Project Description:

The proposed project will update the City's Climate Action Plan (CAP) which was adopted in 2017 and is a policy document identifying numerous programs and policies for both the public sector and private sector that seek to significantly reduce greenhouse gas (GHG) emissions within Redlands.

California has adopted a wide variety of regulations aimed at reducing the State's greenhouse gas (GHG) emissions. In addition to the efforts at the State level, local governments have broad influence and, in some cases, exclusive jurisdiction over activities that contribute to significant GHG emissions through their planning and permitting processes, local ordinances, outreach and education efforts, and municipal operations. As a result, many communities throughout the state are taking responsibility for planning to reduce energy use and emissions. Through proactive measures in land use, transportation, energy efficiency, green building, waste diversion, water conservation and more, local governments help residents and businesses save money while improving quality of life and reducing emissions in their communities.

The 2025 CAP Update includes measures to enable the City to meet its targets for GHG emissions consistent with current targets for the State to the year 2050. The updated CAP will replace the present CAP that the City of Redlands adopted in 2017. The updated CAP includes projections of GHG emissions in Redlands through 2050, outlines updated State GHG reduction targets, and includes a GHG Reduction Strategy with measures with quantified GHG reduction targets.

The project site is not on a list compiled pursuant to Calif. Government Code Section 65962.5 (Cortese List).
