source emissions from application of consumer products. As such, the project would have the potential to contribute to the existing significant cumulative impact related to $O_3$. Although details of individual projects are not currently known, based on the default assumptions for residential development in CalEEMod (Version 2022.1) and EMFAC025 V2.1.0, this impact would be potentially significant at the programmatic level.

## Mitigation Measures

Construction of projects under the HEU6 are not anticipated to result in significant criteria air pollutant emissions. During operation, cumulative development may exceed the MBARD threshold for VOC, $NO_x$, and CO emissions. Feasible mitigation is not available to reduce operational emissions to below a level of significance. During operation, potentially significant impacts related to VOC, $NO_x$, and CO emissions from the increase in area sources are primarily due to consumer products, but also including landscape equipment, hearths, and mobile emissions. The VOC content of consumer products and architectural coatings, and landscape emissions standards, are beyond the control of the County. It is also beyond the scope of the project for mitigation to control consumers' choices in available products.

Emissions could also be reduced through limiting future natural gas use in buildings, including all-electric development or a ban on new natural gas hearths. However, requirements that limit natural gas use in residential development would conflict with Assembly Bill (AB) 130, which limits the ability of local agencies to enact more restrictive standards for residential development. AB 130 and Senate Bill (SB) 131, signed into effect in June 2025, are intended to streamline CEQA review of new housing development. The bills expanded CEQA exemptions for qualifying housing projects, specifically new infill development. AB 130 also included limitations of local jurisdictions' ability to update building codes to apply more restrictive standards to housing development, including green building standards, effective October 1, 2025, through June 1, 2031. As such, this limitation would be in place for the entirety of the HEU6 planning cycle, and mitigation measures to control emissions from these sources are not feasible. The County is exploring how restrictions on natural gas may be adopted as part of CCAAP implementation; however, the CCAAP is not yet adopted, and the details of potential future restrictions are unknown. If adopted, applicable natural gas regulations for CCCAAP consistency would reduce criteria air pollutant emissions as a co-benefit of GHG emissions reductions.

The MBARD has updated VOC content limits for architectural coating over time to be increasingly more stringent. Similarly, California Air Resources Board (CARB) establishes and periodically updates VOC limits for various consumer products. CARB also regulates small off-road engines, such as landscaping equipment, and vehicle emissions and standards are anticipated to become more stringent over time, and as older vehicles are retired. Emissions standards have increased over time, and CARB is currently considering more stringent emissions standards and incentives to increase zero emissions equipment use (CARB 2026b). MBARD also has an ongoing incentive programs to replace fuel powered landscape equipment with battery-operated equipment (MBARD 2025). As such, MBARD and CARB efforts would likely reduce project VOC, $NO_x$, and CO emissions over time. Additionally, despite AB 130 limitations at the local level, all-electric development remains a statewide goal. Incentive programs are currently available, such as the California Electric Homes Program, that provide incentives for new all-electric home construction (CEC 2025). The state is also challenging federal actions that result in higher future mobile emissions, as described above. As such, mobile and area emissions calculated in Table 8 and Table 9. However, because these changes to emissions standards and program participation are beyond the control of the County, and because the project is a policy plan and specifics of future development are unknown at this phase of the plan, it cannot be demonstrated that VOC, $NO_x$, or CO emissions would be reduced to a less than significant level. Future development with 25 or more units associated with the project would require compliance with Sections 20.64.250 and 21.64.250 of the Monterey County Code (County Code), which establish requirements to reduce vehicle trips by ensuring that new developments, redevelopment, and expansion of existing developments contain infrastructure and programs to reduce vehicle travel and encourage alternative modes of travel. Compliance with the County Code would result in reductions in vehicle emissions, but the extent of reductions cannot be calculated at this time. This operational impact would remain significant and unavoidable.

## Summary

The project would not result in a potentially significant impact related to maximum daily criteria air pollutant emissions during construction. Buildout operation of the HEU would exceed the MBARD significance thresholds for VOC, $NO_x$, and CO. Future development under the project would continue to be required to comply with the

CARB motor vehicle standards, MBARD rules and regulations, and the General Plan goals and policies. However, impacts from operation of the project would be significant and unavoidable.

## 2.2.4. Total Construction Emissions by Year, Mitigated

Includes both onsite and offsite emissions.

### Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Year | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |

## 4.8. Stationary Emissions By Equipment Type

### 4.8.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.8.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Avoided | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Subtotal | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Sequestered | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 1/2/2023 | 1/26/2026 | 5.00000 | 800.000 | — |
| Site Preparation | Site Preparation | 1/27/2026 | 11/30/2027 | 5.00000 | 480.000 | — |

| | | | | | | |
|---|---|---|---|---|---|---|
| Grading | Grading | 12/1/2025 | 8/30/2030 | 5.00000 | 1,240.00 | — |
| Building Construction | Building Construction | 1/2/2023 | 12/31/2031 | 5.00000 | 2,348.00 | — |
| Paving | Paving | 6/1/2028 | 10/15/2031 | 5.00000 | 880.000 | — |
| Architectural Coating | Architectural Coating | 6/1/2028 | 10/15/2031 | 5.00000 | 880.000 | — |

## 5.2. Off-Road Equipment

### 5.2.1. Unmitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Concrete/Industrial Saws | Diesel | Average | 1.000000 | 8.00000 | 33.0000 | 0.73000 |
| Demolition | Rubber Tired Dozers | Diesel | Average | 2.00000 | 8.00000 | 367.000 | 0.40000 |
| Demolition | Excavators | Diesel | Average | 3.00000 | 8.00000 | 36.0000 | 0.38000 |
| Site Preparation | Tractors/Loaders/Backhoes | Diesel | Average | 4.00000 | 8.00000 | 84.0000 | 0.37000 |
| Site Preparation | Rubber Tired Dozers | Diesel | Average | 3.00000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Graders | Diesel | Average | 1.000000 | 8.00000 | 148.000 | 0.41000 |
| Grading | Rubber Tired Dozers | Diesel | Average | 1.000000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Tractors/Loaders/Backhoes | Diesel | Average | 2.00000 | 8.00000 | 84.0000 | 0.37000 |
| Grading | Excavators | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Grading | Scrapers | Diesel | Average | 2.00000 | 8.00000 | 423.000 | 0.48000 |
| Building Construction | Cranes | Diesel | Average | 1.000000 | 7.00000 | 367.000 | 0.29000 |
| Building Construction | Forklifts | Diesel | Average | 3.00000 | 8.00000 | 82.0000 | 0.20000 |
| Building Construction | Tractors/Loaders/Backhoes | Diesel | Average | 3.00000 | 7.00000 | 84.0000 | 0.37000 |
| Building Construction | Generator Sets | Diesel | Average | 1.000000 | 8.00000 | 14.0000 | 0.74000 |
| Building Construction | Welders | Diesel | Average | 1.000000 | 8.00000 | 46.0000 | 0.45000 |
| Paving | Pavers | Diesel | Average | 2.00000 | 8.00000 | 81.0000 | 0.42000 |
| Paving | Rollers | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Paving | Paving Equipment | Diesel | Average | 2.00000 | 8.00000 | 89.0000 | 0.36000 |
| Architectural Coating | Air Compressors | Diesel | Average | 1.000000 | 6.00000 | 37.0000 | 0.48000 |

### 5.2.2. Mitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Concrete/Industrial Saws | Diesel | Average | 1.000000 | 8.00000 | 33.0000 | 0.73000 |
| Demolition | Rubber Tired Dozers | Diesel | Average | 2.00000 | 8.00000 | 367.000 | 0.40000 |
| Demolition | Excavators | Diesel | Average | 3.00000 | 8.00000 | 36.0000 | 0.38000 |
| Site Preparation | Tractors/Loaders/Backhoes | Diesel | Average | 4.00000 | 8.00000 | 84.0000 | 0.37000 |
| Site Preparation | Rubber Tired Dozers | Diesel | Average | 3.00000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Graders | Diesel | Average | 1.000000 | 8.00000 | 148.000 | 0.41000 |
| Grading | Rubber Tired Dozers | Diesel | Average | 1.000000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Tractors/Loaders/Backhoes | Diesel | Average | 2.00000 | 8.00000 | 84.0000 | 0.37000 |
| Grading | Excavators | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Grading | Scrapers | Diesel | Average | 2.00000 | 8.00000 | 423.000 | 0.48000 |
| Building Construction | Cranes | Diesel | Average | 1.000000 | 7.00000 | 367.000 | 0.29000 |
| Building Construction | Forklifts | Diesel | Average | 3.00000 | 8.00000 | 82.0000 | 0.20000 |
| Building Construction | Tractors/Loaders/Backhoes | Diesel | Average | 3.00000 | 7.00000 | 84.0000 | 0.37000 |
| Building Construction | Generator Sets | Diesel | Average | 1.000000 | 8.00000 | 14.0000 | 0.74000 |
| Building Construction | Welders | Diesel | Average | 1.000000 | 8.00000 | 46.0000 | 0.45000 |
| Paving | Pavers | Diesel | Average | 2.00000 | 8.00000 | 81.0000 | 0.42000 |
| Paving | Rollers | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Paving | Paving Equipment | Diesel | Average | 2.00000 | 8.00000 | 89.0000 | 0.36000 |
| Architectural Coating | Air Compressors | Diesel | Average | 1.000000 | 6.00000 | 37.0000 | 0.48000 |

## 5.3. Construction Vehicles

### 5.3.1. Unmitigated

| Phase Name | Trip Type | One-Way Trips per Day | Miles per Trip | Vehicle Mix |
|---|---|---|---|---|
| Demolition | Worker | 15.0000 | 9.47000 | LDA,LDT1,LDT2 |
| Demolition | Vendor | — | 6.03000 | HHDT,MHDT |
| Demolition | Hauling | 0.00000 | 20.0000 | HHDT |
| Demolition | Onsite truck | — | — | HHDT |
| Site Preparation | Worker | 17.5000 | 9.47000 | LDA,LDT1,LDT2 |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Apply dust suppressants to unpaved roads | 84% | 84% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |
| Sweep paved roads once per month | 9% | 9% |

## 5.5. Architectural Coatings

| Phase Name | Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|---|
| Architectural Coating | 26,824,811 | 8,941,604 | 0.00000 | 0.00000 | — |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (Ton of Debris) | Material Exported (Ton of Debris) | Acres Graded (acres) | Material Demolished (Ton of Debris) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Site Preparation | 0.00000 | 0.00000 | 135.000 | 0.00000 | 0.00000 |
| Grading | 831,810 | 419,400 | 699.000 | 0.00000 | 0.00000 |
| Paving | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 2 | 61% | 61% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Phase Name | Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|---|
| Paving | Condo/Townhouse | — | 0% |
| Paving | Condo/Townhouse | — | 0% |
| Paving | Condo/Townhouse | — | 0% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2025 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2026 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2027 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2028 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2029 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2030 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2031 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2023 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2024 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |

## 5.9. Operational Mobile Sources

### 5.9.1. Unmitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

| Land Use | Hearth Type | Unmitigated (number) | Mitigated (number) |
|---|---|---|---|
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 6,000 | 6,000 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 6,000 | 6,000 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |

| | | | |
|---|---|---|---|
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 497 | 497 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 26,824,811 | 8,941,604 | 0.00000 | 0.00000 | — |

### 5.10.3. Landscape Equipment

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 21,249,912 | 386.830 | 0.0330 | 0.0040 | 241,382,999 |
| Condo/Townhouse | 21,249,912 | 386.830 | 0.0330 | 0.0040 | 241,382,999 |
| Condo/Townhouse | 1,760,201 | 386.830 | 0.0330 | 0.0040 | 19,994,558 |

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 21,253,137 | 386.830 | 0.0330 | 0.0040 | 0.00000 |
| Condo/Townhouse | 21,253,137 | 386.830 | 0.0330 | 0.0040 | 0.00000 |
| Condo/Townhouse | 1,763,426 | 386.830 | 0.0330 | 0.0040 | 0.00000 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 20,778,129 | 0.00000 |

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 250,842,600 | 0.00000 |
| Condo/Townhouse | 20,778,129 | 0.00000 |

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 367.501 | 0.00000 |

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 4,436.74 | 0.00000 |
| Condo/Townhouse | 367.501 | 0.00000 |

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

| Land Use | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |
| Condo/Townhouse | Household refrigerators and/or freezers | R-134a | 1,430.00 | 0.11538 | 0.60000 | 0.00000 | 1.000000 |
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |
| Condo/Townhouse | Household refrigerators and/or freezers | R-134a | 1,430.00 | 0.11538 | 0.60000 | 0.00000 | 1.000000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 6.75000 | annual days of extreme heat |
| Extreme Precipitation | 4.10000 | annual days with precipitation above 20 mm |
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 31.3300 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 0 | 0 | N/A |
| Wildfire | 1 | 0 | 0 | N/A |

| | | | | |
|---|---|---|---|---|
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 0 | 0 | 0 | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 1 | 1 | 1 | 2 |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

## 6.4. Climate Risk Reduction Measures

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 64.9557295 |
| Employed | 60.78532016 |
| Median HI | 46.47760811 |
| Education | — |
| Bachelor's or higher | 81.58603875 |
| High school enrollment | 100 |
| Preschool enrollment | 1.873476197 |
| Transportation | — |
| Auto Access | 57.21801617 |
| Active commuting | 87.89939689 |
| Social | — |
| 2-parent households | 65.78981137 |
| Voting | 70.98678301 |
| Neighborhood | — |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 22.0000 |
| Healthy Places Index Score for Project Location (b) | 67.0000 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

### 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

## 8.1. Justifications

| Screen | Justification |
|---|---|
| Characteristics: Utility Information | 3CE serves Monterey County for electricity |
| Construction: Construction Phases | Revised to fit in planning years of 2023-2031 |
| Construction: Dust From Material Movement | Based on CalEEMod suggested estimates |
| Construction: On-Road Fugitive Dust | Site are located adjacent to existing roadways and development. Accessible primarily from paved roads. |
| Operations: Vehicle Data | Mobile emissions calculated separately |

## 8.2. Project Characteristics

### 8.2.1. Project Details

| Model Parameter | Default Value | New Value |
|---|---|---|
| Electric Utility | Pacific Gas & Electric Company | Central Coast Community Energy |

## 8.4. Construction

### 8.4.1. Construction Phases

| Phase Type | Phase Name | Model Parameter | Default Value | New Value |
|---|---|---|---|---|
| Grading | Grading | Start Date | 12/1/2027 | 12/1/2025 |
| Grading | Grading | End Date | 9/1/2032 | 8/30/2030 |
| Building Construction | Building Construction | Start Date | 9/2/2032 | 1/2/2023 |
| Building Construction | Building Construction | End Date | 3/14/2080 | 12/31/2031 |

| | | | | |
|---|---|---|---|---|
| Building Construction | Building Construction | Work Days per Phase | 12,400.0 | 2,348.00 |
| Paving | Paving | Start Date | 3/15/2080 | 6/1/2028 |
| Paving | Paving | End Date | 7/30/2083 | 10/15/2031 |
| Architectural Coating | Architectural Coating | Start Date | 7/31/2083 | 6/1/2028 |
| Architectural Coating | Architectural Coating | End Date | 12/14/2086 | 10/15/2031 |

## 8.4.4. Dust from Material Movement

| Phase Name | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Site Preparation | Material Imported | Ton of Debris | — | 0.00000 |
| Site Preparation | Material Exported | Ton of Debris | — | 0.00000 |
| Site Preparation | Total Acres Graded | acres | 720.000 | 135.000 |
| Grading | Material Imported | Ton of Debris | — | 831,810 |
| Grading | Material Exported | Ton of Debris | — | 419,400 |
| Grading | Total Acres Graded | acres | 3,720.00 | 699.000 |

## 8.4.7. On-Road Fugitive Dust

| Phase Name | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Demolition | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Demolition | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Demolition | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Building Construction | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Building Construction | Vendor Trip Paved | % | 52.0000 | 100.0000 |

| | | | | |
|---|---|---|---|---|
| Building Construction | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Hauling Trip Paved | % | 52.0000 | 100.0000 |

## 8.5. Operations

### 8.5.1. Mobile Sources

#### 8.5.1.1. Vehicle Data

| Land Use | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Condo/Townhouse | Weekday Trip Rate | size/day | 7.32000 | 0.00000 |
| Condo/Townhouse | Saturday Trip Rate | size/day | 8.14000 | 0.00000 |
| Condo/Townhouse | Sunday Trip Rate | size/day | 6.28000 | 0.00000 |
| Condo/Townhouse | Weekday Trip Rate | size/day | 7.32000 | 0.00000 |
| Condo/Townhouse | Saturday Trip Rate | size/day | 8.14000 | 0.00000 |
| Condo/Townhouse | Sunday Trip Rate | size/day | 6.28000 | 0.00000 |
| Condo/Townhouse | Weekday Trip Rate | size/day | 7.32000 | 0.00000 |
| Condo/Townhouse | Saturday Trip Rate | size/day | 8.14000 | 0.00000 |
| Condo/Townhouse | Sunday Trip Rate | size/day | 6.28000 | 0.00000 |

# 1. Basic Project Information

## 1.1. Basic Project Information

| Data Field | Value |
|---|---|
| Project Name | Monterey HEU - Reasonable Capacity |
| Construction Start Date | 1/2/2023 |
| Operational Year | 2025 |
| Lead Agency | — |
| Land Use Scale | Plan/community |
| Analysis Level for Defaults | County |
| Windspeed (m/s) | 2.80000 |
| Precipitation (days) | 27.6000 |
| Location | Monterey County, CA, USA |
| County | Monterey |
| City | Monterey |
| Air District | Monterey Bay ARD |
| Air Basin | North Central Coast |
| TAZ | 3238 |
| EDFZ | 6 |
| Electric Utility | Central Coast Community Energy |
| Gas Utility | Pacific Gas & Electric |
| App Version | 2022.1.1.43 |

## 1.2. Land Use Types

| Land Use Subtype | Size | Unit | Lot Acreage | Building Area (sq ft) | Landscape Area (sq ft) | Special Landscape Area (sq ft) | Population | Description |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 4,434.00 | Dwelling Unit | 277.125 | 4,700,040 | 0.00000 | 0.00000 | 14,721.0 | — |

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

| Sector | # | Measure Title |
|---|---|---|
| Energy | E-15 | Require All-Electric Development |

# 2. Emissions Summary

## 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Un/Mit. | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 395.064 | 75.0020 | 213.388 | 0.20144 | 2.22345 | 31.5414 | 33.7649 | 2.05566 | 9.63667 | 11.6923 | — | 49,916.6 | 49,916.6 | 2.60269 | 3.69242 | 137.406 | 51,219.5 |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 394.610 | 87.1156 | 204.653 | 0.20144 | 2.22642 | 31.5414 | 33.7649 | 2.07075 | 9.63667 | 11.6923 | — | 49,347.7 | 49,347.7 | 2.96981 | 3.80696 | 3.77017 | 50,560.2 |
| Average Daily (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 279.884 | 55.4064 | 140.435 | 0.14389 | 1.52958 | 21.2106 | 22.7402 | 1.41579 | 6.16989 | 7.58567 | — | 34,777.1 | 34,777.1 | 1.96024 | 2.63745 | 42.5093 | 35,654.6 |
| Annual (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Unmit. | 51.0789 | 10.1117 | 25.6293 | 0.02626 | 0.27915 | 3.87093 | 4.15008 | 0.25838 | 1.12600 | 1.38439 | — | 5,757.75 | 5,757.75 | 0.32454 | 0.43666 | 7.03790 | 5,903.02 |

## 2.2. Construction Emissions by Year

### 2.2.1. Total Construction Emissions by Year, Unmitigated

Includes both onsite and offsite emissions.

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Year | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |

## 2.2.4. Total Construction Emissions by Year, Mitigated

Includes both onsite and offsite emissions.

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Year | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |

## 4.9. User Defined Emissions By Equipment Type

### 4.9.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.9.2. Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Equipment Type | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

## 4.10. Soil Carbon Accumulation By Vegetation Type

### 4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Vegetation | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Land Use | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Daily, Winter (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Annual | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |
| Total | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

### 4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

| Species | ROG | NOx | CO | SO2 | PM10E | PM10D | PM10T | PM2.5E | PM2.5D | PM2.5T | BCO2 | NBCO2 | CO2T | CH4 | N2O | R | CO2e |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Daily, Summer (Max) | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — | — |

# 5. Activity Data

## 5.1. Construction Schedule

| Phase Name | Phase Type | Start Date | End Date | Days Per Week | Work Days per Phase | Phase Description |
|---|---|---|---|---|---|---|
| Demolition | Demolition | 1/2/2023 | 2/26/2024 | 5.00000 | 300.000 | — |
| Site Preparation | Site Preparation | 2/27/2024 | 11/5/2024 | 5.00000 | 180.000 | — |
| Grading | Grading | 11/6/2024 | 8/19/2026 | 5.00000 | 465.000 | — |
| Building Construction | Building Construction | 1/2/2023 | 12/31/2031 | 5.00000 | 2,348.00 | — |
| Paving | Paving | 6/17/2028 | 9/21/2029 | 5.00000 | 330.000 | — |
| Architectural Coating | Architectural Coating | 9/23/2029 | 12/29/2030 | 5.00000 | 330.000 | — |

## 5.2. Off-Road Equipment

### 5.2.1. Unmitigated

| Phase Name | Equipment Type | Fuel Type | Engine Tier | Number per Day | Hours Per Day | Horsepower | Load Factor |
|---|---|---|---|---|---|---|---|
| Demolition | Concrete/Industrial Saws | Diesel | Average | 1.000000 | 8.00000 | 33.0000 | 0.73000 |
| Demolition | Excavators | Diesel | Average | 3.00000 | 8.00000 | 36.0000 | 0.38000 |
| Demolition | Rubber Tired Dozers | Diesel | Average | 2.00000 | 8.00000 | 367.000 | 0.40000 |
| Site Preparation | Rubber Tired Dozers | Diesel | Average | 3.00000 | 8.00000 | 367.000 | 0.40000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Site Preparation | Tractors/Loaders/Backhoes | Diesel | Average | 4.00000 | 8.00000 | 84.0000 | 0.37000 |
| Grading | Excavators | Diesel | Average | 2.00000 | 8.00000 | 36.0000 | 0.38000 |
| Grading | Graders | Diesel | Average | 1.000000 | 8.00000 | 148.000 | 0.41000 |
| Grading | Rubber Tired Dozers | Diesel | Average | 1.000000 | 8.00000 | 367.000 | 0.40000 |
| Grading | Scrapers | Diesel | Average | 2.00000 | 8.00000 | 423.000 | 0.48000 |
| Grading | Tractors/Loaders/Backhoes | Diesel | Average | 2.00000 | 8.00000 | 84.0000 | 0.37000 |
| Building Construction | Cranes | Diesel | Average | 1.000000 | 7.00000 | 367.000 | 0.29000 |
| Building Construction | Forklifts | Diesel | Average | 3.00000 | 8.00000 | 82.0000 | 0.20000 |
| Building Construction | Generator Sets | Diesel | Average | 1.000000 | 8.00000 | 14.0000 | 0.74000 |
| Building Construction | Tractors/Loaders/Backhoes | Diesel | Average | 3.00000 | 7.00000 | 84.0000 | 0.37000 |
| Building Construction | Welders | Diesel | Average | 1.000000 | 8.00000 | 46.0000 | 0.45000 |
| Paving | Pavers | Diesel | Average | 2.00000 | 8.00000 | 81.0000 | 0.42000 |
| Paving | Paving Equipment | Diesel | Average | 2.00000 | 8.00000 | 89.0000 | 0.36000 |

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

| Control Strategies Applied | PM10 Reduction | PM2.5 Reduction |
|---|---|---|
| Apply dust suppressants to unpaved roads | 84% | 84% |
| Limit vehicle speeds on unpaved roads to 25 mph | 44% | 44% |
| Sweep paved roads once per month | 9% | 9% |

## 5.5. Architectural Coatings

| Phase Name | Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|---|
| Architectural Coating | 9,517,581 | 3,172,527 | 0.00000 | 0.00000 | — |

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

| Phase Name | Material Imported (Ton of Debris) | Material Exported (Ton of Debris) | Acres Graded (acres) | Material Demolished (sq. ft.) | Acres Paved (acres) |
|---|---|---|---|---|---|
| Demolition | 0.00000 | 0.00000 | 0.00000 | — | 0.00000 |
| Site Preparation | 0.00000 | 0.00000 | 135.000 | 0.00000 | 0.00000 |
| Grading | 365,330 | 184,200 | 699.000 | 0.00000 | 0.00000 |
| Paving | 0.00000 | 0.00000 | 0.00000 | 0.00000 | — |

### 5.6.2. Construction Earthmoving Control Strategies

| Control Strategies Applied | Frequency (per day) | PM10 Reduction | PM2.5 Reduction |
|---|---|---|---|
| Water Exposed Area | 2 | 61% | 61% |
| Water Demolished Area | 2 | 36% | 36% |

## 5.7. Construction Paving

| Phase Name | Land Use | Area Paved (acres) | % Asphalt |
|---|---|---|---|
| Paving | Condo/Townhouse | — | 0% |

## 5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

| Year | kWh per Year | CO2 | CH4 | N2O |
|---|---|---|---|---|
| 2025 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2026 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2027 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2028 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2029 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2030 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2031 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |

| | | | | |
|---|---|---|---|---|
| 2023 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |
| 2024 | 0.00000 | 9.99000 | 0.03300 | 0.00400 |

## 5.9. Operational Mobile Sources

### 5.9.1. Unmitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

### 5.9.2. Mitigated

| Land Use Type | Trips/Weekday | Trips/Saturday | Trips/Sunday | Trips/Year | VMT/Weekday | VMT/Saturday | VMT/Sunday | VMT/Year |
|---|---|---|---|---|---|---|---|---|
| Condo/Townhouse | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 | 0.00000 |

## 5.10. Operational Area Sources

### 5.10.1. Hearths

| Land Use | Hearth Type | Unmitigated (number) | Mitigated (number) |
|---|---|---|---|
| Condo/Townhouse | Wood Fireplaces | 0 | 0 |
| Condo/Townhouse | Gas Fireplaces | 4,434 | 4,434 |
| Condo/Townhouse | Propane Fireplaces | 0 | 0 |
| Condo/Townhouse | Electric Fireplaces | 0 | 0 |
| Condo/Townhouse | No Fireplaces | 0 | 0 |
| Condo/Townhouse | Conventional Wood Stoves | 0 | 0 |
| Condo/Townhouse | Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Non-Catalytic Wood Stoves | 0 | 0 |
| Condo/Townhouse | Pellet Wood Stoves | 0 | 0 |

### 5.10.2. Architectural Coatings

| Residential Interior Area Coated (sq ft) | Residential Exterior Area Coated (sq ft) | Non-Residential Interior Area Coated (sq ft) | Non-Residential Exterior Area Coated (sq ft) | Parking Area Coated (sq ft) |
|---|---|---|---|---|
| 9,517,581 | 3,172,527 | 0.00000 | 0.00000 | — |

### 5.10.3. Landscape Equipment

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

### 5.10.4. Landscape Equipment - Mitigated

| Season | Unit | Value |
|---|---|---|
| Snow Days | day/yr | 0.00000 |
| Summer Days | day/yr | 250.000 |

## 5.11. Operational Energy Consumption

### 5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 15,703,685 | 386.830 | 0.0330 | 0.0040 | 178,382,036 |

### 5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

| Land Use | Electricity (kWh/yr) | CO2 | CH4 | N2O | Natural Gas (kBTU/yr) |
|---|---|---|---|---|---|
| Condo/Townhouse | 15,706,910 | 386.830 | 0.0330 | 0.0040 | 0.00000 |

## 5.12. Operational Water and Wastewater Consumption

### 5.12.1. Unmitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 185,372,681 | 0.00000 |

### 5.12.2. Mitigated

| Land Use | Indoor Water (gal/year) | Outdoor Water (gal/year) |
|---|---|---|
| Condo/Townhouse | 185,372,681 | 0.00000 |

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 3,278.78 | 0.00000 |

### 5.13.2. Mitigated

| Land Use | Waste (ton/year) | Cogeneration (kWh/year) |
|---|---|---|
| Condo/Townhouse | 3,278.78 | 0.00000 |

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

| Land Use | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Household refrigerators and/or freezers | R-134a | 1,430.00 | 0.11538 | 0.60000 | 0.00000 | 1.000000 |

### 5.14.2. Mitigated

| Land Use | Equipment Type | Refrigerant | GWP | Quantity (kg) | Operations Leak Rate | Service Leak Rate | Times Serviced |
|---|---|---|---|---|---|---|---|
| Condo/Townhouse | Average room A/C & Other residential A/C and heat pumps | R-410A | 2,088.00 | 0.00225 | 2.50000 | 2.50000 | 10.00000 |
| Condo/Townhouse | Household refrigerators and/or freezers | R-134a | 1,430.00 | 0.11538 | 0.60000 | 0.00000 | 1.000000 |

## 5.15. Operational Off-Road Equipment

### 5.15.1. Unmitigated

### 5.15.2. Mitigated

## 5.16. Stationary Sources

### 5.16.1. Emergency Generators and Fire Pumps

### 5.16.2. Process Boilers

## 5.17. User Defined

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

| Vegetation Land Use Type | Vegetation Soil Type | Initial Acres | Final Acres |
|---|---|---|---|

#### 5.18.1.2. Mitigated

| Vegetation Land Use Type | Vegetation Soil Type | Initial Acres | Final Acres |
|---|---|---|---|

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

| Biomass Cover Type | Initial Acres | Final Acres |
|---|---|---|

#### 5.18.1.2. Mitigated

| Biomass Cover Type | Initial Acres | Final Acres |
|---|---|---|

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

#### 5.18.2.2. Mitigated

| Tree Type | Number | Electricity Saved (kWh/year) | Natural Gas Saved (btu/year) |
|---|---|---|---|

# 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

| Climate Hazard | Result for Project Location | Unit |
|---|---|---|
| Temperature and Extreme Heat | 6.75000 | annual days of extreme heat |
| Extreme Precipitation | 4.10000 | annual days with precipitation above 20 mm |

| | | |
|---|---|---|
| Sea Level Rise | — | meters of inundation depth |
| Wildfire | 31.3300 | annual hectares burned |

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 0 | 0 | 0 | N/A |
| Wildfire | 0 | 0 | 0 | N/A |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 0 | 0 | 0 | N/A |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

## 6.3. Adjusted Climate Risk Scores

| Climate Hazard | Exposure Score | Sensitivity Score | Adaptive Capacity Score | Vulnerability Score |
|---|---|---|---|---|
| Temperature and Extreme Heat | N/A | N/A | N/A | N/A |

| | | | | |
|---|---|---|---|---|
| Extreme Precipitation | N/A | N/A | N/A | N/A |
| Sea Level Rise | 1 | 1 | 1 | 2 |
| Wildfire | 1 | 1 | 1 | 2 |
| Flooding | N/A | N/A | N/A | N/A |
| Drought | 1 | 1 | 1 | 2 |
| Snowpack Reduction | N/A | N/A | N/A | N/A |
| Air Quality Degradation | N/A | N/A | N/A | N/A |

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

## 6.4. Climate Risk Reduction Measures

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Exposure Indicators | — |
| AQ-Ozone | 13.6154 |
| AQ-PM | 2.92470 |
| AQ-DPM | 26.3846 |
| Drinking Water | 38.7161 |
| Lead Risk Housing | 56.6982 |
| Pesticides | 0.00000 |
| Toxic Releases | 0.53763 |
| Traffic | 27.0500 |
| Effect Indicators | — |

| | |
|---|---|
| CleanUp Sites | 82.9787 |
| Groundwater | 87.4813 |
| Haz Waste Facilities/Generators | 30.5890 |
| Impaired Water Bodies | 77.2995 |
| Solid Waste | 59.1753 |
| Sensitive Population | — |
| Asthma | 35.8549 |
| Cardio-vascular | 13.0982 |
| Low Birth Weights | 19.9256 |
| Socioeconomic Factor Indicators | — |
| Education | 24.1205 |
| Housing | 63.9670 |
| Linguistic | 24.7665 |
| Poverty | 26.6709 |
| Unemployment | 37.7147 |

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

| Indicator | Result for Project Census Tract |
|---|---|
| Economic | — |
| Above Poverty | 64.9557295 |
| Employed | 60.78532016 |
| Median HI | 46.47760811 |
| Education | — |
| Bachelor's or higher | 81.58603875 |
| High school enrollment | 100 |
| Preschool enrollment | 1.873476197 |
| Transportation | — |

| | |
|---|---|
| Auto Access | 57.21801617 |
| Active commuting | 87.89939689 |
| Social | — |
| 2-parent households | 65.78981137 |
| Voting | 70.98678301 |
| Neighborhood | — |

## 7.3. Overall Health & Equity Scores

| Metric | Result for Project Census Tract |
|---|---|
| CalEnviroScreen 4.0 Score for Project Location (a) | 22.0000 |
| Healthy Places Index Score for Project Location (b) | 67.0000 |
| Project Located in a Designated Disadvantaged Community (Senate Bill 535) | No |
| Project Located in a Low-Income Community (Assembly Bill 1550) | No |
| Project Located in a Community Air Protection Program Community (Assembly Bill 617) | No |

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

## 8.1. Justifications

| Screen | Justification |
|---|---|
| Characteristics: Utility Information | 3CE serves Monterey County for electricity |
| Construction: Construction Phases | Revised to fit in planning years of 2023-2031 |
| Construction: Dust From Material Movement | Based on CalEEMod suggested estimates |
| Construction: On-Road Fugitive Dust | Site are located adjacent to existing roadways and development. Accessible primarily from paved roads. |

| | |
|---|---|
| Operations: Vehicle Data | Mobile emissions calculated separately |

## 8.2. Project Characteristics

### 8.2.1. Project Details

| Model Parameter | Default Value | New Value |
|---|---|---|
| Electric Utility | Pacific Gas & Electric Company | Central Coast Community Energy |

## 8.4. Construction

### 8.4.1. Construction Phases

| Phase Type | Phase Name | Model Parameter | Default Value | New Value |
|---|---|---|---|---|
| Building Construction | Building Construction | Start Date | 8/20/2026 | 1/2/2023 |
| Building Construction | Building Construction | End Date | 6/16/2044 | 12/31/2031 |
| Building Construction | Building Construction | Work Days per Phase | 4,650.00 | 2,348.00 |
| Paving | Paving | Start Date | 6/17/2044 | 6/17/2028 |
| Paving | Paving | End Date | 9/22/2045 | 9/21/2029 |
| Architectural Coating | Architectural Coating | Start Date | 9/23/2045 | 9/23/2029 |
| Architectural Coating | Architectural Coating | End Date | 12/29/2046 | 12/29/2030 |

### 8.4.4. Dust from Material Movement

| Phase Name | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Site Preparation | Material Imported | Ton of Debris | — | 0.00000 |
| Site Preparation | Material Exported | Ton of Debris | — | 0.00000 |
| Site Preparation | Total Acres Graded | acres | 270.000 | 135.000 |
| Grading | Material Imported | Ton of Debris | — | 365,330 |
| Grading | Material Exported | Ton of Debris | — | 184,200 |
| Grading | Total Acres Graded | acres | 1,395.00 | 699.000 |

### 8.4.7. On-Road Fugitive Dust

| Phase Name | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Demolition | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Demolition | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Demolition | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Site Preparation | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Grading | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Building Construction | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Building Construction | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Building Construction | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Paving | Hauling Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Worker Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Vendor Trip Paved | % | 52.0000 | 100.0000 |
| Architectural Coating | Hauling Trip Paved | % | 52.0000 | 100.0000 |

## 8.5. Operations

### 8.5.1. Mobile Sources

#### 8.5.1.1. Vehicle Data

| Land Use | Model Parameter | Units | Default Value | New Value |
|---|---|---|---|---|
| Condo/Townhouse | Weekday Trip Rate | size/day | 7.32000 | 0.00000 |

| | | | | |
|---|---|---|---|---|
| Condo/Townhouse | Saturday Trip Rate | size/day | 8.14000 | 0.00000 |
| Condo/Townhouse | Sunday Trip Rate | size/day | 6.28000 | 0.00000 |

## *Table of Contents*

**Acronyms and Abbreviations** ..... **v**

**Executive Summary** ..... **ES-1**

**Section 1 Introduction** ..... **1**

1.1 Project Description ..... 1

1.1.1 Project Location ..... 1

1.2 Purpose ..... 2

1.3 Environmental Setting ..... 3

1.3.1 Land Use ..... 3

1.3.2 Topography and Soils ..... 3

1.3.3 Hydrology ..... 3

1.3.4 Climate ..... 4

**Section 2 Methods** ..... **5**

2.1 Literature Review ..... 5

2.2 Vegetation Mapping ..... 5

**Section 3 Results** ..... **7**

3.1 Vegetation Communities and Land Cover Types ..... 7

3.1.1 Vegetation Communities ..... 8

3.1.2 Land Cover Types ..... 10

3.2 Jurisdictional Wetlands and Waters ..... 10

3.3 Sensitive Plant and Wildlife Species ..... 11

3.3.1 Sensitive Plant Species ..... 11

3.3.2 Sensitive Wildlife Species ..... 23

3.3.3 Critical Habitat ..... 34

3.3.4 Nesting Birds ..... 35

3.3.5 Sensitive Roosting Bats ..... 35

3.4 Wildlife Corridors and Habitat Linkages ..... 35

**Section 4 Regulatory Framework** ..... **39**

4.1 Federal ..... 39

4.2 State ..... 40

4.3 Local ..... 43

4.3.1 2010 General Plan (Inland) ..... 43

4.3.2 Monterey County Code ..... 47

**Section 5 Thresholds of Significance** ..... **51**

**Section 6 Impacts ..... 53**
6.1 Threshold 1: Sensitive Plant and Wildlife Species ..... 54
6.1.1 Guidelines for Determination of Significance ..... 54
6.1.2 Impacts Analysis ..... 54
6.1.3 Mitigation Measures ..... 62
6.1.4 Significance After Mitigation ..... 74
6.2 Threshold 2: Riparian Habitat or Other Sensitive Natural Community ..... 75
6.2.1 Guidelines for Determination of Significance ..... 75
6.2.2 Impact Analysis ..... 75
6.2.3 Mitigation Measures ..... 77
6.2.4 Significance After Mitigation ..... 77
6.3 Threshold 3: Jurisdictional Aquatic Resources ..... 77
6.3.1 Guidelines for Determination of Significance ..... 77
6.3.2 Impact Analysis ..... 77
6.3.3 Mitigation Measures ..... 79
6.3.4 Significance After Mitigation ..... 81
6.4 Threshold 4: Wildlife Corridors and Habitat Linkages ..... 81
6.4.1 Guidelines for Determination of Significance ..... 81
6.4.2 Impact Analysis ..... 81
6.4.3 Mitigation Measures ..... 83
6.4.4 Significance After Mitigation ..... 83
6.5 Threshold 5: Local Policies and Ordinances ..... 83
6.5.1 Guidelines for Determination of Significance ..... 83
6.5.2 Impact Analysis ..... 84
6.5.3 Mitigation Measures ..... 85
6.5.4 Significance After Mitigation ..... 85
6.6 Threshold 6: Regional Conservation Planning ..... 86
6.6.1 Guidelines for Determination of Significance ..... 86
6.6.2 Impact Analysis ..... 86
6.6.3 Mitigation Measures ..... 86
6.6.4 Significance After Mitigation ..... 86
6.7 Cumulative Impacts ..... 86
6.7.1 Cumulative Threshold 1: Sensitive Plant and Wildlife Species ..... 86

## *Executive Summary*

At the request of the County of Monterey (County), Harris & Associates has prepared this Biological Resources Technical Report for the County of Monterey Draft General Plan Housing Element Sixth Cycle (2023–2031) Update (project) Program Environmental Impact Report (PEIR).

The project is required to identify sites and zoning designations that can accommodate housing developments capable of satisfying the County's Regional Housing Needs Allocation. Along with facilitating the County's Regional Housing Needs Allocation, the project must identify and analyze significant disparities in access to opportunity (AB 686 – Affirmatively Furthering Fair Housing Act). The Affirmatively Furthering Fair Housing Act requires that a jurisdiction's Housing Element promote inclusive communities and further housing choice through government programs, policies, and operations that recognize existing racial and economic disparities and remediate these disparities.

This report presents the documented biological resources that occur in the project area; identifies potential impacts to sensitive biological resources; documents potential jurisdictional aquatic resources; and recommends avoidance, minimization, or mitigation measures consistent with federal, state, and local rules and regulations.

The biological resources impacts analysis was prepared in accordance with the California Environmental Quality Act (CEQA) of 1970 and the CEQA Guidelines (as amended). This report is a technical study in support of the PEIR.

The biological resources documented as present or with potential to occur in the project area were identified through a review of existing maps, literature and other biological studies conducted in the area, and sensitive species occurrence databases. No biological survey, field reconnaissance, aquatic resources delineation, or focused species surveys were conducted as a part of this project. The results of this review provide information on the potential constraints to project development due to the presence of sensitive biological resources.

Six vegetation communities and two land cover types are documented in the project area. The vegetation communities include fresh water, freshwater marsh, mixed conifer forest, oak woodland, annual grassland, and coastal scrub, all of which are considered sensitive. The two land cover types include agriculture and urban/developed land, which are not considered sensitive.

A total of 35 sensitive plant species and 26 sensitive wildlife species have been documented in the project area. Critical habitat for two sensitive plant species and five sensitive wildlife species occurs in the project area.

Project implementation would result in potentially significant direct and indirect impacts on sensitive plant and wildlife species (including nesting birds and raptors, sensitive roosting bats, and critical

habitat), sensitive vegetation communities, jurisdictional aquatic resources, and wildlife corridors and habitat linkages. Impacts resulting from conflicts with local policies, ordinances, or regional conservation plans protecting biological resources would be less than significant.

Mitigation Measures MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, MM-BIO-CONS-12, (PEIR Section 4.13) MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 are proposed to reduce direct and indirect project impacts on sensitive plant and wildlife species, sensitive vegetation communities, jurisdictional aquatic resources, and wildlife corridors and habitat linkages to below a level of significance. Implementation of the project would not result in cumulative impacts to biological resources because impacts would be reduced to below a level of significance with implementation of these mitigation measures.

# Section 1 Introduction

This Biological Resources Technical Report for the County of Monterey Draft General Plan Housing Element Sixth Cycle (2023–2031) Update (project) Program Environmental Impact Report (PEIR) documents the biological resources in Monterey County and addresses at a programmatic level the potential biological resources impacts associated with the construction and operation of the project for the County of Monterey (County).

## 1.1 Project Description

The project is required to identify sites and zoning designations that can accommodate housing developments capable of satisfying the County's Regional Housing Needs Allocation of 3,326 housing units distributed across four income levels (1,070 extremely low/very low income, 700 low income, 420 moderate income, and 1,136 above moderate income housing units). Along with facilitating the County's Regional Housing Needs Allocation, the project must identify and analyze significant disparities in access to opportunity (AB 686 – Affirmatively Furthering Fair Housing Act). The Affirmatively Furthering Fair Housing Act requires that a jurisdiction's Housing Element promote inclusive communities and further housing choice through government programs, policies, and operations that recognize existing racial and economic disparities and remediate these disparities.

The County includes the capacity for at least 5,897 units, comprising opportunity sites (4,434 units), pipeline sites (1,117 units), and accessory dwelling units (346 units). Opportunity sites are sites for which the County has a reasonable expectation that housing development could occur, although no proposals or entitlements have been submitted.

### 1.1.1 Project Location

The project area is in Monterey County, located just south of the Bay Area. It is bounded by the Pacific Ocean to the west and San Benito County to the east and accessible by U.S. Route 101 from the north and south. Monterey County is one of the largest counties in the State of California, covering more than 3,300 square miles, and is composed of diverse natural habitats and residential communities. Monterey County is on the north-central coast of California and is bordered by the following counties: Santa Cruz to the north; San Benito, Fresno, and King to the east; and San Luis Obispo to the south (Appendix A, Figures; Figure 1, Regional Location). The project area encompasses Unincorporated Monterey County (UMC), the geographic area overseen by the County and covered by the 6th Cycle Housing Element Updates (2023–2031). Regional access to Monterey County is provided through U.S. Route 101 traveling north–south and State Route (SR-) 198 and SR-146 running east–west. SR-1 also provides regional access along the Pacific coastline and SR-218, SR-68, and SR-183 are other major roadways serving Monterey County.

The project area includes 56 opportunity sites in nine planning areas, including North County Inland Area Plan, North County Coastal Land Use Plan, Greater Salinas Valley Area Plan, Greater Monterey Peninsula Area Plan, Fort Ord Master Plan, Toro Area Plan, Carmel Valley Master Plan, Carmel Area Land Use Plan, and Central Salinas Valley Area Plan (Figure 2, Project Location – Index, and Figures 2a through 2i, Project Location).

## 1.2 Purpose

At the request of the County, Harris & Associates has prepared this Biological Resources Technical Report for the project. The purpose of this Biological Resources Technical Report is to present documented biological resources that occur in the project area; identify potential impacts to sensitive biological resources; document potential jurisdictional aquatic resources; and recommend avoidance, minimization, or mitigation measures consistent with federal, state, and local rules and regulations.

The term "biological resources" refers to plant species, wildlife species, and vegetation communities on and adjacent to the survey area. For this Biological Resources Technical Report, sensitive biological resources are those defined as follows: (1) species designated as endangered, threatened, rare, protected, sensitive, or species of special concern according to the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), California Native Plant Society (CNPS), or applicable regional plans, policies, or regulations needs due to limited distribution, limited numbers, or significant population declines associated with natural or human-made causes; (2) species and habitat types recognized by local and regional resource agencies as special status; (3) habitats or vegetation communities that are unique, are of relatively limited distribution, or are of particular value to wildlife; (4) wildlife corridors and habitat linkages; or (5) biological resources that may or may not be considered special status but are regulated under local, state, or federal laws.

The project objectives are as follows:

- Present a comprehensive assessment of local housing conditions and lays out a series of goals, policies, and programs to assist the County in meeting the housing needs of current future residents at all income levels in UMC.
- Addresses numerous requirements resulting from a slate of new state housing laws designed to address factors contributing to the statewide housing shortage.
- Provide a detailed work program for the preservation, improvement, and development of housing, including how and where UMC can accommodate its fair share of the County's need for new housing.
- Identify ways in which the housing needs of all economic segments of the community, including residents and the local workforce, can be met.
- Make necessary amendments to the applicable General Plan elements, area plans, master plans, Local Coastal Programs, and Zoning Ordinance in a manner that

affirmatively furthers fair housing and perpetuates the overall goal of providing safe and decent housing for all economic segments of the community.

## 1.3 Environmental Setting

The following is a description of the existing conditions in the project area.

### 1.3.1 Land Use

UMC is largely undeveloped open space, with the majority of urban and suburban development following SR-1 and U.S. Route 101. Other uses include residential, commercial, agricultural, industrial, military, civic, and public/quasi-public (County of Monterey 2010a).

### 1.3.2 Topography and Soils

The Monterey County is bounded by the Pacific Ocean to the west and San Benito County to the east. The general topography varies throughout the Monterey County and includes coastal bluffs, mountain ranges, and valleys (Figure 3, USGS Topographic Map – Index, and Figures 3a through 3i, USGS Topographic Map). The Monterey County lies within several quadrangles of the California Geological Survey Map, including but not limited to the Salinas, Monterey, and Seaside Quadrangles. Major faults in Monterey County are San Andreas, Palo Colorado-San Gregorio, and Monterey Bay – Tularcitos (OES 2022). There are also other lesser known faults such as Reliz, Rinconada, Garrapata, Rocky Point, and more. Development in UMC is further limited by soils in the area that are susceptible to liquefication (OES 2022).

A total of 39 soil types are present on the opportunity sites in the project area, including Alviso silty clay loam, Antioch very fine sandy loam, Arnold loamy sand, Arnol-Santa Ynex complex, Arroyo Seco gravelly loam, Baywood sand, Chamise channery loam, Chamise shaly loam, Chualar loam, Clear Lake clay, Corducci-Typic Xerofluvents, Cropley silty clay, Diablo clay, Dibble silt loam, Elder sandy loam, Elder very fine sandy loam, Elkhorn fine sandy loam (and thin surface variant), Garey sandy loam, Lockwood channery loam, Lockwood shaly loam, Metz fine sandy loam, Mocho silt loam, Narlon loamy fine sand, Oceano loamy sand, Pacheco clay loam, Pico fine sandy loam, Placentia sandy loam, Rincon clay loam, rock outcrop/Xerorthent association, Salinas clay loam, Santa Lucia channery clay loam, Santa Lucia shaly clay loam, Santa Lucia-Reliz association, Santa Ynez fine sandy loam, Tijunga fine sand, and Xerorthents (dissected, loamy, and sandy) (Figure 4, Soils – Index, and Figures 4a through 4i, Soils; USDA 2026a; USDA 2026b).

### 1.3.3 Hydrology

Seven major watersheds span Monterey County under the responsibility of three different Regional Water Management Groups, based on watershed and jurisdictional boundaries. The seven major watersheds include Bolsa Nueva, Carmel River, Estero Bay, Estrella River, Pajaro River, Salinas River, and Santa Lucia. These watersheds drain west into the Pacific Ocean, with

the Monterey Bay National Marine Sanctuary encompassing approximately 276 miles of shoreline, approximately 6,094 square statute miles, and extending an average of 30 miles offshore (NOAA 2026).

Important surface waters of these three Regional Water Management Groups are described in Section 4.10, Hydrology and Water Quality, Environmental Setting, Surface Water. They include the Salinas River, San Antonio and Nacimiento Rivers and Reservoirs, Waterways originating in the Santa Lucia Range along the Big Sur coast, Elkhorn Slough and Moro Cojo Slough, and the Monterey Bay and the coastal waters of the Monterey Bay National Marine Sanctuary in the Greater Monterey County Integrated Regional Water Management (IRWM) region; the Carmel River, and the Los Padres Reservoir in the Monterey Peninsula IRWM region; Pajaro River in the Pajaro River Watershed IRWM region. Figure 5, Hydrology – Index, and Figures 5a through 5i, Hydrology, identify the major hydrologic features documented in the vicinity of the project area (USFWS 2026a; USGS 2026). Of the major hydrologic features documented in the project area, Big Sur River, Elkhorn Slough, Pajaro River, and Salinas River are defined as traditional navigable waters by the U.S. Army Corps of Engineers (USACE) (USACE 2026). Many of the other major rivers and streams, as well as numerous creeks and drainages, are tributary to these traditional navigable waters or have direct connections to the Pacific Ocean.

### 1.3.4 Climate

On a regional level, Monterey County has a Mediterranean climate, which is characterized by mild, wet winters and warm, dry summers, largely defined by the Pacific Ocean and the Santa Lucia Range. Habitats in this region include both mesic (moist) habitats, such as redwood forest, and xeric (dry) habitats, such as coastal scrub. Generalized climate in the region is characterized by warm, dry summers and cold, moist winters, which pushes the growing season to the wet months of the year (late winter to early spring). Vegetation often goes dormant (senescent) during the later summer months until initial rains start in the fall. The rainy season in Monterey County typically lasts from November through April and has an annual winter precipitation average of approximately 19 inches (Western Regional Climate Center 2026).

# Section 2 Methods

Biological resources documented as present or with potential to occur in the project area were identified through a review of existing maps, literature and other biological studies conducted in the area, and sensitive species occurrence databases. Due to the programmatic nature of this project, no biological survey, field reconnaissance, aquatic resources delineation, or focused species surveys were conducted for the project area. The results of this review provide information on the potential constraints to project development due to the presence of sensitive biological resources.

## 2.1 Literature Review

The following documents and databases were reviewed before the biological resources surveys were performed:

- Calflora Database (Calflora 2026)
- Consortium of California Herbaria database (CCH 2026)
- The CNPS Rare Plant Program Inventory of Rare Plants (CNPS 2026)
- California Natural Diversity Database (CDFW 2026a)
- CDFW Biogeographic Information and Observation System (CDFW 2026b)
- U.S. Department of Agriculture Soil Survey (USDA 2019)
- USFWS Information for Planning and Consultation (IPaC) (USFWS 2026b)
- USFWS NWI Wetlands Mapper (USFWS 2026a)
- USGS National Hydrography Dataset (NHD) (USGS 2026)

## 2.2 Vegetation Mapping

Vegetation community boundaries for the project area were obtained in geographic information system (GIS) format from the U.S Forest Service geospatial dataset (U.S. Forest Service 2026). It is important to note that the U.S. Forest Service dataset is not updated on an annual basis, and there may be discrepancies in the boundaries or designations of the vegetation communities and land cover types due to recent development or natural processes changing the conditions of the project area. Vegetation community types are in accordance with the Preliminary Descriptions of the Terrestrial Natural Communities of California (Holland 1986).

*This page intentionally left blank.*

# Section 3 Results

The results presented in this section provide data from the literature and database review conducted for the project area.

## 3.1 Vegetation Communities and Land Cover Types

The project area consists of six vegetation communities and two land cover types, including freshwater, freshwater marsh, mixed conifer forest, oak woodland, annual grassland, coastal scrub, agricultural land, and urban/developed land. All six vegetation communities documented in the project area as described below are considered sensitive (U.S. Forest Service 2026; Holland 1986). The two land cover types, agricultural land and urban/developed land, are not considered sensitive biological resources.

Table 1, Vegetation Communities and Land Cover Types in the Project Area, presents the vegetation communities and land cover types for the project area and identify the specific opportunity sites (56 total opportunity sites: 1 through 6, 8 through 56, and 64) where each occurs. Figure 6, Vegetation and Land Cover – Index, and Figures 6a through 6i, Vegetation and Land Cover, present the vegetation community and land cover type boundaries in the project area. The sensitive vegetation communities were designated as sensitive because of the general scarcity of the community; because impacts to the habitat are often regulated by the USFWS, CDFW, USACE, or Regional Water Quality Control Board (RWQCB); or because of the species the vegetation community supports and the functions that it provides.

**Table 1. Vegetation Communities and Land Cover Types in the Project Area**

| Vegetation Community and Land Cover Type | Opportunity Site |

| Urban/Developed Land | 1, 2, 3, 4, 5, 6, 9, 10, 11, 13, 14, 15, 16, 17, 18, 19, 20, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 41, 42, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 64 |

**Sources:** U.S. Forest Service 2026; Holland 1986.

**Notes:**

[1] Considered a sensitive vegetation community.

### 3.1.1 Vegetation Communities

#### 3.1.1.1 Wetlands and Waters

#### Freshwater

Freshwater includes year-round bodies of freshwater in the form of lakes, streams, ponds, or rivers. This includes those portions of water bodies that are usually covered by water and contain less than 10 percent vegetated cover.

Freshwater occurs on five of the opportunity sites in the project area, including Sites 11, 12, 13, 14, and 15 (Table 1; Figure 6 series). The fresh water in the project area may fall under the regulatory jurisdiction of the USACE, USFWS, RWQCB, or CDFW.

#### Freshwater Marsh

Freshwater marsh documented in the project area generally corresponds to the coastal and valley freshwater marsh natural community type of Holland (Holland 1986). Coastal and valley freshwater marsh is dominated by fresh water emergent monocots often forming closed canopies. Dominant species include cattails (*Typha* spp.) and tules (*Schoenoplectus* spp.). Coastal and valley freshwater marsh occurs along the coast and in coastal valleys around river mouths and the margins or lakes and springs, although it has been greatly reduced throughout its range due to urban development (Holland 1986).

Freshwater marsh occurs on two of the opportunity sites in the project area, including Sites 24 and 56 (Table 1; Figure 6 series). The freshwater marsh in the project area may fall under the regulatory jurisdiction of the USACE, USFWS, RWQCB, or CDFW.

#### 3.1.1.2 Woodland and Forest

#### Mixed Conifer Forest

Mixed conifer forest documented in the project area generally corresponds to the coast range mixed coniferous forest natural community type of Holland (Holland 1986). Coast range mixed coniferous forest is a closed forest dominated by Ponderosa pine (*Pinus ponderosa*) and Douglas fir (*Pseudotsuga menziesii*), as well as sugar pine (*Pinus lambertiana*), California incense cedar (*Calocedrus decurrens*), and other broad-leaved trees. This community occurs primarily on mesic, well-drained sites with course but relatively moist soils. Coast range mixed coniferous forest is present between approximately 3,500 and 6,000 feet above mean sea level (AMSL), primarily scattered on the summits of the Santa Lucia Range in Monterey County (Holland 1986).

Mixed conifer forest occurs in nine of the opportunity sites in the project area, including Sites 8, 16, 22, 37, 40, 43, 45, 46, and 52 (Table 1; Figure 6 series).

### Oak Woodland

Oak woodland documented in the project area generally corresponds to the interior live oak woodland natural community type of Holland (Holland 1986). Interior live oak woodland is a broad-leaved evergreen woodland dominated by interior live oak (*Quercus wislizeni*), with blue oak (*Quercus douglasii*), California buckeye (*Aesculus californica*), and California bay (*Umbellularia californica*) also being important component species. The dense canopy and persistent leaf litter of this community limits the herbaceous understory. Interior live oak woodland typically occurs on sloping to steep, north-facing hillsides below approximately 8,500 feet AMSL. This community is scattered in the South California Coast Ranges, especially in Santa Cruz and Monterey Counties (Holland 1986).

Oak woodland occurs on 13 of the opportunity sites in the project area, including Sites 8, 9, 10, 20, 21, 22, 31, 40, 46, 48, 52, 53, and 56(Table 1; Figure 6 series).

#### 3.1.1.3 Grassland

### Annual Grassland

Annual grassland documented in the project area generally corresponds to the non-native annual grassland natural community type of Holland (Holland 1986). Non-native annual grassland is a dense to sparse cover of annual grasses sometimes associated with numerous species of native annual forbs. This association occurs on gradual slopes with deep, fine-textured, usually clay soils. Characteristic species include oat (*Avena* sp.), red brome (*Bromus madritensis* ssp. *rubens*), ripgut brome (*Bromus diandrus*), barley (*Hordeum* sp.), and mustard (*Brassica* sp.). The majority of species and biomass in the non-native annual grassland community originated from the Mediterranean region, an area with a history of agriculture and a climate similar to California (Holland 1986).

Annual grassland occurs on 24 of the opportunity sites in the project area, including Sites 1, 4, 8, 9, 10, 11, 12, 14, 15, 18, 19, 20, 21, 22, 31, 32, 37, 38, 42, 44, 46, 47, 48, and 52 (Table 1; Figure 6 series).

#### 3.1.1.4 Scrub

### Coastal Scrub

Coastal scrub documented in the project area generally corresponds to both the northern and central coastal scrub natural community types of Holland (Holland 1986). Coastal scrub is typified by densely growing low- to moderately sized woody shrubs with small leathery evergreen leaves and small diameter flexible branches. These shrubs are often relatively short-lived with a shallow root structure and typically occur in dry, often rocky soils. The understory herbaceous cover can vary from dense to non-existent, depending on site conditions. Characteristic species include sagebrush (*Artemisia* sp.), coyote brush (*Baccharis pilularis*), ceanothus (*Ceanothus* sp.), California goldenbush (*Ericameria ericoides*), bush monkey flower

(*Mimulus aurantiacus*), black sage (*Salvia mellifera*), lupin (*Lupinus* sp.), and Pacific poison oak (*Toxicodendron diversilobum*). In general, coastal scrub occurs on moderate to steep south-facing slopes in proximity to the Pacific Coast (Holland 1986).

Coastal scrub occurs on seven of the opportunity sites in the project area, including Sites 22, 31, 44, 46, 47, 52, and 53 (Table 1; Figure 6 series).

### 3.1.2 Land Cover Types

#### Agricultural Land

Agricultural land is not considered a vegetation community and is therefore not included as a natural community type described in Holland (Holland 1986). Agricultural land includes areas occupied by dairies and livestock feed yards or areas that have been tilled for use as croplands or groves and orchards.

Agricultural land occurs on 16 of the opportunity sites in the project area, including Sites 1, 2, 3, 4, 14, 15, 19, 20, 21, 22, 24, 25, 26, 37, 48, and 50, 59, and is not considered sensitive (Table 1; Figure 6 series).

#### Urban/Developed Land

Urban/developed land is not considered a vegetation community and is therefore not included as a natural community type described in Holland (Holland 1986). Urban/developed land represents areas that have been constructed on or otherwise physically altered to an extent that native vegetation communities are not supported. This land cover type generally consists of semi-permanent structures, homes, parking lots, pavement or hardscape, and landscaped areas that require maintenance and irrigation (e.g., ornamental greenbelts). Typically, this land cover type is unvegetated or supports a variety of ornamental plants and landscaping.

Urban/developed land occupies the greatest amount of the project area, 51 of the opportunity sites, including 1, 2, 3, 4, 5, 6, 9, 10, 11, 13, 14, 15, 16, 17, 18, 19, 20, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 41, 42, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, and 64, and is not considered sensitive (Table 1; Figure 6 series).

## 3.2 Jurisdictional Wetlands and Waters

Aquatic resources delineations were not conducted as part of the project. However, wetlands and waters potentially subject to the regulatory jurisdiction of the USACE pursuant to Section 404 of the CWA, RWQCB pursuant to Section 401 of the CWA or the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), and the CDFW pursuant to Section 1600 et seq. of the California Fish and Game Code (CFGC) occur in the project area. Aquatic vegetation communities

(i.e., freshwater and freshwater marsh) occur in the project area and may fall under the regulatory jurisdiction of the USACE, RWQCB, or CDFW (Figure 6).

As described in Section 1.3.3, Hydrology, numerous major and minor aquatic features occur across the seven major watersheds in which the project area is located (Figure 5). This includes features that are defined by the USACE as traditional navigable waters, are tributaries, or have direct connections to the Pacific Ocean. Most of the rivers, streams, creeks, sloughs, and bays that occur in the project area are documented aquatic resources under the jurisdiction of the USACE, RWQCB, and CDFW, pursuant to Sections 404 and 401 of the CWA and Section 1602 of the CFGC, respectively. The wetlands and waters vegetation communities documented in the project area and described in Section 3.1, Vegetation Communities and Land Cover Types, including freshwater and freshwater marsh, may also be under federal and state jurisdiction. In addition, wetland waters and non-wetland waters, including non-vegetated stream channels, erosional features, gullies, and concrete-lined channels, that occur in the project area may fall under the regulatory jurisdiction of the USACE, RWQCB, or CDFW. However, only these agencies can make a final determination of jurisdictional boundaries.

## 3.3 Sensitive Plant and Wildlife Species

Sensitive species are those recognized by federal, state, or local agencies as being potentially vulnerable to impacts because of rarity, local or regional reductions in population numbers, isolation/restricted genetic flow, or other factors. Sensitive plant species include those listed as threatened or endangered, proposed for listing, or candidates for listing by the USFWS and CDFW; those considered sensitive by the CDFW; or those species included in the California Rare Plant Rank (CRPR) inventory, maintained by the CNPS. Sensitive wildlife species include those listed as threatened or endangered, proposed for listing, candidates for listing by the USFWS and CDFW; those considered sensitive by the CDFW; or the CDFW Watch List (WL).

Based on the database search results, which included a 1-mile buffer in addition to the project area, described previously in Section 2, Methods, 35 sensitive plant species and 26 sensitive wildlife species have been documented in and have the potential to occur in the project area (Figure 7, Historical Species with Potential to Occur – Index, and Figures 7a through 7j, Historical Species with Potential to Occur). These species are listed in Table 2, Sensitive Plant Species Documented in the Project Area, and Table 3, Sensitive Wildlife Species Documented in the Project Area (Calflora 2026; CDFW 2026a; CDFW 2026b; CNPS 2026; USFWS 2026b).

### 3.3.1 Sensitive Plant Species

A total of 35 sensitive plant species have been documented within a 1-mile buffer of the project area and are listed in Table 2 and discussed in more detail in the following sections.

**Table 2. Sensitive Plant Species Documented in the Project Area**

| Scientific Name | Common Name | Federal/State/CRPR |
|---|---|---|
| *Allium hickmanii* | Hickman's onion | None/None/1B.2 |
| *Arctostaphylos hookeri* ssp. *hookeri* | Hooker's manzanita | None/None/1B.2 |
| *Arctostaphylos montereyensis* | Toro manzanita | None/None/1B.2 |
| *Arctostaphylos pajaroensis* | Pajaro manzanita | None/None/1B.1 |

**Sources:** Calflora 2026; CDFW 2026a, 2026b; CNPS 2026; USFWS 2026b.

**Notes:** CE = California endangered; CRPR = California Rare Plant Rank; CT = California threatened; FE = federally endangered; FT = federally threatened.

CRPR: 1B = rare, threatened, or endangered in California and elsewhere; .1 = seriously threatened in California (over 80 percent of occurrences threatened/high degree and immediacy of threat); .2 = moderately threatened in California (20–80 percent occurrences threatened/moderate degree and immediacy of threat)

### Hickman's Onion (*Allium hickmanii*)

- **Status:** CRPR 1B.2
- **Distribution:** Central California coast, primarily northern and southern Monterey County and northern San Luis Obispo County.
- **Habitat:** Closed-cone coniferous forest, coastal prairie, coastal scrub, maritime chaparral, and valley and foothill grassland at elevations between 15 and 655 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest, chaparral, coastal scrub, and annual grassland.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Years Documented:** 1976, 1985, 1988, 1994, 2000, 2009, and 2010.

### Hooker's Manzanita (*Arctostaphylos hookeri* ssp. *hookeri*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal Monterey Bay area in Central California.
- **Habitat:** Closed-cone coniferous forest, chaparral, cismontane woodland, and coastal scrub with sandy soil at elevations between 150 and 1,760 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest, chaparral, and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the northern, western, and west-central portions of the project area (Figure 7 series).
- **Years Documented:** 1975, 1976, 2001, 2010, 2012, and 2014.

### Toro Manzanita (*Arctostaphylos montereyensis*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal and slightly inland in the Monterey Bay area in Central California.
- **Habitat:** Cismontane woodland, coastal scrub, and maritime chaparral with sandy soil at elevations between 100 and 2,395 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest, chaparral, and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Years Documented:** 1950 (recorded as extirpated), 1970, 1977, 1992, 1995, 2009, 2012, and 2017.

### Pajaro Manzanita (*Arctostaphylos pajaroensis*)

- **Status:** CRPR 1B.1
- **Distribution:** Monterey Bay area and inland to Hollister in Central California.
- **Habitat:** Chaparral with sandy soil at elevations between 100 and 2,495 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Chaparral with sandy soil.
- **Occurrence in Project Area:** Documented in the northern, western, and west-central portions of the project area (Figure 7 series).
- **Years Documented:** 1938, 1962, 1964, 1969, 1999, 2001, 2007, 2008, 2009, 2016, and 2017.

### Sandmat Manzanita (*Arctostaphylos pumila*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal Monterey Bay area in Central California.
- **Habitat:** Openings in closed-cone coniferous forest, cismontane woodland, coastal dunes, coastal scrub, and maritime chaparral with sandy soil at elevations between 10 and 675 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest, chaparral, and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Years Documented:** 1952 (recorded as possibly extirpated), 1983, 1992, 2014, 2015, and 2017.

### Alkali Milk-Vetch (*Astragalus tener* var. *tener*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal and inland Central California between Sacramento in the north and Monterey to the south.
- **Habitat:** Alkaline playas, valley and foothill grassland (adobe clay), and vernal pools at elevations between 5 and 195 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Annual grassland with adobe clay soils.
- **Occurrence in Project Area:** Documented in the northeast portion of the project area and likely extirpated (Figure 7 series).
- **Year Documented:** 1889 (recorded as likely extirpated).

### Pink Johnny-Nip (*Castilleja ambigua* var. *insalutata*)

- **Status:** CRPR 1B.1
- **Distribution:** Coastal Monterey Bay area.
- **Habitat:** Coastal prairie and coastal scrub at elevations up to 330 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Coastal scrub.

- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Years Documented:** 1996 and 1999.

### Congdon's Tarplant (*Centromadia parryi* ssp. *congdonii*)

- **Status:** CRPR 1B.1
- **Distribution:** Coastal and inland San Francisco Bay and Monterey Bay areas.
- **Habitat:** Alkaline valley and foothill grassland at elevations up to 755 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Annual grassland.
- **Occurrence in Project Area:** Documented in the northeast, northwest, east-central portions of the project area (Figure 7 series).
- **Years Documented:** 1992, 1998 (recorded as extirpated), 2002, 2003, and 2007.

### Fort Ord Spineflower (*Chorizanthe minutiflora*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal Monterey Bay area.
- **Habitat:** Openings in coastal scrub and maritime chaparral with sandy soils at elevations between 180 and 490 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Chaparral and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Years Documented:** 1994 and 2013.

### Monterey Spineflower (*Chorizanthe pungens* var. *pungens*)

- **Status:** Federally threatened, CRPR 1B.2
- **Distribution:** Coastal and inland Monterey County, concentrated around the Monterey Bay area and north to Santa Cruz.
- **Habitat:** Cismontane woodland, coastal dunes, coastal scrub, maritime chaparral, and valley and foothill grassland with sandy soil at elevations between 10 and 1,475 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Chaparral, coastal scrub, and annual grassland with sandy soil.
- **Occurrence in Project Area:** Documented in the northern, northwest, and southeast portions of the project area (Figure 7 series).
- **Years Documented:** 1929, 1935 (recorded as likely extirpated), 2001, 2014, 2016, and 2017.

### Jolon Clarkia (*Clarkia jolonensis*)

- **Status:** CRPR 1B.2
- **Distribution:** Northern and central Monterey County, both coastal and inland.
- **Habitat:** Chaparral, cismontane woodland, coastal dunes, coastal scrub, and riparian woodland at elevations between 65 and 2,165 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Chaparral and coastal scrub.
- **Occurrence in Project Area:** Documented in the western portion of the project area (Figure 7 series).
- **Year Documented:** 1903 and 1912 (recorded as extirpated).

### Seaside Bird's-Beak (*Cordylanthus rigidus* ssp. *littoralis*)

- **Status:** California endangered, CRPR 1B.1
- **Distribution:** Coastal Monterey Bay area and coastal and inland between Santa Barbara and Santa Maria.
- **Habitat:** Closed-cone coniferous forest, cismontane woodland, coastal dunes, coastal scrub, maritime chaparral, and valley and foothill grassland with sandy soil, often in disturbed openings, at elevations up to 1,690 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in mixed conifer forest, chaparral, coastal scrub, and annual grassland with sandy soil.
- **Occurrence in Project Area:** Documented in the northern and northwestern portions of the project area (Figure 7 series).
- **Years Documented:** 1908, 1930, 1940, 1992, 2002, and 2012.

### Hospital Canyon Larkspur (*Delphinium californicum* ssp. *interius*)

- **Status:** CRPR 1B.2
- **Distribution:** Inland Central California between Concord in the north, Monterey in the west, and Soledad in the east.
- **Habitat:** Mesic cismontane woodland, openings in chaparral, and coastal scrub at elevations between 640 and 3,595 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in chaparral and coastal scrub.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area and potentially extirpated (Figure 7 series).
- **Year Documented:** 1988.

### Umbrella Larkspur (*Delphinium umbraculorum*)

- **Status:** CRPR 1B.3
- **Distribution:** Coastal and inland Monterey, San Luis Obispo, and Santa Barbara Counties.
- **Habitat:** Cismontane woodland and chaparral at elevations between 1,310 and 5,250 feet AMSL (CNPS 2026).

- **Suitable Habitat in Project Area:** Chaparral.
- **Occurrence in Project Area:** Documented in the southeastern portion of the project area (Figure 7 series).
- **Year Documented:** 1962.

### Eastwood's Goldenbush (*Ericameria fasciculata*)

- **Status:** CRPR 1B.1
- **Distribution:** Coastal and inland Monterey Bay area.
- **Habitat:** Openings in closed-cone coniferous forest, coastal dunes, coastal scrub, and maritime chaparral with sandy soil, at elevations between 100 and 900 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in mixed conifer forest, chaparral, and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the northern, northwestern, and western portions of the project area (Figure 7 series).
- **Years Documented:** 1913, 1932, 1985, 1987, 1992, 1995, 2001, 2003, 2014, and 2015.

### Fort Ord Button-Celery (*Eryngium montereyense*)

- **Status:** CRPR 1B.1
- **Distribution:** Coastal Monterey Bay area.
- **Habitat:** Vernally moist swales and vernal pools in valley and foothill grassland surrounded by maritime chaparral and coast live oak woodland, on sandy marine sedimentary substrate (CNPS 2026).
- **Suitable Habitat in Project Area:** Fresh water, annual grassland, chaparral, and oak woodland on sandy marine substrates.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Year Documented:** 2023.

### Sand-loving Wallflower (*Erysimum ammophilum*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal Santa Cruz, Monterey, and San Diego Counties, and on the Channel Islands.
- **Habitat:** Openings in coastal dunes, coastal scrub, and maritime chaparral with sandy soil, at elevations up to 195 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in chaparral and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Years Documented:** 1992 and 2014.

### Fragrant Fritillary (*Fritillaria liliacea*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal and inland San Francisco Bay and Monterey Bay areas.
- **Habitat:** Cismontane woodland, coastal prairie, coastal scrub, and valley and foothill grassland, often in serpentine soils, at elevations between 10 and 1,345 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Coastal scrub and annual grassland with serpentine soil.
- **Occurrence in Project Area:** Documented in the northeastern and western portions of the project area and potentially extirpated (Figure 7 series).
- **Years Documented:** 1940 (recorded as possibly extirpated) and 2002.

### Monterey Gilia (*Gilia tenuiflora* ssp. *Arenaria*)

- **Status:** Federally endangered, California threatened, CRPR 1B.2
- **Distribution:** Coastal and inland Monterey Bay area.
- **Habitat:** Openings in cismontane woodland, coastal dunes, coastal scrub, and maritime chaparral with sandy soil at elevations up to 150 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in chaparral and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1985, 1992, 2009, and 2018.

### Santa Cruz Tarplant (*Holocarpha macradenia*)

- **Status:** Federally threatened, California endangered, CRPR 1B.1
- **Distribution:** Coastal north San Francisco Bay and north Monterey Bay areas.
- **Habitat:** Coastal prairie, coastal scrub, and valley and foothill grassland with clay or sandy soil at elevations between 35 and 720 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Coastal scrub and annual grassland with clay or sandy soil.
- **Occurrence in Project Area:** Documented in the northern portion of the project area and potentially extirpated (Figure 7 series).
- **Year Documented:** 1993.

### Kellogg's Horkelia (*Horkelia cuneata* var. *sericea*)

- **Status:** CRPR 1B.1
- **Distribution:** Coastal California between Point Reyes (Marin County) in the north and Point Conception (Santa Barbara County) in the south.
- **Habitat:** Openings in closed-cone coniferous forest, coastal dunes, coastal scrub, and maritime chaparral with gravelly or sandy soil, at elevations between 35 and 655 feet AMSL (CNPS 2026).

- **Suitable Habitat in Project Area:** Openings in mixed conifer forest, chaparral, and coastal scrub with gravelly or sandy soil.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1896, 1938, 1992, 1998, and 2004.

### Tidestrom's Lupine (*Lupinus tidestromii*)

- **Status:** Federally endangered, California endangered, CRPR 1B.1
- **Distribution:** Southwestern Monterey Bay and coastal Marin and Sonoma Counties
- **Habitat:** Coastal dunes at elevations up to 330 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** None.
- **Occurrence in Project Area:** Documented in the western portion of the project area (Figure 7 series).
- **Year Documented:** 2009.

### Carmel Valley Bushmallow (*Malacothamnus involucratus*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal northern and inland central Monterey County.
- **Habitat:** Chaparral, cismontane woodland, and coastal scrub at elevations between 100 and 3,610 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Chaparral and coastal scrub.
- **Occurrence in Project Area:** Documented in the western portion of the project area (Figure 7 series).
- **Years Documented:** 1944, 1955, 1956, 1977, 1987, 2002, and 2003.

### Carmel Valley Malacothrix (*Malacothrix saxatilis* var. *arachnoidea*)

- **Status:** CRPR 1B.2
- **Distribution:** Inland northern Monterey County, southern San Benito County, and inland eastern Santa Barbara County.
- **Habitat:** Rocky chaparral and coastal scrub at elevations between 80 and 3,400 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Chaparral and coastal scrub with rocky substrates.
- **Occurrence in Project Area:** Documented in the western and southwestern portions of the project area (Figure 7 series).
- **Years Documented:** 1977 and 1990.

### Marsh Microseris (*Microseris paludosa*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal Northern and Central California between Point Arena (Mendocino County) in the north and Point Piedras Blancas (San Luis Obispo) in the south.
- **Habitat:** Closed-cone coniferous forest, cismontane woodland, coastal scrub, and valley and foothill grassland at elevations between 15 and 1,165 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest, coastal scrub, and annual grassland.
- **Occurrence in Project Area:** Documented in the western and central portions of the project area (Figure 7 series).
- **Years Documented:** 1901, 1970, and 1997.

### Northern Curly-Leaved Monardella (*Monardella sinuata* ssp. *Nigrescens*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal Northern and Central California between Point Reyes (Marin County) and Monterey Bay (Monterey County).
- **Habitat:** Chaparral (in Santa Cruz County), coastal dunes, coastal scrub, and lower montane coniferous forest (ponderosa pine sandhills in Santa Cruz County) with sandy soil at elevations up to 985 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest and coastal scrub with sandy soil.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Years Documented:** 1919, 1990, and 2010.

### Woodland Woollythreads (*Monolopia gracilens*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal and inland San Francisco Bay and Monterey Bay areas, coastal and inland southern Monterey County and north San Luis Obispo County.
- **Habitat:** Openings in broadleaf upland forest, chaparral, cismontane woodland, north coast coniferous forest, and valley and foothill grassland with serpentine soils at elevations between 330 and 3,935 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in mixed conifer forest, chaparral, and annual grassland with serpentine soil.
- **Occurrence in Project Area:** Documented in the northern and western portions of the project area and potentially extirpated (Figure 7 series).
- **Years Documented:** 1897 and 1915.

### Monterey Pine (*Pinus radiata*)

- **Status:** CRPR 1B.1
- **Distribution:** Coastal southern San Mateo County, northern Santa Cruz County, Monterey Bay (northwestern Monterey County), and northern San Luis Obispo County.
- **Habitat:** Closed-cone coniferous forest and cismontane woodland at elevations between 80 and 605 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest.
- **Occurrence in Project Area:** Documented in the western portion of the project area (Figure 7 series).
- **Year Documented:** 2018.

### Yadon's Rein Orchid (*Piperia yadonii*)

- **Status:** Federally endangered, CRPR 1B.1
- **Distribution:** Coastal northern and northwestern Monterey County.
- **Habitat:** Coastal bluff scrub, closed-cone coniferous forest, and maritime chaparral with sandy soils at elevations between 35 and 1,675 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest and chaparral with sandy soil.
- **Occurrence in Project Area:** Documented in the northern and western portions of the project area (Figure 7 series).
- **Years Documented:** 1995, 1996, 2001, 2002, 2005, 2010, 2013, 2014, and 2017.

### Choris' Popcornflower (*Plagiobothrys chorisianus* var. *chorisianus*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal southern San Francisco Bay area and south along the coast to northern Monterey Bay.
- **Habitat:** Chaparral, coastal prairie, and coastal scrub with mesic soils at elevations between 10 and 525 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Chaparral and coastal scrub with mesic soils.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Year Documented:** 2009.

### Pine Rose (*Rosa pinetorum*)

- **Status:** CRPR 1B.2
- **Distribution:** Coastal northern Santa Cruz County and northern and central Monterey County along the coast and inland.
- **Habitat:** Closed-cone coniferous forest and cismontane woodland at elevations between 5 and 3,100 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest.

- **Occurrence in Project Area:** Documented in the northern portion of the project area (Figure 7 series).
- **Year Documented:** 1993.

### Santa Cruz Microseris (*Stebbinsoseris decipiens*)

- **Status:** CRPR 1B.2
- **Distribution:** Northern and Central California coast between Point Reyes in the north and Monterey Bay in the south. Also documented inland just north of Paso Robles and east of Camp Roberts in southern Monterey County.
- **Habitat:** Openings in broadleaf upland forest, closed-cone coniferous forest, chaparral, coastal prairie, coastal scrub, and valley and foothill grassland sometimes with serpentine soils at elevations between 35 and 1,640 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in mixed conifer forest, chaparral, coastal scrub, and annual grassland with serpentine soil.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Year Documented:** 1978.

### Santa Cruz Clover (*Trifolium buckwestiorum*)

- **Status:** CRPR 1B.1
- **Distribution:** Coastal and inland Northern and Central California, generally between Fort Bragg (Mendocino County) in the north and Monterey Bay area (Monterey County) in the south.
- **Habitat:** Broadleaf upland forest, cismontane woodland, and coastal prairie with gravelly soils at elevations between 115 and 2,000 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** None.
- **Occurrence in Project Area:** Documented in the west-central and central portions of the project area (Figure 7 series).
- **Year Documented:** 1993 and 1998.

### Pacific Grove Clover (*Trifolium polyodon*)

- **Status:** California rare, CRPR 1B.1
- **Distribution:** Coastal and inland Central and Northern California, generally from Petaluma (Sonoma County) in the north and Monterey Bay area (Monterey County) in the south.
- **Habitat:** Closed-cone coniferous forest, coastal prairie, meadows and seeps, and valley and foothill grassland with granitic (sometimes) and mesic soils at elevations between 15 and 1,395 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Mixed conifer forest and annual grassland with granitic or mesic soils.

- **Occurrence in Project Area:** Documented in the west-central and central portions of the project area (Figure 7 series).
- **Years Documented:** 1995, 1997 and 2005.

### Monterey Clover (*Trifolium trichocalyx*)

- **Status:** Federally endangered, California endangered, CRPR 1B.1
- **Distribution:** Coast and inland between Fort Bragg and Point Arena (Mendocino County) and coastal Monterey Bay and peninsula (Monterey County).
- **Habitat:** Openings in closed-cone coniferous forest, often post-burn areas, with sandy soils at elevations between 100 and 1,000 feet AMSL (CNPS 2026).
- **Suitable Habitat in Project Area:** Openings in mixed conifer forest with sandy soil.
- **Occurrence in Project Area:** Documented in the western portion of the project area (Figure 7 series).
- **Year Documented:** 2022.

## 3.3.2 Sensitive Wildlife Species

A total of 26 sensitive wildlife species (three invertebrates, two fish, six amphibians, four reptiles, five birds, and six mammals) have been documented in the project area, are listed in Table 3, and are discussed in more detail in the following sections.

**Table 3. Sensitive Wildlife Species Documented in the Project Area**

| Species | | Status |
|---|---|---|
| **Scientific Name** | **Common Name** | **Federal/State** |
| **Invertebrates** | | |
| *Bombus occidentalis* | Western bumble bee | None/CCE |
| *Danaus plexippus plexippus* (pop. 1) | Monarch – California overwintering population | FC/None |
| *Euphilotes enoptes smithi* | Smith's blue butterfly | FE/None |
| **Fish** | | |
| *Lavinia exilicauda harengus* | Monterey hitch | None/SSC |
| *Oncorhynchus mykiss irideus (*pop. 9) | Steelhead – South-Central California coast DPS | FT/SSC |
| **Amphibians** | | |
| *Ambystoma californiense* (pop. 1) | California tiger salamander – Central California DPS | FT/CT, WL |
| *Ambystoma macrodactylum croceum* | Santa Cruz long-toed salamander | FE/CE, CFP |
| *Rana boylii (*pop. 6) | Foothill yellow-legged frog – South Coast DPS | FE/CE |
| *Rana draytonii* | California red-legged frog | FT/SSC |
| *Spea hammondii* | Western spadefoot | FPT/SSC |
| *Taricha torosa* | Coast Range newt | None/SSC |

**Table 3. Sensitive Wildlife Species Documented in the Project Area**

| Species | | Status |
|---|---|---|
| **Scientific Name** | **Common Name** | **Federal/State** |
| **Reptiles** | | |
| *Actinemys marmorata* | Northwestern pond turtle | FPT/SSC |
| *Actinemys pallida* | Southwestern pond turtle | FPT/SSC |
| *Anniella pulchra* | Northern California legless lizard | None/SSC |
| *Phrynosoma blainvillii* | Blainville's (coast) horned lizard | None/SSC |
| **Birds** | | |
| *Agelaius tricolor* | Tricolored blackbird | None/CT, SSC |
| *Athene cunicularia* | Western burrowing owl | None/CCE, SSC |
| *Coturnicops noveboracensis* | Yellow rail | None/SSC |
| *Eremophila alpestris actia* | California horned lark | None/WL |
| *Vireo bellii pusillus* | Least Bell's vireo | FE/CE |
| **Mammals** | | |

# Invertebrates

## Western Bumble Bee (*Bombus occidentalis*)

- **Status:** California candidate endangered species
- **Distribution:** Historically common in the western United States and western Canada. Since 1998, drastic population decreases in Central California, Oregon, Washington and southern British Columbia.
- **Habitat:** Three basic habitat requirements: suitable nesting sites (primarily underground cavities) for the colonies, nectar and pollen from floral resources available throughout the duration of the colony period (spring through fall), and suitable overwintering sites (loose soils for burrowing) for the queens. Occurs in a variety of habitats in which the three basic requirements are present, including conifer forests, grasslands, mixed woodlands, agricultural (row crops and orchards), and urban/developed land (USDA 2026c; Xerces Society 2026).

- **Suitable Habitat in Project Area:** Mixed conifer forest, oak woodland, agricultural land, and urban/developed land with underground cavities, flowering nectar and pollen plants, and open areas with loose soils for overwintering.
- **Occurrence in Project Area:** Documented in the northern, northeastern, western, and southeastern portions of the project area, but potentially extirpated (Figure 7 series).
- **Years Documented:** 1935, 1938, 1965, and 1972.

### Monarch – California Overwintering Population (*Danaus plexippus plexippus*)

- **Status:** Federal candidate
- **Distribution:** North America (United States, Canada, and Mexico), Central and South America, Australia, Pacific Islands, Asia, Africa, and southern Europe.
- **Habitat:** Occurs in a variety of habitats where patches of milkweed (*Asclepias* sp.), the monarch caterpillar host plant, are present. Overwinter in groves of eucalyptus, cypress, and pine with appropriate structure and microclimate along the California coast and high-elevation forests in Mexico.
- **Suitable Habitat in Project Area:** Vegetation communities and land cover types where milkweed is available, as well as eucalyptus, cypress, and pine groves with appropriate structure and microclimate for overwintering.
- **Occurrence in Project Area:** Documented in the western portion of the project area (Figure 7 series).
- **Year Documented:** 1984.

### Smith's Blue Butterfly (*Euphilotes enoptes smithi*)

- **Status:** Federally endangered
- **Distribution:** Endemic to the central coast of California, ranging from coastal Monterey Bay area in the north and south along the coast of Monterey County and into northern San Luis Obispo County in the south.
- **Habitat:** Occurs in coastal chaparral, coastal dunes, and grassland where the species' two host and nectar plants, seacliff buckwheat (*Eriogonum parvifolium*) and coast buckwheat (*Eriogonum latifolium*), occur (USFWS 2020).
- **Suitable Habitat in Project Area:** Chaparral and annual grassland along the coast with available seacliff buckwheat and coast buckwheat.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1991 and 2004.

## Fish

### Monterey Hitch (*Lavinia exilicauda harengus*)

- **Status:** CDFW species of special concern (SSC)
- **Distribution:** Pajaro and Salinas River systems
- **Habitat:** Occurs in a variety of habitats, particularly abundant in lowland areas with large pools containing substrates of sand and gravel with available cover (e.g., fallen trees, overhanging bushes) or in small reservoirs with similar habitat conditions (CDFW 2026e).
- **Suitable Habitat in Project Area:** Fresh water with sand and gravel substrates and available cover.
- **Occurrence in Project Area:** Documented in the northern portion of the project area (Figure 7 series). The location of this data point is likely not accurate.
- **Year Documented:** 2018

### Steelhead – South-Central California Coast DPS (*Oncorhynchus mykiss irideus* [Pop. 9])

- **Status:** Federally threatened, CDFW SSC
- **Distribution:** Watersheds from the Parajo River south to Arroyo Grande Creek along the south-central coast of California.
- **Habitat:** Migrate between fresh water breeding and marine non-breeding habitats. Occur in the ocean, in rivers and creeks, and in large inland lakes. Adults are winter-run, beginning upstream migrations to fresh water during peak flows in December and February. Spawns in gravelly substrate in cool, clear, well-oxygenated streams (natal stream), usually at the tail of a pool or at the riffle at the head of a pool; favors areas with well-vegetated banks and abundant instream cover such as boulders, logs, and undercut banks. Fry stay in deeper mid-channel locations until 2 years of age and then move to marine environments (California Trout 2026).
- **Suitable Habitat in Project Area:** Fresh water streams and lakes along the coast.
- **Occurrence in Project Area:** Documented in the western portion of the project area (Figure 7 series). The location of this data point is likely not accurate.
- **Year Documented:** 2000.

## Amphibians

### California Tiger Salamander – Central California DPS (*Ambystoma californiense* [Pop. 1])

- **Status:** Federally threatened, California threatened, CDFW WL
- **Distribution:** Restricted to the Central Valley and Inner Coast Range, from Tulare and San Luis Obispo counties in the south to Sacramento, and Yolo counties in the north.

- **Habitat:** Occurs in grassland, oak savanna, and mixed woodlands edges or lower elevation coniferous forest edges with suitable burrows present during the non-breeding season. Will migrate from November through May at night to seek breeding ponds and pools that are absent of predatory fish (USFWS 2026c).
- **Suitable Habitat in Project Area:** Annual grassland, oak woodland, and mixed conifer forest near fresh water ponds and pools absent of fish for breeding.
- **Occurrence in Project Area:** Documented in the northern, north-central, western, and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1952 (possibly extirpated), 1992, 2003, 2005, 2006, 2007, 2008, 2016, and 2018.

### Santa Cruz long-toed salamander (*Ambystoma macrodactylum croceum*)

- **Status:** Federally endangered, California endangered, California Fully Protected
- **Distribution:** Restricted to southern Santa Cruz and northern Monterey Counties.
- **Habitat:** Occurs in ephemeral wetlands for breeding and adjacent dense riparian uplands (CDFW 2026f).
- **Suitable Habitat in Project Area:** Freshwater and freshwater marsh.
- **Occurrence in Project Area:** Documented in the northern, north-central, western, and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 2011, 2022, and 2023.

### Foothill Yellow-Legged Frog – South Coast DPS (*Rana boylii* [Pop. 6])

- **Status:** Federally endangered, California endangered
- **Distribution:** Pacific Coast to the western slopes of the Sierra Nevada and Cascades mountains up to approximately 5,000 feet in elevation.
- **Habitat:** Occurs in a variety of vegetation communities including valley-foothill hardwood, valley-foothill hardwood-conifer, valley-foothill riparian, ponderosa pine, mixed conifer, mixed chaparral and wet meadows. Closely associated with streams and require shallow and rocky streams that are at least partially exposed to direct sunlight for breeding (USFWS 2026c).
- **Suitable Habitat in Project Area:** Mixed conifer forest and freshwater marsh near freshwater streams for breeding.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1904 (possibly extirpated), 1907 (possibly extirpated), and 1957.

### California Red-Legged Frog (*Rana draytonii*)

- **Status:** Federally threatened, CDFW SSC
- **Distribution:** California coast in southern Mendocino County, inland to Shasta County, California, and south to Baja California, Mexico.
- **Habitat:** Occurs in or near water sources like streams or stock ponds with refugia like rocks or boulders, leaf litter, small stream channels, or animal burrows. Breeding habitats are aquatic, typically ephemeral or permanent pools, or backwaters within streams and creeks, also ponds, marshes, springs, dune ponds, lagoons, cattle ponds, and marshes without bullfrogs or predatory fish. Requires upland areas for movement and dispersal and areas for refugia and aestivation when waters dry up (USFWS 2026c).
- **Suitable Habitat in Project Area:** Fresh water streams and ponds and freshwater marsh without bullfrogs or predatory fish near uplands for dispersal and aestivation.
- **Occurrence in Project Area:** Documented in the northern, western, and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1990, 1996, 1999, 2001, 2003, 2004, 2006, and 2007.

### Western Spadefoot (*Spea hammondii*)

- **Status:** Federally proposed threatened, CDFW SSC
- **Distribution:** Endemic to California and northern Baja California. The northern DPS ranges from Shasta County through the Central Valley, and down the coast from Santa Clara County to Santa Barbara County.
- **Habitat:** Occurs open areas with sandy or gravelly soils, in a variety of habitats including mixed woodlands, grasslands, coastal scrub, chaparral, sandy washes, lowlands, river floodplains, alluvial fans, playas, alkali flats, foothills, and mountains. Vernal pools or similar shallow, temporary pools that do not contain bullfrogs, fish, or crayfish are necessary for breeding (USFWS 2026c; California Herps 2026a).
- **Suitable Habitat in Project Area:** Oak woodland, annual grassland, coastal scrub, chaparral, fresh water streams and pools with sandy or gravelly soils. The presence of predators likely reduces the habitat suitability for breeding.
- **Occurrence in Project Area:** Documented in the north-central portion of the project area, and potentially extirpated (Figure 7 series).
- **Year Documented:** 1922.

### Coast Range Newt (*Taricha torosa*)

- **Status:** CDFW SSC
- **Distribution:** Endemic to California, ranging throughout the coast and Coast Range mountains from Mendocino County to San Diego County.
- **Habitat:** Occurs in oak woodlands, chaparral, and grasslands (California Herps 2026b).
- **Suitable Habitat in Project Area:** Oak woodland, chaparral, and annual grassland.

- **Occurrence in Project Area:** Documented in the central portion of the project area (Figure 7 series).
- **Year Documented:** 2017.

## Reptiles

### Northwestern Pond Turtle (*Actinemys marmorata*)

- **Status:** Federally proposed threatened, CDFW SSC
- **Distribution:** San Joaquin Valley north, all populations in California north of the middle of Monterey Bay, the Coastal and Cascade Ranges of Oregon and Washington State, and an outlying population in Nevada.
- **Habitat:** Occurs in slow-moving permanent or intermittent streams, ponds, lakes, permanent and ephemeral wetlands, and reservoirs with emergent basking sites. This species spends most of its life in water, but also requires terrestrial habitats for nesting and during winter (USFWS 2026c; USFWS 2026d).
- **Suitable Habitat in Project Area:** Fresh water streams and ponds and freshwater marsh with surrounding uplands for nesting.
- **Occurrence in Project Area:** Documented in the northern portion of the project area (Figure 7 series).
- **Year Documented:** 2001 and 2006.

### Southwestern Pond Turtle (*Actinemys pallida*)

- **Status:** Federally proposed threatened, CDFW SSC
- **Distribution:** Restricted to the central Coast Range south from the middle of Monterey Bay to the species' southern range boundary in Baja California.
- **Habitat:** Occurs in slow-moving permanent or intermittent streams, ponds, lakes, permanent and ephemeral wetlands, and reservoirs with emergent basking sites. This species spends most of its life in water, but also requires terrestrial habitats for nesting and during winter (USFWS 2026c; USFWS 2026d).
- **Suitable Habitat in Project Area:** Fresh water streams and ponds and freshwater marsh with surrounding uplands for nesting.
- **Occurrence in Project Area:** Documented in the northern portions of the project area (Figure 7 series).
- **Year Documented:** 2001, 2002, 2003, and 2017.

### Northern California Legless Lizard (*Anniella pulchra*)

- **Status:** CDFW SSC
- **Distribution:** California Coast Ranges from Antioch, Contra Costa County, the San Joaquin Valley from San Joaquin County south, the west slope of the southern Sierras,

the Tehachapi Mountains west of the desert, the mountains of Southern California, and south to the U.S./Mexico border.

- **Habitat:** Occurs in moist, warm, and loose soil (sand, loam, humus) in sparsely vegetated areas in a variety of habitats with available cover in shrubs or leaf litter (CDFW 2000a).
- **Suitable Habitat in Project Area:** Sparsely vegetated areas with suitable soils and available cover.
- **Occurrence in Project Area:** Documented in the western, west-central, and southern portions of the project area (Figure 7 series).
- **Year Documented:** 1946, 1957, 1971, 1984, 1998, 2004, 2006, 2007, 2008, 2014, 2015, and 2018.

### Blainville's (Coast) Horned Lizard (*Phrynosoma blainvillii*)

- **Status:** CDFW SSC
- **Distribution:** Sierra Nevada foothills from Butte County to Kern County and throughout the Central and Southern California coast.
- **Habitat:** Occurs in sandy soils in valley-foothill hardwood, conifer and riparian habitats, as well as in pine-cypress, juniper and annual grassland habitats (CDFW 2000b).
- **Suitable Habitat in Project Area:** Mixed conifer forest and annual grassland with sandy soils.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Year Documented:** 1992, 1999, 2004, and 2006.

## Birds

### Tricolored Blackbird (*Agelaius tricolor*)

- **Status:** USFWS Bird of Conservation Concern, California threatened, CDFW SSC
- **Distribution:** West coast of the United States and Baja California, Mexico.
- **Habitat:** Occurs in wetland and grassland habitats. Breeding colonies are found in rice-growing regions of the Sacramento Valley and pasturelands of the San Joaquin Valley and lower Sacramento Valley. Known to nest in wetlands with cattails, bulrushes, blackberry hedges, and willows as well as agricultural fields and vegetated ditches (Shuford et al. 2008).
- **Suitable Habitat in Project Area:** Freshwater marsh, annual grassland, and agricultural land with suitable nesting habitat.
- **Occurrence in Project Area:** Documented in the northern and north-central portions of the project area (Figure 7 series).
- **Year Documented:** 1936 (possibly extirpated) and 1963.

### Western Burrowing Owl (*Athene cunicularia*)

- **Status:** USFWS Bird of Conservation Concern, CDFW SSC
- **Distribution:** Throughout the United States, Mexico, Central America, South America, and northeast Caribbean.
- **Habitat:** Occurs in open, dry annual or perennial grasslands, deserts, and scrublands, as well as agricultural and ruderal landscapes, characterized by low-growing vegetation with available burrows or burrow-like structures such as culverts. Often associated with high densities of burrowing small mammals (Shuford et al. 2008).
- **Suitable Habitat in Project Area:** Annual grassland and coastal scrub with low-growing vegetation and available small mammal burrows or burrow-like structures.
- **Occurrence in Project Area:** Documented in the north-central and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1965, 2004, and 2007.

### Yellow Rail (*Coturnicops noveboracensis*)

- **Status:** CDFW SSC
- **Distribution:** United States and Canada. Only known in California during breeding season in the northeastern interior and as a winter migrant on the coast and in the Suisun Marsh region.
- **Habitat:** Dense sedge marshes and meadows with moist soils or shallow standing water for nesting during breeding season. Known to inhabit wet meadows and coastal tidal marshes during winter migration (CDFW 2026g).
- **Suitable Habitat in Project Area:** Freshwater marsh during migration; not expected to nest in the project area.
- **Occurrence in Project Area:** Documented in the north-central and western portions of the project area (Figure 7 series).
- **Year Documented:** 1896 and 2014.

### California Horned Lark (*Eremophila alpestris actia*)

- **Status:** CDFW WL
- **Distribution:** California
- **Habitat:** Occurs primarily in grassland and beach habitats but can also be found in disturbed lands, agricultural lands, and alpine fell fields in the Sierra Nevada (CDFW 2026h).
- **Suitable Habitat in Project Area:** Annual grassland and agricultural land.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Year Documented:** 1992 and 2004.

### Least Bell's Vireo (*Vireo belli pusillus*)

- **Status:** Federally endangered, California endangered
- **Distribution:** California and northern Baja California, Mexico during breeding season and winters in southern Baja California, Mexico.
- **Habitat:** Occurs in a variety of habitats, but most often associated with riparian habitat vegetated with willow species in Southern California below 2,000 feet in elevation. Requires dense understory shrub cover for nest concealment, with an overstory dominated by willows.
- **Suitable Habitat in Project Area:** None – no riparian woodland with dense understory and willow overstory occur in the project area. Suitable habitat may occur within 100 feet of the project area.
- **Occurrence in Project Area:** Documented in the southern portion of the project area and potentially extirpated (Figure 7 series).
- **Year Documented:** 1919.

## Mammals

### Townsend's Big-Eared Bat (*Corynorhinus townsendii*)

- **Status:** CDFW SSC
- **Distribution:** Western North America.
- **Habitat:** Occurs in all habitat types except alpine, but it is rare throughout most of its range. Roosts in caves, buildings, tunnels, mines, and other human-made structures (CDFW 2026i).
- **Suitable Habitat in Project Area:** Variety of habitats near caves or structures for roosting, as well as stands of California bay and redwood trees with hollows for roosting, away from human-populated areas.
- **Occurrence in Project Area:** Documented in the west-central portion of the project area (Figure 7 series).
- **Year Documented:** 2013.

### Monterey Dusky-Footed Woodrat (*Neotoma macrotis luciana*)

- **Status:** CDFW SSC
- **Distribution:** Coastal California from Monterey Bay to Morrow Bay.
- **Habitat:** Occurs in riparian forest, woodland, shrubland, and chaparral (Nature Serve 2026).
- **Suitable Habitat in Project Area:** Oak woodland and coastal scrub.
- **Occurrence in Project Area:** Documented in the central portion of the project area (Figure 7 series).
- **Year Documented:** 2017.

### Mountain Lion – Central Coast and Southern California DPS (*Puma concolor*)

- **Status:** California threatened
- **Distribution:** Western United States, Mexico, Central America and South America. In California, Central Coast and Southern California distinct population segments are state threatened.
- **Habitat:** Occurs in a variety of habitats including riparian woodland, forest, scrub, chaparral, grassland and desert habitats; wherever mule deer occur. Canyons may serve as long distance movement corridors. Habitat and/or terrain that provides sufficient cover is necessary for hunting, resting and denning.
- **Suitable Habitat in Project Area:** Coastal scrub, oak woodland, annual grassland.
- **Occurrence in Project Area:** Unknown.
- **Year Documented:** Unknown.

### Monterey Shrew (*Sorex ornatus salarius*)

- **Status:** CDFW SSC
- **Distribution:** Monterey County.
- **Habitat:** Occurs in valley-foothill and montane riparian, woodland, chaparral, grassland, and emergent wetland habitats with stumps, logs, and vegetation litter for cover (CDFW 2026j).
- **Suitable Habitat in Project Area:** Oak woodland, annual grassland, and freshwater marsh with available cover.
- **Occurrence in Project Area:** Documented in the western portion of the project area, potentially extirpated (Figure 7 series).
- **Year Documented:** 1909, 1915, 1927, and 1938.

### American Badger (*Taxidea taxus)*

- **Status:** CDFW SSC
- **Distribution:** Throughout most of California, except in the northern North Coast area.
- **Habitat:** Occurs in habitats with friable soils, including open plains and prairies, farmland, scrub, forest, and occasionally woodland edges (CDFW 2026k).
- **Suitable Habitat in Project Area:** Agricultural land, annual grassland, coastal scrub, mixed conifer forest, and oak woodland with friable soils for burrowing.
- **Occurrence in Project Area:** Documented in the western and west-central portions of the project area (Figure 7 series).
- **Year Documented:** 1919 and 1992.

### San Joaquin Kit Fox (*Vulpes macrotis mutica*)

- **Status:** Federally endangered, California threatened
- **Distribution:** San Joaquin Valley in California, from San Joaquin County in the north to Kern County in the south, and Coast Range, including the Panoche and Cuyama valleys and the Carrizo Plain in San Luis Obispo County.
- **Habitat:** Occurs in desert and grasslands, preferring areas with minimal shrub and herbaceous cover (USFWS 2026c).
- **Suitable Habitat in Project Area:** Sparsely vegetated annual grassland.
- **Occurrence in Project Area:** Documented in the southern portion of the project area (Figure 7 series).
- **Year Documented:** 1975.

## 3.3.3 Critical Habitat

Critical habitat is the specific areas within the geographic range occupied by the species that contain the physical or biological features that are essential to the conservation of endangered and threatened species and that may need special management or protection (USFWS 2026e).

The potential presence of critical habitat in the project area was also analyzed. A total of two plants and five wildlife species have designated critical habitat mapped in the project area (Figure 8, Critical Habitat – Index, and Figures 8a through 8i, Critical Habitat) (CDFW 2026a, 2026b; USFWS 2026b; USFWS 2026f). The seven species and their designations are listed below:

### 3.3.3.1 Plants

- Monterey spineflower – federally threatened, CRPR 1B.2
- Santa Cruz tarplant – federally threatened, California endangered, CRPR 1B.1

### 3.3.3.2 Wildlife

#### Invertebrates

- Vernal pool fairy shrimp (*Branchinecta lynchi*) – federally threatened

#### Fish

- Tidewater goby (*Eucyclogobius newberryi*) – federally endangered

#### Amphibians

- California red-legged frog – federally threatened, CDFW SSC
- California tiger salamander – federally threatened, California threatened, WL

#### Birds

- Western snowy plover (*Charadrius alexandrinus nivosus*) – federally threatened

Only one designated critical habitat, for California red-legged frog, occurs within the opportunity sites, including sites 23, 36, 38, 55, and 56 (Figure 8 series).

### 3.3.4 Nesting Birds

The project area contains suitable nesting habitat for many bird and raptor species protected under the CFGC and the Migratory Bird Treaty Act (MBTA).

The majority of habitat for nesting birds in the project area is in the innumerable native and ornamental trees, shrubs, and buildings of the developed land. The structures in the developed land could support nesting of certain species that use structures with eaves, ledges, crevices, cracks, and other "cavities," nest in or on utility structures, or nest on rooftops, such as black phoebe (*Sayornis nigricans*), gulls (*Larus* sp.), and Bewick's wren (*Thryomanes bewickii*). Grassland- and ground-nesting species, such as the sensitive California horned lark and western burrowing owl, documented in the project area could nest in the annual grassland and open agricultural land throughout the project area. Freshwater marsh habitat in the project area provides potentially suitable nesting habitat for sensitive tricolored blackbird and yellow rail as well. The trees throughout the project area could also support nesting by more common birds, including Anna's hummingbird (*Calypte anna*), American crow (*Corvus brachyrhynchos*), and orioles (*Icterus* sp.), which often nest in ornamental palm and eucalyptus trees. The availability of large amounts of high-quality nesting habitat with access to nearby food and water sources indicates birds and raptors likely use the survey area for nesting.

### 3.3.5 Sensitive Roosting Bats

The project area contains suitable foraging and roosting habitat for sensitive bat species, including Townsend's big-eared bat, which was documented in the west-central portion of the project area (Table 2; Figure 7 series). The structures in the developed land of the project area provide suitable roosting habitat for structure- and cavity-dwelling bats such as Townsend's big-eared bat and big brown bat (*Eptesicus fuscus*). The numerous native trees in the woodland and forest communities and the ornamental trees throughout the developed land of the project area could provide suitable roosting habitat for tree-roosting bats, such as the hoary bat (*Lasiurus cinereus*) and western red bat (*Lasiurus blossevillii*). Western red bat is a CDFW species of special concern. The sources of open, freshwater throughout the project area provide suitable foraging habitat for bats roosting in the area that forage over sources of open water, such as the western mastiff bat (*Eumops perotis*). The availability of suitable habitat indicates bats are likely roosting and foraging in the survey area.

## 3.4 Wildlife Corridors and Habitat Linkages

Wildlife corridors provide routes for local movement and also regional linkages and corridors, often following linear topographic, vegetation, or water features. These corridors can be continuous habitats features, or "stepping stone" areas, providing critical rest and foraging areas for birds traveling along

migratory routes, for example. Local routes of movement provide constant connections to resources that include sources of water, home/cover sites, and foraging areas. Regional linkages and movement corridors provide larger patches of open space to allow relatively free movement of wildlife species along multiple paths between important resources. These areas allow for not only long-term genetic flow between subpopulations but also critical pathways of seasonal/migratory movements. Larger predatory mammals often use regional corridors for hunting and reproduction needs. Potential wildlife corridors can include streams, riparian areas, and culverts under roadways. Habitat characteristics considered included topography, habitat quality, and adjacent land uses.

The project area provides opportunities for wildlife movement and dispersal and provides connections to surrounding and nearby open space areas. In addition, the project area contains suitable nesting, foraging, and nursery sites for many wildlife species.

The major aquatic resources, including rivers, streams, lakes, sloughs, lagoons, and bays, as well as riparian corridors around many of these features, provide important wildlife movement corridors throughout the County. These areas function to facilitate amphibian, fish, reptile, bird, and mammal movement in the region. The network of mountain ranges that extend through the project area, including the Coastal Range, Diablo Range, Gabilan Range, Santa Lucia Range, and Temblor Range, also function as corridors for wildlife movement through the open space and native vegetation communities that occur in these areas.

The CDFW California Terrestrial Habitat Connectivity dataset documents most of the UMC as containing large contiguous natural areas and linkages or corridors that connect existing core natural areas (CDFW 2026c). The highest-quality terrestrial connectivity areas occur along the Pacific Coast south of Carmel to the southern edge of the UMC centering on the Santa Lucia Range and inland along the Coastal and Diablo Ranges. Fort Ord National Monument is connected to Carmel Valley and the Santa Lucia Range along the coast by large blocks of open space that function as movement corridors and habitat linkages as well. However, portions of the UMC have been identified as containing limited connectivity opportunity due to linear transportation corridors and urban development, primarily along the U.S. Route 101 (also known as Highway 101) corridor between King City and Salinas and north along the Pacific Coast between Monterey and Santa Cruz (CDFW 2026c). Similarly, sections of the U.S. Route 101 corridor have been identified by CDFW as barriers to terrestrial wildlife connectivity in the UMC, including a portion of the highway between Salinas and Gilroy. These barriers disrupt an important coastal habitat linkage for medium and large mammals like badger (*Taxidea taxus*), bobcat (*Lynx rufus*), black bear (*Ursus americanus*), mountain lion (*Puma concolor*), and mule deer (*Odocoileus hemionus*), as well as amphibians like California red-legged frog (*Rana draytonii*) and California tiger salamander (*Ambystoma californiense*) moving between the Santa Cruz Mountains and the Gabilans Range (CDFW 2026d).

The project area is also in the Pacific Flyway, the major migratory bird corridor of the western United States. Wildlife refuges and preserves have been designated in the County, including Salinas River National Wildlife Refuge and Carmel River Lagoon and Wetland Natural Preserve in the north and Morro Estuary Natural Preserve in the south, to provide rest stops along the annual migration routes for migratory bird species. The project area contains open space, native vegetation, and aquatic resources, and its position in the Pacific Flyway migratory corridor makes it very likely to provide habitat for migratory birds traveling between nesting and wintering areas.

The project area is likely to be used as a movement corridor for both sensitive and common wildlife species because of the native vegetation communities, undeveloped open space, Pacific Coast shoreline, inland mountainous regions, and numerous fresh water aquatic resources within and adjacent to the project area. Although transportation corridors and areas of urban development may impede some east–west wildlife movement in the northern portion of the UMC, the open space in the project area has the potential to provide important habitat connectivity both locally and regionally.

*This page intentionally left blank.*

# Section 4 Regulatory Framework

This section summarizes federal, state, regional, and local regulations, plans, policies, and programs that provide protection and management of sensitive biological resources that are applicable to the project. The federal government administers non-marine plant- and wildlife-related issues through the USFWS, while waters of the U.S. issues are administered by the USACE. California law relating to wetland, water-related, and wildlife issues is administered by the CDFW. Under the California Environmental Quality Act (CEQA), impacts associated with a project or program are assessed with regard to significance criteria determined by the CEQA lead agency (in this case, the County) pursuant to the CEQA Guidelines. Biological resources-related laws and regulations that apply include the federal Endangered Species Act, MBTA, Clean Water Act (CWA), CEQA, California Endangered Species Act, and CFGC.

## 4.1 Federal

**Coastal Zone Management Act of 1972 (16 USC 1451 through 1464, Chapter 33).** The Coastal Zone Management Act is administered by the National Oceanic and Atmospheric Administration's Office of Ocean and Resource Management and was established as a national policy to preserve, protect, develop, and—where possible—enhance or restore the Coastal Zone in the United States. California has a federally approved Coastal Zone Management Program, and the Coastal Zone Management Act is administered by the California Coastal Commission. Therefore, the Coastal Zone Management Program and permit requirements are discussed further in the California Coastal Act section under state regulations.

**Federal Clean Water Act (U.S. Code, Title 33, Sections 1251–1376).** The federal Clean Water Act (CWA) provides guidance for the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters. Section 401 requires a project proponent to obtain a federal license or permit that allows activities resulting in a discharge to waters of the United States to obtain state certification, thereby ensuring that the discharge will comply with provisions of the CWA. The State Water Resources Control Board administers the certification program in California. Section 402 establishes a permitting system for the discharge of any pollutant (except dredged or fill material) into waters of the United States. Section 404 establishes a permit program administered by the U.S. Army Corps of Engineers (USACE) that regulates the discharge of dredged or fill material into waters of the United States, including wetlands.

**Federal Endangered Species Act, Sections 7 and 9 (16 USC 1531 et seq.; 50 CFR Part 402).** This act prohibits the "take" (i.e., harm, harass, or kill individuals or destroy associated habitat) of species federally listed as threatened or endangered. Take incidental to otherwise lawful activities can be authorized by the USFWS through a permit under the federal Endangered Species Act, Sections 4(d), 7, or 10(a).

**Migratory Bird Treaty Act (U.S. Code, Title 16, Sections 703–712).** The MBTA prohibits the direct or indirect take of migratory birds and their active nests unless permitted.

**Wetlands and Other Waters of the United States.** Aquatic resources, including riparian areas, wetlands, and certain aquatic vegetation communities, are considered sensitive biological resources and can fall under the jurisdiction of several regulatory agencies. In accordance with the Navigable Waters Protection Rule, effective June 22, 2020, the USACE exerts jurisdiction over waters of the United States, including the territorial seas and traditional navigable waters; perennial and intermittent tributaries that contribute surface water flow to such waters; certain lakes, ponds, and impoundments of jurisdictional waters; and wetlands adjacent to other jurisdictional waters (33 CFR Part 328; 40 CFR Parts 110, 112, 116, 117, 120, 122, 230, 300, 302, and 401).

## 4.2 State

**Birds of Prey Protection Provision (California Fish and Game Code, Section 3503.5).** This provision prohibits the taking of birds of prey (Order Falconiformes and Strigiformes), including their nests and eggs.

**California Coastal Act and California Coastal Commission.** The California Coastal Commission (CCC) was established by voter initiative in 1972 and was made permanent by the California Legislature through the adoption of the California Coastal Act (CCA) of 1976 (California Public Resources Code, Section 30000 et seq.). The CCC, in partnership with coastal cities and counties, plans and regulates the use of land and water in the Coastal Zone. Under the CCA, cities and counties are responsible for preparing Local Coastal Programs to obtain authority to issue coastal development permits for projects in their jurisdiction. Local Coastal Programs consist of Land Use Plans, zoning ordinances, zoning maps, and other implementing actions that conform to CCA policies. Until an agency has a fully certified Local Coastal Program, the CCC is responsible for issuing coastal development permits.

Under the CCA, Section 30107.5 labels environmentally sensitive habitat areas are areas in the Coastal Zone "in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which could be easily disturbed or degraded by human activities and developments."

Section 30240 of the CCA states:

- Environmentally sensitive habitat areas shall be protected against any significant disruption of habitat values, and only uses dependent on those resources shall be allowed within those areas.
- Development in areas adjacent to environmentally sensitive habitat areas and parks and recreation areas shall be sited and designed to prevent impacts which would

significantly degrade those areas, and shall be compatible with the continuance of those habitat and recreation areas.

In addition, the CCC regulates impacts on coastal wetlands defined in Section 30121 of the CCA as "lands in the Coastal Zone which may be covered periodically or permanently with shallow water and include saltwater marshes, freshwater marshes, open or closed brackish water marshes, swamps, mudflats, and fens." Under the CCC's definition of wetlands (refer to California Code of Regulations, Section 13577[b]), a wetland need only display one of the parameters typically used to define wetland areas, in contrast to the USACE, which uses a three-parameter definition under its federal authorities. The CCA requires that most development avoid and buffer coastal wetland resources in accordance with Sections 301231 and 30233, including limiting the filling of wetlands to certain allowable uses. Portions of the project area are in the Coastal Zone and, therefore, are subject to the CCA.

**California Endangered Species Act (California Fish and Game Code, Section 2050 et seq.).** This act prohibits any activities that would jeopardize or take a species designated as threatened or endangered by the state.

**Streambed Alteration Agreement (California Fish and Game Code, Section 1600).** The CFGC requires any person who proposes a project that will substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake, or their tributaries, or use materials from a streambed to submit a notification for a Streambed Alteration Agreement to the CDFW.

**California Fish and Game Code, Section 1602.** Section 1602 regulates water resources in the State of California. Activities that divert or obstruct the natural flow of or change or use material from the bed, channel, or bank of any river, stream, or lake may be authorized by the CDFW. CDFW jurisdiction includes intermittent and perennial watercourses and extends to the top of the bank of a stream or lake if unvegetated or to the limit of the adjacent riparian vegetation, located contiguous to the watercourse, if the stream or lake is vegetated.

**California Fish and Game Code, Sections 2080 and 2081.** Section 2080 of the CFGC states that "no person shall import into this state, export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the Commission [California Fish and Game Commission] determines to be an endangered species or threatened species, or attempt any of those acts, except as otherwise provided in this chapter, or the Native Plant Protection Act, or the California Desert Native Plants Act." Pursuant to Section 2081 of the CFGC, the CDFW may authorize individuals or public agencies to import, export, take, or possess state-listed endangered, threatened, or candidate species. These otherwise prohibited acts may be authorized through permits or Memoranda of Understanding if the take is incidental to an otherwise lawful activity, the impacts of the authorized take are minimized and fully mitigated, the permit is consistent with

any regulations adopted pursuant to any recovery plan for the species, and the project operator ensures adequate funding to implement the measures required by the CDFW.

**California Fish and Game Code, Section 3503, 3503.5, 3513, and 3800.** Section 3503 prohibits the take, possession, or needless destruction of the nests or eggs of any birds except as otherwise provided by the code or any regulation made pursuant thereto.

Section 3513 of the CFGC upholds the MBTA by prohibiting any take or possession of birds that are designated by the MBTA as migratory nongame birds except as allowed by federal rules and regulations promulgated pursuant to the MBTA.

Section 3800 of the CFGC affords protection to nongame birds, which are birds occurring naturally in California that are not resident game birds, migratory game birds, or fully protected birds.

**CEQA Guidelines, Section 15380(b), as amended (California Public Resources Code, Section 21000 et seq.).** The goal of CEQA is to assist California public agencies in identifying potentially significant negative environmental impacts caused by their actions and avoiding or mitigating those impacts when feasible.

Although threatened and endangered species are protected by specific federal and state statutes, CEQA Guidelines, Section 15380(b), provides that a species not listed on the federal or state list of protected species may be considered rare or endangered if the species can be shown to meet certain specified criteria. These criteria have been modeled after the rare or endangered species definition in FESA and Sections 2050 through 2059.26 of the CFGC dealing with rare or endangered plants and wildlife. This section was included in CEQA primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on, for example, a candidate species that has not been listed by either the USFWS or CDFW. Thus, CEQA provides an agency with the ability to protect a species from the potential impacts of a project until the respective government agencies have an opportunity to designate the species as protected, if warranted. CEQA also calls for the protection of other locally or regionally significant resources, including natural communities. Although natural communities do not currently have legal protection of any kind, CEQA calls for an assessment of if any such resources would be affected and requires findings of significance if there would be substantial losses. Natural communities listed as sensitive by the California Natural Diversity Database are considered by the CDFW to be significant resources and fall under the CEQA Guidelines to address impacts. Local planning documents, such as General Plans, often identify these resources as well.

**California Fully Protected Wildlife Species Provision (California Fish and Game Code, Sections 3511, 4700, 5050, and 5515).** California fully protected species are described in Sections 3511, 4700, 5050, and 5515 of the CFGC. These statutes prohibit take or possession of fully protected species. The CDFW is unable to authorize incidental take of fully protected species when activities are proposed in areas inhabited by those species, except very limited project types.

**California Native Plant Protection Act of 1977 (California Fish and Game Code, Sections 1900–1913).** These provisions preserve, protect, and enhance endangered or rare native plants of the state.

**Regional Water Quality Control Board (RWQCB).** The RWQCB regulates impacts to water quality under Section 401 of the CWA. A project must comply with Section 401 of the CWA before the USACE can issue a Section 404 Permit. The RWQCB will issue a Section 401 Water Quality Certification or Waiver of Certification, depending on the extent of impacts to waters of the United States. The RWQCB also regulates impact to waters of the state (usually limited to "isolated" waters or swales that may not fall under USACE jurisdiction) under the Porter-Cologne Act.

**Natural Community Conservation Planning Act (NCCP), as amended (California Fish and Game Code, Sections 2800–2835).** The primary objective of the Natural Community Conservation Planning Act (NCCP) is to conserve natural communities at the ecosystem level while accommodating compatible land use. The program seeks to anticipate and prevent the controversies and gridlock caused by species' listing by focusing on the long-term suitability of wildlife and plant communities and including key interests in the process.

**Porter-Cologne Water Quality Control Act.** Regulated by the RWQCB for impacts to waters of the state. Although water quality issues related to impacts to waterways are normally addressed in a Section 401 Water Quality Certification, should a water of the State of California be determined by the USACE not to have CWA jurisdiction, the Porter-Cologne Act would be addressed under a Construction General Permit, State General Waste Discharge Order, or Waste Discharge Requirements, depending on the level of impact and the properties of the waterway.

## 4.3 Local

### 4.3.1 2010 General Plan (Inland)

#### Land Use Element

The 2010 General Plan Land Use Element includes goals and policies for orderly growth that is compatible with and limits development in natural resource areas, including sensitive vegetation communities, aquatic resources, and wildlife habitat, in the County (Goal LU-1 and Policies LU-1.5, LU-1.13). The Element also includes goals and policies establishing land use designations for the County's sensitive natural areas (Goal LU-2 and Policies LU-2.2, LU-2.34[c]) and encourages the provision of open space to protect and conserve biological resources in the County (Goal LU-7, Policy LU-7.2, Goal LU-8, and Policies LU-8.4 through LU-8.6).

#### *Conservation and Open Space Element*

The 2010 General Plan Conservation and Open Space Element includes goals and policies to project and conserve natural environments, listed species, and critical habitat (Goal OS-4 and Policies OS-4.1 through OS-4.3). This Element also includes goals and policies establishing

requirements for development to avoid, minimize, and mitigate for impacts on the sensitive biological resources in the County (Goal OS-5 and Policies OS-5.1 through OS-5.6, OS-5.9, OS-5.11 through OS-5.13, OS-5.16 through OS-5.18, OS-5.24 and OS-5.25).

## Area and Master Plans

In addition to the above General Plan goals and policies, the following Area and Master Plans have supplemental policies related to biological resources:

### *Carmel Valley Master Plan*

Policies CV-1.3, CV-3.4, CV-3.7 through CV-3.12, and CV-3.15 of the Carmel Valley Master Plan require the provision of open space, minimization of hillside and natural landform alteration, and support the protection and preservation of biological resources in the planning area. In particular, Policy CV-3.7 requires that areas of biological significance are identified and preserved as open space.

### *Central Salinas Valley Area Plan*

This area plan does not include supplemental policies to the General Plan that are applicable to biological resources.

### *Greater Monterey Peninsula Area Plan*

Policies GMP-1.5 and GMP-3.5 through GMP-3.10 of the Greater Monterey Peninsula Area Plan limit types of development in environmentally sensitive areas and prescribes setback requirements for wetlands in the planning area. Protection and preservation of native trees, open space, wetlands, plant and wildlife species (including marine birds and mammals), and critical habitats are included in these Policies as well.

### *Fort Ord Master Plan*

#### Land Use Element

The Fort Ord Master Plan Land Use Element Goal supports planned development that balances opportunities for growth with environmental protection. Specific to biological resources, the Recreation/Open Space Land Use Objectives A and B and Policies A-1, B-1, and B-2 encourage conservations and preservation of natural resources and open space, including establishing linkages and buffers for open space areas.

#### Recreation and Open Space Element

The Fort Ord Master Plan Recreation and Open Space Element Objectives A and C and Policies C-1 and C-2 integrates the Fort Ord open space into existing regional open space and promotes the

goals of the Habitat Management Plan through establishment of an oak tree protection program and the ongoing maintenance and preservation of sensitive resources.

#### Conservation Element

The Fort Ord Master Plan Conservation Element specifies objectives and policies pertaining to protection and preservation of Hydrology and Water Quality (Objective C) and Biological Resources (Objective A through E) in the planning area. Hydrology and Water Quality Objective C and Policies C-2 and C-4 through C-6 outline requirements for development and facilities operations to avoid impacts on waterways, including the Monterey Bay and intertidal environments. Biological Resources Objective A and Policies A-1, A-5, A-6, and A-9 require conformance with the Fort Ord Habitat Management Plan habitat preservation, protection, and management. Biological Resources Objectives B and C and Policies B-1 through B-3 and C-1 through C-3 require avoidance and minimization of sensitive species and habitats not addressed in the Habitat Management Plan as well as natural land features and habitats like native oak trees and woodlands. Biological Resources Objectives D and E and Policies D-1 and E-2 include requirements for the promotion of educational programming and monitoring of activities in sensitive natural areas.

### *Greater Salinas Area Plan*

#### Conservation/Open Space

The Greater Salinas Area Plan Conservation/Open Space Policy GS-3.1 encourages avoidance of disturbance for all vegetation on land exceeding 25 percent slope, particularly chaparral and broad leaf evergreen, to minimize erosion and retain important visual amenities.

### *North County Area Plan (Inland)*

#### Conservation/Open Space

The North County Area Plan Conservation/Open Space Policies NC-3.3 through NC-3.5 prioritizes conservation of native vegetation and native oak and madrone trees, and encourages the preservation of critical habitat as open space.

### *Toro Area Plan*

#### Conservation/Open Space

The Toro Area Plan Conservation/Open Space Policies T-3.5 and T-3.7 outline requirements for outdoor lighting to preserve the quality of darkness and discourage the removal of healthy native oak trees.

## Community Plans

In addition to the above General Plan and Area and Master Plans goals and policies, the following Community Plan has supplemental goals policies related to biological resources:

### *Castroville Community Plan*

#### Resource Protection and Enhancement

The Castroville Community Plan Resource Protection and Enhancement Goal 5 and Policy 5.1 encourage the protection and enhancement of natural resources, including sloughs in the planning area.

## Monterey County Local Coastal Program – Land Use Plans

The Coastal Act requires local governments to prepare Local Coastal Programs (LCPs) consistent with the Coastal Act (California Public Resources Code, Section 30000 et seq.) for the portion of the statewide Coastal Zone located within their jurisdiction.

A portion of Monterey County is designated as a "Coastal Zone." The Coastal Zone of the County is divided into four areas governed by Land Use Plans (LUP) and Coastal Implementation Plans (CIP), which together comprise the LCP for Monterey County.

The four LUPs include the following:

- North County Land Use Plan
- Big Sur Coast Area Land Use Plan
- Carmel Area Land Use Plan
- Del Monte Forest Land Use Plan

The County is the main authority for issuing most coastal development permits in the County's coastal areas, with the CCC retaining jurisdiction over specific areas, such as tidelands, public trust lands, and state parks. Additionally, the Commission holds appellate authority over certain categories of development, ensuring compliance with broader coastal policies.

The CIPs establish various development regulations, standards, and procedures to implement the policies of the LUPs.

Under the Monterey County LCP, the LUPs policies and recommended actions that apply to the biological resources, including sensitive vegetation communities, aquatic resources, and wildlife habitat, in the project area are detailed in the sections below.

### *North County Land Use Plan (Coastal)*

The Resource Management Key Policy 2.3.1, General Policies 2.3.2, and Specific Policies 2.3.3 of the North County Land Use Plan support the protection, maintenance, enhancement, and

restoration of environmentally sensitive habitats in the planning area. For instance, Specific Policies 2.3.3 limits public access to areas of rare, endangered and sensitive plants and protects environmentally sensitive habitats from livestock grazing and fuel reduction programs. Provisions for the protection of riparian, wetland, aquatic habitats, terrestrial wildlife, and marine resources are also included in Specific Policies 2.3.3. Key Policy 2.4.1, General Policies 2.4.2, and Specific Policies 2.4.3 supports the protection of important biological habitats, drainage patterns, and the scenic character of coastal, river, and estuarine shorelines from diking, dredging, and filling activities. The quality of water resources in the planning area is protected under Key Policy 2.5.1, General Policies 2.5.2, and Specific Policies 2.5.3.

#### *Carmel Area Land Use Plan*

The Resource Management Key Policy 2.3.2, General Policies 2.3.3, and Specific Policies 2.3.4 of the Carmel Area Land Use Plan support the protection, maintenance, enhancement, and restoration of environmentally sensitive habitats in the planning area. For instance, Specific Policies 2.3.4 limits the use of and access to rare and sensitive terrestrial plant and wildlife habitats, including riparian corridors, Monterey cypress, Monterey pine, and coast redwood forest, and establishes setbacks from streams and riparian communities. Provisions for the protection of marine habitats are also included in Specific Policies 2.3.4. Key Policy 2.4.2, General Policies 2.4.3, and Specific Policies 2.4.4 support the protection of water resources like rivers and streams. Scenic and natural resources in the planning area are protected by limiting the density of new development and public access, including maintenance and creation of trails, under Key Policies 4.4.1 and 5.3.1, General Policies 4.4.2, and Specific Policies 4.4.3 and 5.3.3.

### 4.3.2 Monterey County Code

The Monterey County Code (County Code) ordinances applicable to biological resources in Monterey County inland and coastal areas are described in the sections below. Of the County ordinances listed below, those that are applicable to biological resources in the Monterey County Coastal Zone include: Title 16 Environment (Chapters 16.08 Grading, 16.12 Erosion Control, 16.14 Urban Stormwater Quality Management and Discharge Control, and 16.16 Regulation for Flood Plains in Monterey County); and Title 20 Coastal Zoning.

#### *Title 16 – Environment*

##### Chapter 16.08 – Grading.

This ordinance sets forth rules and regulations to control all grading, establishes the administration procedure for issuance of permits, and provides for approval of plans and inspections of grading construction to minimize erosion, protect fish and wildlife, and to otherwise protect the natural environment of Monterey County.

**Chapter 16.12 – Erosion Control.**

This ordinance specifies requirements to eliminate and prevent conditions of accelerated erosion that have led to, or could lead to, degradation of water quality, loss of fish habitat, damage to property, loss of topsoil or vegetation cover, disruption of water supply, increased danger from flooding.

**Chapter 16.14 – Urban Stormwater Quality Management and Discharge Control.**

This ordinance provides the County with the legal authority to control the entry of urban pollutants into stormwater runoff that may enter the County storm drain system and enhance watercourses within the unincorporated urbanized areas in compliance with the CWA and the Porter-Cologne Act.

**Chapter 16.16 – Regulations for Floodplains in Monterey County.**

This ordinance specifies regulations for floodplains in UMC. The purpose of the ordinance is to minimize public and private losses due to flood conditions in specific areas and is a requirement for continued participation in the Federal Emergency Management Agency (FEMA) National Flood Insurance Program.

### *Title 20 – Coastal Zoning*

Section 20.66.020 of the Coastal Zoning Ordinance refers to Part 2 (North County) and Part 4 (Carmel) of the Monterey County CIP for standards for environmentally sensitive habitats.

### *Coastal Implementation Plan*

North County (Part 2) 20.144.040 (Environmentally Sensitive Habitat Development Standards) of the Coastal Implementation Plan provides development standards that support the protection, maintenance, and, where possible, enhancement and restoration of environmentally sensitive habitats in the planning area. This section requires a biological survey for proposed development that meets a set of criteria related to proximity to environmentally sensitive habitats and outlines general and specific development standards that aim to protect sensitive resources, including terrestrial plant and wildlife habitats, riparian, wetland and aquatic habitats, and marine habitats.

North County (Part 2) Section 20.144.050 (Forest Resource Development Standards) of the Coastal Implementation Plan requires a coastal development permit for the removal of trees and other major vegetation, except in certain circumstances (e.g., small, diseased, or hazardous trees). A Forester's Assessment and Recommendation shall be required for removal of three or more trees requiring a coastal development permit or proposed as part of a development where the tree removal would otherwise require a coastal development permit. Section 20.144.050(C) provides specific development standards for tree removal activities.

Carmel Area (Part 4) 20.146.040 (Environmentally Sensitive Habitat Development Standards) of the Coastal Implementation Plan provides development standards that support the protection,

maintenance, and, where possible, enhancement and restoration of environmentally sensitive habitats in the planning area. This section requires a biological survey for all proposed development and outlines general and specific development standards that aim to protect sensitive resources, including terrestrial plant and wildlife habitats, riparian corridors, and wetland and marine habitats.

Carmel Area (Part 4) 20.146.050 (Water and Marine Resources Development Standards) of the Coastal Implementation Plan provides development standards that support the protection of protect the water quality of the coastal streams and the Point Lobos and Carmel Bay areas of Special Biological Significance in the planning area. This section requires adequate setbacks from streams, stream flow maintenance, performance controls for development site features, maintenance of water quality, protection of natural vegetation along streams and control of grading to minimize erosion and sedimentation.

Carmel Area (Part 4) Section 20.146.060 (Forest Resource Development Standards) of the Coastal Implementation Plan requires a coastal development permit for the removal of trees and other major vegetation, except in certain circumstances (e.g., small, diseased, or hazardous trees). A Forest Management Plan is required for tree removal requiring a coastal development permit or for development requiring a coastal development permit where the development includes native tree removal of size or amount. Section 20.146.060(D) provides specific development standards for tree removal activities.

### *Title 21 – Zoning (Inland)*

#### Chapter 21.64.130 – Regulations for Land Use in the Carmel Valley Floodplain.

The purpose of this ordinance is to protect the Carmel River and its corridor including visual aspects, value as wildlife habitat and stabilize the river channel; preserve the rural character of Carmel Valley; and promote the public health and safety by lessening local flood potential and flood related hazards.

#### Chapter 21.64.260 – Preservation of Oak and Other Protected Trees.

The purpose of this ordinance is to provide the regulations for the protection and preservation oak and other specific types of trees as required in the Monterey County General Plan, Area Plans, and Master Plans. This ordinance also provides the procedures under which proposed removal of such trees may be considered or exempted.

#### Section 21.66.020, Standards for Environmentally Sensitive Habitats.

The purpose of this ordinance is to provide development standards which will allow for the protection, maintenance, and, where possible, enhancement and restoration of environmentally sensitive habitats. This provision requires a biological survey to be conducted as described below

in areas known by available resource information, review or other research, to contain environmentally sensitive habitats. Compliance with this provision is required as a condition of approval for projects in the County.

**Section 21.66.020 (C). Regulations: Biological Survey Requirement.**

1. A biological survey shall be required for all proposed development meeting one or more of the following criteria:
    a. The development is proposed within a known environmentally sensitive habitat, based on the most current resource maps, other reliable other available resource information, or through the planner's on-site investigation;
    b. The development is located within one hundred (100) feet of an environmentally sensitive habitat, and has potential negative impact on the long-term maintenance of the habitat.
        1. The survey shall be required, submitted, and meet approval of the Director of Planning prior to the project application being determined complete.
        2. The survey shall be prepared by a qualified biologist, as selected from the County's list of consulting biologists maintained by the Planning Department. Report preparation shall be at the applicant's expense.
        3. The biological survey shall contain the following elements:
            a. Identify the property surveyed, with accompanying location map and site plan showing topography and all existing and proposed structures and roads, and the proposed project site or sites;
            b. Describe the method of survey;
            c. Identify the environmentally sensitive habitat found on the site and within one hundred (100) feet of the site with an accompanying map delineating the habitat location or locations;
            d. Describe and assess potential impacts of the development on the environmentally sensitive habitat(s) identified in the survey found on the site or on neighboring properties;
            e. Recommend mitigation measures which will reduce impacts;
            f. Assess whether the mitigation measures will reduce the development's impact to an insignificant level.

## Section 5 Thresholds of Significance

Appendix G of the CEQA Guidelines (CEQA Guidelines, Section 15000 et seq.) defines "significant effect on the environment" as a "substantial, or potentially substantial adverse change in the environment." Appendix G of the CEQA Guidelines further indicates that there may be a significant effect on biological resources if the project would:

1. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.
2. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.
3. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.
4. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.
5. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
6. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

*This page intentionally left blank.*

## Section 6 Impacts

Impacts to biological resources from implementation of the project are categorized quantitatively as direct and indirect impacts.

Direct impacts to biological resources occur when significant alterations or destruction occurs during the course of, or because of, project implementation. Examples of such impacts include removing, disturbing, or grading vegetation; dredging or grading a stream bank; filling wetlands with any materials; erecting any structures, including in a stream; and severing or physically restricting wildlife corridors and the distribution of individual species or resources. Other direct impacts may include loss of foraging or nesting habitat and loss of individual species as a result of habitat clearing.

Indirect impacts may include elevated levels of noise or lighting, change in surface water hydrology within a floodplain, and increased erosion or sedimentation. These types of indirect impacts can affect vegetation communities or their potential use by sensitive species. They can also cause the disruption of normal wildlife functions or activities, impacting individual species.

Within the direct and indirect quantitative impacts categories, impacts are also qualified temporally as permanent and temporary impacts.

Permanent impacts may result in irreversible damage to biological resources, including habitat or removal of species from a particular area.

Temporary impacts are interim changes in the local environment due to construction and would not extend beyond project-associated construction, including revegetation of temporarily disturbed areas adjacent to native habitats.

As previously stated in Section 2, development on the entitled/proposed pipeline sites (Sites 57 through 63) would occur independently of project implementation and, therefore, are not considered part of the project's impacts. Thus, the entitled/proposed pipeline sites are not included in this section.

An analysis of the exact acreage of direct impacts that would occur on biological resources, including sensitive plant and wildlife species, sensitive vegetation communities, jurisdictional aquatic resources, and wildlife corridors and habitat linkages, in the project area from project implementation is not provided at the programmatic level. This is because such an analysis would be speculative in nature since focused surveys were not conducted, and future site-specific project designs are not known at this time.

## 6.1 Threshold 1: Sensitive Plant and Wildlife Species

### 6.1.1 Guidelines for Determination of Significance

Significant impacts to sensitive plant and wildlife species could result if the project has a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by the CDFW and USFWS.

### 6.1.2 Impacts Analysis

#### 6.1.2.1 Sensitive Plant Species

**Direct Impacts**

As previously discussed, no biological surveys or focused species surveys were conducted as a part of this programmatic project. A total of 35 sensitive plant species have been documented by historical literature and databased within 1 mile of the project area (refer to Table 2, Sensitive Plant Species Documented in the Project Area, and Figure 7 series).

Implementation of the project on opportunity sites comprised only of urban/developed land and agricultural land totaling 52 opportunity sites (Opportunity Sites 2, 3, 5, 6, 17, 23, 25 through 30, 33 through 36, 39, 41, 49, 50, 51, 54, 55, and 64; refer to Table 1) have a low potential to impact sensitive plant species because it provides little to no suitable habitat value for the sensitive plant species documented in the project area. However, implementation of the project on undeveloped opportunity sites or those that contain native vegetation communities have higher potential to impact sensitive plant species. While suitable habitats for the historically documented sensitive plant species are present in the project area, many of these species have specific microhabitat requirements, including soils and elevation range restrictions, that may reduce the potential for these species to occur on a particular site.

The aquatic habitats present in the project area (Opportunity Sites 11 through 15, 24, and 56; refer to Table 1), including freshwater and freshwater marsh, have the potential to support sensitive plant species documented in the project area, including Fort Ord button-celery.

The woodland and forest communities of mixed conifer forest and oak woodland throughout the project area (Opportunity Sites 8, 9, 10, 16, 20, 21, 22, 31, 37, 40, 43, 45, 46, 48, 52, 53, and 56; refer to Table 1) have the potential to support sensitive plants documented in the project area, including but not limited to Hickman's onion, Toro manzanita, sandmat manzanita, Kellogg's horkelia, northern curly-leaved monardella, pine rose, Monterey pine, and Yadon's rein orchid.

The upland vegetation communities of annual grassland and coastal scrub present in the project area (Opportunity Sites 1, 4, 8 through 12, 14, 15, 18, 19, 20, 21, 22, 31, 32, 37, 38, 42, 44, 46, 47,

48, 52, and 53; refer to Table 1) provides suitable habitat for many of the same sensitive plant species supported by the woodland and forest communities listed previously, as well as Pajaro manzanita, Jolon clarkia, Congdon's tarplant, Monterey spineflower, seaside bird's-beak, fragrant fritillary, Santa Cruz microseris, and Pacific grove clover, among others.

As noted in Section 4.3.2, County of Monterey Development Standards (Title 21, Zoning, Chapter 21.66), the project is required to implement a biological survey requirement in compliance with the provision set forth in Sections 20.66.020 (coastal) and 21.66.020 (inland) of the County Code. Thus, prior to project construction on opportunity sites that contain or are within 100 feet of sensitive vegetation communities that could support sensitive plant species, including (but not limited to) Opportunity Sites 1, 4, 8, 9, 10, 11, 12, 13, 14, 15, 16, 18, 19, 20, 21, 22, 24, 31, 32, 37, 38, 40, 42, 43, 44, 45, 46, 47, 48, 52, 53, and 56 (totaling 32 opportunity sites), a biological survey is required to be conducted to determine the presence of sensitive vegetation communities and sensitive plant species. Further, for these opportunity sites that are in the Carmel Area and North County Coastal Land Use Planning Areas, including Opportunity Sites 16, 43, and 48, projects would be regulated under Coastal Zoning Ordinance of the County Code. Project construction on these coastal sites would be required to comply with the provisions set forth in Section 20.66.020 of the of the County Code specific to coastal development in the Carmel Area and North County (Coastal). These provisions also require a biological survey for all proposed development in the Carmel Area and for development in North County (Coastal) that contains or is within proximity to sensitive habitats.

If the results of the biological survey required under County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), and Mitigation Measure (MM)-BIO-OBJ-1 determine that sensitive plant species are not present and do not have a high potential to occur in the project opportunity sites, direct impacts on sensitive plant species would be less than significant, and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that sensitive plant species are present or have a high potential to occur in the project opportunity sites due to available suitable habitat and avoidance is not feasible, direct impacts on sensitive plant species would be considered potentially significant without additional mitigation.

Therefore, MM-BIO-OBJ-1 and MM-BIO-CONS-2 have been provided to reduce potential impacts on sensitive plant species through conducting focused sensitive plant species surveys prior to construction of the project. Implementation of MM-BIO-OBJ-3 and MM-BIO-CONS-4 would reduce potential impacts on sensitive plant species through monitoring by a qualified biologist prior to and during construction of the project. Implementation of MM-BIO-CONS-5 and MM-BIO-CONS-6 would require discretionary projects to conserve or restore vegetation communities potentially occupied by sensitive plant species. Implementation of MM-BIO-OBJ-1, MM-BIO-

CONS-2, MM-BIO-OBJ-3, and MM-BIO-CONS-4 through MM-BIO-CONS-6 would be required to reduce potential direct impacts on sensitive plant species. Discretionary projects that streamline under the Consistency Process, will, with implementation of the mitigation measures listed above, have their potential impacts to biological resources reduced to less than significant levels.

Projects requiring mitigation for temporary and permanent impacts to vegetation communities can streamline under the Objective Process even if the future residential project requires coordination with CDFW following entitlement, with implementation of MM-BIO-OBJ-1 and MM-BIO-OBJ-3. However, because state law and the HEU6 require certain uses by right, and the County is barred from requiring CEQA review for a "use by right", impacts on sensitive plant species from Objective Process projects would remain significant and unavoidable.[1] Refer to section 3.7.3, By-Right Development, for a discussion of use by right.

### Indirect Impacts

Temporary indirect impacts on sensitive plant species could result during project implementation, and may include dust, which could disrupt plant vitality in the short-term, or construction-related soil erosion and runoff. Permanent edge effects, which are changes that occur at the boundary between two different communities or habitats (i.e., native habitat and urban/developed land), could result during operation of the project. These edge effects may include intrusions by humans and therefore possible trampling of individual plants, invasion by exotic plant and wildlife species, exposure to urban pollutants (fertilizers, pesticides, herbicides, and other hazardous materials), soil erosion, litter, fire, and hydrologic changes (e.g., surface and groundwater level and quality).

Like the discussion under Sensitive Plant Species, Direct Impacts, if the results of the biological survey required by County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), and Mitigation Measure (MM)-BIO-OBJ-1 determine that sensitive plant species are not present and do not have a high potential to occur in the project opportunity sites, indirect impacts on sensitive plant species would be less than significant, and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that sensitive plant species are present or have a high potential to occur in the project opportunity sites due to available suitable habitat and avoidance is not feasible, indirect impacts on sensitive plant species would be considered potentially significant without additional mitigation.

The project would be required to be in compliance with state and local regulations controlling erosion and stormwater runoff, including the National Pollutant Discharge Elimination System (NPDES) Construction General Permit provisions, which would trigger preparation and compliance with an

[1] The Notice of Availability published in the Monterey County Weekly (dated July 17, 2026) stated that impacts related to Biological Resources were less than significant with mitigation incorporated. This was erroneous. The Notice of Availability provided to the CEQA State Clearinghouse has been updated to note that impacts related to Biological Resources are significant and unavoidable, as described in this Section of the PEIR.

approved Stormwater Pollution Prevention Plan that would consider the full range of erosion control best management practices (BMPs), including any additional site-specific and seasonal conditions to minimize any water quality and erosion impacts that could result during construction. In addition, the project would be subject to the County Code, Chapters 16.08 Grading, 16.12 Erosion Control, 16.14 Stormwater Control, and 16.16 Regulation for Flood Plains which require implementation of BMPs to control the discharge of pollutants to the maximum extent practicable, compliance with the state Construction General Permit, elimination of non-stormwater discharges that are not in compliance with an applicable NPDES permit, and development and approval of a project-specific erosion control plan prior to the start of any grading or clearing. Therefore, through compliance with state and local regulations, ordinances, and plans, indirect impacts on sensitive plant species from erosion, polluted runoff, and hydrologic changes would be less than significant, and no mitigation is required.

However, indirect impacts on sensitive plant species from edge effects and increased human activity could result. Therefore, indirect impacts on sensitive plant species during project construction activities would be considered potentially significant without mitigation. Implementation of MM-BIO-OBJ-3 and MM-BIO-CONS-4 would be required to reduce potential impacts, however, because the County is required to process certain uses by right the project could result in a significant and unavoidable impact.

#### 6.1.2.2 Sensitive Wildlife Species

### Direct Impacts

No biological surveys or focused species surveys were conducted as a part of this project. A total of 26 sensitive wildlife species have been documented by historical literature and databased in the project area (refer to Table 3, Sensitive Wildlife Species Documented in the Project and Figure 7 series).

Implementation of the project on opportunity sites with urban/developed land (Opportunity Sites 5, 6, 17, 23, 27 through 30, 33 through 36, 39, 41, 49, 51, 54, 55, and 64; refer to Table 1) has a low potential to impact sensitive wildlife species because it provides little to no suitable habitat value for the sensitive wildlife species documented in the project area. However, the ornamental trees and shrubs and structures present in the urban/developed land could provide suitable foraging and roosting habitat for sensitive bats documented in the project area, including Townsend's big-eared bat. Foraging and overwintering habitat for monarch butterfly could also be present in any large stands of ornamental trees, specifically coastal groves of eucalyptus, cypress, and pine, that occur in the urban/developed land. Direct impacts on the trees, shrubs, and structures in the urban/developed land of the project area could result in direct impacts on these species in the form of foraging, nesting, roosting, and overwintering habitat loss.

Implementation of the project on undeveloped opportunity sites or those that contain agricultural land and native vegetation communities have the potential to impact sensitive wildlife species.

Although the agricultural land throughout the project area (Opportunity Sites 1 through, 4, 14, 15, 19, 20, 21, 22, 24, 25, 26, 37, 48, and 50; refer to Table 1) is unlikely to support most of the historically documented sensitive wildlife species, species like western burrowing owl, American badger, and San Joaquin kit fox have adapted to frequently use highly cultivated and disturbed areas such as agricultural lands for burrowing (if suitable burrows and soil conditions are available) and as movement corridors.

The aquatic habitats present in the project area (Opportunity Sites 11 through 15, 24, and 56; refer to Table 1), including freshwater and freshwater marsh, have the potential to support sensitive fish and amphibian species documented in the project area, including Monterey hitch, Santa Cruz long-toed salamander, and California red-legged frog, among others. These aquatic communities also provide suitable habitat for sensitive reptiles like northwestern pond turtle and southwestern pond turtle, as well as nesting habitat for sensitive birds like tricolored blackbird and yellow rail.

The woodland and forest communities of mixed conifer forest and oak woodland throughout the project area (Opportunity Sites 8, 9, 10, 16, 20, 21, 22, 31, 37, 40, 43, 45, 46, 48, 52, 53, and 56; refer to Table 1) support sensitive reptiles, birds, and mammals documented in the project area, including but not limited to Blainville's (coast) horned lizard, American badger, and Monterey dusky-footed woodrat.

No riparian forest habitat occurs in the opportunity sites. Therefore, no impacts would occur to the sensitive wildlife species potentially occurring in riparian forest habitat, including Santa Cruz long-toed salamander, foothill yellow-legged frog (South Coast DPS), Blainville's (coast) horned lizard, least Bell's vireo, American badger, Monterey dusky-footed woodrat, and Monterey shrew.

The upland vegetation communities of annual grassland, chaparral, and coastal scrub present in the project area (Opportunity Sites 1, 4, 8 through 12, 14, 15, 18 through 22, 31, 32, 37, 38, 42, 44, 46, 47, 48, 52, and 53; refer to Table 1) provides suitable habitat for sensitive invertebrates, reptiles, birds, and mammals documented in the project area. These sensitive wildlife species include Smith's blue butterfly, coast range newt, western burrowing owl, California horned lark, mountain lion, American badger, Monterey shrew, and San Joaquin kit fox, among others.

As noted in Section 4.3.2, the project would implement a biological survey requirement in compliance with the provisions set forth in Sections 20.66.020 (coastal) and 21.66.020 (inland) of the County Code as well as MM-BIO-OBJ-1 and MM-BIO-CONS-2. Thus, prior to project construction on opportunity sites that contain sensitive vegetation communities or those that could support sensitive wildlife species (such as agricultural land), including Opportunity Sites 1 through 4, 8 through 16, 18 through 22, 24, 25, 26, 31, 32, 37, 38, 40, 42 through 48, 50, 52, 53, and 56, a biological survey would be conducted to determine the presence of sensitive vegetation communities and sensitive wildlife species.

If the results of the biological survey determine that sensitive wildlife species are not present and do not have a high potential to occur in the project opportunity sites, direct impacts on sensitive wildlife species would be less than significant, and no additional mitigation is required.

Alternatively, if the results of the biological survey determine that sensitive wildlife species are present or have a high potential to occur in the project opportunity sites due to available suitable habitat and avoidance is not feasible, direct impacts on sensitive wildlife species would be considered potentially significant without additional mitigation.

Therefore, MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4, MM-BIO-OBJ-7, and MM-BIO-CONS-8 would be required to reduce potential direct impacts on sensitive wildlife species through conducting sensitive bird and wildlife species focused surveys prior to construction. If impacts on sensitive wildlife species and their occupied habitats cannot be avoided, the biological resources survey and reporting shall identify all feasible measures to reduce impacts. Implementation of MM-BIO-CONS-5 and MM-BIO-CONS-6 would be required to conserve and restore vegetation communities potentially occupied or used by sensitive wildlife species, thereby reducing impacts on wildlife species. Projects requiring mitigation for sensitive wildlife species and their occupied habitats can streamline under the Objective Process by identifying all sensitive habitat, the quality of that habitat, the presence or absence of sensitive wildlife species, and providing protective measures and adequate ratios for habitat replacement. Further, if "take" of a species is required by a project, that project must coordinate to obtain the necessary "take" permits with CDFW following entitlement. Discretionary projects that streamline under the Consistency Process, will, with implementation of MM-BIO-CONS-5 and MM-BIO-CONS-6, have their potential impacts to biological resources reduced to less than significant levels. Additionally, implementation of MM-BIO-OBJ-3 and MM-BIO-CONS-4 would reduce potential impacts on sensitive wildlife species, such as sensitive roosting bats, through monitoring by a qualified biologist prior to and during construction of the project. Implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4, MM-BIO-CONS-5, and MM-BIO-CONS-6 would be required to reduce potential direct impacts on sensitive wildlife species. However, because the County must process certain uses by right, the project would likely result in a potentially significant unavoidable impact.

### *Nesting Birds*

The project area provides suitable nesting habitat for birds and raptors protected under the CFGC and MBTA. Focused nest surveys were not conducted due to the programmatic nature of the project. If construction activities begin during the general bird and raptor nesting season (January 15 through September 15), the project would be required to implement regulations protecting sensitive nesting birds, including the CFGC and MBTA. Furthermore, MM-BIO-OBJ-7 and MM-BIO-CONS-8 would require focused bird species surveys to determine presence/absence. If impacts cannot be avoided, MM-BIO-OBJ-7 and MM-BIO-CONS-8 would

reduce potential impacts on nesting birds and raptors by requiring a no-disturbance buffer around any active nest. MM-BIO-OBJ-3 and MM-BIO-CONS-4 would reduce potential impacts through monitoring by a qualified biologist prior to and during construction of the project. Therefore, impacts on nesting birds and raptors would be less than significant with implementation of MM-BIO-OBJ-3, MM-BIO-CONS-4, MM-BIO-OBJ-7, and MM-BIO-CONS-8.

#### *Sensitive Roosting Bats*

As previously discussed, suitable roosting habitat for sensitive bat species, including Townsend's big-eared bat and western red bat, occurs in the structures and trees throughout the project area. Although no focused nighttime mist-netting or acoustic surveys were conducted, the availability of suitable roosting with nearby foraging habitat suggests that bats are likely roosting in the project area. Therefore, if sensitive roosting bats are present in the opportunity sites of the project area, potential impacts would be considered potentially significant without mitigation. If impacts cannot be avoided, implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, and MM-BIO-CONS-4 would be required to reduce potential impacts on sensitive roosting bats through monitoring by a qualified biologist prior to and during construction and conducting sensitive wildlife species focused surveys prior to construction of the project. With implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, and MM-BIO-CONS-4, impacts on sensitive roosting bats would be less than significant.

#### *Critical Habitat*

Critical habitat for Monterey spineflower, Santa Cruz tarplant, vernal pool fairy shrimp, tidewater goby, California red-legged frog, California tiger salamander, and western snowy plover occurs in the project area (Figure 8 series). Although most of the critical habitat for these seven species (two plant species and five wildlife species) occurs outside the opportunity sites in the project area, designated critical habitat for California red-legged frog occurs within the project Opportunity Sites 23, 36, 38, 55, and 56 (Figure 8 series). Therefore, potential impacts to this sensitive species in its designated critical habitat could occur during implementation of the project on these opportunity sites and would be considered potentially significant without mitigation.

Like the discussion under Sensitive Wildlife Species, Direct Impacts, if the results of the biological survey required by the County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), as well as MM-BIO-OBJ-1 and MM-BIO-CONS-2 determine that suitable habitat for California red-legged frog is not present in the project opportunity sites where designated critical habitat is documented (including project Opportunity Sites 23, 36, 38, 55, and 56), direct impacts on this sensitive species in its designated critical habitat would be less than significant and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that suitable California red-legged frog habitat is present in the project opportunity sites where designated critical habitat is

documented, direct impacts on designated critical habitat for California red-legged frog would be considered potentially significant without mitigation. Therefore, implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, and MM-BIO-CONS-4 through MM-BIO-CONS-6 would be required to reduce impacts on critical habitat to a less than significant level. However, because the County must process certain uses by right, the Objective Process could result in significant and unavoidable impacts at the programmatic level.

### Indirect Impacts

Temporary construction-related and long-term operational indirect impacts on wildlife generally include lighting, increased human activity (including introduction of pets as predators), hydrologic quality (increased turbidity, excessive sedimentation, flow interruptions, and changes in water temperature), noise, vibration, and trash and garbage, which can attract both introduced terrestrial and native terrestrial and bird predators (such as American crows, common ravens [*Corvus corax*], coyotes [*Canis latrans*], domestic dogs [*Canis familiaris*], raccoons [*Procyon lotor*], and striped skunks [*Mephitis mephitis*]). These indirect impacts in the form of habitat disturbance and potential predation could have a significant impact on the sensitive wildlife species historically documented in the project area, identified in Section 3.3.2, Sensitive Wildlife Species, and discussed under Direct Impacts in Section 6.1.2.2.

As discussed in the section on Sensitive Wildlife Species, Direct Impacts, if the biological survey required by the County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), as well as MM-BIO-OBJ-1 and MM-BIO-CONS-2, finds that sensitive wildlife species are neither present nor have a high potential to occur in the project opportunity sites, indirect impacts on sensitive wildlife species would be less than significant; no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that sensitive wildlife species are present or have a high potential to occur in or adjacent to the project opportunity sites due to available suitable habitat, indirect impacts on sensitive wildlife species could occur.

Indirect impacts on sensitive wildlife species from hydrologic changes, including erosion, stormwater runoff, and pollution discharges, would be reduced through project compliance with NPDES Construction General Permit provisions and County Code, Chapters 16.08, Grading; 16.12, Erosion Control; 16.14, Stormwater Control; and 16.16, Regulation for Flood Plains. Similarly, the project would conform with the County Code, Chapter 10.60, Noise Control, and implement BMPs for the use of noise- and vibration-emitting equipment during construction. Further, compliance with the County Code, Chapter 10.60, Noise Control, would restrict the hours of construction activity and include a noise level limit to minimize disturbance from construction noise. Potential indirect impacts on sensitive wildlife species from new sources of lighting during construction and operation would be reduced through project compliance with County Code, Section 21.63.020, Design Guidelines for Exterior Lighting, which requires temporary

construction lighting and permanent exterior lighting are unobtrusive, avoid off-site glare, and illuminate only the intended area.

However, indirect impacts on sensitive wildlife species from lighting, excessive noise and vibration, increased human activity, and potential predation by mesocarnivores attracted by trash and garbage could result. Therefore, indirect impacts on sensitive wildlife during project construction activities would be considered potentially significant without mitigation. Implementation of MM-BIO-OBJ-3, MM-BIO-CONS-4, (from PEIR Section 4.13, Noise) MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 would be required to reduce potential impacts to a less than significant level through monitoring by a qualified biologist prior to and during construction and BMPs to reduce construction noise and vibration in compliance with the County Code, Chapter 10.60, Noise Control.

### 6.1.3 Mitigation Measures

For by-right housing developments streamlining under the Objective Process, Mitigation Measures (MM) MM-BIO-OBJ-1, MM-BIO-OBJ-3, and MM-BIO-OBJ-7 shall be required to reduce potentially significant impacts on sensitive plant and wildlife species to the extent feasible. However, the County must process certain uses by right and cannot guarantee that impacts would be reduced to a level below significance.

For developments streamlining under the Consistency Process, MM-BIO-CONS-2, MM-BIO-CONS-4 through MM-BIO-CONS-6, and MM-BIO-CONS-8 shall be required to reduce potentially significant impacts on sensitive plant and wildlife species.

#### Sensitive Plant Species

**MM-BIO-OBJ-1: Biological Resources Survey and Protection Measures**. Prior to subsequent project-level approval and prior to any construction or grading activities, as required by Sections 20.66.020 (coastal) and 21.66.020 (inland) of the Monterey County Code, applicants for projects streamlining under the Objective Process on opportunity sites shall retain a qualified biologist, as approved by the County of Monterey (County), to conduct a biological survey documenting the biological resources, including environmentally sensitive habitats, sensitive plant and wildlife species, and jurisdictional aquatic resources, found on the site and within 100 feet of the site.

As identified in California Department of Fish and Wildlife Section 1600 permit standards, the qualified biologist is an individual who holds, at a minimum, a bachelor's degree from an accredited university in a scientific field and shall:

- be knowledgeable and experienced in the biology and natural history of local plant and wildlife resources;
- be able to identify resources that are or have the potential to be present at the project site;

- have previous biological monitoring experience on construction projects;
- for any required nesting bird surveys, the biologist must have at least three years of field experience conducting general and protocol level surveys related to finding nests and monitoring them for the specific purpose of determining breeding status, egg incubation, chick maturity, and estimating fledge date;
- have the necessary experience and/or certifications for conducting protocol and focused surveys for species that may be present in the project area;
- when needed, have obtained the proper handling authorization documentation.

The project-specific biological evaluations shall be conducted using the best available scientific information, including documented species occurrences, applicable database records, habitat suitability, field reconnaissance, and project-specific site conditions, to evaluate the potential for sensitive, special-status, federally or state-listed, candidate, or otherwise protected species to occur on the site and within 100 feet of the site.

The qualified biologist shall document the survey results in a memorandum with maps, consistent with the requirements of Monterey County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), that is signed attesting that there are no sensitive biological resources present on the project site or that if present, they shall be avoided. The County shall review the memorandum and maps to confirm that no sensitive biological resources are present or that if present, they are avoided.

Where suitable habitat is present, sensitive species have the potential to occur, are documented within or adjacent to the project area, or are otherwise reasonably suspected to be present based on habitat conditions or field observations, the qualified biologist shall determine whether habitat assessments and species-specific focused and/or protocol surveys are warranted based on the project characteristics, anticipated impacts, applicable regulatory requirements, and current agency guidance. Where warranted, surveys shall be conducted in accordance with applicable federal, state, and local regulations, agency-approved protocols, and accepted scientific standards. Survey findings shall be used to determine species presence or probable absence and to inform project design, impact assessment, environmental compliance, agency consultation, permitting, monitoring, and any additional biological evaluation or regulatory actions, as required.

If sensitive biological resources are present on the project site but avoided by project design, a qualified biological resources monitor shall be present when earthwork is within 100 feet of the sensitive biological resource to avoid indirect impacts. Refer to MM BIO-OBJ-3, below, which outlines the biological resources monitoring requirements for projects that qualify for streamlining under the Objective Process.

A. **Demonstrate Conformance with 2010 General Plan and Land Use Plan Policies.** Within 2 years of certification of the PEIR, the County shall conduct a comprehensive review of applicable Goals and Policies in the 2010 General Plan and Land Use Plans for North County and Carmel Area related to Biological Resources. Based on that review, the County shall develop standardized checklists to demonstrate conformance with the identified Goals and Policies. The review shall also identify any Policies that are subjective or discretionary in nature. For such Policies, each standardized checklist shall provide clear criteria to demonstrate compliance for eligible projects. These standards will be required to be discussed in the required Biological Report. The review shall include all applicable topic areas, including but not limited to, the following:

- 2010 General Plan:
  i. *Conservation and Open Space Element* - Policies OS-4.1 through OS-4.3: Policies OS-5.1 through OS-5.6, OS-5.9, OS-5.11 through OS-5.13, OS-5.16 through OS-5.18, OS-5.24, and OS-5.25.
  ii. *Land Use Element* – Policies LU-1.5, LU-1.13, LU-2.34(c), LU-7.2, and LU-8.4 through LU-8.6
  iii. *Carmel Valley Master Plan* – CV-1.3, CV-33.4, CV-3.7 through CV-3.12, and CV-3.15
  iv. *Greater Monterey Peninsula Area Plan* – GMP-1.5 and GMP-3.5 through GMP-3.10
  v. *Fort Ord Master Plan* – Land Use Element Policies A-1, B-1, and B-2, Recreation and Open Space Policies C-1 and C-2, Conservation Element Hydrology and Water Quality Policies C-2, C-4, C-6, A-1, A-5, A-6, and A-9; Biological Resources Policies A-1, A-5, A-6, A-9, B-1 through B-3, C-1 through C-3, D-1, and E-2
  vi. *Greater Salinas Area Plan* – Policy GS-3.1
  vii. *North County Area Plan* – Policy NC-3.3 through NC-3.5
  viii. *Toro Area Plan* – Policy T-3.5 and T-3.7
  ix. *Castroville Community Plan* – Policy 5.1
- Land Use Plan Policies:
  i. *North County Land Use Plan* - Key Policy 2.3.1, General Policies 2.3.2, and Specific Policies 2.3.3; Key Policy 2.4.1, General Policies 2.4.2, and Specific Policies 2.4.3; Key Policy 2.5.1, General Policies 2.5.2, and Specific Policies 2.5.3
  ii. *Carmel Area Land Use Plan* - Key Policy 2.3.2, General Policies 2.3.3, and Specific Policies 2.3.4; Specific Policies 2.3.4. Key Policy 2.4.2, General Policies 2.4.3, and Specific Policies 2.4.4; Key Policies 4.4.1 and 5.3.1, General Policies 4.4.2, and Specific Policies 4.4.3 and 5.3.3

B. Applicants for projects that qualify for streamlining under the Objective Process but that would result in unavoidable direct impacts to sensitive vegetation communities shall be required to acquire compensatory credits or implement habitat creation, restoration, enhancement, or preservation that comply with California Department of Fish and Wildlife (CDFW) authorizations at a minimum 1:1 ratio, or a ratio as defined in any state or federal permit(s) issued for the project. Compensatory credits are purchased to compensate for unavoidable impacts to aquatic resources and/or special status species and/or habitat through the conservation and protection of state and/or federally listed threatened, endangered species and/or habitat. Compensatory credits are purchased from banks approved by the U.S. Army Corps of Engineers, U.S. Environmental Protection Agency, CDFW, U.S. Fish and Wildlife Service, National Oceanic and Atmospheric Administration-National Marine Fisheries Service, and/or State Water Resources Control Board.

   Such potential direct impacts shall be addressed by the applicant prior to both issuance of the first grading or construction permit and any vegetation clearing or ground-disturbing activities within the site-specific areas, pursuant to the below: Compensatory credits shall be redeemed through the acquisition of off-site bank credits via a resource agency-approved site within the site's specific watershed or by acquisition of other off-site credits. The qualified biologist shall provide substantial evidence that the acquisition of other off-site credits is adequate. Prior to implementation of project construction impacts (e.g., vegetation clearing or ground-disturbing activities) that would require the redemption of compensatory credits, documentation demonstrating the availability of such credits (i.e., credit ledger) at the agency-approved bank or other off-site credits must be submitted to the County of Monterey for confirmation.

   1. If credits are not available at either a resource agency-approved site within the site's specific watershed or off-site, implementation of habitat creation, restoration, enhancement, or preservation shall occur through a Habitat Monitoring Plan developed by a qualified biologist. Under this option, an applicant shall cause a Habitat Monitoring Plan to be prepared to achieve no net loss of the resource timed in relation to project impacts. Such a plan shall also comply with applicable federal, state, and local requirements.
   2. The Habitat Monitoring Plan shall include all of the following information:
      - A Conceptual planting plan including planting zones, grading, and irrigation.
      - A Seed mix/planting palette.
      - Planting specifications.

- A Monitoring program prepared by a qualified biologist including success criteria to ensure no net loss of sensitive vegetation communities. Final success criteria shall be determined based on quality, quantity, and type of habitat impacted. The monitoring program shall include measures for adaptive management, detailing required remedial actions if success criteria are not met in the monitoring time frame. Remedial actions may include, but are not limited to, providing supplemental water, replanting, and herbivore deterrents/protections.

  For measures that involve habitat acquisition, the Habitat Monitoring Plan shall include all of the following:

  - The location of proposed acquisition.
  - A description of the biological resources to be acquired, including support for the conclusion that the acquired habitat is adequate for the specific maintenance impact.
  - Documentation that the area would be adequately preserved and maintained in perpetuity.
  - The identification of off-site credits shall be provided to the County of Monterey and shall include the following:
  - The location of the approved site.
  - A description of the off-site credits the applicant intends to acquire, including substantial evidence that the acquired habitat would be adequate to mitigate the project's specific maintenance impact.
  - Documentation of the credits that are associated with a bank, which has been approved by the appropriate resource agencies.
  - Documentation in the form of a current credit ledger.

The County shall approve the Habitat Management Plan if all conditions are met.

If "take" of sensitive habitat or species is required, the applicant shall both obtain an Incidental Take Permit from the California Department of Fish and Wildlife and/or US Fish and Wildlife Service and provide proof of such permit to the County prior to County issuance of the first grading or construction permit.

If the qualified biologist report does not identify adequate measures to replace sensitive habitat as detailed above, the project shall be moved into the Consistency Process, and shall follow MM-BIO-CONS-2, etc., below.

**MM-BIO-CONS-2: Biological Resources Survey**. Prior to subsequent project-level approval and prior to any construction or grading activities for discretionary housing developments

streamlining under the Consistency Process, as required by Sections 20.66.020 (coastal) and 21.66.020 (inland) of the Monterey County Code, applicants shall retain a qualified biologist, as approved by the County of Monterey (County), to conduct a biological survey documenting the biological resources, including environmentally sensitive habitats, sensitive plant and wildlife species, and jurisdictional aquatic resources, found on the site and within 100 feet of the site.

Refer to MM-BIO-OBJ-1, above, for all standards and requirements for MM-BIO-CONS-2. If sensitive biological resources are present on the project site but cannot be avoided by project design, a qualified biological resources monitor shall be present when earthwork is in or within 100 feet of the sensitive biological resource to minimize impacts. Refer to MM-BIO-CONS-4, below, which outlines the biological resources monitoring requirements for projects that qualify for streamlining under the Consistency Process. For unavoidable impacts on sensitive plant and wildlife species habitats and sensitive vegetation communities, implementation of MM-BIO-CONS-5 and MM-BIO-CONS-6, below, would be required to compensate for permanent impacts and restore temporary impacts on these habitats.

**MM-BIO-OBJ-3: Qualified Monitoring Biologist.** Prior to the start of construction activities for by-right housing developments streamlining under the Objective Process, as required by mitigation measures recommended by the biological survey report pursuant to County of Monterey Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), and MM-BIO-OBJ-1, a qualified monitoring biologist shall be retained to implement required monitoring. The qualified monitoring biologist shall be responsible for the following monitoring and reporting tasks:

a. **Biological Construction Monitoring Exhibit.** The qualified monitoring biologist shall submit a Biological Construction Monitoring Exhibit, which includes limits of work, proposed monitoring schedule, bird, focused sensitive species, or other wildlife surveys/survey schedules (including general bird nesting and U.S. Fish and Wildlife protocol), timing of surveys, bird construction avoidance areas/noise buffers/barriers, other impact avoidance areas, and any subsequent requirements determined by the qualified monitoring biologist. The Biological Construction Monitoring Exhibit shall include the construction site plan, written and graphic depiction of the project's biological monitoring program, and a schedule for construction activities. Where the potential for impacts on biological resources is limited (e.g., construction within a footprint that consists entirely of previously developed or disturbed lands), the Biological Construction Monitoring Exhibit may be limited to a pre- and post-maintenance verification inspection by a qualified biologist. For highly sensitive resource areas with documented sensitive biological

and aquatic resources present, full-time biological monitors may be required, as determined by a qualified biologist. The Biological Construction Monitoring Exhibit shall be approved by the County of Monterey prior to the start of construction.

b. **Resource Marking/Protection.** Prior to the start of construction activities within the future site-specific project area, the qualified monitoring biologist shall supervise the placement of orange construction fencing or similar visible marker, staking, or flagging along the limits of the construction area adjacent to sensitive biological habitats, as shown on the Biological Construction Monitoring Exhibit to ensure crews remain within the approved construction limits. These demarcations shall not be required for areas with existing barriers, such as chain-link fencing, along the limits or facilities that are within or adjacent to developed and non-sensitive habitat areas. This task shall include flagging plant specimens and delineating buffers to protect sensitive biological resources (e.g., habitats, sensitive plant and wildlife species, including nesting birds) prior to construction.

c. **Cover Trenches.** The qualified monitoring biologist shall oversee the construction site so that cover and escape routes for wildlife from excavated areas shall be provided daily. All steep trenches, holes, and excavations during construction shall be covered at night with backfill, plywood, metal plates, or other means, and if plastic sheeting is used, the edges must be covered with soils such that small wildlife cannot access the excavated hole. Soil piles shall be covered at night to prevent wildlife from burrowing in. The edges of the sheeting shall be weighed down by sandbags. These areas may also be fenced to prevent wildlife from gaining access. Exposed trenches, holes, and excavations shall be inspected twice daily (i.e., each morning and before sealing the exposed area) by the qualified monitoring biologist to monitor for wildlife entrapment. Excavations shall provide an earthen ramp to allow for a wildlife escape route. The qualified monitoring biologist shall verify that the contractor has covered all steep-walled trenches or excavations prior to the end of construction daily. If wildlife species are encountered within any trenches or excavated areas, the qualified monitoring biologist shall remove them, if possible, or provide them with a means of escape (e.g., a ramp or sloped surface at no greater than a 30-degree angle) and allowed to disperse. In addition, the qualified monitoring biologist shall provide training to construction personnel to increase awareness of the possible presence of wildlife beneath vehicles and equipment and to use best judgment to avoid killing or injuring wildlife (refer to below section [e] of this MM-BIO-OBJ-3[f]).

d. **Structure and Tree Clearance.** Prior to the issuance of any permit to allow for the removal or demolition of trees and existing structures within the survey area (particularly any ornamental trees and existing buildings in the developed land

areas), the qualified monitoring biologist shall conduct clearance surveys to flush out any wildlife species nesting, roosting, or otherwise occupying the trees or structures. If wildlife species are encountered within any of the trees or structures (outside the general bird nesting season), the qualified monitoring biologist shall remove them, if possible, or provide them with a means of escape and allow the species to disperse. If tree-roosting bats are suspected, slow removal by gently pushing the tree over with heavy equipment is required. All tree removal in inland areas shall be in accordance with the Monterey County Code, Chapter 16.60, Preservation of Oak and Other Protected Trees. All tree removal in coastal areas shall be in accordance with Section 20.146.060 of the Monterey County Coastal Implementation Plan, Regulations for Development in the Carmel Area Land Use Plan, and Section 20.144.050 of the Monterey County Coastal Implementation Plan, Regulations for Development in the North County Land Use Plan Area, including preparation of a Forest Management Plan, as applicable.

e. **Nighttime Lighting.** Prior to the start of any construction activity where the site plan for the construction area indicates that significant impacts on biological resources may occur, the qualified monitoring biologist shall confirm the planned construction activities are limited to between dawn and dusk to avoid the use of nighttime construction lighting and the resulting illumination of on-site and adjacent habitat areas. In the event that temporary nighttime construction lighting is necessary, the qualified monitoring biologist shall oversee the construction site so that all lighting is of the lowest illumination necessary for human safety, directed away from sensitive vegetation communities and habitat areas, and shielded to minimize light spillover outside of the designated work area.

f. **Pre-Construction Meeting/Education.** Prior to the start of any construction activity where the site plan for the construction area indicates that significant impacts on biological resources may occur, as determined by a qualified biologist, a pre-construction meeting shall be held on site with the following in attendance: County of Monterey project manager, the construction contractor (if applicable), and the qualified monitoring biologist. At this meeting, the qualified monitoring biologist shall identify and discuss the construction protocols that apply to the proposed activities and the sensitive nature of the adjacent habitat with appropriate project personnel.
   - At the pre-construction meeting, the qualified monitoring biologist shall submit to the County of Monterey representative and construction contractor a copy of the Biological Construction Monitoring Exhibit that identifies areas to be protected, fenced, and monitored. This data shall include all buffer limits, if applicable.

- Prior to the start of construction activities, the qualified monitoring biologist shall meet with the construction contractor and crew and conduct an on-site educational session regarding the need to avoid impacts outside the approved construction footprint and to protect sensitive plants and wildlife that may occur at the specific facility. This may include but not be limited to explanations of the bird and wetland buffers, the flag system for removal of invasive species or retention of sensitive plants, and clarification of acceptable access routes/methods and staging areas.

g. **Regulatory Compliance Monitoring.** The qualified monitoring biologist shall conduct periodic compliance checks for construction activities to document compliance with applicable state and local regulations controlling erosion, stormwater runoff, fugitive dust, use of weed- and invasive-free erosion control materials, and excessive noise, including but not limited to, the National Pollutant Discharge Elimination System Construction General Permit provisions, an approved Stormwater Pollution Prevention Plan, erosion and dust control best management practices, and Monterey County Ordinances for stormwater, erosion control, and noise. The qualified monitoring biologist shall have authority to notify the construction contractor and require corrective actions as needed to maintain compliance with the above regulations.

h. **Biological Monitoring and Reporting.** The qualified monitoring biologist with stop work authority shall inspect/monitor the project construction area in accordance with the approved Biological Construction Monitoring Exhibit. This may be limited to pre- and post-maintenance inspections, weekly visits, or full-time monitoring, as determined by the qualified monitoring biologist and County of Monterey. If, during construction, the qualified monitoring biologist identifies sensitive habitat and/or a sensitive species that are neither avoided by design nor identified on the Biological Construction Monitoring Exhibit, or that were not identified in the initial survey and reporting required under MM-BIO-OBJ-1, the qualified biologist shall immediately stop work and notify the County. Work will not commence in the affected area until the County and, if required, a consulting wildlife agency, agree that the project would no longer have the potential to impact a sensitive biological resource.

i. **Documentation.** The qualified monitoring biologist shall document monitoring events via a Consultant Site Visit Record. This record shall be sent to the County of Monterey project manager each month. However, if weekly reports are submitted as part of a separate agency permit requirement, these reports may be forwarded to the County of Monterey in place of Consultant Site Visit Record submittals.

j. **Final Monitoring Report.** If no deviations from the construction site plan occur during maintenance, no additional documentation is required. However, if

deviations from the site plan do occur, such as unanticipated impacts on sensitive vegetation communities or unanticipated discharge of pollutants, a Final Monitoring Report shall be prepared within 3 months following the completion of mitigation monitoring detailing maintenance and monitoring that occurred, and any remedial or compensatory measures taken.

**MM-BIO-CONS-4: Qualified Monitoring Biologist.** Prior to the start of construction activities for discretionary developments streamlining under the Consistency Process, as required by mitigation measures recommended by the biological survey report pursuant to County of Monterey Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), and Mitigation Measure (MM-) BIO-CONS-2, a qualified monitoring biologist shall be retained to implement required monitoring.

Refer to MM-BIO-OBJ-3, above, for all standards and requirements for MM-BIO-CONS-4.

**MM-BIO-CONS-5: Sensitive Vegetation Communities Impacts Mitigation.** Applicants for projects that qualify for streamlining under the Consistency Process that result in direct impacts on sensitive vegetation communities shall be required to provide mitigation to comply with California Department of Fish and Wildlife (CDFW) authorizations at a minimum 1:1 ratio, or as defined in any state or federal permit(s) issued for the project.

Potential direct impacts on sensitive vegetation communities resulting from discretionary project implementation shall be mitigated prior to subsequent project-level approval and prior to any vegetation clearing or ground-disturbing activities within the site-specific areas through one of the following two options:

1. Compensatory mitigation shall be satisfied through the acquisition of mitigation bank credits via a resource agency-approved mitigation site within the site's specific watershed or by acquisition of other off-site mitigation credits to be identified and selected in coordination with CDFW. Prior to implementation of project construction impacts (e.g., vegetation clearing or ground-disturbing activities) that would require compensatory mitigation, documentation demonstrating the availability of mitigation credits (i.e., credit ledger) at the approved mitigation site must be submitted to the County of Monterey for confirmation.
2. If credits are not available at a resource agency-approved mitigation site within the site's specific watershed or through other off-site mitigation credits, implementation of habitat creation, restoration, enhancement, or preservation shall occur through a Habitat Mitigation and Monitoring Plan developed by a qualified biologist. Under this option, a Habitat Mitigation and Monitoring Plan shall be

provided and prepared to achieve no net loss of the resource, be timed in relation to project impacts, and comply with federal and state mitigation requirements.

3. When proposed mitigation involves habitat enhancement, restoration, or creation, the Habitat Mitigation and Monitoring Plan shall include all of the following information:

    - Conceptual planting plan including planting zones, grading, and irrigation.
    - Seed mix/planting palette.
    - Planting specifications.
    - Monitoring program prepared by a qualified biologist including success criteria that ensure no net loss of sensitive vegetation communities. Final success criteria shall be determined based on quality, quantity, and type of habitat impacted and in consultation with CDFW. The monitoring program shall include measures for adaptive management plan detailing remedial actions if success criteria are not met in the monitoring time frame. Remedial actions may include, but are not limited to, supplemental water, replanting, and herbivore deterrents/protections.

    For mitigation that involves habitat acquisition, the Habitat Mitigation and Monitoring Plan shall include all of the following:

    - Location of proposed acquisition.
    - Description of the biological resources to be acquired, including support for the conclusion that the acquired habitat mitigates for the specific maintenance impact.
    - Documentation that the mitigation area would be adequately preserved and maintained in perpetuity.

    The identification of mitigation site credits shall be provided to the County of Monterey and shall include the following:

    - Location of approved mitigation site.
    - Description of the mitigation credits to be acquired, including substantial evidence that the acquired habitat mitigates for the specific maintenance impact.
    - Documentation of the credits that are associated with a mitigation bank, which has been approved by the appropriate resource agencies.
    - Documentation in the form of a current mitigation credit ledger.

**MM-BIO-CONS-6: Habitat Restoration for Temporary Impacts.** Applicants for discretionary projects that qualify for streamlining under the Consistency Process that result in temporary impacts shall restore these areas to pre-construction topographic contours and conditions, including the revegetation of native plant communities, where appropriate, following

disturbance and prior to project completion. Habitat restoration and erosion control treatments shall be installed within these short-term impact areas. Habitat revegetation shall feature native species that are typical of the area, and associated erosion control best management practices shall include silt fence and microplastic- and weed-free straw fiber rolls, where appropriate. The revegetation areas shall be monitored and maintained by a qualified biologist or restoration specialist for 25 months to ensure adequate establishment and sustainability of the plantings/seedings.

Where a project activity involves potential disturbance of non-native invasive plant species (as identified by the California Invasive Plant Council), these plants shall be entirely removed immediately, where feasible, and the removal shall be monitored by the qualified monitoring biologist to ensure that dispersal of propagules (e.g., seeds and stems) are avoided or minimized. Where removal of plant roots is not feasible (e.g., where erosive flows are predicted), aboveground plant material shall be fully removed and monitored by the qualified monitoring biologist. Where aboveground plant material cannot be removed (e.g., due to limited access), herbicides shall be applied by a licensed pest control advisor, using chemicals permitted as safe within aquatic environments.

## Sensitive Wildlife Species

**MM-BIO-OBJ-7: Focused Bird Species Surveys for Avoidance.** Project construction activities for by-right housing developments streamlining under the Objective Process that may directly (e.g., vegetation removal, clearing and grubbing, building demolition) or indirectly affect (noise, light, or ground vibration) nesting raptors and other protected bird species shall be timed to avoid the nesting season (February 1 through September 15). If Project activities occur within the nesting season, the qualified monitoring biologist shall conduct focused surveys for birds in suitable habitat to determine presence/absence. Surveys shall occur within seven (7) days prior to any construction or grading activities within the future site-specific project areas. Focused sensitive bird surveys shall be conducted during the species' specific nesting seasons to determine presence/absence within the development footprint plus a buffer, if recommended by the qualified monitoring biologist (refer to MM-BIO-OBJ-1 and MM-BIO-OBJ-3). The survey report shall map and describe the location and extent of observed sensitive bird species that would be impacted within the areas of potential effect for each project area. If no nesting birds are documented within the individual activity area, construction shall be allowed to proceed. If nesting birds cannot be completely avoided, a no-disturbance buffer shall be established around the active nest, the size of which will be determined by the qualified monitoring biologist based on species of bird and specific construction activities to take place. The size of the buffer can be reduced by the qualified monitoring biologist in consultation with California Department of Fish

and Wildlife. Any work within the buffer shall be avoided until the nest is inactive, as determined by the qualified monitoring biologist.

**MM-BIO-CONS-8: Focused Bird Species Surveys for Avoidance.** Project construction activities for discretionary developments streamlining under the Consistency Process that may directly (e.g., vegetation removal, clearing and grubbing, building demolition) or indirectly affect (noise, light, or ground vibration) nesting raptors and other protected bird species shall be timed to avoid the nesting season (February 1 through September 15). If Project activities occur within the nesting season, the qualified monitoring biologist shall conduct focused surveys for birds in suitable habitat to determine presence/absence. Surveys shall occur within seven (7) days prior to any construction or grading activities within the future site-specific project areas.

Refer to MM-BIO-OBJ-7 above, for all standards and requirements for MM-BIO-CONS-8.

Refer to PEIR Section 4.13, MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5.

### 6.1.4 Significance After Mitigation

MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, and MM-BIO-CONS-8 would require a pre-construction biological survey, monitoring by a qualified biologist prior to and during construction, conservation or restoration of sensitive vegetation communities potentially occupied by sensitive plant and wildlife species, and conducting focused surveys for sensitive bird species prior to construction. Further, under MM-BIO-OBJ-3 and MM-BIO-CONS-4 the biological monitor would be responsible for the following: preparation of an exhibit for monitoring, overseeing resource marking and protection, ensuring cover and escape routes for wildlife are provided, conducting clearance surveys for roosting bats and nesting birds, monitoring for nighttime lighting compliance, providing contractor environmental education, the ability to stop work, and conducting general compliance monitoring and reporting requirements. MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 would require implementation of BMPs to reduce construction noise and vibration in compliance with County Code, Chapter 10.60, Noise Control. Impacts would be reduced below a level of significance for the Consistency Process. However, because the County must process certain uses by right, there is a potential that impacts to sensitive plant and wildlife species cannot be mitigated below a level of significance. Therefore, impacts on sensitive plant and wildlife species would be significant and unavoidable.

## 6.2 Threshold 2: Riparian Habitat or Other Sensitive Natural Community

### 6.2.1 Guidelines for Determination of Significance

A significant impact would result if the project would have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the CDFW or USFWS.

### 6.2.2 Impact Analysis

#### Direct Impacts

A total of six sensitive vegetation communities and two land cover types occur in the project area, including freshwater, freshwater marsh, mixed conifer forest, oak woodland, annual grassland, coastal scrub, agricultural land, and urban/developed land. Construction activities on the project opportunity sites that contain or are within 100 feet of sensitive vegetation communities could result in potential impacts on these sensitive vegetation communities.

As noted in Section 4.3.2, the project, including by-right housing developments and developments streamlining under the Consistency Process on opportunity sites, would implement a biological survey requirement (MM-BIO-OBJ-1 and MM-BIO-CONS-2) in compliance with the provisions set forth in Sections 20.66.020 (coastal) and 21.66.020 (inland) of the County Code. Thus, prior to project construction on opportunity sites that contain or are within 100 feet of sensitive vegetation communities, including freshwater, freshwater marsh, mixed conifer forest, oak woodland, annual grassland, and coastal scrub (Opportunity Sites 1, 4, 8, 9, 10, 11, 12, 13, 14, 15, 16, 18, 19, 20, 21, 22, 24, 31, 32, 37, 38, 40, 42, 43, 44, 45, 46, 47, 48, 52, 53, and 56), a biological survey would be conducted to determine the presence of sensitive vegetation communities.

If the results of the biological survey (MM-BIO-OBJ-1 and MM-BIO-CONS-2) determine that sensitive vegetation communities are not present in or within 100 feet of the project opportunity sites, direct impacts on sensitive vegetation communities would be less than significant, and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that sensitive vegetation communities occur in or within 100 feet of the opportunity sites and avoidance is not feasible, direct impacts on sensitive vegetation communities would be potentially significant without mitigation.

Impacts on opportunity sites comprised only of non-sensitive land cover types, including agricultural land and urban/developed land (Opportunity Sites 2, 3, 5, 6, 17, 23, 25, 26, 27, 28, 29, 30, 33, 34, 35, 36, 39, 41, 49, 50, 51, 54, 55, and 64), would not be considered significant or require habitat-based mitigation.

In the event sensitive vegetation communities are identified in the project opportunity sites and avoidance is not feasible, development of the project could result in potentially significant direct impacts on sensitive vegetation communities, including freshwater, freshwater marsh, mixed conifer forest, oak woodland, annual grassland, and coastal scrub.

With implementation of MM-BIO-OBJ-3 and MM-BIO-CONS-4 through MM-BIO-CONS-6, direct impacts on these sensitive vegetation communities would be reduced through monitoring by a qualified biologist, mitigating for acreage impacts through the Objective Process MM-BIO-OBJ-1[2] and Consistency Process MM-BIO-CONS-2, and restoring habitat for temporary impacts.

### Indirect Impacts

Most of the indirect impacts on sensitive plant species described in Section 6.1, Threshold 1: Sensitive Plant and Wildlife Species, also result in potentially significant indirect impacts on sensitive vegetation communities. Like the discussion under Indirect Impacts in Section 6.1.2.1, if the results of the biological survey required by the County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), and MM-BIO-OBJ-1 and MM-BIO-CONS-2 determine that sensitive vegetation communities do not occur in or within 100 feet of the project opportunity sites, indirect impacts on sensitive vegetation communities would be less than significant, and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that sensitive vegetation communities are present in or within 100 feet of the project opportunity sites, indirect impacts on sensitive vegetation communities would be considered potentially significant without mitigation.

Indirect impacts on sensitive vegetation communities from hydrologic changes, including erosion, stormwater runoff, and pollution discharges would be reduced through project compliance with NPDES Construction General Permit provisions (including preparation and implementation of a Stormwater Pollution Prevention Plan and BMPs) and County Code, Chapters 16.08, Grading; 16.12, Erosion Control; 16.14, Stormwater Control; and 16.16, Regulation for Flood Plains. Therefore, through compliance with state and local regulations, ordinances, and plans, indirect impacts on sensitive vegetation communities from erosion, polluted runoff, and hydrologic changes would be less than significant, and no mitigation is required.

However, indirect impacts on sensitive vegetation communities from edge effects and increased human activity during construction could result. Therefore, indirect impacts on sensitive vegetation communities during project construction activities would be considered potentially significant without mitigation. Implementation of MM-BIO-OBJ-3 and MM-BIO-CONS-4 would

[2] Mitigation is required through this PEIR. The Objective Process mitigation measures in this PEIR would be made a condition in the By-Right Housing Ordinance upon adoption, at which point Objective Process projects would be required to adhere to ordinance without additional future discretionary mitigation.

be required to reduce potential impacts to a less than significant level through monitoring by a qualified biologist prior to and during construction of the project.

### 6.2.3 Mitigation Measures

Refer to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, and MM-BIO-CONS-4 through MM-BIO-CONS-6.

### 6.2.4 Significance After Mitigation

MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, and MM-BIO-CONS-4 through MM-BIO-CONS-6 would require a pre-construction biological survey, monitoring by a qualified biologist prior to and during construction, and conservation or restoration of sensitive vegetation communities.

Impacts on sensitive vegetation communities for Consistency Process projects would be less than significant with mitigation incorporated. It is still possible that impacts on riparian habitat or other sensitive natural community could occur through projects subject to the Objective Process. As discussed in section 3.7.3, By-Right Development of this PEIR, the County must process certain uses by right, using objective criteria and no CEQA review, limitations that may result in significant impacts. Therefore, this impact would be significant and unavoidable.

## 6.3 Threshold 3: Jurisdictional Aquatic Resources

### 6.3.1 Guidelines for Determination of Significance

A significant impact would result if the project would have a substantial adverse effect on state or federally protected wetlands (including but not limited to marsh, vernal pool, and coastal) through direct removal, filling, hydrological interruption, or other means of disturbance.

### 6.3.2 Impact Analysis

#### Direct Impacts

Aquatic resources that are identified by their characteristic vegetation communities, including freshwater (Opportunity Sites 11 through 15) and freshwater marsh (Opportunity Sites 24 and 56), occur in the project area and may fall under the regulatory jurisdiction of the USACE, RWQCB, or CDFW. In addition, Opportunity Site 3 and 42 appear to occur within 100 feet of documented and potentially jurisdictional aquatic features and may be subject to additional environmental review under County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland).

As noted in Section 4.3.2, the project, including by-right housing developments and developments streamlining under the Consistency Process on opportunity sites, would implement a biological survey requirement (MM-BIO-OBJ-1 and MM-BIO-CONS-2) in compliance with the provisions

set forth in Sections 20.66.020 (coastal) and 21.66.020 (inland) of the County Code. Thus, prior to project construction on opportunity sites that contain or are within 100 feet of documented sensitive aquatic resources, including major rivers, creeks, and wetlands (including but not limited to Opportunity Sites 3, 11 through 15, 24, 42 and 56), a biological survey would be conducted to determine the presence of jurisdictional aquatic resources.

If the results of the biological survey determine that jurisdictional aquatic resources are not present in or within 100 feet of the project opportunity sites and avoidance is not feasible, direct impacts on jurisdictional aquatic resources would be less than significant and no additional mitigation would be is required.

Alternatively, if the results of the biological survey determine that jurisdictional aquatic resources occur in or within 100 feet of the project opportunity sites, direct impacts on jurisdictional aquatic resources would be potentially significant without mitigation.

For Opportunity Sites 11 through 15 and 56, HEU6 proposes split zoning consisting of HDR/30 or HDR/25 and RC (Resource Conservation) designations to preserve sensitive resources and create a buffer between those resources and high-density residential development. However, where split zoning cannot entirely avoid development within sensitive aquatic vegetation communities, site-specific biological surveys and appropriate mitigation measures would still be required. In the event jurisdictional aquatic resources are identified and cannot be avoided by project development, a formal aquatic resources delineation and resource agency (USACE, CDFW, and RWQCB) approval of the mitigation strategy to compensate for impacts on jurisdictional aquatic resources through the permitting process would be required. Implementation of MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, and MM-BIO-CONS-12 would reduce direct impacts on jurisdictional aquatic resources through conducting an aquatic resource delineation and obtaining resource agency permits. With implementation of MM-BIO-OBJ-9 and MM-BIO-OBJ-11, qualifying projects may streamline under the Objective Process. If aquatic resources on the site do provide suitable habitat for sensitive plant or wildlife species, the protection measures in MM-BIO-OBJ-1 would be required.

### Indirect Impacts

Most of the indirect impacts on sensitive plant species and sensitive vegetation communities described in Sections 6.1 and 6.2 also result in potentially significant indirect impacts on jurisdictional aquatic resources. Like the discussion in these sections, if the results of the biological survey required by the County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), and MM-BIO-OBJ-1 and MM-BIO-CONS-2determine that jurisdictional aquatic resources do not occur in or within 100 feet of the project opportunity sites, indirect impacts on jurisdictional aquatic resources would be less than significant and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that jurisdictional aquatic resources are present in or within 100 feet of the project opportunity sites, indirect impacts on jurisdictional aquatic resources could occur.

As previously discussed under Indirect Impacts in Section 6.1.2.1, indirect impacts on jurisdictional aquatic resources from hydrologic changes, including erosion, stormwater runoff, and pollution discharges, would be reduced through project compliance with NPDES Construction General Permit provisions (including preparation and implementation of a Stormwater Pollution Prevention Plan and BMPs) and County Code, Chapters 16.08, Grading; 16.12, Erosion Control; 16.14 and 16.16, Regulation for Flood Plains. Therefore, through compliance with state and local regulations, ordinances, and plans, indirect impacts on jurisdictional aquatic resources from erosion, polluted runoff, and hydrologic changes would be less than significant and no additional mitigation would be required.

However, indirect impacts on jurisdictional aquatic resources from edge effects and increased human activity during construction could result. Therefore, indirect impacts on jurisdictional aquatic resources during project construction activities would be considered potentially significant without mitigation. Implementation of MM-BIO-OBJ-3 and MM-BIO-CONS-4 would be required to reduce potential impacts to a less than significant level through monitoring by a qualified biologist prior to and during construction of the project.

### 6.3.3 Mitigation Measures

Refer to MM-BIO-OBJ-1 and MM-BIO-CONS-2.

**MM-BIO-OBJ-9: Aquatic Resources Delineation.** If potentially jurisdictional aquatic resources are identified within opportunity sites for by-right housing developments streamlining under the Objective Process during implementation of Mitigation Measure (MM-) BIO-OBJ-1 as pursuant to Monterey County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), or during any other surveys or monitoring, a qualified biologist shall conduct a formal aquatic resources delineation following the methods outlined in the 1987 U.S. Army Corps of Engineers Wetland Delineation Manual and applicable Regional Supplement to the U.S. Army Corps of Engineers Wetland Delineation Manual to map the extent of wetlands and non-wetland waters, determine jurisdiction, and assess potential impacts. The results of the delineation shall be presented in an aquatic resources delineation report. The aquatic resources delineation report shall be used in consultation with the U.S. Army Corps of Engineers, Regional Water Quality Control Board, and California Department of Fish and Wildlife for necessary authorization or permit, as described in MM-BIO-OBJ-11.

**MM-BIO-CONS-10: Aquatic Resources Delineation.** If potentially jurisdictional aquatic resources are identified within opportunity sites for developments streamlining under the Consistency Process during implementation of MM-BIO-CONS-2 as pursuant to Monterey County Code, Sections 20.66.020 (coastal) and 21.66.020 (inland), or during any other surveys or monitoring, a qualified biologist shall conduct a formal aquatic resources delineation.

Refer to MM-BIO-OBJ-9, above, for all standards and requirements for MM-BIO-CONS-10.

**MM-BIO-OBJ-11: Potentially Jurisdictional Aquatic Resources Permitting.** Any by-right housing developments streamlining under the Objective Process that result in temporary and permanent impacts on the wetland and non-wetland waters potentially under the jurisdiction of the U.S. Army Corps of Engineers, Regional Water Quality Control Board, and California Department of Fish and Wildlife, shall require authorization by the U.S. Army Corps of Engineers through the Section 404 Permit Program, by the Regional Water Quality Control Board through a 401 State Water Quality Certification, and by the California Department of Fish and Wildlife through a 1602 Streambed Alteration Agreement. Approved temporary and permanent impacts on the potentially federal and state jurisdictional aquatic resources in the project area may require compensatory mitigation through proposed on- or off-site habitat restoration, creation, or enhancement to the satisfaction of the U.S. Army Corps of Engineers, Regional Water Quality Control Board, and California Department of Fish and Wildlife to achieve a no-net loss of federal and state jurisdictional wetland and non-wetland waters. The permit(s) shall be submitted to the County prior to issuance of any permit for construction or grading.

**MM-BIO-CONS-12: Potentially Jurisdictional Aquatic Resources Permitting.** Any developments streamlining under the Consistency Process on opportunity sites that result in temporary and permanent impacts on the wetland and non-wetland waters potentially under the jurisdiction of the U.S. Army Corps of Engineers, Regional Water Quality Control Board, and California Department of Fish and Wildlife, shall require authorization by the U.S. Army Corps of Engineers through the Section 404 Permit Program, by the Regional Water Quality Control Board through a 401 State Water Quality Certification, and by the California Department of Fish and Wildlife through a 1602 Streambed Alteration Agreement. The permit(s) shall be submitted to the County prior to issuance of any permit for construction or grading.

Refer to MM-BIO-OBJ-11, above, for all standards and requirements for MM-BIO-CONS-12.

### 6.3.4 Significance After Mitigation

MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, and MM-BIO-CONS-12 would require a pre-construction biological survey, a formal aquatic resource delineation, and approval of resource agency permits. Therefore, impacts on jurisdictional aquatic resources would be less than significant with mitigation incorporated.

## 6.4 Threshold 4: Wildlife Corridors and Habitat Linkages

### 6.4.1 Guidelines for Determination of Significance

A significant impact would occur if the project would interfere substantially with the movement of any native resident or migratory fish or wildlife species, with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

### 6.4.2 Impact Analysis

#### Direct Impacts

As discussed in Section 3.4, Wildlife Corridors and Habitat Linkages, the project area is likely to be used as a wildlife movement corridor because it provides suitable nesting, foraging, nursery, and dispersal areas for both sensitive and common wildlife species due to the presence of native vegetation communities and its connection and proximity to the Pacific Coast and open waters to the west as well as mountain ranges to the east. The northern portion of the project area is adjacent to the Pacific Coast, and there are numerous freshwater aquatic resources in and surrounding the project area, all of which function as large-scale wildlife movement corridors for resident and migratory birds, large mammals, and aquatic species both locally and regionally. The residential and commercial development throughout much of the project area has the potential to limit wildlife movement through the project area. The woodland and forest communities in the project area in particular, are high-quality, contiguous sections of these habitats that support movement and linkages to other habitats along the Pacific Coast and through the mountains to the east for both local and migratory species.

The project opportunity sites are proposed primarily in areas in and adjacent to existing development and would include temporary impacts that occur during construction activities on the sites. Although the project is not expected to have a significant impact on wildlife corridors and habitat linkages over the long-term, project activities may temporarily disrupt wildlife movement through the project area during construction.

As noted in Section 4.3.2 and discussed in Section 6.1.2.2, the project would implement a biological survey requirement (MM-BIO-OBJ-1 and MM-BIO-CONS-2) in compliance with the provisions set forth in Sections 20.66.020 (coastal) and 21.66.020 (inland) of the County Code. Thus, prior to project construction on opportunity sites that contain sensitive vegetation

communities or those that could support wildlife corridors and habitat connectivity (such as agricultural land), including Opportunity Sites 1 through 4, 8 through 16, 18 through 22, 24, 25, 26, 31, 32, 37, 38, 40, 42 through 48, 50, 52, 53, and 56, a biological survey would be conducted to determine if the site is used as a wildlife corridor or linkage to other sensitive habitats.

If the results of the biological survey determine that the project opportunity sites do not function as wildlife corridors or habitat linkages, direct impacts would be less than significant and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that wildlife corridors and habitat linkages are present in the project opportunity sites and avoidance is not feasible, direct impacts would be considered potentially significant without mitigation. Therefore, implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, and MM-BIO-CONS-8 would be required. Consistency Process mitigation would reduce impacts to a less than significant level. It is still possible that impacts to wildlife corridors, habitat linkages, and nursery sites could occur through the Objective Process. The County must process certain uses by right using objective criteria and without CEQA or discretion, which may result in significant impacts. Therefore, the impact would be significant and unavoidable.

### Indirect Impacts

Wildlife movement corridors and habitat connectivity would be impacted by many of the other indirect effects discussed in Section 6.1.2.2 for indirect impacts on sensitive wildlife species. Like the discussion under Sensitive Wildlife Species, Direct Impacts, if the results of the biological survey required by Sections 20.66.020 (coastal) and 21.66.020 (inland) of the County Code and MM-BIO-OBJ-1 and MM-BIO-CONS-2 determine the project opportunity sites do not contain or function as wildlife corridors and habitat linkages, indirect impacts on wildlife corridors and habitat linkages would be less than significant and no additional mitigation would be required.

Alternatively, if the results of the biological survey determine that wildlife corridors and habitat linkages occur in or are provided by the project opportunity sites, indirect impacts on sensitive wildlife species could occur.

As previously discussed in Section 6.1.2.2, indirect impacts to wildlife corridors and habitat linkages from hydrologic changes, including erosion, stormwater runoff, and pollution discharges, would be reduced through project compliance with NPDES Construction General Permit provisions and County Code, Chapters 16.08, Grading; 16.12, Erosion Control; 16.14, Stormwater Control; and 16.16, Regulation for Flood Plains. Similarly, the project would conform with the County Code Chapter 10.60 Noise Control and implement BMPs for the use of noise- and vibration-emitting equipment during construction. Further, compliance with the County Code, Chapter

10.60, Noise Control, would restrict the hours of construction activity and include a noise level limit to minimize disturbance from construction noise. Potential indirect impacts from new sources of lighting during construction and operation would be reduced through project compliance with the temporary construction lighting and permanent exterior lighting requirements in the County Code, Section 21.63.020, Design Guidelines for Exterior Lighting.

However, indirect impacts on wildlife corridors and habitat linkages from lighting, excessive noise and vibration, and increased human activity could result. Therefore, indirect impacts on wildlife corridors and habitat linkages would be considered potentially significant without mitigation. Therefore, implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, and MM-BIO-CONS-8 would be required. Consistency Process mitigation would reduce impacts to a less than significant level. It is still possible that indirect impacts to wildlife corridors, habitat linkages, and nursery sites could occur through the Objective Process. The County must process certain uses by right using objective criteria and without CEQA or discretion, which may result in significant impacts. Therefore, the impact would be significant and unavoidable.

### 6.4.3 Mitigation Measures

Refer to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, and MM-BIO-CONS-8.

### 6.4.4 Significance After Mitigation

MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, and MM-BIO-CONS-8 would require a pre-construction biological survey, monitoring by a qualified biologist prior to and during construction, conservation or restoration of sensitive vegetation communities potentially occupied by sensitive plant and wildlife species, and conducting focused surveys for sensitive bird species prior to construction. Additionally, MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 would require implementation of BMPs to reduce construction noise and vibration in compliance with the Monterey County Noise Ordinance. However, because the County must process certain uses by right without discretionary permits or CEQA, impacts on wildlife corridors, habitat linkages, and nursery sites would be significant and unavoidable.

## 6.5 Threshold 5: Local Policies and Ordinances

### 6.5.1 Guidelines for Determination of Significance

A significant impact would result if the project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

### 6.5.2 Impact Analysis

The project would comply with local policies and ordinances protecting biological resources in the 2010 General Plan Land Use Element and Conservation and Open Space Element, Area Plans, Master Plans, Community Plans, the Monterey County Local Coastal Program LUP, and the County Code (County of Monterey 2010b). Section 4.3, Local, summarizes the goals and policies from these planning documents that are applicable to biological resources and implementation of the project. Further, as summarized in Section 4.3.2 and discussed in Sections 6.1 through 6.4, the project would comply with Sections 20.66.020 (coastal) and 21.66.020 (inland) of the County Code that requires protection of environmentally sensitive habitats in both coastal and inland areas, including the implementation of a biological survey prior to project development (MM-BIO-OBJ-1 and MM-BIO-CONS-2).

As discussed in Section 6.3, Threshold 3: Jurisdictional Aquatic Resources, the project would avoid, or if avoidance is not feasible, fully mitigate potential impacts on jurisdictional aquatic resources, thereby complying with the 2010 General Plan Conservation and Open Space Element Goal OS-4 and Policies OS-4.1 through OS-4.3, as well as policies from the Area and Master Plans that protect wetlands, like the Greater Monterey Peninsula Area Plan Policies GMP-3.6 and GMP-3.7, which require setbacks and protections for wetlands in the planning area. The project would also ensure that development be outside of the required setbacks of 200 feet from the top of bank of a river and 50 feet from the top of bank of a watercourse, unless certain conditions are met, as outlined in County Code, Section 16.16.050(K), Provisions for flood hazard reduction.

Sections 6.1 through 6.4 address the project's potential impacts on sensitive plant and wildlife species, sensitive vegetation communities, jurisdictional aquatic resources, and wildlife corridors and habitat linkages; which indicate that impacts would be potentially significant before incorporation of mitigation. However, implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, MM-BIO-CONS-12, (from PEIR Section 4.13) MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 would mitigate impacts to the extent feasible on sensitive plant and wildlife species, sensitive vegetation communities, jurisdictional aquatic resources, and wildlife corridors and habitat linkages, as discussed in those sections. Objective Process projects that would require a subdivision through either a tentative map, tentative parcel map, or parcel map would still be required to be consistent with the County's General Plan (2010 General Plan), Local Coastal Program (LCP), Monterey County Code (County Code) (Inland and Coastal Zoning), and other applicable County Code regulations.[3]

[3] Pursuant to California Government Code, Section 66474, a legislative body shall deny approval of a tentative map, or a parcel map for which a tentative map was not required, if it makes any of the required findings, including that the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans, that the site is not physically suitable for

It is possible that future projects under the Objective Process would not require a subdivision pursuant to the Subdivision Map Act (e.g., tentative map, tentative parcel map, or parcel map). However, the Housing Accountability Act requires that projects with a "use by right" be consistent with the objective General Plan, zoning, design, and subdivision standards for the site in effect at the time the project application was deemed complete.

However, because the Objective Process requires the County to consider projects objectively, requiring neither discretionary permits or CEQA review, the project could conflict with the 2010 General Plan Conservation and Open Space Element Goal OS-5 and Policies OS-5.1 through OS-5.6, OS-5.9, OS-5.11 through OS-5.13, OS-5.16 through OS-5.18, OS-5.24, and OS-5.25 regarding protection of sensitive plant and wildlife species, critical habitat, and sensitive vegetation communities in the project area. The Objective Process requires avoidance, minimization, and mitigation of impacts through both the By-Right Housing Ordinance and compliance with objective requirements to reduce impacts on sensitive biological resources. However, neither full mitigation nor consistency with applicable land use plans may be feasible because the County cannot condition or modify a project for environmental concerns.

Implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, MM-BIO-CONS-12, (from Section 4.13) MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 would ensure that the project would not conflict with any of the previously mentioned local policies or ordinances protecting biological resources through conducting sensitive plant species focused surveys prior to construction of the project, monitoring by a qualified biologist, conducting sensitive bird and wildlife species focused surveys prior to construction, mitigating for sensitive vegetation community acreage impacts, restoring habitat for temporary impacts, conducting an aquatic resources delineation, obtaining resource agency permits, and implementing noise and vibration BMPs during construction.

### 6.5.3 Mitigation Measures

Refer to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, MM-BIO-CONS-12, and Section 4.13, MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5.

### 6.5.4 Significance After Mitigation

Implementation of MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-BIO-OBJ-9, MM-BIO-

the proposed density of development, and that the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

CONS-10, MM-BIO-OBJ-11, MM-BIO-CONS-12, and Section 4.13, MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5would mitigate direct and indirect impacts to biological resources to the extent feasible. Because of the County's limited discretion to constrain a "use by right", this impact would be significant and unavoidable.

## 6.6 Threshold 6: Regional Conservation Planning

### 6.6.1 Guidelines for Determination of Significance

A significant impact would result if the project would conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state Habitat Conservation Plan.

### 6.6.2 Impact Analysis

The project area is not within an adopted Habitat Conservation Plan and is not subject to the NCCP program or other regional conservation plan. Therefore, no impacts on local or regional conservation plans would occur from implementation of the project and no mitigation is required.

### 6.6.3 Mitigation Measures

No mitigation is required.

### 6.6.4 Significance After Mitigation

No impact without mitigation incorporated.

## 6.7 Cumulative Impacts

### 6.7.1 Cumulative Threshold 1: Sensitive Plant and Wildlife Species

The cumulative project study area was defined within a local context and include surrounding areas with similar biological resources. Cumulative projects within the vicinity of the project area would have the potential to result in impacts on sensitive plant and wildlife species, including loss of habitat.

The remaining areas in the UMC, as well as adjacent and nearby jurisdictions, including Santa Cruz County to the north, the Counties of San Benito, Fresno, and Kings to the east, and San Luis Obispo County to the south, would be required to comply with applicable federal and state regulations that provide protections for sensitive plant and wildlife species, such as the federal Endangered Species Act, California Endangered Species Act, and the California NCCP Act. In addition, some projects that impact sensitive species require approval from the USFWS and CDFW. If significant impacts occur from particular cumulative projects, then mitigation measures are implemented to reduce impacts to the extent feasible in compliance with CEQA.

As discussed in Section 6.1, development of the project would have the potential to impact sensitive plant and wildlife species. Cumulative projects would be required to implement project-specific mitigation measures similar to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, MM-BIO-CONS-8, MM-NOI-OBJ-1, MM-NOI-CONS-2, MM-NOI-OBJ-4, and MM-NOI-CONS-5 and obtain applicable approval from the CDFW and/or USFWS to reduce the project's impacts on sensitive plant and wildlife species. However, it is possible that cumulative projects include a "use by right", which would limit a jurisdiction's ability to fully mitigate impacts to below a level of significance. The project would result in a significant and unavoidable impact. Therefore, the project's contribution to impacts on sensitive plant and wildlife species would be cumulatively considerable.

### 6.7.2 Cumulative Threshold 2: Riparian Habitat or Other Sensitive Natural Community

Cumulative projects within the vicinity of the project area would have the potential to result in impacts associated with riparian habitat and other sensitive natural communities through direct and indirect loss or degradation.

The remaining areas in the UMC, as well as adjacent and nearby jurisdictions, including Santa Cruz County to the north, the Counties of San Benito, Fresno, and Kings to the east, and San Luis Obispo County to the south, would be required to comply with applicable federal and state regulations such as the California Lake and Streambed Alteration Program or the California NCCP Act. These programs provide protections for riparian and other sensitive habitats. In addition, many projects that affect riparian or other protected habitat types require approval from the USFWS and CDFW. If potentially significant impacts would occur from particular cumulative projects, then mitigation measures would be implemented to reduce impacts to the extent feasible. However, it is possible that cumulative projects include a "use by right", which would limit a jurisdiction's ability to fully mitigate impacts to below a level of significance.

As discussed in Section 6.2, Threshold 2: Riparian Habitat or Other Sensitive Natural Community, development of the project would have the potential to impact sensitive vegetation communities. Cumulative projects would be required to implement project-specific mitigation measures similar to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, and MM-BIO-CONS-4 through MM-BIO-CONS-6 to mitigate the project's impacts on riparian habitat or other sensitive communities to the extent feasible. Nevertheless, the project would still result in a significant and unavoidable cumulative impact based on its considerable cumulative contribution to impacts on riparian habitat and other sensitive natural communities.

### 6.7.3 Cumulative Threshold 3: Jurisdictional Aquatic Resources

Cumulative projects within the vicinity of the project area would have the potential to result in a cumulative impact associated with federally or state protected aquatic resources.

The remaining areas in the UMC, as well as adjacent and nearby jurisdictions, including Santa Cruz County to the north, the Counties of San Benito, Fresno, and Kings to the east, and San Luis Obispo County to the south, would be required to comply with applicable federal and state regulations such as the California Lake and Streambed Alteration Program, Sections 401 and 404 of the CWA, and the Porter-Cologne Act.

Existing regulations would ensure that a significant cumulative impact associated with federally or state protected aquatic resources would not occur. If potentially significant impacts would occur from particular cumulative projects, then mitigation measures would be implemented to reduce impacts as required to meet the regulatory agency's no-net-loss standard. As discussed in Section 6.3, the project would avoid impacts on jurisdictional aquatic resources to the greatest extent feasible, providing compensatory mitigation at an approved ratio for unavoidable impacts (MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-9, MM-BIO-CONS-10, MM-BIO-OBJ-11, and MM-BIO-CONS-12), and would not contribute to cumulative impacts on jurisdictional aquatic resources as a result. As with the project, other project in UMC and surrounding cities are required to comply with existing regulatory requirements and obtain applicable permits from the USACE, RWQCB, and CDFW. Therefore, the project's contribution would not be cumulatively considerable.

### 6.7.4 Cumulative Threshold 4: Wildlife Corridors and Habitat Linkages

Cumulative projects in the vicinity of the project area would have the potential to result in a cumulative impact associated with wildlife movement corridors and habitat linkages.

The remaining areas in the UMC, as well as adjacent and nearby jurisdictions, including Santa Cruz County to the north, the Counties of San Benito, Fresno, and Kings to the east, and San Luis Obispo County to the south, would be required to comply with applicable federal and state regulations such as the California NCCP Act, which supports the continued provision of wildlife movement corridors. If potentially significant impacts would occur from particular cumulative projects, then mitigation measures would be implemented to reduce impacts to the extent feasible.

As discussed in Section 6.4, Threshold 4: Wildlife Corridors and Habitat Linkages, development of the project would have the potential to impact wildlife corridors or habitat linkages. Cumulative projects would be required to implement project-specific mitigation measures similar to MM-BIO-OBJ-1, MM-BIO-CONS-2, MM-BIO-OBJ-3, MM-BIO-CONS-4 through MM-BIO-CONS-6, MM-BIO-OBJ-7, and MM-BIO-CONS-8 to mitigate the project's impacts on wildlife corridors or habitat linkages to the extent feasible. However, the project would nevertheless result in a significant and unavoidable cumulative impact.

### 6.7.5 Cumulative Threshold 5: Local Policies or Ordinances

Cumulative projects in the vicinity of the project area would have the potential to result in a cumulative impact associated with conflicts with local policies or ordinances.

The remaining areas in the UMC, as well as adjacent and nearby jurisdictions, including Santa Cruz County to the north, the Counties of San Benito, Fresno, and Kings to the east, and San Luis Obispo County to the south, would be required to comply with applicable local policies or ordinances. If potentially significant impacts would occur from particular cumulative projects, then mitigation measures would be implemented to reduce impacts to the extent feasible.

As discussed in Section 6.5, Threshold 5: Local Policies and Ordinances, because the County must allow a "use by right" without discretionary permits or CEQA, the project may not comply with local policies and ordinances protecting biological resources in the 2010 General Plan Land Use Element and Conservation and Open Space Element, Area Plans, Master Plans, Community Plans, the Monterey County Local Coastal Program LUP, and the County Code. A significant cumulative impact associated with a conflict with a local policy or ordinance would occur. Therefore, the project, in combination with other cumulative projects, would result in a significant cumulative impact. The project's contribution would be cumulatively considerable.

### 6.7.6 Cumulative Threshold 6: Regional Conservation Planning

As discussed in Section 6.6, Threshold 6: Regional Conservation Planning, the project area is not in an adopted Habitat Conservation Plan and is not subject to the NCCP program or other regional conservation plan. Therefore, the project, in combination with other cumulative projects, would not result in a significant cumulative impact from conflicts with regional conservation plans. The project's contribution would not be cumulatively considerable.

# Executive Summary

Harris & Associates prepared this Cultural Resources Technical Report in support of the Programmatic Environmental Impact Report for the proposed County of Monterey General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law (project). This report is intended to provide the results of the cultural desktop survey and provide a program-level analysis of the potential impacts that could occur to cultural resources and Tribal Cultural Resources as a result of project implementation.

The project is required to identify sites and zoning designations that can accommodate housing developments capable of satisfying the County of Monterey's Regional Housing Needs Allocation. Along with facilitating the Monterey County's Regional Housing Needs Allocation, the project must identify and analyze significant disparities in access to opportunity (Assembly Bill 686 – Affirmatively Furthering Fair Housing Act). The Affirmatively Furthering Fair Housing Act requires that a jurisdiction's Housing Element promote inclusive communities and further housing choice through government programs, policies, and operations that recognize existing racial and economic disparities and remediate these disparities.

An assessment of cultural resources and Tribal Cultural Resources was conducted through review of background data from the California Historical Resources Information System, the Native American Heritage Commission, and Tribal outreach. The Fort Ord buildings and structures, the Carmel River/Esselen Trail, and archaeological site P-27-004056 were identified as potentially significant based on prior evaluations that identified them as eligible for listing to the National Register of Historic Places. A copy of the study will be submitted to the Northwest Information Center upon approval from the lead agency. The project is required to be in compliance with all federal, state, and local regulations applicable to cultural resources and Tribal Cultural Resources.

*This page intentionally left blank.*

# Section 1 Introduction

This Cultural Resources Technical Report for the County of Monterey General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law (project) Program Environmental Impact Report (PEIR) documents the cultural resources in Monterey County and addresses at a programmatic level the potential cultural resources and Tribal Cultural Resources (TCRs) impacts associated with the construction and operation of the project for Monterey County.

"HEU6" refers to the draft HEU6 document circulated for public review and submitted to the California Department of Housing and Community Development, while the "project" refers to HEU6 along with other components and related actions intended to implement HEU6.

For the purposes of this analysis, the following definitions are used herein:

- County of Monterey Government (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

## 1.1 Purpose of the Report

At the request of the County, Harris & Associates has prepared this Cultural Resources Technical Report for the project to present documented cultural resources and TCRs that occur in the project area; identify potential impacts and recommend avoidance, minimization, or mitigation measures consistent with federal, state, and local rules and regulations.

This report includes a discussion of the environmental setting and project description; summary of the federal, state, and local regulations applicable to cultural resources and TCRs; methods for the literature review and desk top survey conducted for the project; results reflecting data collected during the desk top survey, including a description and evaluation of existing cultural resources; and an analysis of potential project impacts, and mitigation required to reduce potential impacts from project implementation.

The term "historical resources" refers to buildings, sites, structures, signs or objects, each of which may have historical, architectural, archaeological, cultural, and/or scientific importance. Significant resources are those resources which have been found eligible for listing or are listed in the California Register of Historical Resources (CRHR), National Register of Historic Places (NRHP), or local listing, as applicable.

The term "Traditional Cultural Property" refers to property that is eligible for inclusion in the National Register of Historic Places (NRHP) because of its association with cultural practices, traditions, beliefs, lifeways, arts, crafts, or social institutions of a living community. Tribal Cultural Properties are rooted in a traditional community's history and are important in maintaining the continuing cultural identity of the community.

"Tribal Cultural Resources" are (1) sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe that are either of the following: (A) included or determined to be eligible for inclusion in the California Register or Historical Resources or (B) included in a local register or historical resources as defined in Section 5020.1(k), or (2) a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1 of the California Public Resources Code (PRC). In applying the criteria set forth in Section 5024.1(c) of the PRC for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American Tribe.

The cultural investigation described in this report was implemented to support the County's responsibilities under the California Environmental Quality Act (CEQA) and to reduce impacts to cultural resources and TCRs resulting from the project.

# Section 2 Project Setting

## 2.1 Project Location

Monterey County is just south of the Bay Area. It is bounded by the Pacific Ocean to the west and San Benito County to the east and accessible by U.S. Route 101 from the north and south. Monterey County is one of the largest counties in the State of California, covering more than 3,300 square miles, and is composed of diverse natural habitats and residential communities. Monterey County is located on the north-central coast of California and is bordered by the following counties: Santa Cruz to the north; San Benito, Fresno, and King to the east; and San Luis Obispo to the south (Appendix A, Figures; Figure 1, Regional Location). The project area encompasses UMC, the geographic area overseen by the County and covered by the Sixth Cycle Housing Element Update (2023–2031). Regional access to Monterey County is provided through U.S. Route 101 traveling north–-south and State Route (SR-) 198 and SR-146 running east–-west. SR-1 also provides regional access along the Pacific coastline and SR-218, SR-68, and SR-183 are other major roadways serving Monterey County.

The project area includes 56 opportunity sites throughout Monterey County. Each opportunity site is assigned a number (e.g., Opportunity Site 1). Opportunity sites are spread among the County's nine Land Use Plan areas. These include the areas within the North County Inland Area Plan, North County Coastal Land Use Plan, Greater Salinas Area Plan, Greater Monterey Peninsula Area Plan, Ford Ord Master Plan, Toro Area Plan, Carmel Valley Master Plan, Carmel Area Land Use Plan, and Central Salinas Valley Area Plan (Figures 2a through 2i, Project Location).

## 2.2 Project Description

The project is required to identify sites and zoning designations that can accommodate housing developments capable of satisfying Monterey County's Regional Housing Needs Allocation of 3,326 housing units distributed across four income levels (1,070 extremely low/very low income, 700 low income, 420 moderate income, and 1,136 above moderate income housing units). Along with facilitating the County's Regional Housing Needs Allocation, the project must identify and analyze significant disparities in access to opportunity (Assembly Bill [AB] 686 – Affirmatively Furthering Fair Housing Act). The Affirmatively Furthering Fair Housing Act requires that a jurisdiction's Housing Element promote inclusive communities and further housing choice through government programs, policies, and operations that recognize existing racial and economic disparities and remediate these disparities.

The County includes the capacity for at least 5,897 units, comprising opportunity sites (4,434 units), pipeline sites (1,117 units), and accessory dwelling units (346 units). Opportunity sites are sites for which the County has a reasonable expectation that housing development could occur, although no proposals or entitlements have been submitted. Entitled/proposed (pipeline sites) are

sites where housing has been proposed or entitled and where development is expected to receive a building permit or certificate of occupancy.

## 2.3 Environmental Setting

The following is a description of the existing conditions in the project area.

### 2.3.1 Land Use

The UMC is largely undeveloped open space, with the majority of urban and suburban development following SR-1 and U.S. Route 101. Other uses include residential, commercial, agricultural, industrial, military, civic, and public/quasi-public (County of Monterey 2010).

### 2.3.2 Geology and Soils

Monterey County is bounded by the Pacific Ocean to the west and San Benito County to the east. The general topography varies throughout Monterey County and includes coastal bluffs, mountain ranges, and valleys (Figure 3, USGS Topographic Map – Index, and Figures 3a through 3i). Monterey County lies within several quadrangles of the California Geological Survey Map, including but not limited to the Carmel Valley, Chualar, Marina, Monterey, Moss Landing, Natividad, Prunedale, Salinas, San Lucas, Seaside, Spreckels, Thompson Canyon, and Watsonville East Quadrangles. Major faults in Monterey County are San Andreas, Palo Colorado-San Gregorio, and Monterey Bay – Tularcitos. There are also other lesser-known faults such as Reliz, Rinconada, Garrapata, Rocky Point, and more. Development in the UMC is further limited by soils in the area that are susceptible to liquefication (OES 2022).

A total of 39 soil types are present on the opportunity sites in the project area, including Alviso silty clay loam, Antioch very fine sandy loam, Arnold loamy sand, Arnol-Santa Ynex complex, Arroyo Seco gravelly loam, Baywood sand, Chamise channery loam, Chamise shaly loam, Chualar loam, Clear Lake clay, Corducci-Typic Xerofluvents, Cropley silty clay, Diablo clay, Dibble silt loam, Elder sandy loam, Elder very fine sandy loam, Elkhorn fine sandy loam (and thin surface variant), Garey sandy loam, Lockwood channery loam, Lockwood shaly loam, Metz fine sandy loam, Mocho silt loam, Narlon loamy fine sand, Oceano loamy sand, Pacheco clay loam, Pico fine sandy loam, Placentia sandy loam, Rincon clay loam, rock outcrop/Xerorthent association, Salinas clay loam, Santa Lucia channery clay loam, Santa Lucia shaly clay loam, Santa Lucia-Reliz association, Santa Ynez fine sandy loam, Tijunga fine sand, and Xerorthents (dissected, loamy, and sandy) (Figure 4, Soils – Index, and Figures 4a through 4i; USDA 2025a, 2025b).

### 2.3.3 Climate

On a regional level, Monterey County has a Mediterranean climate, which is characterized by mild, wet winters and warm, dry summers, largely defined by the Pacific Ocean and the Santa Lucia Range. Habitats in this region include both mesic (moist) habitats, such as redwood forest, and

xeric (dry) habitats, such as coastal scrub. Generalized climate in the region is characterized by warm, dry summers and cold, moist winters, which pushes the growing season to the wet months of the year (late winter to early spring). Vegetation often goes dormant (senescent) during the later summer months until initial rains start in the fall. The rainy season in Monterey County typically lasts from November through April and has an annual winter precipitation average of approximately 19 inches (Western Regional Climate Center 2025).

### 2.3.4 Flora and Fauna

Harris biologists (Harris & Associates 2026) have identified biological resources with the potential to occur in the project based on a review of existing maps, literature, and other biological studies conducted in the area. The project area consists of six vegetation communities and two land cover types, including freshwater, freshwater marsh, mixed conifer forest, oak woodland, annual grassland, coastal scrub, agricultural land, and urban/developed land. In addition, 26 wildlife species (three invertebrates, two fish, six amphibians, four reptiles, five birds, and six mammals) have been documented in the project area. These resources would have been used by Native American people. Specifically, they would have used acorns, broom Baccharis, buckwheat, lemonade berries, laurel sumac, sunflower, prickly pear cactus fruit, white sage, wild onion, and yucca. A large number of shellfish and fish would have been available. These were important food resources pre-contact.

## 2.4 Cultural Setting

Cultural resources found throughout Monterey County are reminders of the County's past. Cultural resources are the traces left by pre-contact or historic people who inhabited the Monterey County region. They encompass both the built and the archaeological environments, and could include TCRs. The following cultural background (pre-contact, historical, and ethnographic) is taken from the County's General Plan Environmental Impact Report (County of Monterey 2008a).

### 2.4.1 Pre-Contact Period

The earliest human presence in what is now Monterey County probably dates back as far as 10,000 to 12,000 years ago. The first inhabitants were nomadic hunters, banding together in small groups, following game herds for their subsistence. The earliest settlements began to appear around 7,500 to 8,000 BCE These occupation sites, which comprised small villages, indicate a cultural shift to a different form of subsistence based on exploitation of a broader range of local resources, including marine and freshwater food sources (fish and shellfish), game (rabbits, deer, elk), acorns, and wild roots, and nuts and berries. By 6,000 BCE, at least four such village sites from this period are known to have existed in the area around Moss Landing and Elkhorn Slough, undoubtedly because of the abundance of resources in this area.

A little later, a second shift occurred, again reflecting a change in subsistence strategy that is evident in changes in pre-contact settlement patterns. This change is thought to have occurred because of in-migration of a different people from the north, who were part of a larger movement emanating from farther east. During the middle period (2,500 to 1,600 years ago), villages became larger but fewer in number. They were augmented by a large number of small, widely distributed sites for the collection, processing, and distribution of resources. This new settlement pattern reflects a fundamental shift in strategy from smaller sites dependent on proximity to resources, to villages supported by outlying sites specializing in collecting and processing resources. Rather than being constrained to living near the food source, the people developed a specialized system to collect and transport resources to population centers.

This new strategy of collection rather than foraging allowed an even broader use of resources and over time resulted in a larger population. The ocean and nearby salt and freshwater marshes were used in conjunction with the oak woodland, savanna, and grassland habitats that provided game, acorns, and other resources. The larger collection strategy enabled early inhabitants to expand in number. The specialization of roles allowed the culture to develop. Instead of generalized foraging, individualized skills developed, such as production of arrowheads, musical instruments, shell beads, and tools. During this middle period of prehistory, the local Indigenous culture reached its peak in terms of cultural expressions of concentrated wealth.

During the period between CE 900 and 1,100, a severe climatic shift began. There was a warming period in which the ocean temperature rose, perhaps not unlike a prolonged El Niño event. The marine and coastal environment became less productive and less reliable as a food source. These conditions necessitated another adaptation in subsistence strategy, stimulating further movement inland and greater dependence on acorns as a staple food. Acorns were particularly useful because they could be stored for as long as a year, providing a secure supply of winter food. The climate change led to a redistribution of occupation sites into many different environments. Villages became further disseminated and very seasonal. The overall effect was decentralization with many new sites farther inland. Settlement sites became specialized according to seasonal use, differentiating into winter and summer sites. In wintertime, occupants would move inland, seeking the shelter and resources in inland canyons and habitats. At this time Rancho San Carlos was first occupied intensively, as a winter village site. The resource-rich regions of what is now Fort Hunter Liggett, along the Nacimiento River, were also intensively occupied at the same time.

> At roughly CE 1500, the climate shifted again, entering what is known as the Little Ice Age, a colder period which lasted until at least CE 1800. Collection behavior became very specialized and migratory. The Indigenous people were still in this middle period of subsistence behavior when Spanish explorers saw them for the first time.

### 2.4.2 Ethnohistoric Period (Post-CE 1769)

#### 2.4.2.1 Costanoan/Ohlone

The Costanoan were speakers of languages in the Penutian language family. The Costanoan, now commonly referred to as Ohlone, consisted of over 50 Tribal groups, speaking eight different but related languages that included Karkin (northern and southern portions of the Carquinez Strait); Chochenyo (east shore of San Francisco between Richmond and Mission San José and probably Livermore Valley); Tamien (southern San Francisco Bay and lower Santa Clara Valley); Ramaytush (San Mateo and San Francisco Counties); Awaswas (Santa Cruz Costanoan between Davenport and Aptos); Mutsun (Pajaro River drainage); Achastan/Rumsen (lower Carmel, Sur, and lower Salinas Rivers); and Chalon (Salinas River). This territory encompasses a lengthy coastline as well as several inland valleys.

The Ohlone relied on gathering, hunting, and fishing to procure a wide variety of flora and fauna for subsistence and material needs. The Ohlone had both permanent village locations and seasonal camps to take advantage of the diverse terrain along the central coast. The first Spanish encounters with the Ohlone occurred as early as 1602 with the Sebastian Vizcaino navigational expedition, followed by the inland exploratory expedition of Gaspar de Portola in 1769. Seven missions were established in Ohlone territory between 1770 and 1797. Ohlone were both forcibly and voluntarily brought to the missions along with other Tribes, including Yokuts, Miwoks, Esselen, and Patwin. Once part of the mission system, the Ohlone were discouraged or forced from practicing their traditional rituals and social activities. Contact with Euro-Americans resulted in a drastic reduction of population due to disease, violence, and a declining birth rate. The Ohlone population fell from an estimated 10,000 in 1770 to fewer than 2,000 by 1832. Following secularization of the missions in 1834, most of the remaining Ohlone moved into growing towns and surrounding ranchos to work as laborers or domestic servants. By the mid-twentieth century, the Ohlone population was reduced to 130 in the San Francisco Bay Area, although some research suggests that in the early 1970s there may have been approximately 200 surviving Ohlone.

In the 1960s, the Ohlone Indian Tribe was incorporated as a formal organization, now holding title to the Ohlone Indian cemetery in Fremont, California. In the 1970s, the Pajaro Valley Ohlone Indian Council was created and was actively preserving sites of traditional importance. Four Ohlone groups had sought recognition: the Amah-Mutsun Tribal Band, the Carmel Mission Band, the Indian Canyon Band, and the Muwekma/Ohlone Tribe. Similarly situated as previously federally recognized Tribal groups, were the Ohlone Costanoan Esselen Nation of the Monterey Bay region, historically identified by the Bureau of Indian Affairs under the jurisdiction of the Reno and Sacramento Agencies as the Mission San Carlos Indian Band and Monterey Band of Monterey County, and the Amah-Mutsun Tribal Band identified by the Bureau of Indian Affairs as the San Juan Bautista Band. The Muwekma Ohlone Tribe has historically used the term "Ohlone" throughout the twentieth century. On their 1928–1932 and 1968–1972 Bureau of Indian

Affairs enrollment applications, the families used either Ohlone or Mission San José Tribe. The Amah-Mutsun community used only Mission San Juan Bautista Tribe, and the Monterey community used either Esselen or Mission Carmel Tribe.

There have been continued efforts to document genealogies by using mission records to piece together family and Tribal history. The groups mentioned above, as well as other individuals, have been actively involved in the management and preservation of their heritage and are frequently involved in the management of cultural resources. Ohlone descendants continue to conduct ceremonies and traditional practices such as the gathering of plant materials for basket making. Some of these activities are known to take place on Fort Ord Public Lands in the Central Coast Management Area.

#### 2.4.2.2 Esselen

Peoples of the Esselen language group inhabited the area south of Monterey, including the upper drainage of the Carmel River south to the vicinity of Junipero Serra Peak and west to the Sierra de Salinas. The area encompassed a 25-mile stretch along the Pacific Coast. Research in the early 1970s recognized six Esselen tribelets: Excelen, (Carmel Valley), Echilatg (Santa Lucia Range), El Pino (lower Arroyo Seco), Cuchunu (Arroyo Seco), Eslenajan (near Soledad Mission), and Tucutnut (Carmel River). Very little is known about the lifeways of the Esselen prior to Euro-American contact. Documentation of Esselen lifeways has been minimal, and much of what is known about the group is gleaned from archaeological research and mission records. The population of the Esselen in the eighteenth century is estimated at 500 to 1,285 persons. With the founding of Mission San Carlos Borroméo de Monterey at Carmel in 1770, many Esselen were moved to the mission. It has been suggested that by the mid-1800s they were totally absorbed into the mission population, where many also perished. Families have taken steps to preserve their history and identities as Esselen by founding the Ohlone Costanoan Esselen Nation, currently located in and around Carmel Valley. The Ohlone Costanoan Esselen Nation consists of 500 members and has been petitioning the federal government to regain recognition as a formal federally recognized Tribe.

### 2.4.3 Historical Period

Monterey County has been called the “cradle of California history,” owing to its central position relative to historical activities. Monterey Bay became the focus of several Spanish exploratory expeditions after it was first noticed by Juan Cabrillo in 1542. Sebastian Vizcaino, who sailed into it in 1602, named the bay after Conde de Monterrey, Viceroy of Spain. The Franciscans founded three missions (San Carlos Borroméo, San Antonio de Padua, and Nuestra Soñora de Soledad) in what is now Monterey County, and these, along with the Presidio established in the late 1700s and eight large ranchos that formed from land concessions to Spanish army veterans, became focal points of activity.

When the Mexican Republic formed in 1822, the missions were secularized and new ranchos developed on 68 Mexican land grants. A robust economy emerged, based on cattle ranching on these large ranchos, some of which exceeded 10,000 acres. This economy received a great boost when the Mexican regime opened Monterey harbor to foreign trade. The Custom House in Monterey became the site for collection of duties, providing the main source of income for Alta California's government. The harbor enabled rancheros to trade their hides and tallow for products from around the world. This commercial vitality led to Monterey's role as the Mexican capital of California.

In May 1846, the United States declared war against Mexico, commencing the Mexican-American War. Commodore John Drake Sloat sailed into Monterey Bay two months later and demanded surrender of the port. On orders to secure men and horses for the war in Southern California, Lt. Colonel John C. Fremont arrived in Monterey as well. In November, as Fremont and his men were driving horses from San Juan Bautista to Monterey, Californios led by Manuel Castro attacked them. The Battle of Natividad was the only military engagement fought in Northern California during the Mexican-American War. Organized resistance to the American occupation ended in 1847. On February 2, 1848, the Treaty of Guadalupe Hidalgo was signed, giving the United States possession of Alta California.

Monterey continued to play a key role for some time after the Mexican-American War. At the beginning of the American period, the convention to draft and sign California's new constitution convened at Colton Hall in Monterey, considered California's finest building at the time. This period coincided with the California Gold Rush, and the market for tallow and hides shifted to a demand for beef to feed the population of gold prospectors. By the 1870s, dairy farming was introduced in the area around Gonzales and Soledad. This enterprise required irrigation to support alfalfa production, a practice based on rudimentary canal systems used earlier by friars at the missions.

In 1863 and 1864, a disastrous drought wiped out the cattle industry. Grain production quickly became Monterey County's principal activity. Between 1857 and 1865, the County's grain acreage increased from 2,450 to 27,358 acres. The resulting grain surplus was an incentive to build the harbor at Moss Landing from which farmers could ship their grain products worldwide. Bixby's Landing played a similar role for the export of tanbark and lumber from the Big Sur coast. Transportation soon became a major factor in supporting the County's growing economy. In 1872, the Southern Pacific Railroad extended its rail line to Salinas from Pajaro. As the railroad pushed farther south, it opened new markets and stimulated settlement of new towns. From Salinas, it extended southward to Chualar, followed by Gonzales and Soledad, as landowners donated rights-of-way across their ranches. With this new transport capability, grain could be loaded at Soledad, expanding the acreage available for cultivation. By 1875, nearly 100,000 acres of grain were harvested in the County, making it one of California's principal grain-producing regions.

In the 1880s, a transformation began in the lower Salinas Valley, initiated by systematic draining and reclamation of the extensive marshland and several dozen lakes in the northern end of the valley. By the 1880s, Chinese laborers had cleared 1,000 acres of land, increasing its value from $28 to $100 an acre. As land prices rose, dry farmers and cattle and sheep ranchers sold out or shifted to row crops.

Widespread sugar beet cultivation in the Salinas area prompted Claus Spreckels to open what was then the largest sugar beet refinery in the world in 1899, south of Salinas. Capacity of the plant reached 3,000 tons of beets per day—more than all of the other refineries in California combined. Spreckels also built the town that still bears his name around the facility. The community of Spreckels was one of California's few company towns and was home to a variety of businesses, a school, a church, and cottages for company employees.

The extension of the railroad, improved irrigation systems, refrigerated freight cars, and other innovations in technology transformed the agricultural economy of the Salinas Valley, further opening up cultivated lands to row crops in place of dry farming dominated by grain crops. This development established the basis for the Salinas Valley's modern economy.

In the late nineteenth century, Monterey County became a destination for tourism and resort activities. Three resorts with hotels developed at Paraiso, Tassajara, and Slates Hot Springs. Pacific Grove was founded as a religious and cultural retreat, growing from a tent city to a town of small Victorian cottages. In the early 1900s, Pebble Beach was subdivided and became a fashionable summer resort. In Carmel, the Arts and Crafts movement took hold in local architecture, as the town became a colony for artists and writers.

On the coast, at Moss Landing and in Monterey, sardine fisheries flourished for a little less than two decades between 1931 and the late 1940s. The cannery buildings at both of these locations are historical remnants of that brief period before the sardines and then the canning industry disappeared.

## 2.5 Previous Investigations

Record searches were conducted for the project area. Staff conducted the records search using the California Historical Resources Information System (CHRIS) from the Northwest Information Center (NWIC) (Confidential Appendix B, CHRIS Background Data), the NRHP, and the California Register of Historical Resources (CRHR). Two hundred and eight previous cultural studies have been conducted within the project area. Twenty-nine resources have been previously recorded within the project area consisting of six pre-contact, 22 historic, and one multi-component sites.

### 2.5.1 Pre-Contact Sites

The pre-contact sites include two habitation (P-27-000138/CA-MNT-000002 and P-27-000385/CA-MNT-000280), one game field (P-27-000158/CA-MNT-000022), artifact scatters (P-

27-001021/CA-MNT-0009650 and P-27-003666), and one mortar bowl rim fragment (P-27-002900/CA-MNT-002257).

#### 2.5.1.1 P-27-000138/CA-MNT-000002

P-27-000138/CA-MNT-000002 (habitation) was originally recorded by A.R. Pilling in 1948 who identified bedrock milling features and pestles. In 1975, Stafford, William Roop, Gary Berg & Kathy Flynn surveyed the site. They noted that the new Reservation and River Roads had cut through the site which had almost totally destroyed it. In 1982, William Roop again evaluated the site and identified a midden deposit consisting of dense shell lenses, burned rock, chert flakes, ground stone tool fragments. He described the site as extending from the bluff edge that forms the northeasterly edge of the parcel, upslope along both sides of Reservation Road for a distance of 1,200 feet. Mary Gerbic and Alex DeGeorgey (2013) monitored the site for the PG&E DFM 813-01 project. Midden soils were identified; however, they were absent of artifacts or ecofacts. The last evaluation occurred in 2019 by Sarah Brewer & Scott Miller (2019a, 2019b) for the installment of an overhead fiber-optic cable. No artifacts or midden soils were identified.

#### 2.5.1.2 P-27-000158/CA-MNT-000022

P-27-000158/CA-MNT-000022 was recorded in 1948 by A.R. Pilling and Ann Fisher. It is recorded as "a flat area supposed to have been game field in pre-mission period." Updated surveys and evaluations have not occurred at this site.

#### 2.5.1.3 P-27-000385/CA-MNT-000280

According to Phil Kaijankoski (2020), P-27-000385/CA-MNT-000280 (habitation) "was originally recorded in 1950 by A.R. Pilling." He identified the site as bulldozed and destroyed ca. 1940. It is unknown if Pilling visited the site, or if he recorded it based on correspondence with a reporter from the Monterey Peninsula Herald. An attempt to search the archives of that newspaper for information about this site was unsuccessful." Sarah Brewer and Scott Miller surveyed the site in 2019 and did not encounter any cultural materials. Eleni Ziogas also surveyed the site in 2019 as part of the Caltrans Scenic Route 68 survey. Efforts to identify the site were unsuccessful. CA-MNT-3, and CA-MNT- 4/267, two habitation sites with subsurface deposits, are located roughly 30 and 100 meters south of CA-MNT-280 are identified within the SR-68 Caltrans corridor. Ziogas suggest that these two sites likely encompass CA-MNT-280, or reflect associated activity areas, and suggest that subsurface deposits may extend under SR-68 and into the Caltrans Right-of-way. The final evaluation by Kaijankoski, identifies that "previously, the NWIC did not have a location for this trinomial; however, when transitioning to a geographic information system (GIS) mapping interface the entire extent of Fort Ord, a 45-square-mile area (28,800 acres) northeast of Seaside, was selected as the boundaries of CA-MNT-280." He conducted testing at a portion of the site east of San Benancio Road with negative results.

#### 2.5.1.4 P-27-001021/CA-MNT-0009650

P-27-001021/CA-MNT-0009650 was originally recorded in 1979 by Trudy Haversat who recorded the site based on an informant report. The informant recovered a stone bowl while excavating a fence post. The site was tested in 1986 by Gary Breschini & Trudy Harvest. A lithic scatter consisting of a small number of chert and obsidian flakes were recovered.

#### 2.5.1.5 P-27-003666

P-27-003666 was recorded by Gail Bellenger in 2018. The site consists of ground stone tools that were not in situ and out of context. According to Bellenger, the artifacts were likely a surface expression of the original location but were relocated to a created hill likely due to agricultural activities. A surface collection and testing were conducted, and it was determined that the adjacent fallow field is likely the original context for these artifacts. Bellenger identified the site as "eligible to both the NRHP and the CRHR due to its importance in the cultural sequence of the Indigenous Ohlone/Esselen people, and because it is located close to the Carmel Mission that would have most likely been located to existing villages or encampments."

#### 2.5.1.6 P-27-002900/CA-MNT-002257

P-27-002900/CA-MNT-002257 was recorded by Patrick Cave (2008). He identified the site as a large pre-contact site with midden soils, fire-affected rock, small mammal bone fragments, chert debitage, and shell. A basalt mortar bowl rim fragment was collected. According to Cave, the "site is terminated on the northeast by Merritt Street, and on the west by the graded southwest extension of Poole Street. The site extends southwest to the floodplain of Tembladero Slough, and is visible to the east on adjacent parcels south of Union Street." The site was tested with positive results confirming areal extent and site depth. He identified that the " site had been partially disturbed due to dirt road traffic, parking and soil discing. However, it should be mostly pristine just below the surface on most of the parcel."

### 2.5.2 Historical Resources and Multi-Component Sites

The historic and multi-component resources include structural remains of a hangar for the first commercial airport on Monterey Peninsula (P-27-000090/CA-MNT-001801H), Fort Ord buildings, structures, and features (P-27-002721, P-27-002722, P-27-002733, P-27-002734, P-27-002737, P-27-002738, P-27-002740, P-27-002741, P-27-002742, P-27-002743, P-27-002744, P-27-002747, P-27-002749, and P-27-002912), Pajaro River levee (P-27-004178), single-family residences (P-27-004242, P-27-004243, P-27-004246, P-27-004251, and P-27-004252), Rancho Canada Golf Course (P-27-004262), and the Carmel River/Esselen Trail (P-27-004056).

#### 2.5.2.1 Monterey Peninsula Airport Hangar Structural Remains (P-37-000090/CA-MNT-001801H)

P-27-000090 consists of the structural remains of a hangar constructed in 1928 and associated with the first commercial airport on the Monterey Peninsula. It was built on a north–south axis, and included wood frame construction with corrugated, galvanized metal walls and roof. Sliding doors were present at both ends of the hangar. Maddux Airlines of San Diego, the only commercial airline to use the field and facilities, constructed the hangar. The site includes two features, (1) structural remains, and (2) watering trough. The site was used as an airplane hangar (1928–1936), and subsequently was used as an agricultural watering station and equipment storage. According to Wake et al. (1993), site integrity has been impacted to a great degree by cattle grazing, wind, and vandalism, and 90 percent of the surface has been disturbed to a maximum depth of one foot.

#### 2.5.2.2 Fort Ord

Fort Ord was established in 1917 as a training and staging facility for infantry troops. The base was decommissioned in 1991 and formally closed in 1994. Buildings and structures (P-27-002721, P-27-002722, P-27-002733, P-27-002734, P-27-002737, P-27-002738, P-27-002740, P-27-002741, P-27-002742, P-27-002743, P-27-002744, P-27-002747, P-27-002749, and P-27-002912) were assessed for historical significance between 2003 and 2007 (Jody R. Stock, Holman and Associates [2005, 2007], and Ian Alexander, Juan Cervantes, Matthew Clark). The majority of the identified buildings (mess halls – T27 and T29-38), latrine and showers (T74-83), recreation buildings (T-85, T-90, T-98-100, T-106), warehouse (T-120-121, T-1321), post office (T-101), firehouse (T-105), auto shop (T-138, T-140) and buildings T-23-24, T-87, T-97, and T-104) on record with the NWIC were recorded and evaluated for Section 106 review by Jody R. Stock (2003, 2006). All structures except T-85 were determined eligible for listing on the NRHP under criterion A. According to Stock (2003), buildings T-138 and T-140 did not retain the same amount of integrity as the balance of the structures. Building T-138 was identified as having been "altered with a large metal, roll-down door on the front façade, thereby altering the design, materials, and workmanship." Alexander et. al. (2005, 2007) recorded Feature EGP-1 and EGP-3 in 2005 and updated the feature's status in 2007. Alexander et. al. described the features as follows:

> Feature EGP-1 was a small circular detention pond/reservoir, with an artificially raised berm on the north and east sides only, flanking Inter-Garrison and Chapel Hill Roads respectively. The west and south sides of the pond were contained by rising topography. This berm was about seven feet high on the east side. The pond center was overgrown with willows. There was a wood frame/plank water height gauging station at the east comer with one-foot increments marked to eight feet. It was fastened with wire nails. A buried strip of asphalt and a 24 by 60 foot concrete slab were identified on the south half of the east berm during monitoring. The maximum dimensions for the feature were approximately 400 feet by 400

feet. The feature was totally destroyed prior to May 31, 2007 by construction on the East Garrison Project.

Feature EGP-3 is a wide rectangular artificially flat area (1200 feet east/west, 400 feet north/south) directly west of Feature EGP-1. It was situated between two low ridges and had an all metal post wire fence defining the perimeter. Much of the surface was covered with gravel and had patches of ice plant, coyote bush, plantain, and Russian thistle. There were two nearly identical concrete pads (T-140, T-138) measuring 84 by 38 feet inside, adjacent to a paved access road. These pads had 12-inch-high footing walls on all sides except the street front. Each of these pads had two oblong vehicle repair pits. A flat concrete "modern looking" pad (T-142) measuring 102 by 43 feet was situated north of T-140. The feature area is +/- 11 acres. Monitoring in 2007 identified buried cast concrete saddle tank supports as a 1940s gas or fueling station location; a mortared granite boulder retaining wall fragment; a Hemingray-16 (1919-1950s) insulator; a buried concrete slab measuring 15 by 10 feet. The feature (EPG-3) was destroyed by May 31, 2007.

Although the area in which these buildings and structures are located has not been formally listed as a historic district under the CRHR or NRHP, many of the buildings and structures are still extant.

#### 2.5.2.3 Pajaro River Levee (P-27-004178)

The Pajaro River levee (P-27-004178) was recorded by David Hickman in 2021. According to Hickman, "it was constructed in 1949 by the U.S. Army Corps of Engineers. The levees run from the river mouth to river mile 10.6 on left (south) bank and river mile 11.9 on the right (north) bank, protecting lands around most of the lower reach of the river." Hickman evaluated the resource for significance and determined that "the levee lacks historical significance and does not meet the criteria for listing in the NRHP."

#### 2.5.2.4 Single-Family Residences (P-27-004242, P-27-004243, P-27-004246, P-27-004251, and P-27-004252)

Single-family residences greater than 50 years in age are identified within the project area (P-27-004242, P-27-004243, P-27-004246, P-27-004251, and P-27-004252). They are all located on Merritt Street (111020, 111040, 111098, 111100, 11150) in Castroville. All are Ranch-style except the residence at 11040 Merritt Street that was constructed in the Folk Victorian style. These residences were surveyed and recorded for Section 106 review by Steven J. Melvin et al. (2019) for the MON 183 Castroville Improvement Project. The structures were determined not eligible for listing to the CRHR or NRHP, and are not listed on the Monterey County Register of Historic Resources.

#### 2.5.2.5 Rancho Canada Golf Course (P-27-004262)

The Rancho Canada Golf Course opened in 1970 and was constructed in the Spanish Colonial Revival style. It was recorded and evaluated by James Williams (2018) for the Palo Corona

Regional Park General Development Plan. The golf course was determined not eligible for listing to the CRHR or NRHP. In addition, it was determined to not be eligible for designation under the County of Monterey regulations.

#### 2.5.2.6 Carmel River/Esselen Trail (P-27-004056)

The Carmel River/Esselen Trail is the only identified multi-component resource. The Department of Park and Recreation (DPR) form prepared by Glenn Yanagi (2023) identified that a DPR form was not prepared for this resource when it was evaluated in 1999 by McCarthy. A portion of the trail was evaluated for the New Los Padres Dam and Reservoir project. It was identified as a traditional place/Traditional Cultural Property (TCP) and contributor to the Xasáuan District. The resource was identified as significant under criterion A of the NRHP based on "knowledge that has been passed down orally through the generations reaching into the last century." According to Yanagi, "the study by McCarthy identified that portions of the TCP within the New Los Padres Dam and Reservoir project area would be inundated and alter the setting of the remaining portions of the TCP."

## 2.6 Applicable Regulations

Cultural resource and TCR regulations that apply to the project are CEQA, California Health and Safety Code, provisions of the CRHR, and County regulations. Historical and archaeological districts, sites, buildings, structures, and objects are assigned significance based on their exceptional value or quality in illustrating or interpreting the heritage of Monterey County in history, architecture, archaeology, engineering, and culture. A number of criteria are used in demonstrating resource importance.

### 2.6.1 Federal Level Regulations

#### 2.6.1.1 National Environmental Policy Act

The National Environmental Policy Act (NEPA) (42 USC Section 4321) requires that cultural resources be considered when assessing the environmental impacts of proposed federal projects. Responsibilities of NEPA include the preservation of important historic, cultural, and natural aspects of our national heritage, and to maintain, wherever possible, an environment which supports diversity, and variety of individual choice. NEPA requires federal agencies to incorporate environmental considerations in their planning and decision-making through a systematic interdisciplinary approach. Specifically, all federal agencies are to prepare detailed statements assessing the environmental impact of and alternatives to major federal actions significantly affecting the environment.

#### 2.6.1.2 National Historic Preservation Act

The National Historic Preservation Act (NHPA) (16 USC 470 et seq.) establishes the nation's policy for historic preservation and sets in place a program for the preservation of historic properties by requiring federal agencies to consider effects to significant cultural resources (e.g., historic properties) prior to undertakings.

Section 106 of the NHPA requires federal agencies to take into account the effects of projects on historic properties, which are resources included in or eligible for listing in the NRHP. The purpose of Section 106 is to avoid unnecessary harm to historic properties from federal actions. It also gives the Advisory Council on Historic Preservation and the State Historic Preservation Office an opportunity to consult (36 CFR 800). Federal agencies issuing permits or providing funding for the proposed project would be required to comply with NHPA requirements.

#### 2.6.1.3 National Register of Historic Places

The NRHP is the nation's official list of historic places. The NRHP is overseen by the National Park Service and requires that a property or resource eligible for listing in the NRHP meet one or more of the following four criteria at the national, state, or local level to ensure integrity and obtain official designation:

a. The property is associated with events that have made a significant contribution to the broad patterns of our history.
b. The property is associated with the lives of persons significant to our past. Eligible properties based on this criterion are generally those associated with the productive life of the individual in the field in which the person achieved significance.
c. The property embodies the distinctive characteristics of a type, period, or method of construction, or represents the work of a master, or possesses high artistic value, or represents a significant and distinguishable entity whose components lack individual distinction.
d. The property has yielded, or is likely to yield, information important to prehistory or history.

In addition to meeting at least one of these four criteria, listed properties must also retain sufficient physical integrity of those features necessary to convey historic significance. The register has identified the following seven aspects of integrity: location, design, setting, materials, workmanship, feeling, and association.

Properties are nominated to the NRHP by the State Historic Preservation Officer of the state where the property is located, by the Federal Preservation Officer for properties under federal ownership or control, or by the Tribal Historic Preservation Officer if on Tribal lands. Listing in the NRHP provides formal recognition of a property's historic, architectural, or archaeological significance

based on national standards. Documentation of a property's historic significance helps provide for the preservation of the resource.

## 2.6.2 State Level Regulations

### 2.6.2.1 California Environmental Quality Act

According to CEQA, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing in the CRHR (California Public Resources Code, Section 5024.1; 14 CCR 4852) including the following:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; and/or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

The fact that a resource is not listed in or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to PRC Section 5020.1[k]), or not identified in a historical resources survey (meeting the criteria in Section 5024.1[g] of the CEQA Guidelines) does not preclude a lead agency from determining that the resource may be a historical resource as defined in PRC Section 5020.1(j) or 5024.1.

### 2.6.2.2 California Register of Historical Resources (California Public Resources Code, Section 5020 et seq.)

In California, the term "historical resource" includes but is not limited to "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (PRC Section 5020.1[j]). In 1992, the California Legislature established the CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1[a]). A resource is eligible for listing in the CRHR if the State Historical Resources Commission determines that it is a significant resource and that it meets any of the following NRHP criteria (PRC Section 5024.1[c]):

1. Associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2. Associated with the lives of persons important in our past.

3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4. Has yielded, or may be likely to yield, information important in prehistory or history.

Resources less than 50 years old are not considered for listing in the CRHR but may be considered if it can be demonstrated that sufficient time has passed to understand the historical importance of the resources (refer to 14 CCR 4852[d][2]).

The CRHR protects cultural resources by requiring evaluations of the significance of pre-contact and historical resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed on the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys. The State Historic Preservation Officer maintains the CRHR.

#### 2.6.2.3 California Health and Safety Code, Section 7050.5

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code, Section 7050.5, requires that, if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the County Coroner has examined the remains (California Health and Safe Code, Section 7050.5b). If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact the Native American Heritage Commission (NAHC) within 24 hours (California Health and Safe Code, Section 7050.5c). The NAHC will notify the most likely descendant (MLD). With the permission of the landowner, the MLD may inspect the site of discovery. The inspection must be completed within 24 hours of notification of the MLD by the NAHC. The MLD may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

### 2.6.3 County of Monterey

#### 2.6.3.1 2010 General Plan

The Conservation and Open Space Element of the Monterey County General Plan (2010 General Plan) (County of Monterey 2008a) includes the following archaeological resources, and Native Californian cultural sites, sacred places, and burial sites goals and policies:

## Archaeological Resources

- **Goal OS-6:** Encourage the Conservation and Identification of the County's Archaeological Resources
  - **OS-6.1 –** Important representative and unique archaeological sites and features shall be identified and protected for all parcels with undisturbed natural conditions (i.e., ungraded properties), consistent with State Office of Historic Preservation guidelines and definitions employed on a statewide basis, including Phase I, II, and III studies.
  - **OS-6.2 –** Information on the location and significance of the County's archaeological resources shall be compiled and used in the environmental and development review process. The County shall rely on and participate in the statewide inventory work of the California Native American Heritage Commission and the State Office of Historic Preservation. All Phase I, II, and III studies, and records of Native Californian consultation, shall be filed with appropriate state agencies and local Tribes as well as local data source compilations maintained by the County. The County shall work with local Tribes to update County GIS maps showing high, moderate, and low archaeological sensitivity areas.
  - **OS-6.3 –** New development proposed within moderate or high sensitivity zones, or within 150 feet of a known recorded archaeological and/or cultural site, shall complete a Phase I survey including use of the regional State Office of Historic Preservation or the California Native American Heritage Commission's list of sacred and traditional sites. Routine and Ongoing Agricultural Activities shall be exempted from this policy in so far as allowed by state or federal law.
  - **OS-6.4 –** Development proposed in low sensitivity zones are not required to have an archaeological survey unless there is specific additional information that suggests archaeological resources are present.
  - **OS-6.5 –** Policies and procedures shall be established that encourage development to avoid impacts to sensitive archaeological sites including:

    a. Designing or clustering development to avoid archaeological site deposits, historic sites and resources, and Native Californian cultural sites;
    b. Requiring dedication of permanent conservation easements where subdivisions and other developments can be planned to provide for such protective easements.

  - **OS-6.6 –** Efforts by historical, educational or other organizations to improve the public's recognition of the County's cultural heritage and the citizen's responsibilities for archaeological or cultural resource preservation shall be

encouraged. The County shall adopt a uniform set of guidelines to define Phase I, II, and III significance assessment and data recovery programs. Similar guidelines shall be created to set standards for requirements for consultation with Native Californian descendants to establish procedures for determining the presence or absence of sacred or traditional sites. These guidelines shall address monitoring requirements and participation in cultural resource data recovery programs.

### Native Californian Cultural Sites, Sacred Places, and Burial Sites

- **Goal OS-8:** Encourage the Conservation and Identification of the County's Native Californian Cultural Sites, Sacred Places, and Burial Sites.
  - **OS-8.1 –** Unique burial sites shall be identified and protected. All Native Californian cemeteries, burials, shrine sites, and sacred place locations shall be preserved in place to the greatest extent possible and as permitted by law. In cases where such sites and locations cannot be retained in place without modification, governing requirements in the Government Code, Health and Safety Code, California Environmental Quality Act and Native American Religious Freedom Act shall be taken into account in consulting with local Native Californian Tribal Groups with documented aboriginal ties to the study area and shall be carried out, as necessary, with the assistance and input of the California Native American Heritage Commission. Documentation of descent shall be based on Genealogical Proof Standards.
  - **OS-8.2 –** Information on the location and significance of the County's burial sites shall be compiled and used in the environmental and development review process. All such data sources shall be recorded with the State Office of Historic Preservation coincident with development review.
  - **OS-8.3 –** Development proposed at sites where known burials or human cemeteries are located shall in no case modify, disturb, excavate, or develop within such locations until all steps in compliance with CEQA, Native American Heritage Commission, Health and Safety Code and Government Code, and in accordance with any completed MOU with a local Tribe, have been completed. Routine and Ongoing Agricultural Activities are exempted from this policy in so far as allowed by state or federal law. In the case of any conflict of interpretation, state requirements for the protection of burial sites are applicable and shall be implemented in good faith.

- **OS-8.4 –** Policies and procedures shall be established that encourage development to avoid impacts to burial sites including:

    a. Designing or clustering development to avoid archaeological deposits that typically contain human remains and to avoid any known cemeteries or other concentrations of human remains;
    b. Requiring dedication of permanent conservation easements if subdivisions and other developments can be planned to provide for such protective easements;
    c. In all cases where human remains are identified through CEQA review, archaeological research, ethnohistoric research, inadvertent grading disturbance, or historic record research, the County shall consult with the designated "most likely descendants" as identified by any Memorandum of Understanding (MOU) adopted pursuant to Policy OS-8.7. In the event no MOU is executed, the Native American Heritage Commission shall be consulted to help determine the appropriate Tribal Group in that portion of the County where the burial remains are identified.

- **OS-8.5 –** Efforts by historical, educational or other organizations to improve the public's recognition of the County's cultural heritage and the citizen's responsibilities for burial site preservation shall be encouraged. The County shall establish a Native Californian Advisory Panel that could provide technical assistance to staff in determining how best to address monitoring and site treatment consistent with the policies in this General Plan. Decisions about human remains and heritage resources shall be made in consultation with Tribal representatives consistent with procedures established in Policy OS-8.1.
- **OS-8.6 –** Tribal representatives will be consulted, consistent with state preservation law, about the location of sacred places, ancestral sites, archaeological remains of village sites, burial and cemetery sites, and other significant cultural resources during the preparation of any General Plan amendment, Master Plan, Community Plan, or Specific Plan.
- **OS-8.7 –** While all interested Native Americans shall be encouraged to participate in the CEQA data review and evaluation stages of cultural resource policy implementation, the Ohlone/Coastanoan/Esselen Nation (OCEN) is a designated Most Likely Descendant group identified by the Native American Heritage Commission of the State of California. An Implementation Plan for this General Plan shall include, but not be limited to:

a. Designating OCEN as the clearinghouse group for the coordination of data recovery monitoring and the disposition of human remains in Monterey County.
b. Creating a Memorandum of Understanding adopted to implement California's Local Government Tribal Inter-Governmental Consultation Act (SB18) consistent with this General Plan.
c. Establishing a technical advisory committee pursuant to Policy OS-8.5 and consisting of appropriate Tribal representatives and qualified archaeologists.

#### 2.6.3.2 Preservation of Historic Resources (County Code Section 18.25 et seq.)

The Monterey County Code (County Code) includes provisions for the preservation of historic resources (County of Monterey 2009). It provides the review criteria and process in which resources are designated. The Code also includes guidance to property owners, appeal process, demolition of historic resources, fire and building code requirements, and the requirement to maintain in good repair a historic building or a structure within a historic district.

#### 2.6.3.3 Guidelines for Historic Assessments

The Guidelines for Historic Assessments provides the general requirements for the preparation of cultural reports so that environmental effects are evaluated in a consistent, objective manner (County of Monterey 2008b). In addition, it provides guidance on determining the significance of a resource, and is primarily for property specific evaluations.

### 2.6.4 Native American Traditional Cultural Properties

#### 2.6.4.1 Native American Graves Protection and Repatriation Act

The Native American Graves Protection and Repatriation Act of 1990 (NAGPRA) provides a process for federal agencies and institutions that receive federal funds (including museums, universities, state agencies, and local governments) to repatriate or transfer from their collections certain Native American cultural items – human remains, funerary objects, sacred objects and objects of cultural patrimony – to lineal descendants, and to Indian Tribes, Alaska Native Corporations, and Native Hawaiian organizations. NAGPRA also provides a process for federal agencies to address new discoveries of Native American human remains, funerary objects, sacred objects and objects of cultural property intentionally excavated or inadvertently discovered on federal or Tribal lands. Those processes are detailed in 43 CFR 10.4. "New" discoveries are those events occurring after November 16, 1990, when NAGPRA was enacted. Consultation with Indian Tribes, Alaska Native Corporations, and Native Hawaiian organizations is a critical component for addressing identification, treatment, and disposition of Native American cultural items.

### 2.6.4.2 Native American Heritage Values

Federal and state laws mandate that consideration be given to the concerns of contemporary Native Americans with regard to potentially ancestral human remains, associated funerary objects, and items of cultural patrimony. Consequently, an important element in assessing the significance of the study site has been to evaluate the likelihood that these classes of items are present in areas that would be affected by the proposed project.

Also, potentially relevant to pre-contact archaeological sites is the category termed "Traditional Cultural Properties" in discussions of cultural resources management performed under federal auspices. According to Parker and King (1998), "traditional" in this context refers to those beliefs, customs, and practices of a living community of people that have been passed down through the generations, usually orally or through practice. The traditional cultural significance of a historic property, then, is significance derived from the role the property plays in a community's historically rooted beliefs, customs, and practices. Examples of properties possessing such significance include the following:

1. A location associated with the traditional beliefs of a Native American group about its origins, its cultural history, or the nature of the world;
2. A rural community whose organization, buildings and structures, or patterns of land use reflect the cultural traditions valued by its long-term residents;
3. An urban neighborhood that is the traditional home of a particular cultural group, and that reflects its beliefs and practices;
4. A location where Native American religious practitioners have historically gone, and are known or thought to go today, to perform ceremonial activities in accordance with traditional cultural rules of practice; and
5. A location where a community has traditionally carried out economic, artistic, or other cultural practices important in maintaining its historic identity.

A TCP, then, can be defined generally as one that is eligible for inclusion in the NRHP because of its association with cultural practices or beliefs of a living community that (a) are rooted in that community's history and (b) are important in maintaining the continuing cultural identity of the community.

### 2.6.4.3 California Native American Graves Protection and Repatriation Act

In 2001, the State Legislature passed AB 978, the California Native American Graves Protection and Repatriation Act of 2001 (CalNAGPRA), requiring all state agencies and museums that receive state funding and that have possession or control over collections of human remains or cultural items to provide a process for the identification and repatriation of these items to the appropriate Tribes. The bill also created a Repatriation Oversight Commission with oversight authority. The intent of the legislation was to cover gaps in the federal NAGPRA specific to the State of California. After the Repatriation Oversight Commission remained unfunded for over a

decade, the NAHC was granted oversight authority. The NAHC was given more responsibilities in 2018 under AB 2836 and in 2021 under AB 275. AB 2836 requires the NAHC to provide technical assistance to the University of California in adopting policies and procedures adopted to expedite repatriation of remaining items in its possession. AB 275 requires the NAHC to maintain a list of California Indian Tribes and their state Aboriginal territories, adopt mediation procedures, and publish notices of completion of preliminary inventories and summaries on the Commission website. Pursuant to Section 8013(a) of the California Health and Safety Code, the NAHC maintains a list of all California Indian Tribes and their respective state Aboriginal territories for the purpose of the repatriation of Native American human remains and cultural items.

#### 2.6.4.4 Native American Historic Resource Protection Act

California PRC Sections 5097 et seq. codify the procedures to be followed in the event of the unexpected discovery of human remains on nonfederal public lands. Section 5097.9 states that no public agency or private party on public property shall "interfere with the free expression or exercise of Native American Religion." The code further states that:

> No such agency or party [shall] cause severe or irreparable damage to any Native American sanctified cemetery, place of worship, religious or ceremonial site, or sacred shrine… except on a clear and convincing showing that the public interest and necessity so require. County and city lands are exempt from this provision, expect for parklands larger than 100 acres.

# Section 3 Methods

## 3.1 Survey Methods

The goal of this survey was to identify existing cultural resources through a desk top survey. Harris & Associates conducted a records search at the NWIC for information on known cultural resources within the project area of potential effects (APE). The records search included a review of all records for historic and pre-contact sites, and historic addresses. In addition, the NRHP, the California Register of Historical Resources, the Monterey County Historic Register, the Archaeological Resources Directory, and the Built Environment Resources Directory were reviewed. Harris also requested a Sacred Lands File (SLF) search from the NAHC and conducted Tribal outreach for information about the project site.

## 3.2 Native American Outreach

Harris contacted the NAHC for a SLF search to determine whether Sacred Lands are present within the project area. The NAHC provided a positive response to the SLF check and recommended that the list of Tribes provided be contacted for more information. The NAHC identified 22 Native American representatives as potentially having local knowledge of TCRs. All Tribal points of contact on the list provided by the NAHC were contacted by email and/or regular mail for any information they may have regarding Sacred Lands that may be present on the project area. To date, no responses have been received. Tribal outreach documentation is provided in Confidential Appendix C, Sacred Lands File Search and Tribal Outreach. The County is also conducting AB 52/Senate Bill (SB) 18 government-to-government consultation.

### 3.2.1 Government-to-Government Consultation

The County is also conducting AB 52 and SB 18 government-to-government consultation. The County sent notification of SB 18 consultation on December 1, 2022, and notification of AB 52 consultation on October 30, 2024. County staff have met with the Esselen Tribe of Monterey County, Ohlone Costanoan Esselen Nation, and Indian Canyon Band of Costanoan to discuss the project.

The County consulted with the Esselen Tribe of Monterey County on February 17, 2023, as part of SB 18 consultation. The County re-engaged the Esselen Tribe of Monterey County for additional consultation as part of SB 18 and AB 52 on February 4, 2026 due to subsequent updates to the Opportunity Sites inventory. During consultation, the Esselen Tribe of Monterey County identified and requested:

- Consultation for large development projects for subdivisions that may be located in areas of cultural significance.
- For staff to recognize that the County works with outdated maps of Tribal resource areas. They request to work with the County to identify sensitive areas for potentially

uncovering cultural resources at parcels in the Sites Inventory for the Housing Element Sixth Cycle (2023–2031) update of the General Plan and contribute to development of policies and programs for staff consideration.

- Requested notification on the development of Site 52 through AB 52 and that as many protective measures be in place for development of the site as possible.
- That projects proposed in areas sensitive for cultural significance to Native Tribes indigenous to the land be provided an opportunity for consultation under CEQA and pursuant to state law (AB 52).
- That streamlined permits accommodate residential construction for anticipated generational growth.

County staff did not receive a request for AB 52 consultation from the Esselen Tribe of Monterey County, but followed up with a notice of closing the window of opportunity for consultation as a gesture of goodwill in continued collaboration.

The County consulted with the Ohlone Costanoan Esselen Nation on March 1, 2023, as part of SB 18 consultation and on November 12, 2024, as part of AB 52 consultation. The County also received a letter from Ohlone Costanoan Esselen Nation during the initial public review process for the County's Sites Inventory requesting that the County not include portions of Opportunity Site 52 due to the presence of "culturally significant" areas on the site.

The County re-engaged the Ohlone Costanoan Esselen Nation for additional consultation as part of SB 18 and AB 52 on June 2, 2026 due to subsequent updates to the Sites Inventory. During consultation, the Ohlone Costanoan Esselen Nation identified and requested:

- To see in the General Plan that the Ohlone Tribe is notified of any ground disturbance in Monterey County and function as the monitor for any project monitoring requirement.
- Concerns with meaningful consultation. No decisions will be made, and discussion does not make a difference with what is written or what happens.

  The County HCD Director identified that policies need input from Tribes to comply with SB 18, and staff needs to present actions proposed by the Ohlone Tribe to County decision-makers who might be able to accept and approve the Tribe's most critical priority for implementation within state and local guidelines.
- No public map of Sacred Sites.
- To know the size and location of all ground disturbance in Monterey County and that none are along the Coast or the Salinas River.
- Not supportive of specific locations as they are areas of sensitive Tribal activity.
- Concerns about ministerial laws and approvals, specifically concerned with requirements for discoveries, and how to ensure that proper protections are in place.

- Contractors need to have training on resources to understand what is found.
- Not supportive of the development of Tarpy Flats due to cultural sensitivity of the site. Hiss Parcel Project directly adjoins the site and was acquired by Big Sur Land Trust for preservation of wildlife habitat and cultural values for the Ohlone Costanoan-Esselen Nation.
- Concerns related to ministerial approval process for future development projects and Tribal notification.

Outside of consultation, comments were received from the Indian Canyon Band of Costanoan when the project was presented to the Airport Land Use Commission. The Indian Canyon Band of Costanoan requested consultation, preparation of educational materials, and monitoring. As requested, the County met with the Tribe on July 9, 2026. During the meeting, the Indian Canyon Mutsun Band of Costanoan identified and requested:

- Cultural sensitivity and awareness training for construction workers that have the potential to unearth Tribal resources.
- Provision of Tribal cultural monitoring for sites with archaeological and Tribal cultural sensitivity.
- Incorporation of educational materials and opportunities in project design for projects of value to Tribal nations (i.e. murals, informational placards).
- Provision of Tribal easements where possible to allow for Tribal nations to access lands of Tribal value.

### 3.2.2 Native American and Archaeological Resources Technical Panel

The Native American and Archaeological Resources Technical Panel is an additional forum for engagement with Native Tribes. In addition to meeting with Tribes, the County provided a presentation of the early Draft Sites Inventory on May 4, 2023, and provided a Housing Element status update on October 31, 2024, to the Native American and Archaeological Resources Technical Panel.

*This page intentionally left blank.*

## Section 4 Report of Findings

The records search at the NWIC identified a total of 208 previously conducted cultural studies within the project area (Confidential Appendix B, CHRIS Background Data). The records search indicated that a total of 29 resources (six pre-contact, 22 historic, and one multi-component) were recorded within the project area (Table 1). Each previously recorded resource included one or more resource descriptions, which provides an overview as to the resource type or cultural elements that are present. Each resource is given a resource code, which is assigned by the Office of Historic Preservation to aid in the recordation of resources using DPR forms.

**Table 1. Previously Recorded Cultural Resources within the Project Area**

| P-27-004262 | N/A | Historic | Rancho Canada Golf Club | James Williams 2018 |

Of the six pre-contact resources, two are habitation sites, one is a Native American game field, two include artifact scatters, and one includes the recovery of a mortar bowl rim fragment and an artifact scatter. The 22 historic resources include structural remains of an airport hangar; 45 Fort Ord buildings, structures, and features; one levee; five single-family residences; and one golf course. One multi-component site was identified that consisted of a historic/Native American trail.

In addition, to the NWIC records search, the County of Monterey Historic Resources Register was also reviewed. A total of 25 historic resources were identified. The Berwick Manor and Orchard, the Porter Vallejo Mansion, and the Castroville Japanese Language School are listed on both the National Register and Local Register. In addition, Carmel Valley Airport is listed on the California Register and Local Register. One resource, the Meadows House had a designation of "unknown," and the Old Carmelo School had a designation of "potentially eligible for listing."

## 4.1 National Register of Historic Places

The NRHP was established by the NHPA of 1966 as "an authoritative guide to be used by federal, state, and local governments, private groups and citizens to identify the nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment" (36 CFR 60.2). The NRHP recognizes properties that are significant at the national, state, and local levels. In general, a resource must be 50 years of age to be considered for the NRHP, unless it satisfies a standard of exceptional importance. To be eligible for listing in the NRHP, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Districts, sites, buildings, structures, and objects of potential significance must also possess integrity of location, design, setting, materials, workmanship, feeling, and association. A review of the NRHP indicated that three resources are present within the project area, the Berwick Manor and Orchard, the Porter Vallejo Mansion, and the Castroville Japanese Language School. However, a review of the DPR forms identified that pre-contact site P-27-003666, multi-component site P-27-004056 (Carmel River/Esselen Trail), and the majority of Fort Ord buildings and structures (P-27-002721, P-27-002722, P-27-002733, P-27-002734, P-27-002737, P-27-002738, P-27-002740, P-27-002741, P-27-002742, P-27-002743, P-27-002744, are P-27-002747) are eligible for listing to the NRHP (Table 2, Cultural Resources Eligible or Listed on the NRHP, CRHR, or Local Register within the Project Area). One resource, P-27-004056, is outside of the project area.

**Table 2. Cultural Resources Located within Project Area**

**Notes:**

*2003 NRHP Status Codes used to describe. NRHP Status Codes were updated in 2020.

** No NRHP Code provided.

## 4.2 California Register of Historical Resources

The CRHR, maintained by the Office of Historic Preservation, includes historic and pre-contact resources that have been evaluated and determined to be significant under CEQA. The CRHR provides information, organized by County, regarding resources that have been processed through the Office of Historic Preservation (OHP). A review of the CRHR indicated that one resource is listed, Carmel Valley Airport that is present within the project. Resources that are eligible at the state level would also be eligible at the local level.

## 4.3 Monterey County Register of Historic Resources

The Monterey County Register of Historic Resources (local register) is maintained by the County and is the official inventory of buildings, structures, and areas designated by the County Board of Supervisors. A review of the local register indicates that 25 resources are present within the project area.

Table 2 identifies resources and their significance that are located within the opportunity and pipeline sites. For a full listing of the local register, see Appendix D. Any projects that contain any resources identified on the local register would require additional analysis.

The project is separated into three levels of cultural sensitivity—low, moderate, and high—based on the archival research, the NAHC SLF records search, regional environmental factors, and historic and modern development (Figure 5, Cultural Sensitivity for Monterey County, and Figures 5a–5i).

# Section 5 Potential Impacts to Cultural Resources

Potential impacts to cultural resources are addressed in this section. The General Plan does not address specific projects proposed by the County; therefore, impacts are described generally. Four main impacts to cultural resources may occur through the implementation of the project, including (1) the destruction or adverse change to built resources, including adverse changes in the elements of historical structures, buildings, features, districts, or landscapes that make them significant resources; (2) the destruction of known or unknown pre-contact and historical archaeological resources; (3) the potential to disturb Native American human remains; and (4) the destruction or adverse changes to TCRs. Impacts for each are discussed below.

## 5.1 Historical Resources

The record searches and research identified historical (built) resources within the project. Under CEQA, any project that causes a substantial adverse in the significance of a historical resource would have a significant effect on the environment. Substantial adverse changes to the significance of a historical resource is defined as the physical demolition, destruction, alteration, or relocation of the resource or its immediate surroundings such that its significance would be materially impaired.

Historical resources within the project consist of structural remains of an airplane hangar, Fort Ord buildings, structures, and features, a levee, single-family residences, a golf course, and a multi-component trail. It is unknown how many parcels contain buildings or structures which were constructed prior to 1975 (and therefore are at least 50 years old), or built environmental resources which may meet the age threshold for eligibility when the project is implemented. Future development will likely occur in areas that may contain significant historical structures, buildings, features, or districts. As such, the potential exists for significant impacts to occur as a result of implementation of the project. All potential impacts are assumed to be significant for this analysis. Mitigation Measures CULT-1, CULT-2, CULT-5, and CULT-6 are recommended to minimize the potential for adverse effects to historical (built) resources. Projects that follow the Secretary of the Interior's Standards for the Treatments of Historic Properties are typically mitigated below the level of significance.

Based on the status of the resources within the project qualifying as significant historical resources, a site-specific analysis would be required when subsequent projects are proposed. Unevaluated historical resources may require research and evaluation to determine their eligibility for inclusion in the CRHR or NRHP. As such, individual projects may potentially cause a substantial adverse change in the significance of a historical resource and result in a potentially significant impact.

## 5.2 Archaeological Resources

The record searches and research identified pre-contact and historical archaeological sites within the project area. Based on the background search and research, it is known that the project area was used by pre-contact and historic peoples. As such, additional unrecorded archaeological resources may be present within the project. Under CEQA, archaeological resources may meet the definition of a historical resource or unique archaeological resource. As such, a project that causes a substantial adverse change in the significance of an archaeological resource pursuant to Section15064.5 of the CEQA Guidelines is considered a potentially significant impact. An adverse impact includes the destruction or disturbance of a significant archaeological site or any portion of an archaeological site that contains or has the potential to contain information important to history or prehistory.

Based on the status of the resources within the project qualifying as significant archaeological resources, a site-specific analysis would be required when subsequent projects are proposed. Unevaluated cultural resources may require research, evaluation, or testing programs to determine their eligibility for inclusion in the CRHR or NRHP. In addition, project improvements would have the potential to encounter unrecorded cultural resources. Furthermore, ground-disturbing activities such as clearing, trenching, and grading, have the potential to damage or destroy archaeological resources that may be present on or below the ground surface. Adverse effects to known significant or unique archaeological resources may result in a loss of valuable information that could be gained from the resources or prevent potentially eligible sites from being listed on a register of cultural resources. All potential impacts are assumed to be significant for this analysis. In order to reduce the potential for direct impacts from damage and disturbance to archaeological resources, Mitigation Measures CULT-1, CULT-2, CULT-3, and CULT-4 are recommended. Indirect impacts could also occur with implementation of the project. Specifically, increased accessibility to archaeological resources could lead to resource looting or vandalism activities. This is considered a significant impact. Mitigation Measures CULT-1, CULT-2, CULT-3, and CULT-4 are recommended to mitigate this potential indirect impact.

## 5.3 Human Remains

Based on the records search and research, human remains were not identified within the project. However, there is the potential for the presence of unidentified human remains during project implementation. CEQA assigns special importance to human remains and establishes procedures to be used when Native American remains are discovered. Excavation activities are required to be stopped whenever human remains are uncovered, and the County Coroner is to be contacted to assess the remains. If the County Coroner determines that the remains are those of Native Americans, the NAHC must be contacted within 24 hours. At that time, the property owner or the individual responsible for the excavation work must consult with the appropriate Native

Americans to develop a culturally appropriate means of treating the remains. Ground disturbance associated with the implementation of the project could have the potential to disturb or destroy Native American human remains, including those interred outside of formal cemeteries. Mitigation Measures CULT-1, CULT-2, CULT-3, and CULT-4 are recommended to reduce potential impacts to the unexpected discovery of human remains.

## 5.4 Tribal Cultural Resources

Harris contacted the NAHC for a SLF search to determine whether Sacred Lands are present within the project. The NAHC provided a positive response to the SLF Search and recommended that the list of Tribes provided be contacted for more information. All Tribal points of contact on the list provided by the NAHC were contacted by email and/or regular mail for any information they may have regarding Sacred Lands that may be present on the project. To date, no responses have been received. Tribal outreach documentation is provided in Confidential Appendix C.

One resource was identified during the background search that is a TCR. The Carmel River/Esselen Trail (P-27-004056) within the project area is identified as a multi-component resource. It is described as the "Esselen trade trail that begins at the coast and follows the river into the back country" (Yanagi 2023). It was identified as a traditional place/TCP and contributor to the Xasáuan District. The resource was determined significant under Criterion A of the NRHP based on "knowledge that has been passed down orally through the generations reaching into the last century" (Yanagi 2023).

Implementation of the project would involve ground disturbing construction activities that could cause an adverse effect to significant known or unknown TCRs. Mitigation Measures CULT-1, CULT-2, CULT-3, and CULT-4 are recommended to mitigate impacts to TCRs. Indirect adverse effects may result from increased accessibility to TCRs that could lead to resource looting or vandalism activities. This is considered a significant impact. Mitigation Measures CULT-1, CULT-2, CULT-3, and CULT-4 are recommended to mitigate this potential indirect impact.

*This page intentionally left blank.*

# Section 6 Recommendations

## 6.1 Resource Management

As part of the 2010 General Plan (County of Monterey 2010), the County has already developed several goals and policies with the intent of identifying and preserving archaeological resources. Conservation and Open Space Element Goal OS-6 states, "Encourage the Conservation and Identification of the County's Archaeological Resources." The County developed six policies in support of Goal OS-6:

- **OS-6.1 –** Important representative and unique archaeological sites and features shall be identified and protected for all parcels with undisturbed natural conditions (i.e., ungraded properties), consistent with State Office of Historic Preservation guidelines and definitions employed on a statewide basis, including Phase I, II, and III studies.
- **OS-6.2 –** Information on the location and significance of the County's archaeological resources shall be compiled and used in the environmental and development review process. The County shall rely on and participate in the statewide inventory work of the California Native American Heritage Commission and the State Office of Historic Preservation. All Phase I, II, and III studies, and records of Native Californian consultation, shall be filed with appropriate state agencies and local Tribes as well as local data source compilations maintained by the County. The County shall work with local Tribes to update County GIS maps showing high, moderate, and low archaeological sensitivity areas.
- **OS-6.3 –** New development proposed within moderate or high sensitivity zones, or within 150 feet of a known recorded archaeological and/or cultural site, shall complete a Phase I survey including use of the regional State Office of Historic Preservation or the California Native American Heritage Commission's list of sacred and traditional sites. Routine and Ongoing Agricultural Activities shall be exempted from this policy in so far as allowed by state or federal law.
- **OS-6.4 –** Development proposed in low sensitivity zones are not required to have an archaeological survey unless there is specific additional information that suggests archaeological resources are present.
- **OS-6.5 –** Policies and procedures shall be established that encourage development to avoid impacts to sensitive archaeological sites including:

    a. Designing or clustering development to avoid archaeological site deposits, historic sites and resources, and Native Californian cultural sites;
    b. Requiring dedication of permanent conservation easements where subdivisions and other developments can be planned to provide for such protective easements.

- **OS-6.6 –** Efforts by historical, educational or other organizations to improve the public's recognition of the County's cultural heritage and the citizen's responsibilities for archaeological or cultural resource preservation shall be encouraged. The County shall adopt a uniform set of guidelines to define Phase I, II, and III significance assessment and data recovery programs. Similar guidelines shall be created to set standards for requirements for consultation with Native Californian descendants to establish procedures for determining the presence or absence of sacred or traditional sites. These guidelines shall address monitoring requirements and participation in cultural resource data recovery programs.

Similarly, the County has also developed several goals and policies with the intent of preserving and identifying Native Californian cultural sites, sacred places, and burial sites. The Conservation AND Open Space Element Goal OS-8 states, "Encourage the Conservation and Identification of the County's Native Californian Cultural Sites, Sacred Places, and Burial Sites." The County developed seven policies in support of Goal OS-8:

- **OS-8.1 –** Unique burial sites shall be identified and protected. All Native Californian cemeteries, burials, shrine sites, and sacred place locations shall be preserved in place to the greatest extent possible and as permitted by law. In cases where such sites and locations cannot be retained in place without modification, governing requirements in the Government Code, Health and Safety Code, California Environmental Quality Act and Native American Religious Freedom Act shall be taken into account in consulting with local Native Californian Tribal Groups with documented aboriginal ties to the study area and shall be carried out, as necessary, with the assistance and input of the California Native American Heritage Commission. Documentation of descent shall be based on Genealogical Proof Standards.
- **OS-8.2 –** Information on the location and significance of the County's burial sites shall be compiled and used in the environmental and development review process. All such data sources shall be recorded with the State Office of Historic Preservation coincident with development review.
- **OS-8.3 –** Development proposed at sites where known burials or human cemeteries are located shall in no case modify, disturb, excavate, or develop within such locations until all steps in compliance with CEQA, Native American Heritage Commission, Health and Safety Code and Government Code, and in accordance with any completed MOU with a local Tribe, have been completed. Routine and Ongoing Agricultural Activities are exempted from this policy in so far as allowed by state or federal law. In the case of any conflict of interpretation, state requirements for the protection of burial sites are applicable and shall be implemented in good faith.
- **OS-8.4 –** Policies and procedures shall be established that encourage development to avoid impacts to burial sites including:

a. Designing or clustering development to avoid archaeological deposits that typically contain human remains and to avoid any known cemeteries or other concentrations of human remains;
b. Requiring dedication of permanent conservation easements if subdivisions and other developments can be planned to provide for such protective easements;
c. In all cases where human remains are identified through CEQA review, archaeological research, ethnohistoric research, inadvertent grading disturbance, or historic record research, the County shall consult with the designated "most likely descendants" as identified by any Memorandum of Understanding (MOU) adopted pursuant to Policy OS-8.7. In the event no MOU is executed, the Native American Heritage Commission shall be consulted to help determine the appropriate Tribal Group in that portion of the County where the burial remains are identified.

- **OS-8.5 –** Efforts by historical, educational or other organizations to improve the public's recognition of the County's cultural heritage and the citizen's responsibilities for burial site preservation shall be encouraged. The County shall establish a Native Californian Advisory Panel that could provide technical assistance to staff in determining how best to address monitoring and site treatment consistent with the policies in this General Plan. Decisions about human remains and heritage resources shall be made in consultation with Tribal representatives consistent with procedures established in Policy OS-8.1.
- **OS-8.6 –** Tribal representatives will be consulted, consistent with state preservation law, about the location of sacred places, ancestral sites, archaeological remains of village sites, burial and cemetery sites, and other significant cultural resources during the preparation of any General Plan amendment, Master Plan, Community Plan, or Specific Plan.
- **OS-8.7 –** While all interested Native Americans shall be encouraged to participate in the CEQA data review and evaluation stages of cultural resource policy implementation, the Ohlone/Coastanoan/Esselen Nation (OCEN) is a designated Most Likely Descendant group identified by the Native American Heritage Commission of the State of California. An Implementation Plan for this General Plan shall include, but not be limited to:

  a. Designating OCEN as the clearinghouse group for the coordination of data recovery monitoring and the disposition of human remains in Monterey County.
  b. Creating a Memorandum of Understanding adopted to implement California's Local Government Tribal Inter-Governmental Consultation Act (SB18) consistent with this General Plan.
  c. Establishing a technical advisory committee pursuant to Policy OS-8.5 and consisting of appropriate Tribal representatives and qualified archaeologists.

Furthermore, the County Code Section 18.25 et seq. (Preservation of Historic Resources) includes provisions for the preservation of historic resources. It provides the review criteria and process in which resources are designated. The County Code also includes guidance to property owners, appeal process, demolition of historic resources, fire and building code requirements, the requirement to maintain in good repair a historic building or a structure within a historic district, and maintenance of the local register.

In addition to the County's current goals and policy, the following mitigation measures are recommended to reduce impacts to cultural resources which may be adversely affected by the implementation of the project. The recommended mitigation measures outline a series of assessments and actions, which provide guidance for evaluating potential impacts and incorporating appropriate measures to avoid, minimize, and/or mitigate impacts in compliance with CEQA.

## 6.2 Mitigation Measures

Implementation of the following recommended mitigation measures would reduce potentially significant impacts. The County is the lead agency implementing cultural resource mitigation measures.

**MM-CUL-OBJ-1: Historic Resources Assessment.** By-right residential developments streamlining under the Objective Process shall be required to prepare and submit a historic assessment as part of the development application for review by the County when a project has the potential to affect a building, site, objects, or structures over 50 years old. A Phase I Historic Assessment shall be prepared by a qualified historic consultant pursuant to the County of Monterey Guidelines for Historic Assessments. The Historic Assessment shall determine if a resource is historic by using criteria from the National Register of Historic Places, the California Register of Historical Resources, and Monterey County's Register of Historic Places. If it is determined that a resource is eligible for listing on one or more of these Registers, then a Phase II Assessment shall be prepared.

A Phase II Historic Assessment shall be prepared by a qualified historic consultant and shall provide a more detailed evaluation of the resource and examine how a project will affect its significance. If the Phase I or II Historic Assessment identifies a significant historical resource(s), and if avoidance or preservation in place is not feasible, then MM-CUL-OBJ-3 shall apply.

**MM-CUL-CONS-2: Historic Resource Assessment.** Applicants for developments streamlining under the Consistency Process shall be required to prepare and submit a historic assessment as part of the development application for review by the County when a project has the potential to affect a building, site, objects, or structures over 50 years old.

Refer to MM-CUL-OBJ-1 above for all standards and requirements for MM-CUL-CONS-2.

**MM CUL-OBJ-3: Historic Resources Protection.** By-right residential developments streamlining under the Objective Process shall be required to document, implement treatment measures, and incorporate interpretive measures if the Phase I or II Historic Assessment identifies a significant historical resource(s), and if avoidance or preservation in place of a built environment resource is not feasible. The required documentation shall be provided as part of the development application for review by the County, and shall include the following:

1. Implement documentation and treatment measures consistent with the Secretary of the Interior's Standards for Architectural and Engineering Documentation (Historic American Buildings Survey [HABS]/Historic American Engineering Record [HAER]/Historic American Landscape Survey [HALS]) prior to construction activities that would cause significant impacts. Documentation shall include:
    a. Photographic Recordation: Digital color photographs and large-format archival-quality photographs of the exterior and interior (where accessible) of the resource, including representative architectural features, spatial relationships, and character-defining details.
    b. Written Documentation: A written description of the resource's history, context, architecture, and significance, drawing upon available primary and secondary sources (e.g., Sanborn maps, building permits, census records, historical photographs, and prior evaluations).
    c. Measured Drawings (if appropriate): Scaled floor plans, elevations, and/or site plans prepared to HABS/HAER/HALS standards, if feasible and warranted by the resource's level of significance.
    d. Archival Curation: Documentation shall be compiled in a permanent archival-quality report and submitted to the appropriate local historical society, library, archives, and/or the California Historical Resources Information System regional information center for permanent curation and public accessibility.
2. In addition, where feasible, the project applicant or project proponent shall incorporate interpretive measures to commemorate the historical significance of the resource, such as public signage, exhibits, brochures, or web-based content.

**MM CUL-CONS-4: Historic Resources Protection.** Applicants for developments streamlining under the Consistency Process shall be required to document, implement treatment measures, and incorporate interpretive measures if the Phase I or II Historic Assessment identifies a significant historical resource(s), and if avoidance or preservation in place of a built

environment resource is not feasible. The required documentation shall be provided as part of the development application for review by the County.

Refer to MM-CUL-OBJ-3 above for all standards and requirements for MM-CUL-CONS-4.

**MM-CUL-OBJ-5: Archaeological and Tribal Cultural Resources Protection.** To comply with all relevant site-specific County regulations and policies, in areas with documented or inferred historical, archaeological, or Tribal Cultural Resources—such as areas of high, moderate, or low cultural sensitivity as identified on current County resource maps or in Table 4.5-1, Archaeological and Cultural Sensitivity for Opportunity Sites, of the Draft Program Environmental Impact Report—the project applicant or project proponent shall retain a qualified archaeologist to prepare an archaeological resources assessment report in accordance with professional standards as outlined in the Archaeological Resource Management Report Guidance (California 1990), as part of the development application package.

The Phase I, Phase II, and Phase III report requirements are as follows:

3. Phase I Inventory of Archaeological Resources: A Phase I Inventory of Archaeological Resources shall include, at a minimum, a records search of available resource information at the Northwest Information Center of the California Historic Resources Information System. This records search will, at a minimum, determine whether a part or all of the project area has been previously surveyed for archaeological resources, whether any known archaeological resources have already been recorded on or adjacent to the project area, and whether the probability is low, moderate, or high that archaeological resources are in the project area. Following the background research, a field survey by a professional archaeologist shall be conducted in accordance with accepted standards and practices. The field survey shall include, at a minimum, an inspection of the site for evidence of surface and, if appropriate, subsurface archaeological resources.
    a. If the Phase I Inventory of Archaeological Resources investigation reveals that the site does not contain archaeological resources, no further review is necessary unless otherwise noted by the archaeologist.
    b. If the Phase I Inventory of Archaeological Resources investigation reveals any information indicating that the site is likely to contain archaeological resources, a Phase II Evaluation of Archaeological Resources shall be required unless either of the following applies:
        i. There is substantial evidence, absent the Phase II Evaluation, that the project will have a significant impact on archaeological resources and

those impacts cannot be avoided, in which case a Phase III Plan may be prepared without a Phase II Evaluation; or

ii. If the location of resources can reasonably be determined based on the Phase I Inventory and all development is located to avoid impacts to those identified resources, no further archaeological reports are necessary if the conditions recommended by the archaeologist are applied to the project.

4. Phase II Evaluation of Archaeological Resources: A Phase II Evaluation shall be prepared with the goal of determining site boundaries, an evaluation of the site's significance pursuant to California Public Resources Code, Section 21083.2(g), and an evaluation of avoidance measures pursuant to Subsection E.1 of County Code, Section 21.66.050, if applicable. A Phase II Evaluation may include test excavations when adequate data from previous reports are not available to assess a site's significance; upon completion of testing and assessment of archaeological resources, , the archaeologist shall curate materials to an archival center in Monterey County or repatriate materials to a culturally affiliated Tribe, as appropriate. This does not relieve an owner or owner's representative from following the process mandated by law when human remains are involved.

   a. If no unique archaeological resources are found during the Phase II Evaluation, no further reports are necessary. Despite a negative finding in the Phase II Evaluation, conditions recommended by the archaeologist and the California Native American Tribe through the consultation process shall be applied to the project as appropriate.
   b. If the Phase II Evaluation of Archaeological Resources determines that unique archaeological resources may be present, the Phase II Evaluation shall include consideration of the avoidance measures required in the 2010 General Plan Open Space and Conservation Element Policy OS-6.5, North County Land Use Plan Key Policy 2.9.1 and General Policies 2.9.2, Carmel Area Land Use Plan Key Policy 2.8.2 and General Policies 2.8.3, and Subsection E.2 of County Code, Section 21.66.050. If significant resources cannot be avoided, a Phase III Data Recovery Plan shall be prepared.
   c. The 2010 General Plan Open Space and Conservation Element Policy OS-6.5, North County Land Use Plan Specific Policies 2.9.3, Carmel Area Land Use Plan Specific Policies 2.8.4, and Subsection E.2 of County Code, Section 21.66.050, indicates that mitigation based on a Data Recovery Plan (Phase III Plan) is allowed only upon a showing by the project applicant or project proponent, based on substantial evidence, that avoidance is not feasible. Prior to the Data Recovery Plan being accepted as complete by the County Director

of Housing and Community Development, evidence shall be submitted demonstrating that avoidance is not feasible.

5. Phase III Data Recovery Plan: A Phase III Data Recovery Plan shall evaluate a project's impacts on unique archaeological resources and shall set forth the reasons, based on substantial evidence, why avoidance measures required in Subsection E.2 of County Code, Section 21.66.050, are not feasible under the circumstances of the case. A Data Recovery Plan shall follow the Secretary of the Interior's Guidelines for Archeological Documentation. The Phase III Plan shall include treatment of archaeological resources with culturally appropriate dignity, taking into account the Tribal cultural values and meaning of the resource, including but not limited to the following:
    a. Protecting the cultural character and integrity of the resource;
    b. Protecting the traditional use of the resource; and
    c. Protecting the confidentiality of the resource.
6. Report Format and Standards:
    a. In all cases, written reports shall be prepared consistent with the report format requirements contained in the State Office of Historic Preservation Archaeological Resource Management Reports: Recommended Contents and Format guidelines. A single report may incorporate more than one Phase where appropriate to minimize redundancy and expense. All reports shall be filed with the appropriate state agencies.
    b. Submittal of the applicable report(s) to the County Director of Housing and Community Development shall be required prior to a project application being considered complete.
    c. The report(s) shall be prepared, at the project applicant or project proponent's expense, by a qualified archaeologist, either from the County's list of archaeological consultants or by a member of the Register of Professional Archaeologists who is familiar with California Central Coast archaeology. The project applicant or project proponent shall also be responsible for paying for the costs of data recovery and curation of recovered materials, if applicable.

**MM-CUL-CONS-6: Archaeological and Tribal Cultural Resources Protection.** Applicants for developments streamlining under the Consistency Process shall be required to submit an archaeological resource assessment as part of the development application for review by the County when a project has the potential to affect archaeological or Tribal Cultural Resources.

Refer to MM-CUL-OBJ-5 above for all standards and requirements for MM-CUL-CONS-6.

**MM-CUL-OBJ-7: Avoidance, Preservation, and Data Recovery.** To comply with all relevant site-specific County regulations and policies, if unique archaeological resources or Tribal Cultural Resources are identified, avoidance, preservation, and/or data recovery measures shall be implemented as outlined below.

1. Impacts to unique archaeological resources and Tribal Cultural Resources shall be avoided to the extent feasible. In all cases where unique archaeological resources or Tribal Cultural Resources are identified, the following avoidance measures shall be considered:
    a. Avoidance and preservation of the resources in place, including but not limited to, revising the project design or location to protect the resources and their natural context (e.g., through use of green spaces, parks, or other open space to incorporate the resources) with culturally appropriate protection and management criteria;
    b. Placing the area in a permanent conservation easement or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or using the resources or places;
    c. Limitation of public access; and
    d. Other feasible methods of avoidance and protection of the resource.
2. Mitigation based on a Data Recovery Plan (Phase III Plan) is allowed only upon demonstration by the project applicant or project proponent, based on substantial evidence, that avoidance is not feasible. Prior to the Data Recovery Plan being accepted as complete by the County Director of Housing and Community Development, evidence shall be submitted demonstrating that avoidance is not feasible.
3. The results of all data recovery activities shall be compiled into a final report. The final report shall be prepared by a qualified archaeologist and submitted to the County Director of Housing and Community Development for review and approval prior to final grading or building inspections.

**MM-CUL-CONS-8: Avoidance, Preservation, and Data Recovery.** Applicants for developments streamlining under the Consistency Process shall be required to implement avoidance, preservation, and/or data recovery measures if unique archaeological resources or Tribal Cultural Resources are identified.

Refer to MM-CUL-OBJ-7 above for all standards and requirements for MM-CUL-CONS-8.

# Section 8 List of Preparers and Persons and Organizations Contacted

The following persons participated in the preparation of this report:

## Harris & Associates

| | |
|---|---|
| Donna Beddow, RPA | Principal Investigator |
| Elizabeth Kim | Senior Project Manager |

## Agencies/Individuals Contacted

Amah Mutsum Tribal Band
- Valentin Lopez, Chairperson
- Ed Ketchum – Vice-Chairperson

Amah-Mutsun Tribal Band of San Juan Bautista
- Shelby Brown, Senior Cultural Monitor and Councilwoman
- Garry Zimmer, Senior Cultural Monitor and Consultant
- Christopher Zimmer, Senior Cultural Monitor, Consultant, and Councilman
- Michelle Zimmer, Senior Cultural Monitor and Consultant
- Irene Zwierlein, Chairperson

Costanoan Ohlone Rumsen-Mutsen Tribe
- Patrick Orozco, Chairman

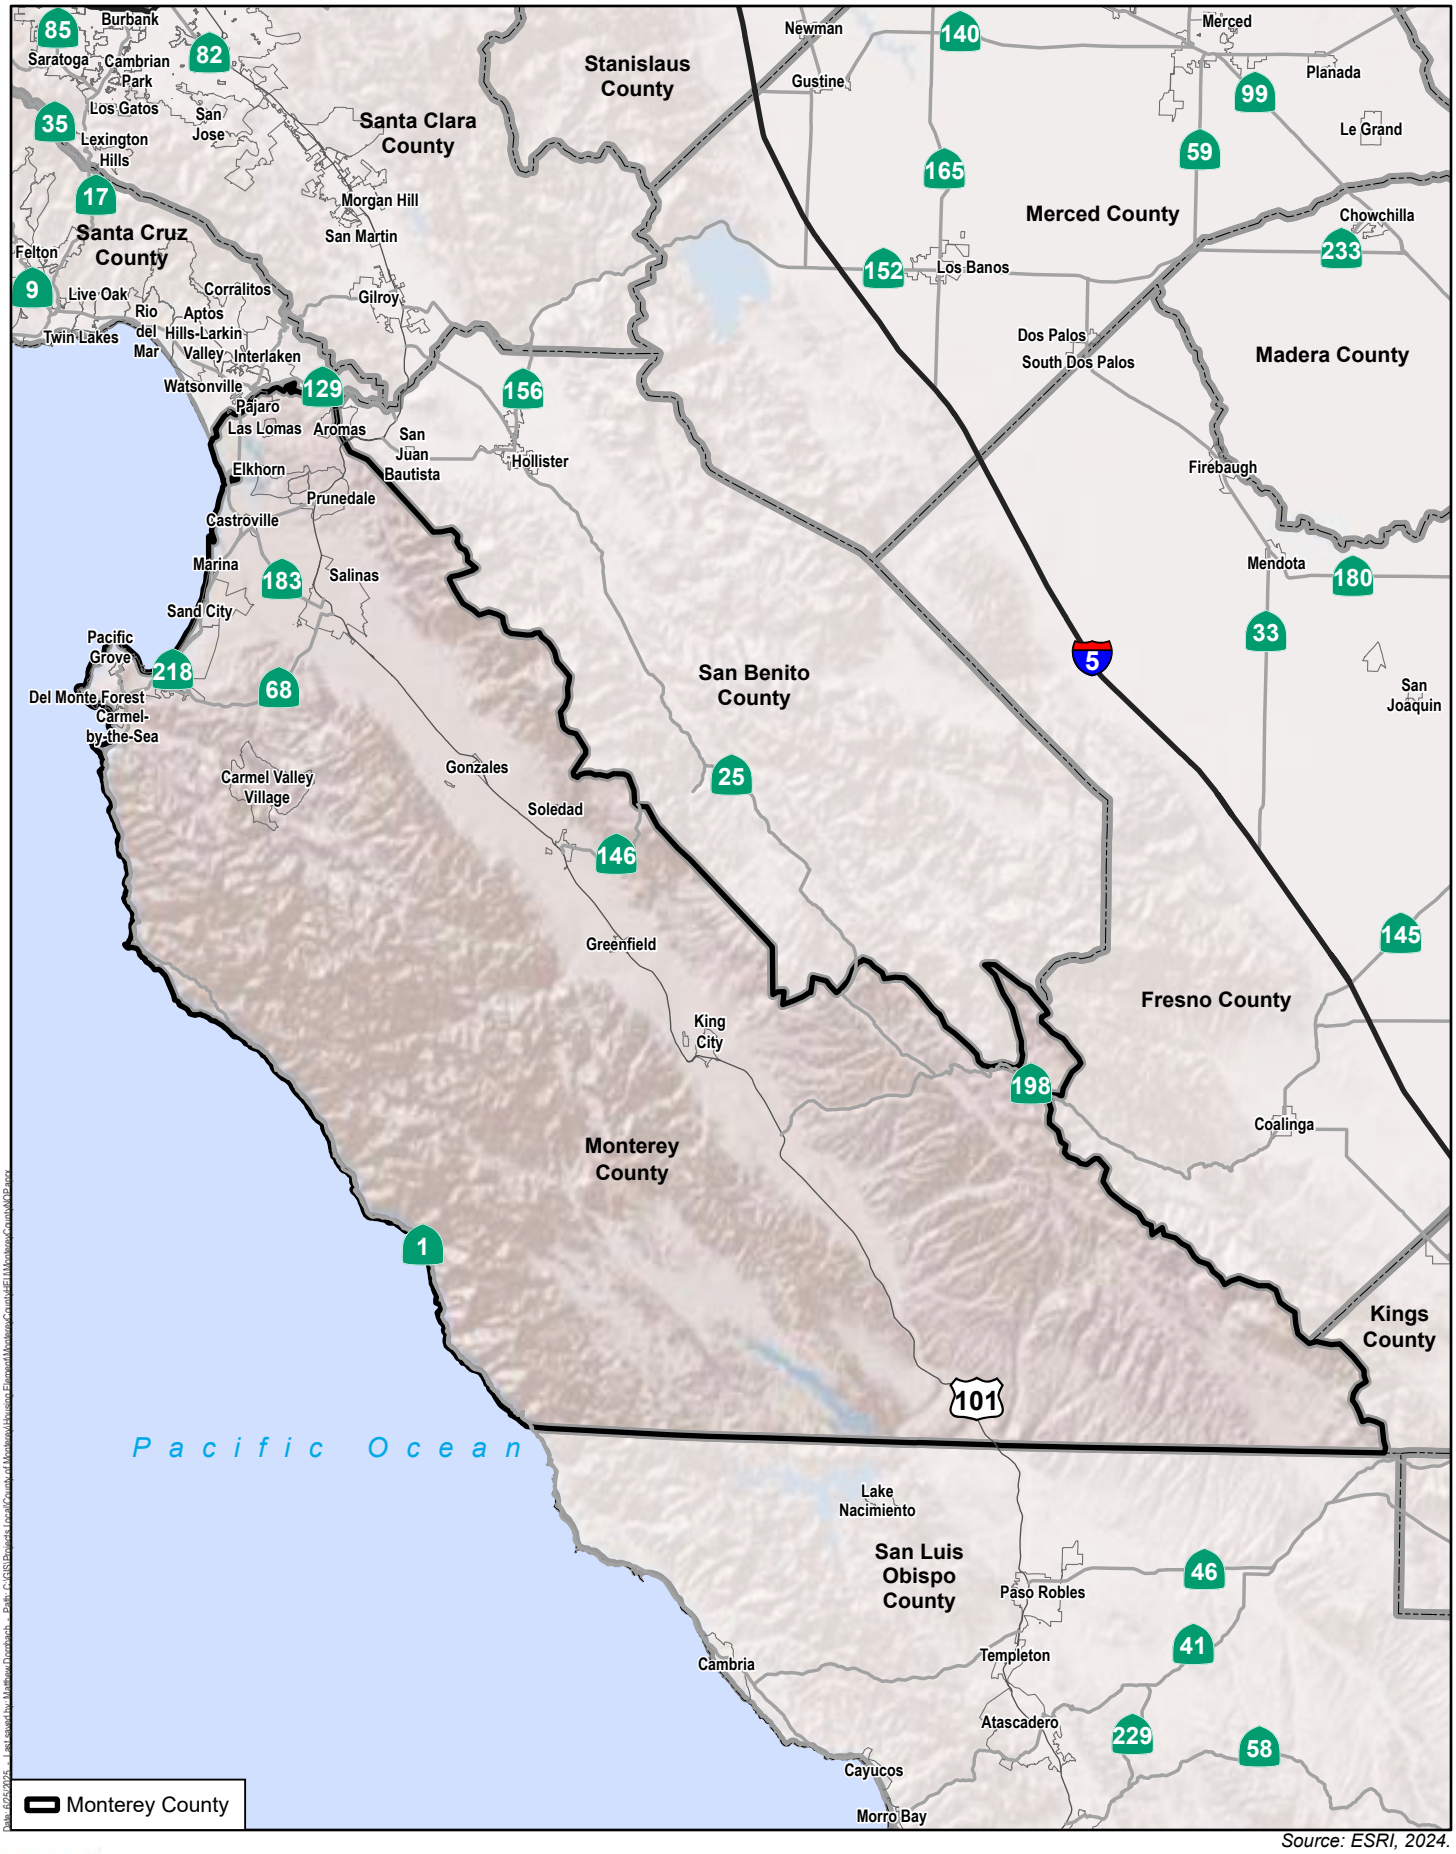
Costanoan Rumsen Carmel Tribe
- Samuel Rodriguez, Cultural Resource Officer
- Henry Munoz, Cultural Resource Officer
- Carla Munoz, Tribal Council

Esselen Tribe of Monterey County
- Susan Morley, Cultural Committee Chairwoman
- Tom Little Bear Nason, Tribal Chairman

Indian Canyon Mutsun Band of Costanoan
- Kanyon Sayers-Roods, MLD Contact
- Ann Marie Sayers, Chairperson

KaKoon Ta Ruk Band of Ohlone Costanoan Indians of the Big Sur Rancheria
- Isaac Bojorquez, Chairman
- Lydia Bojorquez, Vice-Chairperson

Ohlone/Costanoan-Esselen Nation
- Louise Miranda-Ramirez, Chairperson
- Christanne Najera, Vice-Chairperson



Rumsen An:a Tur:ataj Ohlone
- Dee Dee Ybarra, Chairperson
- Daniel Quiroga, Spiritual/Cultural Advisor

Wuksachi Indian Tribe/Eshom Valley Band
- Kenneth Woodrow, Chairperson

# GREENHOUSE GAS EMISSIONS TECHNICAL MEMORANDUM

**To:** County of Monterey
**From:** Sharon Toland, AICP, Senior Technical Specialist, Harris & Associates
**RE:** **Greenhouse Gas Emissions Technical Memorandum for the County of Monterey Draft General Plan Housing Element Sixth Cycle (2023–2031) Update**
**Date:** July 13, 2026
**CC:** Elizabeth Kim, Senior Project Manager, Harris & Associates
**Att:** 1, CalEEMod Results

## Introduction

This memorandum provides the results of Harris & Associates' analysis of the potential greenhouse gas (GHG) emissions impacts implementation of the County of Monterey General Plan Housing Element Sixth Cycle (2023–2031) Update (HEU6), as well as amending other components of the General Plan and other approvals as necessary to implement the HEU6 and comply with state law (project). The project area encompasses the unincorporated Monterey County (UMC), the geographic area overseen by the County and covered by the HEU6. Regional access to Monterey County is provided by the U.S. Route 101 traveling north–south and State Route (SR-) 198 and SR-146 running east–west. SR-1 also provides regional access along the Pacific coastline, and SR-218, SR-68, and SR-183 are other major roadways serving Monterey County.

"HEU6" refers to the draft HEU6 document circulated for public review and submitted to the California Department of Housing and Community Development, while the "project" refers to HEU6 along with other components and related actions intended to implement HEU6.

For the purposes of this analysis, the following definitions are used herein:

- County of Monterey Government (County) – Represents Monterey County as the government entity responsible for the preparation of this Housing Element and its implementation.
- Unincorporated Monterey County (UMC) – Represents the geographic area overseen by the County as a government entity.
- Monterey County (Monterey County) – Represents the entire Monterey County geographic area, including incorporated and unincorporated communities.

The UMC is divided into seven sub-areas: North County, Greater Salinas, Central Salinas Valley, Greater Monterey Peninsula, Toro, Cachagua, and South County. Additionally, two master plans have been adopted in the Greater Monterey Peninsula Area Plan, the Carmel Valley Master Plan and the Fort Ord Master Plan, and the County's Local Coastal Program consists of four planning areas: North County—Coastal, Del Monte Forest, Carmel Area, and Big Sur Coast.

The HEU6 includes the capacity for at least 5,897 residential units, comprising opportunity sites (4,434 units), pipeline sites (1,117 units), and accessory dwelling units (346 units). Pipeline sites are sites where housing has been proposed and/or entitled, and where development is expected to receive a building permit or certificate of occupancy.

Accessory dwelling units would involve additional units on existing housing sites. For California Environmental Quality Act (CEQA) analysis, this GHG Emissions Technical Memorandum assumes both the theoretical maximum capacity of 12,497 new housing units on 56 opportunity sites, and a scenario that includes only the opportunity sites and accessory dwelling units (4,780 new housing units) is provided for informational purposes.

## Greenhouse Gas Analysis Background

A GHG is any gas that absorbs infrared radiation and traps heat in the atmosphere. GHGs are produced from natural processes and human activities. The accumulation of GHGs in the atmosphere influences the long-term atmospheric temperatures and contributes to global climate change. Carbon dioxide ($CO_2$) accounts for the largest amount of GHG emissions, and collectively, $CO_2$, methane ($CH_4$), and nitrous oxide ($N_2O$) amount to approximately 97 percent of total GHG emissions in the United States (USEPA 2023).

For each GHG, a global warming potential has been calculated to reflect how long emissions remain in the atmosphere and how strongly each GHG absorbs energy on a per-kilogram basis relative to $CO_2$. For example, 1 pound of $CH_4$ has 25 times more heat-capturing potential than 1 pound of $CO_2$. To simplify reporting and analysis, GHG emissions are typically reported in metric tons of carbon dioxide equivalent (MT $CO_2e$). Global warming potential is a metric that indicates the relative climate forcing of 1 kilogram of emissions when averaged over the period of interest. Table 1, Global Warming Potential for Select Greenhouse Gases, identifies the $CO_2e$ and atmospheric lifetimes of basic GHGs.

**Table 1. Global Warming Potential for Select Greenhouse Gases**

| Pollutant | Atmospheric Lifetime (years) | Global Warming Potential (100-year)[a] |
|---|---|---|
| $CH_4$ | 12 | 25 |
| $CO_2$ | ~100[b] | 1 |
| $N_2O$ | 121 | 298 |

**Source:** CAPCOA 2022.
**Notes:** $CH_4$ = methane; $CO_2$ = carbon dioxide; $N_2O$ = nitrous oxide
[a] The warming effects over a 100-year period relative to other GHGs.
[b] $CO_2$ has a variable atmospheric lifetime and cannot be readily approximated as a single number.

## Regulatory Setting

### Federal

The U.S. Environmental Protection Agency is responsible for implementing federal policy to address global climate change. In 2009, the U.S. Environmental Protection Agency issued a final rule for mandatory reporting of GHG emissions, which applies to fossil fuel and industrial gas suppliers, direct GHG emitters, and manufacturers of heavy-duty and off-road vehicles, and requires annual reporting of emissions. This final rule does not regulate the emissions of GHGs; it only requires the monitoring and reporting of GHGs for the specified sources above certain thresholds.

### State

California has enacted various legislation related to climate change, much of which has set aggressive goals for GHG emissions reductions throughout the state. Executive Order S-03-05 (2005) established the goal of reducing GHG emissions to 2000 levels by 2010, 1990 levels by 2020, and 80 percent below 1990 levels by 2050. In September 2006, Governor Arnold Schwarzenegger signed California's Global Warming Solutions Act of 2006 (Assembly Bill [AB] 32), requiring the California Air Resources Board to establish a statewide GHG emissions cap for 2020 based on 1990 emissions and to adopt mandatory reporting rules for significant sources of GHG emissions. In April 2015, Governor Jerry Brown signed Executive Order B-30-15, which established the goal of reducing GHG emissions to 40 percent below 1990 levels by 2030. This goal was set into law in Senate Bill 32. AB 1279, the California Climate Crisis Act, enacted in September 2022, updated the goals of AB 32. The bill established a statewide goal to achieve net-zero GHG emissions by 2045 and to achieve and maintain net-negative

GHG emissions thereafter. Additionally, the bill established a specific target for statewide anthropogenic GHG emissions to be reduced to at least 85 percent below 1990 levels by 2045.

### Local

The County is currently preparing a Community Climate Action and Adaptation Plan (CCAAP). The CCAAP is an effort to reduce GHG emissions in line with the targets set by the State of California through 2045. Strategies to reduce GHG emissions are anticipated to include the following sectors: buildings and energy, including energy efficiency, clean energy, and electrification; on-road transportation, including land use planning, and clean and active transportation; off-road vehicles and equipment; solid waste; and water and wastewater. The CCAAP also includes actions for protecting natural and working lands, including urban forests and green spaces in developed lands. The strategies described in the CCAAP provide the County with a viable pathway to meet its climate goals of 28 percent reduction in 2030 and 66 percent reduction in 2040. The CCAAP provides progress toward but does not project achievement of the 2045 goal. The largest source of emissions in 2045 is anticipated to come from agricultural operations, primarily associated with grazing livestock, which is identified as providing value and benefits to the community, making operational changes to reduce emissions difficult. The County will continue to seek opportunities to maintain carbon held in natural and working lands to meet its long-term 2045 GHG reduction target. A community GHG emissions inventory has been completed as part of the effort (County of Monterey 2024). In 2019, community GHG emissions in the UMC were approximately 1,235,855 MT $CO_2e$. The highest contributor of GHG emissions was on-road transportation (39 percent of total emissions), followed by agriculture (32 percent), non-residential energy use (14 percent), and residential energy use (7 percent). The remaining 8 percent is attributable to solid waste, off-road vehicles and equipment, wastewater treatment, and water supply.

## Significance Thresholds

The County has not adopted a Climate Action Plan that meets the requirements for tiering in accordance with the CEQA Guidelines, Section 15183.5. Draft emissions reduction strategies and targets are not yet available for the County's Draft CCAAP. Additionally, the Monterey Bay Air Resources District has not adopted a numeric GHG threshold. GHG analysis guidance published by the state, MBARD, and City was reviewed and considered in determining an applicable standard for the project. Section 3.2 of Appendix D of the 2022 Scoping Plan, Evaluating Plan-Level and Project-Level Alignment with the State of California's Climate Goals in CEQA GHG Analyses, outlines three approaches to evaluating GHG emissions under CEQA: 2022 Scoping Plan Consistency, Net-Zero Emissions, and consistency with a threshold adopted by an applicable air district or agency. As previously noted, an adopted threshold is not available. The remaining two 2022 Scoping Plan approaches are evaluated below, as well as a review of bright-line thresholds and service population or per-capita thresholds.

### Bright-Line Thresholds

Numeric thresholds adopted by other agencies were considered as an option, including a threshold of 1,100 MT $CO_2e$ (annual emissions) adopted by the Sacramento Metropolitan Air Quality Management District and referenced in the 2017 Scoping Plan (CARB 2017). These so-called bright-line thresholds[1] address the state's long-term emissions reduction goals by determining a screening level under which a project would not be considered to hinder the state's ability to meet long-term goals. Bright-line thresholds are typically intended to screen out smaller projects with relatively minimal emissions so that the vast majority (typically 90 percent) of total future development would be subject to mitigation or project features that would reduce GHG emissions compared to business as usual (BAU) emissions and consistency with GHG reduction goals (CAPCOA 2008). These thresholds were ultimately rejected for the Threshold A analysis because they do not specifically address the contribution of emissions in Santa Cruz County to the current statewide AB 1279 goal.

[1] A bright-line threshold is a numeric threshold that provides a clearly defined rule to determine whether emissions are significant or less than significant and does not vary based on the size of type of project.

### Service Population or Per-Capita Thresholds

Numeric thresholds based on service population (defined as residents and employees) or per-capita thresholds are also acceptable per the 2017 Scoping Plan. However, the 2017 Scoping Plan has been replaced by the 2022 Scoping Plan, which does not include a revised per-capita target.

### Net-Zero Anthropogenic Emissions

A screening level of zero increase in anthropogenic emissions for ongoing, annual operational emissions compared to existing conditions is consistent with the Association of Monterey Bay Area Governments methodology for the 2045 Metropolitan Transportation Plan/Sustainable Communities Strategy (SCS). A project that does not generate a net increase in anthropogenic GHG emissions would also be consistent with the overall goal of the 2022 Scoping Plan, which outlines a path for statewide carbon neutrality. Appendix D of the 2022 Scoping Plan, Local Actions, acknowledges that net-zero GHG emissions can be an appropriate target for individual projects. However, the 2022 Scoping Plan does not require or prioritize the use of a net-zero threshold. Due to the nature of the project to accommodate new land use development to support planned growth, and because the design of future projects is unknown, it was determined that a site-specific net-zero standard was appropriate for this plan-level analysis.

### Project Attributes for Residential to Qualitatively Determine Consistency with the Scoping Plan

This 2022 Scoping Plan approach is the first state-recommended approach for determining whether a proposed residential development would align with the State of California's climate goals. The focus of the approach is to examine whether the project includes key project attributes that reduce operational GHG emissions while simultaneously advancing fair housing. The 2022 Scoping Plan states that residential projects that have all of the key project attributes outlined in Scoping Plan Appendix D would accommodate growth in a manner consistent with state GHG reduction goals, specifically the attributes outlined in Table 3, Key Residential and Mixed-Use Project Attributes that Reduce Greenhouse Gases. As outlined in Section 3.2.1 of the 2022 Scoping Plan, these project attributes are intended as a guide to help local jurisdictions qualitatively identify those residential projects that are clearly consistent with the State of California's climate goals, since these attributes address the largest sources of operational emissions for residential projects. In general, residential and mixed-use development projects that incorporate all of the key project attributes are aligned with the State of California's Priority GHG Reduction Strategies for local climate action and with the State of California's climate and housing goals. As such, they are considered to be consistent with the 2022 Scoping Plan or other plans, policies, or regulations adopted for the purposes of reducing GHGs; therefore, the GHG emissions associated with such projects may result in a less than significant GHG impact under CEQA.

As such, absent an adopted local plan or threshold, the appropriate threshold for determining the significance of project GHG emissions is whether development under the project would conflict with key project attributes outlined in the 2022 Scoping Plan. As such, an inventory of project GHG emissions is provided below for informational purposes, and the significance of project emissions is evaluated through consistency with the 2022 Scoping Plan.

## Project Emissions Inventory

Project GHG emissions from construction and operation are inventoried for informational purposes below.

### Construction

Project construction emissions were estimated using the California Emissions Estimator Model (CalEEMod), Version 2022.1. The project is a land use plan and does not propose any specific construction projects, and the details of future construction under the HEU6 are currently unknown. Therefore, maximum daily construction emissions were estimated using CalEEMod default assumptions for construction of 12,497 residential units for the theoretical maximum buildout capacity, although it is highly unlikely, and a more likely 4,434 residential units under the reasonable capacity scenario has also been modeled. Construction assumes the planning period of 2023

to 2031. The recommended default assumption of 600 tons of export material per acre and 1,190 tons of import per acre was used to estimate total earthwork and demolition export for the project, based on the CalEEMod estimate for total project acreage (Ramboll 2023). Detailed assumptions and modeling datasheets are provided in Attachment 1, CalEEMod Results. Construction of the theoretical maximum buildout of 12,497 residential units is estimated to result in average annual construction emissions of 12,256 MT $CO_2$e per year between 2023 and 2031. In comparison, buildout of 4,434 residential units under the reasonable capacity scenario is estimated to result in average annual construction emissions of 4,484 MT $CO_2$e per year between 2023 and 2031.

## Operation

Project operation emissions were also estimated using CalEEMod, except mobile emissions, which were estimated using California Air Resources Board's (CARB's) Emissions Factor (EMFAC) model, as described further below. During operation, BAU buildout[2] under the HEU6 would result in area and indirect emission sources from electricity and natural gas consumption, water and wastewater transport, and solid waste generation. GHG emissions from electricity consumed on-site by the project would be generated off site by the electric provider through fuel combustion. GHG emissions from water and wastewater transport would be indirect emissions resulting from the energy required to transport water from its source and to treat wastewater and transport it to its treated discharge point. The net increase in annual operational emissions from HEU6 buildout conditions is based on CalEEMod default energy use estimates for Central Coast Community Energy and natural gas from Pacific Gas & Electric. CalEEMod default assumptions include natural gas hearths for new residential units. Energy use estimates are conservative because CalEEMod assumes compliance with 2019 Title 24 energy efficiency standards, whereas residential development associated with the HEU6 would be required to comply with increasingly stringent Title 24 Standards, including the current 2025 standards. Operational GHG emissions from these sources associated with the net increase in residential units accommodated by the project are shown in Table 2, Estimated Theoretical Maximum Capacity Project-Related Operation Greenhouse Gas Emissions, based on 12,497 housing units, and Table 3, Estimated Reasonable Capacity Project-Related Operation Greenhouse Gas Emissions, based on 4,434 housing units except mobile emissions. Mobile emissions under the reasonable capacity scenario used vehicle miles traveled (VMT) data based on the 4,910-unit scenario derived from a previous iteration of the traffic model. The reasonable capacity table is included for comparison purposes. The project impact analysis in this section is based on the theoretical maximum capacity of 12,497 units.

Development under the HEU6 would also generate mobile source emissions from motor vehicle trips. The project does not propose any specific future development projects; therefore, project-specific details are not provided. The project's impact related to mobile emissions is based on its impact on Monterey Countywide VMT data for existing (2023) and buildout (2031) conditions from Kimley-Horn (2026a). The net change in mobile emissions from buildout of the HEU6 was estimated using CARB's EMFAC2025 (V2.1.0) model. EMFAC2025 V2.1.0 reflects federal actions to disapprove the U.S. Environmental Protection Agency's (USEPA's) actions to grant California waivers for several regulations in the model, including Advanced Clean Cars II, Advanced Clean Trucks, Zero-Emission Airport Shuttle, Heavy-Duty Vehicle and Engine Emission Warranty and Maintenance Provisions (Warranty Phase 1), and Heavy-Duty Omnibus (Omnibus), although these actions are being contested by the State of California (CARB 2026). Existing Monterey Countywide VMT is approximately 3,267,663 and is estimated to increase to 3,968,469 by 2031 without project implementation. With project implementation, the estimated Monterey Countywide VMT would be 4,277,358 in the buildout year of 2031.

[2] A BAU scenario is one that assumes no additional GHG reduction efforts beyond what have already been adopted and accounted for in CalEEMod. For example, CalEEMod estimates energy use based on 2019 consumption rates and projected 2025 Central Coast Community Energy emissions factors (CAPCOA 2022). It does not account for the 2022 Title 24 energy efficiency standards and future standards that have not yet been adopted.

**Table 2. Estimated Theoretical Maximum Capacity Project-Related Operation Greenhouse Gas Emissions**

| Emissions Source | Emissions (MT $CO_2e$) |
|---|---|
| Area and Refrigerants | 231 |
| Electricity | 7,808 |
| Natural Gas | 26,750 |
| Waste | 2,885 |
| Water | 1,210 |

**Notes:** BAU = business as usual; MT $CO_2e$ = metric tons of carbon dioxide equivalent

**Table 3. Estimated Reasonable Capacity Project-Related Operation Greenhouse Gas Emissions**

| Emissions Source | Emissions (MT $CO_2e$) |
|---|---|
| Area and Refrigerants | 82 |
| Electricity | 2,770 |
| Natural Gas | 9,491 |
| Waste | 1,024 |
| Water | 429 |
| Mobile | 89 |
| **Total BAU Annual Operation Emissions** | **13,885** |

**Source:** CAPCOA 2022. Refer to Attachment 1 for model output.
**Notes:** BAU = business as usual; MT $CO_2e$ = metric tons of carbon dioxide equivalent

# Impact Analysis

As shown in Tables 2 and 3, achieving either the Regional Housing Needs Allocation (RHNA) target or theoretical buildout of new residential units under the HEU6 would result in a net increase in operational GHG emissions compared to existing conditions. However, the estimated GHG emissions in Tables 2 and 3 are conservative and do not take into account that many opportunity sites are near existing development, which may result in fewer mobile emissions associated with VMT. Additionally, development would be subject to increasingly strict building standards that would reduce operational GHG emissions. The HEU6 would accommodate the County's RHNA target consistent with state housing goals. Although the project would require amendments to the County's Local Coastal Program, Monterey County General Plan (2010 General Plan), and Zoning Code to implement the HEU6, the project addresses projected housing needs to accommodate anticipated future growth, consistent with local and regional planning. Consequently, the project would not result in unplanned forecasted GHG emissions. The fundamental purpose of the HEU6 is to demonstrate how the County will accommodate the expected growth in housing needs over an 8-year planning period to comply with both state housing law and the final RHNA plan. Potential conflicts from implementing the HEU6 with the key strategies of the 2022 Scoping Plan and Appendix D, Local Actions, to achieve statewide GHG emissions reduction targets is addressed below.

## 2022 Scoping Plan

The 2022 Scoping Plan outlines a path for achieving carbon neutrality in accordance with AB 1279. The 2022 Scoping Plan recommends that local governments prioritize transportation electrification, VMT reduction, and building decarbonization (CARB 2022). Specifically, Appendix D, Local Actions, of the 2022 Scoping Plan outlines recommendations for local government action to be implemented at the plan level to facilitate 2022 Scoping Plan implementation. A key local action for the 2022 Scoping Plan implementation is preparation and implementation

of a local Climate Action Plan. As described previously, the County is currently preparing a CCAAP. However, the draft CCAAP has not yet been adopted. Adoption is anticipated during the 2023–2031 planning period. As such, individual future projects may be evaluated for consistency with the County's CCAAP and would be required to comply with applicable CCAAP policies or regulations. However, because a local plan has not been adopted at this time to address the County's fair share of GHG reductions under AB 1279, the project is evaluated for potential conflicts with the 2022 Scoping Plan goals and strategies. The GHG reduction goals and strategies for local jurisdictions identified in the 2022 Scoping Plan Appendix D fall into three categories: Transportation Electrification, VMT Reduction, and Building Decarbonization.

Development projects accommodated under the HEU6 are required to adhere to the programs and regulations identified by the 2022 Scoping Plan and implemented by state, regional, and local agencies to achieve the statewide GHG reduction goals of AB 1279. The Appendix D, Local Actions, of the 2022 Scoping Plan are not mandates for new development; however, these strategies represent the most applicable tool for evaluating project consistency with the 2022 Scoping Plan. Table 1 of the 2022 Scoping Plan Appendix D lists Priority GHG Reduction Strategies. The potential for the project to conflict with these strategies is discussed in Table 4, 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies.

**Table 4. 2022 Scoping Plan Appendix D Priority GHG Reduction Strategies**

| Strategy/Action | Potential Conflicts |
|---|---|
| **Transportation Electrification** | |
| Convert local government fleets to ZEVs and provide EV charging at public sites | **Not Applicable/No Conflict.** This strategy is not applicable to the project, which would facilitate the development of residential development to meet Monterey County's future housing needs. However, new single-family and two-family developments facilitated under the project would be required to install electric vehicle (EV) supply equipment (EVSE) in accordance with Section 4.106.4 of the California Green Building Standards Code (CALGreen; 2025 or most recent). For instance, new one- and two-family dwellings and townhouses with attached private garages must install a listed raceway to accommodate a dedicated 208/240-volt branch circuit for each new dwelling unit. In addition, any non-residential (mixed-use) development that may be facilitated by the project would be required to install EVSE in accordance with Section 5.106.5.3 of CALGreen, depending on the number of parking spaces provided. Additionally, new multi-family parking facilities are required to equip 40 percent of the total number of parking spaces with low-power Level 2 EV charging receptacles and 10 percent of the total number of parking spaces with Level 2 EV chargers in accordance with Section 4.106.4.2.2 of CALGreen. The development of new EV chargers would help support the County's conversion of fleets to zero-emission vehicles (ZEVs) by providing additional charging stations. Additionally, MBARD has adopted the Monterey Bay Plug-in Electric Vehicle Readiness Plan to support development of EV infrastructure regionally (CEC 2022). Further, implementation of Mitigation Measure (MM-) GHG-OBJ-1 and MM-GHG-CONS-2 would require that all future developments associated with the HEU6 provide EVSE that, at a minimum, meets the most ambitious voluntary standard in CALGreen at the time of project approval. |
