EXECUTIVE SUMMARY

Alta Environmental DBA NV5 (NV5) has completed a Phase I Environmental Site Assessment (ESA) of the Franklin Elementary School located at 2400 Montana Avenue, Santa Monica, Los Angeles County, California (Site). The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or adjacent to the Site. These issues are considered recognized environmental conditions (RECs).

Site Location and Use

The Site is located at 2400 Montana Avenue in Santa Monica, Los Angeles County, California. The property consists of a single parcel of land that totals approximately 5.2 acres in size. The Site can be identified by Los Angeles County Tax Assessor Parcel Number (APN): 4277-002-901. The Site is located within an area that is primarily residential use. Current uses of adjoining properties include residential developments in all directions.

At the time of our site reconnaissance, the Site was developed as an active elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

The Site was undeveloped prior to 1925. By 1928, the main classroom building had been constructed on the northwestern portion of the Site. By 1938, most of the present-day structures had been constructed on the Site. A single-family residential home was also present on the southeastern corner of the Site. Between 1965 and 1967, the single-family residence was redeveloped into parking lots and playground areas. Between 1989 and 1994, several temporary classroom structures (bungalows) were installed at the Site.

Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify any data gaps during this assessment:

Vapor Encroachment Conditions (VEC)

A Tier 1 vapor encroachment screen (VES) for potential chemicals of concern (COC) was completed for the Site. The assessment was based on the ASTM published Standard Guide E 2600-15. The purpose of the VES was to evaluate for the potential for a vapor encroachment condition (VEC) which is the presence or likely presence of COC vapors in subsurface soils at the Site caused by the release of vapors from contaminated soil or groundwater on or near the Site. The results of the VES did not identify evidence of a potential VEC in connection with the Site.

Conclusions and Recommendations

No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, however, based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

SMSD-21-10665 April 4, 2022

NV5 recommends conducting a limited Phase II subsurface investigation in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

1 INTRODUCTION

The purpose of this assessment was to evaluate the environmental condition of the site as part of the District's environmental review standards in order to comply with the California Environmental Quality Act (CEQA) and Title V of the California Education Code. The assessment was performed to the standards to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner, or bona fide prospective purchaser under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

- 1. 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13;
- 2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312); and
- 3. 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

This report was prepared exclusively for use by Santa Monica-Malibu Unified School District. This report may not be relied upon by any other person or entity without NV5's express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. NV5 cannot be responsible for the impact of any changes in environmental standards, practices, or regulations after performance of services.

1.1 Objectives

NV5's objective for this environmental assessment was to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site. The assessment was done to meet ASTM Standard Practice E1527-13.

The assessment provided herein was determined based on the following:

- 1. Current and past property uses and occupancies;
- 2. Current and past uses of hazardous substances;
- Waste management and disposal activities that could have caused releases or threatened releases of hazardous substances;
- Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances;
- 5. Engineering controls;
- 6. Institutional controls; and
- Evaluation of properties adjoining or located nearby the Site that have environmental conditions
 that could have resulted in conditions indicative of releases or threatened releases of hazardous
 substances to the Site.

1.2 Services

NV5 performed the following services to assess the property:

- 1. Reviewed historical sources of information;
- Searched for recorded environmental clean-up liens;
- 3. Reviewed Federal, State, Tribal, and local government records;

- 4. Visually inspected the site and the adjoining sites;
- 5. Evaluated any specialized knowledge or experience on the part of the purchaser;
- 6. Determined commonly known or reasonably ascertainable information about the property; and
- 7. Evaluated properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

1.3 Assumptions

NV5 has assumed the following for the purposes of this assessment:

- 1. Information provided during any interview (written or oral) was accurate and correct;
- 2. Database information reviewed was accurate and correct;
- 3. Historical information reviewed was accurate and correct;
- 4. Information reviewed at any governmental agency was accurate and correct;
- 5. Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data or well data from adjacent sites, are assumed based on contours depicted on the United States Geological Survey (USGS) Topographic Maps; and
- 6. The property has been correctly and accurately identified by the client, client representatives, property contact, property owner, and/or property representatives.

1.4 Limitations

This assessment is limited to the standards set forth in ASTM Standard Practice E1527-13. This assessment specifically excludes assessment of the following:

- Asbestos and asbestos-containing building materials;
- 2. Biological agents;
- 3. Cultural and historic resources;
- 4. Ecological resources;
- 5. Endangered species;
- 6. Health and safety;
- 7. Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment;
- 8. Industrial hygiene;
- 9. Lead-Based Paint;
- 10. Lead in Drinking Water;
- 11. Mold:
- 12. Radon;
- 13. Regulatory compliance; and
- 14. Wetlands.

Considerations identified by ASTM as beyond the scope of a Phase I Environmental Site Assessment (ESA) may affect business environmental risk at a given property. These environmental issues or conditions may warrant assessment based on the type of property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13; and therefore, not addressed during this assessment.

Per the authorized scope of work, specific client requested items beyond the scope of ASTM E-1527-13 were addressed as part of this assessment (Section 6.0). These items included several items, listed on the following page, that address specific California Department of Education (CDE) requirements for school construction.

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluation. The conclusions presented in this report are based solely on the services described herein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No subsurface exploratory drilling or sampling of any kind was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical or physical analyses have been performed during this Phase I ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted. As applicable, NV5 has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, NV5 accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. NV5 makes no warranty, express or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

This Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. The assessment is not intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use and environmental liens. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.5 Terms

The following terms are used in this report:

- "Site" refers to the property within the approximate boundaries described in Section 2;
- "Immediate site vicinity" refers to properties adjacent to the Site that share a common boundary with the Site; and

- "Site vicinity" refers to the area within an approximate 1-mile radius of the property.
- "Recognized Environmental Conditions" (RECs) The presence or likely presence of any hazardous substances or petroleum products in, on, at or to a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment, or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.
- "Controlled Recognized Environmental Condition" (CREC) A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.
- "Historical Recognized Environmental Condition" (HREC) A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).
- "Migrate/migration" For the purposes of this practice, "migrate" and "migration" refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.
- "Hazardous Substances" The term "hazardous substance" is used here in general accordance with its use as defined in the following regulations:

The terms "material," "waste," and "substances" are used interchangeably, and no legal distinction is implied between the terms as used herein. The words "impact" or "impacted" are used to mean the effect or result of a release of a hazardous substance that could result in a hazardous waste being present at the property. Search distances for government agency lists were those designated by the ASTM Standard E 1527-13.

3 SITE SETTING

3.1 Topographic

The 2018 United States Geological Survey (USGS), [Beverly Hills] 7.5 Minute Topographic Quadrangle map of the Site and surrounding vicinity was reviewed. The elevation of the property is approximately 260 feet above mean sea level. Topography was observed to slope slightly in a southeasterly direction during the site reconnaissance. A copy of the USGS 7.5 Minute Topographic Quadrangle Map is included in Appendix B.

3.2 Regional Geology and Hydrology

The following description of regional geology and hydrology was developed based on regional information presented on the EDR GeoCheck report (2022) and Regional Water Quality Control Board's online *Geotracker* database.

According to United States Department of Agriculture (USDA) soil data published in the EDR GeoCheck report, soils underlying the Site are classified as urban land. Soils of this type are a mixture of sandy and gravelly loam (Appendix B).

Groundwater data published on the *Geotracker* website for an ongoing groundwater investigation at the Providence Saint John's Health Center located at 2121 Santa Monica Boulevard (approximately ½ mile southwest of the Site) indicated that the shallowest groundwater in the vicinity of the Site is approximately 140 feet below ground surface and flows towards the southeast.

3.3 Flood Plain

According to Federal Emergency Management Agency flood plain data presented in the site-specific Environmental Data Resources (EDR) Geocheck Report, the Site is not located within a 100-year or 500-year flood zone (EDR, 2021). The EDR Report is presented as Appendix B.

3.4 Wetlands

According to map data published on the United States Department of Fish and Wildlife (USFW) National Wetlands Inventory (https://www.fws.gov/wetlands/data/mapper.html), No wetlands are mapped on the subject or adjoining properties (Appendix C).

3.5 Water Bodies

No water bodies were observed on the subject or adjoining properties.

3.6 Oil and Gas Wells

According to the State of California, Department of Conservation, Geologic Energy Management Division (CalGEM) oil and gas well finder map (WellSTAR), no oil/gas wells were identified on the Site or adjoining properties.

4 USER-PROVIDED INFORMATION

Information obtained during the interview process is presented in the following sections.

4.1 Title Records

Title records were not provided by the site user representative. Chain of Title Records were obtained by NV5 and are presented in Appendix D. The current owner is listed as Santa Monica-Malibu Unified School District. No vesting deeds prior to 1940 were found during a search of Los Angeles County Recorder's and Assessor's offices.

4.2 Clean-Up Liens

No knowledge of any clean-up liens against the Site was reported by those interviewed. Furthermore, the EDR Environmental Lien and AUL Search report did not identify any environmental liens for the Site (Appendix D).

4.3 Activities and Use Limitations

No knowledge of site-specific activities or use limitations recorded against the Site were reported by those interviewed. Furthermore, according to the EDR Lien and AUL Search report, no Activity and Use Limitations are identified for the Site (Appendix D).

4.4 Specialized Knowledge

No specialized knowledge identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

4.5 Commonly Known Information

No commonly known information identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

4.6 Previous Environmental Assessments

The client provided NV5 with a copy of a previous Phase I Environmental Screening that was conducted by LFR Inc. (LFR) on May 5, 2008. LFR did not find any on-Site of off-Site releases or environmental concerns, except for the following:

Due to the presence of current and former structures on the Site, lead and termiticides
(chlorinated pesticides) may be in the soil. DTSC typically requires lead sampling anytime a
structure that was constructed prior to the ban of LBP in the late 1970s/early 1980s is present at
a Site.

These documents are summarized below and presented in Appendix F.

5 RECORDS REVIEW

5.1 Governmental Databases

NV5 contracted EDR to perform a radius search of governmental databases for this project. The distribution of listed sites with respect to the Site is tabulated and mapped in EDR's Radius Map Report, which can be found in Appendix B. The reader is referred to the table, which can be found near the front of EDR's report.

NV5 conducted a review of the above-referenced database reports and provides the following findings based on sites that have the potential to impact the Site, with respect to the inferred southeasterly groundwater flow direction. Our findings are based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within unsaturated soil for a significant distance. Although a hazardous material can migrate in groundwater in a generally down-gradient direction, there are limitations to this interpretation such as groundwater depth, soil lithology and other subsurface barriers.

5.1.1 Site Database Findings

EDR's report did identify the Site address, as summarized below:

Facility	Franklin Elementary School	
Name &	2400 Montana Avenue	Site
Address	Santa Monica, California	

Database(s) Listed: ECHO, HWTS HAZNET, FINDS, RCRA NONGEN/NLR

The Site address was listed on the ECHO database; however, no violations are reported. According to the four HWTZ HAZNET database listings, this facility disposed of; 8.4 tons of asbestos containing waste in 1994, 0.15 tons of aqueous solution with total organic residues less than 10 percent in 2013, 0.12 tons of polychlorinated biphenyls materials in 2019, and 6.7 tons of asbestos containing waste in 1984. The FINDS database and RCRA NonGen/NLR databases indicated that this facility is not listed as a handler of nonhazardous or hazardous waste.

5.1.2 Adjoining Property Database Findings

EDR's report identified multiple adjoining properties. The details of these listings are presented below.

Facility Name & Address	United Property Management Services 2310 Montana Avenue Santa Monica, California	Southwestern Adjoining Property
Details and AND State of DODA MONOFINING D		

Database(s) Listed: RCRA NONGEN/NLR

According to the RCRA NonGen/NLR database, this facility was reported to not be a generator of hazardous waste as of February and November of 2019.

Facility	805 23 rd Vila A, LP	Southwestern
Name &	805 23 rd Street	
Address	Santa Monica, California	Adjoining Property

Database(s) Listed: RCRA NONGEN/NLR

According to the RCRA NonGen/NLR database, this facility was reported to not be a generator of hazardous waste as of February and April of 2020.

Facility Name &	Ever Ready Service Station 2502 Montana Avenue	Northeastern
Address	Santa Monica, California	Adjoining Property

Database(s) Listed: EDR HIST AUTO

This former facility is located across 25th Street from the northern portion of the Site. According to the EDR HIST AUTO database, this facility was reported to operate as an automobile service and gasoline station from 1928 to 1972. According to local Fire Department records (see Section 5.2), all USTs were removed from this property in 1974. Based on the removal of the USTs, separation distance, and local depth to groundwater, this listing is not considered to represent an REC with respect to the Site.

5.1.3 General Vicinity Database Findings

EDR's report identified multiple off-site facilities within applicable ASTM search radii. NV5 considered all of the listed sites unlikely to impact the subject site, based upon factors including (but not limited to):

- The nature of the listing;
- The use of the site:
- When the site was listed and its current listed status;
- The developmental density of the setting;
- The distance between the listed and subject sites as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions;
- The presence of intervening drainage divides; and/or
- The inferred groundwater movement.

5.2 Regional Agency Offices

NV5 submitted information requests to the various county and regional agencies that may have records with regard to environmentally-oriented concerns affecting the Site, in accordance with ASTM E1527-13 requirements. Should significant records be identified at a later date, an addendum to this report will be issued. Documentation obtained from regulatory agency requests is presented in Appendix C.

Agency	Records Summary
California Division of Geologic Energy Management (CalGEM)	No oil or gas wells were identified on the Site or adjoining properties.
Regional Water Quality Control Board – GEOTRACKER	Site No records identified. Adjoining Property No records identified.
Department of Toxic Substances Control – ENVIROSTOR	Site No records identified. Adjoining Property No records identified.
Santa Monica Fire Department	Site No records identified. Adjoining Property NV5 obtained records pertaining to the former automotive service station located at 2502 Montana Avenue (Northeastern Adjoining Property). According to these records, four oil and gasoline USTs were installed and operated at this property in 1950. Permit records indicated that all tanks were removed in 1974 under supervision of the Santa Monica Fire Department. This property was subsequently redeveloped into a multi-family residential apartment building.
City of Santa Monica Building and Safety Department	Records identified included various building permits related to installing new bus shelters and constructing new shelter footings, and SCE upgrading equipment for system reliability in August of 2011.

7 VAPOR ENCROACHMENT SCREENING

ASTM E1527-13 requires the Environmental Professional to evaluate the potential for vapor encroachment of chemicals of concern (COC) onto the Site, and to determine if such vapor encroachment constitutes evidence of a REC on the Site. The E1527-13 Standard Practice does not specifically state the methods that must be used to screen for potential vapor encroachment issues. However, ASTM has developed a separate Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM E2600-15), which outlines an ASTM E1527-13-compliant methodology to conduct vapor encroachment screening.

7.1 VES Methodology

The goal of conducting Vapor Encroachment Screening (VES) is to identify a vapor encroachment condition (VEC), which is defined as the presence or likely presence of chemicals of concern (COC) vapors in the vadose zone of the Site caused by the release of vapors from contaminated soil and/or groundwater either on or near the Site. If a VEC is identified, the environmental professional must determine whether the VEC represents evidence of a REC on the Site under the context of the Phase I ESA Standard Practice. It should be noted that the identification of a VEC on the Site does not necessarily indicate that a potential for migration of vapors into existing or proposed structures on the Site is likely. The environmental professional will identify the VEC as a REC where the potential for vapor migration into structures is considered likely, or where the contaminant concentrations in the soil, groundwater, or soil vapors on the Site are significant and likely to result in enforcement against on-site or off-site responsible parties.

The VES utilizes information regarding the potential presence of releases on or near the Site that were collected as a normal part of the Phase I ESA process, such as governmental database records, review of governmental files, historical data sources, etc. The VES Standard Guide requires the environmental professional to search for potential sites of concern within specific search radii. The area of concern search radius is 1,760 feet (1/3 mile) for non-petroleum contaminated sites and 528 feet (1/10 miles) for petroleum contaminated sites. The default search distances may be expanded or reduced in the upgradient, downgradient, or cross-gradient directions by the environmental professional based on experience in the local area and applying professional judgment to factors such as where a well-defined regional groundwater flow direction is identified, or whether other geologic features such as low permeability soils or hydrogeologic boundaries such as rivers or streams exist which would tend to limit the potential for migration of groundwater or vapors in a particular direction.

7.2 VES Search Results

NV5 identified several sites of potential concern within the VES search radii, based on our review of governmental database records, regulatory agency files, and historical resources referenced in Section 5.3. However, based on our review of available information, none of these sites appear to represent a VEC in connection with the Site.

8 FINDINGS

Based on the site reconnaissance, review of historical and available documents, and interviews, NV5 finds the following:

8.1 Current Site Activities

At the time of our site reconnaissance, the Site was developed as an active elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

8.2 Historical Site Activities

The Site was undeveloped prior to 1925. By 1928, the main classroom building had been constructed on the northwestern portion of the Site. By 1938, most of the present-day structures had been constructed on the Site. A single-family residential home was also present on the southeastern corner of the Site. Between 1965 and 1967, the single-family residence was redeveloped into parking lots and playground areas. Between 1989 and 1994, several temporary classroom structures (bungalows) were installed at the Site.

8.3 Off-Site Activities

The Site is located within an area primarily for residential use. Current uses of adjoining properties include residential developments in all directions.

8.4 Data-Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify any significant data gaps during this assessment.

9 CONCLUSIONS AND RECOMMENDATIONS

NV5 completed a Phase I ESA of the Franklin Elementary School located at 2400 Montana Street in Santa Monica, California. The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site.

No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, however, based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

NV5 recommends conducting a limited Phase II subsurface investigation in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

10 QUALIFICATIONS AND SIGNATURE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in 40 CFR 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Project Revenue Source Desc: This site is projected for cleanup by responsible parties with reimbursement to

DHS for staff and related costs. However, if the responsible parties fail to provide funding for cleanup, another source of funds will need to be

established.

Site Description: This site is a former "burn dump", which operated until the early 1950's. In

later years, the facility apparently accepted inert materials.

Hazardous Waste Desc: During core drilling prior to construction at the former "burn dump" site,

elevated levels of organic material and lead were encountered in the soil and in the upper saturated zone. It is believed most of the contaminated soil has been removed from the site and properly disposed of, in accordance with State

regulations.

Threat To Public Health & Env: The threat from this site is believed to be minimal. It is believed that most

of the contamination has already been removed from the site. The upper aquifer in the area is generally contaminated by organic solvents and is not used as a

public water supply.

Site Activity Status: DHS has required and the developer has provided a waste management plan for

dealing with hazardous substances during excavation. The proposed depth of the excavation would remove the majority of residual wastes from the landfill.

Materials exceeding DHS's standards are hazardous wastes and will be handled as Class 1 wastes; marginally contaminated waste will be taken to an appropriate

landfill.

The developer said they had a letter from Alternative Technology approving the solidification technology used at this site, but DTSC, Region 3 has no file on this site. SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1/2 - 1 Mile SE

Site Name: Chemold Co.- Broadway

Site EPA ID Number: CA0000476655
Groundwater Flow Direction: Southeast

Measured Depth to Water: approximately 50 feet in the Ballona aquifer.

Hydraulic Connection: The near-surface deposits to a depth of 90 feet include gravel and

coarse sand of the recent alluvium. The recent alluvium is underlain by the Silverado aquifer, which is located within sand and gravel

deposits with small amounts of clay.

Sole Source Aquifer: No information about a sole source aquifer is available

Data Quality: Information based on site-specific subsurface investigations is

documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Reference: AB3205 – Request to Identify Facilities within a 0.25 Mile Radius

of a School Site

Dear Mr. Fraske:

Thank you for your request to the South Coast Air Quality Management District to identify facilities with the potential to emit hazardous or acutely hazardous air pollutants located within one-quarter (1/4) mile radius of Franklin Elementary School located at 2400 Montana Avenue, Santa Monica, CA 90403.

In response to your request, South Coast AQMD staff performed a database search and conducted a field inspection survey of the area surrounding the school site. In accordance with the provisions of Public Resource Code 21151.8(a)(2), we would normally enclose a map showing all facilities with South Coast AQMD permits or pending applications that are located within a ¼- mile radius of the school site. However, based upon our database search and field evaluation, there are no facilities with active or pending permits within the ¼-mile radius of the school site.

Please be advised that this information is specific only to those facilities that have either Permits to Operate and/or pending applications with the South Coast AQMD and those that were readily recognizable during our field survey activities. There may be other operating facilities located within the ¼ -mile radius of the school site that emit hazardous or acutely hazardous air pollutants that were not identified through this process.

If you have any questions regarding the enclosed information, please contact David Hauck at dhauck@aqmd.gov or 909-396-2512.

Sincerely,

David Hauck

Records review: Reviewed records, operator qualifications, field observations and cathodic protection readings. Note that no O&M procedures were inspected during this inspection.

Field Inspection: Cathodic protection readings, ROW inspection of entire line sections.

Finding(s): Issues noted during this inspection included:

Pipeline 0025G-0018 at Contua creek passing coating has sign of atmospheric corrosion. PSE Dan Le mentioned the concern with Crimson. On October 30, 2018 Peter Curtis, Corrosion leader from Crimson informed PSE Dan Le that the line had 3 year atmospheric corrosion inspection per third party and the pipeline ILI run on 12/01/2016 didn't find any metal lost at the location. Per Peter the pipeline doesn't have atmospheric corrosion.

Other than that no violation found

Inspection Summary

IA Inspection Summary

Crimson Pipeline, LLC - All Inspection Units

Operations Maintenance and Emergency Inspection (OM&E)

Activity Report Number:

20180821BDJ1

Inspection Rationale:

This is an Operations Maintenance and Emergency (OM&E) Headquarters Inspection. The Standard OM&E IA questions were used for this OM&E Inspection. There is a total of 138 procedural questions and 3 records questions for this inspection.

Description of Facilities Inspected:

On October 8 and 9, 2018, Pipeline Safety Engineer (PSE) Bob Jamison (Lead), along with PSE Mark McCaleb and PSE (RA) Chuck Mac Donald conducted an OM&E inspection of Crimson Pipeline, LLC located at Crimson's headquarters in Long Beach, CA.

Inspection encompassed all of Crimson's Pipeline assets regulated by CAL FIRE Office of the State Fire Marshal, which included 8 inspection units, 106 pipelines, 18 facilities, and 3 breakout tanks.

Inspection Findings:

Unsatisfactory Items-NONE

Synopsis of Concerns:

There was one concern:

External Corrosion - Cathodic Protection

Does the process give sufficient direction for the monitoring of external corrosion on buried pipelines that are not protected by cathodic protection?

Crimson Pipeline has the following pipelines currently isolated from active systems and not being used to transport crude oil. These pipelines will be listed as 'Active' pending further evaluation for waiver status by OSFM. Once OSFM has approved Crimson's submitted documentation presented for each of these lines, Crimson will submit a letter to the OSFM and NPMS requesting to change the commodity from crude oil to other (inert gas).

These pipelines are as listed below;

OSFM # 0339, Brea Crude Line East, 10.84 miles long.

OSFM # 0862, Piru Gathering Line 653, 10.63 miles long.

OSFM # 0177, Vernon 8", 9.00 miles long.

OSFM # 0219, POC 10", 2.50 miles long.

OSFM # 0339, Brea Crude Line West, 10.84 miles long.

OSFM # 0447, Line 700 Norwalk to Carson, 18.31 miles long.

OSFM # 0703, Newhall to Fillmore, 22.98 miles long.

OSFM # 0757, Dominguez Estates, 1.06 miles long.

OSFM # 0859, Del Amo Gathering, .4 miles long.

OSFM # 0938, Howard Park, 7.81 miles long.

There are three separate lines that do not have OSFM appointed jurisdictional numbers:

Montebello Kern Line, 6.64 miles long.

Norwalk 2B, 1.30 miles long.

Idle 4" Line, .09 miles long.

These pipeline segments are currently purged and filled with an inert gas, they are also isolated from active protected cathodic protection (CP) systems and do not have CP capabilities. Crimson is maintaining Right of Ways, Patrols, Signage, and Atmospheric monitoring where applicable. These listed pipeline segments are in evaluation process by OSFM personnel. This question will be listed as a 'concern' at this time, pending the evaluation outcome by OSFM.

Recommended Follow-up Actions:

Provide operator with a Post Inspection Notice Letter- No Violations Observed.

Result Notes

Section 3.0 Routine Maintenance Operations and Maintenance Manual Crimson Pipeline, LLC 3-8 August 2017 Whenever the pipe transitions the soil-air interface, not only should potentials-tosoil be obtained, but visual observations must be made of any perceived deficiencies in the coating at the interface. Given the soil and pipe stresses at the interface and casual or incidental contact by workers, coating frequently get damaged at the interface. Other locations to inspect are under thermal insulation, under disbonded coatings, at pipe supports, in splash zones if applicable, any deck penetrations, and at over-water spans. If atmospheric corrosion inspection finds evidence of corrosion, implement steps to mitigate per 49 CFR 195.581 except where corrosion is a light, surface oxide or will not affect the safe operation of the pipeline prior to the next inspection (.581.c). Atmospheric corrosion monitoring will be done once every 3 years but not intervals exceeding 39 months. Inspection pipe at soil-to-air interfaces, under thermal insulation, under disbanded coatings, at pipe supports, in splash zones, at deck penetrations, and in spans over water. In the event that pitting or general or local corrosion has resulted in a reduction in wall thickness, the RSTRENG method shall be used where appropriate to calculate the remaining strength of

the pipe and determine a new MOP. Replace or repair the pipe by a method that reliable engineering tests and analyses show can permanently restore the serviceability of the pipe. Coatings shall be inspected by a holiday detector prior to submerging or lowering a pipe into the ditch (or backfilling, where appropriate). Holiday detector shall be set based on coating type and measured coating thickness per industry standards.

3.2.1 Cathodic Protection- Crimson has cathodic protection systems installed on all of the Company's jurisdictional pipelines.

3.2.4 Pipe Inspection Whenever the pipe is exposed for any reason, the outside surface must be inspected. The inspection should be per regulations and should include but not be limited to pipe-to-soil potentials, visual coating inspection, and visual pit inspection (if coating is damaged or removed). When pipe is physically removed, the internal pipe surfaces of the remaining pipe and the removed portion should be inspected for signs of corrosion. You must inspect the pipeline circumferentially and longitudinally beyond where the pipe was removed by visual examination, indirect methods or both to determine if additional corrosion requiring remedial action exists in the vicinity.

Crimson Pipeline has the following pipelines currently isolated from active systems and not being used to transport crude oil. These pipelines will be listed as 'Active' pending further evaluation for waiver status by OSFM. Once OSFM has approved Crimson's submitted documentation presented for each of these lines, Crimson will submit a letter to the OSFM and NPMS requesting to change the commodity from crude oil to other (inert gas).

These pipelines are as listed below;

OSFM # 0339, Brea Crude Line East, 10.84 miles long.

OSFM # 0862, Piru Gathering Line 653, 10.63 miles long.

OSFM # 0177, Vernon 8", 9.00 miles long.

OSFM # 0219, POC 10", 2.50 miles long.

OSFM # 0339, Brea Crude Line West, 10.84 miles long.

OSFM # 0447, Line 700 Norwalk to Carson, 18.31 miles long.

OSFM # 0703, Newhall to Fillmore, 22.98 mile long.

OSFM # 0757, Dominguez Estates, 1.06 miles long.

OSFM # 0859, Del Amo Gathering, .4 miles long.

OSFM # 0938, Howard Park, 7.81 miles long.

There are three separate lines that do not have OSFM appointed jurisdictional numbers at this time.

Montebello Kern Line, 6.64 miles long.

Norwalk 2B, 1.30 miles long.

Idle 4" Line, .09 miles long.

The listed pipeline segments are currently in the evaluation process by OSFM personnel. This question will be listed as a 'concern' at this time, pending the evaluation outcome by OSFM.

Inspection Unit #0025H Active Pipeline

- Unit #0025H has no active pipeline.

All of the pipeline right-of-ways in the above mention units were inspected.

<u>Findings: Recommending observation notes during close out the inspection:</u>

Records;

- -Review line CSFM # 0868 showing the valve inspection records begins dated 12/14/17, 8/02/18, and 4/10/19. It's exceeding 7/1/2 months interval each calendar year.
- -During the records review, Crimson informed OSFM that some pipelines within Units 025C,E, & H are not operated. It would be considered as out-of-service (OoS) pipelines. However, Crimson have not submitted the OoS letter to OSFM for requesting to defer certain activities of its OoS pipelines. OSFM encourages that Crimson needs to submit out-of-service letter to OSFM as soon as possible. Until the OSFM acknowledges the OoS letter for defer certain activities from Crimson, OSFM considers those pipelines as active pipelines. Therefore, Crimson must follow all the applicable requirements in accordance with Part 195.

-During the records review, it was noted that Crimson haven't maintained Cathodic Protection (CP) of its OoS pipelines. However, Crimson have not submitted the OoS letter to defer certain activities of its OoS pipelines. OSFM is concerned that Crimson have not maintained CP of its OOS pipelines.

Field Observation;

CSFM #0412 at approximately mile post 15.6 pipeline right of way (ROW) showing overgrown vegetation, brush, and tree that obscured the view of pipeline right of way.

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

As ummary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Brad street. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Ms. Virginia I. Hyatt Purchasing Director Santa Monica Malibu Unified School District 1651 Sixteenth Street Santa Monica, California 90404-3891

Subject: Phase I Environmental Screening, Franklin Elementary School, 2400 Montana Avenue,

Santa Monica, California

Dear Ms. Hyatt:

LFR Inc. (LFR) is pleased to present this Phase I environmental screening letter for the above-referenced property ("the Site"). The information presented in this letter is based on the results of information obtained from a Site inspection, interviews with personnel familiar with the Site, local regulatory agency review, Santa Monica Malibu Unified School District (SMMUSD) files, and review of a database report compiled by Environmental Data Resources, Inc. (EDR).

Site Description

Franklin Elementary School is located on the south side of Montana Avenue, southwest of the intersection of Michigan Avenue and 25th Street. The Site consists of seven relocatable classrooms located on an asphalt-paved playground on the southwest side of the campus. The proposed renovations at the approximately 6,064-square-foot Site include removal of the relocatable classrooms, construction of a two-story classroom in place of the relocatable classrooms, and expansion of the library, which is currently located adjacent to the northwest of the Site.

A site vicinity map and site location map have been included as Attachment A. Additionally, photographs collected during site reconnaissance activities conducted on November 20, 2007 by LFR representative Shauna Head are presented in Attachment B.

Current Use

The Site consists of an asphalt-paved surface that houses seven relocatable classrooms. LFR observed a pad-mounted electric transformer adjacent to the northwest of the relocatable classrooms (offsite); no evidence of staining or leaking was observed at the base of the transformer.

Historical Research

To evaluate historical use of the property, LFR reviewed Sanborn fire insurance maps, aerial photographs, topographic maps, and city directories (included as Attachment C).

Sanborn Maps

LFR reviewed Sanborn maps obtained from EDR dated 1950, 1965, and 1986. A brief summary of these maps is provided below.

The 1950 map depicts the Site as undeveloped land; however, Franklin Elementary School is developed to the north-northwest of the Site. Classrooms are depicted southeast of the Site, and a dwelling is depicted further southeast of the Site. The areas surrounding the Site are depicted with residential developments.

The 1965 map is similar to the 1950 map; however, the classrooms previously depicted southeast of the Site are no longer visible. The Site configuration remains unchanged from the previous map.

The 1986 map depicts a building at the northwest end of the Site. The building is believed to be the relocatable classrooms currently in place at that location. The areas surrounding the Site remain unchanged.

No environmental concerns were identified during a review of Sanborn maps.

Aerial Photographs

LFR reviewed aerial photographs of the Site that were received from EDR for the years 1928, 1938, 1947, 1956, 1965, 1976, 1989, 1994, and 2002. A brief summary of these aerial photographs is provided below.

The 1928 photograph depicts the Site as a portion of a larger parcel that appears to be the beginning of a school campus. Two structures are depicted at the southwest end of the Site, and a building that is believed to be associated with Franklin Elementary School is depicted approximately 270 feet north of the Site. A residence is depicted at the southwest corner of the lot that will be developed with Franklin Elementary School. Land adjacent to the Site is undeveloped. The surrounding properties appear to be either residential or vacant lots.

The 1938 and 1947 photographs depict the Site as vacant land. Structures associated with Franklin Elementary School are depicted adjacent to the north, south, and west of the Site. The surrounding area appears to be mostly residential, with scattered vacant lots. What appears to be a golf course is depicted approximately 0.50 mile north of the Site.

In the 1956 photograph, the Site appears to be paved with asphalt. Asphalt paving continues to the east of the Site. A grass field is depicted southeast of the Site, followed by basketball courts. The Site is surrounded by additional residential development.

The 1965 photograph depicts two structures at the southwest end of the Site; the remainder of the Site has been painted with white lines, indicating use as a parking lot. The surrounding areas appear relatively unchanged from the previous photograph.

The 1976 photograph depicts classrooms at the northwest end of the Site; based on additional research, these structures are believed to be the current relocatable classrooms. The south end of the Site remains vacant. Areas surrounding the Site appear unchanged from previous photographs.

The 1989 photograph is unfocused, making it difficult to distinguish onsite features. A structure appears to be located at the southwest end of the Site; however, the structure does not resemble the relocatable classrooms currently onsite.

The 1994 photograph depicts the Site developed with two structures that are believed to be the relocatable classrooms currently located onsite. An additional structure is depicted adjacent to the northeast of the Site; this structure is also believed to be one of the relocatable classrooms currently at that location. The remaining areas surrounding the Site are unchanged.

The 2002 photograph depicts the Site as relatively unchanged from the previous photograph.

With the exception of former structures on the Site which may have contained lead-based paint (LBP; as they were present prior to the ban of LBP in the late 1970s/early 1980s) or termiticides (as they were used prior to the ban of chlorinated pesticides in the late 1980s), no environmental concerns were identified during a review of the aerial photographs.

Topographic Maps

LFR reviewed the following historical U.S. Geological Survey (USGS) topographic maps: the 1900 Los Angeles, California 15-Minute Series; the 1934 Beverly Hills, California, 6-Minute Series; and the 1966 (with 1972 and 1981 photorevisions) and 1995 Beverly Hills, California, 7.5-Minute Series. A brief summary of these topographic maps is presented below.

The 1900 map depicts the Site as undeveloped land; however, the Site vicinity appears to be developed with residential streets. The Pacific Ocean is depicted approximately 2.0 mile southwest of the Site.

The 1934 map depicts the Site as similar to the 1900 map, except the Site now appears to be a portion of Franklin Elementary School. A school related building is depicted approximately 270 feet north of the Site. Areas surrounding the Site appear to either be developed with residences or are vacant.

The 1966 and 1972 maps depict the Site as undeveloped land. Three structures are depicted on the school property to the north-northeast of the Site.

The 1981 and 1995 maps depict the Site as undeveloped land. However, based on a comparison of these topographic maps to the historic aerial photographs discussed above, LFR believes that a structure was located on the northwest end of the Site in 1981, and that two structures were present onsite by 1995.

No environmental concerns were identified during a review of the topographic maps.

City Directories

LFR reviewed a historical city directory abstract from EDR that spans the years from 1920 to 2006 at approximately five-year intervals. There are no listings at the Site address prior to 1954, when the Santa Monica Unified School District is listed at the Site address. Franklin School and Santa Monica Malibu Unified School District are listed in 1962, 1965, 1970, 1975, 1991, and 2000. Santa Monica-Malibu Unified School District Children's Centers & Extended Daycare is listed in 1985, in addition to Santa Monica-Malibu Unified School District.

Nearby address listings include numerous individuals and a few commercial properties.

Neighboring Properties

The Site is bounded on the north by classrooms; on the northeast and east by an asphalt-paved playground; on the southeast by an asphalt-paved parking lot; on the southwest and west by an asphalt-paved alley; and on the southwest by a library. Local overhead electric lines were observed along the alley to the southwest of the Site.

Local Agency Review

LFR requested and/or reviewed records for the school address from the following local regulatory agencies, and also reviewed records for the Site at the SMMUSD office.

Santa Monica Environmental Programs (SMEP)

LFR requested information for the Site address from the SMEP. According to the SMEP, there were no records for the Site address.

California Regional Water Quality Control Board, Los Angeles Region (RWQCB)

LFR reviewed information from the State Water Resources Control Board (SWRCB) maintained for the State's RWQCBs on the Internet at http://www.geotracker.swrcb.ca.gov. The Site address is not listed on this database. In addition, LFR received correspondence from the RWQCB's Spills, Leaks, Investigations, and Cleanup (SLIC) Unit stating that they did not have any records of investigations at the Site address.

Department of Toxic Substance Control (DTSC)

LFR requested information from the DTSC regarding the Site address. According to the DTSC, there are no records for the Site.

Los Angeles County Department of Environmental Health, Public Health Investigations (PHI)

LFR requested information from the PHI regarding the Site. According to the PHI, there are no records for the Site.

Santa Monica Malibu School District Files (SMMUSD)

LFR reviewed files for the Site at the SMMUSD offices in Santa Monica. However, no environmental documents relevant to the Phase I environmental screening were found.

EDR Database Review

An environmental database report prepared by EDR was reviewed for local, state, and federal listings for properties within the site vicinity. Regulatory database lists were reviewed for cases pertaining to leaking USTs and aboveground storage tanks (ASTs), hazardous waste sites, and abandoned sites within the specified radii of standards established by the American Society for Testing and Materials (ASTM).

Onsite

Franklin Elementary is listed on the RCRA-SQG and FINDS databases. No violations are listed on the RCRA-SQG database, and the FINDS database is a pointer to other databases with more complete information and does not include any information.

Santa Monica-Malibu Unified School District is listed on the HAZNET database, which includes information obtained from copies of hazardous waste manifests received each year by the DTSC. The database lists asbestos-containing waste, and is likely related to an abatement program conducted in the 1990s. No further information is provided.

Offsite

This section discusses sites that, based on proximity and/or location relevant to the groundwater flow direction, may have the potential to impact the subject Site. No off-site facilities listed in the EDR report are anticipated to pose an environmental concern to the Site at this time.

Vicinity Review of Naturally Occurring Asbestos

Asbestos deposits can be found in many parts of California. The closest mapped rock outcrops that are likely to contain naturally occurring asbestos are located approximately 65 to 80 miles northwest of the Site in Santa Barbara County (DOC 2000, USGS 1969).

Based on the maps reviewed, outcrops of naturally occurring asbestos rocks are well beyond the 10-mile criterion, a distance criterion defined in the "Interim Guidance, Naturally Occurring Asbestos (NOA) at School Sites" (DTSC 2004).

It should be noted that certain rocks, which sometimes have associated asbestos when metamorphosed, are shown within 10 miles of the Site on the *Geologic Map of the Topanga and Canoga Park (South ½) Quadrangles* (Dibblee 1992). However, these rocks are described as intrusive dikes and sills, and are not indicated as metamorphosed. Due to the lack of metamorphism, these rocks have a low probability of associated asbestos.

Based on these observations, the potential for naturally occurring asbestos to be present on the Site is considered low.

Opinion

Onsite

No evidence of specific on-site releases was identified during this Phase I environmental screening. However, LFR identified the following Site and school features from past activities that may have the potential to impact the Site:

• Based on the original date of construction for the site buildings, the potential exists for LBP, termiticides, and/or asbestos-containing materials (ACMs) to be present at the Site. It is noted, however, that the Site was part of an asbestos abatement program conducted in the 1990s.

Offsite

A review of agency database information provided by EDR did not identify any off-site facilities that are likely to represent an environmental concern to the Site.

Conclusions and Recommendations

LFR has performed a Phase I environmental screening of the Site in accordance with our proposal to SMMUSD dated September 17, 2007. The findings and conclusions provided herein are based on information obtained from a site inspection, interviews with personnel familiar with the Site, local regulatory agency review, SMMUSD files, and review of a database report compiled by EDR.

This Phase I environmental screening has identified one recognized environmental condition (REC) that would appear to require additional investigation prior to the Site being approved for school use:

• Due to the presence of current and former structures on the Site, DTSC will likely require sampling for lead and termiticides (chlorinated pesticides) in soil. DTSC typically requires lead sampling anytime a structure that was constructed prior to the ban of LBP in the late 1970s/early 1980s is present at a site, or termiticide sampling anytime a structure that was constructed prior to the ban of chlorinated pesticides in the late 1980s is present at a site. DTSC typically allows for sampling of these particular contaminants as part of a Phase I Addendum, thereby foregoing the traditional Preliminary Environmental Assessment (PEA) process.

If SMMUSD would like to continue considering this Site for potential school use, we recommend completion of a full Phase I Environmental Site Assessment (ESA) for the property, including collection of soil samples to address the potential for LBP and chlorinated pesticides (in accordance with DTSC guidance) and forwarding the ESA and sampling results to the DTSC for their review and approval.

LFR appreciates this opportunity to provide consulting services to the SMMUSD. If you have any questions concerning this project, or would like to discuss other environmental concerns, please contact either of the undersigned at (714) 444-0111.

Sincerely,

Shauna Head Staff Scientist
