 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   203 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =     67679.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    203 Source(s);       6 Source Group(s); and     568
Receptor(s)

                with:      1 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    200 VOLUME source(s)
                 and:      2 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  21112

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
```

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 8.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 4.4 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: OPS DPM.ERR

**File for Summary of Results: C:\LAKES\AERMOD VIEW\PROJECTS\LODI MAVERIK\OPS DPM\OPS DPM.SUM

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for     3 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =     67679.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: TOG

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:      3 Source(s);       4 Source Group(s); and     568
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      3 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  21112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
```

Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =   8.00 ; Decay
Coef. =   0.000   ; Rot. Angle =   0.0
                  Emission Units = GRAMS/SEC   ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =   3.6 MB of RAM.

 **Input Runstream File: aermod.inp

 **Output Print File: aermod.out

 **Detailed Error/Message File: OPS TOG.ERR

 **File for Summary of Results: C:\LAKES\AERMOD VIEW\PROJECTS\LODI MAVERIK\OPS

Maverik Lodi_Unmitigated Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

3. Construction Emissions Details

3.1. Site Preparation (2025) - Unmitigated

3.3. Grading (2025) - Unmitigated

3.5. Building Construction (2025) - Unmitigated

3.7. Paving (2025) - Unmitigated

3.9. Architectural Coating (2025) - Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Maverik Lodi_Unmitigated
Construction Start Date	1/1/2025
Operational Year	2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.40
Precipitation (days)	34.0
Location	38.11558923469829, -121.25499097307477
County	San Joaquin
City	Unincorporated
Air District	San Joaquin Valley APCD
Air Basin	San Joaquin Valley
TAZ	2146
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.28

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Convenience Market (24 hour)	5.98	1000sqft	0.14	5,982	0.00	—	—	—

Fast Food Restaurant with Drive Thru	3.00	1000sqft	0.07	3,003	0.00	—	—	—
Strip Mall	4.50	1000sqft	0.10	4,500	0.00	—	—	—
Fast Food Restaurant with Drive Thru	2.85	1000sqft	0.07	2,850	0.00	—	—	—
High Turnover (Sit Down Restaurant)	6.72	1000sqft	0.15	6,718	0.00	—	—	—
Supermarket	7.92	1000sqft	0.18	7,919	0.00	—	—	—
Parking Lot	327	1000sqft	7.50	0.00	17,204	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	24.2	annual days of extreme heat
Extreme Precipitation	3.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	0	0	0	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	1	1	1	2
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0

AQ-PM	52.5
AQ-DPM	71.9
Drinking Water	68.8
Lead Risk Housing	21.7
Pesticides	78.1
Toxic Releases	21.0
Traffic	47.3
Effect Indicators	—
CleanUp Sites	22.6
Groundwater	53.1
Haz Waste Facilities/Generators	47.6
Impaired Water Bodies	0.00
Solid Waste	35.7
Sensitive Population	—
Asthma	75.0
Cardio-vascular	84.2
Low Birth Weights	7.95
Socioeconomic Factor Indicators	—
Education	69.0
Housing	35.3
Linguistic	46.5
Poverty	63.8
Unemployment	39.2

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—

Above Poverty	46.55460028
Employed	66.08494803
Median HI	43.85987425
Education	—
Bachelor's or higher	17.25907866
High school enrollment	23.00782754
Preschool enrollment	57.19235211
Transportation	—

Foreign-born	38.8

Outdoor Workers	22.5
Climate Change Adaptive Capacity	—
Impervious Surface Cover	35.2
Traffic Density	48.5
Traffic Access	0.0
Other Indices	—
Hardship	58.1
Other Decision Support	—
2016 Voting	42.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	59.0
Healthy Places Index Score for Project Location (b)	45.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	No demolition, longer construction period.
Construction: Dust From Material Movement	Info from client.
Construction: Off-Road Equipment	—
Operations: Vehicle Data	Trip gen per traffic study. Assumed 50% pass-by trips and 50% diverted trips; per traffic study, "The Maverik Gas Station project is not likely to increase VMT significantly as majority of the motorists would utilize the facility on their way to another destination."
Operations: Fleet Mix	Parking Lot = Truck Stop trips (assumed 100% HHD)
Land Use	Based on site plan.

Executive Summary

Kimley-Horn and Associates, Inc. retained Rincon Consultants, Inc. (Rincon) to prepare a cultural resources technical report for the Maverik Lodi project (project) in Lodi, San Joaquin County, California. The project site is 10 acres, located at 4872 E. Kettleman Lane (San Joaquin County Assessor Parcel Number 061-020-150-000). The project involves the construction of a convenience store (5,982 square feet) with 14 fueling areas and a small-scale commercial center (24,990 square feet) with all associated parking, landscaping, and utility elements. The project is subject to the California Environmental Quality Act (CEQA). The City of Lodi is the lead agency under CEQA.

This assessment included a cultural resources records search of the California Historical Resources Information System (CHRIS), a Sacred Lands File (SLF) search, archival and background research, a pedestrian survey, extended phase I (XPI) archaeological testing of the project site, and CEQA impacts analysis for cultural resources.

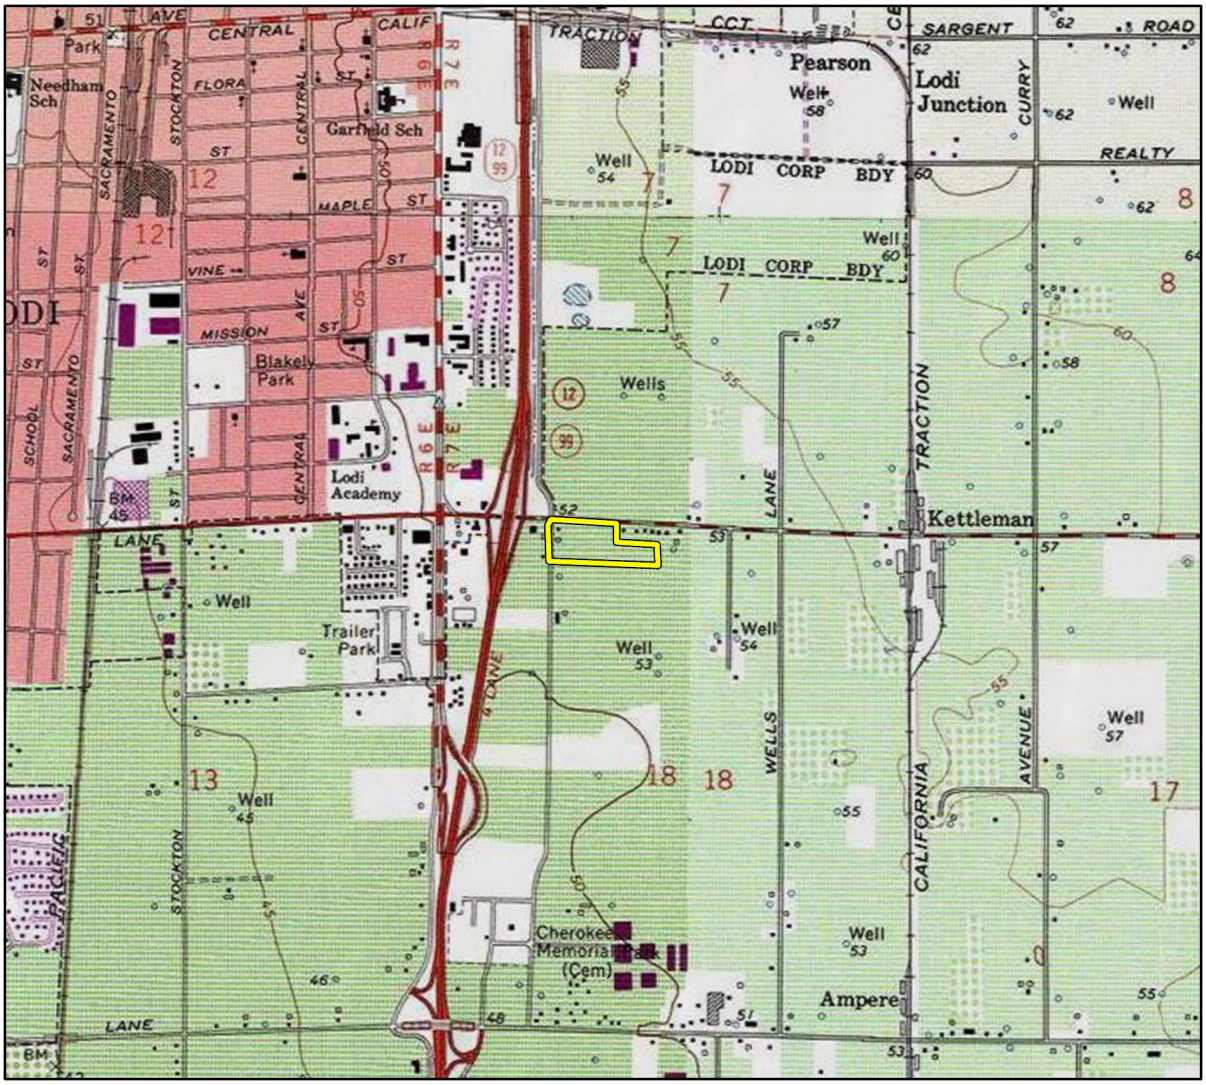
Background research identified a former single-family residence that appears on historical USGS maps from 1939 to 2016, field survey confirmed that the residence is no longer extant and the associated water pump, water feature, and other utilities are still extant within the project site. The XPI within the area of the resource, resulted in no subsurface archaeological deposits associated with the former single-family residence. Due to lack of potential significance and loss of historic integrity, the property was not evaluated for inclusion in the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). It is not considered a historical resource for the purposes of CEQA, and no additional work is recommended.

Further, while the archival research, records search, geologic unit and soil mapping, negative SLF results, and general disturbance of the project site from agricultural use and development indicate a low sensitivity for subsurface Native American archaeological resources, and the XPI failed to identify an archaeological deposit, the presence of a historic-period structure and historic-period use of the property suggest there is sensitivity for encountering subsurface historic-period archaeological deposits. Additionally, there is always the potential to encounter unanticipated archaeological resources during ground disturbing activities. Therefore, Rincon recommends measures for unanticipated discoveries during construction. As there are no historical resources identified within the project site, the project would result in ***no impact to historical resources*** pursuant to CEQA.

1 Introduction

Kimley-Horn and Associates, Inc. retained Rincon Consultants Inc. (Rincon) to conduct a cultural resources study for the Maverik Gas Station Project (project) in Lodi, San Joaquin County, California. This technical report documents the results of the study and tasks conducted by Rincon, specifically, a cultural resources records search, Sacred Lands File (SLF) search, archival and background research, field survey, and extended phase I (XPI) testing. This study has been completed pursuant to the requirements of the California Environmental Quality Act (CEQA) and City of Lodi General Plan policy C-P17. The City of Lodi (City) is the lead agency under CEQA.

1.1 Project Site and Description



The project site is located on a 10-acre parcel at 4872 E. Kettleman Lane (Assessor's Parcel Number 061-020-150-000) in Lodi, San Joaquin County, California. The project encompasses portions of Section 18 of Township 3N, Range 7E on the *Lodi South*, *California* United States Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 1). The project site is bounded by commercial development to the north, agricultural fields to the south, and single-family residences to the east and west, with California State Route 99 (SR 99) 0.09 mile to the west (Figure 2).

The following project description has been adapted from information provided by Kimley-Horn on November 19, 2024. The project proposes the construction of a convenience store (5,982 square feet) with 14 fueling areas and a small-scale commercial center (24,990 square feet). To prevent leaks, double walled noncorrodible fiberglass underground storage tanks that are hooked up to non-corrodible flexible plastic piping will be installed along with a vapor recovery system to prevent fumes from escaping into the air. The development will provide fueling, packaged beer and wine sales, as well as fresh food items. Restroom facilities will be open to the public. The store will operate 24 hours a day, 7 days a week. The building elevations, building materials and floor plan depict the architectural style and themes of the Maverik brand. The project also includes extending Beckman Road East from the intersection with Kettleman Lane, south to the project southern boundary. From this road extension, the proposed Maverik station will have two full access driveways, and the commercial center will have two full access driveways. The Maverik station is also proposed to have one right in/right out access on Kettleman Lane and two full access driveways on existing Beckman Road along the project's western boundary. Adequate on-site parking with ADA parking is located for each proposed building. Bike parking is available near the entrances of buildings. The exterior of the building and fuel canopies will be consistent, with metal roof elements, fiber cement, cultured stone, glass storefront, steel truss beams, etc. HVAC equipment will be situated on the store roof and screened from view by a parapet wall and is consistent with code requirements for screening roof mounted mechanical equipment and blending in with the surrounding community. Landscaping will be provided adjacent to all rights-of-way and buffers around the edges of the property and seating will be incorporated near the buildings. City water, sewer, and storm water utilities are adjacent or near the site and will be incorporated into the design. Signage will comply with code and is designed for visibility and minimum impact to the existing adjacent uses. Other improvements include a left turn lane on East Kettleman Lane into the project site at Beckman Road East in addition to a right turn lane on East Kettleman Lane at Beckman Road. Furthermore, the project would include two crosswalks: one across Beckman Road along East Kettleman Lane and one across East Kettleman Lane at Beckman Road East.

1.2 Personnel

Rincon Archaeologist and Project Manager Elaine Foster, MA, Registered Professional Archaeologist (RPA) served as the project manager for this cultural resources study and is a contributing author of this report. Ms. Foster and Rincon senior archaeologist Heather Blind, MA, RPA, conducted the test excavations for this study. Rincon archaeologist Courtney Montgomery, MA, conducted project management, requested the records search and sacred lands file search, conducted the field survey, and is the primary author of this report. Archaeologist Debbie Balam reviewed historical topographic maps and aerial imagery for this assessment. Architectural Historian Ashley Losco, MHP, prepared the historical background setting. Geographic Information Systems Analyst Erik Holtz prepared the figures found in this report. Principal Nichole Jordan, MA, RPA, reviewed this report for quality control. Ms. Montgomery, Ms. Foster, Ms. Blind, and Ms. Jordan meet the Secretary of the Interior's Professional Qualifications Standards for archeology and history (National Park Service 1983).

2 Regulatory Setting

This section includes a discussion of the applicable state and local laws, ordinances, regulations, and standards governing cultural resources, which must be adhered to before and during implementation of the project.

2.1 California Environmental Quality Act

California Public Resources Code (PRC) Section 21084.1 requires lead agencies determine if a project could have a significant impact on historical or unique archaeological resources. As defined in PRC Section 21084.1, a historical resource is a resource listed in, or determined eligible for listing in, the California Register of Historical Resources (CRHR), a resource included in a local register of historical resources or identified in a historical resources survey pursuant to PRC Section 5024.1(g), or any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant. PRC Section 21084.1 also states resources meeting the above criteria are presumed to be historically or cultural significant unless the preponderance of evidence demonstrates otherwise. Resources listed in the National Register of Historic Places (NRHP) are automatically listed in the CRHR, as are California Historical Landmarks 770 and above; both are therefore historical resources under CEQA. Historical resources may include eligible built environment resources and archaeological resources of the precontact or historic periods.

CEQA Guidelines Section 15064.5(c) provides further guidance on the consideration of archaeological resources. If an archaeological resource does not qualify as a historical resource, it may meet the definition of a “unique archaeological resource” as identified in PRC Section 21083.2. PRC Section 21083.2(g) defines a unique archaeological resource as an artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria: 1) it contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information, 2) has a special and particular quality such as being the oldest of its type or the best available example of its type, or 3) is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological resource does not qualify as a historical or unique archaeological resource, the impacts of a project on those resources will be less than significant and need not be considered further (CEQA Guidelines Section 15064.5[c][4]). CEQA Guidelines Section 15064.5 also provides guidance for addressing the potential presence of human remains, including those discovered during the implementation of a project.

According to CEQA, an impact that results in a substantial adverse change in the significance of a historical resource is considered a significant impact on the environment. A substantial adverse change could result from physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the historical resource would be materially impaired (CEQA Guidelines Section 15064.5 [b][1]). Material impairment is defined as demolition or alteration in an adverse manner [of] those characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in, the CRHR or a local register (CEQA Guidelines Section 15064.5[b][2][A]).

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that resources cannot be left undisturbed, mitigation measures are required (PRC Section 21083.2[a][b]).

The requirements for mitigation measures under CEQA are outlined in CEQA Guidelines Section 15126.4(a)(1). In addition to being fully enforceable, mitigation measures must be completed within a defined time period and be roughly proportional to the impacts of the project. Generally, a project which is found to comply with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings (the Standards) is considered to be mitigated below a level of significance (CEQA Guidelines Section 15126.4 [b][1]). For historical resources of an archaeological nature, lead agencies should also seek to avoid damaging effects where feasible. Preservation in place is the preferred manner to mitigate impacts to archaeological sites; however, data recovery through excavation may be the only option in certain instances (CEQA Guidelines Section 15126.4[b][3]).

2.1.1 National Register of Historic Places

Although the project does not have a federal nexus, properties which are listed in or have been formally determined eligible for listing in the NRHP are automatically listed in the CRHR. The following is therefore presented to provide applicable regulatory context. The NRHP was authorized by Section 101 of the National Historic Preservation Act and is the nation's official list of cultural resources worthy of preservation. The NRHP recognizes the quality of significance in American, state, and local history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects. Per 36 CFR Part 60.4, a property is eligible for listing in the NRHP if it meets one or more of the following criteria:

Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history

Criterion B: Is associated with the lives of persons significant in our past

Criterion C: Embodies the distinctive characteristics of a type, period, or method of installation, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction

Criterion D: Has yielded, or may be likely to yield, information important in prehistory or history

In addition to meeting at least one of the above designation criteria, resources must also retain integrity. The National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess several, if not all, of these seven qualities, defined as follows:

Location: The place where the historic property was constructed or the place where the historic event occurred

Design: The combination of elements that create the form, plan, space, structure, and style of a property

Setting: The physical environment of a historic property

Materials: The physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property

Workmanship: The physical evidence of the crafts of a particular culture or people during any given period in history or prehistory

Feeling: A property's expression of the aesthetic or historic sense of a particular period of time

Association: The direct link between an important historic event or person and a historic property

Certain properties are generally considered ineligible for listing in the NRHP, including cemeteries, birthplaces, graves of historical figures, properties owned by religious institutions, relocated structures, or commemorative properties. Additionally, a property must be at least 50 years of age to be eligible for listing in the NRHP. The National Park Service states that 50 years is the general estimate of the time needed to develop the necessary historical perspective to evaluate significance (National Park Service 1997:41). Properties which are less than 50 years must be determined to have "exceptional importance" to be considered eligible for NRHP listing.

2.1.2 California Register of Historical Resources

The CRHR was established in 1992 and codified by PRC Sections 5024.1 and Title 14 Section 4852. The CRHR is an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change (Public Resources Code, 5024.1(a)). The criteria for eligibility for the CRHR are consistent with the NRHP criteria but have been modified for state use in order to include a range of historical resources that better reflect the history of California (Public Resources Code, 5024.1(b)). Unlike the NRHP however, the CRHR does not have a defined age threshold for eligibility; rather, a resource may be eligible for the CRHR if it can be demonstrated sufficient time has passed to understand its historical or architectural significance (California Office of Historic Preservation 2011). Furthermore, resources may still be eligible for listing in the CRHR even if they do not retain sufficient integrity for NRHP eligibility (California Office of Historic Preservation 2011). Generally, the California Office of Historic Preservation recommends resources over 45 years of age be recorded and evaluated for historical resources eligibility (California Office of Historic Preservation 1995:2).

A property is eligible for listing in the CRHR if it meets one of more of the following criteria:

Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage

Criterion 2: Is associated with the lives of persons important to our past

Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values

Criterion 4: Has yielded, or may be likely to yield, information important in prehistory or history

2.1.3 California Assembly Bill 52 of 2014

As of July 1, 2015, Assembly Bill (AB) 52 was enacted and expands CEQA by defining a new resource category, "tribal cultural resources". AB 52 establishes, "a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment" (PRC Section 21084.2). It further states the CEQA lead agency shall establish measures to avoid impacts that would alter the significant characteristics of a tribal cultural resource, when feasible (PRC Section 21084.3).

PRC Section 21074 (a)(1)(A) and (B) define tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe" and that meets at least one of the following criteria, as summarized in CEQA Guidelines Appendix G:

1) Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020.1(k)
2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying these criteria, the lead agency shall consider the significance of the resource to a California Native American tribe.

AB 52 also establishes a formal consultation process with California Native American tribes that must be completed before a CEQA document can be certified. Under AB 52, lead agencies are required to "begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project." California Native American tribes to be included in the process are those that have requested notice of projects proposed within the jurisdiction of the lead agency.

2.2 California Health and Safety Code

Section 7050.5 of the California Health and Safety Code states that in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the remains are discovered has determined if the remains are subject to the Coroner's authority. If the human remains are of Native American origin, the coroner must notify the NAHC within 24 hours of this identification.

2.3 California Public Resources Code §5097.98

Section 5097.98 of the California Public Resources Code states that the NAHC, upon notification of the discovery of Native American human remains pursuant to Health and Safety Code §7050.5, shall immediately notify those persons (i.e., the Most Likely Descendant [MLD]) that it believes to be descended from the deceased. With permission of the landowner or a designated representative, the MLD may inspect the remains and any associated cultural materials and make recommendations for treatment or disposition of the remains and associated grave goods. The MLD shall provide recommendations or preferences for treatment of the remains and associated cultural materials within 48 hours of being granted access to the site.

2.4 Local Regulations

2.4.1 City of Lodi General Plan

The City of Lodi General Plan, adopted in 2010, includes goals and polices relating to cultural resources. The Conservation Element of the General Plan includes three policies relating to cultural resources (City of Lodi 2010). The policies identified in the general plan include:

Policies

C-P17 For future development projects on previously un-surveyed lands, require a project applicant to have a qualified archeologist conduct the following activities: (1) conduct a record search at the Central California Information Center at the California State University, Stanislaus, and other appropriate historical repositories, (2) conduct field surveys where appropriate and required by law, and (3) prepare technical reports, where appropriate, meeting California Office of Historic Preservation Standards (Archeological Resource Management Reports).

C-P18 In the event that archaeological/paleontological resources are discovered during site excavation, the City shall require that grading and construction work on the project site be suspended until the significance of the features can be determined by a qualified archaeologist/ paleontologist. The City will require that a qualified archeologist/ paleontologist make recommendations for measures necessary to protect any site determined to contain or constitute an historical resource, a unique archaeological resource, or a unique paleontological resource or to undertake data recovery, excavation, analysis, and curation of archaeological/paleontologist materials. City staff shall consider such recommendations and implement them where they are feasible in light of project design as previously approved by the City.

C-P19 If any human remains are discovered or recognized in any location on the project site, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

- The San Joaquin County Coroner/Sheriff has been informed and has determined that no investigation of the cause of death is required; and
- If the remains are of Native American origin: (1) the descendants of the deceased Native Americans have made a timely recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or (2) The Native American Heritage Commission was unable to identify a descendant or the descendant failed to make a recommendation within 24 hours after being notified by the commission.

3 Natural and Cultural Setting

This section provides background information pertaining to the natural and cultural context of the project site. It places the project site within the broader natural environment which has sustained populations throughout history. This section also provides an overview of regional indigenous history, local ethnography, and post-contact history. This background information describes the distribution and type of cultural resources documented within the vicinity of the project site to inform the cultural resources sensitivity assessment and the context within which the project site has been evaluated.

3.1 Natural Setting

The project site lies in the Central Valley at an approximate elevation of 17 meters (56 feet) above mean sea level. The nearest freshwater source is Mokelumne River, approximately 2 miles to the north of the project site. None of the immediately surrounding area retains its natural setting, and the project site has been continuously used for agricultural purposes since at least the 1950s. The project site is surrounded by urban and agricultural developments, including hotels and restaurants in the city of Lodi to the north, agricultural fields to the south, residences in the city of Lodi to the east, and an individual residence with associated agricultural field to the west. Vegetation within the project site consists of dried and overgrown grasses, trees, active crops, and abandoned grape trellis'. Wildlife within the project site and surrounding area consists of crows, house finch, lizards, squirrels, and various insects.

3.2 Cultural Setting

3.2.1 Indigenous History

The project site is located in the Central Valley archaeological region, specifically the Delta subregion, as defined by Moratto (1984). The Central Valley has been described as one of the largest intermontane basins extending 650 kilometers from the Siskiyou Mountains to the Tehachapis (Rosenthal et al. 2007). The Delta subregion is generally identified between Elk Grove to the north, Ripon to the south, Ione to the east, and Concord to the west (Moratto 1984).

No single chronological framework covers the entirety of the Central Valley, but California prehistory is generally divided into three broad time periods: the Paleoindian period (ca. 11,550 to 8550 BCE), the Archaic Period (8550 BCE to CE 1100) and the Emergent Occupation (CE 1000-European Contact) (Fredrickson 1973, 1974) which has been updated and adjusted by Rosenthal et al. (2007) to further separate the Archaic Period into Lower (8550 BCE to 5550 BCE), Middle (5550 BCE to 550 BCE), and Upper (550 BCE to CE 1100). The prehistoric chronological sequence for the Central Valley presented below is based on Rosenthal et al. (2007) and Moratto (1984).

Paleoindian Period (11,550 to 8550 BCE)

Little is currently known about the Paleoindian period in the Central Valley. Geoarchaeological studies have demonstrated that erosion and deposition have buried or destroyed early archaeological deposits. This period is primarily represented by isolated finds, and currently, the earliest accepted date of human occupation in the Central Valley ranges from 11,550 to 9550 BCE

and comes from fluted projectile points similar to Clovis points found at prehistoric sites near Tracy Lake (San Joaquin County) and the Tulare Lake Basin (Fresno, Kings, Kern, and Tulare Counties). Along with fluted projectile points, concave base points have been identified along the Tulare Lake shoreline which was occupied during the Late Pleistocene (5.3 million years ago to 11,700 BCE) (Rosenthal et al. 2007).

Lower Archaic (8550 to 5550 BCE)

Climate change at the end of the Pleistocene caused significant periods of alluvial deposition beginning around 9050 BCE. These new alluvial deposits created a clear stratigraphic boundary between the Late Pleistocene and Holocene sediments. The Lower Archaic, like the Paleoindian Period, is represented mainly by limited isolated finds. However, one Lower Archaic site (CA-KER-116) has been identified in the Central Valley proper and few in the foothills surrounding the valley (Rosenthal et al. 2007).

Typical Lower Archaic artifacts include flaked stone crescents and stemmed points. The identification of projectile points and a diverse faunal assemblage at CA-KER-116 indicate hunting was an important subsistence activity. However, milling tools and plant remains are largely absent in the valley; thus, plant use during the Lower Archaic remains unclear. Several foothill sites contain milling implements and evidence of the use of nut crops such as acorn and pine (Pryor and Wisman 1991). The relationship between foothill and valley floor adaptations is largely unknown during the Lower Archaic; however, it is suggested that the foothill sites may have been seasonally used during this time. More distinct adaptations are apparent in the Middle Archaic, and it is possible that these divergent traditions first emerged in the Lower Archaic (Rosenthal et al. 2007).

Middle Archaic (5550 to 550 BCE)

The Middle Archaic began with substantial climate change to much warmer, drier conditions. Tulare Lake shrank and eventually disappeared. With this came new wetlands which created new habitats, and rising sea levels led to the creation of the Sacramento-San Joaquin Delta, creating new deposits. Fans and floodplains stabilized after an initial period of deposition in 5550 BCE. Archaeological deposits dating to the Middle Archaic are rare in the Central Valley proper due to these geomorphic changes. The Middle Archaic archaeological record has identified a pattern of organized subsistence strategies and increased residential stability. The archetypal pattern of the Middle Archaic has been identified as the Windmiller Pattern. This pattern is represented by extended burials oriented to the west and a sophisticated material culture (Rosenthal et al. 2007). Middle Archaic sites are relatively common in the foothills surrounding the Central Valley and show relatively little change from the Lower Archaic (McGuire 1995).

During this time, the mortar and pestle became more widespread suggesting a shift toward more intensive subsistence practices and higher reliance on the acorn. Fishing technologies, such as bone gorges, hooks, and spears, also appear during the Middle Archaic suggesting a new focus on fishing, especially in the Marsh Creek area. Several other technologies become apparent during this time. Baked-clay impressions of twined basketry, simple pottery, and other baked clay objects have been found at several sites. Personal adornment items also become more frequent. Exchange with outside groups is evidenced by the presence of obsidian, shell beads and ornaments (Rosenthal et al. 2007, Moratto 1984, Burns et al. 2016). Trade also seemed to be focused on utilitarian items such as obsidian or finished obsidian tools from at least five separate sources (Moratto 1984).

Upper Archaic (550 BCE to CE 1100)

The Upper Archaic began with the onset of the Late Holocene, marked by a cooler, wetter climate. The environmental conditions of the Upper Archaic were characterized by the return of lakes that had disappeared during the Middle Archaic and a renewed fan and floodplain deposition. The Upper Archaic is better represented in the archaeological record than earlier periods. Cultural diversity was more pronounced and is marked by contrasting material cultures throughout the valley (Rosenthal et al. 2007).

During this period, numerous specialized technologies were developed such as bone tools, and implements, Olivella and Haliotis beads and ornaments, ceremonial blades, and ground-stone plummets. People living in the San Joaquin Valley region traded with neighboring groups for obsidian. The Upper Archaic period economies varied by region throughout the Central Valley. Economies were primarily focused on seasonal resources such as acorns, salmon, shellfish, rabbits, and deer (Rosenthal et al. 2007).

Emergent Occupation (CE 1000 to Historic)

The stable climatic conditions of the Upper Archaic continued into the Emergent Period. There has been sporadic research in the San Joaquin Valley on this time period, and thus only the Pacheco Complex lithics on the western edge of the valley has been formally defined. After CE 1000, many of the technologies used during the Archaic disappeared to be replaced by cultural traditions used during European contact. During the Emergent Period, the bow and arrow replaced the atlatl as the preferred hunting method sometime between CE 1000 and 1300.

Increased social complexity is evidenced by increased variation in burial types and burial items and larger residential communities. Burial items such as shell beads, ornaments, and ritually “killed” mortars and pestles are often found in burials. Pottery was frequently obtained through trade with groups living in the foothills to the east. The Panoche side-notched point became important in the western side of the San Joaquin Valley (Rosenthal et al. 2007). In addition to the side-notched point, the Panoche Complex featured large circular structures, flexed burials, marine shell beads, bone awls, millingstones, and mortars and pestles (Moratto 1984).

As with the Archaic Period, Emergent Period economies varied geographically, and as seen through the archaeological record, fishing and plant harvesting increased in importance. Most Emergent residential sites contain diverse assemblages of mammal and bird remains and large amounts of fish bone. One thousand years ago, the mortar and pestle become the dominant tool type and small seeds increased in archaeological deposits over time (Rosenthal et al. 2007).

3.2.2 Ethnographic Setting

The project site lies within the traditional territory of the Miwok. The three geographical divisions of the Miwok are the Coast Miwok, Lake Miwok and Interior Miwok. The project site is associated specifically with the Interior Miwok, whom ethnographers further divided into the Plains Miwok and the Sierra Miwok (Kroeber 1925, Levy 1978). The primary differences recorded between the Interior and Sierra Miwok are language, topographic area, and ecological context. The traditional territory of the Interior Miwok is bordered by the Yokuts to the south, the Maidu to the north, the Washo to the east, and the Patwin to the west. The Interior Miwok associated with the Calaveras River region in the vicinity of the project site are the Muqueleme tribelet, a large Miwok group friendly with their Yokuts neighbors to the south. The closest recorded Native American village to the project site is the

Calaveras River crossing at Bellota, where a Muqueleme community lived in 1852 after the secularization of the missions (Bennyhoff 1977).

Miwok settlements typically included thatched, conical houses and semi-subterranean earth-covered dwellings in winter, constructed by higher status families. Houses generally had a central hearth and an earth oven for cooking purposes. Large, semi-subterranean assembly houses were constructed for use as a ritual and social gathering place. In summer, a circular brush hut was constructed for use in mourning ceremonies. Other structures included sweathouses for curing disease and purification prior to hunting, small conical structures used by menstruating women, and grinding houses built over bedrock mortars to permit food processing in inclement weather. Acorn granaries were constructed for long-term acorn storage (Kroeber 1925, Levy 1978).

Ethnographers characterized Miwok social organization by the moiety pattern, with all living things belonging to one of two categories: land and water. Moieties typically married outside their own groups which played an important role in many ceremonies (Levy 1978). On the other hand, political organization centered on small tribelets of approximately 300 to 500 people and several distinct settlements. A chief headed each tribelet, and a representative of the chief of each settlement had oversight of local affairs. Chiefs acted as advisors and managed use of natural resources by preventing trespassing on tribelet territory and determining the appropriate time to begin the acorn harvest each season. The chief also arbitrated any disputes and sanctioned the punishment of criminal offenders (Kroeber 1925, Levy 1978).

Traditional Miwok artistry includes twined and coiled basketry, usually from willow and redbud trees. Other activities include the manufacturing of tule mats used as floor covering, woven blankets often made of rabbit skin strips, or feathers attached to cordage woven from plant fibers. Tule balsa rafts were used to navigate rivers and sloughs (Levy 1978).

Traditional Miwok subsistence practices include the use of acorns and other seeds as primary plant food sources and on hunting of mule deer, tule elk, pronghorn antelope, and various species of waterfowl. Hunting typically included a sinew-backed bow and arrow. Fishing, a particularly important activity for Miwok subsistence, would have primarily utilized various types of nets; Seines would be used in large rivers and sloughs where the pace of water flow was slow, while hook and line would be typical for sturgeon, and harpoons for salmon (Levy 1978).

Records of exploitation of the Interior Miwok people by the Mission San José begin as early as 1811 (Levy 1978). Several triblets of Plains Miwok engaged in armed resistance in the 1820s and 1830s in attempts to resist missionization. As a direct result of the establishment of the mission system, the Interior Miwok population dramatically declined. Despite this, the Interior Miwok continue to populate Amador, San Joaquin, and Calaveras counties and surrounding areas (California Valley Miwok Tribe 2023, Ione Band of Miwok Indians 2023).

3.2.3 Post-Contact Setting

Post-contact history for the state of California is generally divided into three periods: the Spanish Period (1769 to 1822), Mexican Period (1822 to 1848), and American Period (1848 to present). Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Spanish Period in California begins with the establishment in 1769 of a settlement at San Diego and the founding of Mission San Diego de Alcalá, the first of 21 missions constructed between 1769 and 1823. Independence from Spain in 1821 marks the beginning of the Mexican Period, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican-American War, signals the beginning of the American Period when California became a territory of the United States.

Spanish Period (1769-1822)

Spanish explorers made sailing expeditions along the coast of California between the mid-1500s and mid-1700s. Juan Rodriguez Cabrillo in 1542 led the first European expedition to observe what was known by the Spanish as Alta (upper) California. For more than 200 years, Cabrillo and other Spanish, Portuguese, British, and Russian explorers sailed the Alta California coast and made limited inland expeditions, but they did not establish permanent settlements (Bean 1968, Rolle 2003). The Spanish crown laid claim to Alta California based on the surveys conducted by Cabríllo and Vizcaíno (Bancroft 1885, Gumprecht 1999).

By the eighteenth century, Spain developed a three-pronged approach to secure its hold on the territory and counter against other foreign explorers. The Spanish established military forts known as presidios, as well as missions and pueblos (towns) throughout Alta California. The 1769 overland expedition by Captain Gaspár de Portolá marks the beginning of California's Historic Period, occurring just after the King of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. Construction of missions and associated presidios was a major emphasis during the Spanish Period in California to integrate the Native American population into Christianity and communal enterprise.

Although no missions were located near the project site, baptismal records indicate that Yokuts and Miwok speakers comprised a significant portion of the populations at Mission San José (founded in 1797) (Milliken et al. 2009). Having already destabilized coastal populations, the missions attempted to replenish their neophyte populations with Native groups living further inland (Sandos and Sandos 2014). Many fled the missions and sought shelter in California's interior regions, including the greater Central Valley (Arkush 1993, Bennyhoff 1977). Concurrently, some Native American groups began raiding Spanish properties and seizing livestock, leading to the spread of ranching practices outside of the missions' control. Despite efforts to push occupation inland, the Spanish never gained control of the Sacramento or San Joaquin Valleys (Arkush 1993).

Spain began making land grants in 1784, typically to retiring soldiers, although the grantees were only permitted to inhabit and work the land. The land titles technically remained property of the Spanish king (Livingston 1914).

Mexican Period (1822-1848)

Several factors kept growth within Alta California to a minimum, including the threat of foreign invasion, political dissatisfaction, and unrest among the indigenous population. After more than a decade of intermittent rebellion and warfare, New Spain won independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade, and decreed California ports open to foreign merchants (Hackel 1997).

Extensive land grants were established in the interior during the Mexican Period, in part to increase the population inland from the more settled coastal areas where the Spanish had first concentrated their colonization efforts. The secularization of the missions following Mexico's independence from Spain resulted in the subdivision of former mission lands and establishment of many additional ranchos. Commonly, former soldiers and well-connected Mexican families were the recipients of these land grants, which now included the title to the land. While no ranchos were established within the vicinity of the project site, Mexican influence into California's interior was felt through military incursions and the continued coercion of the missions. From 1825 to 1828, the population of Mission San José was bolstered by the addition of neophytes from the Quenemsias, Guaypems, Cosomnes, and Chilamnes Miwok groups of the northern Delta and upper Calaveras River. In 1828,

the Laquisemnes Miwoks of the lower Stanislaus River with various Yokuts groups to resist Mexican control; this uprising was ended by a Mexican military victory in June 1829 (Milliken et al. 2009).

The largest land grants in the California interior were awarded to John Sutter, a German Swiss immigrant who became a Mexican citizen. In 1839, he established a cattle ranch and farm called New Helvetia, headquartered at Sutter's Fort at the divergence of the Sacramento and American Rivers (Bean 1968). During the same period, fur trappers began to explore the area. The first American trapper to come to California, Jedidiah Smith, explored the Sierra Nevada before arriving in the Sacramento Valley in 1827, and traveled along the American and Consumnes rivers, as well as through the San Joaquin Valley.

During the supremacy of the ranchos (1834 to 1848), landowners largely focused on the cattle industry and devoted large tracts to grazing. Cattle hides became a primary Southern California export, providing a commodity to trade for goods from the east and other areas in the United States and Mexico. The number of nonnative inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had no associated immunities. By 1833, an epidemic of malaria reached the San Joaquin Valley, with the disease potentially spread to the region by Hudson's Bay Company fur trappers entering the area in search of beaver and otter pelts (Kyle 2002, Arkush 1993).

American Period (1848- Present)

The United States went to war with Mexico in 1846. During the first year of the war, John C. Fremont traveled from Monterey to Los Angeles with reinforcements for Commodore, Stockton, and evaded Californian soldiers in Santa Barbara's Gaviota Pass by taking the route over the San Marcos grade instead (Kyle 2002). The war ended in 1848 with the Treaty of Guadalupe Hidalgo, ushering California into its American Period.

California officially became a state with the Compromise of 1850, which also designated Utah and New Mexico (with present-day Arizona) as United States territories (Waugh 2003). Horticulture and livestock, based primarily on cattle as the currency and staple of the rancho system, continued to dominate the Southern California economy through 1850s. The discovery of gold in the northern part of the state led to the Gold Rush beginning in 1848, and with the influx of people seeking gold, cattle were no longer desired mainly for their hides but also as a source of meat and other goods. By the 1850s, prospectors had rushed to stake claims along Calaveras River, with some of the most sizable immigrant ethnic groups including Chinese, Chilean, Mexican, and French miners (Chan 2000, Rohe 1996). Miwok and Yokuts populations were further destabilized by the upswell of prospectors. Violent encroachment from settlers and forced displacement led to the abandonment of Native villages along the Calaveras and Mokelumne Rivers by the turn of the century, with communities predominately moving to the Buena Vista and Ione areas of Amador County (Bennyhoff 1977).

Local History

The following has been excerpted from the City of Lodi's General Plan:

> Lodi began in 1869 as the Town of Mokelumne, founded by the Central Pacific Railroad. The railroad connected Lodi with Sacramento to the north and Oakland and Stockton to the south, and the town was laid out parallel to the tracks. To avoid confusion with Mokelumne Hills and Mokelumne City, the townspeople changed the name to Lodi in 1874.

Local industries, such as the Lodi Flouring Mill, and agriculture promoted further growth in the area. The Ivory Store, at the corner of Pine and Sacramento streets, was established in 1869, and other merchants soon followed with their businesses. Access to rail transportation allowed crops and products to be transported throughout the country. Wheat and watermelons were the predominant crops throughout the nineteenth century.

In 1885, Japanese immigrants settled the area to work on ranches. Over time, they purchased land and grew grapes. In the late 1890s German nationals settled Lodi and also participated in the grape industry. Flame Tokay grapes were first planted in the area in the late nineteenth century and by 1900, Lodi had over two million grape vines. In 1906, the City was incorporated, and held its first Tokay Carnival the next year, which would later evolve into the Lodi Grape Festival. The Lodi Arch, which covers the gateway entrance to downtown, was built to commemorate the first Grape Festival in 1934.

Over the following century, Lodi grew from a population of 2,000 to over 60,000. In 1912 Lodi's first City Hall/fire station was built on Main Street. The current City Hall building was dedicated in 1928. In 1913, the Lodi Union High School opened for classes, and in 1919, entrepreneur Roy Allen brewed and sold his first batch of A&W Root beer in Lodi. Local farmers and wineries weathered the Prohibition Era well, growing grapes and shipping them out in secret for wine making. In 1956 the Federal Government officially acknowledges Lodi as a wine grape growing district. The City's continued growth led to the creation of numerous schools and public utilities and services throughout the second half of the twentieth century. Since the mid-1990s, the City has been involved in numerous restoration projects for its historic resources throughout the city, including the City Hall, the Lodi Arch, and the Southern Pacific Lodi Train Station (City of Lodi 2010).

4 Methods

This section presents the methods for each task completed during the preparation of this study.

4.1 Background and Archival Research

4.1.1 Archival Research

Rincon completed background and archival research in support of this study in June and July 2024. A variety of primary and secondary source materials were consulted. Sources included, but were not limited to, historical maps, aerial photographs, and written histories of the area. The following sources were utilized to develop an understanding of the project site and its context:

- Historical aerial photographs accessed via NETR Online
- Historical U.S. Geological Survey topographic maps via TopoViewer
- Geologic Maps via USGS National Geologic Map Database
- United States Department of Agriculture Web Soil Survey

4.1.2 California Historical Resources Information System Records Search

On June 19, 2024, Rincon received California Historical Resources Information System (CHRIS) records search results (records search number 12964L) from the Central California Information Center (CCIC) (Appendix A). The CCIC is the official state repository for cultural resources records and reports for San Joaquin County. The purpose of the records search was to identify previously recorded cultural resources, as well as previously conducted cultural resources studies within the project site and a 0.5-mile radius surrounding it. Rincon also reviewed the NRHP, the CRHR, the California Historical Landmarks list, the Built Environment Resources Directory, as well as its predecessor the California State Historic Property Data File, and the Archaeological Determination of Eligibility list.

4.1.3 Sacred Lands File Search

Rincon contacted the NAHC on June 12, 2024, to request a search of the Sacred Lands File (SLF), as well as a contact list of Native Americans culturally affiliated with the project area (Appendix B).

4.2 Field Survey

Rincon Archaeologist Courtney Montgomery, MA conducted a pedestrian survey of the project site July 16, 2024, using transect intervals spaced 15 meters and oriented generally from east to west. Exposed ground surfaces were examined for artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools, ceramics, fire-affected rock [FAR]), ecofacts (marine shell and bone), soil discoloration that might indicate the presence of a cultural midden, soil depressions, and features indicative of the former presence of structures or buildings (e.g., standing exterior walls, postholes, foundations) or historical debris (e.g., metal, glass, ceramics). Ground disturbances such as burrows and drainages were also visually inspected. Survey accuracy was maintained using a handheld GPS

unit and a georeferenced map of the project site. Site characteristics and survey conditions were documented using field records and a digital camera. Copies of the survey notes and digital photographs are maintained at the Rincon Oakland office.

4.3 Subsurface Testing

Rincon archaeologists Elaine Foster, MA, RPA, and Heather Blind, MA, RPA conducted subsurface auger testing within the project site where the former historic-period structure was identified during background research. The purpose of the subsurface auger excavations was to determine the presence and/or absence of subsurface archaeological deposits associated with the structure, as well as the horizontal and vertical extent of any associated subsurface deposits, if present.

In order to determine the presence or absence of subsurface cultural materials at the project site, 10 hand auger units (HAUs) were excavated within and adjacent to the boundaries of the previously identified historic-period structure within the project site. All excavation locations were recorded using a submeter-accurate handheld Global Positioning System unit (Geode) and documented in both notes and photographs. The HAUs were eight centimeters (3 inches) in diameter and excavated in one layer to a depth of 30 centimeters below surface (cmbs), consistent with the proposed depth of disturbance for the project in that area (grading related to parking improvements). Excavated soil was dry-screened through 3-millimeter (1/8-inch) wire mesh screen. Any materials recovered from the HAUs during dry-screening were examined and documented in the field. All HAUs were backfilled after completion of the excavation. HAU excavation forms were completed to record all relevant data and observations, including the depths, descriptions of recovered materials, and soil descriptions.

5 Findings

5.1 Background Research

5.1.1 Previous Cultural Resources Studies

The CHRIS records search and background research identified seven cultural resources studies within 0.5 mile of the project site (Appendix A). One study (SJ-06911) includes a portion of the project site. The project site had not been previously surveyed. Study SJ-06911 is discussed in further detail below.

SJ-06911

Study SJ-06911 is the Cultural Resources section of the City of Lodi General Plan Update, prepared by Environmental Science Associates, Inc. (ESA) in 2007. The section discusses the results of the citywide records search, existing conditions, and previously recorded cultural resources within the planning area. The study provides ethnographic and historical information for the City of Lodi, and documents cultural resources within the city limits that have been previously found eligible for listing and those listed on the NRHP. In a review of the records search, the study states that only six percent of plan area has been previously surveyed, which does not include the current project site, and recommended that future development associated with the general plan may impact previously unidentified archaeological resources. The study further states that the update implementation may be incompatible with existing development. No field survey was associated with the study (ESA 2007).

5.1.2 Previously Recorded Cultural Resources

The CHRIS records search and background research identified one cultural resource, a historic period structure (P-39-005394) within 0.5 mile of the project site, which is not located within the project site. Table 1 provides information regarding the resource.

Table 1 Known Cultural Resources

Primary Number	Trinomial	Resource Type	Description	Recorder(s) and Year(s)	Eligibility Status	Relationship to Project Site
P-39-005394	-	Historic-Period Structure	1106 Woodrow Street, single story, ranch style residence	Wendt (2021)	6Z[1]	Outside

Source: CCIC 2024

[1] Found ineligible for NRHP, CRHR or Local designation through survey evaluation.

5.1.3 Sacred Land File Search

On June 20, 2024, the NAHC responded to Rincon's SLF request, stating that the results of the SLF search were negative. See Appendix B for the NAHC response, including Tribal contacts list(s).

5.1.4 Aerial Imagery and Historical Topographic Maps Review

Rincon completed a review of historical topographic maps and aerial imagery to ascertain the development history of the project site. Historical topographic map from 1894 depicts the project site as undeveloped land with Interstate Highway 99 to the west and railroad lines to the west and north (USGS 1894). The project site remains undeveloped through 1910, with the addition of a paved road analogous to East Kettleman Lane along the northern boundary of the project site and a portion of a dirt road bounding the project site to the west (USGS 1910). Historical topographic map from 1910 depicts a church on the adjacent property to the east, which remains until 1942 (USGS 1942). By 1939, a single-family home is identified on topographic maps within the northwestern most portion of the project site, south of present-day East Kettleman Lane and west of an unnamed dirt road (USGS 1939). The area is depicted as unchanged with the presence of the building up to 1953, when additional structures, including a barn, water tower, and garage, appear near the building and an agricultural field is depicted to the west of the project site (USGS 1953; NETR Online 2024). Aerial imagery from 1957 depicts two structures within the northwestern most portion of the project site, south of Kettleman Lane (NETR Online 2024). The 1957 aerial also depicts agricultural rows throughout the rest of the project site with dirt roads along the southern, eastern, and western boundaries (NETR Online 2024). By 1967, Beckman Road is depicted along the western boundary of the project site and the rest of the project site in similar condition to 1957 (NETR Online 2024). Between 1993 and 1998, aerial imagery shows that one of the structures is no longer extant, and the early stages of commercial development north of the project site are depicted (NERT Online 2024). By 2002, transmission lines and associated power poles are depicted along the northern and western portions of the project stie, and the commercial development north of the project site is complete (NETR Online 2024). Additionally, by 2002, the project site appears to be graded around the perimeter with agricultural rows of grapes and a strawberry stand south of East Kettleman Lane. An unknown structure within the southern portion of the project site is also present at this time (NETR Online 2024). From 2005 to 2014, there is evidence of grading, and the agricultural rows of grapes decrease within the central proportion of the project site. Additionally, the residence, water tower, and the garage appear to have been demolished between 2016 and 2018, and the single-family home to the southeast is present by 2016 (NETR Online 2024).

5.1.5 Geologic and Soils Map Review

Geologic mapping indicates that the project site is underlain by two geologic units: 1) Qm2: upper member of the Modesto Formation, and 2) Qds: Dune sand (Dawson 2009). The Modesto Formation makes up 90 percent of the project site and the Dune Sand makes up 10 percent of the project site.

The Modesto Formation dates to the Late Pleistocene (129,000 to 11,700 years ago) and consists of undivided alluvium (Dawson 2009) with sand, gravel, silt, and clay (McManus et al. 2014). The Modesto Formation within and near the project site, as identified along the Mokelumne River terrace approximately 2 miles north of the project site, consists of preserved alluvium due to intertidal deposits (Marchand and Allwardt 1981). The Late Pleistocene largely pre-dates human occupation of the region and is generally not conducive to the natural burial and preservation of archaeological deposits. Archaeological deposits present within the Modesto Formation would most likely be located on or near the ground surface.

The Qds unit, Dune Sand, dates from the Late Pleistocene to the Holocene and consists of very well sorted and fine to medium grained eolian sand (Dawson 2009). Eolian sand deposits are formed in dunes and sand seas, and consist of loosely compacted, windblown sand and transported dust (Muhs 2021). Stable eolian deposits may be sensitive for encountering buried archaeological

deposits (ICF 2013), and Holocene aged deposits date to the era of human occupation. As such, these sediments are likely conducive to the preservation of subsurface archaeological deposits.

Soil mapping indicates the project site primarily (appropriate 95 percent) consists of Tokay fine sandy loam which is formed in alluvial deposits derived from granitic rocks. A typical soil profile consists of fine sandy loam from 0 to 60 inches below the surface (California Soil Resource Lab 2003). The soil profile does not contain buried A Horizon (subsurface topsoil) soils, which would indicate potential for the presence of subsurface archaeological deposits.

5.1.6 Archaeological Sensitivity Summary

Archival research indicates the sediments mapped at the surface within the project site are not generally conducive to the natural burial and preservation of archaeological resources. Although Holocene-aged sediments have been recorded within the vicinity of the project site, the majority of the sediments date to the Late Pleistocene which largely pre-dates recorded human occupation of the region. As such, archaeological deposits would be expected on or near the surface. Furthermore, soil mapping indicates the project site is underlain by Tokay fine sandy loam, which has a continuous profile with no buried A Horizon (subsurface topsoil) soils that indicate the potential for subsurface archaeological deposits. Given the age of the geologic units and the absence of buried soil horizons as suggested by the geologic and soils maps, the degree of previous disturbance within the APE associated with the construction and demolition of the structure, as well as the agricultural use of the project site, the project site has low sensitivity for the presence of Native American subsurface archaeological deposits. The presence of a historic-period single-family residence and the continuous use of the project site since the 1930s indicates that the project site has a sensitivity for subsurface historic-period archaeological resources.

5.2 Field Survey Results

No cultural resources were identified during the field survey. Ground visibility was poor (0 to 35 percent) within the majority of the project site due to overgrown grasses (Photograph 1), and excellent (91 to 100 percent) within the former building location in the northwest corner and the northern perimeter of the project site along East Kettleman Lane (Photograph 2). Soils within the project site consisted of brown to gray sandy loam with clay inclusions (Photograph 3). Pacific Gas and Electric Company transmission lines and poles within the project site lined the northern and western edges of the project site (Photograph 4), with one transmission line near the location of the previously extant structure (Photograph 5). Modern refuse (Photograph 6) was observed throughout the northernmost portion of the project site, including a refuse dump associated with an encampment (Photograph 7) near the location of the previously extant strawberry stand approximately 45 feet south of East Kettleman Lane and 250 feet east of Beckman Road.

There is a water pump and a transmission line in the northwest corner of the project site (Photograph 8). Additionally, the area includes modern water infrastructure, a wooden box, and two concrete pillars (Photograph 9) along the Beckman Road. The remnants of a barbed wire fence (Photograph 10) ran along the western side of the project site, approximately 45 feet from Beckman Road. No specific or diagnostic features associated with the historic-period single-family residence were evident on the on these features. No foundations or depressions or soil changes indicative of the former foundation were evident on the surface.

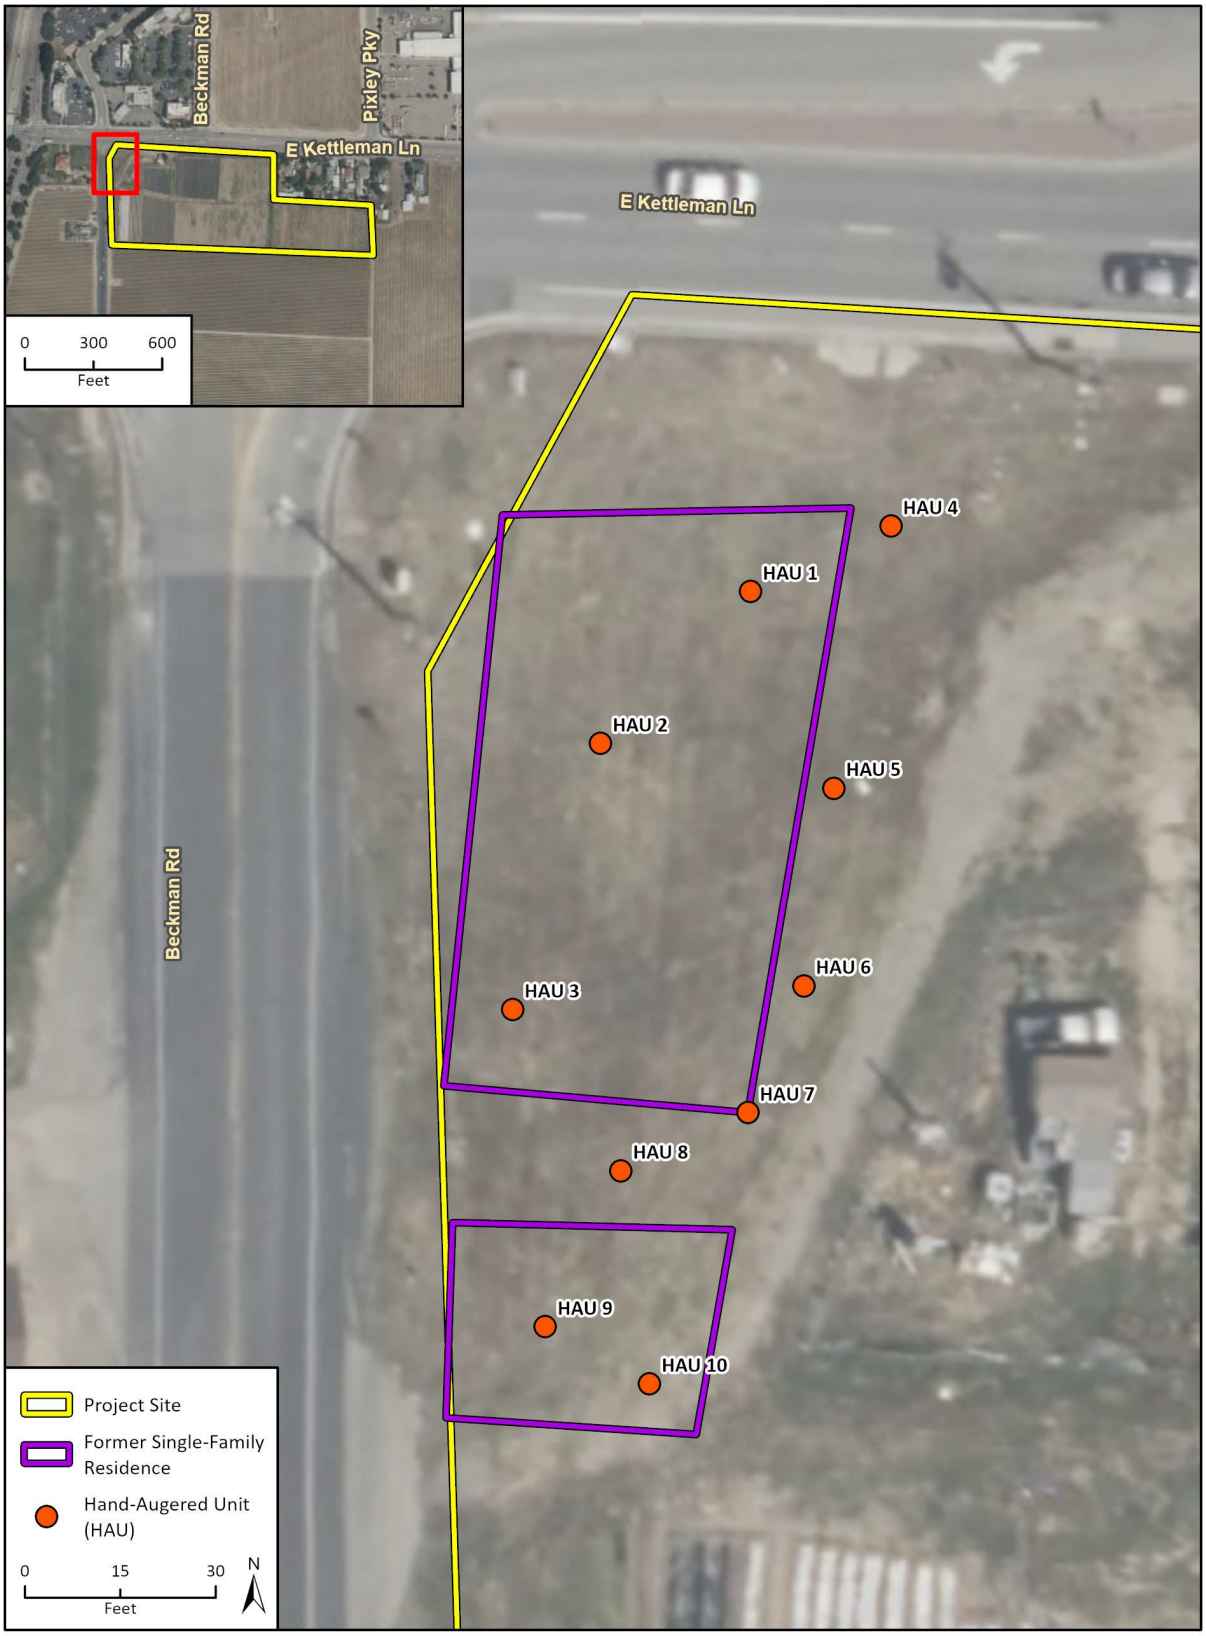
5.3 Subsurface Testing

The subsurface auger testing, consisting of the excavation of 10 hand auger units (HAUs), did not identify any archaeological deposits associated with Mav-01. Figure 3 depicts the HAU locations within the project site, and a representative HAU is depicted in Photograph 11. A summary of the HAU excavations, including soils and disturbances encountered, is detailed in Table 2. Soils within the HAUs generally consisted of coarse loamy sand with between three to 15 percent gravel inclusions and generally colored brown, yellow brown, or dark yellowish brown.



Modern refuse was noted within nine of the ten excavated HAUs and consisted of modern can tabs, metal bottle caps, plastics, aluminum foil, red brick, clear glass fragments, paint chips, a ferrous nail and bolt/nut combined, roadbed fragments, and a plastic wrapper. The presence of modern refuse below the surface indicates previous ground disturbance and soil mixing within the project site.

Table 2 Summary of STP Excavation

HAU	Maximum Depth (cmbs)	Soil	Soil Color (Munsell)	Disturbances	Reason for Termination	Cultural Constituents
1	30	Coarse loamy sand	10 YR 4/4 Dark yellowish brown	Modern can tab	End of unit	None
2	30	Coarse loamy sand with 5% gravel inclusion	10 YR 4/3 Brown	Modern glass gaming bead and PVC pipe	End of unit	None
3	30	Coarse loamy sand with 10% gravel inclusion	10 YR 4/6 Dark yellowish brown	Aluminum foil, red brick fragment (<1 cm)	End of unit	None
4	30	Coarse loamy sand	10 YR 4/4 Dark yellowish brown	Metal bottle cap, clear glass fragment, and plastic	End of unit	None
5	30	Coarse loamy sand	10 YR 4/4 Dark yellowish brown	Plastic	End of unit	None
6	30	Coarse loamy sand with 3% gravel inclusion	10 YR 4/4 Dark yellowish brown	Metal bottle cap	End of unit	None
7	30	Coarse loamy sand	10 YR 4/4 Dark yellowish brown	Clear glass fragments (3)	End of unit	None
8	30	Coarse loamy sand	10 YR 5/4 Yellow brown	White paint chips	End of unit	None
9	30	Coarse loamy sand	10 YR 5/4 Yellow brown	None	End of unit	None
10	30	Coarse loamy sand with 15% gravel inclusions	10 YR 3/4 Dark yellowish brown	Roadbed fragments, plastic wrapper, landscaping plastic, ferrous wire nail (1), and ferrous nut and bolt combined (1)	End of unit	None

6 Impacts Analysis and Conclusions

The impact analysis included here is organized based on the cultural resources thresholds included in CEQA Guidelines Appendix G: Environmental Checklist Form:

a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?
b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?
c) Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

Threshold A broadly refers to historical resources. To more clearly differentiate between archaeological and built environment resources, we have chosen to limit analysis under Threshold A to built environment resources. Archaeological resources, including those that may be considered historical resources pursuant to Section 15064.5 and those that may be considered unique archaeological resources pursuant to Section 21083.2, are considered under Threshold B.

6.1 Historical Built Environment Resources

Background research identified a former single-family residence within the project site from 1939 to 2016. The field survey confirmed that the residence is no longer extant. Because the residence is no longer extant, it cannot be evaluated as a historical resource. Additionally, there is a power line pole at the northwest corner of the project site, installed in approximately 2002 when the transmission line along Kettleman Lane was installed (NETR Online 2024). A customer-owned pole not constructed as part of the utility-owned line, is a simple wood pole design. Because it is less than 45 years old, the threshold generally considered for historical significance, in addition to its ubiquitous design, and lack of potential significance, this utility line was not recorded or evaluated for the purposes of the current study. The project would therefore result in ***no impact to historical resources*** pursuant to CEQA.

6.2 Historical and Unique Archaeological Resources

This study did not identify any archaeological resources or archaeological deposits in the project site. A water pump and water feature along with other utilities are still extant within the project site near the location of the former single-family residence identified on the project site between 1939 and 2016. To be considered an historical resource, a resource must have historic significance and sufficient integrity to convey that significance. As these features could not be directly associated with the former single-family residence and no longer retain historic integrity, they were not further recorded or evaluated for the purposes of the current study.

Further, the archival research, records search, geologic unit and soil mapping, negative SLF results, and general disturbance of the property from agricultural use and development indicate a low sensitivity for subsurface Native American archaeological resources. However, while archaeological testing in the area of highest potential for historic-period archaeological resources were negative, the presence of a historic-period structure and historic-period use of the property suggest there is

sensitivity for encountering subsurface historic-period. Additionally, there is always the potential to encounter unanticipated archaeological resources during ground disturbing activities. Therefore, Rincon presents the following recommended mitigation measure for unanticipated discoveries during construction. With adherence to this measure, Rincon recommends a finding of ***less-than-significant impact with mitigation for archaeological resources*** under CEQA.

6.2.1 Recommended Mitigation

Unanticipated Discovery of Cultural Resources

In the event that archaeological resources are unexpectedly encountered during ground-disturbing activities, work within 50 feet of the find shall halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983) shall be contacted immediately to evaluate the resource. If the resource is determined by the qualified archaeologist to be prehistoric, then a Native American representative shall also be contacted to participate in the evaluation of the resource. If the qualified archaeologist and/or Native American representative determines it to be appropriate, archaeological testing for CRHR eligibility shall be completed. If the resource proves to be eligible for the CRHR and significant impacts to the resource cannot be avoided via project redesign, a qualified archaeologist shall prepare a data recovery plan tailored to the physical nature and characteristics of the resource, per the requirements of the California Code of Regulations (CCR) Guidelines Section 15126.4(b)(3)(C). The data recovery plan shall identify data recovery excavation methods, measurable objectives, and data thresholds to reduce any significant impacts to cultural resources related to the resource. Pursuant to the data recovery plan, the qualified archaeologist and Native American representative, as appropriate, shall recover and document the scientifically consequential information that justifies the resource's significance. The City shall review and approve the treatment plan and archaeological testing as appropriate, and the resulting documentation shall be submitted to the regional repository of the California Historical Resources Information System, per CCR Guidelines Section 15126.4(b)(3)(C).

6.3 Human Remains

No human remains are known to be present within the project site. However, the discovery of human remains is always a possibility during ground disturbing activities. If human remains are found, the State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner must be notified immediately. If the human remains are determined to be of Native American origin, the Coroner will notify the NAHC, which will determine and notify an MLD. The MLD has 48 hours from being granted site access to make recommendations for the disposition of the remains. If the MLD does not make recommendations within 48 hours, the landowner shall reinter the remains in an area of the property secure from subsequent disturbance. With adherence to existing regulations, Rincon recommends a finding of ***less-than-significant impact to human remains*** under CEQA.

Dear Ms. Montgomery:

The Central California Information Center received your record search request for the project area referenced above, located on the Lodi South & Waterloo 7.5' quadrangles in San Joaquin County. The following reflects the results of the records search for the project study area and radius:

As per data currently available at the CCaIC, the locations of resources/reports are provided in the following format: ☐ custom GIS maps ☒ GIS Data/shape files

Summary Data:

Resources within the project area:	None formally reported to the Information Center.
Resources within the 1/2-mile radius:	1: P-39-005394
Reports within the project area:	1: SJ-06911
Reports within the 1/2-mile radius:	5: SJ-00821, 4508, 6200, 9226, 9734

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System (CHRIS). **Note:** Billing will be transmitted separately via email by our Financial Services office* ($253.80), payable within 60 days of receipt of the invoice.

If you wish to include payment by Credit Card, you must wait to receive the official invoice from Financial Services so that you can reference the CMP # (Invoice Number), and then contact the link below:

Re: Maverik Gas Station-East Kettleman Lane and Beckman Road Project, San Joaquin County

Dear Ms. Montgomery:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Pricilla.Torres-Fuentes@nahc.ca.gov.

Sincerely,

Pricilla Torres-Fuentes

APPENDIX E

TRAFFIC STUDY TECHNICAL MEMORANDUM

Technical Memorandum

December 4, 2024

To	Dorothy Kam	**Contact No.**	916-245-4211
From	Kamesh Vedula, GHD; Zach Stinger, GHD, Amanda Hight, GHD	**Email**	Kamesh.Vedula@ghd.com
Project Name	Lodi Maverik Gas Station	**Project No.**	12585843
Subject	Lodi Maverik Gas Station Traffic Study Technical Memorandum		

1. Executive Summary

In this study, “Project” refers to the proposed Maverik Gas Station and other associated land uses to be located at the southeast corner of Kettleman Lane and Business Park Drive/Beckman Road (West), just east of Interstate 5 (I-5). The gas station will service both personal vehicles and trucks, with 14 vehicle fueling positions to be located on the north end of the project site, and 7 truck fueling positions to be located at the south end of the project site. The project convenience store is proposed to be 5,982 square feet (sf) and would be located in the center of the project site with 39 parking stalls. Other planned land uses are listed below.

- 2 commercial land uses - 2,047 sf and 2,453 sf
- 1 drive through restaurant - 3,003 sf
- 1 coffee drive through - 2,850 sf
- 1 dine-in restaurant - 6,718 sf
- 1 grocery/drug store – 7,919 sf.

The Project is anticipated to generate an estimated 266 net new vehicle trips during the AM peak hour and 243 net new vehicle trips during the PM peak hour at the study intersection locations. The study analyzed nine intersections and four roadway segments.

The Kettleman Lane will operate at LOS F with the current 4-lane configuration under the cumulative and cumulative plus project scenarios. With the planned improvement (6-lane configuration as identify in the City’s General Plan Transportation section), Kettleman Lane will operate at the acceptable LOS. The project is responsible for right-of-way dedication and frontage improvement along Kettleman Lane including the additional eastbound lane.

The Cherokee Lane/Kettleman Lane and SR 99 SB Ramps/Kettleman Lane intersections with the 4-lane Kettleman Lane configuration will operate at LOS F during PM peak hour under the cumulative and cumulative plus project scenarios. With the planned improvement on Kettleman Lane will operate at the acceptable LOS. No fair share of the planned improvement is required for the project.

The Business Park Drive-Beckman Road (West)/Kettleman Lane intersection will operate at LOS F during the PM peak under the cumulative and cumulative plus project scenarios. The intersection is expected to operate at LOS F even with the restriction to right-in and right-out and the planned improvements to Kettleman Lane

configuration due to the heavy northbound right traffic projected at this intersection. No improvement is proposed at this intersection and it will continue to operate unacceptably.

The Pixley Parkway/Kettleman Lane intersection with the two-way stop controlled and the 4-lane Kettleman Lane configuration is operating at LOS F during the PM peak hour under the existing and existing plus project scenarios. This intersection with traffic signal and 4-lane Kettleman Lane configuration will operate acceptably under the cumulative and cumulative plus project scenarios. No fair share of the traffic signal is required for the project.

The project is responsible for the signal modification of at the Beckman Road (east)-Project Driveway/Kettleman Lane including the outbound south leg and a 150-foot westbound left turn pocket with 90-foot bay taper. Additionally, it is recommended that approximately 120-foot median divider with a northbound left turn lane and through/right turn lane be constructed on the primary project driveway at Kettleman Lane to minimize queue spillback to/from Kettleman Lane. This might impact the site layout by shifting the first drive aisle to the south.

2. Introduction

The City of Lodi has retained GHD to perform a traffic study for the proposed Maverik Gas Station, commercial retail, restaurants, coffee shop, and grocery store/drug store (referred to herein as the "Project"). The proposed project would be located in the southeast corner of Kettleman Lane and Business Park Drive/Beckman Road (West), just east of Interstate 5 (I-5). This technical memorandum has been prepared to present the following:

- Technical analysis parameters and methodologies.
- Study intersections, data collection, and existing conditions assessment.
- Project description including quantification of the trip generation and trip distribution.
- Intersection & Roadway operations: Existing Conditions, Existing Plus Project Conditions, Cumulative Conditions, and Cumulative Plus Project Conditions

3. Study Area Context & Data Collection

This section presents the study locations that were evaluated within this memorandum. In addition, this section provides an overview of the transportation facilities as it relates to crash history and multimodal connectivity within the study area. Traffic count data is provided in Appendix A. The project location and study facilities are presented in Figure 3.1.

3.1 Study Locations

For this study, four (4) roadway segment locations were identified for roadway operations analysis. These locations were counted along East Kettleman Lane and Beckman Road (West) during a 24-hour period on June 23, 2022, and include:

1. East Kettleman Lane, west of SR 99
2. East Kettleman Lane, east of SR 99
3. East Kettleman Lane, east of Beckman Road
4. Beckman Road (West), south of East Kettleman Lane

In addition, existing intersections one through five below were originally identified for AM and PM peak hour level of service (LOS) evaluation under each analysis scenario. Peak hour turning movement counts were collected at intersections one through five on Thursday, June 23, 2022. New PM peak hour counts were collected for all intersections stated below on Thursday, May 9, 2024. Additionally, an AM peak hour count was

collected on the same day for Pixley Parkway. The new PM peak hour counts were collected to update traffic data as a field visit identified an earlier PM peak hour than what was collected in 2022. The counts for the Pixley Parkway AM peak period were collected from 7 – 9 AM, and the PM peak period counts for all intersections were collected from 2 – 6 PM. The analysis performed utilized the AM peak hour counts from June 23, 2022, the May 9, 2024 AM peak hour counts for Pixley Parkway, and the May 9, 2024 PM peak hour counts for all intersections.

Note: Kettleman Lane west of the SR 99 ramps is a State Route (SR) in Caltrans jurisdiction.

1. East Kettleman Lane (SR 12) @ South Cherokee Lane
2. East Kettleman Lane (SR 12) @ SR 99 Southbound Ramps
3. East Kettleman Lane (SR 12) @ SR 99 Northbound Ramps
4. East Kettleman Lane @ Beckman Road (West)
5. East Kettleman Lane @ Beckman Road (East)
6. East Kettleman Lane @ Pixley Parkway

3.2 Crash History

Crash data was gathered from the Statewide Integrated Traffic Records System (SWITRS) for the years 2017 to 2021. This data was reviewed for crash severity and crash cause at the study intersections. (Note: No crashes at East Kettleman Lane and Beckman Road (East) were recorded in this dataset.) In total, there were 35 crashes that were reported at these locations within the five-year analysis period. Table 3.1 presents the severity of crashes that occurred during this five-year analysis period. As shown, there were no fatalities or serious injury crashes reported.

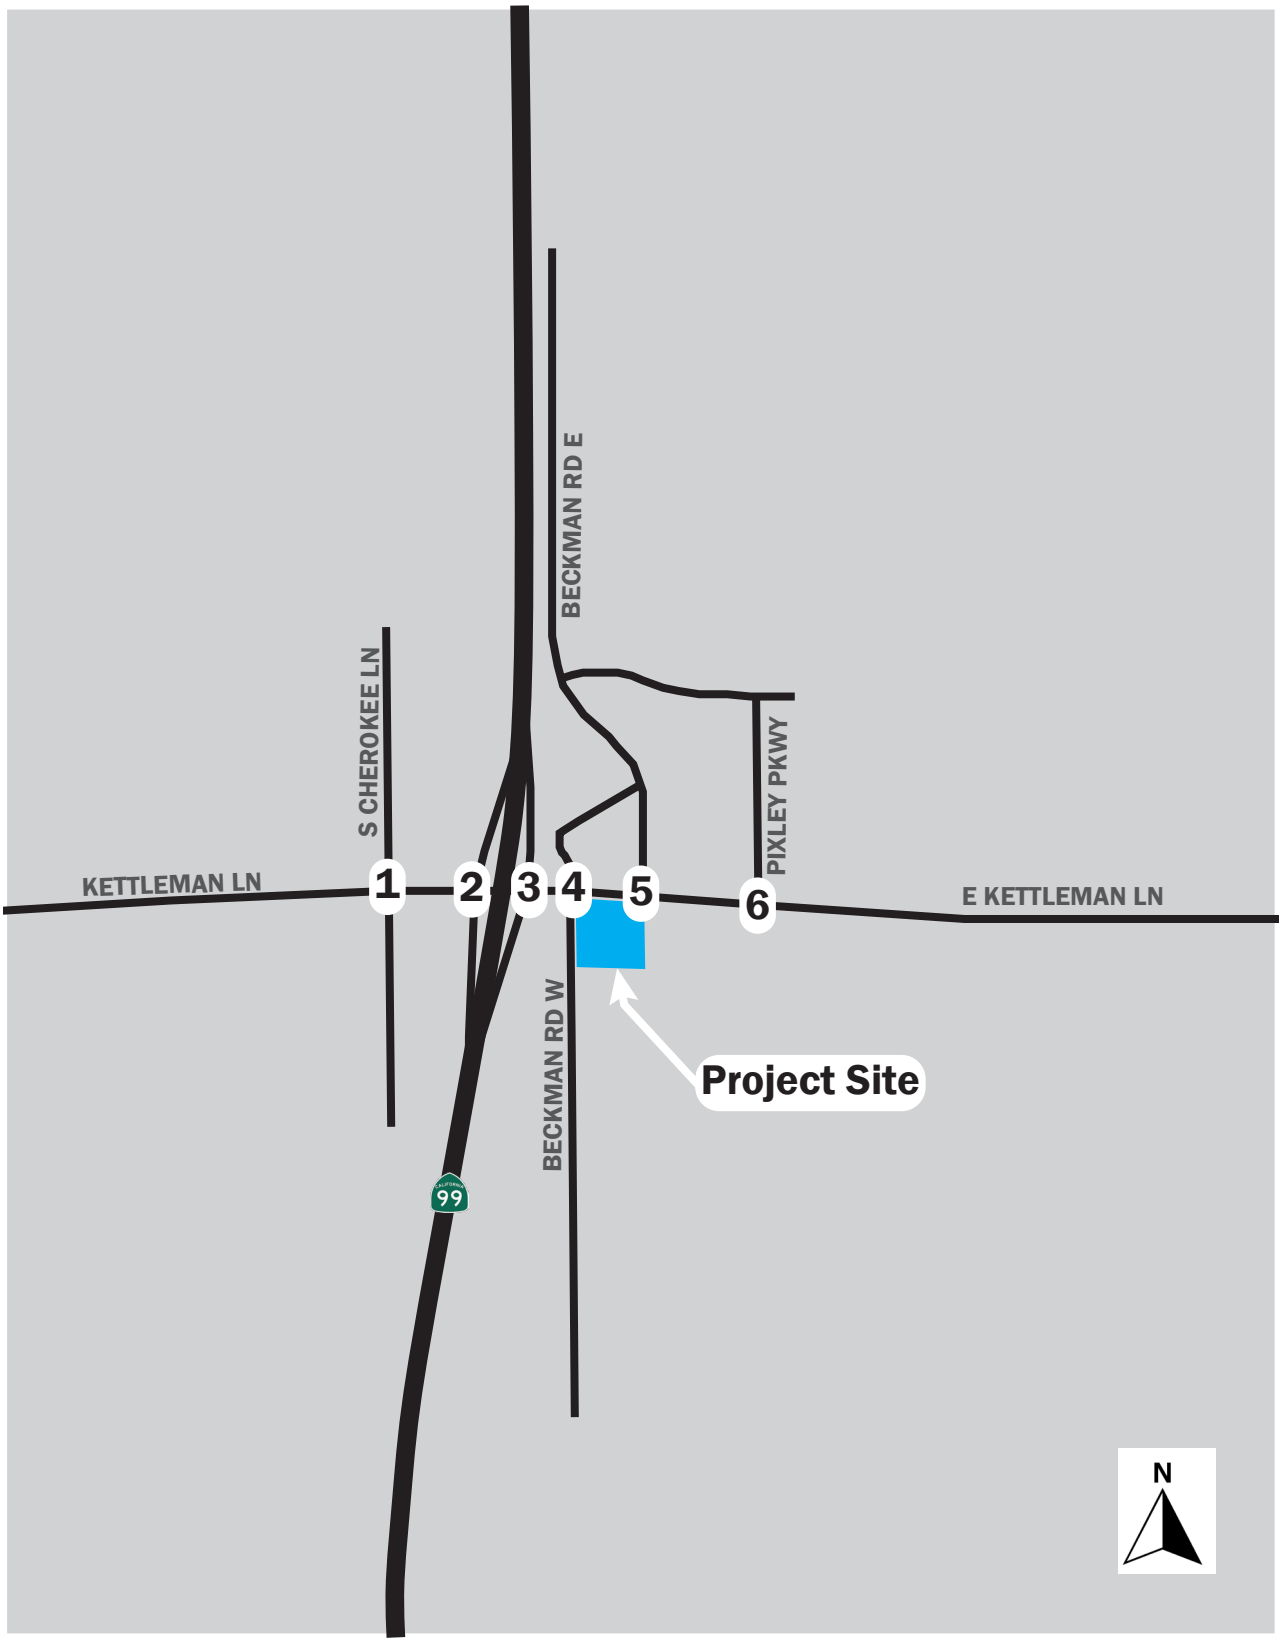

Table 3.1 Crash Severity (5-year)

Intersection	Severity			Total
	Property Damage Only	Other Visible	Complaint of Pain	
1. Cherokee Ln at E Kettleman Ln	12	2	8	22
2. E Kettleman Ln at Rt 99 SB	5			5
3. E Kettleman Ln at RT 99 NB	1			1
4. E Kettleman Ln at S Beckman Rd	3			3
5. E Kettleman Ln at N Beckman Rd				0
6. E Kettleman Ln at Pixley Pkwy		1	3	4

Table 3.2 presents the crash cause category as reported within the dataset during this five-year analysis period. As shown, the majority of crash causes involved unsafe speed.

Table 3.2 Crash Cause Type

Cause of Crash	Intersections

3.3 Multimodal Assessment

Sidewalk coverage is provided along East Kettleman Road in the study area west of SR 99. However, sidewalk coverage is limited to the north side of the roadway east of SR 99. Sidewalk coverage is limited to the west side of Beckman Road (East) in the study area, and no sidewalk is currently provided along Beckman Road (West). ADA features along sidewalks are intermittently provided within the study area.

There are no bicycle facilities along facilities in the study area along East Kettleman Lane between Cherokee Lane to the City limits however, the City of Lodi's General Plan identifies future Class II bicycle lanes along this roadway. There are currently Class II bicycle lanes on Beckman Road (East). There are currently no bicycle lanes on Beckman Road (West); however, the General Plan identifies future Class II bicycle lanes along this roadway. This project will provide right-of-way for potential widening in coordination with the city planning department.

The closest transit stop to the proposed project site is at the intersection of East Kettleman Lane and Cherokee Lane for Route 5 (weekday) and Route 5 and 31 (weekend). During weekday service, Route 5 provides access to Beckman Road (East) via a transit stop at the intersection of Auto Center Drive and Pixley Parkway.

There are currently two points along East Kettleman Lane within the study area with marked crosswalks, both of which are located west of SR 99. With future signalization and the addition of the fourth (south) leg at the intersection of East Kettleman Lane and Beckman Road (East), marked crosswalks should be provided for at least one approach for travel across East Kettleman Lane.

4. Project Description

The term "Project" as used in this study refers to the proposed Maverik Gas Station and other land uses proposed to be located in the southeast corner of Kettleman Lane and Business Park Drive/Beckman Road (West), just east of Interstate 5 (I-5). The gas station will service both personal vehicles and trucks, with 14 vehicle fueling positions to be located on the north end of the project site, and 7 truck fueling positions to be located at the south end of the project site. The project convenience store is proposed to be 5,982 square feet (sf) and would be located in the center of the project site with 39 parking stalls. Other planned land uses are listed below.

- 2 commercial land uses - 2,047 sf and 2,453 sf
- 1 drive through restaurant - 3,003 sf
- 1 coffee drive through - 2,850 sf
- 1 dine-in restaurant - 6,718 sf
- 1 grocery/drug store – 7,919 sf

4.1 Project Trip Generation

Project site trip generation has been estimated for the total number of vehicles fueling positions for personal vehicles (ITE Code 945) and trucks (ITE Code 950), separately. Project site trip generation for the commercial land uses (ITE Code 814) were estimated together, and grocery/drug store (ITE Code 880), dine-in restaurant (ITE Code 932), coffee drive through (ITE Code 937), and drive through restaurant (ITE Code 934) were estimated separately. These estimations were achieved by utilizing the Institute of Transportation Engineers (ITE) publication *Trip Generation Manual (11th Ed.)*.

Gas stations and convenience stores generally serve drivers that are on the roadway system and need to stop for services. Due to the proximity of the project site to I-5, a reduction of project trips was applied to account for vehicle trips already on the adjacent roadway network that stop at the proposed gas station and convenience store. These types of trips are typically considered pass-by trips.

Table 4.1 presents the project trip generation for Plus Project conditions for the Maverik Gas Station. As shown, the Project is anticipated to generate an estimated 266 net new vehicle trips during the AM peak hour and 243 net new vehicle trips during the PM peak hour at the study intersection locations.

Table 4.1 Project Trip Generation

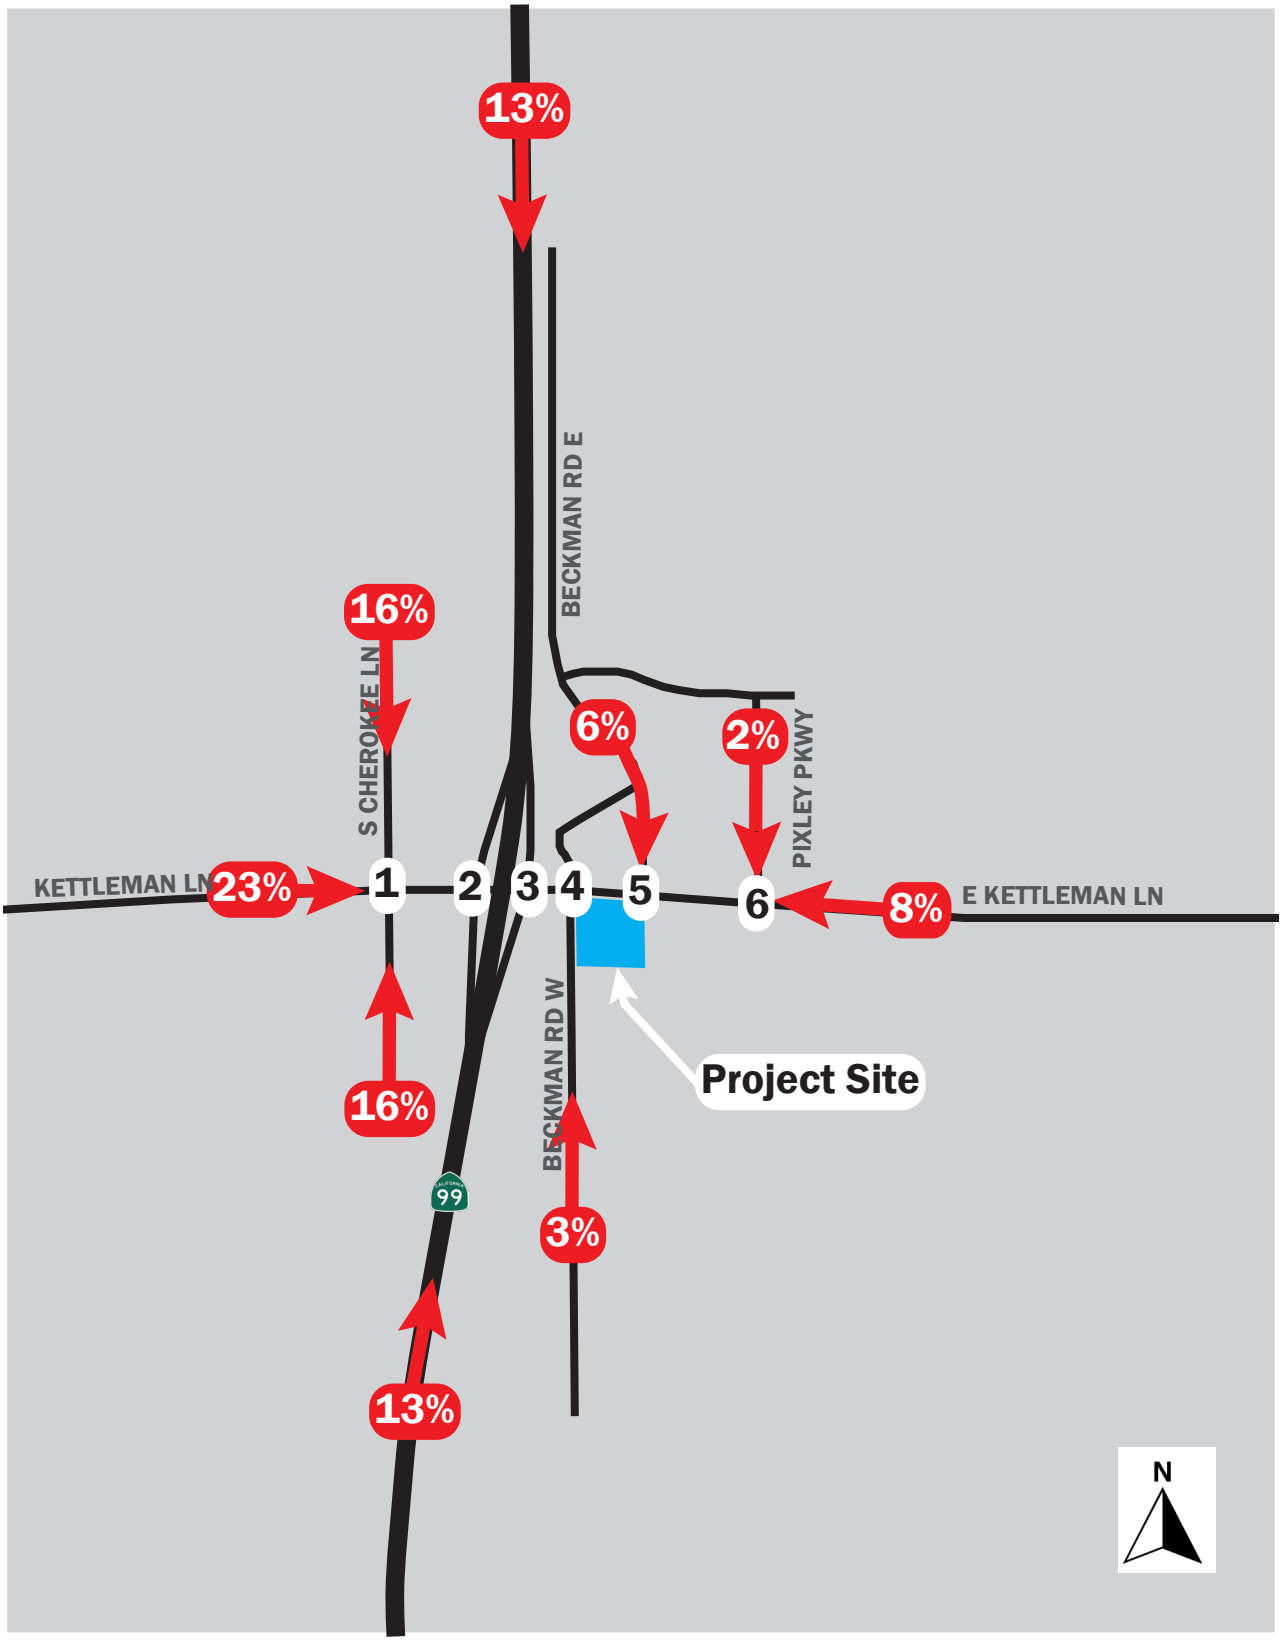
Notes:
1. 1 ksf = 1,000 square feet DU = dwelling unit VFP = Vehicle Fueling Positions
2. Trip rates based on ITE Trip Generation Manual 11th edition fitted-curve equations or average rates
3. Pass-by reduction based on ITE Trip Generation Handbook 3rd Edition (September 2017). Conservative pass-by of 50% was applied for Gas Station, Truck Stop, Coffee Shop and Fast food.
4. Internal Capture rates based on ITE Trip Generation Handbook, 3rd Edition.

4.2 Project Trip Distribution and Assignment



Based on a review of existing turning movements at study intersection locations and an understanding of the surrounding land uses, the Project trip distribution was determined to have the following split for Project trips:

- 13% from Northbound SR 99
- 13% from Southbound SR 99
- 16% from Northbound S. Cherokee Lane
- 16% from Southbound S. Cherokee Lane
- 23% from Eastbound East Kettleman Lane
- 3% from Northbound Beckman Road (W)
- 6% from Southbound Beckman Road (E)
- 2% from Southbound Pixley Parkway
- 8% from Westbound East Kettleman Lane

The project distribution is presented in Figure 4.1.

The pass-by trips were fully incorporated at the intersection of East Kettleman Lane & Beckman Road (E) for the PM peak hour and split based on existing volume patterns. The AM pass-by trips were split between SR 99 and the intersection of East Kettleman Lane & Beckman Road (E) as follows:

- 15% from Northbound SR 99
- 10% from Southbound SR 99
- 75% from intersection of East Kettleman Lane & Beckman Road (E)

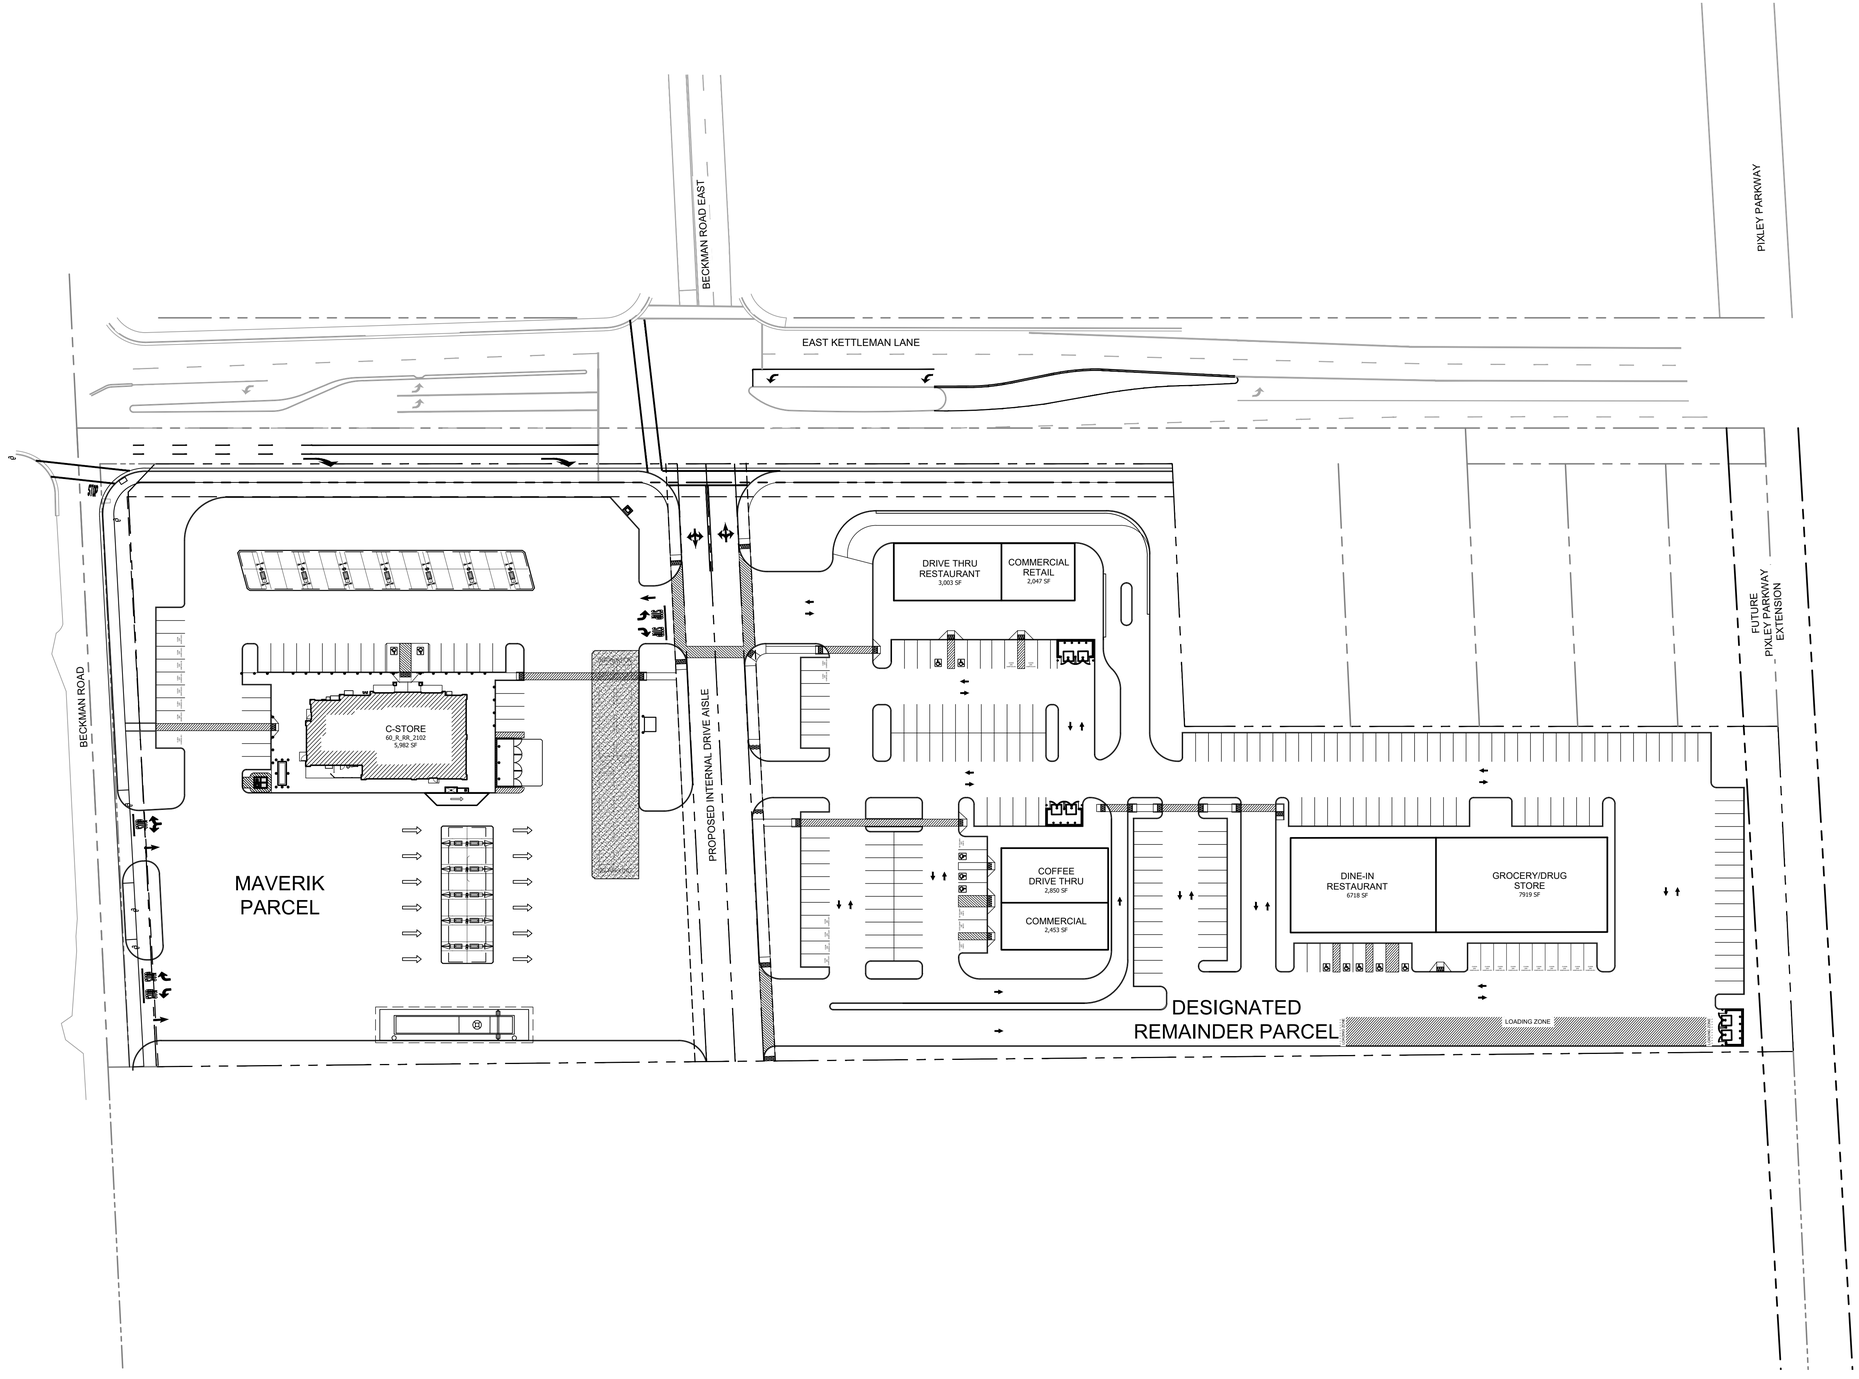
FIGURE 4.1



4.3 Circulation & Site Access

The project site plan is presented in Figure 4.2. The intersection of Kettleman Lane and Beckman Road (West) is side-street stop-controlled with restricted left turns onto Kettleman Lane. The intersection of Kettleman Lane and Beckman Road (East) is a three-leg signalized intersection. With the addition of the project, the intersection at Beckman Road (East) would be modified to include a fourth-leg (south leg) to allow turns into and out of the project site. The west leg should accommodate a 150-foot left turn pocket with a 90-foot bay taper.

As currently proposed, the intersection of Kettleman Lane and Beckman Road (West) will maintain its current alignment and control. As such, left turns out of the project side would be made via the Beckman Road (East) intersection. However, right turns out of the Beckman Road (West) intersection are permitted to make a U-turn at the Beckman Road (East) intersection.

Per the site plan, the Project will provide inbound/outbound access via Beckman Road (West) and outbound-only access via Kettleman Lane. Access via Beckman Road (West) is accommodated via two driveways (north and south). The City of Lodi has requested that the northly driveway allow only one inbound and one outbound lane. In addition, the City of Lodi has requested that all trucks use the southerly driveway on Beckman Road (West) due to the proximity of the northerly driveway to East Kettleman Lane. Based on the location of the truck fueling stations, it is anticipated that trucks will enter the site via the southerly driveway on Beckman Road (West) and exit the site via the intersection of East Kettleman Lane and Beckman Road (East). Non-truck vehicles are anticipated to primarily use both the northerly driveway on Beckman Road (West) and the intersection of East Kettleman Lane and Beckman Road (East) to enter/exit the site.

According to the site plan, truck turns are adequately accommodated with the proposed driveway and intersection configurations.

5. Technical Analysis Parameters & Methodologies

The following section outlines the analysis parameters and methodologies that were used in the transportation impact study to quantify potential project impacts for the analysis scenarios.

5.1 Level of Service Methodologies

Traffic operations were quantified through the determination of "Level of Service" (LOS). Level of Service is a qualitative measure of traffic operating conditions, whereby a letter grade "A" through "F" is assigned to an intersection, or roadway segment, representing progressively worsening traffic conditions. LOS "A" represents free-flow operating conditions and LOS "F" represents over-capacity conditions. Levels of Service were calculated for all intersection control types using the methods documented in the Transportation Research Board publication Highway Capacity Manual, Sixth Edition, A Guide for Multimodal Mobility Analysis, 2016 (HCM 6).

5.1.1 Intersection Operations

The Synchro 11 (Trafficware) software program was used to implement the HCM 6 analysis methodologies to evaluate AM and PM peak hour conditions. Synchro 11 has the capability to produce results based on HCM 2000, HCM 2010, HCM 6, or Synchro methodologies, and takes into account intersection signal timing and queuing constraints when calculating delay, the corresponding delay, and queue lengths. Intersection Level of Service (LOS) was calculated for all control types using the methods documented in HCM 6. For signalized intersections, a LOS determination is based on the calculated averaged delay for all approaches and movements. For two-way or side-street stop-controlled (TWSC) intersections, a LOS determination is based upon the calculated average delay for all movements of the worst performing minor street approach. The vehicular-based LOS criteria for different types of intersection controls are presented in Table 5.1. All Synchro reports are included in Appendix B.

Table 5.1 Level of Service (LOS) Criteria for Intersections

Level of Service	Type of Flow	Delay	Maneuverability	Stopped Delay per Vehicle	
				Signalized	Un-signalized
A	Stable Flow	Very slight delay. Progression is very favorable, with most vehicles arriving during the green phase not stopping at all.	Turning movements are easily made, and nearly all drivers find freedom of operation.	≤10.0	≤10.0
B	Stable Flow	Good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.	Vehicle platoons are formed. Many drivers begin to feel somewhat restricted within groups of vehicles.	>10.0 and ≤20.0	>10.0 and ≤15.0
C	Stable Flow	Higher delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, although many still pass through the intersection without stopping.	Back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted	>20.0 and ≤35.0	>15.0 and ≤25.0
D	Approaching Unstable Flow	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high volume-to-capacity ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	Maneuverability is severely limited during short periods due to temporary back-ups.	>35.0 and ≤55.0	>25.0 and ≤35.0

Level of Service	Type of Flow	Delay	Maneuverability	Stopped Delay per Vehicle	
				Signalized	Un-signalized
E	Unstable Flow	Generally considered to be the limit of acceptable delay. Indicative of poor progression, long cycle lengths, and high volume-to-capacity ratios. Individual cycle failures are frequent occurrences.	There are typically long queues of vehicles waiting upstream of the intersection.	>55.0 and ≤80.0	>35.0 and ≤50.0
F	Forced Flow	Generally considered to be unacceptable to most drivers. Often occurs with over saturation. May also occur at high volume-to-capacity ratios. There are many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors.	Jammed conditions. Back-ups from other locations restrict or prevent movement. Volumes may vary widely, depending principally on the downstream back-up conditions.	>80.0	>50.0

Technical Analysis Parameters

This traffic study focuses on a “planning level” evaluation of traffic operating conditions. The planning level evaluation incorporates appropriate heavy vehicle factors and peak hour factors and reports the resulting operational analysis as estimated using the HCM 6-based analysis methodologies. Assessments of “design level” parameters (including queuing on intersection lane groups, stacking length requirements, etc.) are not included in this study.

Table 5.2 presents the technical parameters that were utilized for the evaluation of the study intersections and ramp segments for the analysis scenarios. All parameters not listed should be assumed as default values or calculated based on the parameters listed.

Table 5.2 Technical Parameter Assumptions

	Technical Parameter	Assumption
1	Intersection Peak Hour Factor	Based on counts/Field Observations
2	Intersection Heavy Vehicle Percent	Based on counts, intersection overall (minimum of 2%)

Agency Level of Service Guidelines and Policies

City of Lodi: The City of Lodi’s General Plan Circulation Element contains the following policy pertaining to roadway LOS standards:

> *T-P11: Strive to comply with the Level of Service standards and other performance measures on Routes of Regional Significance as defined by the County-wide Congestion Management Program.*
>
> *T-P12 For purposes of design review and environmental assessment, apply a standard of Level of Service E during peak hour conditions on all streets in the City’s jurisdiction. The objective of this performance standard is to acknowledge that some level of traffic congestion during the peak hour is acceptable and indicative of an economically vibrant and active area, and that infrastructure design decisions should be based on the conditions that predominate during most of each day.*

Consistent with the City’s policies, this study will consider LOS “E” as the standard threshold acceptable operations for any intersection and roadway under the City of Lodi jurisdiction.

Caltrans:

Caltrans has transitioned away from LOS thresholds in favor of considering Vehicle Miles Traveled (VMT). Caltrans’ Guide for the Preparation of Traffic Impact Studies contains the following policy pertaining to the LOS standards within Caltrans jurisdiction:

> *Caltrans has transitioned away from LOS thresholds in favor of considering VMT. Caltrans’ Transportation Analysis Framework (TAF) and Transportation Analysis Under CEQA (TAC) state that intersection improvement projects are “not likely to lead to a measurable and substantial increase in*

VMT and which therefore generally should not require an induced travel analysis per OPR's Technical Advisory."

For these reasons, the City of Lodi's LOS thresholds will be applied to all applicable intersections. For the purposes of this study, the study intersections will be analyzed at a threshold of LOS "E" in accordance to City of Lodi guidelines.

VMT has replaced LOS as the criterion used to evaluate transportation impacts under the California Environmental Quality Act (CEQA). The California Code of Regulations (14 CCR §15064.3) states the following criteria for analyzing transportation impacts:

(2) Transportation Projects. Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact.

The OPR Technical Advisory identifies that in rural areas fewer options may be available for reducing VMT, and significance thresholds may be best determined on a case-by-case basis. The Advisory goes on to recommend that because new retail development typically redistributes shopping trips from other retail destinations rather than creates new trips, lead agencies should generally analyze retail project's transportation impacts by assessing the total change in VMT.

A retail project might lead to decreases in VMT, depending on previously existing retail travel patterns. For example, by adding retail opportunities to the immediate landscape and thereby improving the proximity of retail destinations, "local-serving retail" tends to shorten trips and reduce VMT. As such, local-serving retail is generally considered by lead agencies to create a less-than-significant transportation impact.

One screening threshold identified in the OPR Technical Advisory is specific to retail development. The Technical Advisory provides that a lead agency may "screen out" local-serving retail development from further CEQA VMT review since it typically redistributes shopping trips rather than creates new trips. As such, OPR states that "lead agencies generally may presume such development creates a less-than-significant impact."

The Maverik Gas Station project is not likely to increase VMT significantly as majority of the motorists would utilize the facility on their way to another destination.

6. Intersection Operations

This section presents the results of AM and PM peak hour intersection operational analysis performed for the study locations using the technical parameters described in the preceding section.

The AM peak hour is defined as the one-hour of peak traffic flow (which is the highest total volume count over four consecutive 15-minute count periods) counted between 7:00 am and 9:00 am on a typical weekday. The PM peak hour is generally defined as the one hour of peak traffic flow counted between 4:00 pm and 6:00 pm on a typical weekday. AM counts from June 23, 2022, were used to analyze intersections one through five, and new counts from May 9, 2024 were used for intersection six. According to field observations (Wednesday, November 9, 2022 and August 13, 2024) and daily 24-hour traffic count data, the peak hour in the project vicinity starts at 3:30 PM, potentially due to a shift change at a nearby facility. Therefore, new counts were collected for the PM peak hour on May 9, 2024 to verify the PM peak hour that was determined for the June 23, 2022 counts. Therefore, the maximum is believed to be captured. The PM peak hour for intersection four in the new counts was 3:45 – 4:45 PM. 3:30 – 4:30 PM was analyzed instead to remain consistent with the 3:30 – 4:30 PM peak hour of the rest of the other study intersections.

In addition, due to the presence of heavy vehicles (trucks) within the study area, heavy vehicle percentages were based on peak hour traffic data collected at the study intersections. Heavy vehicle percentages ranged from 6.0 to 8.8-percent during the AM peak hour, and 2.7 to 4.0-percent during the PM peak hour.

6.1 Existing Conditions

The Existing conditions scenario represents existing transportation facilities serving the project site and establishes the traffic conditions which currently exist for those facilities. Existing conditions for weekday AM and PM peak hour intersection operations were quantified utilizing the existing traffic volumes and intersection lane geometrics and control. Field observations from August 13, 2024 showed westbound queues at intersection three backed up to intersection four consistently during the peak hour. Additionally, westbound queues at intersection three backed up to intersection five during the peak 15-minutes. To ensure that current operations were being adequately represented within Synchro, SimTraffic was used to compare queue lengths and adjustments to the peak hour factors were made to be consistent with what was observed in the field. The SimTraffic results for the PM peak hour are included in Appendix B.

Figure 6.1 presents the Existing peak hour turning movement volumes. Table 6.1 provides the delay (in sec/veh) and resulting LOS for the six study intersections under Existing conditions. As shown, all study intersections are projected to operate above the target LOS during the Existing conditions AM and PM peak hours except for intersection six. Intersection six (Pixley Parkway and East Kettleman Lane) is projected to operate at unacceptable LOS F in the PM peak hour.

Table 6.1 Existing Conditions Intersection Operations

#	Intersection	Control Type[1,2]	Target LOS	AM Peak Hour		PM Peak Hour	
				Delay	LOS	Delay	LOS
1	South Cherokee Lane & East Kettleman Lane	Signal	E	20.7	C	29.1	C
2	SR 99 SB Ramps & East Kettleman Lane	Signal	E	11.4	B	28.6	C
3	SR 99 NB Ramps & East Kettleman Lane	Signal	E	10.5	B	18.6	B
4	Beckman Road (West) & East Kettleman Lane	TWSC	E	11.1	B	15.6	C
5	Beckman Road (East) & East Kettleman Lane	Signal	E	9.3	A	14.1	B
6	**Pixley Parkway & East Kettleman Lane**	**TWSC**	**E**	10.6	B	**138.4**	**F**

Notes:

1. TWSC = Two Way Stop Control
2. LOS = Delay based on worst minor street approach for TWSC intersections, average of all approaches for Signal
3. **Bold** = Unacceptable Conditions

6.2 Existing Plus Project Conditions

Existing Plus Project Conditions were simulated by superimposing traffic generated by the proposed project onto existing intersection traffic volumes. The Project Only intersection peak hour turning movement volumes are presented in Figure 6.2. Signal modification is assumed at the intersection of East Kettleman Lane & Beckman Road (East) associated with adding the new south/fourth intersection leg. This analysis assumes the addition of a westbound left turn lane and protected phasing.

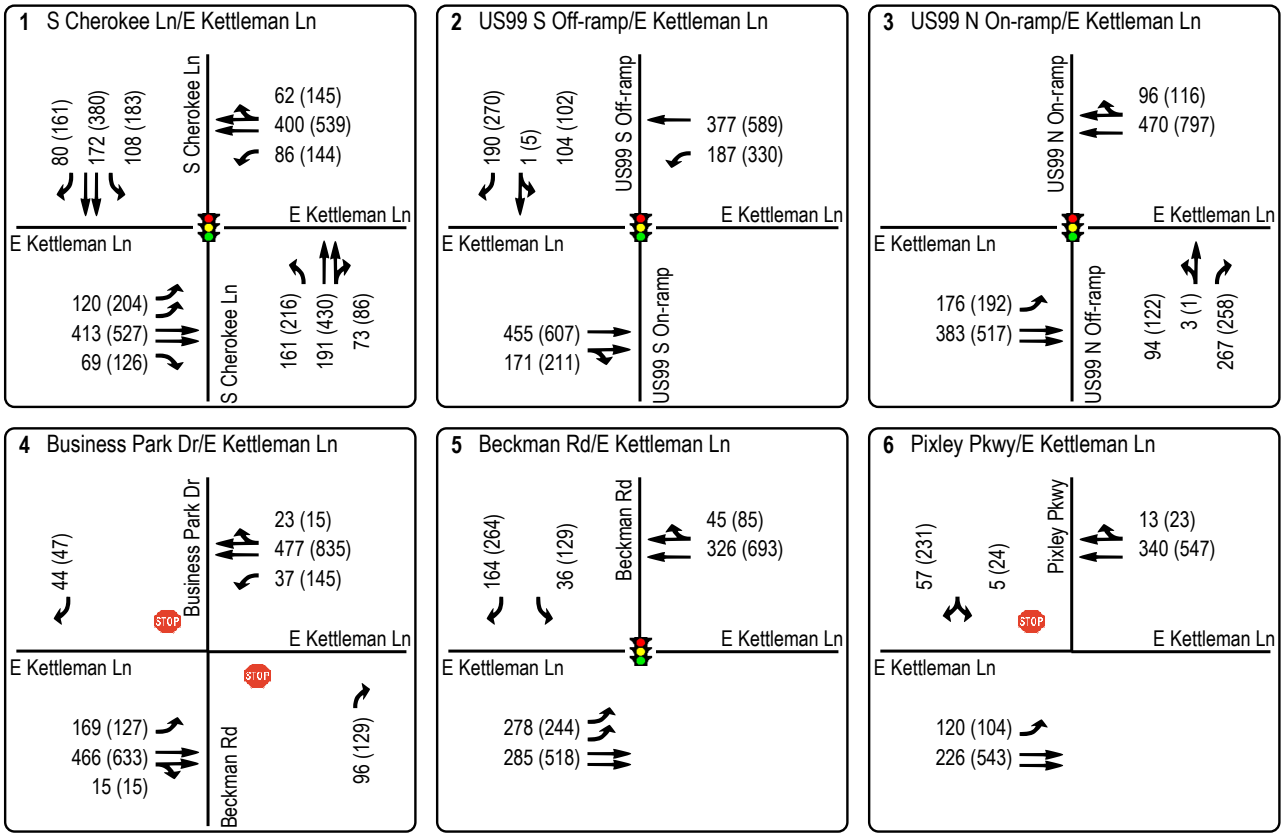

Figure 6.3 presents the Existing plus Project peak hour turning movement volumes. Table 6.2 presents a summary of the intersection operations for the weekday AM and PM peak hour scenarios for the Existing Plus Project Conditions. As shown, all study intersections are projected to operate at or below the target LOS during the Existing Plus Project conditions AM and PM peak hours except for intersection six. Intersection six is projected to continue to operate at LOS F in the PM peak hour.

Table 6.2 Existing Plus Project Intersection Operations

#	Intersection	Control Type[1,2]	Target LOS	AM Peak Hour		PM Peak Hour	
				Delay	LOS	Delay	LOS
1	South Cherokee Lane & East Kettleman Lane	Signal	E	21.4	C	31.1	C
2	SR 99 SB Ramps & East Kettleman Lane	Signal	E	12.8	B	31.1	C
3	SR 99 NB Ramps & East Kettleman Lane	Signal	E	10.9	B	19.1	B

FIGURE 6.3

6.3 Cumulative Conditions

Cumulative conditions refer to the analysis scenarios which reflect future conditions represented by local and regional growth in approximately 20 years in the future. This growth was estimated using the City of Lodi travel demand model. Cumulative No Project conditions was prepared to analyze the scenario that considers the projected 20-Year development forecast, including the currently planned and approved developments, but without the proposed Maverick Gas Station project. The Cumulative No Project conditions do not assume future widening of East Kettleman Lane to six-lanes between Cherokee Lane and SR-99 as it was not included in the City of Lodi General Plan Environmental Impact Report (EIR) because it did not have environmental clearance or funding identified.

The Cumulative Plus Project condition is the analysis scenario in which traffic impacts associated with the proposed Maverick Gas Station development are investigated in comparison to the Cumulative No Project conditions. Levels of Service were calculated for the study locations under Cumulative No Project and Cumulative Plus Project conditions.

For Cumulative conditions, it was assumed that the addition of a northbound approach in the future to Pixley Parkway would require the intersection to be signalized. As such the operations at this intersection were evaluated with a signal and the following geometrics:

- 100-foot right turn pockets (eastbound, westbound, and southbound approaches)
- 50-foot left turn pockets (northbound and southbound approaches)
- 315-foot left turn pockets (eastbound and westbound approaches)
- Channelized right turn lane (southbound approach)

6.3.1 Cumulative No Project Intersection Operations

Figure 6.4 presents the Cumulative No Project peak hour turning movement volumes. Table 6.3 presents a summary of the intersection operations for the weekday AM and PM peak hour scenarios for the Cumulative No Project Conditions. As shown in Table 6.3, three study intersections are projected to operate below the target LOS during the Cumulative No Project conditions PM peak hour.

- South Cherokee Lane & East Kettleman Lane
- SR 99 SB Ramps & East Kettleman Lane
- Beckman Road (West) & East Kettleman Lane (the westbound left and eastbound left movements at intersection are projected to operate at unacceptable LOS F)

Table 6.3 Cumulative No Project Intersection Operations

#	Intersection	Control Type[1,2]	Target LOS	AM Peak Hour		PM Peak Hour

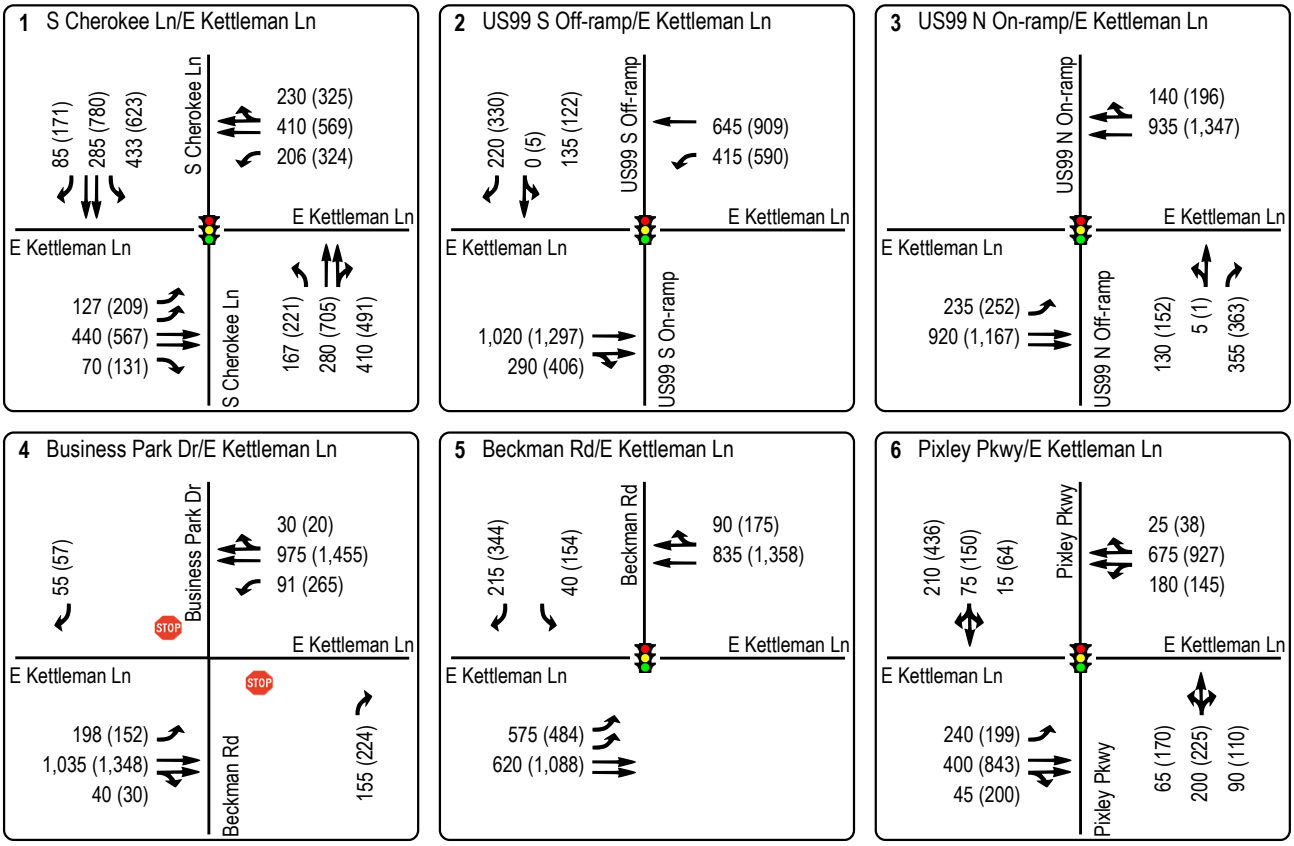
6.3.2 Cumulative Plus Project Intersection Operations

Figure 6.5 presents the Cumulative Plus Project peak hour turning movement volumes. Table 6.4 presents a summary of the intersection operations for the weekday AM and PM peak hour scenarios for the Cumulative Plus Project Conditions. Table 6.4 shows the results of intersection six as a signalized intersection.

As shown, three study intersections are projected to operate at unacceptable LOS during the Cumulative Plus Project conditions PM peak hour:



- South Cherokee Lane & East Kettleman Lane
- SR 99 SB Ramps & East Kettleman Lane
- Beckman Road (West) & East Kettleman Lane (the westbound left and eastbound left movements at intersection are projected to operate at unacceptable LOS F)

Table 6.4 Cumulative Plus Project Intersection Operations

#	Intersection	Control Type[1,2]	Target LOS	AM Peak Hour		PM Peak Hour	
				Delay	LOS	Delay	LOS
1	**South Cherokee Lane & East Kettleman Lane**	**Signal**	**E**	52.6	D	**140.7**	**F**

7. Roadway Segment Operations

Kettleman Lane runs east-west along the SR 12 alignment within the City of Lodi with connections to both Interstate 5 and SR 99. The roadway is referred to as East Kettleman Lane within the project vicinity. East Kettleman Lane is a four-lane major arterial street west of SR 99 and a four-lane minor arterial street east of SR 99. Beckman Road south of East Kettleman Lane is a two-lane collector in the study area which runs to East Harney Lane. SR 99 runs north-south through the City of Lodi and is immediately adjacent to the project site. Table 7.1 presents the existing daily traffic car and truck volumes collected along East Kettleman Lane and Beckman Road (West) within the study area during a 24-hour period on June 23, 2022.

Table 7.1 Existing Roadway Daily Volumes

	EB			WB			Total		
SEGMENT	Cars	Trucks	Total	Cars	Trucks	Total	Cars	Trucks	Total
East Kettleman Lane (4-lanes)									
West of SR 99 Northbound Ramps	8,866	373	9,239	9,486	650	10,136	18,352	1,023	19,375
East of SR 99 Northbound Ramps	8,886	553	9,439	9,218	655	9,873	18,104	1,208	19,312
East of Beckman Road*	5,424	213	5,637	5,528	196	5,724	10,952	409	11,361
Beckman Road (West) (2-lanes)									
South of East Kettleman Lane	1,179	6	1,185	1,182	10	1,192	2,361	16	2,377

The City of Lodi's General Plan Draft EIR (2009) includes average daily traffic (ADT) volume and LOS thresholds for roadway segments, shown in Table 7.2. The following table provides LOS thresholds for average daily traffic (ADT) volumes for two-lane, four-lane and six-lane arterials and two-lane collectors within the City of Lodi. Based on these thresholds, all study roadway segments in the project area are currently operating at LOS A. *(*Note: East Kettleman Lane is four-lanes immediately east of Beckman Road but is reduced to two-lanes east of Pixley Parkway. At this point, the roadway operates at LOS B.)*

Table 7.2 Roadway Segment ADT LOS Thresholds

Classification	ADT Volumes & LOS Thresholds				
	A	B	C	D	E
Arterial (2-Lane)	10,500	12,250	14,000	15,750	17,500
Arterial (4-Lane)	21,000	24,500	28,000	31,500	35,000
Arterial (6-Lane)	31,500	36,750	42,000	47,250	52,500
Collector (2-Lane)	7,500	8,750	10,000	11,250	12,500

7.1 Project Daily Traffic

With the addition of Project traffic, East Kettleman Lane west of SR 99 would experience an increase of 115 AM and 117 PM new peak hour trips, and East Kettleman Lane east of SR 99 would experience an increase of 167 AM and 173 PM new peak hour trips. Assuming a PM peak hour factor of 7-percent of daily traffic for both locations, this would equate to approximately 1,642 new daily project trips west of SR 99 and 2,568 new daily project trips east of SR 99. With this increase in daily volumes, East Kettleman Lane in the project area west of Beckman Road is projected to operate at LOS B.

On East Kettleman Lane east of Beckman Road, the project would add 20 AM and 21 PM new peak hour trips. Assuming a PM peak hour factor of 12-percent of daily traffic at this location, this would equate to approximately 177 new daily project trips. With this increase in daily volumes, this roadway segment would continue to operate at LOS A. However, as noted above, East Beckman Road is reduced to two-lanes east of Pixley Parkway. At this point, the roadway would continue to operate at LOS B.

On Beckman Road (West) south of East Kettleman Lane, the project would add 12 AM and 13 PM new peak hour trips. Assuming a PM peak hour factor of 8-percent of daily traffic at this location, this would equate to approximately 161 new daily project trips. With this increase in daily volumes, this roadway segment would continue to operate at LOS A.

The anticipated new daily project trips, based on PM peak hour project trips, are presented in Table 7.3.

Table 7.3 New Daily Project Trips

Segment	New PM Project Trips	PM Peak Hour Factor	New Daily Project Trips
East Kettleman Lane			
West of SR 99 Northbound Ramps	134	0.07	2,000
East of SR 99 Northbound Ramps	197	0.07	3,000
East of Beckman Road	24	0.12	200
Beckman Road (West)			
South of East Kettleman Lane	15	0.08	200

7.2 Cumulative Daily Traffic

Using average growth rates applied to the study intersections based on the City of Lodi's travel demand model, the roadway ADT on the study segments could increase by approximately two-times over the next twenty years, as shown in Table 7.4. The Cumulative No Project conditions do not assume future widening of East Kettleman Lane to six-lanes between Cherokee Lane and SR-99 as it was not included in the City of Lodi General Plan Environmental Impact Report (EIR) because it did not have environmental clearance or funding identified.

Table 7.4 Cumulative Roadway Daily Volumes Forecasts

Segment	Existing	Cumulative
East Kettleman Lane		
West of SR 99 Northbound Ramps	19,000	38,000
East of SR 99 Northbound Ramps	19,000	38,000
East of Beckman Road	11,000	22,000
Beckman Road (West)		
South of East Kettleman Lane	2,000	4,000

This increase in daily traffic under Cumulative No Project Conditions would results in East Kettleman Road in the study area to degrade to LOS F west of Beckman Road. East Kettleman Road immediately east of Beckman Road would operate at LOS B within the four-lane segment and LOS F within the two-lane segment. Beckman Road (West) would continue to operate at LOS A.

7.3 Roadway Daily Volumes & LOS

Table 7.5 presents the daily volumes and LOS results for the study roadway segments for Existing and Cumulative conditions with and without the Project. *As noted above, East Kettleman Road east of Beckman Road transitions for four to two-lanes; therefore, two LOS results are provided for this location.

Table 7.5 Roadway Daily Volumes & LOS

Segment	Existing	LOS	Existing PP	LOS	Cumulative	LOS	Cumulative PP	LOS
East Kettleman Lane								
West of SR 99 Northbound Ramps	19,000	A	21,000	B	38,000	F	40,000	F
East of SR 99 Northbound Ramps	19,000	A	22,000	B	38,000	F	41,000	F
East of Beckman Road*	11,000	A/B	11,200	A/B	22,000	B/F	22,200	B/F
Beckman Road (West)								
South of East Kettleman Lane	2,000	A	2,200	A	4,000	A	4,200	A
***Bold** = Unacceptable conditions*								

8. Recommended Operational Improvements

In an effort to maintain consistency with City of Lodi and Caltrans policies for transportation facilities, this section identifies the improvements to address the “Plus Project” intersection LOS deficiencies at the study locations. The City of Lodi General Plan Circulation Element recommends widening East Kettleman Lane to six lanes between Lower Sacramento Road to Guild Avenue, providing three travel lanes per direction to accommodate future growth. East of Guild Avenue, East Kettleman Road would be widened to four-lanes.

Roadway: Widening to six lanes will yield acceptable roadway operations on East Kettleman Road in the study area.

Intersections: Based on the intersection operational analysis conducted for this study, widening to six lanes would improve intersection operations at the study locations. The recommended intersection operational improvements therefore include a review of widening potential along East Kettleman Lane to six lanes.

Additionally, intersection one should be modified to convert a southbound through pocket to a left turn pocket and convert the southbound right turn lane to a thru-right lane.

Table 8.1 presents the intersection operations with the roadway widening improvements, project related modifications at intersection five, and expected intersection changes to accommodate future signalization of intersection six.

Table 8.1 Improved Intersection Operations under Cumulative Plus Project Conditions

#	Intersection	Control Type[1,2]	Target LOS	AM Peak Hour		PM Peak Hour	
				Delay	LOS	Delay	LOS
1	South Cherokee Lane & East Kettleman Lane	Signal	E	31.0	C	79.6	E
2	SR 99 SB Ramps & East Kettleman Lane	Signal	E	30.9	C	79.0	E
3	SR 99 NB Ramps & East Kettleman Lane	Signal	E	31.2	C	39.4	D
4	**Beckman Road (West) & East Kettleman Lane**	**TWSC**	**E**	27.4	D	**OVR**	**F**
5	Beckman Road (East) & East Kettleman Lane	Signal	E	27.1	C	32.7	C
6	Pixley Parkway & East Kettleman Lane	Signal	E	20.6	C	35.9	D

Notes:

1. TWSC = Two Way Stop Control
2. LOS = Delay based on worst minor street approach for TWSC intersections, average of all approaches for Signal
3. **Bold** = Unacceptable Conditions
4. OVR = Delay over 300 seconds

The intersection changes stated above would result in projected improvements in roadway segment operations under Cumulative Plus Project conditions. The following intersections are projected to operate acceptably in the AM and PM peak hours.

- South Cherokee Lane & East Kettleman Lane
- SR 99 SB Ramps & East Kettleman Lane
- SR 99 NB Ramps & East Kettleman Lane
- Beckman Road (East) & East Kettleman Lane
- Pixley Parkway & East Kettleman Lane

The following modifications are recommended to further reduce delay, however, right-of-way restrictions and existing buildings make the suggested modifications unfeasible.

- Northbound approach at intersection one: add a 50-foot channelized northbound right turn pocket and 100-foot westbound right turn pocket
- Intersection two: add a 100-foot eastbound right turn pocket
- Intersection five: add a 100-foot westbound right turn pocket and two 150-foot southbound right turn pockets

Intersection four is projected to operate acceptably in the AM peak hour and unacceptably at LOS F in the PM peak hour. Additionally, the westbound left movement, eastbound left movements, and northbound lane at intersection four are projected to operate at LOS F in the PM peak hour in addition to what is shown in the table.

The delay for the westbound left movement at intersection four is projected to increase to approximately 520 s/veh during the Cumulative Plus Project Mitigation scenario in the PM peak hour due to the additional eastbound through lane. The delay is projected to worsen in the AM peak hour as well compared to Cumulative Plus Project conditions. The additional through lane increases the number of conflict points that Synchro is analyzing, resulting in a higher delay for the westbound left movement at intersection four compared to the same movement in the Cumulative Plus Project PM condition as well as a larger delay in the AM peak hour.

While the operations at intersection four can be improved by restricting access to right-in/right-out only, it wouldn't bring the intersection back to acceptable operations as shown in Table 8.2 below. Therefore, the intersection of Beckman Road (West) & East Kettleman Lane would operate at an unacceptable LOS in the Cumulative conditions.

Table 8.2 Restricted Left Turn Intersection Operations under Cumulative Plus Project Conditions

#	Intersection	Control Type[1,2]	Target LOS	AM Peak Hour		PM Peak Hour	
				Delay	LOS	Delay	LOS
4	**Beckman Road (West) & East Kettleman Lane**	**TWSC**	**E**	36.8	E	**156.4**	**F**
5	Beckman Road (East) & East Kettleman Lane	Signal	E	35.2	D	59.9	E

Notes:

1. TWSC = Two Way Stop Control
2. LOS = Delay based on worst minor street approach for TWSC intersections, average of all approaches for Signal
3. **Bold** = Unacceptable Conditions

Intersection Summary	
HCM 6th Ctrl Delay	59.9
HCM 6th LOS	E

Notes

User approved pedestrian interval to be less than phase max green.
User approved ignoring U-Turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
