 No Effect Determination (From CDFW)

Project Description

San Francisco International Airport (SFO or Airport) proposes improvements to portions of the Airport's existing 12- kilovolt (kV) electrical power distribution systems (proposed project) to maintain reliable electrical power at Airport facilities. The proposed project would replace and upgrade segments of the 12 kV electric utility cable networks that distribute power to the Airport's terminals and landside buildings. Based

on cable testing conducted by SFO in 2023 and 2024, the existing 12 kV cables are approximately 30 years old, are approaching the end of their serviceable lives, and are prone to failure. As such, SFO is proposing their replacement to maintain primary electrical power and redundancy and to minimize or avert a disruption of power, lighting, and telecommunications service to critical airport operations that may otherwise result from a failure of the electrical cable system.

The proposed project would involve removing and in-kind replacing electrical cables within an existing 12 kV underground concrete utility duct bank. An approximately 7,700-foot-long (1.5-mile-long) set of 12 kV cables would be removed and replaced between Substation BA, within the Airport's West of Bayshore (WOB) property, and manhole PD-B660, within a portion of the Airport area east of U.S. Highway 101. These electrical cables ultimately feed into electrical substations on Airport property for distribution to the Airport. Cable sets, each comprising a series of individual cables co-located in an existing Airport utility duct bank, would be removed from existing manholes and electrical stations and replaced.

Surface construction activities for the proposed project would include clearing vegetation, widening some existing vehicle access roads, and installing new gravel vehicle access roads on a portion of the WOB property. In addition, five permanent access pads surrounding the existing manholes on the WOB property would be installed, each totaling approximately 2,100 square feet (30 feet by 70 feet). Construction would also involve dewatering utility vaults accessible via manholes.

Determinations

The City and County of San Francisco decided to carry out or approve the project on February 18, 2026. The Final Mitigated Negative Declaration was issued on June 6, 2025. A copy of the document(s) may be examined at the Planning Department, 49 South Van Ness Avenue, Suite 1400, San Francisco, CA, 94103 in file no. 2024-005910ENV.

1. A Negative Declaration has been prepared pursuant to the provisions of CEQA. It is available to the public and may be examined at the Planning Department at the above address.
2. A determination has been made that the project in its approved form will not have a significant effect on the environment.
3. Mitigation measures were made a condition of project approval for the project.
4. A mitigation and monitoring reporting program was adopted for this project.
