NOTICE OF PREPARATION
of a Draft Environmental Impact Report, Notice of Public Scoping Meeting

Project Title: County Administration Center Redevelopment Project

Project Proponent: County of Sonoma

Project Location: Existing County Administration Center (refer to Figure 1 and Figure 2), Santa Rosa, CA

Environmental Impact Report: The Sonoma County Permit and Resource Management Department (Permit Sonoma) is preparing an Environmental Impact Report (EIR) for the redevelopment of a portion of the County's Administration Center, or CAC. The County will be the lead agency under the California Environmental Quality Act (CEQA) for the project. This Notice of Preparation (NOP) describes the proposed project that will be analyzed in the EIR and identifies areas of probable environmental effects of the project.

Agencies and interested members of the public are invited to provide input on the scope of the environmental analysis. If you are a responsible or trustee agency, we need to know the views of your agency as to the scope and content of the environmental information which is relevant to your agency's statutory responsibilities in connection with the proposed project. Due to the time limits mandated by state law, your response must be sent at the earliest possible date, but no later than 30 days after the receipt of this notice.

Written Comments: Please submit written comments within 30 days of the date of this notice to any of the below by 5:00 p.m. on February 10, 2025:

- Email: futureCGC@sonoma-county.org
- Regular Mail: Sonoma Public Infrastructure, Attn: Warren Sattler, 400 Aviation Boulevard, Suite 100, Santa Rosa, California 95403

Public Scoping Meeting: The County will hold a scoping meeting to provide an opportunity for agency staff and interested members of the public to submit comments, either written or verbal, on the scope of the environmental issues to be addressed in the EIR. The scoping meeting will be held on ***January 7, 2025*** from ***6:30 p.m. to 8:30 p.m***. via Zoom (https://sonomacounty.zoom.us/j/93942585146?pwd=7Ik0DauAY0yR09CMnStQgLUbPrZypU.1. Webinar ID: 939 4258 5146, Passcode: 665633 669 444 9171. Note the Zoom link will allow viewing only; public comments can be made in person during the scoping meeting). Written comments regarding relevant issues may be submitted at the meeting and during the public comment meeting. The scoping presentation will be available to view after January 10, 2025 at:

- https://sonomacounty.ca.gov/administrative-support-and-fiscal-services/sonoma-public-infrastructure/divisions/facilities-development-and-management/what-we-do/planning-group/county-government-center

Project Background: The current Sonoma County Administration Center was designed in the 1950s. Since then, the County government has physically grown, requiring the County to lease off-campus commercial office space. Due to the growing size of the County government, the needs of the community, and the rising cost of maintaining the entire County's property portfolio of aging facilities and leased buildings, the County decided it was time to evaluate the potential redesign of the County Administration Center as an opportunity reduce operating and other expenses. Furthermore, Program 4c in the County's current Housing Element identifies the CAC as an area that could accommodate future housing that would be developed consistent with a governmental purpose of the County in order to maintain an inventory of sites to meet its Regional Housing Needs Allocation (RHNA).

Project Location: The proposed project involves a portion of the site known as the existing County Administration Center, or CAC site, in the City of Santa Rosa in Sonoma County. The project site is bounded by Bicentennial Way to the north, Administration Drive to the south, Mendocino Avenue to the east, and State Highway 101 to the west. The site is in an urban area, has been previously graded and developed, and is surrounded by roads, the State Courthouse (currently under construction), office buildings, an apartment complex, and residential neighborhoods.

Proposed Project: The County proposes to replace portions of the CAC to include one office building, a single-story structure to house the Emergency Coordination Center (ECC), covered surface parking with a solar microgrid, and up to 1,000 residential units. The project would involve the construction of a 300,000[1] square foot office building, including a 4,500 gross square foot Board of Supervisors chamber. The office building would collectively house up to approximately 1,300 full-time employees. The project would accommodate up to 115 additional employees compared to existing conditions. The building would be no more than seven stories.

An additional single-story structure would house the 7,000 to 13,000 gross square foot Emergency Coordination Center (ECC), of which up to 5,000 gross square feet would be dedicated to emergency operations, while the remainder would function as conference rooms during non-emergencies. During emergencies, the entire building would function to respond to disasters. Walls between conference rooms would be foldable to allow the building to operate as a single space during emergencies. Figure 3 shows the proposed office site.

The project would also include up to 1,000 residential units (with up to 700 affordable residential units) within multiple four- or five-story buildings with residences on top of a garage podium. The project would expect to integrate up to 20,000 square feet of ground floor retail/commercial space along Mendocino Ave. Figure 4 and Figure 5 illustrate the proposed residential site.

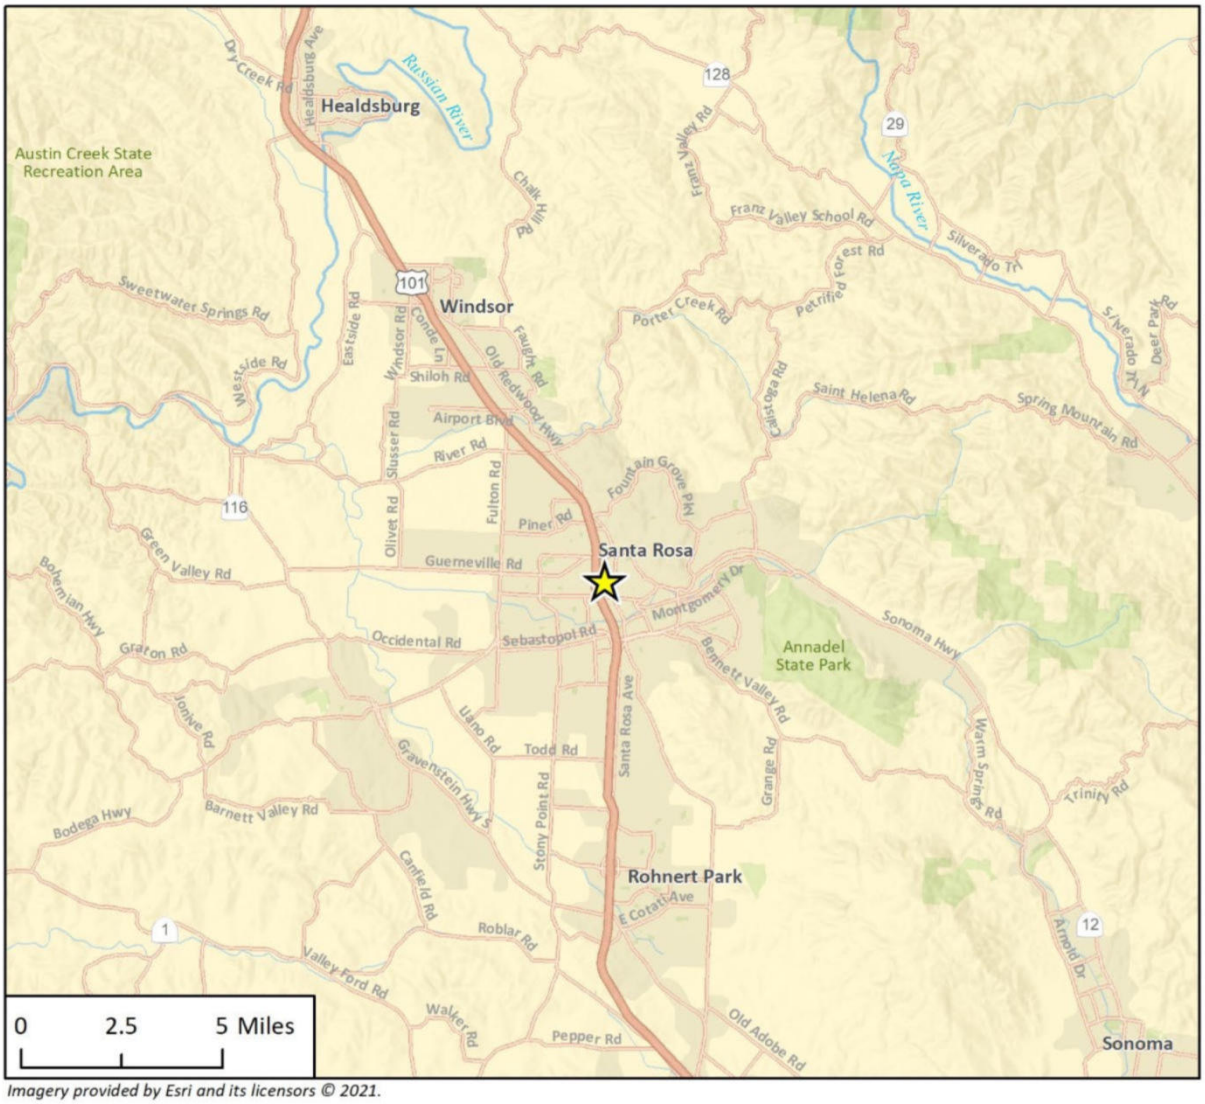
Project Objectives: The County has identified the following objectives for the project:

- Design and construct a new County Administration Center to use County resources more efficiently;
- Provide housing consistent with Program 4c in the County's adopted Housing Element, which would provide housing near jobs, transit, services, and schools;
- Implement goals, objectives, and policies of the Sonoma County General Plan focused on growth in established Urban Service Areas;
- Modernize and improve workplace accessibility, seismic safety, and efficiency

[1] The project description includes a range to allow for future design flexibility. The largest proposed area will be analyzed in this EIR to provide the most conservative analysis.

Project Alternatives: The EIR will evaluate a reasonable range of project alternatives that, consistent with CEQA, meet most of the project objectives and reduce or avoid potential environmental effects, including a required No Project Alternative.

Potential Environmental Effect Areas: The EIR will describe the reasonably foreseeable and potentially significant adverse effects of the proposed project (both direct and indirect). The EIR also will evaluate the cumulative impacts of the project when considered in conjunction with other related past, present, and reasonably foreseeable future projects. The County anticipates that the proposed project could result in potentially significant environmental impacts in the following topic areas, which will be further evaluated in the EIR.



- Aesthetics/Visual
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire
- Cumulative Effects
- Growth Inducing Effects
- Wildfire
- Cumulative Effects
- Growth Inducing Effects

- When the Draft EIR is published, it will be available for review at the County's PRMD offices located at 2550 Ventura Avenue, Santa Rosa, California 95493, Sonoma Public Infrastructure offices located at 400 Aviation Boulevard, Suite 100, Santa Rosa, California 95403 and online at:

  https://sonomacounty.ca.gov/administrative-support-and-fiscal-services/sonoma-public-infrastructure/divisions/facilities-development-and-management/what-we-do/planning-group/county-government-center.

If you have questions regarding this NOP or the scoping meeting, please contact Warren Sattler at (707) 565-3915 or via email at futureCGC@sonoma-county.org.

RECIRCULATED NOTICE OF PREPARATION
of a Draft Environmental Impact Report, Notice of Public Scoping Meeting

Project Title: County Administration Center Redevelopment Project

Project Proponent: County of Sonoma

Project Location: Existing County Administration Center (refer to Figure 1 and Figure 2)

Notice to Reviewers: This Recirculated Notice of Preparation (NOP) has been prepared to include additional project components and information that was not included in the original NOP that was published with the State Clearinghouse on December 24, 2024. Following publication of the original NOP, changes were made to the proposed project that consist of expanding the site boundary, demolishing additional existing buildings, modifying the design and location of the proposed building and increasing the maximum number of residential units. Please refer to the updated Project Description herein. This Recirculated NOP will supersede the original NOP; therefore, the County is requesting that individuals and agencies provide comment letters and/or input on the Recirculated NOP.

Environmental Impact Report: The Sonoma County Permit and Resource Management Department (Permit Sonoma) is preparing an Environmental Impact Report (EIR) for the redevelopment of a portion of the County's Administration Center, or CAC. The County will be the lead agency under the California Environmental Quality Act (CEQA) for the project. This Recirculated NOP describes the proposed project that will be analyzed in the EIR and identifies areas of probable environmental effects of the project.

Agencies and interested members of the public are invited to provide input on the scope of the environmental analysis. If you are a responsible or trustee agency, we need to know the views of your agency as to the scope and content of the environmental information which is relevant to your agency's statutory responsibilities in connection with the proposed project. Due to the time limits mandated by state law, your response must be sent at the earliest possible date, but no later than 30 days after the receipt of this notice.

Written Comments:
Please submit written comments to any of the below by 5:00 p.m. on July 10, 2025

- Email: futureCGC@sonoma-county.org
- Regular Mail: Permit Sonoma, Attn: Warren Sattler, 400 Aviation Boulevard, Suite 100, Santa Rosa, California 95403

Public Scoping Meeting:
The County will hold a scoping meeting to provide an opportunity for agency staff and interested members of the public to submit comments, either written or verbal, on the scope of the environmental issues to be addressed in the EIR. The scoping meeting will be held at Permit Sonoma Hearing Room 2550 Ventura Ave., Santa Rosa, on June 24, 2025 from 6:00 p.m. to 8:00 p.m.

The scoping meeting can also be attended virtual via Zoom at this link:

https://sonomacounty.zoom.us/j/88982360122?pwd=TVFrdEb1ZzbPNETZLyJZ3xmQDfnSns.1

Note the Zoom link will allow viewing only; public comments can be made in person during the scoping meeting. Written comments regarding relevant issues may be submitted at the meeting and during the public comment meeting. The scoping presentation will be available to view after June 24, 2025 on: https://sonomacounty.ca.gov/General-Services/Facilities-Development-and-Management/Groups/Planning-Group/Projects/County-Government-Center/.

Project Background: The current Sonoma County Administration Center was designed in the 1950s. Since then, the County government has physically grown, requiring the County to lease off-campus commercial office space. Due to the growing size of the County government, the needs of the community, and the rising cost of maintaining the entire County's property portfolio of aging facilities and leased buildings, the County decided it was time to evaluate the potential redesign of the County Administration Center as an opportunity to reduce operating and other expenses. Furthermore, Program 4c in the County's current Housing Element identifies the CAC as an area that could accommodate future housing that would be developed consistent with a governmental purpose of the County in order to maintain an inventory of sites to meet its Regional Housing Needs Allocation (RHNA).

Project Location: The proposed project involves a portion of the site known as the existing County Administration Center, or CAC site, in the City of Santa Rosa in Sonoma County. The project site is bounded by Bicentennial Way to the north, Administration Drive to the south, Mendocino Avenue to the east, and State Highway 101 to the west. The site is in an urban area, has been previously graded and developed, and is surrounded by roads, the State Courthouse (currently under construction), office buildings, an apartment complex, and residential neighborhoods.

Proposed Project: The County proposes to replace portions of the CAC to include one office building, a single-story structure to house the Emergency Coordination Center (ECC), covered surface parking with a solar microgrid, and up to 1,500 residential units. The project would involve the construction of a 250,000 square foot office building, including a 3,500 gross square foot Board of Supervisors chamber. The office building would collectively house up to approximately 1,200 full-time employees. The project would accommodate approximately the same number of employees currently accommodated in buildings that would be replaced with a slight increase in capacity of approximately 18 additional employees. The building would be no more than six stories.

An additional single-story structure would house the 7,000 to 13,000 gross square foot Emergency Coordination Center (ECC), of which up to 5,000 gross square feet would be dedicated to emergency operations, while the remainder would function as conference rooms during non-emergencies. During emergencies, the entire building would function to respond to disasters. Walls between conference rooms would be foldable to allow the building to operate as a single space during emergencies. Figure 3 shows the proposed office site.

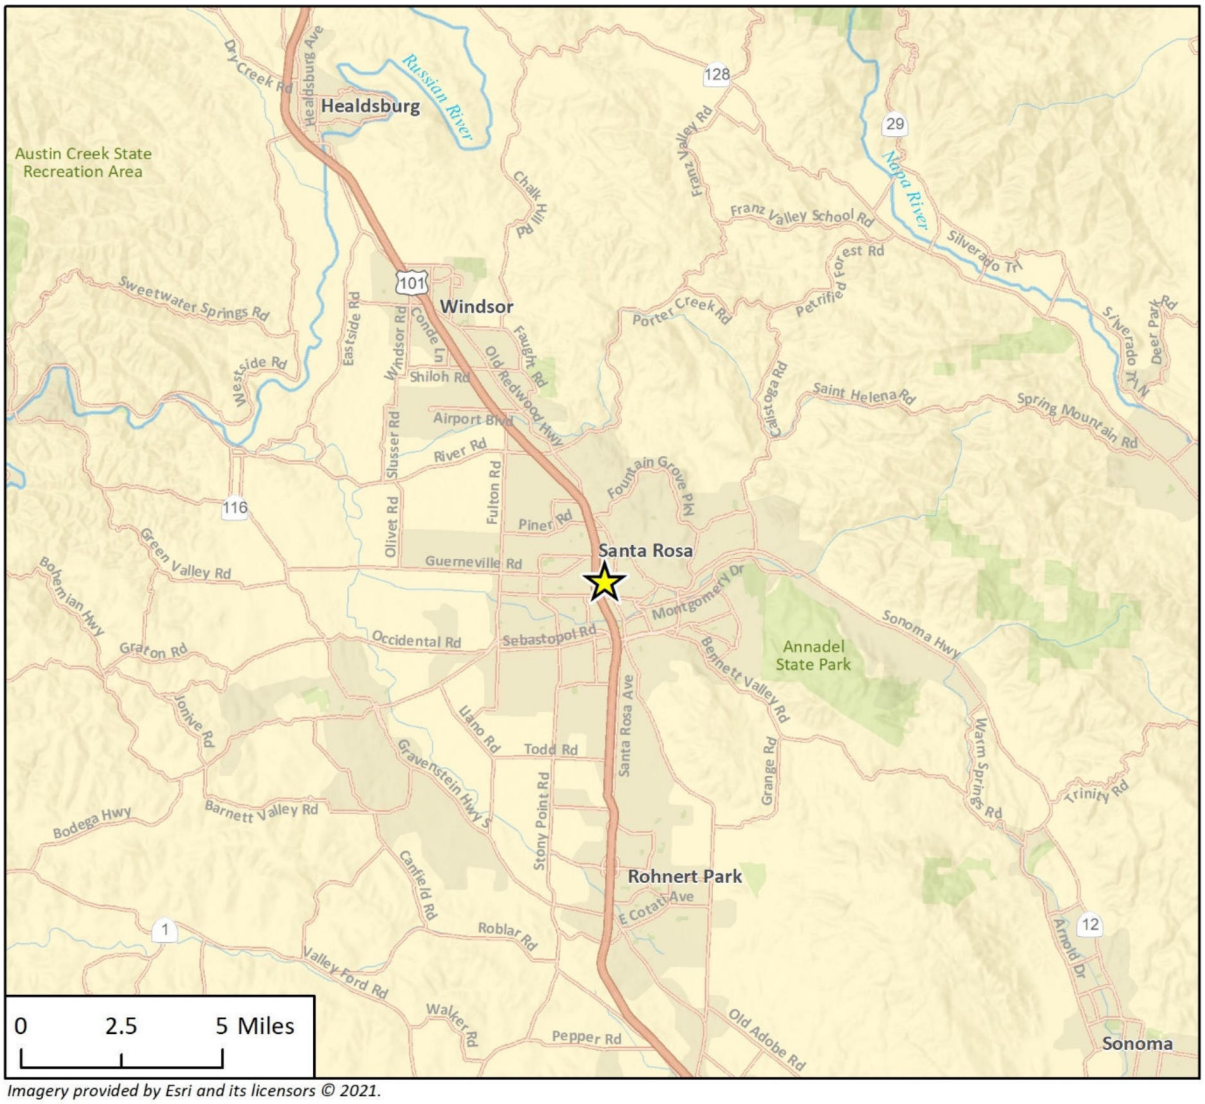
The project would also include up to 1,500 residential units (with approximately 70 percent affordable) within multiple buildings with a maximum height of seven stories in an area of approximately 13.8 acres. The residential component of the project has not been designed or conceptualized beyond the location and setting a maximum number of units and maximum building height. However, it is possible that one or more of the residential buildings would also provide commercial/retail space on the ground floor. Figure 4 illustrates the proposed residential site.

Project Objectives: The County has identified the following objectives for the project:

- Design and construct a new County Administration Center to use County resources more efficiently;
- Provide housing opportunities for County employees;
- Provide housing opportunities for a variety of income levels, with an emphasis on affordable housing opportunities for low and very low-income households;

- Provide housing consistent with Program 4c in the County's adopted Housing Element;
- Provide housing near jobs, transit, services, schools, and community-serving retail and/or commercial establishments;
- Provide access to public transportation and SMART from County Administration Center;
- Implement goals, objectives, and policies of the Sonoma County General Plan focused on growth in established Urban Service Areas;
- Modernize and improve workplace accessibility, seismic safety, and efficiency

Project Alternatives: The EIR will evaluate a reasonable range of project alternatives that, consistent with CEQA, meet most of the project objectives and reduce or avoid any significant environmental effects of the project, including a required No Project Alternative.



Potential Environmental Effect Areas: The EIR will describe the reasonably foreseeable and potentially significant adverse effects of the proposed project (both direct and indirect). The EIR also will evaluate the cumulative impacts of the project when considered in conjunction with other related past, present, and reasonably foreseeable future projects. The County anticipates that the proposed project could result in potentially significant environmental impacts in the following topic areas, which will be further evaluated in the EIR.

- Aesthetics/Visual
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire
- Cumulative Effects
- Growth Inducing Effects
- Wildfire
- Cumulative Effects
- Growth Inducing Effects

When the Draft EIR is published, it will be available for review at the County's PRMD offices located at 2550 Ventura Avenue, Santa Rosa, California 95493 and online at: https://sonomacounty.ca.gov/General-Services/Facilities-Development-and-Management/Groups/Planning-Group/Projects/County-Government-Center/.

If you have questions regarding this NOP or the scoping meeting, please contact Warren Sattler at (707) 565-3915 or via email at futureCGC@sonoma-county.org.

Re: County Administration Center Redevelopment Project
Scoping Comments on Recirculated Notice of Preparation of Environmental Impact Report

Dear Mr. Sattler:

First, below, are general comments about the "Recirculated" Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the proposed County Administration Center Redevelopment Project, followed by scoping comments on selected specific issues to be covered in the EIR, in addition to all of the CEQA issues that are required to be studied.

Inadequate Notice of Preparation

The within NOP again lacks necessary information regarding the project and its probable environmental impacts.

This NOP fails to provide an adequate project description, including that the within EIR will apparently consist of two separate parts (according to the consultant's statements at the scoping meeting on June 24, 2025) – (1) a "project" level EIR evaluation for the no taller than six story, up to 250,000 square foot office building and a single story 7,000 to 13,000 square foot Emergency Operations Center, along with associated surface level parking covered with a solar microgrid (with no indication of the number of parking spaces), and (2) a "program" level EIR evaluation of up to 1500 residential units.[1] The NOP does not indicate whether the residential portion of this project will have any parking, indicate the height of the residential or retail/commercial buildings that will be evaluated, or indicate that there will be any retail and/or commercial uses as part of the residential portion of the project. However, at the scoping meeting, PowerPoint slide 7 (attached hereto) indicated that the residential portion of this project would including buildings of "up to 7 stories including parking garages," and that there would also be "up to 20,000 square feet of retail commercial" uses as part of this residential portion of the project.

The recirculated NOP contains a project description that does not provide complete and accurate information about this project, making it impossible for any interested parties to adequately submit scoping comments, rendering this recirculated NOP defective on its face.

[1] The alleged program portion of the EIR will consist of more than just 1500 residential units, but that's another defect.

Compounding this problem, at a public meeting on Tuesday, July 8, 2025, the Board of Supervisors was presented with renderings and a model of both the "project" portion of this EIR (the County offices – although it is notable that there was no Emergency Operations Center apparent as a part of those renderings/model), and of the possible layout, configuration, types and building heights of the proposed residential/retail/commercial buildings that are part of the "program" portion of this EIR; the PowerPoint slides from that meeting are attached hereto for your ready reference. The consultant then further discussed in that informational hearing the two or three story housing across from the creek, the denser housing along Mendocino (up to 8 stories) with potential retail, and housing and/or mixed use projects in the middle areas – although it was stated that all of the proposals for the residential area of this project were very conceptual, it is a significant problem that any renderings/model exists at all for this alleged program portion of this project, no matter how conceptual.

One of two things is true: (1) either this rendering/model of the proposed residential/retail/commercial portion of this project is reasonably accurate, which would mean that this portion of the EIR is not a program EIR, but is instead a project EIR; or (2) that this rendering/model is purely pie-in-the-sky, in which case it is imperative that it no way affect the EIR's evaluation of the environment impacts of the proposed residential/retail/commercial portion of this project during their programmatic evaluation of same. In fact, though, the release of these renderings/model is very problematic, as it is highly likely that said renderings/model will indeed affect what the EIR evaluates.

Not only is there no clear project description in the current NOP as required by law, but I have to ask – what IS the plan for each portion of this project? Does anyone know? The Emergency Operations Center appears to have vanished from the project portion of the EIR, and the footprints and massing of the residential/retail/commercial of the alleged program portion of the EIR certainly appear to have been developed.

Finally, this NOP does not even attempt to describe the project's probable environmental impacts. Instead, all this NOP does is provide a list of issue areas that will be analyzed in the EIR without making any effort to identify what the probable environmental effects in any of those areas might be. It is not enough to list issue areas that the EIR will allegedly evaluate, the NOP must include a description in some detail of the probable environmental impacts of the project, how they will be evaluated and how strategies will be identified to avoid or significantly reduce the severity of those impacts.

These failures make a meaningful response to the NOP impossible, and the NOP must be redone and rereleased with an adequate and accurate project description.

Notwithstanding the defects of the NOP, following is a non-exclusive list of issues that should be evaluated in detail by the EIR.

Traffic/Transportation/Circulation Impacts

The EIR must adequately analyze and evaluate the traffic/transportation/circulation impacts of both parts of the proposed project, as they will be both negative and significant. Although the current County Administration Center has existing uses and therefore existing impacts, the new parking locations identified in this recirculated NOP will change circulation both internally and externally on Santa Rosa streets, and those impacts must be studied and mitigated. Further, the addition of up to 1500 units of housing both at the intersection of Administration Drive/Mendocino Avenue/Chanate Road, and

extending down County Administration Drive, apparently with both parking garages and up to 20,000 square feet of retail/commercial uses, will significantly increase traffic on Mendocino Avenue, Steele Lane, and other Santa Rosa roads and change circulation, resulting in significant negative impacts.

In addition, this EIR must evaluate and propose mitigation measures to ameliorate the accident rates for all street intersections that will be utilized by employees/residents/guests/patrons of both parts of this project, including but not limited to the accident rates for the intersection at Administration Center Drive/Mendocino Avenue/Chanate Road, the intersection at Russell Avenue/Mendocino Avenue, the intersection at Ventura Avenue/Bicentennial Way/Kaiser parking lot access, and the intersection at County Center Drive/Steele Lane/Illinois Avenue, among others which will be affected. Further, accident rates for all road segments that will be used by employees/patrons/guests/residents of the totality of the proposed project must be evaluated and mitigation measures proposed.

These intersections and road segments already experience numerous accidents, and the addition of new uses on the project site will have a significant, and completely foreseeable, negative impact.

It will not be adequate for the EIR to just evaluate the traffic on roads within the County Administration Center, or those immediately contiguous to the County Administration Center – all roads within a much larger area will be negatively affected by the proposed project, causing significant impacts, and must be evaluated.

The contract between Sonoma County and the EIR consultant states that the consultant shall prepare a separate circulation analysis report and a separate level of service (LOS) report which will be provided to the County as part of this process (although it is alleged that these reports will not be used by the within EIR). I will expect these two contractually required reports to be prepared and to be made public simultaneous with release of any Draft EIR herein. Although allegedly not part of the EIR, both of these documents will be required for the EIR to adequately identify and evaluate evacuation capacity, safety and viability for the totality of this project, and will also provide critical information that must be used by this EIR to adequately evaluate the negative impacts of traffic/transportation/circulation caused by this proposed project.

Further, the City of Santa Rosa states the following in their very recently adopted General Plan 2050 (adopted June, 2025):

> The City requires that developers of future projects submit traffic memos or studies, depending on the size of a proposed project. These documents cover existing and proposed vehicle miles traveled, existing and proposed LOS, existing and proposed trip generation, existing and proposed parking capacity, as well as a discussion of on-site and nearby bicycle and pedestrian conditions, access to public transit, and general site transportation safety. These documents are critical for the City to understand how all modes of transportation may interact with one another on and near a proposed development site, ensuring that improvements are tangible for all road users.[2]

[2] Santa Rosa's General Plan 2050 further states: "Traffic analyses for projects focus on VMT; however, the City continues to consider LOS for some projects. While LOS analyses tend to focus on vehicle traffic, these analyses can lead to benefits for public and active transportation modes. For instance, LOS analyses evaluate the degree to which traffic moves through intersections citywide. In cases where LOS at an intersection is poor, and traffic is moving slowly or must wait for several cycles, there are negative impacts felt by public transportation systems

Even though this project is a County project, it is wholly within the City of Santa Rosa, and this EIR must therefore perform the above required evaluations.

The EIR cannot mitigate its way out of traffic/transportation and circulation impacts by claiming that individuals will not have a personal vehicle on site. As is obvious in the proposed project, there will be very large surface level parking lot(s) as part of the project, and the NOP does not identify in any way how parking will be provided for the 1500 possible residential units – but we know those units will need parking, making it clear that the proposed project expects a large number of personal vehicles as part of the totality of this proposed project.[3]

Although this recirculated NOP has eliminated all detail about the proposed residential development, and failed to mention the apparent retail/commercial component at all, it is probable that both residential units and retail/commercial will require access from multiple locations, including directly onto Mendocino Avenue, which would have significant negative impacts on traffic, transportation and circulation related to Mendocino Avenue and other associated streets. Unless this project states explicitly that there will be no access to residential units, or retail/commercial, to and from Mendocino Avenue, this EIR must adequately evaluate the impacts of said Mendocino Avenue access, and propose mitigations to all said impacts.

Emergency Evacuations

Both parts of this project, and the totality of this proposed project, will have negative, significant and foreseeable impacts on future necessary emergency evacuations for existing residents, employees, visitors, etc., as well as for any new residents, employees, visitors, etc., of the entire northeastern part of Santa Rosa.

This proposed project will negatively affect the capacity, safety and viability of existing evacuation routes not just for the proposed project, but for the entire Chanate Road and Mendocino Avenue corridors, including the Fountaingrove area, and all of northeast Santa Rosa (all of which was forced to evacuate in the middle of the night during the Tubbs fire); therefore, this EIR must adequately assess and evaluate the effects of this project, including the residential, and retail/commercial components, on existing evacuation route capacity, safety and viability during no notice wildfires and other emergencies, including earthquakes. It is without question that the addition of up to 1500 units of housing (or more) at the corner of Administration Drive and Mendocino Avenue and along County Administration Drive will negatively impact future necessary evacuations for existing residents, as during the Tubbs fire the intersection of Chanate Road/Mendocino Avenue/Administration Drive was gridlocked with cars trying to evacuate from the east on Chanate Road, with other vehicles attempting to evacuate from the north on Mendocino Avenue.

---

wherein a bus may also need to wait several cycles through a traffic signal. Further, having adequate performance at intersections can also ensure that traffic signals do not become higher stress environments for bicycles and pedestrians and that adequate time is allotted for non-vehicle intersection crossings."

[3] If the EIR does attempt this purported "mitigation," the EIR will be complicated by then having to state how all of the employees/residents/patrons/guests without personal vehicles on site will be evacuated in the event of an emergency.

This EIR must utilize all available information available about local fire and other hazards (such as earthquake and flooding), including but not limited to the recently changed California earthquake maps, the adopted CalFire local responsibility area (LRA) fire hazard severity zone maps which identify the project location as being in a moderate fire hazard severity zone, Sonoma County Community Wildfire Protection Plan's hazard and risk maps[4], which also identify the project location as being in moderate fire hazard and moderate fire risk (and across Mendocino Avenue is high fire hazard/risk) and First Street Foundation's risk maps which identify the project site as being in moderate and increasing fire risk (they also have maps for other hazards, including flooding and high heat)[5], and must evaluate the fire and other dangers that impact this proposed project.

This EIR must also identify and evaluate the capacity of all roads in northeast Santa Rosa that will be used for future evacuations in the event of a no notice emergency, and must further identify and evaluate the safety and viability of evacuation routes that will be used in these future necessary evacuations. This evaluation must include the addition of additional evacuation traffic as a result of projects currently under construction (including but not limited to redevelopment of both the Journey's End site and the Fountaingrove Inn site), as well as all projects planned in the future (including but not limited to future development of the old Sutter Hospital site on Chanate Road) in the area that will be affected by this proposed project.

To set the scene for this required evacuation evaluation, although the County Administration Center is not in Santa Rosa's identified Wildland Urban Interface area (WUI), it is literally right across the street from said WUI. For this EIR to presume "safety" from a future wildfire because the project site is located outside of Santa Rosa's WUI would render the EIR defective, since, as recent history has shown, both Journey's End (just up the street from this site) and Coffey Park (both also outside of Santa Rosa's WUI) burned to the ground during the Tubbs fire, with lives lost, making it clear that wildfire is an obvious danger for both parts and the totality of this project.

Finally, the EIR must evaluate how this entire proposed project will be evacuated in a no notice emergency, including evacuation of all employees/constituents/patrons/visitors/guests and residents, including those who do not have private vehicles on site. It is neither reasonable nor responsible to assume as mitigation that Santa Rosa or County buses will be available to assist with evacuation of the site, as historically this has not been true.

Flooding

During two heavy rains storms this past winter, Paulin Creek along Administration Drive was at and over its banks, and that has been true during significant rain events for years. Additionally, Santa Rosa just released FEMA flooding maps showing Special Flood Hazard Areas, including within this project site[6] – while those FEMA maps are in progress, clearly this EIR must evaluate the impacts of possible future flooding on each part and on the totality of the proposed project. A screen capture of the FEMA flooding map of the project location is attached hereto.

Reliance Only on Projects with Funding and Actual Plans

This EIR may not rely on alleged "plans" which are not plans in reality for mitigation of any impacts of the totality of this proposed project, including but not limited to the 2021 Moving Forward 2050 Sonoma County Comprehensive Transportation Plan. As just one example, the 2021 Moving Forward 2050 Sonoma County Comprehensive Transportation Plan is not a plan at all; it is just a list of possible projects that might happen at some point in the nebulous future. To the best of my knowledge, none of the speculative projects contained within this example "plan," some of which could affect the within proposed project, have funding or actual plans that could be relied on as mitigation by this EIR.

For mitigation, this EIR must rely only on projects which have assurance of funding in the near future, and where the specifics of the projects are refined enough that effects of said project can be adequately evaluated.

Landscaping

While putting a microgrid over the large proposed surface level parking satisfies a certain set of climate change goals, it appears that there could be a significant delay between installation of the surface level parking lot(s) and the installation of any microgrid, meaning that in the intervening years the lack of any shade on surface level parking lot(s) will result in significant negative impacts such as radiated heat and air quality[7], which will affect not just the proposed project site, but also surrounding areas and the City of Santa Rosa in general.

This EIR must evaluate the effects of any period without landscaping in surface level parking lots on both parts and the totality of this proposed project on the employees/patrons/guests and residents, as well as on surrounding uses and the City of Santa Rosa.

Light Pollution

This Draft EIR must evaluate the impacts of increased light pollution caused by this proposed project. Currently most of the buildings on site are one story, and any night lighting effects on the environment, including on surrounding residential neighborhoods, are limited.

Given the fact that the new multistory Courthouse building built contiguous to this proposed project site has been fully lit at night, although unoccupied, which night lighting is highly visible in surrounding residential neighborhoods, it is clear that this proposed project will have significant light pollution impacts, which must be adequately evaluated and mitigated.

Maximum Amount of Housing that Could be Permitted

Although the recirculated NOP's Project Description asserts that the "limit" will be "up to 1,500 residential units" as one part of the proposed project, the County and/or Santa Rosa are also likely to be subject to multiple state streamlining housing laws before the building permits are issued for the

[7] First Street Foundation indicates that the general area of this project is in "extreme" danger from bad air quality, and in "moderate" danger from heat.

residential portion of this proposed project. Those state laws will likely allow more units to be built on this property than those "planned" for in this NOP.

Therefore, this EIR must evaluate the impacts from the maximum possible number of residential units that state laws would permit on this site, including but not limited to allowed density bonus units and residential units streamlined by recent State legislation and/or as a result of Sonoma County or Santa Rosa not meeting their RHNA at any point in time prior to issuance of building permits for the totality of this project.

Santa Rosa School Closures

The Santa Rosa City School Board has recently made decisions about closure of multiple schools in Santa Rosa, including closure of the Steele Lane Elementary School, which is the closest school to the project location.

This EIR must evaluate the impacts of school closures, including possible changes in transportation/circulation requirements to get children living on this project site to and from remaining open schools.

These are my current scoping comments for the County Administration Center Redevelopment Project EIR.

Please notify me of the release of the DEIR for the totality of the proposed project or any portion thereof, and I further request that the County notify me of all notices, hearings, staff reports, briefings, meetings and all other events related to any portion of this proposed project.

Of course, please do not hesitate to contact me if you have any questions or would like additional information.

Very truly yours,

Sonia E. Taylor

Project Description

The project would include the construction of up to 1,500 residential units within buildings up to 7 stories including parking garages. The residential buildings could include up to 20,000 square feet of retail/commercial in one or more residential buildings.

Six existing buildings would be demolished and one new office building (250,000 square feet) would house up to approximately 1,200 full-time employees.

Proposed covered surface parking would include approximately 1,050 parking stalls and a solar microgrid.

Features including common open space and pedestrian walkways would be incorporated across the site for seamless integration between the office and residential sites.

A new single-story 7,000 to 13,000 square foot building would house the Emergency Coordination Center (ECC).

Executive Summary

Project Trip Generation

At full buildout, the proposed project is estimated to generate the following vehicle trips:

- 625 net new weekday morning (AM) peak hour trips (154 inbound and 471 outbound)
- 632 net new weekday afternoon (PM) peak hour trips (396 inbound and 236 outbound)
- 7,267 net new daily trips

The project trips were distributed and assigned to the transportation network and added to the Existing and Cumulative (Year 2040) baseline traffic volumes to determine the "Plus Project" conditions. More detailed information is presented in **Chapter 4 – Project Travel Characteristics**.

Vehicle Miles Traveled (VMT) Analysis

The project's vehicle-miles traveled (VMT) per capita was estimated using the latest version of the Sonoma County Transportation and Climate Authorities Travel Demand Model (SCTCA Model). The CEQA Transportation VMT screening criteria used in the OPR (now the Governor's Office of Land Use and Climate Innovation) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (2018) was used in addition to thresholds of significance to screen project components from further VMT study (i.e., create a presumption of a less-than-significant impact).

The proposed retail/commercial component of the project consists of approximately 20,000 square feet integrated within a mixed-use campus that includes residential and office uses. This retail space is intended to serve on-site residents, employees, and nearby uses. As such, a portion of retail trips would be internal to the project or diverted from existing nearby trips rather than representing entirely new vehicle travel. In addition, retail uses of this size typically serve local demand and generate relatively short trip lengths. Based on these characteristics, the retail component would not result in a substantial or measurable increase in VMT, and impacts would be ***less than significan***t.

The proposed office component of the project represents a consolidation of existing County uses at the project site. The project would increase on-site employment from approximately 1,182 to 1,200 employees, resulting in a net increase of approximately 18 employees (approximately 1.5 percent). This incremental change would result in a negligible increase in vehicle trips relative to existing conditions and would not meaningfully alter travel patterns or VMT generation. In addition, the incremental office trips represent a very small share of total project-generated travel and do not materially influence overall project VMT performance. Therefore, the office component would not result in a substantial or measurable increase in VMT, and impacts would be ***less than significant***.

For the residential component, the project's Total Home-Based VMT per resident for the baseline Plus Project scenario would be 8.42 VMT per resident, while the Bay Area regional average Total Home-Based VMT per resident is 11.34 VMT per resident. The project's Total Home-Based VMT is lower than the threshold value of 9.64 VMT per resident, which is 15% below the Bay Area regional average of 11.34 VMT per resident. Therefore, the residential portion of the Project results in a ***less than significant impact*****,** and mitigation measures are not required. More detailed analysis is presented in **Chapter 5**.

Other Transportation Analysis

The analysis of the project's CEQA impacts to the multimodal transportations system also included a review of the pedestrian, bicycle, public transit systems, safety, and emergency vehicle access based on the goals and policies in the County of Sonoma General Plan. Impacts for these topic areas are determined to be less than significant, and no mitigation measures are required. This analysis is presented in **Chapter 5**. A non-CEQA operations analysis of the project is presented in **Appendix A**.

1. Introduction

Study Purpose

The purpose of this transportation impact assessment (TIA) is to identify potentially significant adverse impacts of the proposed project on the surrounding transportation system and to recommend mitigation measures, if needed. The analysis contained herein is intended to provide a comprehensive disclosure of transportation related effects, identify potential CEQA impacts and mitigation measures where applicable, and inform County decision makers regarding the project's consistency with adopted transportation policies and safety objectives.

Project Description

The New Sonoma County Government Center project would redevelop the existing County campus with a more efficient and consolidated arrangement of public facilities. Five aging County office buildings totaling approximately 185,500 square feet that currently house functions such as Permit Sonoma, Human Services, Administration, Fiscal services, and the Law Library and Registrar of Voters would be replaced with a new consolidated office building of approximately 220,000 to 250,000 square feet and a 7,000 to 13,000 square foot Emergency Coordination Center (ECC).[1] This consolidation would reduce the number of office buildings on the site while accommodating a similar amount of office space in a more modern and efficient format. The new office building would slightly increase the number of employees from 1,182 to 1,200 and reduce the number of parking stalls from 1,417 to 1,050 stalls. The project would also introduce new uses including approximately 20,000 square feet of retail/commercial space and up to 1,500 residential units across approximately 25 residential buildings. Together, these changes would create a more compact and mixed-use civic campus that makes more efficient use of the existing site.

[1] The proposed ECC would function intermittently as conference or meeting space for County employees already working on-site and as a specialized facility used during emergency events rather than as a regularly occupied, high-activity use. ECC staffing would primarily consist of existing County employees and personnel already assigned to or present at the Government Center campus. Therefore, trips associated with ECC operations are considered internal to the project and are inherently reflected in the office land use trip generation estimates presented in Table 1.

Project Site Plan

2. Analysis Methodology

CEQA Transportation Analysis Methods and Impact Criteria

CEQA Transportation section impacts are identified based on four CEQA Guidelines Appendix G checklist questions. These checklist questions include:

Would the Project:

(a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?
(b) Conflict or be inconsistent with CEQA Guidelines §15064.3, subdivision (b)?
(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
(d) Result in inadequate emergency access?

Checklist question (b) is the formal implementation of Senate Bill 743 (Steinberg, 2013), which installed vehicle-miles traveled (VMT) as the CEQA Transportation section analysis metric, and removed congestion-based metrics such as intersection Level of Service (LOS) from CEQA Transportation section consideration.

The detailed CEQA Transportation Section impact criteria are presented below.

CEQA Vehicle Miles Traveled (VMT) Analysis

CEQA Guidelines §15064.3(a) notes that, for the purposes of §15064.3 and CEQA Transportation analysis, VMT "refers to the amount and distance of automobile travel attributable to a Project." The Governor's Office of Planning and Research (OPR, now the Governor's Office of Land Use and Climate Innovation) interpreted this statement to mean automobile and light-duty truck travel (e.g., pickup trucks). The VMT generated by the Project is also evaluated in the Air Quality, Greenhouse Gas (GHG) Emissions, and Energy sections of the CEQA document for the Project.

A project can be screened from a formal VMT analysis if certain criteria are met that would signify that a project would be presumed to result in a less-than-significant CEQA transportation section impact with respect to VMT. OPR's *Technical Advisory on Evaluating Transportation Impacts* (December 2018) provides the following guidance for determining whether a project's impact on VMT could be presumed to be less than significant if the project meets at least one of the following criteria:

- Small Projects: Projects that generate or attract few trips (estimated by OPR to be fewer than 110 trips per day).
- Map-Based Screening for Residential and Office Projects: Projects located in areas with low VMT per the SCTA model and related thresholds of significance, and that incorporate similar features.
- Near Transit Station: Project within one-half mile of an existing major transit stop or an existing stop along a high-quality transit corridor (per the Public Resources Code). Additional project design criteria must be met in order to meet screening under this criteria.
- Affordable Housing: Projects with 100 percent affordable housing in infill locations

- Local-Serving Retail: small retail projects (estimated by OPR to be less than 50,000 square feet) as presumed to be local-serving and thus screened from analysis.

Screening requires project-specific substantial evidence to support the OPR thresholds identified above.

To supplement the model-based analysis, a map-based review of VMT efficiency was conducted using the Fehr & Peers VMTIndex tool. The VMTIndex is derived from regional travel demand model outputs and represents the ratio of modeled VMT at a specific location to the regional average VMT. The VMTIndex reflects existing travel behavior associated with a location, influenced by land use patterns, proximity of housing to employment and services, and access to multimodal transportation options. Areas with lower VMTIndex values are generally associated with more compact, mixed-use development patterns and improved accessibility, which tend to reduce vehicle travel distances. In this analysis, the VMTIndex is used as supporting evidence to characterize the relative VMT efficiency of the project location.

OPR's *Technical Advisory on Evaluating Transportation Impacts in CEQA* (April 2018) advises that lead agencies can evaluate each component of a mixed-use project independently and apply the significance threshold for each project type included. This is the approach followed by other North Bay agencies, including the City of Santa Rosa. Alternatively, a lead agency may consider only the project's dominant use. Based on local precedents, each component of the project was analyzed independently.

Threshold for residential project: A significant VMT impact would occur if the project results in total VMT per resident exceeding a threshold of 15 percent below the regional average VMT per resident.

OPR has applied the term "region" as the MPO jurisdictional boundary or, in cases in which no MPO boundary exists, the County boundary. Since Sonoma County is part of the Nine-County Bay Area MPO (also known as MTC), the regional average is interpreted as VMT for the Nine-County Bay Area MPO. Furthermore, this approach was previously used for the County's 2023 Housing Element Update; at that time, SCTCA transportation planning staff indicated that the two-model approach was conservative for Project VMT estimation purposes. Additionally, the Technical Advisory notes that VMT "above the region-based threshold would undermine the VMT containment needed to achieve regional targets under SB 375," which sets greenhouse gas emission reduction targets at the MPO level. Therefore, comparing the Project's VMT against the Nine-County Bay Area average is appropriate.

The MTC model was used to derive regional VMT figures for baseline conditions. Under baseline conditions, the average residential VMT per resident in the nine-county Bay Area is 11.34. The applicable significance threshold is 15 percent below this value, or 9.64 residential VMT per resident.

CEQA Vehicle System Impacts

The Project would create a significant impact related to the vehicle system if any of the following criteria are met:

- The Project design would not provide or would eliminate vehicle facilities to connect to the area circulation system; or
- The Project would introduce incompatible uses to the roadway system; or
- The Project design would create hazardous conditions for vehicle drivers.

CEQA Pedestrian System Impacts

The Project would create a significant impact related to the pedestrian system if any of the following criteria are met:

- The Project disrupts pedestrian facilities; or
- The Project interferes with or precludes planned pedestrian facilities; or
- The Project creates inconsistencies with adopted pedestrian system plans, guidelines, policies, or standards.

CEQA Bicycle System Impacts

The Project would create a significant impact related to the bicycle system if any of the following criteria are met:

- The Project would not provide or would eliminate bicycle facilities that connect to the area circulation system; or
- The Project conflicts with existing or planned bicycle facilities; or
- The Project design would create hazardous conditions for bicyclists.

CEQA Public Transit System Impacts

The Project would create a significant impact related to public transit service if any of the following criteria are met:

- The Project generates a substantial increase in public transit riders that cannot be adequately served by existing public transit services; or
- The Project establishes transit facilities or equipment that results in sight distance deficiency or vehicle conflict point; or
- The Project disrupts or conflicts with existing or planned public transit facilities.

CEQA Emergency Access Impacts

The Project would create a significant impact related to emergency access if the Project or element of the Project meet the following criteria:

- Conflicts with an existing or planned emergency response facility or route; or
- Provides inadequate access to accommodate emergency vehicles.

Mitigation and Improvement Measure Terminology

Throughout this report, recommendations are made to address potential deficiencies in the transportation system resulting from the Project. *Mitigation Measures* are improvement measures that are required to be implemented as they pertain to mitigating a significant CEQA impact related to the thresholds. *Recommendations* are improvement measures that are not required to be implemented under CEQA, as they do not pertain to CEQA impact analyses on the transportation system. Fehr & Peers provides these non-binding recommendations for improvements to enhance multimodal circulation, mobility, and access. These recommendations may be incorporated into Conditions of Approval for the Project.

Non-CEQA Intersection Operations

An intersection operations analysis for non-CEQA purposes is presented in **Appendix A**.

3. Environmental Setting

This chapter describes the existing multimodal transportation system in the study area, including the street system, public transit service, and bicycle and pedestrian facilities.

Roadway Network

This section describes the existing regional highway system and the local street circulation system in and around the project site. The regional highway system and roadway classifications described in this section are illustrated in **Figure 2** below.

Regional Facilities

U.S. Highway 101 (U.S. 101) is a major north-south freeway that extends north from Marin, San Francisco and other counties to the south as a six to eight lane divided facility through Sonoma Counties, passing west of the project site before continuing to the North Coast counties of Mendocino, Humboldt, and Del Norte. Access to the project site from U.S. Highway 101 is provided via the interchange at Bicentennial Way north of the project site, as well as access points along Steele Lane located just south of the project site.

Because U.S. 101 serves as the primary regional north south corridor through Santa Rosa, traffic entering and exiting the freeway at interchange locations such as Bicentennial Way can create localized congestion and merging conflicts during peak travel periods. The Santa Rosa General Plan 2050[2] identifies freeway interchanges and major arterial connections as key locations where traffic volumes and turning movements can affect roadway operations and safety.

State Route 12 (SR 12) is a major east-west arterial roadway that provides regional connectivity through Santa Rosa, linking the project site to Sebastopol to the west and Sonoma Valley to the east. In relation to the project site, Highway 12 is located south of the site and functions as an important regional route within the surrounding roadway network. Through the City of Santa Rosa, Highway 12 consists of two travel lanes in each direction. The project site does not have direct access to Highway 12 and instead connects to the route via local and arterial roadways within Santa Rosa. State Route 12 is designated as an Urban Principal Arterial in the Sonoma County General Plan 2020.

As a principal arterial serving regional traffic, State Route 12 carries higher traffic volumes and operating speeds than local streets. The corridor and its intersections can therefore experience heavy traffic, particularly during peak travel periods.

[2] Santa Rosa General Plan 2050 https://www.srcity.org/DocumentCenter/View/46649/Santa-Rosa-General-Plan-2050---Full-Document---June-2025

Local Facilities

While the project site is regionally accessible via U.S. Highway 101, it is locally accessible via local roadways within the City of Santa Rosa, including Administration Drive, Professional Drive, Ventura Avenue, County Center Drive, and Mendocino Avenue.

Administration Drive is a local roadway that runs east-west along the southern edge of the project site. It begins at Mendocino Avenue to the east and continues west to County Center Drive, where it then turns north and runs parallel to US 101 before curving east and terminating at Ventura Avenue.

Professional Drive is a short local roadway located south of the project site that connects to County Center Drive at both its southern and northern ends.

Ventura Avenue is a local roadway that runs north-south through the project site. It connects to Bicentennial Way to the north, which provides access to US 101, and extends south through the project site.

County Center Drive is a local roadway that runs north-south, touching the southwestern corner of the project site at its intersection with Administration Drive and extending south to Steele Lane.

Mendocino Avenue is an arterial that runs north-south connecting to downtown Santa Rosa in the south and becoming Old Redwood Highway at Fountaingrove Parkway and Mendocino Overcrossing in the north. Mendocino Avenue runs along the eastern extents of the project site.

Fiscal Drive is a local roadway that runs east-west and is located entirely within the project site. It begins and ends at Administration Drive and provides internal access within the project site.

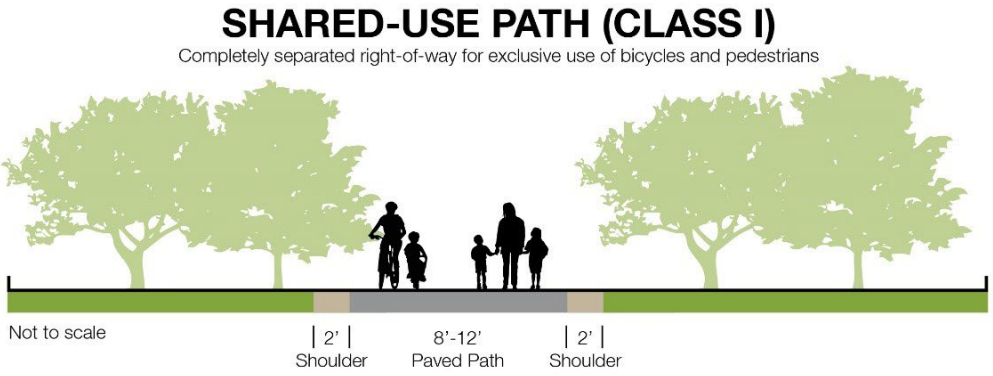
Paulin Drive is a local roadway that runs north-south through the project site and continues west just north of the project site.

Steele Lane is an arterial that runs east-west with access to U.S. 101 and areas west of U.S. 101. Steele Lane is connected to the project site to the north via County Center Drive and Mendocino Avenue.

Bicentennial Way is an arterial that runs east-west with access to U.S. 101 and areas west of U.S. 101. Bicentennial Way is connected to the project site to the south via Ventura Avenue and Mendocino Avenue.

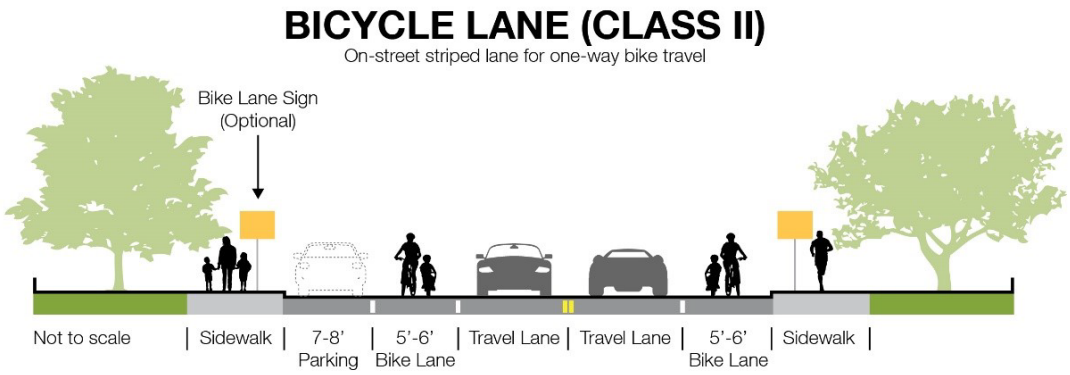
Motor vehicle travel on the local roadways in and around the project site are influenced by their connections to nearby arterial corridors. Administration Drive, Ventura Avenue, Fiscal Drive, and Paulin Drive provide access through the project site, but connect to Mendocino Avenue or Bicentennial Way, either directly or via Administration Drive. These arterial corridors carry higher traffic volumes and speeds and provide access to U.S. Highway 101. As a result, intersections where local streets connect to these corridors can experience increased turning movements and congestion during peak travel periods.

FIGURE 2



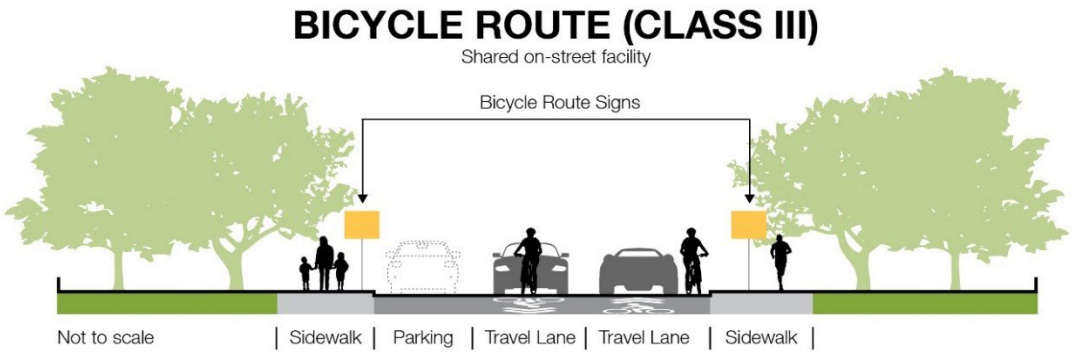
Existing Roadway Network

Fehr & Peers

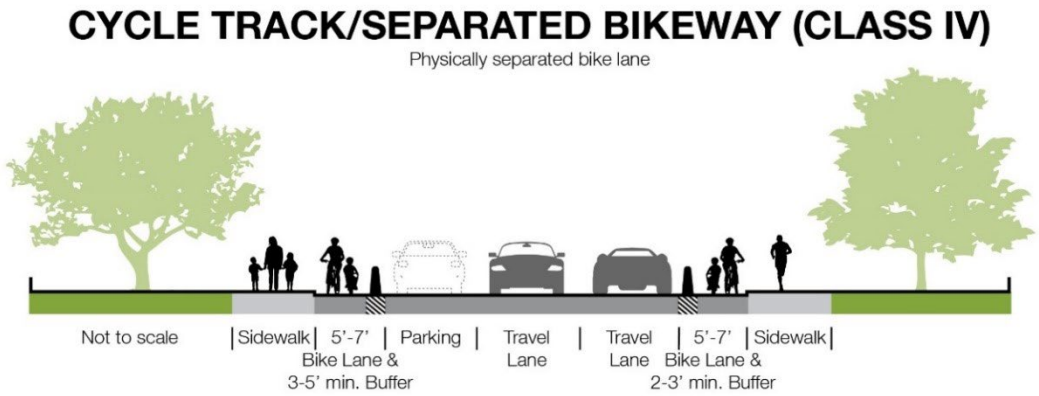


Bicycle Network

Bikeway planning and design in California typically relies on guidelines and design standards established by California Department of Transportation (Caltrans) in the Highway Design Manual (Chapter 1000: Bikeway Planning and Design). Caltrans provides four distinct types of bikeway facilities, as described below and shown in the accompanying figures.



- *Class I Bikeways (Shared-Use Path)* provide a completely separate right-of-way and are designated for the exclusive use of bicycles and pedestrians, with vehicle and pedestrian cross-flow minimized. In general, bike paths serve corridors where on-street facilities are not feasible or where sufficient right-of-way exists to allow them to be constructed.



- *Class II Bikeways (Bicycle Lanes)* are dedicated lanes for bicyclists generally adjacent to the outer vehicle travel lanes. These lanes have special lane markings, pavement legends, and signage. Bicycle lanes are typically five (5) feet wide. Adjacent vehicle parking and vehicle/pedestrian cross-flow are permitted.

- *Class III Bikeways (Bicycle Route)* are designated by signs or pavement markings for shared use with pedestrians or motor vehicles but have no separated bike right-of-way or lane striping. Bike routes serve either to: a) provide a connection to other bicycle facilities where dedicated facilities are infeasible, or b) designate preferred routes through high-demand corridors.

- *Class IV Bikeways (cycle tracks or "separated" bikeways)* provide a right-of-way designated exclusively for bicycle travel within a roadway and are protected from other vehicle traffic by physical barriers, including, but not limited to, grade separation, flexible posts, inflexible vertical barriers such as raised curbs, or parked cars.

The existing bicycle network in the vicinity of the project site is illustrated in Figure 6. Existing bicycle facilities include Class II bike lanes along Mendocino Avenue, which forms the eastern border of the project site, as well as Class II bike lanes along most of County Center Drive, located just south of the project site and connected to Administration Drive at the southern boundary.

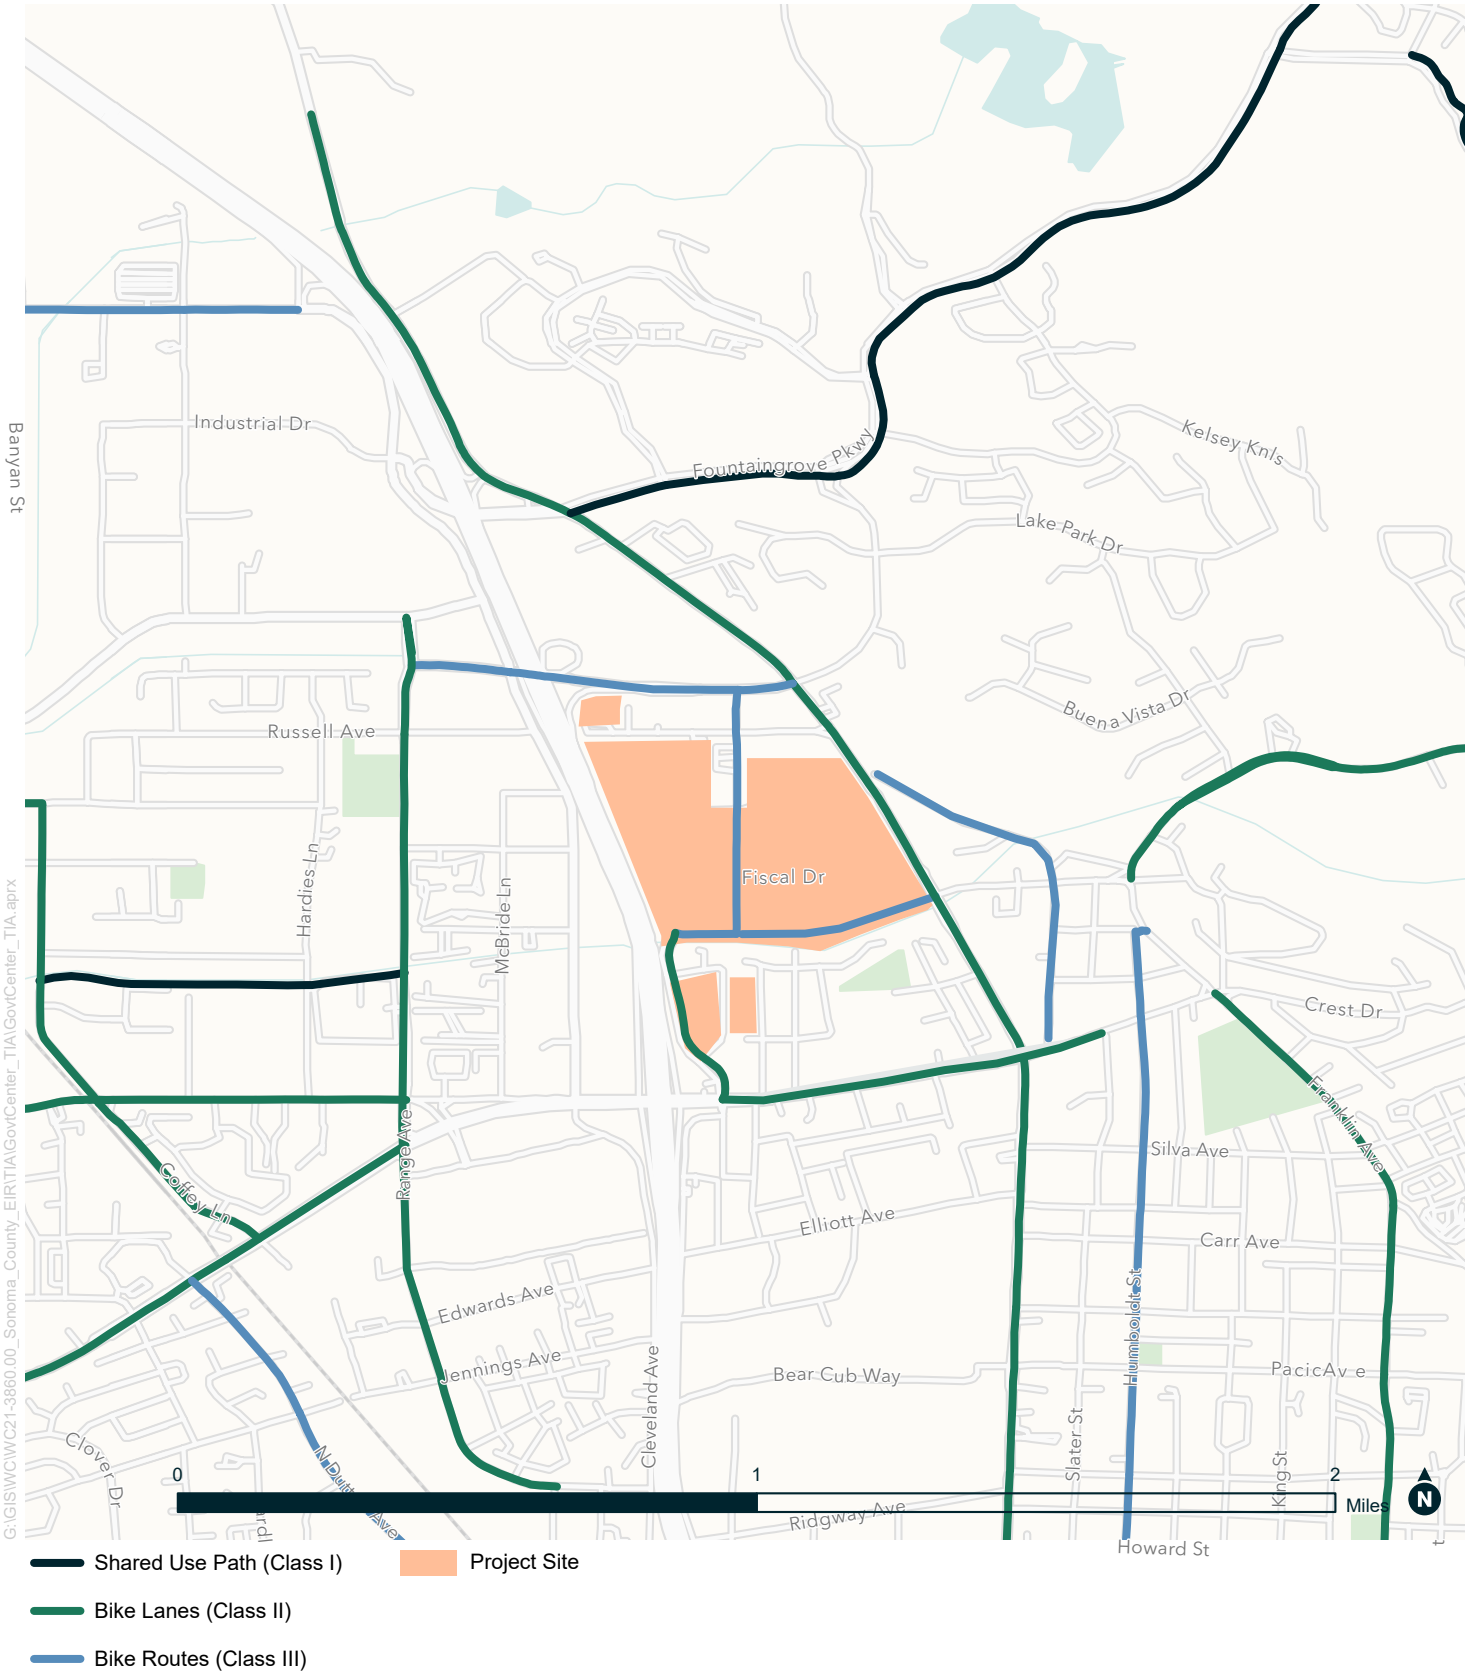


FIGURE 3

Existing Bicycle Network

Fehr & Peers

Pedestrian Network

Pedestrian facilities in the project area include sidewalks, crosswalks, curb ramps, and signals. The City of Santa Rosa, within which the project is located, generally requires sidewalks along public roadways, which should meet current standards, such as those described in *Design Information Bulletin 94 Complete Streets: Contextual Design Guidance* Caltrans' (Caltrans 2024), further referred to as "DIB-94". There are sidewalks throughout much of the project site, though several sidewalk gaps remain.

Land use patterns in and around the project site are characterized by government offices, institutional facilities, surface parking areas, and low-rise development, which shape pedestrian activity and travel patterns. The project site is bordered by Administration Drive to the west and south and Mendocino Avenue to the east, with Mendocino Avenue functioning as a wide, high-volume arterial that can create a physical and perceptual barrier to pedestrian movement. Surrounding uses include court facilities, municipal buildings, commercial development along Mendocino Avenue, and nearby residential areas, generating pedestrian trips by employees, visitors, and residents. While pedestrian facilities are present in portions of the project site, the placement of buildings, surface parking, and roadway configurations contributes to gaps and indirect connections within the pedestrian network, which can affect the comfort and continuity of walking routes between nearby destinations.

Based on the *City of Santa Rosa Active Transportation Plan: Figure 6 – Existing Sidewalks*, pedestrian infrastructure within the project site varies by roadway. Administration Drive includes a mix of complete sidewalk segments and incomplete segments where sidewalks are provided on only one side of the street. Mendocino Avenue, which forms the eastern edge of the project site, includes sidewalks on both sides of the roadway. Ventura Avenue, Fiscal Drive, and Paulin Drive include a range of sidewalk conditions within the project site, including complete sidewalks, sidewalks on only one side of the roadway, and segments with no sidewalks. Marked pedestrian crossings are present throughout the project site, with a total of 12 marked crosswalks identified based on the *City of Santa Rosa Active Transportation Plan: Figure 7 – Existing Crosswalks*.

Pedestrian access to areas west of U.S. Highway 101 is provided via the Steele Lane undercrossing to the south and the Bicentennial Way overcrossing to the north.

Transit Network

Transit providers serving the project site include local and intercity buses. The existing transit network within the project site is shown in **Figure 4.**

SMART

Sonoma-Marin Area Rail Transit (SMART) operates a regional commuter rail system serving Sonoma and Marin Counties. The current rail corridor includes 14 stations between the Town of Windsor and the Larkspur Ferry Terminal, with future extensions planned north of the existing terminus to Healdsburg and Cloverdale. The project site is served by the Santa Rosa North station, which is located approximately one mile away, on the west side of U.S. Highway 101. The SMART pathway runs south alongside the rail line between the Santa Rosa North station and the Santa Rosa Downtown station. At this time, a continuous path does not extend north from the Santa Rosa North station to the Sonoma County Airport station, although funding has been secured to construct this missing segment. Weekday rail service currently operates with headways ranging from approximately 30 to 90 minutes, with more frequent service during peak commute periods and in peak travel directions. SMART operations are funded by a dedicated one-quarter cent sales tax that is authorized through 2029.

SMART service is planned to expand as part of the Marin-Sonoma Coordinated Transit Service Plan. On weekdays, additional trips will be added during midday periods and later in the evening to extend the overall service span. Weekend service will also be increased with more frequent trips throughout the day to reduce headways. While final schedules are still being refined, these service enhancements are anticipated to begin in early 2026.

Santa Rosa CityBus

Santa Rosa CityBus is a local, public bus service serving commuter and community routes in Santa Rosa. CityBus currently offers service for two routes near the project site[3].

Route 1 Mendocino Avenue provides transit service at multiple locations surrounding the project site, including stops on Bicentennial Way at Ventura and Kaiser Hospital north of the project site, Mendocino Avenue at Russell Avenue northeast of the project site, Mendocino Avenue at Administration Drive east of the project site, and Mendocino Avenue at Schurman Drive southeast of the project site.

Route 10 North City Connector provides transit service at a stop on Bicentennial Way at Ventura and Kaiser Hospital, located north of the project site.

Sonoma County Transit

Sonoma County Transit (SCT) is the primary inter-city transit provider in Sonoma County. SCT provides local transit services in the City of Santa Rosa along with services to the City of Petaluma and other areas of Sonoma County. There are six SCT routes that operate in and around the project site: Route 20, Route 30, Route 30x, Route 44, Route 48, and Route 60[4].

[3] https://srcitybus.org/.
[4] https://sctransit.com/maps-schedules/

Route 20 provides transit service south of the project site with stops along Steele Lane. This route serves the Russian River area, Forestville, Sebastopol, and Santa Rosa.

Route 30 provides transit service south of the project site with stops along Steele Lane. This route serves Santa Rosa and Sonoma Valley.

Route 30X provides transit service along Administration Avenue at the southern end of the project site, along Ventura Avenue through the project site, and at stops on Mendocino Avenue just south of the project site. This route serves Santa Rosa and Sonoma Valley.

Route 44 provides transit service along Administration Avenue at the southern end of the project site, along Ventura Avenue through the project site, and at stops on Mendocino Avenue just south of the project site. This route serves Petaluma, Santa Rosa Junior College, Sonoma State University, and other parts of Santa Rosa.

Route 48 provides transit service along Administration Avenue at the southern end of the project site and along Ventura Avenue through the project site. This route serves other parts of Santa Rosa, Rohnert Park, Cotati, and Petaluma.

Route 60 provides transit service along Mendocino Avenue with stops just south of the project site. This route serves Cloverdale, Healdsburg, Windsor, and other parts of Santa Rosa.

Sonoma County Transit is evaluating opportunities to improve bus connections to SMART stations as recommended by MASCOTS. Service changes will go into effect in early 2026.

Most Sonoma County Transit buses are equipped with front mounted bicycle racks that can accommodate up to two bicycles. Bicycle spaces are available on a first come first served basis. If rack space is unavailable, additional bicycles may be permitted on board at the discretion of the bus operator, depending on space and operating conditions.

Golden Gate Transit

Golden Gate Transit GGT serves as the primary provider of long distance regional bus service in Sonoma County. Its routes are primarily oriented toward peak period and peak direction travel, with service connecting Sonoma County to destinations in Marin County and San Francisco. GGT routes that currently serve the project area include Routes 101, 172, and 172X. These routes serve a bus stop located at the intersection of Piner Road and Range Avenue, approximately one mile northwest of the project site. This location represents the second northernmost stop along each of the three routes.

Route 101 operates on both weekdays and weekends with service generally provided on an hourly basis. Route 172 operates during weekday commute periods with buses running approximately every 30 to 60 minutes. Route 172X provides express service, stopping in Santa Rosa and Rohnert Park before continuing south to San Francisco. Unlike Route 172, Route 172X does not include a stop in Petaluma.

The MASCOTS plan proposes modifications to GGT service in Sonoma County, including increased service to San Francisco and the potential elimination of routes with lower ridership. These service changes are anticipated to take effect in early 2026. Under the plan, GGT Route 101 would be discontinued between Novato and Santa Rosa, as well as in the communities between these locations, and replaced by expanded SMART rail service. GGT Route 172X would be discontinued,

while Route 172 would continue to serve Santa Rosa with increased frequencies and additional trips, maintaining the total combined service hours currently provided by Routes 172 and 172X.

Other Transit Services

Santa Rosa CityBus and Sonoma County Transit also provide paratransit services within their respective service areas for riders who are unable to use the fixed-route services.

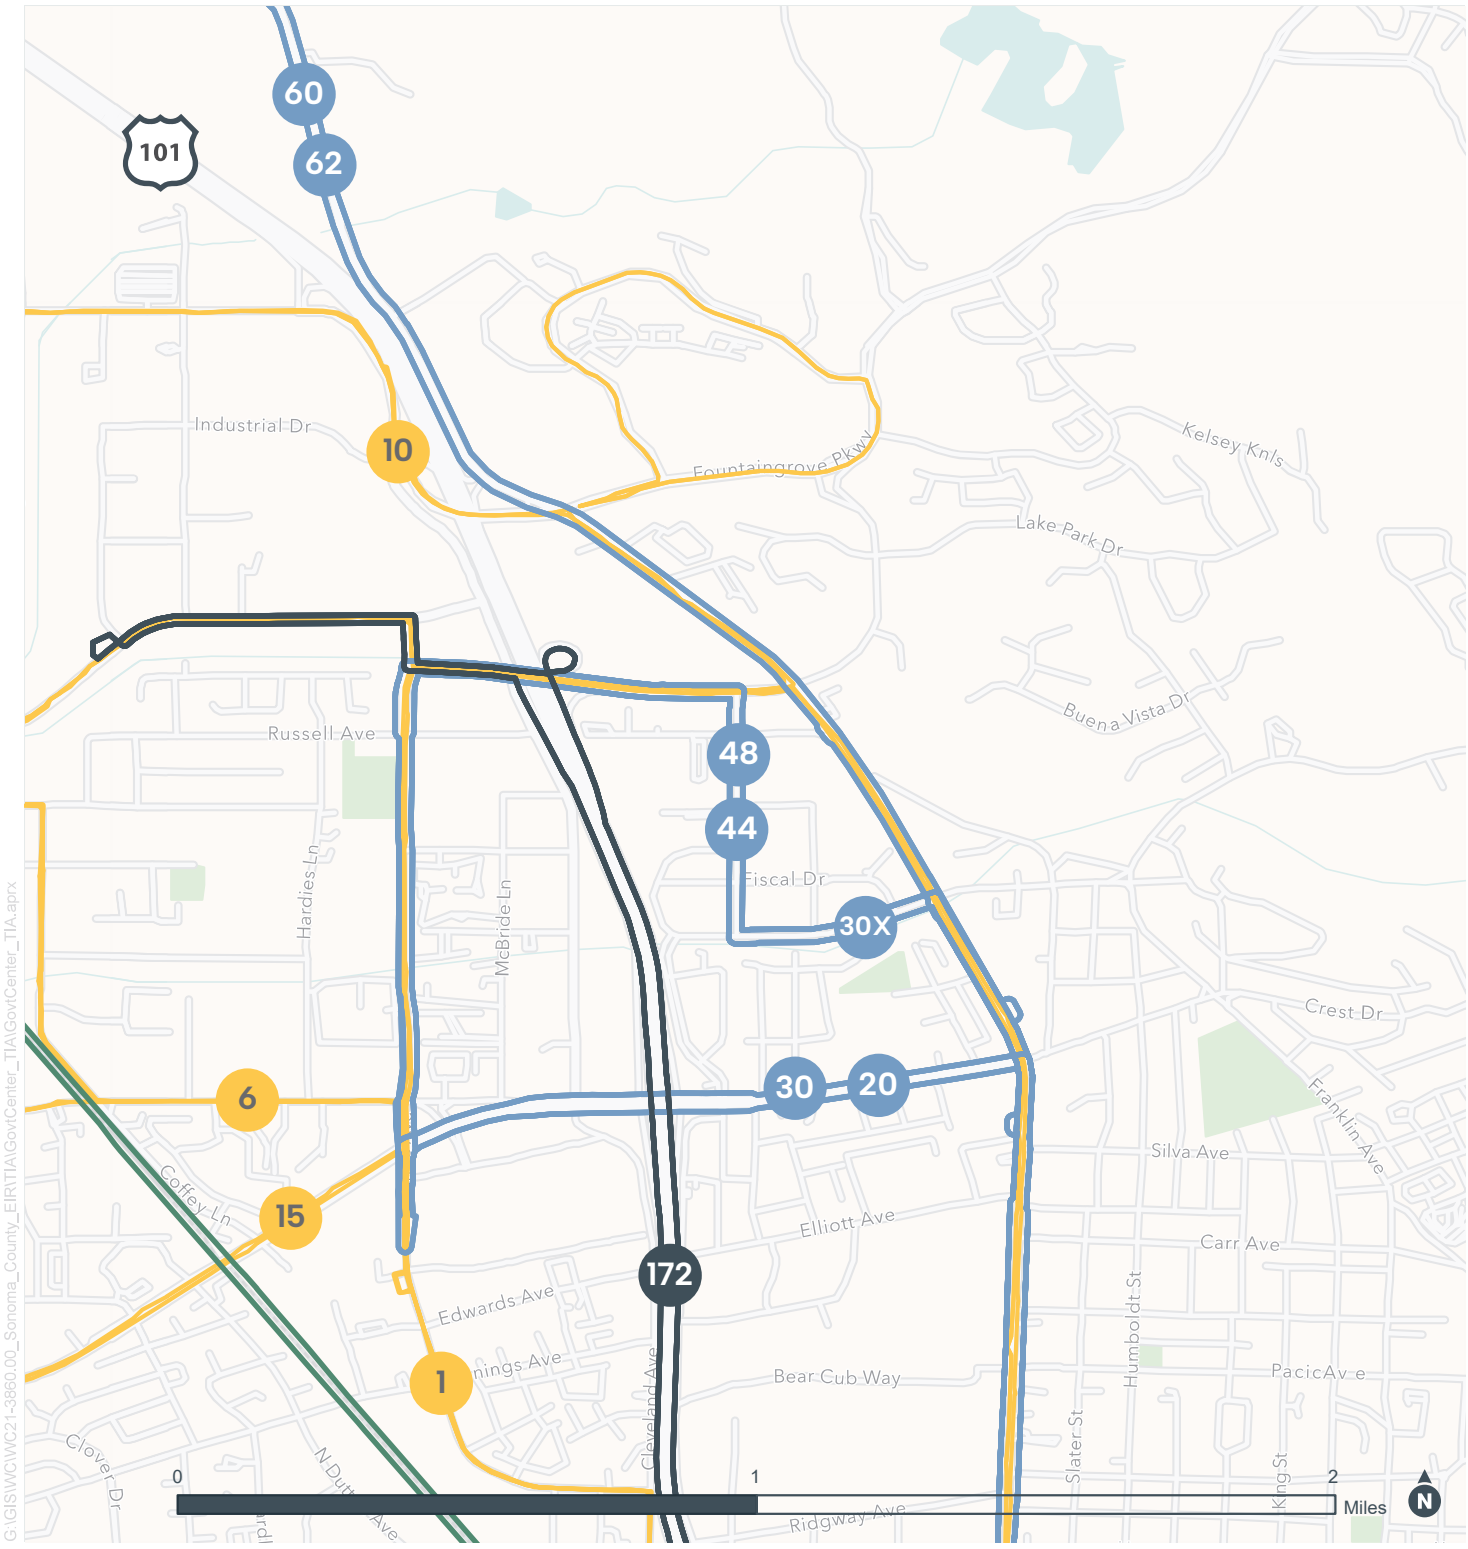

FIGURE 4

Existing Transit Network

Fehr & Peers

Rail and Goods Movement

This section briefly describes truck and freight travel networks in and around the project area.

Truck Routes

Trucks and other heavy vehicles frequently travel in the vicinity of the project site, particularly on the regional roadway network serving Santa Rosa and surrounding communities. U.S. Highway 101, located west of the project site, is part of the California Truck Network, which identifies state highways where commercial vehicles are permitted to operate in accordance with Caltrans size and weight regulations. Mendocino Avenue, located immediately east of the project site, functions as a major north south arterial and is used by local freight, service, and delivery vehicles accessing nearby businesses, government facilities, and institutions. Commercial vehicles also operate on other nearby roadways as needed to support goods movement and local deliveries.

Freight

Freight operations along the Northwestern Pacific Railroad corridor have declined substantially over the past several decades. Service was suspended following severe flood damage that occurred in the late 1990s. More recently, efforts have been made to support the return of freight rail service. In 2021, SMART sought $1.45 million in funding from the California Transportation Commission as part of a $2.9 million freight rail improvement effort under the State Short Line Railroad Improvement Program, which is intended to support investment in smaller freight rail systems. Improvements to rail infrastructure and the resumption of freight service between Sonoma and Marin Counties could reduce the number of freight trucks traveling along U.S. 101.

4. Project Travel Characteristics

This chapter provides an overview of the proposed project trip generation, distribution, and assignment characteristics, allowing for an evaluation of project impacts on the surrounding roadway network. The amount of traffic associated with the project was estimated using a three-step process:

1. **Trip Generation** – The estimated *amount* of vehicle traffic entering/exiting the Project site.
2. **Trip Distribution** – The *direction* trips are projected to approach and depart the Project site.
3. **Trip Assignment** – The Project trips were then *assigned* to specific roadway segments and intersection turning movements based on likely paths of travel.

Trip Generation

A typical method for estimating the number of trips generated by a proposed project is to use trip generation data presented in the Institute of Engineers' *Trip Generation Manual, 11th Edition*. The Trip Generation Manual includes trip generation data for a variety of land-use types. In estimating the trips generated by the proposed project, the office portion of the site was analyzed using Land Use Code 710 (General Office), the residential portion of the project was analyzed using Land Use Code 221 (Low-Rise Multifamily Housing) and the retail/commercial portion of the site was analyzed using Land Use Code 822 (Strip Retail Plaza).

Separate trip generation estimates were prepared for the weekday morning peak hour of adjacent street traffic and weekday evening peak hour of adjacent street traffic. Internal trips within the project site as well as external vehicle trip reductions for the project's walk/bike/transit mode split were calculated using the MainStreet tool created by Fehr & Peers that applies the EPA-approved MXD+ mixed-use trip generation methodology. As a conservative assumption, the external vehicle trip reductions for the project's walk/bike/transit mode splits were not applied. The project trip generation estimates are presented in **Table 1**.

Transportation characteristics associated with the proposed project reflect the consolidation and modernization of existing County government uses at the Government Center site. The project would accommodate up to approximately 1,200 employees compared to approximately 1,182 employees under existing conditions, representing an increase of about 18 employees. While the project would increase building density and introduce residential and retail/commercial uses, it would also reduce the supply of office parking from approximately 1,417 spaces to about 1,050 spaces as the site transitions away from large surface parking areas toward a more compact development pattern that supports additional travel options such as walking, bicycling, and transit.

Overall, the proposed project represents a consolidation of existing County services rather than a substantial increase in employment or activity levels at the site. Because the increase in on-site employment would be minimal and the project primarily replaces existing government office space, the proposed office development is expected to result in a negligible change in overall travel demand. As a result, the project's proposed office component would generate a net zero change in overall trip generation compared to existing conditions.

Table 1. Project Trip Generation

Development Type	ITE Land Use Code	Quantity (Units)	Weekday Trip Generation						
			Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
General Office	710	250,000 sf	1,958	273	37	310	47	248	295
Multifamily Apartments	221	1,500 DU	6,690	143	479	622	365	205	570
Commercial Retail	822	20,000 sf	1,089	43	36	79	63	63	126
Total Raw Trip Generation			**9,737**	**459**	**552**	**1,011**	**475**	**516**	**991**
Reductions									
Internal Capture			-512	-32	-44	-76	-32	-32	-64
Existing Office Building			-1,958	-273	-37	-310	-47	-248	-295
Net Total Trip Generation			7,267	154	471	625	396	236	632

Source: *ITE Trip Generation Manual, 12th Edition;* Fehr & Peers, 2026.

Table 1 shows a summary of the proposed development generating 7,267 weekday daily trips, 625 weekday AM peak hour trips, and 632 weekday PM peak hour trips.

The Emergency Coordination Center (ECC) component of the project was not evaluated as a separate trip-generating land use. The ECC is intended for periodic activation during emergency conditions and does not represent a continuously occupied or independently staffed facility. During activation, ECC users would largely consist of existing County employees and affiliated personnel already captured within the project's employee totals and associated trip generation assumptions. When the ECC is not activated for emergency operations, it may be used as conference or meeting space for County employees already working on-site. In these cases, users are expected to travel between buildings on the campus (e.g., walking from the main government center building), and these movements would not generate new external vehicle trips. Therefore, trips associated with ECC operations are considered internal to the project and are inherently reflected in the office land use trip generation estimates presented in Table 1. No additional trips were added to avoid double counting.

Trip Distribution and Assignment

The trip distribution and trip assignment processes are used to estimate how the trips generated by a project would be distributed across the roadway network. The geographical distribution of trips generated by the project is based on the locations of complementary land uses, the street system serving the project, and existing travel patterns in the area. **Figure 5** presents the resulting trip distribution. Based on the configuration of the roadway network, the project trips were assigned to the roadway system, which is presented in **Figure 6**.

5. CEQA Transportation Assessment

This section discusses potential impacts associated with the proposed project and proposes mitigation measures where necessary.

Project Impact Analysis

Vehicle Miles Traveled

The following subsections outline the CEQA VMT analysis prepared for the Project.

Screening of Retail VMT

As noted in **Section 2**, the adopted VMT analysis methodology retains the option to screen projects (or in a mixed-use project, individual project components) from further analysis (i.e., presume a less-than-significant impact) if a retail project or project component meets the screening criteria in the OPR *Technical Advisory*. The proposed retail/commercial component of the project consists of approximately 20,000 square feet integrated within a mixed-use development that includes residential and office uses. This retail component is intended to primarily serve residents, employees, and visitors to the project site and surrounding area.

Due to its relatively small size and its location within a mixed-use campus, a portion of trips associated with the retail component would be expected to be internal to the project site or diverted from existing nearby trips rather than generating entirely new vehicle travel. In addition, retail uses of this scale typically serve local demand and are associated with shorter trip lengths compared to regional-serving retail uses.

The integration of retail within a compact, mixed-use development also supports opportunities for walking, bicycling, and other non-automobile modes of travel. These characteristics would limit the potential for increases in VMT attributable to the retail component.

Overall, the retail use represents a small portion of the total project and would account for a limited share of total project-generated travel. As such, it would not materially influence the project's overall VMT or affect the results of the residential VMT analysis, which is the primary driver of project-level VMT impacts.

Based on the above, the retail/commercial component would not result in a substantial or measurable increase in vehicle miles traveled, and the impact would be ***less than significant***. No mitigation measures are required.

Screening of Office VMT

As noted in **Section 2**, the adopted VMT analysis methodology retains the option to screen projects (or in a mixed-use project, individual project components) from further analysis (i.e., presume a less-than-significant impact) if a project or project component meets the screening criteria in the OPR *Technical Advisory*. The proposed office component of the project represents a consolidation and modernization of existing County government facilities at the project site. The project would increase total on-site employment from approximately 1,182 to 1,200 employees, resulting in a net increase of approximately 18 employees or approximately 1.5 percent above existing conditions. This incremental

increase in employment would result in a minor increase in daily vehicle trips relative to existing conditions. However, this increase is negligible in the context of both the existing site and the overall project and would not meaningfully change travel behavior or travel patterns associated with the site. The project would continue to function primarily as a County government campus, and the characteristics of commute trips to and from the site would remain substantially similar to existing conditions.

In addition, the incremental trips associated with the net increase in employees represent a very small fraction of total project-generated vehicle trips (less than one percent). As such, the office component does not materially contribute to the project's overall VMT and does not affect the outcome of the residential VMT analysis, which is the primary driver of project VMT.

Furthermore, the office component is part of a mixed-use development that includes residential and retail uses within the project site, providing opportunities to reduce vehicle trip lengths through internal capture and multimodal travel options, further limiting the potential for increases in VMT attributable to the incremental increase in office employment.

In addition, a review of the project site using Fehr & Peers' VMTIndex mapping tool indicates that the site is located in an area characterized by VMT levels below the regional average. The VMTIndex tool uses regional travel demand model outputs to identify areas where existing travel behavior is more efficient relative to regional benchmarks. Development in these areas is typically associated with shorter trip lengths and reduced vehicle miles traveled due to proximity to jobs, services, and multimodal transportation options. Consistent with these characteristics, the project site's location supports travel patterns that are already below regional average VMT levels. Therefore, the incremental increase in office employment would occur in a context where VMT efficiency is relatively high, further supporting the conclusion that the office component would not result in a substantial or measurable increase in VMT.

The proposed ECC would also not materially affect VMT outcomes. Because ECC operations rely primarily on existing County staff who would already be traveling to or from the project site, activation of the ECC would not introduce a new or sustained source of vehicle travel. Any incremental travel associated with emergency response is temporary, infrequent, and operational in nature and is not representative of typical daily travel behavior evaluated under CEQA VMT guidance. As such, the ECC does not alter the conclusions of the office VMT screening analysis and does not result in a substantial or measurable increase in VMT.

Based on the above, the office component would not result in a substantial or measurable increase in vehicle miles traveled relative to existing conditions. Therefore, the project would result in a ***less-than-significant*** impact with respect to VMT for the office use, and no mitigation measures are required.

Assessment of Residential VMT

The latest SCTCA Travel Demand Model was used as the basis of estimating project VMT per capita. The SCTCA Model includes a base year of 2019 and a forecast year of 2040. The SCTCA Model contains land use, roadway network, and travel characteristics information for Sonoma County and divides the county into several traffic analysis zones (TAZs). The Year 2040 model is consistent with expected build-out of MTC's Plan Bay Area 2040, which has since been updated to Plan Bay Area 2050. The SCTCA Model included special adjustments for Sonoma County to reflect the relatively unique travel patterns for Sonoma County; these adjustments include a greater level of roadway

network detail and special generators to better account for the recreational components of trip making in Sonoma County.

The model allows calculation of VMT based on the trip generation of each land use and the trip lengths for each trip. The model land use and roadway network were reviewed and adjusted based on the received project description and cumulative project list under CEQA.

Per guidance from OPR's Technical Advisory, the VMT significance thresholds are set to 15 percent below regional averages. Per OPR's FAQs on the VMT analysis topic, in this case "regional" refers to the Metropolitan Planning Organization region, which for the Bay Area is MTC. Therefore, these averages correspond to the nine-county Bay Area, which is beyond the extent of the SCTCA model. For this analysis, MTC's Travel Model Two provides the regional efficiency metrics to establish significance thresholds, consistent with OPR guidance. This approach was previously used for the County's 2023 Housing Element Update; at that time, SCTCA transportation planning staff indicated that the two-model approach was conservative for project VMT estimation purposes.

Table 2 presents the Total Home-Based VMT per Resident estimates for the residential portion of the project. The Baseline metric was estimated through interpolation between the model outputs of the 2019 Model Base Year and 2040 Model Cumulative Year. The table also presents the Total Home-Based VMT per Resident estimates for the County of Sonoma. The baseline metric was used to develop the assessment threshold and was estimated through interpolation between the model outputs of the model base years and cumulative years.

Table 2. Project Total Home-Based VMT per Resident Estimates

Metric	Model Base Year	2025 Interpolated CEQA Baseline[1]	Model Cumulative Year
Project[2]	8.55	8.42	8.08
Regional Average[3]	12.20	11.34	9.20
CEQA Threshold[4]	-	9.64	-
CEQA Significant Impact?	-	**No**	-

Source: Fehr & Peers, 2025.
Notes:
1. Baseline Conditions is year 2025 (baseline is normally tied to the year when the Notice of Preparation (NOP) is issued).
2. Project home-based VMT per resident calculated using data from the SCTCA model, which has a base year of 2019 and cumulative year of 2040.
3. Regional average home-based VMT per resident calculated using data from the MTC Plan Bay Area 2050 model, which has a base year of 2015 and cumulative year of 2050.
4. CEQA threshold of significance calculated as 15 percent below the regional average in the 2025 interpolated CEQA baseline.

As **Table 2** shows, the project Total Home-Based VMT per resident for the 2025 interpolated baseline Plus Project scenario would be 8.42 VMT per resident. This value is lower than the threshold value of 9.64 VMT per resident, which is 15% below the Bay Area regional average value of 11.34 VMT per resident. Therefore, the residential portion of the project results in a ***less than significant impact*****,** and no mitigation measures are required.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for project-generated VMT.

MITIGATION MEASURES

None required.

Multimodal System Assessment

Evaluation of Roadway Facility Impacts

The project would create a significant impact related to the roadway system if the following criterion is met:

- The project design would not provide or would eliminate vehicle facilities to connect to the area circulation system

Motor vehicle access is provided on local roadways adjacent to and within the project site via Administration Drive, Ventura Avenue, Fiscal Drive, and Paulin Drive, Mendocino Avenue, and Bicentennial Way. The project proposes redevelopment of parcels adjacent to these roadways that would be accessed via existing curb cuts in addition to one new curb cut on Mendocino Avenue; these curb cuts would not preclude motor vehicle access. Therefore, the proposed project would not conflict with plans or policies that pertain to access via the circulation system. Therefore, implementation of the proposed project would result in a ***less-than-significant*** roadway system impact.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for roadway facilities.

MITIGATION MEASURES

None required.

Evaluation of Vehicle System Hazard Impacts

The project would create a significant impact related to the roadway system if any of the following criteria are met:

- The project would introduce incompatible uses to the roadway system; or
- The project design would create hazardous conditions for vehicle drivers.

Due to similar residential and commercial land uses in the project vicinity, the speed and mix of vehicles generated by the project is assumed to be similar to the existing speed and mix of vehicles in the study area.

The project, as currently proposed in the site plan, would provide access to the public circulation system through access points along Administration Drive, Ventura Avenue, Fiscal Drive, Paulin Drive, and Mendocino Avenue. The only new driveway curb cut proposed by the project would be on Mendocino Avenue, which would be designed with controls and turning restrictions appropriate for

geometric, speed, and visibility considerations. Emergency vehicle access would be compliant with the municipal code and subject to review and approval of the Fire Department.

The posted speed limits along the following roadways within the project's vicinity are as follows:

- 25 miles per hour along Administration Drive, Ventura Avenue, Paulin Drive, and Fiscal Drive
- 35 miles per hour along Mendocino Avenue

According to Table 201.1 of the Caltrans *Highway Design Manual*, the stopping sight distance at 25 and 35 miles per hour is 150 feet and 250 feet, respectively. With the use of Google Earth, the sight distances along the study roadway segments were measured to be greater than these minimum distances; therefore, this would indicate that the stopping sight distance for the proposed access points would be adequate. Note that these measurements would be verified by and subject to further engineering study.

Although the internal site has not been designed, roadways/drive aisles would be designed with adequate widths and throat depths. Analysis of the intersection access points for the weekday AM and PM peak hours in all with project scenarios (LOS worksheets included in **Appendix A**) indicate that vehicle queues would not impede emergency access nor create new system hazards. Overall, based on the current site plan, it is assumed that the proposed width and throat depth at the access points are sufficient to accommodate queuing.

Overall, the project does not introduce incompatible uses to the roadway system, nor would it introduce geometric features that would result in hazardous conditions. Thus, implementation of the project would result in a ***less-than-significant*** vehicle system hazard impact.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for vehicle system hazards.

MITIGATION MEASURES

None required.

Evaluation of Pedestrian Facility Impacts

The project would create a significant impact related to the pedestrian system if any of the following criteria are met:

- Disrupt existing pedestrian facilities
- Interfere with planned pedestrian facilities
- Create inconsistencies with adopted pedestrian system plans, guidelines, policies, or standards

There are existing sidewalks along the project frontage on Mendocino Avenue and Administration Drive, and substandard or no sidewalks along portions of Paulin Drive, Fiscal Drive, and Ventura Avenue. Proposed pedestrian facilities on-site include a network of pathways and sidewalks around and between buildings. As a result, the project would improve pedestrian facilities on site and would not disrupt or interfere with any existing or planned pedestrian facilities adjacent to the project site or within the surrounding neighborhoods. The project proposes no features that would be hazardous to pedestrian travel and does not conflict with any pedestrian facilities plans or programs. Overall, the project would result in a ***less-than-significant*** impact related to the pedestrian system.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for pedestrian facilities.

MITIGATION MEASURES

None required.

Evaluation of Bicycle Facility Impacts

The project would create a significant impact related to the bicycle system if any of the following criteria are met:

- Disrupt existing bicycle facilities
- Interfere with planned bicycle facilities
- Create inconsistencies with adopted bicycle system plans, guidelines, policies, or standards

Mendocino Avenue and County Center Drive feature Class II bike lanes while Administration Drive and Ventura Avenue feature Class III bike routes. There are no existing bike facilities on the other roadways within the project study area. Although the design has not yet been determined, the proposed project would include adequate on-site access for bicyclists. The project proposes no changes to existing off-site (i.e., on-street) bicycle facilities and would not interfere with planned bicycle facilities; therefore, the project proposes no features that would be hazardous to cyclists' travel and does not conflict with any bicycle facilities plans or programs. Overall, the project would result in a ***less-than-significant*** impact related to the bicycle system.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for bicycle facilities.

MITIGATION MEASURES

None required.

Evaluation of Emergency Access Impacts

Several factors determine whether a project has sufficient access for emergency vehicles, including the following:

- Number of access points (both public and emergency access only)
- Width of access points
- Width of internal roadways

The project's access points on Administration Drive, Ventura Avenue, Fiscal Drive, Paulin Drive, and Mendocino Avenue would provide emergency vehicle access to the site. These access points would consist of new or modified curb cuts and internal roadways/drive aisles that would be designed to be of adequate width for emergency vehicle access.

Santa Rosa Fire Station 11 is most likely to serve the site. It is located on Lewis Road, and fire vehicles are likely to take Mendocino Avenue and Administration Drive to access the project site. While the project may increase traffic congestion in the vicinity of the project, emergency vehicles would still retain the right to preempt traffic signals and use lights and sirens to indicate to drivers that they

need to yield. Therefore, the project results in a ***less-than-significant*** impact related to emergency vehicle access.

It is noted that the CEQA Transportation section analysis is not the same as the evaluation of evacuation-related impacts. The evaluation of evacuation-related impacts is contained in a separate study.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for emergency access.

MITIGATION MEASURES

None required.

Evaluation of Transit Facility Impacts

The project would create a significant impact related to transit service if the following criteria are met:

- Generate a substantial increase in public transit riders that cannot be adequately served by existing public transit services
- Establish transit facilities or equipment that results in sight distance deficiency or vehicle conflict point
- Disrupt or conflict with existing or planned public transit facilities

The project is located within proximity to several Sonoma County Transit and Santa Rosa CityBus routes and would generate additional demand for transit. This increased demand would be accommodated through available capacity on existing bus routes and monitoring of demand by Sonoma County Transit and Santa Rosa CityBus. Furthermore, the project's residential and employment population would generate additional revenue to support local funding of these transit programs. Therefore, the expected increase in passenger demand is not projected to exceed available transit capacity on the existing bus routes.

Overall, the project proposes no features which would conflict with existing or planned transit services, nor does it preclude future facilities. The project is not expected to result in increases in ridership on local or regional transit facilities that would exceed its capacity. Thus, the project would result in a ***less-than-significant*** impact related to transit.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for transit facilities.

MITIGATION MEASURES

None required.

Cumulative Impact Analysis

The following subsections outline the CEQA cumulative impact analysis prepared for the project.

Vehicle Miles Traveled

As discussed above, the adopted VMT analysis methodology retains the option to screen projects from further analysis and presume a less-than-significant impact if it meets the screening criteria in the OPR *Technical Advisory*. The proposed retail/commercial component of the project represent a relatively minor change in land use intensity at the site when compared to existing conditions. The retail component is limited in size and is intended to serve primarily local demand, including on-site residents and employees, resulting in a portion of trips that would be internal to the project or diverted from existing nearby travel. The office component represents a consolidation of existing County uses and would result in a net increase of approximately 18 employees (approximately 1.5 percent). As discussed in the project-level analysis, these changes would not result in a substantial or measurable increase in VMT and would account for a very small share of total project-generated travel. Under cumulative conditions, these incremental contributions remain small relative to overall travel demand in the study area and region. The characteristics of the project, including its mixed-use design, internal trip capture potential, and location in an area with relatively efficient travel patterns, would continue to support shorter trip lengths and reduced VMT compared to regional averages. As such, the project's retail and office components would not meaningfully increase cumulative VMT or alter regional travel patterns, and this impact is presumed as ***less-than-significant.***

Assessment of Cumulative Residential VMT

As discussed above, the proposed project would not exceed the project-level quantitative thresholds of significance for VMT. In addition, Plan Bay Area meets greenhouse gas reduction targets set by the California Air Resources Board.

Table 3 presents the cumulative year (2040) Total Home-Based VMT per Resident estimates for the residential portion of the project, which is 8.08 VMT per resident. The regional average of 10.06 home-based VMT per resident was derived from interpolation of the base year (2015) and future year (2050) of the MTC Plan Bay Area 2050 model. The project VMT would be below the CEQA threshold of 8.55 home-based VMT per resident, which is 15 percent below the regional average, and therefore this cumulative impact would be **less than significant**.

Table 3. Cumulative Total Home-Based VMT per Resident Estimates

Metric	Model Base Year	2040 Interpolated	Model Cumulative Year
Project[1]	8.55	8.08	8.08
Regional Average[2]	12.20	10.06	9.20
CEQA Threshold[3]	-	8.55	-
CEQA Significant Impact?	-	**No**	-

Source: Fehr & Peers, 2026.
Notes:
1. Project home-based VMT per resident calculated using data from the SCTCA model, which has a base year of 2019 and cumulative year of 2040.
2. Regional average home-based VMT per resident calculated using data from the MTC Plan Bay Area 2050 model, which has a base year of 2015 and cumulative year of 2050.
3. CEQA threshold of significance calculated as 15 percent below the regional average in the 2025 interpolated CEQA baseline.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for VMT.

MITIGATION MEASURES

None required.

Multimodal System Assessment

Roadway Facilities

As discussed above, the project proposes physical changes within the project site and a new curb cut on Mendocino Avenue but would not modify roadways adjacent to the project site including Administration Drive, Ventura Avenue, Fiscal Drive, Paulin Drive, and Mendocino Avenue. However, the project does not preclude implementation of plans or policies that provide roadway accessibility.

There are no additional changes to these streets beyond existing conditions. Therefore, none of the cumulative projects would prevent accessibility for the roadway system. Therefore, this impact would be **less than significant**.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for roadway facilities.

MITIGATION MEASURES

None required.

Vehicle System Hazards

As discussed above, the project proposes physical changes to streets adjacent to the project site including new curb cuts and streetscape improvements along Administration Drive, Ventura Avenue, Fiscal Drive, Paulin Drive, and Mendocino Avenue. Project access points would be designed with

controls and turning restrictions appropriate for geometric, speed, and visibility considerations. Emergency vehicle access would be compliant with the municipal code and subject to review and approval of the Fire Department.

There are no additional changes to these streets beyond existing conditions. Therefore, none of the cumulative projects would create potentially hazardous conditions for the roadway system. Therefore, this impact would be **less than significant**.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for vehicle system hazards.

MITIGATION MEASURES

None required.

Pedestrian Facilities

As discussed above, the proposed project would not interfere with accessibility for people walking to and from the project site or adjoining areas. The proposed project would result in increased levels of pedestrian activity when accounting for additional walking trips, passenger loading activity, and people who may be walking to and from the project site. The proposed project would improve sidewalks within the project site but not modify sidewalks external to the project site. Therefore, the proposed project would not interfere with accessibility for people walking on adjacent streets.

None of the cumulative projects would affect accessibility for people walking as any streetscape changes associated with future development would comply with local city code requirements and relevant streetscape standards for those streets. Therefore, the proposed project, in combination with cumulative projects, would not interfere with accessibility with people walking to and from the project site or adjoining areas. Therefore, this impact would be **less than significant**.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for pedestrian facilities.

MITIGATION MEASURES

None required.

Bicycle Facilities

As discussed above, the proposed project would not interfere with accessibility for bicycling to and from the project site or adjoining areas. Most of the project-generated bicycle trips would be expected to use the bicycle facilities on Administration Drive and County Center Drive to access areas to the south and, in the cumulative condition, west of US-101 via a planned bicycle crossing at Elliot Avenue. Given that a relatively low number of existing bicycle trips were observed, the expected number of bicycle trips that would result from the project would not substantially interfere with access to adjacent bicycle facilities.

None of the cumulative projects would affect accessibility for people biking as any streetscape changes associated with future development would comply with local city code requirements and relevant streetscape standards for those streets. Therefore, the proposed project, in combination

with cumulative projects, would not interfere with accessibility with people biking to and from the project site or adjoining areas. Therefore, this impact would be **less than significant**.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for bicycle facilities.

MITIGATION MEASURES

None required.

Emergency Access

The combination of the proposed project with cumulative projects would not create design features that would result in inadequate emergency access. The proposed project would not change emergency vehicle access to the project site. California Vehicle Code section 21806 requires that all non-emergency vehicles yield right-of-way to emergency vehicles, so general traffic congestion in the vicinity of the project site would not result in substantial delay to emergency vehicle response. When accounting for traffic of cumulative projects, the proposed project would ensure that traffic growth under cumulative conditions would not interfere with emergency vehicle access. Therefore, this impact would be **less than significant**.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for emergency access.

MITIGATION MEASURES

None required.

Transit Facilities

As discussed above, the proposed project would not modify public transit routes or facilities; however, it would introduce a new pattern of vehicular access and egress that interacts with transit routes on Administration Drive, Ventura Avenue, and Mendocino Avenue. Despite this, the total volume of project related traffic, in combination with other cumulative developments, would not overwhelm corridor capacity and would not create a credible and foreseeable potential for localized transit delay. Therefore, this cumulative condition would not result in substantial delay to local bus service on these streets and this impact would be **less than significant**.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Less than significant impact for transit facilities.

MITIGATION MEASURES

None required.

6. Non-CEQA Transportation Assessment

An intersection operations analysis for non-CEQA purposes is presented in **Appendix A**.

7. Appendices

Appendix A ii

Appendix A: LOS Memo

Fehr & Peers

Memo

Date: July 2, 2026

To: Scott Orr & Chris Seppeler, Permit Sonoma

Cc: Gianna Meschi, Rincon Consultants

From: Neil Smolen & Kavya Lakshminarayanan, Fehr & Peers

Subject: New Sonoma County Government Center – Intersection Level of Service Analysis

---

This technical memorandum presents the intersection level of service (LOS) analysis results for the proposed New Sonoma County Government Center (the project) in Santa Rosa, California. This memorandum documents the potential effects of the project on local intersection delays and operations.

Executive Summary

Under existing conditions, all study intersections operate at acceptable LOS D or better. With the addition of project-generated traffic under existing conditions, intersection operations remain at LOS D or better at all locations. Changes in delay are minimal, and no intersections exceed applicable City standards.

Under cumulative (2040) conditions, operations at three intersections are projected to operate at LOS E or LOS F due to regional growth. These intersections are:

- Cleveland Avenue & Mendocino Avenue Overcrossing (PM peak hour)
- Administration Drive & County Center Drive (AM and PM peak hours)
- Guerneville Road & US 101 NB Ramp (PM peak hour)

Operations at these intersections under cumulative (2040) conditions can be improved to LOS D or better through the following measures:

- **Cleveland Avenue & Mendocino O/C**: restriping to add a dedicated northbound right-turn lane, improving capacity and reducing delay
- **Administration Drive & County Center Drive**: conversion from all-way stop control to a single-lane roundabout, substantially improving operations (LOS A) and reducing delay
- **Guerneville Road & US 101 NB Ramp**: lane reconfiguration to better accommodate dominant right-turn demand

Project Description

The project proposes to redevelop a portion of the existing County Administration Center (CAC), located along Administration Drive and bounded by Bicentennial Way, Steele Lane, Mendocino Avenue, and US 101 in Santa Rosa, California. The project proposes to replace five existing County office buildings with a new, consolidated office building of up to 250,000 square feet, representing a net increase of up to 64,500 square feet compared to existing conditions. The project also proposes construction of a 7,000- to 13,000-square-foot Emergency Coordination Center (ECC),[1] up to approximately 20,000 square feet of retail/commercial space, and up to 1,500 residential units across approximately 25 buildings. The office building would accommodate up to approximately 1,200 employees. This represents an increase of 18 employees compared to the existing office uses. The project would also include approximately 1,050 office parking spaces. This represents a decrease of 367 office parking spaces compared to existing conditions.

Figure 1 shows the project site within the context of the study area.

[1] The proposed ECC would function intermittently as conference or meeting space for County employees already working on-site and as a specialized facility used during emergency events rather than as a regularly occupied, high-activity use. ECC staffing would primarily consist of existing County employees and personnel already assigned to or present at the Government Center campus. Therefore, trips associated with ECC operations are considered internal to the project and are inherently reflected in the office land use trip generation estimates presented in Table 3.

Study Scenarios

The following scenarios were evaluated for the weekday morning (AM) and weekday evening (PM) peak hours:

- **Existing Conditions** – Existing conditions based on traffic counts at the study locations.
- **Existing with Project Conditions** – Existing conditions with the addition of project-generated traffic and transportation network infrastructure proposed by the Project.
- **Cumulative without Project Conditions** – Year 2040 traffic forecasts without the proposed Project were developed for the Cumulative conditions by applying traffic volume growth data derived from the SCTA travel demand model and other data sources. This includes a review of the model to include traffic generated by near term projects provided by SCTA.
- **Cumulative with Project Conditions** - Year 2040 traffic forecasts with the addition of project-generated traffic and transportation network infrastructure proposed by the Project.

Level of Service (LOS) Analysis Methodology

The Synchro 12.0 software analysis package, using methodologies from the Highway Capacity Manual, was used to perform this analysis. The analysis results are summarized by vehicle delay in seconds and LOS. LOS is a qualitative description of operations ranging from LOS A, when the roadway facility has excess capacity and vehicles experience little or no delay, to LOS F, where the volume of vehicles exceeds the capacity, results in long queues and excessive delays. The study intersections' LOS were established based on traffic analysis using the Transportation Research Board (TRB) method in the Highway Capacity Manual, 6th Edition.

For signalized intersections, LOS is based on the average delay experienced by all vehicles passing through the intersection. This methodology uses various intersection characteristics (such as traffic volumes, lane geometry, and signal phasing) to estimate the delay per vehicle. The delay per vehicle is a portion of the total delay attributed to the signal operations and includes initial deceleration, queue move up time, time stopped, and acceleration.

At unsignalized intersections, operations are defined by the average control delay per vehicle (measured in seasons) for each stop-controlled movement. This incorporated delay is associated with deceleration, acceleration, stopping, and moving up in the queue. For all-way stop-controlled intersections and roundabouts, the LOS is represented by the average control delay for the whole intersection. For side-street stop-controlled intersections, the average delay and worst-case approach delay and associated LOS are reported in this report.

The average control delays and LOS designations for signalized and unsignalized intersections are summarized in **Table 2**.

Table 2. Intersection LOS and Average Control Delay

Level of Service	Signalized	Unsignalized[1]
A	≤ 10.0	≤ 10.0
B	10.1 to 20.0	10.1 to 15.0
C	20.1 to 35.0	15.1 to 25.0
D	35.1 to 55.0	25.1 to 35.0
E	55.1 to 80.0	35.1 to 50.0
F	> 80.0	> 50.0

Source: Highway Capacity Manual, 6th Edition, Transportation Research Board, 2017.
Note: Delay reported in seconds/vehicle.

While noting some exceptions, the City's guidelines (per General Plan policy T-D-2) generally provide that it is problematic from an LOS standpoint if an intersection degrades from LOS D or better to LOS E or F, or if there is an increase in average vehicle delay of greater than 5 seconds at a signalized intersection where the current LOS operates at either LOS E or F.

Existing Transportation System

Local Access

Administration Drive is a local roadway that runs east-west along the southern edge of the project site. It begins at Mendocino Avenue to the east and continues west to County Center Drive, where it then turns north and runs parallel to US 101 before curving east and terminating at Ventura Avenue.

Mendocino Avenue is an arterial that runs north-south connecting to downtown Santa Rosa in the south and becoming Old Redwood Highway at Fountaingrove Parkway and Mendocino Overcrossing in the north. Mendocino Avenue runs along the eastern extents of the project site.

Ventura Avenue is a local roadway that runs north-south through the project site. It connects to Bicentennial Way to the north, which provides access to US 101, and extends south through the project site.

County Center Drive is a local roadway that runs north-south, touching the southwestern corner of the project site at its intersection with Administration Drive and extending south to Steele Lane.

Steele Lane is an arterial that runs east-west with access to U.S. 101 and areas west of U.S. 101. Steele Lane is connected to the project site to the north via County Center Drive and Mendocino Avenue.

Bicentennial Way is an arterial that runs east-west with access to U.S. 101 and areas west of U.S. 101. Bicentennial Way is connected to the project site to the south via Ventura Avenue and Mendocino Avenue.

Regional Access

U.S. Highway 101 (U.S. 101) is a major north-south freeway that extends north from Marin, San Francisco and other counties to the south as a six to eight lane divided facility through Sonoma Counties, passing west of the project site before continuing to the North Coast counties of

Mendocino, Humboldt, and Del Norte. Access to the project site from U.S. Highway 101 is provided via the interchange at Bicentennial Way north of the project site, as well as access points along Steele Lane located just south of the project site.

State Route 12 (SR 12) is a major east-west arterial roadway that provides regional connectivity through Santa Rosa, linking the project site to Sebastopol to the west and Sonoma Valley to the east. In relation to the project site, Highway 12 is located south of the site and functions as an important regional route within the surrounding roadway network. Through the City of Santa Rosa, Highway 12 consists of two travel lanes in each direction.

Project Trip-Making Characteristics

Trip Generation

The Project's trip generation was estimated using the MXD+ methodology for the weekday daily, weekday morning peak hour, and weekday evening peak hour. The MXD+ trip generation methodology, based on Environmental Protection Agency (EPA) and National Cooperative Highway Research Program (NCHRP) research, more precisely estimates trip generation of mixed-use projects by accounting for the travel within the project (i.e., between uses), trips made by non-automobile modes, and the project's land use context. This approach has been successfully applied and defended throughout Northern California to more precisely estimate external trip generation for mixed-use projects. While this approach accounts for a variety of factors noted above, it does not account for transportation demand management (TDM) measures, such as a constrained parking supply, subsidized transit passes, or other incentives to travel by non-auto modes. **Table 3** displays the Project's trip generation.

The Project's trip generation estimates do not treat the Emergency Coordination Center (ECC) as a separate land use. The ECC is not a continuously occupied facility and is only used intermittently as a conference room or meeting space for County employees already working on-site or during emergency conditions. When activated under emergency conditions, the ECC would be staffed largely by existing County employees and personnel already captured within the Project's office employment totals and associated trip generation assumptions. In either situation, users are expected to travel between buildings on the campus (e.g., walking from the main government center building), and these movements would not generate new external vehicle trips. As a result, trips associated with ECC operations are considered internal to the Project and are inherently reflected within the office land use trip estimates presented in Table 3.

Table 3. Project Trip Generation

Development Type	ITE Land Use Code	Quantity (Units)	Weekday Trip Generation						
			Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total

Trip Distribution and Assignment

Project trip distribution refers to the ultimate origin and destination points of project-generated trips. Estimates of regional Project trip distribution were developed based on existing travel patterns in the area, information from the SCTA travel demand model, and the location of complementary land uses. A summary of the trip distribution percentages are shown in **Figure 3**. The Project's trip generation, in combination with the expected trip distribution patterns, was used to assign the peak hour vehicle trips to the local roadway network and study intersections. The Project's trip assignment is presented in **Figure 4**.

Intersection Level of Service (LOS) Analysis

Existing Conditions Analysis

Existing intersection lane configurations and peak hour turning movement volumes, as shown in **Figure 5**, was used to determine the level of service (LOS) during the weekday and AM and weekday PM peak hours. **Figure 6** shows the Existing Plus Project Conditions Lane configurations and peak hour turning movement volumes.

The results of the LOS analysis using Synchro 12 software program for the study intersections under Existing and Existing Plus Project Conditions are provided in **Table 4**. The corresponding LOS calculation sheets are included in **Appendix A**.

			PM	D	66.8	E	69.9	E

Notes:
1. Delay presented as average intersection delay in seconds
2. Source: Highway Capacity Manual, 7th Edition. Highlighted values indicate operations below LOS D.
3. Intersection utilizes an adaptive signal system; therefore, results are reported with splits optimized.

Source: Fehr & Peers, 2026

As presented in the table above, the Project would result in operating conditions below LOS D at the following intersections under Cumulative Plus Project conditions:

Intersection 1: Cleveland Avenue & Mendocino O/C – LOS E in the PM peak hour
Intersection 9: Administration Drive & County Center Drive – LOS F in the AM and PM peak hours
Intersection 13: Guerneville Road & 101 NB Ramp – LOS E in the PM peak hour

All other intersections would either operate at LOS D or better or the Project's incremental contribution to added delay is entirely negligible.

Potential Improvements for Intersection Operations Below LOS D

Operations at the three intersections that are projected to operate below LOS D under cumulative (2040) conditions can be improved to LOS D or better through the measures identified below and summarized in **Table 6**.

Table 6: Intersection Operations – Cumulative Plus Project Conditions with Improvements

Intersection		Traffic Control	Peak Hour	City LOS Standard	Cum. + Project		Cum. + Project w/ Improvements	
					Delay[1]	LOS[2]	Delay[1]	LOS[2]
1	Cleaveland Avenue & Mendocino O/C	Signal	PM	D	60.0	E	54.3	D
9	Administration Drive & County Center Drive	All way Stop	AM	D	61.7	F	2.0	A
			PM	D	58.8	F	4.1	A
13	Guerneville Road & 101 Northbound Ramp	Signal	PM	D	66.9	E	54.5	D

Notes:
1. Delay presented as average intersection delay in seconds

Source: Fehr & Peers, 2026

- **Intersection 1**: Lane restriping to convert the northbound shared through-right turn lane into separate northbound through and right-turn lanes, with a storage length of about 30 feet for the right-turn lane.
    - With this improvement, the intersection would operate at LOS D during the PM peak hour.
- **Intersection 9**: Convert the intersection to a single-lane roundabout
    - With this improvement, the intersection would operate at LOS A during the AM and PM peak hours.
- **Intersection 13**: Lane restriping to convert the northbound shared left-through-right turn lane to a shared through-right turn lane to accommodate high demand for right turn movement.
    - With this improvement, the intersection would operate at LOS D during the PM peak hour.

Sonoma County Government Center Project Health Risk Assessment

Health Risk Assessment Results Summary

Scenario	Excess Cancer Risk (per million)	Chronic Health Risk[1]	$PM_{2.5}$ µg/m^3 annual average
Residences along Major Dr	7.26	0.042	0.10
BAAQMD Significance Threshold	>10	>1	>0.3
Threshold Exceeded?	No	No	No

$PM_{2.5}$ = particulate matter less than 2.5 microns in size; µg/m^3 = micrograms per cubic meter

[1] Noncancer health impacts are determined by dividing the airborne concentration at the receptor by the appropriate Reference Exposure Level (REL) for that substance. A REL is defined as the concentration at which no adverse noncancer health effects are anticipated. Because noncancer health impacts are assessed as the ratio of airborne concentration versus the REL, the resulting hazard index is unitless.

[2] There is no acute reference exposure level for diesel exhaust to calculate acute health risk. Furthermore, except for unusual circumstances of high exposure, Office of Environmental Health Hazard Assessment does not recommend acute analysis for DPM.

Notes:

1. CARB, "Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values," "OEHHA/ARB Approved Chronic Reference Exposure Levels and Target Organs," "OEHHA/ARB Approved Acute Reference Exposure Levels and Target Organs," and "OEHHA/ARB Approved 8-Hour Reference Exposure Levels and Target Organs," http://www.arb.ca.gov/toxics/healthval/healthval.htm. Tables last updated: May 8, 2018. Downloaded: 08/14/18.

Source: ESA, 2020

Where:

$CONC_{WF}$	Pollutant Concentration ($\mu g/m^3$) multiplied by the weight fraction
CREL	Chronic Reference Exposure Level
HI	Hazard Index
MEI	Maximally Exposed Individual
WFrac	Weight fraction of speciated component

* Key to Toxicological Endpoints

ALIM	Alimentary Tract	EYE	Eye	NS	Nervous System
BN	Bone	HEM	Hematologic System	REPRO	Reproductive System
CVS	Cardiovascular System	IMMUN	Immune System	RESP	Respiratory System
DEV	Developmental System	KIDN	Kidney	SK	Skin
ENDC	Endocrine System

*** MODEL SETUP OPTIONS SUMMARY ***

- -

** Model Options Selected:
* Model Uses Regulatory DEFAULT Options
* Model Is Setup For Calculation of Average CONCentration Values.
* NO GAS DEPOSITION Data Provided.
* NO PARTICLE DEPOSITION Data Provided.
* Model Uses NO DRY DEPLETION. DDPLETE = F
* Model Uses NO WET DEPLETION. WETDPLT = F
* Stack-tip Downwash.
* Model Accounts for ELEVated Terrain Effects.
* Use Calms Processing Routine.
* Use Missing Data Processing Routine.
* No Exponential Decay.
* Model Uses URBAN Dispersion Algorithm for the SBL for 96 Source(s),
for Total of 1 Urban Area(s):
Urban Population = 485375.0 ; Urban Roughness Length = 1.000 m
* Urban Roughness Length of 1.0 Meter Used.
* ADJ_U* - Use ADJ_U* option for SBL in AERMET
* CCVR_Sub - Meteorological data includes CCVR substitutions
* TEMP_Sub - Meteorological data includes TEMP substitutions
* Model Accepts FLAGPOLE Receptor . Heights.
* The User Specified a Pollutant Type of: OTHER

**Model Calculates 1 Short Term Average(s) of: 1-HR
and Calculates PERIOD Averages

**This Run Includes: 96 Source(s); 14 Source Group(s); and 611 Receptor(s)

with: 0 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 78 VOLUME source(s)
and: 18 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)
and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:
Model Outputs Tables of PERIOD Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

```
**Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    34.70 ;  Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                ;  Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =      4.1 MB of RAM.

**Input Runstream File:          aermod.inp
**Output Print File:             aermod.out

**Detailed Error/Message File:   Sonoma County Admin Center.err
**File for Summary of Results:   Sonoma County Admin Center.sum
```

Notes:

1. California Air Resources Board, "Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values," "OEHHA/ARB Approved Chronic Reference Exposure Levels and Target Organs," "OEHHA/ARB Approved Acute Reference Exposure Levels and Target Organs," and "OEHHA/ARB Approved 8-Hour Reference Exposure Levels and Target Organs," http://www.arb.ca.gov/toxics/healthval/healthval.htm. Tables last updated: May 8, 2018. Downloaded: 08/14/18.

Where:

$CONC_{WF}$	Pollutant Concentration ($\mu g/m^3$) multiplied by the weight fraction
CREL	Chronic Reference Exposure Level
HI	Hazard Index
MEI	Maximally Exposed Individual
WFrac	Weight fraction of speciated component

* Key to Toxicological Endpoints

Step 1:
Enter Facility Data

Plant Name	Emergency Coordination Center
Plant No.	

Note: This tool can only be used for permitted facilities that are not gas stations.

Step 2:
Estimate Distance

What is the distance (m) from the facility boundary to the MEI?	195

Step 4:
Specify Source Type

Does facility have only diesel backup generators?	yes

Note: Default generic distance multiplier used if source is not a generator.

Step 5:
Record the Estimates

Cancer Risk	1.646	per 1,000,000
Chronic Hazard	0.000	
PM2.5 Concentration	0.004	µg/m^3

Step 3:
Enter Emissions Data

Chemical Name	CAS No.	Rate	Risk	Hazard	PM2.5 Concentration
	(dashes removed)	(lb/day)	(# / 1,000,000)	(index)	(µg/m3)

Diesel Internal Combustion (IC) Engine Distance Multiplier Tool: This distance multiplier tool refines the screening values for cancer risk and PM2.5 concentrations found in the District's Stationary Source Screening Analysis Tool for permitted facilities which contain only diesel IC engines, to represent adjusted risk and hazard impacts that can be expected with farther distances from the source of emissions.

Diesel Internal Combustion Engines

Distance (meters)	Distance (feet)	Distance adjustment multiplier	Enter Risk or Hazard	Adjusted Risk or Hazard	Enter PM2.5 Concentration	Adjusted PM2.5 Concentration

Generic Distance Multiplier Tool: This distance multiplier tool refines the screening values to represent adjusted risk and hazard impacts that can be expected with farther distances from the source of emissions.

Generic Case

Distance (meters)	Distance (feet)	Multiplier	Enter Risk or Hazard	Adjusted Risk or Hazard	Enter PM2.5 Concentration	Adjusted PM2.5 Concentration
0	0.0	1.000		0		0
5	16.4	1.000		0		0
10	32.8	0.883		0		0
15	49.2	0.855		0		0

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    34.70 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Sonoma County GC.err

 **File for Summary of Results:   Sonoma County GC.sum
