CERS HAZ WASTE:

Name:	CG AUTOMOTIVE
Address:	75 CRISTICH LN B
City,State,Zip:	CAMPBELL, CA 95008
Site ID:	17874
CERS ID:	10355491
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	17874
Site Name:	CG AUTOMOTIVE
Violation Date:	07-18-2016
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 10/17/2016. Observed several old 1 gallon containers of various paints and solvents on shelves in waste storage area. Determine it these containers hold hazardous waste and respond manage them accordingly. Response to report should include information

CG AUTOMOTIVE (Continued) **S112345539**

	on how the containers will be managed.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	17874
Site Name:	CG AUTOMOTIVE
Violation Date:	07-18-2016
Citation:	22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description:	Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes:	Returned to compliance on 10/17/2016. EPA ID number CAL931095471 is currently inactive. Mr. Gerbasi completed DTSC form 1358 during the inspection and agreed to send this form to DTSC and to ensure this number will be used on all hazardous waste pickup manifests.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	17874
Site Name:	CG AUTOMOTIVE
Violation Date:	07-18-2016
Citation:	HSC 6.5 25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25201(a)
Violation Description:	Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to this chapter.
Violation Notes:	Returned to compliance on 10/17/2016. Mr. Gerbasi stated that brake shavings are currently being used as fertilizer for his garden. Brake shavings less than 100 microns must be managed as hazardous waste and kept in a closed and labeled container. Brake shavings larger than this size may be managed as scrap metal. Immediately cease disposing of brake shavings to the land or to trash.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	17874
Site Name:	CG AUTOMOTIVE
Violation Date:	07-18-2016
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description:	Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes:	Returned to compliance on 10/17/2016. MISMANAGEMENT OF USED OIL Mr. Gerbasi stated that brake fluid is mixed with used oil and disposed of as used oil. Per Health and Safety Code section 25250.7 (a) ,"no person who generates, stores, or transfers used oil shall intentionally contaminate used oil with other hazardous waste other than minimal amounts of vehicle fuel". CORRECTIVE ACTION: Immediately cease mixing brake fluid and used oil. Begin collecting used brake fluid in a separate, closed hazardous waste container with a proper hazardous waste label.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-18-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility is an auto repair shop that does not do auto body work. Facility generates the following wastes: spent batteries (core exchange), oily absorbent (none observed), non-empty aerosol cans (none observed), spent fluorescent tubes (recycled), used oil, used antifreeze, used oil and fuel filters, and oily rags (commercially laundered). Parts washing machine is topped off with fluid but does not require replacing, according to Mr. Gerbasi. Inspection included walk-through of all work bays, storage closet next to shop, oil filters waste storage area outside, parking lot perimeter, inspection of trashcans/dumpsters, and review of manifests for used oil, used antifreeze, used oil filters, and bills of lading for battery core exchanges and rag service. Fire extinguishers are annually serviced, aisle space is adequate, employees are trained by Mr. Gerbasi, and waste drums are inspected weekly. The following violations were corrected at the time of inspection: G020 Marking [Truncated]

CERS ID:	10343656
CERS Description:	Hazardous Waste Generator

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-29-2016
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine hazardous waste inspection. Facility is a painting contractor that only works with latex paints. Latex paints leftover from projects are stored in the warehouse and collected every 6 months by the California Paint Care Program. Fire extinguishers have had annual maintenance. Bills of lading were reviewed for latex paint recycling.

CERS HAZ WASTE:
Name: LAMBERT & SONS FLOOR COVERING
Address: 695 MCGLINCY LN
City,State,Zip: CAMPBELL, CA 95008
Site ID: 43329
CERS ID: 10355050
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 43329
Site Name: LAMBERT & SONS FLOOR COVERING
Violation Date: 07-20-2016
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 08/02/2016. Mr. Lambert stated that waste thinner containers are inspected every few weeks when they are used.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 43329
Site Name: LAMBERT & SONS FLOOR COVERING
Violation Date: 07-20-2016
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 08/02/2016. 1.) Facility occasionally generates saturated rags that may contain water based stain or traditional stains. If these rags are saturated with hazardous wastes they may not be intentionally dried and should not be laundered at a facility without a proper permit. 2.) Facility uses durafoam applicator heads (made of absorptive material) to apply finish to floor. Heads are stored in thinner until they are reused. Facility generates about 20 spent heads in a year. Currently heads are thrown in trash. 3.) Facility also occasionally has hardened epoxy or fast-drying product leftover from field jobs. Observed 1x2 gallons of hardened Sika MB primer in trash during inspection. No materials may

LAMBERT & SONS FLOOR COVERING (Continued) **S112346036**

be intentionally hardened to avoid management as a hazardous waste. Materials that dry naturally during use may be hazardous waste if they contain toxic metals. 4.) Mr. Lambert stated that he may not be able to use the 1x55 gallon container of black top sealer with 10 gallons [Truncated]

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 43329
Site Name: LAMBERT & SONS FLOOR COVERING
Violation Date: 07-20-2016
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 08/02/2016. Facility had some hardened waste caked in layers in the transfer funnel, on top of waste containers, in secondary containment, and in drip pan where funnel is stored. Use appropriately sized funnels to prevent spilling or clean up spills when they occur to minimize the possibility of fire or release to the environment.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 43329
Site Name: LAMBERT & SONS FLOOR COVERING
Violation Date: 07-20-2016
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 08/02/2016. No response to the 2010 inspection was received by our office. Mr. Lambert corrected the marking violation and responded in writing to the 2010 report during today's inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-20-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility finishes hardwood floors and stores epoxies, water-based and traditional stains and finishes, paint thinner, and paint thinner waste. Inspection included walk-through of facility waste storage shed, epoxy storage area, inspection of trashcans, and review of waste drop-off receipts from the household hazardous waste collection facility in Santa Clara County. Facility has an active EPA ID number, adequate spill absorbent, and annually serviced fire extinguishers. The following violations were corrected at the time of inspection:

LAMBERT & SONS FLOOR COVERING (Continued) **S112346036**

G020 Marking of hazardous waste: Observed 2x1 quart unmarked containers of thinner waste and one container with an incorrect date from 2012. Labels are preprinted with improper date and records show the last waste drop-off in 2015. Mr. Lambert fixed the incorrect date and consolidated wastes into a properly labeled container. G114 Emergency Aisle Space: One fire extinguisher was blocked by equipment. Mr. Lambert moved this equipment [Truncated]

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 04-09-2019
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Conducted a limited inspection along with Ashley Ryder from this office at the request of Mr. Lambert to verify the site's hazardous waste generator status. Mr. Lambert explained that his industry and specifically his business has made several improvements in hazardous waste minimization for floor refinishing. Mr. Lambert provided over 3-yrs of disposal receipts via the County's Small Business Hazardous Waste Program. Included in the disposal receipts folder was a record of contacting this office to reduce the hazardous waste permit. Given the documentation I observed during the inspection, Lambert & Sons Floor Covering has routinely generated less than 27 gallons per year and their hazardous waste program permit will be changed from 2205 to 2202. In addition, I am authorizing Lambert & Sons Floor Covering to short pay invoice #IN1170428 by $261.00 for an invoice total of $595.00. No adjustments will be made to the County Fire Department's Hazardous Materials Form [Truncated]

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110055847240

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Site ID:	76582
Site Name:	TIM CAMPBELL DESIGN
Violation Date:	07-18-2016
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 08/15/2016. Observed 2 filters with paint residues in the trash. Make a hazardous waste determination for the paint residue on the filters. If determined to be hazardous, begin managing as hazardous waste and accumulate paint filters in a properly labeled container. Paint waste is presumed hazardous because it is listed in California Code of Regulations, Appendix X.

Citation: 40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33
Violation Description: Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.
Violation Notes: Returned to compliance on 08/15/2016. Observed 2 x fire extinguishers that were last serviced in 2014. Ensure that fire extinguishers are tested and maintained annually.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-18-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Facility generates waste oil, lacquer and latex based paints, as well as paint thinner/solvent waste. Waste paint and solvent are brought to the County’s Small Business Hazardous Waste Collection facility. Observed the following wastes on site: 2 x 5 gallon containers of waste paint thinner 20 x 5 gallon containers of various waste paints Container areas are inspected weekly Mr. Campbell has had hazardous waste management training Disposal receipts were reviewed for waste paint and waste lacquer thinner and solvent.

SUNSTONE CONSTRUCTION INC (Continued) **S106093837**

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 07/12/2016. Start date on 2 x 55 gallon drums of used oil is 12/3/15. As a small quantity generator your accumulation time limit is 180 days.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CERS HAZ WASTE:
Name: DE LONGS AUTOMOTIVE
Address: 419 MCGLINCY LN
City,State,Zip: CAMPBELL, CA 95008
Site ID: 110615
CERS ID: 10352752
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 110615
Site Name: DE LONGS AUTOMOTIVE
Violation Date: 07-12-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

DE LONGS AUTOMOTIVE (Continued) **S121738938**

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 07/18/2018. Observed 1 x 55 gal drum of used coolant with an accumulation start date of 5/20/2016. Per Mr. Orsua, no pick-ups have occurred since moving in to this location. As a small quantity generator, the accumulation time limit is 180 days.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 110615
Site Name: DE LONGS AUTOMOTIVE
Violation Date: 07-12-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 07/18/2018. Observed the following hazardous waste containers with incomplete markings: - 2 x 55 gal drums of used oil missing the accumulation start date and generator information - 1 x 15 gal used oil roller missing complete markings
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 110615
Site Name: DE LONGS AUTOMOTIVE
Violation Date: 07-12-2018
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 07/18/2018. EPA ID: CAL000409210 is inactive. DTSC Form 1358 was provided at the time of inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-12-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site with Michelle Santos of HMCD to perform a routine hazardous waste inspection. Business does automotive repair. A walk-through of the facility was conducted with owner, Dell Orsua. The following

DE LONGS AUTOMOTIVE (Continued) **S121738938**

hazardous waste streams were observed: - used oil: 2 x 55 gal drums + 1 x 15 gal roller (empty) - used coolant: 1 x 55 gal drum - used oil filters: 1 x 55 gal drum Fire extinguisher had annual maintenance performed on 6/18/18. Spill control was available. Weekly inspections are being conducted. Employee training is being conducted by Mr. Orsua. Rags are commercially laundered by Aramark. Battery cores are managed by Interstate. Disposal records were reviewed. The following violations were corrected at the time of inspection: G211: EMERGENCY INFORMATION POSTED: SQG [3010022] Notes: - No brake lathing is done at this location. - Aerosol cans are completely used before being thrown in the trash. - Contact email: djsperformance@hotmail.com

Violation Date:	10-28-2021
Citation:	HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description:	Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes:	Returned to compliance on 11/21/2021. Observed a 55 gallon drum containing the drained used oil filter has an accumulation start date of 7-10-2020.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	115067
Site Name:	EUROTECH TUNING
Violation Date:	05-10-2016
Citation:	22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130
Violation Description:	Failure to properly handle, manage, label, and recycle used oil and fuel filters.
Violation Notes:	Returned to compliance on 07/08/2016. Observed 1 x 55 gallon drum of used oil filters that had metal and paper filters commingled. Paper filters cannot be recycled for their metal content and must be managed separately as hazardous waste.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	115067
Site Name:	EUROTECH TUNING
Violation Date:	05-10-2016
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 07/08/2016. 1 x 30 gallon drum of used coolant was missing generator information markings 1 x 15 gallon used oil roller was missing hazardous waste markings 1 x 5 gallon container of used oil was missing hazardous waste markings
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	115067
Site Name:	EUROTECH TUNING
Violation Date:	10-28-2021
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 11/21/2021. Observed a mop bucket containing a pink colored mixture in the shop. The mixture is a combination of 1 part degreaser and 20 part water. The concentrate was labeled as corrosive and contained Sodium Hydroxide. Make a hazardous waste determination on the mop water by either using generator knowledge or having it tested by a Registered CA Environmental Lab for Corrosivity.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-28-2021
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: An onsite routine Hazardous Waste Generator inspection was conducted on 10-28- 2021. Also present at the inspection was Ethan McDermott, Hazardous Materials Specialist. This business is an foreign automotive repair and service facility. The facility's State EPA Identification is active. EPA ID#: CAL000414857. - Fire extinguishers were last serviced on October 2020. - Absorbent was available for spill control. - Emergency Notification information was posted on the shop wall right outside of the office. - Consolidated manifest were reviewed in the office. - Linen Service was provided by Mission Uniform. - Battery core service provided by WorldPak. - The onwer stated that inspections of hazardous waste areas are conducted daily. - Metal shaving from turned rotors will be saved for metal recycling. The following waste streams items were noted at the inspection: Used Oil: 2x 55 gallon drum Used Oil Roller: 1x 30 gallon drum Drain Used Oil Filter: 1x55 [Truncated]
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-10-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Facility is an auto repair shop with 1 service bay. Observed the following wastes on site: 2 x 55 gallon drum of used oil 1 x 30 gallon drum of used coolant 1 x 55 gallon drum of used oil filters 1 x 5 gallon container of used oil Fire extinguishers have had annual maintenance Spill control is available on site Rags are managed by Mission Linen Battery cores are managed by WorldPac Brake shavings are managed as scrap metal and recycled Container areas are inspected weekly Employees have had hazardous waste training through the County's classes Emergency information is posted on site EPA ID # CAL000414857 is active Disposal receipts for used oil, used coolant, and used oil filters were reviewed. The following violations were corrected on site: 2 x 55 gallon drums of used oil were missing the hazardous properties marking. These markings were added during inspection.

Name: WALT'S AUTOMOTIVE
Address: 335 MCGLINCY LN 3
City,State,Zip: CAMPBELL, CA 95008
Site ID: 84620
CERS ID: 10351927
CERS Description: Hazardous Waste Generator

CERS:
Name: WALT'S AUTOMOTIVE
Address: 335 MCGLINCY LN 3
City,State,Zip: CAMPBELL, CA 95008
Site ID: 84620
CERS ID: 10351927
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 84620
Site Name: WALT'S AUTOMOTIVE
Violation Date: 09-26-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

WALT'S AUTOMOTIVE (Continued) **S121792847**

Violation Notes: Returned to compliance on 10/17/2018. Per facility, mop is used for spills and no container for oily water was observed on-site. A Hazardous Waste Determination must be made. If found to be hazardous, the mop water must be properly managed as a hazardous waste.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 84620
Site Name: WALT'S AUTOMOTIVE
Violation Date: 09-26-2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 10/17/2018. Observed 3 x 55 gal drums of used oil and 1 x 55 gal drum of used coolant as open during inspection, while waste was not actively being added. Mr. Nehse stated that it is currently not their practice to close the containers.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 84620
Site Name: WALT'S AUTOMOTIVE
Violation Date: 09-26-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 10/17/2018. The following hazardous waste containers were observed with missing or incomplete markings: - 1 x 30 gal drum of waste paper filters: missing generator information, the words "Hazardous Waste", accumulation start date, hazardous properties, and physical state; THIS WAS CORRECTED ON-SITE. - 3 used oil rollers: missing hazardous waste markings - 1 x 55 gal drum of waste coolant: label missing generator information, physical state, and hazardous properties - 3 x 55 gal drums of used oil: 1 had no hazardous waste markings, 2 had illegible labels Extra labels were provided.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-26-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site with Loren Lim of HMCD to perform a routine Hazardous Waste

WALT'S AUTOMOTIVE (Continued) **S121792847**

Generator inspection. Walt's Automotive does auto repair. A walk-through of the facility was conducted with owner, Walt Nehse. The following hazardous waste streams were observed: Drained, Used Oil Filters: 1 x 55 gal drum Paper Filters: 1 x 30 gal drum Used Oil: 3 x 55 gal drums + 3 x 15 gal rollers Waste Coolant: 1 x 55 gal drum (point of generation) 1 Parts Washer State ID: CAL00077892 is inactive. Documentation of recent efforts to reactivate this ID were provided. Observed metal lathe on-site. Mr. Nehse stated that the brake shavings are collected and transferred to the drained, used oil filters drum. Fire extinguishers have been annually serviced. Current Emergency Information was observed as posted. Shop rags and uniforms are commercially laundered by Cintas. Wet vacuum is used for spill control. Per Mr. Nehse, container area inspections are conducted daily. Battery core exchanges [Truncated]

Environmental Interest/Information System:
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS HAZ WASTE:
Name: ALMADEN CONSTRUCTION
Address: 408 INDUSTRIAL ST
City,State,Zip: CAMPBELL, CA 95008
Site ID: 91187
CERS ID: 10352686
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 91187
Site Name: ALMADEN CONSTRUCTION
Violation Date: 08-02-2016
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Per Mr. Holm, container areas are inspected monthly. Begin inspecting container areas weekly.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 91187
Site Name: ALMADEN CONSTRUCTION
Violation Date: 07-20-2016
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Per Mr. Holm no disposal of used oil has occurred in the past 3 years. As a small quantity generator your accumulation time limit is 180 days.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 91187
Site Name: ALMADEN CONSTRUCTION
Violation Date: 07-20-2016
Citation: 40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33
Violation Description: Failure to test and maintain as necessary all facility communications

ALMADEN CONSTRUCTION (Continued) **S112345278**

or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.

Violation Notes: 2 x fire extinguishers were last serviced in 2014. Ensure that fire extinguishers are tested and maintained annually.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-02-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Inspection began on 7/20/16 and concluded today. Facility consists of an office, a large outdoor storage area and a back storage room. Facility occasionally services fleet vehicles on site. Observed the following wastes on site: 2 x 55 gallon drums of used oil 1 x 55 gallon drum of used oil filters 3 x 1 gallon containers of used oil Battery cores are managed by Battery Systems Employees are thoroughly familiar with hazardous waste management Spill control is available on site Disposal receipts were reviewed for universal waste lamps EPA ID# CAL000232448 is active The following violations were corrected on site: 1 x 55 gallon drum of used oil was missing bung cap. Cap was found and placed on drum. 2 x 55 gallon drums of used oil were missing hazardous waste markings. Markings were added during inspection. 1 x 55 gallon drum of used oil filters was missing the start date. Start date was added [Truncated]

MODERN BENCH OPERATIONS (Continued) **1000216516**

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date:	05-10-2016
Citation:	40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description:	Failure to inspect hazardous waste storage areas at least weekly.
Violation Notes:	Per Mr. Maminiski, container areas are inspected twice a year. Begin conducting container area inspections weekly.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,
Site ID:	142552
Site Name:	PERFORMANCE TECHNIQUES
Violation Date:	07-22-2022
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 07/26/2022. Observed 3x 55 gallon drum of used oil in the hazardous waste accumulation area that were missing the bung cap. These used oil containers were open and were not actively in use to add or remove waste during the inspection.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

Site ID: 28727
Site Name: ETCHED MEDIA CORP
Violation Date: 10-22-2014
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Tiered Permitting Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 09/10/2017. The last annual submittal on CERS was incomplete in that it does not include a plot plan, closure cost estimate, or tank assessment. These items are marked "stored at facility". This option may only be used if agreed to by DEH and for information which is trade secret. PLEASE UPLOAD THE ABOVE NOTED INFO TO CERS. Also, please modify the "unit page" to indicate the system is three tanks (rinse collection, holding tank, treatment tank) instead of two.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-21-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility has ceased operation of treatment in its system. Waste is now pumped from the etch tool to the holding tank, where it is directly transferred to barrels for offiste transportation. According to logs available for review, last treatment in system occurred 5/26/16. --Waste is currently being stored/stockpiled while drums being delivered. Original delivery provided poly drums which were then indicated to not be proper containers, needing stainless steel drums. Site could not locate its closure plan to address the immanent dismantling and removal of the filter press. All other components of the system are slated to remain in use as hazardous waste storage/transfer containers. SITE WILL BE PLACED INTO "DEFERRED CLOSURE". IN THIS STATE, SITE AGREES THAT FULL PBR CLOSURE STANDARDS APPLY ALL PARTS OF THE TREATMENT SYSTEM, AND AT THE TIME THAT THE SYSTEM (OR COMPONENTS) ARE REMOVED FROM SERVICE, THEY WILL BE CLOSED ACCORDING TO THE PLAN AND UNDER PERMIT AND [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-21-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Site generates waste from the etching of metal, screen printing (both plate making and inks) and painting. Wastes are collected in containers and removed under EPA ID CAD982487571 G020C: Drums used for consolidation of waste were all missing the properties and hazards of the wastes. Each drum was marked with this information during the inspection. Both ink and paint wastes are consolidated to same drum for disposal. Booth filters will be managed as HW once removed. Site may wish to utilize satellite accumulation to extend life of storage of waste. Literature provided and requirements discussed. Inspections of waste areas done weekly. Logging inspection of nitric etch system room/drums. Strongly recommend replacing labels on step cans in ink room. Labels are becoming difficult to read due to drips.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-22-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility does various activities to print, etch, silkscreen and otherwise create nameplate and identifier devices. Shop consists of an etch room, platemaker and resist strip area, photoplate/film developer, screen and ink room, paint area (with paint booth), and ink room. Photoresist (AZ Aquablue) is washed and solution is recycled through machine until spent. Completed pH calculation for solution (12.28) and fish bioassay (all lived) on waste to demonstrate non-hazardous. Etch room captures spent nitric acid and rinse from etching of plates (95% magnesium, 1% zinc). Waste generated at etch machine as well as at rinse table. -Waste is treated onsite as part of PBR system. Film developer with silver is collected and shipped offsite using manifest. Screen wash via wipe with papertowels. collected in step cans and transferred to consolidation drum at end of each day. Ink in ink cups at point of use is removed and captured for re-use. Ink being used does not expire [Truncated]

Citation:	22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description:	Failure to obtain and/or maintain an Active EPA ID.
Violation Notes:	Returned to compliance on 05/19/2016. Per the Hazardous Waste Tracking System, EPA ID# CAL000287729 is inactive. Provided facility with DTSC form 1358 to reactivate EPA ID#.
Violation Division:	Santa Clara County Environmental Health
Violation Program:	HW
Violation Source:	CERS,

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	05-19-2016
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine hazardous waste inspection. Facility is a small transmission shop with 1 service bay. Observed the following wastes on site: 1 x 15 gallon container of used oil 1 x 5 gallon container of used oil Fire extinguishers have had annual maintenance Rags are managed by Mission Linen Spill control is available on site Employees are thoroughly familiar with hazardous waste management Container areas are inspected weekly Oily water is pumped from the hot soap parts washer. The oily water remains in a reservoir and is used until service is required. Disposal receipts for used oil and oily water were reviewed The following violations were corrected on site: 1 x 15 gallon drum of used oil was missing complete generator information and the start date. These markings were added during inspection. Emergency information was not posted on site. Emergency

Violations:
Site ID: 63062
Site Name: ROTTEN ROBBIE #27
Violation Date: 09-22-2021
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the functional line leak detector (LLD) monitoring

ROTTEN ROBBIE #27 (Continued) **S101303574**

	pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes:	Returned to compliance on 09/22/2021. Both 87 piping MLLDs were not functioning properly and seemed to be interfering with each other. Issue was resolved during the inspection.
Violation Division:	Santa Clara County Fire Department
Violation Program:	UST
Violation Source:	CERS,
Site ID:	63062
Site Name:	ROTTEN ROBBIE #27
Violation Date:	09-23-2020
Citation:	23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes:	Returned to compliance on 09/23/2020. Multiple float and chain mechanisms failed to trip the shear valve upon initial testing. Failed mechanisms: -diesel and 87 outer in dispenser 1/2 -87 inner in dispenser 3/4 -87 inner and 91 in dispenser 5/6 -diesel, 91, and 87 outer in dispenser 7/8 -87 inner in dispenser 9/10 -diesel in dispenser 11/12 *All mechanisms were cleaned, adjusted as necessary, retested and passed during this inspection.
Violation Division:	Santa Clara County Fire Department
Violation Program:	UST
Violation Source:	CERS,
Site ID:	63062
Site Name:	ROTTEN ROBBIE #27
Violation Date:	09-22-2021
Citation:	23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	DO did not note Diesel STP sump alarms on 2/6/21 & 2/7/21 on the 2/13/21 monthly inspection report, and marked "N/A" for sumps having had an alarm since the previous inspection.
Violation Division:	Santa Clara County Fire Department

Site ID:	63062
Site Name:	ROTTEN ROBBIE #27
Violation Date:	09-23-2020
Citation:	HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description:	"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes:	The 91 fill spill container does not contain the minimum required 5 gallon capacity.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 11/01/2011
Comments: Site investigation and remediation report review complete and DTSC concluded no further action is necessary to address hazardous substances at the Site. The Voluntary Cleanup Agreement scope of work has been completed, so a close-out memo was sent to the DTSC Cost Recovery Unit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 06/23/2011
Comments: Summerhill Homes and DTSC signed a Voluntary Cleanup Agreement for DTSC to review existing Site investigation and remediation documents and make a determination whether further action is required at the Site. DTSC will issue a no further action letter if the Site has been adequately investigated and remediated.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Letter - Demand
Completed Date: 01/26/2012
Comments: Demand letter #1

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 08/29/2011
Comments: Based on the analytical results for sampling conducted at the Site on July 27, 30, and August 1, 2011 that were provided to DTSC in the Report, it appears the extent of soil contamination at the Site has been adequately defined.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 11/01/2011
Comments: Site investigation and remediation report review complete. Based upon an evaluation of the information contained in the submitted reports, DTSC concludes the Site does not pose a threat to human health or the environment under residential land use. Therefore, DTSC determined that no further action is necessary with respect to address hazardous substances at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement Termination Notification
Completed Date: 11/07/2011
Comments: Not reported

Completed Area Name: PROJECT WIDE

SUMMERHILL-CAMPBELL AVENUE SITE (Continued) **S111022971**

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/21/2011
Comments: Based upon the information provided in the reports submitted, DTSC concludes additional assessment, environmental investigation, and remediation may be warranted at the Site. Therefore, DTSC cannot provide the Site with a no further action determination at this time.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Application
Completed Date: 05/19/2011
Comments: After review of the Oversight Request, it was determined that DTSC is the appropriate lead agency.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/22/2023

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/22/2023

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HWT: Registered Hazardous Waste Transporter Database
A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

Date of Government Version: 04/03/2023

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

Longitude (West):	121.942683 - 121° 56' 33.66''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	593732.8
UTM Y (Meters):	4126326.2
Elevation:	208 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12021561 SAN JOSE WEST, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

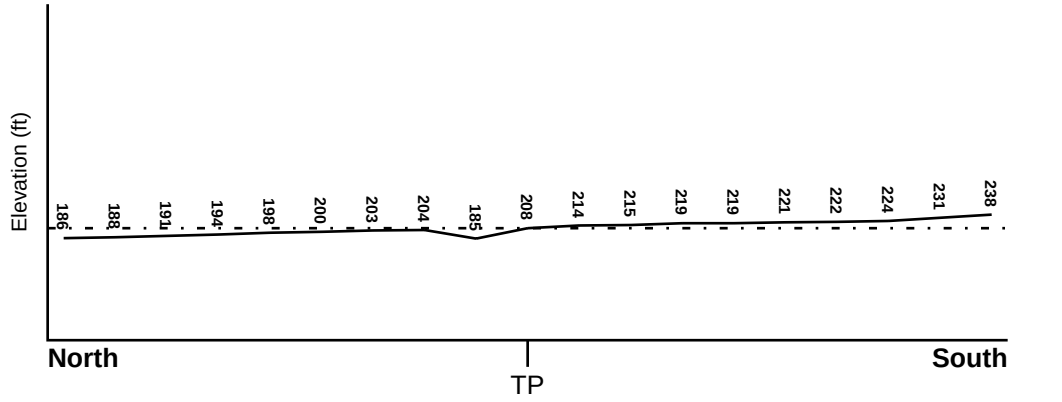
TOPOGRAPHIC INFORMATION

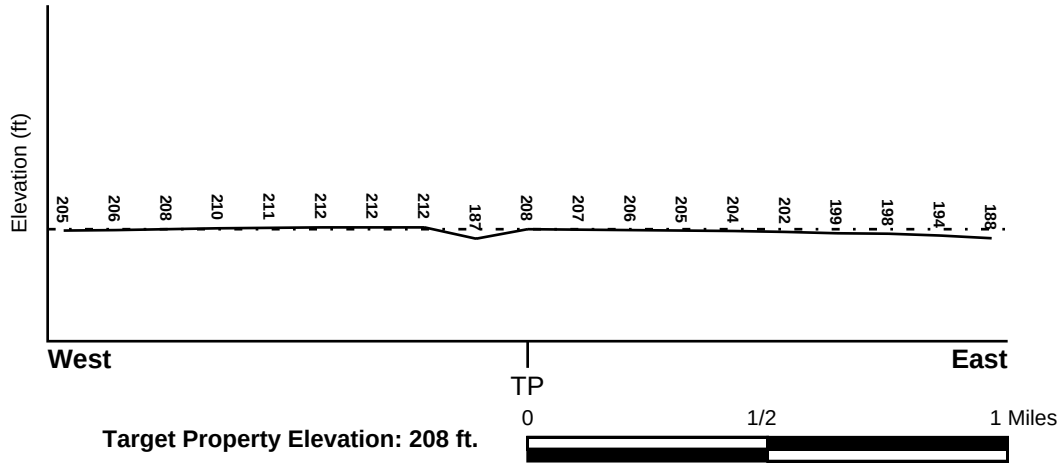
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





0 1/2 1 Miles

Target Property Elevation: 208 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JOSE WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile North
Site Name:	Noble Properties/Orchard Oak
Site EPA ID Number:	CAD981990021
Groundwater Flow Direction:	NNE, BUT MAY BE ALTERED BY LOCAL PUMPING.
Inferred Depth to Water:	100 feet to 130 feet.
Hydraulic Connection:	An aquitard that separates the surficial and lower aquifers is discontinuous or leaky in the vicinity of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PRELIMINARY REPORT UPDATE B

In response to the application for a policy of title insurance referenced herein, ***Chicago Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Chicago Title Insurance Company, a Florida corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

Recording No: 16297431, of Official Records
Affects: Portion of Lot 3 of Parcel One

Reference is hereby made to said document for full particulars.

EXCEPTIONS
(Continued)

26. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

    Recording Date: April 21, 2006
    Recording No: 18896806, of Official Records

27. A deed of trust which purports to secure performance of an agreement referred to therein, and any other obligations secured thereby

    Dated: June 11, 2015
    Trustor/Grantor: Campbell Technology Park, LLC
    Trustee: American Securities Company
    Beneficiary: Wells Fargo bank, National Association
    Recording Date: June 12, 2015
    Recording No: 22984687, of Official Records

    An assignment of the beneficial interest under said deed of trust which names:

    Assignee: Wilmington Trust, National Association, as trustee for the registered holders of Wells Fargo Commercial Mortgage Trust 2015-NXS2, Commercial Mortgage Pass-Through Certificates, Series 2015-NXS2
    Recording Date: August 6, 2015
    Recording No: 23045137, of Official Records

28. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

29. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

30. The Company will require that an Owner's Affidavit be completed by the party(s) named below before the issuance of any policy of title insurance.

    Party(s): Campbell Technology Park, LLC, a California limited liability company

    The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit.

EXCEPTIONS
(Continued)

31. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

    Limited Liability Company: Campbell Technology Park, LLC, a California limited liability company

    a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

    b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

    c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

    d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

    e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

    f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

    g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

32. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other matters which a correct survey would disclose and which are not shown by the public records.

33. Any claims for mechanics' or materialman's liens that may be recorded by reason of a recent work of improvement under construction and/or completed at the date hereof.

34. The requirement that the complete and correct name(s) of the buyer(s) in this transaction be submitted to the Title Department at least 5 days prior to the close of Escrow.

35. This transaction requires high liability approval prior to close of escrow together with an inspection of the subject property.

    Please advise title department with an estimated date that your transaction will close so we can schedule the necessary approvals and inspections.

36. Prior to the close of escrow and the issuance of an ALTA Coverage Policy, an inspection of the property will be required.

37. The transaction contemplated in connection with this Report is subject to the review and approval of the Company's Corporate Underwriting Department. The Company reserves the right to add additional items or make further requirements after such review.

END OF EXCEPTIONS

NOTES

1. Note: The Company is not aware of any matters which would cause it to decline to attach CLTA Endorsement Form 116 indicating that there is located on said Land a Commercial Property, known as 635, 655, 675, 695 Campbell Technology Parkway, Campbell, CA, to an Extended Coverage Loan Policy.

2. Note: The name(s) of the proposed insured(s) furnished with this application for title insurance is/are:

   No names were furnished with the application. Please provide the name(s) of the buyers as soon as possible.

3. Note: Property taxes for the fiscal year shown below are PAID. For proration purposes the amounts were:

Code Area:	010-104
Tax Identification No.:	412-29-010
Fiscal Year:	2022-2023
1st Installment:	$117,576.40
2nd Installment:	$117,576.40
Land:	$9,014,361.00
Improvements:	$9,658,245.00
Bill No.:	8093268

   Affects: Portion of Parcel One

4. Note: Property taxes for the fiscal year shown below are PAID. For proration purposes the amounts were:

Code Area:	010-105
Tax Identification No.:	412-29-011
Fiscal Year:	2022-2023
1st Installment:	$186,068.64
2nd Installment:	$186,068.64
Land:	$12,877,662.00
Improvements:	$16,740,962.00
Bill No.:	8093283

   Affects: Portion of Parcel One

5. Note: Property taxes for the fiscal year shown below are PAID. For proration purposes the amounts were:

Code Area:	010-104
Tax Identification No.:	412-29-012
Fiscal Year:	2022-2023
1st Installment:	$158,625.12
2nd Installment:	$158,625.12
Land:	$12,877,662.00
Improvements:	$12,233,776.00
Bill No.:	8093301

   Affects: Remainder of Parcel One

NOTES
(Continued)

6. Note: Property taxes for the fiscal year shown below are PAID. For proration purposes the amounts were:

Code Area:	010-104
Tax Identification No.:	412-29-015
Fiscal Year:	2022-2023
1st Installment:	$90,639.58
2nd Installment:	$90,639.58
Land:	$9,014,361.00
Improvements:	$5,151,060.00
Bill No.:	8093316
Affects:	Parcel Two

7. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

8. Note: The charge for a policy of title insurance, when issued through this title order, will be based on the Basic Title Insurance Rate.

9. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

10. The application for title insurance was placed by reference to only a street address or tax identification number. The proposed Insured must confirm that the legal description in this report covers the parcel(s) of Land requested to be insured. If the legal description is incorrect, the proposed Insured must notify the Company and/or the settlement company in order to prevent errors and to be certain that the legal description for the intended parcel(s) of Land will appear on any documents to be recorded in connection with this transaction and on the policy of title insurance.

11. Note: If a county recorder, title insurance company, escrow company, real estate broker, real estate agent or association provides a copy of a declaration, governing document or deed to any person, California law requires that the document provided shall include a statement regarding any unlawful restrictions. Said statement is to be in at least 14-point bold face type and may be stamped on the first page of any document provided or included as a cover page attached to the requested document. Should a party to this transaction request a copy of any document reported herein that fits this category, the statement is to be included in the manner described.

12. Note: Any documents being executed in conjunction with this transaction must be signed in the presence of an authorized Company employee, an authorized employee of a Company agent, an authorized employee of the insured lender, or by using Bancserv or other Company-approved third-party service. If the above requirement cannot be met, please call the Company at the number provided in this report.

13. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

NOTES
(Continued)

14. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

15. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company's State Counsel, Regional Counsel, or one of their designees.

END OF NOTES

Jeff Martin/a0h

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non exclusive self protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective August 1, 2021

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

Copyright © 2021. Fidelity National Financial, Inc. All Rights Reserved

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 714-2710 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, visit FNF's Opt Out Page or contact us by phone at (888) 714-2710 or by mail to:

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records. }

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Engeo Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
FOR CLIENT

To evaluate the potential for possible environmentally related impacts and site contamination the following information is requested. This questionnaire is to be completed by the user of the phase one environmental site assessment, or their authorized representative.

PART I

1. Property address and Assessor's Parcel Number (APN):
   635-695 CAMPBELL TECHNOLOGY PARKWAY, CAMPBELL, CA
   412-29-010, 412-29-011, 412-29-012, 412-29-015

2. Current property owner (name, address, voice/fax number):
   CAMPBELL TECHNOLOGY PARK, LLC
   1960 THE ALAMEDA, SUITE 150
   SAN JOSE, CA 95125
   OFC # 408 260-1520

3. Date current property owner assumed title of property:
   ~~MOOR UP TO 2 STORY OFFICE BUILDINGS~~
   APRIL 2006

4. Current property development/improvements:
   FOUR 1 TO 2 STORY OFFICE BUILDINGS

5. Past property use, development/improvements:
   DRIVE-IN THEATER - (MOVIE)

6. Neighboring property uses:
   MULTI FAMILY RESIDENTIAL

PART II

1. Are you aware of any environmental cleanup liens against the *property* that are filed under federal, tribal, local or state law? ☐ Yes ☒ No

2. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law? ☐ Yes ☒ No

3. Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? ☐ Yes ☒ No

4. If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this *property* reasonably reflect the fair market value of the *property*? ☐ Yes ☐ No ☐

5. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*? ☐ Yes ☐ No ☐ N/A

6. Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, ☐ Yes ☒ No

   (a) do you know of specific chemicals that are present or once were present at the *property*?
   (b) do you know of spills or other chemical releases that have taken place at the *property*?
   (c) do you know of any environmental cleanups that have taken place at the *property*?

7. Based on your knowledge and experience related to the *property* are there any obvious indicators that point to the presence or likely presence of contamination at the *property*? ☐ Yes ☒ No

If a "Yes" response was provided to any of the above questions, please provide details below:

I certify that the information herein is true and correct to the best of my knowledge as of the date signed below.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
FOR KEY SITE MANAGER

To evaluate the potential for possible environmentally related impacts and site contamination the following information is requested. This questionnaire is to be preferably completed by the current property owner, or owner representative, leasing agent, or other person having good knowledge of the uses and physical characteristics of the property (Key Site Manager).

PART I

1. Property Address/Location and Assessor's Parcel Number (APN):
   635-695 CAMPBELL TECHNOLOGY PARKWAY, CAMPBELL, CA
   412-29-010, 412-29-011, 412-29-012, 412-29-015

2. Current property owner (name, address, voice/fax number):
   CAMPBELL TECHNOLOGY PARK, LLC
   1960 THE ALAMEDA, SUITE 150
   SAN JOSE, CA 95125
   DAC - 408 260-1520

3. Date current property owner assumed title of property:
   APRIL 2006

4. Current property development/improvements:
   FOUR 1 TO 2 STORY OFFICE BUILDINGS

5. Past property use, development/improvements:
   DRIVE-IN - MOVIE THEATER

6. Neighboring property uses:
   MULTI FAMILY RESIDENTIAL

PART II - The following questions should be answered to the best of your knowledge.

1. Is/has the *property* or any adjoining property used/been used for industrial purposes?	☐ Yes	☐ No
2. Has the *property* or any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	☐ Yes	☒ No
3. Are there currently, or have there been previously, any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than 5 gal in volume or 50 gal in the aggregate, stored on or used at the *property* or at the facility?	☐ Yes	☒ No
4. Has undocumented soil been brought onto the property at any time? If yes, estimated quantity is _____ cubic yards.	☐ Yes	☒ No
5. Has soil been brought onto the property that originated from a contaminated site or that is of an unknown origin?	☐ Yes	☒ No
6. Are there currently, or have there been previously, any pits, ponds, or lagoons located on the *property* in connection with waste treatment or waste disposal?	☐ Yes	☒ No
7. Is there currently, or has there been previously, any stained soil on the *property*?	☐ Yes	☒ No
8. Are there currently, or have there been previously, any registered or unregistered storage tanks (above or underground) located on the *property*?	☐ Yes	☒ No
9. Are there currently, or have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* or adjacent to any structure located on the *property*?	☐ Yes	☒ No
10. Are there currently, or have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?	☐ Yes	☒ No
11. Are there any domestic, irrigation or monitoring wells on the property?	☐ Yes	☒ No
12. If the *property* is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government environmental/health agency?	☐ Yes	☒ No
13. Have you been informed of the past or current existence of *hazardous substances* or *petroleum products* or environmental violations with respect to the *property* or any facility located on the *property*?	☐ Yes	☒ No
14. Have there been any *environmental site assessments* of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?	☐ Yes	☒ No
15. Have there been any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any *hazardous substance* or *petroleum products* involving the *property*?	☐ Yes	☒ No
16. Has there been any past agricultural use of the *property*, such as orchards or seed crop cultivation?	☐ Yes	☐ No
17. Have any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the *property*?	☐ Yes	☒ No
18. Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?	☐ Yes	☒ No

If a "Yes" response was provided to any of the above questions, please provide details below:

I certify that the information herein is true and correct to the best of my knowledge as of the date signed below.

RE: Campbell Technology Parkway

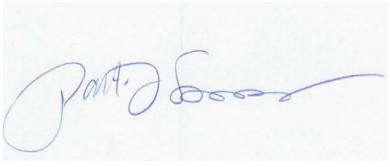
Work Order No.: 2309014

Dear Nadine Periat:

Torrent Laboratory, Inc. received 27 sample(s) on September 01, 2023 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.



Patti L Sandrock
QA Officer

September 11, 2023
Date

Torrent LABORATORY, INC.

Date: 9/11/2023

Client: Engeo (San Ramon)

Project: Campbell Technology Parkway

Work Order: 2309014

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Laboratory, Inc.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Engeo (San Ramon)

Project Name: Campbell Technology Parkway

Work Order No.: 2309014

Date and Time Received: 9/1/2023 2:00:00PM

Received By: Lorna Imbat

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: Client Drop Off

Chain of Custody (COC) Information

Chain of custody present?	Yes
Chain of custody signed when relinquished and received?	Yes
Chain of custody agrees with sample labels?	Yes
Custody seals intact on sample bottles?	Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Not Present
Shipping Container/Cooler In Good Condition?	Yes
Samples in proper container/bottle?	Yes
Samples containers intact?	Yes
Sufficient sample volume for indicated test?	Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes			
Container/Temp Blank temperature in compliance?	No	Temperature:	25.0	°C
Water-VOA vials have zero headspace?	No VOA vials submitted			
Water-pH acceptable upon receipt?	N/A			

pH Checked by: n/a

pH Adjusted by: n/a

SPECIALIZATIONS
- Environmental Assessments and Remediation
- Environmental Restoration
- Water Quality Studies
- Water Wells/Hydrogeology

Since 1985, Shawn has been managing groundwater supply evaluations, hydrogeologic studies, chemical assessments, Phase I and II Site Assessments, UST site investigations, risk-based corrective action (RBCA), VOC remediation, and agricultural impact evaluations. He serves as Principal-in-Charge or Project Manager with extensive expertise in environmental and hazardous materials projects involving groundwater, hydrology, contaminant fate and transport, and complex remediation programs. A renowned expert in his field, Shawn has successfully solved many difficult environmental challenges to achieve desired project outcomes.

SELECT PROJECT EXPERIENCE

Heritage Fields, Great Park Neighborhoods—Irvine, CA
Principal in Charge. Shawn provided principal oversight of the preparation of over 50 phase I and Phase II Environmental Site Assessments for the former El Toro Marine Corps Air Station (MCAS). The site is currently under development as a large-scale mixed-use development including several schools, residential subdivisions, recreational facilities and commercial development. Shawn also provided consultation regarding environmental site characterization and remediation at the site.

Hanover Cannery Park Project No. 14-473—San Jose, CA
Principal in Charge. Shawn provided principal oversight and review of the Phase I ESA, and soil, groundwater, and soil gas sampling. The historical use of the site resulted in chlorinated solvent impacts to groundwater and soil gas. Results were communicated to the client as well as the oversight regulatory agency to come with the proposed remediation. The project consists of redeveloping an approximately 9-acre commercial/industrial property listed on the California Regional Water Quality Control Board's GeoTracker database as an open site assessment cleanup program site. Elevated concentrations of VOCs (specifically PCE and TCE) have been previously detected in soil, groundwater, and soil gas at the property.

Mission Village—Valencia, CA
Principal in Charge. Shawn provided principal oversight of multiple phase I/II environmental site assessments and site remediation. The project site consists of a large scale, residential and mixed-use subdivision, which was a former oil/gas production field, with more than 40 abandoned oil/gas wells.

Vita Pakt—Covina, CA
Principal in Charge. Shawn provided principal oversight of phase I/II environmental site assessments and risk evaluations. The approximately 5.9-acre site formerly operated as fruit processing and dehydration business (ceased operation by 2016) and is planned to be redeveloped into residential housing. Subsurface soil gas impacts were identified in association with past operations.

Innovation at Warm Springs—Fremont, CA
Principal in Charge. Shawn provided oversight of the preparation of Phase I and II ESAs, along with a Preliminary Endangerment Assessment (PEA) for a new elementary school site. The approximately 109-acre site is currently occupied by a parking lot, warehouse buildings, agricultural fields, and UPRR railroad tracks. The southern portion of the Property was a part of the former auto manufacturing and distribution facility jointly owned by Toyota and General Motors. The northern portion of the Property has been used for agricultural purposes since at least the late 1930s. Additionally, railroad tracks are present along the eastern boundary of the Property.

Former gasoline ASTs existed on the Property, along with a pump station and fuel dispensers, which were removed in 2010. The former car wash area also had a wastewater recovery system, which included oil/water separators, clarifiers, and interceptor tanks. One UST was located in the southeast portion of the agricultural fields, which was removed in 2004. Four 10,000-gallon diesel and gasoline USTs were formerly located in the southwestern portion of the Property in the haul-away parking lot area. Mixed-use redevelopment is planned for the Property. A phase II ESA was recommended for the Site, including soil and groundwater sampling.

277 Fairchild 228/236 Evandale Ave—Mountain View, CA
Principal in Charge. Shawn provided oversight of soil, groundwater and soil gas characterizations, risk evaluations and Response Action Plan preparation under USEPA oversight. The site is within the Middlefield-Ellis-Whisman (MEW) Superfund site, contaminated with chlorinated solvents from legacy semiconductor plant operations. On-going remedial activities included soil vapor extraction, groundwater treatment using bioaugmentation, and groundwater/soil gas monitoring. The proposed site development consists of detached single-family homes and townhomes.

The Rivers—West Sacramento, CA
Principal in Charge. Shawn provided oversight of during the preparation of a Removal Action Workplan (RAW) in coordination with CAL-EPA DTSC. The property is a proposed charter school site. ENGEO performed environmental site characterization work to address residual pesticide contamination die to historic termiticide applications. A Removal Action Workplan was developed under the oversight of CAL-EPA to excavate and remove the pesticide impacted soils. Remedial activities were completed in 2018 and DTSC issued a “no further action” letter.

Sparklizing Cleaners and Laundry—Fremont, CA
Group Leader, Principal in Charge, Project Manager. Shawn provided principal review and data analysis for this former dry cleaning facility, which had released tetrachloroethylene (PCE) to site soil and groundwater.

The project site consists of a dry-cleaning facility located within a commercial/retail center. Dry-cleaning operations have been conducted at the facility since 1974 and have resulted in chlorinated solvent impacts to soil and groundwater beneath the site. As a result, the CRWQCB opened a Spills, Leaks, Investigations, and Cleanups (SLIC) case and the site was referred to the Alameda County Water District (ACWD) for lead agency oversight. A series of soil and

groundwater investigations identified a source area beneath the drycleaner suite and an adjoining retail suite. ENGEO prepared a Corrective Action Plan (CAP) and coordinated the in-situ chemical oxidation program, which consisted of injecting 35,000 gallons of potassium permanganate to the subsurface to oxidize chlorinated solvents. The project is currently in the post remediation monitoring phase.

Pleasant Hill BART Station—Walnut Creek, CA
Principal in Charge. Shawn provided oversight, data analysis and consultation during the preparation of a Phase II Environmental Site Assessment. The property is an existing BART station that encompasses 20 acres, including the platform/station area, electrical facilities, a parking garage and additional paved parking areas.

Westshore—Richmond, CA
Project Manager. Shawn conducted Phase I and II Site Assessments, risk evaluations and prepared a soil management plan. The property was a former automotive manufacturing plant proposed for a multi-unit condominium development, including a 6-story podium structure to include five residential floors with 269 units and one parking floor.

Rancho Miramonte—Chino, CA
Principal in Charge. Shawn performed Principal review of ENGEO's environmental documents for this large former dairy facility, proposed for a large-scale detached single-family residential subdivision. Issues with the site included former leaking USTs, nitrate impacts from manure disposal, and surface water impairments. The project was approved for development by the County Environmental Health Department.

Hercules Property—Hercules, CA
Project Manager. Shawn provided oversight of a Phase I Environmental Site Assessment, site asbestos survey, site characterization, and demolition observation/contaminant assessment. The project area consists of ±167 acres located near and along the southeastern shore of San Pablo Bay in Hercules. The property was once a portion of a 1300-acre manufacturing facility that was operated by DuPont from 1879 to 1913 and Hercules Incorporated from 1913 to 1979. The planned development includes single/multi-family residential development with some commercial components.

Highlands Ranch—Pittsburgh, CA
Principal in Charge. Shawn provided oversight, data analysis, and collaboration with RWQCB personnel. The project site consists of a 140-acre portion of the former Chevron Los Medanos Tank Farm located in Pittsburg, California. The site was historically occupied by 24 crude oil tanks and four wax ponds. Remediation of the crude oil tank and wax pond locations was conducted according to a remedial action plan (RAP) and oversight was provided by the CRWQCB. Remediation was performed over a period of four months and consisted of excavating approximately 110,000 cubic yards of impacted soil and placing the material in windrows for ex-situ bioremediation.

Subject: Concerns About Campbell Technology Park Redevelopment

You don't often get email from aekustomz@yahoo.com. Learn why this is important

WARNING: This email originated from an external sender! Please do not open attachments or click on links unless you are certain it is legitimate.

I am a local business owner in Campbell, and I am deeply concerned about the proposed redevelopment of Campbell Technology Park into medium-high-density residential units. While I understand the city's need for housing, I believe this project poses significant challenges that need to be thoroughly examined in the Environmental Impact Report (EIR).

My main concerns include:

1. **Traffic and Safety Hazards** – The roads in this area are already difficult to navigate due to narrow lanes, frequent deliveries, and limited parking. The addition of residential traffic, cyclists, and pedestrians will only increase the likelihood of accidents, creating safety risks for everyone—including my customers and employees.

2. **Disruptions to Local Businesses** – This area has long been home to industrial and commercial businesses, which generate necessary noise and vehicle activity. With new residential units nearby, I worry that complaints from future residents could lead to restrictions that make it harder for businesses like mine to operate.

3. **Parking and Access Issues** – The existing parking situation is already strained, and adding more residents will make it even worse. My business relies on accessible parking for customers and deliveries, and any further reduction could negatively impact our ability to serve the community.

I strongly urge the city to carefully assess these concerns and consider appropriate mitigation measures before proceeding with this project. The businesses in this area are a vital part of the community, and our ability to operate safely and effectively should not be overlooked.

Thank you for your time and consideration.

Best regards,
Arash Kerman

Dear Mr. Fama-

I appreciate your time in reading my email. My name is Christa Rumpler and my husband Paul and I own Accurate Smog Check at 238 Curtner Ave at the intersection of Curtner and McGlincy. We have been proud Campbell business owner for over 20 years. It has come to my attention that there is a plan to redevelop Technology Park into high density housing. I would like to ensure that you are aware of the traffic and pedestrian issues that currently exist.

Pedestrian concerns - There are limited to no sidewalks up and down McGlincy leading from the proposed housing area to the Starbucks and other eateries as well as to local parks and trails. There are many parked cars and no bike lanes to ensure safety for pedestrians.

Crime- McGlincy has many cars parked on the street and many get broken into, crashed into, and or stolen. There are also many unhoused people walking up and down McGlincy at all hours as well as permanently living in parked RVS.

Traffic - I strongly encourage you to spend a day at the intersection of Curtner and McGlincy. It is a "4 way" stop albeit, there is not a stop sign for our patrons exiting our business driveway. The amount of people who run through the stop sign at full speed (20-30 ~ mph) is astonishing. There is only one crosswalk and even that is unsafe. There are hundreds, if not thousands, of people who go through that intersection to go to work in the morning and return home in the evening. They come from Curtner and Camden having come off of San Tomas Expressway or 17 and they speed around the "blind" corner to the stop sign often not stopping. Many of our customers who expect people to obey stop signs have had to slam on their brakes and honk at people who think that running the stop sign is their right of way over someone who doesn't have a stop sign exiting the driveway. Now you want to add how many more drivers who will likely go that way to get to the expressway or freeway for work in the morning. McGlincy is a narrow, barely two-lane road with parking on both sides. Most of the businesses are of an industrial type and therefore large vehicles on a winding road that already cut visibility. There are also many times a day that delivery and service trucks block one of the directions of traffic in order to do their jobs. I would ask that the city evaluate the safety of adding more traffic to this area and implore you to install speed bumps on Curtner between Camden and McGlincy as well as on McGlincy between Curtner and Union. I would also beg you to consider installing full traffic lights (red, yellow, green) at the intersection of Curtner and McGlincy. Not doing so will lead to accidents and more road rage than what we already witness. The goal should be preventative.

We moved here from Los Angeles in 2004 and chose Campbell as our city of business and residence. We own two properties, our son attends Cambrian schools, and we are supporters of the community. We loved the

appeal of a small town. The city of Campbell can not continue to claim "the orchard city" if all we have is high density housing. And while I understand the need for it, and I'm not totally opposed to it, I am opposed to it if the surrounding area is not properly upgraded to handle an increase in population. You are adding too many people to an area with tiny roads and no sidewalks. It doesn't seem sound.

I appreciate your time in hearing me out. We have confidence that the city of Campbell will make good choices for it's pedestrians and business owners.

Sincerely,

Christa Rumpler

Daniel Vigneri - General Manager
515 Westchester Drive - Suite D
Campbell, CA 95008
dvigneri@kobettmetals.com
2-12-2025

Daniel Fama
Senior Planner
City of Campbell
70 North First Street
Campbell, CA 95008

Dear Mr. Fama,

I hope this letter finds you well. I am writing to express my concerns regarding the proposed property development in Campbell, CA, particularly in relation to its potential impact on traffic congestion and local businesses, including Kobett Metals.

Kobett Metals has been a vital part of our community since 2001, establishing itself as a key player in the local economy. During our over 25 years doing business at this location, the traffic from neighboring businesses has always been consistently very busy. Our employees cannot find parking on the street. The double and triple wide parking and access blockage has caused us to call the Campbell Citation Officer on several occasions. Yes, we call the Police to resolve fights and issue tickets. We receive products from our suppliers throughout the day. We must instruct the drivers to avoid McGlincey in the mornings. Because of the inability to drive down Westchester Drive. We often meet the driver down and around the corner of McGlincey to receive our products. The large trucks and the Semis (40 to 50 ft long) that move through
going in both directions makes this a high danger area for all of us. Mixing children on bicycles with constant moving trucks is never a good thing. The proposed development poses a significant risk to our operations, as it could exacerbate the already existing traffic congestion in the area. Increased traffic volume may lead to delays in receiving essential materials, which could severely disrupt our supply chain and hinder our ability to serve our customers effectively.

Furthermore, it is important to note that Campbell Technology Park represents the last remaining industrial area in Campbell. The preservation of this zone is crucial not only for established businesses like Kobett Metals but also for the overall economic health of our community. The potential loss of customers due to accessibility issues, coupled with delays in material delivery, could have a detrimental impact on our business and the local economy.

I urge you to consider these factors carefully as you evaluate the proposed development. The long-term consequences for established businesses and the community should be a priority in your planning process.

Thank you for your attention to this matter. I look forward to your response and hope for a solution that balances development with the needs of existing businesses.

Sincerely,

Daniel Vigneri
General Manager
Kobett Metals

To Daniel Fama, Senior Planner, City of Campbell, Sir:

I am one of the owners of Lambert and Sons Floor Covering Company, located at 695 E. McGlincy Lane.

We echo the concerns expressed by other long-time business owners in this light industrial area.

In particular:

We are opposed only having a single traffic outlet to a tract of 290 homes + some ADUs.

We are opposed to having all that traffic dumped onto McGlincy Lane.

We are opposed to the effect this traffic will have on McGlincy, which has

1. Only one lane in each direction,
2. Regular double-parking per normal light-industrial area, and
3. Daily ~½-mile-long backup on local Curtner Ave. to freeway access.

We are opposed to the safely issues that arise with all the new foot-traffic and bicycle traffic in the area, including children.

We are opposed to this light-industrial area being increasingly restricted or pushed out because of these safety concerns.

Unlike other areas of Campbell where light-industrial has been pushed out by housing development, the McGlincy area is thriving, except perhaps for Campbell Tech Park itself.

Due to safety and fire-egress issues alone, it is unfathomable all this traffic will remain to be dumped onto one location on McGlincy.

We are concerned these important safety issues are not addressed now as part of the EIR.

We appreciate it would take eminent-domain suits to create egresses onto other streets.

We are concerned even with other egresses, the traffic and back-up on McGlincy Lane and Curtner Avenue would be bad for our businesses and unsafe for all.

We would rather this not turn into the problems out around Reid-Hillview airport.

Nathan Lambert

WARNING: This email originated from an external sender! Please do not open attachments or click on links unless you are certain it is legitimate.

Hello Daniel and Mishant,

A comment on each of 2 items on the January 28 Agenda:

Campbell Technology Park EIR Scoping Session

Developing a "Residential Island" in the middle of one of our few industrial districts is poor planning IMHO. Every small business we lose to housing will decrease the quality of life in Campbell.

This is a major project. The street will be substantially destroyed by the time the project is completed. The road is in good shape now, probably one of the better streets in the City. "The proposed project would demolish the existing structures onsite to redevelop the site with the residential development and would include utility and infrastructure improvements, landscaping, construction of a new stormwater drainage system, and offsite improvements."

Please require that the entire street be repaved after all construction has been completed. There are too many examples of poorly patched pavement that ultimately result in repaving costs to the taxpayers.

480 E. Hamilton Avenue – Major Planned Development Permit Modification

Any outdoor storage areas will decrease the number of parking spaces. If the application request is granted, will the remaining spaces meet current parking requirements?

This is a pet peeve of mine. America's Tire is storing tires on parking spaces and Pacific Car Wash has erected canopies across much of their rear yard for business activities. Employees for both entities now park in the Keuhnis/Richlee/April/Robway neighborhood. That's not fair to the residents there. What can I do to formally bring this to the attention of the City? There is adequate space for these vehicles at Hamilton Plaza, but AT and PCW are apparently not willing to pay the cost to rent nearby parking for their employees.

February 8, 2025

To: Daniel Fama, Senior Planner, City of Campbell
danielf@campbellca.gov
CC: Shani Kleinhaus, Environmental Advocate, Santa Clara Valley Bird Alliance
Advocate@scvbirdalliance.org

Re: Campbell Tech Park Project NOP (SCH 2024121066[1])

As a long-time resident of Campbell and on behalf of the Santa Clara Valley Bird Alliance[2] Environmental Action Committee, I am writing these comments with concern about the potential impacts of the Campbell Tech Park project on our local ecosystems, particularly native birds and sensitive habitats near the project site. The proximity of this development to a park and percolation pond, areas that serve as critical resources for resident and migratory birds, merit comprehensive analysis and mitigation in the Environmental Impact Report. While I appreciate the inclusion of some mitigation measures in the project's initial study, I believe a few revisions would help to further ensure the balance of our local ecosystem. Below, I highlight ambiguities within the original NOP and offer solutions that may be considered.

1. MM Bio-2: Pre-Construction Nesting Bird Surveys

MM Bio-2 requires Pre-construction surveys during the nesting season, to be conducted by a qualified biologist within 14 days prior to the beginning of construction activities in order to identify active nests. It also provides minimum no-disturbance buffers from active nests. However, this mitigation measure allows the City of Campbell to reduce no-disturbance buffers based on "consultation and approval by the California Environmental Quality Act (CEQA) lead agency".

The City of Campbell, as the lead agency, does not have the necessary biological expertise to determine appropriate no-disturbance buffers for nesting birds. Reducing these buffers without proper input from

[1] https://files.ceqanet.opr.ca.gov/310279-1/attachment/oiyj3Thf0pWrKRBIzKtucaPtEzPjjqocSU2Hr7YXmRQSfvpIEDbpiIi5I95RpuyVJZXrhh9c6xOBhpTq0

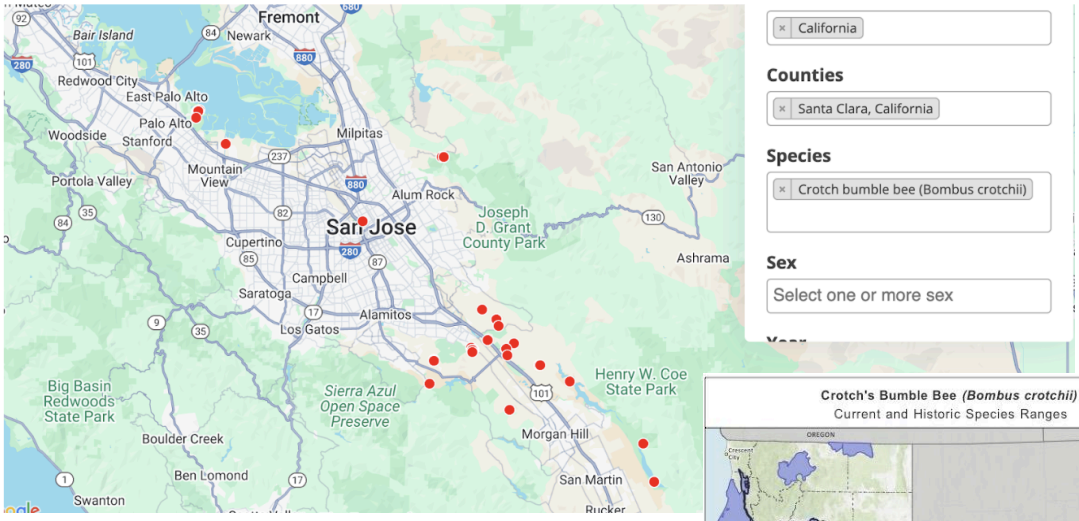
[2] Formerly the Santa Clara Valley Audubon Society

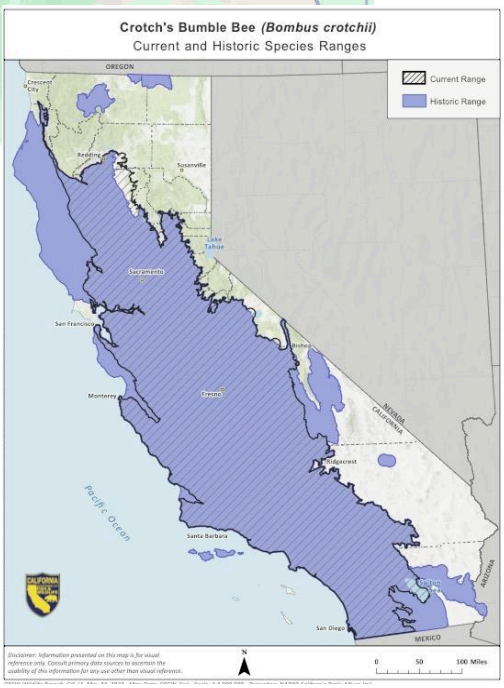
qualified wildlife professionals could lead to significant impacts on nesting birds and violate the Migratory Bird Treaty Act.

To ensure that buffer reductions are scientifically justified and protective of sensitive species, we strongly recommend that this measure be revised to require consultation with the California Department of Fish and Wildlife (CDFW) prior to approving any reduction in no-disturbance buffers.

2. <u>Crotch's Bumble Bee Survey is needed</u>

Crotch's bumblebee (*Bombus crotchii*) is an endangered[3] native species of California. This species has been identified in Santa Clara Valley in both natural and urban landscapes, including downtown San Jose[4]. Due to the proximity to parks and water features, we believe that Crotch's bumblebee can be found at the site and that surveys for the Crotch's bumblebee must be required as a mitigation measure in the EIR.





https://wildlife.ca.gov/Conservation/CESA#bumble-bee

[3] https://wildlife.ca.gov/Data/CNDDB/News/legal-status-of-bumble-bees-in-california
[4] https://www.bumblebeewatch.org/field-guide/12/

3. Lighting and bird collisions:

The NOP states, “The project site is currently developed and produces light and glare from existing lighting and windows” Sec 3.1.d.

The buildings currently on this land are two stories high, Sec 2.3, while the proposed buildings will be taller, up to four-stories high, Sec 3.1.c. The taller buildings create larger opportunities for

light pollution, and birds to collide with buildings, especially since most birds migrate at night and nocturnally migrating birds are attracted to light[5].

In addition, the new project is expected to use LED lighting. Light, especially in the blue spectrum, can have significant and unavoidable impacts to human health and to wildlife.

Recommendations:

- Prevent light spill from buildings via curtains, blinds, or shades that are instructed to be closed at night. This should also help comply with Campbell’s lighting code 21.16.060[6]
- To reduce the Blue Light component of LED fixtures, require all outdoor lighting to have a Correlated Color Temperature of no more than 2700 Kelvin.

Note:

The DesignLights Consortium (DLC) is a nonprofit organization that offers data and resources on quality lighting, controls, and integrated building systems to reduce energy, carbon, and light pollution. Refer to the link below, which identifies energy efficient luminaires that minimize light pollution, provide appropriate visibility for people, and limit negative impacts to the environment:

https://designlights.org/our-work/luna/technical-requirements/luna-v1-0/

4. Tree Removal/Biological and Aesthetics impacts

The IS/NOP dismisses impacts to aesthetic resources and to wildlife habitat and movement. However, removal of trees and vegetation at Campbell Technology Parkway is of concern, since the loss of trees will impact views from the Edith Morley park. Please analyze this potential aesthetic impact and consider preserving and augmenting trees to obscure the development from park visitors' views.

Armstrong Maple is planned to line the border between the project site and Edith Morley park along with other non-native trees. Local ecosystems would instead benefit from the planting of native,

[5] https://www.nytimes.com/2021/04/10/us/bird-migration-lights-out.html

[6] https://library.municode.com/ca/campbell/codes/code_of_ordinances?nodeId=TIT21ZO_CH21.16GEPEST_21.16.060OULIGL

non-invasive California trees[7] such as oaks or pines. Shrubs can also be planted to maintain biodiversity and offer the opportunity for birds, hummingbirds, native bees, honey bees, and butterflies to coexist alongside human neighbors. Planting native species may also reduce the amount of watering needed as well as diminish the use of pesticides.

Attached below is a list of California native trees, shrubs, grasses, ferns, and more information on planting native species:

https://www.summerwindsnursery.com/ca/plants/natives/ca-natives/

Recommendations

- Retain and augment a tree barrier between the park and the development
- Plant trees of locally native species.[8]

Thank you for your attention to this matter, and I look forward to seeing a revised approach that reflects our community's commitment to sustainability and environmental health.

Sincerely,

Mikayla Kerba

RE: NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CAMPBELL TECH PARK PROJECT DATED DECEMBER 23, 2024, STATE CLEARINGHOUSE NUMBER 2024121066

Dear Daniel Fama,

The Department of Toxic Substances Control (DTSC) reviewed the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the Campbell Tech Park Project (Project). The Project includes the development of a 290 units residential development that consists of 27 two-story single-family detached homes, three-story townhome-style condominiums with 149 units across 28 buildings, and four-story townhome-style condominiums with 114 units across 15-buildings. The Project would demolish the existing structures onsite to redevelop the site with the residential development. DTSC recommends and requests consideration of the following comments:

1. If buildings or other structures are to be demolished on any Project sites included in the proposed Project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition, and disposal of any of the above-mentioned chemicals should be conducted in

compliance with California environmental regulations and policies. In addition, sampling near current and/or former buildings should be conducted in accordance with DTSC's Preliminary Endangerment Assessment (PEA) Guidance Manual.

2. DTSC recommends that all imported soil and fill material should be tested to assess any contaminants of concern meet screening levels as outlined in PEA Guidance Manual. Additionally, DTSC advises referencing the DTSC Information Advisory Clean Imported Fill Material Fact Sheet if importing fill is necessary. To minimize the possibility of introducing contaminated soil and fill material there should be documentation of the origins of the soil or fill material and, if applicable, sampling be conducted to ensure that the imported soil and fill material are suitable for the intended land use. The soil sampling should include analysis based on the source of the fill and knowledge of prior land use. Additional information can be found by visiting DTSC's Human and Ecological Risk Office (HERO) webpage.

DTSC appreciates the opportunity to comment on the NOP of a DEIR for the Campbell Tech Park Project. Thank you for your assistance in protecting California's people and environment from the harmful effects of toxic substances. If you have any questions or would like clarification on DTSC's comments, please respond to this letter or via our CEQA Review email for additional guidance.

Sincerely,

Dave Kereazis

Campbell Technology Park:

I attended the meeting 1/28/25 at City Hall regarding the Campbell Technology Park development. During the meeting I did not hear about what is going the happen with Edith Morley Park during the demolition and or construction. I go to the park with my dog all most every day and I do not park on the street side of the park because most of the time all the area is taken up by people not at to the park. From March thru November on the weekends the park can be very busy with parties and people must park across the street. During the pass summer if it's warm I my go twice a day. If I go around 4:30pm there are still a lot of cars and then around 5:00pm a van comes and drops off about 6 people and they get in the cars and drive away.

So, my question for staff will the Edith Morley Park be

Closed during this time? Also, what will happen the garden area?

Toni Bonito

Hi Daniel,

Hope you're well - I saw the most recent SEQA filing and am excited about the prospect of additional housing coming to the city of Campbell given the cost of housing here. Do you have the latest on the timeline approval and where the redevelopment stands with the city? I think it would be a big benefit for both existing and future residents. Any information you have on this development would be greatly appreciated.

Re: West Valley Construction Company, Inc.
Campbell Tech Park Project

Dear Mr. Fama:

West Valley Construction Company, Inc. ("West Valley Construction") was founded in 1958 and has been a vital part of the City of Campbell since 1971. Headquartered in Campbell, our vision is "Building infrastructure to improve the quality of life within our communities." For decades, we have been trusted to build, engineer, and maintain essential infrastructure, primarily underground water supply systems and dry utilities, including communications. Our commitment to safety, reliability, and efficiency ensures that we continue to serve and support the communities in which we operate.

From its Campbell yard at 580 E. McGlincy, West Valley Construction provides 24/7 emergency water supply repair services to the residents of Campbell under a service agreement with San Jose Water Company. In the event of a major earthquake or other disaster in which essential utilities are put out of service, West Valley Construction will be crucial to restoring services to the residents of Campbell on an emergency basis. West Valley Construction has a comprehensive emergency action plan in place to do just that.

Simply put, the City of Campbell *needs* West Valley Construction to continue its safe, efficient, 24/7 operations at its Campbell yard to ensure that essential infrastructure is maintained for its residents.

West Valley Construction has proudly operated in Campbell for over 50 years, contributing significantly to the local economy. Since relocating to 580 E. McGlincy Lane in 1971, we have continuously invested in the community, including paying $243,000 in local taxes in 2024 alone. Our commitment to Campbell is long-term, and we intend to remain a vital part of the City indefinitely.

Currently, West Valley Construction owns four (4) properties and leases one (1) property around the intersection of E. McGlincy Lane and Campbell Technology Parkway. Two (2) are on Campbell Technology Parkway (603 and 563) and the other three (3) are on E. McGlincy Lane (530, 571-599 and 555). Attached is a schematic showing the properties and the ingress and egress of vehicles within our facilities.

West Valley Construction employs 545 individuals across California, with over 130 employees based in Campbell. Many of these employees are Campbell residents who live, work, and contribute to the local economy by supporting businesses throughout the community daily.

Additionally, West Valley Construction is an employee-owned and union company. It has over 135 current and former employee shareholders. West Valley Construction's Employee Stock Ownership Plan, established in 1975 (making West Valley Construction one of the oldest ESOP companies in California and the nation), holds approximately 40% of West Valley Construction's stock. West Valley Construction's employee ownership is certified by third-party company Certified EO. West Valley Construction is signatory to the Laborers, Operators, Teamsters and Plumbers unions and provides over 380 craft employees with stable, well-paying jobs and union benefits.

Furthermore, West Valley Construction is committed to diversity and inclusion and, in fact, has an extremely diverse workforce in both gender and ethnicity. We have built a workforce that reflects the rich diversity of our community and maintain a robust Supplier Diversity Program, partnering with women-, minority-, disabled veteran-, and LGBTQ-owned businesses—many of which operate within Campbell.

Beyond our operational contributions, West Valley Construction is deeply invested in the Campbell community. West Valley Construction's Core Value of Commitment states "We do the right thing for each other, our clients, and our communities." We demonstrate this by being a proud member of the Campbell Chamber of Commerce and through actively supporting local initiatives through the West Valley Construction Charitable Foundation. Our contributions to organizations such as Second Harvest of Silicon Valley (Silver Donor - $334K over the last 10 years and $55K in 2024), St. Jude Children's Research Hospital, the American Cancer Society, and the Stroke Awareness Foundation demonstrate our unwavering commitment to giving back. We have also supported the Campbell Veterans Memorial Foundation, furthering our dedication to those who serve.

Operating a construction and infrastructure company does come with inherent impacts. Our primary yard at 580 E. McGlincy Lane, along with our storage facility (primarily pipe) at 563 Campbell Technology Parkway, are active worksites where noise and heavy equipment operations are necessary. The handling of backfill material stored at 580 E. McGlincy Lane does create dust. Our equipment includes back-up beepers that are intentionally loud (a safety measure).

Traffic flow is another critical consideration. West Valley Construction has seventy-six (76) on-road fleet vehicles, consisting of Class 1 to Class 8 vehicles and trailers, and approximately eighty-seven (87) personal vehicles accessing its Campbell facilities daily. For non-emergency work, crews typically depart the yard around 7:00 a.m. and return around 4:00 p.m. Due to the narrowness of E. and S. McGlincy, the fact that those roadways are so heavily parked with very wide vehicles and the fact that our road fleet vehicles are wide commercial vehicles, the presence of pedestrians or bicyclists on E. and S. McGlincy presents a real and significant hazard to both the pedestrians/bicyclists and our employee drivers.

As is shown on the attached schematic, the egress of vehicles from the yard at 580 E. McGlincy has the vehicles immediately adjacent to the intersection of E. McGlincy and Campbell Technology Parkway. There will be conflict at the intersection with residents. In addition to West Valley Construction vehicles, large delivery trucks frequently visit our facilities (multiple times a day), requiring the full width of Campbell Technology Parkway and E. McGlincy Lane to maneuver, resulting in regular temporary traffic delays. An example of a typical delivery is the trucks that deliver pipe to 563 Campbell Technology Parkway storage yard. The trailer beds are long, and the trucks need to back into the yard – blocking the full width of Campbell Technology Parkway and halting cars on the road. The same happens with E. McGlincy with trucks making deliveries.

West Valley Construction understands the City of Campbell is required to provide more housing. However, we believe that, but for such requirement, a high-density residential project landlocked by light industrial uses and with such limited and poor roadway infrastructure and lack of pedestrian/bicycling infrastructure would *never* be contemplated. The uses and resulting traffic are clearly incompatible.

The objective of West Valley Construction is not, however, to stop the Project. Rather, it is to ensure that the City of Campbell does the right thing for West Valley Construction and its neighboring businesses to ensure that (i) they can continue their normal operations, (ii) there is appropriate mitigation of impacts and (iii) there is assurance the new residents cannot assert the businesses they moved next to are nuisances.

West Valley Construction remains committed to Campbell and its residents. We look forward to working collaboratively with City officials to find balanced solutions that support both economic growth and community well-being. *For more information on West Valley Construction please visit our website at wvcc.com.*

Re: Campbell Tech Park Project EIR
Project Address: 635, 655, 675, and 695 Campbell Technology Parkway
Matter No.: 208185
Our Client: West Valley Construction Company, Inc.
Client's Property: 603 Campbell Technology Parkway, Campbell, California
Client Property Distance from Project Site: Approximately 150 feet

Dear Mr. Fama:

We represent West Valley Construction Company, Inc., whose principal executive office is located at 603 Campbell Technology Parkway, Campbell, California. Our client also operates from nearby 580 E. McGlincy Lane (main operations yard,) 599 E. McGlincy Lane (pipe and materials storage,) 563 Campbell Technology Parkway (heavy equipment operations and pipe storage,) and a fifth adjacent building for office uses. Our letter is submitted in conjunction with a letter from our client's President and Chief Executive Officer, Kevin P. Kelly and a memorandum from our client's traffic consultant, Fehr & Peers. Copies Mr. Kelly's letter and Fehr & Peers' memorandum are attached.

On behalf of our client, we present this letter commenting upon the prescribed scope of the Environmental Impact Report (the "**EIR**") required to be prepared in connection with the proposed re-development of Campbell Technology Park (the "**Project Site**"), and related change of land use from office/research and development uses to detached and attached residential uses (collectively the "**Project.**")

For purposes of the California Environmental Quality Act ("**CEQA**"):

> ""***Environment" means the physical conditions which exist within the area which will be affected by a proposed project*** including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or

> aesthetic significance. ***The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project.*** The "environment" includes both natural and man-made conditions." (14 CCR[1] §15360, ***Emphasis Added***); and,
>
> ""***Significant effect on the environment***" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. ***A social or economic change related to a physical change may be considered in determining whether the physical change is significant.***" (14 CCR §15382, ***Emphasis Added***)

In order for the EIR to be able to make a meaningful statement regarding whether the Project will cause a "significant effect on the environment", it is essential to start with a comprehensive baseline analysis of the "physical environmental conditions in the vicinity of the Project", which "give[s] the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts . . ." (See 14 CCR §15125.)

As proposed, the Project would introduce nearly 300 residential units into an area that, as noted in ENGEO's Modified Phase 1 Environmental Site Assessment, dated October 4, 2023, has been continuously used for industrial and commercial purposes since the area was first developed approximately 50 years ago.[2]

The baseline analysis of the current industrial/commercial environmental setting of the existing developments south of the Project Site will be crucial because it is evident that, if completed as proposed, the Project will impede existing land uses on neighboring properties in multiple ways. The Project will funnel **all** traffic into and out of the entire residential development through entrances on Campbell Technology Parkway. This approach will cause a significant environmental effect, but it is also inefficient and dangerous to both the existing businesses and their employees south of the Project and to the potential new residents.

Unless sufficient environmental mitigations are required, such as requiring users of the Project Site to use paths of ingress and egress other than Campbell Technology Parkway, the addition of nearly 300 families into such a constrained physical space, including, the introduction of children, will render the adjacent parcels unusable in the manner in which they have been used since their construction, and put the children at risk of physical harm.

---

[1] California Code of Regulations

[2] See Table 1.4-1 "Adjoining Site Uses" on Page 4 of the Phase 1 Report

The proposed residential use is contrary to applicable zoning and general plan designations for the area. In reliance upon the zoning, our client, other property owners and businesses purchased or leased and developed their respective parcels and have operated their businesses thereon for decades.

Assuming that this proposed land use change is permissible under the law, that does not mean that allowing this development is a good idea or that it is safe to allow such entirely inconsistent land uses to exist in close proximity to one another. It is hard to imagine two more conflicting land uses sharing a property boundary line. Even if the City of Campbell is legally required to approve the Project and the resulting conflicting land uses, it can still apply common sense to require that the developers obtain other means of entry to the Project Site rather than via Campbell Technology Parkway.

We urge that the City of Campbell direct that the scope of the EIR specifically include each of the following:

1. A detailed baseline analysis of the existing physical environment of the area described in the Phase 1 Report as "South" of the Project Site, including the existing industrial and commercial land uses, the related movement and parking, including regular double parking and parking in red zones, of large trucks and heavy equipment into and out of the area, and the limited street parking in the area.

2. An analysis of the resulting environmental effects on "Recreation," including access to and from Edith Morley Park, and ensuring that street parking remains available for users of the park.

3. An analysis of the effects on public health and safety resulting from the Project, as the same affect both existing tenants, employees, landowners and future residents. This discussion should address traffic and pedestrian safety and air quality for the new residents (especially the young and the aged), who will be living in an industrial area.

4. Mitigations should be studied such as redirecting ingress and egress (except in case of emergency) away from Campbell Technology Parkway and restricting parking on Campbell Technology Parkway, around Edith Morley Park and on E. and S. McGlincy.

5. An analysis of the topics raised by Fehr & Peers in its memorandum and any impacts associated with transportation in accordance with Public Resources Code 21099(b)(3).

We reserve the right to make further comments and editions to this letter after we have had an opportunity to review additional documentation with respect to this matter. If you have questions about any of the matters addressed in this letter, please contact the undersigned.

Very truly yours,

HOGE, FENTON, JONES & APPEL, INC.

FEHR PEERS

Memorandum

Date:	February 12, 2025
To:	Daniel Fama, City of Campbell
CC:	Brad Bosomworth, WVC and Sblend Sblendorio, Hoge Fenton
From:	Elynor Zhou and Matt Haynes, Fehr & Peers
Subject:	**CEQA Scoping for Proposed Development at 635, 655, 675, and 695 Campbell Technology Parkway**

SJ23-2263

Dear Daniel,

We are writing on behalf of West Valley Construction (WVC) regarding the proposed housing development at 635, 655, 675, and 695 Campbell Technology Parkway (referred to as the "Proposed Project" or "project" in this memo). The immediate project vicinity is characterized by light industrial land uses, including two yards operated by WVC.

Fehr & Peers has been a respected consultant in the field of community transportation analysis for over 40 years. We were engaged to review the *Transportation Analysis (TA)* dated April 12, 2024 prepared by Hexagon for the Proposed Project due to WVC's concerns that the area's lack of infrastructure and high level of trucking activities may lead to bike/pedestrian circulation and other safety issues. Our review found that the TA does not adequately acknowledge nor make recommendations to address these concerns. Therefore, we recommend that the City scope of the California Environmental Quality Act (CEQA) study to additionally address these crucial topics. We have included review comments on the TA in the **Attachment** to this letter.

The following presents our existing site observations and areas of concern in more detail.

Project Understanding

The Proposed Project would replace the existing, partially occupied research and development facilities on the site with a residential development consisting of 27 detached small-lot single-family homes and 263 townhomes, for a total of 290 residential units. Access to the project site would be provided via three existing driveways along Campbell Technology Parkway (CTP).

The Transportation Analysis for the Proposed Project was conducted and documented in the memorandum dated April 12, 2024. To the best of our knowledge, the focused draft EIR will be prepared in early 2025 by the environmental consultant.

Challenges & Concerns

This section documents the existing conditions and the potential challenges the Proposed Project brings in terms multimodal access and safety.

Bike & Pedestrian Access & Safety

The Proposed Project would introduce a greater level and varied types of active transportation usage in the area than currently occurs, including bicycle and pedestrian and use by juveniles. The lack of bike and pedestrian facilities, along with the high level of truck traffic, necessitate a thorough evaluation of the bike and pedestrian circulation in the study area to address the access and safety concerns.

The TA should include a detailed existing facility exhibit to show the various gaps in sidewalks and general lack of any bike facilities in the Proposed Project area. There are gaps in the sidewalk or missing sidewalk sections on E. McGlincy Lane west of CTP. There are no on-street or off-street bike facilities on CTP or E. McGlincy Lane. The nearest bike lane is a Class II (on-street) bike lane that starts north of E. McGlincy Lane/Union Avenue intersection. **Figures 1** is an example of the missing sidewalks on E. McGlincy Lane under existing conditions.

Figure 1. Lack of sidewalk on both sides of E. McGlincy Lane west of CTP (Source: Google, 2024). Segment shown is about 1,200 feet west of CTP.

There are cyclists and pedestrians using CTP and E. McGlincy Lane under existing conditions as shown in **Figure 2**, and during field visit we observed a pedestrian with stroller on E. McGlincy Lane.

Figure 2. Cyclist on street near 655 E. McGlincy Lane (Source: WVC, 2024)

The 2022 American Community Survey (ACS) 5-Year Estimate shows an average of 1.28 workers per household in the City of Campbell, and the City average commute mode shares are 1.2% for biking, 1.7% for walking and 1.7% for public transit. For the Proposed Project of 290 units, applying the ACS data based on City averages indicates that out of the 372 workers, there could be five bicycle commuters and 14 commuters on foot or walking to public transit. The Proposed Project will provide 20% of low-income units, which has higher non-auto mode share than non-accordable units. According to a Caltrans Study,[1] the non-auto mode share (transit, walk, and bike) for housing in suburban neighborhood is about 22% for AM peak hour and 36% for PM peak hour. Using this mode share rate on the workers from affordable housing units, there could be as many as 26 commuters on foot or walking to public transit, and about two commuting cyclists. In addition, residential land uses generate other trip types beyond commuting trips including additional trips to and from the Edith Morley Park, which means there would be additional walking and bicycling trips generated by the Proposed Project, and the requirement for additional parking adjacent to the park. We recommend total pedestrian and bicycle activity (both commute and non-commute trips) generated by the project be quantified and reported as part of the CEQA study.

Despite the lack of bike and pedestrian facilities, residents wishing to reach employment and local destinations by walking and cycling would need to use CTP and E. McGlincy Lane given the Proposed Project location. **Figure 3** shows the route of access that residents would most likely take to reach nearby retail, bus stops, and schools. The nearest bus stops are at Bascom Avenue and Dry Creek Road intersection, approximately ¾ mile walking distance from the Proposed Project site. The closest schools are Bagby Elementary School, Ida Price Charter Middle School,

[1] *Affordable Housing Trip Generation Strategies and Rates*, Report Number CA18-2465, Caltrans, September 13, 2018

and Fammatre Elementary School, both located about 1.5 miles to the east. These schools would likely attract some project resident walk and bike trips.

The Santa Clara Valley Transportation Authority (VTA) *Countywide Bicycle Plan* (May 2018) has a planned bike/pedestrian bridge across Highway 17 between CTP and Railway Avenue.[2] Compared to current walking/biking routes on CTP and E. McGlincy Lane, this connection could provide a safer, more direct alternative for active transportation access to/from downtown Campbell, the VTA light rail station, and the Los Gatos Creek Trail for residents in this area, including the Proposed Project site. The CEQA study should evaluate whether the site plan design conflicts with the planned bike/pedestrian bridge and coordinate with City and VTA on accommodating the planned active transportation infrastructure. It should also consider whether constructing the new bike/pedestrian bridge could help mitigate potential transportation and safety impacts.

The parcels to the south and east of the Proposed Project site along the access routes are light industrial use according to City's land use map. Multiple industrial uses are in operations daily, such as WVC, Bob's Towing Service, Sanco and Kobett Metals. The nearby industrial land use and truck activities likely pose potential challenges to the safety of cyclists and pedestrians, as described in the following section.

Truck Activities & Conflicts

Multiple industrial businesses, including WVC, own operations yards and offices along E. McGlincy Lane and CTP. The TA fails to mention or quantify the level of truck traffic and potential conflicts with vulnerable roadway users in this area.

Figure 4 shows the nearby light industrial land use, and WVC's current locations, with their largest site at 580 E. McGlincy Lane at the southeast corner of the CTP/E. McGlincy Lane intersection. This site's outbound driveway is 78 feet east of the intersection and primarily accommodates (FHWA classification) Class 1-8 trucks, trailers, equipment transport vehicles, vendors, and visitors. According to WVC, approximately 101 vehicles visit site on a daily basis, with 50 vehicles making four trips (inbound and outbound total) daily and the rest making multiple trips. Other WVC sites along CTP each generate over 40 truck trips (inbound and outbound total) daily.

Trucks from the industrial businesses are active throughout the day and vary in size, including semi-trailer trucks with wide turning radii. **Figures 5** to **7** illustrate the observed truck activity and existing conflicts. For example, vehicles often try to maneuver around loading trucks staged in the street. One incident report filed by a WVC staff member describes a minor collision involving a passenger vehicle trying to avoid a WVC truck staged on E. McGlincy Lane, and crossing the center line and clipping a parked car.

---

[2] VTA Countywide Bicycle Plan (May 2018) Table 6-2

The net increase in vehicular traffic resulting from the Proposed Project, along with increased project-related bike and pedestrian activity, is likely to conflict with existing trucking operations. This requires thorough study to identify the frequency and types of conflicts, and to implement feasible solutions to reduce their occurrence.

Figure 3

Site Context

Figure 6. Truck staged adjacent to curb on E. McGlincy Lane east of CTP/E. McGlincy intersection (Source: WVC, 2024)

Figure 7. Truck delivery to WVC site north of CTP/E. McGlincy intersection, vehicles trying to drive around the stopped truck (Source: WVC, 2024)

Emergency Access & Evacuation

The Proposed Project would be served by Campbell Technology Parkway which is effectively a cul-de-sac due to the barrier created by Highway 17 to the west. CTP serves as the main resident access as well as emergency vehicle access (EVA). A second EVA access would be provided via an existing EVA easement at the northern end of the project site from Paseo de Palomas Lane. The dependence on Campbell Technology Parkway will significantly affect existing land uses and could pose challenges for evacuation if the road is blocked in the case of fire or natural disaster, or if the road is congested and there is no alternative evacuation route. The neighboring street, Cristich Lane to the southwest of the project site, does not currently connect to CTP (**Figure 8**). Additionally, Cristich Lane, while a paved, private street, may not be well-suited as an emergency evacuation route given the presence of on-street parking and lack of curbs or centerline striping. The scope of the CEQA study should be expanded to consider multiple non-emergency access alternatives to reduce conflicts with industrial traffic.

Figure 8. No access to Cristich Lane from the southern Proposed Project driveway (Source: Fehr & Peers, 2024)

CEQA Study Scope

CEQA requires that the potential adverse effects of a Proposed Project on the environment be analyzed. If those impacts are found to be significant, they must be mitigated through implementation of feasible mitigation measures. The following are our recommended scope items that should be included in the transportation component of the CEQA Study Scope:

Existing Setting

- Document existing and planned bicycle and pedestrian facilities in the study area and identify any gaps in connectivity.
- Document existing levels of bicycling and pedestrian activity.
- Document existing traffic levels in the area including the percent and absolute number of heavy vehicles during peak hours and on a daily basis.
- Evaluate recently installed Rectangular Rapid Flashing Beacon (RRFB) at the eastbound approach of CTP/E. McGlincy Lane for appropriateness of installation and driver compliance.
- Document existing truck activities present in study area, citing location, any temporary lane blockages, duration, and other conditions.
- Document roadway collision history in the study area using City of Campbell police records, Transportation Injury Mapping System (TIMS) data, or other sources.

Analysis Topics

- Analyze adequacy of bicycle and pedestrian facilities and travel routes to accommodate additional walk and bike trips generated by the Proposed Project.
- Evaluate potential conflicts between the site plan design and the planned Highway 17 bike/pedestrian bridge between CTP and Railway Avenue.
- Evaluate conflicts associated with additional project-related vehicle trips and bicyclists/pedestrians with existing truck operations in the area (e.g., idling on E. McGlincy Lane, turning in/out of driveways, pedestrians walking in street due to lack of sidewalks, etc.).
- Evaluate queuing and safety at the CTP/E. McGlincy Lane intersection with the addition of Proposed Project trips.
- Evaluate whether the proposed roadway network and project development would pose challenges for emergency responders and evacuations due to the limited access points. Evaluate alternative routes for vehicle/bike/pedestrian access other than only CTP.

Attachment

Table 1: Transportation Analysis Comments

Section of TA	Comment Topic	Comments	Page of TA
Study Intersection, Data Collection and Analysis Scenarios	Selection of study intersections	Vehicle trips assigned to the east result in more than 10 added trips per lane on Union/Bascom; why is this intersection not selected as the study intersection?	4
	Selection of study intersections	McGlincy/Curtner intersection has long backups in existing conditions and could adversely impact the industrial businesses all along McGlincy. The operations of this intersection should be considered to study.	4
	Existing counts	The study only provides standard definition of the peak hour, but does not specify the actual peak hour used for the analysis. Since existing count is collected at different dates, how are the peak hour and peak hour volumes determined? - Intersection 1 AM and PM was collected on 1/9/2024 - Intersection 2 AM was collected on 11/8/2023 - Intersection 2 PM was collected on 09/01/2022	4
	Existing site driveway counts	No raw count sheet is provided in the TA attachment for existing driveway count on 1/9/2024 to match with Table 1 existing R&D trip generation.	5
Project Trip Generation, Distribution and Assignment	Existing counts	The trip distribution percentage is based on the existing traffic counts, but the project land use is different from existing use with reverse direction of peak traffic. The study area currently has heavy industrial use, and the project site's existing use is R&D and office. The peak direction is morning inbound and evening outbound, with trips traveling to/from other residential areas locally and in the region. The proposed development is residential, so the peak direction is reverse – morning outbound and evening inbound for work trips traveling to/from job centers. So using existing traffic pattern as the base of trip distribution assumption might not reflect the project traffic flow. This also affects the selection of study intersections (10 added trips per lane VTA guideline)	5
	Trip distribution	For trips assigned to Camden/Curtner intersection, a portion of the trips could use the SR-17 ramps; it's unclear whether this is reflected in the analysis.	6 (Figure 3)
Intersection Operations Analysis	Existing LOS	Existing LOS for intersection 2 might not reflect the actual operations condition since the count was from 2022; field observation from 2024 on a normal weekday during peak hour shows queues at southbound right on Curtner and eastbound left on Camden that did not get cleared within one signal cycle, resulting in delays over one minute.	10

	Existing LOS	Campbell General Plan (GP) existing conditions LOS is different from the TA results. Was the GP considered as a reference in the TA process?	10
	Geometry	It's unclear how the SR-17 northbound on-ramp is reflected in the intersection geometry. Are trips using the on-ramp treated as northbound left turns?	11 (Figure 5)
	Queuing results	At Curtner/Camden, eastbound left pocket is insufficient and the upstream traffic queues beyond the 17 Southbound ramps intersection; since the queue at study intersection 2 spills to nearby intersection, should the intersection under influence also be studied?	20 (Table 7)
	Queuing results	The analysis states that the restriping would improve the queue lengths but the benefits seem minimal (95th queue still exceeds storage capacity). We would like to see the plan sheets for the restriping included as attachment.	20 (Table 7)
Freeway Segment and Ramp Analysis	Existing freeway data	Which data period were used for PEMS? Does it fall in the same period as the intersection count dates?	23
	Freeway analysis	Capacity of ramp HOV and GP should be analyzed separately since the traffic volumes are not proportional.	23
Site Access and Circulation	Vehicle parking requirements, Transit access	The study states that the project is within a half-mile walking distance to public transit stops, but there are two contradicted statements: - The discussion on page 27 states that the project is far removed from bus stops; - The discussion on page 29 states that the nearest bus stops are one mile from the site.	27

Re: West Valley Construction Company, Inc.
Campbell Tech Park Project

Dear Mr. Fama:

West Valley Construction Company, Inc. ("West Valley Construction") was founded in 1958 and has been a vital part of the City of Campbell since 1971. Headquartered in Campbell, our vision is "Building infrastructure to improve the quality of life within our communities." For decades, we have been trusted to build, engineer, and maintain essential infrastructure, primarily underground water supply systems and dry utilities, including communications. Our commitment to safety, reliability, and efficiency ensures that we continue to serve and support the communities in which we operate.

From its Campbell yard at 580 E. McGlincy, West Valley Construction provides 24/7 emergency water supply repair services to the residents of Campbell under a service agreement with San Jose Water Company. In the event of a major earthquake or other disaster in which essential utilities are put out of service, West Valley Construction will be crucial to restoring services to the residents of Campbell on an emergency basis. West Valley Construction has a comprehensive emergency action plan in place to do just that.

Simply put, the City of Campbell *needs* West Valley Construction to continue its safe, efficient, 24/7 operations at its Campbell yard to ensure that essential infrastructure is maintained for its residents.

West Valley Construction has proudly operated in Campbell for over 50 years, contributing significantly to the local economy. Since relocating to 580 E. McGlincy Lane in 1971, we have continuously invested in the community, including paying $243,000 in local taxes in 2024 alone. Our commitment to Campbell is long-term, and we intend to remain a vital part of the City indefinitely.

Currently, West Valley Construction owns four (4) properties and leases one (1) property around the intersection of E. McGlincy Lane and Campbell Technology Parkway. Two (2) are on Campbell Technology Parkway (603 and 563) and the other three (3) are on E. McGlincy Lane (530, 571-599 and 555). Attached is a schematic showing the properties and the ingress and egress of vehicles within our facilities.

West Valley Construction employs 545 individuals across California, with over 130 employees based in Campbell. Many of these employees are Campbell residents who live, work, and contribute to the local economy by supporting businesses throughout the community daily.

Additionally, West Valley Construction is an employee-owned and union company. It has over 135 current and former employee shareholders. West Valley Construction's Employee Stock Ownership Plan, established in 1975 (making West Valley Construction one of the oldest ESOP companies in California and the nation), holds approximately 40% of West Valley Construction's stock. West Valley Construction's employee ownership is certified by third-party company Certified EO. West Valley Construction is signatory to the Laborers, Operators, Teamsters and Plumbers unions and provides over 380 craft employees with stable, well-paying jobs and union benefits.

Furthermore, West Valley Construction is committed to diversity and inclusion and, in fact, has an extremely diverse workforce in both gender and ethnicity. We have built a workforce that reflects the rich diversity of our community and maintain a robust Supplier Diversity Program, partnering with women-, minority-, disabled veteran-, and LGBTQ-owned businesses—many of which operate within Campbell.

Beyond our operational contributions, West Valley Construction is deeply invested in the Campbell community. West Valley Construction's Core Value of Commitment states "We do the right thing for each other, our clients, and our communities." We demonstrate this by being a proud member of the Campbell Chamber of Commerce and through actively supporting local initiatives through the West Valley Construction Charitable Foundation. Our contributions to organizations such as Second Harvest of Silicon Valley (Silver Donor - $334K over the last 10 years and $55K in 2024), St. Jude Children's Research Hospital, the American Cancer Society, and the Stroke Awareness Foundation demonstrate our unwavering commitment to giving back. We have also supported the Campbell Veterans Memorial Foundation, furthering our dedication to those who serve.

Operating a construction and infrastructure company does come with inherent impacts. Our primary yard at 580 E. McGlincy Lane, along with our storage facility (primarily pipe) at 563 Campbell Technology Parkway, are active worksites where noise and heavy equipment operations are necessary. The handling of backfill material stored at 580 E. McGlincy Lane does create dust. Our equipment includes back-up beepers that are intentionally loud (a safety measure).

Traffic flow is another critical consideration. West Valley Construction has seventy-six (76) on-road fleet vehicles, consisting of Class 1 to Class 8 vehicles and trailers, and approximately eighty-seven (87) personal vehicles accessing its Campbell facilities daily. For non-emergency work, crews typically depart the yard around 7:00 a.m. and return around 4:00 p.m. Due to the narrowness of E. and S. McGlincy, the fact that those roadways are so heavily parked with very wide vehicles and the fact that our road fleet vehicles are wide commercial vehicles, the presence of pedestrians or bicyclists on E. and S. McGlincy presents a real and significant hazard to both the pedestrians/bicyclists and our employee drivers.

As is shown on the attached schematic, the egress of vehicles from the yard at 580 E. McGlincy has the vehicles immediately adjacent to the intersection of E. McGlincy and Campbell Technology Parkway. There will be conflict at the intersection with residents. In addition to West Valley Construction vehicles, large delivery trucks frequently visit our facilities (multiple times a day), requiring the full width of Campbell Technology Parkway and E. McGlincy Lane to maneuver, resulting in regular temporary traffic delays. An example of a typical delivery is the trucks that deliver pipe to 563 Campbell Technology Parkway storage yard. The trailer beds are long, and the trucks need to back into the yard - blocking the full width of Campbell Technology Parkway and halting cars on the road. The same happens with E. McGlincy with trucks making deliveries.

West Valley Construction understands the City of Campbell is required to provide more housing. However, we believe that, but for such requirement, a high-density residential project landlocked by light industrial uses and with such limited and poor roadway infrastructure and lack of pedestrian/bicycling infrastructure would *never* be contemplated. The uses and resulting traffic are clearly incompatible.

The objective of West Valley Construction is not, however, to stop the Project. Rather, it is to ensure that the City of Campbell does the right thing for West Valley Construction and its neighboring businesses to ensure that (i) they can continue their normal operations, (ii) there is appropriate mitigation of impacts and (iii) there is assurance the new residents cannot assert the businesses they moved next to are nuisances.

West Valley Construction remains committed to Campbell and its residents. We look forward to working collaboratively with City officials to find balanced solutions that support both economic growth and community well-being. *For more information on West Valley Construction please visit our website at wvcc.com.*

Campbell Tech Park Project EIR

From Joe Burman <joe@burmancabinets.com>
Date Sat 2/15/2025 12:31 AM
To techparkproject <techparkproject@campbellca.gov>

You don't often get email from joe@burmancabinets.com. Learn why this is important

WARNING: This email originated from an external sender! Please do not open attachments or click on links unless you are certain it is legitimate.

To the City of Campbell:
Attn: Daniel Fama, Senior Planner, Community Development Dept.

As a long time McGlincy Lane Property and Business Owner, the Development of 290 Residential Units, some with ADU's, in the Campbell Technology Business Park would have a NEGATIVE IMPACT on the WHOLE AREA. There will be a minimum of another 600 cars and car trips, adding to the already crowded and congested daily traffic on a 2 lane street which only has 2 ways in and out. It will also add further traffic and congestion to 2 lane Union Ave and 2 lane Curtner Ave, which are already heavily congested with rush hour traffic. In the Year 2000 General Plan, the City of Campbell proposed a similar scenario for more Housing. But it was stopped by a flawed Traffic Study, along with the Disapproval and Dissent by McGlincy Lane Area Business and Property Owners. I am DEFINITELY OPPOSED to this Redevelopment Project. Lastly as a Campbell resident, Voters should be able to decide this kind of Redevelopment Project, which impacts their property and quality of life.
Thank You, Joe Burman Property Manager for Burman Family LLC and Morris Lane LLC

Mr. Daniel Fama
City of Campbell Community Development Department
70 N. First Street
Campbell, CA 95008

Dear Mr. Fama and the City of Campbell Community Development Department,

I am writing on behalf of Infinite Networks, a small, minority-owned business located on East McGlincy Lane. We wish to formally express our concerns regarding the proposed redevelopment of Campbell Technology Park into residential units, with access being heavily dependent on McGlincy Lane. As business owners and community members, we are deeply troubled by the anticipated impact this project will have on our operations and the overall functionality of the street.

East McGlincy Lane is a busy corridor with only one travel lane in each direction. It serves as a crucial route for commercial properties and small businesses, including ours, which constantly receive large freight deliveries. Delivery and shipping trucks frequently double park due to limited space, and our 30 employees, along with many others in the area, navigate these conditions daily. Adding an estimated 1,368 additional daily trips down this already constrained street is highly concerning and, in our opinion, negligent. Increased traffic congestion and potential safety hazards, such as traffic jams and accidents, will significantly hinder business operations and the daily activities of hardworking professionals in the area.

We urge the City of Campbell to consider alternative access solutions to mitigate these adverse effects. Possible considerations include the development of an additional roadway or the implementation of a dedicated freeway entrance and exit to accommodate the influx of residential traffic. These measures would help preserve the functionality of McGlincy Lane as a commercial corridor while supporting responsible urban planning.

Re: Campbell Tech Park Project– Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)

Dear Daniel Fama:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Campbell Tech Park Project. The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities. The following comments are based on our review of the December 2024 NOP.

Please note this correspondence does not indicate an official position by Caltrans on this project and is for informational purposes only.

Project Understanding
The proposed project would demolish the existing research and development facilities on site and would construct 27 single-family detached homes and 263 town homes. The project is adjacent to State Route 17 (SR-17).

Travel Demand Analysis
With the enactment of Senate Bill (SB) 743, Caltrans is focused on maximizing efficient development patterns, innovative travel demand reduction strategies, and multimodal improvements. For more information on how Caltrans assesses Vehicle Miles Traveled (VMT) analysis for land use projects, please review Caltrans' Transportation Impact Study Guide (*link*). Caltrans looks forward to reviewing the VMT analysis in the DEIR when it is available.

Hydrology
Please ensure that any increase in storm water runoff to State Drainage Systems or Facilities be treated, contained on the project site, and metered to preconstruction levels. Any floodplain impacts must be documented and mitigated. A detailed Drainage Report which includes run off calculations, drainage inlet locations, pipe capacity and final discharge locations should be submitted in the encroachment permit phase for Hydrology to review and approve.

Lead Agency
As the Lead Agency, the City is responsible for all project mitigation, including any needed improvements to the State Transportation Network (STN). The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

Encroachment Permit
Please be advised that any permanent work or temporary traffic control that encroaches onto Caltrans' Right of Way (ROW) requires a Caltrans-issued encroachment permit.

The Office of Encroachment Permit requires 100% complete design plans and supporting documents to review and circulate the permit application package. The review and approval of encroachment projects is managed through the Encroachment Permits Office Process (EPOP) or the Project Delivery Quality Management Assessment Process (QMAP), depending on project scope, complexity, and completeness of the application. Please use the following resources to determine the appropriate review process:

- TR-0416 Applicant's Checklist (*link*)
- Flowchart, Figure 1.2 in Chapter 100 – The Permit Function, Caltrans Encroachment Permit Manual (*link*)

The permit approval may take 30 days to 6 months or more depending on the project scope, size, complexity, completeness, compliance with policies and quality of the permit package submitted. Projects requiring exceptions to design standards or external agency approvals may need more time to process.

To obtain more information and download the permit application, please visit Caltrans Encroachment Permits (*link*). When the applicant is ready to pursue a Caltrans encroachment permit, please contact D4Permits@dot.ca.gov to initiate the process.

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Marley Mathews, Associate Transportation Planner, via LDR-D4@dot.ca.gov. For future early

coordination opportunities or project referrals, please visit Caltrans LDR website (*link*) or contact LDR-D4@dot.ca.gov.

Sincerely,

LLISEL AYON
Acting Branch Chief, Local Development Review
Office of Regional and Community Planning

c: State Clearinghouse

Outlook

Valley Water Comments re: NOP of a DEIR for the Campbell Tech Park Project

From Andrew Quan <AQuan@valleywater.org>
Date Thu 2/13/2025 4:47 PM
To Daniel Fama <danielf@campbellca.gov>
Cc Lisa Brancatelli <LBrancatelli@valleywater.org>

Valley Water has reviewed the Notice of Preparation (NOP) of a Draft Environmental Impact Report (EIR) for the Campbell Tech Park Project at 635, 655, 675, and 695 Campbell Technology Parkway in Campbell, received on January 3, 2025. Per our review, we have the following comments:

1. When considering water supply availability, San Jose Water Company's Urban Water Management Plan assumes a substantial increase in water conservation to meet future water demand (as does the Urban Water Management Plan for Valley Water). For the proposed project to meet its fair share of water conservation assumptions all available water conservation measures should be incorporated into the project including submeters for residential units to encourage efficient water use and by using recycled water if available. In addition, the City and applicant should consider the following:

    - Require landscaping that exceeds the requirements of the City's water efficient landscape regulations;
    - Weather- or soil-based irrigation controllers;
    - Dedicated landscape meters;
    - The installation of dual plumbing to facilitate and maximize the use of alternative water sources for irrigation, toilet flushing, cooling towers, and other non-potable water uses. In addition, onsite reuse of water may be appropriate now or in the future.
    - Maximize the use of alternative water sources for non-potable uses including stormwater, rainwater, and graywater.

2. According to Valley Water's records, the project site is located within the Santa Clara Plain Recharge Area of the Santa Clara Subbasin. The Draft EIR needs to note that the project site is within a groundwater recharge area and should consider potential impacts to groundwater recharge resulting from this project and include potential measures to minimize the impacts.

3. Please note that the project site is located within the James J. Lenihan dam failure inundation zone. The Draft EIR should make note of this and consider potential impacts.

4. According to the Federal Emergency Management Agency's (FEMA) Flood Insurance Rate Maps (FIRM) 06085C0239H and 06085C0237H, effective on May 18, 2009, the project site is located within unshaded Zone X, which is defined as an area of minimal flood hazard.

5. According to Valley Water's records, there are no wells within the property boundary. While Valley Water has records for most wells located in the County, it is always possible that a well exists that is not in Valley Water's records. If previously unknown wells are found on the subject property during development, they must be properly destroyed under

permit form Valley Water or registered with Valley Water and protected from damage. For more information, please call Valley Water's Well Ordinance Program Hotline at (408) 630-2660.

When the Draft EIR is available, Valley Water would appreciate the opportunity to review and provide comments. Please let me know if you have any questions. You may reach me at AQuan@valleywater.org or at 408-630-1667. Please reference File 34951 on any future correspondence regarding this project.

Thank you,

ANDREW QUAN
ASSISTANT ENGINEER II - CIVIL
Community Projects Review Unit

March 11, 2025

City of Campbell
70 N 1st St
Campbell, CA 95008

Attn: Daniel Fama
By Email: danielf@campbellca.gov

Dear Daniel,

VTA appreciates the opportunity to comment on the Notice of Preparation and Initial Study for the proposed residential development located at 635, 655, 675, and 695 Campbell Technology Parkway in Campbell. VTA has reviewed the document and has the following comments:

Community Design and Transportation Manual
VTA recommends that the applicant use VTA's Community Design and Transportation Manual (CDT) to guide the project's design. The CDT Design Guidelines offer strategies for the development's built form and parking design. These guidelines promote pedestrian activity, support transit, and enhance each community's unique character.

Bike and Pedestrian Bridge
VTA's Countywide Bicycle Plan identifies Railway Avenue/Campbell Technology Parkway as a potential site for a bike and pedestrian bridge. A portion of the project site would be an ideal location for this bridge. VTA wants to ensure that the proposed project's design does not hinder future bridge construction at this location. The site design should not physically obstruct the bridge's potential placement. VTA recommends that the City work with the applicant to secure an easement through the land-use approval process, ensuring public access when the bike and pedestrian bridge is constructed.

In addition, the EIR should reference VTA's Countywide Bicycle Plan when assessing the project's consistency with existing plans.

Thank you for the opportunity to review this project. If you have any questions, please do not hesitate to contact me at 408-321-5804 or larissa.sanderfer@vta.org.

Campbell, CA 95008

Re: **Campbell Technology Park – Response to West Valley Construction Letter Dated April 21, 2025**

Dear Mr. Fama and Mr. Seligmann:

As you know, Hanson Bridgett represents Campbell Technology Park LLC ("CTP"), the owner and applicant seeking approval of a 290-unit residential neighborhood at 635, 655, 675, and 695 Campbell Technology Parkway (the "Project"). By this letter, we wish to respond to various public comments on the Project.

On April 21, 2025, West Valley Construction Company, Inc. ("WVCC") transmitted a 63-page letter package (the "WVCC Letter") urging the City to enlarge the scope of the forthcoming Environmental Impact Report ("EIR") well beyond what is required under the California Environmental Quality Act (Pub. Res. Code § 21000 et seq.; "CEQA"). The WVCC Letter does not raise any legal, environmental issues and, for purposes of CEQA review, the City should disregard it. We also remind the City that the Project is subject to the protections of the Builder's Remedy provisions of the Housing Accountability Act, and that none of the issues raised in the WVCC Letter are permissible grounds to deny or unduly condition the Project. We appreciate that the City likely realizes this point, and mention it because we think it is important that WVCC be made aware of this reality as well.

While WVCC has operated in Campbell for many years, the needs of the community have changed. The City faces urgent obligations under State housing law and its own General Plan to facilitate the development of infill housing in appropriate locations, which will require that residential uses be placed in closer proximity to industrial use. The Project site is a prime location within the City capable of supporting this scale of residential development in close proximity to jobs and transit and, indeed, the City's current General Plan would prefer that more than 600 homes be placed at the Project site. The Project's 290 units represent a compromise that other neighbors, including the adjacent mobile home community, have welcomed. The Project therefore helps the City achieve its housing goals while remaining respectful of local neighborhood interests, and CEQA should not be misused to forestall this necessary housing development. Any attempts to improperly deny or delay the Project, through the CEQA process or otherwise, risks violating the Housing Accountability Act and could subject the City to financial penalties.

CTP submits this response to the WVCC letter in order to assist the Community Development Department in defining a legally sound and efficient EIR scope. In short, CEQA obligates the City to analyze whether the Project will create significant effects on the *physical environment;* it does not compel the City to investigate every conceivable annoyance that might befall a future resident.

Further, while WVCC and other public commenters would have the City believe the introduction of new residents will constitute a marked change, introducing exposing residents to extreme dangers, the facts show that (1) there are hundreds of existing residences in the immediate vicinity of WVCC and neighboring operations; and (2) the local streets are in fact very calm, per State traffic accident data, with very few accidents (and with no accidents on Campbell Technology Parkway). It is important, then, to separate fact from fiction.

When WVCC's arguments are measured against governing statute, controlling case law, modern CEQA guidelines, and verifiable facts and date, they collapse.

I. CEQA does not require an EIR to study how existing conditions will affect future residents.

WVCC's central argument – that the EIR must analyze how current industrial conditions (e.g., truck trips, noise, diesel exhaust) might impact future Project occupants – is a textbook example of what courts have consistently rejected.[1] The California Supreme Court held that "CEQA generally does not require an agency to consider the effects of existing environmental conditions on a proposed project's future users or residents."[2] The Court emphasized that CEQA's concern is with a project's impact *on the environment*, not the other way around.

WVCC does not identify any statutory exception that would apply here. Courts have recognized limited carve-outs, such as airport land use compatibility[3] or locating schools within 500 feet of freeways.[4] However, these are narrow, legislatively defined exceptions, and the Project does not implicate them. The presence of diesel trucks and industrial noise from WVCC's own operations does not transform the Project site into an inherently hazardous location warranting CEQA scrutiny. For example, In *Ballona Wetlands Land Trust v. City of Los Angeles,* the court rejected arguments that CEQA required evaluation of sea-level rise impacts on future residents. The court explained that even where environmental conditions might pose serious risks to a project's occupants, CEQA does not authorize agencies to withhold approvals unless the project itself will worsen the conditions.[5] WVCC's position is weaker. The company asks the City to evaluate dangerous conditions *that it and others appear to be unlawfully creating* and how these questionable operations would affect Project users. The City should not be blessing illegal behavior.[6] To give the screw another turn, WVCC further asks that the City make housing decisions based on speculative future responses by residents (e.g., lawsuits, complaints, traffic

[5] *Ballona Wetlands Land Trust v. City of Los Angeles* (2011) 201 Cal.App.4th 455, 473-474.
[6] Illegal behavior can be used to establish an environmental baseline, as discussed in the next section, but CEQA does not allow an agency to allow future unlawful activities to persist once they are identified.

conflicts) that would occur only if unlawful activities, after having now been identified, were allowed to persist.

II. Several of the environmental "impacts" WVCC raises are caused by their own conduct, not the Project.

As noted above, WVCC's argument is particularly unpersuasive in light of the fact that the very conditions it identifies as problematic – truck traffic, double parking, and pedestrian safety hazards – stem from the business practices of WVCC itself and its industrial neighbors. CEQA analysis of the Project must focus on the actual impacts caused by the Project – not conditions that are caused by the behavior of local industrial operations, including WVCC itself.

As admitted by WVCC's legal counsel and its traffic consultant, WVCC's trucks currently double park in narrow street conditions, obstruct access to adjacent properties, park in fire lanes, and routinely idle for extended periods of time in non-designated loading zones. In at least one circumstance, this behavior caused an accident.[7] These conditions are not a consequence of the Project, and are not inherent to the project site or its surroundings; they are a byproduct of voluntary business practices by WVCC and its industrial neighbors. Furthermore, these practices may contravene City regulations and State law. Under the California Vehicle Code, it is unlawful to stop, park, or leave standing any vehicle, whether attended or unattended, in any of several specified locations including: in an intersection; on a crosswalk; within three feet of a sidewalk ramp, alongside another parked or stopped vehicle, *or in a manner that obstructs traffic.*[8] It is also unlawful for vehicles to parallel park more than 18 inches from the curb unless reasonably necessary.[9] Furthermore, the City code contemplates commercial loading occurring in designated zones marked by yellow curbs.[10] It appears that no such marked curbs exist along the portions of E. McGlincy Lane referenced in the WVCC Letter. To the extent WVCC is concerned that these existing practices may result in negative consequences on area traffic or pedestrian safety, WVCC should consider ensuring that its operations comply with all relevant State and local laws. The City should as well.

Under Senate Bill 743 and CEQA Guidelines Section 15064.3, effects on automobile delay, such as the "traffic delays" cited in the WVCC Letter, are not significant environmental impacts. That said, many of the congestion issues WVCC raises are more likely the result of WVCC's own operational practices, including the repeated staging of trucks that block travel lanes and potential misuse of public rights-of-way.

To better understand the public comments received by the City, CTP retained the veteran traffic engineering firm Abrams Associates. As Abrams Associates notes in its Review of Comments on the Transportation Analysis for the Project (provided to the City along with this letter), local industrial businesses frequently utilize public roadways without temporary traffic control signage or flagmen, contributing to congestion, access limitations, and pedestrian safety concerns. To the extent WVCC contends that these are environmental impacts, they are not attributable to new

[7] *See* February 12, 2025 Fehr & Peers Memorandum, p. 4.
[8] *See, e.g.,* Vehicle Code § 22500 subds. (a), (h).
[9] Vehicle Code § 22502.
[10] Campbell Municipal Code § 10.24.060.

residents or the Project, but to longstanding business practices that are themselves potentially unlawful and uncharacteristic of orderly industrial operations.

To the extent existing conditions raised by WVCC are unlawful, WVCC cannot profit from its own wrongdoing. While it is true that unlawful activities may in some circumstances be considered as part of the environmental baseline, that principle is not an invitation to normalize those conditions in perpetuity. Meanwhile, WVCC has not provided any evidence that the Project would result in any significant impacts to the surrounding environment when compared to the environmental baseline.[11]

The City cannot, and should not, extend the scope of environmental review beyond the limits dictated by State law to accommodate or entrench ongoing conduct that may itself violate State or local law. CEQA does not function as a neighborhood preservation statute. It does not exist to insulate existing industrial operators from the lawful effects of adjacent land use changes. Rather than indicating a need for expanded environmental study, WVCC's complaints underscore the importance of enforcing existing traffic, parking, and public safety regulations so that the City can implement its plans to bring more housing opportunities to its community.

III. Speculative nuisance exposure and business disruption are not significant environmental impacts under CEQA.

WVCC's concern that new residents might file nuisance claims or disrupt WVCC's business operations is a non-environmental issue. CEQA does not treat speculative economic or legal effects on surrounding businesses as environmental impacts.[12] While WVCC might not like residential neighbors, when one looks at the issue of land use compatibility, there is nothing at issue. The Project is consistent with the City's current General Plan and Housing Element, which have designated this location as appropriate for residential use. In fact, WVCC and nearby businesses have harmoniously co-existed *for decades* adjacent to residential and recreational uses. For instance, the Paseo de Palomas mobile home community is located in close proximity to WVCC properties and adjacent to other industrial operators. There also exist 18 residential structures, including 16 single family homes and two apartment buildings, on West Valley Drive, behind a row of industrial operators on E. McGlincy Lane. Finally, the Edith Morley Park is located across the street from WVCC operations. This park has picnic facilities, trails, and allows for other recreational uses.

As discussed in the section above, several current practices by WVCC and its industrial neighbors may be in violation of State and local parking and loading regulations and, on that basis, be

[11] *See Communities for a Better Environment v. South Coast Air Quality District.* (2010) 48.Cal.4th 310, 322 ["baseline" must reflect the actual existing conditions on the ground even if they are unlawful].

[12] Cal. Code Regs., tit. 14 § 15358 subd. (b) ["Effects analyzed under CEQA must be related to a physical change"]; § 15064 subd. (e) ["Economic and social changes resulting from a project shall not be treated as significant effects on the environment"]; *Wal-Mart Stroes, Inc. v. City of Turlock* (2006) 138 Cal.App.4th 273, 294-295; *See also Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1205 noting that economic and social effects of proposed projects are outside of CEQA's purview].

subject to nuisance claims *as things stand*. Bringing more "witnesses" into the area should not be cause to find an environmental impact of the Project.

Notwithstanding the above, and as the Abrams Associate report confirms, the local circulation network is not dangerous. Claims by public commenters to the contrary are overblown and, in many respects, complete fabrications. The data shows that there have been just a few accidents on local streets during the past five years, and none on Campbell Technology Parkway. This roadway segment, in facts, operates at a Level of Service A, meaning it is a calm, uncluttered roadway. Per the Abrams Associates report, Campbell Technology Parkway will continue to operate at LOS A with the Project.

WVCC recognizes that the establishment of new residential neighbors may impact the viability of its continued operations, and seeks to use CEQA shield its operations from foreseeable scrutiny or regulatory enforcement. No laws, and especially not CEQA, should be invoked to achieve this improper goal. Potential enforcement of State and local law is not an environmental impact.

IV. The Project does not create adverse impacts to existing recreational facilities under CEQA.

WVCC echoes concerns brought up in the letter prepared by its attorney's law firm, Hoge Fenton, regarding potential overuse of Edith Morley Park parking spaces. These arguments are unsubstantiated. The Project site is located immediately across the street from the park, meaning that future residents are extremely unlikely to drive to it. As such, no credible evidence supports the assertion that the Project would generate a substantial increase in vehicle parking demand at the park.

Additionally, there is no evidence that Project-related demand for residential parking will result in residents' use of on-street parking spaces alongside Edith Morley Park. Though the Project is not required to follow the City's requirements for parking due to the nearby transit access, CTP as a measure of good faith decided to still develop relevant on-site parking in accordance with the City's code. As documented in the Abrams Associates report, the City's code requirements in Chapter 21.28 mandate that the Project provide 718 parking spaces. The Project satisfies this requirement. It is therefore expected the project’s parking supply would be sufficient to ensure its demand would be accommodated on-site, and the idea that homeowners and visitors will utilize the existing parking spaces adjacent to the park for non-park uses, or for auxiliary residential traffic, is a fabrication.

V. Transit access is appropriately analyzed under the proposed CEQA scope; opposition's characterization misstates the record.

The WVCC letter seems to cite *Yerba Buena Neighborhood Consortium v. City and County of San Francisco* (2023) 95 Cal.App.5th 779 to support its claim that "traffic delays" and "transit impacts" need to be studied under CEQA.

With respect to "traffic delays," WVCC's position is a misstatement of the case that clearly conflicts with governing law. Under Senate Bill 743 and CEQA Guidelines Section 15064.3, the most appropriate metric for assessing transportation impacts is Vehicle Miles Traveled ("VMT"). Automobile delay has been explicitly disclaimed as a significant environmental impact, and this is a fundamental principle that traffic engineers and urban planners have known for years.

Accordingly, the City's transportation consultant will prepare a VMT screening analysis in accordance with the governing VMT CEQA thresholds. Far from contradicting this approach, the *Yerba Buena* case repeatedly acknowledges that a project's effect on automobile delay shall not constitute a significant environmental impact.[13]

The WVCC Letter's reference to "transit impacts" is similarly unavailing, as WVCC has not provided any evidence that the Project will result in such impacts. While the *Yerba Buena* case states that transit impacts must be studied, it sets forth clear limits on the scope of such study. First, it notes that a Project's creation of new transit users should not be considered an adverse environmental impact.[14] Second, it concludes that "a project's effect on automobile delay shall not constitute a significant environmental impact […] and transit delays resulting from automobile delays may reasonably be seen as falling within the ambit of this rule."[15] As the *Yerba Buena* case recognizes, the crux of transit impact analysis under CEQA is whether a project would result in newly required expanded infrastructure. Such would include, for instance, a new transit station, expanded right-of-way, or additional rail capacity.[16] The City's proposed scope of CEQA review already includes a *Yerba Buena*-compliant analysis of cognizable impacts on transit, and the WVCC Letter includes no evidence to suggest that the Project will result in the need for expanded public transit infrastructure.

VI. The Project is subject to the Protections of the Builder's Remedy and Broader Housing Accountability Act.

As discussed above, WVCC's objections are not related to CEQA. Beyond the confines of CEQA, the Builder's Remedy limits the scope of issues that the City can consider as a basis to deny or condition the Project. Under State law, the City may not deny the Project, reduce the scope of the Project, or impose any conditions on the Project that would render it infeasible unless the City has substantial evidence that the Project would result in specific, adverse impacts upon the public health or safety due to inconsistency with objective, written public health or safety standards.[17] The WVCC Letter is devoid of any reference to such objective public health or safety standards, and therefore does not provide any permissible basis for the City to deny, reduce, or unduly condition the Project.

WVCC and other commenters may not be aware of the liabilities the City faces if it obstructs a housing development project on improper grounds. The Housing Accountability Act imposes steep penalties for City's that fail to comply with the Builder's Remedy. In additions to attorney's fees and costs of suit, the City could also be subject to a minimum fine in the amount of $10,000 per housing unit it improperly denies, for a total minimum fine of $120,000. Fines are quintupled and could reach $600,000 if the court finds the City acted in bad faith. (Gov. Code, §§ 65589.5(k)(1)(A)(ii), 65589.5(k)(1)(B), 65589.5(l).) Bad faith could be found, for instance, if the City jeopardizes or denies the Project based on an improper expansion of the scope of CEQA

[13] *Yerba Buena Neighborhood Consortium v. City and County of San Francisco* (2023) 95 Cal.App.5th 779, 801-803; 807.
[14] *Id*. at 806.
[15] *Id*.

review in a manner that has been clearly rejected by the courts, or vague traffic safety concerns that are not rooted in an objective, written health or safety standard.

* * *

As detailed in the analysis above, none of the issues raised by WVCC or its counsel provide a basis to expand CEQA review beyond what the law requires. The City has adopted clear thresholds, consistent with state mandates, and should not expand its scope of environmental review to evaluate impacts on Project users or in a way that would normalize or permit unlawful behavior violating local and state law.

As noted above, CEQA does not function, nor should it function, as a neighborhood preservation ordinance. The community needs housing and, as history has shown, WVCC and other industrial uses have harmoniously co-existed with surrounding residential development for many years. Though public commenters would have the City believe the local streets present extreme dangers, the actual data shows local streets are calm and that, during the past five years, there have been sparse accidents that are indicative of no trend, with zero accidents on Campbell Technology Parkway. Please consider, too, that Campbell Technology Park's proposed Project represents a well-considered compromise, in that a development twice the size of the Project is allowed under the General Plan.

The City's role now is to proceed with a focused a legally defensible EIR that addresses environmental impacts, not speculative policy disagreements or operational preferences (especially when those operations violate the law). In a time of statewide housing crisis, projects like Campbell Technology Park's proposal are essential to fulfilling the City's adopted Housing Element and RHNA targets. We respectfully urge the City to adhere to the scope identified and avoid introducing legally unsupported requirements that may jeopardize the EIR's integrity or delay urgently needed housing.

We remain available to provide any additional information the City may need.

Best regards,

Sean Marciniak

Re: Review of Comments on the Transportation Analysis for the Proposed Residential Development Project at 635, 655, 675, and 695 Campbell Technology Parkway

Dear Mr. Fama,

Campbell Technology Park asked me, in my capacity as a licensed traffic engineer, to review various public comments on the Campbell Technology Park's proposed residential development project at 635, 655, 675, and 695 Campbell Technology Parkway, including comments on the transportation analysis (TA)[1] prepared for the project. This letter constitutes a response to these public comments and comments on the transportation portion of the scope of work for the planned Environmental Impact Report (EIR) to be prepared for the project.

The comments that I reviewed were submitted primarily by neighboring businesses, and raise concerns related to access, circulation, parking, and traffic safety. Each has been carefully evaluated based on applicable CEQA thresholds, standard traffic engineering methodology, and the specific design of the project. As explained in the responses below, none of the comments identifies a potentially significant transportation impact.

By way of background, I am a licensed traffic engineer with over 30 years of experience, and am also president and owner of Abrams Associates Traffic Engineering, which has been in business for over 40 years. I have successfully provided traffic and transportation analyses for hundreds of projects throughout the Bay Area. I also previously served for five years as the contract City Traffic Engineer for the City of El Cerrito.

Comments contained in an e-mail from Arash Kerman dated February 11, 2025

Mr. Kerman is a local business owner concerned about the proposed development, particularly in relation to increased danger in navigating the narrow lanes due to frequent deliveries, and limited parking.

Response to Comment #AK-1 – The proposed project is not forecast to increase the volumes on any segment of Campbell Technology Parkway by more than about 100 vehicles per hour during the critical PM peak hour. This equates to less than one additional car every 30 seconds, which is a volume too low to result in any significant changes to the traffic operations on roadways in the area. California Highway Patrol (CHP) accident records confirm that there is no recent history of documented collisions or traffic hazards on this segment of roadway. Specifically, CHP accident records for Campbell Technology Parkway were examined for the past five years (2020 – 2025) and no accidents were identified for the roadway during this time period, On McGlincy Road, there was one accident at the intersection with Campbell Technology Parkway, and two others just east of it. One of these accidents involved a solo vehicle hitting a fixed object and none of the accidents involved pedestrians or bicyclists. The California Manual on Uniform Traffic Control Devices (CAMUTCD) specifies that the need for a traffic signal "*shall be considered*" if there are five or more reported crashes, of types susceptible to correction by a traffic control signal, within a 12-month period.[2] Each crash must involve personal injury or property damage exceeding the applicable requirements for a reportable crash. Based on these criteria the accident data indicates the intersection of Campbell Technology Parkway with E. McGlincy Road has only had one year where there was one qualifying accident during the five-year period analyzed. Such is not indicative of any trend or that the intersection is unsafe.

All lane widths in the area meet City standards. Furthermore, A review of traffic operations on the Campbell Technology Parkway roadway segment using the Highway Capacity Manual (HCM) indicates that the roadway segment currently operates at LOS A, and would continue to do so with the addition of traffic from the proposed project. There is no evidence, empirical or otherwise, that adding the forecast number of residential vehicles to a low-volume, dead-end roadway

[2] California Manual on Uniform Traffic Control Devices 2014 Revision 9, Caltrans, Sacramento, CA, April 1, 2025.

would create new safety risks. To the contrary, the data demonstrates that existing operations remain well below capacity, because there are no congestion problems to speak of and no documentation of existing safety problems that the proposed project might have the potential to exacerbate. Under cumulative plus project conditions, the Campbell Technology Parkway is forecast to carry no more than about 250 vehicles per hour, based on the Transportation Analysis prepared for the project, dated April 12, 2024. As a result, the roadway is forecast to continue to have average travel speeds of 20 mph or above, equating to LOS A conditions on this roadway segment as per Table 16-2 of the Highway Capacity Manual.[3]

The suggestion that future residents would somehow drive less safely than current users is unsupported and speculative. Nothing in the record indicates that the proposed project would cause roadways in the area, such as the Campbell Technology Parkway, to become unsafe. All available evidence confirms that the roadway will continue to operate safely and efficiently even with the project in place.

Response to Comment #AK-2 – There is no evidence to indicate the proposed project would be under parked and cause impacts to on-street parking in the area. The project will provide 728 on-site parking spaces for 290 residential units, including 582 in-garage residential spaces and 146 guest spaces dispersed throughout the site, which results in an average of approximately 2.5 spaces per unit.. This is comparable to local code requirements.[4] The Project includes 290 units, including 28 single family dwellings (SFDs) and 263 townhomes (with 3-4 bedrooms). The City's code requirements in Chapter 21.28 requires 2 spaces for each SFD, and 2.5 spaces for each townhome with 2+ bedrooms. As such, the Project would generate a total demand of 718 spaces, or about the same number of spaces the Project is providing. It is therefore expected the project's parking supply would be sufficient to ensure its demand would be accommodated on-site. As a result, the project is not forecast to result in any significant changes or impacts to the on-street parking occupancy levels in the surrounding area.

[3] *Highway Capacity Manual, Sixth Edition*, Transportation Research Board, Washington D.C., 2016.

[4] It is our understanding that because the project site is within ½ mile of a major transit there are no minimum parking requirements for the project. However, for the proposed project the City's recommended residential parking requirements have been adhered to. Accordingly, the project has been designed to accommodate all of its parking demand internally.

Comments contained in an e-mail from Christa Rumpler dated February 12, 2025

Ms. Rumpler is the owner of Accurate Smog Check at 238 Curtner Avenue and is concerned about pedestrian safety due to both alleged insufficient sidewalks and crime. Furthermore, Ms. Rumpler is concerned about increased traffic and the need for traffic signals.

Response to Comment #CR-1 – Only a small number of pedestrians and bicyclists from the proposed project would be forecast to use E. McGlincy Lane, and no evidence suggests this limited increase would create or exacerbate safety problems. Based on data contained in the transportation analysis for the project there would be less than five pedestrians per hour walking on any one segment of E. McGlincy Lane. Comments on the number of pedestrians suggest the project could generate 14 commuters on foot or walking to public transit. This would be split between the two directions on E. McGlincy Road so the resulting estimate is still only about seven pedestrians walking on any one segment of E. McGlincy Lane. This low estimate is likely still conservative given the industrial nature of the area, and the lack of residential-serving destinations along E. McGlincy Lane such as restaurants, grocery stores, pharmacies, schools, etc. It appears the nearest potential walking destination from the project is the Starbucks on E. McGlincy Lane at Camden Avenue. However, the walking distance to this Starbucks from the project site is almost a mile (about 0.87 miles), which is well outside the normal "*pedestrian shed*" used for designing neighborhoods and determining the service area of public transit stops.[5] The 5-minute walk, or pedestrian shed, is a crucial urban planning principle based on a distance that can be covered in five minutes at a normal walking pace, which is typically a quarter-mile radius. It represents the distance that most people are willing to walk before opting to drive, In addition, CHP accident records for E. McGlincy Lane were examined for the past five years (2000 – 2005) and only two pedestrian accidents were identified during this five-year period, neither of which are in the pedestrian shed. One involved a pedestrian in a crosswalk at the intersection of E. McGlincy Lane and Union Avenue, in an area that already has sidewalks and which is not between the project site and Starbucks. The other involved speeding on E. McGlincy Lane just east of S. McGlincy Lane, which is almost a 700-meter walk from the Project site and nearer to the Starbucks.

[5] *Robert Steuteville, Great idea: Pedestrian shed and the 5-minute walk*, Public Square: A CNU Journal, June 4, 2025, https://www.cnu.org/publicsquare/2017/02/07/great-idea-pedestrian-shed-and-5-minute-walk

Accordingly, there is no evidence the Project will create or exacerbate any pedestrian safety issues.

Response to Comment #CR-2 – There is no evidence to indicate the proposed project would trigger the warrants for installation of a traffic signal at the intersection of E. McGlincy Lane and Curtner Avenue. What are described in this comment are clearly traffic and parking enforcement issues that would not necessarily be solved with installation of a traffic signal or other improvements, which are unlikely to stop people who drive in an unsafe manner in the area. It is our understanding that all lane widths in the area currently meet City standards. CHP accident records for the intersection of E. McGlincy Lane and Curtner Avenue were examined for the past five years (2000 – 2005) and no accidents were identified at this intersection during this time period. Accordingly, the project is not expected to result in any significant changes or impacts to the traffic operations or safety in the vicinity of the intersection of E. McGlincy Lane and Curtner Avenue.

Response to Comment #CR-3 – In July of 2017, the City of Campbell adopted a Neighborhood Traffic Calming Program (NTCP) which includes a neighborhood engagement process by which residents can request traffic calming studies to determine if physical traffic calming measures, such as speed bumps, can be implemented.[6] The proposed project would not have the authority to install speed bumps because a detailed assessment on various issues, such as emergency vehicle access, would first need to be conducted. In the case of Campbell Technology Parkway, this roadway would not qualify for the program because, to be eligible for further study, the program requires that the 85th percentile speed exceeds the posted speed limit by 7 miles per hour. This is a high standard to meet and all evidence indicates that this requirement will never be met on Campbell Technology Parkway. Moreover, requests for such measures must be submitted directly to the City's Public Works Department by a concerned resident, and would require the documented support of at least 67% of affected residents. In short, the NTCP governs traffic calming implementation, and nothing in the project design, existing facts about roadway safety, or forecasted traffic volumes suggests it would trigger or require such measures.

Response to Comment #CR-4 – Please refer to the response to Comment CR-2.

[6] *City of Campbell Traffic Engineering Department, Neighborhood Traffic Calming Program*, City of Campbell Website, June 4, 2025, https://www.campbellca.gov/872/Neighborhood-Traffic-Calming-Program

Comments contained in an e-mail from Daniel Vigneri dated February 12, 2025

Mr. Vigneri is the general manager of Kobett Metals and is primarily concerned with traffic increase, safety of pedestrians, and available parking as well as keeping the area primarily industrial.

Response to Comment #DV-1 – Based on this comment, Kobett Metals does not appear to have sufficient on-site space to accommodate its parking and loading needs and instead relies upon on-street parking in the area. The fact that this business is located on a street Westchester Drive (with no turnaround) where it cannot receive their products is not the fault of the proposed project. Apparently the on-street parking is generally occupied during the week on Westchester Drive, forcing the employees of this business to park a block over on Campbell Technology Drive. While use of Campbell Technology Drive for this parking and loading activities of this private business may be acceptable to the City, there is no evidence to suggest the use of this public street parking by a private business should somehow preclude other land owners in the area from being able to utilize this street for access. First, as noted above, the Project is "self-parked," and will accommodate all Project-generating parking demand within the boundaries of the Project site. Second, existing regulations limit loading and unloading of commercial vehicles to 20 minutes so there is no reason to assume there will be any unusual conflicts. According to Section 10.24.070 of the City's Municipal Code "*Permission granted in this chapter to stop or stand a vehicle for purposes of loading or unloading of materials shall apply only to commercial vehicles and shall not extend beyond the time necessary therefore, and in no event for more than twenty minutes*."

Response to Comment #DV-2 – The transportation analysis prepared for the project and the forecast vehicle, bicycle, and pedestrian trip generation, confirms there is no reason to believe the proposed project will substantially change the traffic operations or safety of pedestrians in the area (children or otherwise). The existing traffic volumes on Campbell Technology Parkway, a dead-end street, are forecast to generate approximately one vehicle every 30 seconds during peak times – a nominal increase that falls well below thresholds of concern. In addition, no evidence of safety problems have been identified in the accident data. Based on the Transportation Analysis prepared for the project (dated April 12, 2024), there is no evidence, data-driven or otherwise, that this limited increase in traffic would result in any congestion, delay, or safety impacts.

Comments contained in an technical memorandum from Elynor Zhou and Matt Haynes of Fehr & Peers dated February 12, 2025

Fehr & Peers presents a series of technical comments regarding CMP thresholds, pedestrian safety, and signal warrant analysis.

Response to Comment #FP-1 – This comment makes an unsupported statement that due to the "*lack of bike and pedestrian facilities*" the project would "*necessitate a thorough evaluation of the bike and pedestrian circulation in the study area*." However, there is no City, County, or State requirement that mandates such an evaluation for this project. There are no documented safety problems identified in the Transportation Analysis prepared for the project, and no significant congestion (i.e., LOS) impacts identified in the area. According to the VTA's Transportation Impact Analysis Guidelines (dated October 2014), "*[i]f a project causes a transportation impact that cannot be mitigated to the CMP Auto LOS standard, a Multimodal Improvement Plan must be provided along with the TIA."* This is the only guidance that could potentially "*necessitate a thorough evaluation of the bike and pedestrian circulation".* In this case the proposed project does not cause any transportation impacts that cannot be mitigated to the CMP Auto LOS standard. Therefore, in the absence of any evidence of an existing safety problem additional evaluation of bicycle and pedestrian facilities should not be required.

Response to Comment #FP-2 – Based on our review, the forecasts of pedestrian and bicycle trips contained in this comment are consistent with what would be expected for a typical residential project. However, this amount of additional pedestrian traffic is much too low to potentially exacerbate any existing concerns about safety in the area. Based on the existing land uses in the project area, the estimates are conservative due to the lack of typical residential services and walking destinations in the area (restaurants, grocery stores, pharmacies, schools, etc.). The nearest likely draw for pedestrians from the project would be the Starbucks on E. McGlincy Lane at Camden Avenue. However, the walking distance to this Starbucks from the project site is almost a mile (about 0.87 miles) and, as noted above, this walking distance is too long to expect the generation of meaningful foot traffic.

Response to Comment #FP-3 – It is acknowledged that some pedestrians could walk to and from Edith Morley Park. However, there is no evidence of any existing safety problems in this area. Delay and LOS calculations using the Highway Capacity Manual methodology indicate there would be no substantial

delays or safety issues anticipated for pedestrians who wish to cross Campbell Technology Parkway to the park. Accordingly, there is no indication that additional pedestrian analysis is warranted.

Response to Comment #FP-4 – Please refer to response to Comment #FP-1.

Response to Comment #FP-5 – The proposed project is located in the Bagby Elementary School attendance boundary, within the Cambrian School District. It is approximately a 1 ½ mile walk from the project site to Bagby Elementary School, and it requires crossing Bascom Avenue, a six-lane arterial. As noted in the Bascom Avenue Complete Streets study: "*The overwhelmingly auto-orientation of Bascom Avenue (high vehicle speeds and lack of crossings) is hazardous to pedestrian activity*."[7] Given the 1 ½ mile distance and the pedestrian conditions along the route, it is our conclusion that it is unlikely there would be any significant volumes of school pedestrians making this journey.

Response to Comment #FP-6 – The level of traffic and truck activity generated by WVC's locations in this area are not nearly high enough to justify prohibiting or discouraging other traffic from using these roadways. There are no documented safety problems; most concerns relate to those being caused by WVC's potentially unlawful use of public streets for loading and unloading trucks. As an example, the only "*minor collision*" referenced in this comment was due to a "*WVC truck staged on E. McGlincy Lane*" which was apparently parked in the street, causing a car to cross the centerline and clip a parked car. The fact that WVC does not have sufficient space on their property to safely stage their trucks off of public streets is not the fault of the proposed project. The fact that WVC chooses to stage their trucks on E. McGlincy Lane should not preclude other land owners in the area from being able to utilize this street for access. The City's municipal code, in Chapter 10.24, provides that loading and unloading may only take place under certain circumstances, including that loading or unloading must occur as quickly as possible, but in no case more than 20 minutes. Our review of the photos indicates the concerns being raised in this comment are primarily enforcement issues.

Response to Comment #FP-7 – Please refer to response to Comment #FP-7.

Response to Comment #FP-8 – Please refer to response to Comment #FP-7.

[7] *Bascom Corridor Complete Streets Study – Pedestrian and Bicycle Conditions Evaluation*, Valley Transportation Authority, San Jose, CA, November 10, 2017.

Response to Comment #FP-9 – This comment recommends a detailed analysis of potential conflicts with trucking operations. However, the concern arises from nearby industrial companies' existing, potentially *illegal* business practices, particularly those involving staging trucks within travel lanes of public streets. One photograph in the comment shows a truck parked in a red zone (Figure 6), while another photographs submitted show a trucks blocking a travel lane without proper temporary traffic control signage or flagmen (Figures 5 & 7). The concern raised here is more appropriately viewed as one of code enforcement and compliance with existing safety requirements for business that block travel lanes on public streets in the area – not one created by the proposed project. It seems clear that potentially illegal parking of large trucks occurs in the area, without adequate temporary traffic controls. This questionable use of public streets by private businesses should not be a reason to prohibit or discourage other motorists in the area from using this roadway.

In general, there appear to be no City, County, or State requirements that would require additional analysis of conflicts with trucking operations, especially without sufficient evidence of an existing safety problem. There are no documented safety problems identified in the Transportation Analysis prepared for the project area and no significant congestion (i.e. LOS) impacts were identified. Therefore, in the absence of evidence or documentation of any existing safety problems in the area (or LOS impacts), it is our opinion that additional evaluation of conflicts with trucking operations in the area should not be required.

Response to Comment #FP-10 – There is no evidence to support requiring additional analysis of emergency vehicle access, especially since this concern is primarily being raised as a result of concerns about private trucking operations and their misuse of public roads for private purposes. Specifically, these are private businesses that potentially illegally block public roadways, without proper temporary traffic control signage or flagmen. There are no documented safety problems identified in the Transportation Analysis and no significant congestion (i.e. LOS) problems have been observed in the area. Theoretically, if there is an emergency then even the employees of the existing office buildings would need the ability to evacuate. In other words, there needs to be sufficient emergency vehicle access to Campbell Technology Parkway (as determined by the Fire and Police Departments) regardless of whether or not the proposed project is implemented. Given the absence of any evidence or documentation of existing safety problems in the area (or LOS impacts) no further evaluation of emergency vehicle access is warranted. Final review and approval would fall under the Fire Department's jurisdiction.

Response to Comment #FP-11 – It does not seem logical that the proposed project should be required to evaluate the appropriateness or driver compliance in conjunction of a Rapid Rectangular Flashing Beacon. Whether or not the installation Rapid Rectangular Rapid Flashing Beacons (RRFB's) are appropriate for this location is entirely up to the City as there are no exact standards for when they should be installed, only guidelines. There is no evidence the Project would cause or exacerbate any pedestrian safety issues and, to the extent drivers are ignoring the existing RRFB, such is not related to or would be exacerbated by the Project. As noted above, the accident statistics for the intersection at issue (E. McGlincy Lane and Campbell Technology Parkway) is not a dangerous intersection and would not become a dangerous intersection should the Project be constructed.

As a result, determining their appropriateness is entirely subjective, and only the City can explain the original rationale for installing them there. Obviously, the proposed project cannot be held responsible for whether or not there is driver compliance with the existing RRFB's. This is a code enforcement matter, not a CEQA or project design issue. Again, there is no evidence that would suggest new motorists from residential uses would somehow be less likely to stop for the RRFB's than current motorists in the area. In addition, if there is an actual compliance problem, then there should be records of complaints and/or accidents at this location – and none have been submitted.

Response to Comment #FP-12 – According to the VTA's Transportation Impact Analysis Guidelines (dated October 2014), a "*CMP intersection shall be included in a TIA"* if the *"proposed development project is expected to add 10 or more peak hour vehicles per lane to any intersection movement".* Here, the intersection being referenced in this comment (S. Bascom Avenue and Union Avenue) appears to be a Congestion Management Plan (CMP) intersection.

To the extent it is a CMP intersection, the project nevertheless would not trigger the 10-trip-per-lane threshold.. The Transportation Analysis (dated April12, 2024) determined that approximately 50 trips per hour would travel to and from the east E. McGlincy Lane. It is forecast this traffic would split roughly 50% in each direction on Union Avenue (about 25 trips in each direction). An additional 10% of the project traffic would be forecast to use Dry Creek Road. Therefore, the total traffic added by the project at the intersection of S. Bascom Avenue and Union Avenue would be approximately 20 trips per hour. This would be split between three different lanes (both inbound and outbound) so the resulting project traffic added at this intersection would be approximately 7 trips per lane, which is below

the 10 trips per lane threshold, assuming this were a CMP intersection. Accordingly, no CMP analysis is required.

Comments contained in a letter from Kevin P Kelly of the West Valley Construction Company dated February 10, 2025

Mr. Kelly raises objections to truck access, staging conditions, and general circulation impacts.

Response to Comment #WVC-1 – While the use of Campbell Technology Drive by WVC for parking and loading may be acceptable to the City, there is no evidence that this use grants exclusive or prioritized access. Public street usage by a private business does not preclude other land owners in the area, nor their tenants, from lawful access or use of the street.

Response to Comment #WVC-2 – Use of Campbell Technology Drive based on Mr. Kelly's assertions is largely due to his own company, WVC, choosing to stage their trucks within the travel lanes of public streets. The photos show a WVC truck blocking a travel lane without proper temporary traffic control signage or flagmen. The core issued is enforcement , specifically whether existing safety requirements are being followed by private businesses staging trucks in the roadway. It seems clear that potentially illegal double parking of large trucks occurs in the area, without adequate temporary traffic controls. This questionable and apparently illegal use of public streets by private businesses should not be a reason to prohibit or discourage other motorists or pedestrians in the area from using this roadway.

Response to Comment #WVC-3 – Please refer to response to Comment #WVC-2.

Comments contained in a letter from Sean Betti of Infinite Networks dated February 14, 2025

Mr. Betti contends that the project will exacerbate congestion on McGlincy Lane and will increase potential safety hazards such as traffic jams and accidents.

Response to Comment #IN-1 – The fact that businesses in the area choose to stage their trucks on public does not justify excluding others from lawful use of the same street. The concerned behavior is not caused by the proposed project, and it is up to the City to determine whether such practices are appropriate under local ordinance. Most Cities would require one-way traffic control with

flagmen for safety if the roadway is going to be narrowed to one lane for any extended period of time (such as for staging large trucks). Our review of available photographs and data confirms that the concerns raised are primarily enforcement issues – not impacts caused by the project.

Response to Comment #IN-2 – Please refer to response to Comment #IN-1.

Response to Comment #IN-3 – There is absolutely no evidence to indicate the volumes of traffic from the proposed project are high enough to warrant construction of any major new freeway connections in the area.

Please don't hesitate to contact me if you have questions or require any additional information to resolve these issues to your satisfaction.

Sincerely,

Stephen C. Abrams

Re: Campbell Tech Park Project EIR
Project Address: 635, 655, 675, and 695 Campbell Technology Parkway
Matter No.: 208185
Our Client: West Valley Construction Company, Inc.
Client's Property: 603 Campbell Technology Parkway, Campbell, California
Client Property Distance from Project Site: Approximately 150 feet

Dear Mr. Fama:

We represent West Valley Construction Company, Inc., whose principal executive office is located at 603 Campbell Technology Parkway, Campbell, California. Our client also operates from nearby 580 E. McGlincy Lane (main operations yard,) 599 E. McGlincy Lane (pipe and materials storage,) 563 Campbell Technology Parkway (heavy equipment operations and pipe storage,) and a fifth adjacent building for office uses. Our letter is submitted in conjunction with a letter from our client's President and Chief Executive Officer, Kevin P. Kelly and a memorandum from our client's traffic consultant, Fehr & Peers. Copies Mr. Kelly's letter and Fehr & Peers' memorandum are attached.

On behalf of our client, we present this letter commenting upon the prescribed scope of the Environmental Impact Report (the "**EIR**") required to be prepared in connection with the proposed re-development of Campbell Technology Park (the "**Project Site**"), and related change of land use from office/research and development uses to detached and attached residential uses (collectively the "**Project.**")

For purposes of the California Environmental Quality Act ("**CEQA**"):

""***Environment" means the physical conditions which exist within the area which will be affected by a proposed project*** including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or

> aesthetic significance. ***The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project.*** The "environment" includes both natural and man-made conditions." (14 CCR[1] §15360, ***Emphasis Added***); and,
>
> ""***Significant effect on the environment***" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. ***A social or economic change related to a physical change may be considered in determining whether the physical change is significant.***" (14 CCR §15382, ***Emphasis Added***)

In order for the EIR to be able to make a meaningful statement regarding whether the Project will cause a "significant effect on the environment", it is essential to start with a comprehensive baseline analysis of the "physical environmental conditions in the vicinity of the Project", which "give[s] the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts . . ." (See 14 CCR §15125.)

As proposed, the Project would introduce nearly 300 residential units into an area that, as noted in ENGEO's Modified Phase 1 Environmental Site Assessment, dated October 4, 2023, has been continuously used for industrial and commercial purposes since the area was first developed approximately 50 years ago.[2]

The baseline analysis of the current industrial/commercial environmental setting of the existing developments south of the Project Site will be crucial because it is evident that, if completed as proposed, the Project will impede existing land uses on neighboring properties in multiple ways. The Project will funnel **all** traffic into and out of the entire residential development through entrances on Campbell Technology Parkway. This approach will cause a significant environmental effect, but it is also inefficient and dangerous to both the existing businesses and their employees south of the Project and to the potential new residents.

Unless sufficient environmental mitigations are required, such as requiring users of the Project Site to use paths of ingress and egress other than Campbell Technology Parkway, the addition of nearly 300 families into such a constrained physical space, including, the introduction of children, will render the adjacent parcels unusable in the manner in which they have been used since their construction, and put the children at risk of physical harm.

---

[1] California Code of Regulations

[2] See Table 1.4-1 "Adjoining Site Uses" on Page 4 of the Phase 1 Report

The proposed residential use is contrary to applicable zoning and general plan designations for the area. In reliance upon the zoning, our client, other property owners and businesses purchased or leased and developed their respective parcels and have operated their businesses thereon for decades.

Assuming that this proposed land use change is permissible under the law, that does not mean that allowing this development is a good idea or that it is safe to allow such entirely inconsistent land uses to exist in close proximity to one another. It is hard to imagine two more conflicting land uses sharing a property boundary line. Even if the City of Campbell is legally required to approve the Project and the resulting conflicting land uses, it can still apply common sense to require that the developers obtain other means of entry to the Project Site rather than via Campbell Technology Parkway.

We urge that the City of Campbell direct that the scope of the EIR specifically include each of the following:

1. A detailed baseline analysis of the existing physical environment of the area described in the Phase 1 Report as "South" of the Project Site, including the existing industrial and commercial land uses, the related movement and parking, including regular double parking and parking in red zones, of large trucks and heavy equipment into and out of the area, and the limited street parking in the area.

2. An analysis of the resulting environmental effects on "Recreation," including access to and from Edith Morley Park, and ensuring that street parking remains available for users of the park.

3. An analysis of the effects on public health and safety resulting from the Project, as the same affect both existing tenants, employees, landowners and future residents. This discussion should address traffic and pedestrian safety and air quality for the new residents (especially the young and the aged), who will be living in an industrial area.

4. Mitigations should be studied such as redirecting ingress and egress (except in case of emergency) away from Campbell Technology Parkway and restricting parking on Campbell Technology Parkway, around Edith Morley Park and on E. and S. McGlincy.

5. An analysis of the topics raised by Fehr & Peers in its memorandum and any impacts associated with transportation in accordance with Public Resources Code 21099(b)(3).

We reserve the right to make further comments and editions to this letter after we have had an opportunity to review additional documentation with respect to this matter. If you have questions about any of the matters addressed in this letter, please contact the undersigned.

Very truly yours,

HOGE, FENTON, JONES & APPEL, INC.

FEHR PEERS

Memorandum

Date:	February 12, 2025
To:	Daniel Fama, City of Campbell
CC:	Brad Bosomworth, WVC and Sblend Sblendorio, Hoge Fenton
From:	Elynor Zhou and Matt Haynes, Fehr & Peers
Subject:	**CEQA Scoping for Proposed Development at 635, 655, 675, and 695 Campbell Technology Parkway**

SJ23-2263

Dear Daniel,

We are writing on behalf of West Valley Construction (WVC) regarding the proposed housing development at 635, 655, 675, and 695 Campbell Technology Parkway (referred to as the "Proposed Project" or "project" in this memo). The immediate project vicinity is characterized by light industrial land uses, including two yards operated by WVC.

Fehr & Peers has been a respected consultant in the field of community transportation analysis for over 40 years. We were engaged to review the *Transportation Analysis (TA)* dated April 12, 2024 prepared by Hexagon for the Proposed Project due to WVC's concerns that the area's lack of infrastructure and high level of trucking activities may lead to bike/pedestrian circulation and other safety issues. Our review found that the TA does not adequately acknowledge nor make recommendations to address these concerns. Therefore, we recommend that the City scope of the California Environmental Quality Act (CEQA) study to additionally address these crucial topics. We have included review comments on the TA in the **Attachment** to this letter.

The following presents our existing site observations and areas of concern in more detail.

Project Understanding

The Proposed Project would replace the existing, partially occupied research and development facilities on the site with a residential development consisting of 27 detached small-lot single-family homes and 263 townhomes, for a total of 290 residential units. Access to the project site would be provided via three existing driveways along Campbell Technology Parkway (CTP).

The Transportation Analysis for the Proposed Project was conducted and documented in the memorandum dated April 12, 2024. To the best of our knowledge, the focused draft EIR will be prepared in early 2025 by the environmental consultant.

Challenges & Concerns

This section documents the existing conditions and the potential challenges the Proposed Project brings in terms multimodal access and safety.

Bike & Pedestrian Access & Safety

The Proposed Project would introduce a greater level and varied types of active transportation usage in the area than currently occurs, including bicycle and pedestrian and use by juveniles. The lack of bike and pedestrian facilities, along with the high level of truck traffic, necessitate a thorough evaluation of the bike and pedestrian circulation in the study area to address the access and safety concerns. FP-1

The TA should include a detailed existing facility exhibit to show the various gaps in sidewalks and general lack of any bike facilities in the Proposed Project area. There are gaps in the sidewalk or missing sidewalk sections on E. McGlincy Lane west of CTP. There are no on-street or off-street bike facilities on CTP or E. McGlincy Lane. The nearest bike lane is a Class II (on-street) bike lane that starts north of E. McGlincy Lane/Union Avenue intersection. **Figures 1** is an example of the missing sidewalks on E. McGlincy Lane under existing conditions.

Figure 1. Lack of sidewalk on both sides of E. McGlincy Lane west of CTP (Source: Google, 2024). Segment shown is about 1,200 feet west of CTP.

There are cyclists and pedestrians using CTP and E. McGlincy Lane under existing conditions as shown in **Figure 2**, and during field visit we observed a pedestrian with stroller on E. McGlincy Lane.

Figure 2. Cyclist on street near 655 E. McGlincy Lane (Source: WVC, 2024)

The 2022 American Community Survey (ACS) 5-Year Estimate shows an average of 1.28 workers per household in the City of Campbell, and the City average commute mode shares are 1.2% for biking, 1.7% for walking and 1.7% for public transit. For the Proposed Project of 290 units, applying the ACS data based on City averages indicates that out of the 372 workers, there could be five bicycle commuters and 14 commuters on foot or walking to public transit. The Proposed Project will provide 20% of low-income units, which has higher non-auto mode share than non-accordable units. According to a Caltrans Study,[1] the non-auto mode share (transit, walk, and bike) for housing in suburban neighborhood is about 22% for AM peak hour and 36% for PM peak hour. Using this mode share rate on the workers from affordable housing units, there could be as many as 26 commuters on foot or walking to public transit, and about two commuting cyclists. In addition, residential land uses generate other trip types beyond commuting trips including additional trips to and from the Edith Morley Park, which means there would be additional walking and bicycling trips generated by the Proposed Project, and the requirement for additional parking adjacent to the park. We recommend total pedestrian and bicycle activity (both commute and non-commute trips) generated by the project be quantified and reported as part of the CEQA study.

FP-2

FP-3

FP-4

Despite the lack of bike and pedestrian facilities, residents wishing to reach employment and local destinations by walking and cycling would need to use CTP and E. McGlincy Lane given the Proposed Project location. **Figure 3** shows the route of access that residents would most likely take to reach nearby retail, bus stops, and schools. The nearest bus stops are at Bascom Avenue and Dry Creek Road intersection, approximately ¾ mile walking distance from the Proposed Project site. The closest schools are Bagby Elementary School, Ida Price Charter Middle School,

[1] *Affordable Housing Trip Generation Strategies and Rates*, Report Number CA18-2465, Caltrans, September 13, 2018

and Fammatre Elementary School, both located about 1.5 miles to the east. These schools would likely attract some project resident walk and bike trips. FP-5

The Santa Clara Valley Transportation Authority (VTA) *Countywide Bicycle Plan* (May 2018) has a planned bike/pedestrian bridge across Highway 17 between CTP and Railway Avenue.[2] Compared to current walking/biking routes on CTP and E. McGlincy Lane, this connection could provide a safer, more direct alternative for active transportation access to/from downtown Campbell, the VTA light rail station, and the Los Gatos Creek Trail for residents in this area, including the Proposed Project site. The CEQA study should evaluate whether the site plan design conflicts with the planned bike/pedestrian bridge and coordinate with City and VTA on accommodating the planned active transportation infrastructure. It should also consider whether constructing the new bike/pedestrian bridge could help mitigate potential transportation and safety impacts.

The parcels to the south and east of the Proposed Project site along the access routes are light industrial use according to City's land use map. Multiple industrial uses are in operations daily, such as WVC, Bob's Towing Service, Sanco and Kobett Metals. The nearby industrial land use and truck activities likely pose potential challenges to the safety of cyclists and pedestrians, as described in the following section.

Truck Activities & Conflicts

Multiple industrial businesses, including WVC, own operations yards and offices along E. McGlincy Lane and CTP. The TA fails to mention or quantify the level of truck traffic and potential conflicts with vulnerable roadway users in this area.

Figure 4 shows the nearby light industrial land use, and WVC's current locations, with their largest site at 580 E. McGlincy Lane at the southeast corner of the CTP/E. McGlincy Lane intersection. This site's outbound driveway is 78 feet east of the intersection and primarily accommodates (FHWA classification) Class 1-8 trucks, trailers, equipment transport vehicles, vendors, and visitors. According to WVC, approximately 101 vehicles visit site on a daily basis, with 50 vehicles making four trips (inbound and outbound total) daily and the rest making multiple trips. Other WVC sites along CTP each generate over 40 truck trips (inbound and outbound total) daily. FP-6

Trucks from the industrial businesses are active throughout the day and vary in size, including semi-trailer trucks with wide turning radii. **Figures 5** to **7** illustrate the observed truck activity and existing conflicts. For example, vehicles often try to maneuver around loading trucks staged in the street. One incident report filed by a WVC staff member describes a minor collision involving a passenger vehicle trying to avoid a WVC truck staged on E. McGlincy Lane, and crossing the center line and clipping a parked car. FP-7 FP-8

[2] VTA Countywide Bicycle Plan (May 2018) Table 6-2

The net increase in vehicular traffic resulting from the Proposed Project, along with increased project-related bike and pedestrian activity, is likely to conflict with existing trucking operations. This requires thorough study to identify the frequency and types of conflicts, and to implement feasible solutions to reduce their occurrence.

FP-9

Figure 5. Morning peak hour truck activity on E. McGlincy Lane east of CTP/E. McGlincy intersection (Source: Fehr & Peers, 2024)

Figure 6. Truck staged adjacent to curb on E. McGlincy Lane east of CTP/E. McGlincy intersection (Source: WVC, 2024)

Figure 7. Truck delivery to WVC site north of CTP/E. McGlincy intersection, vehicles trying to drive around the stopped truck (Source: WVC, 2024)

Emergency Access & Evacuation

The Proposed Project would be served by Campbell Technology Parkway which is effectively a cul-de-sac due to the barrier created by Highway 17 to the west. CTP serves as the main resident access as well as emergency vehicle access (EVA). A second EVA access would be provided via an existing EVA easement at the northern end of the project site from Paseo de Palomas Lane. The dependence on Campbell Technology Parkway will significantly affect existing land uses and could pose challenges for evacuation if the road is blocked in the case of fire or natural disaster, or if the road is congested and there is no alternative evacuation route. The neighboring street, Cristich Lane to the southwest of the project site, does not currently connect to CTP (**Figure 8**). Additionally, Cristich Lane, while a paved, private street, may not be well-suited as an emergency evacuation route given the presence of on-street parking and lack of curbs or centerline striping. The scope of the CEQA study should be expanded to consider multiple non-emergency access alternatives to reduce conflicts with industrial traffic. **FP-10**

Figure 8. No access to Cristich Lane from the southern Proposed Project driveway (Source: Fehr & Peers, 2024)

CEQA Study Scope

CEQA requires that the potential adverse effects of a Proposed Project on the environment be analyzed. If those impacts are found to be significant, they must be mitigated through implementation of feasible mitigation measures. The following are our recommended scope items that should be included in the transportation component of the CEQA Study Scope:

Existing Setting

- Document existing and planned bicycle and pedestrian facilities in the study area and identify any gaps in connectivity.
- Document existing levels of bicycling and pedestrian activity.
- Document existing traffic levels in the area including the percent and absolute number of heavy vehicles during peak hours and on a daily basis.
- Evaluate recently installed Rectangular Rapid Flashing Beacon (RRFB) at the eastbound approach of CTP/E. McGlincy Lane for appropriateness of installation and driver compliance.
- Document existing truck activities present in study area, citing location, any temporary lane blockages, duration, and other conditions.
- Document roadway collision history in the study area using City of Campbell police records, Transportation Injury Mapping System (TIMS) data, or other sources.

FP-11

Analysis Topics

- Analyze adequacy of bicycle and pedestrian facilities and travel routes to accommodate additional walk and bike trips generated by the Proposed Project.
- Evaluate potential conflicts between the site plan design and the planned Highway 17 bike/pedestrian bridge between CTP and Railway Avenue.
- Evaluate conflicts associated with additional project-related vehicle trips and bicyclists/pedestrians with existing truck operations in the area (e.g., idling on E. McGlincy Lane, turning in/out of driveways, pedestrians walking in street due to lack of sidewalks, etc.).
- Evaluate queuing and safety at the CTP/E. McGlincy Lane intersection with the addition of Proposed Project trips.
- Evaluate whether the proposed roadway network and project development would pose challenges for emergency responders and evacuations due to the limited access points. Evaluate alternative routes for vehicle/bike/pedestrian access other than only CTP.

Attachment

Table 1: Transportation Analysis Comments

FP-12

Section of TA	Comment Topic	Comments	Page of TA
Study Intersection, Data Collection and Analysis Scenarios	Selection of study intersections	Vehicle trips assigned to the east result in more than 10 added trips per lane on Union/Bascom; why is this intersection not selected as the study intersection?	4
	Selection of study intersections	McGlincy/Curtner intersection has long backups in existing conditions and could adversely impact the industrial businesses all along McGlincy. The operations of this intersection should be considered to study.	4
	Existing counts	The study only provides standard definition of the peak hour, but does not specify the actual peak hour used for the analysis. Since existing count is collected at different dates, how are the peak hour and peak hour volumes determined? - Intersection 1 AM and PM was collected on 1/9/2024 - Intersection 2 AM was collected on 11/8/2023 - Intersection 2 PM was collected on 09/01/2022	4
	Existing site driveway counts	No raw count sheet is provided in the TA attachment for existing driveway count on 1/9/2024 to match with Table 1 existing R&D trip generation.	5
Project Trip Generation, Distribution and Assignment	Existing counts	The trip distribution percentage is based on the existing traffic counts, but the project land use is different from existing use with reverse direction of peak traffic. The study area currently has heavy industrial use, and the project site's existing use is R&D and office. The peak direction is morning inbound and evening outbound, with trips traveling to/from other residential areas locally and in the region. The proposed development is residential, so the peak direction is reverse – morning outbound and evening inbound for work trips traveling to/from job centers. So using existing traffic pattern as the base of trip distribution assumption might not reflect the project traffic flow. This also affects the selection of study intersections (10 added trips per lane VTA guideline)	5
	Trip distribution	For trips assigned to Camden/Curtner intersection, a portion of the trips could use the SR-17 ramps; it's unclear whether this is reflected in the analysis.	6 (Figure 3)
Intersection Operations Analysis	Existing LOS	Existing LOS for intersection 2 might not reflect the actual operations condition since the count was from 2022; field observation from 2024 on a normal weekday during peak hour shows queues at southbound right on Curtner and eastbound left on Camden that did not get cleared within one signal cycle, resulting in delays over one minute.	10

	Existing LOS	Campbell General Plan (GP) existing conditions LOS is different from the TA results. Was the GP considered as a reference in the TA process?	10
	Geometry	It's unclear how the SR-17 northbound on-ramp is reflected in the intersection geometry. Are trips using the on-ramp treated as northbound left turns?	11 (Figure 5)
	Queuing results	At Curtner/Camden, eastbound left pocket is insufficient and the upstream traffic queues beyond the 17 Southbound ramps intersection; since the queue at study intersection 2 spills to nearby intersection, should the intersection under influence also be studied?	20 (Table 7)
	Queuing results	The analysis states that the restriping would improve the queue lengths but the benefits seem minimal (95th queue still exceeds storage capacity). We would like to see the plan sheets for the restriping included as attachment.	20 (Table 7)
Freeway Segment and Ramp Analysis	Existing freeway data	Which data period were used for PEMS? Does it fall in the same period as the intersection count dates?	23
	Freeway analysis	Capacity of ramp HOV and GP should be analyzed separately since the traffic volumes are not proportional.	23
Site Access and Circulation	Vehicle parking requirements, Transit access	The study states that the project is within a half-mile walking distance to public transit stops, but there are two contradicted statements: - The discussion on page 27 states that the project is far removed from bus stops; - The discussion on page 29 states that the nearest bus stops are one mile from the site.	27

WEST VALLEY CONSTRUCTION

SAFETY | COMMITMENT | RESPECT | RELATIONSHIPS | OWNERSHIP

Mr. Daniel Fama
Senior Planner
City of Campbell
70 North First Street
Campbell, CA 95008

Re: West Valley Construction Company, Inc.
Campbell Tech Park Project

Dear Mr. Fama:

West Valley Construction Company, Inc. ("West Valley Construction") was founded in 1958 and has been a vital part of the City of Campbell since 1971. Headquartered in Campbell, our vision is "Building infrastructure to improve the quality of life within our communities." For decades, we have been trusted to build, engineer, and maintain essential infrastructure, primarily underground water supply systems and dry utilities, including communications. Our commitment to safety, reliability, and efficiency ensures that we continue to serve and support the communities in which we operate.

From its Campbell yard at 580 E. McGlincy, West Valley Construction provides 24/7 emergency water supply repair services to the residents of Campbell under a service agreement with San Jose Water Company. In the event of a major earthquake or other disaster in which essential utilities are put out of service, West Valley Construction will be crucial to restoring services to the residents of Campbell on an emergency basis. West Valley Construction has a comprehensive emergency action plan in place to do just that.

Simply put, the City of Campbell *needs* West Valley Construction to continue its safe, efficient, 24/7 operations at its Campbell yard to ensure that essential infrastructure is maintained for its residents.

West Valley Construction has proudly operated in Campbell for over 50 years, contributing significantly to the local economy. Since relocating to 580 E. McGlincy Lane in 1971, we have continuously invested in the community, including paying $243,000 in local taxes in 2024 alone. Our commitment to Campbell is long-term, and we intend to remain a vital part of the City indefinitely.

Currently, West Valley Construction owns four (4) properties and leases one (1) property around the intersection of E. McGlincy Lane and Campbell Technology Parkway. Two (2) are on Campbell Technology Parkway (603 and 563) and the other three (3) are on E. McGlincy Lane (530, 571-599 and 555). Attached is a schematic showing the properties and the ingress and egress of vehicles within our facilities.

West Valley Construction employs 545 individuals across California, with over 130 employees based in Campbell. Many of these employees are Campbell residents who live, work, and contribute to the local economy by supporting businesses throughout the community daily.

Additionally, West Valley Construction is an employee-owned and union company. It has over 135 current and former employee shareholders. West Valley Construction's Employee Stock Ownership Plan, established in 1975 (making West Valley Construction one of the oldest ESOP companies in California and the nation), holds approximately 40% of West Valley Construction's stock. West Valley Construction's employee ownership is certified by third-party company Certified EO. West Valley Construction is signatory to the Laborers, Operators, Teamsters and Plumbers unions and provides over 380 craft employees with stable, well-paying jobs and union benefits.

Furthermore, West Valley Construction is committed to diversity and inclusion and, in fact, has an extremely diverse workforce in both gender and ethnicity. We have built a workforce that reflects the rich diversity of our community and maintain a robust Supplier Diversity Program, partnering with women-, minority-, disabled veteran-, and LGBTQ-owned businesses—many of which operate within Campbell.

Beyond our operational contributions, West Valley Construction is deeply invested in the Campbell community. West Valley Construction's Core Value of Commitment states "We do the right thing for each other, our clients, and our communities." We demonstrate this by being a proud member of the Campbell Chamber of Commerce and through actively supporting local initiatives through the West Valley Construction Charitable Foundation. Our contributions to organizations such as Second Harvest of Silicon Valley (Silver Donor - $334K over the last 10 years and $55K in 2024), St. Jude Children's Research Hospital, the American Cancer Society, and the Stroke Awareness Foundation demonstrate our unwavering commitment to giving back. We have also supported the Campbell Veterans Memorial Foundation, furthering our dedication to those who serve.

Operating a construction and infrastructure company does come with inherent impacts. Our primary yard at 580 E. McGlincy Lane, along with our storage facility (primarily pipe) at 563 Campbell Technology Parkway, are active worksites where noise and heavy equipment operations are necessary. The handling of backfill material stored at 580 E. McGlincy Lane does create dust. Our equipment includes back-up beepers that are intentionally loud (a safety measure).

Traffic flow is another critical consideration. West Valley Construction has seventy-six (76) on-road fleet vehicles, consisting of Class 1 to Class 8 vehicles and trailers, and approximately eighty-seven (87) personal vehicles accessing its Campbell facilities daily. For non-emergency work, crews typically depart the yard around 7:00 a.m. and return around 4:00 p.m. Due to the narrowness of E. and S. McGlincy, the fact that those roadways are so heavily parked with very wide vehicles and the fact that our road fleet vehicles are wide commercial vehicles, the presence of pedestrians or bicyclists on E. and S. McGlincy presents a real and significant hazard to both the pedestrians/bicyclists and our employee drivers. WVC-1

As is shown on the attached schematic, the egress of vehicles from the yard at 580 E. McGlincy has the vehicles immediately adjacent to the intersection of E. McGlincy and Campbell Technology Parkway. There will be conflict at the intersection with residents. WVC-2 In addition to West Valley Construction vehicles, large delivery trucks frequently visit our facilities (multiple times a day), requiring the full width of Campbell Technology Parkway and E. McGlincy Lane to maneuver, resulting in regular temporary traffic delays. WVC-3 An example of a typical delivery is the trucks that deliver pipe to 563 Campbell Technology Parkway storage yard. The trailer beds are long, and the trucks need to back into the yard – blocking the full width of Campbell Technology Parkway and halting cars on the road. The same happens with E. McGlincy with trucks making deliveries.

West Valley Construction understands the City of Campbell is required to provide more housing. However, we believe that, but for such requirement, a high-density residential project landlocked by light industrial uses and with such limited and poor roadway infrastructure and lack of pedestrian/bicycling infrastructure would *never* be contemplated. The uses and resulting traffic are clearly incompatible.

The objective of West Valley Construction is not, however, to stop the Project. Rather, it is to ensure that the City of Campbell does the right thing for West Valley Construction and its neighboring businesses to ensure that (i) they can continue their normal operations, (ii) there is appropriate mitigation of impacts and (iii) there is assurance the new residents cannot assert the businesses they moved next to are nuisances.

West Valley Construction remains committed to Campbell and its residents. We look forward to working collaboratively with City officials to find balanced solutions that support both economic growth and community well-being. *For more information on West Valley Construction please visit our website at wvcc.com.*

Re: Campbell Tech Park Project EIR
Project Address: 635, 655, 675, and 695 Campbell Technology Parkway
Matter No.: 208185
Our Client: West Valley Construction Company, Inc.
Client's Property: 603 Campbell Technology Parkway, Campbell, California
Client Property Distance from Project Site: Approximately 150 feet

Dear Mr. Fama:

We represent West Valley Construction Company, Inc., whose principal executive office is located at 603 Campbell Technology Parkway, Campbell, California. Our client also operates from nearby 580 E. McGlincy Lane (main operations yard,) 599 E. McGlincy Lane (pipe and materials storage,) 563 Campbell Technology Parkway (heavy equipment operations and pipe storage,) and a fifth adjacent building for office uses. Our letter is submitted in conjunction with a letter from our client's President and Chief Executive Officer, Kevin P. Kelly and a memorandum from our client's traffic consultant, Fehr & Peers. Copies Mr. Kelly's letter and Fehr & Peers' memorandum are attached.

On behalf of our client, we present this letter commenting upon the prescribed scope of the Environmental Impact Report (the "**EIR**") required to be prepared in connection with the proposed re-development of Campbell Technology Park (the "**Project Site**"), and related change of land use from office/research and development uses to detached and attached residential uses (collectively the "**Project.**")

For purposes of the California Environmental Quality Act ("**CEQA**"):

> ""***Environment" means the physical conditions which exist within the area which will be affected by a proposed project*** including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or

> aesthetic significance. ***The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project.*** The "environment" includes both natural and man-made conditions." (14 CCR[1] §15360, ***Emphasis Added***); and,
>
> ""***Significant effect on the environment***" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. ***A social or economic change related to a physical change may be considered in determining whether the physical change is significant.***" (14 CCR §15382, ***Emphasis Added***)

In order for the EIR to be able to make a meaningful statement regarding whether the Project will cause a "significant effect on the environment", it is essential to start with a comprehensive baseline analysis of the "physical environmental conditions in the vicinity of the Project", which "give[s] the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts . . ." (See 14 CCR §15125.)

As proposed, the Project would introduce nearly 300 residential units into an area that, as noted in ENGEO's Modified Phase 1 Environmental Site Assessment, dated October 4, 2023, has been continuously used for industrial and commercial purposes since the area was first developed approximately 50 years ago.[2]

The baseline analysis of the current industrial/commercial environmental setting of the existing developments south of the Project Site will be crucial because it is evident that, if completed as proposed, the Project will impede existing land uses on neighboring properties in multiple ways. The Project will funnel **all** traffic into and out of the entire residential development through entrances on Campbell Technology Parkway. This approach will cause a significant environmental effect, but it is also inefficient and dangerous to both the existing businesses and their employees south of the Project and to the potential new residents.

Unless sufficient environmental mitigations are required, such as requiring users of the Project Site to use paths of ingress and egress other than Campbell Technology Parkway, the addition of nearly 300 families into such a constrained physical space, including, the introduction of children, will render the adjacent parcels unusable in the manner in which they have been used since their construction, and put the children at risk of physical harm.

---

[1] California Code of Regulations

[2] See Table 1.4-1 "Adjoining Site Uses" on Page 4 of the Phase 1 Report

The proposed residential use is contrary to applicable zoning and general plan designations for the area. In reliance upon the zoning, our client, other property owners and businesses purchased or leased and developed their respective parcels and have operated their businesses thereon for decades.

Assuming that this proposed land use change is permissible under the law, that does not mean that allowing this development is a good idea or that it is safe to allow such entirely inconsistent land uses to exist in close proximity to one another. It is hard to imagine two more conflicting land uses sharing a property boundary line. Even if the City of Campbell is legally required to approve the Project and the resulting conflicting land uses, it can still apply common sense to require that the developers obtain other means of entry to the Project Site rather than via Campbell Technology Parkway.

We urge that the City of Campbell direct that the scope of the EIR specifically include each of the following:

1. A detailed baseline analysis of the existing physical environment of the area described in the Phase 1 Report as "South" of the Project Site, including the existing industrial and commercial land uses, the related movement and parking, including regular double parking and parking in red zones, of large trucks and heavy equipment into and out of the area, and the limited street parking in the area.

2. An analysis of the resulting environmental effects on "Recreation," including access to and from Edith Morley Park, and ensuring that street parking remains available for users of the park.

3. An analysis of the effects on public health and safety resulting from the Project, as the same affect both existing tenants, employees, landowners and future residents. This discussion should address traffic and pedestrian safety and air quality for the new residents (especially the young and the aged), who will be living in an industrial area.

4. Mitigations should be studied such as redirecting ingress and egress (except in case of emergency) away from Campbell Technology Parkway and restricting parking on Campbell Technology Parkway, around Edith Morley Park and on E. and S. McGlincy.

5. An analysis of the topics raised by Fehr & Peers in its memorandum and any impacts associated with transportation in accordance with Public Resources Code 21099(b)(3).

We reserve the right to make further comments and editions to this letter after we have had an opportunity to review additional documentation with respect to this matter. If you have questions about any of the matters addressed in this letter, please contact the undersigned.

Very truly yours,

HOGE, FENTON, JONES & APPEL, INC.

FEHR PEERS

Memorandum

Date:	February 12, 2025
To:	Daniel Fama, City of Campbell
CC:	Brad Bosomworth, WVC and Sblend Sblendorio, Hoge Fenton
From:	Elynor Zhou and Matt Haynes, Fehr & Peers
Subject:	**CEQA Scoping for Proposed Development at 635, 655, 675, and 695 Campbell Technology Parkway**

SJ23-2263

Dear Daniel,

We are writing on behalf of West Valley Construction (WVC) regarding the proposed housing development at 635, 655, 675, and 695 Campbell Technology Parkway (referred to as the "Proposed Project" or "project" in this memo). The immediate project vicinity is characterized by light industrial land uses, including two yards operated by WVC.

Fehr & Peers has been a respected consultant in the field of community transportation analysis for over 40 years. We were engaged to review the *Transportation Analysis (TA)* dated April 12, 2024 prepared by Hexagon for the Proposed Project due to WVC's concerns that the area's lack of infrastructure and high level of trucking activities may lead to bike/pedestrian circulation and other safety issues. Our review found that the TA does not adequately acknowledge nor make recommendations to address these concerns. Therefore, we recommend that the City scope of the California Environmental Quality Act (CEQA) study to additionally address these crucial topics. We have included review comments on the TA in the **Attachment** to this letter.

The following presents our existing site observations and areas of concern in more detail.

Project Understanding

The Proposed Project would replace the existing, partially occupied research and development facilities on the site with a residential development consisting of 27 detached small-lot single-family homes and 263 townhomes, for a total of 290 residential units. Access to the project site would be provided via three existing driveways along Campbell Technology Parkway (CTP).

The Transportation Analysis for the Proposed Project was conducted and documented in the memorandum dated April 12, 2024. To the best of our knowledge, the focused draft EIR will be prepared in early 2025 by the environmental consultant.

Challenges & Concerns

This section documents the existing conditions and the potential challenges the Proposed Project brings in terms multimodal access and safety.

Bike & Pedestrian Access & Safety

The Proposed Project would introduce a greater level and varied types of active transportation usage in the area than currently occurs, including bicycle and pedestrian and use by juveniles. The lack of bike and pedestrian facilities, along with the high level of truck traffic, necessitate a thorough evaluation of the bike and pedestrian circulation in the study area to address the access and safety concerns. FP-1

The TA should include a detailed existing facility exhibit to show the various gaps in sidewalks and general lack of any bike facilities in the Proposed Project area. There are gaps in the sidewalk or missing sidewalk sections on E. McGlincy Lane west of CTP. There are no on-street or off-street bike facilities on CTP or E. McGlincy Lane. The nearest bike lane is a Class II (on-street) bike lane that starts north of E. McGlincy Lane/Union Avenue intersection. **Figures 1** is an example of the missing sidewalks on E. McGlincy Lane under existing conditions.

Figure 1. Lack of sidewalk on both sides of E. McGlincy Lane west of CTP (Source: Google, 2024). Segment shown is about 1,200 feet west of CTP.

There are cyclists and pedestrians using CTP and E. McGlincy Lane under existing conditions as shown in **Figure 2**, and during field visit we observed a pedestrian with stroller on E. McGlincy Lane.

Figure 2. Cyclist on street near 655 E. McGlincy Lane (Source: WVC, 2024)

The 2022 American Community Survey (ACS) 5-Year Estimate shows an average of 1.28 workers per household in the City of Campbell, and the City average commute mode shares are 1.2% for biking, 1.7% for walking and 1.7% for public transit. For the Proposed Project of 290 units, applying the ACS data based on City averages indicates that out of the 372 workers, there could be five bicycle commuters and 14 commuters on foot or walking to public transit. The Proposed Project will provide 20% of low-income units, which has higher non-auto mode share than non-accordable units. According to a Caltrans Study,[1] the non-auto mode share (transit, walk, and bike) for housing in suburban neighborhood is about 22% for AM peak hour and 36% for PM peak hour. Using this mode share rate on the workers from affordable housing units, there could be as many as 26 commuters on foot or walking to public transit, and about two commuting cyclists. In addition, residential land uses generate other trip types beyond commuting trips including additional trips to and from the Edith Morley Park, which means there would be additional walking and bicycling trips generated by the Proposed Project, and the requirement for additional parking adjacent to the park. We recommend total pedestrian and bicycle activity (both commute and non-commute trips) generated by the project be quantified and reported as part of the CEQA study.

FP-2

FP-3

FP-4

Despite the lack of bike and pedestrian facilities, residents wishing to reach employment and local destinations by walking and cycling would need to use CTP and E. McGlincy Lane given the Proposed Project location. **Figure 3** shows the route of access that residents would most likely take to reach nearby retail, bus stops, and schools. The nearest bus stops are at Bascom Avenue and Dry Creek Road intersection, approximately ¾ mile walking distance from the Proposed Project site. The closest schools are Bagby Elementary School, Ida Price Charter Middle School,

[1] *Affordable Housing Trip Generation Strategies and Rates*, Report Number CA18-2465, Caltrans, September 13, 2018

and Fammatre Elementary School, both located about 1.5 miles to the east. These schools would likely attract some project resident walk and bike trips. FP-5

The Santa Clara Valley Transportation Authority (VTA) *Countywide Bicycle Plan* (May 2018) has a planned bike/pedestrian bridge across Highway 17 between CTP and Railway Avenue.[2] Compared to current walking/biking routes on CTP and E. McGlincy Lane, this connection could provide a safer, more direct alternative for active transportation access to/from downtown Campbell, the VTA light rail station, and the Los Gatos Creek Trail for residents in this area, including the Proposed Project site. The CEQA study should evaluate whether the site plan design conflicts with the planned bike/pedestrian bridge and coordinate with City and VTA on accommodating the planned active transportation infrastructure. It should also consider whether constructing the new bike/pedestrian bridge could help mitigate potential transportation and safety impacts.

The parcels to the south and east of the Proposed Project site along the access routes are light industrial use according to City's land use map. Multiple industrial uses are in operations daily, such as WVC, Bob's Towing Service, Sanco and Kobett Metals. The nearby industrial land use and truck activities likely pose potential challenges to the safety of cyclists and pedestrians, as described in the following section.

Truck Activities & Conflicts

Multiple industrial businesses, including WVC, own operations yards and offices along E. McGlincy Lane and CTP. The TA fails to mention or quantify the level of truck traffic and potential conflicts with vulnerable roadway users in this area.

Figure 4 shows the nearby light industrial land use, and WVC's current locations, with their largest site at 580 E. McGlincy Lane at the southeast corner of the CTP/E. McGlincy Lane intersection. This site's outbound driveway is 78 feet east of the intersection and primarily accommodates (FHWA classification) Class 1-8 trucks, trailers, equipment transport vehicles, vendors, and visitors. According to WVC, approximately 101 vehicles visit site on a daily basis, with 50 vehicles making four trips (inbound and outbound total) daily and the rest making multiple trips. Other WVC sites along CTP each generate over 40 truck trips (inbound and outbound total) daily. FP-6

Trucks from the industrial businesses are active throughout the day and vary in size, including semi-trailer trucks with wide turning radii. **Figures 5** to **7** illustrate the observed truck activity and existing conflicts. For example, vehicles often try to maneuver around loading trucks staged in the street. One incident report filed by a WVC staff member describes a minor collision involving a passenger vehicle trying to avoid a WVC truck staged on E. McGlincy Lane, and crossing the center line and clipping a parked car. FP-7 FP-8

[2] VTA Countywide Bicycle Plan (May 2018) Table 6-2

The net increase in vehicular traffic resulting from the Proposed Project, along with increased project-related bike and pedestrian activity, is likely to conflict with existing trucking operations. This requires thorough study to identify the frequency and types of conflicts, and to implement feasible solutions to reduce their occurrence.

FP-9

Figure 6. Truck staged adjacent to curb on E. McGlincy Lane east of CTP/E. McGlincy intersection (Source: WVC, 2024)

Figure 7. Truck delivery to WVC site north of CTP/E. McGlincy intersection, vehicles trying to drive around the stopped truck (Source: WVC, 2024)

Emergency Access & Evacuation

The Proposed Project would be served by Campbell Technology Parkway which is effectively a cul-de-sac due to the barrier created by Highway 17 to the west. CTP serves as the main resident access as well as emergency vehicle access (EVA). A second EVA access would be provided via an existing EVA easement at the northern end of the project site from Paseo de Palomas Lane. The dependence on Campbell Technology Parkway will significantly affect existing land uses and could pose challenges for evacuation if the road is blocked in the case of fire or natural disaster, or if the road is congested and there is no alternative evacuation route. The neighboring street, Cristich Lane to the southwest of the project site, does not currently connect to CTP (**Figure 8**). Additionally, Cristich Lane, while a paved, private street, may not be well-suited as an emergency evacuation route given the presence of on-street parking and lack of curbs or centerline striping. The scope of the CEQA study should be expanded to consider multiple non-emergency access alternatives to reduce conflicts with industrial traffic. **FP-10**

Figure 8. No access to Cristich Lane from the southern Proposed Project driveway (Source: Fehr & Peers, 2024)

CEQA Study Scope

CEQA requires that the potential adverse effects of a Proposed Project on the environment be analyzed. If those impacts are found to be significant, they must be mitigated through implementation of feasible mitigation measures. The following are our recommended scope items that should be included in the transportation component of the CEQA Study Scope:

Existing Setting

- Document existing and planned bicycle and pedestrian facilities in the study area and identify any gaps in connectivity.
- Document existing levels of bicycling and pedestrian activity.
- Document existing traffic levels in the area including the percent and absolute number of heavy vehicles during peak hours and on a daily basis.
- Evaluate recently installed Rectangular Rapid Flashing Beacon (RRFB) at the eastbound approach of CTP/E. McGlincy Lane for appropriateness of installation and driver compliance.
- Document existing truck activities present in study area, citing location, any temporary lane blockages, duration, and other conditions.
- Document roadway collision history in the study area using City of Campbell police records, Transportation Injury Mapping System (TIMS) data, or other sources.

FP-11

Analysis Topics

- Analyze adequacy of bicycle and pedestrian facilities and travel routes to accommodate additional walk and bike trips generated by the Proposed Project.
- Evaluate potential conflicts between the site plan design and the planned Highway 17 bike/pedestrian bridge between CTP and Railway Avenue.
- Evaluate conflicts associated with additional project-related vehicle trips and bicyclists/pedestrians with existing truck operations in the area (e.g., idling on E. McGlincy Lane, turning in/out of driveways, pedestrians walking in street due to lack of sidewalks, etc.).
- Evaluate queuing and safety at the CTP/E. McGlincy Lane intersection with the addition of Proposed Project trips.
- Evaluate whether the proposed roadway network and project development would pose challenges for emergency responders and evacuations due to the limited access points. Evaluate alternative routes for vehicle/bike/pedestrian access other than only CTP.

Attachment

Table 1: Transportation Analysis Comments

FP-12

Section of TA	Comment Topic	Comments	Page of TA
Study Intersection, Data Collection and Analysis Scenarios	Selection of study intersections	Vehicle trips assigned to the east result in more than 10 added trips per lane on Union/Bascom; why is this intersection not selected as the study intersection?	4
	Selection of study intersections	McGlincy/Curtner intersection has long backups in existing conditions and could adversely impact the industrial businesses all along McGlincy. The operations of this intersection should be considered to study.	4
	Existing counts	The study only provides standard definition of the peak hour, but does not specify the actual peak hour used for the analysis. Since existing count is collected at different dates, how are the peak hour and peak hour volumes determined? - Intersection 1 AM and PM was collected on 1/9/2024 - Intersection 2 AM was collected on 11/8/2023 - Intersection 2 PM was collected on 09/01/2022	4
	Existing site driveway counts	No raw count sheet is provided in the TA attachment for existing driveway count on 1/9/2024 to match with Table 1 existing R&D trip generation.	5
Project Trip Generation, Distribution and Assignment	Existing counts	The trip distribution percentage is based on the existing traffic counts, but the project land use is different from existing use with reverse direction of peak traffic. The study area currently has heavy industrial use, and the project site's existing use is R&D and office. The peak direction is morning inbound and evening outbound, with trips traveling to/from other residential areas locally and in the region. The proposed development is residential, so the peak direction is reverse – morning outbound and evening inbound for work trips traveling to/from job centers. So using existing traffic pattern as the base of trip distribution assumption might not reflect the project traffic flow. This also affects the selection of study intersections (10 added trips per lane VTA guideline)	5
	Trip distribution	For trips assigned to Camden/Curtner intersection, a portion of the trips could use the SR-17 ramps; it's unclear whether this is reflected in the analysis.	6 (Figure 3)
Intersection Operations Analysis	Existing LOS	Existing LOS for intersection 2 might not reflect the actual operations condition since the count was from 2022; field observation from 2024 on a normal weekday during peak hour shows queues at southbound right on Curtner and eastbound left on Camden that did not get cleared within one signal cycle, resulting in delays over one minute.	10

	Existing LOS	Campbell General Plan (GP) existing conditions LOS is different from the TA results. Was the GP considered as a reference in the TA process?	10
	Geometry	It's unclear how the SR-17 northbound on-ramp is reflected in the intersection geometry. Are trips using the on-ramp treated as northbound left turns?	11 (Figure 5)
	Queuing results	At Curtner/Camden, eastbound left pocket is insufficient and the upstream traffic queues beyond the 17 Southbound ramps intersection; since the queue at study intersection 2 spills to nearby intersection, should the intersection under influence also be studied?	20 (Table 7)
	Queuing results	The analysis states that the restriping would improve the queue lengths but the benefits seem minimal (95th queue still exceeds storage capacity). We would like to see the plan sheets for the restriping included as attachment.	20 (Table 7)
Freeway Segment and Ramp Analysis	Existing freeway data	Which data period were used for PEMS? Does it fall in the same period as the intersection count dates?	23
	Freeway analysis	Capacity of ramp HOV and GP should be analyzed separately since the traffic volumes are not proportional.	23
Site Access and Circulation	Vehicle parking requirements, Transit access	The study states that the project is within a half-mile walking distance to public transit stops, but there are two contradicted statements: - The discussion on page 27 states that the project is far removed from bus stops; - The discussion on page 29 states that the nearest bus stops are one mile from the site.	27

WEST VALLEY CONSTRUCTION

Campbell, CA 95008

Re: West Valley Construction Company, Inc.
Campbell Tech Park Project

Dear Mr. Fama:

West Valley Construction Company, Inc. ("West Valley Construction") was founded in 1958 and has been a vital part of the City of Campbell since 1971. Headquartered in Campbell, our vision is "Building infrastructure to improve the quality of life within our communities." For decades, we have been trusted to build, engineer, and maintain essential infrastructure, primarily underground water supply systems and dry utilities, including communications. Our commitment to safety, reliability, and efficiency ensures that we continue to serve and support the communities in which we operate.

From its Campbell yard at 580 E. McGlincy, West Valley Construction provides 24/7 emergency water supply repair services to the residents of Campbell under a service agreement with San Jose Water Company. In the event of a major earthquake or other disaster in which essential utilities are put out of service, West Valley Construction will be crucial to restoring services to the residents of Campbell on an emergency basis. West Valley Construction has a comprehensive emergency action plan in place to do just that.

Simply put, the City of Campbell *needs* West Valley Construction to continue its safe, efficient, 24/7 operations at its Campbell yard to ensure that essential infrastructure is maintained for its residents.

West Valley Construction has proudly operated in Campbell for over 50 years, contributing significantly to the local economy. Since relocating to 580 E. McGlincy Lane in 1971, we have continuously invested in the community, including paying $243,000 in local taxes in 2024 alone. Our commitment to Campbell is long-term, and we intend to remain a vital part of the City indefinitely.

Currently, West Valley Construction owns four (4) properties and leases one (1) property around the intersection of E. McGlincy Lane and Campbell Technology Parkway. Two (2) are on Campbell Technology Parkway (603 and 563) and the other three (3) are on E. McGlincy Lane (530, 571-599 and 555). Attached is a schematic showing the properties and the ingress and egress of vehicles within our facilities.

West Valley Construction employs 545 individuals across California, with over 130 employees based in Campbell. Many of these employees are Campbell residents who live, work, and contribute to the local economy by supporting businesses throughout the community daily.

Additionally, West Valley Construction is an employee-owned and union company. It has over 135 current and former employee shareholders. West Valley Construction's Employee Stock Ownership Plan, established in 1975 (making West Valley Construction one of the oldest ESOP companies in California and the nation), holds approximately 40% of West Valley Construction's stock. West Valley Construction's employee ownership is certified by third-party company Certified EO. West Valley Construction is signatory to the Laborers, Operators, Teamsters and Plumbers unions and provides over 380 craft employees with stable, well-paying jobs and union benefits.

Furthermore, West Valley Construction is committed to diversity and inclusion and, in fact, has an extremely diverse workforce in both gender and ethnicity. We have built a workforce that reflects the rich diversity of our community and maintain a robust Supplier Diversity Program, partnering with women-, minority-, disabled veteran-, and LGBTQ-owned businesses—many of which operate within Campbell.

Beyond our operational contributions, West Valley Construction is deeply invested in the Campbell community. West Valley Construction's Core Value of Commitment states "We do the right thing for each other, our clients, and our communities." We demonstrate this by being a proud member of the Campbell Chamber of Commerce and through actively supporting local initiatives through the West Valley Construction Charitable Foundation. Our contributions to organizations such as Second Harvest of Silicon Valley (Silver Donor - $334K over the last 10 years and $55K in 2024), St. Jude Children's Research Hospital, the American Cancer Society, and the Stroke Awareness Foundation demonstrate our unwavering commitment to giving back. We have also supported the Campbell Veterans Memorial Foundation, furthering our dedication to those who serve.

Operating a construction and infrastructure company does come with inherent impacts. Our primary yard at 580 E. McGlincy Lane, along with our storage facility (primarily pipe) at 563 Campbell Technology Parkway, are active worksites where noise and heavy equipment operations are necessary. The handling of backfill material stored at 580 E. McGlincy Lane does create dust. Our equipment includes back-up beepers that are intentionally loud (a safety measure).

Traffic flow is another critical consideration. West Valley Construction has seventy-six (76) on-road fleet vehicles, consisting of Class 1 to Class 8 vehicles and trailers, and approximately eighty-seven (87) personal vehicles accessing its Campbell facilities daily. For non-emergency work, crews typically depart the yard around 7:00 a.m. and return around 4:00 p.m. Due to the narrowness of E. and S. McGlincy, the fact that those roadways are so heavily parked with very wide vehicles and the fact that our road fleet vehicles are wide commercial vehicles, the presence of pedestrians or bicyclists on E. and S. McGlincy presents a real and significant hazard to both the pedestrians/bicyclists and our employee drivers. WVC-1

As is shown on the attached schematic, the egress of vehicles from the yard at 580 E. McGlincy has the vehicles immediately adjacent to the intersection of E. McGlincy and Campbell Technology Parkway. There will be conflict at the intersection with residents. WVC-2 In addition to West Valley Construction vehicles, large delivery trucks frequently visit our facilities (multiple times a day), requiring the full width of Campbell Technology Parkway and E. McGlincy Lane to maneuver, resulting in regular temporary traffic delays. WVC-3 An example of a typical delivery is the trucks that deliver pipe to 563 Campbell Technology Parkway storage yard. The trailer beds are long, and the trucks need to back into the yard – blocking the full width of Campbell Technology Parkway and halting cars on the road. The same happens with E. McGlincy with trucks making deliveries.

West Valley Construction understands the City of Campbell is required to provide more housing. However, we believe that, but for such requirement, a high-density residential project landlocked by light industrial uses and with such limited and poor roadway infrastructure and lack of pedestrian/bicycling infrastructure would *never* be contemplated. The uses and resulting traffic are clearly incompatible.

The objective of West Valley Construction is not, however, to stop the Project. Rather, it is to ensure that the City of Campbell does the right thing for West Valley Construction and its neighboring businesses to ensure that (i) they can continue their normal operations, (ii) there is appropriate mitigation of impacts and (iii) there is assurance the new residents cannot assert the businesses they moved next to are nuisances.

West Valley Construction remains committed to Campbell and its residents. We look forward to working collaboratively with City officials to find balanced solutions that support both economic growth and community well-being. *For more information on West Valley Construction please visit our website at wvcc.com.*

1 Introduction

1.1 Purpose of Analysis

The purpose of this Air Quality and Greenhouse Gas Technical Study is to analyze potential air quality and greenhouse gas (GHG) impacts that could occur from the construction and operation of the Campbell Tech Park Project (Project). This assessment was conducted within the context of CEQA. This evaluation relies on guidance and thresholds established by the United States Environmental Protection Agency (USEPA), the California Air Resources Board (CARB), and the Bay Area Air District (BAAD).

1.2 Project Description

The 17.28-acre Project site is located at 635, 655, 675, and 695 Campbell Technology Parkway, in the City of Campbell (City). The site consists of contiguous parcels identified as Assessor Parcel Numbers 412-29-015, 412-29-012, 412-29-011, and 412-29-010, and is bounded by State Route (SR) 17 to the north and west, Campbell Technology Parkway and commercial uses to the south, and single-family housing to the east. The site is currently developed with a research and development campus consisting of four buildings that total approximately 280,864 square feet, known as the Campbell Technology Park.

The Project would entail redevelopment of the site with a total of 290 residential units, consisting of 27 two-story single-family detached homes, three-story townhome-style condominiums with 149 units across 28 buildings, and four-story townhome-style condominiums with 114 units across 15 buildings. Pursuant to Government Code Section 65589.5(d), the proposed project would provide 20 percent of the proposed units for low-income households. The proposed units would be all electric and would not include connections to natural gas utilities, and all proposed structures would include rooftop solar photovoltaic systems. The proposed project would include development of 125,943 square feet of usable open space throughout the site, including a linear open space area in the central portion of the site.

A total of 718 parking spaces would be provided on-site to accommodate the proposed residential developments. Of the total 718 parking spaces, 580 parking spaces would be provided as residential in-garage spaces and 138 spaces would be guest parking dispersed throughout the site.

2 Air Quality

2.1 Environmental Setting

The Project site lies within the San Francisco Bay Area Air Basin (SFBAAB) which is under the jurisdiction of the BAAD. The SFBAAB encompasses all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara counties, the southern portion of Sonoma, and the southwestern portion of Solano County. Air quality in this area is determined by natural factors including topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions.

2.1.1 Climate and Meteorology

Climate and meteorology are important considerations for air quality. Local dispersion and regional transport of air pollutants directly relate to prevailing meteorological factors. Wind directions and speeds, and vertical temperature structure (inversions) are the primary determinants of transport and dispersion effects.

The SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys, and bays, which distort normal wind flow patterns. The Coast Range splits resulting in a western coast gap (Golden Gate) and an eastern coast gap (Carquinez Strait), which allows air to flow in and out of the SFBAAB and the Central Valley.

The climate is dominated by the strength and location of a semi-permanent, subtropical high-pressure cell. During the summer, the Pacific high-pressure cell is centered over the northeastern Pacific Ocean resulting in stable meteorological conditions and a steady northwesterly wind flow. This high-pressure cell keeps storms from affecting the California coast. Hence, the SFBAAB experiences little precipitation in the summer months. Winds tend to blow on shore out of the north/northwest. Upwelling of cold ocean water from below to the surface because of the northwesterly flow produces a band of cold water off the California coast. The cool and moisture-laden air approaching the coast from the Pacific Ocean is further cooled by the presence of the cold water band resulting in condensation and the presence of fog and stratus clouds along the Northern California coast.

In the winter, the Pacific high-pressure cell weakens and shifts southward resulting in wind flow offshore, the absence of upwelling, and the occurrence of storms. Weak inversions coupled with moderate winds result in a low air pollution potential.

2.1.2 Criteria Air Pollutants

Criteria air pollutants include ozone (O_3), carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), particulate matter (PM) measured both in units of smaller than 2.5 microns in diameter ($PM_{2.5}$) and in units smaller than 10 microns in diameter (PM_{10}), and lead (Pb).

Ozone. Most ground-level O_3 is formed as a result of complex photochemical reactions in the atmosphere between reactive organic gases (ROG), nitrogen oxides (NOx), and oxygen. ROG and NOx are considered precursors to the formation of O_3, a highly reactive gas that can damage lung tissue and affect respiratory function. O_3 can damage the respiratory tract, causing inflammation and irritation, and it can induce symptoms, such as coughing, chest tightness, shortness of breath, and worsening of asthmatic symptoms. O_3 in sufficient doses increases the permeability of lung cells, rendering them more susceptible to toxins and microorganisms. Exposure to high concentrations of O_3 (above the current ambient air quality standard) leads to lung inflammation, lung tissue damage, and a reduction in the amount of air inhaled into the lungs. Health effects include potential increased susceptibility to respiratory infections and reduced ability to exercise. Health effects are more severe in people with asthma and other respiratory ailments. People who work or play outdoors are at a greater risk for harmful health effects from O_3. Children and adolescents are also at greater risk because they are more likely than adults to spend time engaged in vigorous activities. While O_3 in the lower atmosphere is considered a damaging air pollutant, O_3 in the upper atmosphere is beneficial, as it protects Earth from harmful ultraviolet radiation. However, atmospheric processes preclude ground-level O_3 from reaching the upper atmosphere (USEPA 2024a).

Carbon Monoxide. CO is a colorless, odorless, poisonous gas produced by the incomplete combustion of fossil fuels. Elevated levels of CO can result in harmful health effects, especially for the young and elderly, and can also contribute to global climate change (USEPA 2024a). When inhaled, CO enters the bloodstream and binds more readily to hemoglobin, the oxygen-carrying protein in blood, than oxygen, thereby reducing the oxygen-carrying capacity of blood and reducing oxygen delivery to organs and tissues. The health threat from CO is most serious for those who suffer from cardiovascular disease. Healthy individuals are also affected, but only at higher levels of exposure. Exposure to CO can cause chest pain, headaches, and reduced mental alertness. At high concentrations, CO can cause heart difficulties in people with chronic diseases and can impair mental abilities. Exposure to elevated CO levels is associated with visual impairment, reduced work capacity, reduced manual dexterity, poor learning ability, difficulty performing complex tasks, and, with prolonged enclosed exposure, death.

Nitrogen Dioxide. NO_2 is a brownish, highly reactive gas primarily produced as a result of the burning of fossil fuels. NO_2 can also lead to the formation of O_3 in the lower atmosphere. NO_2 can cause respiratory ailments, especially in the young and elderly, and can lead to degradations in the health of aquatic and terrestrial ecosystems (USEPA 2024a). Direct inhalation of NO_2 can cause a wide range of health effects, including irritation of the lungs, lung damage, and lowered resistance to respiratory infections, such as influenza. Short-term exposures (e.g., less than three hours) to low levels of NO_2 may lead to changes in airway responsiveness and lung function in individuals with preexisting respiratory illnesses. These exposures may also increase respiratory illnesses in children. Long-term exposures to NO_2 may lead to increased susceptibility to respiratory infection and may cause irreversible lung damage. Other health effects associated with NO_2 include an increase in the incidence of chronic bronchitis and lung irritation.

Sulfur Dioxide. SO_2 is primarily emitted from the combustion of coal and oil by steel mills, pulp and paper mills, and non-ferrous smelters. High concentrations of SO_2 can aggravate existing respiratory and cardiovascular diseases in asthmatics and others who suffer from emphysema or bronchitis. High concentrations of SO_2 can result in temporary breathing impairment for asthmatic children and adults who

are active outdoors. Health effects from exposure to emissions of SO_2 include aggravation of lung diseases, especially bronchitis, and constricting of breathing passages, especially in asthmatics and people involved in moderate to heavy exercise. Short-term exposures of individuals to elevated SO_2 levels during moderate activity may result in health effects, including breathing difficulties that can be accompanied by symptoms, such as wheezing, chest tightness, or shortness of breath. Other health effects that have been associated with longer-term exposures to high concentrations of SO_2, in conjunction with high levels of particulate matter, include aggravation of existing cardiovascular disease, respiratory illness, and alterations in the lungs' defenses. SO_2 also contributes to acid rain, which in turn, can lead to the acidification of lakes and streams (USEPA 2024a).

Particulate Matter. Airborne PM is not a single pollutant, but rather is a mixture of many chemical species. PM is a complex mixture of solids and aerosols composed of small droplets of liquid, dry solid fragments, and solid cores with liquid coatings. Particles vary widely in size, shape, and chemical composition; and they may contain inorganic ions, metallic compounds, elemental carbon, organic compounds, and compounds from Earth's crust. Particles are defined by their diameter for air quality regulatory purposes. Those with a diameter of 10 microns or less (PM_{10}) are inhalable into the lungs and can induce adverse health effects. Fine particulate matter is defined as particles that are 2.5 microns or less in diameter ($PM_{2.5}$) and is a portion of PM_{10}. Emissions from combustion of gasoline, oil, diesel fuel, or wood produce much of the $PM_{2.5}$ pollution found in outdoor air and a significant proportion of PM_{10}. PM_{10} also includes dust from construction sites, landfills and agriculture, wildfires and brush or waste burning, industrial sources, wind-blown dust from open lands, pollen, and fragments of bacteria.

PM may be either directly emitted from sources (primarily particles) or formed in the atmosphere through chemical reactions of gases (secondary particles) such as SO_2, NOx, and certain organic compounds (USEPA 2024a).

PM_{10} and $PM_{2.5}$ particles are small enough—about one-seventh the thickness of a human hair or smaller—to be inhaled and lodged in the deepest parts of the lung, where they evade the respiratory system's natural defenses and can be trapped in the nose, throat, and upper respiratory tract. Health effects from exposure to PM_{10} and $PM_{2.5}$ occur when the body reacts to these foreign particles. Acute and chronic health effects associated with high particulate levels include the aggravation of chronic respiratory diseases; heart and lung disease; and coughing, bronchitis, and respiratory illnesses in children. Recent mortality studies have shown a statistically significant direct association between mortality and daily concentrations of PM in the air. PM_{10} and $PM_{2.5}$ can aggravate respiratory disease and cause lung damage, cancer, and premature death. Sensitive populations, including children, the elderly, exercising adults, and those suffering from chronic lung disease, such as asthma or bronchitis, are especially vulnerable to the effects of PM. Of greatest concern are recent studies that link PM exposure to the premature death of people who already have heart and lung disease, especially the elderly. Acidic PM can also damage humanmade materials and is a major cause of reduced visibility in many parts of the United States. Non-health-related effects include reduced visibility and soiling of buildings.

Lead. Sources of Pb include pipes, fuel, and paint, although the use of Pb in these materials has declined dramatically over the years. Historically, the main source of Pb was automobile emissions. Pb can be inhaled directly or ingested by consuming Pb-contaminated food, water, or dust. Fetuses and children are

most susceptible to Pb poisoning, which can result in heart disease and nervous system damage. Through regulations, the USEPA has gradually reduced the Pb content of gasoline. This program has essentially eliminated violations of the Pb standard in urban areas except those areas with Pb point sources. Exposure to Pb occurs mainly through inhalation of air and ingestion of Pb in food, water, soil, or dust. It accumulates in the blood, bones, and soft tissues and can adversely affect the kidneys, liver, nervous system, and other organs. Excessive exposure to Pb may cause neurological impairments, such as seizures, mental retardation, and behavioral disorders. Even at low doses, Pb exposure is associated with damage to the nervous systems of fetuses and young children, resulting in learning deficits and lowered IQ. Recent studies also show that Pb may be a factor in high blood pressure and subsequent heart disease. Pb can also be deposited on the leaves of plants, presenting a hazard to grazing animals and humans through ingestion (USEPA 2024b).

2.1.3 Ambient Air Quality Standards and Attainment Status

The USEPA and CARB designate air basins where ambient air quality standards are exceeded as "non-attainment" areas. If standards are met, the area is designated as an "attainment" area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered "unclassified." National non-attainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Attainment status is based on the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). Each standard has a different definition, or "form" of what constitutes attainment, based on specific air quality statistics. For example, the federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring value exceeds the threshold per year. In contrast, the federal annual standard for $PM_{2.5}$ is met if the 3-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard.

The Federal Clean Air Act (FCAA) identifies two types of NAAQS. Primary standards provide public health protection, including protecting the health of sensitive populations such as asthmatics, children, and the elderly. Secondary standards provide public welfare protection, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings (USEPA 2024a). The CAAQS are equal to or more stringent than the NAAQS and include pollutants for which national standards do not exist. Table 1 presents the applicable NAAQS and CAAQS. The BAAD is designated as nonattainment for federal and state ozone and $PM_{2.5}$ as well as state PM_{10} (BAAD 2017a). The BAAD is in attainment or unclassified for all other NAAQS and CAAQS.

Table 1. California and National Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[1]	National Standards[2]	
			Primary	Secondary
Ozone (O_3)	8-hour	0.070 ppm (137 µg/m^3)	0.070 ppm (137 µg/m^3)	Same as Primary Standards
	1-hour	0.09 ppm (180 µg/m^3)	--	
Carbon monoxide (CO)	8-hour	9.0 ppm (10 mg/m^3)	9 ppm (10 mg/m^3)	--
	1-hour	20 ppm (23 mg/m^3)	35 ppm (40 mg/m^3)	

Pollutant	Averaging Time	California Standards[1]	National Standards[2]	
			Primary	Secondary
Nitrogen dioxide (NO_2)	Annual arithmetic mean	0.030 ppm (57 µg/m^3)	0.053 ppm (100 µg/m^3)	Same as Primary Standard
	1-hour	0.18 ppm (339 µg/m^3)	100 ppb (188 µg/m^3)	
Sulfur dioxide (SO_2)	Annual arithmetic mean	--	0.030 ppm (80 µg/m^3)	--
	24-hour	0.04 ppm (105 µg/m^3)	0.14 ppm (80 µg/m^3)	--
	3-hour	--	--	0.5 ppm (1300 µg/m^3)
	1-hour	0.25 ppm (655 µg/m^3)	--	--
Respirable Particulate Matter Smaller than 10 Microns in Diameter (PM_{10})	Annual arithmetic mean	20 µg/m^3	--	Same as Primary Standards
	24-hour	50 µg/m^3	150 µg/m^3	
Respirable Particulate Matter Smaller than 2.5 Microns in Diameter ($PM_{2.5}$)[3]	Annual arithmetic mean	12 µg/m^3	9.0 µg/m^3	15 µg/m^3
	24-hour	No separate standard	35 µg/m^3	Same as Primary Standards
Sulfates	24-hour	25 µg/m^3	--	--
Lead (Pb)	30-day average	1.5 µg/m^3	--	--
	Calendar quarter	--	1.5 µg/m^3	Same as Primary Standard
	Rolling 3-month average	--	0.15 µg/m^3	
Hydrogen sulfide (H_2S)	1-hour	0.03 ppm (42 µg/m^3)	--	--
Vinyl chloride (chloroethene)	24-hour	0.01 ppm (26 µg/m^3)	--	--
Visibility reducing particles	8-hour	In 1989, the Air Resources Board converted the general statewide 10-mile visibility standard to instrumental equivalents, which are extinction of 0.23 per kilometer.	--	--

Notes:
1. CO, SO_2 (1- and 24-hour), NO_2, O_3, PM_{10}, and visibility reducing particles standards are not to be exceeded.
2. Not to be exceeded more than once a year except for annual standards.
3. On February 7, 2024, the USEPA issued a pre-publication version of the Final Rule to lower the primary annual NAAQS for $PM_{2.5}$ from 12.0 µg/m^3 to 9.0 µg/m^3 (USEPA 2024g).
-- = no standard established
µg/m^3 = micrograms per cubic meter
mg/m^3 = milligrams per cubic meter
ppm = parts per million
ppb = parts per billion
Sources: CARB 2024a, USEPA 2024g.

2.1.4 Ambient Air Quality

Local air quality can be evaluated by reviewing relevant air pollution concentrations near the Project site. The nearest air quality monitoring stations to the Project site are the Los Gatos and San Jose-Jackson Street monitoring stations. The Los Gatos Monitoring Station, which is approximately 4 miles southwest of the Project Site, monitors O_3 only, and the San Jose-Jackson Monitoring Station, which is approximately 5 miles northeast of the Project Site, monitors O_3, PM_{10}, $PM_{2.5}$, NO_2. Table 2 includes a summary of the air quality monitoring data for the years 2022 through 2024.

Table 2. Los Gatos Monitoring Station and San Jose-Jackson Street Monitoring Station Data (2022-2024)

Pollutant	Air Pollutant, Averaging Time (Units)	2022	2023	2024
Los Gatos Monitoring Station				
Ozone (ppm)	Maximum 1-hour	0.080	0.090	0.046
	California 1-hour number of days over standard	0	0	0
	Maximum 8-hour	0.069	0.055	0.044
	National 8-hour number of days over standard	0	0	0
	California 8-hour number of days over standard	0	0	0

Notes: ppm = parts per million; $\mu g/m^3$ = micrograms per liter
† Day exceedances based on the 2006 24-hour standard.
* insufficient data available to determine the value.

2.1.5 Odors

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from the psychological (i.e., irritation, anger, or anxiety) to the physiological (i.e., circulatory and respiratory effects, nausea, vomiting, and headache).

The ability to detect odors varies considerably among the population and is subjective. Some individuals can smell very minute quantities of specific substances; others have varying sensitivities to odors; and people may have different reactions to the same odor (e.g., bakery, gasoline). It is important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience, e.g., a description of flowery or sweet. Intensity refers to the strength of the odor and depends on the odorant concentration in the air. When an odorous sample is progressively diluted, the odorant concentration decreases, the odor intensity weakens, and it eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant drops below a human's detection threshold.

Neither the state nor the federal governments have adopted rules or regulations for the control of odor sources. Potential odors would be subject to BAAD Regulation 7, Odorous Substances (BAAD 1982).

2.1.6 Toxic Air Contaminants

Toxic air contaminants (TACs) are air pollutants that may cause or contribute to an increase in mortality or serious illness, or which may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; but due to their high toxicity, they may pose a threat to public health even at very low concentrations. Because there is no threshold level below which adverse health impacts are not expected to occur, TACs differ from criteria pollutants for which acceptable levels of exposure can be determined and for which state and federal governments have set ambient air quality standards. TACs, therefore, are not considered "criteria pollutants" under either the FCAA or the California Clean Air Act (CCAA) and are not subject to NAAQS or CAAQS ambient air quality standards. Instead, USEPA and CARB regulate hazardous air pollutants (HAPs) and TACs, respectively, through statutes and regulations that generally require the use of the maximum or best available control technology to limit emissions. In conjunction with air district rules, these federal and state statutes and regulations establish the regulatory framework for TACs. At the national level, USEPA has established national emission standards for hazardous air pollutants (NESHAP) in accordance with the requirements of the FCAA and subsequent amendments. These are technology-based, source-specific regulations that limit allowable emissions of HAPs.

The following provides a summary of the primary TACs of concern relevant to the Project within the State of California and related health effects.

Asbestos

Asbestos is the name given to a number of naturally occurring fibrous silicate minerals with useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The three most common types of asbestos are chrysotile, amosite, and crocidolite. Chrysotile, also known as white asbestos, is the most common type of asbestos found in buildings. Chrysotile makes up approximately 90 to 95 percent of all asbestos contained in buildings in the United States. Exposure to asbestos fibers may result in health issues such as lung cancer, mesothelioma (a rare cancer of the thin membranes lining the lungs, chest, and abdominal cavity), and asbestosis (a non-cancerous lung disease that causes scarring of the lungs). Exposure to asbestos can occur during demolition or remodeling of buildings constructed prior to 1977 when it was banned for use in buildings. Exposure to naturally occurring asbestos can occur during soil disturbing activities in areas with deposits present (USEPA 2024c).

Diesel Particulate Matter

Diesel particulate matter (DPM) was identified as a TAC by CARB in August 1998. DPM is emitted from both mobile and stationary sources. In California, DPM emissions are generated from mobile and stationary sources. Mobile sources include on-road vehicles (trucks, buses, etc.), off-road vehicles and equipment (locomotives, tractors, cargo handling equipment, construction equipment, etc.), marine vessels (recreational watercraft, commercial harbor craft, and ocean-going vessels), and transport refrigeration units. Stationary sources include stationary engines used in emergency-standby generators, prime generators, and agricultural irrigation pumps, as well as portable equipment such as portable generators and pumps (Office of Environmental Health Hazard Assessment [OEHHA] 2001).

DPM is typically composed of carbon particles (“soot”, also called black carbon) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. Diesel exhaust also contains gaseous pollutants, including ROG and NOx. NOx emissions from diesel engines are important because they can undergo chemical reactions in the atmosphere leading to formation of $PM_{2.5}$ and O_3.

In California, diesel exhaust particles have been identified as a carcinogen accounting for an estimated 70 percent of the total known cancer risks in California. DPM is estimated to increase statewide cancer risk by 520 cancers per million residents exposed over an estimated 70-year lifetime. Non-cancer health effects associated with exposure to DPM include premature death, exacerbated chronic heart and lung disease, including asthma, and decreased lung function in children. Short-term exposure to diesel exhaust can also have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks. Individuals most vulnerable to non-cancer health effects of DPM are children, whose lungs are still developing, the elderly, who often have chronic health problems, and people with

emphysema, asthma, and chronic heart and lung disease (CARB 2024c). In addition to its health effects, DPM significantly contributes to haze and reduced visibility.

Sensitive Receptors

Those who are sensitive to air pollution include children, the elderly, and persons with pre-existing respiratory or cardiovascular illness. For the purposes of the California Environmental Quality Act (CEQA), a sensitive receptor is considered to be a location that houses or attracts children, the elderly, people with illnesses, or others who are especially sensitive to the effects of air pollutants. Examples of sensitive receptors include hospitals, residences, convalescent facilities, and schools.

Single-family residences are located immediately east of the Project site, and multi-family residences are located to the northeast, north of Paseo De Palomas Lane. Additional residential uses are located to the west, across SR 17.

2.2 Regulatory Setting

The agencies with regulatory authority over air emissions in the Project area are the USEPA, the CARB, and the BAAD. Each of these jurisdictions develops rules, regulations, and policies to attain the goals or directives imposed upon them through legislation. Although USEPA regulations may not be superseded, both state and local regulations may be more stringent.

2.2.1 Federal

U.S. Environmental Protection Agency

At the federal level, the USEPA has been charged with implementing national air quality programs. The USEPA's air quality mandates are drawn primarily from the FCAA, which was signed into law in 1970. Congress substantially amended the FCAA in 1977 and again in 1990.

Federal Clean Air Act

The FCAA required USEPA to establish NAAQS and set deadlines for their attainment. Two types of NAAQS have been established: primary standards, which protect public health, and secondary standards, which protect public welfare from non-health-related adverse effects, such as visibility restrictions. NAAQS are summarized in Table 1.

National Emission Standards for Hazardous Air Pollutants

Pursuant to the FCAA of 1970, USEPA established NESHAP. These are technology-based source-specific regulations that limit allowable emissions of HAPs. These sources include asbestos-containing building materials (ACBM). NESHAPs include requirements pertaining to the inspection, notification, handling, and disposal of ACBMs associated with the demolition and renovation of structures.

Non-Road Diesel Rule

The USEPA has established a series of increasingly strict emissions standards for new off-road diesel vehicles and engines, including aircraft, heavy equipment, and locomotives. Any off-road construction equipment used for the Project would be required to comply with the applicable emissions standards.

2.2.2 State

California Air Resources Board

CARB is the agency responsible for coordination and oversight of state and local air pollution control programs in California and for implementing the CCAA of 1988. Other CARB duties include monitoring air quality in conjunction with air monitoring networks maintained by air pollution control districts and air quality management districts, establishing CAAQS, which in many cases are more stringent than the NAAQS, and setting emissions standards for new motor vehicles. The emission standards established for motor vehicles differ depending on various factors including the model year, and the type of vehicle, fuel, and engine used. The CAAQS are set to be protective of human health and are summarized in Table 1. These standards apply to the same criteria pollutants as the FCAA and also include sulfates, visibility reducing particulates, hydrogen sulfide, and vinyl chloride. There are currently no NAAQS for these latter pollutants.

California Clean Air Act

The CCAA requires that all air districts in the state endeavor to achieve and maintain CAAQS for O_3, CO, SO_2, and NO_2 by the earliest practical date. The CCAA specifies that districts focus attention on reducing the emissions from transportation and area wide emission sources, and the act provides districts with authority to regulate indirect sources. Each district plan is required to either (1) achieve a five percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each non-attainment pollutant or its precursors, or (2) to provide for implementation of all feasible measures to reduce emissions. Any planning effort for air quality attainment would thus need to consider both state and federal planning requirements.

Assembly Bills 1807 and 2588 – Toxic Air Contaminants

Within California, TACs are regulated primarily through Assembly Bill (AB) 1807 (Tanner Air Toxics Act) and AB 2588 (Air Toxics Hot Spots Information and Assessment Act of 1987). AB 1807 sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB designates a substance as a TAC.

Existing sources of TACs that are subject to the Air Toxics Hot Spots Information and Assessment Act are required to: (1) prepare a toxic emissions inventory; (2) prepare a risk assessment if emissions are significant; (3) notify the public of significant risk levels; and (4) prepare and implement risk reduction measures.

Assembly Bill 617 – Community Air Protection Program

In response to AB 617 (C. Garcia, Chapter 136, Statutes of 2017), CARB established the Community Air Protection Program. The Community Air Protection Program includes community air monitoring, and the community emissions reduction program's focus is to reduce exposure in communities most impacted by air pollution. The California Legislature has appropriated funding to support early actions to address localized air pollution through targeted incentive funding to deploy cleaner technologies in these communities and grants to support community participation in the AB 617 process. AB 617 also includes new requirements for accelerated retrofit of pollution controls on industrial sources, increased penalty fees, and greater transparency and availability of air quality and emissions data, which will help advance air pollution control efforts throughout the state.

Regulatory Attainment Designations

Under the CCAA, CARB is required to designate areas of the state as attainment, non-attainment, or unclassified with respect to applicable standards. An "attainment" designation for an area signifies that pollutant concentrations did not violate the applicable standard in that area. A "non-attainment" designation indicates that a pollutant concentration violated the applicable standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. Depending on the frequency and severity of pollutants exceeding applicable standards, the non-attainment designation can be further classified as serious non-attainment, severe non-attainment, or extreme non-attainment, with extreme non-attainment being the most severe of the classifications. An "unclassified" designation signifies that the data does not support either an attainment or non-attainment designation. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

USEPA designates areas for O_3, CO, and NO_2 as "does not meet the primary standards," "cannot be classified," or "better than national standards." For SO_2, areas are designated as "does not meet the primary standards," "does not meet the secondary standards," "cannot be classified," or "better than national standards." However, CARB terminology of attainment, non-attainment, and unclassified is more frequently used. The USEPA uses the same sub-categories for non-attainment status: serious, severe, and extreme. In 1991, USEPA assigned new non-attainment designations to areas that had previously been classified as Group I, II, or III for PM_{10} based on the likelihood that they would violate national PM_{10} standards. All other areas are designated as unclassified.

Low-Emission Vehicle Program and Zero-Emission Vehicle Program

CARB first adopted Low-Emission Vehicle (LEV) program standards in 1990. The first LEV program standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represented continuing progress in emission reductions. As the state's passenger vehicle fleet continued to grow and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 State Implementation Plan (SIP). In 2012, CARB

adopted the LEV III amendments to California's LEV regulations. These amendments include more stringent emission standards for both criteria pollutants and GHGs for new passenger vehicles.

The Advanced Clean Cars II (ACC II) regulation builds on the Advanced Clean Cars (ACC) rule adopted in 2012. ACC II decreases emissions by increasing electric vehicle (EV) sales via two programs. First, the Zero-Emission Vehicle (ZEV) program requires ZEVs, defined as battery-electric vehicles or fuel-cell-electric vehicles to comprise an increasing portion of annual vehicle sales. Under the ZEV program, original equipment manufacturers must increase sales of ZEVs from 35 percent in 2026 to 100 percent in 2035. Second, ACC II further strengthened the LEV program discussed above, with more stringent emission standards beginning with model year 2025.

On-Road Heavy-Duty Vehicle Program

CARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, California Code of Regulations (CCR) contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. CARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others.

In addition, the CARB's Truck and Bus regulation was established to meet federal attainment standards. This regulation requires heavy-duty diesel vehicles that operate in California to reduce TAC emissions from their exhaust. Diesel exhaust is responsible for 70 percent of the cancer risk from airborne toxics. Therefore, as of January 1, 2023, nearly all trucks and buses are required to have 2010 or newer model year engines to reduce PM and NOx emissions.

In-Use Off-Road Diesel-Fueled Fleets Regulation

CARB has adopted the In-Use Off-Road Diesel-Fueled Fleets Regulation with the intent to reduce PM and NOx emissions from existing off-road heavy-duty diesel vehicles in California. In general, the regulation imposes limits on vehicle idling; requires all vehicle usage be reported to CARB; restricts the addition of older vehicles into fleets; requires the phase-out of the oldest and least efficient engines; and, as of 2024, requires the procurement and use of renewable diesel.

Advanced Clean Truck Act

To reduce emissions, the Advanced Clean Truck Act (ACT) requires original equipment manufacturers of medium- and heavy-duty vehicles to sell ZEVs or near-zero-emissions vehicles, such as plug-in electric hybrids, at an increasing percentage of their annual sales from 2024 to 2035. A ZEV is a vehicle that produces zero tail-pipe emissions, including battery EVs and hydrogen fuel cell vehicles. A near-zero-emissions vehicle is a vehicle with an internal combustion engine and an electric energy storage system, including plug-in hybrid vehicles and hydrogen internal combustion engine vehicles. The ACT includes a cap-and-trade system, capping the number of fossil fuel vehicles sold by stipulating annual sales percentage requirements. Manufacturers can comply with the ACT by generating compliance credits through the sale of ZEVs or near-ZEVs or through the trading of compliance credits.

California State Implementation Plan

The FCAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the SIP. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The FCAA Amendments dictate that states with areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA. State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register.

2.2.3 Regional

Bay Area Air Quality Management District

The BAAD is the public agency entrusted with regulating stationary sources of air pollution in the nine counties that surround San Francisco Bay: Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, southwestern Solano, and southern Sonoma counties. The BAAD has prepared their own CEQA Air Quality Guidelines, which is intended to be used for assistance with CEQA review (BAAD 2022a). The BAAD CEQA Air Quality Guidelines include thresholds of significance and project screening levels for criteria air pollutants (ROG, NO_X, PM_{10}, and $PM_{2.5}$), GHGs, TACs, CO, and odors, as well as methods to assess and mitigate project-level and plan-level impacts.

Current Air Quality Plans

As noted previously, the BAAD is designated as nonattainment for federal and state ozone and $PM_{2.5}$ as well as state PM_{10} (BAAD 2017a). The BAAD adopted the 2017 Clean Air Plan in April 2017 that includes control strategies to reduce ozone precursors (ROG and NOx), particulate matter, TACs, and GHG emissions. The 2017 Clean Air Plan includes several measures for reducing particulate matter emissions from stationary sources and wood burning (BAAD 2017b).

Rules and Regulations

BAAD's regulations and rules include, but are not limited to, the following (BAAD 2024):

- ***Regulation 2: Permits.***
    - **Rule 1: General Permit Requirements.** This regulation includes criteria for issuance or denial of permits, exemptions, and appeals against decisions of the Air Pollution Control Officer and BAAD actions on applications.
- ***Regulation 6: Particulate Matter and Visible Emissions.***

  - **Rule 1: General Requirements.** The purpose of this regulation is to limit the quantity of particulate matter in the atmosphere through the establishment of limitations on emission rates, emission concentrations, visible emissions, and opacity.
  - **Rule 6: Prohibition of Trackout.** The purpose of this rule is to limit the quantity of particulate matter in the atmosphere through control of trackout of solid materials onto paved public roads outside the boundaries of Large Bulk Material Site, Large Construction Site, and Large Disturbed Surface sites including landfills. This rule does not apply to Bulk Material Sites, Construction Sites and Disturbed Surface Sites less than 1 acre.
- ***Regulation 7: Odorous Substances.*** Regulation 7 places general limitations on odorous substances and specific emission limitations on certain odorous compounds. The limitations of this regulation shall not be applicable until BAAD receives odor complaints from 10 or more complainants within a 90-day period alleging that a person has caused odors perceived at or beyond the property line of such person and deemed to be objectionable by the complainants in the normal course of their work, travel, or residence. BAAD staff shall investigate and track all odor complaints they receive and shall attempt to visit the site, identify the source of the objectionable odor, and assist the owner or facility in finding a way to reduce the odor.
- ***Regulation 8: Organic Compounds***
  - **Rule 3: Architectural Coatings.** The purpose of this rule is to limit the quantity of volatile organic compounds in architectural coatings supplied, sold, offered for sale, applied, solicited for application, or manufactured for use within the District.
  - **Rule 15: Emulsified and Liquid Asphalts.** The purpose of this Rule is to limit the emissions of VOCs caused by the use of Emulsified and Liquid asphalt in paving material and paving and maintenance operations.
- ***Regulation 11: Hazardous Pollutants***

Rule 2: Asbestos Demolition, Renovation and Manufacturing. The purpose of this rule is to control emissions of asbestos to the atmosphere during demolition, renovation, milling and manufacturing and establish appropriate waste disposal procedures.

In addition, all construction within BAAD's jurisdiction is required to implement the BAAD's Basic Best Management Practices (BMPs) for Construction-Related Fugitive Dust Emissions, listed below (BAAD 2022a):

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
7. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.

8. Unpaved roads providing access to sites located 100 feet or further from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
9. Publicly visible signs shall be posted with the telephone number and name of the person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall also be visible to ensure compliance with applicable regulations.

2.2.4 Local

Envision Campbell General Plan Update

The Envision Campbell General Plan Update (2040 General Plan) was adopted on April 18, 2023 and provided an update to the 2001 General Plan. As previously noted, although an updated General Plan has been adopted by the City that would supersede the City's 2001 General Plan, as the Housing Crisis Act pre-application was submitted prior to adoption of the 2040 General Plan, the proposed project is subject to the goals and policies of the 2001 General Plan which was in effect at the time of pre-application submittal. Therefore, the goals and policies of the City's historical General Plan is listed below.

The City's 2001 General Plan include the following goals and policies related to air quality that may be applicable to the proposed project (City of Campbell 2001):

Goal CNR-11: Work toward improving air quality and meeting all federal and state ambient air quality standards.

- **Policy CNR-11.1:** Air Quality Impacts: Reduce adverse air quality impacts of City operations.
- **Policy CNR-11.2:** Effects of Development on Air Quality: Use the City's development review proves and the California Environmental Quality Act to evaluate and mitigate the local and cumulative effects on new development on air quality.
- **Policy CNR-11.3:** Air Quality Improvement Programs: Support regional, state, and federal programs to improve air quality.

Additionally, the Conservation and Open Space, and Community Health and Wellness elements of the Envision Campbell General Plan Update include the following goals or policies (City of Campbell 2023). While the Project is subject to the 2001 General Plan, these represent the latest City air quality goals and policies.

- **Goal COS-10** Improve air quality in Campbell and the region through reductions in air pollutants and greenhouse gas (GHG) emissions.
    - **Policy COS-10.1** Improve air quality through continuing to require a development pattern that focuses growth in and around existing urbanized areas, locates new housing near places of employment, encourages alternative modes of transportation, supports efficient parking strategies, reduces vehicle miles traveled, and requires projects to mitigate significant air quality impacts.

- **Policy COS-10.3** Minimize exposure of sensitive receptors to concentrations of air pollutant emissions and toxic air contaminants. For discretionary projects involving sensitive receptors (i.e., children, the elderly, or people with illnesses) proposed within 500 feet of State Route 17 or State Route 85, require an analysis of mobile source toxic air contaminant health risks and, if necessary, incorporate appropriate mitigation measures to reduce health risks to the greatest extent feasible.
- **Policy COS-10.4** Require projects to adhere to the requirements of the Bay Area Air Quality Management District (BAAQMD), including standards related to fireplaces, wood stoves, heaters, dust control, and abatement measures.
- **Policy COS-10.6** Use the city's development review process and the California Environmental Quality Act (CEQA) to evaluate and mitigate the local and cumulative effects of new development on air quality.
- **Policy COS-10.7** Coordinate with the California Air Resources Board (CARB) and the Bay Area Air Quality Management District to properly measure air quality at emission sources and enforce the standards of the Clean Air Act.
- **Policy COS-10.8** Comply with regional, state, and federal standards and programs for control of all airborne pollutants and noxious odors, regardless of source.

- **Goal CHW-6** Protect the diversity, safety, and beauty of the city's neighborhoods.
  - **Policy CHW-6.3** Encourage vegetative screening as buffers between new development and high-volume roadways consistent with the Bay Area Air Quality Management District (BAAQMD) and California Environmental Quality Act (CEQA) guidelines.
  - **Policy CHW-6.4** Protect sensitive receptors, including residential uses, schools, day care centers, parks with recreation facilities, and medical facilities from exposure to unsafe levels of pollutants from stationary or mobile sources.

3 Greenhouse Gas

3.1 Environmental Setting

To fully understand global climate change, it is important to recognize the naturally occurring "greenhouse effect" and to define the GHGs that contribute to this phenomenon. Various gases in the earth's atmosphere, classified as atmospheric GHGs, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space, and a portion of the radiation is absorbed by the earth's surface. The earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation. GHGs, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that would have escaped back into space is now retained, resulting in a warming of the atmosphere. This phenomenon is known as the greenhouse effect.

3.1.1 Greenhouse Gases

Among the prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), nitrogen trifluoride (NF_3), and sulfur hexafluoride (SF_6). Primary GHGs attributed to global climate change, are discussed in the following subsections.

Carbon Dioxide. CO_2 is a colorless, odorless gas. CO_2 is emitted in a number of ways, both naturally and through human activities. The largest source of CO_2 emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, industrial facilities, and other sources. A number of specialized industrial processes, such as mineral production and metal production, and the use of petroleum-based products can also lead to CO_2 emissions. The atmospheric lifetime of CO_2 is variable because it is so readily exchanged in the atmosphere (USEPA 2024d).

Methane. CH_4 is a colorless and odorless gas. CH_4 is the major component of natural gas, about 87 percent by volume. It is also formed and released to the atmosphere by biological processes occurring in anaerobic environments. CH_4 is emitted from a variety of both human-related and natural sources. Human-related sources include fossil fuel production, animal husbandry (e.g., enteric fermentation in livestock and manure management), rice cultivation, biomass burning, and waste management. These activities release significant quantities of CH_4 to the atmosphere. Natural sources of CH_4 include wetlands, gas hydrates, permafrost, termites, oceans, freshwater bodies, non-wetland soils, and other sources such as wildfires. The atmospheric lifetime of CH_4 is about 12 years (USEPA 2024d).

Nitrous Oxide. N_2O is a clear, colorless gas with a slightly sweet odor. N_2O is produced by both natural and human-related sources. Primary human-related sources of N_2O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. N_2O is also produced naturally from a wide variety of biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N_2O is approximately 120 years (USEPA 2024d).

Hydrofluorocarbons. HFCs are manufactured chemicals, many of which have been developed as alternatives to ozone-depleting substances for industrial, commercial, and consumer products. The only significant emissions of HFCs before 1990 were of the chemical HFC-23, which is generated as a byproduct of the production of HFC-22, or Freon 22, used in air conditioning applications. The atmospheric lifetime for HFCs varies from just over a year for HFC-152a to 260 years for HFC-23. Most of the commercially used HFCs have atmospheric lifetimes of less than 15 years (e.g., HFC-134a, which is used in automobile air conditioning and refrigeration, has an atmospheric life of 14 years) (USEPA 2024d).

Perfluorocarbons. PFCs are colorless, highly dense, chemically inert, and nontoxic. There are seven PFC gases: perfluoromethane (CF_4), perfluoroethane (C_2F_6), perfluoropropane (C_3F_8), perfluorobutane (C_4F_{10}), perfluorocyclobutane (C_4F_8), perfluoropentane (C_5F_{12}), and perfluorohexane (C_6F_{14}). Natural geological emissions have been responsible for the PFCs that have accumulated in the atmosphere in the past; however, the largest current source is aluminum production, which releases CF_4 and C_2F_6 as byproducts. The estimated atmospheric lifetimes for CF_4 and C_2F_6 are 50,000 and 10,000 years, respectively (USEPA 2024d).

Nitrogen Trifluoride. NF_3 is an inorganic, colorless, odorless, toxic, nonflammable gas used as an etchant in microelectronics. NF_3 is predominantly employed in the cleaning of the plasma-enhanced chemical vapor deposition chambers in the production of liquid crystal displays and silicon-based thin film solar cells. In 2009, NF_3 was listed by California as a potential GHG to be listed and regulated under AB 32, Section 38505 Health and Safety Code. NF_3 has an atmospheric lifetime of 740 years (USEPA 2024d).

Sulfur Hexafluoride. SF_6 is an inorganic compound that is colorless, odorless, nontoxic, and generally nonflammable. SF_6 is primarily used as an electrical insulator in high voltage equipment. The electric power industry uses roughly 80 percent of all SF_6 produced worldwide. Leaks of SF_6 occur from aging equipment and during equipment maintenance and servicing. The use of SF_6 in electric power systems has decreased dramatically in recent years; for example, according to the USEPA, an old circuit breaker can contain up to 2,000 pounds of SF_6 while modern breakers usually contain less than 100 pounds. Best practices to reduce the potential for SF_6 leaks include training staff to handle SF_6 properly; implement leak detection and repair strategies; and decommissioning equipment appropriately. SF_6 has an atmospheric life of 3,200 years (USEPA 2024e).

Black Carbon. Black carbon is the most strongly light-absorbing component of PM emitted from burning fuels such as coal, diesel, and biomass. Black carbon contributes to climate change both directly by absorbing sunlight and indirectly by depositing on snow and by interacting with clouds and affecting cloud formation. Black carbon is considered a short-lived species, which can vary spatially and, consequently, it is very difficult to quantify associated global warming potentials. The main sources of black carbon in California are wildfires, off-road vehicles (e.g., locomotives, marine vessels, tractors, excavators, dozers), on-road vehicles (e.g., cars, trucks, and buses), fireplaces, agricultural waste burning, and prescribed burning of forest or wildlands. California has been an international leader in reducing emissions of black carbon, including programs that target reducing PM from diesel engines and burning activities (CARB 2013).

3.1.2 Global Warming Potential

Each GHG differs in its ability to absorb heat in the atmosphere based on the lifetime, or persistence, of the gas molecule in the atmosphere. Often, estimates of GHG emissions are presented in carbon dioxide equivalents (CO_2e), which weigh each gas by its global warming potential (GWP).

Expressing GHG emissions in carbon dioxide equivalents takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO_2 were being emitted. Based on a 100-year time horizon, CH_4 traps over 25 times more heat per molecule than CO_2; and N_2O absorbs roughly 298 times more heat per molecule than CO_2. Additional GHGs with high GWP include NF_3, SF_6, PFCs, and black carbon.

3.1.3 Sources of Greenhouse Gas Emissions

On a global scale, GHG emissions are predominantly associated with activities related to energy production from fossil-fuel sources; changes in land use, such as deforestation and land clearing; industrial sources; agricultural activities; transportation; waste and wastewater generation; and commercial and residential land uses. Worldwide, energy production including the burning of coal, natural gas, and oil for electricity and heat is the largest single source of global GHG emissions.

United States of America

In 2022, GHG emissions in the United States totaled 6,343.2 million metric tons (MMT) CO_2e. Within the United States, the largest contributor to GHG emissions is the transportation sector (28 percent). The next largest contributors are from electricity production (25 percent) and industry (23 percent), followed by the commercial and residential sector (13 percent) and the agricultural sector (10 percent). Transportation emissions primarily come from burning fossil fuels for cars, trucks, ships, trains, and planes. Over 94 percent of the fuel used for transportation is petroleum-based, which includes primarily gasoline and diesel. The bulk of emissions generated from energy production come from burning fossil fuels, mostly coal and natural gas. Industry emissions are also primarily generated from fossil fuels burned for heat, the use of certain products that contain GHGs, and the handling of waste. Similar to industry sector emissions, commercial and residential uses arise primarily from fossil fuels for heat, the use of certain products that contain GHGs, and the handling of waste. Agricultural emissions come from livestock such as cows, agricultural soil, and rice production. The land use and forestry sector within the U.S. serves as a carbon sink. Carbon sinks absorb CO_2 from the atmosphere. Land areas across the U.S. absorbed approximately 13 percent of the 2021 GHG emissions (USEPA 2024f).

California

In 2022, GHG emissions within California totaled 371.1 $MMTCO_2e$. Similar to national emissions, in California, the transportation sector is the largest contributor. Transportation emissions account for approximately 39 percent of the total statewide GHG emissions. The majority of transportation emissions are derived from passenger vehicles and heavy-duty trucks. Emissions associated with industrial uses are the second largest contributor, totaling roughly 23 percent. Industrial emissions are driven by fuel

combustion from sources that include refineries, oil and gas extraction, cement plants, and the portion of cogeneration emissions attribution to thermal energy output. Electricity generation (in-state and imports) totaled roughly 16 percent. Other GHG sources include agriculture (8 percent), residential (8 percent), and commercial (6 percent) (CARB 2024d).

City of Campbell

The City of Campbell prepared a GHG emissions inventory for the year 2022, which includes communitywide emissions as well as emissions from municipal operations. The analysis determined that the City emitted approximately 221,755 $MTCO_2e$ in the year 2022. The largest contributor of emissions was determined to be from on-road transportation (59 percent), followed by building natural gas (26 percent) (City of Campbell 2024a).

3.1.4 Effects of Global Climate Change

There are uncertainties as to exactly what the climate changes will be in various local areas of the earth. There are also uncertainties associated with the magnitude and timing of other consequences of a warmer planet: sea level rise, spread of certain diseases out of their usual geographic range, the effect on agricultural production, water supply, sustainability of ecosystems, increased strength and frequency of storms, extreme heat events, increased air pollution episodes, and the consequence of these effects on the economy.

Within California, climate changes would likely alter the ecological characteristics of many ecosystems throughout the state. Such alterations would likely include increases in surface temperatures and changes in the form, timing, and intensity of precipitation. For instance, historical records are depicting an increasing trend toward earlier snowmelt in the Sierra Nevada. This snowpack is a principal supply of water for the state, providing roughly 50 percent of state's annual runoff. If this trend continues, some areas of the state may experience an increased danger of floods during the winter months and possible exhaustion of the snowpack during spring and summer months. An earlier snowmelt would also impact the state's energy resources. An early exhaustion of the Sierra snowpack may force electricity producers to switch to more costly or non-renewable forms of electricity generation during spring and summer months. A changing climate may also impact agricultural crop yields, coastal structures, and biodiversity. As a result, resultant changes in climate will likely have detrimental effects on some of California's largest industries, including agriculture, wine, tourism, skiing, recreational and commercial fishing, and forestry.

3.2 Regulatory Setting

There are considerable regulatory actions regarding GHGs and climate change at the federal, state, regional, and local level. The following includes the key regulations applicable to the Project.

3.2.1 Federal

As noted previously, the USEPA is the federal agency responsible for implementing the FCAA. On April 2, 2007, the U.S. Supreme Court held that the USEPA must consider regulation of motor vehicle GHG

emissions. In addition, in 2010, the USEPA issued a GHG Tailoring Rule, which relates to permitting GHG emissions of major sources.

The Inflation Reduction Act of 2022 is a multi-faceted, landmark federal law intended to reduce GHG emissions, help build a clean economy, reduce energy costs for Americans, and advance environmental justice. The Inflation Reduction Act affirms USEPA's authority to regulate GHG emissions under the FCAA.

3.2.2 State

Executive Order S-3-05

Executive Order (EO) S-3-05, issued in June 2005, set forth the following target dates by which statewide GHG emissions shall be progressively reduced:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

Assembly Bill 32 – The California Global Warming Solutions Act

In line with EO S-3-05, AB 32, passed in 2006, required that GHGs emitted in California be reduced to 1990 levels by the year 2020. GHGs, as defined under AB 32, include CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6. Since AB 32 was enacted, a seventh chemical, NF_3, has also been added to the list of GHGs. CARB is the state agency charged with monitoring and regulating sources of GHGs. AB 32 states the following:

> *Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.*

CARB approved the 1990 GHG emissions level of 427 $MMTCO_2e$ on December 6, 2007. Therefore, to meet the state's target, emissions generated in California in 2020 were required to be equal to or less than 427 $MMTCO_2e$. In order to set a framework for the state to meet this target, CARB was tasked with creating a Scoping Plan (as described below). California announced in July 2018 that the state emitted 427 $MMTCO_2e$ in 2016 and achieved AB 32 goals (CARB 2018).

Executive Order B-30-15

EO B-30-15, issued in April 2015, established a statewide GHG reduction goal of 40 percent below 1990 levels by 2030. The emission reduction target acts as an interim goal between the AB 32 goal (i.e.,

achieve 1990 emission levels by 2020) and EO S-3-05 goal of reducing statewide emissions 80 percent below 1990 levels by 2050.

Senate Bill 32

Senate Bill (SB) 32 is an amendment to the California Global Warming Solutions Act (AB 32) and was signed into law on September 8, 2016. SB 32 states that "In adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions authorized by this division, the state [air resources] board shall ensure that statewide GHG emissions are reduced to at least 40 percent below the statewide GHG emissions limit no later than December 31, 2030." In other words, SB 32 codified the interim goal established in EO B-30-15 of reducing statewide emissions to 40 percent below 1990 levels by 2030.

Assembly Bill 1279: The California Climate Crisis Act

On September 16, 2022, AB 1279, also known as the California Climate Crisis Act, codified the carbon neutrality goal established by EO B-55-18. AB 1279 establishes the policy of the state to achieve carbon neutrality as soon as possible, but no later than 2045, and maintain net negative GHG emissions thereafter. AB 1279 would also ensure that by 2045 the statewide anthropogenic GHG emissions are reduced by at least 85 percent below 1990 levels. The bill would require CARB to ensure that an updated Scoping Plan identifies and recommends measures to achieve carbon neutrality, and to identify and implement policies and strategies that enable CO_2 removal and carbon capture, utilization, and storage technologies to complement AB 1279's emissions reduction requirements.

2022 Climate Change Scoping Plan

CARB's 2022 Climate Change Scoping Plan (2022 Scoping Plan) was approved in December 2022 and assesses progress toward achieving the interim 2030 Target and laying out a path to achieve carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the state's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities (CARB 2022a).

Cap-and-Trade Program

CARB administers the state's Cap-and-Trade Program, which covers GHG sources that emit more than 25,000 metric tons CO_2e ($MTCO_2e$) per year, such as refineries, power plants, and industrial facilities. This market-based approach to reducing GHG emissions provides economic incentives for achieving GHG emission reductions.

The governor signed AB 398 on July 25, 2017, to extend the Cap-and-Trade Program to 2030. The legislation includes provisions to ensure that offsets used by sources are limited to 4 percent of their compliance obligation from 2021 to 2025 and 6 percent of their compliance obligation from 2026 through 2030. AB 398 also prevents air districts from adopting or implementing emission reduction rules from stationary sources that are also subject to the Cap-and-Trade Program (CARB 2022b).

Senate Bill 375: The Sustainable Communities and Climate Protection Act of 2008

SB 375 was signed into law on September 30, 2008. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits more than 40 percent of the total GHG emissions in California. SB 375 states, “Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32.” SB 375 does the following: (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

On March 22, 2018, CARB updated the SB 375 Greenhouse Gas Emission Reduction Targets setting GHG reduction targets for metropolitan planning organizations for 2020 and 2035 (CARB 2024e). The Bay Area reduction targets for per capita vehicular emissions were 10 percent by 2020 and are 19 percent by 2035. Updates to the regional targets are underway and will be approved in 2026.

Assembly Bill 1493: Pavley Regulations and Fuel Efficiency Standards

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations and fuel efficiency standards that reduce GHGs emitted by passenger vehicles and light duty trucks. The fuel efficiency standards were phased in during the 2009 through 2016 model years.

The second phase of the implementation for AB 1493 was incorporated into Amendments to the LEV III or the ACC program. The ACC program combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of requirements for model years 2017 through 2025. The rules helped promote a reduction in pollutants from gasoline and diesel-powered cars and helped deliver increasing numbers of zero-emission technologies, such as full battery EVs, newly emerging plug-in hybrid EVs, and hydrogen fuel cell cars. The regulations also encouraged adequate fueling infrastructure.

Senate Bill 1368: Emission Performance Standards

Enacted in 2006, SB 1368 directs the California Public Utilities Commission to adopt a performance standard for GHG emissions for the future power purchases of California utilities. SB 1368 seeks to limit carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than five years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant.

Because of the carbon content of its fuel source, a coal-fired plant cannot meet this standard because such plants emit roughly twice as much carbon as natural gas, combined cycle plants. Accordingly, the law effectively prevents California’s utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the state. The California Public Utilities Commission adopted the regulations required by SB 1368 on August 29, 2007. The regulations implementing SB 1368 establish a standard for baseload generation owned by, or under long-term contract to publicly owned utilities, of 1,100 pounds of CO_2 per megawatt-hour.

Senate Bill 1078: Renewable Electricity Standards

SB 1078 (September 12, 2002) required California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 changed the due date to 2010 instead of 2017. On November 17, 2008, the governor signed EO S-14-08, which established the Renewable Portfolio Standard (RPS) target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. EO S-21-09 directed CARB to adopt a regulation by July 31, 2010, requiring the state's load serving entities to meet a 33 percent renewable energy target by 2020. CARB approved the Renewable Electricity Standard on September 23, 2010, by Resolution 10-23. In 2011, the state legislature adopted this higher standard in SB X1-2. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas.

Senate Bill 350: Clean Energy and Pollution Reduction Act of 2015

SB 350 (October 7, 2015) reaffirms California's commitment to reducing its GHG emissions and addressing climate change. Key provisions include an increase in the Renewable Portfolio Standards, higher energy efficiency requirements for buildings, initial strategies toward a regional electricity grid, and improved infrastructure for EV charging stations.

Senate Bill 100: California Renewables Portfolio Standard Program

SB 100 (September 10, 2018) revised the RPS goals to achieve the 50 percent renewable resources target by December 31, 2026, and to achieve a 60 percent target by December 31, 2030. The bill requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024; 52 percent by December 31, 2027; and 60 percent by December 31, 2030. The bill also establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045. Under the bill, the state cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Executive Order S-01-07: Low Carbon Fuel Standard

EO S-01-07 was signed on January 18, 2007. The EO mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. In particular, the EO established a Low Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission, CARB, the University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. This analysis supporting development of the protocols was included in an implementation plan for the State Alternative Fuels Plan adopted by California Energy Commission on December 24, 2007, and was submitted to CARB for consideration as an "early action" item under AB 32. CARB adopted the LCFS on April 23, 2009.

The LCFS was subject to legal challenge in 2011. Ultimately, CARB was required to bring a new LCFS regulation for consideration in February 2015. The proposed LCFS regulation was required to contain revisions to the 2010 LCFS and new provisions designed to foster investments in the production of the low-carbon fuels, offer additional flexibility to regulated parties, update critical technical information, simplify and streamline program operations, and enhance enforcement. The Office of Administrative Law approved the regulation on November 16, 2015. The regulation was last amended in 2019 and approved on May 27, 2020. The 2019 Amendments provide clarification related to the Clean Fuel Reward program costs, credit transactions, fuels transactions and compliance reporting (CARB 2020). 2024 Amendments were approved in November 2024, and established new targets to reduce the carbon intensity of transportation fuel by 30 percent by 2030 and 90 percent by 2045. In addition, the 2024 Amendments increase support for ZEV infrastructure (CARB 2024f).

Executive Order S-13-08: Climate Adaptation Strategy

EO S-13-08 states that, “climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California’s economy, to the health and welfare of its population and to its natural resources.” Pursuant to the requirements in this EO, the 2009 California Climate Adaptation Strategy was adopted, which is the, “… first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States.” Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order B-48-18

In January 2018, Governor Brown signed EO B-48-18 requiring all state entities to work with the private sector to have at least 5 million ZEVs on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 EV charging stations by 2025. This order also requires all state entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. Additionally, all state entities are to support and recommend policies and actions to expand ZEV infrastructure at residential land uses, through the LCFS Program and recommend how to ensure affordability and accessibility for all drivers.

3.2.3 Regional

Plan Bay Area 2050

In October 2021, the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) adopted the Plan Bay Area 2050, which is the Bay Area’s long-range plan for sustainable growth, and includes strategies focused on the following sectors: housing, economy, transportation, and environment. Plan Bay Area 2050 also serves as the Regional Transportation Plan and Sustainable Communities Strategy (RTP/SCS) for the region (MTC/ABAG 2021).

3.2.4 Local

Envision Campbell General Plan Update

The Envision Campbell General Plan Update (2040 General Plan) was adopted on April 18, 2023 and provided an update to the 2001 General Plan. As previously noted, although an updated General Plan has been adopted by the City that would supersede the City's 2001 General Plan, as the Housing Crisis Act pre-application was submitted prior to adoption of the 2040 General Plan, the proposed project is subject to the goals and policies of the 2001 General Plan which was in effect at the time of pre-application submittal. Therefore, the goals and policies of the City's historical General Plan is listed below.

The City's 2001 General Plan include the following goals and policies related to GHG that may be applicable to the proposed project (City of Campbell 2001):

Goal CNR-11: Work toward improving air quality and meeting all federal and state ambient air quality standards.

- **Policy CNR-11.1:** Air Quality Impacts: Reduce adverse air quality impacts of City operations.
- **Policy CNR-11.2:** Effects of Development on Air Quality: Use the City's development review process and the California Environmental Quality Act to evaluate and mitigate the local and cumulative effects on new development on air quality.
- **Policy CNR-11.3:** Air Quality Improvement Programs: Support regional, state, and federal programs to improve air quality.

Goal CNR-12: Promote energy conservation in Campbell.

- **Policy CNR-12.2:** Advanced Energy Technology and Building Materials: Facilitate the use of advanced energy technology and building materials to create energy -efficient residences and buildings.
- **Policy CNR-12.3:** Landscaping Requirements: Continue to enforce landscaping requirements that facilitate energy efficient uses and conservation.

Goal H-1: Maintain and enhance the quality of existing housing and residential neighborhoods in Campbell.

- **Policy H-1.2:** Green Building: Encourage the use of sustainable and green building design in new and existing housing.
- **Policy H-1.3:** Energy Efficiency: Energy costs can reduce the affordability of housing for lower income households. The City will continue to promote programs and opportunities for improved energy efficiency and weatherization. To address energy conservation in existing buildings, Campbell's website promotes Pacific Gas and Electric utility assistance programs. These programs primarily serve extremely low and very low income households.

Additionally, the Conservation and Open Space, and Community Health and Wellness elements of the Envision Campbell General Plan Update include the following goals or policies (City of Campbell 2023). While the Project is subject to the 2001 General Plan, these represent the latest City air quality goals and policies.

City of Campbell Climate Action and Adaptation Plan

The City of Campbell is currently preparing their first Climate Action and Adaptation Plan (CAAP), which is anticipated to be adopted in Fall 2025 (City of Campbell 2024b). The CAAP will establish citywide targets that align with statewide emissions reduction goals and help the city achieve carbon neutrality by 2045. The CAAP will include an inventory of emissions from energy sources, buildings, transportation, water, wastewater, and solid waste, as well as a series of adaptation measures to improve resilience of city operations.

4 Methodology and Modeling Parameters

The following discussion explains the methodology and modeling parameters that will be used to estimate air quality and GHG emissions associated with construction and operations of the Project.

4.1 Criteria Pollutant and GHG Emission Methods

The California Emissions Estimator Model (CalEEMod) is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. CalEEMod quantifies direct GHG emissions, such as construction and operational activities and vehicle use, and indirect emissions, such as energy use, solid waste disposal, vegetation planting and/or removal, and water use. Further, CalEEMod identifies mitigation measures to reduce criteria pollutant and GHG emissions along with calculating the benefits achieved from measures chosen by the user.

CalEEMod was developed for the California Air Pollution Control Officers Association in collaboration with the California Air Districts. Default data (e.g., emission factors, trip lengths, meteorology, source inventory) have been provided by the various California Air Districts to account for local requirements and conditions. CalEEMod is a comprehensive tool for quantifying air quality impacts from land use projects located throughout California. The model can be used for a variety of situations where an air quality analysis is necessary or desirable, such as preparing CEQA or National Environmental Policy Act documents, conducting pre-project planning, and verifying compliance with local air quality rules and regulations, etc.

CalEEMod version 2022.1.1.29 was used to estimate construction and operational emissions of the Project.

4.1.1 Construction Modeling Assumptions

Construction is anticipated to begin in January 2026 and would be completed by September 2030. Construction is proposed to be completed in four phases. Phase 1 would include demolition of the existing buildings and pavement and site preparation of the entire site. Phase 2 would include construction of the 27 single-family homes and 49 3-story townhome-style condominium. Phase 3 would include construction of the remaining 100 3-story townhome-style condominiums. Lastly, Phase 4 would include construction of the 114 4-story townhome-style condominium. The modeled construction schedule is presented in Table 3 below.

Table 3. Modeled Construction Schedule

Phase	Task	Start Date	End Date
Phase 1	Site Demolition	1/1/2026	2/1/2026
	Grading	2/2/2026	3/1/2026

Phase	Task	Start Date	End Date
	Site Preparation	3/2/2026	5/1/2026
Phase 2	Building Construction	4/1/2026	7/25/2027
	Paving	7/26/2027	8/25/2027
	Architectural Coating	8/26/2027	9/25/2027
Phase 3	Building Construction	9/26/2027	1/18/2029
	Paving	1/19/2029	2/18/2029
	Architectural Coating	2/19/2029	3/21/2029
Phase 4	Building Construction	3/22/2029	7/15/2030
	Paving	7/16/2030	8/15/2030
	Architectural Coating	8/16/2030	9/15/2030

The comprehensive list of modeled construction equipment per phase and construction task is available in Appendix A. Construction is expected to require approximately 100 workers during peak construction (building construction). The Project is anticipated to require 18,000 cubic yards of cut and 23,000 cubic yards of fill for a net 5,000 cubic yards of fill. All cut and fill was assumed to occur during Phase 1.

4.1.2 Operational Modeling Assumptions

The trip generation rates were adjusted to match the Project-specific traffic analysis (Stantec 2025). As noted previously, the Project would not include natural gas. Operational emissions from all sources were estimated at full buildout of the Project, which is anticipated to occur in 2030. Additionally, operational emissions from the existing technology park were modeled to establish the current environmental baseline for the site. The trip generation rates for the existing land use were adjusted to match the Project-specific traffic analysis (Stantec 2025), and all other inputs were left as default values. The net operational emissions from full project buildout were compared to BAAD thresholds to determine significance.

Moreover, due to Project construction phasing, portions of the Project may be in operation while other phases are still in construction. Therefore, in order to account for the overlap in Project construction and operation, operational emissions were estimated for buildout of Phase 2 (27 single-family homes and 49 3-story townhome-style condominium) during construction of Phase 3 (100 3-story townhome-style condominiums) for year 2027; and operational emissions from buildout of Phase 3 (100 3-story townhome-style condominiums) during construction of Phase 4 (114 4-story townhome-style condominium) for year 2029. Combined emissions were then compared to BAAD thresholds to determine significance.

4.2 Health Risk Assessment Methods

In order to identify the risk posed to nearby sensitive receptors during Project construction, a health risk assessment (HRA) was conducted consistent with BAAD and the Office of Environmental Health Hazard Assessment (OEHHA) guidance.

An air dispersion model is a mathematical formulation used to estimate the air quality impacts at specific locations (receptors) surrounding a source of emissions given the rate of emissions and prevailing meteorological conditions. This assessment relied on the USEPA's AMS/EPA Regulatory Model (AERMOD) Version 23132 air dispersion model applied in the Lakes Software AERMOD View Version 12.0.0 interface. The AERMOD model was used to estimate the concentration of TACs at sensitive receptor locations from potential sources of project generated TACs. The AERMOD model provides a refined methodology for estimating health impacts by utilizing long-term, measured representative meteorological data for the Project site.

The modeling analysis considers the spatial distribution and elevation of each emitting source in relation to the sensitive receptors. Direction-dependent calculations were obtained by identifying the Universal Transverse Mercator coordinates for each source location. Terrain elevations were obtained for the Project site using the AERMAP model, which is the AERMOD terrain data pre-processor. The air dispersion model assessment used meteorological data recorded from the San José International Airport, which is located approximately 5.5 miles north of the Project site. The meteorological data used was preprocessed for use with AERMOD and included data for the year 2017.

Consistent with BAAD guidance, the modeling accounted for all receptor locations within 1,000 feet of the Project site, and a flagpole height of 1.5 meters was used for all residential and worker receptors (BAAD 2022c).

After using AERMOD to determine the concentration of TACs at sensitive receptor locations, the associated health risks were calculated using the CARB's Hotspot Analysis Reporting Program Version 2 (HARP 2) Risk Assessment Standalone Tool (RAST), which calculates the cancer and non-cancer health impacts using the OEHHA's Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015).

4.2.1 Health Risk Modeling Assumptions

The PM_{10} emissions from construction were determined using the results of the CalEEMod modeling conducted for the Project. Construction emissions were modeled as an area polygon source that covers the entire site. To determine health risks, the concentration of PM_{10} was determined at the maximally exposed residential receptor and the maximally exposed worker receptor. For the residential receptor, and consistent OEHHA guidance, exposure was assumed to occur during the third trimester, infant, and a portion of the child stages of life. For the worker receptor, exposure was assumed to begin at age 16. The exposure period was set to the 3.75-year construction period. Detailed parameters and complete calculations are contained in Appendix B.

5 Air Quality Impact Analysis

5.1 CEQA Guidelines

According to the CEQA Guidelines' Appendix G Environmental Checklist, the following questions are analyzed and evaluated to determine whether impacts related to air quality are considered to be significant environmental effects.

Where available, the significance criteria established by the applicable air quality management or air pollution district may be relied upon to make the following determinations.

Where the Project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

c) Expose sensitive receptors to substantial pollutant concentrations?

d) Result in other emissions (such as those leading to odors) affecting a substantial number of people?

5.1.1 Thresholds of Significance

While the final determination of whether a project is significant is within the purview of the lead agency pursuant to Section 15064(b) of the CEQA Guidelines, the BAAD has adopted CEQA thresholds of significance for individual development projects, which establish maximum allowable emissions for ROG, NO_X, PM_{10}, and $PM_{2.5}$ (BAAD 2022a). If the lead agency finds that the project has the potential to exceed these air pollution thresholds, the project should be considered to have significant air quality impacts. The BAAD thresholds are presented in Table 4.

Table 4. BAAD Criteria Pollutant Thresholds of Significance

Pollutant	Construction	Operation	
	Average Daily Emissions (lbs/day)	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tpy)
ROG	54	54	10
NOx	54	54	10
PM_{10}	82 (exhaust)	82	15
$PM_{2.5}$	54 (exhaust)	54	10

Note: Construction particulate matter thresholds only account for exhaust particulate matter emissions.
Source: BAAD 2022a.

According to the BAAD, a project would result in a significant impact if it would individually expose sensitive receptors to TACs resulting in an increased cancer risk greater than 10.0 in 1 million, an increased non-cancer risk of greater than 1.0 on the hazard index (chronic or acute), or an annual average ambient $PM_{2.5}$ increase greater than 0.3 micrograms per cubic meter ($\mu g/m^3$).

5.2 Air Impact Analysis

5.2.1 IMPACT ANALYSIS OF IMPACT AIR-1

IMPACT AIR-1	Conflict with or obstruct implementation of the applicable air quality plan?

Air districts are required to prepared air quality plans to identify strategies to bring regional emissions into compliance with federal and state air quality standards. The BAAD's 2017 Clean Air Plan is the applicable air quality plan in the SFAB to reduce emissions from area, stationary, and mobile sources. consistency determination with the Air Quality Management Plan plays an important role in local agency project review by linking local planning and individual projects to the 2017 Clean Air Plan. It fulfills the CEQA goal of informing decision-makers of the proposed project's environmental effects under consideration early enough to ensure that air quality concerns are fully addressed. It also provides the local agency with ongoing information as to whether they are contributing to the clean air goals in the 2017 Clean Air Plan. Individual projects can show consistency by: (1) meeting the growth projections used within the 2017 Clean Air Plan; (2) demonstrate consistency with applicable 2017 Clean Air Plan control measures; and/or (3) meet BAAD air quality thresholds.

Growth Projections

Regional emissions calculated within the 2017 Clean Air Plan are regional population, housing, and employment projections developed by the Association of Bay Area Governments (ABAG) based on local government's land use planning. The Project would construct 290 residential units and have an anticipated population of 772 residents. Based on the 2001 General Plan, the Project site has a land use designation of research and development and is zoned planned development. It should be noted that the City has released an updated general plan with new land use designations, however the pre-application of the Project was submitted prior to the release of the updated general plan. As such, the 2001 General Plan land use and zoning is applicable for this analysis. Regardless, the Project is not the anticipated use of the site when evaluated within the 2017 Clean Air Plan. As discussed below, the Project would be consistent with the applicable control measures and would not exceed BAAD thresholds. Therefore, it would still be considered consistent with the 2017 Clean Air Plan.

Consistency Analysis

Table 5 identifies the project-applicable control measures in the 2017 Clean Air Plan required by BAAD to reduce emissions for a range of stationary and mobile sources as well as the Project's consistency with those control measures. As shown in Table 5, the Project would not conflict with these control measures.

Table 5. Consistency with the 2017 Clean Air Plan

Measure	Consistency
Stationary Source Control Measures	
SS18: Basin-Wide Combustion Strategy. Stabilize and then reduce emissions of GHGs, criteria air pollutant and toxic emissions from stationary combustion sources throughout the Air District by first establishing carbon intensity caps on major GHG sources, and then adopting new rules to (1) reduce fuel use on a source-type by source type basis, and (2) evaluate alternatives to decarbonize abatement devices.	**Consistent.** Stationary sources are regulated directly by the BAAD which implements rules and regulations to control stationary source emissions. Any new stationary sources associated with the project would be required to comply with BAAD's rules and regulations including issuance of a permit. The Project would construct new residential units and is not anticipated to require any new stationary sources.
SS21: New Source Review for Air Toxics. Propose revisions to Air District Rule 2-5, New Source Review of Toxic Air Contaminants, based on OEHHA's 2015 Health Risk Assessment Guidelines and ARB/California Air resource Board/ California Air Pollution Control Officers Association's 2015 Risk Management Guidance. Revise the Air District's Health Risk Assessment trigger levels for each toxic air contaminant using the 2015 Guidelines and most recent health effects values.	**Consistent.** Stationary sources are regulated directly by the BAAD which implements rules and regulations to control stationary source emissions. Any new stationary sources associated with the project would be required to comply with BAAD's rules and regulations including issuance of a permit. The Project would construct new residential units and is not anticipated to require any new stationary sources.
SS 36: PM from Trackout. Develop new Air District rule to prevent mud/dirt and other solid trackout from construction, landfills, quarries and other bulk material sites.	Consistent. The Project would be required to comply with BAAD's Regulation 6, Rule 1 and Rule 6 as well as BAAD's BMPs for Construction-Related Fugitive Dust Emissions.
SS 37: PM from Asphalt Operations. Develop an Air District rule to require abatement/control of blue smoke emissions related to asphalt delivery to roadway paving projects.	Consistent. The Project would be required to comply with BAAD Regulation 8, Rule 15.
Transportation Control Measures	
TR 9: Bicycle and Pedestrian Access and Facilities. Encourage planning for bicycle and pedestrian facilities in local plans, e.g., general and specific plans, fund bike lanes, routes, paths and bicycle parking facilities.	Consistent. Transportation control measures are strategies to reduce vehicle trips, vehicle use, Vehicle Miles Traveled (VMT), vehicle idling, and traffic congestion to reduce motor vehicle emissions. Most traffic control measures are implemented at the regional level by ABAG. Regardless, the Project would have a less than significant impact on vehicle miles traveled (VMT). Moreover, the Project would include bicycle racks throughout the Project site that would allow for a total of 72 exterior bicycle parking spaces.
Energy and Climate Control Measures	
EN1: Decarbonize Electricity Production. Engage with PG&E, municipal electric utilities and Community Choice Energy to maximize the amount of renewable energy contributing to the production of electricity within the Bay Area as well as electricity imported into the region. Work with local governments to implement local renewable energy programs. Engage with stakeholders including dairy farms, forest managers, water treatment facilities, food processors, public works agencies, and	Consistent. The Project would be all electric and would not include natural gas infrastructure, and all homes are proposed to have solar photovoltaic systems installed, either individually or for the larger condominium building as a whole. Additionally, all structures would comply with the relevant provisions of the CALGreen Code and would not contribute substantially to regional carbon emissions.

Measure	Consistency
waste management to increase use of biomass in electricity production.	
EN2: Decrease Electricity Demand. Work with local governments to adopt additional energy efficiency policies and programs. Support local government energy efficiency program via best practices, model ordinances, and technical support. Work with partners to develop messaging to decrease electricity demand during peak times.	Consistent. The Project would include a solar photovoltaic system.
Building Control Measures	
BL2: Decarbonize Buildings. Explore potential Air District rulemaking options regarding the sale of fossil fuel-based space and water heating systems for both residential and commercial use. Explore incentives for property owners to replace their furnace, water heater, or natural gas powered appliances with zero-carbon alternatives. Update Air District guidance documents to recommend that commercial and multi-family developments install ground source heat pumps and solar hot water heaters.	Consistent. The Project would be all electric and would not include natural gas infrastructure, and all homes are proposed to have solar photovoltaic systems installed, either individually or for the larger condominium building as a whole. Additionally, all structures would comply with the relevant provisions of the CALGreen Code and would not contribute substantially to regional carbon emissions.
Natural and Working Lands Control Measures	
NW-3: Carbon Sequestration in Wetlands. Identify federal, State, and regional agencies, and collaborative working groups that the Air District can assist with technical expertise, research or incentive funds to enhance carbon sequestration in wetlands around the Bay Area. Assist agencies and organizations that are working to secure the protection and restoration of wetlands in the San Francisco Bay.	Not Applicable. This control measure focuses on increasing carbon sequestration on wetlands. The Project would not be constructed on wetlands.
Waste Management Control Measures	
WA-4: Recycling and Waste Reduction. Develop model policies to facilitate local adoption of ordinances and programs to reduce the amount of green waste going to landfills.	**Consistent**. The control measure includes strategies to increase waste diversion rates through efforts to reduce, reuse, and recycle. The proposed project would comply with City policies related to reducing the green waste going to landfills. Additionally, the Project would be required to comply with SB 1383 which requires building management to provide organics collection service, education, and outreach.
Water Control Measures	
WR-2: Support Water Conservation. Develop a list of best practices that reduce water consumption and increase on-site water recycling in new and existing buildings; incorporate into local planning guidance.	**Consistent.** The proposed project would include water efficiency measures required under CALGreen.
Super GHG Control Measures	
SL-1: Short-Lived Climate Pollutants. Reduce methane from landfills and farming activities through various control measures listed under waste and agriculture sectors. Develop a rule to reduce methane emissions from natural gas pipelines and processing operations and amend regulations to reduce emissions of methane and other organic gases from equipment	**Not Applicable**. Super-GHGs include methane, black carbon, and fluorinated gases. These compounds are sometimes referred to as short-lived climate pollutants because their lifetime in the atmosphere is generally short. The Project would not include any land uses that generate significant levels of short-lived climate pollutants.

Measure	Consistency
leaks at oil refineries. Enforce applicable regulations of the servicing of existing air conditioning units in motor vehicles, support the adoption of more stringent regulations by ARB and/or USEPA, and encourage better HFC disposal practices.	

Source: BAAD 2017.

Emissions

Air districts establish emissions thresholds for individual projects to demonstrate the point at which a project would be considered to increase the air quality violations. A project would conflict with the applicable air quality plan if they exceeded any emissions thresholds for which the region is in nonattainment. \ The BAAQMD's adopted thresholds of significance indicate the levels of emissions that projects may emit while the region still moves towards attainments of the CAAQS and NAAQS. Projects that exceed thresholds would be considered to conflict with the 2017 Clean Air Plan. As described under Impact AIR-2, implementation of the Project would not result in net new emissions that exceed the thresholds established by the BAAD. As a result, the Project would not conflict with or obstruct implementation of the applicable air quality plan.

Therefore, while the Project would not comply with the land use and zoning, the Project would still be consistent with the 2017 Clean Air Plan by being consistent with the applicable control measures and fall below BAAD significance thresholds. Therefore, the impact is less than significant.

5.2.2 IMPACT ANALYSIS OF IMPACT AIR-2

IMPACT AIR-2	**Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

In developing thresholds of significance for air pollutants, the BAAD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Construction and operational emissions are discussed separately below.

Construction Emissions

The Project's estimated construction emissions are provided in 6. As shown therein, construction of the Project would not result in emissions that exceed BAAD thresholds.

Table 6. Construction Criteria Pollutant Emissions

Phase[a, b]	Average Daily Emissions (lbs/day)			
	ROG	NOx	PM_{10}[c]	$PM_{2.5}$[c]
Phase 1 and Phase 2	3.55	10.08	3.52	1.49
Phase 3	3.51	6.51	1.29	0.44
Phase 4	3.79	6.15	1.29	0.44
BAAD Thresholds	**54**	**54**	**82**	**54**
Exceed BAAD Thresholds?	***No***	***No***	***No***	***No***

Notes:

[a] Construction emissions were modeled assuming a construction period from 2026 through 2030. Since the emissions were modeled, the proposed construction schedule shifted back by 14 months and Phase 1 construction was extended by approximately 20 working days. Emissions previously run were determined to be similar if not a conservative estimate of the Project emissions due to the following: (1) emissions tend to decrease over time due to emerging technologies and stricter regulations; and (2) BAAD measures emissions in average pounds per day, therefore an extended construction period would result in less emissions per day on average.

[b] The average daily emissions were calculated for each construction phase based on the annual emissions divided by the total days of construction within each phase.

[c] BAAD thresholds for PM_{10} and $PM_{2.5}$ are intended for exhaust emissions only. The emissions presented above include total particulate matter (exhaust emissions and fugitive emissions) and are therefore a conservative estimate.

Source: Appendix C

Consistent with BAAD requirements, the Project would implement BAAD's Basic BMPs for Construction-Related Fugitive Dust Emissions and would comply with Regulation 6 (refer to Section 3.2.3), both of which would reduce fugitive PM emissions during construction.

Based on the above, the Project's construction emissions would not result in a cumulatively considerable net increase in criteria air pollutant emissions.

Operational Emissions

The Project would include redevelopment of the existing research and development campus with a new residential community. As noted in Section 4, Methodology and Modeling Parameters, this analysis considers the net change in emissions that would occur from implementation of the Project as compared to the emissions that occur under existing conditions. Table 7 presents the estimated criteria pollutant emissions that occur under existing conditions. Table 8 presents the estimated criteria pollutant emissions that would occur under the Project, as well as the net change in emissions from implementation of the Project. As shown therein, the net increase in emissions associated with implementation of the Project would not exceed the BAAD's thresholds of significance.

Table 7. Operational Criteria Pollutant Emissions – Existing Conditions

Overlapping Emissions

The potential exists for the initial phases of the Project to become operational while construction of the remaining phases continues. For example, the structures built during Phase 2 (27 single-family homes and 49 3-story townhome-style condominiums) may become occupied and result in operational emissions while construction of Phase 3 is underway and generating construction emissions. Table 9 shows the potential overlapping emissions that may occur during implementation of the Project in comparison to the BAAD's daily emission thresholds of significance.

Table 9. Overlapping Criteria Pollutant Emissions

Project Component	Average Daily Emissions (lbs/day)			
	ROG	NOx	PM_{10}	$PM_{2.5}$
Operation of Phase 2	4.08	1.41	2.21	0.60
Construction of Phase 3	3.83	6.94	1.43	0.49
Overlapping Emissions	*7.90*	*8.35*	*3.64*	*1.08*
Operation of Phase 2 and Phase 3	8.20	2.67	4.77	1.27
Construction of Phase 4	4.84	5.19	1.11	0.37
Overlapping Emissions	*13.04*	*7.86*	*5.88*	*1.64*
BAAD Thresholds	**54**	**54**	**82**	**54**
Exceed BAAD Thresholds?	***No***	***No***	***No***	***No***

Source: Appendix A.

As demonstrated through the discussion above, criteria pollutant emissions would not exceed any applicable threshold of significance during Project construction, operation, or during overlapping phases. Therefore, the Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable federal or state ambient air quality standard, and the impact would be less than significant.

5.2.3 IMPACT ANALYSIS OF IMPACT AIR-3

IMPACT AIR-3 Expose sensitive receptors to substantial pollutant concentrations?

This discussion addresses whether the Project would expose sensitive receptors to construction-generated fugitive dust (PM_{10}), naturally occurring asbestos (NOA), construction-generated DPM, or operational related TACs.

According to CARB, some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, childcare centers, playgrounds, retirement homes, convalescent homes, hospitals, and medical clinics. The nearest sensitive receptors to the Project site include the single-family residences located immediately to the east, and the multi-family residences located to the northeast, north of Paseo De Palomas Lane. Additional residential uses are located to the west of the Project site, across SR 17.

Construction Emissions

During construction associated with the Project, the potential exists for emissions of fugitive dust, NOA, and DPM to be released. Each TAC is discussed separately below.

Fugitive Dust

Fugitive dust would be generated from site grading and other earth-moving activities. Most of this fugitive dust would remain localized and would be deposited near the Project site. However, the potential for impacts from fugitive dust exists unless control measures are implemented to reduce the emissions from the Project site. However, all projects within the jurisdiction of the BAAD are required to implement all of the BAAD's BMPs, listed in Section 2.2.3.1 of this report (BAAD 2022a). The Project's required implementation of the BAAD's BMPs, as well as compliance with Regulation 6, Particulate Matter and Visible Emissions, would minimize construction-related fugitive dust emissions to 20 percent opacity for particulate matter emissions.

Asbestos

Based on historical aerial imagery, the on-site buildings were construction after the 1989 California ban of asbestos on new construction. As a result, workers and nearby receptors would not be exposed to ACBMs during demolition.

Construction in areas of rock formations that contain NOA could release asbestos to the air and pose a health hazard. However, a review of the map with areas more likely to have rock formations containing NOA in California indicates that there is no asbestos in the immediate Project area (U.S. Geological Survey 2011). Therefore, construction of the Project would not expose sensitive receptors to NOA.

Diesel Particulate Matter

Exposure to DPM from diesel vehicles and off-road construction equipment can result in health risks to nearby sensitive receptors. An HRA was prepared in accordance with BAAD and OEHHA guidance. As shown in Table 10, the health risk posed to the maximally exposed worker receptor would not exceed any threshold. However, the level of cancer risk posed to the maximally exposed residential receptor would exceed the BAAD thresholds of 10 in one million. As such, the Project would be required to implement Mitigation Measure AQ-1 that would require the use of Tier 4 equipment. Implementation of Mitigation Measure AQ-1 would reduce the risk at the maximally exposed residential receptor to less than significant levels. Health risk output files are provided in Appendix B.

Table 10. Construction Health Risk Assessment Results

Receptor Type	Cancer Risk (in one million)	Chronic Hazard Index	$PM_{2.5}$ ($\mu g/m^3$)
Unmitigated			
Residential	32.60	0.02	0.08
Worker	0.76	0.02	0.08

Receptor Type	Cancer Risk (in one million)	Chronic Hazard Index	$PM_{2.5}$ ($\mu g/m^3$)
BAAD Thresholds	**10.0**	**1.0**	**0.30**
Exceed BAAD Thresholds?	***Yes***	***No***	***No***
Mitigated			
Residential	6.92	0.003	0.02
BAAD Thresholds	**10.0**	**1.0**	**0.30**
Exceed BAAD Thresholds?	***No***	***No***	***No***

Source: Attachment B.

The potential exists for the initial phases of the Project to become operational while construction of the remaining phases continues. For example, the structures built during Phase 2 (27 single-family homes and 49 3-story townhome-style condominiums) may become occupied and result in operational emissions while construction of Phase 3 is underway and generating construction emissions. Then Phases 2 and 3 would be occupied as Phase 4 is constructed. As such, there would be new receptors located at the Project site while construction occurs. However, the off-site receptors would be exposed over a longer period of time (Phases 1 through 4 of construction) as compared to the on-site receptors which would be exposed for a shorter duration (maximum Phases 3 through 4 of construction). Moreover, the highest level of PM_{10} exhaust emissions would occur during demolition, site preparation, and grading activities which would occur during Phase 1 of construction. The off-site receptor evaluated for the HRA was located immediately adjacent to the Project site and it was determined that with the implementation of MM AQ-1, health risk impacts would be less than significant. As the new on-site residential receptors would be similarly distanced to any future construction phases and would be exposed to a shorter construction duration after the peak of construction emissions, the health risk posed to any new, on-site receptors was determined to be less than the risk posed to the off-site receptor. As such, the impacts posed to any new, on-site receptor would similarly be less than significant with the implementation of MM AQ-1.

Operational Emissions

The greatest potential for exposure to TACs during long-term operations is from the use of heavy-duty diesel trucks and stationary generators that use diesel fuel. The Project is a residential development. Once operational, the majority of vehicle trips to the Project site would be from residents and, as a result, the Project would attract very few diesel truck trips. Additionally, the Project would not include any stationary generators on-site. In terms of carbon monoxide hotspots, the Project is estimated to generate approximately 1,701 vehicle trips per day, or a net increase of 145 trips per day compared to existing conditions (Stantec 2025). The BAAD has determined that a project would have a less than significant impact to carbon monoxide if project-generated traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour. Because implementation of the Project would result in a negligible increase in traffic volumes at nearby intersections, it is determined that the Project would not generate any new carbon monoxide hotspots. For these reasons, once operational, the Project would not be expected to expose existing nearby sensitive receptors to substantial amounts of TACs.

Once operational, the Project would be considered a sensitive receptor location and future residents could be exposed to TAC emissions from nearby mobile and stationary sources. In the California Building Industry Association v. Bay Area Air Quality Management District (62 Cal.4th 369 [2015] [Case No. S213478]), the California Supreme Court held that "agencies subject to CEQA generally are not required to analyze the impact of existing environmental conditions on a project's future users or residents. When a proposed project risks exacerbating those environmental hazards or conditions that already exist, an agency must analyze the potential impact of such hazards on future residents or users. In those specific instances, it is the project's impact on the environment—and not the environment's impact on the project—that compels an evaluation of how future residents or users could be affected by exacerbated conditions." Although the Court ruled that impacts from the existing environment on projects are not required to be addressed under CEQA, land uses such as gasoline stations, dry cleaners, distribution centers, freeways, and auto body shops can expose residents to high levels of TAC emissions if they are in proximity of the project site. The following discussion considers the potential impact of TACs from nearby mobile and stationary sources on future residents of the Project.

The Project site is located south of SR 17. The BAAD has prepared a Mobile Source Screening Map that estimates the concentration of $PM_{2.5}$, the cancer risk, and chronic hazard index from roadway sources. Additionally, per the BAAD's Stationary Source Screening Map, the following 11 permitted stationary sources of emissions are located within 1,000 feet of the Project site (see Table 10). It is noted that source number 6, the generator at Aoptix Technologies, is associated with the existing uses on the Project site and would not be present following implementation of the Project. Therefore, health impacts from the generator at Aoptix Technologies were excluded from the cumulative analysis. Table 12 presents the cumulative health risks that may be posed to on-site receptors from mobile and stationary sources.

Table 11. Permitted Stationary Sources with 1,000 feet of Project Site

Notes:

[1] The BAAD's Mobile Source Screening Map presents a range of values for each geographic area. To be conservative, this table presents the maximum value of the range(s) included in the Project site.

Sources: BAAD 2026a; BAAD 2026b.

As shown in the table above, the cumulative total health risk posed to receptors of the Project would exceed the applicable cumulative threshold of significance for $PM_{2.5}$. However, pursuant to the California Building Standards Code, all proposed residential units would be required to install MERV 13 filters or better. According to the USEPA, MERV 13 filters have an efficiency rating of 50 percent for particles 0.30 to 1.0 microns, 80 percent for particles 1.0 to 3.0 microns, and 90 percent for particles 3.0 to 10.0 microns (USEPA 2024h). $PM_{2.5}$ refers to particles under 2.5 microns in diameter, so filtration efficacy would be a minimum of 50 percent, and the indoor concentration of $PM_{2.5}$ would be reduced to 0.57 $\mu g/m^3$. Mitigation Measure AQ-2 is required to ensure that all tenants are informed of how to properly maintain the filters. Therefore, the required installation of MERV filters would ensure that indoor concentrations of PM would be reduced to below the applicable threshold, and future residents of the Project would not be exposed to substantial pollution concentrations. Based on the analysis above, the Project would not expose sensitive receptors to substantial pollutant concentrations with implementation of Mitigation Measures AQ-1 and AQ-2, and the impact would be less than significant with mitigation.

MM AQ-1 **Minimize Construction Exhaust Emissions.** Exhaust emissions shall be minimized during construction activities with the use of off-road equipment engines that meet or exceed CARB's Tier 4 Final engine emissions standards for off-road equipment exceeding 50 horsepower (hp). At a minimum, all construction equipment shall be

certified as compliant with the Tier 4 Final engine emissions standards as provided in CCR, Title 13, section 2423(b)(1)(B). Engines can achieve these standards through the use of late model engines, low-emission diesel products, alternative fuels, engine retrofit technology, after-treatment products, add-on devices such as particulate filters, or other options as they become available.

MM AQ-2 **HEPA Filter Maintenance Schedule Information.** Prior to occupancy, the applicant shall provide all tenants with information on the routine maintenance schedule to replace and/or clean their MERV 13 filters. Filters should be replaced on a 3-month basis in order to ensure that proper filtration levels are maintained.

5.2.4 IMPACT ANALYSIS OF IMPACT AIR-4

IMPACT AIR-4 Result in other emissions (such as those leading to odors) affecting a substantial number of people?

While offensive odors rarely cause any physical harm, they can still be unpleasant, leading to distress among the public and often generating citizen complaints to local governments and BAAD. The occurrence and severity of odor impacts depends on numerous factors, including nature, frequency, and intensity of the source, the wind speed and direction, and the sensitivity of the receptor. The nearest receptors to the Project site include the single-family residences located immediately to the east, and the multi-family residences located to the northeast, north of Paseo De Palomas Lane. Additional residential uses are located to the west, across SR 17.

Construction activities associated with the Project could result in short-term odorous emissions from diesel exhaust associated with diesel-fueled equipment. However, these emissions would be intermittent and would dissipate rapidly from the source. Project construction would also be required to comply with all applicable BAAD rules and regulations, particularly associated with permitting of air pollutant sources. Compliance with the applicable BAAD regulations, such as Regulation 6 Rule 1, General Requirements, Regulation 7, Odorous Substances, and Regulation 8 Rule 2, Architectural Coatings, would help to minimize emissions leading to odors.

Land uses typically considered as associated with the production of odors during operations include wastewater treatment facilities, waste disposal facilities, and agricultural operations. The Project does not include any land uses that are typically associated with emitting objectionable odors.

Finally, BAAD regulates objectionable odors through Regulation 7, Odorous Substances, which does not become applicable until the Air Pollution Control Officer (APCO) receives odor complaints from ten or more complainants within a 90-day period. Once effective, Regulation 7 places general limitation on odorous substances and specific emission limitations on certain odorous compounds, which remain effective until such time that citizen complaints have not been received by the APCO for one year. The limits of Regulation 7 become applicable again when the APCO receives odor complaints from five or more complainants within a 90-day period (BAAD 1982). Thus, although not anticipated, if odor

complaints are made after the Project is developed, the BAAD would ensure that such odors are addressed, and any potential odor effects are minimized or eliminated.

The Project would not result in other emissions, such as those leading to odors, affecting a substantial number of people. Therefore, the impact would be less than significant.

6 Greenhouse Gas Impact Analysis

6.1 CEQA Guidelines

The CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a project would have a significant impact on GHGs, the type, level, and impact of emissions generated by the project must be evaluated.

The following GHG significance thresholds are contained in Appendix G of the CEQA Guidelines:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or

b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

6.1.1 Thresholds of Significance

In April 2022, the BAAD Board of Directors adopted the CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans, which updated the BAAD's previous guidance related to evaluating GHG emissions to address the most recent climate legislation.

Because construction emissions are temporary and variable, the BAAD has not developed a quantitative threshold of significance for construction-related GHG emissions. However, BAAD recommends that construction related GHG emissions should still be quantified and disclosed in environmental documents.

For land use projects, the BAAD considers a project to have a less-than-significant impact related to GHG emissions if it either (1) is consistent with a local GHG reduction strategy that meets the requirements of CEQA Guidelines Section 15183.5(b) or (2) meets specific project design elements related to buildings and transportation (BAAD 2022b). These design elements include:

Buildings

a. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).

b. The project will not result in any wasteful, inefficient, or unnecessary energy usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.

Transportation

c. Achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA:

   i. Residential projects: 15 percent below the existing VMT per capita

   ii. Office projects: 15 percent below the existing VMT per employee

   iii. Retail projects: no net increase in existing VMT

d. Achieve compliance with off-street electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.

It is noted that the City of Campbell is currently preparing their first CAAP, which is anticipated to be adopted in Spring 2026 (City of Campbell 2024b). Because the City does not have an adopted CAAP, this analysis evaluates the significance of GHG impacts based on meeting the BAAD's project design elements listed above.

6.2 GHG Impact Analysis

6.2.1 IMPACT ANALYSIS OF IMPACT GHG-1

As noted previously, the BAAD's applicable thresholds for the significance of GHG emissions are qualitative, and the following GHG emissions inventories are provided for informational purposes. Potential impacts related to GHG emissions resulting from implementation of the Project are considered in comparison with BAAD's adopted thresholds of significance below.

Construction Emission Inventory

Construction GHGs would be emitted by the off-road construction equipment and vehicle travel by workers and material deliveries to the Project site. The estimated construction GHG emissions are shown in Table 13. The BAAD does not have a quantitative threshold for construction projects. Consistent with other analyses conducted for projects within the city, construction GHG emissions are amortized over an estimated 30-year project lifetime and added to total operational emissions. Additionally, annual construction emissions were also compared to BAAD's stationary source bright-line threshold of 10,000

MT CO_2e to demonstrate that the Project would not result in a significant amount of construction GHG emissions. As shown in Table 13, the annual construction emissions would fall below this threshold.

Table 13. Construction Greenhouse Gas Emissions

Phase	Annual Emissions (MTCO2e/yr)
Phase 1 and Phase 2	1,009
Phase 3	679
Phase 4	677
Total	***2,365***
BAAD Bright-Line Threshold	***10,000***
Exceed?	***No***
Amortized over 30 years	*78.83*

Source: Attachment A.

Operational Emission Inventory

Operational, or long-term, emissions occur over the life of the Project. Operational activities of the Project would generate GHG emissions primarily from mobile sources. Table 14 presents the estimated GHG emissions that occur under existing conditions. Table 15 presents the estimated GHG emissions that would occur under the Project, as well as the net change in emissions from implementation of the Project. As demonstrated in Table 15, implementation of the Project is expected to result in a net decrease in GHG emissions.

Table 14. Operational Greenhouse Gas Emissions – Existing Conditions

Source	Annual Emissions ($MTCO_2e$/yr)
Mobile	1,177.98
Area	4.12
Energy	910.47
Water	272.41
Waste	6.66
Refrigeration	1.19
Total	***2,372.84***

Source: Attachment A.

Table 15. Operational Greenhouse Gas Emissions – Proposed Project

Source	Annual Emissions ($MTCO_2e$/yr)
Mobile	1,254.69
Area	3.60

Source	Annual Emissions ($MTCO_2e/yr$)
Energy	293.47
Water	23.34
Waste	67.29
Refrigeration	0.36
Amortized Construction Emissions	*78.83*
Project Total	***1,721.58***
Existing Total	***2,372.84***
Net Change in Total Annual Emissions	***-651.26***

Source: Attachment A.

Consistency with BAAD's Project Design Elements

According to the BAAD's guidance, in order to find a less-than-significant GHG impact, projects must include certain project design elements, as listed in Section 6.1.1. The Project is evaluated in relation to each design element in Table 16.

Table 16. Project Consistency with BAAD's Project Design Elements

Measure	Consistency Determination
Buildings	
a) The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).	**Consistent.** The Project would include all electric appliances and plumbing and, therefore, would not include natural gas appliances or natural gas plumbing.
b) The project will not result in any wasteful, inefficient, or unnecessary energy use as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines	**Consistent.** The Project would comply with all applicable federal, state, and local regulations regarding energy use during both Project construction and operations. Specifically, the proposed project would comply with CARB's 5-minute idling rule which would reduce fuel consumption and develop the Project to meet the latest CALGreen standards. Therefore, the proposed project would not result in any wasteful, inefficient, or unnecessary energy use.
Transportation	
a) The project will achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target that reflects the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA: i. Residential projects: 15 percent below the existing VMT per capita; ii. Office projects: 15 percent below the existing VMT per employee;	**Consistent.** The Project is presumed to have a less-than-significant VMT impact based on meeting the Projects Consistent with the General Plan screening criteria (Stantec 2025). Therefore, the Project would meet the City's SB 743 VMT policy.

Measure	Consistency Determination
iii. Retail projects: no net increase in existing VMT.	
b) The project will achieve compliance with off-street electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.	**Consistent.** A total of 718 parking spaces would be provided on-site to accommodate the proposed residential developments. Of the total 718 parking spaces, 580 parking spaces would be provided as residential in-garage spaces and 138 spaces would be guest parking dispersed throughout the site. All homes are proposed to have a single dedicated Level 1 and a single dedicated Level 2 receptacle in the garage for EV charging, which complies with the Tier 2 CALGreen requirement for single-family residential land uses. Of the 138 guest spaces, the Project would provide 14 EV capable spaces, 35 EV ready spaces, and 7 EV charging spaces (56 total spaces). Pursuant to the Tier 2 CALGreen requirements, 40 percent of spaces at multi-family residential projects must be EV ready (288 spaces) and 15 percent of those spaces must be equipped with Level 2 charging equipment (43 spaces). The in-garage EV parking and guest EV parking spaces would exceed the required number of spaces and, therefore, the Project would comply with the residential Tier 2 CALGreen standards.

Source: BAAD 2022b.

Based on the analysis included in the table above, the Project would comply with the BAAD's project design elements. Therefore, the Project would not generate GHG emissions that may have a significant impact on the environment, and the impact would be less than significant.

6.2.2 IMPACT ANALYSIS OF IMPACT GHG-2

Pursuant to Appendix G of the CEQA Guidelines, a significant GHG impact is identified if the project could conflict with applicable GHG reduction plans, policies, or regulations. The Project would be subject to complying with the CARB's 2022 Scoping Plan which includes measures adopted for the purpose of reducing GHG emissions.

CARB approved the 2022 Scoping Plan in December 2022. The 2022 Scoping Plan builds upon previous iterations of state scoping plans to achieve carbon neutrality and reduce anthropogenic GHG emissions below 85 percent below 1990 no later than 2045, as directed by AB 1279 (CARB 2022a). Table 17 identifies the Scoping Plan policies that may be relevant to the proposed Project.

Table 17. Project Consistency with 2022 Scoping Plan Greenhouse Gas Reduction Strategies

Measure	Consistency Determination
Deploy ZEVs and reduce driving demand	**Consistent.** The Project would include 14 EV capable spaces, 35 EV ready spaces, and 7 EV charging spaces to support the use of ZEVs, and all single-family homes would be equipped with raceways to support in-garage EV charging.
Coordinate supply of liquid fossil fuels with declining CA fuel demand	**Not Applicable.** This measure is aimed at petroleum refineries and fossil fuel extraction operations.
Generate clean electricity	**Consistent.** All homes are proposed to have solar photovoltaic systems installed, either individually or for the larger condominium building as a whole. Therefore, the Project would generate clean electricity for use on-site.
Decarbonize Buildings	**Consistent.** As noted above, the Project would be all electric and would not include natural gas infrastructure, and all homes are proposed to have solar photovoltaic systems installed, either individually or for the larger condominium building as a whole. Additionally, all structures would comply with the relevant provisions of the CALGreen Code and would not contribute substantially to regional carbon emissions.
Decarbonize Industrial Energy Supply	**Not Applicable.** The Project is a residential project and would not affect industrial energy supply.
Reduce non-combustion emissions (Methane)	**Consistent.** The Project would not include any land uses that generate significant levels of methane, such as landfills or dairy farms.
Reduce non-combustion emissions (Hydrofluorocarbons [HFCs])	**Consistent.** The Project would comply with all state regulations governing SLCPs, including HFCs.
Compensate for remaining emissions	**Not Applicable.** This measure is aimed at the state government to reduce statewide emissions to meet AB 1279 goals. The Project would not interfere with this goal.

Source: CARB 2022a.

This analysis finds the Project would be consistent with the applicable strategies recommended in the 2022 Scoping Plan. Therefore, the Project would not conflict with an applicable plan adopted for the purpose of reducing GHG emissions; therefore, impacts would be considered less than significant.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.6	annual days of extreme heat
Extreme Precipitation	5.85	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	18.0
AQ-DPM	78.0
Drinking Water	22.7
Lead Risk Housing	14.1
Pesticides	0.00
Toxic Releases	31.5
Traffic	86.8
Effect Indicators	—
CleanUp Sites	50.3
Groundwater	89.9
Haz Waste Facilities/Generators	56.7
Impaired Water Bodies	23.9
Solid Waste	52.9

Sensitive Population	—
Asthma	26.4
Cardio-vascular	32.0
Low Birth Weights	72.5
Socioeconomic Factor Indicators	—
Education	3.52
Housing	12.8
Linguistic	41.4
Poverty	19.6
Unemployment	0.91

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	82.08648787
Employed	99.84601566
Median HI	76.27357885
Education	—
Bachelor's or higher	85.98742461
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—
Auto Access	49.51879892
Active commuting	82.24047222
Social	—

English Speaking	84.8
Foreign-born	41.0
Outdoor Workers	94.9
Climate Change Adaptive Capacity	—
Impervious Surface Cover	18.3
Traffic Density	85.6
Traffic Access	87.4
Other Indices	—
Hardship	1.4
Other Decision Support	—
2016 Voting	74.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	26.0

Healthy Places Index Score for Project Location (b)	92.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Acreage adjusted to match site.
Operations: Vehicle Data	Trip generation rate adjusted to match project-specific traffic analysis. Note that this analysis considers that the R&D site is 50% occupied.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.6	annual days of extreme heat
Extreme Precipitation	5.85	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	18.0
AQ-DPM	78.0
Drinking Water	22.7
Lead Risk Housing	14.1
Pesticides	0.00
Toxic Releases	31.5
Traffic	86.8
Effect Indicators	—
CleanUp Sites	50.3
Groundwater	89.9

Haz Waste Facilities/Generators	56.7
Impaired Water Bodies	23.9
Solid Waste	52.9
Sensitive Population	—
Asthma	26.4
Cardio-vascular	32.0
Low Birth Weights	72.5
Socioeconomic Factor Indicators	—
Education	3.52
Housing	12.8
Linguistic	41.4
Poverty	19.6
Unemployment	0.91

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	82.08648787
Employed	99.84601566
Median HI	76.27357885
Education	—
Bachelor's or higher	85.98742461
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—
Auto Access	49.51879892
Active commuting	82.24047222

Social	—
2-parent households	11.3820095
Voting	83.7033235
Neighborhood	—
Alcohol availability	35.81419222
Park access	81.35506224
Retail density	94.43089953
Supermarket access	85.52547158
Tree canopy	74.23328628
Housing	—
Homeownership	20.45425382
Housing habitability	66.32875658
Low-inc homeowner severe housing cost burden	55.85782112
Low-inc renter severe housing cost burden	87.65558835
Uncrowded housing	60.05389452
Health Outcomes	—
Insured adults	84.28076479
Arthritis	93.0
Asthma ER Admissions	72.2
High Blood Pressure	87.1
Cancer (excluding skin)	60.5
Asthma	72.9
Coronary Heart Disease	95.4
Chronic Obstructive Pulmonary Disease	94.6
Diagnosed Diabetes	94.1
Life Expectancy at Birth	92.0
Cognitively Disabled	28.0
Physically Disabled	71.5

Heart Attack ER Admissions	53.0
Mental Health Not Good	82.3
Chronic Kidney Disease	90.3
Obesity	75.0
Pedestrian Injuries	53.9
Physical Health Not Good	93.9
Stroke	93.8
Health Risk Behaviors	—
Binge Drinking	24.0
Current Smoker	84.4
No Leisure Time for Physical Activity	88.8
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	97.3
Elderly	77.9
English Speaking	84.8
Foreign-born	41.0
Outdoor Workers	94.9
Climate Change Adaptive Capacity	—
Impervious Surface Cover	18.3
Traffic Density	85.6
Traffic Access	87.4
Other Indices	—
Hardship	1.4
Other Decision Support	—
2016 Voting	74.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	26.0
Healthy Places Index Score for Project Location (b)	92.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Condo land use acreage adjusted to match site plan. Landscaped area set to match open space plan.
Operations: Vehicle Data	Trip generation rate updated per project-specific traffic report.
Operations: Water and Waste Water	Parking lot water use set to 0
Construction: Construction Phases	Construction phasing provided.
Construction: Off-Road Equipment	Construction equipment provided.
Construction: Trips and VMT	Number of workers provided. Vendor/haul trips left as defaults.
Operations: Hearths	RFI notes units would be all-electric.
