# 1.0 EXECUTIVE SUMMARY

An Environmental Site Assessment - Phase I was prepared for the subject property located at 10500 Yukon Avenue South, 10711 South 10th Avenue, and 3200 West 104th Street, Inglewood, California 90303. The scope of work for the Phase I meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments*. The purpose of the Phase I report is to provide information regarding the potential for hazardous material impacts to the soil and groundwater beneath the subject property. Such threats or material threats are identified in this report as Recognized Environmental Conditions (RECs). The presence of Historical Recognized Environmental Conditions (HRECs) and Controlled Recognized Environmental Conditions (CRECs) was also evaluated. The extent of this evaluation in conjunction with owner/client-supplied data is intended to satisfy the requirements of all appropriate inquiry into the previous ownership and uses of the property. The scope of the work included a site reconnaissance, research of land use records and other sources for preliminary indications of hazardous material use, storage, or disposal at the property and/or on contiguous parcels.

The subject property is located on the south side of 104th Street between Yukon Avenue South and South 10th Avenue, in the City of Inglewood, California. The subject property consists of a portion of three (3) rectangular-shaped parcels of land that encompasses approximately 22.5 acres. In this report the parcels are described as Parcel A, Parcel B, and Parcel C. The current street addresses for the property are 10500 Yukon Avenue South (Parcel A), 3200 West 104th Street (Parcel B), and 10711 South 10th Avenue (Parcel C). According to the Los Angeles County Tax Assessor's office, the Assessor's Parcel Numbers (APNs) for the subject property are 4030-033-901 (Parcel A), 4030-033-903 (Parcel B), and 4030-033-904 (Parcel C).

Parcel A is currently developed with the Morningside High School campus. The subject property consists of the east portion of this parcel and is currently developed with several basketball courts, twelve (12) tennis courts, and one (1) baseball diamond. The remainder of the Parcel A portion of the subject property is undeveloped. Parcel B is currently developed with Woodworth Imagine Learning Magnet Elementary School (Woodworth Elementary School) campus. The subject property consists of the north portion of this parcel and is currently developed with seven (7) permanent structures and five (5) portable structures that were constructed in approximately 1960. Additionally, there are thirteen (13) storage/shipping containers containing furniture and classroom materials located on the southwest portion of Parcel B. The Woodworth Elementary School has been closed since approximately 2019, but the structures were formerly used as classrooms and administrative buildings. Parcel C is currently developed with the Monroe Middle School campus. The subject property consists of the west portion of this parcel and is currently undeveloped. Access to the property is via West 104th Street to the north and South 10th Avenue to the east. Acquisition and residential redevelopment of the subject property is proposed.

Historical site utilization research indicates the subject property was utilized as agricultural land from at least 1928 until 1947. Historical aerial photographs indicate construction on the Morningside High School campus began by 1952. The existing Woodworth Elementary School campus was constructed in approximately 1960. The existing basketball and tennis courts on the west portion of the subject property were constructed by 1970. Historical aerial photographs indicate the existing portable structures on the Woodworth Elementary School campus were brought onto the property between 1981 and 1989. Historical City Directories indicate the subject property has been owned by the Inglewood Unified School District since at least 1960.

LFR Inc. (LFR) prepared a Phase I ESA report titled, *Phase I Environmental Site Assessment,* for a portion of the subject property dated February 7, 2006. The report only includes Parcel C of the subject property (10711 S. 10th

Avenue), which is currently occupied by Monroe Middle School. The Phase I report was prepared for the Inglewood Unified School and reviewed by the Department of Toxic Substance Control (DTSC). The report was prepared pursuant to the ASTM 1527-2000 Standard for Phase I Environmental Assessments. LFR did not identify any Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs) in connection with the property. DTSC concurred LFR and issued an approval letter for the Phase I report on March 8, 2007.

The subject property addresses are identified on the standard environmental government sources researched in this report. The addresses are listed on the RCRA NONGEN/NLR, HWTS, HAZNET, FINDS, CERS, CERS HAZ WASTE, ECHO, RCRA-SQG, HAULERS, ENVIROSTOR, SCH, NPDES databases. The listings are associated with offsite portions of Monroe Middle School (Parcel C) and Morningside High School (Parcel A). The HAZNET, HWTS, RCRA NONGEN/NLR, RCRA-SQG, CERS, and CERS HAZ WASTE listings for Morningside High School are associated with automotive maintenance supplies and waste (oil, coolant, etc.) generated in the mechanic shop located on the northwest, offsite portion of Parcel A. Additionally, there are two listings for small quantities of asbestos containing waste from 2008 and 2018, which were likely generated during renovation activities on the Morningside High School buildings. The HAULERS listing is associated with the Inglewood School District Transportation Department, which is permitted to haul hazardous waste to an offsite disposal facility. The HAZNET and HWTS listings associated with Monroe Middle School (Parcel C) indicate 28 tons of asbestos containing waste was generated in 2008 and 10 tons of asbestos containing waste was generated in 2018. This is likely associated with renovation activities on the Monroe Middle School campus. Additionally, in 2006 0.6 tons of unspecific inorganic solid waste was generated on the property. The NPDES listing for Monroe Middle School is from 2009 and is likely associated with the renovation activities that occurred during this time period. The ENVITOSTOR and SCH listings are associated with the DTSC approved Phase I report completed for the property in 2006. None of these listings are an environmental concern for the subject property.

The nearest listed contaminated site to the subject property is located approximately 1000 feet to the north at 3350 Century Boulevard. The northwest portion of this offsite property was formerly occupied by a car wash/gasoline service station and is currently developed with The Village at Century mall. The property is a former LUST cleanup site that received case closure from the LARWQCB in 2010. In 1991, three gasoline USTs were removed from the site and petroleum impacted soil was discovered beneath the removed USTS. Between 2004 and 2006 several soil, soil gas, and groundwater investigations were conducted on the property. In 2007, thirteen (13) vapor extraction wells were installed and run for approximately two years. Three (3) groundwater monitoring wells were installed in 2006 and quarterly groundwater monitoring was conducted until 2009. In the final groundwater monitoring event, all contaminants were at non-detect levels. Benzene, toluene, ethylbenzene, and xylene impacted soil above each respective EPA SLs was left in place beneath the site at depths ranging from 40 to 90 feet bgs. Due to the distance and cross-gradient location it is considered unlikely that this offsite release has impacted the subject property.

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-13 for the property located at 10500 Yukon Avenue South, 10711 South 10th Avenue, and 3200 West 104th Street, Inglewood, California. Several data failures were encountered during the preparation of this report. The owner and user questionnaire were not returned to CE. This does not alter the conclusions or recommendations made in this report. Review of recorded Land Title Records including environmental liens was excluded from this report. These records should be obtained and reviewed by the user.

**No evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HREC), or controlled recognized environmental conditions (CRECs) was identified in connection with the subject property**. No additional assessment is recommended.

# 2.0 INTRODUCTION

The following report presents the findings of the Environmental Site Assessment - Phase I prepared for the subject property located at 10500 Yukon Avenue South, 10711 South 10th Avenue, and 3200 West 104th Street, Inglewood, California. The scope of the Phase I study meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments* and included research of available land use records and other sources for preliminary indications of hazardous material use, storage or disposal at the property. The findings of this study are intended to provide information to the client regarding potential hazardous material impacts to the soil and groundwater beneath the site.

The scope of the investigation was conducted in general accordance with ASTM Standard Practice for Environmental Site Assessments – Phase I, Environmental Site Assessment Process ASTM E 1527-13. The steps outlined in this process are intended to permit a user (client) to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide purchaser limitations on CERCLA liability. Specifically, this report along with certain obligations of the client, constitutes All Appropriate Inquiry (AAI) into the previous ownership and uses of the property consistent with the standard of care as practiced in this area by environmental professionals. A main component of the assessment is to identify recognized environmental conditions, controlled recognized environmental conditions, and historical recognized environmental conditions, as they may affect the subject property. As defined by ASTM E 1527-13, a recognized environmental condition (REC) means *"the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property."* A controlled recognized environmental condition (C-REC) is defined *as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required*

*controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”* An historical recognized environmental condition (HREC) is defined as *“a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”*

An important component of complying with the ASTM E 1527-13 Standard is information to be obtained or in the possession of the client and/or seller of the property. Such information includes obtaining and review of a recent title report, any specialized information regarding the site or surrounding area which may give rise to identification of a recognized environmental condition, and/or reasons given by the seller should the purchase price be significantly lower than what would be reasonably expected for a property of similar size and value. Often a real estate appraiser is commissioned to evaluate the purchase or sale price of a property. Such an appraisal is outside the scope of this Phase I Assessment report.

The independent conclusions represent California Environmental’s (CE) professional judgment based on the conditions that existed and the information and data available during the course of the study. Factual information regarding operations, conditions, and test data provided by the client, the owner or their representatives have been assumed to be correct and complete. This report includes **CONCLUSIONS AND RECOMMENDATIONS**, which together with the remainder of this report are subject to the **NOTICE** at the end of the report. **This report was prepared for the sole use and reliance by the client as identified on the title page of this report. Use of this report by other entities is expressly forbidden unless the client and CE grant permission.**

# 3.0 SITE DESCRIPTION

## 3.1 LOCATION AND LEGAL DESCRIPTION

The subject property is located on the south side of 104th Street between Yukon Avenue South and South 10th Avenue, in the City of Inglewood, California, see **FIGURE 1 - VICINITY MAP**. The current street addresses for the property are 10500 Yukon Avenue South, 10711 South 10th Avenue, and 3200 West 104th Street. According to the Los Angeles County Tax Assessor's office, the Assessor's Parcel Numbers (APNs) for the subject property are 4030-033-901, 4030-033-903, and 4030-033-904.

## 3.2 DESCRIPTION OF PROPERTY / PROPOSED PROJECT

The subject property consists of a portion of three (3) rectangular-shaped parcels of land that encompasses approximately 22.5 acres. The three parcels are 10500 Yukon Ave South - APN 4030-033-901 (Parcel A), 3200 West 104th Street – APN 4030-033-903 (Parcel B), and 10711 South 10th Avenue – APN 4030-033-904 (Parcel C). Parcel A is currently developed with the Morningside High School campus. The subject property consists of the east portion of this parcel and is currently developed with several basketball courts, twelve (12) tennis courts, and one (1) baseball diamond. The remainder of the Parcel A portion of the subject property is undeveloped. Parcel B is currently developed with Woodworth Imagine Learning Magnet Elementary School (Woodworth Elementary School) campus. The subject property consists of the north portion of this parcel and is currently developed with seven (7) permanent structure and five (5) portable structures that were constructed in approximately 1960. Additionally, there are thirteen (13) storage/shipping containers containing furniture and classroom materials located on the southwest portion of Parcel B. The Woodworth Elementary School has been closed since approximately 2019, but the structures on the subject property were formerly used as classrooms and administrative buildings. Parcel C is currently developed with the Monroe Middle School campus. The subject property consists of the northwest portion of this parcel and is currently

undeveloped. Access to the property is via West 104th Street to the north and South 10th Avenue to the east. Acquisition and residential redevelopment of the subject property is proposed.

### 3.3 GEOLOGY AND HYDROGEOLOGY

The subject property is located in the northern portion of the Peninsular Ranges Geomorphic Province within the north portion of the West Coast Groundwater Basin of the Coastal Plain of Los Angeles. The West Coast Basin is bound on the north by the Ballona Escarpment, on the east by the Newport-Inglewood fault zone, and on the south and west by the Pacific Ocean and Palos Verdes Hills. The site is within the Newport/Inglewood Zone of Deformation. The property is underlain by the Lakewood Formation, which includes upper Pleistocene deposits, divided into upper and lower portions. The upper portion of the formation includes lenses of sand and gravel within silty-sands, silts, and clays. The lower portion consists of marine and non-marine deposits with fairly continuous basal units of sand and gravel, discontinuous lenses of sandy-silt, and clay and shell zones.

Groundwater data was obtained from the RWQCB Geotracker file The Village at Century Property, located approximately 1,200 feet to the north of the subject property at 9830 Crenshaw Boulevard. Groundwater data from the facility indicates that in 2009 depth to groundwater was 105 feet bgs with a southwest flow direction.

## 4.0 BACKGROUND INFORMATION

### 4.1 PREVIOUS WORK

LFR Inc. (LFR) prepared a Phase I ESA report titled, *Phase I Environmental Site Assessment,* for a portion of the subject property dated February 7, 2006. The report only includes the southeastern parcel of the

subject property (10711 S. 10th Avenue), which is currently occupied by Monroe Middle School. The Phase I report was prepared for the Inglewood Unified School and reviewed by the Department of Toxic Substance Control (DTSC) prior to additional development associated with Monroe Middle School. The report was prepared pursuant to the ASTM 1527-2000 Standard for Phase I Environmental Assessments. LFR did not identify any Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs) in connection with the property. DTSC concurred LFR and issued an approval letter for the Phase I report on March 8, 2007.

## 4.2 SITE UTILIZATION HISTORY

Woodworth School is present on the northeast portion of the subject property and consists of elven classroom and administrative buildings. Monroe Middle School is located adjacent to the east of the subject property and consists of fifteen classroom and administrative buildings. The central portion of the subject property is labeled as and "Athletic Field." |

### 4.2.4 Historical Topographic Maps

Historical USGS topographic maps were provided by EDR Company and from online database sources. Maps covering the subject property for twelve (12) time periods were found. The subject property appears in an area of sparse development until approximately 1948. The three (3) existing schools on the subject property appear by 1964.

## 4.3 RECORDS REVIEW INFORMATION

### 4.3.1 Building Information

The structures located on the subject property were constructed in approximately 1960.

### 4.3.2 Underground Storage Tank & Hazardous Materials Research

The Los Angeles County Department of Public Works (LACDPW) online database was reviewed for underground storage tank (UST) permits and industrial waste records associated with the subject property. CE's review of the LACDPW online database indicates that no files are maintained for the subject property addresses.

### 4.3.3 State Regulatory Agency File Review

The State of California Department of Toxic Substances Control (DTSC) Envirostor and the California Regional Water Quality Control Board (RWQCB) GeoTracker online databases were reviewed for any information they may have regarding soil, soil gas, water, or air contamination at the subject property. CE's review of the GeoTracker and Envirostor online databases indicates that no files are maintained for the subject property.

### 4.3.4 LACFD-HHMD and SCAQMD File Review

An online request for records was made with the Los Angeles County Fire Department – Health Hazardous Materials Division (LACFD-HHMD) for any information they may have regarding soil, water or air contamination at the subject property. A response from the LACFD-HHMD indicates that files are maintained for the subject property's address of 10500 Yukon Ave, but they are associated with the offsite, adjacent portion of the parcel. The files are associated with the Inglewood Unified School District Mechanic Shop. The mechanic shop is located on the northwest portion of the Morningside High School property and is approximately 500 feet west (cross gradient) of the subject property. The file includes Hazardous Materials Inspection Reports from 2017 and 2020. The inspection reports indicate that in 2020 the mechanic shop had several 55-gallon containers of oil filters, used oil, antifreeze, and motor oil located within the machine shop. The facility did not receive any violations in 2017 or 2020. The agency response is included in **APPENDIX III**.

The SCAQMD online FIND database was researched for any active or inactive records related to the subject property. A review of the SCAQMD Facility Information Detail (FIND) database indicates that Morningside High School is listed with Facility ID # 99039 and has an active status. No other

information is provided. This is not considered an environmental concern. The agency record is included in **APPENDIX III**.

### 4.4 SITE DRIVE-BY

A drive-by of the area within one-quarter mile of the property was conducted to help identify nearby sites that possibly use, store, or generate hazardous materials. The area surrounding the subject property consists of residential and commercial properties. No service stations are located on the properties adjacent to the subject property. A list of selected environmental risk sites identified within a one-quarter mile radius of the subject property is included in the **STANDARD ENVIRONMENTAL RECORDS SOURCES** section of this report.

## 5.0 SITE RECONNAISSANCE

The site conditions were observed during a reconnaissance conducted by Eric Koons of California Environmental on April 1, 2022. California Environmental completed a Field Reconnaissance Checklist during the site reconnaissance. An Environmental Owner and User Questionnaire were provided to Yuri Gurevich of Harridge Development Group. The Owner and User Questionnaires were not returned. The Environmental Field Reconnaissance Checklist is included in **APPENDIX I**. The features described below are shown on the enclosed **FIGURE 2 - PLOT PLAN**. Photographs of the subject property are attached in the **ILLUSTRATIONS** section of this report.

## 5.1 DESCRIPTION OF THE PROPERTY

The subject property consists of a portion of three (3) rectangular-shaped parcels of land that encompasses approximately 22.5 acres. The three parcels are 10500 Yukon Ave South - APN 4030-033-901 (Parcel A), 3200 West 104th Street – APN 4030-033-903 (Parcel B), and 10711 South 10th Avenue – APN 4030-033-904 (Parcel C). Parcel A is currently developed with Morningside High School campus. The subject property consists of the east portion of this parcel and is currently developed with several basketball courts, twelve (12) tennis courts, and one (1) baseball diamond. The remainder of the Parcel A portion of the subject property is undeveloped. Parcel B is currently developed with Woodworth Imagine Learning Magnet Elementary School (Woodworth Elementary School) campus. The subject property consists of the north portion of this parcel and is currently developed with seven (7) permanent structure and five (5) portable structures that were constructed in approximately 1960. Additionally, there are thirteen (13) storage/shipping containers containing furniture and classroom materials located on the southwest portion of Parcel B. The Woodworth Elementary School has been closed since approximately 2019, but the structures on the subject property were formerly used as classrooms and administrative buildings. Parcel C is currently developed with the Monroe Middle School campus. The subject property consists of the northwest portion of this parcel and is currently undeveloped. Access to the property is via West 104th Street to the north and South 10th Avenue to the east. Acquisition and residential redevelopment of the subject property is proposed.

## 5.2 ADJACENT PROPERTIES

The subject property is bound to the north by West 104th Street with residential and commercial development beyond, to the east by Monroe Middle School with South 10th Avenue and residential development beyond, to the south by residential development, and to the west by Morningside High School with Yukon Ave S and residential development beyond.

## 5.3 TOPOGRAPHY AND DRAINAGE

The subject property has a gentle slope towards the southwest. The topographic elevation of the subject property ranges from approximately 90 to 120 feet above mean sea level. Drainage from the site is by sheetflow towards the adjacent city streets. Several surface drains and catch basins were observed on the Woodworth School property. No evidence of sumps or standing water was observed on the subject property at the time of the site reconnaissance.

## 5.4 PAST USES OF THE PROPERTY

No evidence of the past use, treatment, storage, disposal or generation of hazardous substances was observed on the subject property at the time of the site reconnaissance.

## 5.5 USE OF HAZARDOUS SUBSTANCES

No evidence of significant hazardous substance use was observed on the subject property at the time of the site reconnaissance.

## 5.6 STORAGE TANKS

No evidence of existing aboveground or underground storage tanks, clarifiers, sumps, or grease interceptors was observed on the subject property at the time of the site reconnaissance.

## 5.7 CONTAINERS OF HAZARDOUS OR UNIDENTIFIED SUBSTANCES

No evidence of containers of hazardous or unidentified substances was observed on the subject property at the time of the site reconnaissance.

## 5.8 SOLID WASTE DISPOSAL

Heating and cooling equipment was not observed at the time of the site reconnaissance.

## 5.11 ASBESTOS CONTAINING MATERIALS (ACM)

Sampling of suspect asbestos containing material (ACM) was not included in the scope of work for this study. Suspect ACM was observed in the form of floor tiles and ceiling tiles in the Woodworth School buildings. Due to the date of construction of the subject building in approximately 1960, it is recommended that an asbestos survey be conducted by a certified asbestos consultant prior to renovation or demolition of the subject buildings.

## 5.12 WASTEWATER TREATMENT AND DISPOSAL SYSTEMS

No evidence of wastewater treatment or disposal systems was observed on the subject property at the time of the site reconnaissance.

### 5.13 RADON

Radon hazard assessment was not included in the scope of this study. However, the EDR research report indicates the levels of radon at zero (0) of one (1) sites located within the 90303 zip code in Los Angeles County exceeded four picoCurie per Liter (4 pCi/L), the Federal Action level.

### 5.14 LEAD

Sampling of suspect lead in paint was not included in the scope of work for this project. Lead content in paint was significantly reduced in 1977. Due to the date of construction of the subject building in approximately 1960, it is possible that lead based paint was utilized onsite. The paint coating of the structures appeared in fair condition at the time of the site reconnaissance. It is recommended that a lead survey be conducted by a certified lead consultant prior to renovation or demolition of the subject buildings.

### 5.15 WELLS

## 6.0 NEARBY CONTAMINATED SITES

### 6.1 LANDFILLS

The Solid Waste Information Systems (SWIS), EDR database report, and the Waste Management Unit Database (WMUD) were reviewed to identify landfills and transfer stations located near the property.

The EDR database report indicates that there are no landfills or transfer stations located within a 2,000-foot radius of the subject property. No active hazardous waste landfills are located within Los Angeles County.

## 6.2 OIL FIELD MAPS/METHANE HAZARD ZONES

The California Geologic Energy Management Division's (CalGEM) online mapping system (Well Finder) was researched to determine if oil production occurred on or near the subject property. The CalGEM Well Finder database indicates that there are three (3) oil wells located within 2,000 feet of the subject property. All three (3) oil wells are listed as dry wells that are plugged. Well #1 in the Eunice lease (API 0403705368), located approximately 900 feet to the north of the subject property, and is owned by Duquesne Oil Company. Well #1 in the Hollywood Turf Club C.H. lease (API 0403721197), located 1,500 feet to the north, is owned by Chevron U.S.A. Well #1 in the Johnson lease (API 0403706137), located 1,900 feet to the east, is owned by Chevron U.S.A. This is not considered an environmental concern.

## 6.3 STANDARD ENVIRONMENTAL RECORD SOURCES

In addition to the above records, agency database lists were reviewed for known or suspected contaminated sites and for sites which store, generate or use hazardous materials near the subject property. The subject property addresses are identified on the standard environmental government sources researched in this report. The addresses are listed on the RCRA NONGEN/NLR, HWTS, HAZNET, FINDS, CERS, CERS HAZ WASTE, ECHO, RCRA-SQG, HAULERS, ENVIROSTOR, SCH, NPDES databases. The listings are associated with offsite, cross gradient portions of Monroe Middle School (Parcel C) and Morningside High School (Parcel A). The HAZNET, HWTS, RCRA NONGEN/NLR, RCRA-SQG, CERS, and CERS HAZ WASTE listings for Morningside High School are associated with automotive maintenance

supplies and waste (oil, coolant, etc.) generated in the mechanic shop located on the northwest, offsite portion of Parcel A. Additionally, there are two listings for small quantities of asbestos containing waste from 2008 and 2018, which were likely generated during renovation activities on the Morningside High School buildings. The HAULERS listing is associated with the Inglewood School District Transportation Department, which is permitted to haul hazardous waste to an offsite disposal facility. The HAZNET and HWTS listings associated with Monroe Middle School (Parcel C) indicate 28 tons of asbestos containing waste was generated in 2008 and 10 tons of asbestos containing waste was generated in 2018. This is likely associated with renovation activities on the Monroe Middle School campus. Additionally, in 2006 0.6 tons of unspecific inorganic solid waste was generated on the property. The NPDES listing for Monroe Middle School is from 2009 and is likely associated with the renovation activities that occurred during this time period. The ENVITOSTOR and SCH listings are associated with the DTSC approved Phase I report completed for the property in 2006. The Phase I report is further discussed in **Section 4.1** of this report. There is no record of a release from this offsite, cross gradient facility. None of these listings are an environmental concern for the subject property.

The nearest listed contaminated site to the subject property is located approximately 1000 feet to the north at 3350 Century Boulevard. The northwest portion of this offsite property was formerly occupied by a car wash/gasoline service station and is currently developed with The Village at Century mall. The property is a former LUST cleanup site that received case closure from the LARWQCB in 2010. In 1991, three gasoline USTs were removed from the site and petroleum impacted soil was discovered beneath the removed USTS. Between 2004 and 2006 several soil, soil gas, and groundwater investigations were conducted on the property. In 2007 thirteen vapor extraction wells were installed and run for approximately two years. Three groundwater monitoring wells were installed in 2006 and quarterly groundwater monitoring was conducted until 2009. In the final groundwater monitoring event, all contaminants were at non-detect levels. Benzene, toluene, ethylbenzene, and xylene impacted soil above each respective EPA SLs was left in place beneath the site at depths ranging from 40 to 90 feet bgs. Due to the distance and cross-gradient location it is considered unlikely that this offsite release has impacted the subject property.

The number of environmental sites listed on the databases researched for this report located within a one-half mile radius of the subject property are presented in **TABLE IV**.

Note: A search of public information databases may omit some nearby contaminated sites due to missing or inaccurate information in the public record.

Selected environmental risk sites found to exist within one-quarter mile radius of the property are listed below:

- **Mobile Oil Corp S/S #18-APJ** – 3016 Century Boulevard (1400 feet northeast)
  Listed on LUST, CORTESE, HIST CORTESE, and CERS. The property is a closed LUST site for a former

services station located at the intersection of Crenshaw and West Century Boulevards. In 1988 hydrocarbon impacted soil was discovered on the property during a UST replacement and 161 tons of soil was over excavated and disposed of offsite. In 2001 sampling identified hydrocarbon and BTEX impacts in soil. Further sampling between 2007 and 2009 were used to delineate the impacts to soil and groundwater. Only minor impacts to groundwater between relevant MCLs were identified. The site was granted case closure from the LARWQCB on December 10, 2010. Due to the distance, it is considered unlikely that this offsite release has impacted the subject property.

- **Los Angeles County Fire Station 170** – 10701 Crenshaw Boulevard (700 feet southeast)
  Listed on HWTS, CERS HAZ WASTE, HAZNET, LOS ANGELES CO. HMS, CERS, SWEEPS UST, HIST UST and RCRA NONGEN/NLR. The offsite property is developed with a Los Angeles County Fire Station. Records indicate the fire station regularly generates hazardous waste in the form of waste oil. UST records indicate a diesel UST was installed on the property in 1955 and removed from the property in 1989. There is no records of a release occurring on the property. It is considered unlikely that this offsite property has impacted the subject property to its distance and cross-gradient location.

### 6.4 POTENTIAL VAPOR ENCROACHMENT CONDITION (p-VEC)

The State of California has adopted the Vapor Intrusion Guidance document issued by CalEPA DTSC in October 2011. Potential sources for vapor intrusion to indoor air include degassing of solvents and other compounds from contaminated soil and contaminated groundwater. No evidence of soil and groundwater contamination that would suggest the potential impact of vapor encroachment into onsite structure(s) was noted within the scope of this investigation.

## 7.0 APPARENT PROBLEMS AND CONCERNS

- No recognized environmental conditions (RECs), historical recognized environmental conditions (HREC), or controlled recognized environmental conditions (CRECs) were identified in connection with the subject property.

# 8.0 CONCLUSIONS AND RECOMMENDATIONS

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-13 for the property located at 10500 Yukon Avenue South, 10711 South 10th Avenue, and 3200 West 104th Street, Inglewood, California. Several data failures were encountered during the preparation of this report. The owner and user questionnaire were not returned to CE. This does not alter the conclusions or recommendations made in this report. Review of recorded Land Title Records including environmental liens was excluded from this report. These records should be obtained and reviewed by the user.

**No evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HREC), or controlled recognized environmental conditions (CRECs) was identified in connection with the subject property**. No additional assessment is recommended.

This report is subject to the following **NOTICE**:

## 9.0 OPINION OF ENVIRONMENTAL PROFESSIONAL

All properties are subject to some element of environmental risk and the risk cannot be eliminated. Industrial and commercial properties developed prior to modern environmental laws are especially risk prone to environmental hazards which include, but are not limited to, wastes which may be toxic, ignitable, corrosive or reactive. The potential for these environmental hazards to impact the use of the property can be reduced by the identification and mitigation of the hazards prior to development or redevelopment of the property. Due to the difficulty in locating underground wastes, in some cases it is not always possible to ascertain that hazardous wastes are present on the property prior to development.

A Phase I environmental site assessment does not utilize subsurface exploration to check for the presence of hazardous wastes on the property. The experience of the assessor, along with the research of available reports, aerial photographs and land use records are used to evaluate the potential for hazardous wastes to occur on the site. Based on the information gained from the historical research, subsurface exploration may be recommended to check for the presence of hazardous wastes. Preexisting environmental problems such as the presence of hazardous wastes in the soil or groundwater, can be concealed by grading activities and site improvements. If such wastes are present these wastes cannot be observed.

The undersigned, Charles I. Buckley declares that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312 and I have the specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20.

This report was prepared with the skill and competence as commonly used by environmental professionals in this area. No warranty, expressed or implied, of any kind is made or intended in connection with this report, or by the fact you are being furnished this report, or by any other oral or written statement.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/28/2022 has revealed that there is 1

RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 3 HAZNET sites within approximately 0.001 miles of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Comments: Fieldwork was completed 7/16/2007. On August 8, 2007, the school administrator submitted electronic data for metals, VOCs, lead, OCPs and soil gas for our review. DTSC recommended they incorporate the information into a PEA report and submit for our review. The project consultant then called and indicated they had detected PCE in one location and were seeking our assistance if we would require stepouts. Therefore they requested a meeting in person to discuss the results. On August 15, 2007, DTSC contacted the project proponent and provided them w/a recommendation to conduct step-out-samples at location SG-2 (where PCE was found) and gave them the option to submit PEA report w/a further action recommendation or to conduct the step-out samples now. The choice was theirs to make and requested a notification of their decision.

| Quarterly Update: | Inactive Facility undergoing Corrective Action: All HWMU units have been clean closed. Northrop Grumman Systems Corporation is located in Los Angeles County in the City of Hawthorne. It comprises 321 acres of land and is split by the Dominguez Flood Control Channel, and Crenshaw Boulevard. The parcels are divided into East and West portions of the property for corrective action purposes. There are six (6) RCRA units, five (5) of which are on the west side, and one (1) is on the east side (South Johnson drum storage unit). Interim Status Document was issued on March 30, 1981 for storage and treatment of these RCRA units: four (4) aboveground hazardous wastes in tanks and two (2) storage pads. Closure for the South Johnson drum storage unit was issued in June 2000, and closure of the remaining units (aboveground storage tanks G1, G2, H1, H2, and the remaining storage pad, Satellite 7) was granted in June 2005. Northrop owned the site since 1964. In 1991, the EPA Region IX conducted a Preliminary Assessment (PA) which identified seven (7) Solid Waste Management Units (SWMUs), and three (3) Areas of Concern (AOCs). By 1999, Northrop sold the former Plant |

II to an international/local mail courier company. In 2000, Northrop sold most of the western portion of the Facility to Vought Aircrafts, Inc. (Vought) which maintained the manufacture of commercial aircraft and aircraft parts for the U.S. Military. In the same year, the eastern portion of the Facility was sold to Lowes Enterprises (Lowes), a commercial developer. In 2000, Lowes started re-parceling the East Facility for development purposes after DTSC oversaw the investigation/ remediation of contaminated soils and granted a No Further Action determination on soil at the East Facility. In April 2001, DTSC supplemented the PA by completing a RCRA Facility Assessment for the entire Facility, which identified thirty-nine (39) SWMUs, and sixty-five (65) AOCs. To support the development activities at the Facility, U.S. EPA Region IX and DTSC approved Northrop s request

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

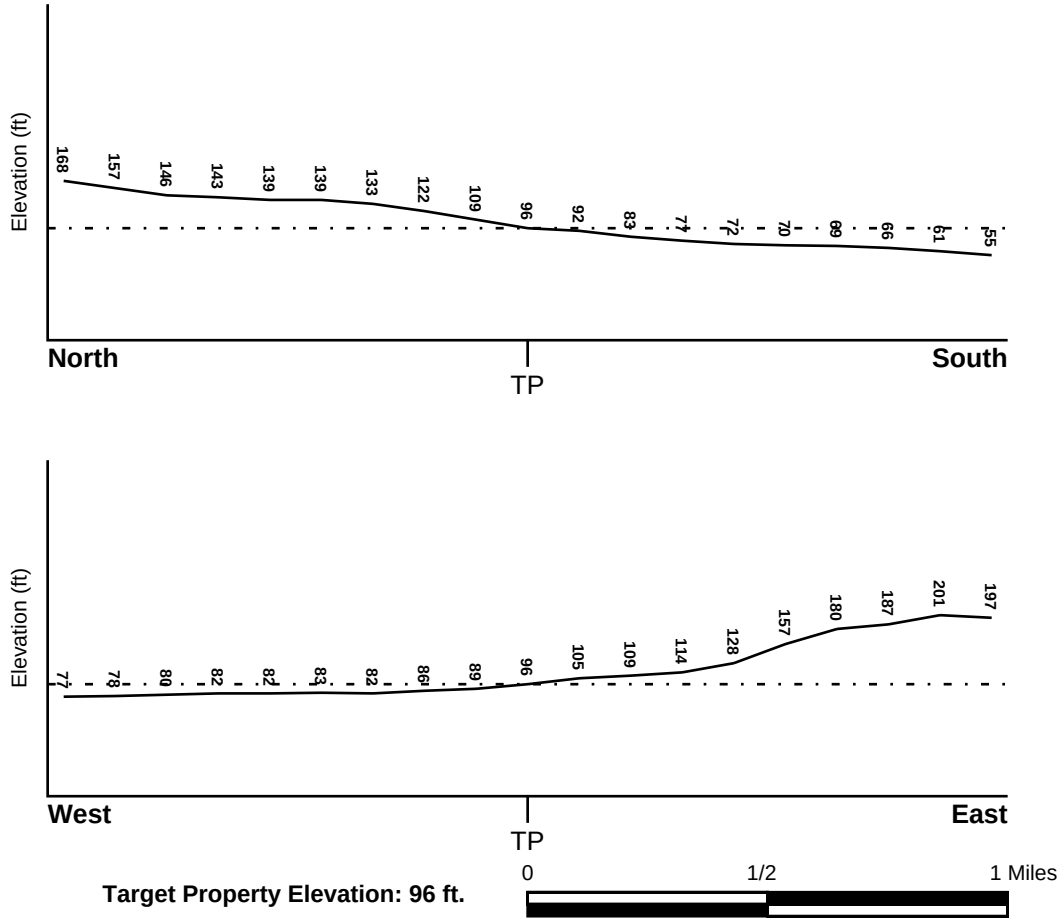

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General SSW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

**Target Property Elevation: 96 ft.**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
