APNS: 209-270-002
Description: The facility was formerly an industrial machining and plating shop where plating solutions were disposed of or spilled onto soils from tanks. The site encompasses approximately 10,000 square feet and is located in a light industrial area. Operations at the site ceased in 1985, and the facility has since remained unoccupied. The facility used an electroplating process that involved plating metal parts using chemical baths containing cadmium (Cd), Chromium (Cr), and Nickel (Ni). Grinding equipment and chemical rinse baths were also used during the electroplating process which contributed to the contamination. The soil at the site was contaminated as a result of spills, drips, and possible discharge of plating bath solutions that occurred during the fourteen years of operation. A preliminary investigation completed in 1983, included soil sampling under the building and found higher than normal levels of metals Cd, Cr, and Ni. Exposure to these hazardous substances can occur from inhalation, ingestion, or direct contact. The area where the contaminants were found is inside a secured building and no exposure is anticipated. In February 1987, a Remedial Order (RAO) was issued to the Responsible Parties (RPs) to characterize and remediate the hazardous substances at the site. In July 1989, a Final Determination of Noncompliance was issued for failure to submit required documents. This case was referred to the AG's office for enforcement. In July 1990, the Department conducted a soil investigation to determine the extent of the contamination. The investigation confirmed high levels of Cr and lead. An Imminent and Substantial Endangerment Determination and Remedial Action Order (Order) was issued to the responsible parties (RPs) on November 24, 1993. DTSC issued a Notice of Final Determination of Non-Compliance on January 12, 1994. In June of 1994, DTSC conducted a removal action excavating the highest concentration of heavy metal contaminated soil from the middle room of the Alark facility. A total of 1,810 tons of contaminated soil was excavated and transported to a treatment and disposal facility. The excavated area was backfilled and a temporary cap was constructed. DTSC conducted a groundwater investigation in January of 1995. Groundwater monitoring wells were constructed around the Alark facility. Initial results of the groundwater investigation detected hexavalent chromium in the groundwater. DTSC conducted an additional groundwater investigation constructing monitoring wells and additional sampling. DTSC approved a groundwater remedial investigation prepared by URS consultants on 3/11/96. Due to the high threat to human health at the site and the lack of state and PRP funds to perform the necessary work, DTSC requested the U.S. EPA to become the lead agency and conduct the necessary remedial activities at the Site. U.S. EPA is now the lead agency, and the Site is on U.S. EPA's National Priorities List (NPL). The two men who owned this Site were William Clark and Bill Allen. Mr. Clark filed for Chapter 7 bankruptcy which was discharged, and Mr. Allen has no appreciable assets. Therefore a NFCRA has been finalized for over $2 million regarding this site. According to our attorney, Mr. Allen has recently deceased. Mr. Allen's sons would like to sell the site, and claim that Mr. Clark signed a quit claim for the site, but there is no evidence of this.

ALARK HARD CHROME (Continued) **1000857231**

Mr. Allen's sons could be considered responsible parties, and so could anybody that bought the site. Currently U.S. EPA has no contract for any work to be done at the site, nor do they know when will they will have any. They will have no documents to give DTSC until at least the first of 2019.

Environmental Interest/Information System:
California's Department of Toxic Substances Control's (DTSC's)-EnviroStor database is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR

NEW BASIS (FRMLY ASSOCIATED PLASTICS) (Continued) **1000327973**

contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-14-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Regional Board staff visited this site on a rainy day. We saw storm water that passes through a three chamber seperator being pumped to the storm drain. Site staff stated that there is a valve that is turned manually 15 minutes after the start of every rain event to divert the flow from the sanitary sewer to the storm sewer. They stated that their staff is located within a 5 minute drive or even walk so they could come to switch the valve and are available by phone at all times. There were approximately thirty 55-gallon barrels in the yard that are used to keep food waste that is filtered from the used cooking oil. The barrels are cleaned after each use. The rinsate from the cleaning was on the ground surrounding the barrels and wash water and rain water all flows to the three chamber seperator. Site staff should be sure to submit Ad Hoc reports within 30 days from the time the monitoring results are received. That seems to have not happened during 16-17, 17-18 and 18-19. Not uploading the results into an Ad Hoc report within 30 days is a violation of the General Permit, Section XI.B.11.a. Regional Board staff also noted one dumpster open during the rain even. That is a violation of the General Permit, Section X.H.1.d.iii. Dumpsters containing industrial waste must be covered at all times when not in use.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-30-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The facility has three sampling points as described in the SWPPP. The SWPPP is undergoing revision so the latest copy was not available for review. There is a copy of the SWPPP in SMARTS. The BMP inspection records were old and not up to date. When questioned Anthony indicated that they were on his computer and have not been printed out yet. The

JCS GREASE BUYERS (Continued) **S113096727**

storm drain inlet at the site did not have any BMPs surrounding it, however, it has a closed valve that is opened after the first 3 minutes of water flow is pumped to the process water system which goes to the sewer system.

Eval Division: Water Boards

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-27-2021
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Insp with Anthony. The 2021-22 AR was submitted on 7/14/21 in error. The Level 1 ERA has not been started and no BMPs implemented. The SWPPP was dated 2013. The last BMP Insp checklist was dated Nov. 2017. The process area is within an area of a closed system. The area is washed twice per day. Samples are sometimes held a few days before sending to the lab. Anthony will submit the 2020-21 AR and send an email with an estimated submittal date for the Level 1 ERA Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date:	02-18-2021
Citation:	22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description:	Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container

ROLENN MANUFACTURING INC (Continued) **S113119574**

	larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.
Violation Notes:	Returned to compliance on 03/24/2021. OBSERVATION: Observed a couple of drums which were empty and not labeled properly. CORRECTIVE ACTION: Owner/operator shall properly label all empty containers larger than 5 gallons with the word "empty" and with the dates they were emptied.

Violation Date:	02-21-2024
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 03/19/2024. OBSERVATION: Observed small accumulation of oil on the floor near CNC Mill and surface grinder. CORRECTIVE ACTION: Owner/operator shall clean up oil spills and manage according to Title 22 hazardous waste regulations. Submit a statement and supporting documentation (photos) explaining how this waste was managed to this department. Photos can be sent to Sarah Miller at sarmiller@rivco.org. Note: Employees were observed actively cleaning liquid off the floor near the machines. Operator stated that rain water entered the facility through a leak in the roof. A white liquid, most likely coolant from nearby machines, was observed mixed with the rain water. Ensure this contaminated water is stored in a hazardous waste container and is handled according to Title 22. Operator stated contaminated water would be placed in an empty tote that is available for use.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 05/24/2021. OBSERVATION: Observed 2 hazardous waste areas. The main storage area was in back building that had years of accumulated used oil, coolant and miscellaneous waste. There were approximately 4 - 275 gallon totes containing used oil and coolant, 7 - 55 gallon drums of used oil and coolant, 2 empty containers and several smaller 5 gallon or less containers on site, all of which lacked hazardous waste labels. The second area was at the front of the main building which had 1 - 275 gallon tote for used coolant, and an uncovered drum for used oily rags and or absorbent. There are no approved hazardous waste containers for used filters, non-empty aerosols, nor a covered container for absorbent and rags. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have all accumulated totes, drums, 5 gallon buckets of hazardous waste properly hauled off site by a registered [Truncated]

Eval Date: 02-21-2024
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility is a manufacturer that generates the following waste streams: used hydraulic oil, contaminated coolant and oil, spent rags, and absorbent waste. Note: Several violations under "Container Management" were marked "N/A", as the facility did not have any containers with hazardous waste at this time. Most recent pick up was 1/19/24 according to manifests. Containers were available for storage of hazardous waste, but no labels had been placed. Ensure containers are properly labeled once waste is stored in them. Education provided. Note: Facility is leasing a space in the building that appears to be used for automotive storage/repair. The following was observed: new containers of oil and antifreeze, spent rags, and a parts washer. Will research and advise regarding this space. All violations shall be corrected. Reinspection/Return-To-Compliance will be completed/verified on or after 3/22/2024.

Name: RECYCLER CORE COMPANY
Address: 2727 KANSAS AVE
City,State,Zip: RIVERSIDE, CA 92507
Site ID: 185623
CERS ID: 10532287
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 185623
Site Name: Recycler Core Company
Violation Date: 11-08-2021
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 02/10/2022. OBSERVATION: Observed an oil deposition on top of the 120 gallon waste oil tank along with oily cardboard and rags. Also, the hazardous waste shed's, floor had an accumulation of oily absorbent on the ground around the tanks and under several 55 gallon drums. The 20 gallon oil recovery tank was in a bermed, secondary containment that was filled with used, oil soaked absorbent. CORRECTIVE ACTION: Owner/operator shall absorb and clean up all used oil, storage areas, placing all used absorbent in labeled hazardous waste drums and manage according to Title 22 hazardous waste regulations. Oily rags shall be placed into an approved container and laundered by Prudential. Segregate the empty drums from the used absorbent drums. Place locking rings of used absorbent drums. The 20 gallon oil recovery tank may have a leak. Assess the tanks condition, repair or replace as necessary. Send photos of cleaned areas to hbarrios@rivco.org.

A. M. LEWIS (Continued) **S102423593**

6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 02/10/2022. OBSERVATION: Observed 4 - 55 gallon drums of used absorbent and 1 55 gallon drum of used oil on site with accumulation start dates from January and August 2020. Also, observed approximately 1 pallet of used fluorescent light bulbs that were unprotected and unlabeled. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have all absorbent waste, maintenance shop, used oil and used fluorescent light bulbs hauled off site by a registered hazardous waste transporter.

Site ID: 185623
Site Name: Recycler Core Company
Violation Date: 11-08-2021
Citation: HSC 6.5 25144.6(b) - California Health and Safety Code, Chapter 6.5, Section(s) 25144.6(b)
Violation Description: Failure to properly manage reusable soiled textile materials prior to being sent for laundering.
Violation Notes: Returned to compliance on 02/10/2022. OBSERVATION: Observed improper textile/contaminated rag management. Observed several oily rags stored on drums, waste tanks and on the floor throughout the facility. CORRECTIVE ACTION: Owner/operator shall properly manage used/soiled textiles. Ensure employees place used rags, in the used rag container after each use, to be properly laundered.

Violation Source: CERS,

Site ID: 185623
Site Name: Recycler Core Company

A. M. LEWIS (Continued) **S102423593**

Violation Date: 11-08-2021
Citation: 40 CFR 1 265.201(c)(5) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(5)
Violation Description: Failure to inspect hazardous waste tanks for the following, when present: 4) The construction materials of the tank at least weekly to detect corrosion or leaking of fixtures or seams. 5) The construction materials of, and the area immediately surrounding, discharge confinement structures (e.g., dikes) at least weekly to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation).
Violation Notes: Returned to compliance on 12/15/2021. OBSERVATION: Observed the presence of multiple hazardous waste violations at this facility. The presence of multiple violations indicates that inspections of the hazardous waste areas are not being conducted. Observed oily spills, oily rags, used absorbent on and around used oil tanks, and a potentially compromised waste oil, 20 gal tank, that is in an oily soaked secondary containment. CORRECTIVE ACTION: Owner/operator shall conduct weekly inspections of all hazardous waste storage areas and ensure spills are addressed on a timely basis and tanks are repaired if leaking.

Environmental Interest/Information System:

RECYCLER CORE COMPANY, INC. (Continued) **1001967531**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

SOUTHEAST CORNER OF KANSAS AVE. AND MASSACHUSETTS AVE. (Continued) **S105672752**

Violation Description:	Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes:	Returned to compliance on 11/25/2015.
Violation Division:	Riverside City Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	182715
Site Name:	Eclipse RV
Violation Date:	11-09-2021
Citation:	40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description:	Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes:	Returned to compliance on 01/05/2022. OBSERVATION: Observed the presence of multiple hazardous waste violations at this facility. The presence of multiple violations indicates that inspections of the hazardous waste areas are not being conducted. CORRECTIVE ACTION: Owner/operator shall conduct weekly inspections of all hazardous waste storage areas.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 01/05/2022. OBSERVATION: The latest manifest for a hazardous waste shipment was 3/28/2019. Also, the main hazardous materials and hazardous waste storage cage had accumulated numerous containers of aging waste, such as paint, acetone, used oil, and many unlabeled 5 gallon buckets and 55 gallon drums. Most containers were unlabeled or had very faded labels. No one on-site could clearly identify the contents of each container nor could to attest to the length of time they had been stored there. CORRECTIVE ACTION:

SOUTHEAST CORNER OF KANSAS AVE. AND MASSACHUSETTS AVE. (Continued) **S105672752**

Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall make a proper hazardous material and or hazardous waste determination of each container and label accordingly. All hazardous waste shall be properly hauled off site by a registered hazardous waste transporter. Storage cage shall be maintained clean, free of debris and have clearly labeled hazardous materials and hazardous waste [Truncated]

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/05/2022. OBSERVATION: Observed numerous containers of various sizes, within the hazardous waste cage that were missing proper labels. CORRECTIVE ACTION: Owner/operator shall label hazardous waste containers with all the required information. Label shall include at least: the words ""hazardous waste"", generator name and address, accumulation start date, composition and physical state of waste, and hazardous property statement. Additionally, segregate the new product and ensure it is labeled so it is easy to ascertain what materials are in each drum.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date:	09-20-2022
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

PULL N SAVE RIVERSIDE (Continued) **S108742076**

Violation Notes:	Returned to compliance on 12/13/2022. OBSERVATION: Observed the 4, 275 gallon totes at the drain pad not properly labeled as hazardous waste, nor was the connex box used for battery storage labeled as such. CORRECTIVE ACTION: Owner/operator shall label hazardous waste containers with all the required information. Label shall include at least: the words "hazardous waste", generator name and address, accumulation start date, composition and physical state of waste, and hazardous property statement. Submit photos to this department, if applicable. The individual totes in the hazardous waste storage area also require individual labels as they will be used for different waste streams. Label the in use, oil, absorbent and the acid absorbent as an oil spill kit and acid spill kit. Once absorbent is exhausted it shall be placed into the hazardous waste drum.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	174259
Site Name:	Allied Auto Salvage/ Pull N Save Riverside
Violation Date:	11-01-2018
Citation:	22 CCR 16 66266.81(a)(3) - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.81(a)(3)
Violation Description:	Failure of facilities that accept spent lead acid batteries in exchange or partial exchange for operable lead-acid storage batteries to comply with the following storage requirements : 1) Storing more than one ton of spent batteries at any one location for more than 180 days. 2) Storing one ton or less of spent batteries at any one location for more than one year, or 3) Removing the electrolyte.
Violation Notes:	Returned to compliance on 12/19/2018. Used lead acid batteries storage area requires secondary containment. In addition a proper stocked spill kit which contains a neutralization chemical should be available for clean up.

Violation Program:	HW
Violation Source:	CERS,
Site ID:	174259
Site Name:	Allied Auto Salvage/ Pull N Save Riverside
Violation Date:	11-01-2018
Citation:	40 CFR 1 265.201(c)(3) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.201(c)(3)
Violation Description:	Failure to inspect hazardous waste tanks at least once each operating day for the following, when present: (1) Discharge control equipment (e.g., waste feed cutoff systems, by-pass systems, and drainage systems) to ensure that it is in good working order; (2) Data gathered from monitoring equipment (e.g., pressure and temperature gauges) to ensure that the tank is being operated according to its design; (3) The level of waste in the tank.
Violation Notes:	Returned to compliance on 12/19/2018. Owner/operator to implement a documented inspection schedule for waste tanks. Daily inspection of discharge system and waste level required.
Violation Division:	Riverside County Department of Env Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	174259
Site Name:	Allied Auto Salvage/ Pull N Save Riverside
Violation Date:	09-20-2022
Citation:	22 CCR 15 66265.171 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.171
Violation Description:	Failure to accumulate hazardous waste in a container that is in good condition.
Violation Notes:	Returned to compliance on 12/13/2022. OBSERVATION: Observed recycled gas, used oil and oily water being stored in non-structurally sound containers, which may increase the likelihood of a release. During the 9/6/22 investigation, observed 3 damaged, open drums with used oil in them out in the west lot. CORRECTIVE ACTION: Owner/operator shall discontinue storing hazardous waste in damaged containers. Replace the 3 damage totes at the water clarifier, 1 tote at the drain pad, and 1 recycled gasoline tote. Observed 3 used oil drums removed, oil was consolidated per owner.

Violation Date: 09-20-2022
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 12/13/2022. OBSERVATION: Observed 3, 275 gallon totes at the water clarifier and without cover/lid in place. CORRECTIVE ACTION: Owner/operator shall maintain all hazardous waste containers closed when not adding/removing hazardous waste. Recommend using vented caps on totes to allow for pressure equalization.

Citation: 22 CCR 18 66268.7(a) - California Code of Regulations, Title 22, Chapter 18, Section(s) 66268.7(a)
Violation Description: Failure to determine if the waste has to be treated before it can be land disposed and retain the documentation at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.

PULL N SAVE RIVERSIDE (Continued) **S108742076**

Violation Notes:	Returned to compliance on 12/13/2022. OBSERVATION: No records for proper land disposal of hazardous waste observed during inspection. Per conversation with the facility owner. All absorbent waste has been shipped to their sister company, Pull-in-Save in Phoenix, AZ for unknown use. No hazardous waste manifests were prepared. CORRECTIVE ACTION: Owner/operator shall managed all used absorbent materials such as heavily, oil soaked rags, cardboard and absorbent granules as a solid, hazardous waste. Operator shall provide a 55 gallon drum, labeled as hazardous waste, to contain all used, absorbent and manage as hazardous waste. Waste shall be transported to an approved treatment facility, by an approved hauler, with a uniform hazardous waste manifest, every 90 days. Maintain manifests for 3 years and have available for inspection.

Violation Date:	09-20-2022
Citation:	22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 12/13/2022. OBSERVATION: Observed oil spills throughout the facility. Used oil totes had oil on their exterior surfaces and their secondary containments had a few inches of oil accumulation in them. See the hazardous waste storage area, and the 4 totes at the drain pad. Also, observed oil spills on the ground at the drain pad, around the crusher and bailer and under the metal recycling bins near the clarifier. Observed oil leaks at the engine storage racks. During the 9/6/22 investigation, observed the employees using a forklift to relocate a processed vehicle that was not completely drained, thus leaving a trail of oil down an interior roadway. In addition, observed oil trails, on the soil, in the crushing zone under heavy equipment tracks. CORRECTIVE ACTION: Owner/operator shall use best management practices and instruct employees to allow vehicles to fully drain, prior to movement, clean up spills immediately, keep containers clean and to take care when transferring liquids into [Truncated]

Site ID: 174259
Site Name: Allied Auto Salvage/ Pull N Save Riverside
Violation Date: 09-20-2022
Citation: 22 CCR 15 66265.172 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.172
Violation Description: Failure to accumulate or store hazardous waste in container made of or lined with materials which will not react with, and are otherwise compatible with, the hazardous waste to be stored.
Violation Notes: Returned to compliance on 12/13/2022. OBSERVATION: Observed an unapproved gasoline, drainage procedure where holes were drilled into the gas pan and gasoline was allowed to drain to a plastic, 55 gallon drum with a drain pan mounted on its top. The approved gas transfer pump was stored away in a back area. Operator states that it is industry standard to use a pneumatic drill with a brass tip to punch the tank. CORRECTIVE ACTION: Owner/operator shall immediately discontinue this drainage practice and use the proper gas transfer pump to the compatible, fuel tank, thus eliminating the plastic intermediary drum and explosion hazard.

Violation Description: Failure to properly manage, store, and label a damaged lead acid battery in a nonreactive, structurally secure, closed container, and/or failure to label damaged lead acid battery with the date that the first battery in the container was placed there with ink, paint or other weather-resistant material so as to minimize the release of acid and lead and to protect the environment.
Violation Notes: Returned to compliance on 12/13/2022. OBSERVATION: On 9/6/2022, observed damaged lead acid batteries commingled with good, used batteries, without containment. CORRECTIVE ACTION: Owner/operator shall properly manage spent lead-acid batteries. Store damaged batteries in a closed, nonreactive, structurally-secure container. Each battery may be placed into a container such as a plastic bag, labeled damaged and date processed. These bagged batteries then may be placed on a pallet and protected from the elements.

Citation:	2014-0057-DWQ - Industrial General Permit
Violation Description:	SW - Deficient BMP Implementation
Violation Notes:	Failure to clean-up waste, debris and leaks.

PULL N SAVE RIVERSIDE (Continued) **S108742076**

Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Site ID: 525875
Site Name: Allied Auto Salvage Inc
Violation Date: 08-07-2007
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Late Report
Violation Notes: 1st Notice of Non-Compliance - 08/07/2007: Failure to submit 2006-2007 Annual Report by July 1st.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Evaluation:
Eval General Type: Compliance Sampling Inspection
Eval Date: 02-14-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Sampling
Eval Notes: Visited site during an extended rain event when it had rained within the last 48 hours. Took samples at the two discharge points within the public right-of-way and didn't go onsite to inspect. Regional Board staff was Michael Roth and Reyna Mendoza.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-13-2013
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Site was relatively clean and well kept. The SWPPP was present and appeared to be complete. There is a crusher on-site, however, the SWPPP specifically states there is no crusher. Rachel was verbally instructed to update the SWPPP to include the crusher. The area near the crusher was discolored from oil spillage, however, they stated that they lay down absorbent and sweep it up after each car is crushed.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Other/Unknown
Eval Date: 01-31-2019
Violations Found: No
Eval Type: Construction Storm Water Compliance Evaluation
Eval Notes: Drove by the site on a rainy day to see if they were discharging, but there was no discharge. Nevertheless, Regional Board staff took two photos of one of the discharge points. The discharge point, to the west of the main driveway shows heavy greyish-black sediment deposited from prior discharges that come out the gate and come from upstream in the yard where the parts and vehicle storage area is located..
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators,

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

LUXFER USA LIMITED (Continued) **U001576520**

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-09-2008
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The Luxfer facility was inspected to determine compliance with NPDES General Permit No. CAS000001. Luxfer manufactures aluminum gas cylinders at this site. The facility SWPPP was not available for review. The facility was in the middle of remodeling a large building to consolidate the site operations into. Housekeeping at the entire site was poor. Oil appeared to have been spilled near the loading dock of building #3. There was adsorbent on the ground, however, it was not picked up. Storm drain inlet inserts or similar BMPs should be considered at the site. The one stormdrain that had gravel bags were not maintained. There was an area where dirt was stockpiled for construction at the site. The stockpile was removed, however, the area was not swept and there was significant sediment left on the asphalt. In the trash storage area near building #4 there was significant debris on the asphalt that needs to be picked up

RWQCB Region:	SANTA ANA RWQCB (REGION 8)
Site History:	Primary UST Area - On September 17, 2002, a UST was discovered at the Luxfer facility during installation of a new sewer line. The UST was located in an asphalt paved area between Buildings 2 and 3. The

LUXFER USA LIMITED (Continued) **S106487195**

2,OOO-gallon UST was six feet in diameter, 24 feet in length, and was buried approximately three feet below ground surface (bgs). A single pipe was connected to the UST on the east side of the tank. It was cut off approximately three feet from the entrance bay of Building 3. A sample of tank sludge and a side wall soil sample were collected. Analytical results indicated: metals (2% lead), total petroleum hydrocarbons (TPH) diesel (d), motor oil (mo), and extractable range organics, and fuel related and chlorinated volatile organic compounds (VOCs). In October 2002, a single angle-boring was drilled beneath the partially exposed UST. Soil samples were collected from the borehole at ten-foot intervals, to a depth of 25 feet below ground surface (bgs). On November 2,2002, the UST was removed and transported off site for disposal. Three soil samples were collected from two locations beneath the former position of the tank. The samples were analyzed for metals, petroleum hydrocarbons, and chlorinated VOCs. Contaminants of Potential Concern (COPCs) were determined for the site, following the U.S. EPA's risk assessment guidance (2001). Thirty-three COPCs were detected in the soil. From 2003 through 2004, initial site characterization consisted of two phases of soil borings and the installation of 3 groundwater monitoring wells (MW1 -MW3). Following the first phase of 5 borings, 6 additional borings were installed using the membraneinterface probe and direct-push soil boring method. An evaluation of background soil metal concentrations and regional groundwater conditions was also conducted. It was found that, with the exception of a single lead concentration, none of the metals concentrations detected at the site had exceeded the U.S. EPA Region IX Preliminary Remediation Goals (PRGs) for residential soils. During June and July of 2005, five groundwater monitoring wells (MW4 -MW8) were installed to further evaluate the groundwater flow direction and define the extent of contaminants in the groundwater at the site. Thirteen groundwater monitoring wells were installed at the site in three phases, between 2004 and 2006. The depth to groundwater is approximately 136 feet bgs. The maximum detected VOC concentrations were detected as follows: 2,700 microgramslliter (~g/L) TCE & 220 ~g/L PCE in MW-6; and 520 ~g/L TCE &52 ~g/L PCE in MW12. The report identifies that the chemical signature of these two monitoring wells, as well as MW8, is different than that of the other ten monitoring wells. In July 2008, Luxfer submitted the "Remedial Action Plan (RAP) Addendum and Work Plan for Soil Excavation". Board staff approved the RAP and work plan on August 27,2008. The work plan proposed 22 direct-push borings to maximum depths of 36 to 39 feet bgs. From late March through April 2008, the pre-excavation characterization was conducted. COPC concentrations ranged up to 3,965 mg/kg VOCs and 16,000 mg/kg TPH. Levels of contamination progressively decreased in samples taken farther away from the former UST, and generally did not extend beyond 20 feet bgs, with the exception of four locations. In January 2008, a Remedial Action Plan was submitted, proposing to excavate soil within the Primary UST Area, to remove the threat that the COPCs may pose to human health and groundwater quality. The target cleanup levels proposed for soil were: total VOCs -1 mg/kg; TPH as gasoline -100 mg/kg; TPH as diesel-100 mg/kg; and TPH as waste oil 1,000 mg/kg. A pre-excavation work phase was proposed, to delineate the area of impacted soil where concentrations of the COPCs were above the target cleanup levels, and to assess the amount of excavated soil that would require off-site disposal. Between September 2 and September 16, 2008, soil excavation of the primary source area was completed,

LUXFER USA LIMITED (Continued) **S106487195**

utilizing large-diameter borings and the pre-excavation characterization analytical data. A total of 64 large-diameter borings were advanced to a maximum depth of 30 feet bgs in stages of 5-foot, 4-foot, 3-foot and 2-foot borings. The borings were backfilled with cement/sand slurry. A total of 1,747 tons of impacted soil were removed and transported to Thermal Remediation Solutions in Azusa, California, for treatment and disposal. The pre-excavation confirmation sampling results verified that the target soil cleanup levels had been achieved at the Luxfer site with the removal of the COPC-impacted soils. The maximum concentrations of COPCs remaining in soil at the site, from 30 feet bgs to the water table at 140 to 150 feet bgs, ranged from 0.3 mg/kg TCE at 39 feet bgs to non-detected for chlorinated VOCs and TPH. Metals were not considered to be at COPCs at a depth of 30 feet bgs or greater. No Further Action (NFA) for Soil The Executive Officer of the Board issued a NFA determination for the soil contamination at the Site on June 25, 2009. Two groundwater monitoring events (August 2009 and February 2010) were completed after the removal of the contaminated soil near the primary UST. In August 2009, the detectable concentrations of PCE in groundwater ranged from 4.4 to 170 g/L and TCE ranged from 14 to 2,200 g/L. In February 2010, the detectable concentrations of PCE in groundwater ranged from 3.7 to 180 g/L and TCE ranged from 10 to 2,200 g/L. As in previous sampling events, the highest TCE and PCE concentrations were found in samples from MW6. No Further Action for groundwater was issued August 9, 2011, with the request that the groundwater monitoring wells remain in place for at least one year from the date of the NFA letter, so that wells may be available for future monitoring if a responsible party for the VOC plume migrating on to the Site is identified.

Violation Description:	Failure to retain for at least three years a legible copy of each manifest or bill of lading which identifies spent lead-acid storage batteries shipped to a person who stores the batteries or who uses, reuses, recycles or reclaims the batteries or their components.
Violation Notes:	Returned to compliance on 01/12/2023. OBSERVATION: Observed inadequate lead-acid battery disposal records. Per the site manager, this facility's cores are picked by their main facility: Uhaul 891 South Arrowhead, San Bernadino, CA 92408, 909-884-2194, for reconditioning. CORRECTIVE ACTION: Owner/operator shall retain lead-acid battery disposal records for 3 years. Shipping papers shall state where the batteries are picked up the address shipped to, the date and quantity of the batteries. Provide the CUPA with documented information on UHaul's battery reconditioning program.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 06-22-2021
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.
Violation Notes: Returned to compliance on 06/22/2021. OBSERVATION: Observed approximately 6 - 55 gallon drums which were empty and not labeled properly. CORRECTIVE ACTION: Owner/operator shall properly label all empty containers larger than 5 gallons with the word EMPTY and the

WEB CAM INC (Continued) **S113029507**

	dates they were emptied. Violation corrected at the time of this inspection.

WEB CAM INC (Continued) **S113029507**

Site ID: 170667
Site Name: Web Cam Racing Cams
Violation Date: 10-09-2019
Citation: Un-Specified
Violation Description: Business Plan Program - Administration/Documentation - General Local Ordinance
Violation Notes: Returned to compliance on 11/08/2019. Current permit issued/posted. [RMC 9.48.140] New Facility - Obtain the current permit and post in a conspicuous location. Current Permit is for Hazardous Waste and expires 8/31/2020
Violation Division: Riverside City Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 170667
Site Name: Web Cam Racing Cams
Violation Date: 06-22-2021
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 06/22/2021. OBSERVATION: Observed 4 - 55 gallon drums of sludge and sand blast residual that were missing proper labels. CORRECTIVE ACTION: Owner/operator shall label hazardous waste containers with all the required information. Label shall include at least: the words ""hazardous waste"", generator name and address, accumulation start date, composition and physical state of waste, and hazardous property statement. Violation was corrected at the time of this inspection.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-30-2023
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Inspector I. Enright
Eval Division: Riverside City Fire Department
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-22-2021
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: This facility is a camshaft grinder, that is a small quantity hazardous waste generator of grinder sludge and bead blast residual. Routine hazardous waste inspection conducted by Heidi Barrios

Eval Notes:	This facility is a Hair Care and Skin Care Manufacturer that is an incidental, small quantity generator of hazardous waste (Battery Acid spills at charging station). Per operator knowledge and analysis, products and residuals are deemed non-hazardous and manifested as such. Supporting analytics's are available. Each non-hazardous waste shipment is analyzed by the Waste hauler, HVAC. Spill kits are dispersed throughout the facility to contain any incidental spill. Education given. Operator has elected to remain under permit as production can change overtime. NOTE: Post an EMPTY container sign at the loading dock.

Address: 2129 3RD ST
City,State,Zip: RIVERSIDE, CA 92507
Site ID: 175163
CERS ID: 10520401
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 175163
Site Name: Budget Transmissions
Violation Date: 09-03-2019
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.
Violation Notes: Returned to compliance on 02/28/2020. OBSERVATION: Observed facility shipping non-RCRA hazardous waste off site. No consolidated manifests available during inspection. CORRECTIVE ACTION: Owner/operator shall obtain previous records of waste disposal. Owner/operator shall maintain records of hazardous waste transport and disposal on site for at least 3 years. Please email manifests from the past 3 years to thilfer@rivco.org.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-20-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This facility is a distributer of building materials. They no longer conduct maintenance on their vehicle fleet. This was discontinued over 5 years ago. H. Barrios, REHS conducted a routine hazardous waste inspection. No used oil, filters or retail waste observed at the time of this inspection. There is a small quantity of aerosol paint supplies in the showroom. Per the operator, damaged merchandise is returned to the vendor for replacement. Spill kits are available for incidental spills. This facility does not have an EPA ID# and does not have any hazardous waste manifests at this time. This facility has requested to be removed from the hazardous waste program and states they do not generate routine hazardous waste. Inspector shall review file in its entirety and advise. A referral will be made to Riverside Fire to conduct an initial (hazardous materials business plan) HMBP inspection. H. Barrios observed threshold quantities of propane (44 - 33.5 lb tanks). Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violations:
Site ID: 134326
Site Name: Merit Oil Co.
Violation Date: 05-29-2019
Citation: 23 CCR 16 2637.1(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2637.1(e)
Violation Description: Failure to submit a copy of the spill containment test results on the Spill Container Testing Report Form to the UPA within 30 days after the test.
Violation Notes: Returned to compliance on 10/31/2019. OBSERVATION: A "Spill Containment Testing Report Form" was not submitted to this Department within 30 days after the completion of the test. Test results on site indicate testing was performed on 5/18/2018. CORRECTIVE ACTION: Owner/operator shall immediately submit to this Department a complete and accurate copy of the Spill Containment Testing Report Form for testing completed on 5/18/2018.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS,

Site ID: 134326
Site Name: Merit Oil Co.
Violation Date: 05-26-2022
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 05/26/2022. OBSERVATION: Observed that facility did not have a solid or liquid hazardous waste drum/container. The site office had used hoses/nozzles on the floor and in a trash can. There was no receptacle for exhausted absorbent. There are current diesel spills on the pad. There was no available container for today’s testing liquid. Observed notes in an older compliance binder that stated that the hazardous waste was consolidated at their main facility, which is located in Rialto, CA Additionally, observed several aerosol cans of paint on the floor throughout the office. Completely empty cans may be disposed of as municipal waste. Non -empty aerosols must be managed as universal waste. CORRECTIVE ACTION: Owner/operator shall absorb diesel spills, place used hoses and nozzles in the solid hazardous waste drum and the testing liquid into the liquid hazardous waste drum, and manage

MERIT OIL COMPANY (Continued) **U003659473**

	according to Title 22 hazardous waste regulations. Operator provided 2 - 55 gallon drums and [Truncated]

Violation Description:	Failure to maintain records of repairs and upgrades on site, or off site if approved by the UPA, for the life of the UST.
Violation Notes:	Returned to compliance on 09/21/2022.
Violation Division:	Riverside County Department of Env Health
Violation Program:	UST
Violation Source:	CERS,
Site ID:	134326
Site Name:	Merit Oil Co.
Violation Date:	05-29-2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention

MERIT OIL COMPANY (Continued) **U003659473**

equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 10/10/2019. OBSERVATION: Observed installed overfill equipment that doesn't meet current requirements. All four OPW drop tubes failed to pass at 95%. CORRECTIVE ACTION: Owner/operator shall ensure that overfill requirements are being met by adjusting/replacing overfill equipment. Any adjustment or replacement of overfill equipment may require a plan check.

MERIT OIL COMPANY (Continued) **U003659473**

Violation Description:	Failure to prepare a Uniform Hazardous Waste Manifest and, if necessary, a Continuation Sheet, before the transport of a hazardous waste off-site for transfer, treatment, storage, or disposal.
Violation Notes:	Returned to compliance on 09/14/2022. OBSERVATION: No manifests available during inspection. CORRECTIVE ACTION: Owner/operator shall obtain all manifests for hazardous waste shipments which occurred in the past 3 years. This facility may have been consolidating there waste off-site to their Rialto, CA facility. Discontinue this practice. All hazardous waste generated at this site shall be placed into on-site, hazardous waste drums and shall be manifested from this site, within 180 days of accumulation.

Violation Description:	Failure to have an approved UST Monitoring Plan.
Violation Notes:	Returned to compliance on 07/19/2019. OBSERVATION: Observed UST Monitoring Plan(s) for all four tanks to be inaccurate and/or missing . 1. The secondary containment for all four tanks is being noted as steel, when it should be fiberglass. 2. The piping secondary containment is being noted as pressurized, when it should be dry. 3. The detection of leak into UDC triggers audible visual alarms / automatic pump shutdown / disconnection of system is being noted as yes, when it should all be no. 4. In the diesel tank information the vapor recovery primary containment is being noted as fiberglass, when it should be none. UST Monitoring Plan is not approved as submitted. CORRECTIVE ACTION: Owner/operator shall make the above mentioned corrections to the UST Monitoring Plan(s) and submit in CERS.

Violation Description:	Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.

MERIT OIL COMPANY (Continued) **U003659473**

Violation Notes:	Returned to compliance on 07/21/2023. OBSERVATION: The 404 Beaudreau, standalone sensor in the satellite UDC does not have power and is not able to continuously monitor this sump. It is activated when UDC 1/2 is initiated for fueling. At this time UDC 1/2 is locked out, because the controller is malfunctioning, which inhibits the fuel valve from opening. Botth dispensers are offline from the computerized card system. The 404 sensor was tested at another dispenser and is a functioning sensor, when it has power. CORRECTIVE ACTION: Owner/operator shall either restore permanent power to the satellite UDC or submit plans to replace all malfunctioning parts. Per operator, they are in the process of discussing a replacement of all dispensers. Direct all plan check questions to the area plan checker, Joel Harris, joelharris@rivco.org, 951-358-5055.

Eval Notes: CME, Jose Rodriguez, ICC Technician #9013848, expires 1/13/25, conducted an annual monitoring certification. Heidi Barrios, REHS, performed a routine monitoring certification. Observations: Faciltiy has 8 Tokheim, UDC's that are approximately 60 years old. Parts are difficult to find or no longer available. UDC's 1/2, 3/4, 5/6, 11/12 and 14 are locked at the nozzel and out of order. Racing fuel 110 is stored in Tank 2 and not dispensed. The T2 turbine was disconnected from the power. The wire was reconnected to complete this inspection. The T1, 91 turbine was not functioning due to faulty wiring. The rusted wire was repair and power restored to complete the testing. At the time of this inspection, only 87 and Diesel were dispensed. 91 was restored for dispensing during this inspection. Operator has indicated that they are pricing a tank top rebuild. Violations shall be corrected and compliance verified on or after 6/22/23.

Background Info:

The facility was formerly an industrial machining and plating shop where plating solutions were disposed of or spilled onto soils from tanks. The site encompasses approximately 10,000 square feet and is located in a light industrial area. Operations at the site ceased in 1985, and the facility has since remained unoccupied.

The facility used an electroplating process that involved plating metal parts using chemical baths containing cadmium (Cd), Chromium (Cr), and Nickel (Ni). Grinding equipment and chemical rinse baths were also used during the electroplating process which contributed to the contamination. The soil at the site was contaminated as a result of spills, drips, and possible discharge of plating bath solutions that occurred during the fourteen years of operation.

A preliminary investigation completed in 1983, included soil sampling under the building and found higher than normal levels of metals Cd, Cr, and Ni. Exposure to these hazardous substances can occur from inhalation, ingestion, or direct contact. The area where the contaminants were found is inside a secured building

ALARK HARD CHROME (Continued) **S100833307**

and no exposure is anticipated.
In February 1987, a Remedial Order (RAO) was issued to the Responsible Parties (RPs) to characterize and remediate the hazardous substances at the site. In July 1989, a Final Determination of Noncompliance was issued for failure to submit required documents. Although the RPs were briefly in compliance, the Department ultimately conducted the RI activities. Because of the RPs noncompliance, this case was referred to the AG's office for enforcement.
In July 1990, the Department conducted a soil investigation to determine the extent of the contamination. The investigation confirmed high levels of Cr and lead.
An Imminent and Substantial Endangerment Determination and Remedial Action Order (Order) was issued to the responsible parties (RPs) on November 24, 1993. The RPs failed to respond to the Order, subsequently, DTSC issued a Notice of Final Determination of Non-Compliance on January 12, 1994.
In June of 1994, DTSC conducted a removal action excavating the highest concentration of heavy metal contaminated soil from the middle room of the Alark facility. A total of 1,810 tons of contaminated soil was excavated and transported to a treatment and disposal facility. The excavated area was backfilled and a temporary cap was constructed.
DTSC conducted a groundwater investigation in January of 1995. Groundwater monitoring wells were constructed around the Alark facility. Initial results of the groundwater investigation detected hexavalent chromium in the groundwater.
DTSC conducted an additional groundwater investigation constructing monitoring wells and additional sampling. DTSC approved a groundwater remedial investigation prepared by URS consultants on 3/11/96. Due to the high threat to human health at the site and the lack of state and PRP funds to perform the necessary work, DTSC requested the U.S. EPA to become the lead agency and conduct the necessary remedial activities at the Site. U.S. EPA is now the lead agency, and the Site is on U.S. EPA's National Priorities List (NPL).
U.S. EPA is conducting a Remedial Investigation and Feasibility Study (RI/FS), and the RI is being performed in several phases. U.S. EPA expects to have the RI to DTSC for its review in November, 2004.
William Clark, one of the site owners, filed for Chapter 7 bankruptcy which has been discharged. The court and the AG's Office has an agreement whereby Mr.Clark will pay $2,000 per year for 15 years, for a total of $30,000. As of October 31, 2003, DTSC's total costs are $2,023,328.89.

CA BOND EXP. PLAN:
Reponsible Party: RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The responsible party is in compliance with the RAO issued by the Department. DHS has budgeted $50,000 for oversight/monitoring of cleanup efforts and expects to recover 100 percent of direct costs, staff costs, and overhead related to the project. The responsible parties will pay all costs associated with remedial investigation and cleanup activities.
Site Description: The facility was formerly an industrial machining and plating shop where plating solutions were disposed of or spilled onto soils from tanks. The site encompasses approximately 10,000 square feet and is located in a light industrial area. Operationsat the site ceased in 1985 and the facility has since remained unoccupied.
Hazardous Waste Desc: High concentrations of cadmium, chromium, and nickel were detected in the soil beneath former plating and process areas. All plating tanks have been removed.
Threat To Public Health & Env: Heavy metals found in soils may migrate to the ground water from the facility. There is extensive use of ground water nearby for irrigation. The general drainage in the area is to Lake Evans, a nearby recreational lake. Some contamination to surfacewater has occurred in the past.
Site Activity Status: The site was first discovered by Riverside County and referred to DHS in 1982. Under the direction of both agencies, initial sampling and site characterization were performed by the owner. A demonstration project in 1986 to evaluate fixation and immobilization of heavy metals in soil was unsuccessful. A RAO was issued in February, 1987 to the owner requiring them to complete RI/FS activities and implement a RAP. These activities, which include soil and ground water investigations, will commencein the Fall of 1988.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/27/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Data Release Frequency: No Update Planned

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

Last EDR Contact: 08/22/2024
Next Scheduled EDR Contact: 01/13/2025
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/05/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

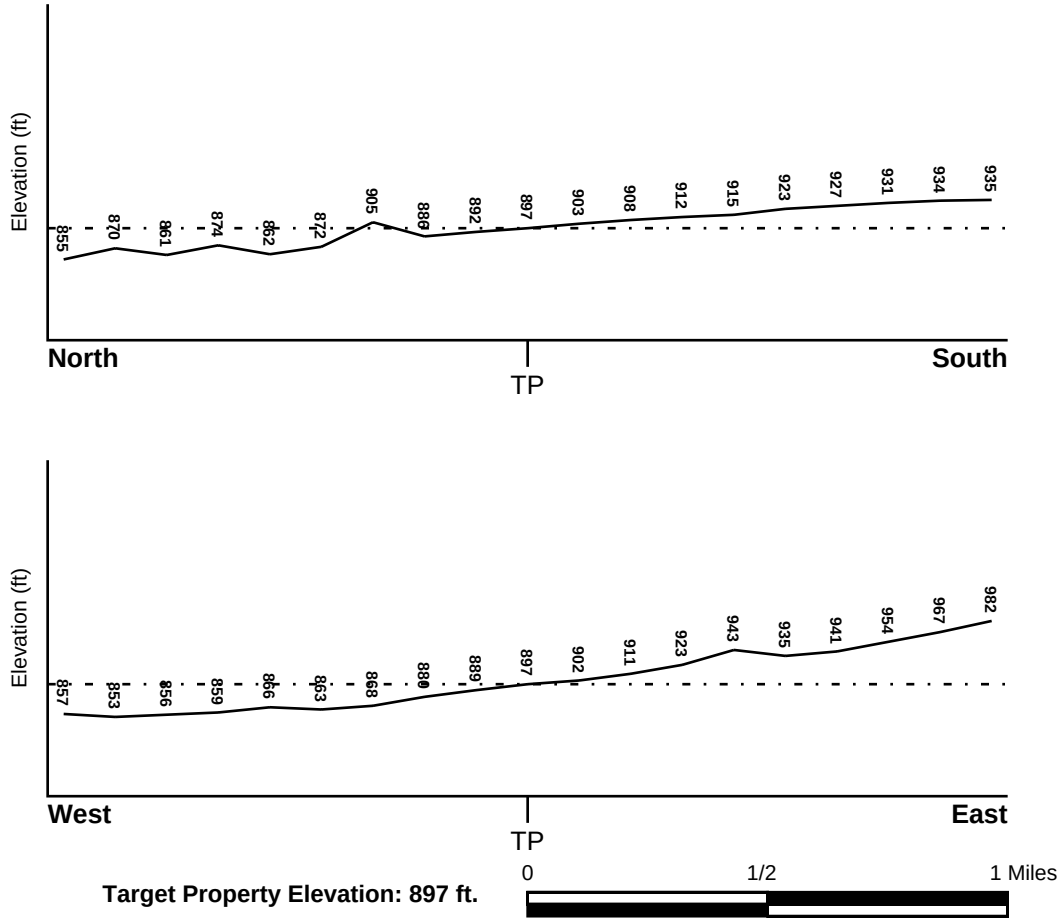
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0726G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06065C0727G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ARLINGTON

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6
2	11 inches	50 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6
3	50 inches	59 inches	cemented	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
4	59 inches	70 inches	coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.6

Soil Map ID: 2

Soil Component Name: HANFORD

Soil Surface Texture: coarse sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6
2	7 inches	40 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
3	40 inches	59 inches	stratified loamy sand to coarse sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GeoSyntec Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by GeoSyntec Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

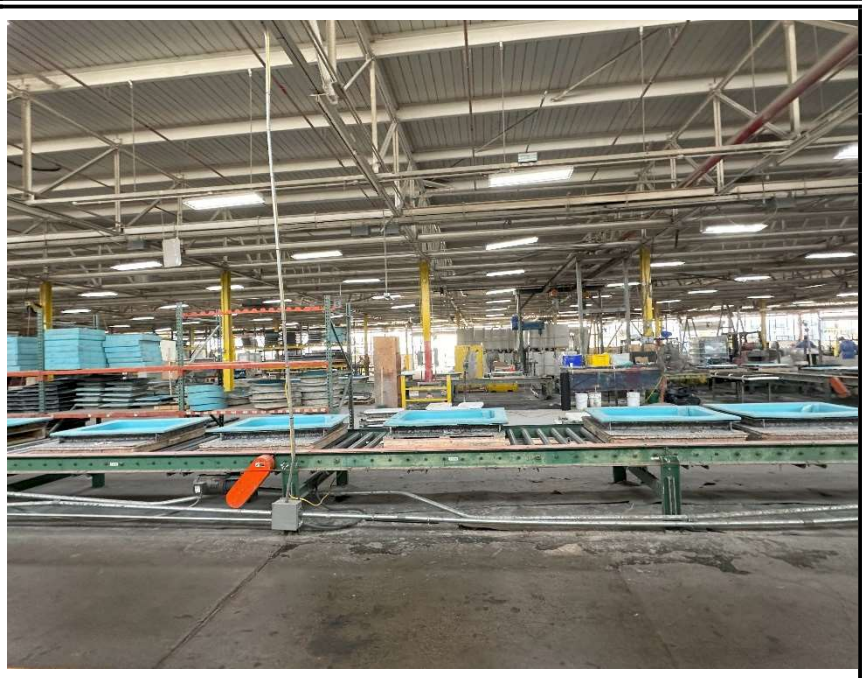
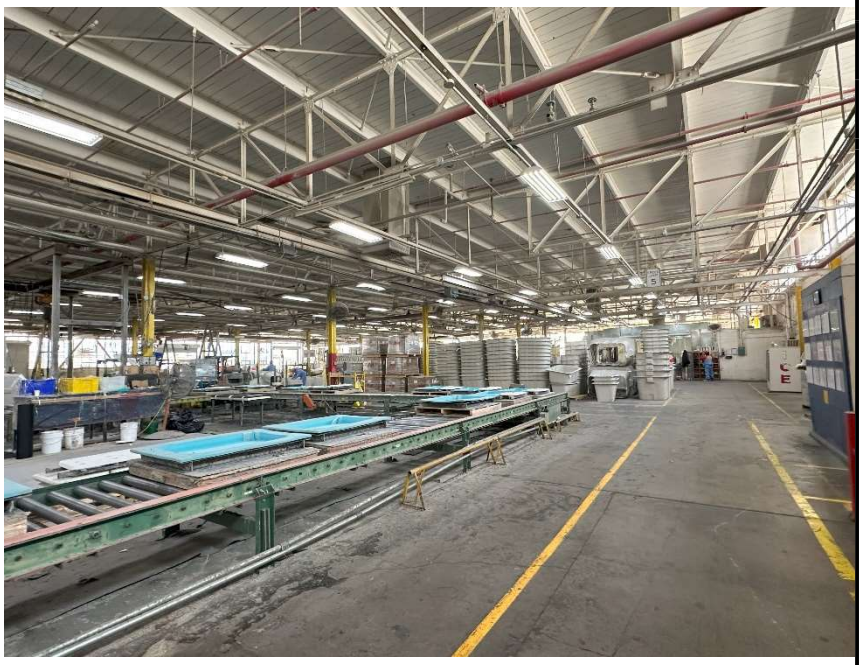
TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.



Address Researched	Address Not Identified in Research Source
1989 Massachusetts Ave	2005, 1995, 1993, 1977, 1970, 1967, 1966, 1961, 1956, 1941, 1931, 1927, 1925, 1924, 1921



APPENDIX G

SELECTED SITE PHOTOGRAPHS TAKEN BY GEOSYNTEC

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 1 **Date: 10/15/2024** **Direction: E** **Comments: Representative photograph of assembly line inside Building 1 at New Basis. Assembly line is filling molds with polymer concrete.**	

Photograph ID: 2 **Date: 10/15/2024** **Direction: N/A** **Comments: Another view of assembly line in Building 1.**	

GEOSYNTEC CONSULTANTS
Photographic Record

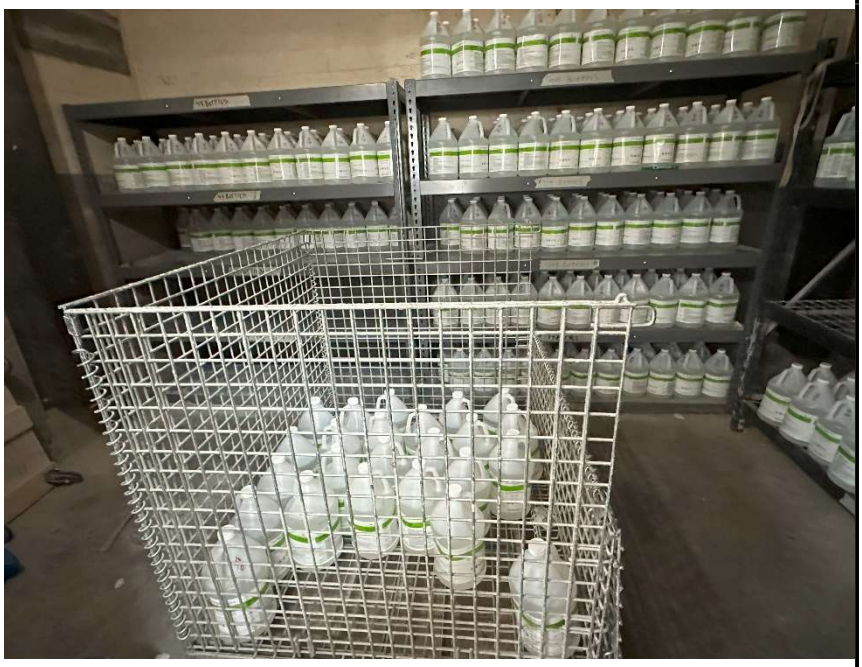
Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 3

Date: 10/15/2024

Direction: W

Comments: Catalyst storage room in Building 1. Stores "MPKP" in small bottles (see next photo).



Photograph ID: 4

Date: 10/15/2024

Direction: W

Comments: Inside the catalyst storage room. Dozens of plastic containers of "MPKP" stored.

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 5 **Date: 10/15/2024** **Direction: N** **Comments: Exterior area between Building 1 and Building 2. Solid materials stored.**	

Photograph ID: 6 **Date: 10/15/2024** **Direction: N** **Comments: Interior of Building 2, where more manufacturing operations occur. In the background is a concrete batch mixer and a control room.**	

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 7 **Date: 10/15/2024** **Direction: NE** **Comments: Another view of the exterior area between Building 1 and 2. Silos containing calcium and sand present. Small amounts of fine-grained materials visible on the ground.**	

Photograph ID: 8 **Date: 10/15/2024** **Direction: SE** **Comments: View of the two reportedly empty ASTs in a concrete secondary containment feature on the north side of Building 2.**	

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

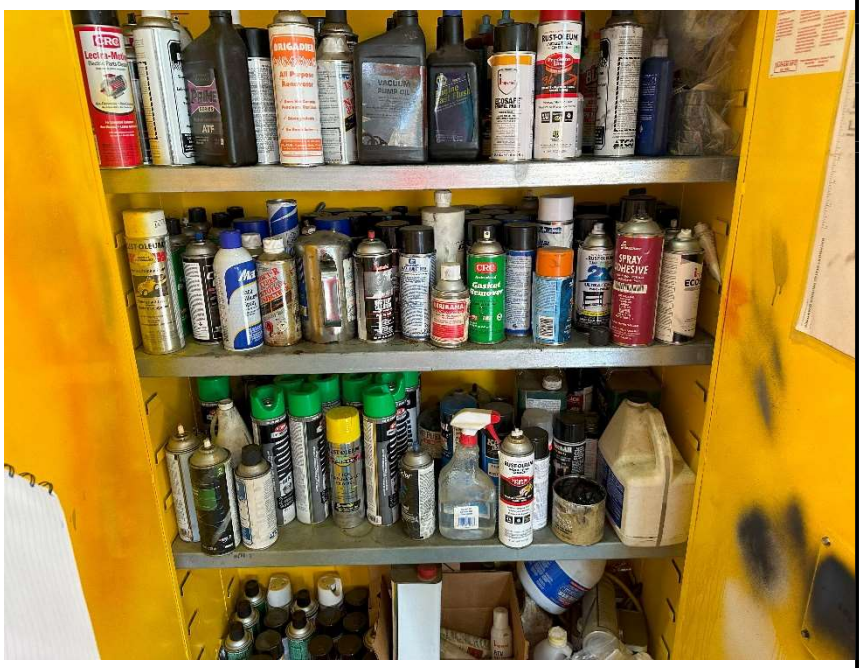
Photograph ID: 9 **Date: 10/15/2024** **Direction: SW** **Comments: View of the gated area with two lifted ASTs on the north side of Building 1. ASTs reportedly contain resin, and the associated infrastructure and pavement beneath the tanks contained oily material (see below).**	
Photograph ID: 10 **Date: 10/15/2024** **Direction: SW** **Comments: Piping and pumps associated with the resin ASTs. Oily material visible.**	

GEOSYNTEC CONSULTANTS Photographic Record	
Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 11 **Date: 10/15/2024** **Direction: SW** **Comments: View of the hazardous materials storage area on the exterior northwest side of Building 1. Approximately 12 55-gallon drums of oily water and acetone sludge and seven 5-gallon buckets of universal waste present. Minor dark oily staining on the underlying pavement.**	
Photograph ID: 12 **Date: 10/15/2024** **Direction: W** **Comments: View of the reportedly empty drum staging area northwest of Building 1. Approximately 12 55-gallon drums present.**	

GEOSYNTEC CONSULTANTS
Photographic Record

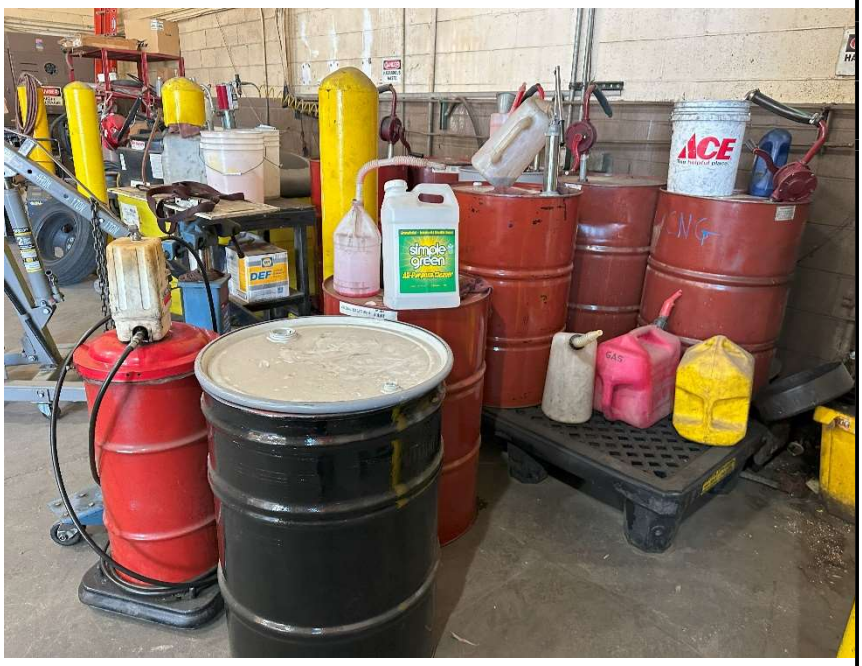
Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**



Photograph ID: 13 **Date: 10/15/2024** **Direction: NE** **Comments: Exterior paved area throughout eastern portion of New Basis. Solid finished products staged on wood pallets. Municipal dumpsters also in this area.**	

Photograph ID: 14 **Date: 10/15/2024** **Direction: NW** **Comments: View of loading dock area to the south of Building 2.**	

GEOSYNTEC CONSULTANTS
Photographic Record



Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 15 **Date: 10/15/2024** **Direction: W** **Comments: View of bus maintenance shop at STA facility. General automotive maintenance and repair chemicals and equipment visible throughout.**	

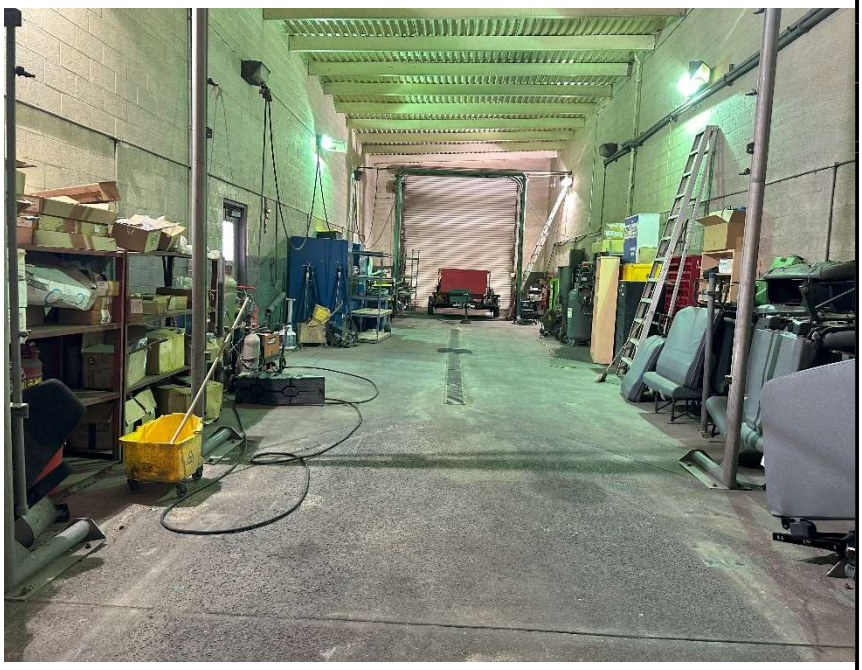
Photograph ID: 16 **Date: 10/15/2024** **Direction: N/A** **Comments: Fire cabinet containing aerosols and other containers in the bus maintenance shop. Representative area of chemical storage.**	

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 17 **Date: 10/15/2024** **Direction: NW** **Comments: Pan beneath a bus being worked in in a maintenance bay in the bus maintenance shop. Oily material visible on the ground.**	
Photograph ID: 18 **Date: 6/20/2018** **Direction: SW** **Comments: Representative drums and small containers of primarily motor oil, waste oil, antifreeze, and diesel exhaust fluid on secondary containment in the chemical storage area and hazardous waste storage area located in the western portion of the bus maintenance shop.**	

GEOSYNTEC CONSULTANTS
Photographic Record



Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 19 **Date: 10/15/2024** **Direction: NW** **Comments: One of two approximately 200-gallon ASTs in the northwest portion of the bus maintenance shop. Pictured AST contains motor oil and other AST contains waste oil.**	

Photograph ID: 20 **Date: 10/15/2024** **Direction: E** **Comments: Northern exterior area of bus maintenance shop, beyond which is the parking lot for the buses. Rectangular feature (possibly former clarifier) visible in the concrete.**	

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 21 **Date: 10/15/2024** **Direction: W** **Comments: Representative well lid. One of several observed throughout paved areas of the STA facility. Beyond is the unpaved parking lot for buses.**	
Photograph ID: 22 **Date: 10/15/2024** **Direction: S** **Comments: Interior of the former bus washing station building in the western portion of the STA facility. Representative storage and ribbon drain visible.**	

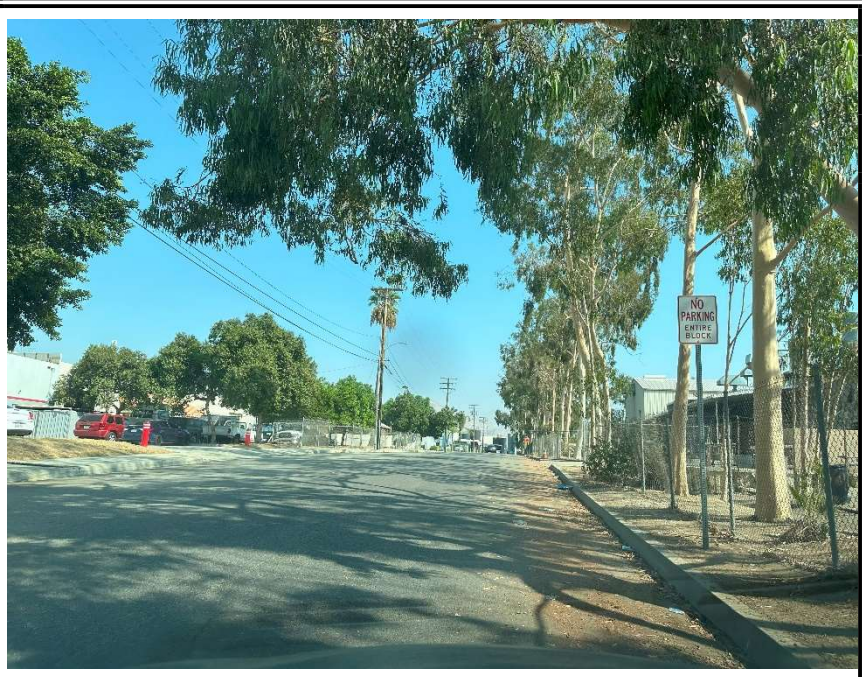
GEOSYNTEC CONSULTANTS Photographic Record	
Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 23 **Date: 10/15/2024** **Direction: W** **Comments: Floor-mounted dry-type transformer and AST containing soap in the western portion of the former bus washing station.**	
Photograph ID: 24 **Date: 10/15/2024** **Direction: S** **Comments: Air filter/compressor and other equipment near floor drain in the southwestern portion of the former bus washing station. Oily material visible on the ground.**	

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 25 **Date: 10/15/2024** **Direction: N/A** **Comments: Another view of the oily material and floor drain the former bus washing station.**	
Photograph ID: 26 **Date: 10/15/2024** **Direction: S** **Comments: Three-stage clarifier to the north of the former bus washing station building. Interior not observed.**	



GEOSYNTEC CONSULTANTS Photographic Record	
Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 27 **Date: 10/15/2024** **Direction: N** **Comments: Aboveground conveyance piping and monitoring well (inferred to be associated with remediation system) observed in the western portion of the STA facility.**	

Photograph ID: 28 **Date: 10/15/2024** **Direction: N** **Comments: Representative photograph of north-adjoining property with tanks and equipment staged outside.**	

GEOSYNTEC CONSULTANTS
Photographic Record

Client: SCIND Massachusetts Point, LLC	**Project Number: SC1143**
Site Name: Riverside	**Site Location: 1989 Massachusetts Ave. & 2626 Kansas Ave.**

Photograph ID: 29 **Date: 10/15/2024** **Direction: NE** **Comments: North-adjoining road (Roberta Street) lined with various commercial/industrial businesses to the north of the Site.**	

Photograph ID: 30 **Date: 10/15/2024** **Direction: N** **Comments: Front of east-adjoining property.**
