APPENDIX III - SUPPORTING DOCUMENTATION

EXECUTIVE SUMMARY

FINDINGS

Andersen Integrated Services Inc. (Andersen) has performed a Phase I Environmental Site Assessment (Phase I) for Dear Properties (Client) for a vacant property located at 35th Street East and East Avenue K, in Los Angeles County and the City of Lancaster, California, Assessor's Parcel Number: 3150-014-008. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

Site Description

According to our research and information provided by the Client, the following property identifier has been found to be associated with the site: Los Angeles County Assessor's Parcel Number 3150-014-008. The site is located on the north side of East Avenue K and to the west of 35th Street East in the city of Lancaster, California. The site is approximately 38.3 acres in size and consists of raw, vacant land. No structures were observed, nor was evidence of dumping. Minor amounts of wood and concrete debris were observed throughout the site. A depression was observed in the soil in the southeast corner of the site, consistent with a catch basin for stormwater depicted in topographic maps. A concrete feature with a pipe attached going below ground was observed in the southwest portion. Should plumbing, a septic system, or any underground piping be encountered during redevelopment, proper removal is recommended. The surrounding area is mostly used for commercial and residential purposes. Groundwater is estimated to be approximately 295-feet below ground surface in the area of the site and is assumed to flow to the north-northwest.

No significant hazardous material storage or recognized environmental conditions were observed at the site. Those interviewed, as persons familiar with the site were not aware of any negative environmental conditions associated with the property.

Historical Land Use

According to Andersen's interpretation of the historical research data, the site consisted of vacant land with potential agricultural use throughout the remainder with the exception of a residential structure and associated farm/ranch out-structures in the south-central portion as early as 1948 through approximately 1971. By 1974, potential agricultural use appears to have ceased and the land appeared to have been graded and consisted of vacant land with the exception of the residential structure and associated out-structures. The site remained relatively unchanged through sometime prior to 2005, when the structures were no longer visible in aerial photographs. By 2009, the site consisted of entirely vacant land, as it remains to the present.

- The site was potentially historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on-site. Agricultural chemicals tend to accumulate in the near surface soils. However, aerial photographs indicate evidence of grading of the soil of the first few feet of soil; it is likely the agricultural chemicals, if any were present, have been diluted to below regulated levels. Furthermore, Andersen assumes that grading will occur prior to any redevelopment of the site. Based on the foregoing, it is our opinion that a risk to human health of the environment based on the potential historical agricultural use of the site is

unlikely, and thus no further action related to the potential former agricultural use of the site is recommended at this time.

- The earliest historical resource obtained during this investigation was an aerial photograph from 1948 which indicated development of the site for residential and ranch/farm uses. The lack of historical data sources for the site dating back to first developed uses represents historical data source failure. However, it is assumed that prior to 1948, the site would have been developed for residential uses, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

Environmental Data Search

- The site is not listed on any of the regulatory databases researched.
- There are no properties within 100-feet of the site where a release is considered likely or a known release has occurred.
- In our opinion, none of the sites listed on the regulatory database report pose a significant threat to the site as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, and/or the sites are located cross or down gradient of the site and in excess of 1/10 mile from the site.
- Appropriate regulatory agencies were contacted regarding hazardous materials, underground storage tank, industrial wastewater, and air emissions equipment files for the site. According to responses to our requests, there are no files for the site.
- The user did not provide Andersen any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the site. An environmental lien search was not requested by the user; however, based on our review of the Department of Toxic Substances Control (DTSC) EnviroStor Database, no environmental liens enforced by the DTSC were identified.

Additional Issues

- Based on the absence of current on-site structures, the potential for asbestos containing building materials is considered to be low. However, individual suspect materials would need to be tested in order to confirm the presence or non-presence of asbestos.
- Based on the absence of current onsite structures, the potential for lead based paint at the site is considered to be low.
- According to our research, radon potential at the site is considered low, however no sampling was conducted as part of this assessment.
- Andersen did not observe visible or olfactory indications of the presence of mold, nor did Andersen observe obvious indications of significant water damage.
- Based on our research, the property is not known to be located in proximity (1,000 feet) to any active or abandoned oil wells or landfills. Therefore the potential for methane risk at the site is considered low.

CONCLUSIONS

Andersen has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13 at the site. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the site.

Recognized Environmental Conditions (REC)

In our opinion, no RECs were revealed during the course of our assessment.

Historical Recognized Environmental Condition (HREC)

In our opinion, no HRECs were revealed during the course of our assessment.

Controlled Recognized Environmental Condition (CREC)

In our opinion, no CRECs were revealed during the course of our assessment.

RECOMMENDATIONS

Based on the foregoing, no additional investigation is recommended at this time.

1.0 INTRODUCTION

Andersen has performed a Phase I Environmental Site Assessment (Phase I) for the property located at 35th Street East and East Avenue K, in Los Angeles County and the City of Lancaster, California (Site). This report has been prepared for the sole use of Dear Properties (Client).

The research conducted for this study and the report prepared are in general conformance with the EPA "All Appropriate Inquiries" standard and the ASTM 1527-13 "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The primary purpose for performing a Phase I ESA is to "...permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Emergency Response Compensation and Liability Act (CERCLA) liability." (ASTM, 2013) An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the user also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligations." (ASTM, 2013) Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

The goal of this process is to identify any (1) recognized environmental conditions (RECs), (2) historical recognized environmental conditions (HRECs), and/or (3) controlled recognized environmental conditions (CRECs) associated with the site.

1. A **recognized environmental condition** is defined as "...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." This definition does not include *de minimis* conditions defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM, 2013).
2. A **historical recognized environmental condition** is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." (ASTM, 2013). The HREC designation requires the comparison of residual contamination concentrations, if any, to currently regulatory standards.
3. A **controlled recognized environmental condition** is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based

criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)” (ASTM, 2013).

In order to identify environmental conditions at the site, the Phase I ESA includes a site inspection, interviews with parties familiar with the property, historical research into the past uses of the property, and an environmental records search with regard to the site, adjoining and immediately surrounding properties, and the surrounding area. In addition, Andersen provides an opinion regarding the potential for asbestos containing materials, lead-based paints, mold, radon, oil and gas exploration, and methane as they relate to the site. Reviewing those documents that are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap.

1.1 SIGNIFICANT ASSUMPTIONS

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

1.2 LIMITATIONS AND EXCEPTIONS

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM 1527-2013, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of Andersen. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

1.3 RELIANCE

This report has been prepared for the sole use of Dear Properties. The contents should not be relied upon by any other parties without the express written consent of Dear Properties and Andersen.

1.4 USER RESPONSIBILITIES

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM E 1527-13 Phase I Standards require that the user conduct independent research and consider certain information before purchasing a property:

- Obtain a recent (less than 180 days old) title report prepared for the site. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations (AULs) with regard to the site. If environmental cleanup liens or AULs encumbering the site or in connection with the site are identified, the user should provide that information to the Environmental Professional (Andersen). If the user has actual knowledge of environmental cleanup liens or AULs encumbering the site or in connection with the site, the user should provide that information to the Environmental Professional (Andersen).
- The user should provide the Environmental Professional (Andersen) with any specialized knowledge the user has with regard to recognized environmental conditions in connection with the property.
- If the user is aware of any commonly known information in the community about the site with respect to recognized environmental conditions, the user should provide the information to the Environmental Professional (Andersen).
- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the user to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the user should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

2.0 SITE DESCRIPTION

Andersen has performed a Phase I for a vacant property located at 35th Street East and East Avenue K, in Los Angeles County and the City of Lancaster, California. The site is located on the north side of East Avenue K and to the west of 35th Street East in the city of Lancaster, California. The site is approximately 38.3 acres in size and consists of raw, vacant land. No structures were observed, nor was evidence of dumping. Minor amounts of wood and concrete debris were observed throughout the site. A depression was observed in the soil in the southeast corner of the site. A concrete feature with a pipe attached going below ground was observed in the southwest portion. Should plumbing, a septic system, or any underground piping be encountered during redevelopment, proper removal is recommended. The surrounding area is mostly used for commercial and residential purposes.

Natural gas and electrical services are provided to the site by Southern California Gas Company and Southern California Edison, respectively. Potable water and sewer services are provided by the City of Lancaster.

2.2 LEGAL DESCRIPTION

According to the Los Angeles County Assessor's Office, the site is located in the City of Lancaster, and is described by the Assessor's Parcel Number: 3150-014-008.

2.3 PHYSICAL SETTING

The elevation of the site is approximately 2,425 feet above sea level (USGS Lancaster East, California 7.5 minute topographic quadrangle). Based on our review of the GeoCheck Section of the EDR Radius report, the site is not situated within a 100-year FEMA Flood Zone. No wetlands were identified at the property or adjoining/immediately surrounding properties. Based on our review of groundwater data presented in the State Water Resources Control Board (SWRCB) GeoTracker website, groundwater was detected at a LADPW public well located at the southwest intersection of W Avenue J and Trevor Street (approximately 4.5-miles west of the site at approximately 295-feet below ground surface). However, perched and semi-perched aquifers may be present beneath the site. Based on topographic map interpretation, regional groundwater flow direction is estimated to be to the north-northwest; however local groundwater flow direction may vary.

3.0 SITE RECONNAISSANCE / INTERVIEWS

3.1 SITE RECONNAISSANCE

On January 24, 2022, Steven Perez with Andersen conducted a site reconnaissance of the site. The site inspection was conducted to attempt to identify current site uses, current hazardous materials storage, and evidence of past site uses and hazardous material storage and to identify evidence of other recognized environmental conditions. The site inspection consisted of a walkover of the site perimeter and exterior site areas. The adjoining properties were visually observed from curbside without being entered.

3.1.1 GENERAL SITE LAYOUT

The site consists of vacant, raw land. Evidence of grading and some shoring for drainage was observed throughout the site. No structures were observed, nor was evidence of dumping. Minor amounts of wood and concrete debris were observed throughout the site. A depression was observed in the soil in the southeast corner of the site, consistent with a catch basin for stormwater depicted in topographic map. A concrete feature with a pipe attached going below ground was observed in the southwest portion. Should plumbing or a septic system be encountered during redevelopment, proper removal is recommended. No pole or pad mounted transformers or PCB-containing equipment were observed on-site.

No physical evidence of current or former ASTs or USTs was identified during the site inspection. The site representative was unaware of current or former ASTs or USTs.

No physical evidence of groundwater monitoring wells, dry wells, injection wells, extraction wells, vapor wells, or groundwater production wells was identified during the site inspection.

3.1.2 RECONNAISSANCE LIMITATIONS

No significant limitations were encountered during our reconnaissance of the site.

3.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

The adjoining and immediately surrounding properties (within 100-feet of the site boundary) were visually and physically observed from public right-of ways and the site in an attempt to identify recognized environmental conditions. Our observations are summarized in the following table:

Location	Address(es)	Uses/Observations
North	3200 E Ave J 8	Eastside High School
East	Multiple addresses along 35 th Street E	Single family residential
South	Multiple addresses along E Ave K	Single family residential
West	Multiple addresses along 32 nd St E	Single family residential

No recognized environmental conditions were readily observable at the adjoining/immediately surrounding properties.

3.3 SURROUNDING AREA OBSERVATIONS

3.3.1 SURROUNDING PROPERTY USES

The surrounding area is mostly developed with commercial and residential structures.

3.3.2 SURROUNDING GEOGRAPHY

The surrounding area is mostly flat with a slight topographic slope to the north-northwest. No nearby hills or bedrock outcroppings were observed in the area of the site. No lakes, ponds, rivers or streams were observed in the surrounding area.

3.4 INTERVIEWS

3.4.1 Property Owner – The property owner was unaware of environmental conditions at the site.

3.4.2 Key Site Manager – The owner of the property is the key site manager and was interviewed as the owner.

3.4.3 Property Occupants – No occupants were available for interview during the completion of this report.

3.4.4 Past Owners, Operators and Occupants – Past owners, operators and occupants were not able to be identified for an interview for this report.

3.4.5 Prospective Purchaser – Andersen was not provided information about a prospective purchaser as part of this assessment.

3.4.6 Neighboring Property Owners/Tenants – Per ASTM an attempt to interview neighboring property owners/tenants was conducted as the site is vacant and unsecured. No adjoining property occupants were available for interview.

3.5 USER PROVIDED INFORMATION

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM 1527-13 Phase I Standards require that the Report User conduct independent research and consider certain information before purchasing a property. Andersen recommends that the User documents completion of the following items:

3.5.1 LIEN SEARCH

The User is required to obtain a recent (less than 180 days old) title report prepared for the site. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations with regard to the site. If environmental cleanup liens or activity and use limitations encumbering the site or in connection with the site are identified, the User should provide that information to the Environmental Professional (Andersen). If the User has actual knowledge of environmental cleanup liens or activity and use limitations encumbering the site or in connection with the site, the User should provide that information to the Environmental Professional (Andersen).

- The user did not provide Andersen any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the site. An environmental lien search was not requested by the user; however, based on our review of the Department of Toxic Substances Control (DTSC) EnviroStor Database, no environmental liens enforced by the DTSC were identified.

3.5.2 SPECIALIZED KNOWLEDGE

The User should provide the Environmental Professional (Andersen) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.

- The User has no specialized knowledge with respect to recognized environmental conditions in connection with the property.

3.5.3 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

If the User is aware of any commonly known information in the community about the site with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (Andersen).

- The User is not aware of any commonly known information in the community about the site with respect to recognized environmental conditions.

3.5.4 PROPERTY VALUATION

If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

- As the user of this report is the owner of the property performing due diligence on the site in contemplation of a future sale or refinance, there is no prospective purchaser included in the transaction.

3.5.5 PURPOSE OF PERFORMING PHASE I ESA

According to the user, the user is the owner of the property performing due diligence on the site in contemplation of a future sale.

4.0 HISTORICAL LAND USE

A review of historical data derived from standard historical resources is provided in this section. The objective of consulting historical sources is to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. During our historical review, acute attention is paid to the site. Data relating to the adjoining and immediately surrounding properties (within 100-feet of the site boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the property itself.

4.1 AERIAL PHOTOGRAPHY REVIEW

Aerial Photograph Coverage was available from Environmental Data Resources (EDR). A summary of our observations is presented in the following table.

Year	Observations	
	Site	Adjoining Properties
1948 1953 1956 1959	The site appears to consist of vacant/agricultural land with a residential/farm structure in the southwest portion.	The adjoining properties appear to consist of vacant/agricultural land.
1971	The west portion of the site appears to consist of graded land with the previously visible residential/farm structures. The east portion is not depicted.	Vacant/agricultural to the northwest, west, and southwest. The east is not depicted.
1974	The site appears to consist of graded land with the previously visible structures.	Appears similar to the previous aerial photograph.
1994	The site appears similar to the previous aerial photograph except the previously graded land appears vacant.	Appears developed with single-family tract homes to the east and south. The north and west adjoining property appear as vacant land.
2005	Appears similar to the previous aerial photograph except the structures are no longer visible.	Appears similar to the previous aerial photograph.
2009 2010 2012 2014 2016	Appears as vacant land.	Appears similar to the previous aerial photograph except the north adjoining property is developed with the present-day school and the west appears developed with single-family tract homes.

4.2 BUILDING DEPARTMENT RECORDS REVIEW

The addresses identified as current and historical addresses for the site were researched at the City of Lancaster Building Division. The following table summarizes relevant building permits obtained and reviewed:

- There were no building permits identified for site.

4.3 CITY DIRECTORY REVIEW

Andersen reviewed historical city directories provided by EDR that included information between 1970 and 2014 at approximately five year intervals. No listings for the site were identified in the city directories. No adjoining property listings revealed any concern to the site.

4.4 SANBORN MAP REVIEW

Sanborn Map Coverage was not available for the site. The remaining Historical Land Use data in our opinion is sufficient to accurately ascertain the historical site use.

4.5 PRIOR ENVIRONMENTAL REPORTS

The client was not aware of previous environmental reports for the site. No previous environmental reports were provided to Andersen or identified in the historical sources reviewed during this assessment.

4.6 HISTORICAL SUMMARY

4.5.1 SITE

According to Andersen's interpretation of the historical research data, the site consisted of vacant land with potential agricultural use throughout the remainder with the exception of a residential structure and associated farm/ranch out-structures in the south-central portion as early as 1948 through approximately 1971. By 1974, potential agricultural use appears to have ceased and the land appeared to have been graded and consisted of vacant land with the exception of the residential structure and associated out-structures. The site remained relatively unchanged through sometime prior to 2005, when the structures were no longer visible in aerial photographs. By 2009, the site consisted of entirely vacant land, as it remains to the present.

- The site was potentially historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on-site. Agricultural chemicals tend to accumulate in the near surface soils. However, aerial photographs indicate evidence of grading of the soil of the first few feet of soil; it is likely the agricultural chemicals, if any were present, have been diluted to below regulated levels. Furthermore, Andersen assumes that grading will occur prior to any redevelopment of the site. Based on the foregoing, it is our opinion that a risk to human health of the environment based on the potential historical agricultural use of the site is unlikely, and thus no further action related to the potential former agricultural use of the site is recommended at this time.

4.5.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

According to Andersen's interpretation of the historical research data, the adjoining and immediately surrounding properties consisted of vacant land with potential agricultural use as early as 1948. Single family tract home development began at the east and south adjoining properties by the mid-1990s. By the late 2000s, single family tract homes had been developed to the west and the north adjoining property was developed with the present-day school, bringing the adjoining properties to the current configuration.

4.7 HISTORICAL DATA GAPS

The earliest historical resource obtained during this investigation was an aerial photograph from 1948 which indicated development of the site for residential and ranch/farm uses. The lack of historical data sources for the site dating back to first developed uses represents historical data source failure. However,

it is assumed that prior to 1948, the site would have been developed for residential uses, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

5.0 REGULATORY DATABASE REPORT

A radial database search was conducted in accordance with the specifications defined in ASTM E 1527-13 which sets the radial search distances for each regulatory database. The radial database search was conducted by EDR on January 18, 2022. A copy of the database report, including a list of acronyms used below, is presented in Appendix II of this report.

Our opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E2600-10), and assumed groundwater flow direction. As discussed in Section 2.3, groundwater is estimated to be approximately 295-feet below ground surface in the area of the site and is assumed to flow to the north-northwest.

5.1 SITE

The site is not listed on any of the regulatory databases researched.

5.2 ADJOINING AND IMMEDIATELY SURROUNDING PROPERTIES

Eastside High School No. 9 (East Avenue J / 35th Street East) - the north adjoining property is listed on the ENVIROSTOR and SCH databases. This facility was investigated by DTSC as part of a standard school investigation. The facility was investigated for potential former agricultural use and assessed for arsenic, chlordane, DDD, DDE, and DDT in soil. No contaminants were found and no further action was determined in November 2001. This listing is not considered an environmental concern to the site.

No other adjoining/immediately surrounding properties (within 100-feet) were listed on any of the regulatory databases researched or the listings were not associated with the storage or disposal of hazardous wastes including aboveground or underground storage tanks, did not indicate a known chemical release, and did not indicate a property use where the use of hazardous chemicals would be expected.

5.3 SURROUNDING AREA

In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the site as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the site and in excess of 1/10 mile from the site.

5.4 ORPHAN FACILITIES

Orphan facilities are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. One orphan facility was identified in the Radius Map Report prepared for this site. The facility was manually mapped to determine the location of the facility relative to the site and groundwater gradient. The following conclusions were made:

In our opinion, the orphan facility listed does not pose a significant threat to the site as there is no indication of a release at the respective site, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the site and in excess of 1/10 mile from the site.

6.0 AGENCY FILE REVIEWS

6.1 STATE AGENCIES

The regional offices of the Lohontan Regional Water Quality Control Board (LRWQCB), Department of Toxic Substances Control (DTSC), and Antelope Valley Air Quality Management District (AVAQMD) were contacted regarding permits and site investigation files for the site.

- According to responses to our requests from LRWQCB and DTSC, there are no files for the site.

The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the site.

- No oil wells were identified within 500 feet of the site.

6.2 CITY/COUNTY AGENCIES

The Los Angeles County Fire Department, Los Angeles County Department of Public Works Environmental Protections Division (LACDPW EPD), and the City of Lancaster City Clerk were contacted regarding hazardous materials, underground storage tank, and industrial waste discharge records for the site.

According to responses to our requests, there are no files for the site.

6.3 AGENCY FILE REVIEW LIMITATIONS

At the time this report was issued, no response has been received from SCAQMD and AVAQMD. Should relevant information be obtained from this agency subsequent to issuing this report, an addendum will be prepared and provided to the Client.

7.0 NON-SCOPE ENVIRONMENTAL RISKS

ASTM Standard E1527-13 identifies additional conditions which, should they exist at the site, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

7.1 ASBESTOS CONTAINING BUILDING MATERIALS

Asbestos is a group of naturally occurring minerals used in certain products, such as building materials and vehicle brakes, to resist heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACM) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACM can be found in a multitude of building products which include acoustical texture, fire-proofing, joint compound, attic and wall insulation, resilient flooring, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, piping insulation, piping joints, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, and swimming pool plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- Based on the absence of current on-site structures, the potential for asbestos containing building materials is considered to be low. However, individual suspect materials would need to be tested in order to confirm the presence or non-presence of asbestos.

7.2 LEAD-BASED PAINT

Although lead-based paint has been taken off the market, it is approximated that 80 percent of buildings built prior to 1978 contain lead paint. Even at low levels, lead poisoning can cause IQ deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity and other behavior problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around our homes and commercial buildings. Lead can be found in dust from moving parts of windows and doors that are painted with lead-based paint, wood trim, walls, cabinets in kitchens and bathrooms, porches, stairs, railings, fire escapes, lamp posts, and soil.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Between the Environmental Protection Agency (EPA), Department of Housing and Urban Development (HUD), Occupational Safety & Health Administration (OSHA), California Department of Public Health (CDPH), each state has various action limits have been placed with the overall objective being an attempt to prevent human exposure and contamination of the surrounding environment.

- Based on the absence of current onsite structures, the potential for lead based paint at the site is considered to be low.

7.3 RADON

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground to the air above and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today.

Testing for the presence of radon is fairly inexpensive, simple and the only way to be certain of the on-site concentration. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on our research at the United States Environmental Protection Agency (USEPA), the average radon concentrations for Los Angeles County are between 2.0 pCi/L and 4.0 pCi/L, below the 4.0 pCi/L action level set by the USEPA. However, site specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the site radon levels.

7.4 WETLANDS

According to the Clean Water Act, a wetland is “those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.” Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- The U.S. Fish and Wildlife Service National Wetlands Inventory was reviewed to determine if the site is situated within an identified wetland. According to the USFWS, the site is not located within a wetland area.

7.5 MOLD

Mold and mildew are simple, microscopic organisms that can grow virtually anywhere if they have adequate moisture, nutrients and appropriate temperatures. Depending on the particular mold or fungus (mildew), growing colonies can be almost any color from white to black. Most household molds and fungi (mildews) are black, grey, or charcoal colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever

good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials. Most molds are not harmful. In fact, molds have important roles in the environment and in living systems. In soil molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

Molds and fungi (mildews) however, can be very destructive to materials on which they grow, and are usually unwelcome and unhelpful in homes. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

Andersen observed a limited amount of interior areas of the subject building(s) in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the site. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, possibly in pipe chases, HVAC systems and behind enclosed walls and ceilings, may be present on the site. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the subject building(s) are at levels acceptable by industry standards.

- Andersen did not observe visible or olfactory indications of the presence of mold, nor did Andersen observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

7.6 METHANE GAS

In response to growing concern regarding methane intrusion into buildings and to the potential for methane build-up underneath buildings, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a site is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a site may be necessary.

- Based on our research, the property is not known to be located in proximity (1,000 feet) to any active or abandoned oil wells or landfills. Therefore, the potential for methane at the site is considered low.

8.0 FINDINGS AND CONCLUSIONS

Environmental and other conditions associated with the site are characterized as RECs, CRECs, HRECs, de minimis conditions, noteworthy conditions, or other considerations as defined in Section 1.1 of this report. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report if not identified below.

Recognized Environmental Conditions (REC)

In our opinion, no RECs were revealed during the course of our assessment.

Historical Recognized Environmental Condition (HREC)

In our opinion, no HRECs were revealed during the course of our assessment.

Controlled Recognized Environmental Condition (CREC)

In our opinion, no CRECs were revealed during the course of our assessment.

RECOMMENDATIONS

Based on the foregoing, no additional investigation is recommended at this time.

SIGNATURES

We declare that, to the best of my professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021	Source: EPA
Date Data Arrived at EDR: 11/05/2021	Telephone: N/A
Date Made Active in Reports: 11/29/2021	Last EDR Contact: 01/13/2022

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map:	12021693 LANCASTER EAST, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Hesperia

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	7 inches	53 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
3	53 inches	77 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Hesperia

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	3 inches	53 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4
3	53 inches	77 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.4

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Cajon

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	9 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: Rosamond

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United States Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Contact: Melissa Borgel

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Andersen Integrated Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 03DB-4C1D-91A9

PO # NA

Project 2112-448

UNMAAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 03DB-4C1D-91A9

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Andersen Integrated Services were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

Public Records Request Number: PR3-011822-12

Location: 44411 40th Street E., Lancaster, CA

APNs: 3150-014-008, 3150-029-025, 3150029-026

Dear Ms. Borgel:

On January 18, 2022, the Department of Toxic Substances Control (DTSC) received your email of the same date requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the site/facility referenced above.

Many of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSC's data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me via email at ChatsworthFileRoom@dtsc.ca.gov.

Sincerely,

Roya Nejad

[PRA Request 44411 40th Street E Lancaster CA APNs 3150 029 026 and 3150 029 025.jpg](#)

Hello Melissa,

I have searched our state databases for current and historical files and reports for the address you provided; **44411 40th Street E, Lancaster, Los Angeles County, CA.**, and the following parcels for your project, **3150-014-008, 3150-029-026, and 3150-029-025**. In addition, I attained the following latitude and longitude for an approximate center of the parcels.

Parcel number	Address	Latitude	Longitude
3150-014-008	N/A	34.677111	-118.0702952
3150-029-025	44411 40th Street E, Lancaster	34.6918707	-118.0599204
3150-029-026	N/A	34.6918707	-118.0610576

According to our files in GeoTracker, this parcels do not have any identified environmental concerns. In addition, there does not appear to be any environment concerns within 1,000 feet of your parcels of interest.

I am attaching two JPG files that show your parcels over a GeoTracker export.

If you would like to, you can access this GeoTracker information yourself by using the following link:

<https://geotracker.waterboards.ca.gov/>

To get to the location of the parcels in GeoTracker, enter the latitude and longitude coordinates for the center of the parcels (e.g., 34.677111, -118.0702952) into the search field of GeoTracker.

To select all the site and facility categories, go to the Legend in the lower left corner and click on "CHOOSE MORE SITES," to expand the Legend.

In the upper left corner, click on the categories under "Sites" to expand the list of site types, and check all the boxes on the left side and click on the map.

You can set the radius of interest in the window that appears near the center of the screen (e.g., 0.26 miles) and then click "GO."

If you place your cursor over a site symbol, the GeoTracker Global Identification number appears. If you click on a site symbol, a pop up window appears and provides additional information regarding that particular site.

I hope this is helpful

Have a nice day.

Subject: RE: PRA Request: 44411 40th Street E, Lancaster, CA: APNs: 3150-014-008, 3150-029-026, and 3150-029-025

EXTERNAL:

Hi Alicia,

To my knowledge, the only address associated with the sites is the one I included. Please see the PDF maps I was provided attached, I hope they help!

Thank you,

Melissa Borgel

Subject: PRA Request: 44411 40th Street E, Lancaster, CA: APNs: 3150-014-008, 3150-029-026, and 3150-029-025

Hello Melissa,

I am the person that will be researching your PRA request and I was wondering if you have a KMZ or KML file that I could use to overlay on my search?
This will clarify what parcels I need to consider as our system does not search on APN's. The address is very helpful thank you but I does not identify the three parcels you need. The KMZ file or even a pdf map will help me.
Thank you so much for your help.

Regards,
Alicia Borchmann
Scientific Aid
Lahontan Regional Water Quality Control Board
alicia.borchmann@waterboards.ca.gov

NOTE: The majority of Lahontan Water Board staff are teleworking due to an Executive Order from Governor Newsom. However, I am available via email, and I am responding to emails throughout the workday.

Our Mission – Restore, enhance, and preserve the quality of the Lahontan Region's water resources and drinking water for the protection of the environment, public health, and all beneficial uses, from mountain crests to valley floors.

Alicia

Please respond to this PRA request.

The due date is February 4, next Friday. Let me know if you have any questions.

Thanks

Bill

Years' Experience: 9

Professional Summary:

Ms. Borgel has been engaged in the environmental section since 2013 with experience in environmental consulting and environmental field work. Ms. Borgel has provided due diligence services for local, statewide, and national lending institutions, private developers, and public agencies. Ms. Borgel has worked directly with clients and regulatory bodies to investigate historical and current site use and help clients achieve compliance with federal regulations. Ms. Borgel has conducted high-level inspections and evaluations of commercial and industrial sites, including metal production, chemical manufacturing, dry cleaning facilities, gas stations, printing facilities, plating factories, and plastic manufacturing. Additionally, Ms. Borgel has experience with commercial and industrial energy auditing, environmental compliance, and environmental health and safety reviews.

- Phase I Environmental Site Assessments, Transaction Screen Assessments, Database Reviews
- Phase II Environmental Site Assessments
- Environmental Sampling, including soil, soil vapor, groundwater, and indoor air
- Environmental compliance reviews
- Team management

Licenses and Certifications:

OSHA 40-Hour Hazardous Waste Operations Certified
OSHA 30-Hour Construction Safety
California Certified Lead Sampling Technician

Project Experience:

Phase I Environmental Site Assessments, across the United States and Canada

Conducted approximately 1000+ Phase I Environmental Site Assessments in approximately 30 states across the United States and two Canadian provinces. Performed regulatory and historical research with approximately analysis of technical information for current and historical operations of sites to determine next stages of assessment based on individual client needs. Worked with multiple times of clients, including private equity, lenders (including Fannie Mae and Freddie Mac), individual property owners, developers, and property management companies.

Exide Project Manager, Los Angeles, California

Residential Lead Assessment and Remediation

Oversaw teams developed for all stages of residential lead sampling and reporting in preparation for remediation and disposal of lead contaminated soils associated with the Exide Battery Recycling facility. Liaison with Department of Toxic Substances Control and managed compliance with site regulation and project development. Developed report writing procedures and templates, data digitization, quality control/quality assurance

procedures, and conducted technical reviews of 3,000+ reports. On-boarding and training of new staff, managing a team of up to eight employees.

Private Client, Eureka, California

Phase I Environmental Site Assessment Portfolio

Performed appropriate field work and research for a portfolio of 30+ commercial properties throughout Eureka, California. Provided guidance to the client on portfolio risk management with significant confidentiality agreements.

Professional Experience:

Los Angeles, California, Senior Project Manager, 2021-present

Irvine, California, Consultant II, 2021

Los Angeles, California, Project Manager, 2018- 2020

Los Angeles, California, Project Manager, 2014-2018

Denver, Colorado, Environmental Science Intern, 2013

Education:

Bachelor of Arts, Environmental Studies, University of Colorado, Boulder, Colorado, 2013

Dennis Ironi, CIH, CSP, REHS, RMP

Years' Experience: 20+

Professional Summary:

Dennis Ironi has been part of the environmental industry for more than 20 years and is an experienced environmental professional recognized by the State of California as a Registered Environmental Health Specialist (REHS), a State Certified Radon Measurement Provider (RMP) as well as being a member of the American Board of Industrial Hygiene as a Certified Industrial Hygienist (CIH) and a member of the Board of Certified Safety Professionals (CSP). Mr. Ironi has worked on more than four thousand indoor air quality projects for commercial, residential and industrial properties. Mr. Ironi has also preformed and reviewed a wide variety of Phase I and Phase II environmental site assessments, as well as Storm Water Pollution Prevention Program plan development and implementation for construction projects. Mr. Ironi has serviced various City, County and State agencies in California via multi-year multi-million dollar contracts and short form single project contracts. The scope of tasks performed by Mr. Ironi extends from performing field assessments and on-site interface with clients to being President of and overseeing all departments of Andersen Environmental for 18 years which is now an EFI Global company until 2018.

Mr. Ironi's Areas of Expertise include:

- Performing indoor air quality assessments including lead, asbestos, mold, chemical, and biological contaminants
- Fire loss environmental evaluation
- Radon Measurement Assessments
- Perform Phase I/II property site assessments
- Perform and develop SWPPP plans
- Perform Quality assurance and peer review of reports
- Manage Government Contract Projects
- Expert witness testimony
- Training of employees and education of clients
- Catastrophe Response
- Health & Safety Reviews
- Client Relations & Business Development

Licenses and Certifications:

Certified Industrial Hygienist, American Board of Industrial Hygiene – CIH No.: 9983
Certified Safety Professional, Board of Certified Safety Professionals – CSP No.: 33632
Registered Environmental Health Specialist, State of California – REHS No.: 7140
Radon Residential Measurement Provider –ID No.: 102942 RT
Lead Sampling Technician – ID No.: 28780
Hazardous Materials and Waste Management – CA Certificate

Project Experience:

Travelers Insurance

Los Angeles, CA

“Old Greyhound Bus Station”

The project site which suffered a fire is in the center of downtown with over 500 tenants in the three story building. Provided oversight and confirmation of the insureds consultants work and recommendations.

Department of Toxic Substances Control (DTSC)

Los Angeles, CA

EXIDE Battery Plant

Provided project management and project safety oversight for the inspection of more than 2,000 homes for the presence of lead contamination through air dispersion. This project was in a heavily populated section of East Los Angeles.

Hensel Phelps, Los Angeles, CA

General Environmental Monitoring

Over the span of 3 years on multiple Los Angeles International Airport (LAX) projects, full time general environmental monitoring and documentation of site conditions was performed in the fully operational airport. This required a full understating of project objectives, timelines and clear communication with many stakeholders.

McCormick Construction, Burbank, CA

Construction Defect Assessment

A newly constructed structure in use by various friends of the university began showing signs of water intrusion in various areas raising concern for the occupants. The project required the development of a plan in which each room would be assessed and documented by a moisture survey, air sampling, visual assessment and a protocol for remediation. The assessment identified heavy water damage was identified in conjunction with severe deterioration of wooden structural members requiring the involvement of a structural engineer. All assessment work was completed timely and under budget.

K-Mart, Casa Grande, AZ

Monsoon Catastrophe Response

A monsoon rain caused a roof to collapse causing an eight-inch fire sprinkler line to break and completely flood a 40,000sqft store. After an engineer verified entry was safe all goods were packed up in containers and shipped to other stores. A full assessment was conducted and a protocol provided to the client for immediate repair, within three days all remedial recommendations were completed and the facility was in the process of being re-roofed.

Wal-Mart, Nashville, TN

Heavy Rains/Flooding Catastrophe Response

Following a heavy rain event, surrounding rivers and lakes flooded causing Tennessee to be in a State of Emergency. The local Wal-Mart was under 6 feet of water, leaving behind hazardous chemical conditions. As a result, full time assessment and monitoring was conducted to evaluate work conditions and confirm adequate clean-up parameters.
