OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

SECTION 1.0
Executive Summary

Environmental Science Associates (ESA) compiled this executive summary using excerpts from the Initial Site Assessment report that follows. This executive summary may not provide all the information necessary to fully characterize the site and gain an understanding of the issues, nor does it detail the Initial Site Assessment and its findings. ESA does not recommend relying solely on this executive summary.

This Initial Site Assessment (ISA) was conducted on behalf of the City of Los Angeles for the City's Los Angeles River Phase IV Bike Path Project along the south side of the Los Angeles River in Los Angeles, California (subject property). This ISA was conducted in accordance with the Caltrans SER Chapter 10 requirements and the American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21), and the U.S. Environmental Protection Agency (EPA) Final Rule regarding Standards and Practices for All Appropriate Inquiries (70 *Federal Register* [FR] 66070, July 1, 2005; 40 Code of Federal Regulations [CFR] Part 312) (AAI Rule). This ISA was conducted to identify Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs) at the subject property (see Section 2.1 for definitions). The subject property is shown in **Figure 1, *Vicinity Map*** and **Figure 2, *Subject Property***.

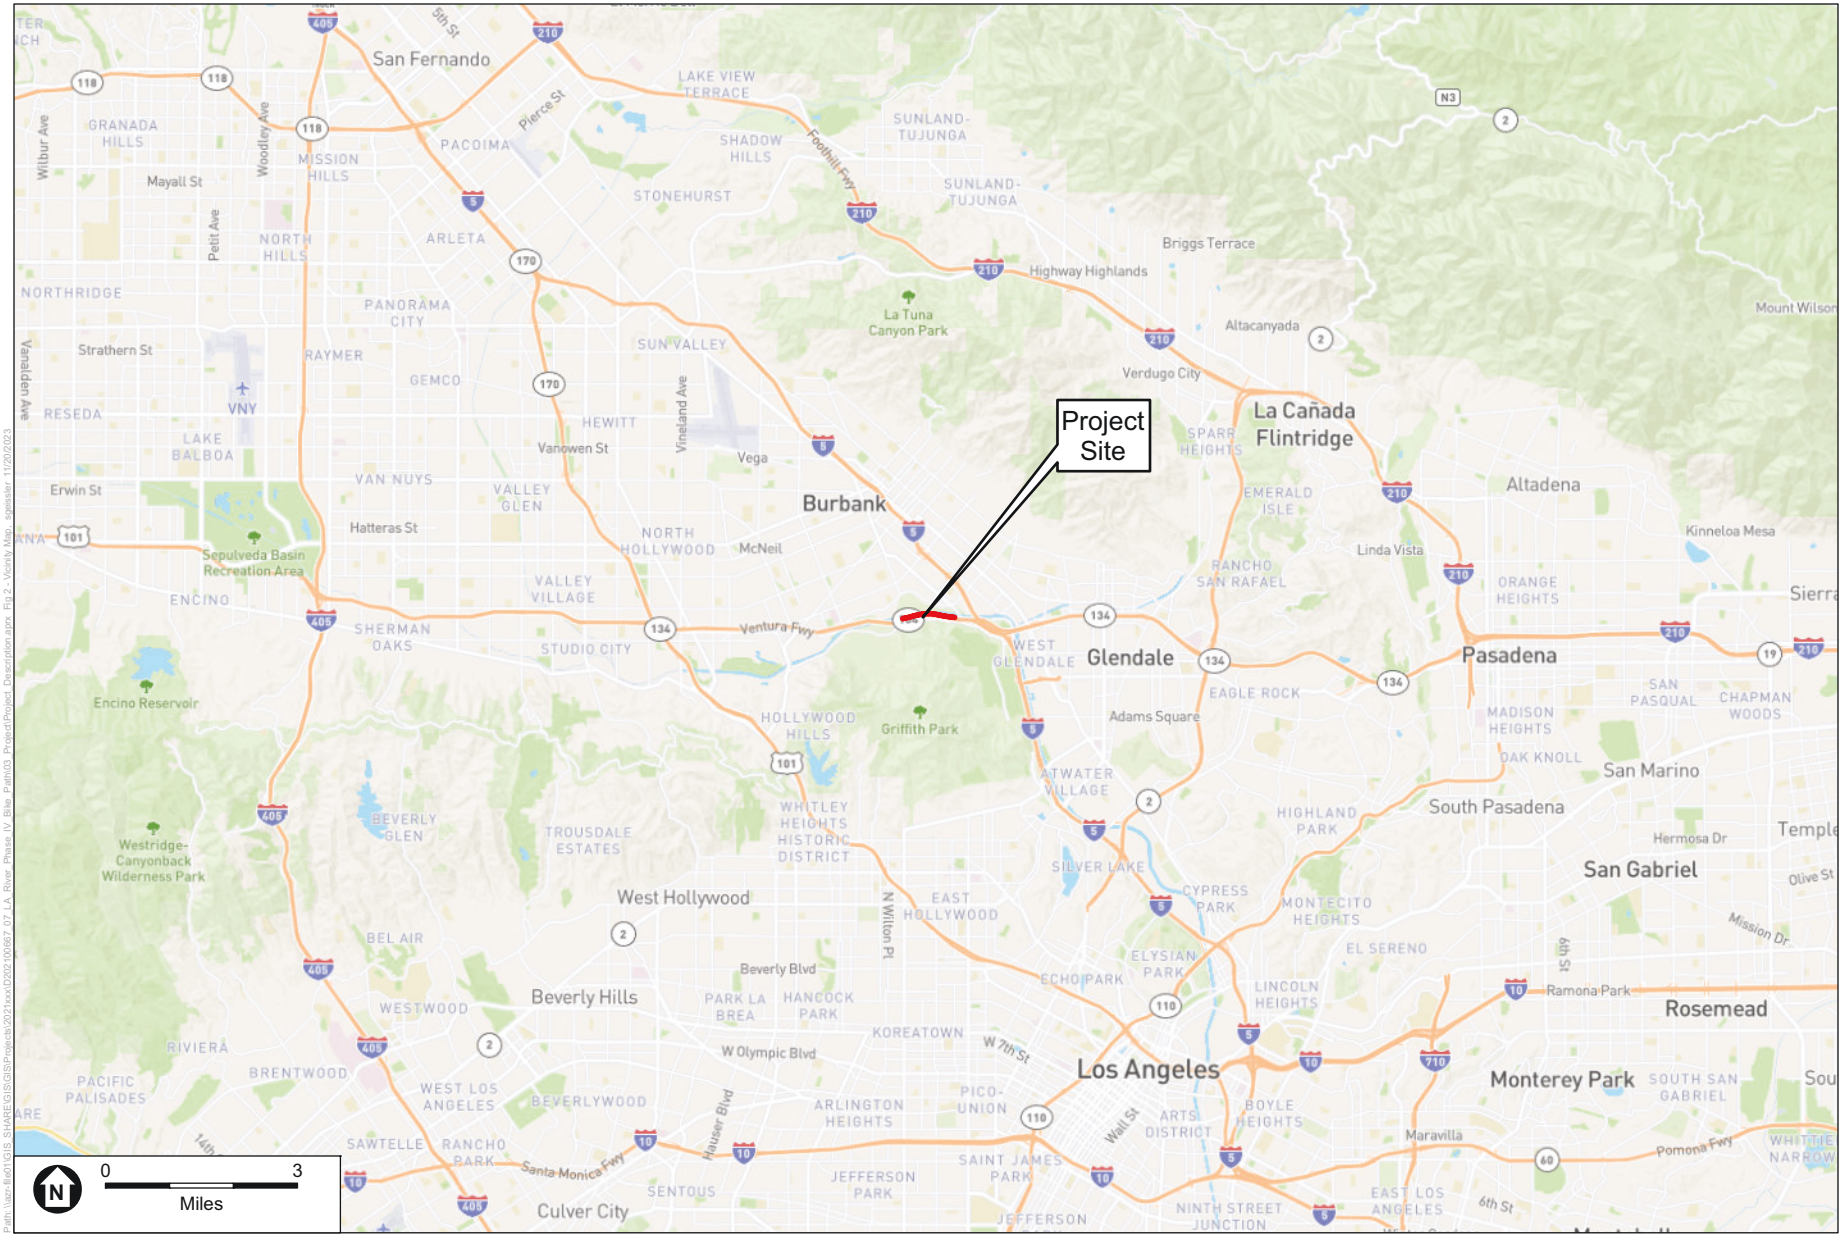

A commercial government records database service searched relevant federal, State, and local regulatory agency lists for listings of the subject property assessed in this ISA, and for nearby properties within the appropriate ASTM 1527 standard search distances. In addition, regulatory agency websites were checked to provide additional information. **None of the listings are considered a REC, HREC, or CREC.**

The subject property was inspected on April 24, 2024. The subject property consists of an approximately 10-foot-wide east-west paved path with up to 20 feet of unpaved dirt and vegetated area adjacent to south side of the paved path. The concrete-lined Los Angeles River is north of and adjacent to the subject property; an equestrian center and open space is further north and across the Los Angeles River. Mixed residential, commercial, and industrial land uses are further north of the equestrian center and open space. The Ventura Freeway is along the south side of the subject property with the Griffith Park Maintenance Service Yard, two museums and hobbyist rail facilities, and Griffith Park further south. There were no observations of liquid spills, stained soil, unusual odors, stressed vegetation, or waste pits or ponds on or adjacent to the subject property. **No RECs**

were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal.

An interview questionnaire was sent to the City of Los Angeles, which has not yet been returned. However, given the information acquired from the records search and site reconnaissance, this data gap is not expected to affect the identification of **any RECs, HRECs, or CRECs.**

The subject property is not considered a potential vapor intrusion source. The subject property has never been developed with land uses that stored, used, or disposed of chemicals. The government records search did not identify any chemical release sites close enough to have affected the subject property. **Therefore, per ASTM E2600-22, there are no known potential threats to the subject property posed by the potential migration of petroleum hydrocarbon or other contaminant vapors from listed sites.**

SECTION 2.0
Introduction

2.1 Purpose, Standards, and Definitions

On behalf of the City of Los Angeles, Environmental Science Associates (ESA) conducted an ISA for the City's Los Angeles Phase IV Bike Path Project along the south side of the Los Angeles River in Los Angeles, California (see Figure 1, *Regional Location*, and Figure 2, *Subject Property*).

This ISA was conducted in general accordance with Caltrans SER Chapter 10 requirements, the American Society of Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21) (ASTM 2021) and the U.S. Environmental Protection Agency (EPA) Final Rule regarding Standards and Practices for All Appropriate Inquiries (70 *Federal Register* [FR] 66070, May 1, 2005; 40 Code of Federal Regulations [CFR] Part 312) (AAI Rule). EPA has stated that the ASTM E1527-21 is consistent with the AAI Rule (87 FR 76578, approved February 15, 2022). Specifically, this final rule amends the AAI Rule at 40 CFR Part 312 to reference ASTM E1527-21 and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the AAI Rule. In addition, Caltrans has stated that ASTM 1527-13 complies with their SER Chapter 10 requirements.

The purpose of this ISA is to enable the parties relying on it to satisfy one or more of the requirements for the innocent landholder defense to liability under the Comprehensive Environmental Response, Compensation, and Liability Act and to evaluate the potential for Recognized Environmental Conditions (RECs) at the subject property. Three types of RECs are defined by ASTM E1527-21, as listed below. The term *Recognized Environmental Conditions (RECs)* means:

> (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

In addition, the ASTM standard defines the two categories cited below.

The term *Historical Recognized Environmental Conditions (HRECs)* means:

> A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional (EP) must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

For a past REC to be considered an HREC, it must:

- Have already been remediated (or meet current standards without remediation);
- Not require use restrictions or engineering controls (e.g., cap, subslab depressurization system); and
- Meet current standards.

If the REC has use restrictions or engineering controls, the REC may be designated as a Controlled Recognized Environmental Condition (CREC), as defined below. Unlike HRECs, a CREC will be listed in the conclusions section of the Phase I environmental site assessment, along with other RECs. The purpose of this new category is to bring continuing obligations, such as use restrictions, maintenance requirements, and reporting requirements, to the forefront. The term *CREC* means:

> A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.

RECs, HRECs, and CRECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. In addition, business environmental conditions (e.g., subsurface crude oil pipelines) are noted but not considered RECs, HRECs, or CRECs.

The ASTM Standard practice also defines a "business environmental risk" as a risk that can have a material environmental impact on the planned use of a property.

2.2 Scope of Services

The following sections describe ESA's work scope:

- Section 2.0, *Introduction*, discusses the purpose for performing ISA, the standards and definitions used for the ISA, and significant assumptions and limitations.

- Section 3.0, *Site Description*, provides general information concerning the location, description, and current and proposed uses of the subject property, along with a description of any structures and improvements at the time of ESA's assessment.

- Section 4.0, *Records Review*, includes ESA's review of various databases available from federal, State, and local regulatory agencies regarding hazardous materials use, storage, or disposal within or near the subject property considered in this assessment. Copies of relevant documents are included in the appendices of this report. Physical setting sources such as topography, soil, and groundwater conditions are described.

- Section 5.0, *Site Reconnaissance*, describes ESA's observations during reconnaissance of the subject property. The methodology used and limiting conditions are described.

- Section 6.0, *User-Provided Information*, documents information provided by the interviews conducted with the owner or property manager.

- Section 7.0, *Findings and Opinions*, presents ESA's findings and professional opinions regarding the information contained in this report. It provides ESA's conclusions regarding the presence of RECs connected with the subject property and data gaps, if any, that could affect the recognition of RECs.

- Section 8.0, *Report Authors and Qualifications*, provides the signatures and qualifications of the report authors.

- Section 9.0, *References*, is a summary of the resources used to compile this report that supplements the information provided in the appendices.

- Appendices, the appendices contain certain pertinent documentation regarding the subject property. Appendix A contains the report of regulatory agency database search results. Appendix B contains the historical aerial photographs and historical topographic maps. City directories and fire insurance maps were not ordered for this ISA because such records would not have been prepared for the river corridor and/or pathway.

2.3 Limitations and Exceptions

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with a property. Conformance of this ISA with ASTM E1527-21 reduces, but does not eliminate, uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with the subject property. While ESA has made every effort to discover and interpret available historical and current information on the subject property assessed within the time available, some potential always remains for undiscovered contamination to be present. ESA's report is a best-efforts collection and interpretation of available information and cannot be considered wholly conclusive. This ISA and the associated work were provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties, expressed or implied. No other warranty is expressed or implied. ASTM E1527-21 is included in this report by reference.

This ISA is based primarily on historical research, a database review, and a site reconnaissance of accessible areas. This ISA does not include "non-scope issues" as specified by ASTM E1527-21, such as surveys for the presence of the following items on or in the vicinity of the subject property: asbestos-containing materials, polychlorinated biphenyls (PCBs), radon, effects on indoor air quality, lead-based paint, lead in drinking water, industrial hygiene, health and safety, regulatory compliance, and high-voltage lines.

The conclusions presented are professional opinions based solely upon indicated data described in this report, visual site and vicinity observations, and the interpretation of the available historical information and documents reviewed, as described in this report. Unless ESA has actual knowledge to the contrary, information obtained from interviews or provided to ESA is assumed to be correct and complete. ESA does not assume any liability for information that was misrepresented to ESA by others or for items not visible, accessible, or present on the subject property during the time of the site reconnaissance. The conclusions are intended exclusively for the purpose outlined herein and the site location and project indicated. Any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of the user.

Opinions and recommendations presented herein apply to the site conditions existing at the time of this ISA and cannot necessarily apply to site changes of which ESA is not aware and has not had the opportunity to evaluate. Changes in the conditions of the subject property may occur with time due to natural processes or the works of man on the property or adjacent properties. Changes in applicable standards may also occur as a result of legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond ESA's control. Opinions and judgments expressed herein are based on ESA's understanding and interpretation of current regulatory standards and should not be construed as legal opinions.

SECTION 3.0
Site Description

3.1 General Setting and Location

The subject property is an approximately 0.8 miles long paved pathway that runs from near Forest Lawn Drive at the west end to near Riverside Drive at the east end along the south side of the concrete-lined Los Angeles River in Los Angeles, California. The subject property is currently a maintenance access road along the south side of the Los Angeles River. The surrounding area consists of the river along the north side and the Ventura Freeway and Griffith Park along the south side. Figure 1 shows the regional location; Figure 2 shows the subject property. Access to the subject property is through the paved pathway and Zoo Drive. The General Plan land use designation is Open Space and the zoning is OS-1XL-RIO (Open Space, paved riverbank with no development overlay district).

3.2 Current and Proposed Land Uses

The subject property consists of a paved maintenance access road along the south side of the Los Angeles River. Land use designation and zoning will remain unchanged. The project, as proposed, would redevelop the subject property as a Class I bicycle and pedestrian pathway since it is separated from auto traffic.

SECTION 4.0
Records Review

The purpose of the records review is to obtain and examine records that could help to evaluate potential RECs, HRECs, and CRECs in connection with the subject property. This section documents the database records search and the evaluation of other records, summarizes information provided by the property owners, and describes the physical setting of the subject property.

4.1 Standard Environmental Record Sources

Federal, State, and local regulatory agencies publish databases of businesses and properties that handle hazardous materials or hazardous waste, including those properties with a known release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. ESA contracted with a commercial database service to perform the government records database search for listings within the appropriate ASTM standard minimum search distance (EnviroSite 2024). A detailed description of the types of information in each database reviewed and the agency responsible for compiling the data is included in the Government Records Report provided as Appendix A, which includes a list of acronyms for the individual databases.

ESA evaluated the listings with regard to the nature of potential chemicals of concern and the extent of known releases. In general, reported or potential releases likely to affect a property would include those located on or within a 1/8-mile (660 feet) radius of the subject property. ESA also considered additional factors such as chemical properties, regional knowledge of the site vicinity, groundwater flow direction, and available past regulatory documentation as part of the REC evaluation.

4.2 Results of Regulatory Records Search

Listed Sites

The records search identified 116 listings at the subject property or within the ASTM-specified search radius in the surrounding area. However, most of the listings are for operating facilities that have no records of spills or releases, duplicate listings for the same facility, or sites that are downgradient (i.e., southeast) of the subject property and would not be able to adversely affect the subject property. The sites identified within the ASTM-specified search radius in the surrounding area that have the potential to affect the subject property are discussed below. The site locations with the key numbers are shown on maps with the Government Records Report in Appendix A. In addition, to augment the regulatory records search, the State Water Resources Control Board (SWRCB) GeoTracker, California Department of Toxic Substances Control (DTSC) EnviroStor,

and USEPA Superfund websites were accessed to further review documents that describe the locations and status of sites with environmental issues. The information summarized below is from the Envirosite report unless otherwise cited.

Site A1, A2, and 7. San Fernando Valley Superfund Site (Area2) - Crystal Springs Wellfield Area – The subject property is located within the San Fernando Valley (Area 2) Superfund site, a 6,680-acre area of contaminated groundwater in Glendale, California (USEPA 2018, 2023). The site is one of four Superfund sites in the San Fernando Valley. Numerous potentially responsible parties contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethene (TCE) and perchloroethene (PCE). However, the five-year reports prepared to track cleanup progress indicate that the plume of contaminated groundwater is located just north of the Los Angeles River, flows east and then south paralleling the Los Angeles River, and does not pass beneath the subject property. In addition, the depth to groundwater is 30 feet and deeper. Consequently, the contaminated plume is not located beneath the subject property and the proposed construction activities for the subject property would not extend deep enough to reach groundwater. Therefore, this site is not expected to represent a significant environmental concern. **This listing is not considered a REC, HREC, or CREC because investigation determined this site did not affect the subject property.**

Site A3. Griffith Park Experimental Lab – The western portion of the subject property is located just north and adjacent to the former Griffith Park Experimental Lab, which is currently the location of the Travel Town Museum (see Figure 2). This site was previously used as a military laboratory for researching camouflage during World War II (USACE 2021). No investigation has been conducted or scheduled for this site. Given the use description (research into camouflage), it is unlikely the activities resulted in the use or release of significant quantities of chemicals that would affect the subject property. Therefore, this site is not expected to represent a significant environmental concern. Additional details regarding this site are provided below in Section 4.3, *Other Records Reviewed*. **Given the likely historical types and volumes of chemical use, this listing is not considered a REC, HREC, or CREC.**

Site 4. Griffith Park Maintenance Service Center [Yard] – This listing at 5201 Zoo Drive, is located about 200 feet south of the subject property across the Ventura Freeway (see Figure 2). This site is listed as a former leaking underground storage tank (UST) site. One 15,000-gallon UST and one 10,000-gallon diesel UST were removed along with associated piping and contaminated soil. This site was issued a case closure and No Further Action (NFA) by the RWQCB on July 30, 1996, indicating that the RWQCB concluded that this site does not pose a risk to people or the environment. Based on the amount of time passed since the reported release, the regulatory oversight and case closure, and the distance from the site to the subject property, this site is not expected to represent a significant environmental concern. **This listing is not considered a REC, HREC, or CREC because investigation determined this site did not affect the subject property.**

Site 5. Westbound 134 Freeway at Forest Lawn Drive – This listing at westbound Ventura Freeway at the Forest Lawn Drive exit is located about 350 feet west of the subject property. This site is listed for a gasoline spill from a multicar accident that resulted in about one gallon of

gasoline spilling into the Los Angeles River on October 19, 2011. The spill was cleaned up at the time. No gasoline spilled onto the subject property. Based on the small volume not being located on the subject property, this site is not expected to represent a significant environmental concern. **This site is not considered a REC, HREC, or CREC because investigation determined this site did not affect the subject property**.

Orphan Sites

Sites not plotted due to poor or inadequate address information are referred to as "orphan sites" or "unmappable parcels." The records search did not identify any orphan sites of concern.

4.3 Other Records Reviewed

An internet search provided additional details of land use adjacent and south of the subject property. In addition, the regulatory agency records search also provides historical aerial photographs, historical topographic maps, fire insurance maps, and city directories, as available. The search results are discussed below.

Historical Use of Adjacent Area to the South

An internet search provided details of land use in the area adjacent and south of the subject property. This information identifies land uses that assist in the review of aerial photographs and topographic maps further below.

Civilian Conservation Corps and US Army Use

The 3,015-acre Griffith Park was originally donated to the City of Los Angeles by Griffith J. Griffith in 1896 (California Military Department 2016). The area adjacent and south of the subject property was originally developed as a Civilian Conservation Corps (CCC) camp on May 12, 1934. The CCC was a voluntary government work relief program that ran from 1933 to 1942 for unemployed, unmarried men. With the outbreak of World War II, the CCC camp was converted into the Griffith Park Internment Camp with two compounds surrounded by fences and guard towers to process and intern Japanese Americans and prisoners of war from February 19, 1942, to August 3, 1943. For the rest of World War II, the facility was used as the Griffith Park Photographic Center and the Griffith Park Experimental Laboratory. The Photographic Center utilized personnel from film studios in nearby Burbank and Hollywood to process photographs and to develop and test new camouflage systems and techniques. This indicates the use of photographic development chemicals and possibly dyes for camouflaging uniforms. The U.S. Army returned the land to the City of Los Angeles in 1947; none of the military use structures remain. The Travel Town Museum covers the previous location of military structures (see Figure 2). **Given the likely historical types and volumes of chemical use, this land use is not considered a REC, HREC, or CREC.**

Rail Museum Use

In 1948, the Griffith Park Train Rides was established at the former location of the previously discussed Griffith Park Photographic Center and the Griffith Park Experimental Laboratory (see

Figure 2) (Griffith Park Trains 2024). The Travel Town Museum was established in 1952 at this same location. This facility provides rides on a miniature railroad line and operates railroad historical museum including full scale rail cars. The miniature trains operate on propane. Maintenance of the trains would include small volumes of lubricating oils and cleaning solvents. The government records search discussed above did not identify any hazardous materials issues with this facility use.

In 1956, a group of railroad enthusiasts formed the Los Angeles Live Steamers Railroad Museum, located just south of the Griffith Park Maintenance Service Yard (see Figure 2) (Los Angeles Live Steamers, 2024). This group operates small scale, rideable trains powered by steam, diesel, or electricity. In addition, this facility has several full-scale rail cars, a diesel-powered generator to generate steam, and a barn previously used by Walt Disney for his small-scale rail line in his backyard. Small quantities of diesel fuel, engine oil, and cleaning solvents are stored and used at this facility for hobby-scale train use. The government records search discussed above did not identify any hazardous materials issues with this facility use. **Given the small volume of chemicals used and no records of spills, this land use is not considered a REC, HREC, or CREC.**

Griffith Park Maintenance Service Yard

The Griffith Park Maintenance Service Yard is about 300 feet south of the subject property across Ventura Freeway and is currently being used for storage and fueling for maintenance equipment of Griffith Park (see Figure 2). This facility has a permanent building housing Recreation and Parks staff, several portable buildings, a parking lot, and storage areas. The aerial photograph review discussed further below indicates the Griffith Park Maintenance Service Yard may have been established as early as 1956. Maintenance activities would have included the storage and use of fuel, oils, and cleaning solvents, and possibly paints and thinners. As discussed above, in Section 4.2, *Results of Regulatory Records Search*, this Griffith Park Maintenance Service Yard is listed as a former leaking UST case that was subsequently cleaned up. As observed during the site reconnaissance (see Section 5.0), this facility currently has fuel USTs. **This facility is not considered a REC, HREC, or CREC because investigation and cleanup indicates this facility did not affect the subject property.**

Historical Aerial Photographs

Historical aerial photographs are available for the years 1934, 1947, 1948, 1952, 1954, 1956, 1960, 1963, 1967, 1970, 1972, 1974, 1975, 1977, 1979, 1981, 1983, 1985, 1986, 1989, 1994, 1995, 2002, 2005, 2009, 2010, 2012, 2014, 2016, 2018, 2020, and 2022, and are included in Appendix B. The yellow dashed line indicates the subject property on the aerial photographs.

The **1934 aerial photograph** shows the free-flowing Los Angeles River before it was lined with concrete for flood control purposes. The subject property is south of the river. The western portion of the subject property is developed with five long structures, two large circular tanks that probably held water, 27 smaller tanks in three rows, and several other structures, all consistent with the previously discussed CCC facility. One approximately 1,000-foot-long structure of uncertain use runs east-west extending from the end of the assess road to the river. The eastern

portion of the subject property does not show any particular use other than the one access road. The area further to the south of the subject property is largely undeveloped parklands with some dirt roads. The area north and across the river shows some urban development but not along the immediate north bank of the river. The subject property does not have large darkened stained areas suggestive of contaminated soil.

The **1947 and 1948 aerial photographs** show the Los Angeles River in it's present-day alignment after it was lined with concrete for flood control purposes. The subject property shows no structures. An east-west paved road is present where the future Ventura Freeway will be along the south side of the subject property. As previously discussed, the entire area south of the subject property was in military use as the Griffith Park Photographic Center and the Griffith Park Experimental Laboratory during World War II. The previously noted two water tanks are still present. The center area south of the subject property appears to be graded but with no structures. The eastern area south of the subject property is undeveloped other than access roads. The subject property does not have large darkened stained areas suggestive of contaminated soil.

The **1952 aerial photograph** shows no structures on the subject property. An east-west paved road is present adjacent and south of the subject property on the future alignment of the Ventura Freeway. As previously discussed, the Griffith Park Train Rides facility was established and may have extended east into the center area just south of the subject property. A large light-colored rectangular area with a few structures is present at the present-day location of the Griffith Park Maintenance Service Yard. The eastern area south of the subject property is undeveloped other than the access roads. The subject property does not have large darkened stained areas suggestive of contaminated soil.

The **1954 aerial photograph** shows no structures on the subject property. The western area just south of the subject property has additional new structures. The center and eastern areas just south of the subject property have been graded and most of trees have been removed. The area north and across the river from the subject property shows a dirt horse track, consistent with the present-day use of this area as an equestrian center. No other significant changes are observed. The subject property does not have large darkened stained areas suggestive of contaminated soil.

The **1956 through 1960 aerial photographs** show no structures on the subject property. The western and center area just south of the subject property has additional new structures consistent with the small-scale rail and museum land use. The Griffith Park Maintenance Service Yard may have been established by 1956. The support pipe for the water and sewer pipes observed during the site reconnaissance is present as of 1960 (see Figure 2 and Section 5.0, *Site Reconnaissance*). No other significant changes are observed. The subject property does not have large darkened stained areas suggestive of contaminated soil.

The **1963 aerial photograph** shows no structures on the subject property. The Ventura Freeway has been constructed in its present-day alignment adjacent and south of the subject property, which separate the subject property from land uses south of the freeway. No other significant changes are observed. The subject property does not have large darkened stained areas suggestive of contaminated soil.

The **1965 through 2022 aerial photographs** shows no structures on the subject property. Although the surrounding areas showed continuing urban development, no significant changes are observed on the subject property. The subject property does not have large darkened stained areas suggestive of contaminated soil.

In summary, no dark stained areas suggestive of contaminated soil are visible on the subject property in any of the aerial photographs. **The review of aerial photographs does not indicate any RECs relative to the subject property.**

Historical Topographic Maps

Historical topographic maps are available for the years 1894, 1896, 1898, 1900, 1902, 1920, 1921, 1926, 1928, 1948, 1953, 1966, 2012, 2015, 2018, and 2022, and are included in Appendix B. The subject property and a buffer zone is identified with a yellow-shaded polygon on the topographic maps.

The **1894 through 1902 topographic maps** shows the Los Angeles River in its previously unlined free-flowing state through the eastern portion of the subject property. The subject property shows no structures. The surrounding area is mostly undeveloped land with few structures.

The **1920 and 1921 topographic maps** show one structure of uncertain use and unpaved road passing through the center portion of the subject property that crosses the Los Angeles River to the north. The larger area on either side of the Los Angeles River is shown in green on the 1920 map, suggesting the areas along the river were in agricultural use.

The **1926 and 1928 topographic maps** show one structure in a different location and that the one road has been paved. The areas to the north and east show some additional development, including the grand Central Airport to the northeast across the river and the National Guard Airport to the east.

The **1948 topographic map** shows the Los Angeles River in its present-day concrete-lined channel and the Ventura Freeway in its current alignment. The subject property shows no structures. Several structures consistent with the previous World War II uses are present to the south.

The **1953 topographic map** is similar to the 1948 map but the structures south of and across the freeway are in different locations.

The **1966 topographic map** shows no changes to the subject property. The area south of the subject property and across the freeway identify the Travel Town facility and a sewage treatment facility in the center area.

The **1966 topographic map** shows no changes to the subject property. The area south of the subject property and across the freeway identify the Travel Town facility and a sewage treatment facility in the center area. The present-day equestrian area is shown across the river north of the subject property.

The **2012 through 2022 topographic maps** use the recent topographic map format that shows minimal details and no structures.

In summary, the topographic maps are consistent with the description of the subject property discussed above in the historical land uses and aerial photograph discussions and do not indicate any RECs.

4.4 Physical Setting

The following sections provide information about the physical setting of the subject property. Geotechnical information is not a required element of ASTM E1527-21 Phase I environmental site assessments and is not included in this Phase I environmental site assessment.

Topography. The subject property is in the Burbank, California, 7.5 Minute Quadrangle. The subject property is along the south side of the Los Angeles River, which drains to the east and then south into San Pedro Bay and the Pacific Ocean. The subject property is relatively flat, sloping eastward from elevations of 491 feet to 469 feet above mean sea level.

Geology, Soils, and Hydrology. The path is paved with imported fill consisting of a mix of sand, silt, and clay. The geology of the local area is Quaternary[1] alluvial valley and fan deposits composed of sand, silt, and clay (CGS 2024). The subject property is not crossed by a known Holocene (i.e., movement within the last 11,700 years) active fault (CGS 2024).

According to monitoring of the San Fernando Valley Superfund Site (Area2) - Crystal Springs Wellfield Area, the depth to groundwater is 30 feet and deeper with groundwater flow to the east (USEPA 2018, 2023).

Flood Hazard. The subject property along and adjacent to the Los Angeles River is not located within a FEMA-designated 100-year flood zone (Envirosite 2024).

[1] Quaternary time is from 5.3 million years ago to the present.

SECTION 5.0
Site Reconnaissance

5.1 Methodology and Limiting Conditions

Justin Nguyen, from ESA, conducted the site reconnaissance on April 24, 2024, to assess present conditions. Access to the subject property was provided by the City of Los Angeles staff. The weather at the time of the site reconnaissance was sunny and cool. The site conditions discussed below are limited to readily apparent environmental conditions observed. The subject property is shown on Figure 2, *Subject Property.*

5.2 General Site Setting

The subject property consists of a paved path along the south side of the Los Angeles River. The Ventura Freeway (State Route 134) borders the south side of the subject property. The surrounding area land use is Griffith Park further south, and the Los Angeles Equestrian Center and Bette Davis Picnic Area is to the north across the Los Angeles River. The observed conditions, along with photographs, are described below.

5.3 Site Observations

The proposed Los Angeles River Phase IV Bike Path Project is approximately 0.8 miles long and runs from near Forest Lawn Drive at the west end to near Riverside Drive at the east end. The paved path is generally about 10 feet wide with up to 20 feet of unpaved dirt and vegetated area along much of the south side of the paved path.

Typical Paved Path

The photographs on the next two pages show typical views of the paved path. The eastern half of the path is under high-voltage transmission lines set on steel towers. All of the bank of the river is armored with concrete and riprap. Some of the river is fenced off from the paved path; some of the river side has no fencing and is accessible from the paved path. Occasional pieces of trash and debris were observed within the subject property but is considered a *de minimus* condition. No chemical containers, liquid spills, large areas of stained soil or pavement, unusual odors, or stressed vegetation were noted, as shown in the photographs.

Access Tunnel Area

As shown on Figure 2, an access tunnel extends south of the paved path, passing under the Ventura Freeway, and connects to an unpaved trail on the south side of the freeway. No chemical containers, large areas of stained soil or pavement, liquid spills, unusual odors, or stressed vegetation were noted, as shown in the photographs below.

Water or Sewer Pipeline

The photographs below show a protective pipe that contains one potable water (top) and two small sewer force mains (below) that crosses the Los Angeles River at the location shown on Figure 2. No chemical containers, large areas of stained soil or concrete, liquid spills, unusual odors, or stressed vegetation were noted, as shown in the photographs below.

Pole-Mounted Transformer

An electric power pole with a transformer is at the location shown on Figure 2 and shown in the photographs below. No liquid spills, stained soil, or unusual odors were noted on the ground around the pole.

Offsite Griffith Park Maintenance Service Yard

As discussed in Section 4.0, *Records Review*, the Griffith Park Maintenance Service Yard (Site 4) previously had a leaking UST that was investigated and cleaned up as of July 30, 1996. The Service Yard has a set of USTs and fuel pumps, as shown in the photographs below. ESA did not observe any spills or stained hardscape. Note that the fuel pumps and USTs are about 430 and 460 feet, respectively, south of the subject property. Other than *de minimus* staining on the pavement, no liquid spills, large stained areas, unusual odors, or stressed vegetation were noted.

Travel Town Museum and Los Angeles Live Steamers Railroad Museum

In addition to the largely undeveloped areas of Griffith Park, the Travel Town Museum and Los Angeles Live Steamers Railroad Museum that include operating historical railway locomotives, passenger and freight cars, and streetcars is located about 400 feet south of the western (Travel Town Museum) and center (Steamers) portions of the subject property and on the south side of the Ventura Highway. Although not entered, views into the museum areas did not indicate liquid spills, liquid containers, large areas of hardscape or soil staining, stressed vegetation, or unusual odors.

5.4 Results of Site Reconnaissance

The subject property is developed as paved access road along the south side of the Los Angeles River. Other than *de minimis* staining, there were no observations of spills, stained pavement or soil, unusual odors, or stressed vegetation. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

SECTION 6.0
User-Provided Information

An interview questionnaire was sent to the City of Los Angeles, which has not yet been returned. However, given the information acquired from the records search and site reconnaissance, this data gap is not expected to affect the identification of RECs, HRECs, or CRECs.

SECTION 7.0
Vapor Encroachment Screening

The government records database report and other resources were reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby sites to migrate beneath the subject property. Based on the ASTM E2600-22, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* (ASTM 2022), the following minimum search distances were used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the subject property:

- 1/10 mile (528 feet) for petroleum hydrocarbons (i.e., gasoline or diesel)
- 1/3 mile (1,760 feet) for other contaminants of concern

Groundwater depth and flow direction are also utilized to determine risk of vapor migration. According to the groundwater monitoring results for the San Fernando Valley Superfund Site (Area2) - Crystal Springs Wellfield Area, the depth to groundwater is 30 feet and deeper with groundwater flow to the east (USEPA 2018, 2023). If known or suspect contaminated sites are located under the criteria listed below, then online resources are reviewed to determine the extent of the contaminated plume at those sites.

- Onsite or adjacent to the subject property,
- Within 100 feet, or
- Within the above referenced distances from the subject property and upgradient or cross gradient to the subject property,

The subject property has never been developed with land uses that stored, used, or disposed of chemicals. Based on review of the government records database report and other previously discussed information, the only known or suspect petroleum hydrocarbon-impacted sites within 528 feet of the subject property would be the UST removals at the Griffith Park Maintenance Service Yard conducted in 1996. There are no other sites with potential contaminants of concern within 1,760 feet of the subject property.

As discussed in Section 4.2, *Results of Regulatory Records Search*, the UST site has been cleaned up and the case closed by the overseeing regulatory agency. Case closure means that the regulatory agency concluded that the UST site does not pose a risk to people or the environment. In addition, the direction of groundwater flow is to the east, which would be crossgradient (parallel) to the subject property, not toward the subject property. **Therefore, the subject property is not considered a potential vapor intrusion source**. **Therefore, per ASTM E2600-22, there are no known potential threats to the subject property posed by the potential migration of petroleum hydrocarbon or other contaminant vapors from listed sites.**

SECTION 8.0
Findings and Opinions

8.1 Findings and Opinions

A commercial government records database service searched relevant federal, State, and local regulatory agency lists for listings of the subject property and for nearby properties within the appropriate ASTM 1527 standard search distances. In addition, regulatory agency websites were checked to provide additional information. The records search returned 116 listings. **None of the listings are considered a REC, HREC, or CREC.**

The subject property was inspected on April 24, 2024. The subject property consists of an approximately 10-foot-wide east-west paved path with up to 20 feet of unpaved dirt and vegetated area along much of the south side of the paved path. The concrete-lined Los Angeles River is along the north side with an equestrian center and open space across the Los Angeles River to the north. Mixed residential, commercial, and industrial lands uses are further north of the equestrian center and open space. The Ventura Freeway is along the south side of the subject property with the Griffith Park Maintenance Service Yard, two museum and hobbyist rail facilities, and Griffith Park further south. There were no observations of liquid spills, stained soil, unusual odors, stressed vegetation, or waste pits or ponds on the subject property or on adjacent surrounding areas. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

An interview questionnaire was sent to the City of Los Angeles, which has not yet been returned. However, given the information acquired from the records search and site reconnaissance, this data gap is not expected to affect the identification of **any RECs, HRECs, or CRECs.**

The subject property is not considered a potential vapor intrusion source. **Therefore, per ASTM E2600-22, there are no known potential threats to the subject property posed by the potential migration of petroleum hydrocarbon or other contaminant vapors from listed sites.**

8.2 Data Gaps

ESA attempted to obtain reasonably ascertainable information regarding the subject property and the surrounding environs. As noted above, the lack of an interview questionnaire is not considered a data gap. There were no data gaps identified that could affect the identification of RECs, HRECs, or CRECs.

SECTION 8.0
Report Authors and Qualifications

8.1 Report Authors and Signatures

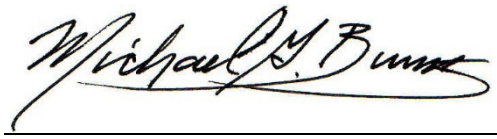

This section includes qualification statements of the environmental professionals responsible for conducting the Phase I environmental site assessment and preparing this report.

Mr. Michael Burns, PG, CEG, CHG, of ESA conducted the data review for the subject property, conducted the site reconnaissance, and prepared the Phase I environmental site assessment report. Mr. Burns has over 30 years of experience in environmental site investigations, characterizations, and assessments, including Phase I environmental site assessments. His resume is in Appendix C.

The work conducted and the report written by Mr. Burns was reviewed by Mr. David Beauchamp. Mr. Beauchamp has over 19 years of experience in environmental site investigations, characterizations, and assessments, including Phase I Environmental Site Assessments.

Mr. Burns and Mr. Beauchamp declare that, to the best of their professional knowledge and belief, they meet the definition of Environmental Professional as defined in 40 CFR §312.10. Mr. Burns has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of this subject property. With the assistance of Mr. Beauchamp, he has developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Source Description
Source Description : DTSC EnviroStor is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

Site Details

Superfund Site :	SAN FERNANDO VALLEY (AREA 2) GLENDALE, CA
Street Address :	CRYSTAL SPRINGS WELLFIELD AREA GLENDALE, CA 91209

Site Status :

For the site's long-term cleanup, EPA split the site into two operable units (OUs) to manage and prioritize cleanup actions. An OU is a focused study area that allows EPA to take discrete actions as part of an overall cleanup. Glendale North and South OU: The interim remedy includes groundwater pumping and treatment, with the City of Glendale or another municipality receiving the treated water. The Glendale Area treatment facility began operating in 2000 and continues to provide drinking water to the city. So far, the plant has removed more than 60,000pounds of VOCs from groundwater at the site. Glendale Chromium OU: In 2007, EPA established the Glendale Chromium Operable Unit (GCOU) to characterize emerging chromium contamination in ground water within SFV Area 2 and determine an appropriate remedial action. EPA completed a removal action, or short-term cleanup, in 2007 to excavate contaminated soils and cap and fence the site. EPA began investigating chromium contamination in the groundwater in 2008. EPA and PRPs have since installed 29 new groundwater monitoring wells to help identify the extent of chromium contamination. Investigation activities are ongoing. EPA will use the results of these studies to identify cleanup options for the site.

Site Background :

The San Fernando Valley (Area 2) site is a 6,680-acre area of contaminated groundwater in Glendale, California. The site is one of four Superfund sites in the San Fernando Valley. Numerous potentially responsible parties (PRPs) contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE). In 1980, sampling discovered levels of VOCs above federal and state drinking water standardsin a number of production wells in the San Fernando Valley. In response to the public health threat, the cities either shut down their wells and provided alternate sources of drinking water or blended contaminated well water with water from clean sources. Groundwater monitoring from 1981 to 1987 revealed contamination in more than half the water supply wells in the eastern portion of the San Fernando Valley Groundwater Basin. The shutdown of these wells meant that cities in the region had to use more expensive sources of drinking water and the loss of a substantial drinking water source in an area where this resource is already scarce. Prior to the discovery of contamination, the aquifer had provided drinking water to over 800,000 residents. In 2000, a 5000 gallon-per-minute treatment plant began operating and provides drinking water to the City of Glendale.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description : ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

Source Description :

DTSC EnviroStor is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Site Details

Superfund Site :	SAN FERNANDO VALLEY (AREA 1) NORTH HOLLYWOOD, CA
Street Address :	NORTH HOLLYWOOD WELLFIELD AREA NORTH HOLLYWOOD, CA 91601

Site Status :

EPA separated the site into two areas to help manage and prioritize cleanup activities.North Hollywood Area: The interim remedy included groundwater pumping and treatment using aeration and granular activated carbon air filtering units, with discharge of the treated water to the Los Angeles Department of Water and Power's pumping station. Construction of the remedy began in 1989 and operation is ongoing. As of 2008, the system had extracted and treated about eight billion gallons of VOC-contaminated groundwater.EPA later selected a second interim remedy to include well-head treatment for hexavalent chromium and 1,4-dioxane, expanded combined treatment operations and additional monitoring wells. EPA is currently proposing to update the remedy by allowing reinjection of treated groundwater into source areas.Burbank Area: The interim remedy included extraction and treatment of groundwater. The City of Burbank's Public Service Department receives groundwater from the site blended with treated groundwater to reduce nitrate levels and distributes it to the public water supply system. Operation of the remedy began in 1996. Groundwater treatment has removed about 36 billion gallons of VOCs-contaminated groundwater and is ongoing.

Site Background :

The San Fernando Valley (Area 1) site is a twenty-square-mile area of contaminated groundwater located primarily in North Hollywood and Burbank, California. The site is one of four Superfund sites in the San Fernando Valley. The Area 1 site has been further divided into operable units: the Burbank Operable Unit (BOU) located primarily in Burbank and south of the Burbank airport; and, the North Hollywood Operable Unit (NHOU) located to the west of the BOU. Numerous potentially responsible parties (PRPs) contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE). Cleanup, operation and maintenance activities, and monitoring are ongoing.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Reg Measure ID :	396148
Reg Measure Type :	401 Certification
Reg Measure Title :	401 Cert Riverside Drive Bridge Widening Project

Reg Measure Description :

The City of Los Angeles (City) and the California Department of Transportation (Caltrans) propose to rehabilitate and widen the Riverside Drive Bridge (Bridge #53C-1298) over the Los Angeles River in Los Angeles. Caltrans is the lead agency under the National Environmental Policy Act (NEPA) and the City is the lead agency under the California Environmental Quality Act (CEQA).The project would provide a 14-foot wide bike path that would cross under the bridge. This undercrossing would connect the existing Los Angeles River bike path east of the bridge to the area west of the bridge, where there are plans to extend the bike path. The bike path would be paved and striped according to current standards. Grading work would be conducted for a bikeway on the west side of Riverside Drive, and new curbs and gutters would be installed adjacent to the SR-134 on-ramp. The project would also provide a new connection from the future bike path to Riverside Drive. The connection would require the removal of the existing concrete railing atop the bridge?s southwest abutment. The bikeway construction will include partial removal of the channel liner on the south side. An 800-foot retaining wall will be constructed for the bikeway underpass and retaining walls will be constructed on the top of the channel for the bikeway approaches to Riverside Drive.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Waste Activity Monitoring

Report Cycle :	2013
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	PCW - PETROLEUM CONTACT WATER (RCRA HAZARDOUS, WASTEWATER TREATMENT)
Primary NAICS :	44711 - Gasoline Stations with Convenience Stores
Source Code :	G09 - Other production or service-related processes from which the waste is a direct outflow or result (specify in comments)
Form Code :	W113 - Other aqueous waste or wastewaters (fluid but not sludge)
Management Method :	H061 - Fuel blending prior to energy recovery at another site (waste generated either on-site or received from off-site)
Generation Tons :	4.1701418
Managed Tons :	0
Shipped Tons :	4.1701418
Received Tons :	0
Receiver ID :	CAD008302903
Receiver State :	CA
Shipper ID :	CAR000119149
Shipper State :	CA
Waste Minimization :	X - No waste minimization efforts were implemented for this waste
Waste Code List :	D001, D018
Waste Code Group :	TCORICR - One or more D018-D043 code
Waste Generation Type :	N/R

Report Cycle :	2013
Hazardous Waste Page Number :	2
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	SPILL PADS (RCRA HAZARDOUS)

Source Description

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description
Source Description : The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site History :

The Site was inspected by Regional Board staff, focused mainly on past and present methods for handling chemicals and wastes at your facility. Based on the inspector's observations and the information presented, it was determined, in 1995, that no further action was required with respect to the Well Investigation Program. The Responsible Party was requested to notify this Board of any change in operations including storage and handling of chemicals or processing and disposal of waste.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description
Source Description : The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Evaluations

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosite account representative for a complimentary site report containing all of the details available.

Evaluation Date : 2023-09-18
Violations Found : No
General Type : Other/Unknown
Type : Other, not routine, done by local agency

Notes : The previously issued APSA Inspection report as well as any applicable documents, plans and CERS submittals were reviewed. The facility is found to have complied with all Aboveground Petroleum Storage Act violations originally issued on 1/20/2022. All open APSA NOVs and NTCs have been cleared for this facility.

Division : Los Angeles City Fire Department
Program : APSA
Source : CERS

Evaluation Date : 2023-02-17
Violations Found : Yes
General Type : Other/Unknown
Type : Other, not routine, done by local agency

Notes :

Second Notice of Violation Inspection Report Indicated previously in this report are violations, originally issued on 1/20/2022, that have not been resolved by the original COMPLY BY date. These violations have been re-issued and the violation class upgraded. Review and correct all violations indicated in this report, on or before the new COMPLY BY date associated with each violation. Failure to resolve these violations will result in this facility being subject to formal enforcement. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. The California Health and Safety Code (CHAPTER 6.67 SECTION 25270) requires that facilities meeting either of the following requirements be added to the APSA (Aboveground Petroleum Storage Act) program and comply with the regulations [Truncated]

Violations Found : No
General Type : Compliance Evaluation Inspection
Type : Routine done by local agency

Notes : ALL VIOLATIONS HAVE BEEN CORRECTED. THERE ARE CURRENTLY NO VIOLATIONS AT THIS FACILITY.

Division : Los Angeles City Fire Department
Program : HMRRP
Source : CERS

Evaluation Date : 2022-01-20
Violations Found : Yes
General Type : Compliance Evaluation Inspection
Type : Routine done by local agency

Notes :

Consent to enter, inspect, and take photographs was given by: PATRICIA PERRY, MATT SANDBERG Documents uploaded to CERS were reviewed and field verified. The Spill Prevention Control and Countermeasure plan and related inspection and testing logs were reviewed on site. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. The California Health and Safety Code (CHAPTER 6.67 SECTION 25270) requires that facilities meeting either of the following requirements be added to the APSA (Aboveground Petroleum Storage Act) program and comply with the regulations set forth in the CHSC. Storage of any liquid petroleum based product stored in above [Truncated]

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Completed Activities

Completed Date :	2008-02-14
Area Name :	PROJECT WIDE
Sub Area Name :	N/R
Document Type :	Site Screening
Comments :	N/R

Completed Date :	1995-11-21
Area Name :	PROJECT WIDE
Sub Area Name :	N/R
Document Type :	Site Screening
Comments :	DTSC recieived a notice of intent to sue under RCRA and HWCA. The site's soil and groundwater are contaminated with petroleum hydrocarbons and VOCs. RWQCB is currently over- seeing the remediation activities at the site. Therefore, DTSC is referring this to RWQCB. It is an RP lead EPA NPL site. This site is a part of the Glendale superfund site.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Sample Collection Date :	2023-11-02 10:07:00
Chemical Name :	Perfluorotetradecanoic acid (PFTeDA)
Chemical Valid Value :	PFTEDA
Result :	< 2 NG/L
Reporting Limit :	2
Source Chemical Name :	2810
Source Well Depth (Ft) :	N/R
Source Top Depth of Screen (Ft) :	N/R
Source Bottom Depth of Screen (Ft) :	N/R
Source Analytical Method :	EPA 537.1
Source Datum :	N/R
Source Lab Note :	EUROFINS EATON ANALYTICAL (MONROVIA)

Sample Collection Date :	2023-11-02 10:07:00
Chemical Name :	Perfluoroundecanoic acid (PFUnDA)
Chemical Valid Value :	PFUNDCA
Result :	< 2 NG/L
Reporting Limit :	2
Source Chemical Name :	2812
Source Well Depth (Ft) :	N/R
Source Top Depth of Screen (Ft) :	N/R
Source Bottom Depth of Screen (Ft) :	N/R
Source Analytical Method :	EPA 537.1
Source Datum :	N/R
Source Lab Note :	EUROFINS EATON ANALYTICAL (MONROVIA)

Sample Collection Date :	2023-11-02 10:07:00
Chemical Name :	Perfluorobutane sulfonic acid (PFBS)
Chemical Valid Value :	PFBSA
Result :	= 2.5 NG/L
Reporting Limit :	2
Source Chemical Name :	2801
Source Well Depth (Ft) :	N/R
Source Top Depth of Screen (Ft) :	N/R
Source Bottom Depth of Screen (Ft) :	N/R
Source Analytical Method :	EPA 537.1

Result Detection :	Not Detected
PFAS Chemical Name :	Perfluorobutanoate
Result Measure Value (ppt) :	-
Result Measure Value :	-
Result Unit of Measure :	N/R
Detection/Quantitation Limit Type :	Laboratory Reporting Level
Detection/Quantitation Measure Value:	3.6
Detection/Quantitation Unit of Measure:	ng/l
Laboratory Accreditation Indicator :	N/R
Fish Species :	N/R
Activity Comment :	N/R
Result Comment :	Added qualifier code: none. RTI Sample: 340900118170001 ULASF-08.

Result Detection :	Not Detected
PFAS Chemical Name :	CFC-114
Result Measure Value (ppt) :	-
Result Measure Value :	-
Result Unit of Measure :	N/R
Detection/Quantitation Limit Type :	Reporting limit by DQCALC
Detection/Quantitation Measure Value:	0.03
Detection/Quantitation Unit of Measure:	ug/l
Laboratory Accreditation Indicator :	N/R
Fish Species :	N/R
Activity Comment :	N/R
Result Comment :	N/R

Result Detection :	Not Detected
PFAS Chemical Name :	Perfluorodecanoate
Result Measure Value (ppt) :	-
Result Measure Value :	-
Result Unit of Measure :	N/R
Detection/Quantitation Limit Type :	Laboratory Reporting Level
Detection/Quantitation Measure Value:	1.8
Detection/Quantitation Unit of Measure:	ng/l
Laboratory Accreditation Indicator :	N/R
Fish Species :	N/R
Activity Comment :	N/R
Result Comment :	Added qualifier code: none. RTI Sample: 340900118170001 ULASF-08.

Waste Activity Monitoring

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosite account representative for a complimentary site report containing all of the details available.

Report Cycle :	2005
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	CADMIUM CONTAINING SPENT RINSE WATER FROM A PLATING PROCESS
Primary NAICS :	332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring
Source Code :	G08 - Removal of spent process liquids or catalysts (bulk removal of wastes from chemical manufacturing or processing, etc.)
Form Code :	W107 - Aqueous waste containing cyanides (generally caustic)
Management Method :	H073 - Cyanide destruction with or without precipitation (includes any preparation or final processes for consolidation of residuals)
Generation Tons :	20.8507089
Managed Tons :	0
Shipped Tons :	20.8507089
Received Tons :	0
Receiver ID :	CAD097030993
Receiver State :	CA
Shipper ID :	CAD008297996
Shipper State :	CA
Waste Minimization :	N/R
Waste Code List :	D006
Waste Code Group :	D006 - CADMIUM
Waste Generation Type :	N/R

Waste Code Group :	F006 - WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLA
Waste Generation Type :	N/R
Report Cycle :	2003
Hazardous Waste Page Number :	2
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	CYANIDE AND CADMIUM CONTAINING SPENT RINSE WATER FROM A PLATING PROCES.
Primary NAICS :	332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring
Source Code :	G01 - Dip, flush or spray rinsing (using solvents to clean or prepare parts or assemblies for further processing - i.e. painting or assembly)
Form Code :	W107 - Aqueous waste containing cyanides (generally caustic)
Management Method :	H073 - Cyanide destruction with or without precipitation (includes any preparation or final processes for consolidation of residuals)
Generation Tons :	7.5062552
Managed Tons :	0
Shipped Tons :	7.5062552
Received Tons :	0
Receiver ID :	CAT080036682
Receiver State :	CA
Shipper ID :	CAD008297996
Shipper State :	CA
Waste Minimization :	N/R
Waste Code List :	D006
Waste Code Group :	D006 - CADMIUM
Waste Generation Type :	N/R
Report Cycle :	2003
Hazardous Waste Page Number :	3
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	FILTER CAKE GENERATED IN THE RECYLE OF PLATING RINSE WATERS THAT ARE RETURNED TO THE PROCESS.
Primary NAICS :	332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring

Map Id: 99

Waste Generation Type :	N/R
Report Cycle :	2003
Hazardous Waste Page Number :	4
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	CORROSIVE, CONTAINING CADMIUM, SPENT ACID STRIPING SOLUTION FROM PLATING PROCESS.
Primary NAICS :	332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring
Source Code :	G02 - Stripping and acid or caustic cleaning (using caustics to remove coatings or layers from parts or assemblies)
Form Code :	W103 - Spent concentrated acid (5% or more)
Management Method :	H039 - Other recovery or reclamation for reuse including acid regeneration, organics recovery, etc. (specify in comments)
Generation Tons :	1.6513761

Source Description

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description : ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring. The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description : RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.
The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.
TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Waste Generator Details

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosite account representative for a complimentary site report containing all of the details available.

State Waste :

2018: 221 - Waste oil and mixed oil, 0.20000 tons to CAD044429835
2009: 221 - Waste oil and mixed oil, 1.2 tons to TXD077603371
2008: 221 - Waste oil and mixed oil, 4.35 tons to TXD077603371
2007: 221 - Waste oil and mixed oil, 3.3 tons to TXD077603371
2006: 741 - Liquids with halogenated organic compounds >= 1,000 Mg./L, 0.4 tons to TXD077603371
2006: 221 - Waste oil and mixed oil, 0.3 tons to TXD077603371
2006: 612 - Household waste, 0.155 tons to WAD991281767
2005: 343 - Unspecified organic liquid mixture, 0.374 tons to CAT080013352
2004: 221 - Waste oil and mixed oil, 0.45 tons to KYD053348108
2004: 331 - Off-specification, aged or surplus organics, 0.5 tons to WAD991281767
2004: 214 - Unspecified solvent mixture, 0.1 tons to WAD991281767
2004: 791 - Liquids with pH <= 2, 0.3 tons to WAD991281767
2001: 551 - Laboratory waste chemicals, 0.0208 tons to CAD028409019
2001: 343 - Unspecified organic liquid mixture, 0.204 tons to CAD008302903
2001: 221 - Waste oil and mixed oil, 0.228 tons to CAT080013352

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
NCDB supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

State Waste :

2019: 223 - Unspecified oil-containing waste, 0.45000 tons to CAD044429835
2019: 791 - Liquids with pH <= 2, 0.06000 tons to UTD981552177
2019: 272 - Polymeric resin waste, 0.22500 tons to NED981723513
2019: 331 - Off-specification, aged or surplus organics, 0.45100 tons to NED981723513
2019: 331 - Off-specification, aged or surplus organics, 0.18050 tons to ARD069748192
2019: 352 - Other organic solids, 0.60000 tons to ARD069748192
2019: 291 - Latex waste, 0.60000 tons to NED981723513
2019: 221 - Waste oil and mixed oil, 0.45000 tons to CAD044429835
2019: 352 - Other organic solids, 0.75000 tons to NED981723513
2019: 352 - Other organic solids, 0.12500 tons to TXD055141378
2019: 352 - Other organic solids, 27.21840 tons to CAD980675276
2019: 151 - Asbestos containing waste, 10.10000 tons to CAD980675276
2018: 331 - Off-specification, aged or surplus organics, 0.02400 tons to TXD982290140
2018: 281 - Adhesives, 0.08200 tons to ARD069748192
2018: 331 - Off-specification, aged or surplus organics, 0.04750 tons to TXD982290140
2018: 141 - Off-specification, aged or surplus inorganics, 0.01750 tons to TXD982290140
2018: 352 - Other organic solids, 1.95000 tons to NED981723513
2018: 512 - Other empty containers 30 gallons or more, 0.03000 tons to CAD044429835
2018: 352 - Other organic solids, 0.87500 tons to TXD055141378
2018: 151 - Asbestos containing waste, 16.19000 tons to CAD980675276
2018: 223 - Unspecified oil-containing waste, 0.50000 tons to CAD044429835
2018: 151 - Asbestos containing waste, 0.25000 tons to CAD044429835
2018: 291 - Latex waste, 2.77550 tons to CAD044429835

Source Description

Source Description : All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

State Waste :

2019: 171 - Metal sludge (see 121), 5.77360 tons to NVT330010000
2018: 171 - Metal sludge (see 121), 3.29920 tons to NVT330010000
2017: 171 - Metal sludge (see 121), 4.214 tons to NVT330010000
2016: 171 - Metal sludge (see 121), 5.0568 tons to NVT330010000
2016: 223 - Unspecified oil-containing waste, 1.14675 tons to NVT330010000
2015: 171 - Metal sludge (see 121), 5.114 tons to NVT330010000
2015: 223 - Unspecified oil-containing waste, 1.14675 tons to NVT330010000
2014: 171 - Metal sludge (see 121), 2.5284 tons to NVT330010000
2013: 171 - Metal sludge (see 121), 13.4848 tons to NVT330010000
2012: 171 - Metal sludge (see 121), 16.856 tons to NVT330010000
2012: 223 - Unspecified oil-containing waste, 2.2935 tons to NVT330010000
2012: 223 - Unspecified oil-containing waste, 1.14675 tons to NVT330010000
2011: 171 - Metal sludge (see 121), 13.4848 tons to NVT330010000
2011: 223 - Unspecified oil-containing waste, 1.14675 tons to NVT330010000
2010: 223 - Unspecified oil-containing waste, 0.834 tons to NVT330010000
2010: 171 - Metal sludge (see 121), 19.3844 tons to NVT330010000
2009: 221 - Waste oil and mixed oil, 1.045 tons to AZR000501510
2009: 171 - Metal sludge (see 121), 13.4848 tons to NVT330010000
2008: 181 - Other inorganic solid waste, 18.6992 tons to NVT330010000
2008: 223 - Unspecified oil-containing waste, 2.2935 tons to AZR000501510
2007: 223 - Unspecified oil-containing waste, 3.44025 tons to AZR000501510
2007: 181 - Other inorganic solid waste, 13.9236 tons to NVT330010000
2006: 223 - Unspecified oil-containing waste, 4.587 tons to AZR000501510
2006: 181 - Other inorganic solid waste, 3.3712 tons to NVT330010000
2006: 223 - Unspecified oil-containing waste, 1.0425 tons to AZR000501510
2006: 181 - Other inorganic solid waste, 14.528 tons to NVT330010000
2006: 181 - Other inorganic solid waste, 6.8112 tons to NVT330010000
2006: 711 - Liquids with cyanides >= 1,000 Mg./L, 2.7522 tons to CAD097030993
2005: 223 - Unspecified oil-containing waste, 1.14675 tons to CAT080013352
2005: 181 - Other inorganic solid waste, 7.9856 tons to NVT330010000

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Waste Generator Details

State Waste :

1997: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.), 0.275 tons to CAD008302903
1997: 221 - Waste oil and mixed oil, 0.22 tons to CAD008302903
1995: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.), 0.275 tons to CAD008302903
1995: 221 - Waste oil and mixed oil, 0.22 tons to CAD008302903
1994: 221 - Waste oil and mixed oil, 0.1375 tons to CAD008302903
1994: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.), 0.1815 tons to CAD008302903
1994: 221 - Waste oil and mixed oil, 0.03 tons to CAD008302903
1993: 221 - Waste oil and mixed oil, 0.15 tons to CAD008302903
1993: 151 - Asbestos containing waste, 0.005 tons to CAT080014079
1993: 551 - Laboratory waste chemicals, 0.07 tons to CAT080014079

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description : AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description : (E-GGRT, accessible through an EPA web page, is used to submit annual reports in support of the EPA rule for mandatory reporting of greenhouse gases (GHG) by large GHG emissions sources.
Implementation of 40 CFR part 98 is referred to as the greenhouse gas reporting program (GHGRP). This comprehensive, nationwide emissions data will provide a better understanding of the sources of GHGs and will guide development of the policies and programs to reduce emissions.
The publically available data will allow reporters to track their own emissions, compare them to similar facilities, and aid in identifying cost effective opportunities to reduce emissions in the future.
The EGRID contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.
The Energy Information Administration (EIA) is an independent agency within U.S. Department of Energy that develops surveys, collects energy data, and analyzes and models energy issues. The EIA-860 database supports the annual electric generator report and contains electric utility and non-utility (including independent power producers, combined heat and power producers, and other industrials) generator-specific plant data, including county and state location and ownership information.

Source Description : The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

EPS

HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description : RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

The RMP database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Source Description :

CAMDBS is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed to reduce the transport of ozone. These emissions trading programs allow regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Additional information on the programs is available on the Clean Air Markets site.

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

ENVIROSTOR - CA

Facility Name :	ELITE CLEANERS
Facility Address :	1242 W GLENOAKS BLVD, GLENDALE, CA 91201
County :	LOS ANGELES

Site Details

Cleanup Date :	2022-04-01
Cleanup Status :	Active
Site Type :	Evaluation
Site Type Detailed :	Evaluation
Acreage :	0.19
APN :	5623036002
National Priorities List :	NO
Regulatory Agencies Involved :	DTSC - Site Cleanup Program
Lead Agency :	DTSC - Site Cleanup Program
Project Manager :	Greta Fischer
Supervisor :	Marissa Cozette
Office :	CVCI Discovery and Enforcement
Envirostor ID :	60003362
Site Code :	308055
Assembly :	44
Senate :	25
Congressional District :	30
Special Program :	N/R
Past Uses :	DRY CLEANING
Potential COC :	Tetrachloroethylene (PCE); 1,2-Dichloroethylene (trans); 1,2-Dichloroethylene (cis); 1,1-Dichloroethylene; Trichloroethylene (TCE); Vinyl chloride
Confirmed COC :	Vinyl chloride-NO; Tetrachloroethylene (PCE)-NO; 1,2-Dichloroethylene (cis)-NO; 1,2-Dichloroethylene (trans)-NO; Trichloroethylene (TCE)-NO; 1,1-Dichloroethylene-NO
Potential Media Affected :	Soil Vapor
Restricted Use :	NO
Site Management Req :	N/R
Funding :	CVCI 2021
Latitude :	34.165809
Longitude :	-118.283022

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

PWS
Public Water Supply
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems

PWS ENF
Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems with enforcememnt violations

WELLS - GAMA - CA
California Groundwater Ambient Monitoring Assessment
State Water Resources Control Board
916-341-5791
Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3
Flood data
Environmental Protection Agency
(202) 566-1667
Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI
National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

SSURGO
Detailed Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
Detailed Soil Data Map

STATSGO & MUI
General Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
General Soil Data Map

USGS GEOLOGIC AGE
USGS Digital Data Series DDS
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
USGS Digital Data Series DDS: Geologic Age and Rock Stratigraphic Unit

DAMS - CA
California Dam Inundation Maps
Department of Water Resources
916-845-8275
Dam inundation maps show the maximum extent of damage of a flood wave from a dam failure

OIL & GAS WELLS - CA
Oil and Gas Well Data
State of California Department of Conservation
916-327-1042
Oil and gas well locations and detail for all 6 districts

RADON
National Radon Database
U.S. Environmental Protection Agency
215-814-2469
A study of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

RADON - CA
Radon tested locations in California
California Department of Health Services
(916) 449-5674
A table of long term and short term indoor radon measurments

RADON EPA
RADON EPA
U.S. Environmental Protection Agency
215-814-2469
EPA list of Radon zones

AIRPORT FACILITIES
Airport landing facilities
Federal Aviation Administration
(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

Qualified SWPPP Developer (QSD) #PG4532

PROFESSIONAL AFFILIATIONS

Bay Planning Coalition, Dredging and Beneficial Reuse Committee

Michael Burns is a highly skilled and effective project manager and technical analyst with more than 30 years of experience in the environmental and geological sciences. He provides expert services in CEQA and NEPA planning and permitting, site characterization, water quality investigations, remedial investigation/feasibility studies (RI/FS), waste management, litigation support, property assessments, development and redevelopment, soil and groundwater remediation, and groundwater banking. His projects include municipal and regional water supply, industrial and manufacturing facilities, general plan updates, airports, levees, landfills, refineries, research and development facilities, hazardous waste management, vineyards, and commercial properties.

Relevant Experience

Water Supply, Water Quality, and Water Rights

Monterey Peninsula Water Supply Project Environmental Impact Report, Monterey, CA. *Hydrogeologist and Hazardous Materials Analyst.* Michael provided senior-level technical consultation and analysis for geology, seismicity, groundwater hydrology and water quality, and hazardous materials, and was responsible for evaluating the results of coastal hydrogeological investigations and groundwater modeling in support of the design of the seawater intake system, the geological and groundwater hydrology and water quality impacts, and project alternatives. Under contract with the California Public Utilities Commission, ESA prepared an Environmental Impact Report on the California American Water Company (CalAm) Monterey Peninsula Water Supply Project. The project would replace existing CalAm water supplies that have been constrained by legal decisions affecting diversions from the Carmel River and pumping from the Seaside Groundwater Basin. The primary project elements include a 9.6 million gallons per day subsurface slant wells seawater intake system, a desalination plant, expanded aquifer storage and recovery facilities, and over 20 miles of conveyance pipelines and pump stations. Key issues included potential impacts to sensitive beach and dune habitat associated with construction and maintenance of the seawater intake system; minimizing effects on the Salinas Valley Groundwater Basin associated with the operation of the proposed subsurface slant wells; sustainably managing the storage of treated water in an aquifer storage and recovery system; and the effects of future coastal erosion and retreat due to anticipated sea level rise.

Syphon Reservoir Improvement Project, Orange County, CA. *Hydrogeologist and Hazardous Materials Analyst.* Michael provided senior-level technical consultation and analysis for geology, seismicity, groundwater hydrology and water quality, and hazardous materials. The proposed project will increase the capacity of the existing Syphon Reservoir and replace the existing engineered dam with a new and larger engineered dam. The proposed project will allow the storage of additional recycled water produced at the Michelson WRP during periods of low demand for use during periods of high demand. In addition, the San Joaquin Marsh will be reworked as a mitigation bank to compensate for impacts to woody riparian and freshwater marsh habitats. Key issues included the location in a seismically active region, the increased size of the dam and reservoir area, and the increase in the downstream flooding area in the event of a dam failure.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Stanford University, Searsville Watershed Restoration Project, Stanford University, CA. *Hazardous Materials Analyst, 2011*. ESA conducted environmental studies to support development of the Environmental Impact Report (CEQA, NEPA and permitting) and preparation of the Environmental Impact Report (EIR) for Stanford University's Searsville Watershed Restoration Project, which addresses sediment, fish passage and water supply issues at Stanford's Searsville Dam and Reservoir. Stanford proposes to restore fish passage and natural sediment transport processes past the dam and replace the reservoir's water supply function, with the preferred alternative being constructing a tunnel and gate at the base of the dam and flushing accumulated sediment downstream through San Francisquito Creek to San Francisco Bay. The project includes enhancement of the watershed ecosystem upstream and downstream of the Dam, and the water supply function would be replaced through an increase in the pumping capacity at the existing San Francisquito Creek diversion facility to increase flows to the off-stream Felt Reservoir, which would be expanded to replace the lost capacity at Searsville Reservoir. Michael conducted Phase I environmental site assessments for the study area to establish baseline conditions relative to the potential presence of hazardous materials from historical and current operations. Michael then used this information, along with sediment testing data, to inform and prepare the hazards and hazardous materials section of the joint NEPA/CEQA document. Key issues included addressing the presence of metals and pesticides in the sediments accumulated behind the dam.

Kern Fan Project, Kern County, CA. *Hydrogeologist and Hazardous Materials Analyst, 2020.* Michael provided senior-level technical consultation and analysis for geology, seismicity, groundwater hydrology and water quality, and hazardous materials. Michael evaluated the groundwater modeling results with a focus on potential impacts to surrounding water banking operations. The proposed project will develop water recharge and recovery facilities in the Kern Fan area. The proposed project will recharge, store, recover and deliver State Water Project water, including Article 21 water, and water from other sources when available. The stored water will be used to provide ecosystem benefits downstream from the SWP's Lake Oroville and supply reliability benefits for agricultural and municipal and industrial uses. The proposed project will involve the construction and operation of water conveyance, recharge and recovery facilities that will also provide intermittent wetland habitat to benefit local and migratory birds. Key issues included the location in a seismically active region, mounding that might affect surface infrastructure, impacts to surrounding water banking operations, and the project's ability to improve the sustainability of groundwater supplies.

Groundwater Reliability Improvement Program EIR, Southern CA. *Hydrogeologist*. Michael analyzed geologic resources and hydrology and water quality for the Water Replenishment District of Southern California for the Supplemental Recharge Wells Project in the Montebello Forebay of the Central Basin in Southern California. The project purpose was to increase the volume of injected recycled water for groundwater replenishment. Key issues included the ability of the aquifers to accept the water without adverse water quality effects, the retention time in the aquifers before the injected water reached the nearest water supply well, and the potential for adverse effects from mounding around the injection wells.

San Francisco Public Utilities Commission Groundwater Supply Project Environmental Impact Report, San Francisco, CA. *Hydrogeologist***.** Michael provided senior-level consultation, technical input, and review for hydrology and hazardous materials portions of the Westside groundwater basin project. This included detailed evaluation of the potential impacts of changes in groundwater levels to Lake Merced, which is incised into the water table. The evaluation analyzed the relationship of water quality parameters relative to lake levels using historical data. ESA is providing specialized natural resource, environmental, and environmental planning expertise to assist the San Francisco Public Utilities Commission to evaluate several groundwater management alternatives.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Goetz Road Potable Water Storage Tank and Transmission Pipeline Project, Cities of Menifee and Perris, CA. *Hydrogeologist and Hazardous Materials Analyst.* Michael provided senior-level technical consultation and analysis for geology, seismicity, groundwater hydrology and water quality, and hazardous materials. The proposed project would construct and operate an 8-million-gallon potable water storage tank, a chlorination disinfection facility, and associated transmission pipeline to address a number of deficiencies in the pressure levels of the water supply system. Portions of the system pressure zone are hydraulically isolated due to major north-south pipeline corridors that lack east-west capacity. Additionally, the zone has low pressure, deficient storage, and insufficient pumping capacities. The proposed project would correct existing storage deficiencies and provide additional storage volume for existing and proposed development within the area. Key issues included the location in a seismically active region, changes to drainage, and the location in an area susceptible to flooding.

Onyx Ranch South Fork Valley Water Project, Onyx, CA. *Analyst for Geology, Hydrology, Water Quality, and Hazardous Materials.* Michael conducted due diligence for a water rights project for the Rosedale-Rio Bravo Water Storage District, which included conducting a Phase I assessment for potential hazardous materials and evaluating the project-specific groundwater-surface water modeling. The project will re-route surface diversions from the Kern River to the Districts groundwater bank. Michael analyzed geologic, seismic, hydrologic, water quality, and hazardous materials impacts for the proposed project. Key issues included evaluating impacts to local water supply wells and water service suppliers.

LADWP Parks Stormwater Capture Project, Onyx, CA. *Analyst for Geology, Hydrology and Water Quality, and Hazardous Materials.* The proposed project would include construction of stormwater capture facilities at nine City owned parks to help capture surface flow and divert stormwater runoff from the Tujunga Wash Central Branch storm drain to recharge the San Fernando Groundwater Basin. Michael analyzed geologic, seismic, hydrologic, water quality, and hazardous materials impacts for the proposed project. Key issues included potential high water levels and liquefaction, possible paleontological resources, and the location of one park on a former landfill.

San José/Santa Clara Water Pollution Control Plant Master Plan Program Environmental Impact Report, San José, CA. *Hydrogeologist.* Michael provided senior-level consultation, technical input, and review for the hydrology and hazardous materials portions of the project. This included technical input and senior-level review of the sites' historical uses that may have resulted in residual chemical concentration in soil and/or groundwater that could exceed action levels. The Program/Project Environmental Impact Report was prepared for the City of San José's master plan to rebuild the San José/Santa Clara wastewater facility and convert land uses on the plant's 2,700-acre site on the South Bay's shoreline. The Master Plan included a wide range of projects that will transform the existing plant operations, including changes in the method of biosolids handling that will enable the conversion of the plant's buffer lands to a variety of other uses including economic development, recreation, and habitat restoration. Key areas of investigation for the EIR include habitat conversion, traffic, and air quality (greenhouse gas emissions, toxic air contaminants, criteria air pollutants).

DWR Tisdale Bypass Project, Sutter County, CA. *Hydrogeologist, 2019-20.* The state DWR periodically excavates and stockpiles for reuse sediment that accumulates in flood control channels to restore the channel design capacity. Michael prepared the sediment characterization work plan to sample sediment and compare the chemical testing results to various screening levels. Michael then sampled the sediment, evaluated the results, and submitted the testing report to the DWR for inclusion in their Section 404 permitting package. Key issues included negotiating screening levels with the Regional Water Board.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Cadiz Groundwater Conservation, Recovery, and Storage Project Environmental Impact Report, Cadiz, CA. *Analyst for Geology, Hydrology, Mineral Resources, and Hazardous Materials.* Michael provided senior-level technical consultation and analysis of the geologic, hydrologic, hazardous materials, and mineral resources impacts for the Environmental Impact Report for the Cadiz Groundwater Conservation, Recovery, and Storage Project. The Project is a groundwater recovery, water conservation, and conjunctive use storage project to actively manage the groundwater basin within the Fenner and Orange Blossom Watersheds in the eastern Mojave Desert and develop a new reliable water supply and storage facility for the Santa Margarita Water District and other participating water agencies. The Conservation and Recovery component would recover up to 50,000 acre-feet per year water that would otherwise be lost to evaporation in two dry lakes. The Storage and Recovery component would actively manage the groundwater basin as a conjunctive use project. Up to 1-million-acre feet of water originating from the Colorado River, directly or by exchange, would be conveyed to the watershed from the Colorado River Aqueduct through the pipeline constructed under the Conservation and Recovery Component of the project. This water would be recharged into the aquifer system via spreading basins and recovered when needed.

City of Antioch Desalination Project, Antioch, CA. *Hydrogeologist.* The City of Antioch proposes to construct and operate a desalination plant on the San Joaquin River to improve the water quality of currently diverted surface water that regularly becomes too saline for use. Michael analyzed geology, hazardous materials, hydrology, and water quality impacts from the project. Key issues included water pipelines that would cross active and abandoned oil pipelines.

Casa Diablo IV Geothermal Project, Mammoth Lakes, CA. *Hydrogeologist and Chemist.* Ormat Technologies developed geothermal resources in Mammoth Lakes to generate electricity with oversight from the Bureau of Land Management. Michael analyzes chemical, stable isotope, water level, and precipitation data from wells and surface water stations to identify water sources and chemical trends. Key issues include verifying that the pumping of deeper geothermal waters will not adversely affect the water supply for the Town of Mammoth Lakes.

City of Morro Bay Reclamation Project, Morro Bay, CA. *Hydrogeologist.* The City of Morro Bay proposed constructing and operating a wastewater reclamation facility and associated pipelines to replace the existing wastewater treatment facility but upgrade treatment to provide advanced treated recycled water for indirect potable reuse instead of discharging to the bay. Michael analyzed geology, hazardous materials, hydrology, and water quality impacts from the project. Key issues included potential loss of treated groundwater to the ocean.

City of Daly City Vista Grande Drainage Basin Tunnel Analysis, Daly City. *Hydrogeologist.* Michael provided senior-level consultation and technical input for the hydrology portion of the project. This included providing technical input to develop the monitoring program in the existing canal to evaluate existing hydrological and chemical conditions. The project will examine alternatives for a pipeline and outfall construction for stormwater management in Daly City.

San Juan Watershed Project. *Hydrogeologist and Hazardous Materials Analyst*. Michael provided senior-level technical consultation and analysis for surface water/groundwater interaction and hazardous materials analysis. The Santa Margarita Water District, City of San Juan Capistrano, and South Coast Water District, are proposing to increase the capture and storage of urban runoff and stormwater to augment local groundwater supplies and reduce the region's dependence on imported water. Three inflatable dams would be constructed across the Santa Margarita River to increase the infiltration of water to the underlying aquifer. Key issues include evaluating the surface water – groundwater modeling to identify potential flooding or conflicts with hazardous materials sites.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Santa Clarita Valley Sanitation District Chloride Compliance Facilities Plan and Environmental Impact Report, Los Angeles and Ventura Counties, CA. *Analyst for Geology, Hydrology, and Hazardous Materials.* Michael provided technical consultation and analysis for geologic, hydrologic, and hazardous materials impacts for the Chloride Compliance Facilities Plan and Environmental Impact Report. In addition, he evaluated the Groundwater-Surface Water Interaction Model results with a focus on the potential impacts relative to geology, hydrology, and hazardous materials. The Santa Clara River in southern California has 303(d)-listed river segments listed for chloride and other constituents. The District is evaluating changes to the management of the river with a focus on reducing chloride concentrations to improve the agriculture water supply and increasing recycled water use of tertiary-treated water from the two District treatment facilities.

West Basin Desalination Project, El Segundo, CA. *Geologist and Hazardous Materials Analyst.* Michael provided senior-level technical consultation and analysis for geology, seismicity, and hazardous materials, and was responsible for evaluating the results of sea level rise modeling. The project would construct and operate a seawater desalination plant on an existing ocean-front power plant facility to replace imported public water supplies. Key issues included potential impacts of sea level rise on the existing sea wall and the construction of pipelines through areas with known hazardous materials sites.

North Bay Water Recycling Program, (also known as the North San Pablo Restoration and Reuse Project). *Geology and Hazardous Materials Analyst.* Michael evaluated geologic, seismic, hazardous materials, and cultural resources along certain proposed pipeline alignments to promote the expanded beneficial use of recycled water in the North Bay region. Key issues included identifying alignment sections that cross known hazardous materials sites or areas susceptible to wild land fires.

Owens Lake Master Plan, Owens Lake, CA. *Geology, Hazardous Materials, and Hydrology and Water Quality Analyst*. The Los Angeles Department of Water and Power is evaluating methods to reduce the volume of water needed for dust suppression on Owens Lake. Michael evaluated geologic, seismic, hazardous materials, hydrology, and water quality impacts for the proposed methods. Key issues included evaluating modeling results to verify that the dust suppression replacement methods would be successful and that the diversion of that volume of water to public water supply would not adversely impact local water users or the environment.

Sunnyvale Water Pollution Control Plant Master Plan and Water Purification Facilities, Sunnyvale, CA. *Geology and Hazardous Materials Analyst.* Michael provided senior-level technical consultation and analysis for geology, seismicity, and hazardous materials for the proposed treatment facilities upgrades, increased recycled water production, and recharge or injection of the recycled water into Santa Clara Valley aquifers for groundwater recharge. Key issues included analyzing the ability of the proposed recharge basins and injection wells to accept the recycled water.

Fresno-Clovis Regional Water Reclamation Facility Recycled Water Program Expansion Initial Study/Mitigated Negative Declaration, Fresno-Clovis Area, CA. *Task Manager and IS/MND Analyst.* Michael provided task management for the preparation of the project description and analysis for geology, hydrology, water quality, and hazardous materials issues for the proposed treatment facilities upgrades and increased recycled water production. Key issues included analyzing the updates to the compliance monitoring program and the ability of the recharge basins and local farms to accept the increased recycled water volume.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Marin County Flood Control, Novato Creek CEQA Mitigated Negative Declaration, Novato, CA. *Project Manager, Geologist, Hydrologist Analyst*. Michael provided planning and permitting services to assist Marin County Flood Control with evaluating and preparing CEQA documents for the Novato Creek Flood Control Dredging Project within Novato Creek and its tributaries in Novato. The Project was designed to remove an estimated 70,000 cubic yards of accumulated silt from the creek beds of Novato Creek, Warner Creek, and Arroyo Avichi Creek to restore originally designed flood control capacity. He oversaw the baseline surveys for wetland delineation, biological assessment, geotechnical conditions, and potential disposal sites, preparation of the mitigated negative declaration, and evaluation of required permits.

Tin Cross Vineyards Water Rights, Cloverdale, CA. *Project Manager and Hydrologist.* Michael provided planning and permitting services to establish and maintain their water rights. The diverted and stored water is used for irrigation, frost protection, and recreation. He is providing the baseline environmental documentation, water availability analysis/cumulative flow impairment index, biological survey, initial study, and mitigated negative declaration per CEQA and state water rights guidelines.

Oak Ridge Vineyards and Ranch Water Rights, Cloverdale, CA. *Project Manager and Hydrologist.* Michael is providing planning and permitting services to establish and maintain the vineyard water rights. The diverted and stored water is used for irrigation, domestic use, and recreation. Michael provided the baseline environmental documentation, water availability analysis/cumulative flow impairment index, initial study, upper limit of anadromy surveys, and mitigated negative declaration per CEQA and state water rights guidelines. Future activities will include installation of meters to monitor diversion volumes, biological surveys and completion of the water rights process.

Cornell Vineyards Environmental Impact Report, Sonoma County, CA. *Analyst for Geology and Hydrology.* Michael evaluated geologic and hydrologic impacts for the proposed construction and operation of a winery in Sonoma County, CA. The winery would produce wine from the existing vineyards, excavate and improve caves to store the wine and reduce the above-ground footprint, and utilize extensive water conservation techniques to reduce the impact on surface water and groundwater supplies. The water conservation approach includes rainwater harvesting, wet season groundwater pumping and storage, rain gardens to reduce and control erosion, and waste water recycling to reduce the impacts to the local creek and watershed.

Frey Vineyards Water Rights, Redwood Valley, CA. *Project Manager and Hydrologist.* Michael provided planning and permitting services to assist Frey Vineyards in establishing and maintaining their water rights. The diverted and stored water is used for irrigation and frost protection. He provided the environmental baseline documentation, initial study, and mitigated negative declaration per CEQA and state water rights guidelines.

Masut du Ho Vineyards Water Rights, Redwood Valley, CA. *Project Manager and Hydrologist.* Michael provided planning and permitting services to assist Masut du Ho Vineyards in establishing and maintaining their water rights. The diverted and stored water is used for irrigation and frost protection. He provided the environmental baseline documentation, initial study, and mitigated negative declaration per CEQA and state water rights guidelines.

Section 1211 Wastewater Change Petition for the San Jose Creek Water Reclamation Plant, Los Angeles County, CA. *Groundwater Hydrogeology Analyst.* Michael is providing analysis of surface water and groundwater conditions at the San Gabriel River and San Jose Creek confluence. The Sanitation District of Los Angeles County is considering reducing their tertiary treated waste discharges from the San Jose Water Reclamation Plant. Key issues include analyzing whether groundwater upwelling supports riparian vegetation.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Redevelopment and Restoration of Environmentally Impaired Properties

Veritas Software Corporation Purchase of Raytheon/Fairchild Superfund Site, Mountain View, CA. *Project Manager and Hydrogeologist***.** Michael served as the environmental project manager for a redevelopment project involving the purchase, redevelopment, and occupation of a Superfund site undergoing active remediation consisting of a soil vapor extraction and treatment system, a groundwater extraction and treatment system, and a perimeter slurry wall that could not be adversely affected by redevelopment of the site. He served on the client project team for developing the approach to purchasing and redeveloping the site in concert with Ernst & Young, along with integrating the closure of the Fairchild Semiconductor manufacturing facility with site redevelopment. He prepared an Environmental Site Assessment to evaluate environmental conditions of site and identify environmental conditions that would affect future redevelopment; evaluated ongoing treatment systems and residual contamination to ensure completion or continuation of previous owners environmental obligations, protection of buyers investment, and the health and safety of construction workers and future building occupants; worked with the existing semiconductor manufacturing facility to ensure closure was consistent with new owner's environmental and geotechnical requirements, worked with the architect to develop the site to maximize the benefit to new owner while not interfering with ongoing site remediation (the criteria included locating buildings to maximize transit zone credits with City); provided input to City agencies to produce the Initial Study for rezoning and redevelopment; evaluated ecological conditions onsite related to sensitive species (specifically burrowing owls); and performed all environmental and geotechnical investigations in support of demolition of existing structures and construction of new facility. During and after construction, he oversaw the geotechnical and environmental oversight of construction activities, responded to geotechnical and environmental issues, and reviewed and monitored the regional U.S.EPA-led Indoor Air Quality Study that included this Site.

Oakland Waterfront Ballpark District Project (Oakland Athletics), Environmental Impact Report, Oakland, CA. *Analyst for Hazardous Materials.* Michael analyzed hazardous materials impacts and provided senior level review for geologic, seismic, and hydrology and water quality impacts. The Oakland Athletics proposed to redevelop and revitalize an underutilized waterfront site by constructing a state-of-the-art multi-purpose waterfront ballpark and event center in Oakland that meets MLB requirements for sports facilities, can be used year-round for sporting events and entertainment and convention purposes, and constructs mixed use commercial and residential development to meet housing demand. The site is the Howard Marine Terminal, which has a long history of industrial use resulting in contaminated soil and groundwater that is currently capped to prevent exposure to the public or environment. Key issues included evaluating the impacts from the development of the waterfront while remediating portions of the site and maintaining the cap that prevents exposure to hazardous materials.

US Department of Veterans Affairs, Palo Alto Health Care Center Redevelopment Project Environmental Impact Statement, Santa Clara County, CA. *Analyst for Geology, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources.* ESA is prepared a comprehensive EIS assessing the environmental effects of redevelopment of the VA's 92-acre Palo Alto Health Care Center Campus which currently houses 38 buildings and structures. Alternatives include construction of a new 550-bed cancer treatment hospital with a local health care partner. Development of such a facility would require relocation and reconstruction of existing facilities on the campus, including a new bed tower, spinal cord injury center, ambulatory care center, and other facilities. Environmental issues associated with the project included residual pesticides from previous agricultural land use. Michael provided senior-level technical consultation and analysis for geology and soils, groundwater hydrology and water quality, hazards and hazardous materials, and mineral resources.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Veritas Software Corporation Purchase of Parcel at McCarthy Ranch, Milpitas, CA. *Project Manager and Hydrogeologist***.** Michael served as the project manager for a redevelopment project involving the purchase, development, and occupation of a former agricultural parcel adjacent to Coyote Creek in Milpitas, California. He served on the client project team developing the approach to purchasing and redeveloping site in concert with the owner, developer, financial agent, architect, landscaping architect, and construction contractor. He evaluated environmental conditions of site and surrounding properties focusing on residual chemicals from historical agricultural use to ensure protection of the buyer's investment and the health and safety of construction workers and future building occupants. He evaluated ecological and archaeological conditions onsite related to sensitive species (i.e. burrowing owls, salt harvest mouse), a potential buried historical farmhouse, and the location adjacent to the creek; and all environmental and geotechnical investigations in support of construction of the new facility.

Tom Bradley International Terminal Expansion, Los Angeles International Airport, Los Angeles, CA. *Contract Environmental Compliance Officer (CECO)*. Michael served as the CECO for the excavation phase of the project, which added nine new gates, reconfigured the existing gates, and expanded and improved the existing terminal facilities to handle the new large-capacity jets that can carry as many as 800 passengers. Duties included ensuring the implementation of all components of the construction-related environmental requirements through management direction, compliance monitoring, direct inspections, maintenance of records, and investigation and cleanup of contaminated sites. The CECO responsibilities included the following:

- Reviewed contract documents to develop the project specific mitigation plan
- Developed solicitation plans for on-call services for mitigation, as needed
- Prepared environmental reports and mitigation plans, as required
- Developed contaminated materials management procedures
- Developed procedures for the management of hazardous material encountered during structure demolition
- Ensured procedures are being executed through daily field inspections
- Conducted soil sampling investigations for fuel leak sites as construction proceeded and managed the contaminated soil excavation and disposal

Google Downtown West Mixed-Use Redevelopment Project, Environmental Impact Report, San José, CA. *Analyst for Hazardous Materials.* Michael analyzed hazardous materials impacts and provided senior level review for geologic, seismic, and hydrology and water quality impacts. Google is redeveloping and revitalizing an underutilized downtown area of San José with mixed-use commercial and residential transit–oriented development that includes onsite wastewater treatment and water recycling. The project area has a long history of industrial use and numerous parcels have soil and groundwater contamination, including parcels that have land use covenants that restrict land uses and prohibit disturbing caps that prevent exposure to the public and the environment. Key issues included evaluating the impacts from the development while remediating portions of the site and maintaining caps that prevent exposure to hazardous materials.

1200-1340 Old Bayshore Highway Redevelopment Project, Environmental Impact Report, Burlingame, CA. *Analyst for Geology, Hazardous Materials, and Hydrology and Water Quality.* Michael analyzed impacts relative to geology, hazardous materials and hydrology and water quality. The project applicant is proposing to redevelop this site as a life sciences research facility. The project area has a long history of industrial use with some areas of contaminated soil and groundwater. In addition, two drainages from upland areas cross the project site, routing stormwater to the San Francisco Bay. Key issues included evaluating the impacts from the development while developing mitigations for potentially encountering residual contamination from prior land uses.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Culver Crossings, Environmental Impact Report, Culver City and City of Los Angeles, CA. *Geology, Hazardous Materials, and Hydrogeology Analyst.* Michael analyzed geology, seismicity, hazardous materials, hydrology, and water quality impacts. This redevelopment project constructed office buildings and underground parking on property that straddles the Cities of Los Angeles and Culver City. Key issues included (1) evaluating residual soil and groundwater contamination from previous onsite and offsite uses and developing mitigation to address the residual contamination and (2) evaluating the proposed design features to manage stormwater runoff and ensure that stormwater is captured and treated to prevent impacts to offsite waterways and the capacity of the municipal stormwater system.

Los Cerritos Wetlands Restoration and Oil Well Consolidation Project, Long Beach, California. *Hazardous Materials, Geologic Resources, and Utilities Analyst.* Michael provided input for the project description, peer review of technical reports, analysis for hazards and hazardous materials, geologic, seismic, and utilities resources for the Programmatic Environmental Impact Report. This Program will consolidate oil and natural gas production well operations, and close and remove oil and natural gas operations that become uneconomic, followed by restoring the currently separate properties to wetlands habitat. Key issues include the destruction and relocation of oil and natural gas wells such that the former production field can successfully function as wetland habitat.

Los Cerritos Wetlands Complex Restoration and Oil Well Consolidation Program, Long Beach, CA. *Hazardous Materials, Geologic Resources, Hydrology and Water Quality, and Utilities Analyst.* Michael provided input for the project description, peer review of technical reports, analysis for hazards and hazardous materials, geologic, seismic, hydrology and water quality, and utilities for the Programmatic Environmental Impact Report (PEIR). This Program will consolidate oil and natural gas production well operations from four to two properties to improve production efficiency, followed by restoring one property to a wetlands habitat mitigation bank. As a first-tier environmental document, this PEIR will serve as the foundation for subsequent CEQA analysis (e.g., Project-level EIRs, addendums), which would be conducted for project-specific restoration designs. Key issues include the destruction and relocation of oil and natural gas wells such that the former production fields can successfully function as restored wetland habitat.

Rancho Los Amigos South Campus Redevelopment, Downey, CA. *Hazardous Materials Analyst.* Michael is provided hazardous materials analysis for the proposed redevelopment of the derelict former medical center. The County proposed to remove about 51 buildings and redevelop the 28-acre property as an internal services headquarters, probation department headquarters, and sheriff's department crime laboratory. Key issues included extensive contamination from hazardous building materials, trash and mold from homeless encampments and soil and groundwater contamination from fuel and oil tanks, pesticide use, and medical waste, including radioactive materials.

Niles Gateway Mixed Use Project, Fremont, CA. *Geology, Hazardous Materials, and Hydrogeology Analyst.* Michael analyzed geology, seismicity, hazardous materials, hydrology, and water quality impacts for the Mitigated Negative Declaration. The redevelopment project will provide townhomes, live/work units, retail/restaurant uses, and community space uses. Key issues included evaluating the cleanup of the former industrial uses, and potential impacts to downstream groundwater recharge facilities.

Almaden Lake Improvement Project, Los Angeles, CA. *Hazardous Materials Analyst.* Michael provided analysis for hazardous materials for the Environmental Impact Report. The Almaden Lake Improvement Project will separate Almaden Creek from Almaden Lake, restoring the creek alignment and natural creek functions. In addition, the lake bottom sediments would be capped to prevent elemental mercury from historical upstream mining operations from being converted into methylmercury and entering the food chain.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

San Anselmo Flood Protection EIR, Fairfax and San Anselmo, CA. Geology, *Hazardous Materials, and Hydrology and Water Quality Analyst.* Michael provided geology, seismic, hazardous materials, hydrology, and water quality analysis for the proposed reworking of the San Anselmo Creek to improve flood control. The County proposes to remove buildings and footings that impede flow, construct a retention to contain flood flows, and rework the channel to improve carrying capacity. Key issues included hazardous building materials and soil and groundwater contamination from nearby hazardous materials sites.

Oracle Corporation Oracle Corporation Purchase of Parcel at Dublin Transit Center, Dublin, CA. Michael provided due diligence services for the purchase of a former military base parcel. He served on the project team for developing the approach to purchasing and redeveloping the site in concert with the owner, developer, construction contractor, and onsite power contractor. He evaluated the history and environmental conditions of site and surrounding properties to ensure completion of previous owners obligations, protection of buyers investment, and the health and safety of construction workers and future building occupants; performed environmental and geotechnical investigations in support of developing potential design that would minimize interaction with residual chemicals in soil and groundwater; worked with the buyer and developer to acquire and quantify the indemnification from the current owner; and performed all ecological investigations for sensitive species.

Macronix America Purchase of McCarthy Ranch Parcel, Milpitas, CA. Michael served as the project manager for a redevelopment project involving the purchase and redevelopment of a former farm, including developing the approach to redeveloping site in concert with the owner, architect, and construction contractor; evaluating onsite conditions for residual chemicals from historical agricultural use to ensure protection of the health and safety of construction workers and future building occupants; and performing all environmental and geotechnical investigations in support of construction of new facility.

Avaya Telecommunications Inglewood Site for Redevelopment, Inglewood, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the closure and remediation of a former equipment and vehicle maintenance facility where chlorinated solvents migrated through joints in a trench inside the building to soil and to groundwater 100 feet below ground surface. He evaluated the history and environmental conditions of site and surrounding properties; evaluated the nature and extent of chemicals (predominantly chlorinated solvents) released to soil and groundwater beneath site from historical use as a telecommunications and service equipment maintenance and repair facility; identified the center portion of trench inside the building as the release location; performed a limited air quality investigation to verify air within the building was not being adversely affected from potential vapors from contaminated soil beneath the building; closed the trench and sump system inside the building including removal of contaminated soil source from beneath leaky section of trench; eliminated the onsite source; and reduced regulatory agency urgency.

East Hollywood Mitigated Negative Declaration, Los Angeles, CA. *Hazardous Materials, Geology, and Hydrology and Water Quality Analyst.* Michael provided senior-level technical consultation and analysis for the proposed redevelopment of the existing street light maintenance yard into an operational maintenance yard. Previous activities at the site resulted in petroleum hydrocarbons and cleaning solvents contaminating soil and groundwater at the site. In addition, a former dry cleaner located just upgradient of the site released dry cleaning solvent into groundwater, which migrated to the subject site. Key issues included analyzing hazardous building materials in existing structures, the extent of known soil and groundwater contamination, the proposed soil remediation method of excavation and disposal, and the proposed treatment of groundwater using a permeable reactive barrier.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Comstock High Rise, Santa Rosa, CA. *Project Manager and Hydrogeologist.* This proposed redevelopment project involved the potential redevelopment of an existing theater site into a 14-story high-rise building with two subsurface parking garage levels in the downtown area, adjacent to a leaking gasoline underground storage tank site. Michael investigated subsurface environmental and geotechnical conditions to address geotechnical construction requirements and the development of approaches to dewater the subsurface construction during and after construction of the subsurface parking garage levels without drawing the adjacent contamination to the site.

Alameda Point, Alameda, CA. *Project Manager and Geologist*. The Alameda Unified School District proposed constructing housing on a portion of the former Alameda Naval Air Station (NAS) for District staff. Numerous sites within the NAS have been and continue to be investigated and remediated for hazardous building materials and soil and groundwater contamination. Michael conducted due diligence for the project by reviewing investigation and testing reports to evaluate the property for potential risks to onsite residents.

Restoration of Natural Habitat

Eden Landing Ecological Preserve Levee Maintenance Project, Hayward, CA. *Quality Assurance Officer.* This project is part of the South Bay Salt Pond Restoration Project, a collaborative project with CA Wildlife Foundation, California Fish and Wildlife, the Regional Water Board, and construction contractors with available fill. The project restores former salt ponds, adjacent diked marshes, levees, and transitional areas to uplands that are managed for resident and migratory water birds, and tidal marsh habitat and species on the margins of San Francisco Bay. In addition, the restoration activities restore flood control protection by restoring and maintaining levees. Michael serves as the Quality Assurance Officer, which includes developing and implementing the Master Quality Assurance Project Plan (QAPP) to ensure imported fill for levee improvements meets ecological screening levels, and screening and inspecting fill source sites and fill placement at Eden Landing to verify compliance with the QAPP screening criteria. Key issues include negotiating screening levels with the Regional Water Board, reviewing proposed imported fill documentation, and inspecting import sites to ensure compliance with screening criteria.

Ballona Creek Wetlands Restoration, Los Angeles, CA. *Hydrogeologist and Analyst.* Michael provided senior-level technical consultation and analysis for geology, seismicity, and hazardous materials for the Environmental Impact Report. The Ballona Wetlands Restoration project will realign Ballona Creek into a natural meandering stream, restore wetlands and upland habitat, maintain and improve levees for flood control, relocate natural gas monitoring wells to offsite locations, and improve visitor access for 574 acres of the Ballona Creek wetlands. The restoration will include the excavation and reworking of over 2 million cubic yards of soil to restore the wetlands and upland habitat to a natural ecosystem. The Ballona Creek wetlands were originally part of the once-extensive 1,700-acre Ballona Creek wetlands, extending from Playa Del Rey to Santa Monica, greatly reduced in extent by development. The wetlands are on the 2,000-mile migratory route for birds between Alaska and Latin America, known as the Pacific Flyway, and are a protected habitat for hundreds of birds, native plants, animals, and marine life, including the California least tern. The wetlands are one of the last tidal wetlands in southern California, with high and low tides twice daily. Key issues included identifying hazardous materials sites that could affect the habitat.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Ukiah Riverside Phase 1 and 2 Assessment, Ukiah, CA. *Project Manager and Hazardous Materials Analyst.* Michael conducted a focused Phase 1 and 2 environmental site assessment for the proposed Riverside Park project in Ukiah, California. The City of Ukiah is proposing to expand Riverside Park to include an area previously used as a sewage treatment plant, a police shotting range, for the dumping of street cleaning waste (sediment and vegetation), and as an unregulated and uncontrolled dumping site. The Phase 1 assessment was conducted in accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Based on the results, selected areas were sampled and analyzed to investigate the potential for chemical releases. The key issue was identifying one area with elevated levels of lead that will need to be disposed of at an offsite facility permitted to accept the waste.

Los Cerritos Wetlands Restoration and Oil Well Consolidation Project, Long Beach, CA. *Hazardous Materials, Geologic Resources, and Utilities Analyst.* Michael provided input for the project description, peer review of technical reports, analysis for hazards and hazardous materials, geologic, seismic, and utilities resources for the Programmatic Environmental Impact Report. This Program will consolidate oil and natural gas production well operations, and close and remove oil and natural gas operations that become uneconomic, followed by restoring the currently separate properties to wetlands habitat. Key issues include the destruction and relocation of oil and natural gas wells such that the former production field can successfully function as wetland habitat.

Los Cerritos Wetlands Complex Restoration and Oil Well Consolidation Program, Long Beach, CA. *Hazardous Materials, Geologic Resources, Hydrology and Water Quality, and Utilities Analyst.* Michael provided input for the project description, peer review of technical reports, analysis for hazards and hazardous materials, geologic, seismic, hydrology and water quality, and utilities resources for the Programmatic Environmental Impact Report (PEIR). This Program will consolidate oil and natural gas production well operations from four to two properties to improve production efficiency, followed by restoring one property to a wetlands habitat mitigation bank. As a first-tier environmental document, this PEIR will serve as the foundation for subsequent CEQA analysis (e.g., Project-level EIRs, addendums), which would be conducted for project-specific restoration designs. Key issues include the destruction and relocation of oil and natural gas wells such that the former production fields can successfully function as restored wetland habitat.

Grizzly Slough Floodplain Restoration Hazardous Substances Assessment, *Task Manager.* Michael conducted a focused Hazardous Substances Assessment, similar to a Phase 1 and 2 environmental site assessment, for the Grizzly Slough Floodplain Restoration Project near Thornton, California. Mercury contamination from historical gold mining in the Sierras resulted in mercury being transported and deposited in waterways and sediments throughout the Delta. Under anaerobic conditions, elemental mercury is transformed into methylmercury and taken up into the food chain. The purpose of the assessment was to assess the property for the presence of mercury in sediments, along with residual chemicals from agricultural use. The results of the assessment will inform the restoration project design. The Phase 1 portion of the assessment was conducted in general accordance with the ASTM 1527 standard, which included research of historical and regulatory agency records, interviews, and a site inspection. The sampling locations and analytical tests were based on the results of the Phase I assessment. The sampling results indicated the sediments contain residual levels of elemental mercury, methylmercury, and pesticides. The key issue was quantifying mercury levels in site sediments to evaluate the impacts of flooding the property.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Russian River Estuary Management Project. *Geologist, Hydrologist, Mineral Resources, and Hazardous Materials Analyst.* Michael evaluated geologic, hydrologic, mineral resource, and hazardous materials impacts for the Environmental Impact Report for the proposed Russian River Estuary Management Project. This Project is intended to fulfill federal mandates described in a Biological Opinion from the National Marine Fisheries Service to implement adaptive management of the Russian River Estuary to enhance fisheries habitat while minimizing flood risk. Implementation of the Estuary Management Project would involve management of the Estuary as a summer lagoon during a lagoon management period May 15 to October 15, and continuation of artificial breaching practices during the remainder of the year.

Hazardous Materials Projects

Santa Susana Field Laboratory (SSFL), Programmatic and Project Level Environmental Impact Report, Simi Hills, CA. Earth Sciences and Hazardous Materials Task Leader for Geology, Seismicity, Hydrology and Water Quality, Mineral Resources, and Hazardous Materials. Michael served as the Earth Sciences and Hazardous Materials task leader responsible for evaluating the geologic, seismic, hydrologic, water quality, hazardous materials, and mineral resources impacts. The California Department of Toxic Substances Control provides oversight of the site investigation and cleanup activities for the former SSFL, located in the Simi Hills, northwest of Los Angeles, California. SSFL was a government-sponsored research and testing facility from 1947 to 2006. Site activities included research, development, and testing of rocket engines, water jet pumps, lasers, liquid metal heat exchanger components, nuclear energy, and related technologies. The principal activities were large rocket engine testing and nuclear power generation research. Soil and groundwater are contaminated with various chemicals, principally trichloroethene, along with other chemicals and radionuclides. Soil and groundwater contamination requires investigation and cleanup. These activities are highly scrutinized by the local communities and the site is the subject of ongoing legal action. ESA prepared the Programmatic and Project Level EIR for soil and groundwater remediation. Key issues included evaluating the impacts from the cleanup of chemical and radioactive waste to cleanup workers, the environment, and the future proposed open space and parkland land use. Ongoing work will include reviewing cleanup decision documents prepared by the responsible parties to verify consistency and compliance with the EIR.

Morgan Hill Perchlorate Investigation, CA. *Task Manager and Hydrogeologist***.** Michael served as the Task Manager for directing the on- and offsite groundwater monitoring and site evaluation program for a former flare manufacturing facility where perchlorate had been released to soil and groundwater affecting an area including several thousand domestic, agricultural, and municipal water supply wells in an area ten miles long by two miles wide by 400 feet deep. He characterized the nature and extent of the plume (including the preparation and regular update of the site conceptual model for the affected area, participating in the development and implementation of the strategic approach for the investigation and remediation activities as a member of the management and legal team, acquisition, negotiations with regulatory agencies, and the preparation of reports); managed the on- and offsite quarterly monitoring program (including the quarterly sampling of 46 onsite wells and over 400 offsite wells; the identification of additional wells affected by perchlorate and their integration into the monitoring program; the evaluation of the monitoring program for lateral and vertical coverage; and responding to requests for sampling from the public); negotiations with the regulatory agencies; providing public presentations; and developing recommendations for future monitoring activities and offsite remediation (including evaluation of potential treatment approaches and data, installation of well head treatment systems, interface with private well owners, and the preparation of reports). The key issue consisted of identifying the extent of contaminated groundwater and getting those groundwater users on bottled water.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Topock Gas Compressor Station, CEQA Consultant (Multiple Environmental Impact Reports), Topock, AZ / Needles, CA. *Analyst for Geology, Hydrology, Mineral Resources, and Hazardous Materials.* Michael provided senior-level technical consultation and analysis of the geologic, seismic, hydrologic, water quality, hazards and hazardous materials, utilities, and mineral resources impacts for the various CEQA documentation efforts. The California Department of Toxic Substances Control provides oversight of the site investigation and cleanup activities for the Pacific Gas and Electric Company (PG&E) Topock Gas Compressor Station, located in San Bernardino County, 15 miles southeast of Needles, California, and adjacent to the Colorado River. Soil and groundwater under and near the Station are contaminated with hexavalent chromium, along with other chemicals. The presence of hexavalent chromium is the result of past wastewater disposal activities at the Station. Soil and groundwater contamination requires investigation and cleanup. These activities are highly scrutinized by the regional Native American Tribes because the area has important cultural and religious significance. ESA prepared Environmental Impact Reports for soil and groundwater investigations and cleanup actions, including CEQA evaluations that tier off of the Programmatic Environmental Impact Report for the Groundwater Remedy. Additional project-specific Environmental Impact Reports may be required for the final remedy. ESA will provide these services as well as lead the Native American and public participation efforts. Key issues include evaluating the impacts from the cleanup of soil and groundwater contamination to cleanup workers and the environment and minimizing adverse impacts to tribal culturally sensitive lands.

Mojave Micro Mill Project, Mojave, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the permit process for managing blowdown water for a proposed steel recycling facility. Michael assisted the Pacific Steel Group in developing the blowdown water project description and negotiated permitting requirements with the Regional Water Board. Key issues included identifying acceptable recycling and disposal options and eliminating the requirement for coverage under the Industrial General Permit.

The Companies Superfund "Triple Site," Sunnyvale, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the investigation, monitoring, and remediation of a chlorinated-solvent contaminated groundwater project for the offsite operable unit of the Companies Superfund site located within an RWQCB-led regional groundwater investigation and remediation program. He developed and implemented work plans and investigations, regulatory agency negotiation, preparation of post-RI investigation reports including the 5-Year Status Report and Effectiveness Evaluation, and the quarterly water quality monitoring program. He provided litigation support for the defense against a class-action lawsuit charging residential property value depreciation including the soil flux investigation to evaluate the potential volatilization of chlorinated solvents from groundwater to surface soils. The lawsuit was withdrawn when the investigation demonstrated that groundwater volatilization, if it was occurring, did not result in significant, if any, incremental increases in carcinogenic risks or noncarcinogenic adverse health effects as established by the EPA.

Redwood Plaza Shopping Center, Redwood City, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the investigation and remediation of chlorinated solvent and petroleum hydrocarbon contaminated groundwater at a former auto parts manufacturing facility located within an RWQCB-led regional soil and groundwater investigation and remediation program. He led the characterization of the nature and extent of groundwater contamination; negotiated with regulatory agencies; closed of two former rail spurs into facility; installed and operated a soil vapor extraction and treatment system beneath the existing building constructed over a former drum storage area; and treated groundwater with an in-situ proprietary chemical treatment to reduce the chlorinated solvent concentrations to levels where natural attenuation will be the selected final remedial option. The key issue was conducting the soil and groundwater cleanup without affecting the ongoing commercial operations.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Teledyne-Singer Site, Palo Alto, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the investigation and remediation of solvent-contaminated soil and groundwater at a former R&D facility located within a Department of Toxic Substances Control-led regional groundwater investigation and remediation program. He developed and implemented RI/FS work plans and investigations, conducted regulatory agency negotiation, prepared the RI report, managed the monitoring program, and developed, constructed, and operated the air-stripper groundwater treatment system.

Santa Rosa Creek Project, Santa Rosa, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the environmental and geotechnical investigation of areas along Santa Rosa Creek in Santa Rosa, California, previously re-worked and filled to improve flood control. The geotechnical investigation was preformed to assist the US Army Corps of Engineers in a future feasibility study for improving fish habitat because the historical flood control activities increased water temperatures by removing shade trees and eliminating slow water areas more suitable for spawning by removing bends and obstructions. As a part of the historical flood control activities, fill was dredged from the creek bed and used as fill in certain bends in the creek. Some of this fill has lead concentrations above naturally occurring levels. Michael also evaluated the residual levels of lead in the fill through a human health risk assessment that considered the current and potential future land uses and developed a limited removal action plan to eliminate hot spots to be implemented when funding becomes available.

Former Bay Area Drum Reconditioning Facility, San Francisco, CA. *Project Manager and Hydrogeologist.* Michael served as the task manager to evaluate the nature and extent of contaminants released to soil and groundwater from a former drum reconditioning facility and state Superfund site for a multiple responsible party group. The state Department of Toxic Substances Control (DTSC) provided regulatory agency oversight. His duties included implementing the Remedial Investigation/ Feasibility Study (RI/FS) work plan including the installation and sampling of soil borings and groundwater monitoring wells, reassessing ten years of prior consultant and regulatory agency work, preparing the RI report incorporating historical and recent data, negotiating with the regulatory agencies, managing the semiannual monitoring, and developing the Remedial Action Plan.

NASA Ames Research Center, Moffett Field, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for facility-wide investigation and remediation of underground storage tank leaks including the development and implementation of RI/FS work plans and investigations, and underground storage tank investigations and removals. The closure activities included the excavation and removal of numerous underground storage tanks with some adjacent to, or under, buildings and critical utilities.

Glen Cove Waterfront Park, Greater Vallejo Recreation District, Vallejo, CA. *Project Manager and Hydrogeologist.* Michael conducted the Preliminary Endangerment Assessment (PEA) of the then-proposed Glen Cove Waterfront Park. This formerly private property was contaminated by airborne lead attributed to the former American Smelting and Refining Company, located 2 miles southeast across the Carquinez Straight, which operated from 1900 to 1971. The lead was deposited in soil on the site, was taken up into plants, and resulted in the deaths of 40 horses between 1968 and 1970. The state Department of Toxic Substances Control (DTSC) provided regulatory agency oversight. He managed the site sampling program that quantified the extent of lead in soil and sediments along the shoreline. The site was remediated through the excavation of and offsite disposal of soil. The DTSC deemed the site as remediated and closed the case. The site was subsequently developed as the Glen Cove Waterfront Park Michael' s tasks included the preparation and implementation of work plans, sampling and analysis of soil and sediment samples, and preparation of reports.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Point Potrero Marine Terminal, Richmond, CA. *Project Manager and Hydrogeologist.* Michael conducted the investigation of a former shipyard and ship scrapping operation with rail spurs. He researched historical operations identifying potential historical sources, investigated the nature and extent of soil and groundwater contamination, negotiated with the regulatory agency, and prepared investigation reports identifying the areas to be remediated.

Precision Monolithics Site, Santa Clara, CA. *Project Manager and Hydrogeologist.* Michael served as the hydrogeologist for the remedial investigation of solvent-contaminated groundwater from an R&D facility. His tasks included the preparation and implementation of work plans, installation of groundwater monitoring and extraction wells including "B-level" monitoring wells, and preparation of reports. The key issue was establishing a monitoring and remediation network without interfering with the ongoing semiconductor manufacturing operations.

USUS Department of Veterans Affairs, Palo Alto Health Care Center Redevelopment Project Environmental Impact Statement, Santa Clara County, CA. *Analyst for Geology, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources*. ESA is prepared a comprehensive EIS assessing the environmental effects of redevelopment of the VA's 92-acre Palo Alto Health Care Center Campus which currently houses 38 buildings and structures. Alternatives include construction of a new 550-bed cancer treatment hospital with a local health care partner. Development of such a facility would require relocation and reconstruction of existing facilities on the campus, including a new bed tower, spinal cord injury center, ambulatory care center, and other facilities. Environmental issues associated with the project included previous agricultural land use and, cultural resources and Native American consultation issues concerning the presence of human remains and other cultural properties. Other issues include transportation, air quality, noise, and visual resources. Michael provided senior-level technical consultation and analysis for geology and soils, groundwater hydrology and water quality, hazards and hazardous materials, and mineral resources.

General Plans and Regional Plans

City of Oakland General Plan Update, Map Atlas and Environmental Impact Report, Alameda County, CA. *Analyst for Geology, Hazardous Materials, Hydrology and Water Quality.* The City has updated the General Plan, as is periodically required. Michael first assisted the City in developing the existing hazardous materials sites portion of the City's Map Atlas, a planning document that describes current conditions within the City, including maps and charts. Michael then analyzed and provided senior level review for geologic, seismic, paleontological resources, hazards and hazardous materials, and hydrology and water quality impacts. Key issues included evaluating the impacts from the development of properties with hazardous materials issues (e.g., asbestos-containing materials), lead-based paint, previous spills of hazardous materials), flooding issues (i.e., sea level rise and tsunamis), and unstable soils issues (e.g., expansive or liquefiable soils).

Connect SoCal 2024, Environmental Impact Report, Southern CA. *Task Manager for Geology, Hazardous Materials, Hydrology and Water Resources, and Mineral Resources.* The Southern California Association of Governments (SCAG), the metropolitan planning organization for this six-county region, is preparing the Connect SoCal 2024, a long-range comprehensive plan for the region's multi-modal transportation system. Preparing the Plan is one of SCAG's primary statutory responsibilities under federal and state law, and is the mechanism used to conduct long-range (at least 20-year) planning in their regions. SCAG must adopt a Plan and update it every four years if the region is to receive federal and state transportation dollars for public transit, streets/roads, and bicycle and pedestrian improvements. Michael analyzed hazardous materials, hydrology, and water quality impacts and provided senior level review for geologic, seismic, and mineral and paleontological resources impacts. Key issues included balancing the assumed compliance with existing regulations with crafting mitigation measures to ensure compliance.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Santa Clara County Housing Element, Environmental Impact Report, Santa Clara County, CA. *Analyst for Hazardous Materials.* Michael analyzed hazardous materials impacts and provided senior level review for geologic, seismic, paleontological resources, and hydrology and water quality impacts. The County has updated the General Plan Housing Element, as is periodically required. Key issues included evaluating the impacts from the development of properties with hazardous materials issues (e.g., asbestos-containing materials), lead-based paint, previous spills of hazardous materials) and/or in areas that overlie plumes of contaminated groundwater of a Superfund site and/or within an airport influence area.

Napa County Housing Element, Environmental Impact Report, Napa County, CA. *Analyst for Hazardous Materials.* Michael analyzed hazardous materials impacts and provided senior level review for geologic, seismic, paleontological resources, and hydrology and water quality impacts. Napa County has updated the General Plan Housing Element, as is periodically required. Key issues included evaluating the impacts from the development of properties with hazardous materials issues (e.g., asbestos-containing materials), lead-based paint, previous spills of hazardous materials) and/or in areas susceptible to wildfires.

City of Mountain View Housing Element, Environmental Impact Report, Mountain View, CA. *Analyst for Hazardous Materials.* Michael analyzed hazardous materials impacts and provided senior level review for geologic, seismic, paleontological resources, and hydrology and water quality impacts. The City of Mountain View has updated the General Plan Housing Element, as is periodically required. Key issues included evaluating the impacts from the development of properties with hazardous materials issues (e.g., asbestos-containing materials), lead-based paint, previous spills of hazardous materials) and/or in areas that overlie plumes of contaminated groundwater of a Superfund site and/or within an airport influence area.

City of Menlo Park Housing Element, Environmental Impact Report, Menlo Park, CA. *Analyst for Hazardous Materials.* Michael analyzed hazardous materials impacts and provided senior level review for geologic, seismic, paleontological resources, and hydrology and water quality impacts. The City of Menlo Park has updated the General Plan Housing Element, as is periodically required. Key issues included evaluating the impacts from the development of properties with hazardous materials issues (e.g., asbestos-containing materials), lead-based paint, and/or previous spills of hazardous materials).

Due Diligence / Phase 1 and 2 Assessments

Sacramento Area Flood Control Agency (SAFCA) – Natomas Basin Phase 1 Program – The City of Sacramento, the County of Sacramento, the County of Sutter, CA. *Geologist and Analyst*. Michael provided due diligence research and analysis for the Area-Wide Due Diligence Assessment for properties proposed for acquisition within the Natomas Levee Improvement Program (NLIP). The American River Flood Control District and Reclamation District 1000 created SAFCA in 1989 through a Joint Exercise of Powers Agreement to provide the Sacramento region with increased flood protection along the American and Sacramento Rivers. The NLIP encompasses approximately 45 perimeter miles of terrain with some interior reach. The program included Phase 1 environmental site assessments conducted in general accordance with ASTM 1527 standards that included the review of historical and regulatory agency records, interviews with persons knowledgeable about the sites, and site inspections. The Phase 1 site assessments identified certain properties where prior uses may have resulted in the release of chemicals to soil at concentrations above screening levels. Using the results of the Phase 1 site assessments, Phase 2 soil and groundwater sampling programs were conducted for selected properties where levee improvements might encounter contaminated soil and/or groundwater. The results of the Phase 2 site assessments were used to develop cleanup recommendations.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Premier Pacific Vineyards, Preservation Ranch, Sonoma County, CA, *Program Manager, Geologist, Hydrologist, and Hazardous Materials Analyst.* Michael served as the program manager for a multi-million-dollar, full service, environmental planning and permitting program for a 20,000-acre precedent-setting project involving the creation of a property-wide integrated land use plan to reduce resource fragmentation, implement sustainable viticulture practices, and restore degraded timberland using sustainable timber management practices. From a land-management perspective, this project would set an example for future vineyard projects, incorporating edge effect and wildlife-enhancing designs that coordinate design and viticulture elements to reduce erosion impacts to the surrounding watershed. This project would restore thousands of acres of contiguous forest heavily impacted from historic logging practices. He oversaw baseline surveys for wildlife, botanical, and fishery studies, including threatened and endangered species (California Spotted Owl, Coho and Steelhead Salmon); geotechnical studies including slope stability, erosion, landslide, water availability, roadway assessments, aggregate borrow sites and reservoir construction; watershed studies including sediment budgets, hillslope monitoring, and vineyard monitoring; GIS (data management and analysis, predictive management tool, and multi-dimensional graphic displays); permit scheduling and minimization strategies; wetland delineations, habitat characterization and mapping; and pre-construction permit requirements. The key issue was educating regulatory agencies and the public on the positive benefits of the project in providing an economic vehicle to fund forest restoration, road repair, and the reduction of erosion of sediment into creeks.

Hyperloop Technologies Nevada Development Loop Transportation Facility, North Las Vegas, NV. *Task Manager.* Michael conducted a Phase I environmental site assessment for the proposed construction and operation of the Hyperloop Development Loop Transportation Facility in North Las Vegas, Nevada, for Hyperloop Technologies. Hyperloop is a high speed, intercity transportation system which uses passenger and cargo capsules inside a reduced-pressure tube system that would reach a top speed of 800 miles per hour with a yearly capacity of 15 million passengers. The Nevada facility constructs and tests prototype capsules. The Phase 1 assessment was conducted in general accordance with the current ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and two site inspections. Key issues included verifying no environmental or hazardous materials issues that would interfere with construction and operation of the facility.

San Manuel Land Exchange, San Bernardino County, CA. *Analyst for Mineral Resources.* Michael conducted a mineral potential investigation for a proposed land exchange between the U.S. Forest Service and the San Manuel Band of Mission Indians. The exchange would consolidate lands of substantial cultural resource and ancestral value adjacent to existing Tribal lands and consolidate land of substantial biological resource value adjacent to existing Forest Service lands. Michael researched the proposed lands for potential for locatable, leasable, and/or saleable minerals within the subject properties. Key issues included identifying geologic units with the potential for economic mineral resources.

Lower San Joaquin River Reach TS30L Levee Improvement, California Project TS30L, Stockton, CA. ***Project Manager.*** Michael conducted a Phase I environmental site assessment for the San Joaquin Area Flood Control Agency (SJAFCA) for the above-cited levee improvement project on the Lower San Joaquin River Reach TS30L levee. Phase 1 assessments are conducted in accordance with the ASTM 1527 standard for conducting Phase I assessments. The assessments include research of historical and regulatory agency records, interviews, and site inspections. Key issues include identifying undocumented and unauthorized site uses resulting in hazardous materials issues. The results inform SJAFCA on site conditions and facility funding for levee improvements. For this project, a Phase II soil sampling investigation would have been conducted if the Phase I assessment identified potential contaminated soil issues; none were identified so a Phase II soil investigation was not necessary.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Donahue Highlands Master Plan Project, Marin County, CA. *Analyst for Geology, Hydrology and Water Quality, and Hazardous Materials.* Michael developed the constraints analysis and EIR sections for geology, hazards, and hydrology and water quality impacts for a residential development master plan for the Marin County Community Development Agency. This included inspecting the parcels proposed for development, evaluating geotechnical investigations, developing the constraints analyses and analyzing geologic, seismic, hydrologic, water quality, and hazardous materials impacts for the proposed project. Key issues included evaluating historical landslides and the potential for stormwater retention basins impacts to result in slope failures.

Hat Creek Radio Observatory Phase 1 and 2 Assessment, Stanford Research Institute (SRI) International. *Project Manager.* Michael conducted a focused Phase 1 and 2 environmental site assessment for the Hat Creek Radio Observatory in Lassen County, California, that SRI International was considering acquiring from the University of California at Berkeley. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Based on the results, selected areas were sampled and analyzed to investigate the potential for chemical releases. The key issue was identifying possible hazardous materials issues and cost estimating cleanup activities to facilitate the purchase of the property.

BART to Livermore Extension, Alameda County, CA. *Analyst for Geologic, Seismic, and Paleontological Resources.* Michael conducted impacts analyses for geologic, seismic, and paleontological resources for the BART to Livermore environmental impact report. This project would construct an extension of BART from the existing Dublin Station to a new Isobel Avenue Station, additional parking structures, a turnout to a new maintenance yard, and improved bus transfer facilities. Key issues included impacts from construction facilities down the corridor of Interstate 580, expansion into adjacent existing roads and commercial development, and construction in areas with possible paleontological resources.

Dogtown and Lime Creek Bridge Replacements Focused Phase 1 Assessments, Calaveras County, CA. *Project Manager.* Michael conducted focused Phase I environmental site assessments for the proposed replacement of the Dogtown and Lime Creek Bridges in Calaveras County, for Calaveras County and Caltrans. The Phase 1 assessments were conducted in general accordance with the current ASTM 1527 standard, but focused to meet the needs of the County and Caltrans. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. In addition, the bridges were visually inspected for asbestos-containing materials and lead-based paint, and the area researched for seismic issues.

Forum Mobility EV, Various Locations, CA. *Task Manager.* Michael conducts Phase I environmental site assessments for Forum Mobility EV, whom is developing and operating fleet electric vehicle (EV) charging stations. The Phase 1 assessments are conducted in general accordance with the ASTM 1527 standard. The assessments include research of historical and regulatory agency records, interviews, and site inspections. Key issues include identifying undocumented and unauthorized site uses resulting in potential hazardous materials issues. The results inform Forum Mobility on the suitability of potential properties.

Tuolumne Rancheria Fee-to-Trust Phase I Assessments, Tuolumne, CA. *Task Manager.* Michael conducts Phase I environmental site assessments for the Tuolumne Band of Mi-Wuk Indians and the Tuolumne Economic Development Authority for the fee-to-trust transfer of numerous residential and undeveloped rural parcels. The Phase 1 assessments are conducted in accordance with the ASTM 1527 standard for conducting Phase I assessments. The assessments include

research of historical and regulatory agency records, interviews, and site inspections. Key issues include identifying undocumented and unauthorized site uses resulting in hazardous materials issues. The results inform the Tribe and Authority on fee-to-trust land transfer options and actions to resolve environmental issues.

Cloverdale Parcel Phase I Assessment, Petaluma, CA. *Project Manager.* Michael conducted a Phase environmental site assessment for the Dry Creek Rancheria for the development of one parcel for residential uses. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Key issues included the prior site use as a sawmill.

Santa Fe Avenue and East Childs Avenue Intersection Improvements, Planada, CA. *Task Manager.* Michael conducted an Initial Site Assessment (similar to a Phase I environmental site assessment) for the proposed intersection improvements. The intersection has a high accident rate due to poor visibility caused by odd street angle approaches at a rail crossing. The Phase 1 assessments were conducted in general accordance with the current ASTM 1527 standard, but focused to meet the needs of Merced County and Caltrans. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Key issues included pressure-treated railroad ties and a long history of agricultural use that included pesticides.

Complete Streets Focused Phase 1 Initial Site Assessments, Sunrise Avenue in Citrus Heights and Miner Avenue in Stockton, CA. *Project Manager.* Michael conducted focused Phase I environmental site assessments for the proposed urban streets rehabilitation projects in Citrus Heights and in Stockton. The Phase 1 assessments were conducted in general accordance with the current ASTM 1527 standard, but focused to meet the needs of the cities and Caltrans. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Both streets have adjacent properties with current or historical soil contamination issues that could be encountered during the rehabilitation activities.

Berry Street Bridge Replacement Initial Site Assessment, Calistoga, CA. *Project Manager.* Michael conducted an Initial Site Assessment for the proposed replacement of the Berry Street Bridge over Napa Creek in Calistoga, California, for the City of Calistoga and Caltrans. The assessment was conducted in general accordance with the current ASTM 1527 standard, but focused to meet the needs of the City and Caltrans. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. In addition, the bridge was visually inspected for asbestos-containing materials and lead-based paint, and the area researched for seismic issues. Concurrently, Michael also assisted with drilling borehole to investigate the site for cultural resources.

Eight Olive-Ciernia Parcels Phase 1 Assessment, Riverside County, CA. *Project Manager.* Michael conducted a Phase I environmental site assessment for eight parcels just east of San Jacinto, California, for the Soboba Band of Luiseño Indians. The Phase 1 assessment was conducted in general accordance with the current ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. In addition, the parcels were visually inspected for asbestos-containing materials and lead-based paint, and the area researched for seismic issues.

Alexander Valley RV Park and Campground Phase 1 Assessment, Geyserville, CA. *Project Manager.* Michael conducted a Phase I environmental site assessment for the Alexander Valley RV Park and Campground, along the Russian River northeast of Healdsburg, California, for the Dry Creek Rancheria. The Phase 1 assessment was conducted in general accordance with the current ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Dublin Crossings Due Diligence and Environmental Constraints Assessment, Private Clients, Dublin, CA. *Project Manager.* Michael conducted a focused due diligence and environmental constraints assessment for the 180-acre Dublin Crossings property in Dublin, California, that a group of private clients were considering acquiring from the federal government. The property historically and currently is used by the U.S. Army and NASA as the southern portion of the Camp Parks Reserve Base. The assessment focused on historical land uses, past and ongoing remediation projects to address releases of various contaminants, and the compatibility of the proposed land uses with the ongoing cleanup activities.

Ostrom Road Green Rail Phase I Assessment, Yuba County, CA. *Project Manager.* Michael conducted a Phase I environmental site assessment for Recology's Ostrom Road Landfill for the proposed development of a preserve as compensatory mitigation for impacts to jurisdictional waters resulting from Recology's Ostrom Road Green Rail Project. The restoration actions for the proposed preserve include grazing management and weed control on vernal pool and adjacent upland grassland habitats, and grazing exclusion, weed control, and native revegetation on riparian and riverine habitats adjacent to Best Slough. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Key issues included potential groundwater contamination from upstream Beale Air Force Base sites.

Sonoma State University Acquisition of Roth Parcels, Sonoma County, CA. *Project Manager.* Michael conducted a Phase I environmental site assessment for the proposed Sonoma State University acquisition of the Roth parcels to be added to their existing adjacent Fairfield Osborn Preserve, a research and educational preserve on the western slope of Sonoma Mountain. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection.

Petaluma Parcel Fee-to-Trust Phase I Assessment, Petaluma, CA. *Project Manager.* Michael conducted a Phase I environmental site assessment for the Dry Creek Rancheria for the development of six parcels for potential residential, commercial, and/or recreation uses. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Key issues included prior site uses as a sawmill, spa business, and gun club. In addition, Michael conducted soil testing in the area around the former gun club and verified no elevated concentrations of lead from that prior use.

Proshold Parcels Phase I Assessment, Geyserville, CA. *Project Manager.* Michael conducted a Phase environmental site assessment for the Dry Creek Rancheria for the existing Proschold parcels that have vineyards, wildlands, and a creek. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. The purpose was to enable funding for creek restoration. Key issues included assessing environmental conditions around vehicles abandoned along the creek bed.

Patterson Pass Reservoir Transfer, South Bay Aqueduct Enlargement Project, Livermore, CA. *Project Manager.* In preparation for the transfer of certain lands adjacent to the Patterson Pass Reservoir from the state Department of Water Resources (DWR) to Alameda County Zone 7, Michael conducted a focused Phase 1 environmental site assessment general accordance with the ASTM 1527-05 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection.

Landrum & Brown and Marin County, Gnoss Field Environmental Impact Statement/Environmental Impact Report, Novato, CA. *Project Manager, Hydrogeologist, Mineral Resources, and Hazardous Materials Analyst*. Michael provided

planning services to assist Marin County and the Federal Aviation Administration (FAA) with a National Environmental Policy Act (NEPA) and California Environmental Quality Act (CEQA) analysis for the proposed 1,100-foot extension of Runway 13/31 of the Gnoss Field Airport into a disturbed wetland and former agricultural area. A combined Environmental Impact Statement/Environmental Impact Report was prepared to comply with NEPA and CEQA, respectively, and described and analyzed the affected environment and potential impacts of the proposed project within the affected area. Successful extension of Runway 13/31 will enable Gnoss Field Airport to handle modern aircraft and improve the safety of the airport.

Beach Chalet Athletic Fields Renovation Environmental Impact Report, San Francisco Recreation and Parks Department. *Hydrogeologist.* Michael provided senior-level consultation, technical input, and review for the hydrology and hazardous materials portions of the project. This included the evaluation of whether the materials used in the construction of synthetic turf materials could result in leachate that would exceed action levels. The project would convert the existing athletic fields to artificial turf and include lighting that would allow for night field use. Key issues include aesthetic resources, hazardous materials, and biological resources impacts.

Construction General Permit Stormwater Pollution Prevention Plans

DWR, Oroville Dam Fiber Optic and 13.8 kV Power Transmission Lines, Oroville Dam, Butte County, CA. *Qualified SWPPP Developer (QSD), 2017-19.* The Oroville Dam spillway failure in 2017 damaged much of the infrastructure, including communications and power transmission lines. Michael served as the QSD that developed and managed the SWPPP for the replacement of the Fiber Optic and 13.8 kV Power Transmission Lines between the Hyatt Power facility at the base of the dam, the Thermalito dam on the Feather River, and the DWR headquarters facility. Key issues included preventing sediment or other pollutants from entering the Feather River during construction on two steep alignments, and the alignment immediately adjacent and, in a few locations, over to the river.

Yuba River Narrows Restoration Project, Yuba River, CA. *Qualified SWPPP Developer (QSD), 2018.* The Yuba River Narrows project was conducted for the US Fish and Wildlife Service to improve salmonid spawning and rearing habitat by reworking the riverbed. Michael served as the QSD that developed and managed the SWPPP that included work in the river and using two adjacent staging areas. Key issues included preventing sediment or other pollutants from entering the Yuba River during construction from the two adjacent staging areas.

Sonoma Creek Enhancement Project, San Pablo Bay, CA. *Qualified SWPPP Developer (QSD), 2019.* The Sonoma Creek Enhancement Project was conducted for the Audubon California, U.S. Fish and Wildlife Service, and Marin-Sonoma Mosquito Vector and Control District. The project extended the main channel tidal and several side channels to facilitate encourage proper circulation and drainage within the project area, while reducing mosquito populations. Some of the dredged material was used to create marsh-upland mounds throughout the marsh interior to provide high-tide refugia for marsh wildlife, such as the salt harvest mouse. Michael served as the QSD that developed and managed the SWPPP that included work in the wetlands and using one adjacent staging area. An amphibious excavator was used to minimize impacts on the wetlands. Key issues included preventing sediment or other pollutants from entering San Pablo Bay during construction.

Lake Tahoe Airport Hangar Pavement Rehabilitation, South Lake Tahoe, CA. *Qualified SWPPP Developer (QSD).* The airport is rehabilitating various portion of degraded pavement. Michael served as the QSD that developed the SWPPP for the pavement rehabilitation. Key issues included preventing sediment or other pollutants from entering the Upper Truckee River during construction.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Anderson Dam Seismic Retrofit, Morgan Hill, CA. *Qualified SWPPP Developer (QSD).* Valley Water is conducting a seismic retrofit to bring the Anderson Reservoir dam up to current code. Michael serves as Valley Water's onsite inspector ensuring that the contractor is maintaining the stormwater best management practices in accordance with the project SWPPP. In addition, Michael provides guidance on safety and disposal issues related to the presence of naturally occurring asbestos in excavated materials. Key issues included preventing sediment or other pollutants from entering Coyote Creek during construction.

Silicon Valley Clean Water Gravity Pipeline Project, CA, *Qualified SWPPP Developer (QSD)*. The Silicon Valley Clean Water Gravity Pipeline Project replaced aging and undersized sewer pipelines and lift stations in San Mateo County along San Francisco Bay. Michael served as the QSD that developed and managed the SWPPP that included work along marshlands of the Bay. Key issues included preventing sediment or other pollutants from entering the marshlands and the Bay during construction.

On-Call Services Contracts

Northern and Central California Engineering Services for Hazardous Material Investigations and Remedial Design. *Program and Project Manager.* Michael served as the Program Manager for the on-call services program providing asbestos and lead-based paint surveys, Phase I and II site investigations, and remedial actions for state agency-owned sites for the northern and central regions of California. The projects included identifying toxic and hazardous substances, materials, or wastes in building interior spaces, construction materials, electrical and mechanical systems, water systems, and onsite fill, soil, and groundwater; evaluating the mitigation and remediation of hazardous substances; investigating the nature and extent of hazardous substances; preparing remediation bid packages, studies, plans and specifications, preliminary plans, working drawings, and cost estimates for future abatement; and providing bidding support and oversight of remedial contractors.

Hazardous Materials Site Investigations, Alameda County, CA. *Project Manager.* Michael served as the Program Manager for the on-call services program providing asbestos and lead-based paint surveys, Phase I and II site investigations, and remedial actions for the Alameda County Public Works Agency. The projects managed by Michael included conducting Phase I and II environmental site assessments; identifying toxic and hazardous substances, materials, or wastes in building interior spaces, building construction materials, building electrical/mechanical systems, and onsite fill, soil, and groundwater; identifying and evaluating the mitigation and remediation of hazardous substances; investigating the nature and extent of hazardous substances; and preparing site investigation reports, soil management plans, and cost estimates for future abatement.

Department of Water Resources On-Call Services, Sacramento Maintenance Yard, Sacramento, CA. *Project Manager, 2014-16.* Michael served as the Task Manager for Task TO-13, Hazardous Building Materials Survey, and TO-14, Groundwater Monitoring Program. Under TO-13, the roofing materials for an older maintenance building were tested for the presence of asbestos-containing materials and lead-based paint in preparation for replacing the roof. Certain materials were identified as containing asbestos and will require special waste management. Under TO-14, soil vapor and groundwater monitoring wells were sampled to evaluate the success of in-situ chemical oxidation of petroleum hydrocarbons leaked from onsite underground fuel storage tanks. The monitoring program indicated the site qualifies

for the state's Low-Threat Closure Program. Upon destruction of the wells, the Regional Water Quality Control Board will issue a closure letter for the site.

Michael Burns, CHG, CEG, PG, QSD (Continued)

Director Geo-Hydro-HazMat Technical Services Group

Department of Defense Facilities

Fort Ord Superfund Site, Fort Ord, CA. *Senior Reviewer and Hydrogeologist.* Michael served as the senior technical consultant, quality control officer, and field auditor on the basewide remedial investigation/feasibility study, 39 individual site investigations, Operable Unit OU-1 groundwater remediation, and interim action sites. Michael also served as the project manager for the investigation of four sites at Fritzche Army Airfield. His tasks included the preparation of work plans in accordance with U.S. Army Corps of Engineers Data Quality Objectives requirements, directing soil boring and trenching field investigations, the evaluation of data, and the preparation of reports with recommendations. He served as technical consultant and quality control officer for ordnance and explosives (OE) investigations for property transfer under Base Realignment and Closure (BRAC) program.

Fort Hunter Liggett, CA. *Senior Reviewer and Hydrogeologist.* Michael served as the senior technical consultant, quality control officer, and field auditor on basewide groundwater and drinking water investigations, the Fort Hunter Liggett landfill investigation and monitoring program, and 8 individual site investigations. He directed the preparation, submittal, and implementation of sampling and analysis plans in accordance with recently revised federal Subtitle D and state Article 5 regulations using statistical analysis. He prepared the Remedial Investigation Report under CERCLA guidelines with a focus on monitored natural attenuation as the proposed remedial option. He also served as the senior technical consultant for closure of eight sites within the base.

Airports

Tom Bradley International Terminal Expansion, Los Angeles International Airport, Los Angeles, CA. *Contract Environmental Compliance Officer (CECO)*. Michael served as the CECO for the excavation phase of the project, which added nine new gates, reconfigured the existing gates, and expanded and improved the existing terminal facilities to handle the new large-capacity jets that can carry as many as 800 passengers. Duties included ensuring the implementation of all components of the construction-related environmental requirements through management direction, compliance monitoring, direct inspections, maintenance of records, and investigation and cleanup of contaminated sites. The CECO responsibilities included the following:

- Reviewed contract documents to develop the project specific mitigation plan
- Developed solicitation plans for on-call services for mitigation, as needed
- Prepared environmental reports and mitigation plans, as required
- Developed contaminated materials management procedures
- Developed procedures for the management of hazardous material encountered during structure demolition
- Ensured procedures are being executed through daily field inspections
- Conducted soil sampling investigations for fuel leak sites as construction proceeded and managed the contaminated soil excavation and disposal

San Francisco International Airport (SFO), CA. *Hazardous Materials Analyst and Hydrogeologist.* Michael has provided services for the following SFO projects:

Shoreline Protection Program Project - SFO proposes to implement the SFO Shoreline Protection Program to address flood protection and future sea level rise for the expected lifespan of the shoreline improvements. The project will install new shoreline protection infrastructure that would comply with current Federal Emergency Management Administration requirements for flood protection and incorporate protection for future sea level rise. The project site is comprised of the Airport's 8-mile shoreline and western landside boundary. The project will construct shoreline protection improvements to eliminate the probability of substantial inundation at the Airport until 2085. Michael analyzed hazards and hazardous

materials issues relative to the proposed project. Key issues included construction in some areas with known soil and groundwater contamination, and potential conflicts with aircraft at the ends of runways.

West of Bayshore Project – As part of ongoing flood maintenance, SFO periodically removes accumulated sediment and vegetation from drainage channels along the west side of the Bayshore Freeway. Michael conducted a sediment sampling program to identify appropriate recycling or disposal of the removed sediment, and to characterize the concentrations of chemicals in sediment being transported from the City of Millbrae stormwater system into said drainage channels. Key issues included evaluating whether the levels of chemicals in sediment exceed ecological regulatory action levels.

South Airport Boulevard Phase I Environmental Site Assessment and Phase II Site Investigation. *Task Manager.* Michael conducted a Phase I environmental site assessment for this northern street section of SFO for upgrades to current road standards. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Key issues included the degraded pressure-treated wood posts and guardrails along pone portion of the road. Michael conducted sampling of soil beneath the guardrails and determined that soil had not been contaminated with wood preservative chemicals. However, the soil is contaminated with lead from historical use of leaded gasoline and will require management as hazardous waste.

North Field Road Parking Area Phase II Site Investigation. *Task Manager.* Michael conducted a Phase II drilling and soil sampling investigation for this northern portion of SFO to investigate whether redevelopment of the area might encounter contaminated soil from historical uses. The investigation consisted of six soil borings, the collection of various soil samples, and the analysis for petroleum hydrocarbons and metals. The results were compared to regulatory action levels and determined that soil had not been contaminated above actin levels.

West Field Cargo Area Phase I Environmental Site Assessment. *Task Manager.* Michael conducted a Phase I environmental site assessment for this western portion of SFO for the redevelopment of airport cargo and support areas. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Key issues included fuel and oil releases from former USTs, and former and current aircraft loading uses that could affect redevelopment of the area.

Boarding Area H Phase I Environmental Site Assessment. *Task Manager.* Michael conducted a Phase I environmental site assessment for this western portion of SFO for the redevelopment of airport cargo and support areas. The Phase 1 assessment was conducted in general accordance with the ASTM 1527 standard. The assessment included research of historical and regulatory agency records, interviews, and a site inspection. Key issues included fuel and oil releases from former and current aircraft loading uses that could affect redevelopment of the area.

NASA Ames Research Center, Moffett Field, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for facility-wide investigation and remediation of underground storage tank leaks including the development and implementation of RI/FS work plans and investigations, and underground storage tank investigations and removals. The closure activities included the excavation and removal of numerous underground storage tanks with some adjacent to, or under, buildings and critical utilities.

Landrum & Brown and Marin County, Gnoss Field Environmental Impact Statement/Environmental Impact Report, Novato, CA. *Project Manager, Hydrogeologist, Mineral Resources, and Hazardous Materials Analyst*. Michael provided planning services to assist Marin County and the Federal Aviation Administration (FAA) with a National Environmental

Policy Act (NEPA) and California Environmental Quality Act (CEQA) analysis for the proposed 1,100-foot extension of Runway 13/31 of the Gnoss Field Airport into a disturbed wetland and former agricultural area. A combined Environmental Impact Statement/Environmental Impact Report was prepared to comply with NEPA and CEQA, respectively, and described and analyzed the affected environment and potential impacts of the proposed project within the affected area. Successful extension of Runway 13/31 will enable Gnoss Field Airport to handle modern aircraft and improve the safety of the airport.

Litigation Support

Former Sawmill and Road Construction Equipment Staging Site, Orrick, CA. *Expert Witness.* Michael provided litigation support and expert witness testimony for a former sawmill and road construction equipment staging site. The property owner (client) brought suit against an international construction company claiming (1) the construction company had contaminated his property with petroleum hydrocarbons during their lease, and (2) the construction remedial efforts were inadequate. The construction company brought a countersuit against prior site owners and occupants claiming the remaining contamination was caused by prior sawmill operations. He managed the investigation of site conditions including (1) the review of work to date, (2) a supplementary investigation to identify existing groundwater quality, (3) the development of a remedial action plan approved by the Regional Water Quality Control Board, and (4) the development of remedial action plan cost analyses. Michael also provided litigation support by evaluating the most probable causes for residual contamination, assisting with development of the trial presentation, and the evaluation of opposing arguments, followed by three days of expert witness testimony in a successful trial with judgment against construction company.

Former Dry Cleaners Site, Reedley, CA. *Expert Witness.* Michael provided litigation support and expert witness testimony for a former dry cleaners site. An upgradient property owner with a former dry cleaning facility brought suit against the previous owners of a downgradient property that was also once a dry cleaning facility for contamination of groundwater with tetrachloroethene (PCE). He provided review of the consultants work for both properties with the objective apportioning cleanup responsibility, consultation for ongoing investigation activities evaluating the nature and extent of PCE in groundwater, and the development of remedial action plan cost analyses. Michael also provided litigation support to the attorney team for the downgradient property owners, assists with development of the trial presentation, evaluates opposing arguments, and provided expert witness testimony at depositions. The litigation was successfully settled to all parties' satisfaction.

RGW vs. Alameda County Public Works Agency, Redwood Road Widening Project, Castro Valley, CA. *Expert Witness.* Michael provided litigation support and expert witness testimony defending the County from a lawsuit brought by a contractor claiming certain excavated fill materials should have been managed as hazardous waste. In the arbitration hearing, Michael successfully defended the County by demonstrating all material recycled by County was done in accordance with all applicable laws and regulatory procedures.

Recycled Fill Material Supplier, Brisbane, CA. *Expert Witness.* Michael provided litigation support for cost recovery of returned materials fees. The opposing side claimed the fill material provided by the Supplier was contaminated. Michael managed the investigation that demonstrated that contamination was derived from an offsite source as the identified contaminates were not present at significant levels in fill material. The investigation resulted in settlement prior to trial favorable to client.

Former Retail Fueling Facility and Automotive Repair Facility, San Jose, CA. *Expert Witness.* Michael provided litigation support for a former fuel and automotive repair facility. A past site owner brought suit against several parties regarding petroleum hydrocarbon contamination. He reviewed and evaluated investigation and remediation reports and letters on behalf of a prior tenant who operated a fueling and automotive repair facility. The evaluation resulted in the successful out-of-court settlement favorable to the former tenant.

The Companies Superfund Triple Site, Sunnyvale, CA. *Expert Witness.* Michael provided litigation support for the defense against a class-action lawsuit charging residential property value depreciation. He managed the soil flux investigation to evaluate the volatilization of chlorinated solvents from groundwater to surface soils. The lawsuit was withdrawn when the investigation demonstrated that groundwater volatilization, if it was occurring, did not result in significant, if any, incremental increases in carcinogenic risks or non-carcinogenic adverse health effects as established by the EPA.

Former Grove Laundry, Pacific Grove, CA. *Expert Witness.* Michael is providing litigation support and expert witness testimony for the property owner downgradient of a former French laundry. The affected property owner (client) has brought suit against the recalcitrant property owners of the former laundry to force cleanup of soil and groundwater contaminated with fuel oil. He reviews all historical and new documents, assists the client and attorney with documents to the regulatory agency overseeing the cleanup, and provided expert witness testimony at the jury trial. The jury found in favor of our client and awarded the client $500,000 and orders for the recalcitrant owners to conduct the cleanup at their expense.

Landfills

Altamont Landfill, Livermore, CA. *Project Manager, Hydrogeologist, and Hazardous Materials Consultant.* Michael serves as the project manager, hydrogeologist, and hazardous materials consultant for the Altamont Landfill Community Monitor Committee program. Pursuant to a settlement agreement governing the expansion of the landfill and its resource recovery facility, the Cities of Livermore and Pleasanton, Sierra Club, Northern California Recycling Association, and Altamont Landowners Against Rural Mismanagement won the right to have an independent Community Monitor review reports from, and monitor operations at, the Landfill. Michael's tasks include managing the review of documents, periodic site inspections and records reviews, and the preparation and presentation to the Committee of the results of the inspections and reviews. Key issues include evaluating the quality control of the landfill's monitoring program.

Closure of Winton Avenue Landfill, Hayward, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for landfill closure activities that included conducting the State-mandated Solid Waste Assessment Test (SWAT) program. He investigated the extent of landfill leachate in groundwater, negotiated with the regulatory agencies, developed the site's Soil Acceptance Plan to establish criteria for the acceptance of soil from County roadwork projects and of dredge sediment from County flood control activities. The acceptance criteria included chemical restrictions to exclude hazardous waste and grain-size restrictions since accepted the material was used as the landfill capping material. He developed the Grading Plan to direct landfill staff as to where accepted soil was to be placed and to document individual load placements. The Grading Plan was integrated with requirements of the Storm Water Pollution Prevention Plan and the needs of the County to continue using the landfill as a staging area.

Burlingame Landfill, Burlingame, CA. *Project Manager and Hydrogeologist.* Michael served as the project Manager for a landfill investigation under the State-mandated Solid Waste Assessment Test (SWAT) program and revised Article 5 regulations. Michael's tasks included revision and implementation of SWAT work plan incorporating the new, revised

Article 5 regulations; installation and sampling of groundwater monitoring and leachate wells; development of SWAT conclusions; financial assurance requirements; water quality monitoring program; regulatory agency negotiation; and the preparation of the SWAT/revised Article 5 report.

Cummings Road Landfill, Eureka, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for landfill investigation under State-mandated SWAT program. Michael's tasks included the preparation of work plans, installation and sampling of groundwater monitoring and leachate extraction wells, geological mapping of landfill, and research for and preparation of SWAT report. The installation of the leachate extraction wells required drilling through municipal solid waste.

Lewis Road Landfill, Watsonville, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for landfill investigation under the State-mandated SWAT program. Michael's tasks included preparation of work plan, installation and sampling of groundwater monitoring and leachate extraction wells, geological mapping of landfill, and research for and preparation of SWAT report.

Galbraith Landfill, Oakland, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the Report of Waste Discharge (ROWD) for the placement of dredged Oakland Harbor sediments over former Galbraith Landfill. His tasks included the evaluation of dredged sediment and landfill physical and chemical parameters, and the site hydrogeology; development of the post-placement monitoring program; and preparation and submittal of ROWD.

Redwood Landfill, Novato, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the landfill water quality monitoring program under the revised federal Subtitle D and revised State Article 5 regulations. His tasks included overseeing the quarterly water quality monitoring program, evaluation of data, preparation of quarterly reports, and preparation and submittal of proposed intra-well sampling and analysis plan in accordance with recently revised regulations and statistical analysis requirements.

Soil Biotreatment

Coyote Facility, San Jose, CA. *Project Manager.* Michael served as the project manager for a soil biotreatment project on diesel-contaminated soil. His tasks included the preparation of work plans, construction of the treatment cell, the monitoring of the soil until the treatment goals were obtained, and the restoration of treatment area to natural conditions.

West Winton Avenue Biotreatment Project, Hayward, CA. *Project Manager.* Michael served as the project manager for a soil biotreatment project on hydrocarbon-contaminated soil. His tasks included the preparation of work plans, regulatory agency negotiation, construction of the treatment cell, monitoring of soil until treatment goals were obtained, and restoration of treatment area.

Hydrocarbon Investigations

Buildings 207/231 Area of Presidio of San Francisco, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the hydrogeological investigation and corrective action program of a subarea of the Presidio of San Francisco taking into account future plans to restore the Tennessee Hollow Riparian Corridor, expand the Crissy Marsh, and rebuild the Highway 101/Doyle Drive overpasses. He conducted historical records searches to identify potential sources within area, assembled and evaluated previously collected data, developed work plans to fill the data gaps, conducted data gaps field investigations to fill the data gaps in support of the preparation of a Corrective Action Plan

(CAP), and developed the CAP to remediate areas with chemical concentrations above action levels, when funds become available to implement the CAP.

Gas & Shop Service Station, Redwood City, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the investigation of a gasoline fuel leak site. He conducted the hydrogeological investigation and Risk-Based Corrective Action (RBCA) modeling to establish site-specific action levels, and developed Remedial Action Plan for underground storage tank leak site. His tasks included preparing work plans, negotiating with the regulatory agency and attorneys, and managing the field investigations including the fingerprinting of fuel leaks.

Shell Service Station, Scotts Valley, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the hydrogeological investigation of an underground storage tank leak site. His tasks included the installation and sampling of groundwater monitoring wells, geologic mapping of trenches and creek slope faces where gasoline was exiting through fractures in underlying siltstone and sandstone bedrock, and the preparation of reports with recommendations.

Shell Service Station, Watsonville, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for a hydrogeological investigation of an underground storage tank leak site. His tasks included the preparation of work plan, installation and sampling of groundwater monitoring wells including a "B-level" well, and the preparation of reports documenting the investigation and providing recommendations.

Kelseyville Fire Protection District, Kelseyville, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the investigation and remediation of petroleum hydrocarbons in soil and groundwater for commingled former underground storage tank leak sites. He conducted hydrogeological investigations to identify the nature and extent of petroleum hydrocarbons in soil and groundwater, a risk assessment to establish site-specific action levels, a feasibility study to identify remedial options, and a treatability study to evaluate remedial options.

Buildings 207/231 Area of Presidio of San Francisco, CA. *Project Manager and Hydrogeologist.* Michael served as the project manager for the hydrogeological investigation and corrective action program of a subarea of the Presidio of San Francisco taking into account future plans to restore the Tennessee Hollow Riparian Corridor, expand the Crissy Marsh, and rebuild the Highway 101/Doyle Drive overpasses. He conducted historical records searches to identify potential sources within area, assembled and evaluated previously collected data, developed work plans to fill the data gaps, conducted data gaps field investigations to fill the data gaps in support of the preparation of a Corrective Action Plan (CAP), and developed the CAP to remediate areas with chemical concentrations above action levels, when funds become available to implement the CAP.

Energy Projects

California Public Utilities Commission (CPUC), Southern California Edison (SCE) Cal City Substation 115kV Upgrade Project. California City, CA. *Analyst for Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources.* Michael provides senior-level technical consultation and analysis for geology and soils, hydrology and water quality, hazards and hazardous materials, and mineral resources for the project. The project would add electrical load serving capacity to serve current and long-term forecasted energy demand in Kern and San Bernardino counties and provide a second source line to Edwards Substation at Edwards Air Force Base. Several substations would be interconnected to enable electrical power to be routed to different areas, as needed. Under contract with the CPUC for this SCE project, ESA reviewed the Preliminary Environmental Assessment (PEA) and is working with SCE and CPUC to fill data gaps to enable the preparation of the Environmental Impact Report and move the

project forward. Key issues include overlap or proximity to hazardous waste sites, and active military and research use of airspace over portions of the project footprint on and adjacent to Edwards Air Force Base. Construction and maintenance of transmission towers using helicopters will need to be coordinated with Edwards Air Force Base to prevent flight conflicts.

California Public Utilities Commission (CPUC), San Diego Gas and Electric (SDG&E) TL 6975 San Marcos to Escondido Initial Study/Mitigated Negative Declaration, San Diego County, CA. *Analyst for Geology, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources.* Michael provided senior-level technical consultation and analysis for geology, seismicity, groundwater hydrology and water quality, and hazards and hazardous materials. Under contract with the CPUC for this SDG&E project, ESA prepared an Initial Study/Mitigated Negative Declaration for the installation of a 69-kilovolt electric transmission line between substations in San Marcos and Escondido to provide system redundancy and remedy numerous violations issued by the North American Electric Reliability Corporation (NERC). Key issues included geotechnical issues of transmission alignment over rugged terrain and proximity to some residential areas.

First Solar, LLC, Heartland Hydrogen Solar and Hydrogen Production Project, Fresno County, CA. *Analyst for Geology, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources*. Michael provided senior-level technical consultation and analysis for geology and soils, groundwater hydrology and water quality, and hazards and hazardous materials for the project. The project would construct, operate, and decommission a facility to generate hydrogen fuel from solar energy using an integrated onsite solar photovoltaic power generation facility and a hydrogen fuel production facility in western Fresno County. A tertiary wastewater treatment plant would be constructed in the City of Mendota at the existing Mendota Wastewater Treatment Plant to provide recycled water needed for the hydrogen facility. The project would rely on the PV solar cells to convert sunlight into electricity, which would be used to split the recycled water into hydrogen and oxygen. The solar facility would generate up to approximately 300 megawatts of electricity and the hydrogen facility would produce up to 30,000 kilograms per day of renewable hydrogen fuel. Michael provided senior-level technical consultation and analysis for geology and soils, groundwater hydrology and water quality, and hazards and hazardous materials. In addition, Michael conducted a Phase I Environmental Site Assessment that identified hazardous waste issues that the landowner removed per our request to enable the project to move forward.

Casa Diablo IV Geothermal Project, Mammoth Lakes, CA. *Hydrogeologist and Chemist.* Ormat Technologies developed geothermal resources in Mammoth Lakes to generate electricity with oversight from the Bureau of Land Management. Michael analyzes chemical, stable isotope, water level, and precipitation data from wells and surface water stations to identify water sources and chemical trends. Key issues include verifying that the pumping of deeper geothermal waters will not adversely affect the municipal water supply for the Town of Mammoth Lakes.

Sacramento County WattEV Innovative Freight Terminal (SWIFT) Supplemental EIR, Sacramento, CA. *Analyst for Geology, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources.* ESA prepared an EIR that evaluated the environmental effects of a publicly accessible Electric Vehicle (EV) charging facility to be bult on a 110-acre parcel of land south of the Sacramento International Airport (SMF). The facility would include Direct Current Fast Chargers and Megawatt Chargers powered by a new solar array and would serve shippers and transporters as well as public transportation and passenger vehicles. The charging stations along with three accessory structures providing services to the traveling public (i.e., convenience store, resting lounge, restrooms, etc.) would be located on the northern 13.5 acres of the project site while the solar array would be located on the remaining 96.5 acres of the site to the south. As

the project site is located on land controlled by SMF, the analysis in the EIR tiered from the analysis found in the Supplemental EIR for 2022 Airport Master Plan Update. Key issues addressed in the EIR included changes to stormwater flow across the site. The EIR was certified in May 2024 on an expedited schedule. Michael provided senior-level technical consultation and analysis for geology and soils, groundwater hydrology and water quality, hazards and hazardous materials, and mineral resources.

Oroville Dam Fiber Optic and 13.8 kV Power Transmission Lines, Oroville Dam, CA. *Qualified SWPPP Developer (QSD).* The Oroville Dam spillway failure in 2017 damaged much of the infrastructure, including communications and power transmission lines. Michael served as the QSD that developed and managed the SWPPP for the replacement of the Fiber Optic and 13.8 kV Power Transmission Lines between the Hyatt Power facility at the base of the dam, the Thermalito Dam on the Feather River, and the DWR headquarters facility. Key issues included preventing sediment or other pollutants from entering the Feather River during construction on two steep alignments, and the alignment immediately adjacent and, in a few locations, over the river.
