1 INTRODUCTION

This report presents the results of the Traffic Analysis (TA) for East Highland Ranch (Project), which is located between Santa Ana Canyon Road and Greenspot Road on either side of Alta Vista in the City of Highland, as shown in Exhibit 1-1. The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project and, where necessary, recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the San Bernardino County Congestion Management Program (CMP) Guidelines for CMP Traffic Impact Analysis Reports (Appendix B, 2016 Update), and consultation with City staff during the traffic study scoping process. (1) The City-approved Project Traffic Study Scoping Agreement is provided in Appendix 1.1 of this TA.

1.1 SUMMARY OF FINDINGS

The Project is to construct the following improvements as design features in conjunction with development of the site:

- Project to install stop controls for egress traffic at Project driveways and construct applicable site adjacent roadway improvements.

Additional details and intersection lane geometrics are provided in Section 1.6 *Recommendations*.

1.2 PROJECT OVERVIEW

The Project consists of the development of 113 single-family residential dwelling units. A preliminary site plan for the proposed Project is shown in Exhibit 1-2. The Project is proposing to develop in a single phase with an anticipated Opening Year of 2027. Access to the proposed Project would be provided onto Santa Ana Canyon Road via Street B and Alta Vista via Street A and Street F. Exhibit 1-3 depicts the location of the proposed Project in relation to the existing roadway network and the study area intersections.

In order to develop the traffic characteristics of the proposed Project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021) for Single Family Detached Residential (ITE Land Use Code 210) has been utilized. (2) The Project is anticipated to generate a total of 1,066 two-way trips per day with 80 AM peak hour trips and 106 PM peak hour trips. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation*.

1.3 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to intersections and roadways have been assessed for each of the following conditions:

- Existing (2024) Conditions
- Opening Year (2027) Without Project
- Opening Year (2027) With Project
- Cumulative (2050) Without Project
- Cumulative (2050) With Project

1.3.1 EXISTING (2024) CONDITIONS

Information for Existing (2024) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared.

1.3.2 OPENING YEAR (2027) CONDITIONS

The Opening Year (2027) traffic conditions analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of ambient growth and the addition of traffic generated by other known or probable related projects. To account for background traffic growth, an ambient growth factor from Existing conditions of 6.12% is included for Opening Year Without traffic conditions (2 percent per year for 3 years). The ambient growth is consistent with the growth used by other projects in the area within the City of Highland and is consistent with the County of San Bernardino traffic study guidelines. The related projects are at least in part already accounted for in the assumed 6.12% of ambient growth, and some of these related projects may not be implemented and operational within the 2027 Opening Year time frame assumed for the Project. The resulting traffic growth utilized in the TA (6.12% ambient growth factor plus traffic generated by related projects) would therefore tend to overstate rather than understate background cumulative traffic deficiencies under 2027 conditions. The Opening Year (2027) With Project traffic conditions analysis includes the Opening Year (2027) Without Project traffic forecasts plus the addition of Project traffic.

1.3.3 CUMULATIVE (2050) CONDITIONS

Traffic projections for Cumulative (2050) traffic conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing. The Cumulative conditions analysis will be utilized to determine if improvements funded through regional transportation mitigation fee programs can accommodate the long-range cumulative traffic at the target Level of Service (LOS) identified in the County of San Bernardino (lead agency) General Plan. Each of the applicable transportation fee programs are discussed in more detail in Section 7 *Local and Regional Funding Mechanisms*.

1.4 STUDY AREA

To ensure that this TA satisfies the City of Highland's traffic study requirements, Urban Crossroads, Inc. prepared a Project traffic study scoping package for review by City of Highland staff prior to the preparation of this report. This agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology. The agreement approved by the City is included in Appendix 1.1..

The 7 study area intersections shown in Exhibit 1-3 and listed in Table 1-1 were selected for evaluation in this TA based on consultation with City of Highland staff. At a minimum, the study area includes intersections where the Project is anticipated to contribute 50 or more peak hour trips per the County’s traffic study guidelines. (1) The “50 peak hour trip” criterion represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. The 50 peak hour trip criterion is a traffic engineering rule of thumb that is accepted and widely used within San Bernardino County for estimating a potential area of influence (i.e., study area).

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

#	Intersection	Jurisdiction	CMP?
1	Boulder Av. & Greenspot Rd.	County of San Bernardino, City of Highland	Yes
2	Church St. & Greenspot Rd.	County of San Bernardino, City of Highland	Yes
3	Weaver St. & Greenspot Rd.	County of San Bernardino, City of Highland	No
4	Street B & Santa Ana Canyon Rd.	County of San Bernardino, City of Highland	No
5	Alta Vista & Santa Ana Canyon Rd.	County of San Bernardino, City of Highland	No
6	Alta Vista & Street A/Street F	County of San Bernardino, City of Highland	No
7	Alta Vista & Greenspot Rd.	County of San Bernardino, City of Highland	Yes

The intent of a CMP is to link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. The County of San Bernardino CMP became effective with the passage of Proposition 111 in 1990 and last updated in 2016 with an updated Nexus Study completed in 2023. (1) As shown in Table 1-1, there are 3 intersections identified as San Bernardino County Transportation Authority (SBCTA) CMP intersections.

1.5 DEFICIENCIES

This section provides a summary of deficiencies by analysis scenario. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 5 *Opening Year (2027) Traffic Conditions*, Section 6 *Cumulative (2050) Traffic Conditions* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented in Table 1-2.

TABLE 1-2 : SUMMARY OF LOS

1.5.1 EXISTING (2024) CONDITIONS

All of the study area intersections are currently operating at an acceptable LOS during the weekday AM, Mid-Day, and PM peak hours.

1.5.2 OPENING YEAR (2027) CONDITIONS

All of the study area intersections are anticipated to continue to operate at an acceptable LOS during the weekday AM, Mid-Day, and PM peak hours.

1.5.3 CUMULATIVE (2050) CONDITIONS

The following study area intersections are anticipated to operate at an unacceptable LOS under Cumulative (2050) Without Project Traffic Conditions:

- Boulder Av. & Greenspot Rd. (#1) – LOS E Mid-Day and PM peak hours
- Alta Vista & Greenspot Rd. (#7) – LOS F AM peak hour only

The following study area intersections are anticipated to continue to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Cumulative (2050) With Project traffic conditions:

- Boulder Av. & Greenspot Rd. (#1) – LOS E Mid-Day and PM peak hours
- Alta Vista & Greenspot Rd. (#7) – LOS F AM peak hour; LOS E Mid-Day peak hour

1.6 RECOMMENDATIONS

1.6.1 SITE ADJACENT AND SITE ACCESS RECOMMENDATIONS

The following recommendations are based on the minimum improvements needed to accommodate site access and maintain acceptable peak hour operations for the proposed Project. The site adjacent recommendations are shown in Exhibit 1-4.

Recommendation 1 – Street B & Santa Ana Canyon Road (#4) – The following improvement is necessary to accommodate site access:

- Project to install a stop sign on the northbound approach (Street B).

Recommendation 2 – Alta Vista & Street A/Street F (#6) – The following improvements are necessary to accommodate site access:

- Project to install a stop sign on the eastbound approach (Street A).
- Project to install a stop sign on the westbound approach (Street F).

1.6.2 OFF-SITE RECOMMENDATIONS

The recommended improvements needed to address the cumulative deficiencies identified under Cumulative (2050) traffic conditions are shown in Table 1-3. For those improvements listed in Table 1-3 and not constructed as part of the Project, the Project Applicant's responsibility for the Project's

contributions towards deficient intersections is fulfilled through payment of fees or fair share that would be assigned to construction of the identified recommended improvements. The Project Applicant would be required to pay fair share fees consistent with the City's requirements (see Section 7 *Local and Regional Funding Mechanisms*).

TABLE 1-3: SUMMARY OF IMPROVEMENTS BY ANALYSIS SCENARIO

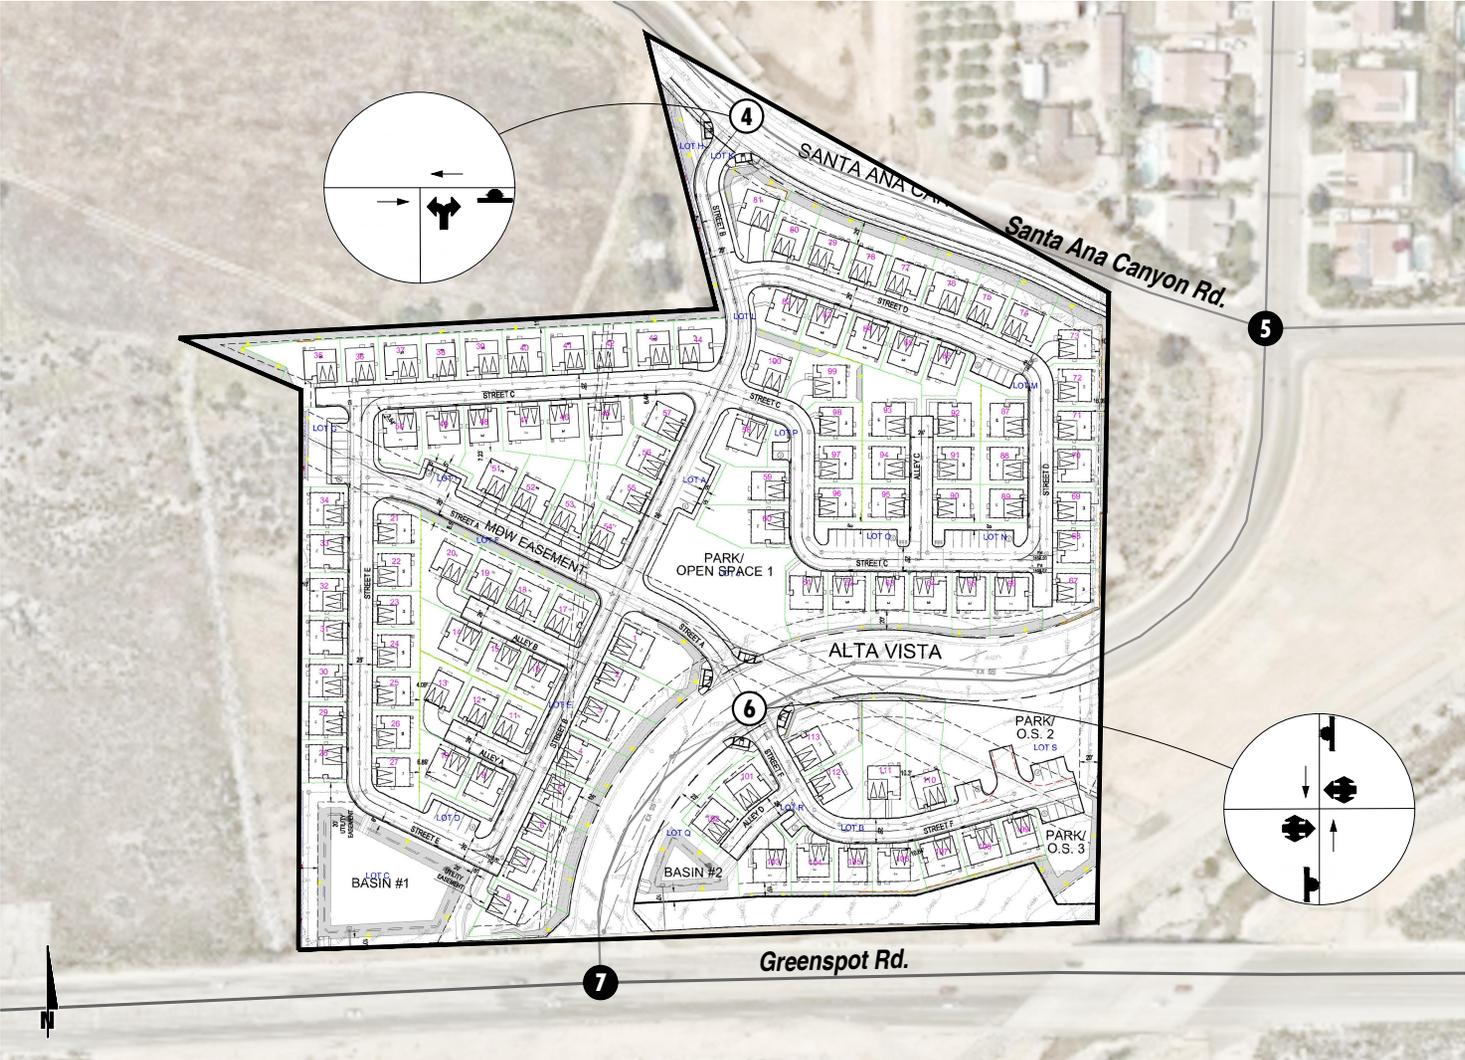

#	Intersection Location	Jurisdiction	Existing (2024)	Opening Year (2027) Without	Analysis Scenario		Fair Share % ¹	
					Opening Year (2027) With	Cumulative (2050) Without Project		Cumulative (2050) With
1	Boulder Av. & Greenspot Rd.	County of San Bernardino, City of Highland	None	None	None	Add 2nd WB left-turn lane	Same	4.8%
7	Alta Vista & Greenspot Rd.	County of San Bernardino, City of Highland	None	None	None	Install a Traffic Signal	Same	8.1%

¹ See Table 7-1 for Fair Share Calculations

1.6.3 TRAFFIC GAP ASSESSMENT

At the City's request, a traffic gap evaluation has been conducted for southbound left-turning vehicles from Alta Vista to Greenspot Road for the weekday AM, Mid-Day, and PM peak hours. The Project is anticipated to contribute 3 trips to the southbound left turn at Alta Vista and Greenspot Road during the AM peak hour which experiences the highest southbound left-turning volume. The assessment suggests that there is a sufficient number of gaps in the traffic along Greenspot Road to accommodate the anticipated left-turning traffic in the morning peak hour and can therefore adequately accommodate Project traffic.

EXHIBIT 1-4 : SITE ACCESS RECOMMENDATIONS

-  = Proposed Lane

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with the City of Highland and the County of San Bernardino's Traffic Study Guidelines.

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors, such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing a breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 7th Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (3) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

The City of Highland requires signalized intersection operations analysis based on the methodology described in the HCM. (3) Intersection LOS operations are based on an intersection's average control delay. Control delays include initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections, LOS is related to the average control delay per vehicle and is correlated to an LOS designation as described in Table 2-1.

The traffic modeling and signal timing optimization software package Synchro (Version 12) has been utilized to analyze signalized intersections. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Customary practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g., $PHF = [Hourly Volume] / [4 \times Peak\ 15\text{-minute\ Flow\ Rate}]$). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (3)

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0 ¹
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F

Source: HCM, 7th Edition

¹ If V/C is greater than 1.0 then LOS is F per HCM.

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

Near-Term Traffic Conditions:

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

Cumulative (2050) Traffic Conditions:

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive triple left: 1600 vphgpl

2.2.2 UNSIGNALIZED INTERSECTIONS

The City of Highland requires the operations of unsignalized intersections to be evaluated using the methodology described in the HCM. (3) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2). At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. Delay for the intersection is reported for the worst individual movement at a two-way stop-controlled intersection. For all-way stop controlled intersections, LOS is computed for the intersection as a whole (average delay).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0 ¹
Little or no delays.	0 to 10.00	A
Short traffic delays.	10.01 to 15.00	B
Average traffic delays.	15.01 to 25.00	C
Long traffic delays.	25.01 to 35.00	D
Very long traffic delays.	35.01 to 50.00	E
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F

Source: HCM, 7th Edition

¹ If V/C is greater than 1.0 then LOS is F per HCM.

2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term “signal warrants” refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or determine the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (4)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (4) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions and for all future analysis scenarios for existing unsignalized intersections. Warrant 3 is appropriate to use for this TA because it provides specialized warrant criteria for intersections with rural characteristics. For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection. Urban warrants have been used where posted speed limits on the major roadways with unsignalized intersections are 40 miles per hour or below and rural warrants have been used where speeds exceed 40 miles per hour.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets. Similarly, the speed limit has been used as the

basis for determining the use of Urban and Rural warrants. Traffic signal warrant analyses were performed for the following study area intersections shown in Table 2-3.

TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS

#	Intersection
4	Street B & Santa Ana Canyon Rd.
5	Alta Vista & Santa Ana Canyon Rd.
6	Alta Vista & Street A/Street F
7	Alta Vista & Greenspot Rd.

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions*. The traffic signal warrant analyses for future conditions are presented in Section 5 *Opening Year (2027) Traffic Conditions*, and Section 6 *Cumulative (2050) Traffic Conditions*. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location but rather that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

2.4 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from applicable surrounding jurisdictions.

2.4.1 CITY OF HIGHLAND

According to the City of Highland General Plan Circulation Element, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours. Therefore, any intersection operating at LOS E or F is considered deficient/unsatisfactory.

2.4.2 CMP

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. (1)

2.5 DEFICIENCY CRITERIA

This section outlines the methodology used in this analysis to identify circulation system deficiencies. The following deficiency criteria has been utilized for the City of Highland. To determine whether the addition of Project-related traffic at a study intersection would result in a deficiency, the following will be utilized:

- Intersection critical movements shall be maintained at LOS D or better.

2.6 PROJECT FAIR SHARE CALCULATION METHODOLOGY

Improvements found to be included in the City's DIF will be identified as such. For improvements that do not appear to be in either of the pre-existing fee programs, a fair share contribution based on the Project's proportional share may be imposed in order to address the Project's share of deficiencies in lieu of construction. It should be noted that fair share calculations are for informational purposes only and the City Traffic Engineer will determine the appropriate improvements to be implemented by a project (to be identified in the conditions of approval). The Project's fair share contribution is determined based on the following equation, which is the ratio of Project traffic to net new traffic (where net new traffic is the future traffic less existing traffic):

$$\text{Project Fair Share \%} = \frac{\text{Project Buildout Traffic}}{(\text{Cumulative (2050) With Project Traffic} - \text{Existing Traffic})}$$

This Page Intentionally Left Blank

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Highland General Plan Circulation Network, and a review of existing peak hour intersection operations and traffic signal warrant analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Highland staff (Appendix 1.1), the study area includes a total of 7 existing and future intersections as shown previously in Exhibit 1-3. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

3.2 GENERAL PLAN CIRCULATION ELEMENT

As noted previously, the Project site is located within the City of Highland. The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Highland General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Highland General Plan Circulation Element and Exhibit 3-3 illustrates the City of Highland General Plan Roadway Cross-Sections.

A Modified Primary Arterial is identified as having a 135-foot right-of-way and 98-foot curb-to-curb measurement. Modified Primary Arterials include two lanes of travel in each direction and a 18.5-foot curbed and/or landscaped median. The following study area roadway within the City of Highland is classified as a Modified Primary Arterial:

- Boulder Avenue

A Major Highway is identified as having a 104-foot right-of-way and 80-foot curb-to-curb measurement. Major Highways include two lanes of travel in each direction and a 19-foot curbed and/or landscaped median. The following study area roadway within the City of Highland is classified as a Major Highway:

- Greenspot Road

A Secondary Highway is identified as having an 88-foot right-of-way and 64-foot curb-to-curb measurement. Secondary Highways include two lanes of travel. The following study area roadway within the City of Highland is classified as a Secondary Highway:

- Church Street

A Collector is identified as having a 66-foot right-of-way and 44-foot curb-to-curb measurement. Collectors include two lanes of travel (one in each direction). The following study area roadways within the City of Highland are classified as a Collector:

- Weaver Street
- Alta Vista
- Santa Ana Canyon Road

Figure 3-1 Roadway Cross-Sections

3.3 BICYCLE & PEDESTRIAN FACILITIES

Exhibit 3-4 illustrates the City of Highland bicycle facilities. Church Street is identified as a bicycle route within the City of Highland General Plan. Existing pedestrian facilities within the study area are shown in Exhibit 3-5. Field observations and traffic counts conducted in May 2024 indicate light pedestrian and bicycle activity within the study area.

3.4 TRANSIT SERVICE

The study area within the City of Highland is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Based on a review of the existing transit routes within the vicinity of the proposed Project, Route 15 currently runs along Greenspot Road. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with Omnitrans to potentially provide bus service to the site. Existing transit routes in the vicinity of the study area are illustrated in Exhibit 3-6.

3.5 EXISTING (2024) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in May 2024. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday Mid-Day Peak Hour (peak hour between 1:30 PM and 3:30 PM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

The 2024 weekday AM, weekday Mid-Day, and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. As such, no additional adjustments were made to the traffic counts to establish the baseline condition. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

EXHIBIT 3-4 : CITY OF HIGHLAND BICYCLE FACILITIES

-  = 1 Approach
 -  = 2 Approaches
 -  = 3 Approaches
 -  = All Approaches
 -  = Sidewalks

EXHIBIT 3-6 : EXISTING TRANSIT ROUTES

Existing weekday ADT volumes are shown in Exhibit 3-7 for actual vehicles. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 12.01 = \text{Leg Volume}$$

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 8.32 percent. As such, the above equation utilizing a factor of 12.01 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 12.01 percent (i.e., $1/0.0832 = 12.01$) and was assumed to sufficiently estimate ADT volumes for planning-level analyses. Existing weekday peak hour intersection volumes are also shown in Exhibit 3-7.

3.6 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis*. The intersection operations analysis results are summarized in Table 3-1, which indicates that all existing study area intersections are currently operating at acceptable LOS during the peak hours. The intersection operations analysis worksheets are included in Appendix 3.2.

TABLE 3-1: INTERSECTION ANALYSIS FOR EXISTING (2024) CONDITIONS

#	Intersection	Traffic Control ²	Delay ¹ (secs.)			Level of Service		
			AM	MD	PM	AM	MD	PM
1	Boulder Av. & Greenspot Rd.	TS	23.3	25.1	27.3	C	C	C
2	Church St. & Greenspot Rd.	TS	15.3	13.1	13.3	B	B	B

¹ Per the Highway Capacity Manual (7th Edition), overall average intersection Delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

² TS = Traffic Signal; CSS = Cross-street Stop

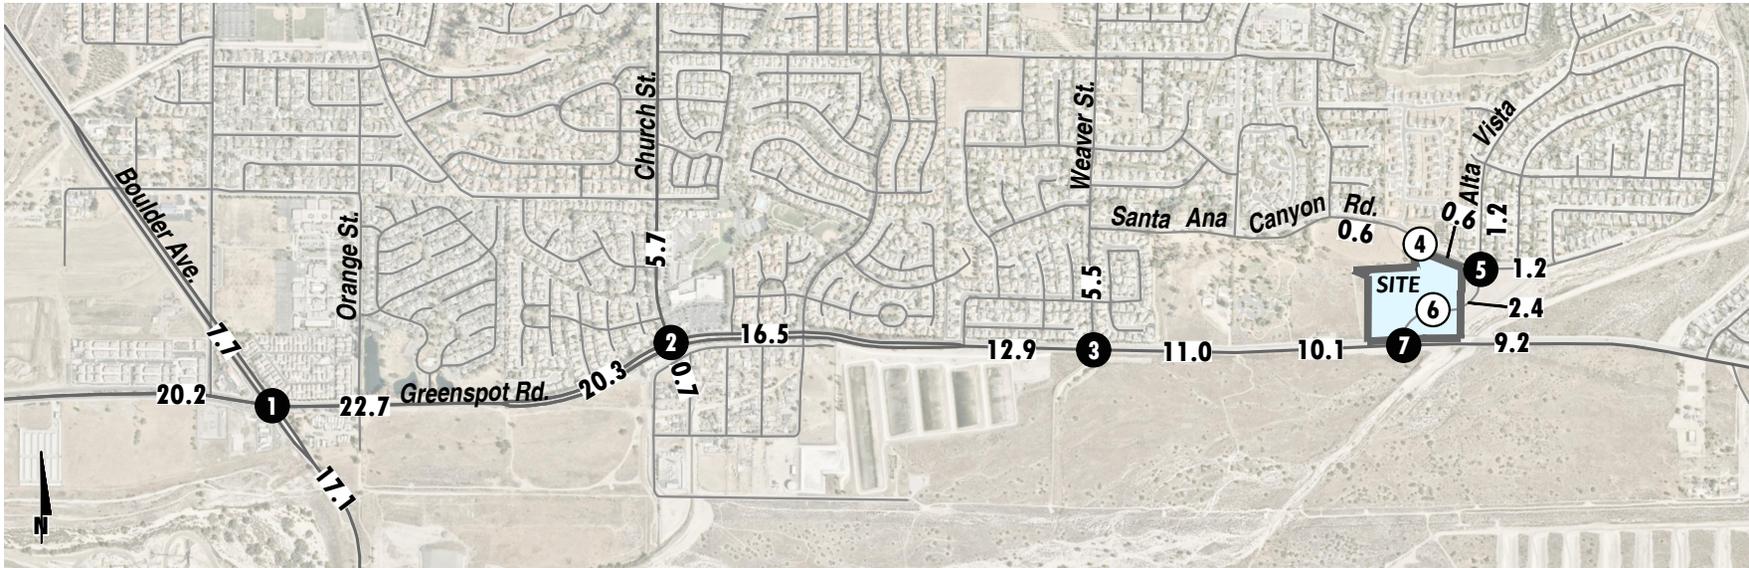

3.7 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following unsignalized study area intersection currently meets a peak hour traffic signal under Existing traffic conditions:

- Alta Vista & Greenspot Rd. (#7)

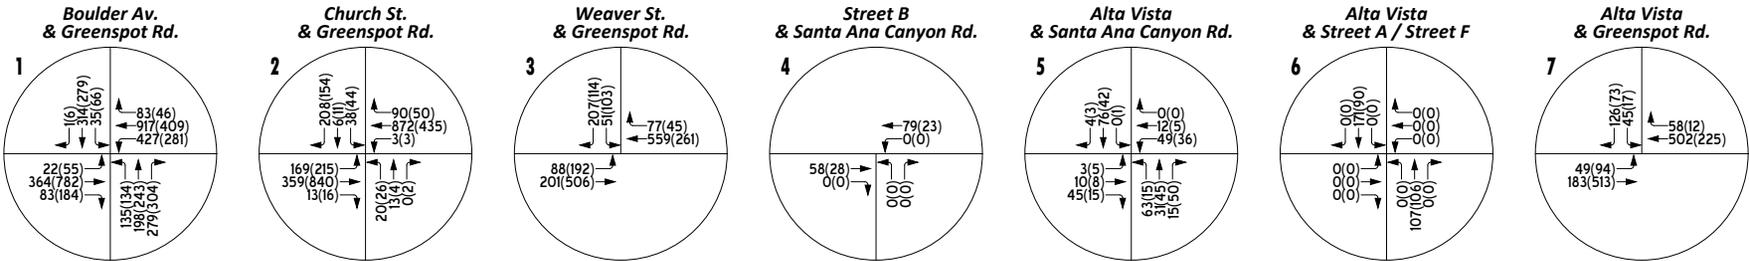

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project’s trip assignment onto the study area roadway network. A preliminary site plan for the proposed Project is shown previously in Exhibit 1-2. The Project consists of the development of 113 single-family residential dwelling units. Access to the proposed Project would be provided onto Santa Ana Canyon Road via Street B and Alta Vista via Street A and Street F. The Project is anticipated to have an Opening Year of 2027.

4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. The proposed Project trip generation will be based upon the trip-generation statistics published in the ITE Trip Generation Manual (11th Edition, 2021) for Single Family Detached Residential use (see also Table 4-1). (2)

Trip generation for the proposed Project are summarized in Table 4-1. As shown in Table 4-1, the proposed Project is anticipated to generate a total of 1,066 two-way trip-ends per day with 80 AM peak hour trips and 106 PM peak hour trips.

TABLE 4-1: TRIP GENERATION SUMMARY

Land Use ¹	Units ²	ITE LU Code	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Single Family Detached Residential	DU	210	0.18	0.52	0.70	0.59	0.35	0.94	9.43

¹ Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, 11th Edition (2021).

² DU = dwelling units

Land Use	Quantity Units ¹	AM Peak Hour			PM Peak Hour			Daily
		In	Out	Total	In	Out	Total	
Single Family Detached	113 DU	21	59	80	67	39	106	1,066

¹ DU = dwelling units

4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. The trip distribution pattern is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. The proposed Project trip distribution patterns are shown in Exhibit 4-1.

4.3 MODAL SPLIT

The potential for Project trips to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project’s estimated trip generation. Essentially, the Project’s traffic

projections are “conservative” in that these alternative travel modes would reduce the forecasted traffic volumes.

4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project weekday ADT and weekday peak hour intersection turning movement volumes are shown in Exhibit 4-2.

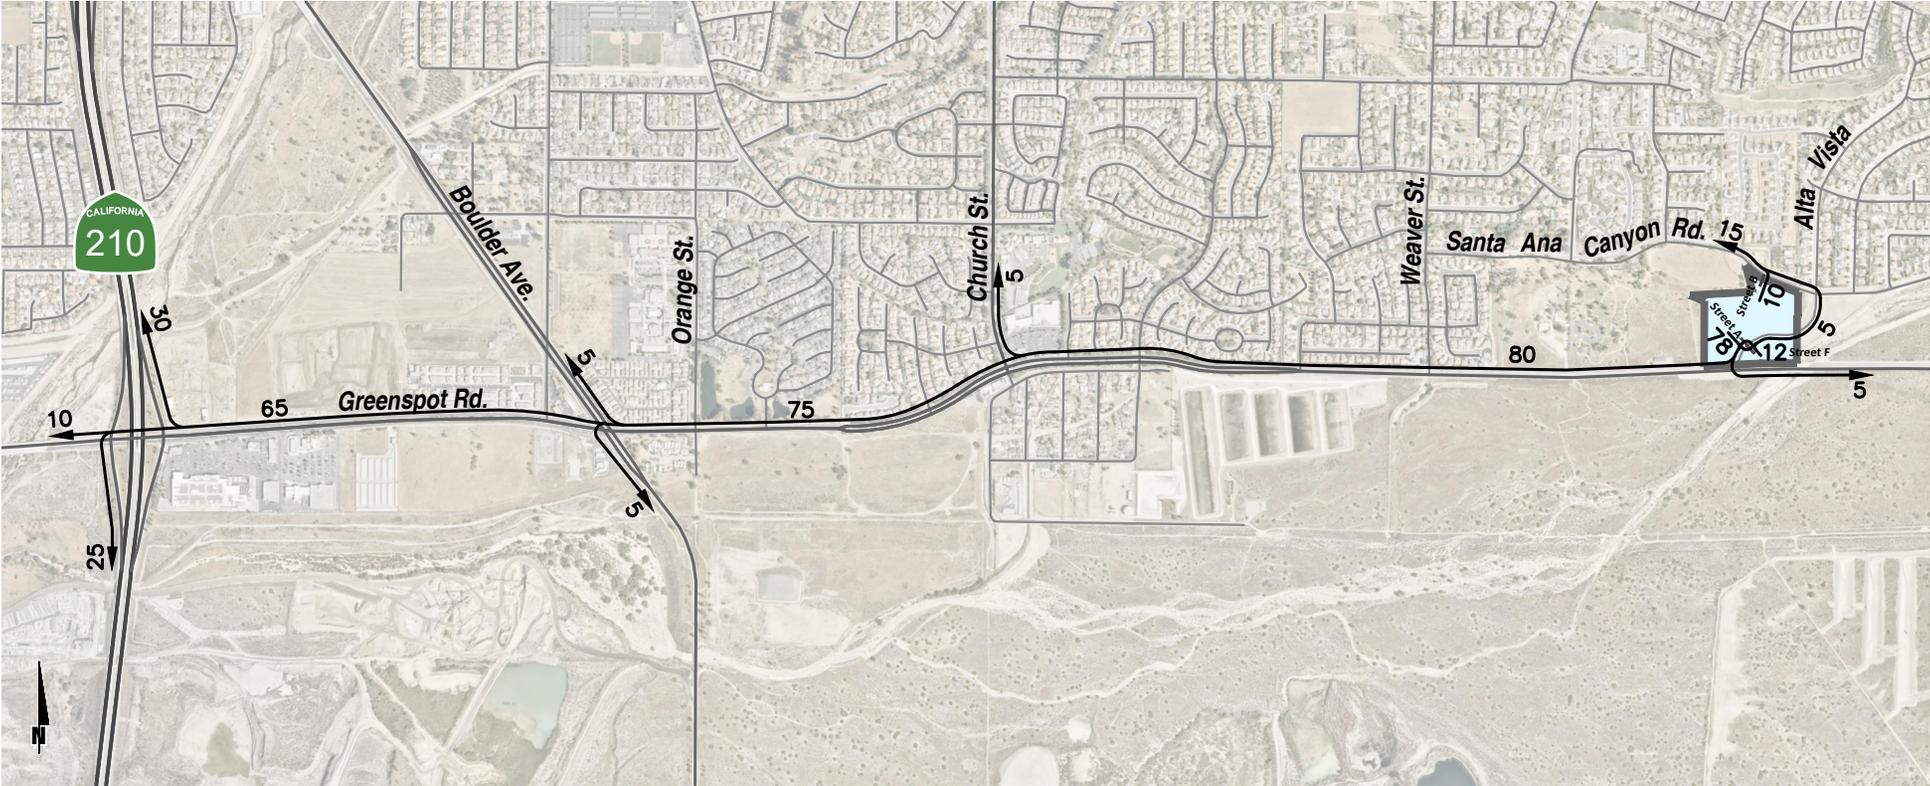

4.5 BACKGROUND TRAFFIC

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year for 2027 traffic conditions. The total ambient growth is 6.12% for 2024 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in conjunction with traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies. Opening Year (2027) traffic volumes are provided in Section 5. The traffic generated by the proposed Project was then manually added to the base volume to determine Opening Year with Project forecasts.

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

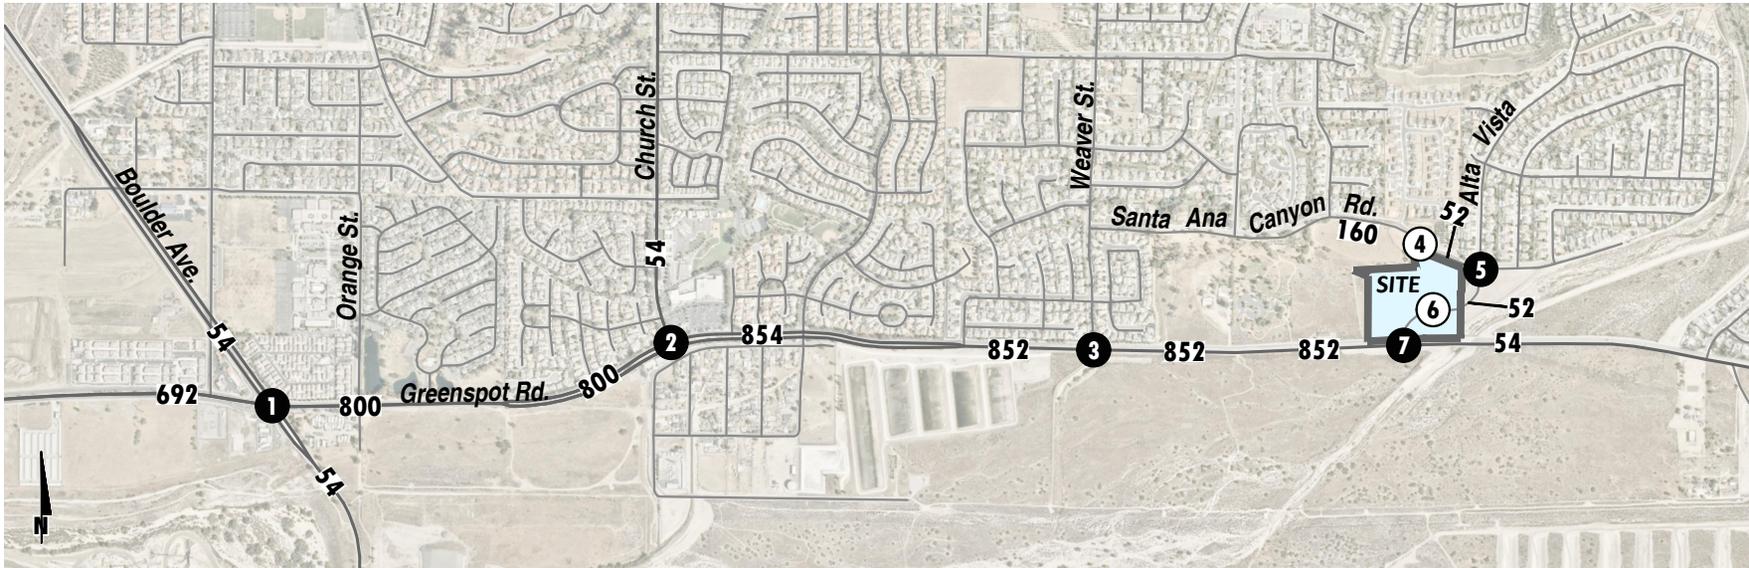

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Highland, City of Redlands, and City of San Bernardino. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. Exhibit 4-3 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown in Table 4-2. If applicable, the traffic generated by individual cumulative projects was manually added to the Opening Year forecasts to ensure that traffic generated by the listed cumulative development projects in Table 4-2 are reflected as part of the background traffic. Cumulative ADT and peak hour intersection turning movement volumes, in actual vehicles, are shown in Exhibit 4-4.

4.7 CUMULATIVE (2050) VOLUME DEVELOPMENT

Traffic projections for Cumulative (2050) Without Project conditions were derived from the San Bernardino County Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino. The traffic forecasts reflect the area-wide growth anticipated between Existing (2024) conditions and Cumulative (2050) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Cumulative (2050) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in 2024. The SBTAM has a base (validation) year of 2016 and a horizon (future forecast) year of 2040. The difference in model volumes (2040-2016) defines the growth in traffic over the 24-year period.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 765), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

The SBTAM uses an AM peak period-to-peak hour factor of 0.35 and a PM peak period-to-peak hour factor of 0.27. These factors represent the relationship of the highest single AM peak hour to the modeled 3-hour AM peak period (an even distribution would result in a factor of 0.33) and the highest single PM peak hour to the modeled 4-hour PM peak period (an even distribution would result in a factor of 0.25).

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Cumulative (2050) forecasts. Cumulative (2050) turning volumes were compared to Opening Year (2027) volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year (2027) and Cumulative (2050) traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2024) and Opening Year (2027) conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Cumulative (2050) peak hour forecasts.

The future Cumulative (2050) Without Project peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis. Post processing has been performed for the weekday AM and PM peak hours only as these are the only time periods where traffic model data was readily available. Weekday Mid-Day peak hour volumes for Cumulative (2050) traffic conditions were derived based on a similar ratio observed between the Weekday PM and Mid-Day for existing traffic conditions. Project traffic was then added for all With Project traffic conditions. Post processing worksheets are included in Appendix 4.1.

This Page Intentionally Left Blank

5 OPENING YEAR (2027) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year (2027) traffic forecasts, and the resulting intersection operations and traffic signal warrant analyses.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year (2027) conditions are consistent with those shown previously in Exhibit 3-1, with the exception of the following:

- Project driveways assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year (2027) With Project conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Cumulative development driveways and those facilities assumed to be constructed by cumulative development projects to provide site access are also assumed to be in place for Opening Year (2027) conditions (e.g., intersection and roadway improvements along the Project's frontage and driveways).

5.2 OPENING YEAR (2027) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing (2024) traffic volumes plus an ambient growth factor of 6.12% and the addition of traffic generated by known cumulative development projects. The weekday AM, Mid-Day, and PM peak hour volumes which can be expected for Opening Year (2027) Without Project traffic conditions are shown in Exhibit 5-1.

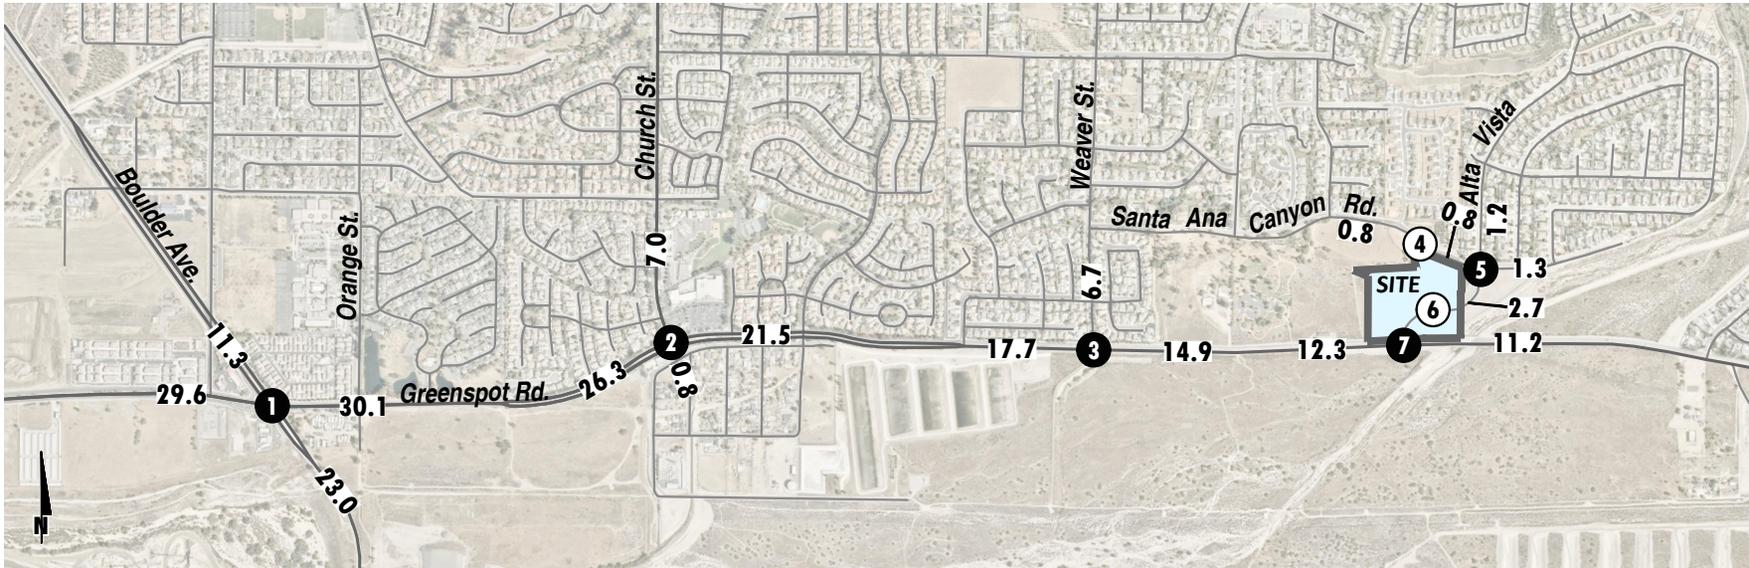

5.3 OPENING YEAR (2027) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing (2024) traffic volumes plus an ambient growth factor of 6.12% and the addition of Project traffic plus the addition of traffic generated by known cumulative development projects. The weekday AM, Mid-Day, and PM peak hour volumes which can be expected for Opening Year (2027) With Project traffic conditions are shown in Exhibit 5-2.

5.4 INTERSECTION OPERATIONS ANALYSIS

Opening Year (2027) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies*. The intersection analysis results are summarized in Table 5-1 for Opening Year (2027) traffic conditions, which indicate that all of the study area intersections are anticipated to operate at an acceptable LOS under Opening Year (2027) Without and With Project traffic conditions. The intersection operations analysis worksheets for Opening Year (2027) Without and With Project traffic conditions are included in Appendices 5.1 and 5.2, respectively.

¹ Per the Highway Capacity Manual (7th Edition), overall average intersection Delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

² TS = Traffic Signal; CSS = Cross-street Stop; AWS = All-way Stop; IS = Improvement

5.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants have been performed for Opening Year (2027) traffic conditions based on peak hour intersection turning movements volumes or planning level (ADT) volumes. There are no unsignalized study area intersections anticipated to meet a traffic signal warrant under Opening Year (2027) traffic conditions. The Opening Year (2027) Without and With Project traffic conditions traffic signal warrant analysis worksheets are provided in Appendices 5.3 and 5.4, respectively.

5.6 TRAFFIC GAP ASSESSMENT

In order to evaluate the ability for vehicles turning left from Alta Vista onto Greenspot Road, the two-way gaps in the flow of eastbound and westbound traffic along Greenspot Road was captured on May 9, 2024 during the morning, mid-day, and evening peak periods (7-9 AM, 1:30-3:30 PM, and 4-6 PM). Two-way gaps reflect the condition when there is no eastbound or westbound traffic at the location of the proposed Project. The gaps in traffic can then be utilized by left-turning vehicles from the proposed Project. Two-way gaps longer than 2.0 seconds have been recorded for this study (see Appendix 3.1).

The traffic gap collected was evaluated based on the critical gap and follow-up time methodologies outlined in the Federal Highway Administration’s (FHWA) Highway Capacity Manual (HCM). Critical gap is defined as “the minimum time interval in the major-street traffic stream that allows intersection entry for one minor-street vehicle.” The time between the departure of one vehicle from the minor street to the next along the same major street is called the follow-up time.

Traffic gap results are summarized on Table 5-2 for weekday morning, mid-day, and evening peak hours, respectively. The morning peak hour occurred between 7:15 AM and 8:15 AM, the mid-day peak hour occurring between 2:30-3:30, and the evening peak hour occurring between 4:45 PM and 5:45 PM. There was a total of 423 two-way gaps in the east-west traffic along Greenspot Road during the morning peak hour which could potentially allow up to 572 vehicles to turn left from the proposed Project driveway. Based on the Project trip generation and distribution patterns

presented in the approved scoping agreement, the Project is anticipated to have 3 southbound left turning vehicles from Alta Vista during the morning peak hour. As such, the data suggests there is a sufficient number of gaps in traffic along Greenspot Road to accommodate the anticipated left-turning traffic during the morning peak hour.

There was a total of 388 two-way gaps in the east-west traffic along Greenspot Road during the mid-day peak hour which could potentially allow up to 602 vehicles to turn left from Alta Vista. Based on the Project trip generation and distribution patterns presented in the approved scoping agreement, the Project is anticipated to have 1 southbound left turning vehicle from Alta Vista during the mid-day peak hour. As such, the data suggests there is a sufficient number of gaps in traffic along Greenspot Road to accommodate the anticipated left-turning traffic during the mid-day peak hour.

There was a total of 414 two-way gaps in the east-west traffic along Greenspot Road during the evening peak hour which could potentially allow up to 572 vehicles to turn left from Alta Vista. Based on the Project trip generation and distribution patterns presented in the approved scoping agreement, the Project is anticipated to have 1 southbound left turning vehicle from Alta Vista during the evening peak hour. As such, the data suggests there is a sufficient number of gaps in traffic along Greenspot Road to accommodate the anticipated left-turning traffic during the evening peak hour.

TABLE 5-2: GAP STUDY FOR ALTA VISTA & GREENSPOT ROAD

¹ Source: Highway Capacity Manual, 7th Edition.

As shown, the existing signalized intersection at Alta Vista and Greenspot Road currently provides sufficient gaps in traffic to accommodate left-turning traffic from Alta Vista.

Alta Vista is currently a 2-lane undivided roadway with one lane in each direction of travel separated by a painted median. Table 5-3 summarizes the time gap for cars needed to complete a maneuver (either left or right turn) from the minor leg per the Caltrans Highway Design Manual (HDM) Table 405.1A. Note that additional time has been added to the values shown in Table 405.1A to account for the left-turning vehicles crossing the painted median.

TABLE 5-3: CORNER SIGHT DISTANCE TIME GAP (T_G) FOR UNSIGNALIZED INTERSECTIONS

Design Vehicle	Left turn from Stop (s)	Right turn from Stop and Crossing Maneuver (s)
Passenger Car	8.0	6.5

Source: Caltrans Highway Design Manual, July 1, 2020, Table 405.1A.

Note: Times include additional time to account for the painted median: additional 0.5s for passenger cars

The number of instances during the AM peak hour where the gap was greater than 8 seconds is 79, 101 for Mid-Day, and 85 for the PM peak hour, see table 5-4. Based on the number of instances of gap occurrences during the peak hour, the gaps at the driveway location on Alta Vista and Greenspot Road are more than adequate to accommodate the anticipated Project traffic.

6 CUMULATIVE (2050) TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Cumulative (2050) conditions and the resulting intersection operations, traffic signal warrant, and improvements.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Cumulative (2050) conditions are consistent with those shown previously in Exhibit 3-1, with the exception of the following:

- Project driveways assumed to be constructed by the Project to provide site access are also assumed to be in place for Cumulative (2050) With Project conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Cumulative development driveways and those facilities assumed to be constructed by cumulative development projects to provide site access are also assumed to be in place for Cumulative (2050) conditions (e.g., intersection and roadway improvements along the Project's frontage and driveways).

6.2 CUMULATIVE (2050) TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM, plus the traffic generated by the proposed Project for With Project conditions only. The weekday AM, Mid-Day, and PM peak hour volumes which can be expected for Cumulative (2050) Without Project traffic conditions is shown in Exhibit 6-1. Similarly, the weekday AM, Mid-Day, and PM peak hour volumes which can be expected for Cumulative (2050) With Project traffic conditions is shown in Exhibit 6-2.

6.3 INTERSECTION OPERATIONS ANALYSIS

Cumulative (2050) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies*. The intersection analysis results are summarized in Table 6-1 for Cumulative (2050) traffic conditions, which indicates that the following study area intersections are anticipated to operate at an unacceptable LOS under Cumulative (2050) Without Project traffic conditions:

- Boulder Av. & Greenspot Rd. (#1) – LOS E Mid-Day and PM peak hours
- Alta Vista & Greenspot Rd. (#7) – LOS F AM peak hour only

The following study area intersections are anticipated to continue to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Cumulative (2050) With Project traffic conditions:

- Boulder Av. & Greenspot Rd. (#1) – LOS E Mid-Day and PM peak hours
- Alta Vista & Greenspot Rd. (#7) – LOS F AM peak hour; LOS E Mid-Day peak hour

The intersection operations analysis worksheets for Cumulative (2050) Without and With Project traffic conditions are included in Appendices 6.1 and 6.2, respectively.

TABLE 6-1: INTERSECTION ANALYSIS FOR CUMULATIVE (2050) CONDITIONS

# Intersection	Traffic Control ²	Cumulative (2050) Without Project						Cumulative (2050) With Project					
		Delay ¹ (secs.)			Level of Service			Delay ¹ (secs.)			Level of Service		
		AM	MD	PM	AM	MD	PM	AM	MD	PM	AM	MD	PM
1 Boulder Av. & Greenspot Rd.	TS	38.0	59.3	60.9	D	E	E	39.0	63.3	66.0	D	E	E
2 Church St. & Greenspot Rd.	TS	21.4	14.4	13.8	C	B	B	33.2	14.6	15.0	C	B	B
3 Weaver St. & Greenspot Rd.	TS	12.6	8.4	9.7	B	A	A	13.5	8.4	9.7	B	A	A
4 Street B & Santa Ana Canyon Rd.	CSS	Future Intersection						10.0	9.3	9.1	B	A	A
5 Alta Vista & Santa Ana Canyon Rd.	CSS	19.4	11.3	11.3	C	B	B	19.8	11.4	11.4	C	B	B
6 Alta Vista & Street A/Street F	CSS	Future Intersection						11.8	11.4	11.4	B	B	B
7 Alta Vista & Greenspot Rd.	CSS	>100	28.5	24.4	F	D	C	>100	41.4	31.7	F	E	D

* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ Per the Highway Capacity Manual (7th Edition), overall average intersection Delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

² TS = Traffic Signal; CSS = Cross-street Stop; AWS = All-way Stop; IS = Improvement

6.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

The traffic signal warrant analysis for Cumulative (2050) traffic conditions are based on the peak hour volumes or planning level ADT volume-based traffic signal warrants. No study area intersections are anticipated to meet either peak hour volume or ADT volume-based warrants with the addition of Project traffic (see Appendices 6.3 and 6.4, respectively).

6.5 DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

This section provides a summary of deficiencies and recommended improvements based on the City of Highland deficiency criteria discussed in Section 2.5 *Deficiency Criteria*.

6.5.1 INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient under Cumulative (2050) traffic conditions in an effort to achieve an acceptable LOS. The effectiveness of the recommended improvement strategies to address Cumulative (2050) traffic deficiencies are presented in Table 6-2. Worksheets for Cumulative (2050) Without Project and With Project, with improvements, are provided in Appendices 6.5 and 6.6, respectively.

TABLE 6-2: INTERSECTION ANALYSIS FOR CUMULATIVE (2050) CONDITIONS WITH IMPROVEMENTS

#	Intersection	Traffic Control ³	Intersection Approach Lanes ¹												Delay ² (secs.)			Level of Service		
			Northbound			Southbound			Eastbound			Westbound			AM	MD	PM	AM	MD	PM
			L	T	R	L	T	R	L	T	R	L	T	R						
1	Boulder Av. & Greenspot Rd.																			
	- Without Project	TS	2	2	0	1	2	1	2	2	1	2	2	1	29.2	37.9	40.2	C	D	D
	-With Project	TS	2	2	0	1	2	1	2	2	1	2	2	1	30.1	40.8	44.9	C	D	D
7	Alta Vista & Greenspot Rd.																			
	- Without Project	TS	0	0	0	0	1	0	1	2	0	0	2	0	8.6	5.3	5.1	A	A	A
	-With Project	TS	0	0	0	0	1	0	1	2	0	0	2	0	11.2	5.9	5.8	B	A	A

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; **1** = Improvement

² Per the Highway Capacity Manual (7th Edition), overall average intersection Delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. HCM delay reported in seconds.

³ TS = Traffic Signal; CSS = Cross-Street Stop; **TS** = Improvement

This Page Intentionally Left Blank

7 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Highland are funded through a combination of improvements constructed by the Project, development impact fee programs or fair share contributions. Fee programs applicable to the Project are described below.

7.1 CITY OF HIGHLAND DEVELOPMENT IMPACT FEE (DIF) PROGRAM

The City of San Bernardino has created its own local Development Impact Fee (DIF) program to impose and collect fees from new residential, commercial, and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes a Regional Circulation System Fee to comply with Measure "I" and a Local Circulation System Fee to address transportation improvements which are locally significant. The fee schedule was recently updated in August 2023 and is adjusted annually based upon changes in the construction cost index. Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City.

The Project Applicant will be subject to the City's DIF program and will pay the requisite City DIF at the rates then in effect. The Project Applicant's payment of the requisite DIF at the rates then in effect pursuant to the DIF Program will mitigate its impacts to DIF-funded facilities. After the City's DIF are collected, they are placed in a separate interest-bearing account pursuant to the requirements of Government Code § 66000 et seq. The timing to use the DIF is established through periodic capital improvement programs which are overseen by the City's Public Works Department.

7.2 MEASURE "I"

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure "I", a one-half of one percent sales tax on retail transactions, through the year 2040, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure "I" extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by the San Bernardino County Transportation Authority (SBCTA) and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure "I" requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in March 2019. Revenues collected through these programs are used in tandem with the City's DIF funds to deliver projects identified in the Nexus Study. While Measure "I" is a self-executing sales tax administered by SBCTA, it bears

discussion here because the funds raised through Measure “I” have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

7.3 FAIR SHARE CONTRIBUTION

Project improvements may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City’s discretion). When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, have been provided in Table 7-1 for the applicable deficient study area intersection and for each applicable phase. These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

TABLE 7-1: PROJECT FAIR SHARE CALCULATIONS

#	Intersection	Existing (2024)	Project	2050 With Project	Total New Traffic	Project % of New Traffic [±]	
1	Boulder Av. & Greenspot Rd.	AM:	2,858	60	4,114	1,256	4.8%
		MD:	2,448	79	4,115	1,667	4.7%
		PM:	2,789	79	4,513	1,724	4.6%
7	Alta Vista & Greenspot Rd.	AM:	963	68	2,103	1,140	6.0%
		MD:	787	90	1,899	1,112	8.1%
		PM:	934	90	2,214	1,280	7.0%

¹ **BOLD** = Highest fair share percentage is highlighted.

APPENDIX 1.1: TRAFFIC STUDY SCOPING AGREEMENT

This Page Intentionally Left Blank

DATE: August 9, 2024
TO: Matt Bennett, City of Highland
FROM: Charlene So, Urban Crossroads
JOB NO: 15974-01 TA Scope

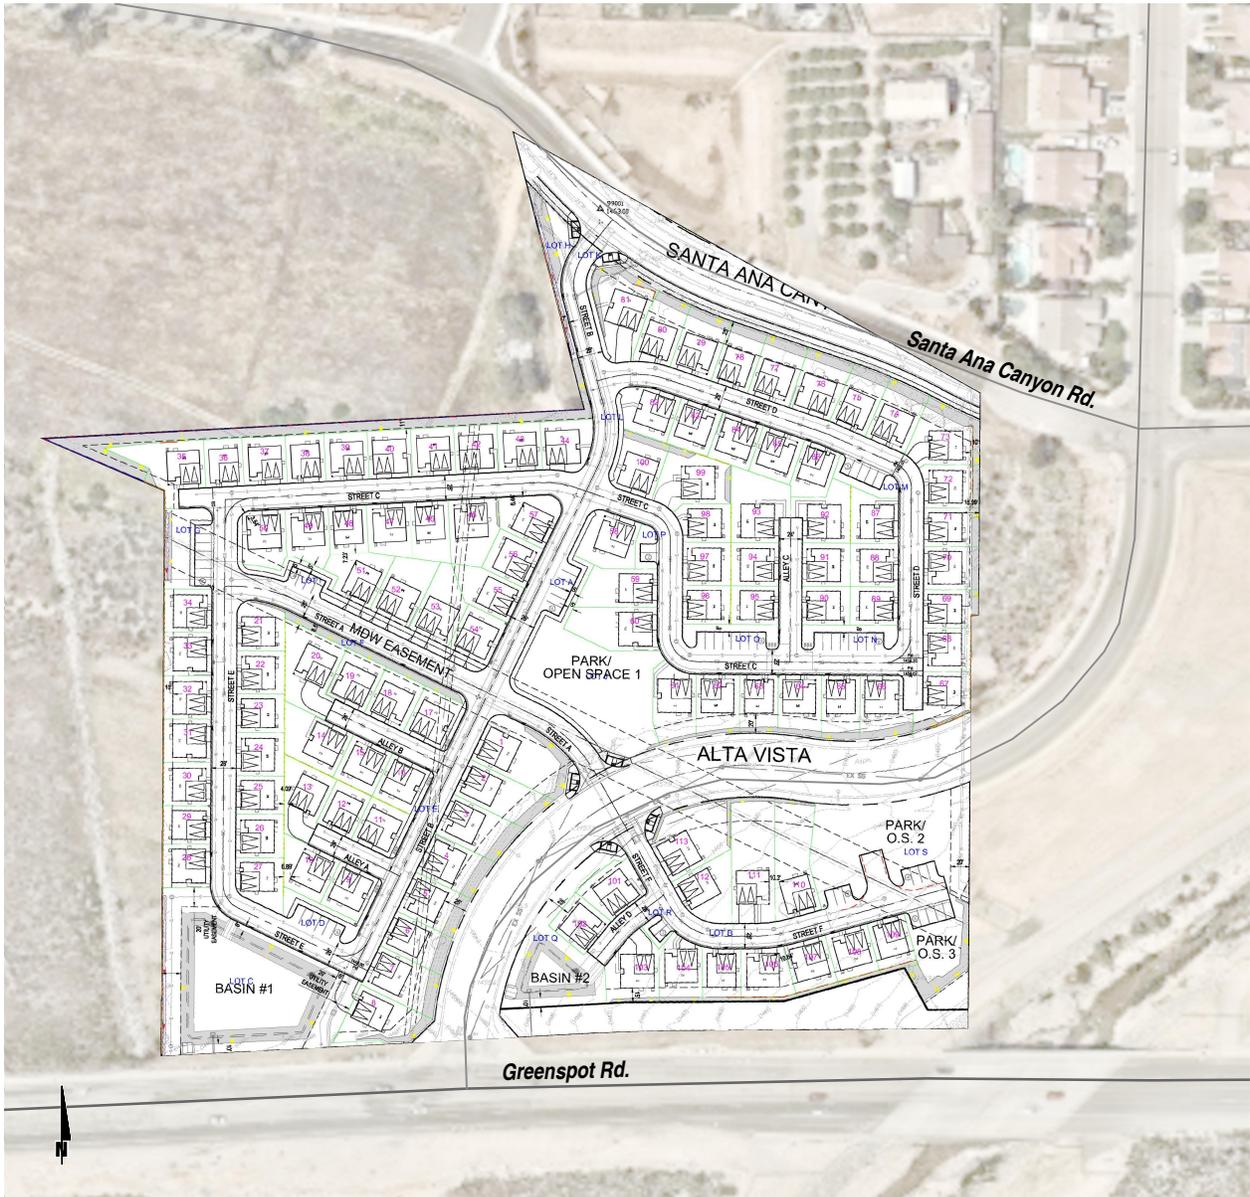

EAST HIGHLAND RANCH (TENTATIVE TRACT MAP NO. 20721) TRAFFIC STUDY SCOPING AGREEMENT

Urban Crossroads, Inc. is pleased to submit the following Traffic Study Scoping Agreement for East Highland Ranch development (referred to as Project), to establish a traffic analysis (TA) scope of work that would be prepared in support of the proposed Project. The Project is located between Santa Ana Canyon Road and Greenspot Road on either side of Alta Vista in the City of Highland. The following memo outlines the project-related trip generation, trip distribution patterns, proposed study area and analysis scenarios expected to be included in the Project traffic analysis.

PROPOSED PROJECT

It is our understanding that the Project is to consist of the development of 113 single family residential dwelling units. Exhibit 1 shows the preliminary site plan. The Project is proposing to develop in single phase with an anticipated Opening Year of 2027. Access to the proposed Project would be provided onto Santa Ana Canyon Road via Street B and Alta Vista via Street A and Street F.

EXHIBIT 1: PRELIMINARY SITE PLAN

TRIP GENERATION

Trip generation represents the amount of traffic, which is both attracted to, and produced by, a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. The proposed Project trip generation will be based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their latest Trip Generation Manual (11th Edition, 2021) for the proposed uses. Table 1 summarizes the ITE trip generation rates and resulting Project trip generation. As shown in Table 1, the proposed Project is anticipated to generate a net total of 1,066 two-way trips per day with 80 AM peak hour trips and 106 PM peak hour trips.

TABLE 1: PROJECT TRIP GENERATION SUMMARY

Land Use ¹	Units ²	ITE LU Code	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Single Family Detached Residential	DU	210	0.18	0.52	0.70	0.59	0.35	0.94	9.43

¹ Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, 11th Edition (2021).

² DU = dwelling units

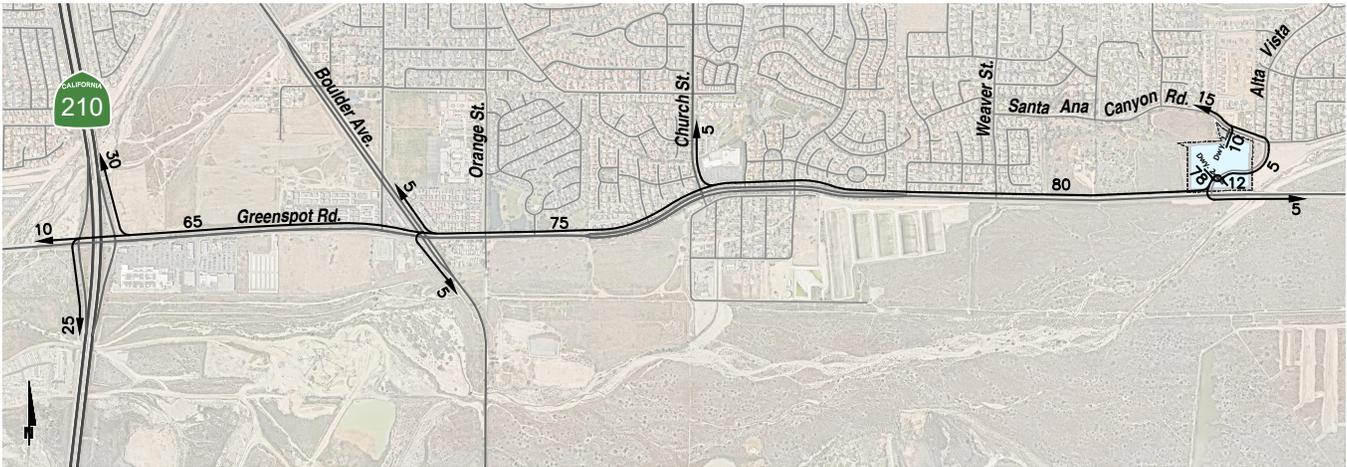

Land Use	Quantity Units ¹	AM Peak Hour			PM Peak Hour			Daily
		In	Out	Total	In	Out	Total	
Single Family Detached	113 DU	21	59	80	67	39	106	1,066

¹ DU = dwelling units

TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. The proposed Project trip distributions are shown in Exhibit 2.

EXHIBIT 2: PROJECT TRIP DISTRIBUTION

LEGEND:

- 10 = Car Percent To/From Project
- = Trip Distribution

PROPOSED ANALYSIS SCENARIOS

The following analysis scenarios are proposed to be evaluated in the Traffic Study:

1. Existing (2024)
2. Project Opening Day (2027) Without Project
3. Project Opening Day (2027) With Project
4. Cumulative (2045) Without Project
5. Cumulative (2045) With Project

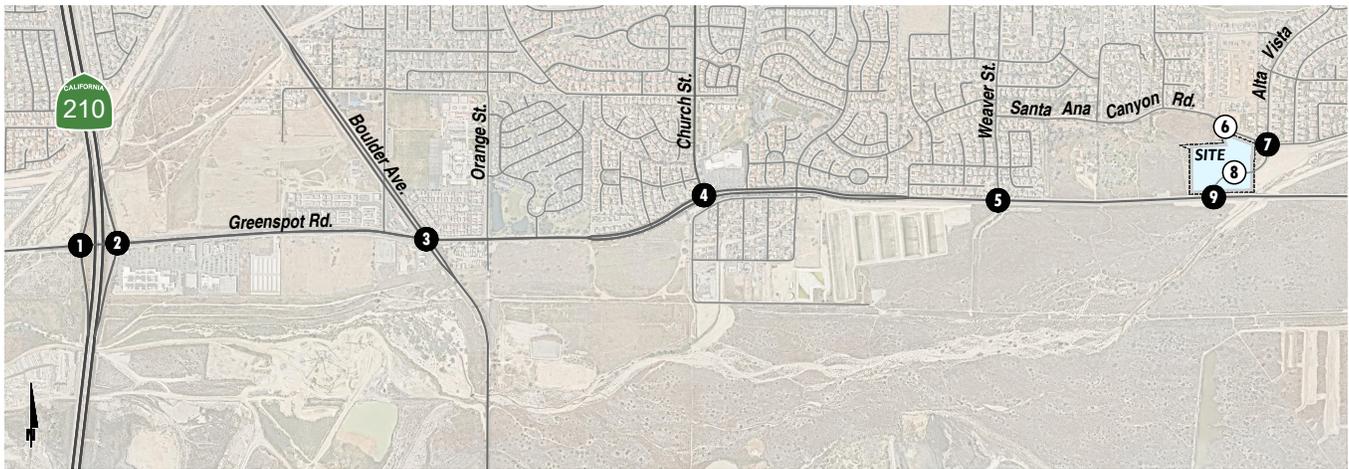

All study area intersections will be evaluated using the Highway Capacity Manual (HCM) 7th Edition analysis methodology. Cumulative (2045) traffic forecasts will be derived using the SBTAM Traffic Model.

INTERSECTION ANALYSIS LOCATIONS

Consistent with the City Guidelines, the study area limits have been set based upon a threshold of 50 peak hour project trips. In other words, at a minimum, the study area includes any intersection of Collector roadway or higher classification street with another Collector roadway or higher classification street, at which the proposed Project will add 50 or more peak hour trips. This methodology has been utilized to establish the study area for the proposed Project. The proposed intersection analysis locations have been identified graphically in Exhibit 3 and listed below.

#	Intersection
1	I-210 SB Ramps & Greenspot Rd.
2	I-210 NB Ramps & Greenspot Rd.
3	Boulder Av. & Greenspot Rd.
4	Church St. & Greenspot Rd.
5	Weaver St. & Greenspot Rd.
6	Street B & Santa Ana Canyon Rd.
7	Alta Vista & Santa Ana Canyon Rd.
8	Alta Vista & Street A/Street F
9	Alta Vista & Greenspot Rd.

EXHIBIT 3: INTERSECTION ANALYSIS LOCATIONS

LEGEND:

- ① = Existing Intersection Analysis Location
- ② = Future Intersection Analysis Location

EXISTING COUNT DATA

Traffic counts were conducted May 9, 2024, while local schools were in session and operating on normal bell schedules. No adjustments are proposed to the collected data other than those needed to preserve traffic flow between closely spaced intersections (such as the freeway ramps) so there is no unexplained loss of vehicles.

AMBIENT GROWTH

An ambient growth rate of 2 percent per year, compounded annually, will be used for this analysis (2% per year over 3 years or 6.12%).

TRAFFIC SIGNAL WARRANTS

Traffic signal warrant analysis will be conducted for all unsignalized full access driveways/intersections following the guidance of the California Manual on Uniform Control Devices (CA MUTCD).

OPEN ITEMS – CUMULATIVE DEVELOPMENT PROJECTS

It is requested that the City provide a current list of cumulative development projects for inclusion in our traffic study.

OPEN ITEMS – SIGNAL TIMING

It is requested that the City provide traffic signal timing for any City controlled intersections that we should take into consideration in our operations analysis. Applicable signal timing for Caltrans facilities will be obtained from District 8.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Figure 4C-4. Warrant 3, Peak Hour (70% Factor)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 64 km/h OR ABOVE 40 mph ON MAJOR STREET)

Traffic Conditions = **HY (2045) WP Conditions - Weekday AM Peak Hour**

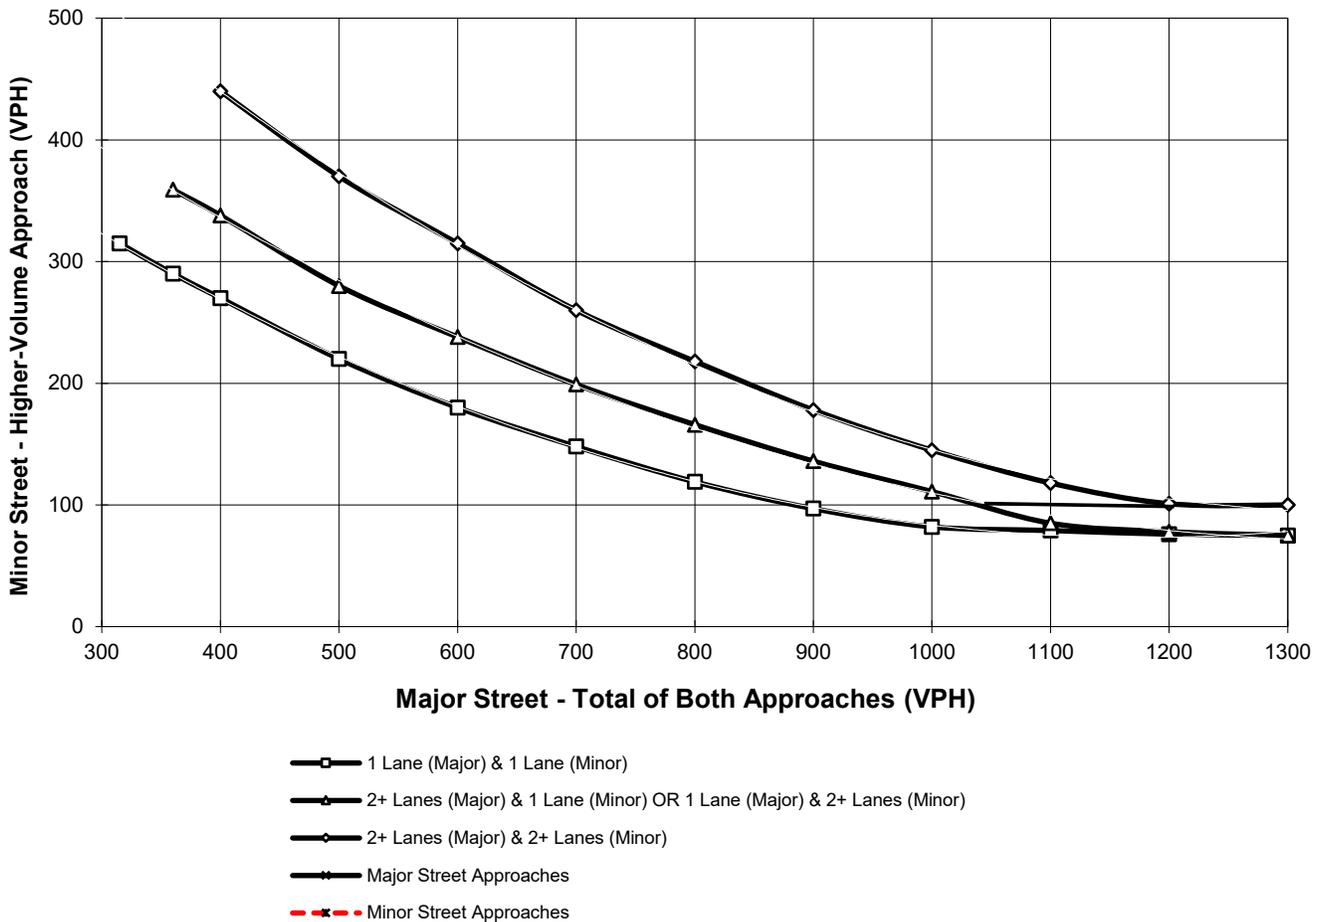

Major Street Name = **Alta Vista**

Total of Both Approaches (VPH) = **259**
 Number of Approach Lanes Major Street = **1**

Minor Street Name = **Santa Ana Canyon Rd.**

High Volume Approach (VPH) = **181**
 Number of Approach Lanes Minor Street = **1**

SIGNAL WARRANT NOT SATISFIED

*Note: 100 vph applies as the lower threshold for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold for a minor-street approach with one lane

Intersection Summary

HCM 7th Control Delay, s/veh	44.9
HCM 7th LOS	D

Notes

Unsignalized Delay for [SER] is excluded from calculations of the approach delay and intersection delay.

Timings

7: Greenspot Rd. & Alta Vista

Lane Group	EBL	EBT	WBT	SBL
Lane Configurations				
Traffic Volume (vph)	173	1308	570	24
