San Jose, California 95126

Subject: Phase I Environmental Site Assessment
2303 Gianera Street
Santa Clara, California 95054
AEI Project No. 490804

Dear Shannon George:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (408) 559-7600 or TGolino@aeiconsultants.com.

Sincerely,
DRAFT
Tory Golino
Senior Vice President
AEI Consultants

PROJECT SUMMARY

2303 Gianera Street, Santa Clara, Santa Clara County, California 95054
AEI Project No. 490804

DRAFT

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by David J. Powers & Associates to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 2303 Gianera Street, Santa Clara, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

Property Information	
Site Address(es)	2303 Gianera Street, Santa Clara, Santa Clara County, California 95054
Property ID (APN or Block/Lot)	104-06-037
Location	North side of Gianera Street
Site and Building Information	
Approximate Site Acreage/Source	0.39/Assessor
Number of Buildings	Two
Building Construction Date(s)/Source	Between 1974 and 1979/Historical Aerial Research
Building Square Footage (SF)/Source	4,400/Ownership
Number of Floors/Stories	One
Basement or Subgrade Area(s)	None identified
Number of Units	Two
Additional Improvements	Asphalt-paved parking areas and associated landscaping
Property Type	Residential
On-site Occupant(s)	None - residences are currently unoccupied
Current On-site Operations/Use	Unoccupied single family residence, accessory dwelling unit (ADU), with planned demolition of existing structures and redevelopment into residential townhouses
Current Use of Hazardous Substances	Yes; refer to Section 7.1
Regulatory Information	
Regulatory Database Listing(s)	None identified

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1889-1899	Undeveloped land	Historical topographic maps
1900-1938	Unknown use/Data failure; refer to Section 1.6.1	N/A
1939-1974	Agricultural land	Aerial photographs
1979-Present	Developed with the current single family residence and garage (2303 Gianera Street)	Aerial photographs, city directories, historical topographic maps, interviews, agency records, site observation

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Vacant land (APN: 104-06-041)	None identified
East	Apartments (2301 Gianera Street)	None identified
South	Gianera Street, followed by:	None identified

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
	Apartments (2262-2282 Gianera Street)	
	Residence (2304 Gianera Street)	
West	Apartments (2305 Gianera Street, 2313 Villa Place)	None identified

FINDINGS AND OPINIONS

Significant Data Gap(s) is defined by the current ASTM Standard E1527 as a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

AEI did not identify significant data gaps which affected our ability to identify RECs.

Recognized Environmental Condition (REC) is defined by the current ASTM Standard E1527 as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the current ASTM Standard E1527 as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the current ASTM Standard E1527 as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the current ASTM Standard E1527. These include, but are not limited to, de minimis conditions and/or environmental considerations such as non-ASTM scope items, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property. A de minimis condition is

defined by the ASTM Standard as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

- Based on a review of historical sources, the subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The routine application of pesticides and fertilizers is not considered a release subject to CERCLA response costs. No evidence of spilling, dumping, emitting, and/or mishandling of pesticides and/or fertilizers was identified, and thus the former agricultural uses do not represent a REC. AEI understands that the subject property is slated for redevelopment for residential and/or other sensitive receptor uses. Although the past agricultural uses do not represent a REC per the ASTM E1527 definition, the past agricultural uses may pose a threat to the health and safety of the future occupants. Recommendations for further assessment of past agricultural uses are provided in *Recommendations* section below.
- Two unlabeled 55-gallon drums were observed behind the ADU on the northeast portion of the subject property. The contents of the drums could not be confirmed as they were sealed shut, but they may be empty. No evidence of impact to the subject property, such as surface staining, odors, stressed vegetation, or spillage of contents, was observed. Based on this information, the presence of the drums is not considered to represent evidence of a REC. However, the drums represent a housekeeping concern and should be removed from the property and properly disposed of.
- AEI understands that demolition activities of the subject property buildings are planned. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment.
- AEI understands that demolition activities of the subject property buildings are planned. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-21, of 2303 Gianera Street, Santa Clara, Santa Clara County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.

RECOMMENDATIONS

AEI recommends the following:

- Subsurface Investigation (being prepared under a separate cover)
- Unidentified 55-gallon drums and automotive-related fluid containers should be removed from the subject property and properly disposed, and the staining should be properly cleaned up

DRAFT

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 2303 Gianera Street, Santa Clara, Santa Clara County, California ([Appendix A: Figures](#) and [Appendix B: Property Photographs](#)).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with the most current ASTM E1527 Standard associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by the current ASTM Standard E1527. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under the current ASTM Standard E1527.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. The current ASTM Standard E1527 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the current ASTM Standard E1527.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to [Section 6.3](#) for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

1.6 DATA FAILURE AND DATA GAPS

According to the current ASTM Standard E1527, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to the current ASTM Standard E1527, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to the current ASTM Standard E1527, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to the current ASTM Standard E1527, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	As noted in Section 3.0, historical sources were not obtained at five-year intervals dating back to first developed use. However, it is assumed that during this time period the subject property would have been agricultural land, if not developed with a residence. Therefore, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, Sanborn fire insurance maps, city directories, historical topographic maps, agency records, interviews

1.6.2 SIGNIFICANT DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of David J. Powers & Associates. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with David J. Powers & Associates and AEI's contract and Terms and Conditions dated March 13, 2024. The limitation of liability defined in the contracted terms is the aggregate limit of AEI's liability to the client and all relying parties.

DRAFT

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

Property Information	
Site Address(es)	2303 Gianera Street, Santa Clara, Santa Clara County, California 95054
Property ID (APN or Block/Lot)	104-06-037
Location	North side of Gianera Street
Site and Building Information	
Approximate Site Acreage/Source	0.39/Assessor
Number of Buildings	Two
Building Construction Date(s)/Source	Between 1974 and 1979/Historical Aerial Research
Building Square Footage (SF)/Source	4,400/Ownership
Number of Floors/Stories	One
Basement or Subgrade Area(s)	None identified
Number of Units	Two
Additional Improvements	Asphalt-paved parking areas and associated landscaping
Property Type	Residential
On-site Occupant(s)	None - residences are currently unoccupied
Current On-site Operations/Use	Unoccupied single family residence, accessory dwelling unit (ADU), with planned demolition of existing structures and redevelopment into residential townhouses
Current Use of Hazardous Substances	Yes; refer to Section 7.1
Regulatory Information	
Regulatory Database Listing(s)	None identified

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	Natural gas/PG&E
Cooling System	Electricity/PG&E
Potable Water	City of Santa Clara
Sewage Disposal/Treatment	City of Santa Clara

Utility source/system information listed in the table above is provided by Tianxing Wang, property owner, unless otherwise noted above.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a residential area of Santa Clara, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Vacant land (APN: 104-06-041)	None identified
East	Apartments (2301 Gianera Street)	None identified
South	Gianera Street, followed by: Apartments (2262-2282 Gianera Street) Residence (2304 Gianera Street)	None identified
West	Apartments (2305 Gianera Street, 2313 Villa Place)	None identified

2.4 PHYSICAL SETTING

Geologic Unit	Qac: Alluvial claysoil, includes bay mud, age Holocene Source: USGS and United States Department of the Interior
Soil Series	Urban Land: this designation indicates that more than 85 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures; due to the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property. Source: USDA Soil Survey From the 2023 Geotechnical Investigation Report: In Boring B-1, the surface material consists of 3.0 inches organic material. Below the organic layer to a depth of 7.0 feet, a black, moist, stiff silty clay layer was encountered. A color change of medium gray was noted at the depth of 4 feet. From the depths of 7 feet to 12 feet, the soil became medium brown, moist, stiff sandy silty clay. From the depths of 12 feet to 20 feet, an olive brown, moist, stiff clayey silt/silty clay layer was encountered. From the depths of 20 feet to the end of the boring at 50 feet, the soil became olive brown, moist, stiff silty clay. A color change of bluish gray was noted at the depth of 43 feet. Similar soil profile were encountered in other borings.
Groundwater Flow Direction	West-northwest Source: Topographic map interpretation and EDR GeoCheck
Estimated Depth to Groundwater	22 to 23 feet bgs Source: 2023 Geotechnical Investigation conducted for the subject property
Surface waters on the subject property or adjoining sites	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL RECORDS REVIEW

Reasonably ascertainable standard historical sources as outlined in the current ASTM Standard E1527 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, historical topographic maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1889-1899	Undeveloped land	Historical topographic maps
1900-1938	Unknown use/Data failure; refer to Section 1.6.1	N/A
1939-1974	Agricultural land	Aerial photographs
1979-Present	Developed with the current single family residence and garage (2303 Gianera Street)	Aerial photographs, city directories, historical topographic maps, interviews, agency records, site observation

Based on a review of historical sources, the subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The routine application of pesticides and fertilizers is not considered a release subject to CERCLA response costs. No evidence of spilling, dumping, emitting, and/or mishandling of pesticides and/or fertilizers was identified. AEI understands that the subject property is slated for redevelopment for residential use. Sampling for pesticides/fertilizers and/or other compliance measures pertaining to past agricultural uses may be required for by regulatory agencies prior development of the property; assessment of compliance with regulatory requirements is beyond the scope of this investigation. Although the past agricultural uses do not represent a REC per the ASTM E1527 definition, the past agricultural uses may pose a threat to the health and safety of the future occupants. Recommendations for further assessment of past agricultural uses are provided in *Recommendations* section below.

If available, copies of historical sources are provided in [Appendix D](#).

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years (1939-2020, non-inclusive):

Year(s)	Subject Property Description	Adjoining Site Descriptions
1939	Agricultural land (orchards)	NORTH: Agricultural land (orchards) EAST: Agricultural land (orchards) SOUTH: A road, followed by agricultural land WEST: Agricultural land (orchards)

Year(s)	Subject Property Description	Adjoining Site Descriptions
1948, 1950, 1956, 1963, 1968	Agricultural land (orchards) and what appears to be a small structure on the southwest corner	NORTH: No significant changes EAST: No significant changes SOUTH: No significant changes WEST: No significant changes
1974	No significant changes	NORTH: No significant changes EAST: No significant changes SOUTH: No significant changes WEST: Agricultural land and residence
1979, 1982	Developed with the existing two residential structures	NORTH: No significant changes EAST: Vacant land SOUTH: No significant changes WEST: Residence
1993	No significant changes	NORTH: No significant changes EAST: No significant changes SOUTH: No significant changes WEST: No significant changes
1998, 2006, 2009, 2012, 2016, 2020	No significant changes	NORTH: Vacant land EAST: The existing residential building SOUTH: A road, followed by the existing residential buildings WEST: The existing residential buildings

Subject property:

- Agricultural land - Refer to Section 3.0

Adjoining Site(s):

- No potential environmental concerns identified

3.2 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 CITY DIRECTORIES

A search of historical city directories was conducted for the subject property utilizing EDR. Directories were reviewed in approximate five-year increments from 1922-2020, non-inclusive. The first listing for the subject property appeared in 1992.

City directory listings for the subject property were residential in nature.

Commercial businesses including "Pay Less Aluminum Awnings" and "Trinity Roofing" were identified between 1995 and 2010. Based on the nature of property use, it is likely that these listings refer to off-site businesses and/or businesses owned by the residential tenants, and are not necessarily indicative of on-site operations.

The table below summarizes the search of historical city directories conducted for the adjoining sites. Refer to the appendices for a complete list of historical adjoining occupants identified during the review of city directories obtained from EDR.

Adjoining Sites

Direction	Address(es)	Potential Listings of Concern
North	No associated address (APN: 104-06-041)	N/A
East	2301 Gianera Street	None identified
South	2262-2282, 2304 Gianera Street	None identified
West	2305 Gianera Street, 2313 Villa Place	None identified

Subject property:

- No potential environmental concerns identified

Adjoining Site(s):

- No potential environmental concerns identified

3.4 HISTORICAL TOPOGRAPHIC MAPS

AEI reviewed historical topographic maps of the subject property and surrounding area. A search was made of the EDR collection of topographic maps. Historical topographic maps were reviewed for the following years 1889-2021, non-inclusive:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1889, 1897, 1899	No features depicted	NORTH: No features depicted EAST: No features depicted SOUTH: No features depicted WEST: No features depicted
1953, 1961, 1968	Agricultural land	NORTH: Agricultural land EAST: Agricultural land SOUTH: Agricultural land WEST: Agricultural land
1973	Agricultural land	NORTH: Agricultural land EAST: Agricultural land SOUTH: Agricultural land WEST: Agricultural land and a small structure
1980	Developed with a structure	NORTH: No features depicted EAST: Developed with a structure SOUTH: A road, followed by no features depicted WEST: Developed with a structure
2012, 2015, 2018, 2021	No features depicted	NORTH: No features depicted EAST: No features depicted SOUTH: No features depicted WEST: No features depicted

Subject property:

- Agricultural land - Refer to Section 3.0

Adjoining Site(s):

- No potential environmental concerns identified

3.5 CHAIN OF TITLE

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

DRAFT

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Department of Environmental Health (SCDEH)	March 19, 2024	Online	Angelica Bryan	No records on file

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara Fire Department (SCFD)	March 19, 2024	Online	Stephanie Davis	No records on file

4.3 BUILDING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara Building Department (SCBD)	March 19, 2024	Online	Stephanie Davis	Records discussed below

Records Summary

Year(s)	Owner/Applicant	Description of Permit and Building Use
2006	2303 Gianera Street	Sewer cap (application expired)
2006	2303 Gianera Street	Demo one single family residence (application expired)
2006	2303 Gianera Street	Demo detached garage (application expired)
2006	2303 Gianera Street	Build new single family residence with garage (application expired)
2006	2303 Gianera Street	Grading with underground utilities (application expired)
2007	2303 Gianera Street	Temporary power pole (application expired)
2008	2303 Gianera Street	Re-roof (application expired)
2014	2303 Gianera Street	Install rooftop solar panels

Evidence indicating current or prior use or storage of hazardous substances was not on file for the subject property with the SCBD.

4.4 PLANNING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Planning Department (SCCPD)	March 13, 2024	Telephone	Planning Staff	No evidence indicating the existence of AULs on file for the subject property

4.5 ASSESSOR'S OFFICE

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Assessor's Office	March 14, 2024	Online	N/A	Information obtained is discussed below

Records Summary

APN	104-06-037
Acreage	0.39 acres (as provided by Assessor)
Construction Date	1925 (as provided by Assessor)
Building Square Footage	1,812 square feet (as provided by Assessor)
Current Owner	Tianxing Wang
Additional Information	According to the Assessor, the original construction date of the subject property was listed as 1925; however, based on a review of aerial photographs, structures do not appear present on the subject property until circa 1979. Refer to Section 3.0 for further discussion of historical uses of the subject property.

4.6 OTHER AGENCIES SEARCHED

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) GeoTracker	March 14, 2024	Online	N/A	No records on file
SWRCB GeoTracker Historical Hazardous Substance Storage Information	March 14, 2024	Online	N/A	No records on file
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	March 14, 2024	Online	N/A	No records on file
CA DTSC EnviroStor	March 14, 2024	Online	N/A	No records on file
CalEPA Regulated Site Portal	March 14, 2024	Online	N/A	No records on file
Bay Area Air Quality Management District (BAAQMD)	March 14, 2024	Email	Magnolia Vinluan-Chan	No records on file
Santa Clara Valley Water (VW) Well Information Map and Fuel Leaks and Solvents Database	March 14, 2024	Online	N/A	No records on file

4.7 OIL AND GAS WELLS

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Geologic Energy Management Division (CalGEM)	March 14, 2024	CalGEM Map	No

4.8 OIL AND GAS PIPELINES

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	March 14, 2024	NPMS Public Map Viewer	Information obtained is discussed below

According to observed signage and information obtained from the NPMS Public Map Viewer, an active underground natural gas pipeline operated by PG&E is located along the south adjoining roadway (Gianera Street); see Figure 2 and NPMS map in appendices. No stressed vegetation or olfactory indications of a release were observed in the vicinity of the pipeline.

Per the NPMS Public Map Viewer, an incident related to "corrosion" was identified at the southwest corner of the intersection of Gianera Street and Cheeney Street, approximately 75 southwest of the subject property. However, due to its contents, the natural gas pipeline is not expected to represent a potential threat to soil or groundwater conditions at the subject property. Based on this information, the pipeline is not considered a REC at this time.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The minimum search distance from the federal and state environmental records database listings specified in the current ASTM Standard E1527 is included in [Section 5.1](#). A copy of the regulatory database report, which includes detailed descriptions of the databases noted below as well as the total number of sites identified, is included in [Appendix C](#) of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion, if any, are identified and further discussed in [Section 5.1](#).

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern
Federal NPL (Superfund) sites	1.0			
Federal Delisted NPL sites	0.5			
Federal CERCLA removals/orders sites	0.5			
Federal CERCLA sites with NFRAP	0.5			
Federal RCRA facilities undergoing Corrective Action	1.0			
Federal RCRA TSD facilities	0.5			
Federal RCRA generators (LQG, SQG, VSQG)	SP/ADJ			
Federal RCRA NonGen/NLR sites	SP/ADJ			
Federal IC/EC sites	SP			
Federal ERNS sites	SP			
State/tribal "Superfund" equivalent sites	1.0			
State/tribal hazardous waste facilities	0.5			
State/tribal landfill and solid waste disposal facilities	0.5			
State/tribal leaking storage tanks	0.5			
State/tribal registered storage tanks	SP/ADJ			
State/tribal voluntary cleanup sites	0.5			✓

Database	Search Distance (Miles)	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern
State/tribal IC/EC registries	SP			
State/tribal brownfield sites	0.5			
Orphans	N/A			
Additional Environmental Record lists	SP/ADJ			

Facility Name	Gianera 2 - Habitat for Humanity Silicon Valley
Address	2261-2285 Gianera Street
Distance & Direction	Approximately 75 feet east
Hydrologic Position	Up-gradient
Databases Listed	ENVIROSTOR, VCP
Comments	According to the regulatory database, this site was identified as an Envirostor/ Voluntary Cleanup Program (VVP) site with the status of "Certified" as of March 30, 2011. Information obtained from a Removal Action Certification obtained from the Envirostor website, the site history consisted of agricultural use prior to a single family residence. Investigations at the site discovered lead in soil up to 1,900 mg/kg, and soil activities were completed in 2010. The site was listed as receiving certification from the Department of Toxic Substances Control (DTSC) noting that satisfactory abatement of the site had been completed. Based on the media impacted (soil only), and certification from the regulatory oversight agency, this site is not a REC.

5.2 VAPOR MIGRATION

A vapor encroachment condition (VEC) is the presence or likely presence of Chemical(s) of Concern (COC) vapors in the vadose zone of the subject property caused by the release of vapors from contaminated soil and/or groundwater either on or near the subject property.

AEI conducted a limited screening for potential VECs that may affect the subject property. The VEC screening focused on the current and historical usage of the subject property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons.

Determination of AOC

To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by the current ASTM E2600 of 1,760 feet (1/3 mile) from the subject property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology:

Non-petroleum hydrocarbon COCs:

- 1,760 feet in the upgradient direction
- 365 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if Light, Non-Aqueous Phase Liquid, (LNAPL, i.e. floating product) is suspected:

- 528 feet in the upgradient direction
- 165 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if LNAPL is *not* suspected:

- 528 feet in the upgradient direction
- 95 feet in the cross-gradient direction
- 30 feet in the downgradient position

Additional adjustment of the AOC may be conducted based on AEI's professional judgment.

Conclusions

Source	VEC Identified	VEC Not Identified	Comments

5.3 EMERGING CONTAMINANTS

As defined in Section 3.2.36 of the current ASTM Standard E1527, hazardous substance means “those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts.” There are some substances that non-environmental professionals and others may assume to be hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA, through interpretation by EPA regulations and the courts. These substances may include: (i) some substances that occur naturally or through biological digestion (for example, methane), and (ii) substances about which human understanding is evolving (for example, per- and polyfluoroalkyl substances, also known as “PFAS”). These and any other “emerging contaminants,” where they are not identified as a hazardous substance by CERCLA, as interpreted by EPA regulations and the courts, are not included in the scope of this standard. Some of these substances may be considered a “hazardous substance” (or equivalent) under applicable state laws. In those instances, where a Phase I ESA is performed to satisfy both federal and state requirements, or as directed by the user of the report, it is permissible to include analysis and/or discussion of these substances, in the same manner as any other Non-Scope Consideration. If and when such emerging contaminants are defined to be a hazardous substance under CERCLA, as interpreted by EPA regulations and the courts, such substances shall be evaluated within the scope of this standard.

It should be noted that AEI's limited PFAS screening is based solely on review of the resources cited. Identification, or lack thereof, is not a warranty that PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFAS, additional sources of PFAS contamination may exist at the subject property, adjoining sites and/or other nearby sites not identified by the limited screening tools reviewed.

5.3.1 PFAS-RELATED REGULATORY DATABASE LISTINGS

As an initial screening tool for potential PFAS contamination, AEI reviewed PFAS-related database listings from EDR.

Source	Subject Property Identified	Adjoining Site(s) Identified	Other Nearby Site(s) of Concern Identified	Comments
EDR PFAS Regulatory Database Listing(s)				No listings warranting discussion were identified

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to the current ASTM Standard E1527, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative	Tianxing Wang	March 14, 2024	Email	2022	Interviewed; see Interview Summary table below
Key Site Manager	Tianxing Wang, property owner	March 14, 2024	Email	2022	Owner is acting Key Site Manager; see Interview Summary table below

INTERVIEW SUMMARY

Question	Owner (Representative)/Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	No
Do you have any knowledge of previous environmental investigations conducted on site?	N/A
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	No
Are you aware of any known plans for site redevelopment or change in site use?	Yes; planned demolition of existing structures and redevelopment into 8 residential townhouses
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	No

6.1.2 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to the current ASTM Standard E1527 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Information not provided
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Information not provided
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Information not provided
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Information not provided
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the	Information not provided

Question	Response/ Comment
property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	Information not provided

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

6.4 ENVIRONMENTAL LIEN AND AUL SEARCH

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	April 11, 2024
AEI Site Assessor(s)	Lea Palumbo
Property Escort(s)/ Relationship(s) to Property	AEI was not escorted
Units/Areas Observed	Representative interior and exterior areas of the two on-site buildings and yard areas
Area(s) not accessed and reason(s)	None
Other Physical Constraints	None
General Observations	The property includes two residential buildings including one single-family residence, a garage/ADU, and associated paved parking areas and associated landscaping.

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use (including drums, totes, and intermediate bulk containers)		
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	✓	
Unidentified Substance Containers	✓	
Electrical or Mechanical Equipment Likely to Contain Fluids		
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers		✓
Pits, Ponds, and Lagoons		
Stained Soil or Pavement		
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems or Cesspools		
Biomedical Wastes		
Other		

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 HAZARDOUS SUBSTANCE AND PETROLEUM PRODUCT CONTAINERS NOT IN CONNECTION WITH PROPERTY USE

Substance/Waste	Size/Quantity	Location	Secondary Containment	Staining/Spills
-----------------	---------------	----------	-----------------------	-----------------

Presumed waste oil	~5-gallon collection jug/1	Northeast exterior of residence	No	Light staining on concrete
Motor oil	1-quart jug/5	Northeast exterior of residence	No	Light staining on concrete

Some evidence of staining associated with leakage from the containers was observed. However, no storm drains were located in the immediate vicinity of the stains. Based on the relatively small size and the fact that the staining was located on a paved area, it appears that the staining is surficial in nature and thus is considered a de minimis condition. However, as a best management practice, these containers should be removed from the subject property and properly disposed, and the staining should be properly cleaned up.

7.1.2 UNIDENTIFIED SUBSTANCE CONTAINERS

Substance/Waste (size/quantity)	Container Condition	Location	Secondary Containment	Staining/Spills
Unknown (55-gallon drums/2)	Closed, rusted drums stored on soil	Northeast exterior of subject property	No	No

Two unlabeled, empty 55-gallon drums were observed behind the ADU on the northeast portion of the subject property. The contents of the drums could not be confirmed by AEI. No evidence of impact to the subject property, such as surface staining, odors, stressed vegetation, or spillage of contents, was observed. Based on this information, the presence of the drums is not considered to represent evidence of a REC. However, the drums represent a housekeeping concern and should be removed from the property and properly disposed of.

7.2 ADJOINING PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 DRAINS, SUMPS, AND CLARIFIERS

Several storm drains were observed in the parking areas of the adjoining properties and adjoining roadways. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not considered evidence of a REC.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refractory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Although the cutoff date of 1981 referenced in the OSHA regulations is generally accepted for estimating the likelihood that certain building materials may contain asbestos, building materials manufactured after 1981, while not expected to, may still contain asbestos. Typical materials that are known to still be manufactured with asbestos include but are not limited to: asphalt roofing products and building caulking materials and adhesives. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment

Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.
Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

According to the property owner, demolition of the subject property buildings is planned for the near future. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment.

8.2 LEAD-BASED PAINT

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥ 1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

AEI understands that demolition activities of the subject property buildings are planned. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 NATURALLY-OCCURRING RADON

Radon is a naturally-occurring, odorless, and invisible radioactive gas. According to the United States EPA, radon is the second leading cause of lung cancer. Natural radon levels vary and are closely related to geologic formations, soils, and foundation construction. Radon may enter buildings through basement sumps or other openings such as cracks and other holes in foundations.

US EPA Map

In 1993 the United States EPA prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map identifies counties of the US with the greatest potential for elevated indoor radon levels based on indoor radon measurement data, geology, soil parameters, and foundation types. The map divides the country into three radon zones based on potential radon accumulation, but is not to be considered predictive of radon accumulation.

The 1993 EPA map identifies the following three radon zones:

- Zone 1 - Highest potential for radon accumulation; average indoor radon levels may be greater than 4 pCi/L
- Zone 2 - Moderate potential for radon accumulation; average indoor radon levels may be between 2 and 4 pCi/L
- Zone 3 - Low potential for radon accumulation; average indoor radon levels may be less than 2 pCi/L

It is important to note that elevated levels of radon can be found in all three zones, and the EPA and other agencies recommend site-specific testing to determine radon levels at a specific property. Therefore, while the map does give an indication of the propensity of radon gas accumulation in structures in a county, elevated radon levels may be found in all three radon zones.

It should also be noted that EPA's 1993 Map of Radon Zones, while useful, was based on limited data collected prior to 1993 and therefore may be supplemented with available state-developed or other data to further understand the radon potential for a specific area.

According to the US EPA, the radon zone level for the County is Zone 2, which has a moderate potential for radon accumulation.

According to additional data obtained from California Department of Health Services Radon Database, of 16 tests conducted in the subject property zip code (95054) in 2016, one of the tests were above 4.0 pCi/L. While a relatively small percentage of the test results exceeded the EPA threshold, the majority of the locations sampled were below 4.0 pCi/L.

Radon sampling would be necessary to determine site-specific radon conditions. Radon sampling was not requested as part of this assessment.

8.4 SUSPECT MOLD OR MICROBIAL GROWTH CONDITIONS

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property buildings to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of suspect mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NORTHERN RECEIVING S EPA ID:: CAR000148791	4857 CENTENNIAL BLVD	NW 0 - 1/8 (0.110 mi.)	3	14

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Status: Certified
Facility Id: 43800001

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/23/2023 has revealed that there are 16 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 2 CPS-SLIC sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

CERS TANKS: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

A review of the CERS TANKS list, as provided by EDR, and dated 10/16/2023 has revealed that there is 1 CERS TANKS site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CITY OF SANTA CLARA	2339 GIANERA ST	WSW 1/8 - 1/4 (0.133 mi.)	A7	34

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/28/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CITY OF SANTA CLARA		SW 1/8 - 1/4 (0.126 mi.)	A4	28

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there is 1 CUPA Listings

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

2010. The public comment period will run from September 22 through October 22, 2010.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/22/2011
Comments: Final Completion Report documents the remedial activities that were conducted under the approved Removal Action Workplan. Approximately 123 tons of lead contaminated soil was excavated. Confirmation samples showed they met the cleanup goal of 80 mg/kg for unrestricted use.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 05/11/2010
Comments: DTSC approved the supplemental soil investigation work plan to characterize the vertical extent of the lead contamination.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Registry ID: 110000484468

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650

toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Date: 06/30/2021
Comments: Activity completed on 6/30/2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 02/17/2002
Comments: RMDL - PH 3 - DTSC approved the implementation report for the Phase 3 area. Phase 3 consists of soil in the remaining 16 acres of the site, which is bounded on the north by Hope Drive, Lick Mill Boulevard on the west, Guadalupe River on the east, and the Mansion Grove Apartments on the south. Between January 2001 and December 2001, approximately 55,000 cubic yards of contaminated soils were excavated from the Phase 3 area of the site and either disposed offsite or reused in the nearby CalTrans Highway 87 construction project.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 06/09/2003
Comments: DES - GW - DTSC approved the Remedial Design and Implementation Plan for ground water. Phase 4 consists of implementation of the groundwater remedy in the 2.2 acre area north of Mansion Grove apartments where groundwater contaminated with volatile organic constituents will be extracted and treated. The remedy consists of

the installation of three extraction wells at the property boundary of Mansion Grove in March 2003 and the extraction trench at the leading edge of the contaminated groundwater in February 2004.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 07/12/2002
Comments: RMDL - PH 1 - DTSC approved the Remedial Action Implementation Report for Phase 1 area. Phase 1 consists of soils on approximately 130 acres generally bounded by Hope Drive on the north, Agnew Road on the west, Lick Mill Boulevard on the east, and Montague Expressway on the south. Between December 20, 2000 and June 15, 2001, approximately 182,600 tons of soils contaminated with hazardous levels of arsenic, lead, mercury and DDT were excavated from Phase 1 and disposed at permitted landfill. Approximately 269,400 tons of soil contaminated with non-hazardous levels of arsenic, lead or PAHs were either transported to the CalTrans Highway 87 construction project for reuse, or to permitted landfill for disposal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/26/2004
Comments: DTSC approved the implementation of the remedial action which consisted of the installation of the extraction trench and the its treatment system, including the groundwater monitoring system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 11/20/2000
Comments: RAP - DTSC approved the RAP which required that any soil above the remedial goals be excavated and properly managed off-site. The groundwater beneath the site will be remediated by the construction of an extraction trench at the property boundary of Mansion Grove, and an additional extraction trench at the leading edge of the contaminated groundwater. The site cleanup was broken up into four phases to support development schedules for the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 08/16/2000
Comments: Approved the Remedial Investigation Report for the site which delineated the extent of soil and groundwater contamination. Soil was contaminated with the following: arsenic, lead, mercury, DDT, chlordane, polycyclic aromatic hydrocarbons (PAHs), perchloroethylene (PCE) and trichloroethylene (TCE). Groundwater investigation showed PCE, TCE, 1,1-dichloroethylene (DCE), cis-1,2-DCE, 1,2-dichloroethane (DCA) and vinyl chloride (VC) to be above the drinking water standards in the area north of the Mansion Grove Site.

Comments: Land Use Restriction - Site Inspection/Visit

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 10/26/2004
Comments: RMDL - GW - DTSC approved the completion report for the installation and start up of the groundwater extraction trench. A Deed restriction was recorded on the portion of the site where the groundwater contamination exist which prevents use of the property for residential and other purposes. All allowed uses and developments of the property shall preserve the integrity of the extraction trench, extraction wells, and groundwater treatment system and monitoring wells at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 06/08/2007
Comments: No problems noted during the inspection.

Comments: Land Use Restriction - Site Inspection/Visit

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 11/07/2001
Comments: Remedial action completed which consisted of excavation of contaminated soil containing metals and polynuclear aromatic hydrocarbons (PAH) and disposed to an offsite facility.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 12/19/2000
Comments: DTSC approved a remedial design for the soil removal activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/07/2008
Comments: The 5 Year Report indicates the existing system at the site is effective in controlling offsite migration of groundwater contaminants.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 08/31/2015
Comments: DTSC performed a five-year review to evaluate the effectiveness and protectiveness of the remedy implemented as the site. DTSC concluded that the remedy remains protective of human health and the environment. The land use covenant prevents sensitive site uses, volatile organic compounds in groundwater remain stable, and there are no complete human exposure pathways at the site.

Completed Date: 06/30/2021
Comments: Activity completed on 6/30/2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 02/17/2002
Comments: RMDL - PH 3 - DTSC approved the implementation report for the Phase 3 area. Phase 3 consists of soil in the remaining 16 acres of the site, which is bounded on the north by Hope Drive, Lick Mill Boulevard on the west, Guadalupe River on the east, and the Mansion Grove Apartments on the south. Between January 2001 and December 2001, approximately 55,000 cubic yards of contaminated soils were excavated from the Phase 3 area of the site and either disposed offsite or reused in the nearby CalTrans Highway 87 construction project.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 06/09/2003
Comments: DES - GW - DTSC approved the Remedial Design and Implementation Plan for ground water. Phase 4 consists of implementation of the groundwater remedy in the 2.2 acre area north of Mansion Grove apartments where groundwater contaminated with volatile organic constituents will be extracted and treated. The remedy consists of the installation of three extraction wells at the property boundary of Mansion Grove in March 2003 and the extraction trench at the leading edge of the contaminated groundwater in February 2004.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 07/12/2002
Comments: RMDL - PH 1 - DTSC approved the Remedial Action Implementation Report for Phase 1 area. Phase 1 consists of soils on approximately 130 acres generally bounded by Hope Drive on the north, Agnew Road on the west, Lick Mill Boulevard on the east, and Montague Expressway on the south. Between December 20, 2000 and June 15, 2001, approximately 182,600 tons of soils contaminated with hazardous levels of arsenic, lead, mercury and DDT were excavated from Phase 1 and disposed at permitted landfill. Approximately 269,400 tons of soil contaminated with non-hazardous levels of arsenic, lead or PAHs were either transported to the CalTrans Highway 87 construction project for reuse, or to permitted landfill for disposal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/26/2004
Comments: DTSC approved the implementation of the remedial action which consisted of the installation of the extraction trench and the its

treatment system, including the groundwater monitoring system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 11/20/2000
Comments: RAP - DTSC approved the RAP which required that any soil above the remedial goals be excavated and properly managed off-site. The groundwater beneath the site will be remediated by the construction of an extraction trench at the property boundary of Mansion Grove, and an additional extraction trench at the leading edge of the contaminated groundwater. The site cleanup was broken up into four phases to support development schedules for the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 08/16/2000
Comments: Approved the Remedial Investigation Report for the site which delineated the extent of soil and groundwater contamination. Soil was contaminated with the following: arsenic, lead, mercury, DDT, chlordane, polycyclic aromatic hydrocarbons (PAHs), perchloroethylene (PCE) and trichloroethylene (TCE). Groundwater investigation showed PCE, TCE, 1,1-dichloroethylene (DCE), cis-1,2-DCE, 1,2-dichloroethane (DCA) and vinyl chloride (VC) to be above the drinking water standards in the area north of the Mansion Grove Site.

Background Info: A major portion of the former Agnews Developmental Center (ADC) has been cleaned up under the Department of Toxic Substances Control (DTSC) oversight. For details on these projects, please refer to CalSite #43990005 (Rivermark Properties) and #43990006 (Agnews State Hospital, DGS). The parcels being addressed under CalSite number includes properties on Agnews Road east of Lafayette Street bordered by DGS Parcel 3 (except those parcels in CalSite #43990006 above), and portions of Sun Microsystems Complex. The former ADC was a State hospital or developmental center since the 19th century. It served developmentally disabled individuals on a live-in basis. The surrounding and previous use of land was farming and orchards. In 1996, the California DDS declared ADC-West as surplus which meant closure for the center and providing available lands for redevelopment. This resulted in the redevelopment of the property including the construction of the Sun Microsystem Complex, the Hope Company, an apartment complex, and the Emergency and Housing Consortium. A Phase 1 environmental assessment and investigation were conducted on ADC-West by the consultant West Associates in 1995 and 1996. The assessment covers the whole of ADC-West property. Potential sources were identified by the West Associates which included an automotive compound (located east of Avenue A) and a former solid waste incinerator (north of the automotive compound). This property is located east of DGS Parcel 4. A Case Closure Summary Report by the Santa Clara Valley Water District, dated December 16, 2002, describes the investigation and cleanup conducted at the automotive compound for underground tanks. Contaminants detected in soil included the following: TPH-gasoline (2,000 ppm), benzene (5.7 ppm), toluene (4.0 ppm) and MTBE (0.87 ppm). In groundwater, the following contaminants were detected: TPH-gasoline (10,000 ppb), benzene (1,400 ppb), toluene (570 ppb) and MTBE (8,200 ppb). From 1987 to 1998, four underground storage tanks and three vehicle lifts were removed. Cleanup included the removal of 400 cubic yards of contaminated soil, and 20,000 gallons of contaminated groundwater pumped intermittently. On December 16, 2002, the Santa Clara Valley Water District, after three quarters of groundwater monitoring, issued a letter confirming the completion of a site investigation and cleanup. The report cited another

AGNEWS STATE HOSPITAL (Continued)

S102008399

potential source of contamination which was the solid waste incinerator, located northwest of the automotive compound. The incinerator had been inactive for several years and was used to burn mostly papers. According to the consultant, the ashes can contain PCBs and metals. Analytical results indicate that the ash would require disposal to a Class 1 Facility. The report did not describe the removal of the incinerator nor the disposal of the ash in the incinerator. However, the site visit indicates there are no existing structures at the Site. Sun Microsystems is located on Agnew Road across the properties mentioned above. A 1985 ADC map showed an empty parcel on the corner of Lafayette and Agnew Road, now owned by Sun Microsystems. This lot is currently zoned for research and development. Next to the empty lot is Sun Microsystems parking lots and office buildings. Information indicates this property was occupied by buildings for ADC staff residence and administrative offices. A Draft Environmental Impact Report dated May 1997 and finalized in July 1997 did not raise concern regarding any potential source of hazardous substances from these areas, except for the presence of asbestos and lead paint on the older buildings. Most of these buildings have been demolished and replaced with new structures and asphalt parking area. An apartment complex is now constructed where the former automotive compound and the incinerator were located. South of this complex is Hope Company and the Emergency Housing Consortium. Hope Company, which is located next to DGS 4, is a community service company. The facility was constructed in the early 1990s and has a long term lease with the State of California. Based on the type of operation of the company, hazardous substances are not suspected to be used at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

UTM Y (Meters): 4139653.0
Elevation: 16 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5640070 MILPITAS, CA
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

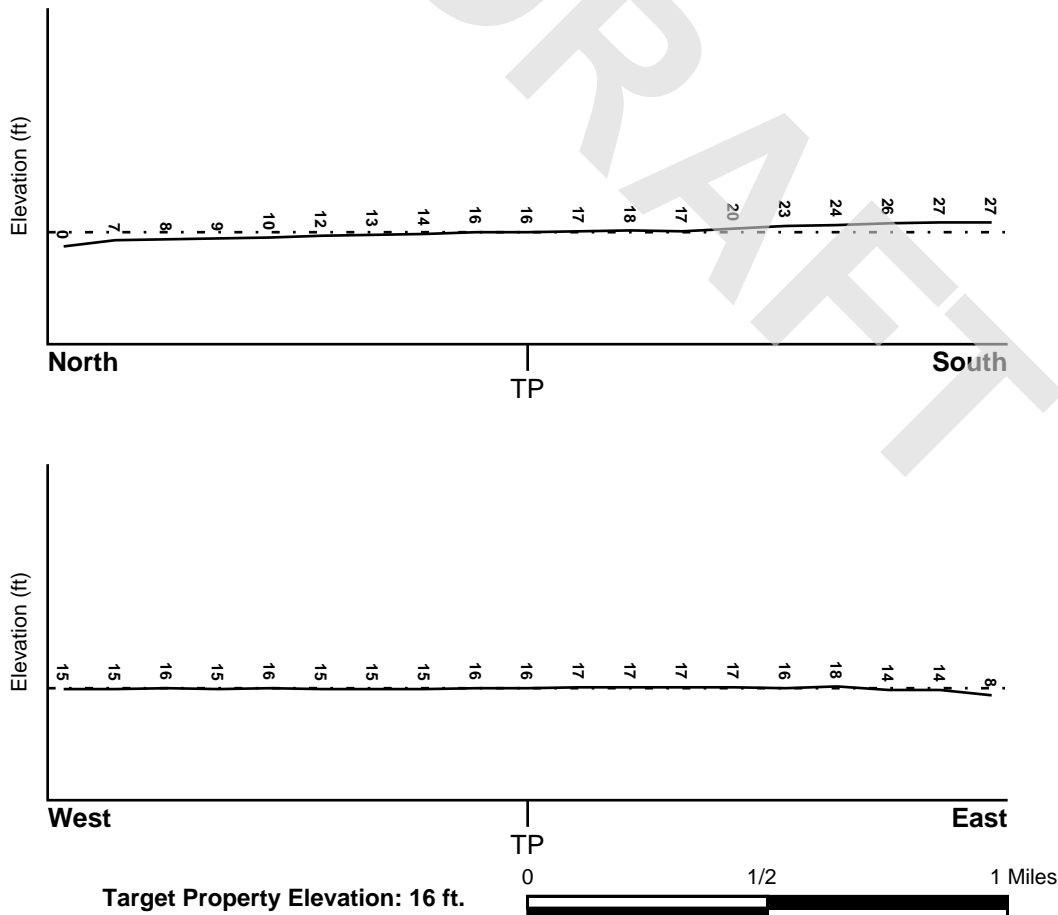

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

MILPITAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles South
Site Name:	Siliconix Inc
Site EPA ID Number:	CAD009131392
Groundwater Flow Direction:	NOT SPECIFIED, BUT A MONITORING WELL ON THE SOUTHERN SIDE OF THE SITE IS THE UP-GRADIENT WELL AND A MONITORING WELL ON THE NORTHERN SIDE OF THE SITE IS THE DOWN-GRADIENT WELL.
Measured Depth to Water:	15 feet.
Hydraulic Connection:	The surficial and lower aquifers are hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Historical Topo Map Report

03/15/24

Site Name:

490804
2303 Gianera Street
Santa Clara, CA 95054
EDR Inquiry # 7596357.4

Client Name:

AEI Consultants
2500 Camino Diablo
Walnut Creek, CA 94597
Contact: Christian Cagonot

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	360658	Latitude:	37.400973 37° 24' 4" North
Project:	490804	Longitude:	-121.965536 -121° 57' 56" West
		UTM Zone:	Zone 10 North
		UTM X Meters:	591558.28
		UTM Y Meters:	4139857.18
		Elevation:	16.00' above sea level

Message to requester

Requester + Staff

Dear **Lea**:

The City of Santa Clara (the "City") completes its response to your records

request submitted pursuant to the California Public Records Act ("PRA").

I am looking to obtain electronic copies of records from their respective departments on file for the property located at 2303 Gianera Street, Santa Clara, CA (APN 104-06-037):

-Fire Dept/Env Services: fire inspections, records regarding hazardous materials, above/underground storage tanks, and spills/cleanups

-Building Dept: all (including current and historical) building permits

The City has released all records responsive to your records request in accordance with the PRA and are available for download through the NextRequest portal at <https://santaclara.nextrequest.com/>.

There are no additional records. The Fire Department has no responsive records for this request.

This completes the City's response to your request, and we will consider this matter closed.

Sincerely,

City Clerk's Office

City of Santa Clara

Please note that email correspondence with the City of Santa Clara, along with attachments, may be subject to disclosure pursuant to the California Public Records Act, unless otherwise exempt.

Requester + Staff

Dear **Lea**:

The City of Santa Clara (the "City") acknowledges and continues its response to your record request ("Request") pursuant to the California Public Records Act ("PRA").

I am looking to obtain electronic copies of records from their respective departments on file for the property located at 2303 Gianera Street, Santa Clara, CA (APN 104-06-037):

-Fire Dept/Env Services: fire inspections, records regarding hazardous materials, above/underground storage tanks, and spills/cleanups

-Building Dept: all (including current and historical) building permits

The City has released partial records responsive to your request in accordance with the PRA and such records are available for download through the NextRequest portal at <https://santaclara.nextrequest.com/>.

The City is continuing its search of City servers to locate additional responsive documents in a manner consistent with the PRA, and respectfully extends the response fourteen (14) days until **April 15, 2024**, provided that we will timely notify you if this is not possible.

Sincerely,

City Clerk's Office

City of Santa Clara

Please note that email correspondence

with the City of Santa Clara, along with attachments, may be subject to disclosure pursuant to the California Public Records Act, unless otherwise exempt.

**REMOVAL ACTION CERTIFICATION
GIANERA 2 – HABITAT FOR HUMANITY SILICON VALLEY SITE**

1. Certification of Removal Action:

I hereby certify that the following information is true and correct to the best of my knowledge.

Project Manager, Cleanup Program

3/29/2011

Date

Unit Chief, Cleanup Program

3/30/2011

Date

2. Certification Statement: Based upon the information which is currently and actually known to DTSC:

 X DTSC has determined that all appropriate response actions have been completed, that all acceptable engineering practices were implemented and that no further removal/remedial action is necessary.

 DTSC has determined, based upon a remedial investigation or site characterization, that the site poses no significant threat to public health, welfare, or the environment and therefore implementation of removal/remedial measures is not necessary.

 DTSC has determined that all appropriate removal/remedial actions have been completed and that all acceptable engineering practices were implemented: however, the site requires ongoing operation and maintenance (O&M) and monitoring efforts. The site will be deleted from the "active" site list following (1) a trial operation and maintenance period and (2) execution of a formal written settlement between DTSC and the responsible parties, if appropriate. However, the site will be placed on DTSC's list of sites undergoing O&M to ensure proper monitoring of long-term clean-up efforts.

3. Site Name and Location: (Street address, County, and City)

Gianera 2 – Habitat for Humanity Silicon Valley
2261 to 2285 Gianera Street
Santa Clara, Santa Clara County, California

A. List any other names that have been used to identify this site:

None

B. Address of site if different from above: not applicable

C. Assessor's Parcel Numbers: 104-060-047

4. Responsible Parties:

Habitat for Humanity Silicon Valley
513 Valley Way
Milpitas, California 95053
Relationship to Site: Current Owner

5. Brief Description and History of the Site:

The 0.3-acre site is located at 2261 to 2285 Gianera Street in Santa Clara, California. The site history consisted of agricultural use from the late 1940s, a single residential unit constructed in 1971, and in 2009, Habitat for Humanity developed the Site with four single family homes and one two-story condominium. The homes and condominium are currently occupied. The Site is bordered by residences to the south, west and east, and a PG&E substation to the north across an easement. San Tomas Aquino Creek is approximately 1,000 feet to the west.

Habitat for Humanity Silicon Valley entered into a Voluntary Cleanup Agreement (VCA) with DTSC in May 2010 to conduct a site assessment and prepare a Removal Action Workplan for the Site.

Investigations were conducted at the Site between July 2004 to June 2010, and lead was identified in soil ranging at the surface to 1.5 feet below ground surface (bgs). The highest lead concentration found in soil at the Site is 1,900 milligrams per kilogram (mg/kg) at 1.5 feet bgs.

DTSC approved the Final Removal Action Workplan on November 3, 2010. The implementation of the removal activities is documented in the March 15, 2011 Completion Report, Soil Removal Activities Report prepared by Cornerstone Earth Group on behalf of Habitat for Humanity Silicon Valley.

6. Type of Site:

Has the Site been identified in the EnviroStor database as an active DTSC site?

Yes X No

RCRA-Permitted Facility	<u> </u>	Bond-funded	<u> </u>
RCRA Facility Closure	<u> </u>	RP-Funded	<u> X </u>
NPL	<u> </u>	Federal Facility	<u> </u>
Other (i.e. walk-in)	<u> </u>	Explain Briefly:	

7. Size of the Site:

Small X Medium Large Extra-Large

8. Dates of Remedial Action:

a. Initiated: February 1, 2011 b. Completed: March 11, 2011

9. Response Action Taken on Site: (check appropriate action)

 X Removal Action (satisfactory abatement of site)
 Final Remedial Action
 RCRA enforcement/closure action
 No action, further investigation verified that no clean-up action at the site was need.

A. Type of Remedial or Removal Action: (e.g. excavation and disposal, on-site treatment, etc.)

The removal actions consisted of excavating lead-contaminated soil from the areas of the Site not covered by the homes, condominium, or pavement, disposing it at a permitted off-site facility, confirmation sampling to ensure the lead cleanup goal had been achieved, and backfilling with clean imported materials. A total of 425 tons of excavated, lead-contaminated soil was disposed at the Chemical Waste Management's Altamont Landfill, Resource Recovery Facility in

Livermore, California, and Clean Harbors' Buttonwillow Landfill in Buttonwillow, California. Because soil impacted with lead may remain beneath hardscapes and structures on the Site, Covenants, Conditions and Restrictions governing the homeowners association will be revised to restrict disturbances of the existing hardscapes and structure foundations, and for maintaining the pavements.

B. Estimated quantity of waste associated with the site (i.e., tons/gallons/cubic yards) which was:

☐ treated amount:
☐ untreated (capped sites) amount:
☒ removed amount: 425 tons of soil

10. Cleanup Levels/Standards:

a. What were the cleanup standards established by DTSC pursuant to the Final Remedial Action Plan or Removal Action Workplan?

The soil cleanup level for lead was the residential California Human Health Screening Level of 80 mg/kg.

b. Were the specified cleanup standards met? Yes ☒ No ☐

c. If "no", why not:

Not applicable

11. DTSC Involvement in the Removal Action:

A. Did DTSC order the Removal Action?

Yes ☐ No ☒ Date of Order: VCA, May 6, 2010

B. Did DTSC review and approve the following plans/procedures? (indicate date of review/approval, if done):

Sampling and Analysis Procedures Date: November 3, 2010

Health and Safety Protections Date: November 3, 2010

Removal Action Workplan Date: November 3, 2010

C. If the site was abated by responsible party, did DTSC receive a signed statement from a licensed professional on all phases of the Removal Actions? (indicate date of statement)

Removal Action Workplan Date: October 27, 2010

Post-Remediation Date: March 15, 2011

D. Did a registered engineer or geologist verify that acceptable engineering practices were implemented?

Yes ☒ No ☐ Name: Ron L. Helm, California Registered Geologist # EG1808

Date: March 15, 2011 (certification included in Completion Report)

E. Did DTSC confirm completion of all Remedial Actions?

Yes ☒ No ☐ Date: March 22, 2011 (date of Removal Action Completion Report approval)

F. Did DTSC (directly or through a contractor) actually perform the removal action?

Yes ☐ No ☒ Name of Contractor:

G. Was there a community relations plan in place?

Yes ☒ No ☐ A community profile was prepared and approved on July 30, 2010

H. Was a removal/remedial action plan developed for this site?

Yes ☒ No ☐

I. Did DTSC hold public meetings regarding the draft RAW?

Yes ☐ No ☒

J. Were public comments addressed?

Yes ☒ No ☐

Date of DTSC responses to public comments: October 27, 2010

K. Are all of the facts cited above adequately documented in the DTSC files?

Yes ☒ No ☐

If no, identify areas where documentation is lacking:

Not applicable

12. EPA Involvement in the Remedial Action;

A. Was EPA involved in the site cleanup?

Yes ☐ No ☒

B. If yes, did EPA concur with all remedial actions?

Yes ☐ No ☐

C. EPA comments

EPA staff involved in cleanup: (name, title, address, and phone number)

13. Other Regulatory Agency Involvement in the Cleanup Action:

Agency:

Activity:

☐ RWQCB

☐ ARB

☐ CHP

☐ Caltrans

☐ Other

Name of contact persons and agency:

14. Post Closure Activity:

**A. Will there be post-closure activities at this site?
(e.g. Operation and Maintenance)**

Yes ☐ No ☒

B. Have post-closure plans been prepared and approved by DTSC?

Yes ☐ No ☒

**C. What is the estimated duration of post-closure (including
Operation and Maintenance) activities?**

Not applicable

D. Are deed restrictions proposed or in place?

Yes ☐ No ☒

If "yes", have deed restrictions been recorded with the County recorder?

Yes ☐ No ☐

If "no", who is responsible for assuring that the deed restrictions are recorded? not applicable

Who is the Program contact? Henry Chui 510-540-3759
name/phone number

E. Has cost recovery been initiated?

Yes ☒ No ☐

If "yes", amount received \$24,276.63; 100% of DTSC costs.

F. Were local planning agencies notified of the cleanup action?

Yes ☐ No ☐

If "yes", the name and address of the agency:

15. Expenditure of Funds and Sources: (Information to be supplied by Toxic Account Unit.) funding source and amount expended:

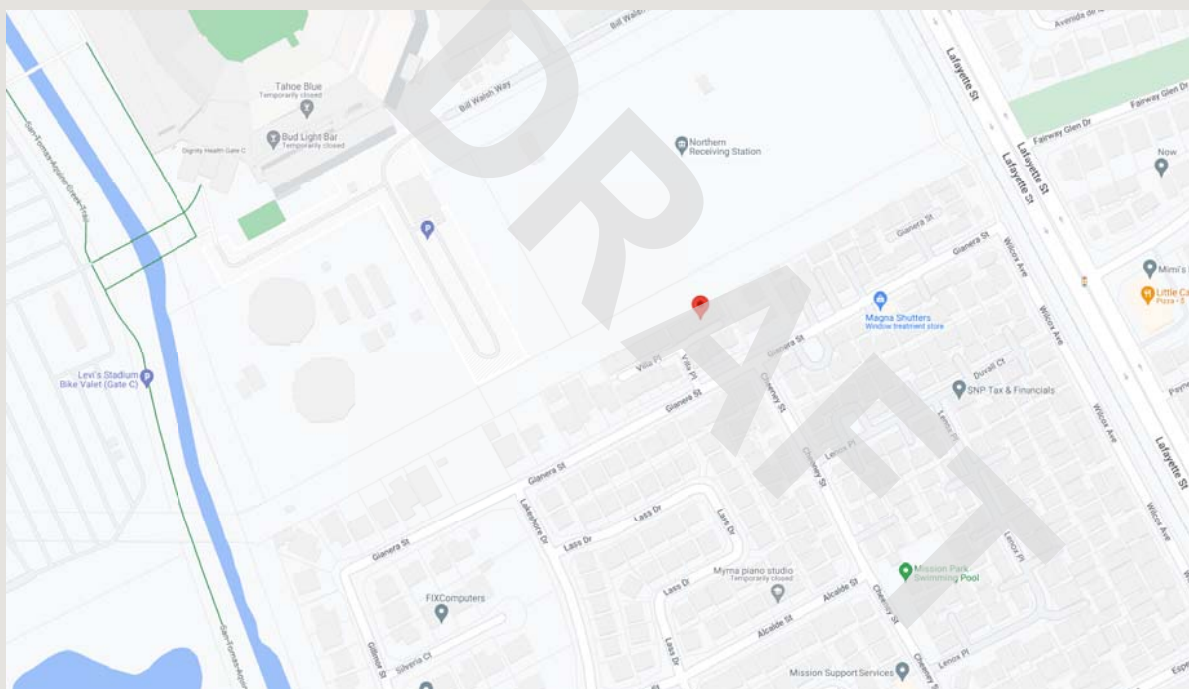

<input type="checkbox"/> HWCA	\$ _____	<input type="checkbox"/> HSA	\$ _____
<input type="checkbox"/> HSCF	\$ _____	<input type="checkbox"/> RCRA	\$ _____
<input checked="" type="checkbox"/> RP	\$ <u>unknown</u>	<input type="checkbox"/> Other	\$ _____
<input type="checkbox"/> Federal Cooperation Agreement	\$ _____		

16. Problems Encountered Which Caused Major Delays: The contractor had to perform a second soil removal due to several confirmation samples that did not meet the lead cleanup level.

17. Accomplishments Unique to this Project: DTSC and Habitat for Humanity Silicon Valley worked closely from the preparation of the Removal Action Workplan through implementation of the removal actions to ensure that the cleanup was done to meet the project schedule.

18. **Final Use of Site:** Habitat for Humanity Silicon Valley has developed the Site with four single-family homes and a two-story condominium.

San Jose, CA 95131

Attention: Vincent Yan

Subject: Proposed Residential Subdivision
2303 Gianera Street
Santa Clara, California
GEOTECHNICAL INVESTIGATION

Dear Vincent Yan:

Pursuant to your request, we are pleased to transmit herein the results of our geotechnical investigation for the proposed residential subdivision. The subject site is located at 2303 Gianera Street in Santa Clara, California.

Our findings indicate that the site is suitable for the proposed development provided the recommendations contained in this report are carefully followed. Our field reconnaissance, drilling, sampling, and laboratory testing of the surface and subsurface material evaluate the suitability of the site. The following report details our investigation, outlines our findings, and presents our conclusions based on those findings.

If you have any questions or require additional information, please feel free to contact our office at your convenience.

Very truly yours,

SILICON VALLEY SOIL ENGINEERING

Sean Deivert
Project Manager

KEY TO LOG OF BORING

EXPLORATORY BORING LOG (B-1 THROUGH B-4)

INTRODUCTION

Per your authorization, Silicon Valley Soil Engineering (SVSE) conducted a geotechnical investigation. The purpose of this investigation was to determine the nature of the surface and subsurface soil conditions at the project site through field investigations and laboratory testing. This report presents an explanation of investigative procedures, results of the testing program, our conclusions, and our recommendations for earthwork and foundation design to adapt the proposed development to the existing soil conditions.

PROJECT LOCATION AND DESCRIPTION

The subject site is located at 2303 Gianera Street in Santa Clara, California (Figure 1 – Vicinity Map). Gianera Street bounds the subject site to the southeast, existing residences to the southwest and northeast, and utility easement to the northwest. At the time of our investigation, the site was a rectangular shaped, relatively flat parcel of land occupied by residential structures. The proposed development will include the demolition of the existing structure(s) and construction of seven two-story residences with associated improvements. Location of the proposed residences and our exploratory soil borings is shown on the Figure 2 – Site Plan.

FIELD INVESTIGATION

After considering the nature of the proposed development and reviewing available data on the area, a field investigation was conducted at the subject site under the direction of our geotechnical engineer. It included a site reconnaissance to detect any unusual surface features, and the drilling of four exploratory test borings to determine the subsurface soil characteristics. The borings were drilled on February 14, 2023 to the depths of 5, 10, and 50 feet below the existing ground surface elevation. The borings were drilled with a truck-mounted drill rig using 8-inch diameter hollow stem augers and hand-held augers. The approximate location of the borings is shown on Figure 2 – Site Plan.

The soils encountered were logged continuously in the field during the drilling operations. Relatively undisturbed soil samples were obtained by hammering a 2.0-inch outside diameter (O.D.) split-tube sampler for a Standard Penetration Test (SPT), ASTM Standard D1586 into the ground at various depths. A 2.5-inch diameter split-tube sampler (Modified California) was utilized to obtain soil sample for direct shear tests at the depths of 1.5 feet to 3 feet. A 140-pound hammer with a free fall of 30 inches was used to drive the sampler 18 inches into the ground. Blow counts were recorded on each 6-inch increment of the sampled interval. The blows required for advancing the sampler the last 12 inches of the 18-inch sampled interval were recorded on the boring log as penetration resistance. In addition, disturbed bulk samples of the near-surface soil were collected for laboratory analyses. The Exploratory Boring Log(s) contained in the Appendix are a graphic representation of the encountered soil profile; and also show the depths at which the relatively undisturbed soil samples were obtained.

LABORATORY INVESTIGATION

A laboratory-testing program was performed to determine the physical and engineering properties of the soils underlying the site.

1. Water content and dry unit weight tests were performed on the relatively undisturbed soil samples in order to determine soil consistency and the moisture variation throughout the explored soil profile (Table I).
2. The strength parameters of the foundation soils were determined from direct shear tests that were performed on selected relatively undisturbed soil samples (Table I).
3. Atterberg Limits tests were also performed on the near-surface soil to assist in the classification of these soils and to obtain an evaluation of their expansion and shrinkage potential and liquefaction analysis (Table I & Figure 4).

4. Laboratory compaction tests of the native soil material were performed to determine the maximum dry density per the ASTM D1557 test procedure (Figure 5).
5. One R-Value test was performed on a near surface soil sample for pavement section design recommendations (Figure 6).

The results of the laboratory-testing program are presented in the Tables and Figures at the end of this report.

SOIL CONDITIONS

In Boring B-1, the surface material consists of 3.0 inches organic material. Below the organic layer to a depth of 7.0 feet, a black, moist, stiff silty clay layer was encountered. A color change of medium gray was noted at the depth of 4 feet. From the depths of 7 feet to 12 feet, the soil became medium brown, moist, stiff sandy silty clay. From the depths of 12 feet to 20 feet, an olive brown, moist, stiff clayey silt/silty clay layer was encountered. From the depths of 20 feet to the end of the boring at 50 feet, the soil became olive brown, moist, stiff silty clay. A color change of bluish gray was noted at the depth of 43 feet. Similar soil profile were encountered in other borings.

Groundwater was initially encountered in Boring B-1 to the depth of 23 feet and stabilized at the end of the drilling operation at 22 feet. It should be noted that the groundwater table would fluctuate as a result of seasonal changes and hydrogeologic variations such as groundwater pumping and/or recharging. A detailed description of the soil profiles encountered is presented in Exploratory Boring Log(s) contained in the Appendix.

GENERAL GEOLOGY

The site lies in the Santa Clara Valley, which is part of the Coast Ranges geological province. The Santa Clara Valley occupies the structural trough formed by two northwest trending mountain ranges; the Santa Cruz Mountains to the southwest

of the valley and the Diablo Range to the northeast. The Diablo Range is predominantly composed of Franciscan Formation, which is uppermost Jurassic to lower Upper Cretaceous eugosynclinal assemblage. The Santa Cruz Mountains are predominantly composed of material formed of Cenozoic shelf and slope deposits. A thick blanket of latest Cretaceous and Tertiary clastic sedimentary rocks and isolated intrusions of serpentine covers large parts of the province. Folds, thrust faults, steep reverse faults, and strikeslip faults developed as a consequence of Cenozoic deformations that occur very often within the province and some of them are continuing today (CDMG; 1966). Earthquake probability and faults are shown on Figure 3.

Sedimentary marine strata alternating with non-marine strata record the Quaternary history of the region. The changes of the depositional environment are related to the fluctuation of sea level corresponding to the glacial and interglacial periods. Late Quaternary deposits fill the center of the Santa Clara Valley and most of the strata are of continental origin characterized as alluvial and fluvial materials. The subject site is underlain by fluvial deposits (Helley and Brabb, 1971, Rogers & Williams, 1974).

LIQUEFACTION ANALYSIS:

The site is located within the State of California Seismic Hazard Zone for liquefaction (CGS, USGS). Therefore, a liquefaction analysis was performed.

A. GROUNDWATER

Groundwater was initially encountered in Boring B-1 to the depth of 23 feet and stabilized at the end of the drilling operation at 22 feet. Based on the State guidelines and CGS Seismic Hazard Zone Report 051 [Seismic Hazard Evaluation of the Milpitas 7.5-Minute Quadrangle, Alameda and Santa Clara Counties, California (Updated 1/13/2006). Department of Conservation. Division of Mines and Geology], the highest expected groundwater level is approximately 7 feet

below ground elevation. Therefore, this depth of the groundwater table will be used for the liquefaction analysis.

B. SUSPECTED LIQUEFIABLE SOIL LAYERS

The site is located within the State of California Seismic Hazard Zone for liquefaction (CGS, USGS). The State Guidelines (CGS Special Publication 117A, revised 2008, Southern California Earthquake Center, 1999) were followed by this study. Based on recent studies (Bray and Sancio, 2006, Boulanger and Idriss, 2004), the “Chinese Criteria”, previously used as the liquefaction screening (CGS SP 117, SCEC, 1999) is no longer valid indicator of liquefaction susceptibility. The revised screening criteria clearly stated that liquefaction is the transformation of loose saturated silts, sands, and clay with a Plasticity Index (PI) < 12 and moisture content (MC) $> 85\%$ of the liquid limits are susceptible to liquefaction and with a plasticity index $12 < (PI) < 18$ and moisture content (MC) $> 80\%$ of the liquid limits (LL) are moderately susceptible to liquefaction. Moreover, sensitive soils having PI > 18 can undergo severe strength loss, so engineering judgement must be applied when using screening criteria. Therefore, it is recommended that both PI and water content criteria be considered for screening criteria. This occurs under vibratory conditions such as those induced by a seismic event. To help evaluate liquefaction potential, samples of potentially liquefiable soil were obtained by hammering the split tube sampler into the ground. The number of blows required driving the sampler the last 12 inches of the 18-inch sampled interval were recorded on the log of test boring. The number of blows was recorded as a Standard Penetration Test (SPT), ASTM Standard D1586-92.

The results from our exploratory boring show that the subsurface soil material in Boring B-1 to the depth of 50.0 feet consists of stiff silty clay to stiff sandy silty clay to stiff clayey silt/silty clay to stiff silty clay. The following is the determination of the liquefiable soil for each soil layer in Boring B-1.

1. The stiff silty clay layer from the surface to the depth of 7 feet is not liquefiable soil because it is above the highest expected groundwater table (7 feet).
2. The stiff sandy silty clay layer from the depths of 7 feet to 12 feet is not liquefiable soil based on the Plasticity Index (PI) and Water content (Wc) over Liquid Limit (LL) ratio:
 - Sample No. 1-3 (10 feet); Wc = 21.0%; LL = 35; Wc/LL = 0.60; PI = 19
3. The stiff clayey silt/silty clay layer from the depths of 12 feet to 20 feet is not liquefiable soil based on the Plasticity Index (PI) and Water content (Wc) over Liquid Limit (LL) ratio:
 - Sample No. 1-4 (15 feet); Wc = 22.8%; LL = 32; Wc/LL = 0.71; PI = 18
4. The stiff silty clay layer from the depths of 20 feet to the end of boring at 50 feet is not liquefiable soil based on the Plasticity Index (PI) and Water content (Wc) over Liquid Limit (LL) ratio:
 - Sample No. 1-6 (25 feet); Wc = 22.6%; LL = 36; Wc/LL = 0.63; PI = 19
 - Sample No. 1-8 (35 feet); Wc = 21.1%; LL = 37; Wc/LL = 0.57; PI = 18
 - Sample No. 1-9 (40 feet); Wc = 20.9%; LL = 35; Wc/LL = 0.60; PI = 19
 - Sample No. 1-10 (50 feet); Wc = 21.5%; LL = 37; Wc/LL = 0.58; PI = 19

The similar liquefaction screening process was used for Boring B-3.

In summary, there is no suspected liquefiable soil layer underlying Boring B-1 and Boring B-3.

The screening analysis for the suspected liquefiable soil layer is presented in a graphical format as shown in Figure 7A and Figure 7B – Liquefaction susceptible Criteria (Boring B-1) and Figure 8A and Figure 8B – Liquefaction susceptible Criteria (Boring B-3).

C. LIQUEFACTION CONCLUSION

Since there is no liquefiable soil layer underlying the subject site, the potential for liquefaction is minimal.

INUNDATION POTENTIAL

The subject site is located at 2303 Gianera Street in Santa Clara, California. Based on FEMA Flood Map, the site is located in Zone “X” – “Area with Reduced Flood Risk Due to Levee”.

DRAFT

CONCLUSIONS

1. The site covered by this investigation is suitable for the proposed development provided the recommendations set forth in this report are carefully followed.
2. Based on the laboratory testing results of the near-surface soil and the native surface soil at the subject site has been found to have a high expansion potential when subjected to fluctuations in moisture.
3. The final exterior grade adjacent to the proposed structures should be graded to permit proper drainage and diversion of water away from the foundation.
4. The proposed residences should be supported either on conventional spread foundation, mat slab foundation, or pier and grade beam foundation.
5. We recommend that a reference to our report should be stated in the grading and foundation plans that includes the geotechnical investigation report file number and date.
6. On the basis of the engineering reconnaissance and exploratory boring, it is our opinion, trenches that will be excavated to depths less than 5 feet below the existing ground surface will not need shoring. However, for trenches that will be excavated greater than 5 feet in depth, shoring will be required or excavated in accordance with OSHA guidelines.
7. All earthwork including grading, backfilling, and foundation excavation shall be observed and inspected by a representative from Silicon Valley Soil Engineering (SVSE). Contact our office 48 hours prior to the commencing of any earthwork operations for inspection services.

RECOMMENDATIONS:

GRADING

1. The placement of fill and control of any grading operations at the site should be performed in accordance with the recommendations of this report. These recommendations set forth the minimum standards to satisfy other requirements of this report.
2. All existing surface and subsurface structures which will not be incorporated in the final improvements shall be removed from the subject site prior to any grading operations.
3. The depressions left by the removal of subsurface structures should be cleaned of all debris, backfilled and compacted with clean, native or approved import soil. This backfill must be engineered fill and should be conducted under the supervision of a SVSE representative.
4. All organic surface material and debris shall be stripped prior to any other grading operations, and transported away from all areas that are to receive structures or structural fills. Soil containing organic material may be stockpiled for later use in landscaping areas only.
5. After removing all the subsurface structures and after stripping the organic material from the soil, the improved area should be scarified by machine to a depth of 12 inches and thoroughly cleaned of vegetation and other deleterious matter.
6. After stripping, scarifying and cleaning operations, native soil should be moisture conditioned with 3% over optimum moisture, compacted to not less than 90% relative maximum density using ASTM D1557 procedure over the entire improved area, 5 feet beyond the perimeter of the pad as permitted and 3 feet beyond the edge of the driveway area.

7. All engineered fill or imported soil should be placed in uniform horizontal lifts of not more than 8 inches in un-compacted thickness, and compacted to not less than 90% relative maximum density. Before compaction begins, the fill shall be brought to a water content that will permit proper compaction by either; 1) aerating the material if it is too wet, or 2) spraying the material with water if it is too dry. Each lift shall be thoroughly mixed before compaction to assure a uniform distribution of water content.
8. When fill material includes rocks, nesting of rocks will not be allowed and all voids must be carefully filled by proper compaction. Rocks larger than 4 inches in diameter should not be used for the final 2 feet of improved area.
9. Unstable (yielding) subgrade should be aerated or moisture conditioned as necessary. Yielding isolated area in the subgrade can be stabilized with an excavation of the subgrade to the depth of 12 to 18 inches, lined with stabilization fabric membrane (Mirafi 500X or equivalent) and backfilled with aggregate base.
10. Driveway asphalt pavement section designs are presented in Table II. Rigid concrete and paver pavement section designs are presented in Table III and IV.
11. All imported soil material, if any, must be approved by SVSE before being brought to the site. Import soil must have a plasticity index no greater than 15, an R-Value greater than 25 and environmentally clean (non-hazardous). The import soil should contain at least 30 percent fines (particles passing the No. 200 sieve) to reduce the potential for surface water to infiltrate beneath structure.
12. SVSE should be notified at least two days prior to commencement of any grading operations so that our office may coordinate the work in the field with the contractor.

13. All grading work shall be observed and approved by a representative from SVSE. The geotechnical engineer shall prepare a final report upon completion of the grading operations.

WATER WELLS

14. Any water wells and/or monitoring wells that are to be discovered and abandoned on the site shall be capped according to the requirements of the Valley Water (Santa Clara Valley Water District). The final elevation of the top of the well casing must be a minimum of 3 feet below the adjacent grade prior to any grading operation.

FOUNDATION DESIGN CRITERIA

15. The proposed structures should be supported either on continuous perimeter and interior spread foundation, mat slab foundation, or pier and grade beam foundation.
16. Conventional spread foundation (no isolated spread footings) should be founded at a minimum depth of 36 inches below finished subgrade pad elevation. Under these conditions, the allowable bearing capacity is 2,500 psf for conventional spread footings.
17. The mat slab foundation should have a minimum thickness of 10 inches with an 18 inch total thickened edge and 12 inch wide. A value of 120 pci as the soil modulus of subgrade of reaction and contact pressure of 1,800 psf can be used in the design of the mat foundation. The weight of the mat slab can be neglected for bearing pressures.
18. The mat slab foundation should be underlain by 16 inches of $\frac{3}{4}$ -inch clean crushed rock (recycled material not acceptable) with Stego 15-mil vapor barrier. The vapor barrier should be placed between the rock layer and concrete slab. The vapor barrier membrane should be overlapped, taped at seams and/or mastic applied for protrusions.

19. Skin friction piers shall have a minimum diameter of 16 inches and penetrate a minimum of 6 feet below the lowest adjacent grade with 6 feet maximum spacing on-center. These piers can be designed with an allowable skin friction value of 600 psf. The top 1 foot of the pier should be neglected in the calculation of the allowable skin friction force and passive resistance. This value is for dead plus live loads and may be increased by 1/3 for short term seismic and wind loads.
20. All piers should be reinforced with at least four No. 5 rebars, which shall run the entire length of the piers, with the perimeter piers tied at least 12 inches into the grade beam's upper section.
21. The grade beams width should be limited to 10 inches and be founded a minimum depth of 6 inches below adjacent pad grades and should be reinforced with a minimum of two No. 4 rebars, one near the top and one near the bottom. Grade beams should be kept to a recommended width above in order to minimize any effect of uplift pressures and underlain with 3 inches of void form.
22. The above bearing values are for dead plus live loads and may be increased by one-third for short term seismic and wind loads.
23. We estimated that the total and differential settlements of the proposed structures would be on the order of 0.5 inch and 0.25 inch, respectively.
24. The footing bottoms should be compacted with jumping jack and inspected prior to rebar and form work placement.
25. Because of the high expansion potential of the surface native soil, we recommend any footing excavation should be saturated with water (not overly saturated) and periodically daily after footing excavation and prior to concrete placement.
26. The project structural engineer responsible for the foundation design should determine the final design of the foundation and reinforcing

required. The design of the structure and the foundation shall meet local building code requirements. We recommend that the foundation plans be reviewed by our office prior to submitting to the appropriate local agency and/or to construction.

2022 CBC SEISMIC VALUES

27. Chapter 16 of the 2022 California Building Code (CBC) outlines the procedure for seismic design. The site categorization and site coefficients are shown in the following table.

Classification/Coefficient*	Design Value
Site Latitude	37.400934° N.
Site Longitude	121.965485° W.
Site Class (ASCE 7-16)	D
Risk Category	I,II,III
0.2-second Mapped Spectra Acceleration, S_s	1.500g
1-second Mapped Spectra Acceleration, S_1	0.600g
Short-Period Site Coefficient, F_a	1.0
Long-Period Site Coefficient, F_v	1.7
0.2-second Period, Maximum considered Earthquake Spectral Response Acceleration, S_{MS} ($S_{MS} = F_a S_s$)	1.50g
1-second Period, Maximum Considered Earthquake Spectral Response Acceleration, S_{M1} ($S_{M1} = F_v S_1$)	1.02g
0.2-second Period, Designed Spectra Acceleration, S_{DS} ($S_{DS} = 2/3 S_{MS}$)	1.00g
1-second Period, Designed Spectra Acceleration, S_{D1} ($S_{D1} = 2/3 S_{M1}$)	0.68g

*2022 CBC

CONCRETE SLAB-ON-GRADE CONSTRUCTION

28. Based on the laboratory testing results of the near-surface soil, the native soil on the site was found to have a highly expansion potential when subjected to fluctuation in moisture.

29. The concrete slab-on-grade should be underlain by a minimum of 16 inches of $\frac{3}{4}$ -inch crushed rock (recycled crushed rock is not acceptable) should be placed on the compacted native subgrade. The rock should be compacted in-place with vibratory plate. The subgrade soil should be compacted to at least 90% relative maximum density.
30. The concrete slab should have a minimum thickness of 5 inches and reinforced with No. 4 rebar at maximum spacing of 18 inches on-center both ways. If the concrete slab would receive a floor covering or sealant, a Stego 15-mil vapor barrier should be placed between the rock layer and concrete slab. The vapor barrier membrane should be overlapped, taped at seams and/or mastic applied for protrusions.

RETAINING WALLS

31. General retaining walls, if any, shall be designed for a lateral earth pressure (active) equivalent to 65 pounds equivalent fluid pressure for cantilevered condition with horizontal backfill. If the retaining walls are restrained from free movement at both ends, the walls shall be designed for the earth pressure resulting from 75 pounds equivalent fluid pressure, to which shall be added surcharge loads. The structural engineer shall discuss the surcharge loads with the geotechnical engineer prior to designing the retaining walls.
32. In designing for allowable resistive lateral earth pressure (passive) of 250 pounds equivalent fluid pressure may be used with the resultant acting at the third point. The top foot of subgrade soil shall be neglected for computation of passive resistance.
33. The aforementioned values assume a drained condition and a moisture content compatible with those encountered during our investigation.
34. For undrained condition, lateral earth pressure (active) is 80 psf and restrained at 85 psf.

35. A friction coefficient of 0.3 shall be used for retaining wall design. This can be increased by 1/3 for short term seismic and wind loads.
36. For drained condition, drainage should be provided behind the retaining wall. The drainage (subdrain) system should consist of perforated pipe placed at the base of the retaining wall and surrounded by $\frac{3}{4}$ inch drain rock wrapped in a filter fabric. The drain rock wrapped in fabric should be at least 12 inches wide and extend from the base of the wall to within 1.5 feet of the ground surface. The upper 1.5 feet of backfill should consist of compacted native soil. The retaining wall drainage system should drain to an appropriate discharge facility.
37. As an alternative to the drain rock and fabric backfill, Miradrain 2000 or 6000 or approved equivalent drain mat may be used behind the retaining wall. The drain mat should extend from the base of the wall to within 12 inches of the ground surface. A perforated pipe (subdrain system) should be placed at the base of the wall in direct contact with the drain mat. The pipe should drain to an appropriate discharge facility.

EXCAVATION

38. Any vertical cuts deeper than 5 feet must be properly shored or excavated in accordance with OSHA guidelines. The minimum cut slope for excavation to the desired elevation is one horizontal to one vertical (1H:1V). The cut slope should be increased to 2H:1V if the excavation is conducted during the rainy season or when the soil is highly saturated with water.
39. No difficulties due to soil conditions are anticipated in excavating the on-site material. Conventional earth moving equipment will be adequate for this project.

DRAINAGE

40. It is considered essential that positive drainage be provided during construction and be maintained throughout the life of the proposed structures.
41. The final exterior grade adjacent to the structures should be such that the surface drainage will flow away from the proposed structures. Rain water discharge at downspouts should be directed into hard pipes to acceptable drainage facilities which will prevent water from collecting in the soil adjacent to the foundation.
42. Utility lines that cross under or through perimeter foundation should be completely sealed to prevent moisture intrusion into the areas under the slab and/or footings. The utility trench backfill should be of impervious material and this material should be placed at least 4 feet on either side of the exterior footings.
43. Consideration should be given to collection and diversion of roof runoff and the elimination of planted areas or other surfaces which could retain water in areas adjoining the building. The landscape grade adjacent to the perimeter foundation should be at a minimum slope of 5 percent away from structures.
44. Bioretention systems, if any, should not be located within 10 feet from building foundation or 5 feet from driveway/parking edge and should not undermine parking curbs. If the bioretentions are no more than 5 feet from foundation and 3 feet from driveway/parking curb, the bioretention should be lined with impermeable liner (15 mil plastic or thicker) to above the overflow elevation and waterproofed if adjacent to building. Reinforced concrete curbs adjacent to bioretentions shall be deepened for proper support to bottom elevation of the bioretention gravel. Biosoil mix and gravel should not be used for calculation to support curbs.

45. Based on laboratory test results of the near surface soil at the subject site, we estimated that the infiltration rate is approximately 0.1 inches per hour ($K_{SAT} = 7 \times 10^{-5}$ cm/sec). This rate can be used in the design of the retention system for on-site storm drainage.

ON-SITE UTILITY TRENCHING

46. Utility trenches within the public right-of-way should be excavated, bedded, and backfilled in accordance with local or governing jurisdiction requirements.
47. All utility lines including plumbing should be bedded with at least 6 inches over the pipe or conduit with 1/4, 3/8 or 3/4 inch crushed rock or well graded sand conforming to pipe manufacture's requirements. Sand and gravel should be compacted in-place.
48. The remaining excavated area should be backfilled with native on-site material or imported fill and compacted to at least 90% relative maximum density. Backfill should be placed in uniform 8 inch lifts and compacted. Jetting of trench backfill is not recommended. An engineer from our firm should be notified at least 48 hours before the start of any utility trench backfilling operations.
49. The utility trenches running parallel to the building foundation should not be located in an influence zone that will undermine the stability of the foundation. The influence zone is defined as the imaginary line extending at the outer edge of the footing at a downward slope of 1H:1V (one unit horizontal distance to one unit vertical distance). If the utility trenches were encroaching the influence zone, the encroached area should be stabilized with cement sand slurry (75 psi minimum compressive strength).
50. If utility trench excavation is to encounter groundwater, our office should be notified for dewatering recommendations.

PAVEMENT DESIGN

51. Due to the uniformity of the near-surface soil at the site, one R-Value Test was performed on a representative bulk sample. The result of the R-Value test is enclosed in this report. The following alternate sections are based on our laboratory resistance R-Value test of near-surface soil samples and traffic indices (T.I.) of 4.5 for parking stalls and 5.5 for parking area and driveway (travel way). Asphalt pavement section designs, which satisfy the State of California Standard Design Criteria, and above traffic indices, are presented in Table II. Concrete and paver pavement section designs are presented in Table III and IV.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The recommendations presented herein are based on the soil conditions revealed by our test borings and evaluated for the proposed construction planned at the present time. If any unusual soil conditions are encountered during the construction, or if the proposed construction will differ from that planned at the present time, Silicon Valley Soil Engineering (SVSE) should be notified for supplemental recommendations.
2. This report is issued with the understanding that it is the responsibility of the owner, or his representative, to ensure that the necessary steps are taken to see that the contractor carries out the recommendations of this report in the field.
3. The findings of this report are valid, as of the present time. However, the passing of time will change the conditions of the existing property due to natural processes, works of man, from legislation or the broadening of knowledge. Therefore, this report is subjected to review and should not be relied upon after a period of three years.
4. The conclusions and recommendations presented in this report are professional opinions derived from current standards of geotechnical practice and no warranty is intended, expressed, or implied, is made or should be inferred.
5. The area of the borings is very small compared to the site area. As a result, buried structures such as septic tanks, storage tanks, abandoned utilities, or etc. may not be revealed in the borings during our field investigation. Therefore, if buried structures are encountered during grading or construction, our office should be notified immediately for proper disposal recommendations.
6. Standard maintenance should be expected after the initial construction has been completed. Should ownership of this property change hands, the

prospective owner should be informed of this report and recommendations so as not to change the grading or block drainage facilities of this subject site.

7. Stormwater management, structure, foundation design and calculations are not part of our investigation or scope.
8. This report has been prepared solely for the purpose of geotechnical investigation and does not include investigations for toxic contamination studies of soil or groundwater of any type. If there are any environmental concerns, our firm can provide additional studies.
9. Any work related to grading and/or foundation operations during construction performed without direct observation from SVSE personnel will invalidate the recommendations of this report and, furthermore, if we are not retained for observation services during construction, SVSE will cease to be the Geotechnical Engineer of Record for this subject site.

Class II Baserock (R=78 min.) compacted to at least 95% relative max. density	12.0"	8.0"	6.0"
Subgrade soil scarified & compacted to at least 90% relative max. density	12.0"	12.0"	12.0"

* Including trash enclosures, stress pads, and valley gutters.

* Reinforcement: Rebar No. 4 at 18" on-center, maximum spacing both ways. Control joints maximum spacing at 10' by 10'.

** Reinforcement: Rebar No. 3 at 18" on-center, maximum spacing both ways. Control joints maximum spacing at 5' by 5'.

Vertical curbs should be keyed at least 3 inches into pavement subgrade.

TABLE IV**PROPOSED PAVER PAVEMENT SECTIONS**

Location: Proposed Residential Subdivision
2303 Gianera Street
Santa Clara, California

	<u>DRIVEWAY/PARKING AREA*</u>			
Recommended Paver Pavement Sections:	1A	1B	2A**	2B**
Vehicular Rated Pavers	Min. 3.25" ± Permeable Paver Parking Stalls With subdrain	Min. 3.25" ± Permeable Paver Parking Stalls	Min. 3.25" ± Permeable Paver Driveway With subdrain	Min. 3.25" ± Permeable Paver Driveway
ASTM No. 8 Bedding Course & Paver Filler	2.0"	2.0"	2.0"	2.0"
3/4" Clean Crushed Rock or ASTM No. 57 Stone	12.0"	4.0"	16.0"	6.0"
ASTM No. 2 Stone	---	12.0"	---	12.0"
Subgrade scarified & compacted to at least 90% relative maximum density	12.0"	12.0"	12.0"	12.0"

* The subgrade should be lined with Mirafi 140N Filter Fabric and Tensar BX1100 Geogrid or equivalent. Subgrade should be sloped at a minimum of 2% towards the subdrain system, if necessary. If subdrain is allowed to be notched in the subgrade, the subdrain trench should be at least 12 inches wide and 6 inches below the finished subgrade elevation and the walls and bottom should be lined with filter fabric. The subdrain system should consist of a 4-inch diameter perforated pipe schedule 40, SDR 35, or equivalent surrounded by ASTM No. 57 Stone (¾ inch drain rock). Or, the subdrain pipe may be required to be within the ASTM No. 2 Stone section. The drainage system should drain to a discharge facility. The pavers should be bordered with a concrete curb/band to avoid water infiltration into non-permeable parking areas. Typically, minor maintenance would be required during the life of the pavers.

** Support fire apparatus of 75,000 lbs.

APPENDICES

MODIFIED MERCALLI SCALE

METHOD OF SOIL CLASSIFICATION

KEY TO LOG OF BORING

EXPLORATORY BORING LOGS (B-1 THROUGH B-4)

**GENERAL COMPARISON BETWEEN EARTHQUAKE MAGNITUDE
AND THE EARTHQUAKE EFFECTS DUE TO GROUND SHAKING**

Earthquake Category	Richter Magnitude	Modified Mercalli Intensity Scale* (After Housner, 1970)	Damage to Structure
		I – Detected only by sensitive instruments.	
	2.0	II – Felt by few persons at rest, especially on upper floors; delicate suspended objects may swing.	
	3.0	III – Felt noticeably indoors, but not always recognized as an earthquake; standing cars rock slightly, vibration like passing truck.	No Damage
Minor		IV – Felt indoors by many, outdoors by a few; at night some awaken; dishes, windows, doors disturbed; cars rock noticeably.	
	4.0	V – Felt by most people; some breakage of dishes, windows, and plaster; disturbance of tall objects.	Architectural Damage
		VI – Felt by all; many are frightened and run outdoors; falling plaster and chimneys; damage small.	
5.3	5.0	VII – Everybody runs outdoors. Damage to building varies, depending on quality of construction; noticed by drivers of cars.	
Moderate	6.0	VIII – Panel walls thrown out of frames; fall of walls, monuments, chimneys; sand and mud ejected; drivers of cars disturbed.	
6.9		IX – Buildings shifted off foundations, cracked, thrown out of plumb; ground cracked, underground pipes broken; serious damage to reservoirs and embankments.	Structural Damage
Major	7.0	X – Most masonry and frame structures destroyed; ground cracked; rail bent slightly; landslides.	
7.7		XI – Few structures remain standing; bridges destroyed; fissures in ground; pipes broken; landslides; rails bent.	
Great	8.0	XII – Damage total; waves seen on ground surface; lines of sight and level distorted; objects thrown into the air; large rock masses displaced.	Near Total Destruction

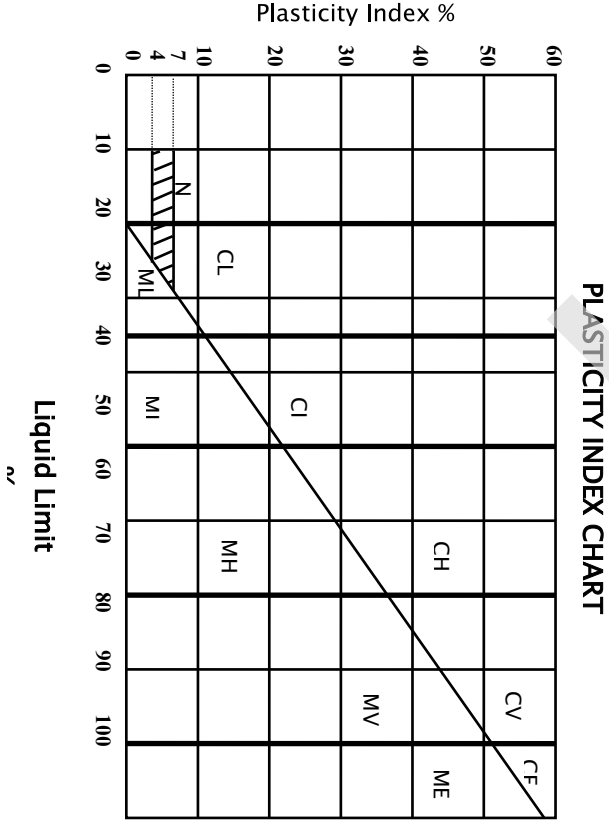

*Intensity is a subject measure of the effect of the ground shaking, and is not engineering measure of the ground acceleration.

METHOD OF SOIL CLASSIFICATION CHART

MAJOR DIVISIONS		SYMBOL		TYPICAL NAMES
COARSE GRAINED SOILS (More than 1/2 of soil > no. 200 sieve size)	GRAVELS (More than 1/2 of coarse fraction > no. 4 sieve size)	CW		Well graded gravel or gravel-sand mixtures, little or no fines
		GP		Poorly graded gravel or gravel-sand mixtures, little or no fines
		GM		Silty gravels, gravel-sand-silt mixtures
		GC		Clayey Gravels, gravel-sand-clay mixtures
	SANDS (More than 1/2 of coarse fraction < no. 4 sieve size)	SW		Well graded sands or gravelly sands, no fines
		SP		Poorly graded sands or gravelly sands, no fines
		SM		Silty sands, sand-silt mixtures
		SC		Clayey sands, sand-clay mixtures
FINE GRAINED SOILS (More than 1/2 of soil < no. 200 sieve size)	SILTS & CLAYS LL < 50	ML		Inorganic silts and very fine sand, rock, flour, silty or clayey fine sand or clayey silt/slight plasticity
		CL		Inorganic clay of low to medium plasticity, gravelly clays, sandy clay, silty clay, lean clays
		OL		Organic silty/s and organic silty clay of low plasticity
	SILTS & CLAYS LL > 50	MH		Inorganic silts, micaceous or diatocaceous fine sandy, or silty soils, elastic silt
		CH		Inorganic clays of high plasticity, fat clays
		OH		Organic clays of medium to high plasticity, organic silty clays, organic silts
				Peat and other highly organic soils
HIGHLY ORGANIC SOIL		PT		

CLASSIFICATION CHART - UNIFIED SOIL CLASSIFICATION SYSTEM

Key to Log of Boring

Sheet 1 of 1

Depth (feet)	Sample Type	Sample Number	Sampling Resistance, blows/ft	Material Type	Graphic Log	MATERIAL DESCRIPTION	Water Content, %	Dry Unit Weight, pcf	Direct Shear Test - Cohesion in ksf	Direct Shear Test - Internal Friction Angle in degrees	Liquid Limit - LL, %	Plasticity Index - PI, %
1	2	3	4	5	6	7	8	9	10	11	12	13

COLUMN DESCRIPTIONS

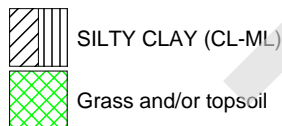

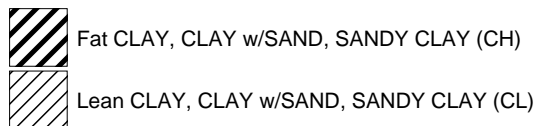

- 1** Depth (feet): Depth in feet below the ground surface.
- 2** Sample Type: Type of soil sample collected at the depth interval shown.
- 3** Sample Number: Sample identification number.
- 4** Sampling Resistance, blows/ft: Number of blows to advance driven sampler one foot (or distance shown) beyond seating interval using the hammer identified on the boring log.
- 5** Material Type: Type of material encountered.
- 6** Graphic Log: Graphic depiction of the subsurface material encountered.
- 7** MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
- 8** Water Content, %: Water content of the soil sample, expressed as percentage of dry weight of sample.
- 9** Dry Unit Weight, pcf: Dry weight per unit volume of soil sample measured in laboratory, in pounds per cubic foot.
- 10** Direct Shear Test - Cohesion in ksf: Cohesion is the y-axis intercept of the failure envelope tangent to the Mohr circles.
- 11** Direct Shear Test - Internal Friction Angle in degrees: The internal friction angle (Phi) is the angle inclination of the failure envelope.
- 12** Liquid Limit - LL, %: Liquid Limit, expressed as a water content.
- 13** Plasticity Index - PI, %: Plasticity Index, expressed as a water content.

FIELD AND LABORATORY TEST ABBREVIATIONS

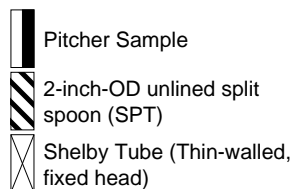

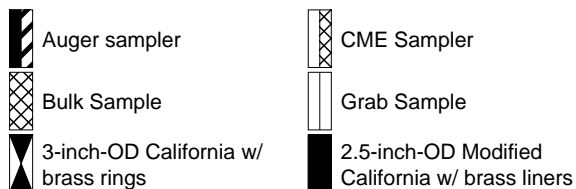

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent

PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

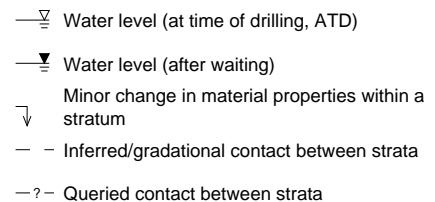

MATERIAL GRAPHIC SYMBOLS

TYPICAL SAMPLER GRAPHIC SYMBOLS

OTHER GRAPHIC SYMBOLS

GENERAL NOTES

- 1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
- 2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

APPENDIX G

QUALIFICATIONS

DRAFT

Lea Palumbo

Project Manager, Due Diligence

EDUCATION

- B.S. - Environmental Policy Analysis and Planning (emphasis in Climate Change Policy), University of California, Davis

CERTIFICATIONS

- EPA Accredited Asbestos Building Inspector

SUMMARY OF PROFESSIONAL EXPERIENCE

Ms. Palumbo has been in the environmental service industry since 2018. She provides expertise in environmental project management, consulting, and due diligence services for large- and small-scale industrial, commercial, multifamily residential, and rural properties.

PROJECT EXPERIENCE

Project experience for Ms. Palumbo includes:

- Phase I ESAs
- Environmental Transaction Screens (ETs)
- Limited Environmental Site Assessments (LESAs)
- Records Research with Risk Assessments (RSRAs)
- Regulatory Database Review
- Historical Records Review
- Property Resilience Assessments (CRRs)

As a Due Diligence Project Manager, Ms. Palumbo provides project management and technical expertise to ensure ASTM compliance and satisfaction of client requirements.

In addition, prior to joining the environmental consulting industry, Ms. Palumbo spent four years studying a diverse range of environmental disciplines including: environmental policy analysis, environmental law, geology, Geographic Information Systems (GIS), sustainable development, and environmental planning.

Megan Salcido

National Client Manager, Due Diligence

EDUCATION

- BA- Environmental Studies, Brown University, Providence, RI

CERTIFICATIONS

- EPA Accredited Asbestos Building Inspector

SUMMARY OF PROFESSIONAL EXPERIENCE

Ms. Salcido has been in the environmental industry since 2014 and provides project management and oversight to ensure compliance and satisfaction of client requirements for Phase I Environmental Site Assessments, Real Estate Transaction Screens, Database Reviews, and other similar environmental assessments. She has successfully completed assessments on a variety of residential, agricultural, commercial and complex industrial sites. Ms. Salcido is accustomed to all aspects of Due Diligence Property Assessments and the needs and requirements of a variety of reporting standards, including ASTM, EPA's All Appropriate Inquiry (AAI), and customized client formats.

PROJECT EXPERIENCE

Project experience for Ms. Salcido includes:

- Phase I Environmental Site Assessments
- Limited Environmental Site Assessments
- Environmental Transaction Screens
- Records Research with Risk Assessments
- Regulatory Database Reviews
- Historical Records Reviews
- ACM, Radon, LBP, and drinking water sampling

In addition, prior to joining the environmental consulting industry, Ms. Salcido spent four years studying a diverse range of environmental disciplines including: environmental health, coastal ecology and conservation, environmental statistics, ecology, conservation biology, environmental law and policy, and science communications.

APPENDIX H

COMMONLY USED ACRONYMS & ABBREVIATIONS

DRAFT

Units	
µg/L	Micrograms per Liter
mg/kg	Milligrams per Kilogram
mg/L	Milligrams per Liter

Acronyms & Abbreviations	
AACEI	Association for the Advancement of Cost Engineering International
AC	Air Conditioner, or Acre
ACM	Asbestos-Containing Material
ADA	The Americans with Disabilities Act
ADAAG	ADA Accessibility Guidelines
ADJ	Adjoining Site
ADU	Accessory Dwelling Unit
AEI	AEI Consultants
AFUE	Annual Fuel Utilization Efficiency
AHERA	Asbestos Hazard Emergency Response Act
AHU	Air Handling Unit
AIA	American Institute of Architects
Allow	Allowance
ALTA	American Land Title Association
Amp	Amperage, or Ampere
APN	Assessor Parcel Number
ASCE	American Society of Civil Engineers
ASHRAE	American Society of Heating, Refrigerating and Air-Conditioning Engineers
AST	Aboveground Storage Tank
ASTM	ASTM International
AUL	Activity and Use Limitation
bgs	Below Ground Surface
BOMA	Building Owners & Managers Association
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes
BTU	British Thermal Unit (measurement of heat)
BTUH	British Thermal Units per Hour
BUR	Built-up Roof System
CERCLA	Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	Comprehensive Environmental Response Compensation and Liability Information System
CESQG	Conditionally Exempt Small Quantity Generator
CH	Clubhouse
CO	Certificate of Occupancy
COC	Contaminant of Concern, or Chemical of Concern
COP	Coefficient of Performance
CRA	Construction Risk Assessment
CREC	Controlled Recognized Environmental Condition
CUP	Conditional Use Permit
CWH	Compact Water Heater, or Cold Water Heater
DHW	Domestic Hot Water
DWV	Drainage, Waste, Ventilation
EA	Each
EC	Engineering Controls
ECM	Energy Conservation Measure
EDR	Environmental Data Resources, Inc.
EEM	Energy Efficiency Measures
EER	Energy Efficiency Ratio

Units	
pCi/L	PicoCuries per Liter
ppb	Parts per Billion
ppm	Parts per Million

Acronyms & Abbreviations	
LBP	Lead-Based Paint
LCP	Lead-Containing Paint
LED	Light Emitting Diode
LEED	Leadership in Energy and Environmental Design
LFCA	Limited Facility Condition Assessment
LLP	Landowner Liability Protection
LQG	Large Quantity Generator
LS	Lump Sum
LUST	Leaking Underground Storage Tank
M	Model
MAP	Multifamily Accelerated Processing
MBH	1,000 BTUs per Hour
MCL	Maximum Contaminant Level
MDP	Main Distribution Panel
MEP	Mechanical, Electrical and Plumbing
MHP	Mobile Home Park
MMI	Modified Mercalli Intensity
MPH	Miles per Hour
MRL	Machine Room-Less
MTBE	Methyl Tertiary Butyl Ether
MTCO ₂ e	Metric Tons of Carbon Dioxide Equivalent
NA or N/A	Not Applicable
ND	None Detected
NESHAP	National Emission Standards for Hazardous Air Pollutants
NFA	No Further Action
NFPA	National Fire Protection Association
NFRAP	No Further Remedial Action Planned
NLR	No Longer Regulated
NOV	Notice of Violation
NPL	National Priorities List
NPV	Net Present Value
NRA	Net Rentable Area
NRI	National Risk Index
O	Occupied
O&M	Operations and Maintenance
OEC	Other Environmental Consideration
OFC	Office
OH&PR / OH&P	Overhead and Profit
OPC	Opinion of Probable Cost
OSHA	Occupational Safety and Health Administration
PCA	Property Condition Assessment
PCB	Polychlorinated Biphenyl
PCE / PERC	Perchloroethylene, or Tetrachloroethylene, or Tetrachloroethene
PCR	Property Condition Report
PE	Professional Engineer
PFAS	Per- and Polyfluoroalkyl Substances

Acronyms & Abbreviations	
EFF AGE	Effective Age
EIFS	Exterior Insulation Finishing Systems
EMF	Electro Magnetic Fields
EMS	Energy Management System
EPA	Environmental Protection Agency
EPDM	Ethylene Propylene Diene Monomer (rubber membrane roof)
ERNS	Emergency Response Notification System
ESA	Environmental Site Assessment
ESG	Environmental, Social and Governance
EUI	Energy Use Intensity
EUL	Estimated Useful Life
EWEM	Energy and Water Efficiency Measure
F	Fahrenheit
FAR	Floor Area Ratio
FCA	Facility Condition Assessment
FCU	Fan Coil Unit
FEMA	Federal Emergency Management Agency
FF&E	Furniture, Fixtures and Equipment
FFHA	Federal Fair Housing Act
FHA	Forced Hot Air, or Fair Housing Act, or Fair Housing Administration
PHW	Forced Hot Water
FIRM	Flood Insurance Rate Map
FLS	Fire and Life Safety
FM	Factory Mutual
FOIA	US Freedom of Information Act
FOIL	Freedom of Information Law
FRP	Fiber Reinforced Plastic
FRT	Fire Retardant Treated
FTRP	Fire Retardant Treated Plywood
Gal	Gallon
GFA	Gross Floor Area
GFCI	Ground Fault Circuit Interrupter
GFI	Ground Fault Interrupt (circuit)
GHG	Greenhouse Gas
GIS	Geographic Information System
GPF	Gallons per Flush
GPM	Gallons per Minute
GPNA	Green Physical Needs Assessment
GPR	Ground-Penetrating Radar
GSF	Gross Square Footage
GWB	Gypsum Wall Board
HID	High Intensity Discharge
HREC	Historical Recognized Environmental Condition
HSPF	Heating Seasonal Performance Factor
HUD	Department of Housing and Urban Development
HVAC	Heating, Ventilation and Air Conditioning
IAQ	Indoor Air Quality
IBC	International Building Code
IC	Institutional Control
IM / IR	Immediate Repair
IRR	Internal Rate of Return
ISR	Impervious Surface Ratio
kBTU	Kilo-British Thermal Unit
kGal	Kilogallon
kW	Kilowatt
kWh	Kilowatt Hour

Acronyms & Abbreviations	
PGA	Peak Ground Acceleration
PML	Probable Maximum Loss
POC	Point of Contact
PSF	Pounds per Square Foot
PSQ	Pre-Survey Questionnaire
PTAC	Packaged Through-Wall Air Conditioning (Unit)
PVC	Polyvinyl Chloride
R&M	Repair and Maintain - Routine Maintenance
RCRA	Resource Conservation and Recovery Act
REC	Recognized Environmental Condition
RM	Room
ROI	Return On Investment
ROW	Right-of-Way
RP	Responsible Party
RR	Replacement Reserve
RTU	Rooftop Unit
RUL	Remaining Useful Life
SDS	Safety Data Sheet
SEDI	Statement of Energy Design Intent
SEER	Seasonal Energy Efficiency Ratio
SEL	Scenario Estimated Loss
SEMS	Superfund Enterprise Management System
SEP	Statement of Energy Performance
SF	Square Footage, or Square Feet
SIR	Savings to Investment Ratio
SL	Scenario Loss
SP	Subject Property
SQG	Small Quantity Generator
SRA	Seismic Risk Assessment
ST	Short Term
SUL	Scenario Upper Loss
SUP	Special Use Permit
SVOC	Semi-Volatile Organic Compound
SY	Square Yard
TCE	Trichloroethylene, or Trichloroethene
TE	Thermal Efficiency
TPH	Total Petroleum Hydrocarbons
TPHd / TPH-d	Total Petroleum Hydrocarbons (diesel range)
TPHg / TPH-g	Total Petroleum Hydrocarbons (gasoline range)
TPHo / TPH-o	Total Petroleum Hydrocarbons (oil range)
TPO	Thermoplastic Polyolefin Roof Membrane
TRPH	Total Recoverable Petroleum Hydrocarbons
TSD	Treatment, Storage, and Disposal
UBC	Uniform Building Code
USDA	United States Department of Agriculture
USGS	United States Geological Survey
UST	Underground Storage Tank
V	Vacant
VAV	Variable Air Volume Box
VCP	Voluntary Cleanup Program
VOC	Volatile Organic Compound
VSQG	Very Small Quantity Generator
WDO	Wood Destroying Organism
ZAR	Zoning Analysis Report
