PRELIMINARY HYDROLOGY STUDY

FOR

SEQUOIA COMMERCE CENTER

**PREPARED UNDER
THE SUPERVISION OF**

**REINHARD STENZEL , PE
R.C.E. 56155
EXP. 12/31/24**

INTRODUCTION

A: PROJECT LOCATION

The project site is located east of Van Ness Avenue between W. 190TH Street and 195th Street in the City of Torrance. See following page for vicinity map.

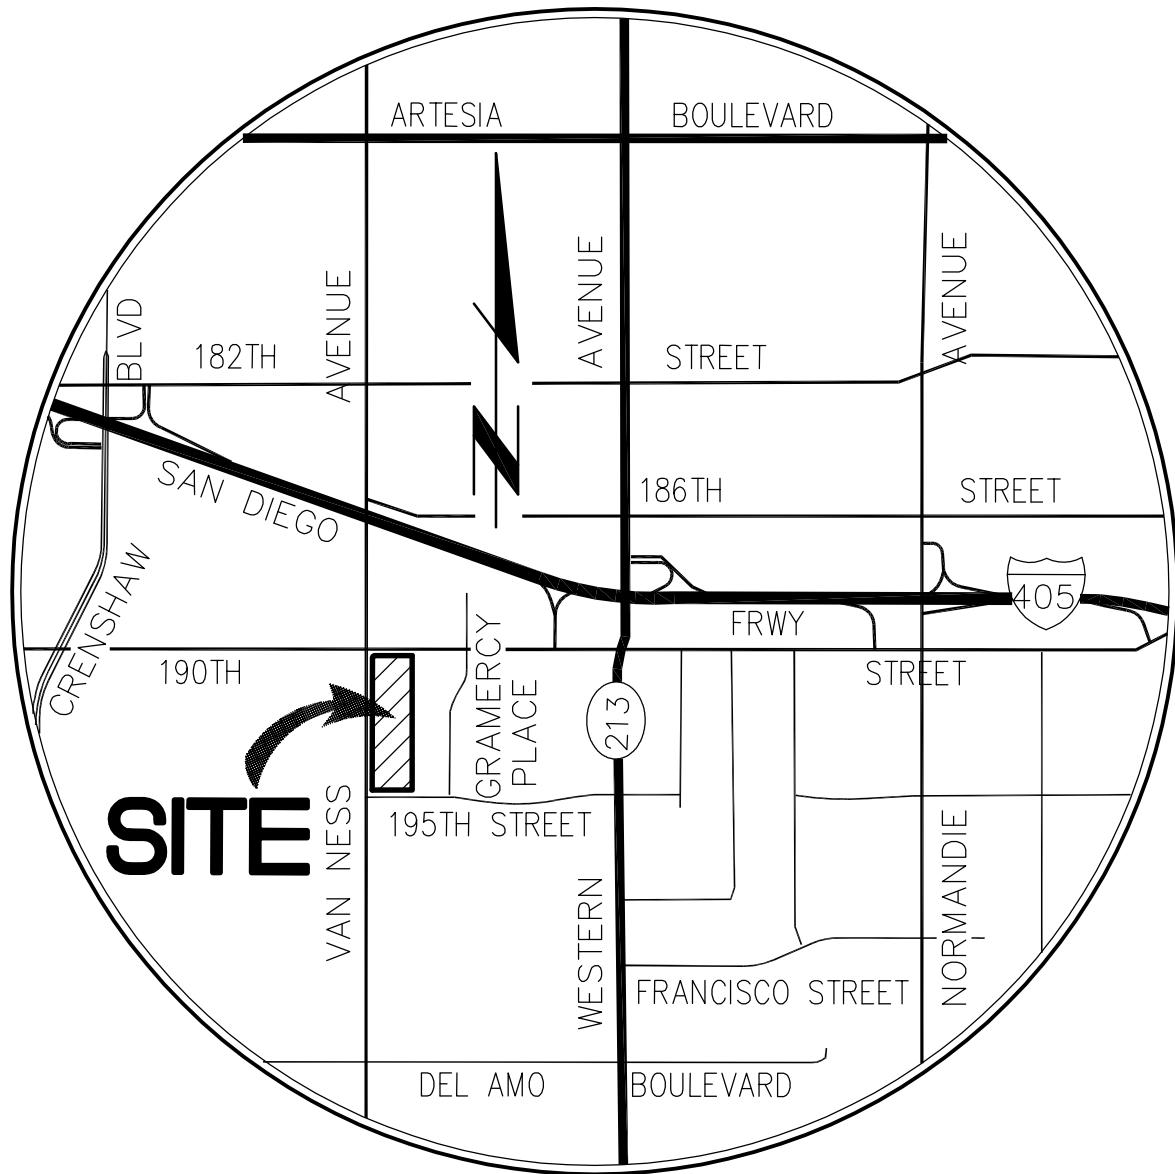

B: STUDY PURPOSE

The purpose of this study is to analyze the drainage impacts this project will have on downstream infrastructure and properties; determine the capacity of proposed and existing storm drain facilities to convey proposed condition stormwater; and to determine mitigation measures to address the impacts in conformance with requirements of the City of Torrance Master Drainage Plan.

C: PROJECT STAFF:

Thienes Engineering staff involved in this study include:

Reinhard Stenzel, PE
Eduardo Toledanes

VICINITY MAP

N.T.S.

DISCUSSION

The proposed project site encompasses a total area of approximately 14.02 acres. There will be two proposed warehouse type buildings. Building 1 and Building 2 will have a floor area of approximately 112,700 square feet and 147,500 square feet respectively. The truck yards will be located on the easterly side of the project site. Proposed driveways will be located adjacent to the streets. Vehicle parking areas will be provided on the north, south and westerly side of the site. A proposed drive aisle will be located between the two proposed buildings with additional vehicle parking spaces. There will be landscaping around the area and adjacent to Van Ness Avenue, W. 190th street and 195th Street.

Master Plan of Drainage

Per Los Angeles County Flood Control District, the site was divided to drain in three different locations where most of the site runoff area (26A, 9.15 acres) drains westerly to Van Ness Avenue and discharged to a 7'-1" x 8'-6" R.C.B.C. at Van ness Avenue. The northeasterly portion (76k, 2.46 acres) will drain easterly to an existing catch basin along the south side of W. 190th Street. This catch basin connects to the existing 36" R.C.P. at W. 190th Street while the remaining southeasterly portion of the site (28A, 2.41 acres) will sheet flow towards 195th Street and conveyed west to an existing catch basin at Van ness Avenue and ultimately discharged to the existing R.C.B.C. at Van Ness Avenue.

Allowable discharge was provided by the L.A.C.F.C.D. that requires area 26A (9.15 acres) to discharge 0.77 cfs per acre while 76K (2.46 acres) and 28A (2.41 acres) will have an allowable discharge of approximately 1.2 cfs per acre and 0.78 cfs per acre.

Please see Appendix "A" reference materials for portions of L.A.C.F.C.D. drainage and downstream existing storm drain plans.

Proposed Condition

The project site at proposed condition will be converted into an industrial park. Runoff from east side of Building #1 (subarea 1C) runoff will drain to catch basins in the vehicle parking. The 50-year storm event at this location is approximately 3.3 cfs undetained. Runoff from Building #1 (subareas 1A and 1B) will drain into catch basins at the easterly truck yard and conveyed south via storm drain Line C. The 50-year storm event at this location is approximately 11.7 cfs (5.8 cfs + 5.9 cfs) undetained. Site runoff will continue to drain south and will connect to a proposed storm drain system Line A downstream.

Tributary areas to Building #2 (subareas 2A-2G) will sheet flow towards the easterly truck yard and conveyed north via storm drain Line A that connects to Line C downstream. The

50-year storm event from these areas is approximately 21.0 cfs (5.2 cfs + 2.2 cfs + 2.2 cfs + 6.0 cfs + 1.0 cfs + 3.4 cfs + 1.0 cfs) undetained.

The remaining westerly and southerly landscaped areas 3B (1.1 cfs) and 3C (0.4 cfs) will drain into catch basins at Van Ness Avenue and discharged to an existing public R.C.B.C. in Van Ness Avenue. The 50-year storm event at this location is approximately 1.5 cfs undetained. The total 50-year peak flow rate tributary to the project is approximately 38.1 cfs (13.2 cfs + 21.0 cfs + 2.4 cfs + 1.5 cfs) undetained which higher than the allowable discharge condition (11.9 cfs). Therefore, temporary detention is required onsite to limit runoff outflow from the project site.

The northerly landscape area of Building #1 (subarea 3A, 0.6 cfs) will drain to an existing 36" R.C.P. at W. 190th Street. The 50-year peak flow rate at this area is approximately 0.6 cfs.

Detention

Developed condition peak flow rate discharge from Building #1 and Building #2 site will be limited to the allowable condition (11.9 cfs). Per City of Torrance, runoff volume ponding will be allowed only in the easterly truck yards with a maximum depth of approximately 6" above ground. Therefore, remaining peak flow runoff volume will be stored in underground chambers at the truck yard. The total 50-year peak flow rate discharge from Building #1 site will be limited to 3.2 cfs and 4.8 cfs for Building #2. The peak flow volume will require approximately 5,941 cubic feet and 9,345 cubic feet of storage for Building #1 and Building #2 with a maximum ponding depth of approximately 0.5' above ground at the truck yard.

Building #1 and Building #2 will temporarily store 4,060 cubic feet and 5,186 cubic feet of runoff volume above ground 3,760 cubic feet and 4,159 cubic feet of volume in the underground chambers.

To reduce the proposed condition discharge to allowable condition discharge, onsite storm drainpipe sizes will be determined by using hydraulics and utilizing existing hydraulic grade line downstream. Hydraulic calculations will be provided during the project's final design phase.

The total 50-year peak flow rate from the project site to the ex 7'1"x8'6" RCB in Van Ness Avenue is approximately 11.9 cfs. (3.2 cfs. + 4.8 cfs + 2.4 cfs + 1.5cfs) at detained condition which is comparable to the allowable condition. Therefore, the project site improvements will not impose a negative impact on the existing offsite drainage facilities downstream.

See Appendix "C" for Detention Calculations.

Water Quality

Runoff from Buildings #1 and Building #2 will drain to proposed catch basins and conveyed to proposed underground chambers located at the easterly truck yard via proposed onsite storm drain system. Here, initial runoff from the project site will drain to proposed underground chambers and conveyed to proposed modular wetland for water quality purposes. Runoff volume that exceeds water quality volume will be conveyed back to the main onsite storm drain line and ultimately discharged to an existing storm drain facilities downstream.

See separate water quality report for and Best Management Practices (BMP's) used for the site and BMP calculations.

Methodology

Hydrology calculations were computed using Los Angeles County Department of Public Works Hydro-Calc Excel spreadsheet. The soil classification area is "009" and 50- year 24 hour Isohyet is "5.9" per L.A.C.D.P.W. Hydrology Manual.

See Appendix "A" for reference material from the San Bernardino County Hydrology Manual

Peak Flow Hydrologic Analysis

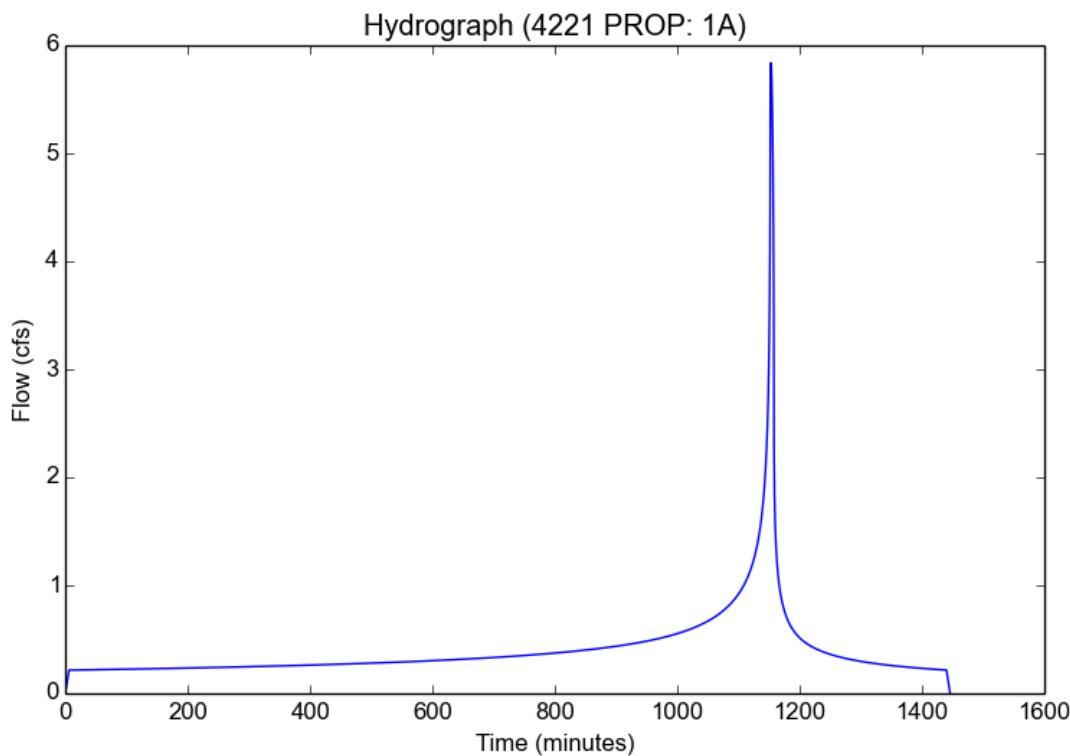

File location: O:\4200-4299\4221\HYDROLOGY\APPENDIX B RATIONAL METHOD\4221 PROP Report.pdf
Version: HydroCalc 1.0.3

Input Parameters

| | |
|---------------------------|-----------|
| Project Name | 4224 PROP |
| Subarea ID | 1A-1C |
| Area (ac) | 5.58 |
| Flow Path Length (ft) | 558.0 |
| Flow Path Slope (vft/hft) | 0.0078 |
| 50-yr Rainfall Depth (in) | 5.9 |
| Percent Impervious | 0.9 |
| Soil Type | 9 |
| Design Storm Frequency | 50-yr |
| Fire Factor | 0 |
| LID | False |

Output Results

| | |
|-------------------------------------|------------|
| Modeled (50-yr) Rainfall Depth (in) | 5.9 |
| Peak Intensity (in/hr) | 2.8224 |
| Undeveloped Runoff Coefficient (Cu) | 0.8649 |
| Developed Runoff Coefficient (Cd) | 0.8965 |
| Time of Concentration (min) | 8.0 |
| Clear Peak Flow Rate (cfs) | 14.1189 |
| Burned Peak Flow Rate (cfs) | 14.1189 |
| 24-Hr Clear Runoff Volume (ac-ft) | 2.2608 |
| 24-Hr Clear Runoff Volume (cu-ft) | 98482.1104 |

Peak Flow Hydrologic Analysis

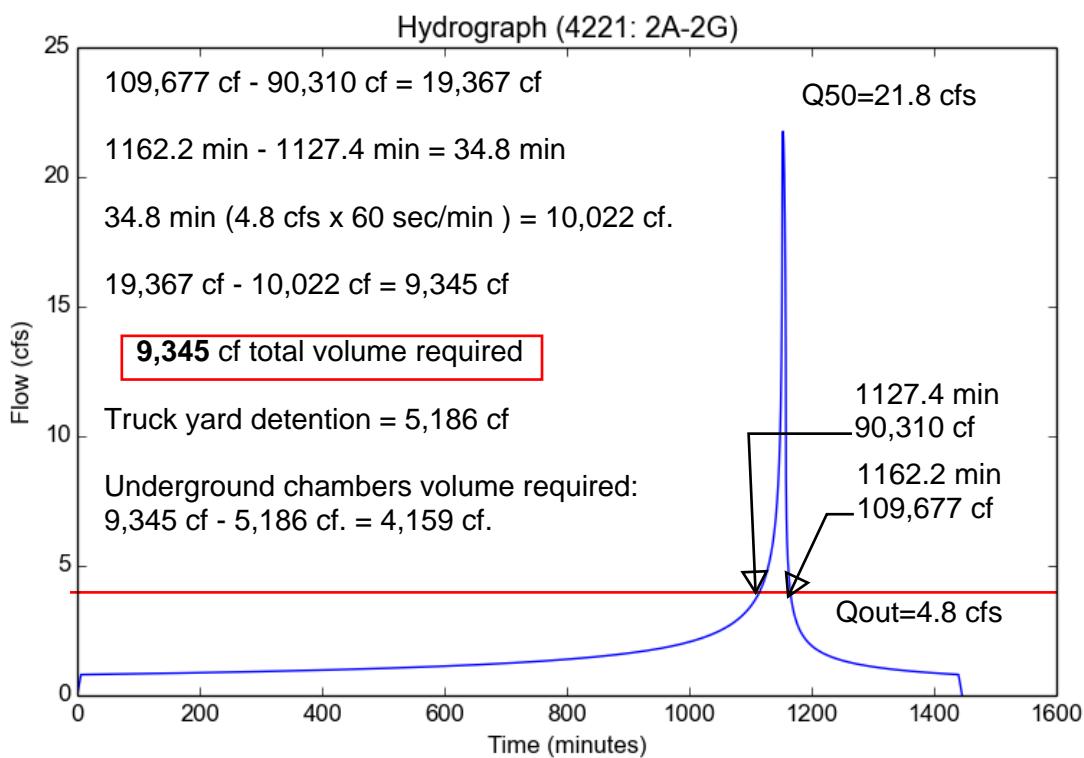

File location: O:\4200-4299\4221\HYDROLOGY\APPENDIX D DETENTION CALCS\4221 - 2A-2G HYD.pdf
Version: HydroCalc 1.0.3

Input Parameters

| | |
|---------------------------|--------|
| Project Name | 4221 |
| Subarea ID | 2A-2G |
| Area (ac) | 7.49 |
| Flow Path Length (ft) | 416.0 |
| Flow Path Slope (vft/hft) | 0.0082 |
| 50-yr Rainfall Depth (in) | 5.9 |
| Percent Impervious | 0.9 |
| Soil Type | 9 |
| Design Storm Frequency | 50-yr |
| Fire Factor | 0 |
| LID | False |

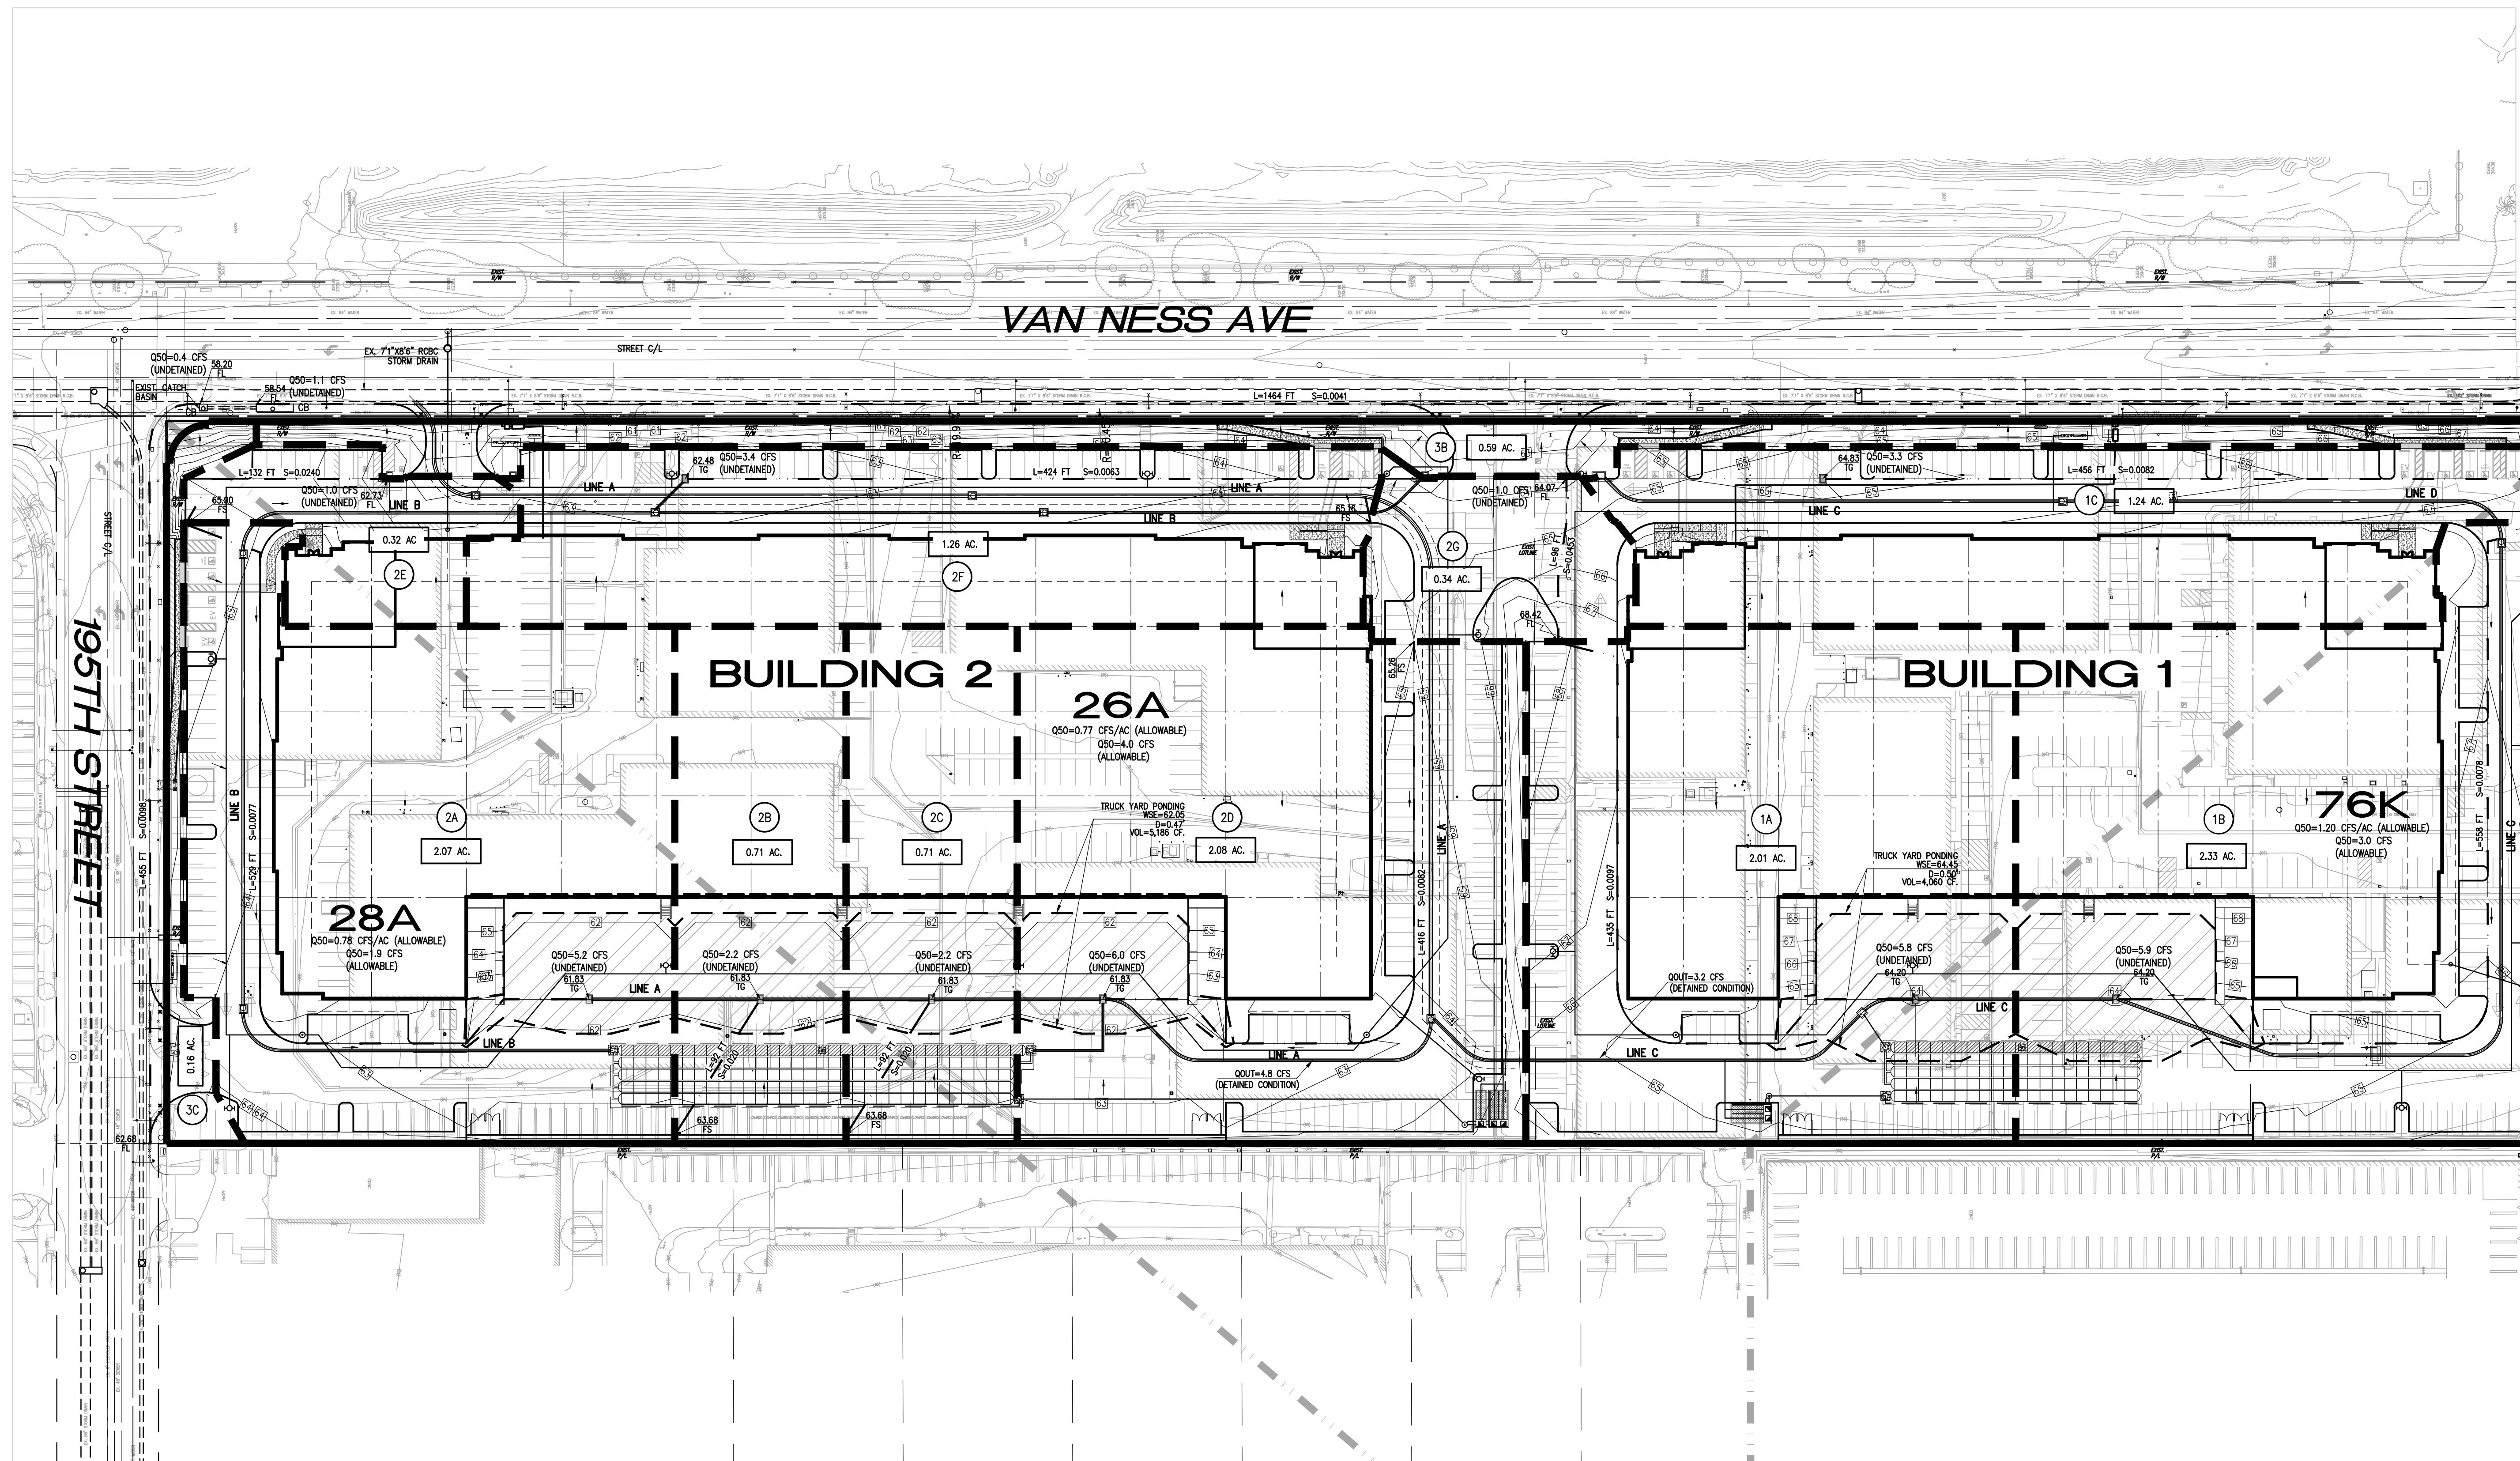

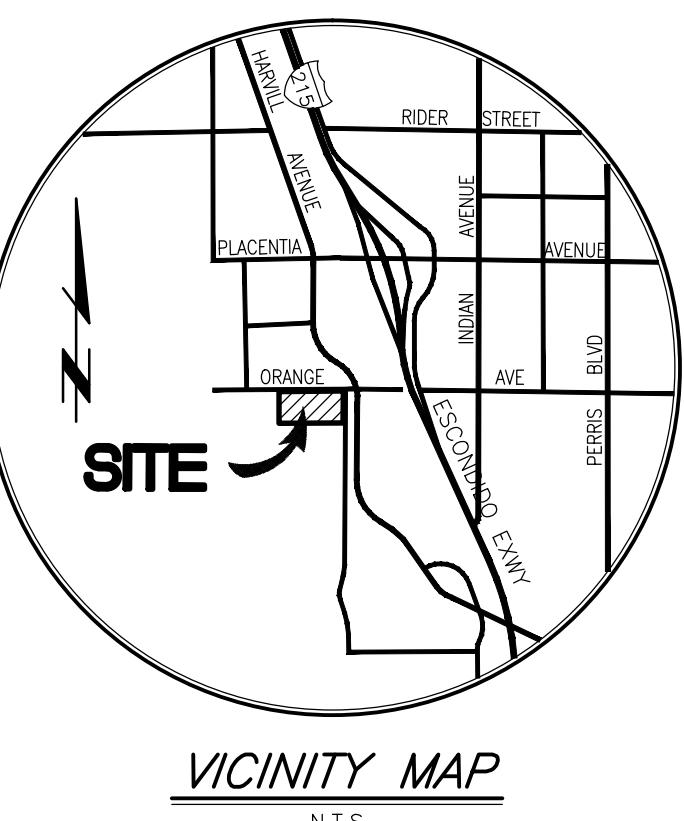

Output Results

| | |
|-------------------------------------|-------------|
| Modeled (50-yr) Rainfall Depth (in) | 5.9 |
| Peak Intensity (in/hr) | 3.231 |
| Undeveloped Runoff Coefficient (Cu) | 0.8904 |
| Developed Runoff Coefficient (Cd) | 0.899 |
| Time of Concentration (min) | 6.0 |
| Clear Peak Flow Rate (cfs) | 21.7571 |
| Burned Peak Flow Rate (cfs) | 21.7571 |
| 24-Hr Clear Runoff Volume (ac-ft) | 3.0348 |
| 24-Hr Clear Runoff Volume (cu-ft) | 132196.1656 |
