

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Euclid Avenue Recycled Water System Project

Lead Agency: Ontario Municipal Utilities Company

Contact Name: Luke Zhipeng Qu

Email: LZQu@ontarioca.gov Phone Number: 909-395-2676

Project Location: Ontario San Bernardino
City *County*

Project Description (Proposed actions, location, and/or consequences).

The City of Ontario (City) is proposing the Euclid Avenue Recycled Water System Project in Ontario to construct approximately 20,128 linear feet (LF) of City-owned and operated recycled water mains, install approximately 300 LF of lateral connections, and convert approximately 2,440 LF of existing potable water mains using open trench construction. The Project will extend Ontario's approved recycled water system from an existing IEUA connection in the 4th Street/ Euclid Avenue intersection to serve the following city parks and open space: Euclid Avenue center median (4th Street to Holt Boulevard and E. Walnut Street to E. Riverside Drive). City Civic Center Complex, Town Square Park, James R. Bryant Park, Centennial Park, and Riverside Parkway. The Project will also perform tree maintenance for trees in poor health consisting of ten (10) heritage tree removals/replacements.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The Project has been designed to avoid most impacts on trees and historical cultural resources; mitigation measures will be implemented during construction for short-term/temporary impacts and will include barriers, construction buffers, and monitoring by a certified arborist and archaeologist meeting Secretary of Interior Standards.

There are no permanent significant impacts that will result from the Project. Mitigation measures have been proposed for Project construction to reduce temporary impacts to less than significant levels for aesthetic resources, nesting birds, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, noise, public services, transportation, tribal resources, utilities and services.

Restoration of existing surfaces will occur after construction is completed. The Mitigation Monitoring and Reporting Program for the Project requires the following: A nesting bird survey will be completed prior to mobilization. The engineer's recommendations for geology and soils will be implemented during construction and will include water quality best management practices. Noise barriers may be implemented to reduce noise at sensitive receptors. A transportation management plan will be approved for construction. The contractor is required to coordinate with utility and service purveyors during construction. Native American tribes will be contacted if resources are found during earthwork. Cultural and historical resource monitoring is required throughout construction. Arborist monitoring is required throughout construction and for three years post construction for the Project for any trimmed trees.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

No areas of controversy are known. The Project is consistent with Ontario's General Plan goals and policies.

Provide a list of the responsible or trustee agencies for the project.
