PROJECT DESCRIPTION

PROJECT DESCRIPTION:

- NEW SINGLE FAMILY DWELLING AND ATTACHED ADU ON VACANT LAND
- LOT TIE OF 2824 & 2830 PREWETT ST;
- STREET IMPROVEMENT ALONG THOMAS STREET TO 20' MIN. ROADWAY WIDTH PER SEPARATE B-PERMIT;
- THREE FEET DEDICATION ALONG THOMAS STREET;
- SINGLE FAMILY RESIDENCE WITH 3,938 sf RFA, 4 BEDROOMS, 5 BATHROOMS AND ATTACHED 2 CAR GARAGE. 2 ADDITIONAL UNCOVERED PARKING STALLS PROVIDED AT REAR YARD.
- ATTACHED ADU, 800sf, PER GCS 65852.2(e)(1)(A)
- SWIMMING POOL
- GRADING
- TWO RETAINING WALLS, 6-FEET MAXIMUM HIGH EACH
- REQUEST TO DEVIATE FROM 12.21 C.10 (i)(2) TO PERMIT THE CONSTRUCTION, USE, AND MAINTENANCE OF A NEW SINGLE-FAMILY DWELLING ON A LOT FRONTING ON A SUBSTANDARD HILLSIDE LIMITED STREET WITHOUT PROVIDING A 20-FOOT WIDE ADJACENT MINIMUM ROADWAY ADJACENT TO THE PROPERTY ALONG PREWETT.
- REQUEST TO DEVIATE FROM 12.21 C.10 (i)(3) MINIMUM ROADWAY WIDTH (CONTINUOUS PAVED ROADWAY FROM THE DRIVEWAY APRON TO THE BOUNDARY OF THE HILLSIDE AREA)

Surveyor's Notes

This map was prepared without the benefit of a title report.

Surveyor is not responsible for any items which may be omitted from this map due to obstructions at time of survey including, but not limited to, inaccessible areas, parked vehicles, and/or dense vegetation.

Any hardscape and contours shown hereon without survey point data are interpolated between the closest shown survey points and should be considered approximate as only an infinite number of field measurements would represent precise ground conditions.

March 29, 2021

TO WHOM IT MAY CONCERN

Re: City of Los Angeles Protected Trees and Shrubs.
2824 & 2830 Prewett St., Los Angeles, CA 90031

On this day, March 29, 2021, I visited the above referenced two vacant lands, to check for City of Los Angeles Protected Trees and Shrubs.

As specified by City of Los Angeles Ordinance No. 186873, Protected Tree is "Any of the following Southern California indigenous species, which measures four inches or more cumulative diameter, four and one-half feet above the ground level at the base of the tree (**DBH**): a) Indigenous Oak tree excluding the Scrub Oak, b) Southern California Black Walnut, c) Western Sycamore and d) California Bay, and Protected Shrub is Mexican Elderberry and Toyon.
According to this Ordinance, there are no indigenous native trees or shrubs on both vacant lands and their immediate vicinity.

As surveyed, the only existing vegetation on both vacant lands is annual weeds.

If I can be of further assistance, do not hesitate to contact me.

Very Truly Yours,

Arsen Margossian

Comment(s):
Provide treatment for new and replaced impervious areas per the City of LA Appendix E criteria for small scale residential. For infiltration options, only incidental infiltration using permeable pavers to self treat are permitted. Drain all other roof and hardscape area to rain tanks, planter boxes or lined rain gardens. Overflow to street via non erosive surface/pipe.

GEOLOGY AND SOILS REPORT APPROVAL LETTER

May 27, 2021

LOG # 117273
SOILS/GEOLOGY FILE - 2

Trumika Corporation
5432 Briggs Avenue
La Crescenta, CA 91214

TRACT: 8002
LOT(S): 1 & 2
LOCATION: 2824 & 2830 N. Prewett Street

CURRENT REFERENCE REPORT/LETTER(S)	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Geology/Soils Report	7578	04/06/2021	GeoSoils Consultants, Inc.
Oversized Doc(s).	"	"	"

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provides recommendations for the proposed two-story residence, one-story accessory dwelling unit (ADU), swimming pool, and decks. The lower level of the residence and the ADU will be partially subterranean. Retaining walls ranging up to 10 feet in height are proposed for the partially subterranean floor levels. The subject property is vacant and generally undeveloped. A slope descends to the southwest about 60 feet in height at gradients of about 3:1 to 4:1 (H:V) and steepening at the lower 10 feet along Two Tree Avenue to gradients of about 1:1 to 1½:1 (H:V). Subsurface exploration performed by the consultant consisted of six test pits to a maximum depth 5½ feet and supplemented with field mapping of the bedrock outcrops. The earth materials at the subsurface exploration locations consist of up to 4 feet of uncertified fill underlain by slopewash and sandstone and siltstone bedrock. Geologic structure observed by the consultant consisted of northeast and southeast dipping bedding between 25 and 32 degrees. The consultants recommend to support the proposed structures on conventional and/or drilled-pile foundations bearing on competent bedrock.

The referenced report is acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. The proposed development spans across two consecutive lots. Prior to the issuance of building permits, a lot-tie shall be performed.

2. Secure the notarized written consent from all owners upon whose property proposed grading/construction access is to extend, in the event off-site grading and/or access for construction purposes is required (7006.6). The consent shall be included as part of the final plans.

3. Conformance with the Zoning Code Section 12.21 C8, which limits the heights and number of retaining walls, will be determined during structural plan check.

4. Approval shall be obtained from the Department of Public Works, Bureau of Engineering, Development Services and Permits Program for the proposed removal of support and/or retaining of slopes adjoining to a public way (3307.3.2).

201 N. Figueroa Street 3rd Floor, LA (213) 482-7045

5. The geologist and soils engineer shall review and approve the detailed plans prior to issuance of any permits. This approval shall be by signature on the plans that clearly indicates the geologist and soils engineer have reviewed the plans prepared by the design engineer and that the plans include the recommendations contained in their reports (7006.1).

6. All recommendations of the report that are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.

7. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans. Submit one copy of the above reports to the Building Department Plan Checker prior to issuance of the permit. (7006.1)

8. A grading permit shall be obtained for all structural fill and retaining wall backfill (106.1.2).

9. All graded, brushed or bare slopes shall be planted with low-water consumption, native-type plant varieties to protect slopes against erosion (7012).

10. All new graded slopes shall be no steeper than 2H:1V (7010.2 & 7011.2).

11. Prior to the issuance of any permit, an accurate volume determination shall be made and included in the final plans, with regard to the amount of earth material to be exported from the site. For grading involving import or export of more than 1000 cubic yards of earth materials within the grading hillside area, approval is required by the Board of Building and Safety. Application for approval of the haul route must be filed with the Board of Building and Safety Commission Office. Processing time for application is approximately 8 weeks to hearing plus 10-day appeal period.

12. All man-made fill shall be compacted to a minimum 90 percent of the maximum dry density of the fill material per the latest version of ASTM D 1557. Where cohesionless soil having less than 15 percent finer than 0.005 millimeters is used for fill, it shall be compacted to a minimum of 95 percent relative compaction based on maximum dry density. Placement of gravel in lieu of compacted fill is only allowed if complying with LAMC Section 91.7011.3.

13. Existing uncertified fill shall not be used for support of footings, concrete slabs or new fill (1809.2, 7011.3).

14. Drainage in conformance with the provisions of the Code shall be maintained during and subsequent to construction (7013.12).

15. Grading shall be scheduled for completion prior to the start of the rainy season, or detailed temporary erosion control plans shall be filed in a manner satisfactory to the Grading Division of the Department and the Department of Public Works, Bureau of Engineering, B-Permit Section, for any grading work in excess of 200 cubic yards (7007.1).

201 N. Figueroa Street 3rd Floor, LA (213) 482-7045

16. The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the General Safety Orders of the California Department of Industrial Relations (3301.1).

17. Temporary excavations that remove lateral support to the public way, adjacent property, or adjacent structures shall be supported by shoring, as recommended. Note: Lateral support shall be considered to be removed when the excavation extends below a plane projected downward at an angle of 45 degrees from the bottom of a footing of an existing structure, from the edge of the public way or an adjacent property. (3307.3.1)

18. Where any excavation, not addressed in the approved reports, would remove lateral support (as defined in 3307.3.1) from a public way, adjacent property or structures, a supplemental report shall be submitted to the Grading Division of the Department containing recommendations for shoring, underpinning, and sequence of construction. Shoring recommendations shall include the maximum allowable lateral deflection of shoring system to prevent damage to adjacent structures, properties and/or public ways. Report shall include a plot plan and cross-section(s) showing the construction type, number of stories, and location of adjacent structures, and analysis incorporating all surcharge loads that demonstrate an acceptable factor of safety against failure. (7006.2 & 3307.3.2)

19. Prior to the issuance of any permit that authorizes an excavation where the excavation is to be of a greater depth than are the walls or foundation of any adjoining building or structure and located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation (3307.1).

20. The soils engineer shall review and approve the shoring plans prior to issuance of the permit (3307.3.2).

21. Prior to the issuance of the permits, the soils engineer and the structural designer shall evaluate the surcharge loads used in the report calculations for the design of the retaining walls and shoring. If the surcharge loads used in the calculations do not conform to the actual surcharge loads, the soil engineer shall submit a supplementary report with revised recommendations to the Department for approval.

22. Unsurcharged temporary excavations in fill, slopewash, and/or favorably-oriented bedrock may be cut vertical up to 5 feet. For excavations over 5 feet, the lower 5 feet may be cut vertically and the portion of the excavation above 5 feet shall be trimmed back at a gradient not exceeding 1:1, as recommended.

23. Unsurcharged temporary excavations exposing unsupported geology and/or unsupported bedding planes shall be trimmed back along the lowest unsupported plane or shored, as recommended.

24. Shoring shall be designed for the lateral earth pressures specified for permanent retaining walls on page 15 of the 04/06/2020 report, as recommended. All surcharge loads shall be included into the design.

25. Shoring shall be designed for a maximum lateral deflection of 1 inch, provided there are no structures within a 1:1 plane projected up from the base of the excavation. Where a structure is within a 1:1 plane projected up from the base of the excavation, shoring shall be designed for a maximum lateral deflection of ½ inch, or to a lower deflection determined by the consultant that does not present any potential hazard to the adjacent structure.

26. A shoring monitoring program shall be implemented to the satisfaction of the soils engineer.

27. All foundations shall derive entire support from competent bedrock, as recommended and approved by the geologist and soils engineer by inspection.

28. Foundations adjacent to a descending slope steeper than 3:1 (horizontal to vertical) in gradient shall be a minimum distance of one-third the vertical height of the slope but need not exceed 40 feet measured horizontally from the footing bottom to the face of the slope (1808.7.2); for pools the foundation setback shall be one-sixth the slope height to a maximum of 20 feet (1808.7.3).

29. Pile caisson and/or isolated foundation ties are required by LAMC Sections 91.1809.13 and/or 91.1810.3.13. Exceptions and modification to this requirement are provided in Information Bulletin P/BC 2020-030.

30. Pile and/or caisson shafts shall be designed for a lateral load of 1000 pounds per linear foot of shaft exposed to fill, soil and weathered bedrock per P/BC 2020-050.

31. The design passive pressure shall be neglected for a portion of the pile with a horizontal setback distance less than five feet from fill, soil or weathered bedrock.

32. When water is present in drilled pile holes, the concrete shall be tremied from the bottom up to ensure minimum segregation of the mix and negligible turbulence of the water (1808.8.3).

33. Existing uncertified fill shall not be used for lateral support of deep foundations (1810.2.1).

34. Slabs placed on approved compacted fill shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.

35. Concrete floor slabs placed on expansive soil shall be placed on a 4-inch fill of coarse aggregate or on a moisture barrier membrane. The slabs shall be at least 3½ inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.

36. The seismic design shall be based on a Site Class C, as recommended. All other seismic design parameters shall be reviewed by LADBS building plan check.

37. Retaining walls shall be designed for the lateral earth pressures specified on page 15 of the 04/06/2020 report. All surcharge loads shall be included into the design.

38. Retaining walls/basement walls higher than 6 feet shall be designed for lateral earth pressure due to earthquake motions as specified on page 16 of the 04/06/2020 report (1803.5.12).

Note: Lateral earth pressure due to earthquake motions shall be in addition to static lateral earth pressures and other surcharge pressures. The height of a stacked retaining wall shall be considered as the summation of the heights of each wall.

39. Basement walls and other walls in which horizontal movement is restricted at the top shall be designed for at-rest pressure as specified on page 15 of the 04/06/2020 report (1610.1). All surcharge loads shall be included into the design.

40. Retaining walls at the base of ascending slopes shall be provided with freeboard.

41. The recommended equivalent fluid pressure (EFP) for the proposed retaining wall shall apply from the top of the freeboard to the bottom of the wall footing.

42. All retaining walls shall be provided with a standard surface backdrain system and all drainage shall be conducted in a non-erosive device to the street in an acceptable manner (7013.11).

43. With the exception of retaining walls designed for hydrostatic pressure, all retaining walls shall be provided with a subdrain system to prevent possible hydrostatic pressure behind the wall. Prior to issuance of any permit, the retaining wall subdrain system recommended in the soils report shall be incorporated into the foundation plan which shall be reviewed and approved by the soils engineer of record (1805.4).

44. Installation of the subdrain system shall be inspected and approved by the soils engineer of record and the City grading/building inspector (108.9).

45. Basement walls and floors shall be waterproofed/damp-proofed with an LA City approved "Below-grade" waterproofing/damp-proofing material with a research report number (104.2.6).

46. Prefabricated drainage composites (Miradrain, Geotextiles) may be only used in addition to traditionally accepted methods of draining retained earth.

47. Where the ground water table is lowered and maintained at an elevation not less than 6 inches below the bottom of the lowest floor, or where hydrostatic pressures will not occur, the floor and basement walls shall be damp-proofed. Where a hydrostatic pressure condition exists, and the design does not include a ground-water control system, basement walls and floors shall be waterproofed. (1803.5.4, 1805.1.3, 1805.2, 1805.3)

48. The pool shall be designed for expansive soil conditions in accordance with Information Bulletin P/BC 2017-014.

49. The proposed swimming pool shall be designed for a freestanding condition. The portion of the pool wall within a horizontal distance of 7 feet from the top of the slope shall be capable of supporting the water in the pool without soil support (1808.7.3).

50. The structure shall be connected to the public sewer system per P/BC 2020-027.

51. All roof, pad, and deck drainage shall be conducted to the street in an acceptable manner in non-erosive devices or other approved location in a manner that is acceptable to the LADBS and the Department of Public Works. Water shall not be dispersed on to descending slopes without specific approval from the Grading Division and the consulting geologist and soils engineer (7013.10).

52. Sprinkler plans for irrigation shall be submitted and approved by the Mechanical Plan Check Section (7012.3.1).

53. Any recommendations prepared by the geologist and/or the soils engineer for correction of geological hazards found during grading shall be submitted to the Grading Division of the Department for approval prior to use in the field (7008.2, 7008.3).

54. The geologist and soils engineer shall inspect all excavations to determine that conditions anticipated in the report have been encountered and to provide recommendations for the correction of hazards found during grading (7008, 1705.6, & 1705.8).

55. All friction pile or caisson drilling and excavations shall be performed under the inspection and approval of the geologist and soils engineer. The geologist shall indicate the distance that friction piles or caissons penetrate into competent bedrock in a written field memorandum. (1803.5.5, 1705.1.2)

56. Prior to pouring concrete, a representative of the consulting soils engineer shall inspect and approve the footing excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the work inspected meets the conditions of the report. No concrete shall be poured until the LADBS Inspector has also inspected and approved the footing

excavations. A written certification to this effect shall be filed with the Grading Division of the Department upon completion of the work. (108.9 & 7008.2)

57. Prior to excavation an initial inspection shall be called with the LADBS Inspector. During the initial inspection, the sequence of construction, shoring, pile installation, protection fences, and dust and traffic control will be scheduled (108.9.1).

58. Installation of shoring shall be performed under the inspection and approval of the soils engineer and deputy grading inspector (1705.6, 1705.8).

59. Prior to the placing of compacted fill, a representative of the soils engineer shall inspect and approve the bottom excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the soil inspected meets the conditions of the report. No fill shall be placed until the LADBS Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be included in the final compaction report filed with the Grading Division of the Department. All fill shall be placed under the inspection and approval of the soils engineer. A compaction report together with the approved soil report and Department approval letter shall be submitted to the Grading Division of the Department upon completion of the compaction. In addition, an Engineer's Certificate of Compliance with the legal description as indicated in the grading permit and the permit number shall be included (7011.3).

60. No footing/slab shall be poured until the compaction report is submitted and approved by the Grading Division of the Department.

distance of at least 20 feet upon a street as defined here, or upon a private street as defined in Article 8 of this chapter. The width of an access-strip portion of a lot shall not be less than 20 feet at any point. In a residential planned development or an approved small lot subdivision a lot need have only the street frontage or access as is provided on the recorded subdivision tract or parcel map for the development. ***(Amended by Ord. No. 176,354, Eff. 1/31/05.)***

LOT, CORNER. *A lot situated at the intersection of two (2) or more streets having an angle of intersection of not more than one hundred thirty five (135) degrees.*

LOT, INTERIOR. *A lot other than a corner lot.*

LOT, KEY. *The first interior lot to the rear of a reversed corner lot and not separated therefrom by an alley.*

LOT, REVERSED CORNER. *A corner lot the side street line of which is substantially a continuation of the front line of the first lot to its rear.*

LOT, THROUGH. *A lot having a frontage on two parallel or approximately parallel streets, but not including those lots having frontage on a street and frontage on a navigable public canal or waterway parallel or approximately parallel to said street.* ***(Amended by Ord. No. 184,802, Eff. 3/17/17.)***

LOT LINE, FRONT. *In the case of an interior lot, the line separating the lot from the street or place, and in the case of a corner lot, a line separating the narrowest street frontage of the lot from the street, except in those cases where the latest tract deed restrictions specify another line as the front lot line.*

LOT LINE, REAR. *A lot line which is opposite and most distant from the front lot line and, in the case of an irregular, triangular, or gore-shaped lot, a line ten (10) feet in length within the lot, parallel to and at the maximum distance from the front line.*

LOT LINE, SIDE. *Any lot boundary line not a front lot line or a rear lot line.*

STREET. *Any public thoroughfare other than an alley or walk, except that in those cases where a subdivision has been recorded containing lots which abut only on an alley or walk, said alley or walk may be considered to be a street.*

This property is considered to be a Corner/Reversed Corner Lot. As defined above, to maintain the original front yard per LAMC Sec. 12.21 C1(e), the lot line fronting on Prewett Street shall be the front lot line as option 1. Or lot line fronting on Thomas Street shall be the front lot line as option 2. The remaining lot lines shall be as indicated in the attached zoning maps.

This letter is in response to a zoning code question only and based on limited information. Full code compliance shall also be to the satisfaction of the Department of Building and Safety Plan Check through the submittal of fully detailed plans.

RE: 2824 N PREWETT ST **APN: 5208-015-002**
2830 N PREWETT ST **5208-015-001**

In response to your request of August 2, 2021, regarding zoning information on the above referenced property ("Property"), please be advised of the following:

The property, known as Tract: TR 8002, Block: None, Lots: 1 and 2, which is shown on the Zoning Map to be located in the **[Q]R1-1D** Zone. See the attached print out of the Parcel Profile Report for zoning related information pertaining to this property.

You requested a determination of the lot lines for the above parcel. Please be advised of the following:

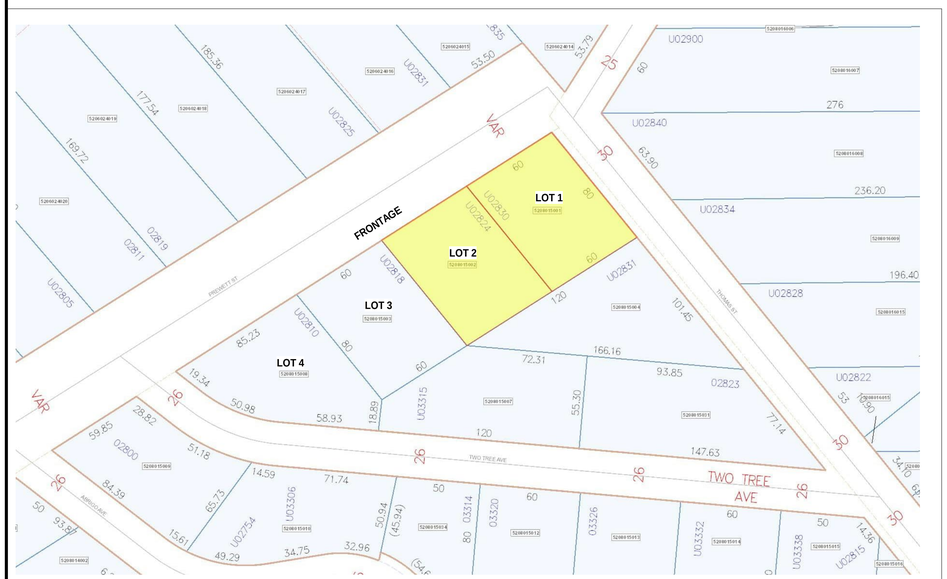
In order to better understand how and why we are making our determination, we should first see how some common terms are defined in the zoning code. According to LAMC Section 12.03, these terms are defined as follows:

LAMC SECTION 12.03 – "DEFINITIONS"

FRONTAGE. *All property fronting on one (1) side of a street between intersecting or intercepting streets, or between a street and right-of-way, waterway, end of dead-end street, or city boundary measured along the street line. An intercepting street shall determine only the boundary of the frontage on the side of the street which it intercepts.*

LOT. *A parcel of land occupied or to be occupied by a use, building or unit group of buildings and accessory buildings and uses, together with the yards, open spaces, lot width and lot area as are required by this chapter and fronting for a*

LADBS G-5 (Rev. 7/21/2020) AN EQUAL EMPLOYMENT OPPORTUNITY - AFFIRMATIVE ACTION EMPLOYER



Add Lot

Enter the Lot information after adding rows:

Lot	Frontage (ft)	Setback (ft)
1	60	
2	60	
3	60	
4	85.23	

Results
Number of lots: **4**
Errors:
At least two lots entered must provide setbacks.

Clear Calculate

PREVAILING FRONT YARD CALCULATION

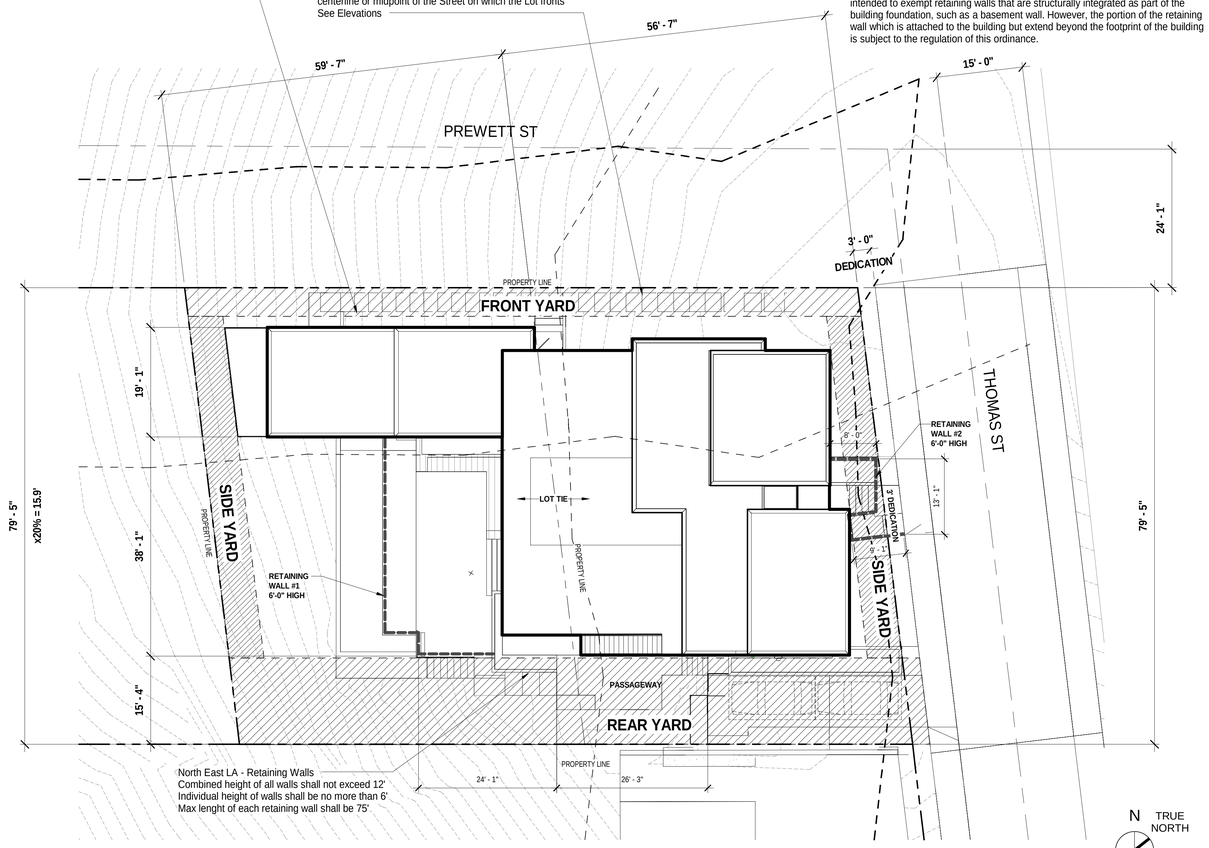
12.21.C10.(a)(2) Front Yard Setback on Lots Fronting on Substandard Hillside Limited Street. For any Lot that fronts on a Substandard Hillside Limited Street, there shall be a minimum Front Yard setback of at least five feet. However, the prevailing Front Yard setback regulations, as outlined in Subparagraph (1) of this Paragraph (a), shall apply, so long as a Front Yard setback of no less than five feet is provided.

12.21.C.10(a)(5) Lots Fronting on Substandard Hillside Limited Streets. (Amended by Ord. No. 184,802, Eff. 3/17/17.) For any Lot fronting onto a Substandard Hillside Limited Street, as defined in Section 12.03, no portion of a Building or Structure within 20 feet of the Front Lot Line shall exceed 24 feet in height. The 24-foot maximum Building and Structure height shall be measured from the Elevation at the centerline or midpoint of the Street on which the Lot fronts
See Elevations

APPLICABLE CODES AND DEFENITIONS:

RETAINING WALLS:

Ord.176,445 (Sec. 12.21C8)
The Ordinance defines retaining walls as "a freestanding continuous structure, as viewed from the top, intended to support earth, which is not attached to a building." According to the City Attorney's Office, the phrase "not attached to a building" is intended to exempt retaining walls that are structurally integrated as part of the building foundation, such as a basement wall. However, the portion of the retaining wall which is attached to the building but extend beyond the footprint of the building is subject to the regulation of this ordinance.



REQUIRED SETBACKS:

FRONT YARD 20% OF LOT DEPTH NOT TO EXCEED 20'-0"
REAR YARD 15'-0"
SIDES YARD 5'-0" PLUS 1'-0" FOR EACH INCREMENT OF 10'-0" OVER 18'-0"
10% OF LOT WIDTH, 3' MIN. FOR NARROW LOTS (WIDTH < 50')
5'-0" EXTRA SETBACK FOR WALLS 14' HIGH AND 45' LONG

RETAINING WALL SCHEDULE

WALL #	LOCATION	LENGHT	HEIGHT	MATERIAL

Torch-Applied & Tough

Asphalt membranes modified with atactic polypropylene (APP) are widely valued for their strength, and ability to resist cracking, blistering and oxidation after years of UV exposure. CertainTeed offers six Flintlastic® torch-applied, APP-Modified products:

Product	Role	Thickness	Weight	Coverage	ASTM	Why Buy?
Flintlastic® STA	Base, Ply, Cap	3.8 mm (150 mils)	86 lbs.	100 sq. ft.	D6222, Grade S, Type I	Versatile product combines strength of APP with the stress-resilience of its polyester reinforcement mat. *Using as base or ply:* Same benefit as APP-Base T plus premium product allows for extended warranties (see rear). *Using as cap:* Quick torch installation with granule-free, forgiving selvage edge.
Flintlastic STA Plus	Base, Ply, Cap	4.5 mm (177 mils)	98 lbs.	100 sq. ft.	D6222, Grade S, Type I	See "Flintlastic STA" plus premium product allows for extended warranties (see rear).
Flintlastic GTA	Cap	4.0 mm (160 mils)	103 lbs.	100 sq. ft.	D6222, Grade G, Type I	Workhorse granule-surfaced cap sheet combines strength of APP with the stress-resilience of its polyester reinforcement mat.
Flintlastic GTA-FR	Cap	4.0 mm (160 mils)	103 lbs.	100 sq. ft.	D6222, Grade G, Type I	See "Flintlastic GTA"; fire retardant additives enables enhanced fire rating.
Flintlastic GTA CoolStar®	Cap	4.0 mm (160 mils)	93 lbs.	100 sq. ft.	D6222, Grade G, Type I	See "Flintlastic GTA" plus highly reflective, granules. Reduce thermal heat gain, improving building comfort and reducing energy cost.
Flintlastic GTA-FR CoolStar®	Cap	4.0 mm (160 mils)	98 lbs.	100 sq. ft.	D6222, Grade G, Type I	See "Flintlastic GTA-FR" plus highly reflective, granules. Reduce thermal heat gain, improving

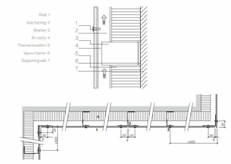
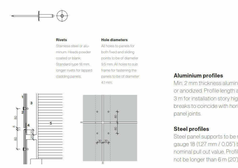
REV 1/2020

PERMEABLE PAVERS SYSTEM

Metal sub frame (aluminium or galvanized steel)





Rivets
Stainless steel rivet or alu. rivet. Head powder coated or black.
Standard pull 10 mm, longer rivets for lapped cladding panels.

Hole diameters
Rivet hole diameter 6.5 mm and sliding points in box of diameter 10 mm. All holes in sub frame for fastening the panels to be of diameter 4.2 mm.

Aluminium profiles
Min. 2 mm thickness aluminium mill or anodized. Profile length about 3 m for installation story high breaks to coincide with horizontal panel joints.

Steel profiles
Steel panel supports to be min. gauge 18 (127 mm / 0.097) to obtain nominal pull out value. Profiles should not be longer than 6 m (20').

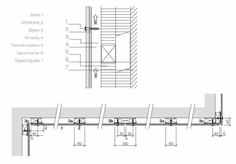
The rear ventilation system

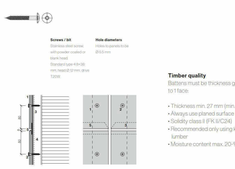
A highly sustainable solution

Providing considerable energy savings for any building, the environmentally friendly ventilated facade system and Swisspearl fiber cement panels are not only a good contribution to climate protection, they also offer a great opportunity to enhance the durability, appearance and value of a building.

At Swisspearl panels are specially designed for rainscreen cladding applications with rear ventilation. Combined with each other, they become the most reliable system from the technical construction viewpoint. This cladding system effectively protects the building and its structure from the elements for a long time. Furthermore, it reduces humidity and the air circulation optimizes the efficiency of insulation. Therefore, there will be no problem with mold, fungi, etc. The rot-resistant and non-combustible panels are extremely durable and virtually maintenance free – an attractive solution with many advantages.

Timber battens





Screws / Gil
Stainless steel screws with powder coated or black head.
Standard pull 10 mm, head 8.2 mm, drive TX15

Hole diameters
Hole diameter 6.5 mm Ø8.5 mm

Timber quality
Battens must be thickness gauged to 1 facts

- Thickness min. 27 mm (min. 3/4")
- Always use planed surface timber
- Stability class II (EN 335/24)
- Recommended only using kiln-dried lumber
- Moisture content max. 20-%

Maximum longevity to exterior cladding

The five main components

The typical rainscreen system is based on natural rear ventilation. It is most reliable, sustainable and provides maximum longevity to exterior cladding. Ventilated facade systems consist of five main components.

1 Support structure
2 Sub frame
3 Thermal insulation layer
4 Ventilated cavity
5 Swisspearl Cladding

1 Support structure
The exterior wall of a building is mainly made of concrete, CMU blocks, brickwork, steel or timber frame with studs and planked by gypsum boards.

2 Sub frame
Swisspearl facade panels are installed on timber or metal supports.

3 Thermal insulation layer
The advantage of an exterior thermal insulation is to keep the entire building structure at a constant temperature and to minimize thermal bridges and thus reduce the loss of energy to a minimum. Economical as well as ecological advantages result.

4 Ventilated cavity
The main task of the air cavity is the evacuation of moisture and excess heat. Thanks to the pressure difference between bottom and top, the air circulation occurs naturally.

5 Swisspearl Cladding
The outer skin of the building envelope has two main functions: to be aesthetically pleasing as well as protecting against influences from climate and environment.

Special base panel refer to page 115
Three Reflex colors are also available with a sanded surface panel.

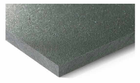
Swisspearl Reflex

Shiny look with metallic character

Reflex is a through-colored fiber cement panel with a reflective surface coating. The metallic character gives the panels a sophisticated, shiny look and creates exciting nuances in color shades depending on the vantage point and lighting.

The standard range, with 11 colors, opens up unlimited opportunities in architecture.

With its shiny appearance, Reflex transforms building envelopes into sophisticated architectural highlights.



INFO

Panel
Base panel: Integrally colored
Top layer: Iridescent

Panel size refer to page 61

Swisspearl Largo:
Arbitrary panel size up to a maximum size of 3050 x 1250 mm; thickness 8 mm and 12 mm. Large panels can also be used for the interior.

Swisspearl Linearis:
4 different panel sizes; thickness 8 mm.

Swisspearl Modulo:
2 different panel sizes; thickness 8 mm.

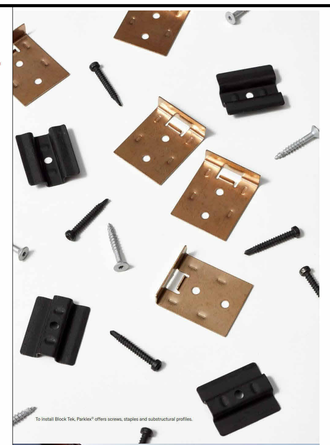
For a detailed summary of the sizing and color options, please refer to our delivery programs.

Colors
A wide standard range of 11 colors.

Installation
The whole range from flat layer to lapped coverings, with face or concealed fastening.

Detailed information refer to our DIM (Design & Installation Manual).

SWISSPEARL FIBER CEMENT PANELS RAIN SCREEN SYSTEM



To install Block Tek, Parklex® offers screws, staples and substructural profiles.

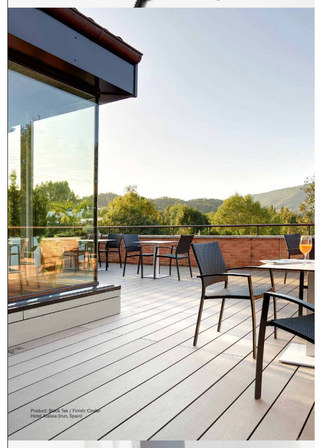
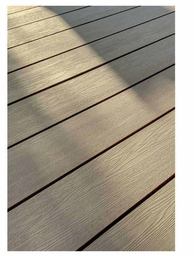
(A) Other products used: Oil, Aluminio, bleach, mayonnaise, ketchup, mustard, hand cream, wine vinegar and oil.

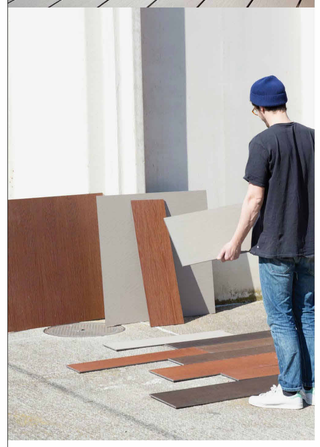


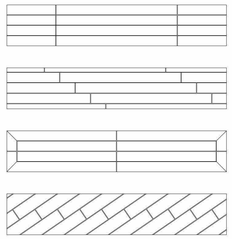
Product: Block Tek / Finish: Cinder
Fixing: Adhesive Mesh, Screws



Block Tek decking can be installed with screws, staples or with an adhesive system over a supporting substructure.

Perimeter expansion joints must be left at the end and along the length of the boards in order to allow them to move, freely expand or contract, and to facilitate the evacuation of water or snow.





The assembly pattern must be studied before starting the work since installation of the supporting substructure will depend on the pattern used.

Each board is unique. We make sure that the texture of the surface varies from one panel to another, in order to avoid repeated patterns in any composition. Block Tek decking is available in 6 different finishes and 3 standard widths: 130, 198 and 300 mm.

All panels come in a maximum length of 2440 mm.
The available thicknesses are 10 and 14 mm.
Orders in customised widths and shapes are available on request.

DATE STAMP 3/20/2024 4:37:45 PM

1. General Notes:

(a) Any modifications of or changes in approved grading plans must be approved by the City Engineer.

(b) All grading and construction shall conform to City of Los Angeles requirements.

(c) Approval of these plans reflect solely the review of plans in accordance with the City and does not reflect any position by the City or the Department of public Works regarding the status of any issues relating to the land on which the improvements may be construed.

(d) Any export of material from the site to off-site property requires an approved grading plan.

(e) All graded sites must have drainage swales, berms, and other drainage devices prior to approval of rough grading.

(f) A copy of the grading permit and approved grading plans must be in the possession of a responsible person and available at the site at all times.

(g) The Field Engineer must set drainage stakes for all drainage devices.

(h) All storm drain work is to be done under continuous inspection by the Field Engineer. Weekly status reports shall be submitted by the Field Engineer to the City Engineer.

(i) Final grading must be approved before occupancy of buildings will be allowed.

(j) Comply with the Planning and Zoning Code by showing locations and sizes of oak trees on the grading plan and obtaining the appropriate permit.

(k) Separate plans for temporary drainage and Stormwater Pollution (Erosion Control) measures to be used during the rainy season must be submitted prior to October 1. The erosion control devices shown on said plans must be installed by no later than November 1 and maintained in operable condition until April 15 of the following year, and before any anticipated rain.

(l) Every effort should be made to eliminate the discharge of nonstormwater from the project site at all times.

(m) Provisions shall be made for contributory drainage at all times.

(n) A preventive program to protect the slopes from potential damage form burrowing rodents is required. Owner to inspect slopes periodically for evidence of burrowing rodents and a first evidence of their existence shall employ an exterminator for their removal.

(o) Roof drainage must be diverted from graded slopes.

(p) All subdrain outlets are to be surveyed for line and elevation. this can be shown on an as-built grading plan.

2. Fill Notes:

(a) Fill shall be compacted throughout their full extent to a minimum of 90% of maximum dry density as determined by current A.S.T.M. Soil Compaction Tests D1557 or D2922, where applicable: Where not applicable, a test acceptable to the Building Official shall be used.

(b) Field density shall be determined by a method acceptable to the Building Official. However, not less than 10% of the required density test, uniformly distributed, shall be obtained by the current A.S.T.M. D1557 (Sand Cone Method).

(c) Sufficient tests of the fill soils shall be made to determine the relative compaction of the fill in accordance with the following minimum guidelines:

(1) One test for each two-foot vertical lift.

(2) One test for each 1,000 cubic yards of material placed.

(3) One test at the location of the final fill slope for each building site (lot) in each four-foot vertical lift or portion thereof.

(4) One test in the vicinity of each building pad for each two-foot vertical lift or portion thereof.

(d) Sufficient tests of the soils shall be made to verify that the soil properties comply with the design requirements, as determined by the Geotechnical Engineer including soil types, shear strengths parameters and corresponding unit weights in accordance with the following guidelines:

(1) Prior and subsequent to placement of the fill, shear tests shall be taken on each type of soil or soil mixture to be used for all fill slopes steeper than three (3) horizontal to one vertical.

(2) Shear test results for the proposed fill material must meet or exceed the design values used in the geotechnical report to determine slope stability requirements. Otherwise, the slope must be reevaluated using the actual shear test value of the fill material that is in place.

(3) Fill soils shall be free of deleterious materials.

(4) The results of such testing shall be including in the reports required by Section 7016.8 of the Building Code.

(e) Fill shall not be placed until stripping of vegetation, removal of unsuitable soils, and installation of subdrain if any have been inspected and approved by the Geotechnical Engineer. The Building Official may require a "Standard Test Method for moisture, ash, organic matter, peat or other organic soils" current ASTM D-2974 on any suspect material. All materials that have a test value of 10% of greater will be rejected as unsuitable for support of or being structural fill.

(f) Rock or similar material greater than 12 inches in diameter shall not be placed in the fill unless recommendations for such placement have been submitted by the Geotechnical Engineer and approved in advance by the Building Official.

(g) Continuous inspection by the Geotechnical Engineer, or a responsible representative, shall be provided during all fill placement and compaction operations where fills have a depth greater than 30 feet or slope surface 2:1.

(h) Continuous inspection by the Geotechnical Engineer, or a responsible representative, shall be provided during all subdrain installations.

(i) Fill slopes of 2:1 steepness ratio are to be constructed by the placement of soil at sufficient distance beyond the proposed finish slope to allow compaction equipment to be operated at the outer limits of the final slope surface. The excess fill is to be removed prior to completion of rough grading. Other construction procedures may be used when it is demonstrated to the satisfaction

(j) The Geotechnical Engineer shall provide sufficient inspection during the preparation of the natural ground and the placement and compaction of the fill to be satisfied that the work is being performed in accordance with the plan and applicable Code requirements.

(k) The grading contractor shall submit the statement required by the City Engineer at the completion of rough grading.

3. Inspection Notes:

(a) The permittee of his agent shall notify the Building Official at least one working day in advance of required inspections at

(1) Initial. When the site has been cleared of vegetation and unapproved fill has been scarified, benched or otherwise prepared for fill. Fill shall no have been placed prior to this inspection.

(2) Rough. When approximate final elevations have been established; drainage terraces, swales and berms installed at the top of the slope; and the statement required in this Section have been received.

(3) Final. When grading has been completed; all drainage devices installed; slope planting established, irrigation systems installed and the As-Built plans, required statements, and reports have been submitted.

(b) Geotechnical Notes:

(1) All recommendations included in the consultant's geotechnical report(s) must be complied with and are a part of the grading plans and specifications.

(2) Grading operations must be conducted under periodic geologic inspections with monthly inspection reports to be submitted to the City Engineer.

(3) The Consulting Geologist and Geotechnical Engineer must state in a final report, prior to the approval of rough grading by the City Grading Division, that geotechnical hazards have been removed, mitigated or designated as "Restricted Use Areas". The final report must be submitted to the Engineering Division for their review and approval.

(4) Foundation, wall and pool excavation must be inspected and approved by the consulting geologist and geotechnical engineer, prior to the placing of steel or concrete.

(5) Building pads located in cut/fill transition areas shall be overexcavated a minimum of three (3) feet below the proposed bottom of footing.

(c) Planting and Irrigation Notes:

(1) The plans of a designed irrigation system for full coverage of all portions of the slopes shall be submitted and approved prior to rough grading approval by the City.

(2) All cut slopes over five (5) feet and fill slopes over three (3) feet shall be planted with an approved ground cover and provided with an irrigation system as soon as practical after rough grading.

(3) Planting and irrigation plans for slopes greater than 20 feet in height must be prepared and signed by a Licensed Landscape Architect or Registered Civil Engineer.

(d) Stormwater Pollution Plan Notes:

ATTACHMENT A NOTES

(a) Eroded sediments and other pollutants must be retained on-site and may not be transported from the site via sheetflow, swales, area drains, natural drainage courses or wind.

(b) Stockpiles of earth and other construction related materials must be protected from being transported form the site by the forces of wind or water.

(c) Fuels, oils, solvents, and other toxic materials must be stored in accordance with their listing and are not to contaminate the soil and surface waters. All approved storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of in a proper manner. Spills may not be washed into the drainage system.

(d) Excess or waste concrete may not be washed into the public way or any other drainage systems. Provisions shall be made to retain concrete wastes on-site until they can be disposed of as solid waste.

(e) Trash and construction related solid wasted must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.

(f) Sediments and other materials may not be tracked from the site by vehicle traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the public way. Accidental depositions must be swept up immediately and may not be washed down by rain or other means.

(g) Any slopes with disturbed soil or denuded of vegetation must be stabilized so as to inhibit erosion by wind and water.

4. Additional Notes

(a) The existence and location of any underground utility or structures shown on these plans are obtained by a search of the available records. To the best of our knowledge, there are no existing utilities except for as shown on this map. The contractor is required to take due precautionary measures to protect the utility lines shown and any other utility lines not of record or not shown on this drawing.

(b) The contractor is required to familiarize himself with the plans, the soils and/or geologic reports, and the site prior to commencing work.

(c) The soils and geological report prepared by IRVINE GEOTECHNICAL, INC. dated MAY 13, 2008, and any subsequent reports shall be considered a part of these plans and all recommendations thereof shall be complied with.

(d) Retaining walls shown on these plans (if any) are to be constructed by separate permit.

(e) Sanitary facilities shall be maintained on the site from the beginning to the completion of grading operation.

(f) Dust shall be controlled by watering as required by air pollution control district of Los Angeles County.

(g) The engineer preparing these plans will not be responsible for, or liable for, unauthorized changes to or uses of these plans. All changes to the plans must be in writing and must be approved by the preparer of these plans.

(h) All cut or fill slopes shall be no steeper than 2:1 unless otherwise noted.

(i) The surface of all cut and fill slopes shall be protected against damage by

(j) Quantities: Cut: 847 C.Y. Fill: 132 C.Y. Export: 715 C.Y. (Quantities shown hereon are for permit fee establishment only and shall not be used for bidding or contract purposes).

(k) Specifications shall have precedence over drawings.

(l) In-grading inspections must be made by the consulting geologist and geotechnical engineer. Monthly in-grading inspection reports must be submitted directly to the Geology and Soils Section by the consultants.

(m) Rough grading must be approved by a final geology and geotechnical engineering report prior to approval by the Geology and Soils Section. An As-Built Geologic Map must be included in the final geology report. Submit report for approval for issuance of building permit. Provide a final report statement that verifies work was done in accordance with report recommendations and code provisions (Section 7021-3).

(n) Foundation, wall and pool excavations must be inspected and approved by the consulting geologist and geotechnical engineer prior to the placing of steel or

(o) The contractor shall notify Calcivic Engineering Group of any discrepancies in the plans before proceeding with construction.

(p) Registered Deputy Grading Inspector is required on grading and foundation earthwork where (site exceeds 60,000 s.f.) (cut or fill slopes exceeds 2:1) (cuts exceed 40 ft. in height and within 20 ft. of a property line) (foundation excavation below a 1:1 plane from property line) (projects involve unusual hazards)(shoring work including slot-cuts)". (1704)

(q) A Registered deputy Grading Inspector is required on all shoring work including slot-cuts Sec. 1701.5.

(r) All grading slopes shall be planted and sprinklered. (7012.1)

(s) Standard 12 inch high berm is required at top of all graded slopes.

(t) No fill to be placed, until the city grading inspector has inspected and approved the bottom excavation.

(u) Man-made fill shall be compacted to a minimum relative compaction of 90% Cohesionless soils with less than 15% finer than .005 mm require 95% compaction. Sec. 91.7013.3

(v) Continuous inspection by the soils engineer/ geologist is required for grading.

(aa) "General Specifications for all Grading plans" – Department Building and safety form B-164 is a part of the plans.

(bb) All grading slopes shall be planted and sprinklered. Sec.91.7012.1

(cc) Temporary Erosion control to be installed between November 1 and April 15. Obtain Grading inspector's and Department of Public Works approval of proposed procedures. (>200 cy.)] (7007.1)

(dd) All fill or backfill shall be compacted by mechanical means to a minimum 90% relative compaction as determined by ASTM method D-1557. Subdrains shall be provided where required by Code.

(ee) The soils engineer is to approve the key or bottom and leave a certificate on the site for the grading inspector. The grading inspector is to be notified before any grading begins and, for bottom inspection, before fill is place. Fill may not be placed without approval of the grading inspector.

(ff) existing non-conforming slopes shall be cut back at 2:1 (26 degrees) or retain.

(gg) Stake and flag the property lines in accordance with a licensed survey map.

(hh) Final plans and caculations must be signed by a register Civil Engineer. (7006.1).

ATTACHMENT B NOTES

The following BMPs as outlined in, but not limited to, the Best Management Practice Handbook, California Stormwater Quality Task Force, Sacramento, California 1993, or the latest revised edition, may apply during the construction of this project (additional measures may be required if deemed appropriate by County Inspectors):

CA001 – DEWATERING OPERATIONS
CA002 – PAVING OPERATIONS
CA003 – STRUCTURE CONSTRUCTION AND PAINTING
CA010 – MATERIAL DELIVERY AND STORAGE
CA011 – MATERIAL USE
CA012 – SPILL PREVENTION AND CONTROL
CA020 – SOLID WASTE MANAGEMENT
CA021 – HAZARDOUS WASTE MANAGEMENT
CA022 – CONTAMINATED SOIL MANAGEMENT
CA023 – CONCRETE WASTE MANAGEMENT
CA030 – VEHICLE AND EQUIPMENT CLEANING
CA031 – VEHICLE AND EQUIPMENT FUELING
CA032 – VEHICLE AND EQUIPMENT MAINTENANCE
CA040 – EMPLOYEE/SUBCONTRACTOR TRAINING
ESC01 – SCHEDULING
ESC02 – PRESERVATION OF EXISTING VEGETATION
ESC10 – SEEDING AND PLANTING
ESC11 – MULCHING
ESC20 – GEOTEXTILES AND MATS
ESC21 – DUST CONTROLS
ESC22 – TEMPORARY STREAM CROSSING
ESC23 – CONSTRUCTION ROAD STABILIZATION
ESC24 – STABILIZED CONSTRUCTION ENTRANCE
ESC30 – EARTH DIKE
ESC31 – TEMPORARY DRAINS AND SWALES
ESC32 – SLOPE DRAIN
ESC40 – OUTLET PROTECTION
ESC41 – CHECK DAMS
ESC42 – SLOPE ROUGHENING/TERRACING
ESC50 – SILT FENCE
ESC51 – STRAW BALE BARRIERS
ESC52 – SAND BAG BARRIER
ESC53 – BRUSH OR ROCK FILTER
ESC54 – STORM DRAIN INLET PROTECTION
ESC55 – SEDIMENT TRAP
ESC56 – SEDIMENT BASIN

This plan has been reviewed and conforms to recommendations of soils engineering/geologic reports dated X

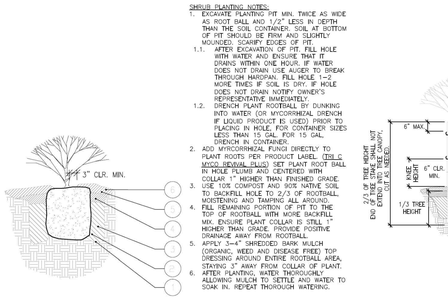
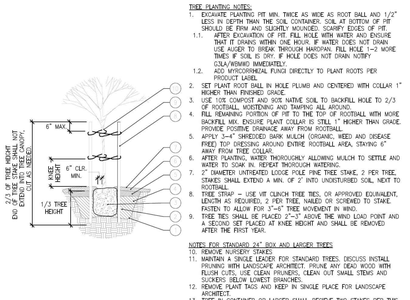
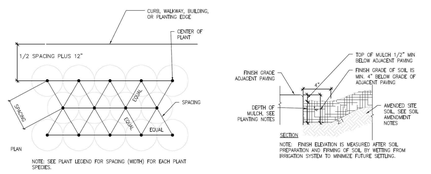
PLANTING NOTES:

1. SOIL PREPARATION:
A. CLEAR SITE OF ALL VEGETATION, INCLUDING LARGE ROOT SYSTEMS FROM PLANTS REMOVED.
B. ROTOTILL TOGETHER 90% SITE SOIL AND 10% COMPOST TO A DEPTH OF 8".
C. REMOVE ALL VEGETATION REMNANTS, CLODS OF 2" DIAMETER OR LARGER, STONES, SMALLER ROOTS, AND OTHER DELETERIOUS MATERIAL.
D. IF SOIL IS OVERLY COMPACTED (OVER 150 PSL OR 85% PROCTOR). TILL COMPACTED AREA BY HAND TO A DEPTH OF 6-8". IF SOIL IS COMPACTED BELOW 8" DEPTH, BREAK UP COMPACTION WITH AN AUGER.
E. WHEN PLANTING PER DETAIL, BACKFILL WITH 90% SITE SOIL AND 10% COMPOST.
F. ALL LANDSCAPE AREAS ARE TO RECEIVE AN EVEN APPLICATION OF SOIL HUMATE WITH AN APPLICATION RATE PER PRODUCT SPECIFICATIONS DEPENDING ON TYPE USED. THE HUMATE AMENDMENT IS TO BE INCORPORATED UNIFORMLY ONTO TOP OF SOIL. THESE ARE ACCEPTABLE SOIL AMENDMENT PRODUCTS OR EQUIVALENT;
1.1. GRANULAR PRODUCT PREMIUM HUMATE FROM TRI-C. APPLICATION RATE IS 50 LBS PER 1,000 S.F. FOLLOW DIRECTION ON PRODUCT LABEL.
1.2. LIQUID PRODUCT SPRAY APPLICATION "TERAVITA LC-10 PLUS 7". (WWW. SIMPLICI-TEA.COM). FOLLOW DIRECTIONS ON PRODUCT LABEL.
1.3. "SOLUPLKS" FROM EARTHFORT (WWW.EARTHFORT.COM). LIQUID APPLICATION= 1 GALLON/ACRE OR 7 OZ FOR 2,375 S.F. FOLLOW DIRECTIONS ON PRODUCT LABEL.
2. PLANTING DEPTH: ALL PLANTS ARE TO BE PLANTED SO THAT AFTER SETTLING, THE CROWN OF THE PLANT IS EVEN WITH FINISH GRADE AND ALL ROOTS ARE FULLY COVERED WITH SOIL.
3. NO WATERING BASINS: DO NOT INSTALL WATERING BASINS AROUND PLANTS.
4. MULCH SPECIFICATION: INSTALL A 3"-4" DEEP LAYER OF WOOD BARK AND LEAF MIXTURE MULCH ON TOP OF IRRIGATION TUBING. WOOD CHIPS OR ARTIFICALLY COLORED MULCH SHALL NOT BE USED. KEEP ALL MULCH 4" AWAY FROM CROWN OF PLANTS.
5. COMPOST TEA: APPLICATION OF BREWED COMPOST TEA IS HIGHLY RECOMMENDED. PLEASE CONTACT COMPOST TEANA AT 310.367.6485.
6. MAINTENANCE: SIZES OF PLANTS AND TREES ARE SHOWN ON PLAN AT 75% OF MATURE SIZE. THE GARDENER WILL NEED TO ENSURE THAT ALL PLANTS AND TREES RECEIVE REGULAR MAINTENANCE I.E. PRUNING, THINNING, AND DIVIDING, AND MULCH RENEWAL TO MAINTAIN LONGEVITY, HEALTH, AND AESTHETIC INTENT OF THE PLANTING. CONTRACTOR SHALL BE RESPONSIBLE FOR MONITORING PLANT HEALTH AND WATERING SCHEDULING THROUGH WARRANTY. GARDENER RESPONSIBLE FOR DAY-TO-DAY MAINTENANCE.
7. QUANTITIES: CONTRACTOR IS RESPONSIBLE FOR VERIFYING PLANT QUANTITIES. QUANTITIES IN PLANITNG PLAN SUPERCEDES QUANTITY IN PLANTING LEGEND.
8 PLANTING PATTERN: PLANT ALL GROUND COVERS IN A TRIANGULAR PATTERN FOR MOST EFFICIENT COVERAGE.
9. SUBSTITUTIONS: IF CERTAIN PLANTS ON PLANT LIST ARE NOT AVAILABLE AT THE TIME OF PLANTING, CONTACT BEAUTIFUL GARDENS LA TO DETERMINE IF A SUITABLE SUBSTITUTION COULD BE MADE.
10. ON SITE POSITIONING: BEAUTIFUL GARDENS LA RESERVES THE RIGHT TO ADJUST PLANT MATERIAL ON SITE. PLANTS TO BE PLACED AND POSITIONED ON SITE PER PLAN BY LANDSCAPE CONTRACTOR. FINAL PLANT LAYOUT SHALL BE APPROVED BY BEAUTIFUL GARDENS LA PRIOR TO PLANTING.
11. GUARANTEE: ALL PLANT MATERIAL PURCHASED BY LANDSCAPE CONTRACTOR SHALL BE GUARANTEED FOR A PERIOD OF 3 MONTHS. GUARANTEE PERIOD COMMENCES FROM THE TIME OF FINAL INSPECTION AND ACCEPTANCE BY THE OWNER. PLANTS USED FOR REPLACEMENT OF DEAD PLANTS SHALL BE THE SAME KIND AND SIZE AS ORIGINALLY PLANTED, UNLESS OTHERWISE DIRECTED BY BEAUTIFUL GARDENS LA. REPLACEMENT PLANTS ARE TO BE PLANTED FOLLOWING THE ORIGINAL PLANS AND SPECIFICATIONS.
12. MEADOW AREA: SPACE PLUGS EVENLY THROUGHOUT, SEE LEGEND FOR SPACING (IN A TRIANGULAR PATTERN). USE 2" OR SMALLER PLUGS. SPREAD WILDFLOWER SEED BETWEEN GRASS PLUGS AFTER ALL PLANTING IS COMPLETE. SPREAD SEED PER NURSERY RECOMMENDATIONS. CONTACT S&S SEEDS FOR SEED RATE & TO PURCHASE SEEDS: WWW.SSEEDS.COM, (805) 684-0436, EMAIL: INFO@SSSEEDS.COM, ADDRESS: PO BOX 1275, CARPINTERIA, CA.







COMPOST SPECIFICATION:

COMPOST SHALL BE PRODUCED BY A COMPOST FACILITY FULLY LICENSED BY THE STATE OF CALIFORNIA WHICH DOCUMENTS THE PATHOGEN REDUCTION PROCESS. COMPOST IS TO BE WELL-COMPOSTED, STABLE, AND WEED-FREE ORGANIC MATTER. PH RANGE OF 5.5 TO 8; MOISTURE CONTENT 30 TO 55 PERCENT BY WEIGHT; 100 PERCENT PASSING THROUGH 3/8" SLEEVE; SOLUBLE SALT CONTENT OF 5 TO 10 DECISIEMENS/M; AND NOT EXCEEDING 0.5 PERCENT INERT CONTAMINANTS AND FREE OF SUBSTANCE TOXIC TO PLANTINGS.
A) ORGANIC MATTER CONTENT: 50 TO 60 PERCENT OF DRY WEIGHT.
B) FEEDSTOCK: AGRICULTURAL, FOOD, OR INDUSTRIAL RESIDUALS; YARD TRIMMINGS; OR SOURCE-SEPARATED OR COMPOSTABLE MIXED SOLID WASTE. SLUDGE OR SEWAGE WASTE COMPOSTS ARE NOT ACCEPTABLE.
C) AMEND SOIL WITH AGRI SERVICE OR COMPARABLE HUMIC COMPOST SOIL AMENDMENT. SIX CUBIC YARDS PER 1,000 SQUARE FEET TO A DEPTH OF 5" TO 8" OF SOIL.

Planting Notes

"A certificate of completion shall be signed by the designer of the landscape plans, irrigation plans, or the licensed landscape contractor for the project."

"All Planting areas to include a min. of 3in of mulch shall be applied to all exposed soil surfaces of planting areas except turf areas, creeping or rooting groundcovers or direct seeding applications where mulch is contraindicated."

"For soils less than 6% organic mater in the top 6in of soil, compost at a rate of 4 cubic yards per 1,000 square feet."

"Recirculating water systems shall be used for all water features."

"A minimum 3-inch layer of mulch shall be aplied on all exposed soil surfaces of planting areas except turf areas, creeping or rooting groundcovers, or direct seeding applications where mulch is contraindicated."
"Unless contradicted by a soils test, compost at a rate of a minimum of four cubic yards per 1,000 square feet of permeable area shall be incorporated to a depth of six inches into the soil."
"For soils less than 6% organic matter in the top 6 inches of soil, compost at a rate of a minimum of four cubic yards per 1,000 square feet of permeable area shall be incorporated to a depth of six inches of soil."

HYDROZONES AND WATER BUDGET

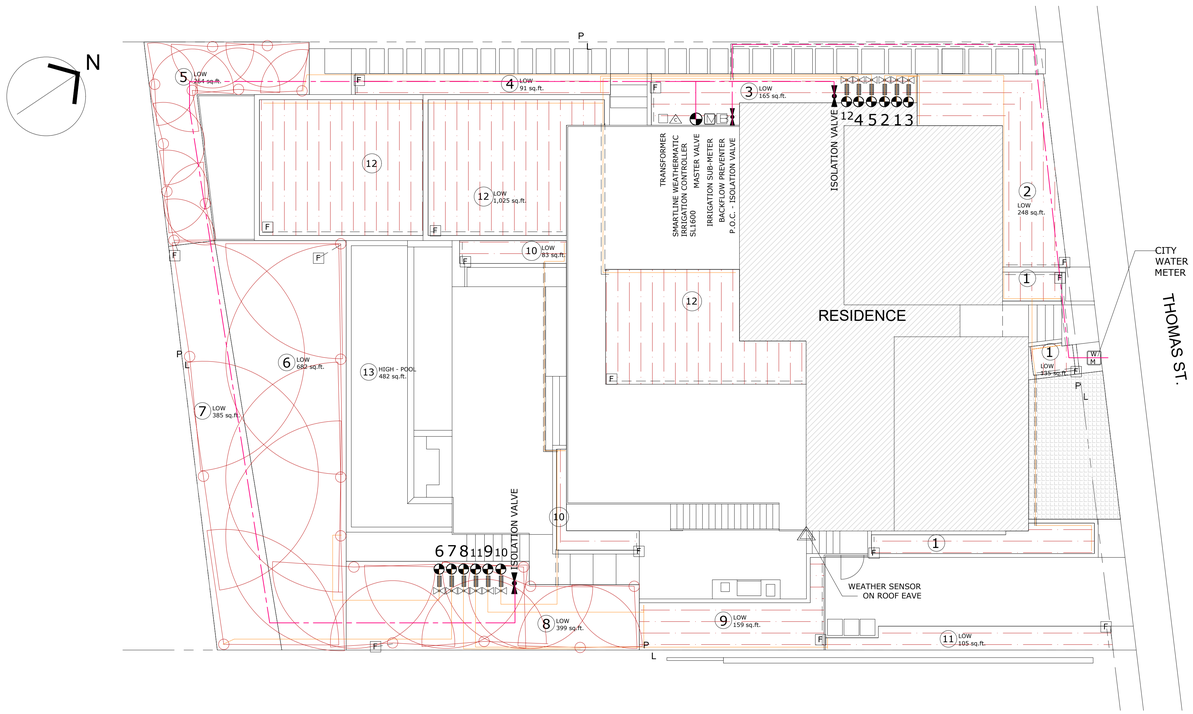
Beautiful Gardens LA
6168 1/2 Whitworth Dr.
Los Angeles, CA 90035
310.502.0058 310.230.1782

Project:
Residence
2830 Prewett,
Los Angeles, CA 90031

L4

Scale: 3/16"=1'-0"
Date: 03/31/21

REV: 04/27/21



GENERAL IRRIGATION NOTES

1. A DIAGRAM OF THE HYDROZONE PLAN SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES.
2. A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE SIGNER OF THE LANDSCAPE PLANS, THE SIGNER OF THE IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT.
3. AN IRRIGATION AUDIT REPORT SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION.
4. IRRIGATION WATER SUPPLY IS CITY SUPPLIED POTABLE WATER FROM THE EXISTING WATER METER LOCATED AT THE PARKWAY.
5. AT THE TIME OF FINAL INSPECTION, THE PERMIT APPLICANT MUST PROVIDE THE OWNER OF THE PROPERTY WITH A CERTIFICATE OF COMPLETION, CERTIFICATE OF INSTALLATION, IRRIGATION SCHEDULE, SCHEDULE OF LANDSCAPE MAINTENANCE AND SCHEDULE OF IRRIGATION MAINTENANCE.
6. RECIRCULATING WATER SYSTEMS SHALL BE USED FOR WATER FEATURES.
7. PRESSURE REGULATING DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES.
8. CHECK VALVES OR ANTI-DRAIN VALVES ARE REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR.
9. MANUAL SHUT-OFF VALVES SHALL BE REQUIRED, AS CLOSE AS POSSIBLE TO THE POINT OF CONNECTION OF THE WATER SUPPLY, TO MINIMIZE WATER LOSS IN CASE OF AN EMERGENCY OR ROUTINE REPAIR.

IRRIGATION DETAIL NOTES

DRIP

1. ALL PLANTED AREAS ARE DRIPPED WITH NETAFIM TLCV6-12 GRID. THE EMITTER SPACING IS 12" AND THE ROW SPACING FOR ALL ZONES IS 12"

2. ALL DRIP GRIDS HAVE BEEN POSITIONED TO BE SITUATED ON THE CONTOUR OF THE SLOPE. WHEN INSTALLING RIDS, ENSURE LINES OF THE GRID ARE PARALLEL TO THE SLOPE.

3. ENSURE THAT ALL PLANTS HAVE ONE EMITTER POSITIONED ON THE ROOTBALL. IF AN EMITTER DOES NOT FALL DIRECTLY ON TOP OF A ROOTBALL, USE THE NETAFIM MICRO TUBING ADAPTOR PLUGGED INTO A NEARBY NETAFIM INLINE EMITTER, AND RUN 1/4" DRIP TUBE ONTO ROOTBAKK AND STAKE DOWN.

4. THE DRIP ZONES HAVE DASHED LINES DRAWN IN MARKING THE POSITIONS OF ALL THE DRIP TUBING.

5. ALL ZONES HAVE EITHER 1/2" PVC, 3/4" PVC OR 1/2" BLANK POLYETHYLENE TUBING RUNNING DIRECTLY FROM THE VALVE WHERE THE ZONE BEGINS. THESE INDIVIDUAL SIZES ARE CLEARLY MARKED ON THIS PLAN. BE SURE TO INSTALL THE CORRECT SIZE PIPE OR TUBING, AS THEY ARE DESIGNED TO HANDLE THE MAXIMUM FLOW OF EACH ZONE.

6. ON THE EDGES OF THE DRIP ZONES, START THE EMITTER LINE ROWS NO MORE THAN 4" FROM THE HARDSCAPING EDGE.

7. THE SUPPLY AND EXHAUST HEADERS FOR EACH SUB-GRID CONSIST OF 1/2" BLANK POLYETHYLENE TUBING.

8. DRIP GRIDS AND SUB-GRIDS HAVE A FLUSH POINT AT THE HYDRAULIC OPPOSITE END OF THE SUPPLY HEADER. INSTALL PER INSTALLATION DETAIL.

9. TEMPORARILY PLUG ANY EMITTER THAT WILL NOT BE NEEDED WITH NETAFIM PLUG. THIS PLUG CAN BE EASILY REMOVED LATER, WHEN THE ROOTS HAVE REACHED THAT AREA.

VALVES

1. VALVES ARE 3/4" RAIN BIRD CONTROL ZONE KITS WITH PRE-INSTALLED FILTERS AND 30 PSI PRESSURE REGULATORS. THEY ARE TO BE INSTALLED PER INSTALLATION DETAIL.

2. VALVE MAINFOLDS HAVE AN ISOLATION VALVE DIRECTLY UPSTREAM.

PIPES

1. THE MAINLINE PIPE IS 1" SCHEDULE 40 PVC ALL THE WAY FROM THE WATER METER, THROUGH THE POINT OF CONNECTION AND ONWARD TO EACH VALVE MAINFOLD. CONNECT TO THE CITY WATER SUPPLY WHERE SHOWN ON PLAN.

CONTROLLER, WEATHER SENSOR AND IRRIGATION SUB-METER

1. THE IRRIGATION CONTROLLER IS A 16-STATION WEATHERMATIC SL1600 SMART CONTROLLER.

2. WEATHERMATIC WEATHER SENSOR SLW10 INSTALLED ABOVE CONTROLLER, ON ROOF EAVE, WITH NO OBSTRUCTION FROM ABOVE. ENSURE THE WEATHER SENSOR IS IN A SUNNY SPOT, AND THAT NOTHING BLOCKS RAIN.

3. THERE IS A MASTER VALVE DIRECTLY DOWNSTREAM OF THE IRRIGATION SUB-METER. BE SURE TO WIRE IT TO CONTROLLER.

STATIC WATER PRESSURE
1- CONTRACTOR SHALL VERIFY EXISTING STATIC WATER PRESSURE ONSITE
2- STATIC PRESSURE: 70 PSI
3- CONTRACTOR SHALL VERIFY SIZE OF EXISTING WATER METER ONSITE

"A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE SIGNER OF THE LANDSCAPE PLANS, THE SIGNER OF THE IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT."

"THE LANDSCAPE FOR THIS PROPERTY MUST BE BUILT TO THE APPROVED LANDSCAPE PLANS WITHIN THIS APPROVED BUILDING PLAN SET. ANY REVISIONS TO APPROVED PLANS WILL REQUIRE RE-SUBMITTAL AND APPROVAL AND MUST STILL COMPLY WITH THE CURRENT WATER-EFFICIENT LANDSCAPE AND IRRIGATION STANDARDS. ANY AREAS OF LANDSCAPE NOT COMPLETED AT TIME OF THE CLOSE OF THE BUILDING CONSTRUCTION PERMIT MUST BE COVERED WITH A MINIMUM 3 INCH (3") LAYER OF MULCH. THIS INCLUDES ALL EXPOSED SOIL SURFACES OF EXISTING PLANTING AREAS EXCEPT IN TURF AREAS, OVER CREEPING OR ROOTING GROUNDCOVERS, OR IN DIRECT SEEDING APPLICATIONS, WHERE MULCH IS NOT APPROPRIATE. FUTURE LANDSCAPE INSTALLATIONS FOR INCOMPLETE LANDSCAPE INSTALLATIONS MUST BE TO THE APPROVED LANDSCAPE PLANS. I HAVE READ AND UNDERSTAND THE TERMS OF THIS STATEMENT."

IRRIGATION MAINTENANCE SCHEDULE

DURING FIRST SIX WEEKS AFTER INSTALLATION:

1. CHECK CONTROLLER AND LANDSCAPE EVERY TWO WEEKS TO ENSURE THAT THE AUTOMATIC PROGRAM IS FUNCTIONING WELL, AND THE PLANTS ARE THRIVING.

2. CHECK WATERING HISTROY ON CONTROLLER
3. CHECK THAT ALL DATA IN CONTROLLER ARE CURRENT AND CORRECT.
4. TURN ON ALL ZONES AND WALK THROUGH TO ENSURE PROPER FUNCTION OF ALL COMPONENTS.

EVERY SIX MONTHS:

1. FLUSH ALL DRIP ZONES TO REMOVE ANY DEBRIS FROM THE SYSTEM.
2. FLUSH ALL DRIP FILTERS AT THE VALVES EVERY SIX MONTHS.
3. TURN ON EACH ZONE, AND THROUGH TO ENSURE THAT ALL IS FUNCTIONING WELL. MAKE ANY REPAIRS OR ADJUSTMENTS NEEDED.

ANNUALLY:

1. PERFORM AN ANNUAL FULL-SYSTEM IRRIGATION CHECK. MAKE ANY NEEDED REPAIR OR ADJUSTMENTS.

"I HAVE COMPLIED WITH THE CRITERIA OF THE ORDINANCE AND APPLIED THEM FOR THE EFFICIENT USE OF WATER IN THE LANDSCAPE DESIGN PLAN."

"I AGREE TO COMPLY WITH THE REQUIREMENTS OF THE WATER EFFICIENT LANDSCAPE ORDINANCE AND SUBMIT A COMPLETE LANDSCAPE DOCUMENTATION PACKAGE."

"THE PACKAGE COMPLIES WITH THE PERFORMANCE APPROACH OF THE MWELO."

8 DRIPPER PLUG RING

NOTE: IF THERE ARE ANY EMITTERS IN THE NETAFIM GRID THAT WILL NOT BE NEEDED IN THE PRESENT, PLUG THEM WITH THE "DRIPPER PLUG RING" FROM NETAFIM. THESE PLUGS ARE REUSABLE.

TO ENSURE THAT EACH NEW PLANT HAS AN EMITTER ON ITS ROOT BALL, USE THIS ADAPTOR FROM NETAFIM. IT IS CALLED A MICRO TUBING ADAPTOR. THE MODEL NUMBER IS: TLMTUBEADP.

CLIP THIS ADAPTOR ONTO THE NEAREST INLINE EMITTER IN THE GRID TO THE PLANT. THEN ATTACH A LENGTH OF ¼" DRIP TUBING, AND RUN IT TO THE TOP OF THE ROOT BALL, AND STAPLE IT DOWN.

THIS ADAPTOR AND ¼" TUBING MAY BE REMOVED AFTER THE ROOTS OF THE PLANTS MOVE OUT INTO THE NATIVE SOIL.

GENERAL IRRIGATION NOTES

"CONTRACTOR SHALL BE LICENSED; IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO READ, UNDERSTAND, AND ADHERE S RESPONSIBILITY TO READ, UNDERSTAND, AND ADHERE TO PROJECT NOTES AND SPECIFICATION, PERTAINING TO ALL PLANS, INCLUDING THE FOLLOWING GENERAL AND SITE SPECIFIC NOTES."

1. "THIS DESIGN IS DIAGRAMMATIC. ALL VALVES, ETC., SHOW WITHIN PAVED AREAS FOR DESIGN CLARIFICATION ONLY, AND SHALL BE INSTALLED IN THE PLANTING AREAS WHERE POSSIBLE, AVOID ANY CONFLICTS BETWEEN THE IRRIGATION SYSTEM AND EXISTING STRUCTURES, UTILITIES AND PLANTING."
2. "ALL MAINLINE PIPING UNDER PAVING SHALL BE INSTALLED IN SEPARATE SLEEVES, MAIN LINE SLEEVE, CONTROL WIRE SLEEVES SHALL BE OF SUFFICIENT SIZE FOR THE REQUIRED NUMBER OF WIRES UNDER PAVING, OR SIZE AS INDICATED ON PLANS."
3. "ALL EXTERIOR LOW VOLTAGE WIRE CONNECTIONS SHALL BE FULLY ENCLOSED USING WATERPROOF CONNECTORS."
4. "EXTEND ALL SLEEVES A MINIMUM OF SIX (6) INCHES BEYOND PAVING EDGES."
5. "PROVIDE A MINIMUM OF 18" COVER OVER ALL PRESSURE MAINLINE PIPE AND 12" MINIMUM COVER OVER ALL COVER OVER ALL PRESSURE MAINLINE PIPE AND 12" MINIMUM COVER OVER ALL MINIMUM COVER OVER ALL NON-PRESSURE LATERAL LINES."
6. "CONTRACTOR SHALL BE RESPONSIBLE FOR PULLING VALVE WIRING THROUGH SLEEVING WHEN NECESSARY."
7. "ALL LATERAL LINE PIPING UNDER PAVING SHALL BE PVC SCHEDULE 40 PIPE AND SHALL BE INSTALLED PRIOR TO PAVING."
8. "EXERCISE EXTREME CARE WHEN EXCAVATING FOR IRRIGATION SYSTEM DUE TO EXISTING UTILITIES. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO BECOME FAMILIAR WITH ALL GRADE DIFFERENCES, LOCATION OF WALLS, STRUCTURES, AND UNDERGROUND UTILITIES. THE CONTRACTOR SHALL COORDINATE HIS WORK WITH AND ALL OTHER TRADES ON SITE."
9. "DO NOT WILLFULLY INSTALL THE IRRIGATION SYSTEM AS SHOWN ON THE DRAWINGS WHEN IT IS OBVIOUS IN THE FIELD THAT UNKNOWN OBSTRUCTION, GRADE DIFFERENCES OR DIFFERENCES IN THE AREA DIMENSIONS EXIST THAT MIGHT NOT HAVE BEEN CONSIDERED IN THE DESIGN. SUCH OBSTRUCTIONS OR DIFFERENCES SHOULD BE BROUGHT TO THE ATTENTION OF BEAUTIFUL GARDENS LA. IN THE EVENT THIS NOTIFICATION IS NOT PERFORMED, THE CONTRACTOR SHALL ASSUME ALL RESPONSIBILITY FOR ANY REVISIONS NECESSARY."
10. "ALL THREADED PIPE CONNECTIONS MADE TO SLIP-JOINT PVC PIPE SHALL BE MADE WITH A PVC THREADED COUPLING. ALL THREADED ADAPTERS AND COUPLINGS ARE TO BE 'DURA' DEEP SOCKET TYPE. DURA' DEEP SOCKET TYPE. DEEP SOCKET TYPE."
11. "ALL VALVES SHALL BE LOCATED IN GROUND COVER AREAS WHENEVER POSSIBLE. REMOTE CONTROL VALVES SHALL BE INSTALLED IN BELOW GRADE BOXES. USE BROWN COLORED BOXES UNLESS OTHERWISE SPECIFIED."
12. "THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAKING THE FINAL CONNECTION OF CONTROL WIRES BETWEEN EXISTING WIRES AND NEW CONTROL VALVES."
13. "CONTRACTOR SHALL PROVIDE SEPARATE SLEEVE FOR PRESSURIZED MAINLINE AND LATERALS ROUTED UNDER EXISTING WALKWAYS AS NEEDED."
14. "CONTRACTOR SHALL FOLLOW ALL MANUFACTURER'S INSTRUCTIONS AND RECOMMENDATIONS FOR INSTALLATION AND S INSTRUCTIONS AND RECOMMENDATIONS FOR INSTALLATION AND COORDINATION OF THE IRRIGATION SYSTEM TO INSURE A COMPLETE SYSTEM."
15. "COVER ALL DRIP LINES WITH MINIMUM 3" THICK LAYER OF APPROVED BARK MULCH."
16. "PRESSURE REGULATION DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE REGULATION DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES."
17. "MANUAL SHUT-OFF VALVES SHALL BE REQUIRED, AS CLOSE AS POSSIBLE TO THE POINT OF CONNECTION OF THE MANUAL SHUT-OFF VALVES SHALL BE REQUIRED, AS CLOSE AS POSSIBLE TO THE POINT OF CONNECTION OF THE WATER SUPPLY, TO MINIMIZE WATER LOSS IN CASE OF AN EMERGENCY OR ROUTINE REPAIR."
18. "CHECK VALVES OR ANTI-DRAIN VALVES AREA REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE CHECK VALVES OR ANTI-DRAIN VALVES AREA REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR."
19. "A DIAGRAM OF THE IRRIGATION PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER A DIAGRAM OF THE IRRIGATION PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES."
20. "AT THE TIME OF FINAL INSPECTION, THE PERMIT APPLICANT MUST PROVIDE THE OWNER OF THE PROPERTY WITH A AT THE TIME OF FINAL INSPECTION, THE PERMIT APPLICANT MUST PROVIDE THE OWNER OF THE PROPERTY WITH A CERTIFICATE OF COMPLETION, CERTIFICATE OF INSTALLATION, AND AN IRRIGATION SCHEDULE OF LANDSCAPE AND IRRIGATION MAINTENANCE."
21. "AN IRRIGATION AUDIT REPORT SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION."
22. "AN OPEN-TRENCH INSPECTION BY CITY STAFF IS REQUIRED PRIOR TO COVERING BELOW GRADE PIPES, LATERALS, AND MAINS. THE DESIGNER OF THE LANDSCAPE, OR THEIR DESIGNEE, AND GENERAL CONTRACTOR, OR THEIR DESIGNEE, PERFORMING THE INSTALLATION MUST BE PRESENT AT THE OPEN- TRENCH INSPECTION. FOR OPEN-TRENCH INSPECTIONS, CALL THE OFFICE OF SUSTAINABILITY AND THE ENVIRONMENT AT (310) 458-8405."
23. "PRIOR TO FINAL INSPECTION INSTALLER SHALL TEST THE IRRIGATION SYSTEM TO VERIFY THAT IT MEETS THE APPROVED DESIGN AND SPECIFICATIONS."
24. "PRIOR TO FINAL INSPECTION INSTALLER MUST PROGRAM THE IRRIGATION CONTROLLER."
25. "A FINAL INSPECTION BY CITY STAFF IS REQUIRED PRIOR TO CERTIFICATE OF OCCUPANCY TO ENSURE THAT THE SYSTEM WAS BUILT TO APPROVED PLANS AND SPECIFICATIONS. FOR FINAL INSPECTIONS, CALL THE OFFICE OF SUSTAINABILITY AND THE ENVIRONMENT AT (310) 458-8405. THE FOLLOWING ITEMS WILL BE REQUIRED AT FINAL INSPECTION PRIOR TO THE ISSUANCE OF A CERTIFICATE OF OCCUPANCY:
POST-INSTALLATION SOIL TEST RESULTS WHICH MUST CONTAIN THE PERCENTAGE (%) OF ORGANIC MATTER; MAY ALSO INCLUDE BUT IS NOT LIMITED TO SOIL TEXTURE; INFILTRATION RATE OR SOIL TEXTURE INFILTRATION RATE TABLE; PH; TOTAL SOLUBLE SALTS; SODIUM; AND RECOMMENDATIONS DETERMINED BY LABORATORY TEST. EXCEPTION: LANDSCAPES CONTAINED ENTIRELY IN PLANTERS OR CONTAINERS ARE EXEMPT FROM THIS REQUIREMENT.
A DETAILED IRRIGATION CONTROLLER MAP MUST BE INSTALLED INSIDE OR NEAR THE IRRIGATION CONTROLLER WITH AT MINIMUM A DESCRIPTION FOR EACH ZONE INCLUDING: PLANT MATERIAL, WATERING DEVICE, VALVE, OR STATION NUMBER, RUN TIME FOR PEAK DEMAND MONTH AND PRECIPITATION RATE.
IRRIGATION SCHEDULES INCLUDING ESTABLISHMENT PERIOD START AND END DATES, MUST BE POSTED INSIDE THE IRRIGATION CONTROLLER HOUSING UNIT BY THE INSTALLER."
26. "ELECTRONIC SUBMISSION OF AN AS-BUILT SET OF PLANS TO THE CITY IS REQUIRED IF REQUESTED BY CITY INSPECTOR."
27. "PRIOR TO CONSTRUCTION OF LANDSCAPED AREA OR IRRIGATION, THE CONTRACTOR MUST OBTAIN AND REVIEW A COPY OF THE WATER-EFFICIENT LANDSCAPE AND IRRIGATION STANDARDS."
28. "ALL LANDSCAPING AND IRRIGATION SYSTEMS MUST COMPLY WITH ALL LOCAL, STATE, AND FEDERAL LAWS AND REGULATIONS."
29. "THE IRRIGATION SYSTEM MUST COMPLY WITH ALL LOCAL, STATE, AND FEDERAL LAWS AND REGULATIONS."
30. "THE IRRIGATION DESIGNER OR LANDSCAPE ARCHITECT OR LANDSCAPE DESIGNER SHALL PERFORM ONE OR MORE SITE OBSERVATIONS DURING SYSTEM INSTALLATION TO CHECK FOR ADHERENCE TO THE DESIGN, INCLUDING THAT THE PROPER INSTALLATION OF THE BACKFLOW PREVENTION ASSEMBLY, MAIN LINE, LATERALS, VALVES, SPRINKLER HEADS, DRIP IRRIGATION EQUIPMENT, CONTROL WIRE, CONTROLLERS, AND SENSORS MEETS THE INTENT OF THE IRRIGATION DESIGN PLAN AS DESIGNED AND APPROVED."
31. "AREAS DESIGNATED AS MULCH ON APPROVED LANDSCAPE PLANS, INCLUDING AREAS COVERED BY WOOD CHIPS, GRAVEL, STONE, DECOMPOSED GRANITE, AND AREAS DESIGNATED AS ARTIFICIAL TURF ON APPROVED LANDSCAPE PLANS CANNOT BE REPLACED WITH TURFGRASS OR HIGH WATER USE PLANTS AS DEFINED IN THE CURRENT EDITION OF THE WATER USE CLASSIFICATION OF LANDSCAPE SPECIES (WUCOLS), ONCE MULCH OR ARTIFICIAL TURF HAS BEEN INSTALLED."
32. "TURFGRASS, INCLUDING EXISTING PLANT MATERIAL, IS NOT ALLOWED ON SLOPES GREATER THAN TWENTY-FIVE PERCENT (25%) WHERE THE TOE OF THE SLOPE IS ADJACENT TO AN IMPERMEABLE HARDSCAPE."
33. "PLANT MATERIAL LISTED IN THE CURRENT INVASIVE PLANT INVENTORY FOR THE SOUTHWEST REGION BY THE CALIFORNIA INVASIVE PLANT COUNCIL OR LISTED FOR THE SOUTH COAST REGION BY THE PLANTRIGHT ORGANIZATION ARE PROHIBITED, INCLUDING EXISTING PLANT MATERIAL, EXCEPT FOR KNOWN NON-FRUITING, NON-INVASIVE, STERILE VARIETIES, CULTIVARS OR SELECTIONS."
34. "AUTOMATIC WEATHER-BASED OR SOIL-MOISTURE BASED IRRIGATION CONTROLLERS SHALL BE INSTALLED ON THE IRRIGATION SYSTEM."
35. "A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE SIGNER O F THE LANDSCAPE PLANS OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT"

Establishment Schedule

When the landscape is new, schedule the Weathermatic smart controller for Watering mode: "Basic". This means the controller will execute your schedule, not an automatic one. After 1 year, switch to Water mode: "Smart". This will ensure that the new plants are watered correctly while they are getting established.

Establishment Schedule (first year after planting)

Zones	Plant Type	Month	Application Rate	Weekly ETo	Minutes Per Week
All	Low-water	January	.96 in/hr	0.5 in.	28
All	Low-water	February	.96 in/hr	0.68 in.	38
All	Low-water	March	.96 in/hr	0.84 in.	47
All	Low-water	April	.96 in/hr	1.1 in.	61
All	Low-water	May	.96 in/hr	1.24 in.	69
All	Low-water	June	.96 in/hr	1.35 in.	75
All	Low-water	July	.96 in/hr	1.4 in.	78
All	Low-water	August	.96 in/hr	1.33 in.	74
All	Low-water	September	.96 in/hr	1.17 in.	65
All	Low-water	October	.96 in/hr	0.88 in.	49
All	Low-water	November	.96 in/hr	0.61 in.	34
All	Low-water	December	.96 in/hr	0.43 in.	24

Permanent Schedule

When the landscape is new, schedule the Weathermatic smart controller for Watering mode: "Basic". This means the controller will execute your schedule, not an automatic one. After 1 year, switch to Water mode: "Smart". This will ensure that the new plants are watered correctly while they are getting established.

Permanent Schedule (second year after planting)

Zones	Plant Type	Month	Application Rate	Weekly ETo	Minutes Per Week
All	Low-water	January	.96 in/hr	0.5 in.	7
All	Low-water	February	.96 in/hr	0.68 in.	9
All	Low-water	March	.96 in/hr	0.84 in.	12
All	Low-water	April	.96 in/hr	1.1 in.	15
All	Low-water	May	.96 in/hr	1.24 in.	17
All	Low-water	June	.96 in/hr	1.35 in.	19
All	Low-water	July	.96 in/hr	1.4 in.	19
All	Low-water	August	.96 in/hr	1.33 in.	18
All	Low-water	September	.96 in/hr	1.17 in.	16
All	Low-water	October	.96 in/hr	0.88 in.	12
All	Low-water	November	.96 in/hr	0.61 in.	8
All	Low-water	December	.96 in/hr	0.43 in.	6

Permanent Schedule Landscape Data

Landscape data for Smart Controller After Plants are Established

Zones	Sprinkler Type	Plant Type	Soil Type	Slope	More or Less
All	Inline drip, 0.96 in/hr (enter this rate manually in controller)	Native (25%)	Silty sand	None	Adjust individual zones for shade per controller instructions
