1.0 SUMMARY

This report presents the results of a Phase I Environmental Site Assessment (ESA) of a property located 85901 Avenue 53 in Coachella, California (the Subject Property) prepared by Northgate Environmental Management, Inc. (Northgate) for Terra Nova Planning & Research, Inc. (Terra Nova). The Subject Property consists of one developed lot and one undeveloped lot. A munitions manufacturing facility, producing combustible ordnance and countermeasure products, is located on the developed portion lot, with an empty lot just across Avenue 53 to the north. The total Subject Property consists of approximately 53 acres identified by APNs 778-390-008 and 778-420-013 in Riverside County. A Subject Property Location Map is shown on Figure 1 and a Subject Property Plan is shown on Figure 2.

Available historical information indicates that the Subject Property consisted of agricultural land since at least 1949 and remained agricultural through the late 1960s. By 1972, the Subject Property had been partially developed with the current Armtec facility. Facility expansion is seen in the aerials from 1984, 1996, 2002 and 2006. The Subject Property has remained in the configuration seen in 2006 into the present. The areas in the vicinity of the Subject Property were primarily agricultural and vacant, undeveloped land from at least 1949 through the late 1960s. From 1972 onward, industrial, commercial, and residential developments begin to expand gradually throughout the parcels surrounding the Subject Property. The first residential development appears south of the Subject Property in 1972, as well as in the north. By 2016, north and south adjacent parcels have been developed, and parcels adjacent to the east and west remain vacant with the exception of a trailer park residential subdivision east of Tyler Street. The parcels adjacent to the east and west of the Subject Property remain mostly vacant to this day.

In summary, Northgate has performed a Phase I ESA of a property located South of Avenue 53, West of Tyler Street in Coachella, California in conformance with the scope and limitations of ASTM Practice E 1527-21, which was adopted as the new standard by the EPA on February 13, 2023, and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations [CFR] Part 312). Any exceptions to, or deletions from, these practices are described in Section 2.3 of this report. This assessment revealed the following Recognized Environmental Condition (REC) associated with the Subject Property:

- An 8,000-gallon underground storage tank (UST) containing xylenes was present at the facility from 1992 until its removal in 2001. According to records obtained from Riverside County's Department of Environmental Health, one or more leaks from the former UST were reported between 1998 and 2001. The UST and associated piping was subsequently removed and investigations indicated that residual concentrations of benzene, ethylbenzene, toluene and xylenes were present in soil and that impacted soil extended to groundwater. BTEX concentrations were noted to be below regulatory

cleanup levels; however, groundwater was noted to be impacted with xylenes at concentrations that exceeded the California maximum contaminant level (MCL). The lack of closure documentation represents a REC.

The assessment has revealed the following Historic RECs (HRECs) associated with the Subject Property:

- The Armtec Facility has, both presently and in the past, operated settling ponds. A final pond closure plan from URS dated July 12, 2001, in conjunction with Cleanup and Abatement Order (CAO) No. 00-135, indicated that nitrocellulose contamination was present in the soil under the floor of the evaporation/percolation ponds, but at concentrations well below human health risk-based regulatory cleanup levels. Nitrocellulose contamination was typically restricted to the upper 6 inches of soil beneath the ponds. According to the report, Armtec redesigned the manufacturing process where washdown and process waster is recycled rather than discharged, thus the use of five out of seven ponds was discontinued. The report closes with a statement that Armtec intended to remove the soil and incinerate it onsite. Significant records documenting communication between Armtec and the Regional Water Quality Control Board for the Colorado River Basin (RWQCB) regarding monitoring and analysis of the ponds were present including a rescission of the CAO and a no further action letter.

The assessment did not reveal any Controlled RECs (CRECs) associated with the Subject Property. However, the following business environmental risk (BER) was identified:

- Due to the nature of the facility residing on the Subject Property, manufacturing munitions including combustible ordnance and countermeasure products, for at least 52 years, the potential for subsurface contamination cannot be ruled out.
- The Subject Property has consisted of agricultural land since at least 1949, and remained agricultural through the late 1960s, which can represent a potential for shallow subsurface impacts related to the potential historic use of pesticides, herbicides, and/or insecticides.

2.0 INTRODUCTION

This report presents the results of a Phase I ESA of a property located at 85901 Avenue 53 in Coachella, California. The Subject Property consists of two parcels totaling about 53-acres of developed and undeveloped land with a munitions manufacturing facility situated on one of the two parcels at the Subject Property. The Subject Property is identified by APNs 778-390-008 and 778-420-013 in Riverside County. A Subject Property Location Map is shown on Figure 1 and a Subject Property Plan is shown on Figure 2.

2.1 Purpose

The purpose of Phase I ESA has been to identify and evaluate the presence of RECs at the Subject Property. The term “REC” means *(1) the presence of hazardous substances or petroleum products in, on or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment.* The term is not intended to include *de minimus* conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

2.2 Scope of Services

Northgate has performed this Phase I ESA in general conformance with the scope and limitations of ASTM E-1527-21, *Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and 40 CFR Part 312, *Standards and Practices for All Appropriate Inquiry – Final Rule*, which was adopted as the new standard by the EPA on February 13, 2023. This investigation was conducted by Environmental Professional Jacob Lacy, with review from Derrick Willis, Northgate Principal. The scope of work for the investigation included the following services:

- Review of readily available information regarding the history of the Subject Property, including historic aerial photographs, maps, previous reports, and other information, and discussions with individuals familiar with the Subject Property;
- A reconnaissance of the Subject Property and near vicinity;
- Review of regulatory agency files for the Subject Property and surrounding area, as applicable;

- Interview with the Subject Property owner, tenants, and others as appropriate regarding land use at the Subject Property;
- Evaluation of potential RECs, development of conclusions and recommendations as appropriate; and
- Preparation of this report.

2.3 Limitations and Exceptions

2.3.1 Limitations

The purpose of an environmental assessment is to reasonably evaluate the potential for RECs arising from past practices on a given site area. In performing an environmental assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. No investigation is thorough enough to absolutely rule out the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not be construed as a guarantee of the absence of such materials on the Subject Property, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

Environmental conditions may exist at the Subject Property that cannot be identified by visual observation. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

Except where there is express concern of Northgate's client, or where specific environmental contaminants have been previously reported by others, naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

Where the scope of services is limited to interview and/or review of readily available reports and literature, any conclusions and/or recommendations are necessarily based largely on information supplied by others, the accuracy or sufficiency of which may not be independently reviewed by Northgate.

Any opinions and/or recommendations presented apply to Subject Property conditions existing at the time of performance of services. Northgate is unable to report on, or accurately predict, generally unforeseeable events that may impact the Subject Property following performance of services, whether occurring naturally or caused by external forces. Therefore, Northgate cannot

assume responsibility for such events or their impact. Northgate also cannot assume responsibility for changes in environmental standards, practices, or regulations.

2.3.2 Exceptions

The time intervals between some historical information sources may exceed five years due to the unavailability of such records. However, in Northgate's opinion, this data gap does not significantly impact our ability to evaluate historic land use conditions at the Subject Property given the availability of other sources for this information.

During the time this report was prepared, Northgate submitted a file review request to the Riverside County Department of Environmental Health. The Department provided multiple files concerning a former leaking UST containing xylene. While these records included valuable information pointing to contamination from the tank, no agency letters indicating case closure were found.

A file review request was also sent to the City of Coachella and while the City confirmed receipt of the file review request, no formal response has been received from this agency. Northgate will issue an addendum to this report if any public records received from these agencies within 90 days of the date of this report significantly changes the conclusions or recommendations of this report.

There were no other limiting conditions.

2.4 Phase I ESA Report Shelf Life

As defined in the ASTM Standard, a Phase I ESA report remains viable if it was completed no more than 180 days prior to the date of acquisitions or up to one year if the Phase I ESA Report have been updated including the following five components: 1) Interviews; 2) Searches for recorded environmental cleanup liens; 3) Review of government records; 4) Reconnaissance of the Subject Property and adjoining properties; and 5) Environmental Professional Declaration.

The shelf life date begins with the date upon which the first of these components was completed. The table below summarizes the date of completion of these components of this Phase I ESA report, with the report shelf life initiating from the earliest of the dates provided below.

Report Component	Date
Interviews	June 26, 2024
Searches for recorded environmental cleanup liens	June 20, 2024
Review of government records	
Government records requests	June 19, 2024
Aerial photographs	June 14, 2024
Sanborn maps	June 14, 2024
Historic topographic maps	June 14, 2024
City directories	July 9, 2024
Subject Property reconnaissance	June 20, 2024
Environmental Professional Declaration	August 5, 2024

2.5 User Reliance

This report has been prepared for the exclusive use of Terra Nova Planning & Research, Inc and its subsidiaries, affiliates, partners, and lenders (collectively the Users) in evaluating environmental conditions at the Subject Property. Others may not use or rely on the information contained in this report without the express written consent of Northgate.

3.0 USER-PROVIDED INFORMATION

3.1 Environmental Liens or Activity and Use Limitations

An environmental lien and activity and use limitation (AUL) search was conducted for the Subject Property by Environmental Data Resources (EDR). EDR's review indicates that there are no environmental liens or AULs of record for this parcel of the Subject Property. A copy of the Environmental Lien and AUL Search is included in Appendix A (EDR, 2024a). The Subject Property is not listed on the Federal NPL LIENS database.

3.2 Valuation Reduction for Environmental Issues

Northgate has not been provided with any information that indicates that the value of the property does not reasonably reflect the fair market value of the property.

3.3 Owner, Property Manager, and Occupant Information

Information provided for the Subject Property by EDR in the Environmental Lien and AUL Search indicates that the title to the Subject Property is vested in Armtec Defense Products Co as of 2010. The Subject Property is currently undeveloped land with no structures.

3.4 Specialized Knowledge

Northgate was not provided any information related to specialized knowledge of the Subject Property.

3.5 Reason for Performing the Phase I ESA

The purpose of this investigation is to assist in evaluating environmental conditions at the Subject Property for general informational purposes.

4.0 SUBJECT PROPERTY RECONNAISSANCE

Current Subject Property conditions were observed during a reconnaissance of the Subject Property and near vicinity performed by Mr. Ricardo Munoz, Project Geologist of Northgate on June 20, 2024. Photographs from the reconnaissance are attached at the end of this report.

4.1 Methodology and Limiting Conditions

The Subject Property reconnaissance was performed by traversing the Subject Property and general area on foot. There were no access issues or limiting conditions encountered during the reconnaissance of the Subject Property, except for entrance into the 11 series buildings due to security clearance.

4.2 Subject Property Conditions

4.2.1 *Current Use of the Subject Property*

The Subject Property is comprised of various buildings, storage containers, storage areas, basins, parking areas, and a vacant lot. The Subject Property is bordered by fencing to the west, north, east, and south. In general, the facility is used for research and development, chemical evaluation, engineering services, manufacturing of combustible cases for artillery ammunition, mortar systems, and tank ammunition, and quality control operations. A Site Plan showing features identified during the Site Reconnaissance is shown on Figure 2.

4.2.2 *Description of Structures, Roads, Sewage, and Potable Water Sources*

The subject property is developed with various buildings, storage containers, shade structures, overhead and underground piping, and aboveground storage tanks (ASTs). The Subject Property is bordered by fencing to the west, north, east and south and is only accessible from the east via Tyler Street. Sewage and potable water services are currently provided to the Subject Property from the Imperial Irrigation District.

4.2.3 *Inspection Observations*

- ***Hazardous Substances and Petroleum Products in Connection with Identified Uses***

Hazardous substances and petroleum products were observed in connection with identified uses during the inspection of the Subject Property. The following were observed;

- Storage of nitrocellulose was reportedly stored within Buildings 11, 11A, 11B, 11C and observed in Building 5.

- A fuel point is located in the northern portion of the Subject Property and utilizes a fuel dispenser equipped with a 1,000-gallon gasoline AST and a 1,000-gallon diesel AST and 5-gallon gasoline, diesel, and motor oil containers.
- A 10,000-gallon xylene AST was observed in the southeastern portion of the Subject Property.
- A hazardous Material Storage Area is located in the central portion of the Subject Property and is comprised of temperature-controlled shipping containers with various chemicals including aquamarine dye, yellow dye, lemon yellow dye, synthomer, resin, tan dye, soda ash, kymene, kor-lok, acrylic, and nalcon.

- ***Storage Tanks***

No evidence of USTs was observed during the inspection of the Subject Property. Various ASTs were observed during the reconnaissance including the following:

- One 10,000-gallon xylene AST was observed in the southeastern portion of the Subject Property.
- Fourteen 30,000-gallon slurry ASTs were observed at the Subject Property adjacent to Building 3, 6, and 9. Slurry is a mixture of chemicals and nitrocellulose and is used to make molds for artillery, tank, and motor programs.
- Three white water 30,000-gallon ASTs were observed adjacent to Building 3 and 6. White water is treated water that has been recycled and is used to make slurry mixtures.
- One 10,000-gallon sodium hydroxide AST, two 10,000-gallon grey water ASTs, one 7,000-gallon nitrogen AST, and one 10,000-gallon wastewater AST was observed south of Building 2. These ASTs are used to treat wastewater and are sent to the Peroxydisulfate (PDS) treatment system for discharge to the city sewer system.
- Five 10,000-gallon water holding ASTs were observed as part of the PDS, an area where water is stored, treated for pH imbalance, and discharged to the city sewer system.
- Two 30,000-gallon water holding ASTs, three 10,000-gallon ASTs, and three 5,000-gallon ASTs were observed as part of the Process Water Recovery System (PWRS). These ASTs hold water that has gone through the process within Buildings 3, 6, and 9 and are treated and filtered for reuse.

- ***Strong, Pungent, or Obnoxious Odors***

No strong, pungent, or obnoxious odors were observed during the inspection of the Subject Property.

- ***Standing Surface Water, Pools, or Sumps Containing Liquids***

Two lined basins used to collect runoff stormwater and recycled water using aeration techniques were observed in the southern portion of the Subject Property. Two dry retention basins and a series of ponds were reportedly located in the eastern portion of the Subject Property that are reportedly used for stormwater runoff.

- ***Drums, Totes, and Bulk Containers***

Large quantities of drums and totes were observed at the Subject Property. Clean empty drums and totes were observed in the central portion of the Subject Property. The empty drums and totes can be moved to any of the nine satellite storage areas located throughout the Subject Property when necessary. The satellite storage areas utilize secondary containment features such as containment pallets and/or berms. Once the drums and/or totes are full, they are sent to the Hazardous Waste Storage Area located in the southern portion of the Subject Property.

Drums containing nitrocellulose were also observed within Building 5 and in areas where slurry is produced. After the contents of these drums are used, these drums are sent to the Hazardous Waste Storage Area pending offsite disposal.

- ***Hazardous Substances and Petroleum Product Containers Not in Connection with Identified Uses***

No hazardous substances or petroleum products not in connection with identified uses were observed during the inspection of the Subject Property.

- ***Unidentified Substance Containers***

No unidentified substance containers were observed during the inspection of the Subject Property.

- ***PCB-Containing Items***

A total of two pole-mounted transformers were noted at the Subject Property. One was located along the eastern boundary, and one located in the northern portion of the Subject Property; however, it could not be determined if the equipment contained polychlorinated biphenyls (PCBs). It was reported that all onsite transformers and substations are facility property and are serviced annually. No leaks or staining were observed in relation to this feature. Three substations were observed at the Subject Property. One located in the central portion, one in the southern portion, and one in the southeastern portion of the Subject Property. It could not be determined if the equipment contained PCBs. No stains or leaks were observed in relation to

these features. Various dry type transformers were also noted throughout the Subject Property; however, they did not appear to contain PCBs.

- ***Heating / Cooling***

Many buildings and structures contained heating / cooling equipment maintained by employees at the facility.

- ***Stains or Corrosion on Floors, Walls, or Ceilings***

No stains or corrosion on floors, walls, or ceilings were observed during the inspection of the Subject Property.

- ***Drains and Sumps***

Trench drains and/or drains were observed within the interior and exterior of Building 3, Building 6, and Building 9. Trench drains were also observed at the PWRS, WEPA Area, and the Hazardous Waste Storage Area. Aqueous solutions are funneled into various sumps throughout the Subject Property and is pumped to hazardous waste storage containers or to the water treatment area via aboveground piping.

- ***Pits, Ponds, or Lagoons***

No pits, ponds, or lagoons were observed during the inspection of the Subject Property.

- ***Stained Soil or Pavement***

No stained soil or pavement was observed during the inspection of the Subject Property.

- ***Stressed Vegetation***

No stressed vegetation was observed during the inspection of the Subject Property.

- ***Solid Waste***

At the PWRS located in the southern portion of the Subject Property, fibers are filtered out as part of the water treatment activities. These fibers are mixed with cardboard that is shredded at the Soaking Tank area and is shipped out for reuse at other facilities.

- ***Water / Wastewater***

No water or wastewater was observed on the ground during the inspection of the Subject Property.

- ***Wells***

Three groundwater monitoring wells were observed during the inspection of the Subject Property. These wells are sampled twice a year with comprehensive reports submitted to the Regional Water Quality Control Board – Colorado River Basin Region, to confirm that environmental impacts are not occurring as a result of onsite activities. A cement water structure

was observed in the northern portion of the Subject Property and is monitored by the local municipality. A water production well was also reported at the Subject Property and was historically used to supply water for onsite activities but is no longer in use.

- ***Septic Systems or Cesspools***

No septic systems or cesspools were observed during the inspection of the Subject Property.

4.3 Current Uses of Adjoining Properties

The Subject Property is located in an area with mixed residential, recreational, and agricultural land use. The Subject Property is bordered on the north by Avenue 53 beyond which is residential development. To the east, the Subject Property is bordered by Tyler Street, beyond which is vacant land, residential development, and commercial developments. To the south, the Subject Property is bordered by agricultural land. To the west the Subject Property is bordered by a recreational field used for sports and agricultural land.

4.4 Subject Property Reconnaissance Summary

In summary, Northgate's reconnaissance of the Subject Property did indicate the presence of conditions indicating the use and storage of hazardous materials at the Subject Property. In general, hazardous chemicals are stored in various areas of the Subject Property, namely building 5, Buildings 11 through 11C, and the Hazardous Material Storage Area. Chemicals are used to produce slurry for the production of artillery, molds, and tanks. Waste products are temporarily stored in satellite accumulation and/or the Hazardous Waste Storage Area. Water used within the Subject Property is treated and reused or discharged to the city sewer system. Products are tested, stored, and shipped offsite. As part of the Subject Property operations various storage areas, administrative buildings, research and development, and maintenance equipment can be found throughout the Subject Property. No evidence of a release was observed during the Subject Property reconnaissance.

5.0 SUBJECT PROPERTY PHYSICAL SETTING

5.1 Subject Property Location and Legal Description

The Subject Property is located at 85901 Avenue 53 in Coachella, California. The Subject Property consists of approximately 53 acres identified by APNs 778-390-008 and 778-420-013 in Riverside County. A Subject Property Location Map is shown on Figure 1 and a Subject Property Plan is shown on Figure 2.

5.2 Subject Property Vicinity General Characteristics

The Subject Property consists of both developed and undeveloped land with a munitions manufacturing facility, producing combustible ordnance and countermeasure products, situated on one of the two parcels. The vicinity can be described a mix of commercial, industrial, agricultural, and residential properties. The Subject Property is locally bordered on the north by a residential development, on the east by Tyler Street, on the west by a soccer field and row crops, and on the south by additional agricultural land.

5.3 Geology and Groundwater

5.3.1 Geology

The Subject Property is located approximately 12.5 miles northeast of the Salton Sea within the Coachella Valley, a structural and topographic depression that is related to complex interactions with the San Andreas fault system. Offsets along various detachment faults produced the Coachella Valley and erosional processes transport sediment from topographic highs in the surrounding mountains (Little San Bernardino Mountains to the northeast, the foothills of the San Bernardino Mountains to the northwest, and the San Jacinto and Santa Rosa Mountains to the southwest) to lower elevations within the valley. The Coachella Valley contains as much as 12,000 feet of sediment (Raimi + Associates, 2014).

The Subject Property sits upon unconsolidated valley sediments, which are mapped as Quaternary alluvial sand and gravel associated with Whitewater River (located approximately 1.2 miles to the east of the Subject Property) and Quaternary clay associated with playa lake deposits (Dibblee, 2008). The Subject Property is located approximately 4 miles west of the San Andreas fault zone, which is considered “active” (active since Holocene time with the potential for surface rupture) according to published earthquake hazard maps in the vicinity (CGS, 2015).

5.3.1 Groundwater

The Subject Property is located within the central portion of the Indio Subbasin (part of the larger Coachella Valley Groundwater Basin). The Indio Subbasin is located northwest of the Salton Sea and is bounded by the Banning fault to the north and semi-permeable rocks of the Indio Hills to the northeast. The subbasin is drained by the Whitewater River and its tributaries and surface flow is directed southeast to the Salton Sea (DWR, 2004).

Groundwater is present within unconsolidated Pleistocene and Holocene alluvial deposits, which consist of older alluvium and the Ocotillo Conglomerate Formation. The Ocotillo Conglomerate consists of a thick sequence (over 1,000 feet thick) of poorly-bedded, coarse sand and gravel and is considered the primary water-bearing unit in the subbasin (DWR, 2004). Groundwater below the Subject Property is part of the Coachella hydrologic subunit and is classified as “beneficial use” for municipal, industrial, and agricultural uses (RWQCB, 2006).

Groundwater information is not available for review at the Subject Property; however, recent groundwater data were identified for a property located near 85989 Avenue 52, Coachella, California, approximately 0.4 miles to the northeast of the Subject Property. Groundwater monitoring wells installed to investigate a petroleum pipeline release located near 85989 Avenue 52 indicate that depth to first groundwater ranges from approximately 15 to 17 below ground surface (bgs). Groundwater was encountered at approximately 10 feet bgs during the xylene UST removal. A groundwater gradient of 0.002 feet per foot directed to the south-southeast was reported at the nearby petroleum pipeline release site (Arcadis, 2023).

6.0 RECORDS REVIEW

6.1 Standard Environmental Record Sources

To determine if the Subject Property has any documented environmental concerns, or if other sites with documented environmental concerns exist within the search radii of the Subject Property prescribed by ASTM 1527 and *All Appropriate Inquiry* standards, Northgate reviewed a summary of regulatory agency database listings prepared by EDR on June 14, 2024. In addition, where appropriate, Northgate reviewed local regulatory agency files for additional specific information regarding sites identified in the EDR report judged to be of possible concern to the Subject Property. The EDR report presenting a summary of the agency databases reviewed and a map showing the location of the identified sites is provided as Appendix B (EDR, 2024b). The results of the database search and follow-up agency file review are summarized below.

6.1.1 Subject Property

The Subject Property is occupied by a small arms and ordinance production facility, and is a large quantity generator of hazardous waste, an Emergency Planning and Community Right-to-Know Act (EPCRA) Tier II reporting facility, and has active impoundments utilized for the treatment and disposal of an unspecified quantity and type of waste. The Subject Property is listed on multiple regulatory agency databases related to the use, storage, and disposal of hazardous materials (EDR, 2024b), as summarized below:

- The Subject Property is listed on the Emission Inventory System (EIS) as a Large Stationary Source and Voluntarily Reported Smaller Source of Air Point Pollutant sources, under Registration number 110064261258. A records review indicated that, as of 2023, the facility incinerates ethylbenzene, xylene, and n-Hexane,
- A Biennial Report from 2021 indicated various hazardous waste generated including ignitable solvents, alkaline solutions, ignitable waste, acidic wastes, heavy metals, inorganic solids, and organic solids. The facility is also required to comply with EPCRA Section 313 and provides an annual Toxic Release Inventory (TRI) consisting of chemicals released to the environment, or otherwise disposed.
- The facility historically had one 8,000-gallon UST containing xylene, which was installed in 1992 and located in the southeast portion of the Subject Property adjacent to building 6. According to records obtained from Riverside County's Department of Environmental Health, one or more leaks from the former UST were reported between 1998 and 2001 and a permit for its removal was dated September 6, 2002. A report from

Advanced GeoEnvironmental, Inc, dated March 21, 2002, is further described in Section 6.3.4.

Two double-lined impoundments are maintained onsite and are utilized for the treatment and disposal of an unspecified quantity and type of process waste containing a variety of compounds. Three onsite monitoring wells are utilized to evaluate ground water conditions and are sampled semi-annually. A Five-Year Report provided to the Regional Water Quality Control Board for the time period from January 2019 to December 2023 indicated that constituents of concern (COCs) including diphenylamine (DPA) were found to be below detection levels for the 2023 year but ranged from 31.4 micrograms per liter (ug/L) to 5.61 ug/L for the previous years from 2019 to 2022.

- Over 100 Safety Data Sheets (SDSs) were provided to Northgate for review following the Site Reconnaissance. The SDSs were divided into three categories: laboratory materials, materials used in mortars, and materials stored in tanks. A variety of materials appear to be utilized at the Subject Property. These materials exhibit multiple hazardous characteristics including ignitability, corrosivity, reactivity, and toxicity.

6.1.2 Subject Property Vicinity Sources

The regulatory agency database search prepared by EDR (Appendix B) indicates the presence of 220 regulatory and other database listings for properties located within an approximate one-mile radius of the Subject Property. Sites with documented releases impacting groundwater located within about 0.25-mile upgradient of the Subject Property, or otherwise judged to be of potential impact to soil, soil vapor, or groundwater quality at the Subject Property, are summarized in the following table.

Property Name	Agency Database	Location Relative to Subject Property	Potential Environmental Concern
El Super Toro Loco #3 – 52051 Grapefruit Ave, Coachella, CA	LUST, Cortese, CERS	.316 miles to the north of the Subject Property (upgradient)	<p>Information in the EDR report indicates that the facility was identified as an automotive service station, with a LUST case having been opened in February of 2004, and closed in July of 2006. The initial petroleum release appeared to have originated from dispenser piping, which was subsequently replaced.</p> <p>Given the distance from the Subject Property, this facility is not likely to represent a significant potential threat to soil, soil vapor, or groundwater quality at the Subject Property.</p>
KOOLCO – 52112 Industrial Way, Coachella, CA	LUST, Cortese, HIST CORTESE, CERS	.346 miles to the north of the Subject Property (upgradient)	<p>Information in the EDR report indicates that the facility was identified as a LUST Cleanup Site, opened in April of 1994, and closed in December of the same year. No further information was reported.</p> <p>Given the distance from the Subject Property, this facility is not likely to represent a significant potential threat to soil, soil vapor, or groundwater quality at the Subject Property.</p>

In summary, the Subject Property is bordered to the north by two LUST Cleanup Sites; however, both are more than a quarter of a mile from the Subject Property. These three sites represent the closest facilities to the Subject Property with issues of environmental concern but are either downgradient or further than one quarter mile away.

6.2 Vapor Encroachment Screening

Northgate evaluated the Subject Property as well as surrounding properties for potential vapor encroachment concerns. The evaluation took into consideration current or past activities that could cause vapor encroachment concerns (VECs). A “Tier I” Vapor Encroachment Screen (VES; Appendix C) was performed to evaluate the potential for vapors associated with contaminated soil and/or groundwater to impact the Subject Property, whether originating from the Subject Property or from nearby vicinity Subject Property sources (EDR, 2024c). For properties where a VEC could not be ruled out, existing subsurface investigation reports, if available, were used to evaluate potential impacts to the Subject Property (Tier 2 screening). The following table presents a summary of the VES Findings.

Potential for Vapor Intrusion on Subject Property	
<i>Areas of Concern</i>	<i>Conclusion</i>
Subject Property (existing land use)	VEC identified
Subject Property (former land use)	VEC not identified.
Adjoining Property or near-by Property Operations or Existing Conditions	VEC not identified
Historical Uses of Adjoining Property or Near-by Properties	VEC not identified

Northgate’s review identified an 8,000-gallon UST containing xylenes, which was installed in 1992 and located in the southeast portion of the Subject Property adjacent to Building 6. According to records obtained from Riverside County’s Department of Environmental Health, one or more leaks from the former UST were reported between 1998 and 2001 and a permit for its removal was dated September 6, 2002. A Soil Sampling Report from Advanced GeoEnvironmental, Inc, (Advanced GeoEnvironmental, Inc., 2002), indicated that benzene, toluene, ethylbenzene, and xylenes (BTEX) were detected in soil samples collected around the former UST and piping; however, concentrations of residual soil were below their corresponding EPA RSLs and/or DTSC-SLs for commercial land use. The UST was removed on September 10, 2002, and soil was excavated down to 6 inches above groundwater. After removal of soil and pumping of groundwater from the UST cavity, residual concentrations of xylenes were detected at 4.56 milligrams per liter (mg/l), above the California MCL of 1.75 mg/l for drinking water. Final confirmation soil samples taken from a depth just above the water table found xylene

concentrations ranging from .97 to 210 mg/kg, below the EPA RLS of 2,500 mg/kg for commercial land use. The potential for xylene to be present in the subsurface soil, soil vapor and/or groundwater represents a VEC. Northgate did not identify any known off-Subject Property contamination sources that could have directly impacted soil, soil vapor, or groundwater quality at the Subject Property.

6.3 Additional Environmental Record Sources

Northgate contacted local regulatory agencies for information regarding the use or storage of hazardous materials at the Subject Property, and reviewed files at any agency maintaining a file for the Subject Property beginning on June 19, 2023. The following agencies were contacted for information regarding the use or storage of hazardous materials at the Subject Property:

- California Department of Toxic Substances Control EnviroStor Website;
- State Water Resources Control Board GeoTracker Website;
- California Environmental Protection Agency Website;
- Regional Water Quality Control Board – Colorado River Basin;
- Riverside County, Department of Environmental Health;
- Riverside County Fire Department;
- City of Coachella;
- Air Quality Management District, South Coast; and
- California Department of Conservation, Geologic Energy Management Division.

The results of the records review are described in the following sections.

6.3.1 Department of Toxic Substances Control EnviroStor Website

The Subject Property is not listed on the Department of Toxic Substances Control (DTSC) EnviroStor website, and thus, there are no files related to the property.

6.3.2 State Water Resources Control Board GeoTracker Website

The Subject Property is not listed on the State Water Resources Control Board (SWRCB) GeoTracker website, and thus, there are no files related to the property.

6.3.3 California Environmental Protection Agency Website

The Subject Property is listed on the California Environmental Protection Agency (CalEPA) website; for being subject to Stationary Air Emissions reporting, for the presence of Aboveground Petroleum Storage tanks, for Hazardous Chemical Storage, for being a Large Quantity Generator of Hazardous Waste, and for Land Disposal Activities.

6.3.4 Regional Water Quality Control Board – Colorado River Basin

Northgate submitted a file review request to the Regional Water Quality Control Board – Colorado River Basin (RWQCB). The RWQCB provided extensive documentation concerning the closure of several surface ponds, installation of surface ponds, and monitoring reports. A final pond closure plan from URS dated July 12, 2001 (Appendix D), in conjunction with Cleanup and Abatement Order (CAO) No. 00-135, indicated that nitrocellulose contamination was present in the soil under the floor of the evaporation/percolation ponds in concentrations ranging from 3.5 to 1,660 mg/kg, several magnitudes below the EPA RSLs for commercial land use. Nitrocellulose contamination was typically restricted to the upper 6 inches of soil beneath the ponds. According to the report, Armtec redesigned the manufacturing process where washdown and process waster is recycled rather than discharged, thus the use of five out of seven ponds was discontinued. The report closes with a statement that Armtec intended to remove the soil and incinerate it onsite. Significant records documenting communication between Armtec and RWQCB regarding monitoring and analysis of the ponds were present including a rescission of the CAO indicating that no further action was required.

A draft UST closure report from URS dated October 16, 2002 (Appendix D), was also provided. The draft closure report summarized an early investigation where xylenes concentrations in soil samples collected ranged from .002 to 7,380 mg/kg, and ethylbenzene ranged concentrations ranged from 0.002 to 516 mg/kg. The report also summarized a groundwater investigation conducted in June 2002 where xylenes were detected in groundwater at concentrations ranging from .023 to 6,260 mg/l. The report indicated that the UST was removed on September 10, 2002, and soil was excavated down to 6 inches above groundwater. Approximately 26,164 gallons of contaminated groundwater was pumped from the excavation, after which xylenes in groundwater was found to remain at 4.56 mg/l, above the California MCL of 1.75 mg/l for drinking water. Final confirmation soil samples taken from a depth just above the water table found xylenes concentrations ranging from .97 to 210 mg/kg, below the EPA Regional Screening Level (RSL) of 2,500 mg/kg for commercial land use. Benzene was detected in bottom samples at concentrations of .007 to .011 mg/kg, below the Department of Toxic Substances Control Screening Level (DTSC SL) for of 1.4 mg/kg for commercial land use, and toluene was detected at concentrations ranging from .006 to .14 mg/kg, well below the EPA RSL of 47,000 mg/kg for commercial land use. No additional documentation regarding this UST was present in the files, and no record of agency closure was found. The lack of closure documentation represents a REC.

6.3.5 Riverside County, Department of Environmental Health

Northgate submitted a file review request to the Riverside County Department of Environmental Health. According to records obtained from the Department, one or more leaks from a former UST were reported between 1998 and 2001 and a permit for its removal was dated September 6, 2002. A 2002 Soil Sampling Report by Advanced Geo Environmental, Inc. (Appendix D) indicated that xylenes was detected in soil samples around the UST/Piping area at concentrations ranging from 9.2 mg/kg to 520 mg/kg. The report also indicated that impacted soil appeared to extend to the groundwater table at 9 ft bgs. No further documentation concerning the UST was found within the County's files.

6.3.6 Riverside County Fire Department

Northgate submitted a file review request to the Riverside County Fire Department (RCFD). The RCFD replied on June 25, 2024, with an excel spreadsheet documenting various known statuses of the facility operating at the Subject Property. According to the RCFD, the facility at the Subject Property is a large quantity generator of hazardous waste with the EPA ID CAD008252157. The facility also has a Hazardous Materials Business Plan (HMBP) and is subject to Aboveground Petroleum Storage Act (SPSA) programs. Departmental inspections were documented as having been conducted in 2015 and 2020, where no violations were noted.

6.3.7 City of Coachella

Northgate submitted a file review request to the City of Coachella. While the City confirmed receipt of the file review request, no formal response has been received from this agency. Northgate will issue an addendum to this report if any public records received from this agency within 90 days of the date of this report significantly changes the conclusions or recommendations of this report.

6.3.8 Air Quality Management District, South Coast

Northgate submitted a file review request to the South Coast Air Quality Management District (SCAQMD) for the South Coast. The Board replied on June 26, 2024, indicating that they had files relating to the Subject Property. A file transfer link was provided which included 231 separate records concerning the Subject Property. Records provided included several Permit to Operate letters pertaining to the facility operating at the Subject Property, and are summarized below:

- Two 800,000 British thermal units per hour (BTU/hr) gas-fired incinerators from 1993;
- Multiple boilers from various years;

- Several spray booths from various years;
- Multiple processing and dipping tanks from various years,
- Several coating and drying systems from various years,
- Multiple vacuums and air pollution control systems;
- Several diesel-fueled emergency generators;
- Multiple drying ovens,
- An organic solvent storage system with a 5,500-gallon AST from 2004;
- A regenerative thermal oxidizer from 2018;
- an 8,000-gallon UST for storage of xylene from 1986 and 1990; and
- a 600,000 British thermal units per hour BTU/hr gas-fired explosive waste incinerator from 1982.

Many of these permits are expected for the level of industrial activity that occurs within the onsite facility. It is worth noting that the 8,000-gallon xylene UST is mentioned in the Phase I Environmental Site Assessment Questionnaire referenced in section 7.1 as having been removed and replaced by an AST due to a leak.

6.3.9 Oil and Gas Wells

According to the EDR GeoCheck® - Physical Setting Source Addendum located in the EDR Radius Report (Appendix B), there are no oil or gas wells located on the Subject Property and there are no wells located within one mile of the Subject Property. Information available on the California Department of Conservation, Geologic Energy Management Division's (CalGEM) website also confirms that there are no oil and gas wells located at the Subject Property and not within one mile of the Subject Property. There are no wells that appear to represent an environmental concern to the Subject Property.

6.4 Historical Records Review

Information on historical land use at the Subject Property and adjacent area was evaluated by reviewing historic aerial photographs, maps, and other documents. Summaries of these investigation findings are presented below.

6.4.1 Aerial Photographs

Northgate reviewed historic aerial photographs of the Subject Property from 1949, 1953, 1959, 1965, 1972, 1975, 1984, 1996, 2002, 2006, 2009, 2012, 2016, and 2020 obtained from EDR on June 14, 2024. Copies of the aerial photographs are provided in Appendix E (EDR, 2024d). A summary of the aerial photograph review is presented below.

Year: 1949	Scale: 1" = 500'	Source: USDA
Subject Property Description: The Subject Property is shown as agricultural land with row crops throughout the Subject Property.		
<i>North:</i>	Agricultural land and row crops.	
<i>East:</i>	Vacant, undeveloped land on both sides of Route 111.	
<i>South:</i>	Agricultural land and row crops.	
<i>West:</i>	Agricultural land and row crops.	

Year: 1953	Scale: 1" = 500'	Source: USDA
Subject Property Description: The Subject Property appears similar to the 1949 photograph.		
<i>North:</i>	Appears similar to the 1949 photograph.	
<i>East:</i>	Appears similar to the 1949 photograph.	
<i>South:</i>	Appears similar to the 1949 photograph.	
<i>West:</i>	Appears similar to the 1949 photograph.	

Year: 1959	Scale: 1" = 500'	Source: USDA
Subject Property Description: The Subject Property appears similar to the 1953 photograph, but with a small structure hidden in the trees in the northwest corner.		
<i>North:</i>	Appears similar to the 1953 photograph.	
<i>East:</i>	Appears similar to the 1953 photograph.	
<i>South:</i>	Appears similar to the 1953 photograph.	
<i>West:</i>	Appears similar to the 1953 photograph.	

Year: 1965	Scale: 1" = 500'	Source: USGS
Subject Property Description: The Subject Property appears similar to the 1959 photograph except that agricultural activities appear to have ceased and there appears to be dirt trails traversing the site.		
<i>North:</i>	Appears similar to the 1959 photograph.	
<i>East:</i>	Appears similar to the 1959 photograph with the addition of some small structures on the parcel adjacent to the Subject Property.	
<i>South:</i>	Appears similar to the 1959 photograph.	
<i>West:</i>	Appears similar to the 1959 photograph.	

Year: 1972	Scale: 1" = 500'	Source: USDA
Subject Property Description: Several buildings have been constructed on the Subject Property, along with several ASTs.		
<i>North:</i>	Appears similar to the 1965 photograph, except that agricultural activities appear to have ceased, and new subdivisions have been constructed farther north.	
<i>East:</i>	A mobile home subdivision now fronts Tyler Street.	
<i>South:</i>	Appears similar to the 1965 photograph.	
<i>West:</i>	Appears similar to the 1965 photograph, except that most agricultural activities have ceased.	

Year: 1975	Scale: 1" = 500'	Source: USGS
Subject Property Description: The Subject Property appears similar to the 1972 photograph.		
<i>North:</i>	Appears similar to the 1972 photograph.	
<i>East:</i>	Appears similar to the 1972 photograph.	
<i>South:</i>	Appears similar to the 1972 photograph.	
<i>West:</i>	Appears similar to the 1972 photograph.	

Year: 1984	Scale: 1" = 500'	Source: USDA
Subject Property Description: The facility that occupies the Subject Property has doubled in size with at least three new buildings expanding the campus southward, and four large ASTs.		
<i>North:</i>	Appears similar to the 1975 photograph, except for a new industrial/commercial development across Grapefruit Boulevard from the Subject Property.	
<i>East:</i>	Appears similar to the 1975 photograph.	
<i>South:</i>	Appears similar to the 1975 photograph.	
<i>West:</i>	Appears similar to the 1975 photograph.	

Year: 1996	Scale: 1" = 500'	Source: USGS/DOQQ
Subject Property Description: The facility residing on the Subject Property has continued to grow in size and has expanded towards the western border of the parcel, with new impoundments all along the eastern border.		
<i>North:</i>	Appears similar to the 1984 photograph.	
<i>East:</i>	Appears similar to the 1984 photograph.	
<i>South:</i>	Appears similar to the 1984 photograph.	
<i>West:</i>	Appears similar to the 1984 photograph.	

Year: 2002	Scale: 1" = 500'	Source: USGS/DOQQ
Subject Property Description: The Subject Property appears similar to the 1996 photograph, but now has two large impoundments along the southern border of the parcel.		
<i>North:</i>	Appears similar to the 1996 photograph.	
<i>East:</i>	Appears similar to the 1996 photograph.	
<i>South:</i>	Appears similar to the 1996 photograph, but with new commercial/industrial developments southeast of the Subject Parcel.	
<i>West:</i>	Appears similar to the 1996 photograph.	

Year: 2006	Scale: 1" = 500'	Source: USDA/NAIP
Subject Property Description: The Subject Property appears similar to the 2002 photograph.		
<i>North:</i>	A majority of the parcels to the north are in the process of being developed into a new subdivision, and several paved and partially paved streets are present.	
<i>East:</i>	Appears similar to the 2002 photograph.	
<i>South:</i>	Appears similar to the 2002 photograph.	
<i>West:</i>	Appears similar to the 2002 photograph.	

Year: 2009	Scale: 1" = 500'	Source: USDA/NAIP
Subject Property Description: The Subject Property appears similar to the 2006 photograph.		
<i>North:</i>	A large number of residential structures have been developed on the adjacent parcels.	
<i>East:</i>	Appears similar to the 2006 photograph.	
<i>South:</i>	Appears similar to the 2006 photograph.	
<i>West:</i>	Appears similar to the 2006 photograph.	

Year: 2012	Scale: 1" = 500'	Source: USDA/NAIP
Subject Property Description: The Subject Property appears similar to the 2009 photograph.		
<i>North:</i>	Most of the northern parcels have been developed with residential structures.	
<i>East:</i>	Appears similar to the 2009 photograph.	
<i>South:</i>	Appears similar to the 2009 photograph.	
<i>West:</i>	Appears similar to the 2009 photograph.	

Year: 2016	Scale: 1" = 500'	Source: USDA/NAIP
Subject Property Description: The Subject Property appears similar to the 2012 photograph.		
<i>North:</i>	All of the northern parcels have been developed with residential structures.	
<i>East:</i>	Appears similar to the 2012 photograph.	
<i>South:</i>	Appears similar to the 2012 photograph.	
<i>West:</i>	Appears similar to the 2012 photograph.	

Year: 2020	Scale: 1" = 500'	Source: USDA/NAIP
Subject Property Description: The Subject Property appears similar to the 2016 photograph.		
<i>North:</i>	Appears similar to the 2016 photograph.	
<i>East:</i>	Appears similar to the 2016 photograph.	
<i>South:</i>	Appears similar to the 2016 photograph.	
<i>West:</i>	Appears similar to the 2016 photograph.	

In summary, historical aerial photographs of the Subject Property and adjacent areas indicate that the Subject Property consisted of agricultural land since at least 1949 and remained agricultural through the late 1960s. By 1972, the Subject Property has been partially developed with the current Armtex facility. Facility expansion is seen in the aerials from 1984, 1996, 2002 and 2006. The Subject Property has remained in the configuration seen in 2006 into the present.

Land use in the vicinity of the Subject Property has been primarily agricultural and vacant, undeveloped land since at least 1949 through the late 1960s. From 1972 onward, industrial, commercial, and residential developments begin to expand gradually throughout the parcels surrounding the Subject Property. The first residential development appears south of the Subject Property in 1972, as well as in the north. By 2016, north and south adjacent parcels have been developed, and parcels adjacent to the east and west remain vacant with the exception of a trailer park residential subdivision east of Tyler Street. The parcels adjacent to the east and west of the Subject Property remain mostly vacant to this day.

6.4.2 Sanborn Maps

Northgate requested Sanborn fire insurance maps for the Subject Property from EDR. However, maps covering the Subject Property and vicinity were not found by EDR on June 14, 2024. A copy of the Sanborn Map Report is provided in Appendix F (EDR, 2024e).

6.4.3 Topographic Maps

Northgate reviewed historic topographic maps for the Subject Property for the years 1904, 1941, 1943, 1947, 1956, 1972, 1975, 2012, 2015, 2018, and 2021 obtained from EDR on June 14, 2024. Copies of the topographic maps are provided in Appendix G (EDR, 2024f).

Quadrangle: Indio		Scale: 1:125,000	Series: 30 Minute
1904:	The Subject Property and vicinity are shown as vacant land located between the towns of Coachella to the north and La Mesa to the southwest. Roads are mapped in the area, including adjacent to the east and west of the Subject property. A railroad line is also located east of the Subject Property. The topography in the vicinity of the Subject Property appears relatively flat, with no contours noted on or near the Subject Property.		
Quadrangle: Coachella		Scale: 1:62,500	Series: 15 Minute
1941:	The Subject Property appears similar to the 1904 map, with the vicinity to the north experiencing residential and commercial development, and new roads are seen throughout the overall region surrounding the Subject Property.		
1943	The Subject Property and vicinity appear similar to the 1941 map.		
Quadrangle: Coachella		Scale: 1:50,000	Series: 15 Minute
1947:	The Subject Property and vicinity appear similar to the 1943 map.		
Quadrangle: Indio		Scale: 1:24,000	Series: 7.5 Minute
1956:	The Subject Property appears similar to the 1947 map, except that additional residential development has taken place west of the Subject Property, and a sewage disposal facility is mapped east of the Subject Property.		
1972	The Subject Property and vicinity no longer show partial vegetation as was depicted in the 1956 map, and a series of buildings and tanks now exist on the Subject Property. An expansion of residential development has taken place west of the Subject Property.		
1975	The property is depicted in an aerial photo, rather than a topo map, which shows the existing facility in its infancy with only 5 buildings. The surrounding vicinity is a mix of agricultural and residential development.		
2012	The Subject Property appears to contain an impoundment or water feature in the southeast corner and is surrounded by multiple commercial and residential developments.		
2015	The Subject Property and vicinity appear similar to the 2012 map.		
2018	The Subject Property and vicinity appear similar to the 2015 map.		
2021	The Subject Property and vicinity appear similar to the 2018 map.		

In summary, the Subject Property has been shown as undeveloped land located in the Coachella area since at least 1904, until 1941 when two structures are mapped on the Subject Property. During the same year, residential and commercial developments began to appear in the north. Currently, the subject property remains developed with an ordinance and countermeasure manufacturing facility, while residential and commercial developments remain in the vicinity.

6.4.4 City Directories

Northgate reviewed a summary of local city directory listings for the Subject Property available at approximate three- to five-year intervals from 1976 to 2020 obtained from EDR on July 9, 2024. A copy of the EDR city directory search, along with a tabular summary of the directory listings for the Subject Property, is provided in Appendix H (EDR, 2024g).

Directory listings for the Subject Property provided by EDR from 1976 through 2020 indicate that the Subject Property has been occupied by the current facility known as Armtec Defense Products Co, Inc. from 1976 to the present day. Listings in the vicinity of the Subject Property have typically included commercial and residential development throughout the period searched. Additional listings of potential environmental concern are presented in Section 6.1.2 above.

6.5 Building Permits

Northgate reviewed a summary of building permits for the Subject Property and adjacent properties obtained from EDR on June 14, 2024. The Subject Property had obtained a variety of permits including fire suppression infrastructure, plumbing work for wastewater discharges, irrigation for landscaping, construction of storage buildings, installation of an 8,000,000-BTU boiler, emergency generator installs, roof work, electrical upgrades, construction/upgrades to guard houses, office improvements/additions, and the installation of a xylene tank foundation. No permits were found for properties in the vicinity of the Subject Property. A copy of the Building Permit Report is provided in Appendix I (EDR, 2024h).

6.6 Property Tax Map

Northgate requested property tax maps for the Subject Property from EDR. The Subject Property, identified by APNs 778-390-008 and 778-420-013, was not covered by any current tax map. A copy of the Property Tax Map Report is provided in Appendix J (EDR, 2024i).

6.7 Previous Reports

Northgate was not provided with any previous reports prepared for the Subject Property.

6.8 Non-Scope Considerations

The following potential environmental concerns that are not within the scope of the ASTM Standard were evaluated as part of this assessment.

6.8.1 Floodplain Maps

Northgate viewed an online version of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for the City of Coachella, California, Panel 06065C2270H. According to the FIRM, the Subject Property is not mapped within any flood hazard area (FEMA, 2018).

6.8.2 Radon

The California Department of Health Services' (DHS') online list of indoor radon levels indicates that radon concentrations from 12 indoor air samples collected in zip code area 92236 were less than 4.0 picocuries per liter (pCi/L) (DHS, 2016). According to the EDR Radius Report (Appendix B), the federal EPA radon zone for Riverside County is Zone 2 (indoor average level less than or equal to 2 pCi/L and greater than or equal to 4 pCi/L).

The State of California Division of Drinking Water and Environmental Management maintains a database of radon test results indicating that out of one sample collected in zip code 92236, in the living area, first floor, it was below 4 pCi/L. The DHS and the EPA recommend that some form of mitigation be conducted for houses with indoor radon concentrations of 4 pCi/L or greater.

These results indicate that radon gas does not appear to constitute a significant environmental concern at the Subject Property.

7.0 INTERVIEWS

7.1 Owner Interview

Ms. Luz Rodriguez, Environmental Specialist at Armtec Defense Products Co., the Subject Property owner representative, completed a Phase I ESA Questionnaire (Appendix K). Ms. Rodriguez identified the facility as having several chemicals onsite with SDSs being available; but were not provided. Chemicals and hazardous materials are reported to be used, stored and disposed of within local state and federal regulations, and the facility is in the process of obtaining ISO 14001 certification. An 8,000-gallon UST containing xylene, was referenced as having been installed in 1992, and removed due to an unspecified leak. The UST was replaced with an AST.

7.2 Key Subject Property Manager Interview

Northgate did not interview any Subject Property managers, as the parcel is undeveloped.

7.3 Regulatory Agency Interview

Northgate did not interview any regulatory agency personnel as part of this Phase I ESA.

8.0 PHASE I ESA CONCLUSIONS AND RECOMMENDATIONS

8.1 Conclusions

This report presents the results of a Phase I ESA at a property located at 85901 Avenue 53 in Coachella, California. The Subject Property consists of two parcels totaling about 53 acres of developed and undeveloped land with a munitions manufacturing facility situated on one of the two parcels at the Subject Property. The Subject Property is identified by APNs 778-390-008 and 778-420-013 in Riverside County.

The purpose of the investigation is to identify the potential presence of RECs at the Subject Property. A REC refers to the presence or likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or under conditions that pose a material threat of a future release to the environment. The following REC was identified during this assessment:

- An 8,000-gallon UST containing xylenes was present at the facility from 1992 until its removal in 2001. According to records obtained from Riverside County's Department of Environmental Health, one or more leaks from the former UST were reported between 1998 and 2001. The UST and associated piping was subsequently removed and investigations indicated that residual concentrations of benzene, ethylbenzene, toluene and xylenes were present in soil and that impacted soil extended to groundwater. BTEX concentrations were noted to be below regulatory cleanup levels; however, groundwater was noted to be impacted with xylenes at concentrations that exceeded the California maximum contaminant level (MCL). The lack of closure documentation represents a REC.

An HREC refers to a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the property to any controls (for example AULs, or other property use limitations). The following HREC was identified during this assessment:

- The Armtec Facility has, both presently and in the past, operated settling ponds. A final pond closure plan from URS dated July 12, 2001, in conjunction with Cleanup and Abatement Order (CAO) No. 00-135, indicated that nitrocellulose contamination was present in the soil under the floor of the evaporation/percolation ponds, but at concentrations well below human health risk-based regulatory clean up levels. Nitrocellulose contamination was typically restricted to the upper 6 inches of soil beneath the ponds. According to the report, Armtec redesigned the manufacturing process where

washdown and process waster is recycled rather than discharged, thus the use of five out of seven ponds was discontinued. The report closes with a statement that Armtec intended to remove the soil and incinerate it onsite. Significant records documenting communication between Armtec and the Regional Water Quality Control Board for the Colorado River Basin (RWQCB) regarding monitoring and analysis of the ponds were present including a recission of the CAO and a no further action letter.

A CREC refers to a REC affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities, with hazardous substances or petroleum products allowed to remain in place subject to implementation of controls (for example, AULs or other property limitations). The following CREC was identified during this assessment:

- Northgate did not identify any CRECs associated with the Subject Property.

A BER is defined by ASTM E 1527-21 as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations:

- Due to the nature of the facility residing on the Subject Property, manufacturing munitions including combustible ordnance and countermeasure products, for at least 52 years, the potential for subsurface contamination is highly probable.
- The Subject Property has consisted of agricultural land since at least 1949, and remained agricultural through the late 1960s, which can represent a potential for shallow subsurface impacts related to the potential historic use of pesticides, herbicides, and/or insecticides.

8.2 Recommendations

Northgate recommends that a limited Phase II ESA be performed in areas where development is planned in the southern parcel to evaluate potential impacts to shallow soil, and potential vapor encroachment concerns beneath proposed building footprints, based on the Subject Property land use and historical agricultural use.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Jacob Lacy, CHMM, REM
Environmental Professional

Derrick Willis
Principal

Qualifications of the Environmental Professional are provided in Appendix L.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations (AULs), such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel number and/or legal description
- search for ownership information
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.
- search for publicly available environmental encumbering instrument(s) filed on or after the recording of the current deed; between the recording of the current deed and the most current publicly available date
- provide a copy of any environmental encumbrance(s)
- provide a copy of the current deed when available

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/22/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

EXECUTIVE SUMMARY

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/22/2024 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

INDIAN RESERV: This map layer portrays Indian administered lands of the United States that have any area equal to or greater than 640 acres.

A review of the INDIAN RESERV list, as provided by EDR, and dated 12/31/2014 has revealed that there is 1 INDIAN RESERV site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
AUGUSTINE RESERVATIO		WSW 1/2 - 1 (0.795 mi.)	0	154

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/09/2024 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ARMTEC DEFENSE PROD Registry ID:: 110070089179	85 901 AVENUE 53	0 - 1/8 (0.000 mi.)	A7	155

ECHO: ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.

A review of the ECHO list, as provided by EDR, and dated 12/17/2023 has revealed that there is 1 ECHO site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ARMTEC DEFENSE PROD Registry ID: 110070089179	85 901 AVENUE 53	0 - 1/8 (0.000 mi.)	A7	155

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/28/2023 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 4 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: D003
Waste Description: Reactive Waste

Waste Code: D004
Waste Description: Arsenic

Waste Code: D005
Waste Description: Barium

Waste Code: D008
Waste Description: Lead

Waste Code: D009
Waste Description: Mercury

Waste Code: D011
Waste Description: Silver

Waste Code: D018
Waste Description: Benzene

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent

Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U002
Waste Description: 2-Propanone (l) (Or) Acetone (l)

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (l) (Or) Ethyl Acetate (l)

Waste Code: U223
Waste Description: Benzene, 1,3-Diisocyanatomethyl- (R,T) (Or) Toluene Diisocyanate (R,T)

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Registry ID: 110070747096

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

SIC Code 2: Not reported
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste: WSHWTR
Waste Type2: Not reported
Waste2: Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

 RWQCB Region: COLORADO RIVER BASIN RWQCB (REGION 7)
 Site History: On April 15, 2010, soil samples were taken during a spill bucket replacement at the waste oil tank. 3.1 ppb tetrachloroethene was detected 2 under the spill bucket. CVWD decided to try to dig out the tetrachloroethene. They dug to the top of the tank on May 17, 2010. 4 soil samples were taken. Up to 29 ppm TPHoil and 71 ppm TPHd was detected. The site was placed into LOP due to increasing TPHd and TPHoil with depth and groundwater levels of ~20 . (The water table has been dropping over the past decade, previously it had been as shallow as 12 .) The Water District decided to remove the tank and replace it with an above ground tank. On October 28, 2010, the tank was removed. The tank pull contractor stated that a vent line had been connected to the tank and was capped below grade. The line had corroded and there were holes in it. Whenever the tank was

S110455372

overfilled, the waste oil would leak into the surrounding soils. The soil around the vent line was dug out and containerized in two drums. 1 confirmation sample was taken beneath the former tank at 11 and analyzed. The 14 sample was held awaiting the results of the 11 sample. The 11 sample had ND <0.1 ppm TPHg, 3.9 ppm TPHd, and ND BTEX and VOCs. One soil sample was also taken from each of the two drums and labeled A and B. The A drum sampled had ND<0.1 ppm TPHg, 125 ppm TPHd, and 2720 ppm TPHmotor oil. The B drum sample had 1.88 ppm TPHg, 7960 ppm TPHd, 9260 ppm TPHmotor oil, 5.03 ppb 1,3,5-TMB, 2.66 ppb 1,2,4-TMB and 2.88 ppb naphthalene. RWQCB and Riv Co concur with closure. Case closed 1/13/2011.

Completed Document Type: Site Screening
Completed Date: 10/25/1994
Comments: CalSites Validation Program confirms NFA for DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/23/1991
Comments: PA Reassessment report was reviewed by Region 4 staff. GW in the Coachella Valley - Thermal area is 500 to 1000 feet below ground surface. In 1985, a fire at the Wilber Ellis chem. facility consumed 25 tons of pesticides and fertiliz- ers in 4 days. Post fire cleanup was removal of all remai- ning materials. Staff recommends NFA by Site Mitigation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 02/29/2024	Source: EPA
Date Data Arrived at EDR: 03/01/2024	Telephone: N/A
Date Made Active in Reports: 03/27/2024	Last EDR Contact: 06/03/2024
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/08/2024
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/29/2024	Source: EPA
Date Data Arrived at EDR: 03/01/2024	Telephone: N/A
Date Made Active in Reports: 03/27/2024	Last EDR Contact: 06/03/2024
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/08/2024
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 02/29/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

	Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HWT: Registered Hazardous Waste Transporter Database

A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

Date of Government Version: 01/02/2024	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/03/2024	Telephone: 916-440-7145
Date Made Active in Reports: 03/21/2024	Last EDR Contact: 04/04/2024
Number of Days to Update: 78	Next Scheduled EDR Contact: 07/15/2024
	Data Release Frequency: Quarterly

HWTS: Hazardous Waste Tracking System

DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

Date of Government Version: 01/26/2024	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/30/2024	Telephone: 916-324-2444
Date Made Active in Reports: 04/17/2024	Last EDR Contact: 05/09/2024
Number of Days to Update: 78	Next Scheduled EDR Contact: 07/15/2024
	Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

SITE MIT SANTA CRUZ: Site Mitigation Santa Cruz County List

Sites may become contaminated with toxic chemicals through illegal dumping or disposal, from leaking underground storage tanks, or through industrial or commercial activities. The goal of the site mitigation program is to protect the public health and the environment while facilitating completion of contaminated site clean-up projects in a timely manner.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/05/2024

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

85901 AVENUE 53
85901 AVENUE 53
COACHELLA, CA 92236

TARGET PROPERTY COORDINATES

Latitude (North):	33.66209 - 33° 39' 43.52"
Longitude (West):	116.16649 - 116° 9' 59.36"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	577279.1
UTM Y (Meters):	3724808.5
Elevation:	89 ft. below sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50004965 INDIO, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

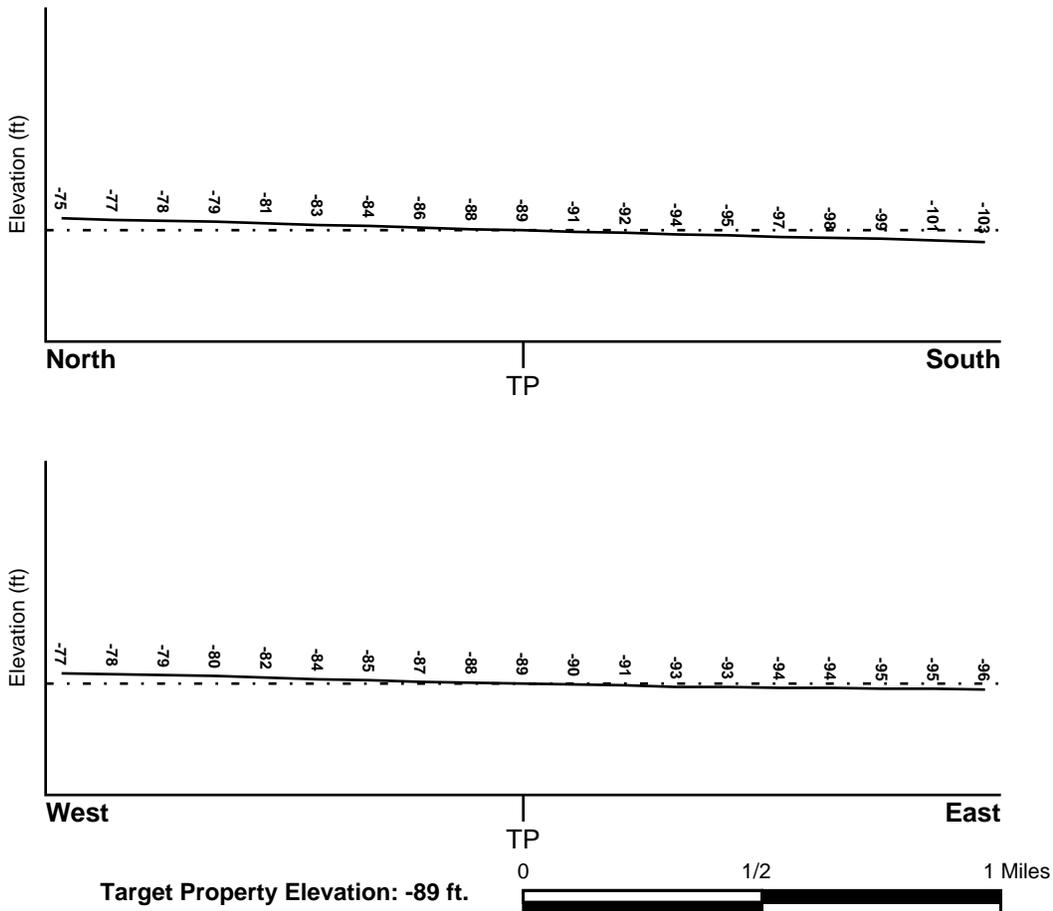

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06065C2270G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
INDIO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Indio

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 122 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	9 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Coachella

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D004
Waste Description:	Arsenic
Waste Code:	D005
Waste Description:	Barium
Waste Code:	D008
Waste Description:	Lead
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D011
Waste Description:	Silver
Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone

MAP FINDINGS

ARMTEC DEFENSE PRODUCTS INC., 85-901 AVENUE 53, COACHELLA, CA 92236 (Continued)

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U223
Waste Description: Benzene, 1,3-Diisocyanatomethyl- (R,T) (Or) Toluene Diisocyanate (R,T)

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

MAP FINDINGS

ARMTEC DEFENSE PRODUCTS INC., 85-901 AVENUE 53, COACHELLA, CA 92236 (Continued)

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

WDS: Other Ascertainable Records

Name: ARMTEC DEFENSE PRODUCTS 02-106
 Address: 85901 AVE 53
 City: COACHELLA
 Facility ID: West Colorado River 332005012
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: Not Reported
 Subregion: 7
 Facility Telephone: 7603980143
 Facility Contact: RON DIFELICE
 Agency Name: ARMTEC DEFENSE PRODUCTS CO.
 Agency Address: PO BOX 848
 Agency City,St,Zip: COACHELLA 92236
 Agency Contact: RON DIFELICE
 Agency Telephone: 7603980143
 Agency Type: Private
 SIC Code: 3483
 SIC Code 2: Not Reported
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
 Primary Waste: WSHWTR
 Waste Type2: Not Reported
 Waste2: Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
 Secondary Waste: Not Reported
 Secondary Waste Type: Not Reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
 Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Subject: Proposed Final Pond Closure Plan
Armtec Facility
Coachella, California
RWQCB CAO No. 00-135
URS Project No. 58-00170034.01-20000

Dear Mr. Palmer:

URS Corporation (URS) is pleased to provide Armtec Defense Products, Inc. (Armtec) this proposed pond closure plan addressing nitrocellulose in soil at the Armtec facility located at 85-901 Avenue 53 in Coachella, California. This plan has been prepared as requested by the California Region Water Quality Control Board, Colorado River Region (RWQCB) to address concerns regarding nitrocellulose in pond-bottom soil at the site. If you have any questions regarding this proposed remedial action plan, please give us a call.

Sincerely,

URS CORPORATION

Appendices

- Appendix A Manufacturers Standard Practice Instruction No. 1205: Percolation Pond Maintenance and Cleaning

Armtec was required to perform a groundwater evaluation at the Armtec Defense Products Company (Armtec) facility located at 85-901 Avenue 53 in Coachella, California (the site, Figure 1) in response to Cleanup and Abatement Order (CAO) No. 00-135, issued by the California Regional Water Quality Control Board (RWQCB), Colorado River Region on September 28, 2000. CAO No. 00-135 requires Armtec to evaluate groundwater beneath the site for the presence of acetone, ethylbenzene, xylenes, 4-methyl 2-pentanone, and diphenylamine (DPA), collectively, the constituents of concern (COCs). During the soil and groundwater evaluation conducted by URS Corporation (URS) at the site in February and March 2001, nitrocellulose fines were identified in soil in the floors of the evaporation/percolation ponds at the facility. The results of the groundwater evaluation are summarized in a report titled "Groundwater Evaluation, Armtec Facility, 85-901 Avenue 53, Coachella, California," dated April 24, 2001.

Armtec is in the process of implementing a redesigned manufacturing process which involves capturing or treating 100% of wash-down water, and recycling 100% of process water. The redesigned system is scheduled to be operational by October 2001, and Armtec intends to cease discharging to five of the seven ponds by July 31, 2001 and discontinue wastewater discharges to the final two ponds prior to December 31, 2001. The seven existing unlined ponds will be closed and replaced with two lined ponds which will be used for emergency storage. This proposed final closure plan was prepared on behalf of Armtec to describe the final closure of the seven onsite ponds and address the concerns of the RWQCB with respect to residual concentrations of nitrocellulose in soil at the site.

REGION 7

2.1 FACILITY DESCRIPTION

The Armtec facility consists of approximately 40 acres bounded by Avenue 53 on the north, Tyler Street on the east, and agricultural land on the south and west in Coachella, California (Figure 1). There is vacant property across Avenue 53 to the north, and a trailer park across Tyler Street to the east. According to the U.S. Geological Survey, the property lies at an elevation ranging from approximately 90 feet below mean sea level (MSL) in the northwest corner of the property to 95 feet below mean sea level (MSL) in the southeast corner of the property. Areas around the buildings and parking areas at the site are paved with asphaltic concrete, and the remainder of the site is unpaved. The property is enclosed with chain-link fencing and access to the site is controlled through a guard shack on the north side of the site. The property is supplied with municipal water, sewer, and natural gas services.

2.2 DESCRIPTION OF MANUFACTURING PROCESS

Armtec is a government defense contractor that manufactures fiber-based ammunition components known as combustible cartridge cases or containers (CCCs). The facility has been producing components for combustible ordinance for the U.S. government since 1968. The containers manufactured at the facility are designed to hold propellants and projectiles for military weapons systems such as mortars, artillery charges and tank ammunition. Subsequent processing, filling and final assembly of the CCCs manufactured at the site is conducted offsite by other government contractors.

Two manufacturing processes (post-impregnation process and the beater additive process) are employed at the facility. The post-impregnation process produces CCCs for 120 mm tank ammunition. The post-impregnation process utilizes a slurry consisting of less than 0.5% solids (fibrous nitrocellulose, Kraft process wood pulp and supporting chemicals) in potable city water. The CCCs are formed by lowering a felting tool composed of fine metal screen into the slurry and applying a vacuum. The vacuum draws water through the screen and retains the fibrous material on the outer surface of the screen. The CCCs are then molded into final form, immersed in resin to provide structural strength, and cured in an oven prior to final trimming and inspection. Wastewater generated during the manufacturing process is passed through a roto-shear or hydroscreen to remove residual solids from the water. The wastewater is then recycled or sent to the onsite evaporation ponds for additional settling. The beater additive process produces CCCs for mortars and artillery charges. The beater additive process involves the same slurry process as the post-impregnation process, but the resin is added to the slurry prior to performing the felting process. Once the CCCs are removed from the mold, they can go directly to final trimming and inspection. Process wastewater is handled in the same method as previously described for the post-impregnation process.

Production is conducted within three buildings at the facility known as Buildings 3, 6 and 9. Approximately 90% of the process wastewater generated in Buildings 6 and 9 is currently recycled, with the balance of the wastewater discharged to the settling ponds (see Figure 1) along with the process water discharged from Building 3 and the wash-down water from all buildings at the facility. Currently, 40,000 to 130,000 gallons of process wastewater per day are discharged

to the onsite settling ponds. After the water evaporates, settled solid material is removed from the ponds and incinerated under permit onsite.

Armtec is currently redesigning its manufacturing processes, and evaluating options which include capturing or treating 100% of wash-down water, and recycling 100% of all process water. In addition, Armtec intends to abandon the use of the seven unlined settling/evaporation ponds at the facility, and intends to replace the unlined ponds with fewer double-lined settling/evaporation ponds to be used for emergency storage. After implementation of the redesigned system, Armtec anticipates that the only discharges to the double-lined ponds will be due to unexpected events such as equipment failures or failed slurry batches. Furthermore, the upgraded system may eliminate the need for or require a modification of the present discharge permit.

2.3 REGIONAL GEOLOGY

The site is located north of the Salton Sea and southeast of Indio in the Coachella Valley area of southern California. According to the Geologic Atlas of California, the site is underlain by Quaternary lake deposits of ancient Lake Coahuila generally consisting of interbedded clay, silt, sand and beach gravel. The Coachella Valley and its physiographic equivalents to the south; the Imperial and Mexicali Valleys, make up the Salton Trough, a deep basin that represents the structural extension of the Gulf of California into North America. The topographic high created by the deltaic deposits of the Colorado River prevent the marine inundation of the Imperial and Mexicali valleys which are below sea level. The Salton Trough is bounded by the Western Mojave Desert Province to the north, the Peninsular Range Batholith to the west, the Basin and Range Province to the east, and the Gulf of California to the south beyond the Colorado River delta.

2.4 REGIONAL HYDROGEOLOGY AND HYDROLOGY

According to the "Water Quality Control Plan, Colorado River Basin - Region 7," dated 1994 and prepared by the RWQCB, the site lies within the Coachella Valley Planning Area. Groundwater is stored primarily in unconsolidated Pleistocene sediments, which are thicker than 1,000 feet in the valley. Well yields as high as 4,000 gpm have been reported in the valley. A clay aquitard extends from the Salton Sea north to an area west of Indio and overlies the domestic use aquifers, and underlies lenses of permeable sediments and perched ground waters which are recharged by percolating irrigation water.

The facility lies within the Indio Hydrologic Subarea of the Coachella Hydrologic Area. The groundwater within the Coachella Hydrologic Area (referred to as the Coachella Hydrologic Subunit, Area Code No. 719.40 in the 1994 Basin Plan) has been designated by the RWQCB as having existing beneficial uses for municipal (MUN), industrial (IND) and agricultural (AGR) supplies. As indicated on Table 2-5 of the Basin Plan, the beneficial use designation for municipal supply indicates that at least one of the aquifers within the basin supports a municipal beneficial use, but does not necessarily apply to all groundwater within the basin. A semi-perched unconfined aquifer is present at an approximate depth of 4 to 7 feet below ground

surface (bgs) beneath the site. However, groundwater in the semi-perched unconfined aquifer is considered poor quality due to high total dissolved solids (TDS) concentration of approximately 3,000 mg/l, and is not presently used for municipal or agricultural supply. According to the RWQCB, a deeper confined aquifer is separated from the upper semi-perched confined aquifer by a clay aquitard. The top of the uppermost confined aquifer is located at an approximate depth of 200 feet bgs in the vicinity of the site.

Based on a drillers log (No. 073717, dated November 21, 1980) for a water well installed at the site between October and November 1980, it appears that two distinct confined aquifers underlie the site. An upper confined aquifer is present at an approximate depth of 215 to 305 feet bgs beneath the site, and is separated from a deeper confined aquifer (present at a approximate depth of 485 to 665 feet bgs) by an approximately 180-foot-thick clay layer. This is likely the extensive aquitard referenced in the Basin Plan. Well construction details presented on the log indicate a well was constructed in the borehole with screened sections over the intervals from 500 to 570 feet bgs and 612 to 660 feet bgs. The well was gravel-packed over the interval from 150 to 660 feet bgs, and a sanitary surface seal described as "standard mud slurry" was placed from the ground surface to the top of the gravel pack at a depth of 150 feet bgs. The well drillers report also indicated that a 4-hour pumping test performed on the well suggested a production rate of 250 gallons per minute.

Numerous surface and shallow subsurface drains that transport irrigation drainage and stormwater to the Salton Sea are present throughout the project vicinity. The main purpose of the tile drains which underlie much of the Coachella Valley is to maintain the semi-perched unconfined aquifer at an approximate depth of 5 to 10 feet bgs. According to information obtained from the work plan, the east-west tile drains present under the Armttec facility were initially installed in 1962. Additional lateral piping was installed beneath the Armttec settling ponds to improve drainage beneath the ponds and was connected to the pre-existing east-west tile drain network.

3.1 SUMMARY OF PREVIOUS SOIL AND GROUNDWATER EVALUATION

Armtec was required to perform a groundwater evaluation at the facility in response to Cleanup and Abatement Order (CAO) No. 00-135, dated September 28, 2000. CAO No. 00-135 requires Armtec to evaluate groundwater beneath the site for the presence of acetone, ethylbenzene, xylenes, 4-methyl 2-pentanone, and DPA, collectively, the constituents of concern (COCs). In addition, Armtec conducted an assessment of the presence of nitrocellulose (NC) in soils within the evaporation/percolation ponds.

During February and March 2001, six CPT soundings (CPT-01 through -06), four Hydropunch borings (GW-01 through -04), and 15 shallow soil borings (S-1 through S-15) were advanced at the site. In addition, six monitoring wells (MW-01 through -06) were installed to evaluate groundwater conditions in the shallow unconfined aquifer beneath the site. The approximate locations of soil borings advanced and monitoring wells installed at the site are indicated on Figure 2. The results of the soil and groundwater evaluation are summarized in a report titled "Groundwater Evaluation, Armtec Facility, 85-901 Avenue 53, Coachella, California," dated April 24, 2001 and prepared by URS.

The results of the groundwater evaluation indicated that, with the exception of DPA, none of the COCs were detected in soil or groundwater samples collected during this investigation. DPA concentrations identified in groundwater during our investigation are below the U.S. EPA Reference Dose (calculated as a safe exposure level with respect to non-cancer health effects) and Suggested No-Adverse-Response Level (SNARL), and significantly below the Region 9 PRG for tap water. Although DPA is present at low concentrations in the unconfined perched aquifer beneath the Armtec facility, groundwater from this aquifer is of poor quality and is not currently used for drinking water and will not likely be used for drinking water in the future.

Subsequent to implementation of the redesigned wastewater treatment system and discontinued wastewater discharges to the unlined ponds, residual DPA concentrations in groundwater beneath the site are likely attenuate to non-detectable concentrations within a matter of months.

DPA concentrations identified in soil during the URS investigation were significantly lower than current PRGs and do not appear to pose a threat to human health or the environment at the concentrations observed. NC concentrations observed in soil at the site do not appear to be a threat to human health or the environment. Furthermore, when the existing unlined ponds are taken out of service, discharges of settleable material containing NC fines (and DPA) will cease.

3.2 NITROCELLULOSE IN SOIL

Soil samples selected for analyses from borings S-01, S-05, S-10, S-11 and S-12, did not contain detectable concentrations of NC. Soil samples collected from the remaining ten shallow soil borings were found to contain NC at concentrations ranging from 3.5 to 1,660 mg/kg, primarily in soil samples collected from the upper six inches of soil in each boring. An evaluation of the NC analytical data indicated the mean NC concentration in soil at the surface of the ponds was approximately 400 mg/kg. However, at a depth of two to three feet, NC was typically not detected and the mean NC concentration decreased to less than 5 mg/kg.

SECTION THREE

Soil and Groundwater Evaluation

Based on their review of the April 2001 Groundwater Evaluation Report, the RWQCB concurred with URS' recommendation of conducting quarterly monitoring for the COCs in the six monitoring wells to further document groundwater conditions beneath the site. Although soil sample analytical results for the URS investigation indicated that NC in soil is primarily limited to the upper 6 inches of soil beneath the evaporation ponds at the facility, the RWQCB requested that Armtec develop a remedial action plan addressing NC in soil at the site.

4.1 ENVIRONMENTAL FATE AND TRANSPORT OF NITROCELLULOSE

When nitrocellulose is released to soil, it undergoes microbial degradation in a manner similar to that seen for naturally occurring, nitrogenated organic compounds. That is, it undergoes microbial degradation with the ultimate release of inorganic ions (carbon and nitrogen) that are subsequently used by plants or naturally-present microorganisms. Nitrate and ammonia are major components of the nitrogen cycle. However, these are not the final product as they are rapidly transformed by denitrification into nitrogen ions or fixated into plant tissue by nitrogen-fixing soil microorganisms (Alexander, 1977). Nitrates and ammonia in soil are rapidly taken up by plant life to satisfy their nutrient demand. Through this cycle plants are able to uptake nitrogen that is an essential nutrient for plants and produce proteins, amino-acids and polypeptides that are essential for animal life.

In most cases, the natural degradation of nitrogen-containing compounds is not an environmental concern as it is an essential component of the plant and animal life cycle. The only environmental concern is when the production of nitrates, by the cycle, either exceeds the plant and microbial capacity to uptake the nitrate produced, or nitrates are produced beyond the reach of plant and microbial life. An example of this is where nitrocellulose has been disposed in a landfill (Huibergtse, et al., 1979) and nitrates are produced beyond the reach of plant roots and naturally-present microorganisms and cannot be utilized by plants or microorganisms.

At the Armtec facility, the relatively minor amounts of residual nitrocellulose present in the upper few inches of soil in the bottoms of the evaporation/percolation ponds is likely to be degraded by naturally occurring soil microorganisms. The majority, if not all, of the nitrogen contained in residual nitrocellulose will enter the nitrogen cycle and ultimately be used by the abundant plants and microorganisms as an essential nutrient. The nitrocellulose degradation process will include the temporary, and short-lived, production of nitrates. However, given the low nitrocellulose content of soil and the presence of microorganisms and plants in soil at the site, the nitrates produced during the natural degradation process will rapidly proceed through the cycle to become essential nitrogen ions.

4.2 CHEMICAL AND PHYSICAL PROPERTIES OF NITROCELLULOSE

There are no Maximum Contaminant Levels (MCLs), Preliminary Remediation Goals (PRGs), Permissible Exposure Limits (PELs), Threshold Limit Values (TLVs) or other screening or cleanup criteria for NC in soil. According to the Manufacturers Safety Data Sheet (MSDS) for the NC product utilized at Armtec, the NC product consists of 12.6% nitrocellulose and 87.4% water (by weight), there are no known carcinogenic or teratogenic human effects, and there are no known effects on animals. An MSDS obtained from Nobel Enterprises, a manufacturer of NC in the United Kingdom, indicated that their NC (cellulose nitrate) product consists of approximately 65-75% nitrocellulose and 25-35% ethyl alcohol, isopropyl alcohol or water. Toxicity data obtained from the Nobel MSDS for NC indicated that the oral LD₅₀ (lethal dose for 50% of the test organisms) for a rat is greater than 5,000 mg/kg, and that the fish toxicity LC₅₀ 96 hour test (lethal concentration for 50% of the test organisms after 96 hours) for fathead minnows

was greater than 10,000 mg/l. The Nobel MSDS also indicated that the nitrocellulose component of the Nobel NC product consists of less than 12.3% nitrogen.

Extensive research conducted by the United States Department of Defense, the United States Army and consulting professionals at weapons manufacturing facilities and military installations suggest NC in soil is not of toxicological significance and will naturally biodegrade to inert substances. Ruminants may digest NC to produce carbohydrates and protein, but NC is not digestible by humans and is excreted unchanged. In soil, NC will degrade to produce many products including carbon dioxide and nitrogen oxides, but little or no nitrate. Composting nitrocellulose-impacted soil accelerates the biodegradation of NC and converts the biodegradable material to harmless, stabilized by-products which can be utilized as soil amendments.

There are no PRGs for nitrate or nitrite in soil. However, the residential PRG for nitric oxide, one of the potential degradation products of NC, is 7,800 mg/kg and the industrial PRG is 100,000 mg/kg. If we assume that a soil sample containing 100 mg/kg NC contains 12.3% nitrogen, then the soil sample would contain up to 12.3 mg/kg nitrogen using the product information obtained from Nobel. If all of the available nitrogen in the soil sample were converted to nitric oxide, the resulting nitric oxide concentration would be 12.3 mg/kg, which is more than 100 times lower than the residential PRG. Therefore, based on the available information, Armtec proposes that a cleanup level of 100 mg/kg nitrocellulose in soil would provide a more than adequate level of protection.

4.3 EVAPORATION POND CLOSURE PROCESS

Each of the evaporation ponds consists of three "cells" which act as wastewater clarifiers. Wastewater is discharged to the first cell where most of the suspended material, including NC fines, settles. The wastewater then flows to the second cell where additional settling takes place, and finally to the third and largest cell where final settling and evaporation occurs.

Armtec began the evaporation pond closure process by taking ponds 3, 4 and 7 out of service in May 2001. Ponds 5 and 6 are intended to be taken out of service in June 2001. Ponds 1 and 2 will remain in use until December 2001, when the redesigned water treatment system is scheduled to be fully operational.

Some ponds at the facility have not been in use for several months, while others have been recently drained or are currently in use. Once the ponds are drained, Armtec personnel will clean the ponds in accordance with the procedures outlined in the Manufacturers Standard Practice Instruction No. 1205, a copy of which is included as Attachment A.

4.4 PROPOSED TREATMENT OF NITROCELLULOSE-CONTAINING SOIL

NC fines are commonly remediated using incineration, natural biodegradation and enhanced bioremediation. Incineration of NC fines is an efficient, cost-effective and industry-accepted method of treatment. NC fines will also naturally biodegrade in soil to inert substances. However, the speed of natural biodegradation is largely dependent upon many factors including the concentration of NC, the presence of microorganisms in the soil, soil temperature, pH, moisture and oxygen content, and the carbon-to-nitrogen ratio. Enhanced bioremediation of NC

in soil typically involved excavation and stockpiling of the NC containing soil. Amendments and bulking agents such as wood chips, animal and vegetable waste may be added to the stockpiles to enhance the biodegradation process. Acidic or alkaline solutions, and specific microorganisms also may be added to further enhance the process.

Nitrocellulose-containing sediment will be generated during the pond cleaning activities described in Section 4.3. Since a permitted incinerator exists at the Armtec facility, Armtec proposes to incinerate the material in the on-site incinerator. Previous analytical testing of the waste residue generated by the incineration process indicated that the material was classified as a non-hazardous waste for disposal purposes. After incineration, the material will consist primarily of residual soil and may be suitable for onsite reuse. However, if offsite disposal is necessary, the incinerated soil will be tested in accordance with the accepting facility's waste discharge requirements prior to offsite transportation and disposal. Pending approval from the disposal facility, the incinerated soil could be transported to a Class III landfill for disposal after incineration.

4.5 CONFIRMATION SOIL SAMPLING

Although no established cleanup level for NC, nitrate or nitrite exists, Armtec proposes a very conservative cleanup level of 100 mg/kg for NC in soil. Based on the available toxicity data for NC and its likely breakdown products, residual concentrations of 100 mg/kg or less after pond cleaning and closure will be protective of human health and the environment. Subsequent to completion of the routine pond cleaning activities described in Section 4.3, at least eight confirmation soil samples will be collected from each pond at statistically random locations to confirm that residual NC concentrations are less than 100 mg/kg. At least four of the confirmation soil samples collected from each pond will be collected from the third and largest cell.

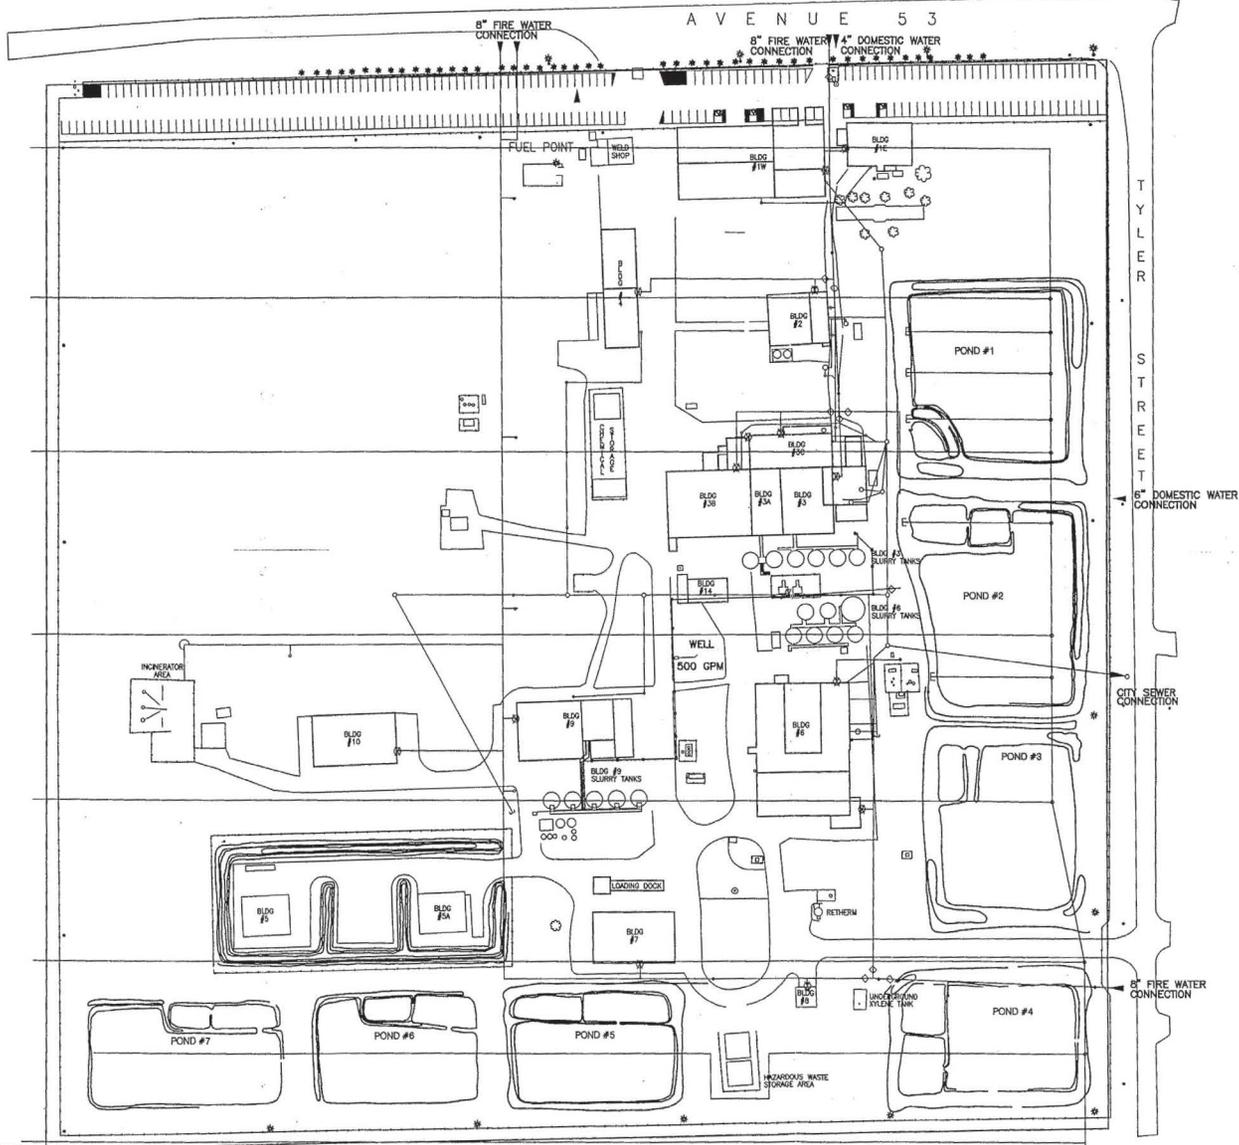

In addition to analyses for NC, one soil sample collected from the first settling basin of each pond will be analyzed for total Kjeldahl nitrogen, nitrate and nitrite to confirm whether these breakdown products are present. An additional background soil sample will also be collected and analyzed for comparison.

If confirmation sampling indicates the presence of greater than 100 mg/kg NC in the remaining soil after routine cleaning, targeted excavation of soil will be performed in the vicinity of those sample locations until confirmation sampling indicates residual NC concentrations are less than 100 mg/kg.

4.6 REPORT

Subsequent to the completion of the evaporation ponds closure process, confirmation sampling and receipt of confirmation sampling analytical results, URS will prepare a draft report for regulatory review. The draft report will be submitted to the RWQCB within four weeks of completion of pond closure activities, which is currently scheduled to be completed by December 31, 2001. Upon receipt of comments from the RWQCB, URS will incorporate the comments into a final report. It is the intent of Armtec to request a "no further action" letter subsequent to the completion of the remedial activities described herein.

**Manufacturers Standard Practice Instruction No. 1205
Percolation Pond Maintenance and Cleaning**

MSPI - 1205 - ADM.

PERCOLATION POND MAINTENANCE AND CLEANING

1.0 PURPOSE

This MSPI establishes the procedures for Percolation Pond Maintenance and Cleaning. It applies to all percolation ponds on the facility.

2.0 TOOLS AND EQUIPMENT REQUIRED

2.1 Tools

2.1.1 Non-sparking shovels

2.1.2 Non-sparking rakes

2.2 Equipment

2.2.1 All terrain Fork Truck

2.2.2 Drum Transporter

2.2.3 Bagging Rack

2.2.4 55 gallon drums

2.2.5 1 inch water supply hose with nozzle

2.2.6 Shade structure for summer months

2.2.7 Out of service sign

2.2.8 Near-Infrared moisture analyzer (lab)

2.3 Materials

2.3.1 Water – City

2.3.2 Plastic bags, 23" x 10 x 39"

3.0 APPLICABLE DOCUMENT

DOD 4145.26M "Contractor Safety Manual"

Use or disclosure of data contained on this
sheet is subject to the restrictions on the
back page of this document.

4.0 SAFETY AND ENVIRONMENTAL

- 4.1 Safety references for this MSPI are in accordance with the Contractor Safety Manual (DOD 4145.26-M), the approved Safety Site Plan, and Armtec's Injury and Illness Prevention Program.
- 4.2 Protective fire retardant coveralls issued by Armtec shall be worn. The coveralls shall be worn closed to within 6" of the neck. Pant legs and sleeves are not to be rolled up in a fashion that creates a cuff.
- 4.3 Loose jewelry, such as but not limited to, bracelets or necklaces are not permitted to be worn while operating moving machinery.
- 4.4 Hair is to be tied back and/or held up securely to prevent it from becoming entangled in moving machinery.
- 4.5 Do not operate any machinery unless you have been trained and have received authorization from your Supervisor.
- 4.6 Any questions pertaining to the safe operation of the process shall be taken to your Supervisor. Any abnormal function or unusual occurrence must also be reported to your Supervisor.
- 4.7 When manually handling items in excess of 40 pounds, or bagging pond sediment, a back support belt issued by Armtec shall be worn.
- 4.8 In the event of fire immediately evacuate the pond area and report to the Safety Office.
- 4.9 Do not attempt to fight any fire in or near a pond.
- 4.10 Do not allow pond sediment to become dry. When a pond is being cleaned, the sediment must be maintained water moist to the touch. Ponds containing sediment that are not actively being cleaned must have a water level over the sediment.
- 4.10.1 At least, daily when a pond is down for service, a small sample of the sediment shall be taken to the laboratory for moisture analysis. Using the microwave moisture analyzer or equivalent, test the sample for water content.
- 4.10.2 The target water content of pond sediment being cleaned is 25% +/- 2% by weight. Exceeding the target moisture is not considered a deviation from this procedure.

- 4.11 Do not perform weed abatement on dirty ponds that are down for cleaning.
- 4.12 Only non-sparking tools shall be used for pond cleaning.
- 4.13 All ponds are restricted areas. Unauthorized personnel shall be escorted from the area.

5.0 PREPARATION FOR CLEANING

- 5.1 Select a pond, other than the one scheduled for cleaning, and open the water inlet.
- 5.2 Close the water inlet valve to the pond that is scheduled to be cleaned.
 - 5.2.1 Place the "Out of Service" sign in close proximity to the inlet water valve on the pond to be cleaned. This will help prevent it from being turned back on accidentally. It will also serve to identify a pond that is down for servicing.
- 5.3 It will take approximately one week for the water level to drop in the pond containment area to a level that facilitates cleaning. During this waiting period the pond shall be checked daily to insure the pond sediment has not dried.

CAUTION

Do not allow pond sediment to become dry. When dry it is flammable and can burn rapidly generating a great deal of heat. When pond sediment is maintained water moist to the touch it will not sustain burning on its own. (See 4.10.1 and 4.10.2)

NOTICE

During periods of down time such as weekends and holidays, enough water shall be added to all pond containment areas to insure they do not become dry.

- 5.4 Once the water has drained off or evaporated the Lead Burner or Supervisor will make the determination if the pond is ready to clean.

6.0 CLEANING

- 6.1 The Lead Burner will select a corner of the containment area to begin the cleaning.

WARNING

Do not allow pond sediment to become dry. When dry it is flammable. While cleaning a pond, check the sediment often throughout the day to insure it is moist to the touch. (See 4.10.1 and 4.10.2)

- 6.2 Using a non-sparking shovel, scoop the area selected as an entry point free of sediment. Place the shovel scoops of sediment into the plastic bags.
- 6.2.1 A non-sparking rake may be used for collecting clods.
- 6.3 With the moist sediment in the bag, tie the opening of the bag in a knot as if you were tying a balloon. This will prevent the sediment from drying out.
- 6.4 Place the sealed bag of sediment into a 55-gallon drum for transport to the incinerator area.
- 6.5 Continue with 6.2 through 6.4 until an area large enough for the bagging rack is created.
- 6.6 Place the bagging rack in the cleaned entry area. Insert bags into the framing.
- 6.7 Continue scooping the pond sediment from the containment area. Use care to minimize the dirt collected but insure a good collection of sediment is achieved.
- 6.8 Place the collected pond sediment into the bags on the bagging rack.
- 6.9 When full tie and seal the bags.
- 6.10 Place the full bags into 55 gallons drums for transport to the incinerators.
- 6.10.1 Full bags of sediment may be placed into piles for collection. They may be drummed later in the shift for transport to the incinerators.
- 6.10.2 Bags of pond sediment must be placed in to drums prior to the end of the work shift.

- 6.11 When the drummed pond sediment is received at the incinerator holding area, a Burn Tag shall be affixed to the drum or to one of the bags in the top of the drum. The burn tag shall be filled out indicating the pond the material was removed from, the date of removal, and the operators names.
- 6.11.1 Under no circumstance shall drums of sediment be staged for incineration exceeding 90 calendar days. The priority is to demilitarize the material as soon as possible after arriving at the incinerator area.
- 6.12 At the end of a work shift, the Supervisor or Leadperson shall insure the containment area is wet down enough so as not to dry out overnight. For weekends or other extended down times enough water shall be added to the pond containment area to insure it will not become dry.

APPLICATION/REPORT OF WASTE DISCHARGE GENERAL INFORMATION FORM FOR WASTE DISCHARGE REQUIREMENTS OR NPDES PERMIT

VI. OTHER REQUIRED INFORMATION

Please provide a COMPLETE characterization of your discharge. A complete characterization includes, but is not limited to, design and actual flows, a list of constituents and the discharge concentration of each constituent, a list of other appropriate waste discharge characteristics, a description and schematic drawing of all treatment processes, a description of any Best Management Practices (BMPs) used, and a description of disposal methods. Also include a site map showing the location of the facility and, if you are submitting this application for an NPDES permit, identify the surface water to which you propose to discharge. Please try to limit your maps to a scale of 1:24,000 (7.5' USGS Quadrangle) or a street map, if more appropriate.

VII. OTHER

Attach additional sheets to explain any responses which need clarification. List attachments with titles and dates below:

A summary of the proposed modifications to the waste discharge process are summarized in the attached letter and design drawings prepared by URS.

You will be notified by a representative of the RWQCB within 30 days of receipt of your application. The notice will state if your application is complete or if there is additional information you must submit to complete your Application/Report of Waste Discharge, pursuant to Division 7, Section 13260 of the California Water Code.

VIII. CERTIFICATION

"I certify under penalty of law that this document, including all attachments and supplemental information, were prepared under my direction and supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

RE: Cleanup and Abatement Order 00-135: Submittal of Request for Modification of Permit Order No. 91-043 Regarding Waste Discharge Requirements

Ref: Letter dtd. May 30, 2001; Palmer to RWQCB; Remediation Plan

Dear Mr. Krull:

Per the referenced May 30 Plan and its predecessor documents, Armtec Defense Products hereby submits for your consideration our request to modify the existing discharge permit to recognize the significant improvements resulting from the referenced Plan. The resulting modified permit, as requested herein, will then limit further discharges, after its effectivity date, to only emergency discharges to new double-lined ponds. This application requests the RWQCB's approval of:

- The closing of the present seven unlined ponds, and
- The design and construction of two new double-lined ponds.

DESCRIPTION OF FACILITY AND DISCHARGE SOURCES

The Armtec facility consists of approximately 40 acres bounded by Avenue 53 on the north, Tyler Street on the east, and agricultural land on the south and west in Coachella, California (Figure 1). Armtec is a government defense contractor that manufactures fiber-based ammunition components known as combustible cartridge cases or containers (CCCs). The facility has been producing components for combustible ordinance for the U.S. government since 1968. The containers manufactured at the facility are designed to hold propellants and projectiles for military weapons systems such as mortars, artillery charges and tank ammunition. Manufacturing activity at the Armtec plant is limited to the production of the

RECEIVED

JUL 13 2001

REGION 7

CCC, with all subsequent processing to create a completed loaded ammunition product occurring at non-Armtec facilities located elsewhere throughout the United States.

Production for the three main product lines (Tank, Mortar Increments, and Artillery/MACS) is concentrated in three buildings at the facility known as Buildings 3, 6 and 9. Two discharge streams result from this production--one stream (the process stream) containing the water and chemicals that become the finished CCC; and one stream (the washdown stream) containing the water and chemicals/materials that result from periodic cleaning of the buildings and equipment as part of routine maintenance. In addition, research and development is conducted by Armtec in a separate onsite facility (Building 2) and occasional discharges occur from this source. An average of 150,000 to 200,000 gallons of water is used each production day at Armtec for these three uses, with the majority of that water already being recycled, leaving approximately 20,000 to 80,000 gallons per day to be discharged to the present unlined ponds. After the discharges settle in the ponds and the majority of the water evaporates off, the remaining wet solids are retrieved and burned in an approved onsite incinerator.

Please see the attached Pond Closure Plan for a fuller description of the process.

PROPOSED WASTE DISCHARGE MODIFICATIONS

By agreement with the RWQCB, Armtec is implementing a redesigned manufacturing process which will eliminate the unlined ponds and will capture or recycle 100% of all washdown waters, process waters, and R&D waters. The proposed modification requests approval for the design and construction of two engineered lined ponds for emergency use only, with all other discharges being recycled or captured and packaged for appropriate offsite disposal. The redesigned system is scheduled to be fully operational by January 2002. Armtec intends to cease discharging to 5 of the 7 ponds by July 31, 2001 and to discontinue discharges to the final 2 ponds prior to December 31, 2001. The 7 existing unlined ponds will then be closed and replaced with two lined ponds for emergency use only.

Existing waste discharge requirements for the facility are outlined in RWQCB Order No. 91-043, dated September 18, 1991. The following list of chemical/material additives are currently used in Armtec's manufacturing process:

- Diphenylamine (DPA)
- Ethanol
- Nalcon (contains methylene-bis-thiocyanate)
- Aluminum sulfate
- Marbon (natural rubber latex)
- Talc (inert powder)
- Kymene (contains polymerized epichlorohydrin)
- Polyester fiber
- Acrylic fiber

The proposed two lined ponds are double-lined emergency evaporation ponds to be constructed at the approximate locations of existing Ponds 5, 6 and 7 (see Figure 1). Each

pond will be designed with sufficient total volume to hold a total of 900,000 gallons of combined emergency discharge plus rain from a 100-year storm, and to also allow 24 inches of freeboard. Because the ponds will be used for emergency storage only, and because the recently-completed groundwater evaluation indicated no significant impacts to groundwater from discharges to the unlined ponds, a leak detection system is not considered necessary. Engineering plans and specifications for the design and construction of the two emergency containment ponds are included as Attachment A.

PROPOSED MONITORING AND REPORTING REQUIREMENTS

Armtec is currently required to conduct effluent monitoring for numerous inorganic and organic constituents and bioassays on a monthly to annual basis. Since the discharge of wastewater to unlined ponds will be discontinued, and since all future discharges will be to double-lined ponds used only for emergency storage, Armtec proposes discontinuing effluent monitoring for inorganic and organic constituents and bioassays, and reporting only event discharges on an annual basis.

Armtec is currently required to conduct tile line discharge monitoring on a quarterly basis for inorganic and organic constituents, except for diphenylamine, which is monitored on a monthly basis. Since the discharge of wastewater to unlined ponds will be discontinued, and all future discharges will be to double-lined ponds used only for emergency storage, Armtec proposes discontinuing tile line discharge monitoring for all constituents.

A copy of the Application/Report of Waste Discharge, General Information Form for Waste Discharge Requirements or NPDES Permit (Form 200) is included as Attachment B. In the preparation of Form 200, we have assumed that the RWQCB will act as the "Lead Agency" with respect to the California Environmental Quality Act (CEQA). In addition, since the requested modification involves emergency only wastewater discharges to double-lined evaporation ponds versus the current process which allows routine discharges to unlined ponds, we have assumed that the RWQCB will determine that the project is exempt from CEQA for the purpose of obtaining a modified WDR for wastewater discharges at the facility.

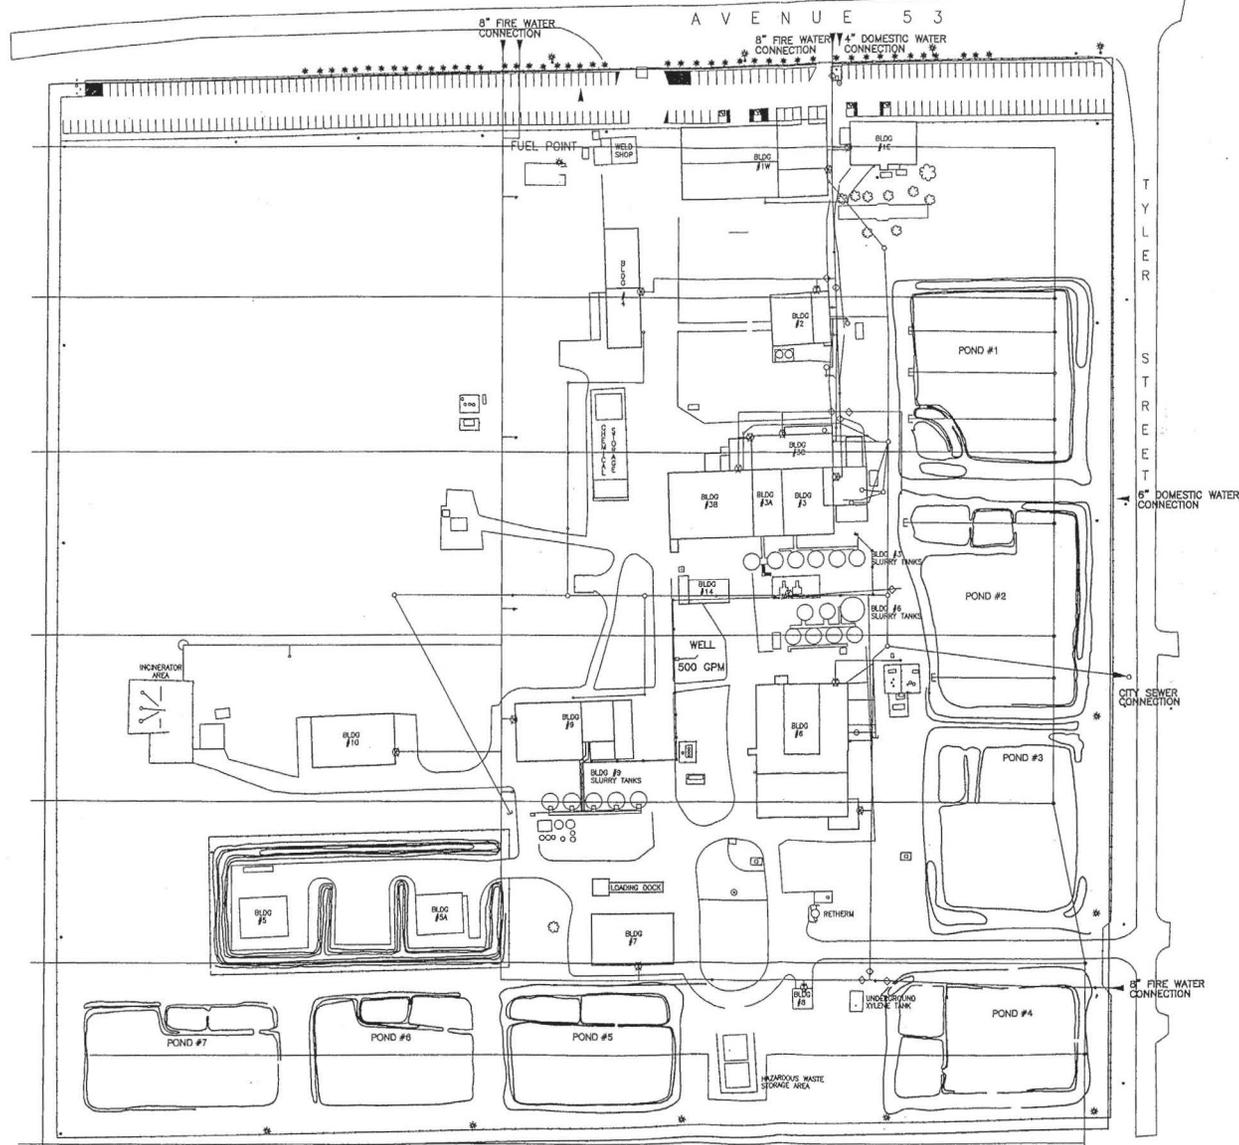

If you have any questions, please contact us at the above phone number.

Yours truly,

James R. Palmer
Vice President of Operations

Subject: Soil Sampling Related to Piping Removal-Armtec Defence Products, Co.
85-901 Avenue 53, Coachella, California

Dear Mr. Ray:

In conjunction with your permit, feed piping between an underground xylene storage tank and a production facility was removed in preparation for replacement. I have enclosed a copy of the Geologist's Soil Collection and Analysis Report for the sampling related to the piping removal.

Xylenes were detected in soil samples, as noted in the report, at locations by the xylene tank and at the production building. Xylenes were not detected in the remaining samples.

Please review the test findings and let us know your recommendations for the next steps we need to take.

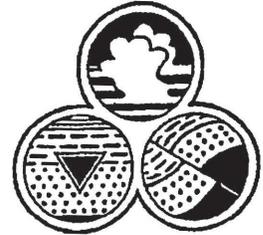

Sincerely,

Ron DiFelice

Dear Mr. Backe:

In accordance with your request, we have collected and analyzed soil samples related to product piping removal at the above referenced address. The enclosed report describes the procedures and findings of this sampling program.

The opportunity to provide this service is greatly appreciated. If you have any questions regarding this matter, please feel free to call our office at (714) 996-5151.

Soil Sampling Related to Product Piping Removal
Armtec Defense Products Co.
85-901 Avenue 53, Coachella, California

1.0. INTRODUCTION

Advanced GeoEnvironmental, Inc. (AGE) was retained by Tank Specialists of California (TSC) to collect soil samples following the removal of approximately 230-feet of product piping related to an 8,000-gallon underground storage tank (UST) at the above-referenced site. The site is located in a rural desert area at an approximate elevation of 95 feet below mean sea level (Figure 1 - *Location Map, 7.5-Minute Indio Quadrangle, USGS Topographic Series, Photorevised 1972*).

1.1. DEPTH TO GROUND WATER INFORMATION

According to the personnel from Armtec, ground water is as shallow as 10-feet below surface grade (bsg) at the site. Saturated conditions were encountered in the soil at approximately 9-feet bsg during this investigation. Ground water flow is inferred to be topographically controlled, flowing to the southeast.

1.2. UNDERGROUND STORAGE TANK SYSTEM

The underground storage tank system consisted of an 8,000-gallon UST used to store xylene and two 230-foot long product pipes that provided xylene to Building 6. The UST system will be retrofitted with above-ground piping. The depth to the removed piping ranged from approximately 2-feet bsg near the UST to 2-inches' bsg near Building 6. The former piping run, UST and immediately surrounding features are depicted on Figure 2 - *Site Plan*.

2.0. PROCEDURES

Two product pipes were located in the piping trench (Figure 2). The product piping union from one pipe was generally offset approximately 5-feet from the union of the second pipe. Therefore, the soil samples were generally collected between the unions, or approximately 2.5-feet from the union of each pipe. The unions were at the same location on each pipe in the two areas where the piping direction changed (Figure 2).

The soil samples were collected with a hand auger and were collected approximately 2-feet below the pipes. The sample numbers identify the sample location number and depth below surface grade (ie. sample PL1-4' was collected from sample location 1 at 4-feet below surface grade). Based on field observations, deeper soil samples were collected from the area of sample PL1-4'. A small trench was excavated with a backhoe near sample PL1-4' to a maximum depth of 9-feet bsg (Figure 2). Additional samples were collected from the teeth of the backhoe from

21 March 2002
AGE Project No. RC 5531D1.960
Page 2 of 3

depths of 8 and 9-feet bsg. In addition, an 8-foot bsg sample was collected from sample location PL2-4' utilizing a hand auger.

The samples were collected by retrieving the soil from the bucket of the hand auger or backhoe teeth and compacting the soil into brass sleeves. The sleeves were sealed with aluminum foil sheets, and capped with end caps. The samples were then relinquished to a representative of the Riverside County - Department of Environmental Health (RC-DEH) for labeling and sealing with evidence tape. The samples were then placed in a chilled container for subsequent transport to a state-certified laboratory. Soil sampling procedures were performed by Mr. Robert Loeffler, California Registered Geologist No. 6709. The soil sampling event was directed and witnessed by Ms. Jackie Jones of the RC-DEH.

The samples were transported under chain-of-custody to Cal Tech Environmental Laboratories (CTEL) for analysis. The samples were analyzed for purgeable aromatic hydrocarbons (benzene, toluene, ethylbenzene and xylenes) with methyl tertiary butyl ether (MTBE) in accordance with EPA method 8021.

3.0. FINDINGS

Aromatic odors were noted in the samples collected near the UST (samples PL1-4', PL1-8' and PL1-9'). No odors were noted at the remaining sample locations. Saturated conditions were encountered at 9-feet near the UST.

Xylenes were detected at 9.2 mg/kg, 520 mg/kg and 5 mg/kg in samples PL1-4', PL1-8' and PL1-9', respectively. Xylenes were also detected at 0.013 mg/kg in sample PL13-2'. Xylenes were not detected in the remaining samples.

Ethylbenzene was detected in samples PL1-4', PL1-8' and PL1-9' at 0.70 mg/kg, 66 mg/kg and 1.1 mg/kg, respectively. Ethylbenzene was not detected in any additional samples.

Benzene, toluene and MTBE were not detected in any of the samples collected. The analytical results are summarized on Table 1. The analytical report (CTEL Project Number CT178-0203091), RC-DEH sample receipt form and chain-of-custody forms are attached.

4.0. CONCLUSIONS

Based on field observations and analytical results, hydrocarbons were detected in the piping trench near the northern end of the UST. The impacted soil appears to extend to the ground water table at 9 feet bsg. Xylenes were also detected at the end of the piping run near Building 6, however, the concentration is low and does not warrant further assessment.

21 March 2002
AGE Project No. RC 5531D1.960
Page 3 of 3

This report should be submitted to RC-DEH for further review and directives.

5.0 LIMITATIONS

Our professional services were performed using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar localities. The findings were based mainly upon analytical results provided by independent laboratories. Interpretations of the subsurface conditions at the site for the purpose of this investigation are made from a limited number of available data points (i.e. soil samples) and subsurface conditions may vary away from these data points. No other warranty, expressed or implied, is made as to the professional recommendations contained in this report.

Subject: Draft Xylene UST Closure Report
Armtec Facility
Coachella, California
URS Project No. 27644524.00004

Dear Mr. DeFelice:

URS Corporation (URS) is pleased to provide Armtec Defense Products (Armtec) this draft report summarizing the results of closure activities for a former xylene underground storage tank (UST) located at the Armtec facility at 85-901 Avenue 53 in Coachella, California (the site, Figure 1). Our services were conducted in general accordance with the scope of work as outlined in our proposals dated May 1 and June 14, 2002.

BACKGROUND

URS understands that the xylene UST was installed in September 1985 and has not been used since December 2001. The UST passed integrity testing conducted in February 2002, but the piping system failed. As a result, Armtec contracted Advanced GeoEnvironmental, Inc. (AGI) to remove approximately 230 feet of underground piping (delivery and return piping) between the xylene UST and Building 6 in March 2002.

The results of AGI's investigation are summarized in their March 21, 2002 report titled "Soil Sampling Related to Product Piping Removal – Armtec Defense Products Company, 85-901 Avenue 53, Coachella, California." According to the AGI report, the former piping was reportedly installed in a trench ranging in depth from a few inches to about two feet below ground surface (bgs). On March 14, 2002, AGI collected 15 soil samples from the former piping trench and the north end of the UST under the direction of an inspector from the Riverside County Department of Environmental Health (DEH). The AGI report indicated that soil samples along the piping trench were collected at depths of approximately 2 feet below pipe joint unions. In addition, a trench was excavated at the north end of the UST to an approximate depth of 9 feet bgs. The soil samples collected by AGI were analyzed for benzene, toluene, ethylbenzene, xylene (BTEX), and methyl tertiary butyl ether (MTBE) by EPA Method 8021. According to the AGI report, none of the 15 soil

File: Armtec 7A332005012

Mr. Ron DiFelice
Armtec Defense Products, Inc.
October 16, 2002
Page 2

samples collected contained detectable concentrations of benzene (<0.005 mg/kg), toluene (<0.005 mg/kg), or MTBE (<0.01 mg/kg). Three of the 11 soil samples collected at depths ranging from 4 to 9 feet bgs located within a distance of 5 feet of the north end of the UST contained ethylbenzene at concentrations ranging from 0.70 to 66 mg/kg, and total xylenes at concentrations ranging from 5 to 520 mg/kg. In addition, one soil sample collected at a depth of two feet bgs at the south side of Building 6 where the former piping entered Building 6 contained 0.013 mg/kg total xylenes.

Based on their field observations and analytical results, AGI concluded that soil containing xylenes was in contact with groundwater on the north side of the UST, and that additional investigation was needed to further evaluate the extent of xylenes in soil and the presence of xylenes in shallow groundwater near the UST. Armtec indicated to URS that it was directed by the Colorado River Regional Water Quality Control Board (RWQCB) to investigate the extent of soil containing xylenes, remove the affected soil, and provide a report of the results to the RWQCB.

In May 2002, Armtec contracted URS to conduct additional investigation in the vicinity of the xylene UST to further evaluate the lateral and vertical extent of xylenes in soil. The results of soil and groundwater characterization activities conducted by URS are summarized in our July 30, 2002 report titled "Report of Subsurface Evaluation, Underground Xylene Tank, Armtec Facility, Coachella, California." Nine soil borings were advanced to an approximate depth of 9 feet (the approximate depth at which groundwater was encountered during the AGI investigation) on the perimeter of a concrete slab lying at the ground surface above the UST. Eighteen soil samples collected by URS (two samples from each of the nine soil borings) were analyzed for BTEX by EPA Method 8260B. The soil samples selected for analysis contained total xylenes at concentrations ranging from <0.002 to 7,380 mg/kg, ethylbenzene at concentrations ranging from <0.002 to 516 mg/kg, and toluene at concentrations ranging from <0.002 to 30.6 mg/kg. Five of the soil samples analyzed contained total xylenes at concentrations exceeding the US Environmental Protection Agency Region IX (USEPA) Preliminary Remediation Goal (PRG) of 210 mg/kg for soil at industrial properties, and three of the soil samples analyzed contained ethylbenzene at concentrations exceeding its PRG of 230 mg/kg for soil at industrial properties. However, none of the soil samples analyzed contained detectable concentrations of benzene or MTBE. It should be noted that the PRGs for xylenes and ethylbenzene in soil at industrial sites are the same as for residential sites.

Based on the results of the May 2002 investigation conducted by URS, soil samples collected on the perimeter of the UST contained elevated concentrations of xylenes. In June 2002 at Armtec's request, URS further evaluated the extent of xylene-affected soil and

Mr. Ron DiFelice
Armtec Defense Products, Inc.
October 16, 2002
Page 3

the possible impacts to groundwater. Seventeen additional soil borings were advanced around the perimeter of the concrete slab covering the UST to an approximate depth of 9 feet bgs. URS also advanced seven additional borings to an approximate depth of 11 feet bgs in the vicinity (within approximately 6 to 20 feet) of the xylene UST to facilitate collection of groundwater samples using a Hydropunch™ sampling device. The approximate locations of the borings advanced by URS are presented on Figures 2, 3 and 4.

An additional 39 soil samples selected for analysis from the June 2002 investigation were found to contain total xylenes at concentrations ranging from <0.010 to 5,500 mg/kg (5 of the 39 soil samples contained total xylenes at concentrations exceeding the PRG), ethylbenzene at concentrations ranging from <0.005 to 810 mg/kg (4 of the 39 soil samples contained ethylbenzene at concentrations exceeding the PRG), and toluene at concentrations ranging from <0.005 to 0.015 mg/kg (none of the 39 soil samples contained toluene at concentrations exceeding the PRG). Benzene was not detected in any of the 39 soil samples analyzed, and MTBE was only detected in two soil samples at concentrations of 0.032 and 0.140 mg/kg.

Seven groundwater samples collected in June 2002 contained total xylenes at concentrations ranging from 0.023 to 6,260 mg/l, and ethylbenzene at concentrations ranging from 0.0029 to 1,050 mg/l. Two groundwater samples contained 0.077 and 11.8 mg/l toluene. None of the groundwater samples contained detectable concentrations of benzene or MTBE. Locations of the borings where groundwater samples were collected are highlighted on Figure 4.

Based on the results of investigations conducted at the site, URS concluded that soil with concentrations of total xylenes and ethylbenzene exceeding the industrial PRG were present in the immediate vicinity of the UST at depths greater than 4.5 feet bgs to extending below the level of groundwater. The distribution of xylene concentrations in soil at 6 feet bgs is presented on Figure 2, and the distribution of xylenes in soil at 8 to 9 feet bgs (at the level of groundwater) is presented on Figure 3. Based on the analytical results, URS estimated that approximately 150 cubic yards of soil may contain xylenes and ethylbenzene at levels above their respective PRGs. URS also concluded that groundwater with concentrations of total xylenes, ethylbenzene and toluene exceeding their respective MCLs and PRGs is limited to the immediate vicinity of the UST. Additionally, concentrations attenuate rapidly to less than 1 mg/L at distances greater than 12 feet from the perimeter of the UST (Figure 4).

Based on the results of soil and groundwater sampling conducted in the vicinity of the xylene UST, URS recommended that Armtec remove the UST.

Mr. Ron DiFelice
Armtec Defense Products, Inc.

Page 4

UST CLOSURE ACTIVITIES

In September 2002, Armtec contracted Tank Specialists of California (TSC) to remove the xylene UST. In preparation for removal of the UST, TSC demolished the concrete slab and removed overburden soil to facilitate UST removal. Concrete debris and "clean" overburden soil were segregated and stockpiled onsite. On September 10, 2002, TSC removed the UST under the direction of DEH Inspector Joe Ainsworth. A copy of the certificate of closure for the UST is included as Attachment A.

On September 12, 2002, URS provided excavation oversight and collected confirmation soil samples from the sidewalls and floor of the excavation. Using a backhoe, TSC excavated soil to an approximate depth of 6 inches above groundwater (present at 8 to 9 feet bgs) until visual indications (such as staining) and soil screening (headspace readings) indicated that xylene concentrations were less than 1 mg/kg. Headspace screening and workspace air monitoring were performed by URS using a photoionization (PID) meter. Excavated soil was placed onto and covered with plastic sheeting until it was loaded for offsite transportation under non-hazardous manifest on , 2002. Copies of the non-hazardous soil manifests are included in Attachment B.

Confirmation soil samples were collected at the approximate locations indicated on Figure 5. Sixteen excavation sidewall confirmation samples (eight at an approximate depth of 3 to 4 feet bgs, and eight at an approximate depth of 6 to 7 feet bgs) were collected from the perimeter of the UST excavation cavity. In addition, four soil samples were collected at an approximate depth of 8 feet bgs, just above the level of standing groundwater in the center of the excavation. The approximate lateral extent of the area excavated is shown on Figure 5.

Soil collected during confirmation sampling was placed into laboratory-supplied glass jars, sealed with teflon-lined caps, labeled and analyzed by HP Labs of Solana Beach, California in an onsite State-certified mobile laboratory (CERT #1746). Soil samples were handled in accordance with chain-of-custody procedures. Copies of the analytical laboratory reports are included in Attachment C.

After removal of the UST a "sheen" of xylene product was noted on the water table surface in the open excavation. In an attempt to remove the sheen of xylene observed on groundwater, Armtec contracted with Hazardous Waste Transportation Services (HTS) to evacuate groundwater from the excavation. On six separate occasions (September 17, 20, 23, 26, and October 2 and 8, 2002) a vacuum truck was used to remove approximately 26,164 gallons (ranging from approximately 3,439 to 5,000 gallons per event) of groundwater from the excavation. The initial load of xylene-containing groundwater was

Mr. Ron DiFelice
Armtec Defense Products, Inc.
October 16, 2002
Page 5

transported by HTS to Onyx Environmental in Azusa, California under uniform hazardous waste manifest for disposal. However, characterization of the liquid waste at Onyx Environmental indicated that the xylene-containing groundwater was non-hazardous. Therefore, the remaining five loads of xylene-containing groundwater were transported by HTS to K-Pure Waterworks in Rancho Cucamonga, California under non-hazardous waste manifest for disposal. Copies of the manifests for groundwater pumped from the excavation are included in Attachment B.

Prior to and following evacuating groundwater from the excavation, Armtec collected groundwater samples in laboratory-supplied containers that were sealed, labeled, and transported in an insulated cooler with ice under chain-of-custody procedures to American Scientific Laboratories (ASL) in Los Angeles, California for analysis. Copies of the ASL laboratory reports are included in Attachment C.

DISCUSSION

Soil Conditions

Soil encountered in the in the upper 9 feet in the vicinity of the former xylene UST generally consists of silt, sandy silt, and silty sand. Copies of boring logs are included in the July 2002 URS report. Final confirmation soil sample results for sidewall samples indicate that residual xylene concentrations in soil surrounding the former UST are less than 0.5 mg/kg. Bottom confirmation samples (Bottom-01 through Bottom-04) collected at a depth just above the water table contained xylenes at concentrations ranging from 0.97 to 210 mg/kg. Based on the concentrations in the four bottom confirmation soil samples, Armtec contracted TSC to excavate additional soil on September 12, 2002, to an approximate depth of two- to three feet below the level of groundwater (about 11 feet bgs) in the vicinity of the samples containing more than 1 mg/kg xylene. Because the depth of excavation extended below groundwater, additional confirmation soil samples were not collected from the bottom of the excavation after removal of soil containing xylenes at concentrations greater than 1 mg/kg.

The USEPA Region IX PRG for total xylenes in soil at industrial sites is 210 mg/kg. As demonstrated on Figure 5, none of the 20 soil samples collected from the final excavation cavity contained xylene concentrations exceeding the PRG. Furthermore, for areas on the excavation floor where total xylene concentrations exceeded 1 mg/kg, Armtec excavated additional soil to an approximate depth of 11 feet bgs to remove soil containing total xylene concentrations greater than 1 mg/kg. The 20 confirmation soil samples contained ethylbenzene at concentrations ranging from 0.006 to 28 mg/kg, significantly below the PRG for ethylbenzene in soil at industrial properties (230 mg/kg). None of the sidewall confirmation samples contained

Mr. Ron DiFelice
Armtec Defense Products, Inc.
October 16, 2002
Page 6

detectable concentrations of toluene or benzene. Two of the four bottom confirmation soil samples contained benzene at concentrations of 0.007 and 0.011 mg/kg, and toluene at concentrations of 0.006 and 0.14 mg/kg. The PRG for benzene in soil at industrial properties is 1.5 mg/kg. The PRG for toluene in soil at industrial properties is 520 mg/kg.

Groundwater Conditions

The facility lies within the Indio Hydrologic Subarea of the Coachella Hydrologic Area. The groundwater within the Coachella Hydrologic Area (referred to as the Coachella Hydrologic Subunit, Area Code No. 719.40 in the 1994 Basin Plan) has been designated by the RWQCB as having existing beneficial uses for municipal (MUN), industrial (IND) and agricultural (AGR) supplies. As indicated on Table 2-5 of the Basin Plan, the beneficial use designation for municipal supply indicates that at least one of the aquifers within the basin supports a municipal beneficial use, but does not necessarily apply to all groundwater within the basin. A semi-perched unconfined aquifer is present at an approximate depth of 8 to 9 feet bgs beneath the former xylene UST. However, groundwater in the semi-perched unconfined aquifer is considered to be of poor quality and it is not presently used for municipal or agricultural supply. According to the RWQCB, a deeper confined aquifer is separated from the upper semi-perched confined aquifer by a clay aquitard. The top of the uppermost confined aquifer is located at an approximate depth of 200 feet bgs in the vicinity of the site. Regional groundwater flow in the shallow semi-perched aquifer is toward the southeast, and groundwater monitoring conducted in six monitoring wells at the site also indicates a southeasterly flow direction.

Groundwater was typically encountered in the Hydropunch borings at depths ranging from 8.5 to 9 feet bgs, and standing groundwater was observed in the excavation after removal of the UST at an approximate depth of 9 feet bgs. During groundwater pumping from the open excavation, Armtec personnel reported that the depth to groundwater would be temporarily reduced to an approximate depth of 11 feet bgs at the conclusion of pumping, and would slowly recover to about 9 feet bgs after a period of approximately 24 hours. Armtec personnel also indicated that after the initial groundwater pumping event that the sheen was no longer observed.

The U.S. EPA Region IX PRG (for tap water) for total xylenes in groundwater is 1.4 mg/l. The State of California Maximum Contaminant Level (MCL) for total xylenes in drinking water is 1.75 mg/l. As indicated on Figure 4, only three of the seven Hydropunch groundwater samples (XHP-01, -02 and -03) collected in June 2002 contained total xylenes at concentrations exceeding the PRG. Figure 4 also demonstrates that xylene concentrations exceeding the PRG or MCL are limited to a relatively small area immediately surrounding the UST. Groundwater samples that were collected upgradient (XHP-06) and downgradient

Mr. Ron DiFelice
Armtec Defense Products, Inc.
October 16, 2002
Page 7

(XHP-04, -05 and -07) of the UST contained xylene concentrations significantly lower than the PRG or MCL.

Groundwater remediation activities conducted by Armtec have involved pumping the standing groundwater out of the former UST excavation on six separate occasions between September 17, 2002 and October 8, 2002. During this period approximately 26,164 gallons of xylene-containing groundwater have been removed and transported offsite for disposal. Groundwater samples collected from the excavation following each pumping event demonstrate that total xylene concentrations have decreased appreciably from 7.48 mg/l total xylenes after the initial pumping event on September 16, 2002, to 4.56 mg/l (approximately 2.5-times the MCL for drinking water) after the fifth pumping event conducted on October 2, 2002.

Ongoing groundwater monitoring conducted by URS since 2001 indicates a southeasterly groundwater flow direction across the site. Groundwater samples collected from monitoring wells installed around the site perimeter (see Figure 1), during three groundwater monitoring events have not contained detectable concentrations of xylenes or any other BTEX constituent. Tile-drain water sampling was also conducted by URS for the facility during the 2001 groundwater assessment. A water sample collected from a downgradient sampling port in February 2001 for a tile-line which passes approximately 50 feet south of the former UST did not contain detectable concentrations of xylenes or any other VOC.

The results of these previous investigations, ongoing groundwater monitoring and the xylene concentrations in downgradient Hydropunch™ borings XHP-04, XHP-05, and XHP-07 further demonstrate that groundwater containing concentrations of xylenes above the PRG for tap water and MCL for drinking water is limited to the immediate vicinity of the UST and has not migrated more than 20 feet downgradient from the former UST, or offsite.

CONCLUSIONS

Based on the results of the March 2002 AGI investigation, soil and groundwater investigations performed at the site by URS in May and June 2002, and UST closure activities conducted in September and October 2002, we conclude the following:

- Soil borings advanced around the perimeter of the former UST (refer to Figures 2 and 3) demonstrate that the lateral extent of affected soil has been adequately characterized. Soil with concentrations of total xylenes and ethylbenzene exceeding the residential/industrial PRGs in the immediate vicinity of the UST were removed during UST closure activities conducted in September 2002 (refer to Figure 4).

Mr. Ron DiFelice
Armtec Defense Products, Inc.
October 16, 2002
Page 8

- Soil containing total xylenes at concentrations greater than 1 mg/kg in the vicinity of the former UST have been removed to a depth extending two to three feet below the level of groundwater. Therefore, additional soil excavation or remediation is not warranted.
- Groundwater sampling around the UST and ongoing groundwater monitoring at the site suggests the plume of dissolved xylene and ethylbenzene appears stable and localized to the immediate vicinity of the former UST.
- Groundwater remediation activities performed by Armtec in September and October 2002 have resulted in the extraction of more than 26,000 gallons of contaminated groundwater and significant reduction of xylene concentrations in groundwater to slightly more than twice the PRG and MCL.
- Groundwater in the shallow semi-perched aquifer is of poor quality due to impacts from active regional agricultural activities and surface water-infiltration in the region and is not currently used for drinking water. Furthermore, groundwater in the shallow semi-perched aquifer is not likely to be used for drinking water or any other beneficial use in the future.
- Low-permeability silts and clays present in the upper 200 feet of soil beneath the site have effectively limited the lateral migration of xylene-containing groundwater, and will continue to effectively control the migration of relatively low concentrations of residual contaminants in the future.
- Relatively low residual concentrations of xylenes and ethylbenzene the shallow semi-perched aquifer are limited to the immediate vicinity of the former UST and do not pose a significant threat to human health or deeper aquifers present at depths greater than 200 feet bgs or a significant degradation of shallow semi-perched groundwater quality.

RECOMMENDATIONS

The source of the release and affected soil with xylene concentrations exceeding 1 mg/kg have been removed. Armtec has extracted more than 26,000 gallons of groundwater containing xylenes, ethylbenzene and toluene. Residual groundwater concentrations of these constituents are approximately 2.5-times the drinking water MCL and tap water PRGs for a shallow semi-perched aquifer of poor quality that is not currently used for drinking water, and will not likely be used for drinking water in the future. Therefore, URS recommends:

- Allowing residual concentrations of total xylenes (and ethylbenzene) in soil and groundwater in a relatively small area surrounding the UST to naturally attenuate.

Mr. Ron DiFelice
Armtec Defense Products, Inc.
October 16, 2002
Page 9

Considering the current and future site usage (industrial), poor water quality in the shallow semi-perched aquifer beneath the site, and the results of URS' investigations and UST closure activities which demonstrate the extent of the release is localized, URS believes natural attenuation is the most practical and feasible method of remediating the residual contaminant concentrations. Active remedial alternatives (such as pump and treat, vapor extraction or dual-phase extraction) are typically implemented at sites involving much larger areas of more significant contamination, and would be impractical for a small release such as is present at the Armtec site.

- Using the existing monitoring well network at the site and ongoing groundwater monitoring (which includes analyses for volatile organic compounds including BTEX) data to monitor for the presence of BTEX in groundwater at the site, especially at the downgradient property boundary.
- Replacing the former xylene UST with an aboveground xylene tank (AST) in an aboveground concrete containment structure with aboveground piping to the buildings at the site. An AST in aboveground containment with aboveground piping would effectively eliminate the future potential for soil and groundwater impacts associated with a UST.
- Requesting closure, or a "no further action required" letter from the RWQCB based on the closure activities conducted to date, and concurrence that natural attenuation is an appropriate remedial method to address low concentrations of residual contamination resulting from the former UST.

URS recommends providing a copy of this letter report to the RWQCB for review, and meeting with RWQCB staff to discuss the UST closure activities and our rationale for requesting "no further action." We appreciate the opportunity to provide ongoing assistance to Armtec, and we look forward to continuing to work with you in the future. If you have any questions, please give us a call.

URS PROJECT #27644524**

HP Labs Project # UR091202W2

Mr. Wittig:

Please find enclosed a data report for the above referenced location. Soil samples were analyzed on-site in DOHS certified mobile laboratory (CERT #1746).

Project Summary

The following analyses were conducted:

- 27 soils for volatile aromatic hydrocarbons (BTEX) by EPA Method 8021B

The samples were received on-site in appropriate containers with appropriate labels, seals, and chain-of-custody documentation.

Project Narrative

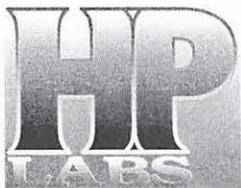

The results for all analyses and required QA/QC analyses are summarized in the enclosed tables. All calibrations, blanks, surrogates, and spike recoveries fulfill quality control criteria.

HP Labs appreciates the opportunity to provide analytical services to URS on this project. If you have any questions relating to this data or report, please do not hesitate to contact us.

Sincerely,

A handwritten signature in black ink, appearing to read 'Tamara Davis, for'.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Northgate Env. Management, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 1ACB-4B22-A76E
PO # NA
Project 85901 Avenue 53

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 1ACB-4B22-A76E

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Northgate Env. Management, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Northgate Env. Management, Inc. on Jun 14, 2024.

TARGET PROPERTY

85901 AVENUE 53
COACHELLA, CA 92236

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

TARGET PROPERTY FINDINGS

TARGET PROPERTY DETAIL

**85901 AVENUE 53
COACHELLA, CA 92236**

85901 AVENUE 53

Date: **2/23/2024**
Permit Type:
Description: **Armtec Defense**
Permit Description: **Fire Commercial TI**
Work Class:
Proposed Use:
Permit Number: **FPCBP2400129**
Status: **Assigned**
Valuation: **\$0.00**
Contractor Company:
Contractor Name:

Date: **6/28/2017**
Permit Type: **plumb**
Description: **INSTALL NEW WASTE WATER DISCHARGE PRE-TREATMENT SYSTEM TO EXISTING 8" SEWER LINE ON PROPERTY**
Permit Description: **PLUMBING PERMIT**
Work Class:
Proposed Use:
Permit Number: **PL-2016-08-00311**
Status: **issued**
Valuation: **\$0.00**
Contractor Company:
Contractor Name: **ESTERLINE DEFENSE TECHNOLOGIES**

TARGET PROPERTY FINDINGS

Date: **6/20/2012**
Permit Type:
Description: **INSTALL IRRIGATION FOR THE TYLER STREET LANDSCAPING**
Permit Description: **PLUMBING PERMIT**
Work Class:
Proposed Use:
Permit Number: PL-2012-06-00178
Status: issued
Valuation: \$0.00
Contractor Company:
Contractor Name: DESERT CONCEPTS CONSTRUCTION I

Date: **1/4/2012**
Permit Type:
Description: **CONSTRUCT TWO (2) 900 SQ FT MASONRY STORAGE BUILDINGS WITH INTERIOR IMPROVEMENTS ELECTRICAL, MECHANICAL AND COPPER**
Permit Description: **MISCELLANEOUS BUILDING PERMIT**
Work Class:
Proposed Use:
Permit Number: BL-2011-10-08837
Status: final
Valuation: \$0.00
Contractor Company:
Contractor Name: DESERT CONCEPTS CONSTRUCTION I

Date: **12/6/2011**
Permit Type:
Description: **INSTALL ONE (1) STEAM BOILER 8,000,000 BTU**
Permit Description: **MECHANICAL PERMIT**
Work Class:
Proposed Use:
Permit Number: ME-2011-12-00156
Status: issued
Valuation: \$0.00
Contractor Company:
Contractor Name: PORTER BOILER SERVICE

TARGET PROPERTY FINDINGS

Date: **2/24/2010**
Permit Type:
Description: **INSTALL GENERATOR FOR GUARD HOUSE (22KW)**
Permit Description: **ELECTRICAL PERMIT**
Work Class:
Proposed Use:
Permit Number: EL-2010-02-00562
Status: issued
Valuation: \$0.00
Contractor Company:
Contractor Name: ARMTEC DEFENSE PRODUCTS CO

Date: **1/25/2010**
Permit Type:
Description: **CONNECT SEWER LINE TO GUARD HOUSE 160 SQ.FT. CURRENTLY UNDER CONSTRUCTION**
Permit Description: **MASTER BUILDING PERMIT**
Work Class:
Proposed Use:
Permit Number: BL-2010-01-07734
Status: canceled
Valuation: \$0.00
Contractor Company:
Contractor Name: ARMTEC DEFENSE PRODUCTS CO

Date: **12/27/2009**
Permit Type:
Description: **Modify pitch of roof, replace A.C. unit**
Permit Description:
Work Class:
Proposed Use:
Permit Number: 4348
Status:
Valuation: \$30,000.00
Contractor Company:
Contractor Name:

TARGET PROPERTY FINDINGS

Date: **12/27/2009**
Permit Type:
Description: **Install concrete slab for drainage**
Permit Description:
Work Class:
Proposed Use:
Permit Number: 4349
Status:
Valuation: \$5,000.00
Contractor Company:
Contractor Name:

Date: **12/20/2009**
Permit Type:
Description: **Relocate mobile trailer & electrical permit**
Permit Description:
Work Class:
Proposed Use:
Permit Number: 5032
Status:
Valuation: \$0.00
Contractor Company:
Contractor Name:

Date: **12/14/2009**
Permit Type:
Description: **Construct a separation wall in Bldg. 10**
Permit Description:
Work Class:
Proposed Use:
Permit Number: 5002
Status:
Valuation: \$80,000.00
Contractor Company:
Contractor Name:

TARGET PROPERTY FINDINGS

Date: **11/12/2009**

ADJOINING PROPERTY FINDINGS

ADJOINING PROPERTY DETAIL

The following Adjoining Property addresses were researched for this report. Detailed findings are provided for each address.

No Permits Found

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other common reasons for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- **Permit Number:** The alphanumeric designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- **Description:** A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- **Permit Type:** Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The EDR Property Tax Map Report

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

APPENDIX K
PHASE I ESA QUESTIONNAIRE

Phase I Environmental Site Assessment Questionnaire

(User Provided Information Questionnaire)

Date: 6/26/24

Your Name: Luz Rodriguez

Your Title: Environmental Specialist

Site Name: Armtec Defense Products

Site Location: Coachella, CA

Relationship to Site: Owner Occupant Purchaser Other (please explain)

Length of Time Associated with Site: 24 years

Please review and complete this questionnaire which will assist Northgate in completing our site assessment. If sufficient space is not provided, please complete your response on a separate sheet of paper and attach it to this questionnaire.

1. Are you aware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state or local law?

Yes No Unknown N/A

If Yes, please explain: _____

2. Are you aware of any activity or land use limitations, such as engineering controls (for contaminant control), land use restrictions or institutional controls, that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Yes No Unknown N/A

If Yes, please explain: _____

3. Do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes No Unknown N/A

If Yes, please explain: Yes, I am the environmental specialist with related
experience and knowledge of chemicals.

4. Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

a) Do you know the past uses of the Site?

Yes No Unknown N/A

If Yes, please explain: This site has remained the same since the start of the
company, previously was just desert.

b) Do you know of specific chemicals that are present or once were present at the Site?

Yes No Unknown N/A

If Yes, please explain: Yes, we have several chemicals on site. SDSs are available.

c) Do you know of chemical spills that have taken place at the Site?

Yes No Unknown N/A

If Yes, please explain: Small controlled and contained spills

d) Do you know of any environmental cleanups that have taken place at the Site?

Yes No Unknown N/A

If Yes, please explain: Underground xylene tank was leaking, excavated and now we have an above ground xylene tank

e) Do you know if any fill material has been imported to the Site?

Yes No Unknown N/A

If Yes, please explain: _____

5. Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site?

Yes No Unknown N/A

If Yes, please explain: _____

6. Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Site?

Yes No Unknown N/A

If Yes, please explain: _____

7. Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site?

Yes No Unknown N/A

If Yes, please explain: _____

8. Based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of contamination at the Site?

Yes No Unknown N/A

If Yes, please explain: _____

9. Does the Site's purchase price reasonably reflect the fair market value of the property?

Yes No Unknown N/A

If No, do you know the reason for lower purchase price? Is it possible that the lower purchase price is because of contamination known or believed to be present at the Site?

Yes No Unknown N/A

If Yes, please explain: _____

10. Have any of the following documents been prepared for the Site and, if so, can copies be provided to Northgate:

- Environmental site assessment reports Yes No Copies available
- Environmental compliance audit reports Yes No Copies available
- Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, National Pollutant Discharge Elimination System permits, underground injection permits) Yes No Copies available
- Registrations for underground storage tanks (USTs) and/or above ground storage tanks (ASTs) Yes No Copies available
- Registrations for underground injection systems Yes No Copies available

- Material safety data sheets Yes No Copies available
- Community right-to-know plan Yes No Copies available
- Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc. Yes No Copies available
- Reports regarding hydrogeologic conditions on the Site or in the surrounding area
 Yes No Copies available
- Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the Site or relating to environmental liens encumbering the Site Yes No Copies available
- Hazardous waste generator notices or reports Yes No Copies available
- Risk assessments Yes No Copies available
- Recorded Activity and Use Limitations (e.g. deed restriction, asphalt cap)
 Yes No Copies available

If you know of specific chemicals or other hazardous materials (e.g., PCB associated with transformers, batteries, etc.) that are present or were once present at the property, how were they used, stored, and disposed?

Everything is used, stored and disposed within local, state and federal regulations and in the process of obtaining ISO 14001 certification.

Do you know of aboveground or underground storage tanks on the property? If yes, what did they contain?

We currently have an aboveground storage tank that contains xylene.

Do you have any knowledge or experience with nearby/adjacent properties? If yes, do you have knowledge of chemicals, releases, or cleanups on these properties?

No

How long have you owned, operated, leased, or been familiar the present and past uses of the property?

The company started in the 1960s.

Northgate Environmental appreciates your assistance on this project.

APPENDIX L

ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS

DERRICK S. WILLIS

PRINCIPAL II

Mr. Willis has over 24 years' experience serving both public sector and private clients in California and Canada on a wide variety of environmental projects. For the last several years, Mr. Willis' focus has been on formulating and facilitating closure and development strategies for large, complex, high profile, environmental projects for aerospace, industrial, and real estate development firms. Mr. Willis has extensive experience with due diligence/property transfer and development issues in a wide variety of industrial and regulatory settings. He is familiar with the industrial processes that generate environmental wastes, the fate and transport of chemicals in the environment, the potential adverse effects of these substances on human and ecological receptors, compliance challenges faced by business operators, the performance of remedial technologies, and how these issues play into site acquisition, development, and divestiture.

REPRESENTATIVE EXPERIENCE

Environmental Site Assessments

- **RREEF, Multiple Sites, Southern California** — Mr. Willis serves as client director for RREEF on multiple projects including acquisition studies (which include mold, asbestos and indoor air quality surveys), tenant audit programs, soil remediation, groundwater investigation and remediation, third party oversight, agency negotiation, and mold and asbestos abatement programs.
- **Watson Land Company, Multiple Sites, Southern California** — Mr. Willis has directed over 40 acquisition-related due diligence investigations for Watson Land Company (Watson). Scope of work has included Phase I ESAs, soil and groundwater investigations, risk evaluations, agency negotiation, and aiding Watson in evaluating and quantifying the potential risk associated with recognized environmental concerns.
- **Various Clients, Various Locations, Southern California** — Project manager for more than 200 Phase I environmental assessments (ESAs) for industrial facilities including aerospace, furniture and paper manufacturing factories; utility companies, vehicle and equipment maintenance facilities; and landfills as well former agricultural land. The objective of the ESAs was to evaluate and quantify potential liabilities associated with the acquisition and development of the properties.

Site Investigation and Remediation

- **Kimco Realty Corporation, multiple locations in California and Nevada**, – Serves Principal-in-Charge and program manager for investigation and remediation of several dry-cleaner sites in California (Cupertino, Daly City, Lakewood, and LaVerne) and Reno, Nevada. Projects range from investigation of soil impact to remediation of soil and groundwater. Mr. Willis is responsible for developing remedial strategies, negotiating with regulatory agencies, and providing technical direction to staff in order to evaluate and remediate site impacts, and bring sites to regulatory closure.

- ***Baker Cold Storage, Port of Long Beach Pier B Facility, California*** – Serves as project manager for investigation, remediation and redevelopment support of a 12-acre former wood treatment facility in the Port of Long Beach. The site is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans. In addition, tidally influenced groundwater is impacted with PCP and petroleum hydrocarbons and methane charged from oilfield operations. Mr. Willis evaluated investigation data, managed a groundwater investigation program and develop a remedial approach for soil and groundwater. Mr. Willis successfully streamlined the regulatory process by aggregating the remedial work plans including RCRA closure of a drip pad, into one encompassing work plan (Soil and Groundwater Response Plan) and one Remedial Design Document ([RDD] that incorporated the facility design components into building mitigation design), and securing agency approvals on components of site construction concurrent with development of the RDD. Site is currently being developed with a 250,000 square-foot cold storage facility.
- ***RREEF, Villa Marina Marketplace, Marina Del Rey, California*** — Mr. Willis managed the design and installation of a groundwater treatment system to treat groundwater impacted from metals and selenium to meet NPDES discharge requirements for a basement dewatering system for a shopping center. He currently manages the operation, maintenance and reporting associated with the ongoing dewatering system.
- ***Black Mountain Industrial Complex Remedial Design and Implementation, Nevada*** – Served as project manager for expedited investigation and remediation program for the Tronox industrial facility within the BMI Complex. Previously the world's largest magnesium production facility during World War II, the site was later utilized for the manufacture of rocket fuel, other products, and most recently alkali and manganese oxide-based chemicals. Historical Industrial operations resulted in subsurface impacts from heavy metals, perchlorate, pesticides, chlorinated solvents, asbestos, radionuclides, and other chemicals. Developed streamlined investigation and remedial approach, prepared remedial plans, and rapidly mobilized and managed a team of staff and subcontractors to remove approximately 800,000 cubic yards of soil from the site to meet commercial soil cleanup goals for direct contact exposure in an expedited timeframe.
- ***Hawaii Wood Preserving Company Treatment Facility, Maui, Hawaii*** – Served as project manager, for decommissioning, investigation, remediation, and closure for a former wood treatment facility to allow for redevelopment. The site operated as from 1972 to 2001 to treat lumber with PCP, chromated copper arsenate (CCA), permithrin, and disodium octoborate. Chemicals were profiled, all equipment was decontaminated and ecommissioned, and verification sampling was conducted as part of decommissioning. A remedial investigation and remedial alternatives analysis was developed and implemented to investigate and develop a path-forward to closure. The implemented remedial approach consisted of site capping and long-term groundwater monitoring.
- ***Lockheed Martin Former International Light Metals Facility, Torrance, California*** — Served as project manager and principal investigator for a 67-acre aerospace facility where client objective was expedited redevelopment. The project included facility demolition, preparation and implementation of a Resource Conservation and Recovery Act (RCRA) closure plan for 11 permitted RCRA units, negotiations with the Department of Toxic Substance Control (DTSC), preparation of a RCRA Facility Assessment (RFA) (210 features identified that required intrusive investigation), implementation of a RCRA Facility Investigation (RFI) for soil and groundwater, preparation of a health-based risk assessment, and implementation of soil remediation. Site closure for soil was granted only three years after project initiation, in contrast to the normal six to eight year process, and has been used as an example by head DTSC officials as an example of

industry and the regulatory community working together to achieve expedited site closures for property redevelopment purposes. Mr. Willis also developed strategy for groundwater investigation and remediation and negotiated the corrective action consent agreement (CACA) with DTSC.

- ***Playa Capital Corporation, Playa Vista Development Project, Los Angeles, California*** — Mr. Willis served as program manager for the Playa Vista project, one of the largest and most visible brownfield development projects in the country. At 1,100 acres, it is the largest underway in Los Angeles County. His primary responsibility included environmental program management (including scoping, developing, scheduling, and tracking environmental activities for the development project), risk management (including developing and negotiating with agencies for appropriate cleanup criteria), remedial strategy/management (including development and implementation of pilot tests and oversight of investigation and remediation activities), agency/RP/buyer negotiations, consultant and contractor selection/oversight, coordination with Playa's infrastructure group on the development/implementation of integrated remedial approach where appropriate, litigation support, data management, and transactional support with respect to the sale of remediated parcels.
- ***Project Manager, Confidential Client, Buena Park, California*** — Served as project manager for multi-media remediation project at a commercial development in Buena Park, California. The site was a former food processing facility that was redeveloped into commercial offices and warehouse space. Evaluated the environmental liability for a Real Estate Investment Trust (REIT) that subsequently purchased the property, and managed remediation program in conjunction with site redevelopment.
- ***Project Manager, Brownfield Redevelopment, Torrance, California*** — Served as project manager for site redevelopment project for a PacTrust. Evaluated environmental liabilities associated with a 12-acre parcel that was part of a butadiene plant (Del Amo Superfund Site) left undeveloped as a brownfield, and formulated a strategy to expedite regulatory closure and redevelopment. A comprehensive investigation was completed on the parcel, and the report submitted to the Environmental Protection Agency (EPA) for review. Successfully negotiated with EPA to conduct a non-Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) closure program. Conducted soil remediation program under EPA oversight in conjunction with site construction activities.
- ***Project Manager, Investigation and Remediation Program, Safety Kleen, Vancouver, British Columbia, Canada*** — Managed remediation of former solvent recycler transfer stations in British Columbia and Alberta, Canada. Sites involved characterization and remediation of soil and perched groundwater zones. Assessed feasibility of vapor extraction for cleanup of vadose zone contamination, and designed and installed a dewatering system for perched water in former tank cavities and surficial saturated zone for Vancouver transfer station. Achieved regulatory site closure two years faster than previous consultant's estimate.
- ***Couples Manufacturing, Investigation and Remediation Program, La Mirada, California*** — Project manager for soil/groundwater characterization and remediation program at a truck maintenance facility in La Mirada, California. Conducted an underground storage tank and clarifier removal program in conjunction with site characterization activities. Implemented remediation of soil and groundwater impacted with petroleum hydrocarbons. Negotiated and received closure from Regional Water Quality Control Board (RWQCB).
- ***Alberta Environment, Abandoned Wood Treatment Sites, Various Locations, Alberta, Canada*** — Project manager for the Wood Preserving Sites Characterization Program for Alberta

Environment. Performed site characterization of four former wood preservation sites in Alberta, Canada. The sites had been used for many years for treating wood poles and railroad ties with a pentachlorophenol/diesel mixture. Soil and/or groundwater were impacted at the sites. Soil borings and groundwater monitoring wells were installed, and laboratory analysis of soil and groundwater was performed, to help determine the lateral and vertical migration of dissolved-phase hydrocarbons in the groundwater and dense non-aqueous phase liquids (DNAPLs) through glacial tills and several non-confining layers. Detailed drilling and sampling plans were necessary to ensure correct evaluation of vertical DNAPL migration. Aquifer tests were performed and receptor data were collected in order to formulate a quantitative assessment of both health-based and environmental risk.

- **Texaco Refining and Marketing Inc., Investigation and Remediation Programs, Various Locations, Southern California** — Responsible for remediation programs at several petroleum retail outlets for Texaco in the southern California area. Projects included soil and groundwater investigation programs, underground storage tank (UST) removals, remedial design (including design and implementation of vapor extraction and aquifer tests), implementation of remedial program, and operation and maintenance of remediation systems. This included designing, specifying, permitting, and installing of all equipment (including piping, downhole pumps, off-gas treatment, and water treatment).
- **Groundwater Contamination Investigation and Analysis, Technisol, Raymond, Alberta, Canada** — Conducted a groundwater investigation program at a solvent recycling facility located in southern Alberta, Canada. The program was implemented to determine the lateral and vertical extent of several species of chlorinated volatile organic compounds present in the confined aquifer beneath the facility. Aquifer testing was performed to estimate migration rates and to provide preliminary data for remedial action. Successfully negotiated with Alberta Environment (lead regulatory agency) for monitored natural attenuation approach.
- **Pier A Railyard, Port of Los Angeles, Los Angeles, California** — Managed a soil and groundwater investigation program at a Port of Los Angeles rail transfer yard. The objective of the project was to characterize previously identified polynuclear aromatic compounds, volatile organic compounds, and petroleum hydrocarbons in the soil and groundwater, and identify any regulated building materials in the site structures in order to facilitate an expedited redevelopment program. The project was finished ahead of schedule and under budget.
- **Soil and Groundwater Remediation, Texaco, Various Locations, Southern California** — Conducted vapor extraction tests, performed data analysis, and generated recommendations for an industrial manufacturing facility to determine the viability of using vapor extraction for remediating chlorinated solvents, primarily tetrachloroethene (PCE), present in the soil beneath the facility. Each test was designed to assess air flow rates and vacuums, vertical interference and crossflow, radii of influence, potential for water upwelling, and effectiveness of vapor extraction in both vadose and capillary zones. Extracted vapors were collected to determine volatile organic compound concentrations. Data were used to determine well spacing and slotting intervals, optimum flow rate/vacuum combinations, extraction blower sizing, and vapor treatment equipment.
- **Texaco, Various Locations, Southern California** — Responsible for preparation of South Coast Air Quality Management District (SCAQMD) permitting, installation, operation and maintenance of thermal and catalytic oxidizers/vapor extraction systems for the remediation of soil (containing petroleum hydrocarbons) beneath operating service stations.

Litigation Support

- **Litigation Support, Confidential Client, City of Commerce, California** – Conducted site review of historical records, developed and implemented soil, soil vapor, and groundwater investigation, and developed Site Conceptual Model (SCM) for former aerospace facility that was now developed as a multi-tenant warehouse. Successful in being able reconstruct historical SCM to show that environmental impacts were caused by historic aerospace operations from the 1940s to 1960s and not from the more recent tenant operations. Provided information and deposition for property management firm’s counsel.
- **Mediation Support, Confidential Client, Los Angeles, California** – Project manager for mediation support of insurance claim for cost reimbursement for handling, transportation and disposal of petroleum contaminated soil encountered during development of a high rise on a former hospital site. Work consisted of using photogrammetry and historical records to develop a volume of contaminated soil and expert witness report using spatial data analysis, rebuttal of expert witness reports, and expert witness testimony as part of mediation where a judgement was made in favor of our client for the full reimbursement cost.

EDUCATION

B.S., Geology, University of Alberta, Alberta, 1988

PROFESSIONAL HISTORY

Northgate Environmental Management, Principal, 2006–present
LFR Levine Fricke, Principal Hydrogeologist, 2002–2006
Integrated Environmental Services, Director of Operations/Senior Program Manager, 1999–2002
ARCADIS Geraghty & Miller, Inc. Senior Hydrogeologist, 1993–1999
Environmental Design Corporation, Vice President, 1992
Environmental Science & Engineering, Inc., Staff Geologist, 1991
Terracon Geotechnique, Ltd., Geologist, 1989–1991
Contract Positions, Various Locations, Geologist, 1988

REGISTRATIONS

Certified Environmental Manager, Nevada, No. EM 2252

JACOB A. LACY, CHMM, REM

ASSOCIATE ENVIRONMENTAL CONSULTANT

Mr. Lacy has an exceptional record of accomplishment in management and support of environmental projects and programs. Highly adept at coordinating activities across multiple initiatives. Special expertise in auditing, risk mitigation, regulatory analysis/enforcement, RCRA, and site remediation. Experienced at developing policies and procedures, performing research, and conducting presentations. Extensive knowledge of environmental regulations at the Federal level, as well as in Maryland and Virginia. Strong in building relationships with government representatives. Certified Hazardous Materials Manager (CHMM), Registered Environmental Manager (REM), Hazardous Waste Compliance Manager, and Environmental Management Systems Auditor.

REPRESENTATIVE EXPERIENCE

Consulting

- **JBG Smith, Bethesda, Maryland** — Coordinate environmental management and remediation activities for major DC based land developer from 2022-Current. Projects include management of contaminated soil, UST removal, and review of Phase I & Phase II reports. Assist in pre-construction activities including planning for soil disposal, regulatory interaction, and moisture/mold mitigation. Also provide guidance in Spill Prevention Control & Countermeasure issues, hazardous waste management & disposal, and planning for the abatement of hazardous building materials (typically asbestos).
- **MDOT-Maryland Aviation Administration, Baltimore, Maryland** — On-site Environmental Compliance & Permitting Support from 2015-2022. Served in an onsite staff capacity charged with the responsibility of managing and leading Environmental Compliance efforts for two State Owned Airports (BWI & Martin State). Independently and autonomously managed dual Hazardous Waste Programs, including storage, segregation, packaging, and maintaining an inventory of waste items. Scheduled waste removal events with various transporters, and rigidly tracked manifest. Produced Bi-Annual reports to regulatory authorities on behalf of the Client. Served on an Agency-wide Permit Committee, where contractor/tenant building permits were reviewed and evaluated for potential environmental hazards and impacts, including indoor air quality issues and hazardous building materials. Investigated issues associated with tenant and client Spill Prevention Control and Countermeasure Plans (SPCC) and directed resolution with responsible parties. Issues typically included improper storage & handling of fuels and chemicals. Authored Phase I reports for derelict properties purchased by the Airport Authority.
- **MDOT-Motor Vehicle Administration, Glen Burnie, Maryland** — Environmental Compliance & Support from 2014-2015. Revised a Spill Prevention Control and Countermeasure Plan (SPCC) covering all aboveground and underground storage tanks (37,800 gallons total) at the headquarters in Glen Burnie, MD. Updated a Compliance Focused Environmental Management System (EMS) manual which applied to the entire organization. Completed a beta test and data population of a new EMS document management system. Revised a stormwater management plan governing the activities associated with the facility's MS4 permit. Administered hazardous & universal waste management training.
- **NASA Goddard Space Flight Center, Greenbelt, Maryland** — Phase I Environmental Site Assessment completed in 2014. Performed a Phase I Environmental Site Assessment at a space satellite tracking facility located on the Goddard campus. Reviewed all accessible records

pertaining to the site and conducted a physical evaluation in addition to holding employee interviews to determine if any environmental hazards were present.

- **Washington Suburban Sanitary Commission (WSSC), Laurel, Maryland** — Right of Entry Coordinator from 2012-2015. Aided multiple engineering firms in obtaining entry permits for sanitary sewer infrastructure on private, public, and commercial properties. Worked closely with client (WSSC) and project teams to facilitate EPA-mandated sewer repairs. Communicate extensively with project engineers, government agencies, and consulting companies. Conduct property research and verify ownership. Resolved issues such as denial of entry by property owners and business concerns.

Electrical Utility

- **Potomac Electric Power Company (PEPCO), Washington, DC** — Sr. Environmental Program Manager from January through May 2022. Provided management and oversight of multiple environmental compliance programs for electrical power utility serving nearly 900,000 customers across the District of Columbia, as well as Montgomery & Prince Georges Counties in Maryland. Responsible for maintenance and oversight of Hazardous Waste Contingency Plans for three Service Centers designated as Large Quantity Generators. Also charged with ensuring compliance with hazardous waste storage and biennial reporting. Tasked with Tier II Reporting for over 40 transmission facilities (Substations). Conducted compliance inspections at various facilities including fleet maintenance, transformer maintenance, waste storage, and salvage yards.

Local Government

- **City of Newport News Department of Engineering, Newport News, Virginia** — Environmental Specialist II from 2004-2012. Coordinated environmental compliance programs for Engineering Dept. that manages and maintains entire infrastructure for 120-mile² city. Planned and managed projects to remediate environmentally contaminated properties. Investigated and resolved environmental contamination from USTs and other compliance issues. Worked on projects related to State of Virginia's Chesapeake Bay Preservation Act (CBPA). Conducted compliance and program audits. Worked in conjunction with multiple departments. Reviewed residential and commercial construction plans and environmental studies for CBPA compliance.

EDUCATION

MS, Public Administration, Old Dominion University, 2011

BS, Environmental Science, Lynchburg College, 2004

PROFESSIONAL HISTORY

Northgate Environmental Management, Inc., Associate Environmental Consultant, (2022–present)

Potomac Electric Power Company (PEPCO), Senior Environmental Program Manager, 2022

AECOM, Environmental Scientist IV, 2016-2022

Straughan Environmental, Environmental Management Specialist, 2012-2016

City of Newport News, Environmental Specialist II, Dept. of Engineering, 2004-2012

REGISTRATIONS/CERTIFICATIONS/TRAINING

Certified Hazardous Materials Manager (CHMM), Institute of Hazardous Materials Management

Registered Environmental Manager (REM), National Registry of Environmental Professionals

Hazardous Waste Compliance Manager, Archer Institute of Environmental Training

Registered Asbestos Inspector, State of Maryland

Certificate in Environmental Management Systems (based on ISO 14001), Virginia Technical Center
for Organizational & Technological Advancement

ISO 14001:2004 Environmental Management Systems Lead Auditor Training, British Standards
Institute
