

APPENDIX AIR

AIR QUALITY MODELING OUTPUTS

Pit River Burney Custom Report

Table of Contents

- 1. Basic Project Information
 - 1.1. Basic Project Information
 - 1.2. Land Use Types
 - 1.3. User-Selected Emission Reduction Measures by Emissions Sector
- 2. Emissions Summary
 - 2.1. Construction Emissions Compared Against Thresholds
 - 2.2. Construction Emissions by Year, Unmitigated
 - 2.3. Construction Emissions by Year, Mitigated
 - 2.4. Operations Emissions Compared Against Thresholds
 - 2.5. Operations Emissions by Sector, Unmitigated
 - 2.6. Operations Emissions by Sector, Mitigated
- 3. Construction Emissions Details
 - 3.1. Demolition (2024) - Unmitigated
 - 3.2. Demolition (2024) - Mitigated

3.3. Site Preparation (2024) - Unmitigated

3.4. Site Preparation (2024) - Mitigated

3.5. Grading (2024) - Unmitigated

3.6. Grading (2024) - Mitigated

3.7. Building Construction (2024) - Unmitigated

3.8. Building Construction (2024) - Mitigated

3.9. Building Construction (2025) - Unmitigated

3.10. Building Construction (2025) - Mitigated

3.11. Paving (2025) - Unmitigated

3.12. Paving (2025) - Mitigated

3.13. Architectural Coating (2025) - Unmitigated

3.14. Architectural Coating (2025) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Pit River Burney
Construction Start Date	6/1/2024
Operational Year	2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	48.8
Location	40.874812208457655, -121.677974762308
County	Shasta
City	Unincorporated
Air District	Shasta County AQMD
Air Basin	Sacramento Valley
TAZ	159
EDFZ	3
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
------------------	------	------	-------------	-----------------------	------------------------	--------------------------------	------------	-------------

Government Office Building	16.0	1000sqft	0.37	16,000	1,000	—	—	—
Day-Care Center	13.7	1000sqft	0.31	13,700	1,000	—	—	—
Single Family Housing	36.0	Dwelling Unit	8.60	70,200	421,663	—	89.0	—
Government Office Building	54.8	1000sqft	1.26	54,800	999	—	—	—
City Park	4.00	Acre	4.00	0.00	4.00	4.00	—	—
Parking Lot	59.0	1000sqft	1.35	0.00	100	—	—	—
Other Non-Asphalt Surfaces	9.31	1000sqft	0.21	0.00	0.00	—	—	—
Other Asphalt Surfaces	75.0	1000sqft	1.72	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Transportation	T-14*	Provide Electric Vehicle Charging Infrastructure
Energy	E-2	Require Energy Efficient Appliances
Energy	E-12-A	Install Alternative Type of Water Heater in Place of Gas Storage Tank Heater in Residences
Water	W-4	Require Low-Flow Water Fixtures

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	142,155	47,385	126,750	42,250	8,598

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
------------	---------------------------------	---------------------------------	----------------------	-------------------------------	---------------------

Demolition	0.00	0.00	0.00	—	—
Site Preparation	0.00	0.00	15.0	0.00	—
Grading	0.00	0.00	90.0	0.00	—
Paving	0.00	0.00	0.00	0.00	3.69

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Government Office Building	0.00	0%
Day-Care Center	0.00	0%
Single Family Housing	0.40	0%
Government Office Building	0.00	0%
City Park	0.00	0%
Parking Lot	1.35	100%
Other Non-Asphalt Surfaces	0.21	0%
Other Asphalt Surfaces	1.72	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	204	0.03	< 0.005
2025	0.00	204	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Government Office Building	256	0.00	0.00	66,860	797	0.00	0.00	207,860
Day-Care Center	646	85.2	80.0	177,003	2,008	778	730	602,123

5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

8. User Changes to Default Data

Screen	Justification
Land Use	Site specific land uses and size
Construction: Construction Phases	adjusted to fit in 12 month anticipated construction timing. cut building construction in half so double equipment.
Construction: Off-Road Equipment	doubled building construction to reflect reduction in time to build.
Operations: Vehicle Data	Park handles annual and quarterly meetings with 400 and 250 people attending so annual vmt will be correct with these trips added. Adjusted building trip rate to be in line with small office building rate. Assumed office building and daycare will have 2/3 passby and 1/3 primary.
Operations: Solid Waste	matched rates in EA.

PAGE LEFT INTENTIONALLY BLANK

1 INTRODUCTION

The purpose of this Biological Assessment (BA) is to address the effects of the Pit River Tribe (Tribe) Burney Fee-To-Trust and Housing Project (Proposed Action) on species listed as endangered or threatened or candidate species under the federal Endangered Species Act (ESA). Seven parcels totaling approximately 65.25 acres (Project Site) is currently held in fee by the Tribe and is located within unincorporated Shasta County in the Town of Burney, California (**Figures 1 and 2**). The Tribe proposes to develop a portion of the Project Site with thirty-six houses for tribal members, a building to house Tribal Council Chambers/offices/meeting space, an outdoor meeting area, and three or four small non-residential complexes that would support both commercial and tribal office uses (Alternative A). The Project Site is contiguous to the Tribe's existing trust land.

1.1 Purpose and Need

The Proposed Action is the transfer of the Project Site into trust pursuant to the Secretary's authority under the Indian Reorganization Act, 25 USC § 5108. This purpose satisfies the Department of the Interior's (Department's) land acquisition policy articulated in the Department's trust land regulations at 25 CFR, Part 151. The purpose of the Proposed Action is to promote economic development, self-determination, and self-sufficiency of the Tribe, consistent with the BIA's "Self Determination" policy.

The Project Site is adjacent to facilities owned and operated by the Tribe, including the Pit River Casino, the Pit River Mini Mart, and Pit River Tribal Housing. Alternative A would provide the Tribe with additional housing, income derived from commercial development, and indirect economic benefits associated with providing secure housing options to the Tribe's members. Acquisition of the Project Site into federal trust and the subsequent development of Alternative A would allow the Tribe to meet the following goals:

- Restore a land base of the Tribe's ancestral territory in the state of California;
- Provide safe and sufficient housing and childcare to tribal members;
- Engage in diverse and self-sustaining economic development;
- Assist the Tribe in meeting long-term goals of increased tribal revenue, employment and managerial experience, and enhanced economic self-sufficiency;
- Facilitate tribal self-sufficiency, self-determination, and economic development;
- Allow the Tribe to exercise sovereign authority over land that it owns;
- Enhance the well-being of tribal citizens and strengthen the Tribe's ability to serve tribal citizens;
- Reduce the risk of wildfire by allowing the Tribe to properly manage the land for fire dangers;
- Protect potentially occurring cultural resources and existing natural resources within and immediately adjacent to the Project Site.

1.2 Proposed Project Components

Alternative A consists of the following: (1) transfer of the Project Site into federal trust for the benefit of the Tribe; and (2) construction of 36 residential housing units, Tribal administration buildings, and three small commercial complexes (**Figure 3**). Alternative A would shift civil regulatory jurisdiction of the Project Site to the

Tribe and federal government.

1.2.1 Buildings

The commercial development on Assessor's Parcel Number (APN)s 028-410-014, would front State Route (SR)-299 and Tamarack Avenue. Tribal Council chambers/ office/ meeting space, parking, and an outdoor gathering space on APN 028-410-016. Twenty-six of the residences would be built behind the commercial buildings on APN 028-410-015. Ten single-family Tribal member houses and/or tribal administration, such as daycare would be built on APN 028-450-033 (**Figure 3**). The building footprint of each house would range from approximately 1,800 square feet (sf) to 2,400 sf. The two-story Tribal Council Chambers/office/meeting space building would be 16,000 sf, and the commercial buildings would have an average footprint of 13,700 sf.

1.2.2 Access and Parking

Regional access to some of the residences and commercial buildings would be via SR-299 and Tamarack Avenue, which run in an approximately east-west direction to the north of the majority of the parcels. The ten residential parcels on APN 028-450-033 would be accessed via Bartell Street, a north-to-south trending roadway on the eastern edge of the Project Site. Internal dirt roads from these streets provide vehicular access to the interior of the Project Site. Land uses near the Project Site include residential areas, a church, a gas station, timberland, and the Pit River Casino. On-site parking is approximated to be 59,000 sf. Driveways would cover approximately 9,308 sf, and internal roads would be 24 feet wide.

1.2.3 Construction

Construction would involve earthwork, placement of concrete foundations, steel and wood structural framing, electrical and mechanical work, building finishing, and paving. Construction would also involve grading and excavation for building pads. Given the level topography of the Project Site, construction may be accomplished with balanced onsite cut and fill; however, structural-grade fill may be imported to meet engineering requirements for roadways and building pads. Structures would be erected in a manner consistent with the California building code standards in effect at the time of final design planning. Roads would be a minimum of 24 feet wide with a single lane in either direction.

1.2.4 Applicant Conservation Measures

The following measures are proposed by the Tribe to avoid or minimize impacts to federally listed or candidate species that may occur in the vicinity of the Action Area, described below in Section 1.3, Action Area.

1.2.4.1 Northern Spotted Owl Measures

- 1) Any necessary tree removal for construction will be restricted to October 1 through February 1, outside of the nesting season for northern spotted owl (*Strix occidentalis*) or protocol surveys will be conducted for northern spotted owl prior to tree removals.
- 2) Construction equipment will utilize existing public and private roads to the extent feasible during construction to minimize additional land disturbance.

- 3) In areas where field surveys identify the presence of suitable nesting habitat for northern spotted owl within the project work limits, the status of nesting activity would be determined through protocol-level surveys to determine the presence/absence of nesting northern spotted owls. If no active nests are identified, construction may proceed. If active nests are encountered during protocol surveys, USFWS will be consulted regarding incorporation of additional avoidance and minimization measures including establishment of nest avoidance buffers around active northern spotted owl nests.

1.2.4.2 Nesting Migratory Bird Measures

- 1) Should construction activities associated with the Proposed Action occur during the general nesting season (February 15 to September 15), a preconstruction nesting bird survey shall be conducted no more than 5 days prior to the start of ground disturbing activities including tree removals. Areas within 500 feet of construction shall be surveyed for active nests.

Should an active nest be identified, a nest avoidance buffer shall be established based on the needs of the species identified. Avoidance buffers may vary in size depending on habitat characteristics, project-related activities, and disturbance levels.

Construction fencing or flagging shall be applied along the outermost perimeter of the nest avoidance buffer. Avoidance buffers and construction fencing shall remain in place until the end of the general nesting season or upon determination that the nest has fledged or is otherwise determined to be inactive.

Should work activity cease for 7 days or greater during the breeding season, surveys shall be repeated to ensure birds have not established nests during inactivity.

If active nests are found within the Action Area, USFWS will be consulted regarding additional avoidance measures including potentially avoiding construction during the nesting season in suitable habitat.

- 2) All project related activities should comply with the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act to the greatest extent possible. Active nests (i.e., nests with eggs or chicks) are protected year-round. Project related activities requiring disturbance to, or removal of, an active nest or causing a breeding bird to leave the nest for prolonged lengths of time should not be implemented.
- 3) To the extent possible, work should be scheduled outside of the bird breeding/nesting season (February 15 – August 31) to avoid impacts to nesting birds.
- 4) If work must be scheduled during the bird breeding season, a qualified biologist should conduct a pre-construction nesting bird survey, to include a 500-ft buffer from the edge of the project area, to ensure that no active nests are present in the project vicinity.
 - a. If an active nest is located, the nest area should be flagged for avoidance, and a buffer zone delineated, flagged, or otherwise marked. Buffer distances can be determined by a Nesting Bird Management Plan (NBMP), approved by the USFWS, that considers species, terrain, habitat type, and activity levels.

-
- b. In the absence of an approved NBMP, the following buffer distances are recommended:
- i. Passerines: For non-ESA species, exclusionary buffers will be no less than 100 feet.
 - ii. Raptors (excluding eagles): No less than 500 feet.
 - iii. Federally listed birds: No less than 300 feet.

1.2.4.3 *Northwestern Pond Turtle Measures*

- 1) No less than 14 days prior to initiating ground-disturbing activities, a qualified biologist shall conduct preconstruction surveys in accordance with applicable regulations and guidelines for northwestern pond turtle (*Actinemys marmorata*). The biologist will ensure turtles are not present within the project work limits prior to the installation of exclusionary fencing/barrier (silt-fence).
- 2) The project work limits shall be delineated prior to installation of exclusionary fencing by a qualified biologist. No construction activities shall take place outside the delineated project work limits.
- 3) The project work limits shall be fenced off with exclusionary fencing to prevent northwestern pond turtle from moving into the construction area. This barrier will be constructed out of properly installed silt fencing or equivalent material to prevent the movement of northwestern pond turtle into the project work limits. The bottom of the fencing will be keyed into the ground to prevent wildlife from moving under the fencing.
- 4) If any northwestern pond turtles are found during pre-construction surveys, the biologist shall contact USFWS within 24 hours to initiate consultation, to determine whether relocation and/or additional exclusion buffers are appropriate. If the USFWS approves relocating the animal, then the approved, qualified biologist shall be given sufficient time to move the animal(s) from the project work limits before work construction can begin.
- 5) Any vegetation removed prior to the start of construction activities shall be placed away from sensitive species exclusion areas so that no cut vegetation remains once exclusionary fencing is installed. All nonnative, invasive vegetation removed shall be discarded offsite and away from aquatic resources to prevent reseeding.
- 6) If any northwestern pond turtle are observed in the project work limits during construction, work will immediately stop. The northwestern pond turtle will be allowed to move out of harm's way on its own accord, and USFWS will be contacted within 24 hours to initiate consultation on additional avoidance measures in conjunction with a qualified biologist.

1.2.4.4 *General Measures*

- 1) Before the project activities begin, all construction personnel shall attend a Worker Environmental Awareness Training session conducted by a qualified biologist. The session shall describe potentially occurring special-status species including northern spotted owl, northwestern pond turtle and their habitats, address the proper implementation of avoidance measures, and clarify the boundaries of the project work limits.
- 2) Federally-listed plants or wildlife should not be collected or harassed if encountered on site.

-
- 3) Any wildlife encountered during an activity, including construction, operation, and decommissioning should be allowed to leave the area of its own accord, unharmed.
 - 4) Trash will be disposed of daily in covered containers during construction to minimize the potential for construction activities to attract scavengers that could affect federally listed species that may occur within the Action Area.
 - 5) Feeding of wildlife and/or leaving of food or trash as an attractive nuisance to wildlife is prohibited. Particular attention should be paid to “micro-trash” (including such small items as screws, nuts, washers, nails, coins, rags, small electrical components, small pieces of plastic, glass or wire, and any debris or trash that is colorful or shiny).
 - 6) All trash and food items should be promptly contained within closed, wildlife-proof containers. These should be regularly removed from the Project Site to reduce the attractiveness of the area to ravens and other predators.
 - 7) The project proponent, its agents, or contractors should cover or fill all potential pitfalls to wildlife or cavities in which wildlife may become trapped when not attended. These include pits, trenches, vats, buckets, pipes, etc. Ramping should be provided in open trenches when necessary to provide escape routes for entrapped wildlife.
 - 8) The project proponent, its agents, or contractors should preserve existing native vegetation to the extent practicable. Precautions should be taken to avoid damage to native vegetation by people or equipment.
 - 9) To the extent practicable, material laydown yards, staging areas, and areas of surface disturbance associated with the project should be located in previously disturbed areas or in areas where habitat quality is poor. In addition, material laydown yards, staging areas, and areas of surface disturbance shall not be located within the buffers to Burney Creek, or within buffer from aquatic resources.
 - 10) To prevent the introduction of invasive plant species, project proponents, their agents, or contractors should ensure that all vehicles and equipment that have been used on sites outside of the project area are cleaned prior to entering the project work limits.
 - 11) When applicable, weed-free dirt, mulch, gravel, and other materials should be used.
 - 12) Domestic pets are discouraged on site. This does not apply to the use of domestic animals that may be used to aid in official and approved monitoring procedures/protocols, or service animals under Titles II and III of the Americans with Disabilities Act.

1.3 Action Area

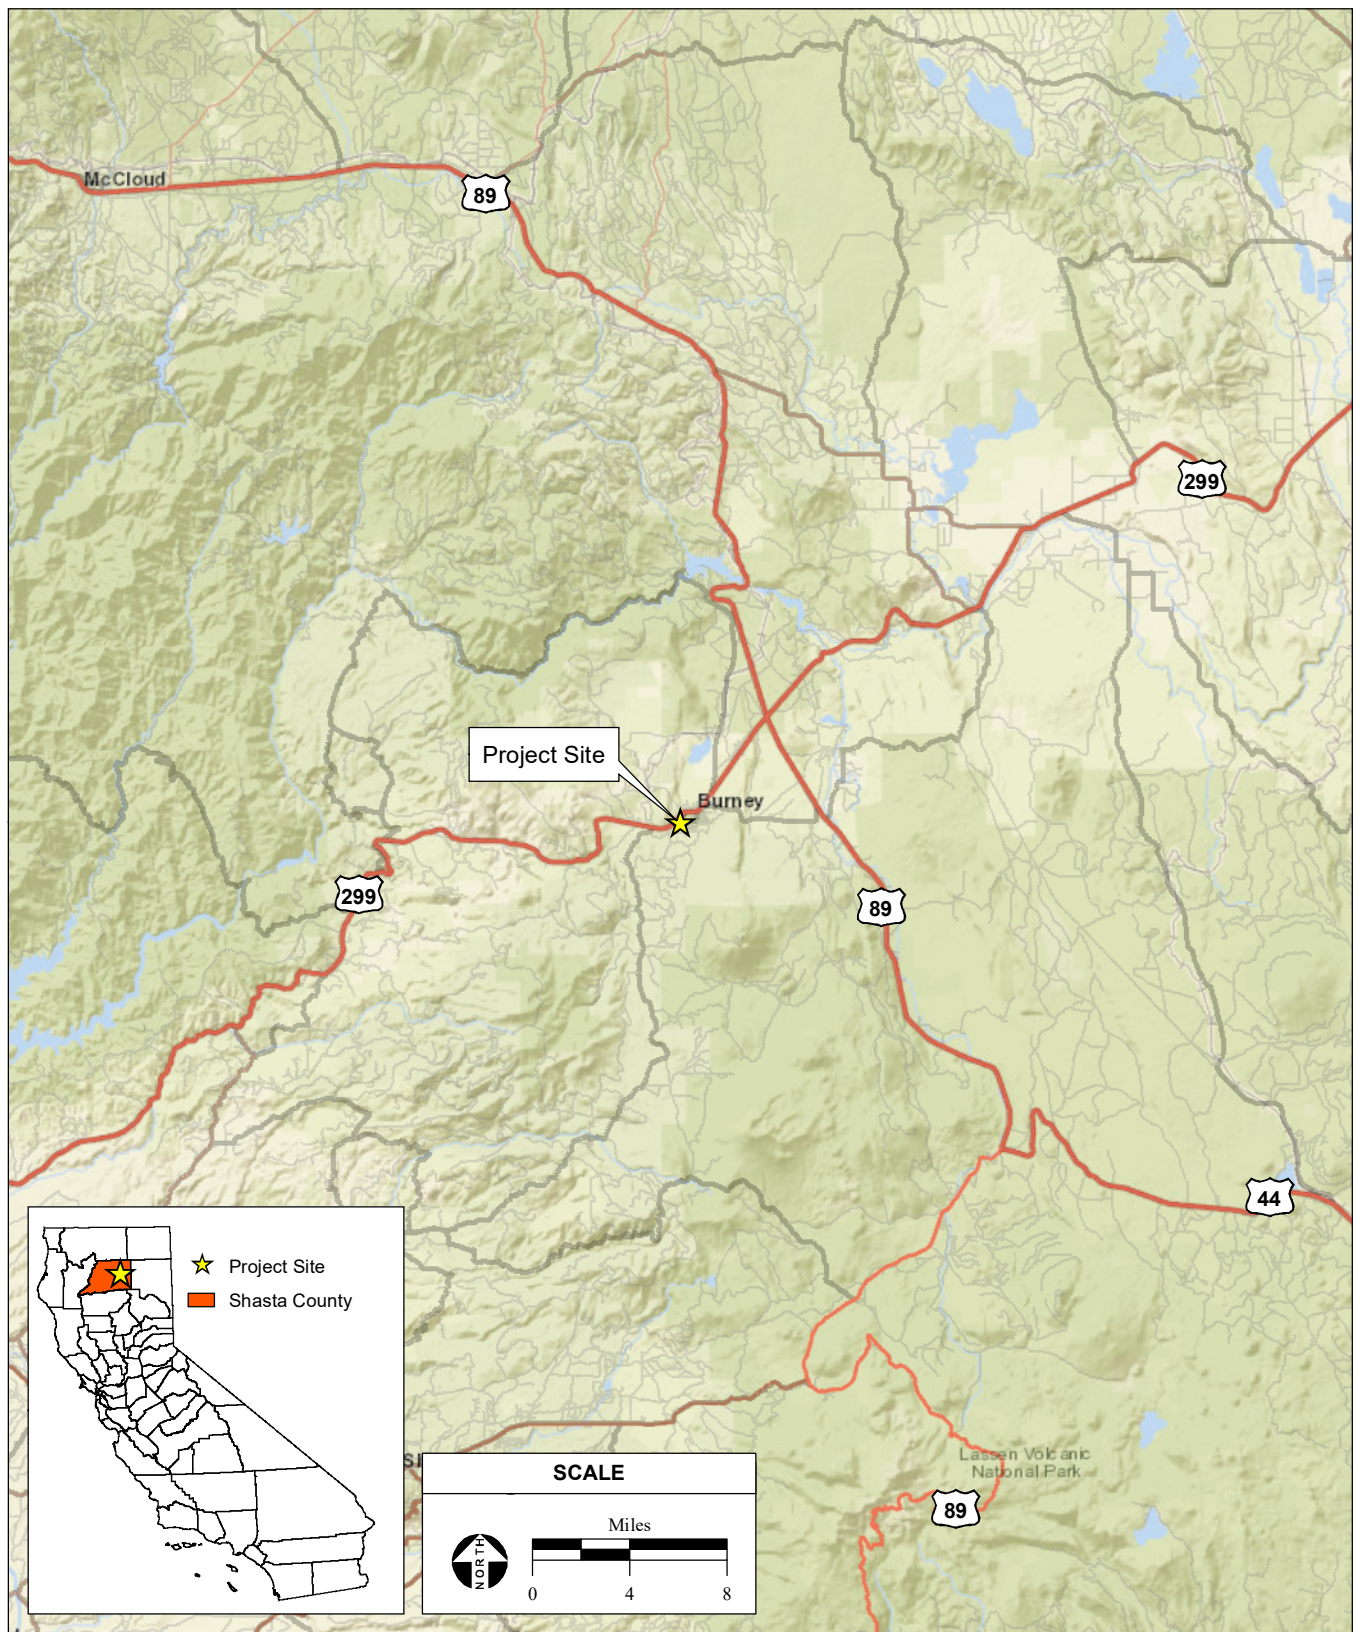

The Project Site consists of seven parcels (Assessor’s Parcel Numbers [APNs] 028-170-015, 028-410-014, 028-410-015, 028-410-016, 028-410-018, 028-410-025, and 028-450-033) located southeast of California State Route 299 (SR-299) and Tamarack Road, and west of Bartell Street in the Town of Burney, CA located within unincorporated Shasta County (Figure 2). The Action Area is within Section 19, Township 35 North, Range 3 East,

as depicted on the “Burney, CA” U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 3). The Action Area includes the 11.89-acre proposed project work limits and entire Project Site.

2 METHODOLOGY

The following information was reviewed in support of the analysis contained in this BA and to support site investigations:

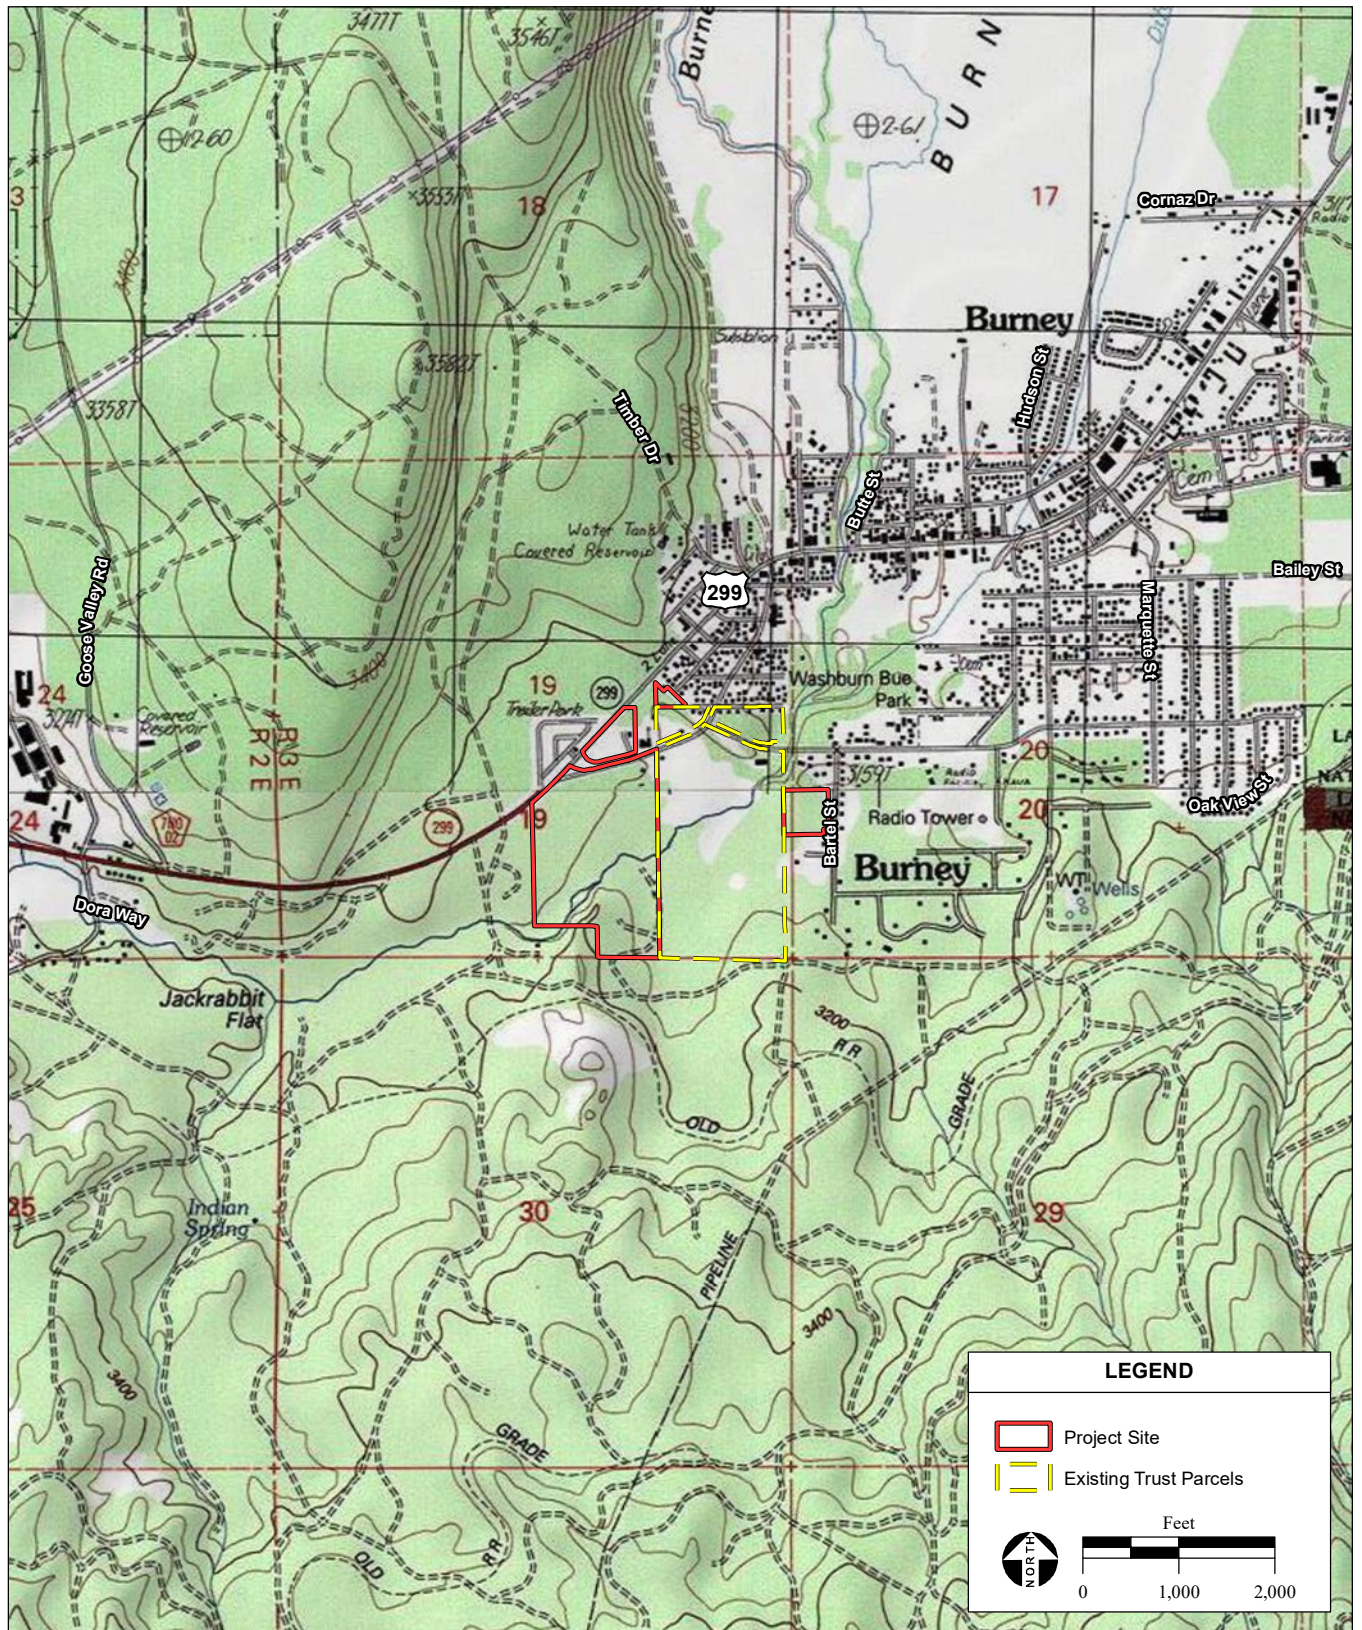

- United States Fish and Wildlife Service (USFWS) Official Species List, inquiry of federally species with the potential to occur within the Action Area last updated July 24, 2024 (USFWS 2024a; **Appendix A**);
- USFWS Critical Habitat Mapper (USFWS 2024b)
- USFWS National Wetlands Inventory (NWI) map of wetland features on the Action Area (USFWS 2023a; **Appendix A**);

SOURCE: ESRI, 2023; Montrose Environmental, 10/23/2023

Figure 3
Site Plan and Action Area

- California Native Plant Society (CNPS) query, last updated July 31, 2024, of special-status plant species (California Rare Plant Rank [CRPR]) known to occur on the Burney and Burney Mountain West USGS 7.5-minute topographic quads (CNPS 2024; **Appendix A**);
- California Natural Diversity Database (CNDDB) query, last updated October 23, 2024, of special-status plant and wildlife species known to occur on the Burney and Burney Mountain West USGS 7.5-minute topographic quads (CDFW 2024; **Appendix A**);
- National Marine Fisheries Service (NMFS) ESA Critical Habitat Mapper (NMFS 2024; **Appendix A**); and
- National Oceanic and Atmospheric Administration (NOAA) Essential Fish Habitat Mapper (NOAA 2024; **Appendix A**).

2.1 Biological Surveys

A biological resources survey was conducted in the Action Area on August 22 and August 23, 2022. Dominant vegetative communities were identified, surface waters were mapped, and the potential for special-status species to occur within the Action Area was evaluated. In addition to site visits, current and historical aerial imagery and topographic maps were reviewed. Surveys assessed habitat types, federally listed species, suitable habitat for federally listed species, and wetlands and waters of the U.S. Species and habitat types were classified using the *Guidelines for Assessing the Effects of Proposed Projects on Rare, Threatened, and Endangered Plants and Natural Communities* (CDFW 2018), *Botanical Survey Guidelines of the California Native Plant Society* (CNPS 2001), *Guidelines for Conducting and Reporting Botanical Inventories for Federally Listed, Proposed, and Candidate Plants* (USWS 2000), and *The Jepson eFlora* (Jepson Flora Project 2024).

2.2 Analysis

An analysis to determine federally listed or candidate species that may have the potential to occur within the Action Area was conducted. Habitat requirements for each species were assessed and compared to the type and quality of habitats observed in the Action Area during surveys. Species with no potential to occur within the Action Area were ruled out of further analysis based on lack of suitable habitat, elevation range, substrate/soils, and/or geographic distribution.

3 ENVIRONMENTAL SETTING

3.1 Topography, Climate, and Soil Types

The Action Area is located within the southwestern portion of Shasta County within the City of Burney. The Action Area has a Mediterranean climate with warm, dry summers and relatively mild winters. The mean annual temperature range near the City of Burney, CA is approximately 43° to 89° Fahrenheit (F). The average annual precipitation is approximately 28.4 inches, with a maximum of approximately 5 inches occurring during the month of December. Soils within the Action Area include Burney-Arkright complex, 2 to 9 percent slopes, Jimmerson loam-Jimmerson stony sandy loam complex, 2 to 15 percent slopes, and Matquaw gravelly sandy loam, 0 to 5 percent slopes (NRCS 2022). The Burney-Arkright complex and the Jimmerson loam-Jimmerson

stony sandy loam complex are not considered hydric. The Matquaw gravelly sandy loam series is considered hydric.

3.2 Habitat Types Within Action Area

A habitat map is provided in **Figure 3**. The Project Site is comprised of mixed conifer forest, shrub and grassland habitats, ruderal/developed, riparian, and riverine habitats.

Aquatic habitat on the Project Site includes a portion of Burney Creek, as well as two ephemeral drainages, which are tributaries to Burney Creek (**Figure 4**).

3.2.1 Mixed Conifer Forest

The majority of the site is comprised of mixed conifer forest. This habitat covers approximately 56.8 acres (89 percent) of the parcels within the Action Area and consists of mixed-age stands dominated by Ponderosa pine (*Pinus ponderosa*) and Douglas fir (*Pseudotsuga menziesii*) with a contingent of true fir (*Abies* sp.) and California black oak (*Quercus kelloggii*). An understory consisting of mahala mat (*Ceanothus prostratus*) and sapling forms of canopy tree species grows beneath the canopy. A large burn scar is located within this habitat type and along Burney Creek. Additionally, two berms exist within mixed conifer forest property characterized by raised earth with prior disturbance presumably from logging or other earthmoving. Approximately 10.90 acres of mixed conifer forest would be impacted by the Proposed Action.

3.2.2 Shrub and Grassland

Shrub and grassland habitats occur interspersed within the Action Area in areas of open canopy. This habitat covers approximately 3.0 acres (4.6 percent) of the parcels and is comprised of bare earth and native and non-native grass with shrub species, including rye (*Secale* sp.), purple false-brome (*Brachypodium distachyon*), manzanita (*Arctostaphylos* sp.), creeping snowberry (*Gaultheria hispidula*), yellow star-thistle (*Centaurea solstitialis*), and silver sagebrush (*Artemisia cana*). Approximately 0.70 acre of shrub and grassland would be impacted by the Proposed Action.

3.2.3 Ruderal/Developed

Developed areas include existing buildings and their associated compacted dirt roads and lots. These comprise approximately 2.9 acres (4.5 percent) of the parcels within the Action Area. Approximately 0.29 acre of ruderal/developed areas would be impacted by the Proposed Action.

3.2.4 Riparian

Riparian habitat covering approximately 1.4 acres (2.2 percent) of the Action Area is found in a corridor along Burney Creek, and is composed of thickly growing Oregon ash (*Fraxinus latifolia*) and California greenbrier (*Smilax californica*). This community would not be impacted by the Proposed Action.

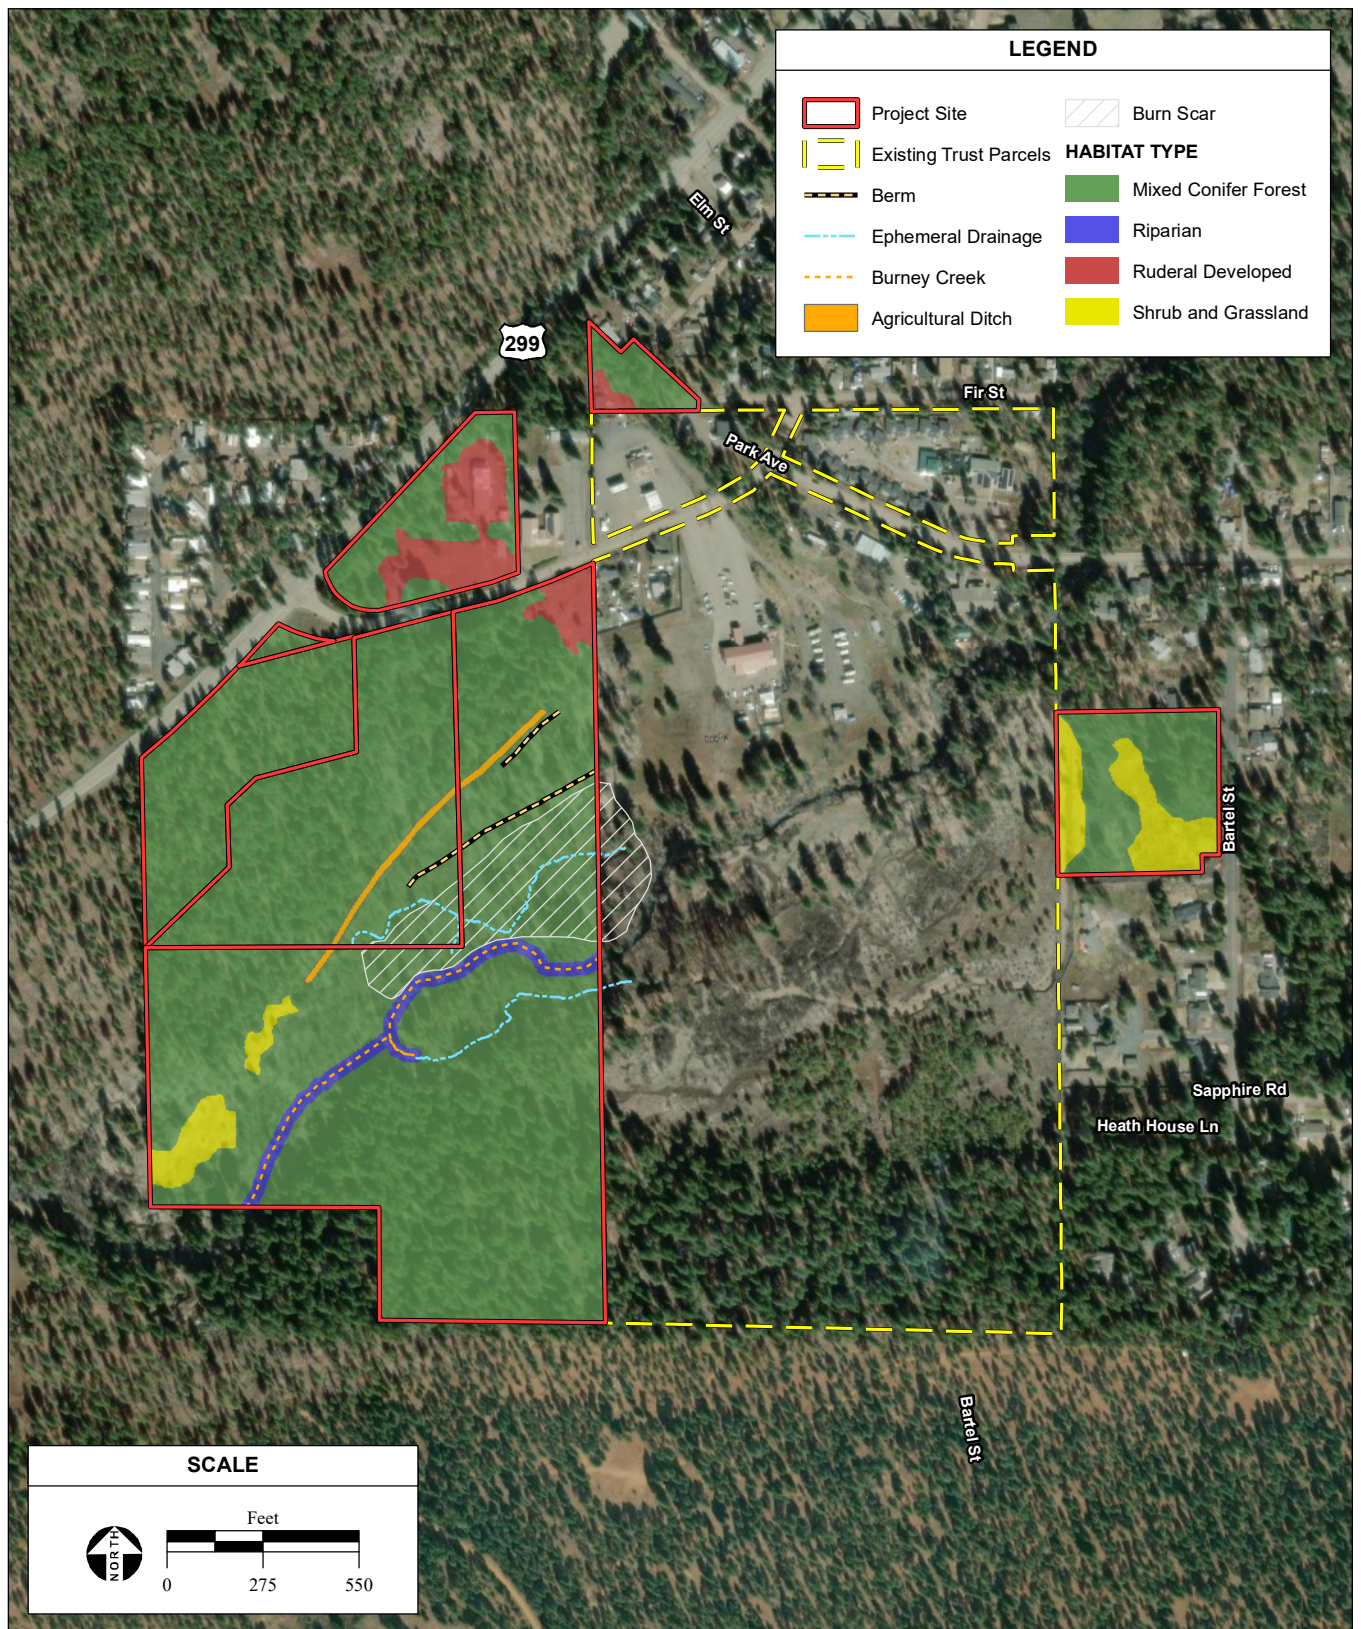

3.2.5 Riverine (Burney Creek)

Burney Creek bisects the Action Area, and is bordered by mixed conifer forest to the north and south. Burney Creek also supports riparian habitat along its banks as described above. Burney Creek will not be impacted by the Proposed Action.

3.3 Aquatic Resources

Aquatic habitat within the Action Area is limited to Burney Creek and two associated ephemeral drainages as well as an active agricultural ditch. Approximately 1,535 linear feet of Burney Creek and 1,896 linear feet of ephemeral drainages occur within the Action Area. The course of these features and Burney Creek is shown on Figure 4. The ephemeral drainages originate outside the Project Site within existing trust land and flow on-site into Burney Creek. It may be possible for Burney Creek to backflow into these drainages in flood conditions per observation of the topography.

The agricultural ditch runs along the northern bank of Burney Creek and takes water upstream of the Action Area and eventually connects to Burney Creek downstream of the Action Area. All aquatic features are avoided by the Proposed Action.

ESRI, 2023; Montrose Environmental, 10/23/2023

Pit River Tribe Burney Fee-to-Trust and Housing BA / 222518 ■

Figure 4
Vegetation Communities

3.4 Critical Habitat and Essential Fish Habitat

There is no USFWS designated critical habitat within the Action Area (USFWS 2024a; USFWS 2024b). Burney Creek does not contain NMFS designated critical habitat (NMFS 2024). No designated essential fish habitat (EFH) within the Action Area (NOAA 2024). Therefore, designated critical habitat and essential fish habitat will not be affected by the Proposed Action.

3.5 Federally Listed and Candidate Species

3.5.1 USFWS IPaC Query

A query of the Service's IPaC database was conducted on July 24, 2024 for the Proposed Action (see Appendix A). The query determined that one federally listed plant species slender Orcutt grass (*Orcuttia tenuis*) and four federally listed or candidate wildlife species; northern spotted owl (*Strix occidentalis caurina*), Monarch butterfly (*Danaus plexippus*), Conservancy fairy shrimp (*Branchinecta conservatio*), and Shasta crayfish (*Pacifastacus fortis*) could potentially occur in the region of the Action Area. It should be noted that northwestern pond turtle (*Emys [Actinemys] marmorata*) was recently classified as a candidate for listing under the ESA. Three species were determined to not have a potential to occur within the Action Area based on lack of suitable habitat or other reasoning as outlined below. Species that were ruled out from potentially occurring within the Action Area will not be discussed further in this BA.

3.5.2 Species Considered but Not Addressed Further

3.5.2.1 Slender Orcutt Grass

Listing Status, Distribution, and Habitat Requirements

Slender Orcutt grass was federally listed as threatened in March of 1997. This species is known from scattered localities in Lake, Lassen, Modoc, Butte, Plumas, Sacramento, Shasta, and Tehama Counties. The highest percentage of known occurrences is in northern Tehama County. Slender Orcutt grass is typically found in vernal pool complexes derived from volcanic soils (USFWS 2005).

Reasoning for Dismissal

The Action Area does not contain suitable vernal pool habitat for this species. Further, aquatic environments within the Action Area will be avoided by the Proposed Action. Therefore, this species is not expected to occur within the Action Area and will not be affected by the Proposed Action. There is no designated critical habitat for this species within the Action Area. Therefore, the Proposed Action will have no effect on slender Orcutt grass or designated critical habitat for this species, and this species is not addressed further in this BA.

3.5.2.2 *Conservancy Fairy Shrimp*

Listing Status, Distribution, and Habitat Requirements

Conservancy fairy shrimp was listed as endangered in September of 1994. This species is known to occur in vernal pools and other seasonal wetlands within the Vina Plains within Butte and Tehama Counties, at a single location in western Placer County, within the Jepson Prairie Preserve in Solano County, in the Yolo Bypass Area of Yolo County, within the Sacramento National Wildlife Refuge, and in isolated populations within the San Joaquin Valley south to Los Padres National Forest. This species is endemic to vernal pools. Typical vernal pools that this species utilize include relatively large and turbid pools with a longer than average hydroperiod (USFWS 2012).

Reasoning for Dismissal

The Action Area does not contain suitable vernal pool habitat for this species. In addition, aquatic environments within the Action Area will be avoided by the Proposed Action. Therefore, this species is not expected to occur within the Action Area and will not be affected by the Proposed Action. There is no designated critical habitat for this species within the Action Area. Therefore, the Proposed Action will have no effect on Conservancy fairy shrimp or designated critical habitat for this species, and this species is not addressed further in this BA.

3.5.2.3 *Shasta Crayfish*

Listing Status, Distribution, and Habitat Requirements

Shasta crayfish was listed as endangered in September of 1988. Shasta crayfish are restricted to Shasta County in streams and ponds with volcanic rock base within the Pit River watershed including tributaries of Hat Creek and Fall River. This species has declined significantly due to spread of the non-native signal crayfish, disease, water pollution, and habitat loss and is now considered critically endangered.

Reasoning for Dismissal

Known occurrences of Shasta crayfish are limited to the Hat Creek and Pit River watersheds. There are no known occurrences of the species within the Burney Creek watershed, and the species was considered extirpated within Burney Creek by the USFWS prior to the listing of the species in 1988 (USFWS 2023b). In addition, Burney Creek and associated drainages will not be impacted by the Proposed Action. Critical habitat has not been designated for this species (USFWS 2024a). Therefore, the Proposed Action will have no effect on Shasta crayfish or designated critical habitat for this species, and this species is not addressed further in this BA.

4 EFFECTS OF THE ACTION

Impacts to biological communities as a result of the Proposed Action are shown on Figure 5. As shown in the figure, impacts include 10.90 acres of impact to mixed conifer forest, 0.70 acre of impact to shrub and grassland habitats within open areas of forest canopy, and 0.29 acre of impacts to ruderal/developed areas. No impacts

will occur to Burney Creek, its associated ephemeral drainages, or associated riparian habitats. An existing agricultural ditch running along the north bank of Burney Creek will also be avoided by the Proposed Action.

4.1 Critical Habitat & Essential Fish Habitat

No USFWS designated critical habitat is present within the Action Area (USFWS 2024a, 2024b). Additionally, no NMFS/NOAA designated critical habitat or EFH within the Action Area (NMFS 2024; NOAA 2024). Therefore, designated critical habitat and essential fish habitat will not be affected by the Proposed Action.

SOURCE: Vivid Maxar aerial photography, 3/16/2022; ESRI, 2023; Montrose Environmental, 10/23/2023

Figure 5
Vegetation Community Impacts

4.2 Impacts on Federally Listed and Candidate Species

No suitable habitat for federally listed plant species occurs within the Action Area (see discussion in Section 3.5.2.1). One federally listed wildlife species (northern spotted owl) and two candidate species (Monarch butterfly and northwestern pond turtle) have the potential to occur within the Action Area. The potential effects on these species from the Proposed Action are discussed below.

4.2.1 Northern Spotted Owl

4.2.1.1 *Status and Life History*

Northern spotted owl is listed as threatened under the ESA (USFWS 2024a). Northern spotted owls generally rely on old growth forest habitats for nesting, roosting, foraging, and dispersal. Old-growth forests contain a multi-layered, multi-species canopy dominated by large overstory trees with moderate to high canopy closure. Older forests also have a high incidence of trees containing large cavities and other types of deformities; numerous large snags; an abundance of large, dead wood on the ground; and open space within and below the upper canopy for owls to fly (Thomas et al. 1990). Generally, northern spotted owls do not select intermediate or younger-aged stands (Solis and Gutierrez 1990). Foraging habitat ranges from complex structure to forests with lower canopy closure and smaller trees (Solis and Gutierrez 1990).

4.2.1.2 *Occurrence in the Action Area*

There are no documented occurrences of northern spotted owl within the Action Area and this species was not observed during site reconnaissance visits (CDFW 2024). The nearest documented occurrence of this species to the Action Area is from 1990 and is approximately 5.5 miles northwest of the Action Area within a designated timber harvest area. The Action Area contains marginally suitable habitat for this species within the mixed conifer vegetation community. The stands of mixed conifer within the Action Area are relatively young and therefore, do not present primary old growth habitat for this species. However, given the documented occurrences in the vicinity of the Action Area and the marginally suitable habitat present, there is some potential for this species to occur within the Action Area.

4.2.1.3 *Critical Habitat*

There is no designated critical habitat for this species within the Action Area. The nearest designated critical habitat is approximately 7.5 miles northwest of the Action Area.

4.2.1.4 *Effects Analysis*

No northern spotted owls were observed within the Action Area during field surveys and there are no documented occurrences of northern spotted owl within the Action Area. However, the Action Area contains marginally suitable habitat for northern spotted owl especially for foraging where younger forest stands can be utilized. While the majority of forested habitat within the Action Area will not be directly impacted by the Proposed Action, impacts to northern spotted owl could occur if it were present during construction activities including tree removal within mixed conifer habitat. Construction activities such as tree removal could result in

direct impacts to active nests and breeding pairs or nest abandonment could occur associated with increased human presence, noise, or lighting during construction activities. Construction activities could also result in disruptions to foraging behaviors or avoidance of suitable foraging habitat.

Indirect impacts to northern spotted owls could occur from long-term increased lighting, noise, and human presence within the Action Area associated with long-term occupation of housing units and commercial buildings. The increased human presence may make remaining forest areas less suitable for use by spotted owls in the future because of this increased level of human activity.

The applicant has proposed avoidance measures to avoid or reduce impacts to northern spotted owls that may occur within the Action Area during construction. Proposed conservation measures for northern spotted owls outlined in Section 1.2.4.1 will require protocol level surveys during the owl's nesting season. If active nesting is determined, additional measures may be developed in consultation with USFWS.

As outlined in the proposed conservation measures in Section 1.2.4.1, if construction activities occur within the northern spotted owl nesting season, protocol level surveys will be conducted to determine suitable habitat and presence/absence of nesting owls. If active nesting is documented, the USFWS will be consulted in developing and incorporating appropriate avoidance and minimization measures. Compliance with the applicant proposed conservation measures in Section 1.2.4.1, activities associated with the Proposed Project **may affect but are not likely to adversely affect** northern spotted owl and its suitable habitats within the Action Area.

4.2.2 Northwestern Pond Turtle

4.2.2.1 *Status and Life History*

Northwestern pond turtle and southwestern pond turtle species (collectively referred to as western pond turtle) were proposed for listing by the USFWS in October of 2023. The northwestern pond turtle subspecies is known to occur within Washington, Oregon, Nevada, and northern and central California and is the species that could potentially occur within the Action Area. Pond turtle individuals are found within perennial ponds, lakes, streams, or permanent pools within seasonal streams. Pond turtles typically require basking sites of submerged logs, mats of vegetation or mud banks (Jennings and Hayes 1994). Nests can be constructed in suitable upland areas up to several hundred meters from aquatic habitat; the average distance is 28 meters (92 feet) from aquatic habitat (Rathbun et al. 2002). Eggs are laid in sandy to clay soils (Nussbaum et. al. 1983). Pond turtles overwinter in both aquatic and terrestrial habitats. Terrestrial overwintering habitat consists of: (1) burrows in leaf litter or soil, and (2) upland refuges that are an average of 50 meters (164 feet) from the aquatic habitats (Rathbun et al. 2002).

4.2.2.2 *Occurrence in the Action Area*

No northwestern pond turtles were observed within the Action Area during site surveys and there are no documented occurrences for the species within the Action Area. The nearest documented occurrence of the species is approximately 7 miles northeast of the Action Area (CDFW 2024). Burney Creek does contain suitable

aquatic habitat for this species and adjacent upland areas could potentially support nesting habitat for this species. Suitable nesting habitat exists within the upland areas; however, there is no known suitable perennial aquatic habitat within dispersal range. Therefore, this species has some potential to occur within the Action Area.

4.2.2.3 Critical Habitat

Northwestern pond turtle is a newly designated candidate for federal listing and therefore, no critical habitat has been designated for the species.

4.2.2.4 Effects Analysis

No northwestern pond turtles were observed within the Action Area during field surveys and there are no documented occurrences of northwestern pond turtles within the Action Area. However, the Action Area contains suitable habitat for northwestern pond turtle within portions of Burney Creek and its associated drainages. Northwestern pond turtle could also potentially utilize upland areas adjacent to Burney Creek for egg laying. While Burney Creek will not be directly impacted by the Proposed Action, impacts to northwestern pond turtle could occur if it were present during construction activities. Construction activities such as vegetation removal and grading could result in direct impacts to northwestern pond turtle individuals or eggs present in upland areas during construction. Increased human presence, noise, or lighting during construction could also result in northwestern pond turtles avoiding suitable habitat within the Action Area.

Indirect impacts to northwestern pond turtles could occur from long-term increased lighting, noise, and human presence within the Action Area associated with long-term occupation of housing units and commercial buildings. The increased human presence may make remaining habitat areas along Burney Creek less suitable for use by northwestern pond turtle in the future because of this increased level of human activity.

The applicant has proposed avoidance measures to avoid or reduce impacts to northwestern pond turtle that may occur within the project work limits during construction. The conservation measures proposed for western pond turtle would reduce potential impacts to western pond turtle from the proposed project; a pre-construction survey shall be conducted using the most current USFWS approved methodology and exclusionary fencing shall be installed around the construction area. With compliance with the applicant proposed conservation measures outlined in Section 1.2.4, construction activities associated with the Proposed Project **may affect but are not likely to adversely affect** northwestern pond turtle and its suitable habitats within the Action Area.

4.2.3 Monarch Butterfly

4.2.3.1 Status and Life History

The Monarch butterfly was designated as a candidate species for potential listing under the ESA in December of 2020. The Monarch can occur throughout North America, and Central and South America, Australia, New Zealand, as well as Pacific and Caribbean Islands where suitable habitat conditions exist (USFWS 2020). There

are two designated North American populations. The eastern population includes individuals east of the Rocky Mountains and the western population includes individuals occurring west of the Rocky Mountains. The western population generally overwinters in coastal California and Baja California. The eastern population overwinters in the southeastern U.S. and northern Mexico (USFWS 2020). Western populations typically overwinter in groves of blue gum eucalyptus (*Eucalyptus globulus*), Monterey pine (*Pinus radiata*), and Monterey cypress (*Hesperocyparis macrocarpa*) (USFWS 2020).

Monarchs require milkweed plants (*Asclepias* sp.) for oviposition and feeding of butterfly larvae. Nectar and milkweed sources are often found associated with riparian corridors in the western U.S. (USFWS 2020).

4.2.3.2 Occurrence in the Action Area

No Monarch butterflies were observed within the Action Area during site surveys and there are no documented occurrences for the species within the Action Area. The nearest documented occurrence of the species is approximately 5.5 miles east of the Action Area near the community of Cassel (CDFW 2024). The Action Area is generally forested and does not contain suitable nectaring or breeding habitat. There is a riparian corridor associated with Burney Creek within the Action Area that could provide movement opportunities for the species during migration periods. This riparian corridor will be avoided by the Proposed Action. Therefore, this species is only expected to potentially use the Action Area as a movement corridor.

4.2.3.3 Critical Habitat

This species is a candidate species and no critical habitat has been designated.

4.2.3.4 Effects Analysis

Monarch butterflies are not expected to utilize the Action Area for nectaring or breeding due to lack of suitable habitat. Forested areas and developed areas without milkweeds or suitable nectaring plant species are not suitable habitats for this species. The open shrublands within the Action Area were not observed to contain suitable nectar plants or milkweed species and therefore, would not be expected to be utilized by this species. Given the lack of suitable habitat within the Action Area, it is expected that Monarch butterflies would generally not utilize the Action Area with the possible exception of moving through the Action Area during migration periods especially along Burney Creek which will not be impacted by the Proposed Action. The Proposed Action would not be expected to affect Monarch movements after construction of the Proposed Action as the riparian corridor along Burney Creek will not be impacted. Therefore, the Proposed Action is expected to have **no effect** on Monarch butterflies.

4.3 Cumulative Effects

Cumulative effects are those effects that may occur from future federal, private, or tribal actions that are reasonably certain to occur within the Action Area. Upon completion of the Proposed Action, regular maintenance of infrastructure associated with the Proposed Action as well as maintenance of housing units and

commercial buildings will occur. This is not expected to result in additional impacts to habitats identified in this BA and will generally occur within newly developed areas with minimal habitat value for federally listed species. Therefore, the Proposed Action is not expected to result in additional cumulative effects beyond those analyzed above.

4.4 Interrelated and Interdependent Effects

Interrelated projects are those that are part of a larger action and depend on the larger action for their justification. Interdependent effects are those that have no independent utility separated from the Proposed Action. The fee-to-trust conversion is interrelated to the construction of tribal housing and commercial areas. However, the fee-to-trust portion of the project is discussed in this document, and effects to federally listed species and their habitats are limited to the construction portion of the Proposed Action. No additional interrelated or interdependent construction activities or infrastructure improvements are associated with the Proposed Action. Therefore, the Proposed Action does not have interrelated or interdependent effects beyond those discussed in this BA.

5 CONCLUSIONS

Construction activities associated with the Proposed Project will have **no effect** on designated critical habitat and essential fish habitat as there is no designated critical habitat or essential fish habitat for federally listed species within the Action Area. The Action Area is generally not expected to support Monarch butterfly with the exception of potentially providing a movement corridor during migration periods. Migration of monarch butterflies is not expected to be affected by the Proposed Action as the primary movement corridor along Burney Creek will be avoided by the Proposed Action. Therefore, the Proposed Action will have **no effect** on Monarch butterfly. With compliance with the conservation measures outlined in this BA, construction activities associated with the Proposed Project **may affect but are not likely to adversely affect** northern spotted owl, and western pond turtle.

Project Code: 2024-0121227

Project Name: Pitt River Tribe Fee-To-Trust Housing/Tribal Council/Chambers/Offices/Meeting Space Project

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf>

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts, see <https://www.fws.gov/program/migratory-bird-permit/what-we-do>.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures, see <https://www.fws.gov/library/collections/threats-birds>.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit <https://www.fws.gov/partner/council-conservation-migratory-birds>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of

this letter with any request for consultation or correspondence about your project that you submit to our office.

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

PROJECT SUMMARY

Project Code: 2024-0121227

Project Name: Pitt River Tribe Fee-To-Trust Housing/Tribal Council/Chambers/Offices/
Meeting Space Project

Project Type: Residential Construction

Project Description: fee-to-trust development

Project Location:

The approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/@40.87401185,-121.67518206697864,14z>

Counties: Shasta County, California

ENDANGERED SPECIES ACT SPECIES

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

EFH Mapper Report

EFH Data Notice

Essential Fish Habitat (EFH) is defined by textual descriptions contained in the fishery management plans developed by the regional fishery management councils. In most cases mapping data can not fully represent the complexity of the habitats that make up EFH. This report should be used for general interest queries only and should not be interpreted as a definitive evaluation of EFH at this location. A location-specific evaluation of EFH for any official purposes must be performed by a regional expert. Please refer to the following links for the appropriate regional resources.

[West Coast Regional Office](#)

Query Results

Degrees, Minutes, Seconds: Latitude = 40° 53' 11" N, Longitude = 122° 21' 29" W
Decimal Degrees: Latitude = 40.886, Longitude = -121.642

The query location intersects with spatial data representing EFH and/or HAPCs for the following species/management units.

EFH

No additional Essential Fish Habitats (EFH) were identified at the report location.

Pacific Salmon EFH

No Pacific Salmon Essential Fish Habitat (EFH) were identified at the report location.

Atlantic Salmon

No Atlantic Salmon were identified at the report location.

HAPCs

No Habitat Areas of Particular Concern (HAPC) were identified at the report location.

EFH Areas Protected from Fishing

No EFH Areas Protected from Fishing (EFHA) were identified at the report location.

Spatial data does not currently exist for all the managed species in this area. The following is a list of species or management units for which there is no spatial data.

EXECUTIVE SUMMARY

PHASE I ENVIRONMENTAL SITE ASSESSMENT

PIT RIVER TRIBE: BURNEY FEE-TO-TRUST

This Phase I Environmental Site Assessment (ESA) assesses potential hazardous materials issues on seven parcels comprising approximately 65.25 acres of land in Shasta County, California (Subject Property). This Phase I ESA has been prepared on behalf of the Pit River Tribe (Tribe) and in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard Practice E 1527-21 and Bureau of Indian Affairs (BIA) Guidelines (602 DM Chapter 2). Any exceptions to or deletions from this practice are described in **Section 1.0**. The Phase I ESA includes database searches, a field survey, and interviews.

Current Use of Subject Property

The Tribe uses one parcel for a maintenance and storage building. The remaining parcels are mostly vacant.

Site Features of Concern

The Subject Property contains copious amounts of debris scattered throughout, as well as a stained transformer, paint and other cans, abandoned cars, homeless living areas, a possibly contaminated dirt pile, buckets, appliances, and furniture. The dirt pile may comprise a Recognized Environmental Concern (REC), however if it contains hazardous materials, they likely constitute a *de minimis* condition as defined by ASTM E1527-21 and therefore qualify as an issue that generally does not present a threat to human health or the environment, and would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The debris can be removed as necessary, however the results obtained by testing the dirt pile for contamination may guide appropriate disposal methods.

Limiting Conditions and Data Gaps

The Subject Property is unmapped in the Sanborn Library; thus, no records were available for review.

Activity and Use Limitations

A review of “activity and use limitations” was not within the scope of this ESA but may be obtained through a title search.

Findings

Based on information gathered during preparation of this ESA, no RECs, Historic RECs, or Controlled RECs were identified in connection with the Subject Property.

Recommendations

Dumping is more dispersed in the southern portion of the Subject Property, where because of the distance from formal roadways there appears to be less occupation by homeless people. It is also where a considerable number of larger objects has been left, including car frames and appliances. It is recommended that an organized program of cleanup begin removing this debris, using trailers or large

dumpsters. The locations marked on **Figure 5** are approximate; each, particularly in the southern half of the Subject Property, is a central point, and the people removing the debris should be sure to examine the general area while there, as there likely is more within view than just at the GPS location. Because the Subject Property is unfenced and easily accessible from local roadways, there is always the potential for additional dumping, but a thorough cleaning of the areas not inhabited by homeless people should be performed. Areas near a homeless population are most likely going to need a regular schedule of periodic cleanup.

The following actions are recommended for the Subject Property:

- Try and determine the origin of the large soil pile on APN 028-410-018-000; if from scraping the parcel, or if the origin cannot be determined, submit samples to an accredited testing laboratory, and implement additional steps (i.e., soil sampling, remediation) as needed depending on results.
- If the tests come back with unacceptably high levels of hazardous materials, retain a qualified contractor to remove and dispose of at a qualified facility.
- Remove the temporary buildings and railroad car from APN 028-410-018-000 with all the attendant debris.
- Remove all debris, tires, lumber, vehicles, furniture, cans, drums, wire, fencing, glass, plastic, appliances, etc. and dispose of at an appropriate facility.
- Report the rusted transformer to PG&E, as it may contain PCBs.

SECTION 1.0

INTRODUCTION

1.1 PURPOSE

The Pit River Indian Tribe (Tribe) owns 65.25 acres of land on seven individual parcels (Subject Property) located adjacent to the Pit River Casino in Burney, Shasta County, California. The Tribe anticipates that the site may be used for residential housing as a continuation of the Montgomery Creek Rancheria Housing Project.

The term REC refers to the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with relevant laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Additionally, the term Historical Recognized Environmental Conditions (HREC) refers to environmental conditions associated with the Subject Property, including a past release of any hazardous substance or petroleum product that has since been remediated, which would have been considered a REC in the past. This ESA also includes the analysis of the presence of Controlled Recognized Environmental Conditions (CREC) for hazardous substance releases that have been partially addressed through remediation, but where some contamination remains in place under certain risk-based restrictions or conditions. An analysis of HRECs and CRECs is included in this ESA (ASTM, 2021). In addition, a “Tier 1 (non-intrusive) Vapor Encroachment Screening (VES)” was completed in accordance with the methodology set forth in ASTM E2600-15 “Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions”. The purpose of the Tier 1 VES is to conduct an initial screen to identify, to the extent feasible, a potential vapor encroachment concern (VEC) in connection with the Property with respect to chemicals of concern that may migrate as vapors into existing or planned structures on the Property due to contaminated soil and or groundwater on the Property or within close proximity to the Property.

1.2 SCOPE OF SERVICES

This Phase I ESA was completed in conformance with the Bureau of Indian Affairs (BIA) Guidelines (602 DM Chapter 2) and the American Society for Testing and Materials (ASTM) Standard Practice E 1527-21. The Phase I ESA includes the Subject Property and surrounding known sources of contamination up to a 1.0-mile radius from the Subject Property. The scope of work performed includes:

1. Review of relevant database listings of hazardous material sites, waste generators, and underground storage tanks (UST),
2. Review of historical topographic maps and aerial photographs of the Subject Property,
3. Interviews with owners, operators, occupants, and/or local government officials.
4. Site reconnaissance of the Subject Property.

Physical testing of soil or groundwater is not within the scope of this Phase I ESA. Neither testing for

asbestos-containing building materials nor lead-based paint surveys are included as part of this assessment. Per- and Polyfluoroalkyl Substances (PFAS) are not considered as part of this assessment.

1.3 LIMITATIONS AND EXCEPTIONS

No Phase I ESA can completely eliminate uncertainty regarding the potential for RECs in connection with a property. Conformance of this assessment to ASTM Standard Practice E 1527-21 will reduce, but not eliminate uncertainty regarding the potential for RECs in connection with the Subject Property.

While every effort has been made to discover and interpret available historical and current information on the Subject Property within the time available, the possibility of undiscovered contamination remains. This report is a best effort collection and interpretation of available information consistent with industry standards for the completion of Phase I ESAs.

1.4 METHODOLOGY

The following data sources were included in this Phase I ESA:

- Previous land uses and the history of the area, which were researched in an effort to identify RECs, HRECs, and CRECs at or near the Subject Property
- Historical aerial photographs (**Appendix A**) and historic topographic maps (**Appendix B**) from different decades, which were examined for the presence of aboveground storage tanks (AST), industrial buildings, gas station canopies and/or pump islands, as well as other indications of bulk hazardous material storage
- Sanborn Fire Insurance Maps, which document historical property use through abbreviations and map symbols that identify commercial, residential, industrial, and other land uses; because of the rural location, the Subject Property is not included on Sanborn maps (**Appendix C**)
- The City Directory Image Report, which may also indicate previous land uses of the Subject Property (**Appendix D**)

Database Searches

A database search was conducted utilizing the online search company that provides a Radius Map Report of the results of an Environmental Database Report (EDR) as well as California state databases maintained by the Department of Water Resources (DWR) and Department of Toxic Substances Control (DTSC). The Radius Map Report (**Appendix E**) provides graphical and tabulated results of the EDR search that includes records of known storage tank sites and known sites of hazardous materials generation, storage, and/or release compiled by federal, state, and local agencies. These compiled records consist of: (a) known or potentially hazardous waste sites and landfills; (b) sites currently under investigation for environmental violations; (c) sites that manufacture, generate, use, store, and/or dispose of hazardous materials or hazardous wastes; (d) sites that have USTs and/or ASTs; and (e) sites with recorded violations of regulations concerning USTs and hazardous materials/hazardous wastes. The database search is intended to identify facilities that may have the potential to impact surface and subsurface conditions on the Subject Property.

Site Reconnaissance

A site reconnaissance inspection was conducted on July 27-28, 2022, to visually examine the Subject Property for obvious physical indications of improper hazardous substance or petroleum product disposal, such as stained soil or asphalt, stressed vegetation, sumps, partially buried drums, bulk USTs and ASTs for

fuel, and other obvious signs of hazardous materials involvement.

Questionnaires

A user/owner questionnaire was completed by Russell Eleck, Lands Coordinator for the Pit River Tribe on October 3, 2023, and Shasta County responded to an inquiry on July 14, 2022.

1.5 DEVIATIONS AND DATA GAPS

ASTM Standard E 1527-21 requires any significant data gaps, deviations, and deletions from the ASTM Standard to be identified and addressed in the Phase I ESA. A significant data gap would be one that affected the ability to identify a REC on the Subject Property or adjacent properties.

Due to the location of the Subject Property, Sanborn Fire Insurance Maps were not available (**Appendix C**). However, historical aerial photographs (**Appendix A**) and historic topographic maps (**Appendix B**) were available for review of past uses of the Subject Property. Therefore, the lack of Sanborn Fire Insurance Maps is not considered a significant data gap for this Phase I ESA.

The Shasta County Department of Environmental Health responded to an email inquiry on July 14, 2022 reporting that they had no information regarding hazardous materials incidents on the Project Site. No adjacent property owner could be reached, however, the EDR report, field survey, and Mr. Eleck's information are sufficient to inform this Phase I ESA and the lack of an adjacent property owner questionnaire is not considered a significant data gap for this Phase I ESA.

SECTION 2.0

SITE DESCRIPTION AND RECONNAISSANCE

2.1 LOCATION AND LEGAL DESCRIPTION

The Subject Property includes seven individual parcels of land contiguous to existing trust properties in Burney, California. The Subject Property is located approximately 50 miles northeast of Redding, California (**Figures 1 and 2**); the Subject Property parcels (**Table 1**) are located south of/below Highway 299 and are bisected by Tamarack Avenue (**Figure 3**). Most lie west of the Pit River Casino though one lies to the north and one to the east within Sections 19 and 20, Township 35 North, Range 3 East as depicted on the Burney, CA and Burney Mountain West, CA USGS 7.5-minute topographic quadrangles.

TABLE 1: SUMMARY OF ASSESSOR'S PARCEL NUMBERS (APN)

APN	Acreage	Name
028-170-015-000	1.1	Housing Property
028-410-014-000	6.09	
028-410-015-000	11.44	
028-410-016-000	37.46	Gensaw Property
028-410-018-000	4.0	Impact Resources
028-410-025-000	0.22	Casino Sign
028-450-033-000	4.94	
Total	65.25	

2.2 SITE AND VICINITY GENERAL CHARACTERISTICS

The Subject Property is located west of the town of Burney and south of State Route 299; the seven parcels of land lie east and west of the Pit River Casino. The Subject Property includes a gently rolling ground surface within the Burney Valley and is located at approximately 3,165 feet above mean sea level (**Figure 3**). Surrounding land uses include of timber harvesting, rural residential, small commercial/industrial, the Pit River Casino, and vacant land.

2.3 CURRENT USES OF THE SUBJECT PROPERTY

The area has been historically used for agriculture, residential, or as vacant land.

2.4 CURRENT USES OF ADJOINING PROPERTIES

The current adjoining property uses include:

North: Undeveloped rural, rural residential

South: Undeveloped rural, rural residential

East: The Pit River Casino is east of most of the Subject Property parcels, rural residential

West: Pit River Casino, undeveloped rural, rural residential

2.5 HISTORIC USES OF THE SUBJECT PROPERTY

Aerial Photographs

Aerial photographs (**Appendix A**) were reviewed for information regarding historic and current uses within and in the vicinity of the Subject Property.

The following aerial photographs were available for review at a scale of 1" = 500': 1939, 1952, 1973, 1975, 1981, 1993, 1998, 2005, 2009, 2012, and 2016. Aerial photographs were of varying clarity. From the first available aerial in 1937, the Subject Property and surrounding land uses appear to be undeveloped, wooded open space with Highway 299 visible to the northwest, what would become Tamarack Road cutting through the Subject Property, and Burney Creek can be seen crossing the Subject Property. In 1973, development is visible east of APN 028-410-018-000, at the location of what is now the Grace Community Bible Church and a vineyard is visible immediately south of APN 028-450-033-000. In 1981, there is an additional building northeast of the church, a residence has been added to the vineyard, and Tamarack Road has been paved. There is what appears to be a field road crossing the bulk of the Subject Property parallel to, and north of, Burney Creek and a north-south trending road on the western edge of APN 028-450-033-000. There is a metal industrial building located on APN 028-410-018-000 in 1998, and the Pit River Casino appears adjacent to the Subject Property. There are no other significant changes over time.

Historic Topographic maps

United States Geological Survey (USGS) topographic maps (**Appendix B**) were reviewed for information regarding historic and current uses within and in the vicinity of the Subject Property. The 1935 and 1939 Burney 30' maps, 1957 Burney 15' map, 1990, 1995, 2012, 2015, and 2018 7.5' Burney, and Burney Mountain West maps were available for review.

From the first available topographic map in 1935, the Subject Property and surrounding land uses appear to be undeveloped open space, however Highway 299 is visible, Tamarack Road is present as a dirt track with housing immediately east of the Subject Property, and the town of Burney is well-established. There are no apparent changes on the 1939 map, but clear signs of the town's expansion, a lumber mill west of the Subject Property, and a railroad grade south of the Subject Property are visible in 1957. Starting in 1990, dirt roads are visible in the southern portion of the Subject Property, as well as a possible residence in APN 028-410-018-000. No other significant changes appear on the remaining topographic maps.

Sanborn Fire Insurance Maps

The Subject Property is unmapped by Sanborn Fire Insurance Maps (**Appendix C**).

The City Directory Image Report

The City Directory may also indicate previous land uses of the cross street of the Subject Property (**Appendix D**). Images are unavailable prior to 1992. The only listings are adjacent to the Subject Property, and include the Impact Resources Shop in 2005.

2.6 PHYSICAL FEATURES

Hydrology and Geology

The Proposed Project area lies within the Cascade Range geomorphic province, which is a chain of volcanic cones extending from Washington, through Oregon, and into California. The Cascade Range is dominated

by Mt. Shasta and terminates at Lassen Peak, and is transected by deep canyons of the Pit River. Drainage on the Subject Property trends to the east-northeast.

The Subject Property is located near the southern end of the Burney Valley. The rock stratigraphic unit of the Subject Property is of the Cenozoic era, Quaternary system, and Quaternary volcanic rocks series (**Appendix E**). The dominant soils within the Subject Property are Jimmerson loam, Matquaw gravelly sandy loam, and Arkright gravelly loam. These range from well drained to poorly drained soils with moderate to slow infiltration rates (EDR, 2022). At least a dozen faults occur within the vicinity of the Subject Property (CGS, 2015). The closest fault is located approximately 0.5 miles from the northern boundary of the Subject Property. This fault is classified as quaternary and active within the last 1.6 million years (CGS, 2015), which indicates that it is potentially active.

Floodplain Map

The Federal Emergency Management Agency (FEMA) designates flood risk areas based on a parcel's location with respect to 100-year and 500-year floodplains. A 100-year flood is the flood elevation that has a 1 percent chance of being equaled or exceeded each year and a 500-year flood is the flood elevation that has a 0.2 percent chance of being equaled or exceeded each year. FEMA prepares Flood Insurance Rate Maps (FIRM) that show the flood risk designations of lands throughout the United States.

Part of the Subject Property is located in Flood Zone AE, which is identified by FEMA as an area subject to inundation by a 1-percent-annual-chance-flood event, other portions of the Subject Property are Zone X, with a 0.2% annual chance flood event. The western edge of APN 028-450-033-000 is part of a Regulatory Floodway; the remainder of APN 028-450-033-000 has elements of Zone AE and Zone X. There is also a strip of Zone AE-mapped land along Burney Creek where it crosses the Subject Property.

A "Regulatory Floodway" means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height. Communities must regulate development in these floodways to ensure that there are no increases in flood elevations. For streams and other watercourses where FEMA has provided Base Flood Elevations (BFEs), but no floodway has been designated, the community must review floodplain development on a case-by-case basis to ensure that increases in water surface elevations beyond a certain amount do not occur, or identify the need to adopt a floodway if adequate information is available. A copy of the regional floodplain map is included in **Appendix F**.

National Wetlands Inventory Mapper

The southern portion of the Subject Property, north of Burney Creek, is mapped as a combination of Freshwater Emergent Wetland and Freshwater Forested/Shrub Wetland (USFWS, 2022, **Appendix G**).

Roadways

Access to the Subject Property is limited due to the rural nature of the area. Regional access to the Subject Property is provided by State Route 299, which borders the northern edge of the Subject Property. Internally, Tamarack Avenue borders other Subject Property parcels. Bartel Street borders APN 028-450-033-000, the only parcel not located immediately adjacent to any of the other Subject Property parcels.

Aerial Photograph

2.7 SITE RECONNAISSANCE OBSERVATIONS

The objective of the site reconnaissance was to identify current or historic hazardous materials involvement or signature environmental conditions on the Subject Property to substantiate or build upon research demonstrating past uses of the Subject Property. Hazardous materials involvement or signature environmental conditions include the presence or likely presence of any hazardous materials or petroleum products that indicate an existing release, past release, or a threat of release into structures, soil, or groundwater on the Subject Property. Signs of hazardous materials could include ASTs or USTs; on-site wastewater treatment systems; monitoring wells; stained soils and/or unusual odors; indications of any excavation or removal of soils; patched asphalt; large debris piles; or other obvious signs of hazardous materials involvement.

The site reconnaissance was performed by Charlane Gross on July 27-28, 2022. Survey methods included walking transects across the Subject Property parcels, canvassing the perimeter, taking photographs, and documenting items observed via GPS. Site photographs and survey finds are included in **Figures 4** and **5**, respectively. In addition, AES consulted with Gregory Feather Wolfen, Tribal Environmental Director and Tribal Monitor Bill George. The reconnaissance clearly showed a long-standing pattern of dumping on various areas within the Subject Property. Finds included vehicles and vehicle parts, appliances, lumber, a large propane tank, numerous tires, furniture, a port-a-john, paint cans, food containers from the 1950s through the present day, plastic, clothing, metal, garbage, trailer skids, a cattle guard, etc. Individual areas called out on **Figure 5** generally represent a wide-spread scatter of debris, with a single point taken near the center.

028-170-015-000

This is the location of the maintenance building for the Pit River Casino and other Tribal properties. There is a cut and fill driveway entering the property from Fir Street, then a fairly open landscape where vehicles, machinery, and tools are stored. There are two small shipping containers to the side which could not be accessed. Outside, there were fencing materials, tires, 5-gallon buckets being used to contain parts, pallets, piping, and a 55-gallon fuel drum. Inside, there were tools and equipment, paint, oil, cleaning products, 2-gallon gas cans, 5-gallon containers of oil, hydraulic fluid and paint thinner, pump sprayers, and vehicle batteries, all properly stored.

028-410-014-000

This parcel parallels State Route 299, where an ongoing program of tree thinning has left fresh stumps and burn piles. Piles of garbage as well as casual littering were observed.

028-410-015-000

There is a modern trash scatter focused in the northern-most part of the parcel, continuing from the parcel to the west. There is also a more wide-spread scatter of debris piles throughout the southern half of the parcel as indicated on Figure 5. In general, debris was predominantly located along dirt roads, or paths crossing the parcel where vehicle access was available. Finds included recent garbage, abandoned cars and car parts, lumber and appliances. An irrigation ditch crosses the southeastern corner of the parcel.

028-410-016-000

This parcel includes wooded grasslands crossed by a number of dirt roads, as well as the irrigation ditch and Burney Creek. There is a wide range of dumped debris and garbage. Relatively modern garbage exists in an almost continuous scatter at the northern end of APN 028-410-016-000, along the edge of State

Route 299 and where there were former residences, though most of the debris is recent. A group of power poles are located in the northeastern corner where a residence formerly stood. One transformer there, on Tamarack Avenue, is rusted on the outside. There are also two concrete foundations near the northwestern corner of the parcel, both of which are approximately 30 years old, representing small residential structures that were abandoned when the Tribe purchased the property. A nearby 55-gallon drum was empty and may have been used for burning. There is also a 1950s to 1960s can dump that included a collection of cans, bedsprings, glass fragments, and a discarded washing machine and dryer. Other finds scattered around the parcel include furniture, additional appliances, fencing, tires, lumber, a large propane tank, recent garbage, a motor, and a port-a-john tipped on its side.

028-410-018-000

This is a former Forest Service property which has been scraped mostly to bare earth; there is a large pile (approximately 15 feet in diameter and 6 feet high) of scraped-up soil near the center. Gregory Feather Wolfen, Tribal Environmental Director, told AES that the parcel had been used by the Forest Service and that vehicles had been maintained there, with resulting fuel and hydraulic fluid spills. He was unsure about any cleanup of the spills, but thought that they may have been scraped up and left or buried. The sizeable dirt pile on this parcel therefore has the potential to contain hazardous materials. This dirt pile may represent a REC. Other finds include tires, culvert pipes, plastic, muffler pipes, an empty 5-gallon motor oil bucket, and a cattle guard.

There are also temporary buildings and a railroad car being used by the homeless. These structures contain mattresses, food containers, insulation, lumber, clothing, and garbage in and around the structures.

028-410-025-000

This is a small, grassy parcel at the intersection of State Route 299 and Tamarack Avenue. The Pit River Casino sign and a pad-mounted transformer are the only things on the parcel.

028-450-033-000

This parcel was alternately covered in thick trees and brush or high grasses, except in those areas closest to Bartel Street on the eastern edge of the parcel, along a dirt road which tracked east to west through the approximate center of the site, and along the northern edge of the parcel. There is a small fill pile located in the northwest corner. It is overgrown and measured approximately 5 feet wide by 2 feet tall. There were no indications of its origin, and no apparent evidence of associated contamination. There was also a stack of trailer skids in the southwest corner, a modern debris scatter, and a small pile of concrete dumped near the western edge.

There are water lines and transmission lines along Tamarack Avenue and Bartel Street. No evidence of septic systems or wells were noted, but it seems likely that they once did exist in proximity to the former residence locations, but these may have been capped or removed.

Buildings/Structures

Two temporary buildings on wooden supports are located on APN 028-410-018-000. They are in disrepair and contain debris from use by homeless people.

Undocumented fill

There is the large pile of scraped-up soil on APN 028-410-018-000 and the smaller fill pile located on APN

028-450-033-000.

Agricultural uses

No clear agricultural use has been documented on the Subject Property. Site observations are summarized in **Table 2**.

TABLE 2: SUMMARY OF SITE OBSERVATIONS

Site Setting	Observations
Current Uses of Property	Undeveloped rural.
Past Uses of Property	There were residences lining State Route 299 and in the southwestern portion of the Subject Property, the rest is undeveloped rural.
Current Uses of Adjoining Property	North: Undeveloped rural, rural residential
	South: Undeveloped rural, rural residential
	East: The Pit River Casino is east of most of the Subject Property parcels, rural residential
	West: Pit River Casino, undeveloped rural, rural residential
Current or Past Uses in the Surrounding Area	The area has been historically used for agriculture, residential, or vacant.
Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions	The Subject Property is a relatively level landscape; surface water flows to the east-northeast. Underlying geology is volcanic.
General Description of Structures	Two temporary buildings and a collapsing wooden rail car are the only structures.
Undocumented Fill	A large pile on APN 028-410-018-000 may be from scraping the former Forest Service parcel, and could contain contaminants. A smaller pile on APN 028-450-033-000 has no clear origin or contamination.
Roads	Regional access to the property is provided by State Route 299, local access by Tamarack Avenue and Bartel Street.
Potable Water Supply	No wells were observed. Fire hydrants were observed on Tamarack Ave. and Bartel St.
Sewage Disposal System	No septic systems were observed.
Waste Removal Services	Burney Disposal provides waste removal for the developed Subject Property parcels.
Possible Hazardous Substances and Petroleum Products in Connection with Identified Uses	A 55-gallon fuel drum was observed at the maintenance yard; petroleum products were stored in and around the maintenance building on APN 028-170-015-000.
Storage Tanks and Associated Piping	No storage tanks were observed.
Odors	No odors were identified.
Pools of Liquid	No pools of liquid were observed.
Drums (5 gal to 55 gal containers should be described)	An empty 55-gallon drum in APN 028-410-016-000, an empty 5-gallon bucket of engine oil in APN 028-410-018-000, a 5-gallon bucket of dried paint on APN 028-170-015-000, and an empty 5-gallon metal can in the Burney Creek channel in APN 028-410-016-000 were observed.
Potential Hazardous Substances and Petroleum Products Containers	Petroleum products were observed in and around the maintenance yard, paint cans were observed as part of the debris piles throughout the Subject Property.
Unidentified Substance Containers	Numerous unidentified metal containers were observed throughout the Subject Property.
Polychlorinated Biphenyls (PCB)	There was a pad-mounted transformer on in APN 028-410-025-000, pole-mounted transformers in good condition along Bartel Street and Tamarack Avenue, and a

Site Setting	Observations
	rusted pole-mounted transformer in the northwest corner of APN 028-410-016-000.
Pits, Ponds, or Lagoons	No pits, ponds or lagoons were observed.
Stained Soil or Pavement	No stained soils were observed.
Stressed Vegetation	No stressed vegetation was observed.
Solid Waste	Debris observed on the Subject Property included metal, wood, tires, furniture, concrete, wiring, clothing, plastic, abandoned vehicles and associated parts, discarded appliances, paint cans, a propane tank, a couch, a port-a-john, and a large amount of recent garbage.
Waste Water	No wastewater discharge or standing pools were observed.
Wells	No wells were observed on the Subject Property.
Septic System	There were likely septic systems associated with various residences on the Subject Property but none were observed.

2.8 SITE PHOTOGRAPHS

Figure 4 provides photographs that show the site conditions of the Subject Property at the time of the site visit.

- APN 028-170-015-000 Maintenance Building with Equipment (**Figure 4a**, Photo 1)
- APN 028-170-015-000 Fuel Drum (**Figure 4a**, Photo 2)

Figure 5
Survey Finds

SECTION 3.0

INTERVIEWS AND USER-PROVIDED INFORMATION

3.1 LOCAL ENVIRONMENTAL RECORDS SOURCES

Local Environmental Agency

The EDR radius map report (**Appendix E**), the State of California's State Water Resources Control Board (SWRCB) GeoTracker database, and the DTSC EnviroStor database provided search and documentation of local hazardous materials data.

Department of Planning and Zoning

Land use and zoning designations of the Subject Property were reviewed through information provided by the County. The Subject Property has multiple land use designations, including commercial for parcels 028-170-015-000, 028-410-014-000, 028-410-018-000, and 028-410-025-000, one-family residential for 028-410-015-000 and that portion of 028-410-016-000 north of Burney Creek, Open Space along the Burney Creek corridor, Timberland for that portion of 028-410-016-000 south of Burney Creek, and one-family residential for 028-450-033-000 (Shasta County, 2022).

Electrical Utility and Natural Gas Companies

Pacific Gas and Electric (PG&E) provides gas and electrical utilities in the vicinity of the Subject Property (California Energy Commission, 2022). Overhead power lines are located along the east side of APN 028-450-033-000, along Tamarack Avenue, and a pad-mounted transformer is located on APN 028-410-025-000. Gas transmission pipelines are located south of the Subject Property (NPMS, 2022).

3.2 INTERVIEWS AND QUESTIONNAIRES

Standard land owner and government official questionnaires were distributed and are included in **Appendix H**.

Owner/User Questionnaire and Owner Provided Information

The Owner/User questionnaire was completed by Russell Eleck, Lands Coordinator for the Pit River Tribe on October 3, 2023. In his responses, Mr. Eleck indicated he does not have specific knowledge of hazardous materials or conditions on the Subject Property.

Title Records

No title company or professional was engaged by the client to review recorded land title records and lien records. Likewise, documentation regarding property valuation was not provided nor reviewed.

Known/Reasonably Ascertainable Information and Actual Knowledge of the User

The Owner/User Questionnaire asks if the owner is aware of "commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases of hazardous materials." Mr. Eleck checked the "no" box.

Environmental Liens, Activity and Use Limitations, and Valuation Reductions

On the Owner/User Questionnaire, Mr. Eleck indicated that he was not aware of any environmental liens or activity and use limitations.

Degree of Obviousness

Mr. Eleck confirmed that based on his knowledge and experience related to the property, there are no obvious indicators that point to the presence or likely presence of hazardous materials products or petroleum product releases at the Subject Property.

Specialized Knowledge

Question 3 of the Owner/User Questionnaire states that Mr. Eleck does have specialized knowledge of the Subject Property and adjoining property.

Adjacent Property Owner and Agency Interviews

An inquiry was sent to the Shasta County Environmental Health Department which replied that, because they are tribal lands, parcels 028-170-015, 028-410-014, 028-410-025, and 028-450-033 are not regulated by the County and that they had no records of incidents on the remaining parcels.

SECTION 4.0

RECORDS REVIEW

4.1 DATABASE SEARCH

Database searches were conducted for records of known storage tank sites and known sites of hazardous materials generation, storage, and/or contamination within 1.0 mile from the boundary of the Subject Property. The environmental database review was accomplished by using the services of a computerized search firm, EDR. EDR uses a geographic information system to plot locations of past or current hazardous materials involvement. The EDR Report (EDR, 2022) was reviewed to determine if the Subject Property and adjacent sites are listed on regulatory agency databases. Although a site may be listed within a regulatory agency database, the listed site may not currently be contaminated or affect the environmental quality of the Subject Property and therefore may not be considered a REC. The regulatory agency database search is only as accurate as the data and date the data was entered into the regulatory agency-maintained database. If not reported to the appropriate regulatory agency, installation of USTs or hazardous materials releases would not be listed on the regulatory agency databases that were searched for this Phase I ESA.

The purpose of the database search is to determine if the Subject Property or adjacent sites contain RECs that would impact surface and/or subsurface conditions on the Subject Property. The EDR database report includes list of known and “unmapped” or orphan sites. The complete list of reviewed databases is provided in the EDR Report, included in **Appendix E**, and is summarized in **Table 3**. The DWR GeoTracker and DTSC EnviroStor databases were also examined; Geotracker reported the Mt. Burney Elementary School, Beacon #630, Kwick Mart Burney, Shasta County Sheriff’s Office, Taylor Property, George Greer residence, and Bernards LUST cleanup sites, all of which are within 1 mile of the Subject Property and all of which have been closed. No sites were reported on the EnviroStor database.

TABLE 3: EDR SUMMARY OF AGENCY DATABASES

Regulatory Agency Database	Min. Search Distance	Property Listed	Sites Listed
SEMS-ARCHIVE	0.50 mile	No	1
Leaking Underground Storage Tanks (LUST)	0.50 mile	No	6
Aboveground Storage Tanks (UST)	0.25 mile	No	1
INDIAN UST	0.25 mile	No	1
CA State Water Resources Control Board (SWRCB) Underground Storage Tank Division Registered UST List (SWEEPS UST)	0.25 mile	No	1
HIST UST	0.25 mile	No	1
USEPA RCRA Non-Generators (NonGen) / No Longer Regulated (NLR)	0.25 mile	No	2
CA Cortese Hazardous Waste and Substances List (Cortese)	0.50 mile	No	5
HIST CORTESE	0.50 mile	No	4
TOTAL			22
Notes: TP = Target Property Sites may be listed in more than one database Source: EDR, 2022 (Appendix E)			

4.2 RECORDED HAZARDOUS MATERIALS

Subject Property

Fletcher Forest Products, Inc., located at 20202 Tamarack Avenue, is within the Subject Property. It is on the SWEEPS UST because of an underground diesel fuel storage tank, in use since August 1990. No violations have been reported. This site is not a REC for the Subject Property. There are no other hazardous materials listings within the Subject Property. Based on the results of an EDR ASTM E2600-15 Tier I VES, a VEC does not exist for the Property.

Adjacent Properties

The 28 remaining database listings are located on 17 sites within a one-mile radius of the Subject Property. However, a site listed on a regulatory agency database does not necessarily mean a hazardous materials release occurred at the listed site; most of the sites listed in **Table 2** fall into this category and are listed merely because they are required to work under regulatory oversight, or have had minor violations which did not result in the release of a hazardous material to the environment and which have been corrected. The remaining four sites are discussed below.

Pit River Mini Mart – 20258 Tamarack Avenue

Located approximately 223 feet northeast of and downgradient from the Subject Property, this site is on the INDIAN UST database because it is an underground gasoline storage tank on Indian Land installed in November 2011. This site is not a REC for the Subject Property.

Pit River Health Service, Inc – 36977 Park Avenue

This site is approximately 310 feet east-northeast and upgradient from the Subject Property. It is listed on the RCRA NonGen/NLR as a potential generator, but this site does not generate waste and is not a REC for the Subject Property.

Kwik Mart Burney – 37047 Main Street

Located approximately 1,154 feet north-northeast of and upgradient from the Subject Property, this closed site is listed on the UST, LUST, Cortese, HAZNET, HWTS, and HIST CORTESE databases. Leaking gasoline from an underground storage tank was reported in 1990 when the tank was closed. The case was opened in 1994, soils were removed for remediation, and soil analysis revealed elevated concentrations of petroleum hydrocarbons including diesel fuel. Subsequent investigations, including installation of groundwater monitoring wells demonstrated that pollution remaining at the site did not pose a threat to the environment and a No Further Action Required letter was issued in 1998. Pollutant concentrations were examined again in 2014 and found to be the same as in 1998 and the case has been closed. This site is not a REC for the Subject Property.

Mitch Quistgard – 20017 Bartel Street

This site is approximately 1,231 feet east-southeast and downgradient from the Subject Property. It is listed on the RCRA NonGen/NLR as waste handler, but this site does not generate waste and is not a REC for the Subject Property.

Fast Gas/Beacon SS #630 – 1667 Main Street

Located approximately 1,290 feet north-northeast of and upgradient from the Subject Property, this is a historic UST where three underground tanks were installed in 1972 and stored 10,000 gallons of gasoline.

The site is listed on the UST, LUST, Cortese, and HIST CORTESE databases. It was reported that gasoline leaked into the soil in January 1994. The leak was stopped immediately, the soil cleaned up, and the case was closed in July 1994. This site is not a REC for the Subject Property.

Mt Burney Elementary School – 20375 Tamarack Road

Located approximately 1,420 feet northeast and downgradient from the Subject Property, this site is listed on LUST, Cortese, HIST CORTESE, NPDES and CIWQS databases. A leak of heating oil was reported in 1991; the leak was stopped and the contaminated soil removed. The case was closed in 1993 and the site is not a REC for the Subject Property.

Taylor Property – Highway 299E

Located approximately 1,477 feet north-northeast of and downgradient from the Subject Property, this is a LUST reported in September 1998; it was discovered during the closure of the tank and stopped as soon as discovered. Because of the potential for leaked gasoline to enter the aquifer, groundwater well monitoring occurred from 2002 to 2007. A closure summary report was prepared in 2008, and the case was closed in 2009. This site is not a REC for the Subject Property.

Bernards – 37087 Main Street

This site is listed on the LUST and Cortese site; it is located 1,504 feet north-northeast of and downgradient from the Subject Property. (1) 4,000-gallon, and (1) 1,000-gallon gasoline UST, (1) 4,000-gallon diesel UST, and (1) 500-gallon waste oil UST. The four gasoline and diesel USTs were reported to be abandoned via concrete slurry in August 1991. A Preliminary Site Assessment (PSA) consisting of test pits and soil confirmation samples were conducted in April 2005. Groundwater was not encountered during the PSA. Confirmation soil sampling reported elevated petroleum hydrocarbon constituent concentrations in soils beneath the site. A Request for a work plan for additional site assessment of the site in efforts to delineate the potential lateral and vertical extents of contamination was requested by Shasta County in October 2005. An Unauthorized Release Report (URR) was filed by Shasta County in June 2012. The case was closed in 1992, then reopened in 2012 and is still active. However, the site is not a REC for the Subject Property.

Louisiana-Pacific Corp Burney Operation – Highway 89

This site is 2,589 feet northeast and downgradient from the Subject Property. It is a fiberboard producer and large quantity generator listed on the SEMS-ARCHIVE and RCRA-SQG sites, however no violations have been reported; the site is not a REC for the Subject Property.

Unmapped or Orphan Sites

Three orphan sites have been listed in the EDR radius report (**Appendix E**), Sierra Pacific Industries (buried drums that were removed in 1988), the Sheriff's Department (leaking underground gasoline tank), and Happy Valley Cemetery (abandoned drug lab equipment). The cases for each have been closed and none of these sites pose a REC for the Subject Property.

Previous Environmental Studies

No previous Phase I ESAs have been completed for the Subject Property.

SECTION 5.0

FINDINGS AND CONCLUSIONS

Based on information gathered while conducting this Phase I ESA, no RECs, HRECs, or CRECs were identified in connection with the Subject Property. Any hazardous materials emanating from the dumping that has occurred on the Subject Property likely constitute a *de minimis* condition as defined by ASTM E1527-21 and therefore qualify as an issue that generally does not present a threat to human health or the environment, would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. The following observations and findings were made:

- Review of historical topographic maps and aerial photographs showed that the Subject Property was mostly vacant in the past.
- Burney Creek and an irrigation ditch cross the middle of the Subject Property.
- Debris of varying size and age was found throughout much of the Subject Property.
- There are homeless people living in three structures on the Subject Property, with recent debris in and around the structures.
- There is a rusted transformer located near the northeast corner of the Subject Property.
- There is a large soil pile on APN 028-410-018-000 that may include petrochemicals resulting from Forest Service vehicle maintenance activities.

The following actions are recommended:

- Try and determine the origin of the large soil pile on APN 028-410-018-000; if from scraping the parcel, or if the origin cannot be determined, submit samples to an accredited testing laboratory, and implement additional steps (i.e., soil sampling, remediation) as needed depending on results.
- If the tests come back with unacceptably high levels of hazardous materials, retain a qualified contractor to remove and dispose of at a qualified facility.
- Remove the temporary buildings and railroad car from APN 028-410-018-000 with all the attendant garbage.
- Remove all debris, garbage, tires, lumber, vehicles, furniture, cans, drums, wire, fencing, glass, plastic, appliances, etc. and dispose of at an appropriate facility.
- Report the rusted transformer to PG&E, as it may contain PCBs.

SECTION 6.0

REPORT PREPARERS

The undersigned declare to the best of their professional opinion that they meet the definition of Environmental Professional (EP) as defined in Section 312.10 of 40 CFR 312. Charlane Gross performed the site reconnaissance and prepared this report under the professional supervision of Stephen Defibaugh, who qualifies as an EP as defined in ASTM Standard E 1527-21, and has the specific qualifications based on education, training, and experience to assess a property of the nature, and setting of the Subject Property. Resumes for the report contributors are included in **Appendix I**.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

RGA LUST..... Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>LOUISIANA-PACIFIC CO</i> Site ID: 0901658 EPA Id: CAD089924633	<i>HWY 89 9 MI NE OF BU</i>	<i>NE 1/4 - 1/2 (0.490 mi.)</i>	<i>14</i>	<i>39</i>

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 6 LUST sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

INDIAN UST: A listing of underground storage tank locations on Indian Land.

A review of the INDIAN UST list, as provided by EDR, has revealed that there is 1 INDIAN UST site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
PIT RIVER MINI MART Database: INDIAN UST R9, Date of Government Version: 10/12/2021 Alternate Facility ID: PIT001 Tank Status: Currently in Use	20258 TAMARACK AVE.	NE 0 - 1/8 (0.042 mi.)	2	9

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FLETCHER FOREST PROD Status: A Tank Status: A Comp Number: 145	20202 TAMARACK AVE	0 - 1/8 (0.000 mi.)	1	9

HIST UST: Historical UST Registered Database.

A review of the HIST UST list, as provided by EDR, and dated 10/15/1990 has revealed that there is 1 HIST UST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FAST GAS Facility Id: 00000013890	1667 MAIN STREET	NNE 1/8 - 1/4 (0.244 mi.)	A7	20

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that

EXECUTIVE SUMMARY

there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

(1) 4,000 gallon, and (1) 1,000 gallon gasoline UST, (1) 4,000 gallon diesel UST, and (1) 500 gallon waste oil UST. The four gasoline and diesel USTs were reported to be abandoned via concrete slurry in August 1991. A Preliminary Site Assessment (PSA) consisting of test pits and soil confirmation samples were conducted in April 2005. Groundwater was not encountered during the PSA. Confirmation soil sampling reported elevated petroleum hydrocarbon constituent concentrations in soils beneath the site. A Request for a work plan for additional site assessment of the site in efforts to delineate the potential lateral and vertical extents of contamination was requested by Shasta County in October 2005. An Unauthorized Release Report (URR) was filed by Shasta County in June 2012.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: N/A
Date Made Active in Reports: 05/31/2022	Last EDR Contact: 07/01/2022
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/10/2022
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: 800-424-9346

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2022	Telephone: (415) 495-8895

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2022	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2022	Telephone: (415) 495-8895

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2022	Telephone: (415) 495-8895

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

PIT RIVER BURNEY FTT
OAK STREET
BURNEY, CA 96013

TARGET PROPERTY COORDINATES

Latitude (North):	40.874033 - 40° 52' 26.52"
Longitude (West):	121.678544 - 121° 40' 42.76"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	611352.2
UTM Y (Meters):	4525402.5
Elevation:	3165 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12014056 BURNEY MOUNTAIN WEST, CA
Version Date:	2018
North Map:	12014052 BURNEY, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

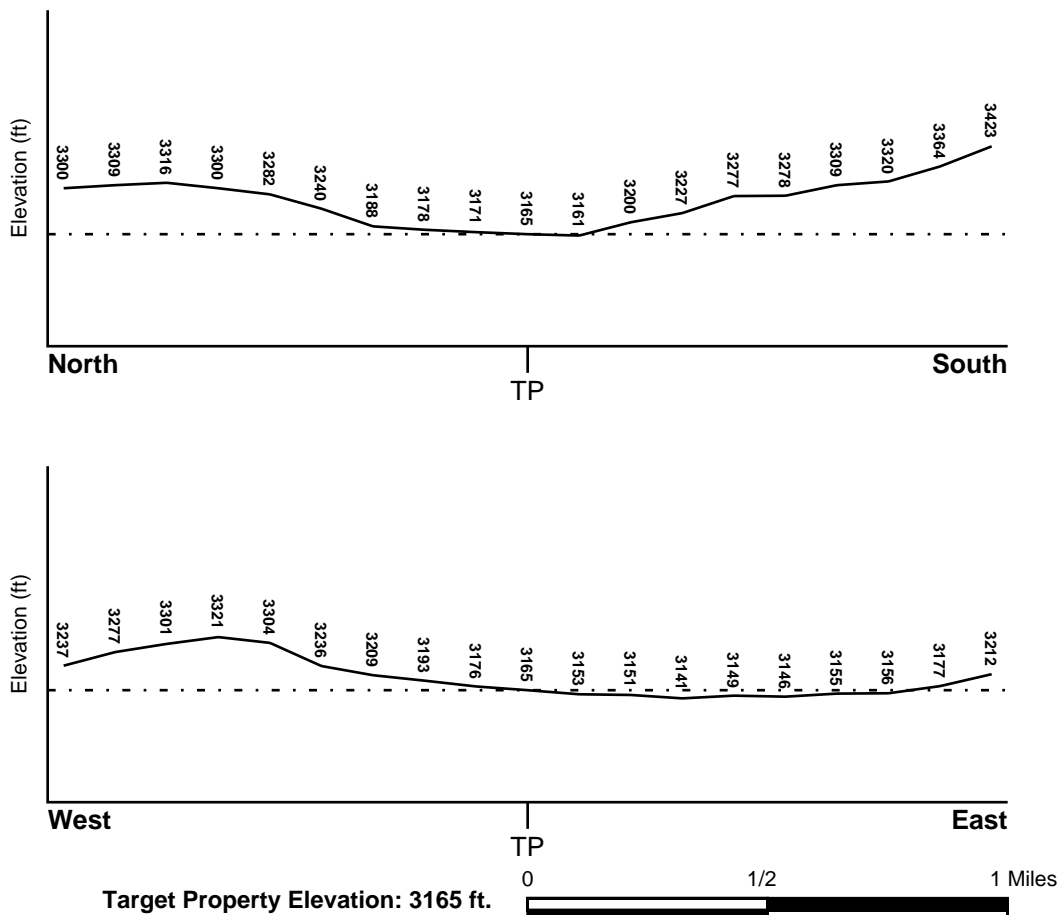

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06089C1050G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

06089C0745G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BURNEY MOUNTAIN WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: JIMMERSON

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 7.3 Min: 5.6
2	5 inches	24 inches	loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 7.3 Min: 5.6
3	24 inches	35 inches	silty clay loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 7.3 Min: 5.6
4	35 inches	50 inches	silty clay loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 7.3 Min: 5.6
5	50 inches	61 inches	cobbly clay loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 7.3 Min: 5.6
6	61 inches	70 inches	silty clay loam	Not reported	Not reported	Max: 1.41 Min: 0.42	Max: 7.3 Min: 5.6

Soil Map ID: 2

Soil Component Name: MATQUAW

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	gravelly sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6.5 Min: 5.6
2	3 inches	9 inches	sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6.5 Min: 5.6
3	9 inches	27 inches	very fine sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6.5 Min: 5.6
4	27 inches	33 inches	loamy sand	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6.5 Min: 5.6
5	33 inches	72 inches	stratified extremely gravelly loamy sand to very gravelly sandy loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 6.5 Min: 5.6

Soil Map ID: 3

Soil Component Name: ARKRIGHT

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United States Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

QUESTIONNAIRES

User/Owner/Occupant/Key Site Manager Questionnaire

This Phase I Environmental Site Assessment is being completed according to American Society for Testing and Materials (ASTM) Standard Practice E1527-13. We request your assistance in conducting this Assessment by asking that you complete this questionnaire and return it as soon as possible.

These questions should be answered by someone or a group of people that are most likely to have knowledge about the subject of the questions – typically the owner, long time tenant, or a property manager. *Please do not leave any blank.* Answer in good faith to the best of your knowledge and if you're not sure how to answer the question, feel free to contact the environmental professional for clarification.

Property Name: Pit River Burney fee-to-trust parcels

Property Address or ID Number (as applicable): Highway 299 at Tamarack Avenue

General Property Description (location, use, level of development, topography, biota, etc.):

APNs 028-170-015-000, 028-410-014-000, 028-410-015-000, 028-410-016-000, 028-410-018-000, 028-410-025-000, and 028-450-033-000

Please continue to the questions on the next page.

Question	Yes	Unsure	No	If yes, please describe
<p>1. Did a search of land title records (or judicial records where appropriate – see NOTE below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?</p> <p>NOTE — Certain jurisdictions require that environmental liens be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens.</p>	X			
<p>2. Did a search of recorded land title records (or judicial records where appropriate, see NOTE below) identify any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?</p> <p>NOTE — Certain jurisdictions require that activity and use limitation (AULs) be filed in judicial records rather than in land title records. In such cases judicial records must be searched for AULs.</p>	X			
<p>3. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?</p>	X			
<p>4. Does the purchase price paid for the property reasonably reflect the fair market value of the property? If you conclude that there is a difference, do you have any reason to believe that the lower purchase price is because contamination is known or believed to be present at the property?</p>	X			
<p>5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases of hazardous materials?</p>			X	
<p>6. Do you know the past uses on the property? If so, please generally describe the uses and how long have you have had knowledge of the property?</p>			X	

Question	Yes	Unsure	No	If yes, please describe
7. Do you know of specific chemicals that are present or once were present at the property?			X	
8. Do you know of spills or other chemical releases that have taken place at the property?			X	
9. Do you know of any environmental cleanups that have taken place at the property?			X	
10. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of hazardous materials or petroleum product releases at the property?			X	
11. Are there any pits, ponds, or lagoons on the property that have been used in connection with waste disposal or waste treatment?			X	
12. Are there any areas of stained soil or pavement on the property?			X	
13. Are there any areas of stressed vegetation caused by something other than insufficient water on the property?	X			Oak Trees not peaking and competing with each other.
14. On the property are there any depressions, mounds, or filled/graded areas that are associated with solid waste disposal?			X	
15. Are there any liquid discharges into waterways on the property or injections into groundwater on the property?			X	
16. Are there any wells located on the property?			X	
17. Are there any septic systems or cesspools on the property?			X	

Question	Yes	Unsure	No	If yes, please describe
<p>18. Do you have or know of the existence of any of the following records related to the property?</p> <p>a) Environmental site assessment reports?</p> <p>b) Environmental compliance audit reports?</p> <p>c) Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permit, wastewater permits, NPDES permits, underground injection permits)?</p> <p>d) Registrations for underground and above-ground storage tanks?</p> <p>e) Registrations for underground injection system?</p> <p>f) Material safety data sheets?</p> <p>g) Community right-to-know plan?</p> <p>h) Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; facility response plans, etc.?</p> <p>i) Reports regarding hydrogeologic conditions on the property or surrounding area?</p> <p>j) Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property?</p> <p>k) Hazardous waste generator notices or reports?</p> <p>l) Geotechnical studies?</p> <p>m) Risk assessments?</p> <p>n) Recorded Activity and Use Limitations (AULs)?</p>		X		
19. Do you know of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances on the property?			X	
20. Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances?			X	
21. Do you have any reason to believe contamination is present at the property that was not covered by the above questions?			X

Charlane Gross

From: Shasta County Environmental Health <scehd@co.shasta.ca.us> on behalf of Shasta County Environmental Health
Sent: Thursday, July 14, 2022 2:16 PM
To: Charlane Gross
Subject: [EXTERNAL] RE: resent email

Good Afternoon,

Parcels 028-170-015, 028-410-014, 028-410-025, and 028-450-033 is on tribal land and not regulated by our office. We have no records for these.

For the remaining parcels, we have no records.

Hello –

I'm sorry – I just sent you an email inquiry, but got one APN wrong. This is the corrected list.

My name is Charlane Gross, I am a consultant preparing a Phase I Environmental Site Assessment for seven properties in Burney, all near the western side of town. Their APNs are:

028-170-015-000
028-410-014-000
028-410-015-000
028-410-016-000
028-410-018-000
028-410-025-000
028-450-033-000

I would like to know if anyone at the county has information regarding hazardous materials spills, incidents, or accidents on any of these parcels. I have attached a form letter which can be filled out if someone would like to, but would happily accept any kind of response you can send me.

Thank you,

--

Charlane Gross, M.A., RPA
Senior Archaeologist

APPENDIX I

RESUMES

Gregory Buchanan, PG

Senior Geologist

Long Beach, CA

Mobile: (562) 239-6755

Email: gbuchanan@montrose-env.com

Professional Experience

Mr. Buchanan is a Senior Geologist with 24 years of experience in managing subsurface investigation and site remediation projects. He is responsible for all aspects of project management including coordinating fieldwork, reporting, Agency and Client negotiations, and budget tracking to progress sites to closure. He writes Phase II proposals and performs report reviews. Prior experience includes performing Site Characterizations, Phase I and Phase II Site Assessments, Site Conceptual Models, Remedial Action Plans, O&M of Remedial Systems, and slug and pump tests. Mr. Buchanan has completed groundwater investigations, assisted with vapor intrusion investigations, and site remediation. He also provided staff oversight of projects, data analysis, and technical report review.

Education, Licenses & Certifications

BS Geology, California State University Dominguez Hills, CA, 1996

License: Professional Geologist (PG, #8721, Exp. 11/2023), California Board of Professional Engineers, Land Surveyors, and Geologists

Client Project Experience

Downey Business Center, Downey, California

Mr. Buchanan is working with the Client and the Los Angeles Regional Water Quality Control Board (LARWQCB) to assess and remediate VOC contamination resulting from heat-treating and circuit board cleaning activities under previous ownership. Currently, five commercial/industrial buildings are undergoing soil vapor extraction (SVE) remediation.

Barkley Building, Orange, California

Mr. Buchanan is working with the Client and the DTSC to assess and remediate historical VOC contamination beneath the property. The SVE network installed by the previous consultant was expanded and remediation is ongoing.

Commercial Building, Bellflower, California

Mr. Buchanan is working with the new property owner and the LARWQCB to remediate historical VOC contamination from beneath the property using an SVE network installed under prior ownership.

Commercial Building, Los Alamitos, California

Mr. Buchanan is working with the Client and Santa Ana RWQCB to assess and remediate VOC contamination from onsite dry-cleaning activities. He coordinated and implemented an indoor excavation beneath two suites of the building. Project management at the Site is ongoing.

Commercial Building, Westminster, California

Mr. Buchanan is working with the Client and the DTSC to assess and manage historical VOC contamination beneath the Site.

Relevant Project Experience

Environmental Site Assessments

Soil Vapor Investigation, Screening Level Health Risk Assessment for Indoor Air Quality, Los Angeles, California

Mr. Buchanan conducted a soil vapor investigation and indoor air testing to assess the potential human health risk from possible vapor intrusion into the building from beneath the site. Historical land uses included commercial and light industrial, machine shop, and wood working facilities. Previous soil sampling had revealed tetrachloroethylene (PCE) at five feet below ground surface (bgs). In November of 2019, Mr. Buchanan managed the collection of sub-slab soil vapor sampling (and radon sampling), in conformance with the California Department of Toxic Substances Control (DTSC) and the Los Angeles Regional Water Quality Control Board (LARWQCB) specifications.

In addition, Mr. Buchanan conducted a Screening-level Risk Assessment (SLRA) to evaluate whether potential human health risks (cancer risk and non-cancer risk) were present at the site, deriving from PCE and TCE in sub-slab soil vapor. The health risk was determined to be below the California Department of Toxic Substances Control residential standards.

Southgate Ranch, Phase I Environmental Site Assessment and Vapor Encroachment Screening for Former Oil and Gas Production Site, Santa Fe Springs, California

Mr. Buchanan managed Montrose professionals to conduct a Phase I Environmental Site Assessment (ESA) according to generally accepted ESA industry standards (ASTM E 1527-13, Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process and EPA Final All Appropriate Inquiries (AAI) standard practices). Historical land uses included: oil production, gas production, injection of brine water into the subsurface, and limited residential/agricultural uses. Montrose professionals reviewed environmental databases and found that above ground storage tanks were used to store crude oil. Oil sumps and underground piping for oil and water had historically been a concern. From 2000 to present, multiple oil and injection wells

were in operation. At present, oil well abandonment activities have begun to prepare the site for redevelopment.

In addition, Mr. Buchanan conducted an ASTM E2600-10 Tier I screening and identified a remediation site and three chlorinated solvent waste sites in the established area of concern for vapor encroachment. Chlorinated solvents were chemicals of concern that could represent a vapor encroachment concern. Chlorinated solvents were also detected during the groundwater monitoring events at the remediation site. As a result, Montrose professionals determined that a vapor encroachment condition existed at the Property.

Cushman Wakefield, Soil and Soil Vapor Sampling at Former Oil Field Site, Santa Fe Springs, California

From 1923 to 1978 the site was used as an oil field, with oil wells and associated above-ground gas and oil tanks. In addition, the site contained an oil sump associated with a former oil well, as well as a clarifier, which is currently used by a commercial boiler and pump repair shop. In 2019, Mr. Buchanan conducted soil sampling in the vicinity of the former gas/oil tanks and the oil sump area, using Environmental Protection Agency (EPA) Method 5035, and acetate sleeves, that were capped and sealed. The samples were analyzed by a California ELAP-accredited laboratory for total petroleum hydrocarbons (TPH), using EPA Method 8015B, and for volatile organic compounds (VOCs), using EPA Method 8260B. Mr. Buchanan also managed the installation of vapor probes, and follow-up sampling that conformed to California Department of Toxic Substances Control (DTSC) and the Los Angeles Regional Water Quality Control Board (LARWQCB) specifications.

Based on the sampling results, Mr. Buchanan wrote the final Subsurface Investigation Report.

Phase II Environmental Site Assessment for Former Automotive Service and Machining Facility, Orange, California

Previous soil testing identified the presence of Trichloroethene (TCE), tetrachloroethylene (PCE), and previous soil vapor testing revealed the presence of VOCs. Continuous SVE operation began in February of 2014. In May of 2019, Mr. Buchanan managed additional borings at the site to assess total petroleum hydrocarbons, TCE, and VOC concentrations. The results of these tests demonstrated that vapor extraction would not likely be able to remove VOCs from the near-surface soil to meet California Department of Toxic Substances Control (DTSC) health risk limits. To reduce the potential vapor intrusion health risk, Mr. Buchanan recommended that a sub-slab depressurization (SSD) system be installed in each of the eight multifamily units and that the indoor air be tested to assess human health risk. Also, he determined that continued soil vapor extraction could remove additional VOC mass from the subsurface soil and could also reduce VOC concentrations in groundwater. Mr. Buchanan recommended installation of a minimum of three new groundwater wells to further define and monitor the VOC plume in groundwater and to determine the flow direction and gradient.

Soil Vapor Survey and Risk Assessment for Former Dry Cleaners, Rancho Cucamonga, California

Mr. Buchanan conducted an environmental assessment of the site and recommended sub-slab soil vapor sampling of volatile organic compounds (VOCs) be conducted to assess the potential human health risk from possible vapor intrusion beneath the site. He conducted the soil vapor sampling, in accordance with the Department of Toxic Substances Control (DTSC) and the Los Angeles Regional Water Quality Control Board (RWQCB) specifications. Analytical results indicated that tetrachloroethylene (PCE) sub-slab soil vapor concentrations and trace concentrations of dichlorofluoromethane were detected. Mr. Buchanan prepared a Screening Level Sub-Slab Soil Vapor Risk Assessment in accordance with DTSC Final Vapor Intrusion Guidance dated October, 2011.

Los Angeles County Metropolitan Transportation Authority, Phase II Environmental Site Assessments, Underground Storage Tank Investigation, Soil Vapor Surveys, Los Angeles, CA

Mr. Buchanan completed numerous Phase II Environmental Site Assessments as part of eminent domain proceedings related to a transportation project, including an investigation of the former locations of underground storage tanks (USTs) and former dry cleaning facilities. He conducted soil borings beneath the former USTs to a depth of up to 40 feet below ground surface. He also managed soil vapor surveys to attempt to determine if an unauthorized toxic release from former dry cleaning operations, vapor degreasers, and spray booths had occurred.

Chevron, Phase I/II Environmental Site Assessments for Oil Pipeline Relocation, Southern California

Mr. Buchanan served as construction manager for an oil pipeline relocation project for a major oil company. He coordinated heavy equipment contractors during the excavation of new and existing right-of-ways, in cooperation with the local oil refinery, and the City of Torrance. In addition, he conducted Phase I/II Environmental Site Assessments and completed the project on time and under budget.

Soil Vapor Survey, Screening Health Risk Assessment for Dry Cleaners, Downey, California

A dry cleaners had been operating on site for 30 years. Mr. Buchanan took soil vapor samples in accordance with the California Department of Toxic Substances Control (DTSC) and the Los Angeles Regional Water Quality Control Board specifications. Three soil-vapor borings were advanced to five feet bgs in the alley behind the site. Soil vapor sampling results indicate low Tetrachloroethylene (PCE) concentrations in all three borings. No other Volatile Organic Compounds were detected above laboratory reporting limits. A limited screening level risk assessment showed that the human health risk behind the dry cleaner was below DTSC accepted values (low Hazard Index, non-cancer risk).

Phase I Environmental Site Assessment for Former PVC Pipe Manufacturing Site, Downey, California

Mr. Buchanan conducted the Phase I Environmental Site Assessment (ESA) in general conformance with ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessments Process and EPA Final All Appropriate Inquiries (AAI) standard practices. Former land uses included: agricultural, Polyvinyl chloride (PVC) pipe manufacturing, commercial furniture sales, and construction materials sales.

Mr. Buchanan conducted a review of environmental regulatory databases and prior assessment reports, which identified that the Property had undergone numerous subsurface investigations to address potential environmental concerns due to former PVC pipe manufacturing operations from the early 1980s until 1993. These prior assessment reports also described investigations regarding a former heat treating facility that operated on nearby properties from the mid-1950s until 1993. Soil sampling investigations at the former heat treating facility, that did not include the Property, identified total recoverable petroleum hydrocarbon (TRPH) and volatile organic compound (VOC) impacted soil. The impacted soil was excavated, and the heat treating facility was granted closure by the Los Angeles Regional Water Quality Control Board (LARWQCB) for shallow volatile organic compound (VOC) impacted soil. Despite the issuance of site closure from LARWQCB, Mr. Buchanan recommended further investigation, as the threat to groundwater and from vapor intrusion was not assessed at either former facility.

Soil Vapor Survey, Indoor Air Quality Human Health Risk Assessment for Former PVC Pipe Manufacturing Site, Downey, California

Mr. Buchanan conducted an investigation of the site of a former PVC pipe manufacturing facility to determine the potential human health risk inside each building, from soil vapor encroachment. Mr. Buchanan collected all soil-vapor samples at a depth of five feet below ground surface (bgs), using a procedure that conforms to California Department of Toxic Substances Control (DTSC) and Los Angeles Regional Water Quality Control Board (LARWQCB) specifications. Mr. Buchanan prepared a Screening Level Risk Assessment in accordance with DTSC Final Vapor Intrusion Guidance (October 2011), and DTSC Human and Ecological Risk Division (HERD)-approved Johnson & Ettinger soil gas screen, version 2.0 model (modified December 2014), which was used to estimate the potential risk due to the presence of contaminants in the soil vapor at a depth of five feet bgs. Mr. Buchanan collected a total of 40 soil vapor samples at a depth of five feet beneath the onsite buildings. Based on J&E modeling, Mr. Buchanan determined that potential health risk was below DTSC screening levels in the buildings, and recommended no further investigation.

Clarifier Removal and Soil Sampling, El Segundo, California

Mr. Buchanan managed the removal of one in-ground 1,000-gallon capacity, three-stage concrete clarifier from the site. The clarifier was removed in accordance with a City of El Segundo Waste Closure Permit. In December of 2019, Mr. Buchanan managed the process of removing the clarifier, rinsing and cleaning it, and transportation of non-hazardous wastewater and debris for disposal. Since there was no evidence of staining in the clarifier excavation or soil stockpile, it was transported for disposal with a destruction certificate and wastewater manifest. Following excavation of the clarifier, Based on the soil sampling results, Mr. Buchanan wrote the final Clarifier Removal and Soil Sampling Report and recommended no further investigation at the site.

Groundwater Monitoring and Remediation

Groundwater Monitoring Well Installation, Groundwater Sample Testing at Former Dry Cleaners Facility, Pico Rivera, California

Mr. Buchanan managed the installation of three onsite wells to approximately 100 feet below ground surface (bgs) to replace the four onsite wells that had been dry for several years. The site was located in a retail shopping center that contained a former dry-cleaners. In addition, he prepared a site-specific Health and Safety Plan in accordance with Occupational Safety and Health Administration regulations, 29 CFR 1910.120, and applicable Department of Toxic Substances Control (DTSC) guidance. The Plan identified potential hazards associated with physical activities and potential exposure to hazardous constituents identified during previous sampling activities at the facility. Tetrachloroethylene (PCE) Chloroform and Acetone were detected at low concentrations. He also prepared a Groundwater Monitoring Well Installation Report for submittal to the Los Angeles Regional Water Quality Control Board (LARWQCB), that indicated no VOCs were detected above Maximum Contaminant Levels (MCLs). Therefore, Mr. Buchanan recommended that LARWQCB consider the groundwater portion of the case for final monitoring and closure.

Former Wright Terminal, Groundwater Monitoring and Remediation, Air Sparging, Long Beach, California

Since 2000, Montrose has been conducting groundwater monitoring at the former Wright Terminal that had operated as a petroleum refinery from the 1930's until 1986, and from 1986 to 1989 as a fuel-storage and fuel-blending facility. The 5.6-acre site has since been redeveloped and is currently occupied by a large warehouse building. In 2016, Montrose professionals installed an air sparging well to assist in the remediation of VOC contamination in the perched groundwater. Mr. Buchanan tested groundwater samples for total petroleum

hydrocarbons and volatile organic compounds and submitted quarterly Groundwater Monitoring and Remediation progress reports to the California Water Resources Control Board.

Los Angeles County Sanitation Districts, Remedial Action Workplan, Soil Vapor Extraction, Soil and Groundwater Remediation for Former Oil Refinery Site, Carson, California

Los Angeles County Sanitation Districts (LACSD) wanted to demolish a former refinery on a property adjacent to LACSD's Joint Water Pollution Control Plant (JWPCP), in preparation for future development. In 2000, LACSD had purchased the 36-acre property to act as a buffer for the JWPCP. Past operations of the facility had resulted in soil and groundwater contamination, with crude and refined hydrocarbon products. Up to ten feet of free product had been reported on the groundwater, which is approximately 70 feet below the surface.

Mr. Buchanan managed sparging and vapor extraction pilot tests on the site. Mr. Buchanan managed groundwater monitoring well installation and performed semi-annual groundwater monitoring/sampling. In addition, Mr. Buchanan recently concluded implementation of a Data Gap Investigation Work Plan that included investigative borings, utilizing cone penetration testing (CPT) and ultraviolet optical screening tools (UVOST), in-situ chemical oxidation (ISCO) feasibility testing, surfactant enhanced product recovery (SEPR) testing, current light non-aqueous phase liquids (LNAPL) distribution in groundwater, and air sparge/vapor extraction pilot testing. Mr. Buchanan wrote the report to identify and recommend procedures and methods for collecting the data necessary to prepare a Remedial Design Implementation Plan for deep soils and groundwater and to assess the contingent remedies.

Santa Clarita Sheriff Station, Geoprobe Investigation, Groundwater Sampling, ORC Barrier, Santa Clarita, CA

Mr. Buchanan conducted a Geoprobe investigation for a new groundwater monitoring well placement at the Santa Clarita Sheriff's station. Mr. Buchanan managed the installation of an Oxygen Release Compound (ORC) barrier and additional ORC borings in the source area with a Geoprobe rig. He performed groundwater sampling and vapor extraction operations and maintenance (O&M) at the site. Mr. Buchanan used a Membrane Interface Probe in conjunction with a Cone Penetration Testing rig to delineate a free phase product plume up gradient of the source area.

Underground Tank Removal and Soil Sampling Report for Former Gasoline Service Station, Los Angeles, California

Mr. Buchanan managed the removal of three double-wall steel 12,000-gallon gasoline underground storage tanks (USTs), one double-wall steel 1,000-gallon waste oil UST, four dispensers, and associated product piping from a former gasoline service station site, in accordance with a permit from the Los Angeles Fire Department (LAFD) and with South Coast Air Quality Management District Rule 1166 soil monitoring requirements. Prior to removal, the USTs were examined by Montrose's Certified Industrial Hygienist and were found to be in good condition. Three soil samples were collected from beneath each 12,000-gallon UST; two samples were collected from beneath the waste oil UST, a single soil sample was collected from beneath each of the four dispensers, and four samples were collected from beneath the approximately 80 feet of product-piping. The soil samples were collected, in accordance with Environmental Protection Agency (EPA) preservation Method 5035 for analyses of Volatile Organic Compounds (VOCs) and Oxygenates by EPA Method 8260B, and for Total Petroleum Hydrocarbons (TPH carbon-chain ID) by EPA Method 8015B, and they were analyzed by a California Environmental Laboratory Accredited Program (ELAP) certified laboratory. Concentrations of TPH as gasoline,

TPH as diesel, and low volatile organic compounds (VOCs) were detected above LAFD action levels, and therefore, Mr. Buchanan recommended further investigation.

US Marine Corps Air Station El Toro SUPERFUND site, Environmental Site Investigation for 300 Underground Storage Tanks, El Toro, California

The El Toro Marine Corps Air Station covers about 4,700 acres. Commissioned in 1943, it supported the Fleet Marine Forces in the Pacific Ocean, serving as the major west coast jet fighter facility. Mr. Buchanan conducted an environmental site assessment at the US Marine Corps Air Station El Toro SUPERFUND site in El Toro, California. He conducted a survey of the 300 underground storage tanks (USTs) onsite. He researched historical records on environmental regulatory databases for the presence of toxic releases, conducted on-site visual inspections, and determined the preliminary level of risk for soil/soil vapor contamination at each UST.

Real Estate Investor / Southgate and Downey, CA

Working with Client to remediate solvent plumes in soil and groundwater beneath a commercial property. Performed initial site assessments, and installed soil vapor extraction system and associated wells. Reduced human health risk to below screening level, performed conformation testing, and received regulatory closure of the South Gate site from the Los Angeles County Fire Department. Assessment and remediation is ongoing at the Downey site.

Real Estate Investor / Pico Rivera

Working with a Client on soil-vapor assessment/intrusion project at an existing retail property and nearby residential property under Los Angeles Regional Water Quality Control Board (RWQCB-LA) guidance.

Business Real Estate Owner

Working with a Client and Regional Water Quality Control Board (RWQCB) to assess indoor and soil vapor contamination at an industrial park in Baldwin Park.

Business Real Estate Owner / Los Alamitos

Working with Client to assess and mitigate volatile organic compound (VOC) release from a former dry cleaning facility in a Retail Center. Coordinated excavation of VOC-impacted soil inside the building tenant space, waste disposal, and final report. Designed horizontal soil vapor depressurization system (SDDS) for the site. Currently mitigating vapor intrusion into the building and reducing VOCs in soil vapor by several orders of magnitude. Assessment under the oversight of the Santa Ana Regional Water Board is ongoing.

Various Phase II Assessments / Los Angeles, CA

Completed Phase II assessments recommended in Phase I reports, prepared by Leymaster Environmental. Responsibilities included proposals, sample collection, and final reports.

Real Estate Investor / Canoga Park, CA

Prepared a site for residential development that was a former onsite gasoline station discovered during Phase I assessment and removal of impacted soil under Regional Water Board guidance.

Private Company / National City, CA

Provided project management and technical input during multiple underground storage tank (UST) removals at a large industrial property. Interfaced with San Diego County and National City Fire officials to resolve site issues.

Real Estate Investor / Rancho Dominguez, CA

Worked with a Client and Department of Toxic Substances Control (DTSC) to investigate chlorinated solvent releases at a large industrial property. Concerns included hazardous material storage areas, former underground storage tank (UST) and clarifier, discharge areas, and vapor intrusion concerns.

Private Company / Escondido, CA

Worked with National Client Manager to investigate industrial property for environmental concerns. Discovered underground storage tank (UST) during ground penetrating radar (GPR) survey. Negotiated with property owner to remove UST, under San Diego County guidance, and performed additional investigation, as required by the County.

Project Management / Various Retail Sites / CA

Managed service station projects under a Management Transfer (MT) program. Responsible for all aspects of project management including coordinating fieldwork, reporting, and budget tracking to progress these sites to closure. Worked extensively with the San Diego Department of Environmental Health, the County of Orange Health Care Agency, and the Los Angeles Water Quality Control Board.

Emergency Response / Petroleum / Montebello, CA

Managed an unauthorized release of petroleum hydrocarbons project line in Montebello, California. Worked with District and their consultant to remediate the site, and received closure from the DTSC.

MECX Chemical Oxidation and Implementation

Developed several chemical oxidation proposals for the public and private sectors. Estimated oxidant requirements using client-provided data. Analyzed bench-test data, prepared oxidation equipment, and performed chemical oxidation field work. Interpreted field results and prepared chemical oxidation progress reports.

Subsurface Remediation / Cement Plant / Palmdale, CA

Supervised a large diameter excavation of contaminated soil project at a cement production facility in Antelope Valley, California. Supervised the installation of a soil cap over an existing 23-acre cement kiln dust pile to control leaching into groundwater.

Subsurface Investigation / Utility Contractor / Santa Fe Springs, CA

Prepared a feasibility study for an industrial facility in Santa Fe Springs, California. Performed a Geoprobe investigation in the source area and prepared a Risk Assessment report. Performed a high volume pump test at the Site, and prepared a Site Conceptual Model for the site.

Subsurface Investigation / Recycling Facility / Rancho Dominguez, CA

Characterized methylene chloride contamination under an industrial facility using a Membrane Interphase Probe (MIP) in Rancho Dominguez, California. Installed and operated a two phase vapor extraction system at the site.

APPENDIX REG

APPLICABLE FEDERAL, STATE, AND LOCAL LAWS AND
REGULATIONS

APPENDIX A

APPLICABLE FEDERAL, STATE, AND LOCAL LAWS & REGULATIONS

Federal, state, and local laws and regulations relevant to Alternatives A and B included below. As discussed in the Environmental Assessment, state and local laws and regulations apply to the Property prior to acquisition into trust, but are generally not applicable to land in trust.

LAND RESOURCES

FEDERAL

National Earthquake Hazards Reduction Program

The Earthquake Hazards Reduction Act of 1977 (Public Law 95-124, 42 United States Code 7701 et. seq.), as amended in 2004 (Public Laws 101-614, 105-47, 106-503, and 108-360), established the National Earthquake Hazards Reduction Program. This program was designed to develop measures for earthquake hazard reduction and improve the understanding of earthquakes and their effects.

STATE AND LOCAL

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act (formerly the Alquist-Priolo Special Studies Zone Act), signed into law December 1972, requires the delineation of zones along active and potentially active faults in California. The California Geological Survey (CGS) defines an “active” fault as one that exhibits evidence of activity during the last 11,000 years. Faults that exhibit evidence of quaternary activity are considered to be “potentially active.” The purpose of the Alquist- Priolo Act is to regulate development on or near fault traces to reduce the hazard of fault rupture and limit the location of structures in these areas.

Seismic Hazards Mapping Act

The Seismic Hazards Mapping Act was enacted in 1991 to protect the public from the effects of strong ground shaking, liquefaction, landslides, ground failure, or other hazards caused by earthquakes. This act requires a state geologist to delineate various seismic hazard zones and requires cities, counties, and other local permitting agencies to regulate certain development projects within the portions of the zones over which they have jurisdiction. Before a development permit is granted by a city, county, or other local permitting agency for a site within a seismic hazard zone, a geotechnical investigation of the site must be conducted and appropriate mitigation measures must be incorporated into the project’s design.

California State General Plan Guidelines

The California State General Plan Guidelines discusses required land use elements which must designate the proposed general distribution, general location and extent of land uses for: Housing, business, industry, open space, agricultural, natural resources, recreation facilities, educational facilities, future solid and liquid waste facilities, greenways, and Timberland Preserve Zone lands. For housing, business,

and industry a land use element must designate the general distribution, location, and allowable intensity of uses for these areas. A land use element must provide location and distribution of land uses for “open space, including agricultural natural resources, recreation, and enjoyment of scenic beauty” (Gov. Code § 65302(a)). Additional land use elements designations for Timberland Production Zone lands discourage expanding urban services into Timberlands and “premature or unnecessary conversions of timberland to urban and other uses.”

Shasta County General Plan Housing Element

Chapter 6.2 of the housing element in the Shasta County General Plan discusses a combination of planning requirements from the mandated Land Use, Conservation and Open Space Elements which are mandatory to the preservation of Timberlands. Timberland management in the County of Shasta protects the development and utilization of natural resources, protection over watersheds, open space for production of resources, and provides zoning designations to restrict land use to growing, harvesting and compatible land uses. Section 6.2.3 outlines objectives for the preservation of land zoned as Timberland. Chapter 6.9 of the housing element discusses open space and recreation. Open space is defined by Government Code Section 65560(b) and includes any parcel or area of land or water which is essentially unimproved and designated as such.

WATER RESOURCES

FEDERAL

Executive Order 11988

Executive Order (EO) 11988 requires federal agencies to limit adverse impacts associated with the occupancy or modification of floodplains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. Specifically, EO 11988 states that agencies shall first determine whether the proposed action will occur in a floodplain. EO 11988 defines a floodplain as an area that has a one percent or greater chance of flooding in any given year. Second, if an agency proposes to allow an action to be located in a floodplain, “the agency shall consider alternatives to avoid adverse effects and incompatible development in the floodplains.” If the only practicable alternative action requires sitting in a floodplain, the agency is required to minimize potential harm to or within the floodplain.

Disaster Relief Act: Federal Emergency Management Agency

The Disaster Relief Act of 1974, as amended by the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988, created the Federal Emergency Management Agency (FEMA), which is responsible for determining flood elevations and floodplain boundaries based on U.S. Army Corps of Engineers (USACE) studies. FEMA is also responsible for distributing Flood Insurance Rate Maps, which are used in the National Flood Insurance Program. These maps identify the locations of special flood hazard areas, including 100-year floodplains.

Clean Water Act (CWA)

The CWA, 33 U.S. Code (USC) Section 1251(a)(2), sets forth national goals that waters shall be “fishable,

swimmable” waters (CWA Section 101 [a][2]). The CWA addresses both point and non-point sources of pollution (Sections 402 and 319, respectively), both of which are controlled through the National Pollution Discharge Elimination System (NPDES).

The CWA delegates to the states to establish a priority ranking of these impaired waters for purposes of developing water quality control plans that include Total Maximum Daily Loads (TMDL). A TMDL is a calculation of the maximum amount of a pollutant that a water body can receive and still meet water quality standards and includes an allocation for each of the pollutant’s sources. These water quality control plans describe how an impaired water body will meet water quality standards through the use of TMDLs.

NPDES Permitting Program

An NPDES permit must be obtained in order to discharge policy pollutants into “Waters of the U.S.” In some states, the U.S. Environmental Protection Agency (USEPA) has delegated permitting authority to the regional water quality agency. On Tribal land, the USEPA retains authority to regulate discharges. Section 303(d) of the CWA requires states to periodically prepare a list of all surface waters in their respective jurisdictions for which beneficial uses of the water—such as for drinking, recreation, aquatic habitat, and industrial use—are impaired by pollutants. These include water bodies that do not meet state surface water quality standards and are not expected to improve within the next two years.

Anti-Degradation Policy

Federal policy (Code of Federal Regulations [CFR], Title 40, Part 131.6) specifies that each state must develop, adopt, and retain an anti-degradation policy to protect the minimum level of surface water quality necessary to support existing uses. Each anti-degradation policy must include implementation methods consistent with provisions outlined in 40 CFR §131.12. On trust land, such issues are addressed by the USEPA.

Safe Drinking Water Act

Under the mandate of the Safe Drinking Water Act (SDWA), the USEPA sets legally enforceable National Primary Drinking Water Regulations (primary standards) that apply to public water systems. These standards are established to protect human health by limiting the levels of contaminants in drinking water. The USEPA does not oversee the construction and permitting of groundwater wells, but requires that public health standards, such as an effectively installed sanitary seal, are in place. The most direct oversight of water systems is conducted by state drinking water programs if the State has been granted “primacy” from the USEPA, the authority to implement SDWA within their jurisdictions. The USEPA will also primarily establish monitoring and operational requirements, which will typically be specific to the project area.

The USEPA also defines National Secondary Drinking Water Regulations (secondary standards) for contaminants that cause cosmetic and aesthetic effects, but not for health effects. The USEPA recommends that these secondary standards be met but does not require systems to comply with them. Both primary and secondary drinking water standards are expressed as either Maximum Contaminant

Levels (MCL), which define the highest level of a contaminant allowed in drinking water, or Maximum Contaminant Level Goals, which define the level of a contaminant below which there is no known or expected risk to health.

STATE AND LOCAL

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Division 7 of the California Water Code [Water Code]) provides the basis for surface water and groundwater quality regulation within California. This act established the authority of the State Water Resources Control Board (SWRCB) and the nine Regional Water Quality Control Boards (RWQCBs). The Porter Cologne Act (§13242) requires that a TMDL program of implementation be developed in the Regional Water Quality Control Plans for water bodies listed under Section 303 of the CWA that describes how water quality objectives will be attained.

RWQCB's Anti-degradation Policy

The Porter-Cologne Act requires the State to designate beneficial uses of surface water and groundwater, and to specify water quality objectives designed to protect those uses. These water quality objectives are presented in the Regional Water Quality Control Plans (basin plans). Basin plans are developed and periodically reviewed to fulfill the State's requirements of the anti-degradation policy of the CWA. Each basin plan provides a technical basis for determining WDRs and regulatory enforcement action. The project site is within the North Coast Region.

California Water Code

The California Water Code designates the California Department of Public Health (CDPH) as the lead agency responsible for developing uniform statewide recycling criteria for each type of use of treated wastewater for the protection of public health. The CDPH and the RWQCBs are directed under the Water Code to regulate treated wastewater production and use. The CDPH has jurisdiction over the production of treated wastewater and the enforcement of California Code of Regulations (CCR) Title 22 for treated wastewater criteria. The RWQCB is responsible for issuing treated wastewater use requirements.

Shasta County General Plan

The objectives and policies contained in this element of the County of Shasta General plan address the countywide water needs with particular attention to South Central Urban Region (SCR) while recognizing the statewide importance of County water resources as well as the importance of the two significant groundwater basins, the Redding Groundwater Basin and the Fall River Valley Basin, and the high contribution of surface flows to water resource diversions. This element also recognizes risks to water resources within its policies, promoting interagency water resource planning, targeting minimizing sedimentation and erosion, as well as enforcing proper design and soil selection of septic systems within the County among other policy items.

AIR QUALITY

FEDERAL

Clean Air Act of 1970

The Federal Clean Air Act (CAA) was enacted in 1970 and last amended in 1990 (42 USC §7401 et seq.) for the purposes of protecting and enhancing the quality of the nation's air resources to benefit public health, welfare, and productivity. The CAA establishes a framework for national, state, and local air pollution control efforts. Basic components of the CAA and its amendments include national ambient air quality standards (NAAQS) for criteria air pollutants, requirements for state implementation plans (SIPs) to meet the NAAQS, motor vehicle emissions standards, stationary source emissions standards and permits, and enforcement provisions. The EPA is the federal agency responsible for establishing the NAAQS, overseeing state air programs as they relate to the CAA, approving SIPs, and setting emissions standards for mobile sources under federal jurisdiction.

National Ambient Air Quality Standards

The USEPA, under authority of the CAA, developed primary and secondary NAAQS in 1971. The primary NAAQS protect the public health with an adequate margin of safety, and the secondary standards protect the public welfare from known or anticipated adverse effects to aesthetics, crops, or architecture (42 USC §7409[b]). The EPA designated six pollutants of primary concern as criteria air pollutants (CAPs): carbon monoxide (CO), sulfur dioxide (SO₂), nitrogen dioxide (NO₂), ozone, lead (Pb), and particulate matter (PM). The NAAQS are time-averaged maximum ambient air concentrations. For various CAPs, more than one time-averaged maximum concentration has been established by the EPA in order to address the typical exposures to the population from natural and anthropogenic sources in the environment. Concentrations above these time-averaged maximum concentrations are anticipated to cause adverse health effects to sensitive receptors. The violation criteria established by the EPA are based upon these time-averaged maximum concentrations specific to each CAP. For example, the NAAQS for ozone must be exceeded on more than three days in three consecutive years in order to constitute a violation. On the other hand, if the NAAQS for CO are exceeded on more than one day in any given year, a violation has occurred. **Table 1** presents the violation criteria for the various averaging times of the NAAQS for each CAP.

Attainment Status

To determine conformance with the NAAQS, states are responsible for providing ambient air monitoring data to the USEPA. The USEPA then determines, using the violation criteria, if the results of the monitoring data indicate compliance with the NAAQS. The USEPA classifies areas in compliance with the NAAQS as being in "attainment". Areas that do not meet the NAAQS are classified as being in "nonattainment" by the USEPA.

Table 1. NAAQS AND ASSOCIATED VIOLATION CRITERIA

Pollutants	Times	Primary		Violation Criteria
		ppm	µg/m ³	
Ozone	8 hours	0.70	-	The 3-year average of the annual 4 th highest daily 8-hour maximum is not to be above

				0.070 µg/m ³
Carbon Monoxide	8 hours	9	10,000	If exceeded on more than 1 day per year
	1 hour	35	40,000	If exceeded on more than 1 day per year
Nitrogen Dioxide	Annual average	0.053	-	Not to be above 0.053 ppm in a calendar year.
	1 hour	0.100	-	The 3-year average of the 98 th percentile of the daily maximum 1-hour average at each monitor is not above 0.100 ppm.
Sulfur Dioxide	1-hour	0.075	-	99 th percentile of 1-hour daily maximum averaged over 3 years.
PM ₁₀	24 hours	-	150	Not to be above 150 µg/m ³ on more than three days over three years with daily sampling
PM _{2.5}	Annual arithmetic mean	N-	12 (see note)	The 3-year average from a community-oriented monitor is not above 12 µg/m ³ .
	24 hours	-	35	The 3-year average of the 98 th percentile for each population-oriented monitor within an area is not above 35 µg/m ³ .
Lead	Rolling –3 Month Average	-	0.15	Not to be above 0.15 µg/m ³ .
	Quarterly Average	-	1.5	-
<p>Note: On February 7, 2024 the USEPA strengthened the NAAQS for the annual PM_{2.5} to 9.0 micrograms per cubic meter. At this time, this change has not been published in the Federal Register. New designations for this standard will be available within two years of issuing the revised NAAQS. It is anticipated that Shasta County would meet the new standard.</p> <p>Source: USEPA, 2024.</p>				

General Conformity

The federal General Conformity Rule implements Section 176(c) of the CAA, and establishes minimum thresholds for reactive organic compounds (ROGs) and nitrogen oxides (NOx) (ozone precursors), particulate matter (PM), and other regulated constituents for nonattainment and maintenance areas. Under the General Conformity Rule, the lead agency with respect to a federal action is required to demonstrate that the proposed federal action conforms to the applicable SIP before the action is taken. There are two phases to a demonstration of general conformity:

1. The Conformity Review process, which entails an initial review of the federal action to assess whether a full conformity determination is necessary, and
2. The Conformity Determination process, which requires that a proposed federal action be demonstrated to conform to the applicable SIP.

The Conformity Review requires the lead agency to compare estimated emissions to the applicable general conformity *de minimis* threshold(s). If the emission estimates from step one is below the applicable threshold(s), then a general conformity determination is not necessary, and the full Conformity

Determination is not required. If emission estimates are greater than *de minimis* levels, the lead agency must conduct a formal Conformity Determination. Shasta County is unclassifiable or in attainment for all of the national ambient air quality standards.

Federal Class I Areas

Title 1, Part C of the CAA was established, in part, to preserve, protect, and enhance the air quality in national parks, national wilderness areas, national monuments, national seashores, and other areas of special national or regional natural, recreational, scenic, or historic value. The CAA designates all international parks, national wilderness areas, and memorial parks larger than 5,000 acres and national parks larger than 6,000 acres as “Class I areas.” The CAA prevents significant deterioration of air quality in Class I areas under the Prevention of Significant Deterioration (PSD) program. Any major source of emissions within 100 kilometers (km; 62.1 miles) from a federal Class I area is required to conduct a pre-construction review of air quality impacts on the area(s). There are three Class I areas within 100 km (62.1 miles) of the Project Site, Thousand Lakes Wilderness, Lassen Volcanic National Park and Caribou Wilderness. It is not anticipated that the Project will be a major source.

Tribal Minor New Source Review

The Tribal Minor New Source Review (NSR) permitting program was established by the USEPA under the CAA. The minor NSR program applies to both new minor sources and minor modifications to both major and minor projects in attainment and nonattainment areas. NSR programs must comply with the standards and control strategies of the Tribal Implementation Plan (TIP) or SIP. If there is not an applicable SIP or TIP, the USEPA issues permits and implements the program. A General Permit under the minor NSR program would be required on tribal trust land if stationary source allowable emissions of regulated pollutants would exceed the thresholds presented in 40 CFR 49.153, (Table 2). This General Permit serves as a preconstruction permit containing limitations and other restrictions specifying the construction, modification, and operation of a minor source. The applicability of Tribal NSR is made on a source’s potential to emit (PTE)..

TABLE 2. TRIBAL MINOR NEW SOURCE REVIEW THRESHOLDS

Pollutant	Emissions Thresholds for Nonattainment Areas (tpy)	Emissions Thresholds for Attainment Areas (tpy)
NO _x	5	10
ROG	2	5
PM	5	10
PM ₁₀	1	5
PM _{2.5}	0.6	3
CO	5	10
SO ₂	5	10
Pb	0.1	0.1
Source: 40 CFR 49.153.		

Federal Hazardous Air Pollutant Program

The Federal Hazardous Air Pollutant Program designates the USEPA as the agency with jurisdiction for issuing regulations regarding air quality on Tribal land. In addition to CAPs, the CAA requires the USEPA to regulate hazardous air pollutants (HAPs). The USEPA maintains a list of over 180 airborne chemicals that are recognized as HAPs. Title III of the CAA requires the USEPA to promulgate National Emissions Standards for Hazardous Air Pollutants (NESHAP). The NESHAP may differ between major sources 5 APPENDIX A and area sources of hazardous air pollutants (HAPs). Major sources are defined as stationary sources with potential to emit more than 10 tons per year (tpy) of any HAP or more than 25 tpy of any combination of HAPs; all other sources are considered area sources.

Climate Change

Climate change is a global phenomenon attributable to the sum of all human activities and natural processes.

EO 13990 directs agencies to consider all available tools and resources in assessing GHG emissions and climate change effects of their proposed actions, including the 2023 National Environmental Policy Act Guidance on Consideration of Greenhouse Gas Emissions and Climate Change. To assess impacts, the 2023 GHG Guidance states that federal agencies should quantify direct and indirect emissions of the project alternatives with the level of effort being proportionate to the scale of the emissions relevant to the NEPA review.

The CEQ guidance advises federal lead agencies to consider the following:

1. The potential effects of a proposed action on climate change as indicated by assessing GHG emissions.
2. The effects of climate change on a proposed action and its environmental impacts.

On February 19, 2021, Secretary of the Interior Deb Haaland issued Secretarial Order (SO) 3399 to prioritize action on climate change throughout the Department and to restore transparency and integrity in the Department's decision-making processes. SO 3399 specifies that when considering the impact of GHG emissions from a proposed action, Bureaus/Offices should use appropriate tools, methodologies, and resources available to quantify GHG emissions and compare GHG quantities across alternatives. SO 3399 acknowledges that identifying the interactions between climate change and the environmental impacts of a proposed action in NEPA documents can help decision makers identify opportunities to reduce GHG emissions, improve environmental outcomes, and contribute to protecting communities from the climate crisis.

STATE AND LOCAL

California Air Resources Board

The California Air Resources Board (CARB), a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both federal and State air pollution control programs within California. In this capacity, CARB conducts research, sets California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, and provides

oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray or aerosol paints), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California's SIP, for which it works closely with Air Quality Management Districts and the USEPA. CARB has implemented numerous strategies to reduce criteria air pollutants from mobile sources such as the advanced clean cars, advanced clean trucks, and advanced clean fleets.

California Clean Air Act

The California Clean Air Act of 1988 (CCAA) requires nonattainment areas to achieve and maintain the CAAQS by the earliest practicable date, as well as requires local air districts to develop plans for attaining the State standards. At a local level, the Shasta County Air Quality Management District (Shasta County AQMD) has jurisdiction over Shasta County, which is the northernmost portion of the SVAB. The Shasta County AQMD attains and maintains air quality conditions in Shasta County through a comprehensive program of planning, regulation, enforcement, technical innovation, and promotion of the understanding of air quality issues.

California Global Warming Solutions Act

In September 2006, then-Governor Schwarzenegger signed the California Global Warming Solutions Act (Assembly Bill [AB] 32). AB 32 (California Health and Safety Code, Division 25.5) establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and establishes a cap on statewide GHG emissions. AB 32 required that statewide GHG emissions be reduced to 1990 levels by 2020. This reduction was intended to be accomplished by enforcing a statewide cap on GHG emissions that was phased in starting in 2012. To effectively implement the cap, AB 32 directed CARB to develop and implement regulations to reduce statewide GHG emissions from stationary sources.

In 2016, Senate Bill (SB) 32 and its companion bill AB 197 amended California Health and Safety Code, Division 25.5 Section 38500 et seq. and established a new GHG reduction target of 40 percent below 1990 levels by 2030. The bills also include provisions to ensure the benefits of state climate policies reach into disadvantaged communities. In 2022, Assembly bill 1279 codified the 2045 carbon neutrality goal of EO B-55-18 by declaring that it is the policy of the state to achieve net zero GHG emissions no later than 2045, to achieve and maintain net negative GHG emissions thereafter, and to ensure that by 2045 statewide anthropogenic GHG emissions are reduced to at least 85 percent below the 1990 levels. California Climate Crisis Act

AB 1279 declares the State's policy to achieve net zero greenhouse gas emissions no later than 2045 and achieve and maintain net negative greenhouse gas emissions thereafter. The bill also ensures that by 2045, statewide anthropogenic greenhouse gas emissions will be reduced to at least 85% below the 1990 levels. The bill requires the State Board to work with relevant State agencies to ensure that updates to the CARB Scoping Plan identify and recommend measures to achieve these policy goals and to identify and implement a variety of policies and strategies that enable carbon dioxide removal solutions and carbon capture, utilization, and storage technologies in California, as specified.

Building off the success of the previous Plan's iterations, the 2022 CARB Scoping Plan lays out the sector-

by-sector roadmap for California to achieve carbon neutrality by 2045 or earlier, outlining a technologically feasible, cost-effective, and equity-focused path to achieve the State's climate target. A specific requirement of AB 32 was to prepare a Climate Change Scoping Plan for achieving the maximum technologically feasible and cost-effective GHG emission reduction by 2020. CARB developed and approved the initial Scoping Plan in 2008, outlining the regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs that would be needed to meet the 2020 statewide GHG emission limit and initiate the transformations needed to achieve the state's long-range climate objectives (CARB 2009).

Most recently, CARB approved the 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) in December 2022. The 2022 Scoping Plan outlines the proposed framework of action for achieving the 2045 GHG target of an 85 percent reduction in GHG emissions relative to 1990 levels; the update also adds carbon neutrality as a science-based guide for California's climate work (CARB 2022). The 2022 Scoping Plan outlines how carbon neutrality can be achieved to reduce GHGs to meet the emission targets by reducing anthropogenic emissions and expanding actions to capture and store carbon. New to the 2022 Scoping Plan is a commitment to incorporate and quantify natural and working lands as a key component to GHG reductions and actions around capture and storage of carbon. The 2022 Scoping Plan strategy for meeting the state's 2030 GHG target incorporates the full range of legislative actions and state-developed plans that have relevance to the year 2030. The 2022 Scoping Plan is heading toward the 2045 target of 85 percent below 1990 levels and carbon neutrality, including the following reductions in key sectors:

- The transportation sector targets reductions based on the technology of vehicles and associated refueling infrastructure for those vehicles; the fuel used as the energy source to power vehicles and the facilities that produce them; and vehicle miles traveled (VMT), which relates to development patterns and available transportation options.
- The electricity grid sector has a target of 38 MMTCO₂e in 2030 and 30 MMTCO₂e in 2035, which includes a goal of generating 20 gigawatts of offshore wind by 2045 and specifies that the increased demand for electrification occurs without new fossil gas-fired resources.
- The manufacturing and building sector include increased electrification of energy demand for construction equipment, as well as across many manufacturing sectors and buildings.
- CO₂ removal and capture include carbon capture and storage facilities and mechanical systems to remove CO₂ from the ambient air.
- Short-lived climate pollutants, including non-combustion methane emissions, are reduced with various strategies.
- Natural and working lands sectors include targets to conserve natural working lands and coastal waters, and to implement actions to accelerate natural removal of carbon and improve resilience to climate change.

In the 2022 Scoping Plan, CARB recommends statewide targets of no more 226 MMTCO₂e from AB 32 GHG inventory sector emissions and 7 MMTCO₂e from natural and working lands, a reduction from carbon capture and sequestration due to avoided GHG emissions from industry and electric sectors of 13 MMTCO₂e, and a reduction of 7 MMTCO₂e from CO₂ removal, including carbon sequestration on natural and working lands, as well as direct air capture and bio-energy with carbon capture and sequestration.

The net 2030 GHG emissions, accounting for emissions and removal or sequestration, is 226 MMTCO₂e. For the 2045 scenario in the 2022 Scoping Plan, maximum GHG emissions from AB 32 inventory sector emissions are 65 MMTCO₂e, emissions from working lands are 7 MMTCO₂e, and reductions from carbon capture and sequestration and CO₂ removal are 100 MMTCO₂e. This is a net reduction of 3 MMTCO₂e by 2045.

Low-Carbon Fuel Standard

The Low-Carbon Fuel Standard (LCFS), established in 2007 through Executive Order S-1-07 and administered by CARB, requires producers of petroleum-based fuels to reduce the carbon intensity of their products that started with a 0.25 percent reduction in 2011, and culminated in a 10 percent total reduction in 2020. In September 2018, CARB extended the LCFS program to 2030, making significant changes to the design and implementation of the program, including a doubling of the carbon intensity reduction to 20 percent by 2030.

Petroleum importers, refiners, and wholesalers can either develop their own low-carbon fuel products or buy LCFS credits from other companies that develop and sell low-carbon alternative fuels, such as biofuels, electricity, natural gas, and hydrogen. The Port started participating in the LCFS program in January 2019 as an opt-in entity, generating credits by providing electricity to vessels through shore power, as well as providing charging infrastructure for battery-electric Class 8 on-road trucks, battery-electric cargo-handling equipment, and battery-electric light-duty vehicles.

Renewable Portfolio Standard

The State of California adopted standards to increase the percentage of energy from renewable resources that retail sellers of electricity, including investor-owned utilities and community choice aggregators, must provide in their portfolio. The Renewables Portfolio Standard (RPS) was established in 2002 under Senate Bill 1078, accelerated in 2006 under Senate Bill 107, and expanded in 2011 under Senate Bill 2. The standards are referred to as the RPS. Qualifying renewables under the RPS include bioenergy such as biogas and biomass, small hydroelectric facilities (30 MW or less), wind, solar, and geothermal energy. The CPUC and the CEC jointly implement the RPS program. Senate Bill 1020 of 2022 (SB 1020) would revise that state policy regarding eligible renewable resources and zero-carbon resources supply 90% of all retail sales of electricity to California end-use customers by December 31, 2035, 95% of all retail sales of electricity to California end-use customers by December 31, 2040, 100% of all retail sales of electricity to California end-use customers by December 31, 2045, and 100% of electricity procured to serve all state agencies by December 31, 2035, as specified. It also contains provisions for cooperation between CPUC and Independent System Operators (ISOs) for the purpose of transmission planning by allowing the exchange of confidential business information without risk of public disclosure requirements.

Shasta County Air Quality Management District

The Air Quality Management District (AQMD) manages the air quality resources of Shasta County through environmental oversight for the benefit of the public. The AQMD of Shasta County works directly with the Air Pollution Control Board to create guidelines, regulate potential industrial and commercial developments, address applications for the construction of emission devices, and handle annual permit

issuance. The AQMD tracks emissions and estimates releases of air contaminants for all permitted devices. They also propose mitigation strategies by considering potential health risks as well as federal and state ambient air quality standards. The AQMD monitors and manages information regarding concentrations of particulate matter and ozone air pollutants. The Shasta County Air Quality Management District is also responsible for open burning permits for hazard reduction, land clearing, forest management, or agricultural projects.

The clean air strategy of the Shasta County AQMD includes the preparation of plans for the attainment of ambient air quality standards, when needed, adoption and enforcement of rules and regulations concerning sources of air pollution, and issuance of permits for stationary sources of air pollution. It should be noted that once the land is taken into trust, the Shasta County AQMD would not have jurisdiction over the site; the USEPA and the Tribe would have jurisdiction over the site. However, off-site improvements would be subject to applicable Shasta County AQMD rules and regulations in effect at the time of construction. Descriptions of rules that may be applicable to off-site construction include, but are not limited to:

- Shasta County AQMD Rule 2-1A, Authorities to Construct/Permits to Operate - Specifies that any person who uses construction equipment for construction activities must obtain a permit to operate prior to installation activities.
- Shasta County AQMD Rule 2-2, Emissions Reduction Credit and Banking Rule - Provides for a mechanism for permitted and non-permitted emissions sources to deposit, transfer, and use emission reduction credits (ERCs) as offsets as allowed by applicable laws and regulations. The provisions of Rule 2:2 apply to the deposit, transfer, and use of ERCs from stationary sources and open biomass burning sources of air pollution emissions. ERCs are typically required when stationary source pollutants exceed 25 tons per year.
- Shasta County AQMD Rule 3-2, Specific Air Contaminants - Controls the amount of air contaminants allowed to be discharged into the atmosphere.
- Shasta County AQMD Rule 3-31, Architectural Coatings - Controls the architectural coatings and solvents used.
- Shasta County AQMD Rule 3-15, Cutback and Emulsified Asphalt - Cutback and emulsified asphalt application shall be conducted in accordance with Rule 3-15.
- Shasta County AQMD Rule 3-16, Fugitive, Indirect, or Non-Traditional Sources - Controls the emission of fugitive dust during earth-moving, construction, demolition, bulk storage, and conditions resulting in wind erosion.
- Shasta County AQMD Rule 3-28, Stationary Internal Combustion Engines - Limits the emissions of NOX and CO from stationary internal combustion engines.

Shasta County AQMD Rule 3-32, Adhesives and Sealants - Limits the emissions of volatile organic compounds (VOCs) from adhesives and sealants and associated primers, and from related surface preparation solvents, cleanup solvents, and strippers. Shasta County AQMD Rule 3-33, Wood Products Coating Operations - Limits the emissions of volatile organic compounds (VOCs) from coatings and strippers used on wood products and from products used in surface preparation and cleanup.

LIVING RESOURCES

FEDERAL

Federal Endangered Species Act

The U.S. Fish & Wildlife Service (USFWS) enforces the provisions of the federal Endangered Species Act (FESA) for all terrestrial species. Section 9 (§ 1538) prohibits the "take" of a listed species by anyone, including private individuals and state and local agencies. Threatened and endangered species on the federal list (50 CFR Sections 17.11 and 17.12) are protected from take, which is defined as direct or indirect harm. If "take" of a listed species is incidental to an otherwise lawful activity, this triggers the need for consultation under Section 7 of the FESA for federal agencies, including tribes.

Pursuant to the requirements of the FESA, a federal agency reviewing a project within its jurisdiction must determine whether any federally listed species may be present on a project site and whether the project will have a potentially significant impact upon such species. A discussion of regionally listed species is provided in consideration of potential impacts associated with project implementation. Under the FESA, habitat loss is considered to be an impact to the species. In addition, the agency is required to determine whether the project is likely to jeopardize the continued existence of any species that is proposed for listing under the FESA or to result in the destruction or adverse modification of critical habitat proposed to be designated for such species (16 USC Section 1536[3], [4]). Therefore, project-related impacts to these species, or their habitats, would be considered significant.

Migratory Bird Treaty Act

Migratory birds are protected under the federal Migratory Bird Treaty Act (MBTA) of 1918 (16 USC 703-711). The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed under 50 CFR 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). The direct injury or death of a migratory bird due to construction activities or other construction-related disturbance that causes nest abandonment, nestling abandonment, or forced fledging would be considered take under the MBTA. As such, project-related disturbances must be reduced or eliminated during the nesting season. The general nesting season extends from February 15 to September 15.

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act was originally enacted in 1940 to protect bald eagles and was later amended to include golden eagles (16 USC Subsection 668-668). This act prohibits take, possession, and commerce of bald and golden eagles and associated parts, feathers, nests, or eggs with limited exceptions. The definition of take is the same as the definition under the FESA. The USFWS established five recovery programs in the mid-1970s based on geographical distribution of the species. Critical Habitat was not designated by regulation under FESA. In 1995, the USFWS reclassified the bald eagle from endangered to threatened under FESA in the contiguous 48 states, excluding Michigan, Minnesota, Wisconsin, Oregon, and Washington where it had already been listed as threatened. In 2007, the bald eagle was federally delisted under FESA. However, the provisions of the act remain in place for protection of bald and golden eagles.

Clean Water Act (CWA) Sections 404 and 401

A project that involves discharge of dredged or fill material in navigable Waters of the U.S. must first obtain authorization from the USACE, under Section 404 of the Clean Water Act (CWA). USACE maintains the final authority for determining whether an aquatic habitat qualifies as a Water of the U.S. Projects requiring a 404 permit under the CWA also require a Section 401 certification from either USEPA for trust land, or the RWQCB for non-trust land. These two agencies also administer the NPDES general permits for construction activities disturbing one acre or more.

STATE AND LOCAL

California Endangered Species Act

The California Endangered Species Act (CESA) is similar to FESA, but is limited to species under state jurisdiction listed by the state as threatened or endangered. Under Section 2080 of the California Fish and Game Code, off-reservation take is prohibited. Take is defined as activities that “hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill.” Under Section 2081, the California Department of Fish and Wildlife (CDFW) can authorize take if an incidental take permit is issued by the Secretary of the Interior or Commerce in compliance with FESA for jointly listed species, or if the director of CDFW issues a permit and impacts are minimized and mitigated for State listed species. In general, CESA does not cover habitat impacts.

California Department of Fish and Game Code

California Fish and Game Code Sections 3503, 3503.5, and 3800 prohibit the off-reservation possession, incidental take, or needless destruction of birds, their nests, and eggs. Section 3511 lists birds or other species that are “fully protected” off-reservation and may not be taken or possessed except under specific permit. Consultation with CDFW may be required if construction would potentially impact off-reservation state-listed species or nesting raptors. Section 1602 requires notification before beginning off-reservation activities that obstruct or divert the natural flow of an off-reservation river, stream, or lake; change or use of any material from the bed, channel, or bank of an off-reservation river, stream, or lake; or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it can pass into an off-reservation river, stream, or lake. California Fish and Game Code Section 1602 applies to off-reservation perennial, intermittent, and ephemeral bodies of water in California.

Shasta County General Plan

The objectives and policies contained in Section 6.7 Fish and Wildlife element of the County of Shasta General plan address the need to preserve unique and important aquatic, fish and wildlife habitats, and plant communities for their biological resource and ecological values, as well as for their direct and indirect benefits to the citizens of Shasta County. The Fish and Wildlife Element incorporates requirements from the State-mandated Conservation and Open Space Elements found in Government Code Sections 65302(d) and 65560, respectively.

CULTURAL RESOURCES

FEDERAL

Section 106 of the National Historic Preservation Act

Section 106 of the National Historic Preservation Act (NHPA), as amended, and its implementing regulations found in 36 CFR Part 800 require federal agencies to identify cultural resources that may be affected by actions involving federal lands, funds, or permitting. The Bureau of Indian Affairs must comply with Section 106 for the proposed trust acquisition. The significance of the resources must be evaluated using established criteria outlined in 36 CFR 60.4, as described below.

If a resource is determined to be a historic property, Section 106 of the NHPA requires that effects of the federal undertaking on the resource be determined. A historic property is defined as:

...any prehistoric or historic district, site, building, structure or object included in, or eligible for inclusion in the National Register of Historic Places, including artifacts, records, and material remains related to such a property...(NHPA Sec. 301[5])

Section 106 of the NHPA prescribes specific criteria for determining whether a project would adversely affect a historic property, as defined in 36 CFR 800.5. An impact is considered adverse when prehistoric or historic archaeological sites, structures, or objects that are listed on or eligible for listing in the National Register of Historic Places (NRHP) are subjected to the following.

- physical destruction of or damage to all or part of the property
- alteration of a property
- removal of the property from its historic location
- change of the character of the property's use or of physical features within the property's setting that contribute to its historic significance
- introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant historic features
- neglect of a property that causes its deterioration
- transfer, lease, or sale of the property out of federal control without adequate and legally enforceable restrictions or conditions to ensure long-term preservation of the property's historic significance

If the historic property will be adversely affected by the undertaking, then prudent and feasible measures to resolve adverse impacts must be taken. The State Historic Preservation Office must be provided an opportunity to review and comment on these measures prior to project implementation.

National Register of Historic Places

The eligibility of a resource for listing in the NRHP is determined by evaluating the resource using criteria defined in 36 CFR § 60.4 as follows. The quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects of state and local

importance that possess integrity of location, design, setting, materials, workmanship, feeling, association, and

- A. that are associated with events that have made a significant contribution to the broad patterns of our history;
- B. that are associated with the lives of persons significant in our past;
- C. that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. that have yielded, or may be likely to yield, information important to prehistory or history.

Sites younger than 50 years, unless of exceptional importance, are not eligible for listing in the NRHP. In addition to meeting at least one of the criteria listed above, the property must also retain enough integrity to enable it to convey its historic significance. The NRHP recognizes seven aspects or qualities that, in various combinations, define integrity. These seven elements of integrity are location, design, setting, materials, workmanship, feeling, and association. To retain integrity a property will always possess several, and usually most, of these aspects.

Archaeological Resources Protection Act of 1979

The Archaeological Resources Protection Act of 1979 (ARPA; Public Law 96-95; 16 USC 470aa-mm) provides for the protection of archaeological resources and sites that are on public and Indian lands, and fosters increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals having collections of archaeological resources and data that were obtained before October 31, 1979. ARPA also provides for penalties for noncompliance and illegal trafficking.

Native American Graves Protection and Repatriation Act

The Native American Graves Protection and Repatriation Act (NAGPRA), 25 USC 3001 et seq., provides a process for museums and federal agencies to return Native American cultural items – human remains, funerary objects, sacred objects, or objects of cultural patrimony – to lineal descendants, and culturally affiliated Indian tribes and Native Hawaiian organizations. NAGPRA includes provisions for unclaimed and culturally unidentifiable Native American cultural items, intentional and inadvertent discovery of Native American cultural items on federal and Tribal lands, and penalties for noncompliance and illegal trafficking.

Paleontological Resources Preservation Act

Paleontological resources are defined as the traces or remains of prehistoric plants and animals. Such remains often appear as fossilized or petrified skeletal matter, imprints, or endocasts, and reside in sedimentary rock layers. Paleontological resources are considered important for their scientific and educational value. Fossil remains of vertebrates are considered significant. Invertebrate fossils are considered significant if they function as index fossils. Index fossils are those that appear in the fossil record for a relatively short and known period of time. This allows geologists to interpret the age range of

the geological formations in which they are found. The Paleontological Resources Preservation subtitle of the Omnibus Public Land Management Act, 16 USC 470aaa to aaa-11 requires the U.S. Department of Agriculture (USDA) and the U.S. Department of the Interior to issue implementation regulations to provide for the preservation, management, and protection of paleontological resources on federal lands and ensure that these resources are available for current and future generations to enjoy as part of America's national heritage.

STATE AND LOCAL

PRC Section 21083.2

CEQA requires that, for projects financed by or requiring the discretionary approval of public agencies in California, the effects that a project has on historical and unique archaeological resources be considered (Public Resources Code [PRC] Section 21083.2). Historical resources are defined as buildings, sites, structures, or objects, each of which may have historical, architectural, archaeological, cultural, or scientific importance (PRC Section 50201).

CEQA Guidelines Section 15064.5

The CEQA Guidelines (Section 15064.5) define three cases in which a property may qualify as a historical resource for the purpose of CEQA review:

- The resource is listed in or determined eligible for listing in the California Register of Historical Resources (CRHR).
- The resource is included in a local register of historic resources, as defined in PRC Section 5020.1(k), or is identified as significant in a historical resources survey that meets the requirements of PRC Section 5024.1(g) (unless the preponderance of evidence demonstrates that the resource is not historically or culturally significant).
- The Lead Agency determines that the resource may be a historical resource as defined in PRC Section 5020.1(j), 5024.1, or significant as supported by substantial evidence in light of the whole record. Section 5024.1 defines eligibility requirements and states that a resource may be eligible for inclusion in the CRHR if it:
 1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
 2. Is associated with the lives of persons important in our past;
 3. Embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of an important creative individual, or possesses high artistic values; or
 4. Has yielded, or may be likely to yield, information important in prehistory or history.

Resources must retain integrity to be eligible for listing on the CRHR. Resources that are listed in or eligible for listing in the National Register of Historic Places (NRHP) are considered eligible for listing in the CRHR, and thus are significant historical resources for the purposes of CEQA (PRC Section 5024.1(d)(1)).

California Health and Safety Code Section 7050.5

In the event of discovery of human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined whether the remains are Native American. The coroner shall make his or her determination within two working days from the time the person responsible for the excavation, or his or her authorized representative, notifies the coroner of the discovery or recognition of the human remains. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC).

Assembly Bill 52

AB 52, signed into law in 2014, established a new category of resources in CEQA called “tribal cultural resources” that considers the tribal cultural values in addition to the scientific and archaeological values when determining impacts and mitigation. Pursuant to PRC, Division 13, Section 21074, TCRs can be either:

1. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either:
 - a. Included or determined to be eligible for inclusion in the CRHR; or
 - b. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.
2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to the eligibility criteria for the CRHR (PRC § 5024.1(c)). In applying these criteria, the lead agency must consider the significance of the resource to a California Native American Tribe.

Native American tribes traditionally and culturally affiliated with a geographic area may have expertise concerning their tribal cultural resources. In light of this, AB 52 requires that, within 14 days of a decision to undertake a project or determination that a project application is complete, a lead agency shall provide written notification to California Native American tribes that have previously requested placement on the agency’s notice list. Notice to tribes shall include a brief project description, location, lead agency contact information, and the statement that the tribe has 30 days to request consultation. The lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a tribe.

Shasta County General Plan

The Heritage Resources element of the Shasta County General Plan includes the following objectives and policies for cultural resources:

Objectives: HER-1: Protection of significant prehistoric and historic cultural resources

Policies: HER-a: Development projects in areas of known heritage value shall be designed to minimize degradation of these resources. Where conflicts are unavoidable, mitigation measures which reduce such impacts shall be implemented. Possible mitigation measures may include clustering, buffer or nondisturbance zones, and building siting requirements.

SOCIOECONOMIC CONDITIONS

FEDERAL

Executive Order 12898

Executive Order 12898, *Federal Actions to Address Environmental Justice in Minority and Low-Income Populations*, as amended, directs federal agencies to develop an Environmental Justice Strategy that identifies and addresses disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations. The CEQ has oversight responsibility of the federal government's compliance with EO 12898 and NEPA. The CEQ, in consultation with the USEPA and other agencies, has developed guidance to assist federal agencies with their NEPA procedures so that environmental justice concerns are effectively identified and addressed. The document *Final Guidance for Incorporating Environmental Justice Concerns in EPA's NEPA Compliance Analyses* provides the direction on how to analyze the impacts of actions on low-income and minority populations. Communities may be considered "minority" under the executive order if one of the following characteristics apply:

- The cumulative percentage of minorities within a census tract is greater than 50 percent (primary method of analysis).
- The cumulative percentage of minorities within a census tract is less than 50 percent, but the percentage of minorities is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis (secondary method of analysis).

According to USEPA, either the county or the state can be used when considering the scope of the "general population." A definition of "meaningfully greater" is not given by the CEQ or USEPA, although the latter has noted that any affected area that has a percentage of minorities above the state's percentage is a potential minority community and any affected area with a minority percentage double that of the state's is a definite minority community under EO 12898. Communities may be considered "low-income" under the EO if one of the following characteristics applies.

- The median household income for a census tract is below the poverty line (primary method of analysis).
- Other indications are present that indicate a low-income community is present within the census tract (secondary method of analysis).

In most cases, the primary method of analysis will suffice to determine whether a low-income community exists in the affected environment. However, when a census tract income may be just over the poverty line or where a low-income pocket within the tract appears likely, the secondary method of analysis may be warranted. Other indications of a low-income community under the secondary method of analysis include limited access to health care, overburdened or aged infrastructure, and dependence on subsistence living.

STATE AND LOCAL

SB 1000 CA Code 65302(h)

Requires all General Plans identify disadvantaged communities within the Plans jurisdiction. These communities are defined by the California Environmental Protection Agency pursuant to Section 39711 of the Health and Safety Code, or is a community that is defined as a low-income neighborhood that is disproportionately affected by pollution and other environmental health hazards. The General Plan is required to create objectives and policies to reduce health risks within these disadvantaged communities including, but not limited to, the reduction of pollution exposure, improving air quality, promotion of public facilities, food access, safe and sanitary homes, and physical activity.

Shasta County General Plan

Chapter 7.3 of the General Plan Housing Element identifies residential sites adequate to accommodate housing for all income levels. Addresses conservation and improvement of existing affordable housing stock and promotes housing opportunities for all persons. The State Department of Housing and Community Development (HCD) distributes the Regional Housing Need Allocation (RHNA) to jurisdictions within Shasta County based on income categories. The RHNA aims to increase the housing supply, promote the relationship between jobs and housing, balance household income distributions, develop socioeconomic equity, protect environmental and agricultural resources and encourage efficient development patterns.

TRANSPORTATION AND CIRCULATION

Federal Transportation Improvement Program

The Federal Transportation Improvement Program (FTIP) is a plan for the implementation of the long-range Regional Transportation Plan. The FTIP presents manageable components to federal funding agencies for the funding of long-term plans and establishes a systematic approach to programming capital improvement projects over a five-year term, and is subject to continual modifications.

STATE

California Department of Transportation

The California Department of Transportation establishes Caltrans as the managing agency over permitting and regulation of state roadways. They are responsible for numerous programs involved with transportation standards, engineering services, environmental review, as well as the management of rail and mass transportation.

Shasta County General Plan

The Shasta County General Plan, Circulation Element, dated September 2004, outlines transportation related goals and policies within the County. These guidelines state that Shasta County shall adopt LOS C standards for any new roads. New developments shall not be approved unless traffic impacts are adequately mitigated. Such mitigation may take the form of, but not limited to, provision of capacity improvements and demand reduction measures. The County has determined that a project may have significant impacts on traffic and circulation if it does any of the following:

- Causes an intersection or roadway segment that operates acceptable without the project to degrade to an unacceptable LOS due to the addition of traffic from the project
- Causes an intersection that is operating at an unacceptable LOS without the project and experiences an increase of 5 or more seconds of control delay due to the addition of the project traffic.
- Causes a roadway segment that operates unacceptably to experience an increase in its daily volume to a capacity ratio of 0.05 or greater due to the addition of project traffic.

LAND USE

FEDERAL

Farmland Protection Policy Act

The Farmland Protection Policy Act (FPPA) is intended to minimize the impact federal programs have on the unnecessary and irreversible conversion of farmland to nonagricultural uses. It assures that federal programs are administered in a manner that is compatible with state and local units of government, and private programs and policies to protect farmland (7 USC § 4201).

The Natural Resource Conservation Service (NRCS) is responsible for the implementation of the FPPA and categorizes farmland in a number of ways. These categories include: prime farmland, farmland of statewide importance, and unique farmland. Prime farmland is considered to have the best possible features to sustain long-term productivity. Farmland of statewide importance includes farmland similar to prime farmland, but with minor shortcomings, such as greater slopes or less ability to store soil moisture. Unique farmland is characterized by inferior soils and, depending on climate, generally needs irrigation.

The NRCS fulfills the directives of the Soil and Water Conservation Act (16 USC § 2001-2009) by identifying significant areas of concern for the protection of national resources. NRCS uses a land evaluation and site assessment (LESA) system to establish a Farmland Conversion Impact Rating (FCIR) score. The FCIR is completed on form AD-1006. The FCIR form has two components: land evaluation, which rates soil quality up to 100 points, and the site assessment, which measures other factors that affect the property's viability up to 160 points.

The total FCIR score is used as an indicator for the project's sponsor to consider alternative sites if the potential adverse impacts on the farmland exceed the allowable level; however, the FPPA does not

require federal agencies to alter projects to avoid or minimize farmland conversion. Sites receiving a combined score of less than 160 (out of 260 possible points) do not require further evaluation. For sites with a combined score greater than 160 points, at least two other alternatives are required to be considered and the alternative with the lowest number of points selected unless there are other overriding considerations.

Williamson Act

The Williamson Act, also known as the California Land Conservation Act of 1965, allows local governments to enter into contracts with private landowners to restrict specific parcels for agricultural use or open space. The private land owner then receives property tax assessments that are much lower than the market value. The Williamson Act also outlines enrollment guidelines, acreage minimums, enforcement procedures, allowable uses, and compatible uses.

STATE AND LOCAL

Shasta County General Plan

The Shasta County General Plan outlines statements on future growth, development, and quality of life in Shasta County. The plan is amendable and revisable as it is recognized that the community values may change over time. The general plan's overall purpose is to preserve the quality of life during periods of growth and appropriately address the concerns of the growing community while preserving the current landscape.

Shasta County Code of Ordinances

The Shasta County Code of Ordinances designates zoning districts and outlines land use planning for the preservation of resources and in the interest of public welfare. Shasta County Code of Ordinances Section 17.02.010 outlines its purpose to be "to promote and protect the public health, safety, peace, morals, comfort, convenience and the general welfare; implement the county general plan, and to facilitate and guide growth in accordance with the general plan; to protect the social and economic stability of residential, commercial, industrial, resource production, and recreational activities within the county through the orderly, planned use of the land."

PUBLIC SERVICES AND UTILITIES

FEDERAL

Safe Drinking Water Act

Minimum national drinking water standards and guidelines for groundwater protection are established through the 1974 Safe Drinking Water Act (amended in 1986 and 1996). Contaminants of concern relevant to domestic water supply are defined as those that pose a public health threat or that alter the aesthetic acceptability of the water. The USEPA regulates contaminants through the development of national primary and secondary Maximum Contaminant Levels for drinking water.

STATE AND LOCAL

California Integrated Waste Management Act

State Assembly Bill 939 (AB 939), or California Integrated Waste Management Act, requires all jurisdictions to enact plans and programs to divert 50 percent of all solid waste away from landfills. These plans and programs include, but are not limited to Source Reduction, Recycling, Composting, Special Waste Component, and Public Education. A local assistance staff will help localities meet their planning and diversion mandates and impose fines if the diversion plan is not met.

Shasta County General Plan

Shasta County General Plan establishes responsibility of local municipalities to provide care and services to the general populace of Shasta County. Section 5.4 outlines Fire and Sheriff protection, Section 6.4 outlines Electricity, Natural Gas and Renewable Energy Resources, Section 6.6 plans the distribution of potable water. Section 7.5 provides a plan for public facilities, such as wastewater and solid waste disposal.

Shasta County Municipal Code

Shasta County Municipal Code defines the duties of public services, including but not limited to: the Sheriff (Title 2 Chapter 2.20), County Fire Warden (Title 2 Chapter 2.32), Water Service (13.12), Sewage (8.40) and Refuse Collection (8.32). The Municipal Code outlines service and connection fees, permitting requirements, prohibited actions and penalties. The code aims to maintain public health and safety, general welfare and zoning rules.

NOISE

FEDERAL

The Federal Interagency Committee on Noise

The Federal Interagency Committee on Noise (FICON) provides guidance in how to assess noise impacts resulting from aircraft operation. However, although FICON recommendations were specifically developed to assess aircraft noise impacts, these criteria have been applied to other sources of noise similarly described in terms of cumulative noise exposure metrics.

TABLE 3. SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE LEVELS

Ambient Noise Level without Project, LDN	Increase Required for Significant Impact
< 60 dB	+ 5.0 dB or more
60 to 65 dB	+ 3.0 dB or more
> 65 dB	+ 1.5 dB or more
Source: FICON, 1992	

Noise Abatement Criteria

The FHWA establishes Noise Abatement Criteria (NAC) for various land uses that have been categorized

based on activity. Land uses are categorized on the basis of their sensitivity to noise as indicated in the table below. The FHWA NAC is based on peak traffic hour noise levels.

TABLE 4. FEDERAL NOISE ABATEMENT CRITERIA HOURLY A-WEIGHTED SOUND LEVEL DECIBELS

Activity Category	Activity Criteria Leq (h), dBA	Evaluation Location	Activity Category Description
A	57	Exterior	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.
B	67	Exterior	Residential.
C	67	Exterior	Active sport areas, amphitheaters, auditoriums, campgrounds, cemeteries, daycare centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreation areas, Section 4(f) sites, schools, television studios, trails and trail crossings.
D	52	Interior	Auditoriums, daycare centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or non-profit institutional structures, radio studios, recording studios, schools, and television studios.
E ¹	72	Exterior	Hotels, motels, offices, restaurants/bars, and other developed lands, properties or activities not included in A-D or F.
F	--	--	Agriculture, airports, bus yards, emergency services, industrial, logging, maintenance facilities, shipyards, utilities (water resources, water treatment, electricity), and warehousing.
G	--	--	Undeveloped lands that are not permitted.
Notes: ¹ Includes undeveloped lands permitted for this activity category. Source: 23 CFR 772			

FHWA Construction Noise Thresholds

The Federal Highway Administration (FHWA) provides construction noise level thresholds in its Construction Noise Handbook, 2006 in order to evaluate the potential noise impacts for projects.

TABLE 5. FEDERAL CONSTRUCTION NOISE THRESHOLDS

Noise Receptor Locations and Land Uses	Daytime (7 am - 6 pm)	Evening (6 pm - 10 pm)	Nighttime (10 pm - 7 am)
	dBA, Leq ¹		
Noise-Sensitive Locations (residences, institutions, hotels, etc.)	72 or Baseline + 5 (whichever is louder)	Baseline + 5	Baseline + 5 (if Baseline < 70) or Baseline + 3 (if Baseline > 70)
Commercial Areas (businesses, offices, stores, etc.)	77 or Baseline + 5	None	None
Industrial Areas (factories, plants, etc.)	82 or Baseline + 5	None	None
Notes: ¹ Leq is the equivalent continuous sound level; Leq thresholds were empirically determined using L ₁₀ (FHWA, 2006). dBA are Source: FHWA, 2006.			

Vibration Standards

The effects of ground-borne vibrations typically cause only a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically an annoyance only indoors, where the associated effects of the building shaking can be notable. Ground-borne noise is an effect of ground-borne vibration and only exists indoors since it is produced from noise radiated from the motion of the walls and floors of a room and may consist of the rattling of windows or dishes on shelves.

The Federal Transit Administration (FTA) utilizes criteria for acceptable ground-borne vibration which is expressed in terms of root mean squared (RMS) velocity levels in decibels. Vibration categories are classified by land use for a general assessment of impact levels.

TABLE 6. GROUND-BORNE VIBRATION (GBV) IMPACT CRITERIA FOR GENERAL ASSESSMENT

Land Use Category	GBV Impact Levels (VdB re 1 micro-inch / sec)		
	Frequent Events ¹	Occasional Events ²	Infrequent Events ³
Category 1: Buildings where vibration would interfere with interior operations.	65 VdB	65 VdB	65 VdB
Category 2: Residences and buildings where people normally sleep.	72 VdB	75 VdB	80 VdB
Category 3: Institutional land uses with primarily daytime use.	75 VdB	78 VdB	83 VdB
1. "Frequent Events" is defined as more than 70 vibration events of the same source per day. Most rapid transit projects fall into this category. 2. "Occasional Events" is defined as between 30 and 70 vibration events of the same source per day. Most commuter trunk lines have this many operations. 3. "Infrequent Events" is defined as fewer than 30 vibration events of the same kind per day. This category includes most			

commuter rail branch lines.

4. This criterion limit is based on levels that are acceptable for most moderately sensitive equipment such as optical microscopes. Vibration-sensitive manufacturing or research will require detailed evaluation to define acceptable vibration levels. Ensuring lower vibration levels in a building often requires special design of the HVAC systems and stiffened floors.

5. Vibration-sensitive equipment is generally not sensitive to ground-borne noise.

Source: FTA, 2006

Peak particle velocity (PPV) is often used to measure vibration. PPV is the maximum instantaneous peak (inches per second) of the vibration signal. The PPV levels are used to estimate L_v or VdB levels (vibration decibels with a reference velocity of one micro-inch per second). Human responses to vibration vary by the source of vibration, which is either continuous or transient. Continuous sources of vibration include construction while transient sources include truck movements. Generally, the thresholds of perception and annoyance are higher for transient sources than for continuous sources.

The table below summarizes the FTA's guideline vibration damage criteria for various structural categories. As shown therein, buildings extremely susceptible to vibration damage could be damaged if vibration levels exceed 90 VdB. Additionally, although humans have a perceptibility threshold of 65 VdB, human response to vibration is not usually significant unless the vibration exceeds 70 VdB (FTA, 2006). Background vibration velocity in residential areas is usually 50 VdB or lower.

TABLE 7. CONSTRUCTION VIBRATION DAMAGE CRITERIA

Building Category	Approximate PPV (in/sec)	Approximate L_v (VdB)
Reinforced-concrete, steel, or timber (no plaster)	0.5	102
Engineered concrete and masonry (no plaster)	0.3	98
Non-engineered timber and masonry buildings	0.2	94
Buildings extremely susceptible to vibration damage	0.12	90

Source: FTA, 2006

STATE AND LOCAL

California Noise Insulation Standards

The State of California establishes noise limits for vehicles licensed to operate on public roads. The State has also established noise insulation standards for new multi-family residential units, hotels, and motels that would be subject to high levels of transportation-related noise. The requirements are collectively known as the California Noise Insulation Standards (CNIS; Title 24, CCR). The CNIS set forth an interior day-night average noise level (L_{dn}) standard of 45 dB in a habitable room. An acoustical analysis demonstrating how dwelling units have been designed to meet this interior standard is required where such units are proposed in areas subject to noise levels greater than 60 dB L_{dn} .

Shasta County General Plan

Section 5.5.3 of the General Plan's housing element outlines objectives of the county surrounding noise and activities related to or which generate noise.

Objectives

- To protect County residents from the harmful and annoying effects of exposure to excessive noise.
- To protect the economic base of the County by preventing incompatible land uses from encroaching upon existing or programmed land uses likely to create significant noise impacts.
- To encourage the application of state-of-the-art land use planning methodologies in the area of managing and minimizing potential noise conflicts.

TABLE 8. TRANSPORTATION NOISE RELATED LAND USE COMPATIBILITY GUIDELINES FOR DEVELOPMENT

Land Use Category	Community Noise Exposure (L _{dn} OR CNEL, dB)		
	G.A. ¹	C.A. ²	G.U. ³
Residential, Theatres, Music Halls, Meeting Halls, Churches, & Auditoriums	55 - 60	60 - 50	75+
Transient Lodging – Motels, Hotels, & RV Parks	55 - 60	65 – 80	80+
Schools, Libraries, Museums, Nursing Homes & Child Care	55 - 60	65 – 80	80+
Playgrounds, Neighborhood Parks, & Amphitheatres	55 - 75	75 - 80	80+
Office Buildings, Business, Commercial, & Professional	55 - 70	70 - 80	80+
Industrial, Manufacturing, Agriculture, & Utilities	55 - 75	75+	N/A
Golf Courses, Outdoor Spectator Sports & Riding Stables	55 - 75	75-85	85+
Interpretation: 1. G.A.= Generally Acceptable 2. C.A.= Conditionally Acceptable G. U.= Generally Unacceptable Source: County of Shasta, 2020.			

Exemptions to land use certain activities are outlined within the table above along with generally acceptable noise levels. Conditionally acceptable noise levels may be accepted if proper construction measures are applied however, noise production shall be minimized through proper site planning, building materials and design.

5.5.4 Site Planning

- Use of building setbacks and dedication of noise easements to increase the distance between noise source and the receiver.
- Locating uses and orienting buildings that are compatible with the higher noise levels adjacent to noise-generators or in clusters as means to shield noise-sensitive areas.
- Clustering office, commercial, or multiple-family residential structures to reduce interior open-space noise levels.
- Locate automobile and truck access to commercial or industrial land uses abutting residential parcels at the maximum practical distance from the residential parcels.
- Avoid the siting of commercial and industrial loading and shipping facilities adjacent to residential parcels whenever practicable.
- Parking areas for commercial and industrial uses should be set back from adjacent residential uses to the maximum extent feasible, or buffered and shielded by walls, fences, berms, and/or landscaping techniques

Building Materials/Design

- Using dense building materials and tight-fitting doors.
- Employing multi-glazed and multi-pane windows
- Placing unopenable windows on the side of the structure facing a major roadway and entry doors on the side of the building facing away from the major roadway.
- Avoid placing balconies and patio areas facing major transportation routes.

HAZARDOUS MATERIALS

FEDERAL

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) regulates the land disposal of hazardous materials from cradle-to-grave. This means establishing a regulatory framework for the generation, transport, treatment, storage and disposal of hazardous waste. Specifically, Subtitle D of RCRA pertains to non-hazardous solid waste and Subtitle C focuses on hazardous solid waste. A solid waste can consist of solids, liquids and gases, but these must be discarded in order to be considered waste. Additionally, the USEPA has developed regulations to set minimum national technical standards for how disposal facilities should be designed and operated. States issue permits to ensure compliance with USEPA and state regulations. The regulated community is comprised of a diverse group that must comprehend and adhere to RCRA regulations. These groups can consist of hazardous waste generators, government agencies, small businesses, and gas stations with underground petroleum tanks.

Hazard Communication Standard

The hazard communications standard requires that chemical manufacturers evaluate the potential risks that may be posed by use of such chemicals. In turn, employers utilizing such chemicals must inform employees of the chemical analysis and associated risks of use. The Occupational Health and Safety Administration is the governing body in charge of defining the Hazard Communication Standards.

Federal Hazardous Substances Act

The Consumer Product Safety Commission has a limited role in regulating hazardous substances; it primarily deals with the labeling of consumer products through the Federal Hazardous Substances Act (FHSA). FHSA only requires products that may at some point be in the presence of people's dwellings to be labeled, including during purchase, storage, or use. These labels must alert consumers of the potential hazards that the product may pose. However, in order for a product to be required for labeling, the product must be toxic, corrosive, flammable/combustible, an irritant, a strong sensitizer, or have the ability to generate pressure through decomposition, heat, or other means. Furthermore, the product must possess the ability to cause severe personal injury or substantial illness during or as a result of any customary or reasonably predictable handling or use, including reasonably foreseeable ingestion by children.

Federal Insecticide, Fungicide, and Rodenticide Act

The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) addresses the sale, distribution, and labeling of pesticides, as well as the certification and training of pesticide applicators. FIFRA establishes recordkeeping and reporting requirements on certified applicators of restricted use pesticides. Furthermore, FIFRA imposes storage, disposal, and transportation requirements on registrants and applicants for the registration of pesticides. Pesticide use is regulated through requirements to apply pesticides in a manner consistent with the label. The labeling requirement includes directions for use, warnings, and cautions along with the uses for which the pesticide is registered (e.g., pests and appropriate applications). This includes the specific conditions for the application, mixture, and storage of the pesticide.

Additionally, the label must specify a time period for re-entry into an area after the pesticide has been applied, and when crops may be harvested after the application of the pesticide. If a pesticide is used in a manner contrary to specifics on its label, then the use constitutes a violation of the FIFRA.

Toxic Substances Control Act

The federal Toxic Substances Control Act (TSCA), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act, permits the USEPA to evaluate the potential risk from novel and existing chemicals and address unacceptable risks chemicals may have on human health and the environment. The USEPA oversees the production, importation, use, and disposal of certain chemicals. This includes the USEPA having the authority to require record keeping, reporting, and test requirements and restrictions associated with certain chemical substances and/or mixtures. However, certain groups of chemicals are excluded from TSCA consideration, including—but not limited to—food, drugs, cosmetics and pesticides. Examples of chemicals included in TSCA consideration are lead paint, asbestos, mercury, formaldehyde, and polychlorinated biphenyls.

Emergency Planning and Community Right-to-Know Act

The federal Emergency Planning and Community Right-to-Know Act (EPCRA) is designed to assist local communities to protect public health, safety, and the environment from chemical hazards. The

Community Right-to-Know provisions help increase the public's knowledge and access to information on chemicals at individual facilities, their uses, and releases into the environment. The EPCRA also requires industry to report on the storage, usage, and releases of hazardous substances to federal, state, and local governments, and states and communities can use the information gained to improve chemical safety and protect public health and the environment.

Comprehensive Environmental Response, Compensation and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980, also known as Superfund, provides funds to clean up uncontrolled, closed, or abandoned hazardous waste sites, as well as accidents, spills, and other emergency releases of pollutants and contaminants into the environment. The USEPA cleans up orphan sites when potentially responsible parties cannot be identified or located, or when they fail to act.

STATE AND LOCAL

California Environmental Protection Agency

The California Environmental Protection Agency (CalEPA) develops, implements, and enforces environmental laws that regulate air, water and soil quality, pesticide use, and waste recycling and reduction. CalEPA oversees and coordinates the activities of the Office of Environmental Health Hazard Assessment, the SWRCB, the Air Resources Board (ARB), the Department of Pesticide Regulation, Department of Toxic Substances Control (DTSC), and the Department of Resources Recycling and Recovery. The DTSC takes enforcement actions against violators, oversees hazardous wastes on contaminated properties, makes decisions on permit applications from companies that want to store, treat, or dispose of hazardous waste, and protects consumers against toxic ingredients in everyday products.

California Code of Regulations, Title 22, Division 4.5

CCR Title 22, Divisions 4 and Division 4.5 address off-Reservation environmental and public health standards for the management of hazardous waste. Hazardous materials are defined as those that pose a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment (22 CCR §66260.10). Hazardous waste as defined in 22 CCR § 66261.3 includes acutely hazardous waste, extremely hazardous waste, non-RCRA hazardous waste, RCRA hazardous waste, special waste, and universal waste.

California Health and Safety Code, Division 20, Chapter 6.95

California Health and Safety Code, Division 20, Chapter 6.95 requires off-Reservation businesses to plan and prepare for a chemical emergency through the preparation of a Hazardous Materials Inventory and a Hazardous Materials Business Plan (HMBP). The local Certified Unified Program Agency conducts routine inspections at off-Reservation businesses to submit HMBPs via California's Environmental Reporting System website.

Shasta County General Plan

Shasta County defines hazardous materials as all toxic, flammable, combustible, corrosive, poisonous, and radioactive substances which because of its quantity, concentration, or physical, chemical, or infectious characteristics may either:

- Cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness, or;
- Pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, disposed of, or otherwise managed" (California Health and Safety Code Section 25117).

Objectives and Policies relevant to hazardous materials are contained in the Hazardous Materials element of the general plan and include:

- 5.6.3 Objectives
 - HM-1 Protection of life and property from contact with hazardous materials through site design and land use regulations and storage and transportation standards.
 - HM-2 Protection of life and property in the event of the accidental release of hazardous materials through emergency preparedness planning.
- 5.6.4 Policies
 - HM-a The County shall make every effort to inform applicants for discretionary and nondiscretionary projects which are located within potential border zone property of known hazardous waste facilities that they must comply with State requirements regarding hazardous waste facilities. A map shall be prepared and maintained which identifies these areas.
 - HM-b Shasta County shall maintain an emergency preparedness plan for hazardous materials.
 - HM-c Shasta County shall adopt policies for hazardous materials use, transportation, storage and disposal as required by State laws.
 - HM-d Shasta County shall adopt policies for the protection of life and property from contact with hazardous materials through site design and land use regulations.
 - HM-e Any proposal for development of a disposal site for hazardous wastes in Shasta County shall be reviewed closely to ensure that no significant environmental impacts will result from the project. Review of such project may include a determination of what type of hazardous wastes may be disposed of at the site.

VISUAL RESOURCES

FEDERAL

National Scenic Byway Program

The National Scenic Byway Program was established by Congress in 1991 as the Intermodal Surface Transportation Efficiency Act. The Program is administered by the Federal Highway Administration and

was established to preserve scenic but less-traveled roadways. A national scenic byway is a road recognized by the U.S. Department of Transportation for one or more of six intrinsic qualities. Intrinsic qualities include archeological, cultural, historic, natural, recreational, and scenic. National scenic byways must already be designated as state scenic byways or must possess all six intrinsic qualities to be nominated.

STATE AND LOCAL

California State Scenic Highways

In 1963, the State Legislature established the California Scenic Highway Program through Senate Bill 1467 and 1468, provisions of which were added to the Streets and Highways Code. Scenic highway designation does not preclude nearby development; however, the program encourages development that does not degrade the scenic value of the highway corridor.

Shasta County General Plan

The Shasta County General Plan outlines the plans and goals related to visual resources. The County provides guidance on scenic highways placing emphasis on the importance of scenic corridors. The county strives to maintain a balance by valuing scenic corridors based on resource protection, County demand for corridor preservation in order to tailor protections appropriately. The Shasta County General Plan is an extension of federal and state regulations which ensures that visual resources in relation to scenic highways and visual resources are not compromised.

- Protection of the natural scenery along the official scenic highways of Shasta County from new development which would diminish the aesthetic value of the scenic corridor.
- New development along scenic corridors of the official scenic highway should be designed to relate to the dominant character of the corridor (natural or natural and man-made contrast) or of a particular segment of the corridor. Relationships shall be achieved in part through regulations concerning building form, site location, and density of new development.
- Recognition that the management practices of agriculture, timber, and other resource-based industries which may cause some degradation of the visual quality of the scenic corridor are inevitable but their impacts are temporary.

Custom Soil Resource Report for Intermountain Area, Parts of Lassen, Modoc, Shasta, and Siskiyou Counties, California

August 19, 2022

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

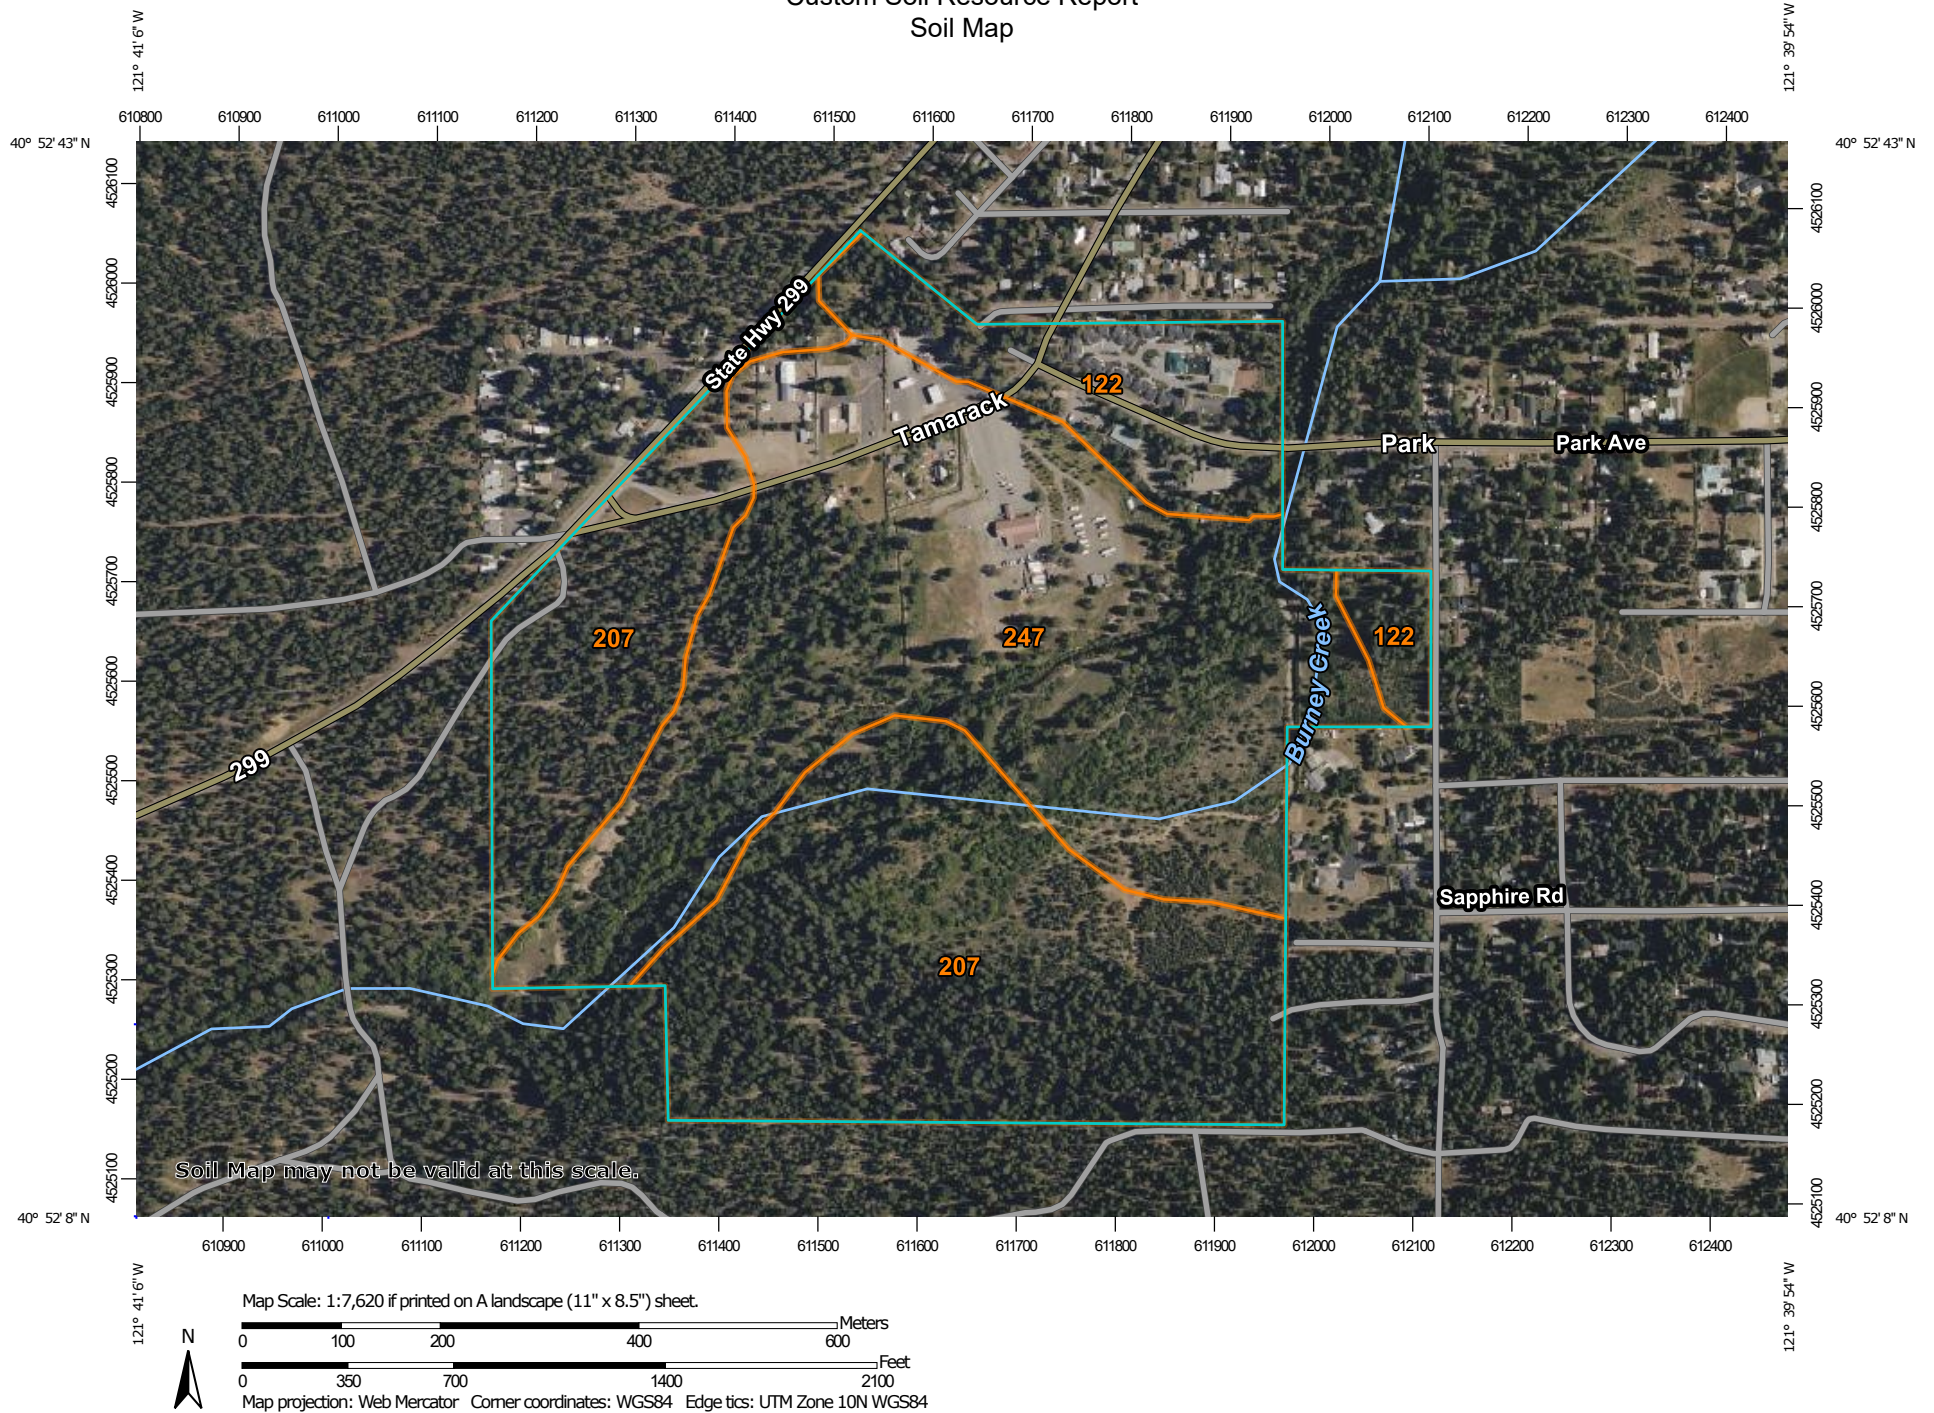

Custom Soil Resource Report

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Intermountain Area, Parts of Lassen, Modoc, Shasta, and Siskiyou Counties, California
Survey Area Data: Version 15, Sep 6, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 8, 2019—Jun 21, 2019

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background

imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
122	Burney-Arkright complex, 2 to 9 percent slopes	17.1	11.3%
207	Jimmerson loam-Jimmerson stony sandy loam complex, 2 to 15 percent slopes	65.3	43.2%
247	Matquaw gravelly sandy loam, 0 to 5 percent slopes	68.6	45.4%
Totals for Area of Interest		151.1	100.0%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or

landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Intermountain Area, Parts of Lassen, Modoc, Shasta, and Siskiyou Counties, California

122—Burney-Arkright complex, 2 to 9 percent slopes

Map Unit Setting

National map unit symbol: jblb
Elevation: 3,000 to 3,300 feet
Mean annual precipitation: 16 to 25 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 80 to 100 days
Farmland classification: Not prime farmland

Map Unit Composition

Burney and similar soils: 41 percent
Arkright and similar soils: 39 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Burney

Setting

Landform: Lava flows
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Slope alluvium derived from basalt

Typical profile

H1 - 0 to 8 inches: gravelly loam
H2 - 8 to 38 inches: gravelly clay loam
H3 - 38 to 59 inches: very stony clay loam
H4 - 59 to 69 inches: weathered bedrock

Properties and qualities

Slope: 2 to 9 percent
Depth to restrictive feature: 40 to 60 inches to paralithic bedrock
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Moderate (about 6.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Ecological site: F022BG200CA - Mesic Lava Plateaus, Low Sloping (15% or less), <25 inch precip
Hydric soil rating: No

Description of Arkright

Setting

Landform: Lava flows
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Slope alluvium derived from basalt

Typical profile

H1 - 0 to 10 inches: gravelly loam
H2 - 10 to 14 inches: gravelly loam
H3 - 14 to 24 inches: cobbly clay loam
H4 - 24 to 28 inches: weathered bedrock

Properties and qualities

Slope: 2 to 9 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: C
Ecological site: F022BG200CA - Mesic Lava Plateaus, Low Sloping (15% or less), <25 inch precip
Hydric soil rating: No

Minor Components

Unnamed, similar to burney but > 35% clay

Percent of map unit: 5 percent
Landform: Lava flows
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Unnamed, similar to arkright but < 20 inches deep

Percent of map unit: 5 percent
Landform: Lava flows
Landform position (two-dimensional): Shoulder
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

Jimmerson

Percent of map unit: 5 percent
Landform: Lava flows
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Hambone

Percent of map unit: 5 percent
Landform: Lava flows
Landform position (two-dimensional): Shoulder
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

207—Jimmerson loam-Jimmerson stony sandy loam complex, 2 to 15 percent slopes

Map Unit Setting

National map unit symbol: jbrt
Elevation: 3,300 to 4,500 feet
Mean annual precipitation: 25 to 35 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 80 to 100 days
Farmland classification: Not prime farmland

Map Unit Composition

Jimmerson and similar soils: 60 percent
Jimmerson and similar soils: 30 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Jimmerson

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Old tephra deposits and material from lava flows

Typical profile

H1 - 0 to 5 inches: loam
H2 - 5 to 24 inches: loam

Custom Soil Resource Report

H3 - 24 to 36 inches: clay loam
H4 - 36 to 50 inches: clay loam
H5 - 50 to 62 inches: cobbly clay loam
H6 - 62 to 70 inches: clay loam

Properties and qualities

Slope: 2 to 15 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: High (about 9.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Ecological site: F022BG202CA - Mesic, Cool (FFD<100) Ash-Influenced Mountains
Hydric soil rating: No

Description of Jimmerson

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Old tephra deposits and material from lava flows

Typical profile

H1 - 0 to 12 inches: stony sandy loam
H2 - 12 to 20 inches: cobbly loam
H3 - 20 to 38 inches: clay loam
H4 - 38 to 60 inches: clay loam

Properties and qualities

Slope: 2 to 15 percent
Surface area covered with cobbles, stones or boulders: 3.0 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: High (about 10.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e

Custom Soil Resource Report

Hydrologic Soil Group: C

Ecological site: F022BG202CA - Mesic, Cool (FFD<100) Ash-Influenced Mountains

Hydric soil rating: No

Minor Components

Unnamed

Percent of map unit: 7 percent

Landform: Hillslopes

Landform position (two-dimensional): Footslope

Landform position (three-dimensional): Base slope

Down-slope shape: Convex

Across-slope shape: Convex

Hydric soil rating: No

Unnamed, soils shallow over weathered bedrock

Percent of map unit: 3 percent

Landform: Hillslopes

Landform position (two-dimensional): Shoulder

Landform position (three-dimensional): Side slope

Down-slope shape: Convex

Across-slope shape: Convex

Hydric soil rating: No

247—Matquaw gravelly sandy loam, 0 to 5 percent slopes

Map Unit Setting

National map unit symbol: jbv

Elevation: 3,300 to 3,360 feet

Mean annual precipitation: 25 to 35 inches

Mean annual air temperature: 45 to 48 degrees F

Frost-free period: 80 to 100 days

Farmland classification: Prime farmland if irrigated

Map Unit Composition

Matquaw and similar soils: 85 percent

Minor components: 15 percent

Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Matquaw

Setting

Landform: Stream terraces

Landform position (two-dimensional): Toeslope

Landform position (three-dimensional): Tread

Down-slope shape: Linear

Across-slope shape: Linear

Parent material: Alluvium derived from igneous rock

Typical profile

H1 - 0 to 4 inches: gravelly sandy loam
H2 - 4 to 10 inches: sandy loam
H3 - 10 to 27 inches: very fine sandy loam
H4 - 27 to 34 inches: loamy sand
H5 - 34 to 72 inches: stratified extremely gravelly loamy sand to very gravelly sandy loam

Properties and qualities

Slope: 0 to 5 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): High (2.00 to 6.00 in/hr)
Depth to water table: About 24 to 42 inches
Frequency of flooding: FrequentNone
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 5.2 inches)

Interpretive groups

Land capability classification (irrigated): 4w
Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: B
Ecological site: F021XG914CA - Wet Loamy
Hydric soil rating: Yes

Minor Components

Esperanza

Percent of map unit: 4 percent
Landform: Stream terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Microfeatures of landform position: Swales
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Hydric soil rating: No

Dudgen

Percent of map unit: 4 percent
Landform: Stream terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Microfeatures of landform position: Swales
Down-slope shape: Linear, concave
Across-slope shape: Linear, concave
Hydric soil rating: No

Winnibulli

Percent of map unit: 4 percent
Landform: Stream terraces
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear

Custom Soil Resource Report

Hydric soil rating: No

Pit

Percent of map unit: 3 percent

Landform: Stream terraces

Landform position (two-dimensional): Toeslope

Landform position (three-dimensional): Tread

Microfeatures of landform position: Swales

Down-slope shape: Linear, concave

Across-slope shape: Linear, concave

Hydric soil rating: Yes
