PRELIMINARY ENVIRONMENTAL ASSESSMENT

HOPE ELEMENTARY SCHOOL EXPANSION PROJECT PORTERVILLE, TULARE COUNTY, CALIFORNIA (SITE CODE: 104883)

Prepared for:

HOPE ELEMENTARY SCHOOL DISTRICT

AUGUST 2024

August 26, 2024

Project Number: 2301-3641

Elizabeth "Liz" Tisdale, Project Manager
California Department of Toxic Substances Control
Northern California Schools Unit
8800 Cal Center Drive
Sacramento, California 95826-3200

Subject: Preliminary Environmental Assessment Report
Hope Elementary School Expansion Project
(Project Code: 104883)

Dear Ms. Tisdale:

Padre Associates, Inc. (Padre), on behalf of Hope Elementary School District and PlaceWorks, has prepared this Preliminary Environmental Assessment (PEA) Report for the Hope Elementary School Expansion Project, located at 613 West Teapot Dome Avenue in Porterville, Tulare County, California.

The PEA was completed in accordance with the California Environmental Protection Agency (CalEPA) Department of Toxic Substances Control (DTSC) approved PEA workplan titled: *Preliminary Environmental Assessment Workplan, Hope Elementary School Expansion Project, Porterville, Tulare County, California (Padre, July 2024)*.

The PEA results report will be made available to the public for review and comment pursuant to Option A of the California Education Code (CEC) §17213.1.a (6) (A). If you have any questions or require additional information, please contact the undersigned at (916) 333-5920 ext. 240 / 250.

Sincerely,
PADRE ASSOCIATES, INC.

Alan Churchill, P.G.
Senior Geologist

Alan J. Klein, R.E.P.A., C.P.E.S.C., QSD
Associate Senior Environmental Scientist

CC: Melanie Matta, Superintendent/Principal, Hope Elementary School District

EXECUTIVE SUMMARY

Padre Associates, Inc. (Padre), on behalf of Hope Elementary School District (District), has prepared this Preliminary Environmental Assessment (PEA) Report for the Hope Elementary School Expansion Project located at 613 West Teapot Dome Avenue in Porterville, Tulare County, California (Project Site).

The District plans to construct a new gymnasium, which will contain three classrooms for up to 60 students. The existing parking area will be expanded, and a fire lane added. In addition, a new playfield will be constructed on the east portion of the Project Site. The anticipated opening date is August 2027.

The PEA was conducted in accordance with the document titled: *Preliminary Environmental Assessment Workplan, Hope Elementary School, Expansion Project, Porterville, Tulare County, California (Site Code: 104883, (Padre, July 2024)*. The California Environmental Protection Agency (CalEPA) Department of Toxic Substances Control (DTSC) approved the PEA workplan in a letter dated July 11, 2024.

The PEA Report will be made available to the public for review and comment pursuant to Option A of the California Education Code (CEC) §17213.1.a (6)(A).

The purpose of the PEA was to establish whether a release or potential release of hazardous substances or naturally occurring material, which would pose a threat to human health via ingestion, dermal contact, and inhalation exposure pathways, exists at the Project Site. Chemicals of potential concern (COPC) identified at the Project Site included residual organochlorine pesticides (OCPs), arsenic, and lead from historic agricultural use; OCPs, petroleum hydrocarbons, metals, semi-volatile organic compounds (SVOCs), and naturally occurring asbestos (NOA) related to undocumented imported fill material; and petroleum hydrocarbons and metals related to a bus barn located west and adjacent to the Project Site that was constructed between 1977 and 1984.

Arsenic concentrations in soil ranged from 0.81 to 5.54 milligram per kilogram (mg/kg). Arsenic concentrations were compared to an arsenic data set from a school site located approximately 4 miles northwest of the Project Site. The property has a similar geologic setting (Pleistocene Nonmarine (Qc) sedimentary deposits) as the Project Site and consists of similar type soils (sandy loam). The arsenic concentrations at the background site ranged from 1.02 to 3.79 mg/kg. Arsenic concentrations identified in surface soil at the Project Site are comparable to background concentrations and further assessment and/or remedial action for arsenic in soil is not warranted.

Lead concentrations in soil ranged from 1.11 to 8.92 mg/kg in soil at the Project Site. Using DTSC's lead risk assessment spreadsheet model (*LeadSpread Version 9*), the model estimated a 90th percentile blood lead concentration of 0.1 µg/dl, which is below OEHHA's blood

toxicity level of 1 µg/dl. Therefore, further assessment and/or remedial action for lead in soil is not warranted.

Based on the findings of the PEA, the Project Site has not been adversely impacted by historic or current land-use activities. Therefore, Padre recommends the issuance of a “No Further Action” designation from the DTSC regarding the proposed Hope Elementary School Expansion Project.

1.0 INTRODUCTION

Padre Associates, Inc., on behalf of Hope Elementary School District (District), has prepared this Preliminary Environmental Assessment (PEA) report for the Hope Elementary School Expansion Project located at 613 West Teapot Dome Avenue in Porterville, Tulare County, California (Project Site). The Project Site is identified on **Plate 1-1: Site Location** and **Plate 1-2: Site Map**.

The District plans to construct a new gymnasium, which will contain three classrooms for up to 60 students. The existing parking area will be expanded, and a fire lane added. In addition, a new playfield will be constructed on the east portion of the Project Site. The anticipated opening date is August 2027.

The PEA was conducted in accordance with the document titled: *Preliminary Environmental Assessment Workplan, Hope Elementary School Expansion Project, Porterville, Tulare County, California Site Code: 104883, (Padre, July 2024)*. The California Environmental Protection Agency (CalEPA) Department of Toxic Substances Control (DTSC) approved the PEA workplan in a letter dated July 11, 2024. A copy of DTSC's approval letter is presented in **Appendix A**.

1.1 PURPOSE

California Department of Education statutes (Assembly Bill 387, Senate Bill 162, and Assembly Bill 2644) require the CalEPA/DTSC to review environmental assessments for proposed new school sites and/or new construction school expansion projects. The role of the DTSC is to ensure that selected properties do not contain hazardous substances or naturally occurring materials that are a threat to public health and the environment.

1.2 OBJECTIVES

This PEA was conducted consistent with the DTSC guidance manual for evaluation of hazardous substance release sites titled *Preliminary Endangerment Assessment Guidance Manual*, State of California, Environmental Protection Agency, January 1994 (Revised October 2015). Pursuant to 79055(a) (1) (C) et. seq. (formerly Health and Safety Code §25355.5 (a) (1) (C)), the activities were performed to fulfill the requirements of the Environmental Oversight Agreement (EOA) issued to the school district by CalEPA/DTSC. The objectives of the PEA included:

- Evaluating historical information for indications of past use, storage, disposal, and/or release of hazardous substances at the Project Site;
- Establishing through a field sampling and laboratory analysis program, the nature, concentration, and general extent of hazardous substances that may be present in soil and/or groundwater at the Project Site; and
- Estimating the potential threat to public health and the environment presented by

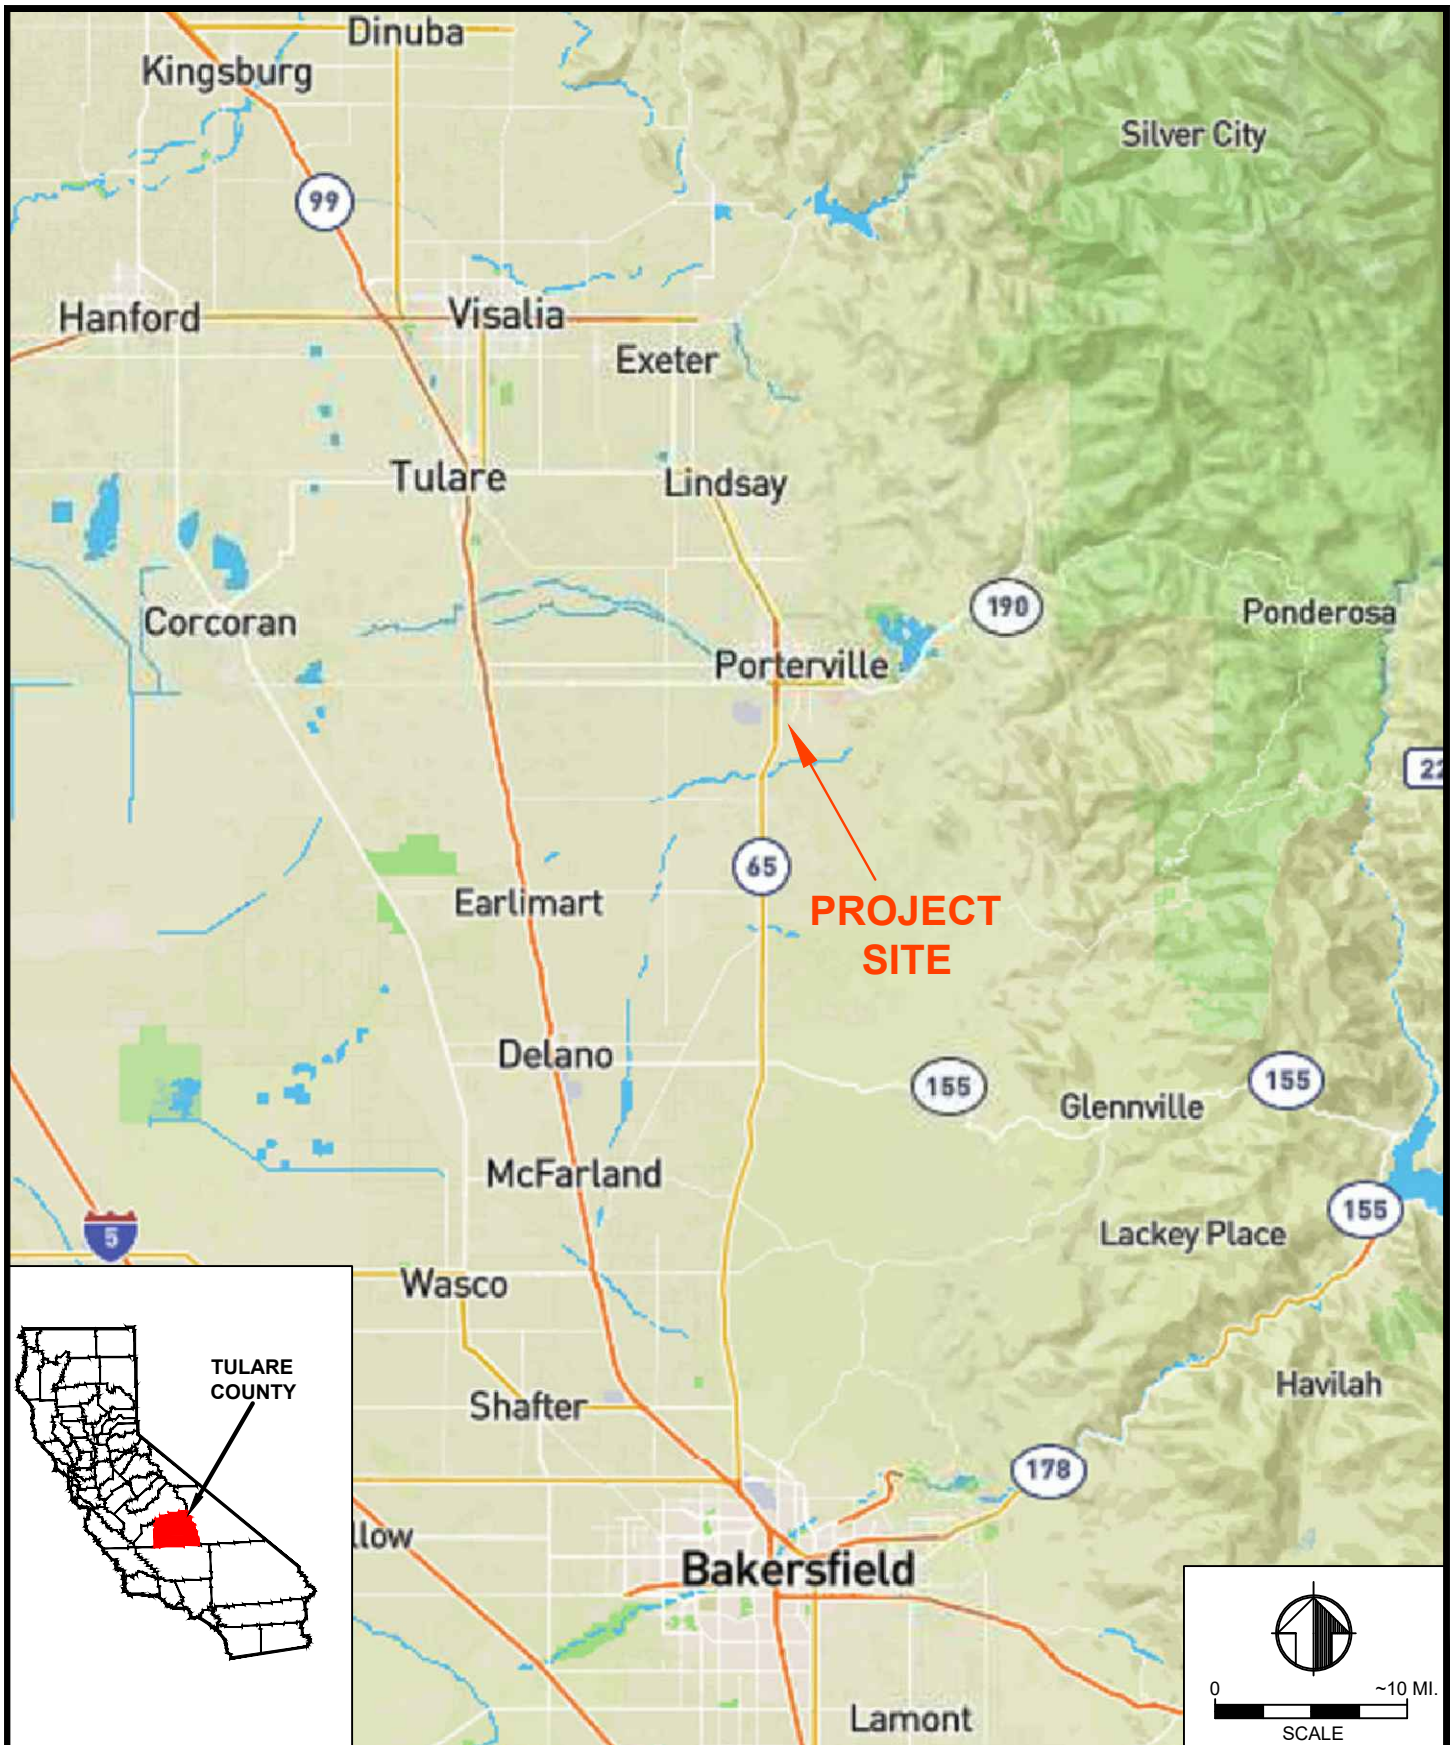

hazardous constituents identified at the property and providing an indicator of relative risk using a residential land-use scenario.

Based on information developed during the course of the PEA and the conservative human and ecological risk evaluation using the DTSC's *PEA Guidance Manual*, January 1994, (Revised October 2015), DTSC will then make an informed decision regarding potential risks posed by the Project Site.

Possible outcomes of the PEA decision include the issuance of a "No Further Action" finding if the risk level is found to be less than 1 in 1,000,000 ($>10^{-6}$) which is DTSC's "point of departure", and the health hazard index is less than 1.0. Additional outcomes may include the need for further assessment through the Remedial Investigation/ Feasibility Study (RI/FS) process if the Project Site presents a risk and/or health hazard; the need to perform a Removal Action if localized impacts by hazardous substances release(s) are found; or the abandonment of the Project Site as a potential school site and the pursuit of alternative sites.

1.3 PUBLIC PARTICIPATION

The PEA Report will be made available to the public for review and comment pursuant to Option A of the California Education Code (CEC) §17213.1.a (6)(A). When completed, public participation documentation will be submitted to DTSC under separate cover.

HOPE ELEM. SCHOOL EXPANSION PROJECT
 613 W. TEAPOT DOME AVENUE
 PORTERVILLE, CALIFORNIA

PROJECT NO. 2301-3641	DATE 8/20/24	DR. BY AC	APP. BY AJK
--------------------------	-----------------	--------------	----------------

PLATE 1-1
 SITE LOCATION

2.0 PROPERTY DESCRIPTION AND CONTACTS

2.1 SITE LOCATION AND ASSESSOR'S PARCEL NUMBER

The Project Site consists of approximately 2.2-acres of agricultural land that is a portion of a larger parcel of land (7.72-acres) identified by the Tulare County Assessor's Office as Assessor's Parcel Number (APN) 303-060-041. The Project Site is relatively flat and lies at an approximate elevation of 475-feet above mean sea level (amsl). A copy of the parcel map was presented in the PEA Workplan.

2.2 DESIGNATED CONTACT PERSON

Melanie Matta, Superintendent/Principal
Hope Elementary School District
613 Teapot Dome Avenue, Porterville, CA 93257
(559) 784-1064
mmatta@hope-esd.org

2.3 PROPERTY USE

The Project Site consists of an unpaved parking lot at the northwest portion and an active citrus orchard on the remaining portion.

2.4 ENVIROSTOR DATABASE NUMBER

The EnviroStor database number for the Project Site is 60003755.

2.5 TOWNSHIP, RANGE, AND SECTION

The Project Site is located in portion Section 14, Township 22 South, Range 27 East, of the Porterville, California USGS 7½-Minute topographic series, Quadrangle Map, 2021. The latitude and longitude near the approximate center of the Project Site are identified as:

- Latitude (North): 36° 01' 17.28" (36.021467)
- Longitude (West): -119° 01' 50.62" (-119.030728)

2.6 SITE MAPS

A site location map is included as **Plate 1-1**, and a site map is included as **Plate 1-2**.

2.7 PHYSICAL SETTING

Topography

Based on a site visit and a review of the USGS 7.5-minute topographic quadrangle – Porterville, California 2018, the Project Site is relatively level and situated at an approximate

elevation of 475 feet above mean sea level (amsl). Based on current site conditions rainfall would infiltrate into the exposed surface area of the Project Site. Surface drainage from excessive precipitation would be expected to flow north towards a drainage swale along West Teapot Dome Avenue.

Geology

The Project Site is located in the southeastern portion of the Great Valley Geomorphic Province. The Great Valley Geomorphic Province, a north-south trending valley, is approximately 400 miles long by 50 miles wide, and the southern portion of which is known as the San Joaquin Valley. The Project Site is located on the eastern flank of the San Joaquin Valley, west of the southern Sierra Nevada. The surface of the San Joaquin Valley is composed primarily of unconsolidated Pleistocene (1.6 million to 11,000 years ago) and Recent (11,000 years ago to the present) alluvial sediments. These lie unconformably on Mio-Pliocene, marine sediments, which extend to a crystalline basement at a depth of approximately 20,000 feet (Norris and Webb, 1990).

Stratigraphically, the subsurface of the Great Valley is complex, and is comprised of tens of thousands of feet of marine and non-marine sediments ranging in age from Jurassic to Recent. The sediments are important sources of groundwater and petroleum hydrocarbon resources (oil and gas). The relatively flat surface of the San Joaquin Valley is underlain by alluvial, lacustrine, and marine sedimentary deposits that accumulated as the structural trough formed as the adjacent mountain ranges were elevated through tectonic processes. The thickness of the sediments varies from a thin veneer along the valley margins to thousands of feet thick at the axis of the trough. The main axis of the trough is oriented north-south along the valley's main drainage axis.

According to the *Geologic Map of California – Fresno Sheet (1965)*, *California Geological Survey*, the Project Site is underlain by the quaternary age Pleistocene Nonmarine (Qc) sedimentary deposits.

Soils

According to the United States Department of Agriculture, Soil Conservation Service's, Soil Survey of Tulare County, California, Central Part dated February 1982, the surface soil at the Project Site includes San Joaquin loam, 0 to 2 percent slopes and San Joaquin loam, 2 to 9 percent slopes in the north portion of the Project Site.

San Joaquin loam, 0 to 2 percent slopes consists of moderately deep, well drained soils which formed on terraces in alluvium derived from weathered granitic rock sources. Typically, the surface layer is brown and reddish-brown loam, moist, hard, slightly sticky and slightly plastic about 13 inches thick. The subsoil is reddish-brown sandy clay loam and clay 12 inches thick. Below the subsoil is a yellowish-red hardpan about 31 inches thick. Below the hardpan is brown, stratified sandy loam and loam to a depth of 78 inches. Permeability is very slow and the surface runoff is slow.

San Joaquin loam, 2 to 9 percent slopes consists of moderately deep, well drained soils which formed on terraces in alluvium derived from weathered granitic rock sources. Typically, the surface layer is brown and reddish-brown loam about 13 inches thick. The subsoil is reddish-brown sandy clay loam and clay 12 inches thick. Below the subsoil is a yellowish-red hardpan about 31 inches thick. Below the hardpan is brown, stratified sandy loam and loam to a depth of 78 inches. Permeability is very slow and the surface runoff is slow or medium.

Groundwater

According to the California Department of Water Resources (<https://wdl.water.ca.gov/>), groundwater level data for a water well (22S27E10R001M) located approximately 0.25 west of the Project Site, the depth to groundwater is greater than 100 feet below grade surface. Based on regional topographic maps, groundwater is inferred to flow northwesterly.

3.0 BACKGROUND

3.1 SITE HISTORY

The Project Site has been owned by the District since 2005 and consists of approximately 2.2-acres of agricultural land that is a portion of a larger parcel of land (7.72-acres) identified by the Tulare County Assessor's Office as Assessor's Parcel Number (APN) 303-060-041. The Project Site was previously owned by Laux Land Company.

Based on a review of aerial photographs the Project Site has been in agriculture-use since at least the 1950s through to the present day. There are no building structures currently or historically identified at the Project Site. The northwest portion of the Project Site (approximate 0.6 acres) was converted into an unpaved parking area circa 2011/2012 to support modernization activities at the adjacent school site.

Padre completed a reconnaissance of the Project Site on December 6, 2023. The Project Site is generally flat and includes an unpaved parking area and an active citrus orchard. The unpaved parking area consists of approximately 0.6 acres and is located at the northwest portion of the Project Site. The remaining portion of the Project Site is part of a larger citrus orchard. No water wells or electrical transformers were observed at the Project Site. The active citrus orchard is currently leased to Prado Farm Labor Services.

Pesticide-use permits for the Project Site were provided by the Tulare County Agricultural Commissioner. Chemical application permits were issued to Sergio Prado for the years 2020 through 2023. None of the listed chemicals were identified as OCPs, and once applied these chemicals are known to readily experience biodegradation and photodegradation. The list of chemical use in the orchard area of the Project Site was presented in the PEA Workplan (Padre, July 2024).

A review of the Environmental Data Resources (EDR) Radius Map Report did not identify facilities in the database records search within a one-mile radius of the Project Site that present a recognized environmental concern (REC) to the Project Site. According to the EDR Environmental Lien Search, no environmental liens or AULs were identified for the Project Site. A review of DTSC's Envirostor Database and the State Water Resources Control Board's (SWRCB) GeoTracker website, did not identify any facilities in the databases that present a REC to the Project Site.

3.2 SURROUNDING PROPERTY LAND USE

The Project Site is bordered to the north by West Teapot Dome Avenue, beyond which are residences and agricultural land; to the east and south by orchards; and to the west by Hope Elementary School.

A review of the EDR Radius Map Report, DTSC's Envirostor database, and the SWRCB's Geotracker database did not identify facilities in the database records search within a one-mile radius of the Project Site that present a REC to the Project Site.

3.3 CHEMICALS OF POTENTIAL CONCERN

The chemicals of potential concern (COPC) identified at the Project Site are based on current site conditions and historic property use. This information is summarized below:

- Organochlorine pesticides (OCPs), arsenic and lead in soil from agriculture-use with the presence of orchards (1930s – present day);
- No historic building structures have been identified to have occupied the Project Site;
- An unpaved parking area was constructed at the northwest portion of the Project Site circa 2011/2012 to support modernization activities for the adjacent school site. The source of this import material is unknown. Therefore, undocumented import fill material will be assessed for the presence of OCPs, petroleum hydrocarbons, metals, semi-volatile organic compounds (SVOCs), and naturally occurring asbestos (NOA);
- There is a building located approximately 6- to 7-feet west of the Project Site that was constructed between 1977 and 1984. The building is steel framed with corrugated metal roofing and siding (unpainted) and sits on a concrete slab foundation. The building is used for general maintenance of the District's school buses and as a school equipment storage area. Therefore, Project Site soil located adjacent to this structure will be assessed for the presence of petroleum hydrocarbons and metals;
- According to the *California Geological Survey (CGS) Map of California – Fresno Sheet (1966, fourth printing 1991)*, the occurrence of small ultrabasic outcrops has been identified approximately 2.5 to 4 miles northeast, east, and southeast of the Project Site. The Project Site is not situated within the drainage (Tule River, Deer Creek) of these outcrops. Additionally, several proposed school sites (Envirostor Nos. 60000281 in the Porterville area and located in the drainage of these outcrops have been assessed for the presence of NOA. According to reported analytical results soil samples did not contain concentrations of NOA at concentrations requiring further DTSC action. The sites reviewed included *Alta Vista Potential School Site* (Envirostor No. 60000281); the *Proposed Morton School Site* (Envirostor No. 60000280); and the *Future K-8 Site on Newcomb* (Envirostor No. 60002413) located in the drainage of the ultrabasic outcrops. Therefore, sampling for NOA in native soil is not proposed;
- According to the U.S. EPA map of California radon zones, Tulare County is identified as a Zone 2 (orange) county. Zone 2 counties have a predicted average indoor radon screening level greater than 2 pCi/L and less than 4 pCi/L. According to the California database of indoor radon levels for Tulare County (zip Code: 93257), 23 out of 150 site radon tests exceeded 4.0 pCi/L. Therefore, the potential for radon hazard at the Project Site is considered moderate and is dependent on site-design and building construction specifications; and

-
- The Project Site will be provided potable and irrigation water from a groundwater well located at the adjacent school site. The school's potable water system (Water System No. 5400994) is regulated by the California State Water Resources Control Board (SWRCB) Drinking Water Division and appears to be in compliance with drinking water standards. Therefore, the assessment of groundwater at the Project Site is not proposed. A copy of the 2022 Consumer Confidence Report along with water quality test results for the well are presented in PEA Workplan.

4.0 CONCEPTUAL SITE MODEL

The conceptual site model is the tool used to identify the primary sources of COPC identified at the Project Site, release mechanisms for the COPC, points of exposure at the Project Site, and the exposure pathways (ingestion, inhalation, and dermal contact) for the screening level evaluation of chronic health risks. The objective of this PEA is to evaluate the Project Site for an unrestricted land use (residential) scenario.

There are several ways a receptor may be exposed to COPC (i.e., pesticides, metals, etc.). Receptors can include humans, animals, vegetation, surface water, and/or groundwater. Typical pathways for exposure to COPC include:

- Physical transport via tracking chemicals of concern on people, clothing, and/or equipment; and
- Transport by airborne particulate matter.

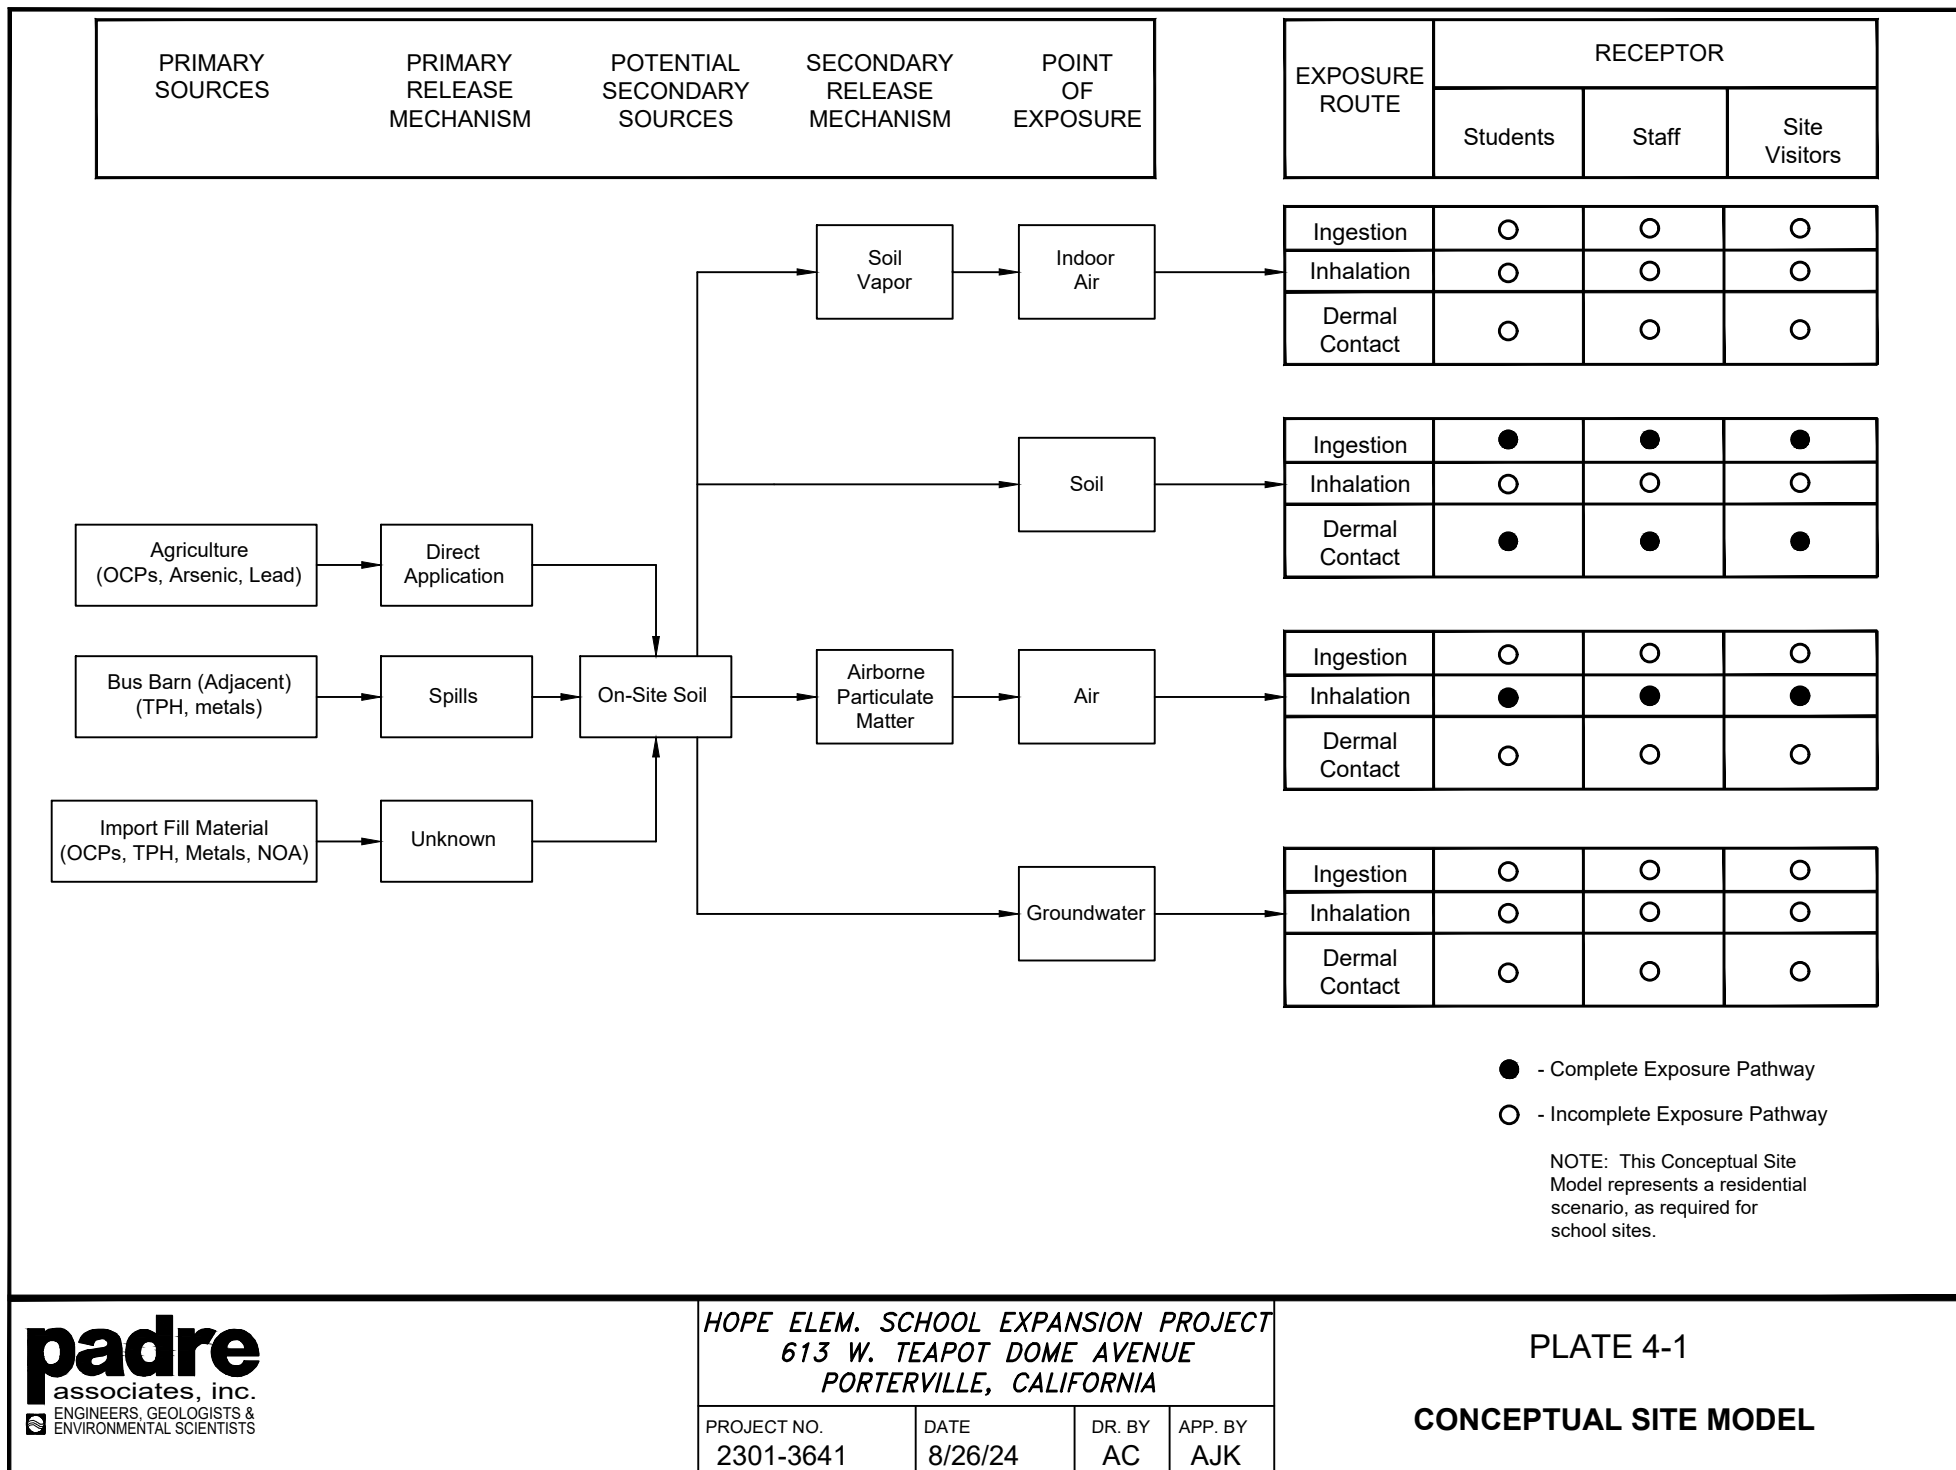

For humans and animals, exposure usually occurs by the following exposure routes:

- Ingestion or inhalation of contaminated soil particles; and
- Dermal contact with contaminated soil particles.

The conceptual site model for the Project Site was developed based on the following assumptions:

- Exposure of students, staff, and site visitors to COPC in soil via the ingestion and dermal contact routes is considered a complete exposure pathway;
- Exposure of students, staff, and site visitors to COPC in airborne particulate matter via the inhalation route is considered a complete exposure pathway;
- Exposure of students, staff, and site visitors to COPC in soil vapor via the inhalation route is considered an incomplete exposure pathway;
- Potable and irrigation water will be provided to the Project Site from an existing groundwater well located at the adjacent school site. The school's water system is regulated by the California State Water Resources Control Board (SWRCB) Drinking Water Division. Therefore, further assessment of groundwater beneath the Project Site is not proposed;
- Surface water was not observed at the Project Site. Therefore, exposure to surface water at the Project Site is an incomplete exposure pathway; and
- Ingestion of vegetation and animals is considered an incomplete exposure pathway because of the proposed use as a school site.

A conceptual site model is presented on **Plate 4-1**.

5.0 PEA ASSESSMENT

The PEA soil sampling activities were completed on July 24, 2024, in general accordance with the DTSC approved PEA workplan dated July 11, 2024. Prior to initiating field activities for the PEA, a field activities notification letter presented on District letterhead was delivered to nearby residents (line-of-sight) and posted at the Project Site. Site photographs are presented in **Appendix B** and a copy of the Health & Safety Plan is presented in **Appendix C**.

5.1 SAMPLE LOCATIONS

Sample locations were identified using an EOS Arrow 100 handheld electronic navigating device operating with the United States Government's Global Positioning Satellite system. The GPS coordinates for the soil sample locations are presented in **Table 5-1**. The field sampling schedule is presented in **Table 5-2** and the sample collection information is presented in **Table 5-3**. Specific soil sample locations and sample depths are described below:

5.1.1 Soil Sampling

Based on site conditions and DTSC's sampling guidance documents the following sampling plan was implemented:

Citrus Orchard

Based on the approximate acreage of the citrus orchard (1.6 acres), four (4) discrete soil samples were collected within the orchard portion of the Project Site. The discrete soil samples were collected from surface to approximate depths of 0.5-feet and chemically analyzed for the presence of OCPs, arsenic, and lead. Soil sample locations are presented on **Plate 5-1**.

Import Fill Material

The northwest portion of the Project Site (approx. 0.6 acres) was improved as an unpaved parking area to support construction activities at the adjacent elementary school in the years 2011/2012. The source of the import material (decomposed granite?) is unknown. Therefore, four discrete soil samples were collected from approximate depths of surface to 0.5-feet bgs within the import fill material. The discrete soil samples were analyzed for the presence of OCPs, total petroleum hydrocarbons (TPH) identified as gasoline, diesel, motor oil, CAM 17 metals, SVOCs, and NOA. Soil sample location areas are presented on **Plate 5-1**.

Bus Barn (Adjacent)

There is a building located approximately 6- to 7-feet west of the Project Site that was constructed between 1977 and 1984. The building is steel framed with corrugated metal roofing and siding (unpainted) and sits on a concrete slab foundation. The building is used for general maintenance of the District's school buses and as a school equipment storage area. Therefore, adjacent to the

building, two soil samples were collected from approximate depths of 1.0- to 1.5-feet which is slightly below grade with the buildings concrete flooring and into native soil. The samples were chemically analyzed for the presence of TPH (identified as gasoline, diesel fuel, and motor oil) and CAM 17 metals. Soil sample locations are presented on **Plate 5-1**.

5.1.2 Quality Analysis/Quality Control Samples

For quality assurance/quality control (QA/QC), approximately 10% of the discrete soil samples were analyzed as duplicate soil samples. Padre requested the analytical laboratory to split selected soil samples to be chemically analyzed as duplicates for OCPs, arsenic, and lead. One equipment blank sample and one field blank sample per soil sampling event (water samples) were also collected and analyzed for the presence of arsenic and lead.

5.2 SAMPLE COLLECTION

5.2.1 Soil Sample Collection

Surface and subsurface soil samples were collected using hand sampling tools including a hand pick and auger. Soil sampling equipment was decontaminated prior to use at each sample collection location and sampling event. Soil samples were collected in 2-inch x 6-inch stainless steel sleeves and sealed with plastic end caps. Surface soil was loosened with the hand pick and placed into the sample sleeves. Soil cuttings will be placed back in the hole after sample collection. Field sampling methods conformed to guidelines set forth in the site-specific Health and Safety (Appendix C).

The soil samples were sealed, labeled, and preserved on ice in the field. After completion of soil sampling activities, the soil samples were transferred to a State-certified analytical laboratory under chain-of-custody protocol for chemical analyses. Field sampling methods conformed to guidelines set forth in the Health and Safety Plan (Appendix C).

5.2.2 Decontamination Procedures

Equipment that came into contact with potentially contaminated soil was decontaminated consistently so as to assure the quality of samples collected. Disposable equipment intended for one-time use was not decontaminated but packaged for appropriate disposal. Decontamination occurred prior to and after each use of a piece of equipment. All sampling devices used were decontaminated using the following procedures:

- Non-phosphate detergent and tap water wash, in a 5-gallon plastic bucket, using a brush;
- Deionized/distilled water rinse, in a 5-gallon plastic bucket; and
- Final deionized/distilled water rinse in a 5-gallon plastic bucket.

At the completion of sampling activities, the small amount of wash water was dispersed to the field area and allowed to infiltrate/evaporate. The wash water consisted of water, non-phosphate detergent, and a small amount of surface soil.

5.3 SAMPLE ANALYSES

The laboratory analytical program schedule is summarized in **Table 5-2**. Analytical methods, types of containers, preservative, and holding times are summarized in **Table 5-3**. The laboratory analytical program will consist of chemical analyses of soil samples collected from the Project Site for the presence of:

- OCPs by U.S. Environmental Protection Agency (EPA) Method 8081B;
- Arsenic and Lead by U.S. EPA Method 6020;
- TPH (-g, -d, -mo) by U.S. EPA Method 8015M;
- CAM 17 Metals by U.S. EPA Method 6000/7000 series;
- SVOCs by U.S. EPA Method 8270; and
- NOA by PLM and TEM.

Equipment blanks (water sample) and field blanks (water sample) were also collected and analyzed for the presence of arsenic and lead by U.S. EPA Method 200.8.

5.3.1 Chain-of-Custody Records

Chain-of-custody (C-O-C) records are used to document sample collection and shipment to the laboratory for analysis. A C-O-C record accompanied all samples shipped for analysis. Form(s) were completed and sent with the samples for each laboratory and each shipment. If multiple coolers were sent to a single laboratory on a single day, C-O-C form(s) were completed and sent with the samples for each cooler. The C-O-C record identified the contents of each shipment and maintained the custodial integrity of the samples. Generally, a sample was considered to be in someone's custody if it was either in someone's physical possession, in someone's view, locked up, or kept in a secured area that was restricted to authorized personnel. Until receipt by the laboratory, the custody of the samples was the responsibility of the sample collector.

5.4 FIELD VARIANCES

The import fill material located in the northwest portion of the Project Site was anticipated to be approximately 1-foot in depth. During field assessment activities, the import material was identified to be approximately 6- to 7-inches in depth. Therefore, samples collected of the import material ranged from surface to 0.5-feet.

Test Method	Sample Depth	Number of Samples	Sample Location	Submittal Status
Bus Barn				
TPH by U.S. EPA Method 8015	Below grade of concrete flooring: (1.0-1.5 feet)	2 (discrete)	BB-1 and BB-2	Analyze
CAM 17 Metals by U.S. EPA Method 6020/7010	Below grade of concrete flooring: (1.0-1.5 feet)	2 (discrete)	BB-1 and BB-2	Analyze
QA/QC Samples (water)				
Arsenic and Lead by U.S. EPA Method 200.8	Not Applicable	1 per day	Equipment Blank (EB-1, etc.)	Analyze
		1 per day	Field Blanks (FB-1, etc.)	Analyze

Notes:

OCP – Organochlorine pesticides
TPH – Total petroleum hydrocarbons
SVOC – Semi-volatile organic compounds
NOA – Naturally occurring asbestos
CARB – California Air Resources Board
PLM – Polarized Light Microscopy
TEM – Transmission Electron Microscope

Table 5-3. Sample Collection Information

Sample Matrix and Test Method	Container	Preservative	Holding Time From Sample Collection to Extraction
Soil			
OCPs U.S. EPA Method 8081A	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	Ice	14 days
Arsenic U.S. EPA Method 6020	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	Ice	180 days
Lead U.S. EPA Method 6020	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	Ice	180 days
TPH (-g, -d, -mo) U.S. EPA Method 8015m	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	Ice	14 days
SVOCs U.S. EPA Method 8270	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	Ice	14 days
CAM 17 Metals U.S. EPA Method 6000/7000 series	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	Ice	180 days
NOA CARB 435 by PLM	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	None	60 days
NOA CARB 435 by TEM	2-inch x 6-inch stainless steel sample sleeves and plastic end caps	None	60 days
Water			
Arsenic and Lead U.S. EPA Method 200.8	250 mL poly bottle	HNO ₃ / Ice	180 days

Notes:

OCPs – organochlorine pesticides

TPH – total petroleum hydrocarbons

SVOCs – Semi-volatile organic compounds

NOA – naturally occurring asbestos

HNO₃ – Nitric Acid

6.0 FINDINGS

The following sections describe the results of the PEA field activities performed by Padre at the Project Site. The following subsections describe soil sample analytical results, locations, and depth intervals for soil samples collected at the Project Site.

The laboratory analytical results are summarized in **Tables 6-1** through **6-4**. Arsenic in soil results are presented in **Plate 6-1** and lead in soil results are presented in **Plate 6-2**. Certified analytical laboratory reports and chain-of-custody documentation are provided in **Appendix D**.

6.1 SOIL RESULTS – CITRUS ORCHARD

The laboratory analytical results for soil samples collected from the citrus orchard are as follows:

- OCPs were not identified at or above their respective reporting limits.
- Arsenic concentrations ranged from 3.35 to 4.12 milligrams per kilogram (mg/kg).
- Lead concentrations ranged from 5.14 to 8.92 mg/kg.

6.2 SOIL RESULTS - IMPORT FILL MATERIAL

The laboratory analytical results for soil samples collected from the area of import fill material are as follows:

- OCPs were not identified at or above their respective reporting limits.
- TPH (-g, -d, -mo) was not identified at or above their respective reporting limits.
- SVOCs were not identified at or above their respective reporting limits.
- NOA was not detected at or above the 0.25% asbestos type sensitivity level by PLM.
- NOA was not detected at or above the 0.01% asbestos type sensitivity level by TEM.
- Arsenic concentrations ranged from 0.810 to 1.86 mg/kg.
- Lead concentrations ranged from 1.11 to 1.63 mg/kg.
- All other CAM 17 Metals were well below their respective Risk Screening Levels (RSLs).

6.3 SOIL RESULTS – BUS BARN (ADJACENT)

The laboratory analytical results for soil samples collected from the area adjacent to the bus barn are as follows:

- TPH (-g, -d, -mo) was not identified at or above their respective reporting limits.
- Arsenic concentrations ranged from 2.71 to 5.54 mg/kg;
- Lead concentrations ranged from 3.34 to 6.49 mg/kg;
- All other CAM 17 Metals were well below their respective RSLs.

6.4 QA/QC SAMPLES

6.4.1 Equipment Blank

For each sampling event, distilled water was used as rinseate for decontaminating soil sampling equipment. The equipment blank sample was collected by pouring rinseate water over and through recently cleaned equipment and collected directly into the appropriate sample container.

The equipment blank sample was chemically analyzed for arsenic by U.S. EPA Method 200.8. The results of the laboratory analysis did not identify the presence of arsenic or lead at or above the analytical reporting limit of 1.0 micrograms per liter (µg/L).

6.4.2 Field Blank

For each sampling event, distilled water was used as rinseate for decontaminating sampling equipment. The field blank sample was collected by pouring rinseate water into the appropriate sample container.

The field blank sample was chemically analyzed for arsenic by U.S. EPA Method 200.8. The results of the laboratory analysis did not identify the presence of arsenic or lead at or above the analytical reporting limit of 1.0 µg/L for field blank samples.

6.5 LABORATORY QA/QC and DATA VALIDATION

Eurofins Calscience, located in Tustin, California provided the required chemical analyses for soil and water samples collected at the Project Site. Eurofins Calscience is certified (No. 3082) by the State of California Environmental Laboratory Accreditation Program (ELAP) Branch to provide the required chemical analyses.

EMSL Analytical, Inc. (EMSL) located in San Leandro, California provided the required NOA analyses for soil samples collected at the Project Site. EMSL is certified (No. 1620) by the State of California ELAP Branch to provide the required analyses.

A cover letter with the signature of the laboratory director accompanies every laboratory report received for this project. According to the lab director, samples were analyzed utilizing EPA or other ELAP approved methodologies, and that the results are in compliance both technically and for completeness. The data quality objectives (DQO) met by the analytical laboratory for this project were level II.

6.5.1 Precision

Precision measures the reproducibility of repetitive measurements. It is strictly defined as the degree of mutual agreement among independent measurements as the result of repeated application of the sample process under similar conditions.

Analytical precision is a measurement of the variability associated with duplicate or replicate analyses of the same sample in the laboratory and is determined by analysis of laboratory quality control samples such as duplicate control samples (LCSD or DCS), matrix spike duplicates (MSD), or sample duplicates. If the recoveries of analytes in the specified control samples are comparable within established control limits, then precision is within limits.

Total precision is a measurement of the variability associated with the entire sampling and analytical process. It is determined by analysis of duplicate or replicate field samples, and measures variability introduced by other than laboratory and field operations. Field duplicate samples are analyzed to assess field and analytical precision.

Duplicate results are assessed using the relative percent difference (RPD) between duplicate measurements. If the RPD for laboratory quality control samples exceeds 30 percent, data shall be qualified as described in the applicable validation procedure. If the RPD between primary and duplicate field samples exceeds 100 percent for soil, data shall be qualified as described in the applicable validation procedure. The RPD shall be calculated as follows:

$$\% \text{ RPD} = 100\% \times \frac{\text{Abs}(X_2 - X_1)}{\text{Avg}(X_2 + X_1)}$$

Where X_2 is the larger of the two observed values, and X_1 is the smaller of the two observed values. The RPDs for selected original and duplicate soil samples are calculated in the following tables.

OCPs

Sample Identification	DDD	DDE	DDT	Chlordane	Dieldrin
AG-3	<5.0	<5.0	<5.0	<25	<5.0
AG-3 DUPE	<5.0	<5.0	<5.0	<25	<5.0
RPD (%)	0	0	0	0	0
Within Acceptable Range	Yes	Yes	Yes	Yes	Yes

Arsenic

Sample Identification	Original Sample (mg/kg)	Duplicate Sample (mg/kg)	RPD (%)	Within Acceptable Range
AG-2 (Surf)	3.41	3.35	1.78	Yes

Lead

Sample Identification	Original Sample (mg/kg)	Duplicate Sample (mg/kg)	RPD (%)	Within Acceptable Range
AG-1 (0-0.5')	5.67	6.19	8.77	Yes

The RPDs for the original and duplicate constituents are acceptable.

One sample was chemically analyzed as a duplicate for arsenic and lead. The RPDs for the original and duplicate samples are acceptable.

6.5.2 Accuracy

Accuracy of laboratory analyses was by laboratory control samples, surrogate standards, matrix spikes, and initial and continuing calibrations of instruments. Laboratory accuracy is expressed as the percent recovery (%R). Accuracy limits are statistically generated by the laboratory or required by specified EPA methods. If the percent recovery is determined to be outside of acceptance criteria, the data was qualified. The percent recovery was calculated as follows:

$$\%R = 100 \times \frac{X_s - X}{T}$$

where X_s is the measured value of the spike sample, X is measured value of the unspiked sample, and T is the true value of the spiked solution.

In general recoveries were within acceptance limits; however, if recoveries were outside of acceptance criteria, the data was qualified by the analytical laboratory.

6.5.3 Representativeness

Representativeness is the degree to which data accurately and precisely represent selected characteristics of the media sampled. Representiveness of data collection is addressed by the preparation of sampling and analyses programs. The PEA investigation had sufficient and the proper number of sample locations; incorporated the proper sampling methodologies; utilized the proper sample collection techniques and decontamination procedures; utilized the proper laboratory methods to prepare and analyze soil/water samples; and performed proper field and laboratory QA/QC protocols.

6.5.4 Completeness

Completeness is the amount of valid data obtained compared to the amount that was expected under ideal conditions. The number of valid results divided by the number of possible results, expressed as a percentage, determines the completeness of the data set. The objective for completeness is to recover at least 90 percent of the planned data to support field efforts. The formula for is completeness is presented below:

$$\% \text{ Completeness} = 100 \times \frac{\text{number of valid results}}{\text{number of expected results}}$$

The analytical data for the soil and water samples is 100% complete.

6.5.5 Comparability

Comparability is an expression of confidence with which one data set can be compared to another data set. The objective of comparability is to ensure that data developed during the PEA investigation are comparable to site knowledge and adequately address applicable criteria or standards established by DTSC or the U.S. EPA. The laboratory methods that were utilized during this PEA investigation are consistent with the current standards of practice as approved by the DTSC and the USEPA.

6.5.6 Reporting Limits

Laboratory detection limits for the proposed analytical methods were presented in the PEA Workplan dated July 2024 and approved by DTSC. The detection limits for OCPs, TPH, SVOCs, and metals were met by the analytical laboratory.

6.5.7 Chain-of-Custody

Completed chain-of-custody forms were provided with the samples upon sample delivery to Eurofins and EMSL. Copies of the chain-of-custody forms were included in the final analytical report. No discrepancies were noted by the analytical laboratory.

6.5.8 Holding Time(s)

All soil and/or water analyses requested from the analytical laboratories (Eurofins and EMSL) were performed within the method-specific holding times.

NA – Not Analyzed

7.0 HUMAN HEALTH SCREENING-LEVEL EVALUATION

7.1 CHEMICALS OF POTENTIAL CONCERN

Based on the laboratory analytical results for soil samples collected at the Project Site, the following chemicals of potential concern (COPC) were evaluated for risk assessment purposes:

- Metals – Arsenic and Lead

Arsenic concentrations in soil ranged from 0.81 to 5.54 mg/kg. Arsenic concentrations were compared to an arsenic data set from a PEA report for a school site (Envirostor ID: 60000280) and located approximately 4 miles northwest of the Project Site. The property has a similar geologic setting (Pleistocene Nonmarine (Qc) sedimentary deposits) as the Project Site and consists of similar type soils (sandy loam). The arsenic concentrations at the background site ranged from 1.02 to 3.79 mg/kg. In general, arsenic concentrations identified in surface soil at the Project Site are comparable to background concentrations and further assessment and/or remedial action for arsenic in soil is not warranted. A copy of the background arsenic concentrations is presented in **Appendix E**.

Lead concentrations in soil ranged from 1.11 to 8.92 mg/kg in soil at the Project Site. A risk assessment was performed using the DTSC lead risk assessment spreadsheet model (*LeadSpread Version 9*). Based on the LeadSpread output, exposure to the lead concentrations detected at the Project Site will result in a 90th percentile blood lead concentration of 0.1 micrograms per deciliter (µg/dl) in children which is below the California Office of Environmental Health Hazard Assessment (OEHHA) blood toxicity level of 1 µg/l. Therefore, further assessment and/or remedial action for lead in soil is not warranted. A copy of the LeadSpread Risk Assessment Spreadsheet is presented in **Appendix F**.

8.0 ECOLOGICAL SCREENING

A detailed ecological screening evaluation was not performed during this PEA. Based on a review of aerial photographs the Project Site has been in agriculture-use since at least the 1950s through to the present day. The northwest portion of the Project Site (approximate 0.6 acres) was converted into an unpaved parking area circa 2011/2012 to support modernization activities at the adjacent school site. Therefore, based on the available information, there does not appear to be a significant pathway of exposure to nonhuman, sensitive ecological species.

9.0 CONCLUSIONS AND RECOMMENDATIONS

The purpose of the PEA was to establish whether a release or potential release of hazardous substances, which potentially pose a threat to human health via ingestion, dermal contact, and inhalation exposure pathways, exists at the Project Site.

Evaluation

Based on the laboratory analytical results for soil samples collected at the Project Site, the following COPC were evaluated for risk assessment purposes:

- Metals – Arsenic and Lead

Risk Assessment

Arsenic concentrations in soil ranged from 0.81 to 5.54 mg/kg. Arsenic concentrations were compared to an arsenic data set from a school site located approximately 4 miles northwest of the Project Site. The property has a similar geologic setting (Pleistocene Nonmarine (Qc) sedimentary deposits) as the Project Site and consists of similar type soils (sandy loam). The arsenic concentrations at the background site ranged from 1.02 to 3.79 mg/kg. Arsenic concentrations identified in surface soil at the Project Site are comparable to background concentrations and further assessment and/or remedial action for arsenic in soil is not warranted.

Lead concentrations in soil ranged from 1.11 to 8.92 mg/kg in soil at the Project Site. Using DTSC's lead risk assessment spreadsheet model (*LeadSpread Version 9*), the model estimated a 90th percentile blood lead concentration of 0.1 µg/dl, which is below OEHHAs blood toxicity level of 1 µg/dl. Therefore, further assessment and/or remedial action for lead in soil is not warranted.

Recommendations

Based on the findings of the PEA, the Project Site has not been adversely impacted by historic or current land-use activities. Therefore, Padre recommends the issuance of a "No Further Action" designation from the DTSC regarding the proposed Hope Elementary School Expansion Project.

PRELIMINARY ENVIRONMENTAL ASSESSMENT WORKPLAN – APPROVAL
LETTER, HOPE ELEMENTARY SCHOOL DISTRICT, HOPE ELEMENTARY SCHOOL
EXPANSION PROJECT, PORTERVILLE, TULARE COUNTY, CALIFORNIA
(PROJECT CODE: 104883)

Dear Ms. Matta:

The Department of Toxic Substances Control (DTSC) reviewed the final *Preliminary Environmental Assessment Workplan* (PEA Workplan – Padre Associates, Inc., July 10, 2024) received on July 10, 2024. The PEA Workplan includes project background information as well as proposed environmental investigation activities for a 2.2-acre expansion area for the Hope Junior High School located at 613 West Teapot Dome Avenue in Porterville, Tulare County, California (Site).

The PEA Workplan is approved.

If Site conditions differ from those presented in the approved PEA Workplan, additional work may be necessary. In accordance with Education Code section 17210.1(b), the Hope Elementary School District (District) shall provide written notice to businesses and residents in the immediate area, approved in form by DTSC, at least five days in advance of field investigation activities. The intent of this requirement is to provide advance notice

Ms. Melanie Matta
July 10, 2024
Page 2

of fieldwork such as drilling, sampling, and other environmental data collection activities to anyone who lives or works in the line of sight of the Site. Please notify DTSC a minimum of 48 hours in advance of fieldwork or schedule changes.

The PEA Workplan states that the District intends to make the Draft PEA Report available for public review in compliance with Option A of the Education Code section 17213.1(a)(6)(A). Pursuant to Education Code section 17213.1, subdivision (a)(6), at the same time the Draft PEA Report is submitted to DTSC for review, the District shall publish a DTSC-approved notice in a local newspaper of general circulation and post the notice in a prominent manner at the Site. The notice should state the District's intent of making the Draft PEA Report available for public review pursuant to Option A. A copy of the notice shall be submitted to DTSC with the Draft PEA Report.

If you have any questions regarding the project, please contact me at (916) 255-6666 or via email at Elizabeth.Tisdale@dtsc.ca.gov.

Sincerely,

Elizabeth Tisdale
Project Manager

APPENDIX C
HEALTH & SAFETY PLAN
(from Appendix F of the PEA Workplan)

APPENDIX F
SITE HEALTH AND SAFETY PLAN

Project Title: Preliminary Environmental Assessment (PEA) for the Hope Elementary School Expansion Project.

Project Address: 613 West Teapot Dome Avenue, Porterville, California.

Project Manager: Alan J. Klein Cell Phone: (916) 947-4831

Project Supervisor: Jerome K. Summerlin Cell Phone: (805) 218-0109

Office Phone: (916) 333-5920 (Sacramento Office) ext. 240.

INTRODUCTION

The purpose of this Site Health and Safety Plan (HSP) is to establish requirements for protecting the health and safety of site workers for the above-referenced project. The HSP contains safety information, instructions, and procedures.

ORGANIZATION

The following personnel are designated to carry out the stated job functions pertaining to the site activities. All site personnel have read this safety plan and are familiar with its provisions.

	Name	Signature
Site Safety Officer:	Alan Churchill	_____
Field Team Leader:	Matt Miller	_____
Field Personnel:		_____
Field Personnel:		_____
Field Personnel:		_____
Equipment Operator:		_____
Operator Helper:		_____

Work was accomplished in accordance with the Site Safety Plan, with the following exceptions: _____

Site Safety Office: _____

Date: _____

(RETURN ORIGINAL COPY TO JOB FILE WITH SIGNATURES)

EMERGENCY RESPONSE (DIAL 9-1-1)

Nearest phone:	On Padre staff.
Emergency Facility:	Sierra View Medical Center
Address:	465 W. Putnam Avenue, Porterville, CA 93257
Phone:	(559) 784-1110
Ambulance response time:	Approximately 12-minutes.

Fire and Police will also be contacted by dialing 911. Ambulance service is to be used in emergencies if the injured person cannot safely be transported by a Padre Associates, Inc., vehicle. When in doubt as to the severity of the situation, call 911. Driving directions to Memorial Medical Center Emergency Department and an illustrated map are located at the end of this HSP.

SITE DESCRIPTION

Location:	613 West Teapot Dome Avenue, Porterville, California.
Potential Hazards:	Soil containing organochlorine pesticides (OCPs), metals, total petroleum hydrocarbons (TPH), semi-volatile organic compounds (SVOCs), and naturally occurring asbestos (NOA).
Area of Interest:	Surface and shallow subsurface soil at the Project Site.
Surrounding Land Use:	Agricultural land (citrus orchards) and elementary school.
Topography:	Relatively flat.
Weather Conditions:	Expected temperatures 80-90 degrees.

PROJECT OBJECTIVE

The objectives of the environmental assessment program are to:

- Utilize hand sampling equipment to collect surface and subsurface soil samples across the Project Site; and
- Selected soil samples will be submitted to a certified analytical laboratory to be chemically analyzed for the presence of OCPs, metals, TPH, SVOCs, and NOA.

AGENCY REPRESENTATIVES

Name:	Elizabeth Tisdale, Project Manager
Agency:	California Department of Toxic Substances Control
Program:	Northern California Schools Unit
Phone Number:	(916) 255-6666

SITE SETUP

A safe perimeter will be established at the work Project Site. The work area will be restricted to required personnel only. No unauthorized personnel will be allowed within the established safe perimeter or will be allowed to enter the Project Site during field work activities. Control boundaries will be marked with caution tape (if necessary) to maintain the established safe perimeter. The onsite command post will be established at the Padre Associates, Inc. vehicle onsite.

HAZARD EVALUATION

Chemicals Onsite. The following substance(s) are known or suspected to be onsite. The primary hazards of each are identified along with their concentrations, if known.

Substance Involved	Primary Hazard	Concentration
OCPs in soil	Ingestion, inhalation, and dermal contact	Unknown
Arsenic in soil	Ingestion, inhalation, and dermal contact	Unknown
Lead in soil	Ingestion, inhalation, and dermal contact	Unknown
TPH in soil	Ingestion, inhalation, and dermal contact	Unknown
SVOCs in soil	Ingestion, inhalation, and dermal contact	Unknown
CAM 17 metals in soil	Ingestion, inhalation, and dermal contact	Unknown
NOA in soil	Ingestion, inhalation, and dermal contact	Unknown

Notes:

OCPs - Organochlorine Pesticides
TPH - Total Petroleum Hydrocarbons
NOA - Naturally Occurring Asbestos

Physical Hazards Onsite. The physical hazards and potential for employee exposure to the hazards (i.e., low, moderate, and high) anticipated during the field investigation are discussed below.

Heavy Equipment. The hazards involved with using heavy equipment (i.e., Geoprobe, pick-up trucks, backhoe) include hazards of pinch points; impact from moving parts; fatigue; and improper operation. Heavy equipment used during field activities will consist of pick-up trucks. The potential for incidents to occur from exposure to heavy equipment is considered low. Pre-cautions will be taken when working around heavy equipment. The following safe practices are to be followed during work around heavy equipment:

- While working onsite, wear reflective/visible safety vests, always maintain visual contact with the operator and remain alert.
- Never walk directly behind or to the side of heavy equipment without the operator's knowledge;
- All heavy equipment must be fitted with audible back-up alarms as mandated by OSHA;
- Blades, buckets, and other hydraulic systems will be fully lowered, and parking brakes engaged whenever equipment is not in use; and
- All non-essential personnel will be kept out of the work areas.

Heavy equipment other than pickup trucks is not anticipated for this project. Therefore, the potential for employee exposure to heavy equipment hazards during field activities is considered low.

Slips, Trips and Falls. Site activities can pose a variety of slip, trip and fall hazards. Examples that contribute to slips, trips and falls include uneven ground surfaces and slick or wet surfaces, and unstable earth slopes. The field activities will be conducted on a relatively level ground surface area. The immediate work area will remain clear of all sampling tools and equipment not in use.

Overhead and Underground Utilities. Typical site activities such as movement of equipment or intrusive activities such as excavations can present the risk of contact with overhead or underground utilities. Overhead utilities are not present at the Project Site. Soil collection activities will consist of using hand sampling equipment to collect surface and near surface soil samples. Therefore, the potential for employee exposure to utility hazards during field activities is considered low.

Heat Stress. High temperatures, direct sun, use of PPE, and labor-intensive activities may contribute to heat stress. Heat stress can involve a high risk of illness or death. Symptoms of heat stress or heat exhaustion include:

- Headaches, dizziness, lightheadedness, or fainting;
- Weakness and moist;
- Mood changes such as irritability or confusion;
- Upset stomach or vomiting.

Preventing heat stress while working outdoors includes:

- Know the signs/symptoms of heat stress, and monitor yourself and coworkers;
- Drink lots of water; about 1 cup every 15 minutes;
- Take regular breaks away from the sun;
- Wear lightweight, light colored, loose-fitting clothes;
- Avoid alcohol, caffeinated drinks, or heavy meals.

Treatment for heat related illness includes:

- Move the worker to a cool shaded area;
- Loosen or remove heavy clothing;
- Provide cool drinking water;
- Fan and mist the person with water;
- Call 911.

Field work is expected to be completed during June 2024. Therefore, the potential for employee exposure to heat stress hazards during field activities is considered moderate.

Fire and Explosion. Gas or sewer lines can contain hazardous levels of explosive or toxic gases, which may pose a fire risk. The risk of fire on site may also stem from the presence of vegetation, heat and fuel sources from construction equipment and site vehicles, or from the presence of combustible gases or vapors in contaminated soil and/or wells. Padre vehicles will be parked on unvegetated work areas. Therefore, the potential for exposure to fire and explosion hazards is considered low.

Traffic Hazards. Work activities along roadways, parking areas, and entrance and exit areas create exposure to traffic hazards. The Project Site consists of an unpaved parking area and citrus orchard. Field sampling activities will not be performed along or near roadways. Therefore, the potential for exposure to traffic hazards is considered low.

Biological Hazards. The Project Site consists of an unpaved parking area and citrus orchard. Therefore, there is a potential presence for a wide variety of insects, including bees, ticks and spiders that may be encountered. Stings from bees may cause serious allergic reactions in certain individuals. Ticks are parasites that feed on the blood of an animal/human host and can carry several severe diseases, causing fever and pain for several days and even brain damage. Poisonous snakes or spiders may also be encountered. Skin contact with certain plants (i.e., poison oak and poison ivy) may cause severe reactions. The best protection is skin coverage (long pants, long shirts, and gloves). Avoid wearing perfumes and scents.

GENERAL SAFETY RULES

1. There will be no eating, drinking, or smoking within the work areas of the PEA.
2. Fire extinguishers will be in nearby Padre staff vehicles.
3. First aid kits will be in nearby Padre staff vehicles.

EQUIPMENT

Personal Protective Equipment. Based on the evaluation of potential hazards, the level of protection deemed appropriate for this site is Level D. Field sampling activities will be conducted in such a manner as to limit the creation of dust during soil disturbance.

Level D equipment includes:

hard hat
steel toe and shank boots
safety glasses or goggles
gloves

Level C equipment includes:

- full or half face respirator
- dual cartridge with organic vapor/acid gas hepa filtration
- steel toe neoprene boots
- Tyvek suits
- latex inner gloves
- PVC outer gloves
- duct tape

DECONTAMINATION PROCEDURES

Level D - Decontamination. For Level D PPE work, the following personnel decontamination procedures must be observed by workers prior to rest breaks and upon leaving the exclusion zone:

1. Remove gross contamination from tools, monitoring equipment, boots, etc., prior to leaving the work site, using water, paper towels, Handi-Wipes®, etc.
2. Either completely decontaminate solid equipment at the work site using detergent and water (if possible) or wrap equipment in a plastic bag for transport until complete decontamination is possible.
3. Always follow established personnel decontamination procedures and remove contaminated gloves, paper towels, etc. by placing them in a plastic bag and arranging for proper disposal.
4. Wash hands and face (field wash) thoroughly with soap and water before lunch or coffee breaks, and as soon as possible after finishing work for the day.

MONITORING

Safety Monitoring

1. The designated Site Safety Officer is responsible for onsite safety recommendations during fieldwork activities.
2. A daily safety meeting will be conducted onsite by the Site Safety Officer prior to initiation of activities. The technical work plan will be discussed, and any other topic considered relevant by the Site Safety Officer.

Environmental Monitoring

1. The Site Safety Officer shall be notified of any onsite emergencies or potential hazards noticed by other site personnel. The Site Safety Officer is responsible for determining whether it is safe to proceed. If the Site Safety Officer does not or cannot make the determination, then the project manager shall be contacted prior to continuing with the investigation.
2. If any equipment onsite fails to operate properly, the Field Team Leader and Site Safety Officer shall be notified. It will be determined as to the effect of this failure on continuing

operations on the site. If the failure affects the safety of personnel or prevents completion of the work plan tasks, all personnel shall leave the job site until the situation is evaluated and appropriate actions taken.

Personal Monitoring.

The following personal monitoring will be in effect onsite:

- Site personnel will be observed by the Site Safety Officer to determine whether they are operating in a safe manner.

TRAINING REQUIREMENTS

All personnel will be up to date on the requirements set forth in 29 CFR 1910.120. It is the responsibility of the Corporate Health and Safety Coordinator to maintain the required annual 8-hour refresher training for all personnel. Padre's Corporate Health and Safety Coordinator is Mr. Andreas Wedderien (805) 644-2220 x19.

DISPOSAL OF WASTES DURING FIELD ACTIVITIES

Generated waste solids (gloves, bottles, wrappers, etc.) will be placed in plastic trash bag and removed from the Project Site and the end of day of field activities. Soil cuttings will be placed back into the bore holes; therefore, no waste solids will be stored onsite. At the completion of sampling activities, the small amount of wash water will be dispersed to the ground surface. The wash water will consist of water, non-phosphate detergent, and a small amount of surface soil.

ROUTE TO HOSPITAL

Directions

1. From the work area, head West on Teapot Dome Avenue (0.4 mi.);
2. Turn Right on CA-65 North (2.8 mi.);
3. Take exit for Olive Avenue (0.2 mi.);
4. Turn Left onto Putman Avenue (0.3 mi.);
5. Turn Right onto Putnam Avenue (0.7 mi.);

Arrive: Sierra View Medical Center, 465 W. Putnam Ave, Porterville, CA 93257

Drive Time: 4.5-miles in approximately 10-minutes.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative 570-193109-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 7/26/2024 9:40 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.0°C.

GC/MS Semi VOA

Method 8270C: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-466094 and analytical batch 570-466727 recovered outside control limits for the following analytes: Benzo[g,h,i]perylene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gasoline Range Organics

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Diesel Range Organics

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides

Method 8081A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-466360 and analytical batch 570-468193 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8081A: The continuing calibration verification (CCV) associated with batch 570-468193 recovered above the upper control limit for Chlordane and Toxaphene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: AG-3 (SURF) DUP (570-193109-15).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 570-467482 and 570-467599 and analytical batch 570-468126 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Padre Associates, Inc.
Project/Site: Hope Elementary School, Porterville, CA

Job ID: 570-193109-1

Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	3082	07-31-26
The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.			
Analysis Method	Prep Method	Matrix	Analyte
200.8	200.8	Water	Arsenic
200.8	200.8	Water	Lead
8081A	3546	Solid	alpha-Chlordane
8081A	3546	Solid	gamma-Chlordane
8270C	3546	Solid	1,2,4-Trichlorobenzene

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. Some samples may contain asbestos fibers present in dimensions below PLM resolution limits. EMSL suggests that samples reported as <0.25% or none detected undergo additional analysis via TEM.

EMSL maintains liability limited to cost of analysis. This report relies only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL is not responsible for sample collection activities or analytical method limitations. Interpretation and use of results are the responsibility of the client. Regulated asbestos includes the 6 Federally regulated types: chrysotile, amosite, crocidolite, actinolite, tremolite, and anthophyllite. Other minerals can include Libby Amphibole, Erionite, and other non-regulated minerals. A countable structure for this report would have substantially parallel sides, a length greater than or equal to 0.5 microns and meet the aspect ratio defined above. The reported mass percent may be statistically unreliable when the mass percent of the largest structure is high. Contact the laboratory for additional analytical options.
