Haul Truck/Worker Trip Adjustment Factor to Model

	Total (miles)
	HAUL
Haul Distance (Haz Waste Facility or Landfill)	86
Hauling Default	40
Vendor	20.40
AERMOD	0.68
% in Dispersion Model, Hauling (Haz Waste Facility or Landfill)	0.8%
Hauling Default	1.7%
% in Dispersion Model, Vendor	3.4%

Calculated in Lake AERMOD View

Haul Route -W	625.6	m
Haul Route -E	1102	m
Haul Route Model	1102	
	1.102	km modeled
	0.62	km to mile conversion
	0.68	Miles modeled

Emissions (g/s)

1.000

Conservatively multiplying by largest percentage of emissions by vehicle class included within each phase

Haul Truck/Worker Trip Adjustment Factor to Model

	Total (miles)
	HAUL
Haul Distance (Haz Waste Facility or Landfill)	86
Hauling Default	40
Vendor	20.40
AERMOD	0.39
% in Dispersion Model, Hauling (Haz Waste Facility or Landfill)	0.5%
Hauling Default	1.0%
% in Dispersion Model, Vendor	1.9%

Calculated in Lake AERMOD View

			Emissions (g/s)
Haul Route -W	625.6	m	1.000
Haul Route -E	1102	m	
Haul Route Model	625.6		
	0.6256	km modeled	
	0.62	km to mile conversion	
	0.39	Miles modeled	

Conservatively multiplying by largest percentage of emissions by vehicle class included within each phase

Haul Truck/Worker Trip Adjustment Factor to Model

	Total (miles)
	HAUL
Haul Distance (Haz Waste Facility or Landfill)	86
Hauling Default	40
Vendor	20.40
AERMOD	0.68
% in Dispersion Model, Hauling (Haz Waste Facility or Landfill)	0.8%
Hauling Default	1.7%
% in Dispersion Model, Vendor	3.4%

Calculated in Lake AERMOD View

Haul Route -W	625.6	m
Haul Route -E	1102	m
Haul Route Model	1102	
	1.102	km modeled
	0.62	km to mile conversion
	0.68	Miles modeled

Emissions (g/s)

1.000

Conservatively multiplying by largest percentage of emissions by vehicle class included within each phase

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Inglewood HS - construction new build MIT avg day
Construction Start Date	7/1/2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	17.6
Location	231 S Grevillea Ave, Inglewood, CA 90301, USA
County	Los Angeles-South Coast
City	Inglewood
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4551
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
High School	178	1000sqft	2.74	177,739	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Building Construction	Building Construction	7/1/2026	12/25/2027	6.00	466	—
Architectural Coating	Architectural Coating	9/11/2026	2/25/2027	6.00	144	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Building Construction	Cranes	Diesel	Tier 4 Final	1.00	1.00	367	0.29
Building Construction	Forklifts	Diesel	Tier 4 Final	2.00	1.00	82.0	0.20
Building Construction	Generator Sets	Diesel	Average	1.00	1.00	14.0	0.74
Building Construction	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	1.00	1.00	84.0	0.37
Building Construction	Welders	Diesel	Tier 4 Final	3.00	1.00	46.0	0.45
Architectural Coating	Air Compressors	Diesel	Tier 4 Final	6.00	1.00	37.0	0.48

5.3. Construction Vehicles

5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Building Construction	—	—	—	—
Building Construction	Worker	76.0	18.5	LDA,LDT1,LDT2
Building Construction	Vendor	30.0	10.2	HHDT,MHDT
Building Construction	Hauling	0.00	20.0	HHDT
Building Construction	Onsite truck	—	—	HHDT
Architectural Coating	—	—	—	—
Architectural Coating	Worker	16.0	18.5	LDA,LDT1,LDT2
Architectural Coating	Vendor	—	10.2	HHDT,MHDT
Architectural Coating	Hauling	0.00	20.0	HHDT
Architectural Coating	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	266,609	88,870	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
High School	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	532	0.03	< 0.005
2027	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.03	annual days of extreme heat
Extreme Precipitation	5.60	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	35.2
AQ-PM	74.0
AQ-DPM	78.6
Drinking Water	53.5
Lead Risk Housing	75.2
Pesticides	0.00
Toxic Releases	87.4
Traffic	33.8
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	41.4
Haz Waste Facilities/Generators	84.6
Impaired Water Bodies	0.00
Solid Waste	70.9
Sensitive Population	—
Asthma	92.4
Cardio-vascular	86.8
Low Birth Weights	24.6
Socioeconomic Factor Indicators	—
Education	67.6
Housing	94.7
Linguistic	66.6
Poverty	83.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	15.91171564
Employed	29.51366611
Median HI	14.69267291
Education	—
Bachelor's or higher	23.67509303
High school enrollment	100
Preschool enrollment	35.28807905
Transportation	—
Auto Access	15.55241884
Active commuting	88.4383421
Social	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0
Healthy Places Index Score for Project Location (b)	17.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
High School	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.03	annual days of extreme heat
Extreme Precipitation	5.60	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	35.2
AQ-PM	74.0
AQ-DPM	78.6
Drinking Water	53.5
Lead Risk Housing	75.2
Pesticides	0.00
Toxic Releases	87.4
Traffic	33.8
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	41.4
Haz Waste Facilities/Generators	84.6
Impaired Water Bodies	0.00
Solid Waste	70.9

Sensitive Population	—
Asthma	92.4
Cardio-vascular	86.8
Low Birth Weights	24.6
Socioeconomic Factor Indicators	—
Education	67.6
Housing	94.7
Linguistic	66.6
Poverty	83.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	15.91171564
Employed	29.51366611
Median HI	14.69267291
Education	—
Bachelor's or higher	23.67509303
High school enrollment	100
Preschool enrollment	35.28807905
Transportation	—
Auto Access	15.55241884
Active commuting	88.4383421

Traffic Access	87.4
Other Indices	—
Hardship	78.7
Other Decision Support	—
2016 Voting	11.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0

Healthy Places Index Score for Project Location (b)	17.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.03	annual days of extreme heat
Extreme Precipitation	5.60	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	35.2
AQ-PM	74.0

AQ-DPM	78.6
Drinking Water	53.5
Lead Risk Housing	75.2
Pesticides	0.00
Toxic Releases	87.4
Traffic	33.8
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	41.4
Haz Waste Facilities/Generators	84.6
Impaired Water Bodies	0.00
Solid Waste	70.9
Sensitive Population	—
Asthma	92.4
Cardio-vascular	86.8
Low Birth Weights	24.6
Socioeconomic Factor Indicators	—
Education	67.6
Housing	94.7
Linguistic	66.6
Poverty	83.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	15.91171564

Employed	29.51366611
Median HI	14.69267291
Education	—
Bachelor's or higher	23.67509303
High school enrollment	100
Preschool enrollment	35.28807905
Transportation	—
Auto Access	15.55241884
Active commuting	88.4383421
Social	—
2-parent households	5.10714744
Voting	30.11677146
Neighborhood	—
Alcohol availability	4.516874118
Park access	11.53599384
Retail density	87.61709226
Supermarket access	80.25150776
Tree canopy	25.48440909
Housing	—
Homeownership	4.914667009
Housing habitability	3.849608623
Low-inc homeowner severe housing cost burden	0.911074041
Low-inc renter severe housing cost burden	46.37495188
Uncrowded housing	27.38354934
Health Outcomes	—
Insured adults	29.96278712
Arthritis	4.9
Asthma ER Admissions	9.7

High Blood Pressure	2.8
Cancer (excluding skin)	38.7
Asthma	2.6
Coronary Heart Disease	3.3
Chronic Obstructive Pulmonary Disease	3.4
Diagnosed Diabetes	0.9
Life Expectancy at Birth	30.3
Cognitively Disabled	20.1
Physically Disabled	5.2
Heart Attack ER Admissions	9.1
Mental Health Not Good	10.5
Chronic Kidney Disease	2.1
Obesity	1.7
Pedestrian Injuries	63.9
Physical Health Not Good	5.3
Stroke	0.9
Health Risk Behaviors	—
Binge Drinking	95.6
Current Smoker	10.6
No Leisure Time for Physical Activity	10.8
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	40.5
Elderly	36.3
English Speaking	34.8
Foreign-born	55.4
Outdoor Workers	50.9

Climate Change Adaptive Capacity	—
Impervious Surface Cover	4.4
Traffic Density	43.8
Traffic Access	87.4
Other Indices	—
Hardship	78.7
Other Decision Support	—
2016 Voting	11.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0
Healthy Places Index Score for Project Location (b)	17.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.03	annual days of extreme heat
Extreme Precipitation	5.60	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	35.2

AQ-PM	74.0
AQ-DPM	78.6
Drinking Water	53.5
Lead Risk Housing	75.2
Pesticides	0.00
Toxic Releases	87.4
Traffic	33.8
Effect Indicators	—
CleanUp Sites	17.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0
Healthy Places Index Score for Project Location (b)	17.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

EXECUTIVE SUMMARY

Inglewood High School Reconstruction Project – Archaeological Resources Assessment Report

The Inglewood Unified School District (District) proposes the Inglewood High School Reconstruction Project (Project) on an approximately 18-acre site composed of four Assessor Parcel Numbers (APNs): 4020-017-900, 4020-016-900, 4020-025-900, and 4020-026-900, located in the City of Inglewood (City).

Environmental Science Associates (ESA) has prepared this archaeological resources assessment to identify and evaluate the potential impacts to archaeological resources associated with the Project for the purpose of complying with the California Environmental Quality Act (CEQA). The scope of work for this assessment included a cultural resources records search through the California Historical Resources Information System-South Central Coastal Information Center (CHRIS-SCCIC), a Sacred Lands File (SLF) search through the Native American Heritage Commission (NAHC), land use history research, geologic map review, review of the Geotechnical Investigation Report (geotechnical report) prepared for the Project, a pedestrian survey of the Project Site, an archaeological sensitivity assessment, and the recommendation of mitigation measures to reduce impacts from the Project to archaeological resources to a less than significant level. The District is the lead agency pursuant to CEQA.

The records search through the CHRIS-SCCIC revealed that although no archaeological resources (historic-period or prehistoric) have been previously recorded within the Project Site or 0.50-mile radius, a total of five prehistoric archaeological resources have been recorded in the general vicinity of the Project Site. More specifically, these prehistoric archaeological resources were recorded in the vicinity of Centinela Creek, which is located near the Project Site.

The records search through NAHC's SLF yielded negative results; however, the NAHC noted that the absence of site information does not mean the absence of cultural resources in a project area.

An archaeological survey of the Project Site was conducted on February 3, 2025. Approximately 35 percent of the Project Site was subject to an opportunistic survey that targeted areas with exposed ground surface, such as landscaped areas, including the front lawn of the campus, and athletic fields. Ground surface visibility within the landscaped areas ranged from approximately 0-10 percent, due to grass and artificial turf that covered the unpaved ground. The remaining 65 percent of the Project Site was not surveyed as it is currently developed with buildings and pavement. No archaeological resources were observed.

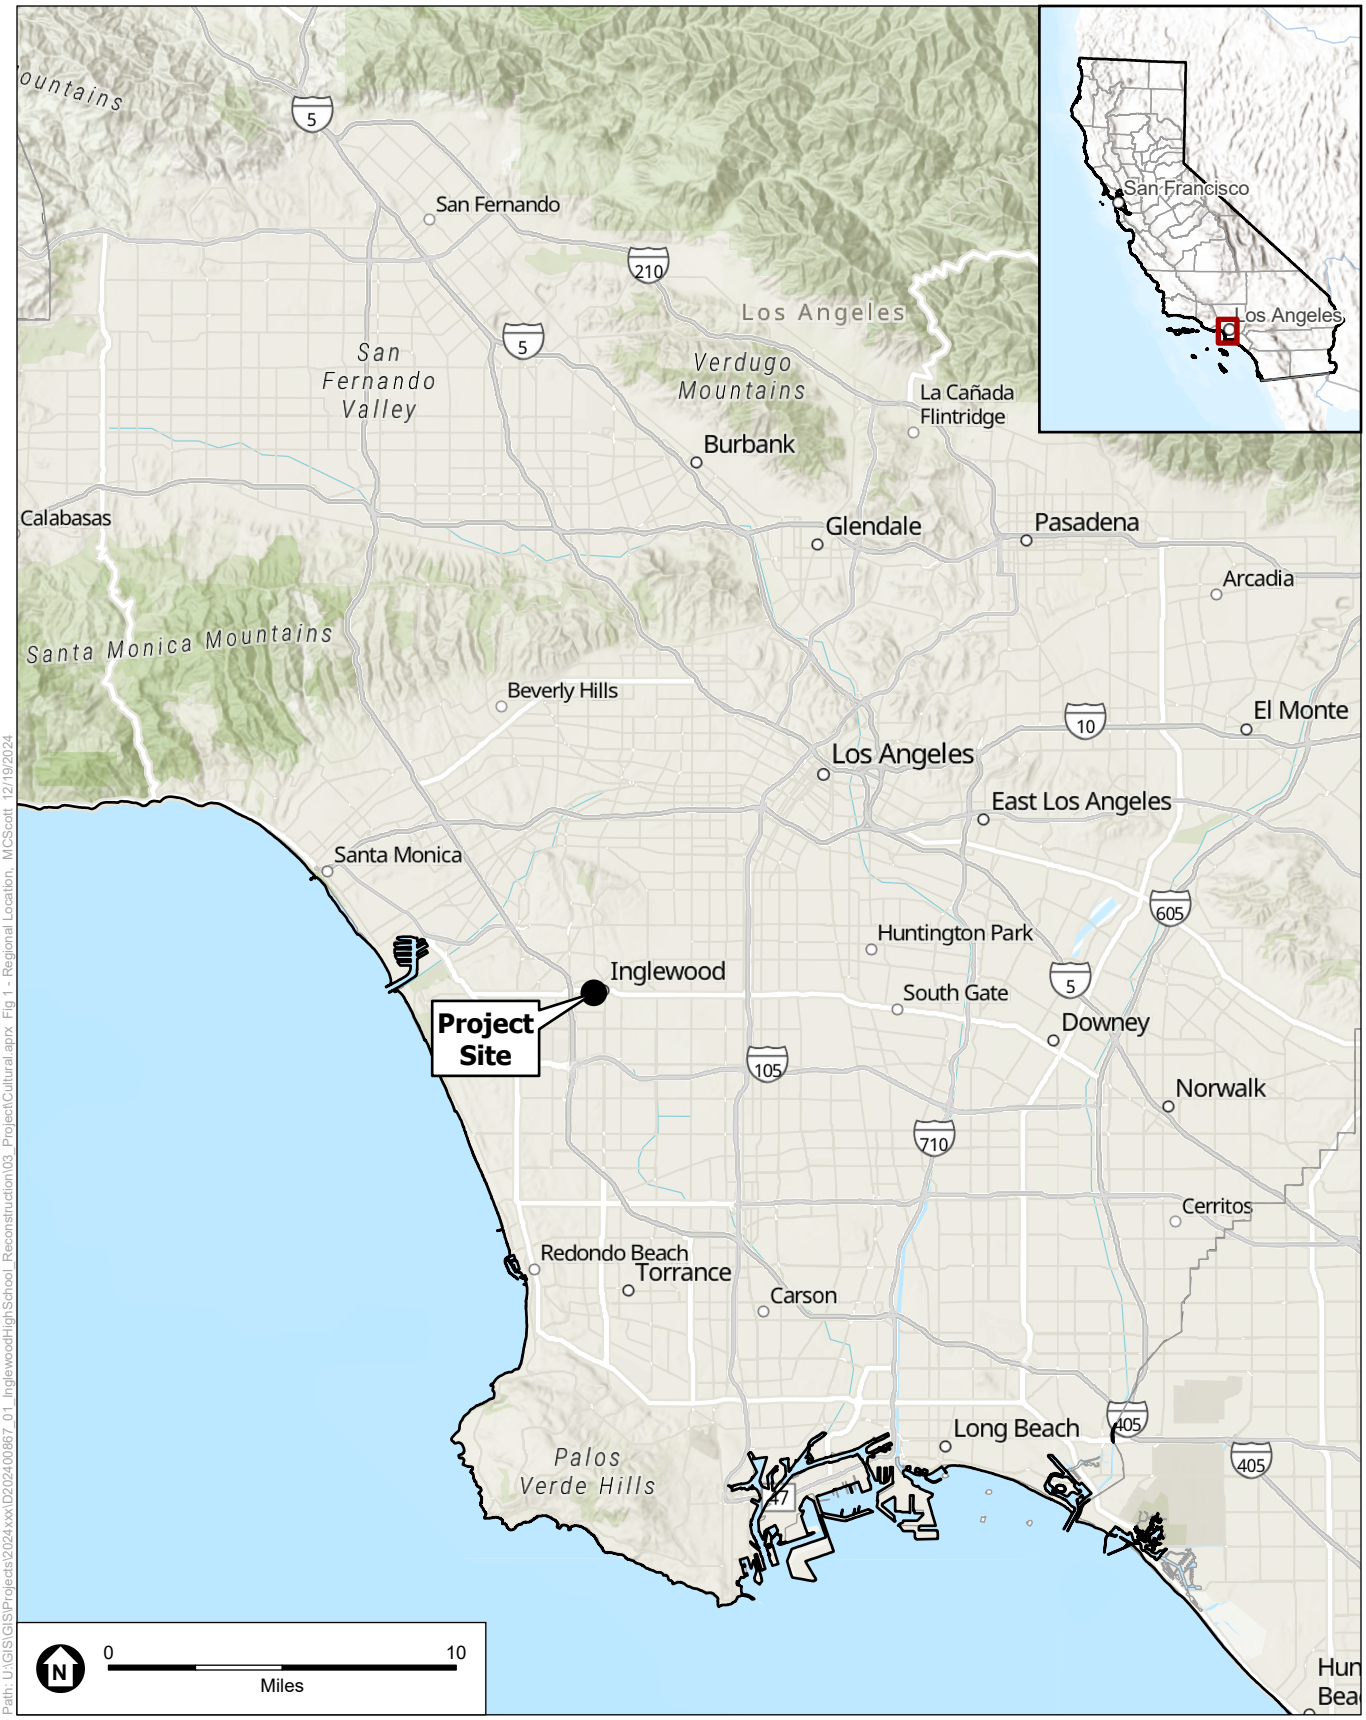
The archaeological sensitivity assessment indicates that the Project Site has a moderate potential for encountering buried prehistoric archaeological deposits based on the following reasons: 1) five prehistoric archaeological sites have been recorded outside the 0.50 mile radius, but in close proximity to Centinela

Creek, which demonstrates prehistoric occupation was a common occurrence in the vicinity of this creek; 2) the Project Site is located in the vicinity of Centinela Creek, an unnamed Native American village and the "Old Salt Road" used by Native Americans which have the potential to retain buried prehistoric archaeological resources; and 3) construction of the majority of existing buildings would not have involved deep excavation that would have displaced archaeological resources. The archaeological sensitivity assessment also indicates that portions of the Project Site (northwestern, southern and western) have a moderate to high potential to yield buried historic-period archaeological resources due to the fact that several residential buildings with outbuildings and garages existed within the Project Site.

ESA recommends implementation of mitigation measures to reduce impacts to archaeological resources, which are provided in the *Summary of Results and Recommended Mitigation Measures* section of this report. With implementation of these measures, impacts to archaeological resources would be less than significant under CEQA.

INGLEWOOD HIGH SCHOOL RECONSTRUCTION PROJECT

Archaeological Resources Assessment Report



Introduction

The Inglewood Unified School District (District) proposes the Inglewood High School Reconstruction Project (Project) on an approximately 18-acre site composed of four Assessor Parcel Numbers (APNs): 4020-017-900, 4020-016-900, 4020-025-900, and 4020-026-900, located in the City of Inglewood (City). Environmental Science Associates (ESA) has prepared this archaeological resources assessment to identify and evaluate the potential impacts to archaeological resources associated with the proposed Project for the purpose of complying with the California Environmental Quality Act (CEQA). The scope of work for this assessment included a cultural resources records search through the California Historical Resources Information Center-South Central Coastal Information Center (CHRIS-SCCIC), a Sacred Lands File (SLF) search through the Native America Heritage Commission (NAHC), land use history research, geologic map review, review of the Geotechnical Investigation Report (geotechnical report) prepared for the Project, a pedestrian survey of the Project Site, an archaeological sensitivity assessment, and the recommendation of mitigation measures to reduce impacts from the Project to archaeological resources to a less than significant level. The District is the lead agency pursuant to CEQA.

ESA personnel involved in the preparation of this report are as follows: Fatima Clark, B.A., project manager and report author; Kyle Garcia, M.A., RPA senior reviewer; Salpi Bocchieriyan, M.A., RPA report author; Ellen McIlvain, B.A., archaeological surveyor; and Chance Scott, GIS specialist. Resumes of key personnel are included in **Appendix A**.

Project Location

The Inglewood High School campus (Project Site or campus) is located at 231 S. Grevillea Avenue in the western central portion of the city within Los Angeles County, California (**Figure 1**). The Project Site is bounded by West Manchester Boulevard to the north, West Kelso Street to the south, South Grevillea Avenue to the east, West Olive Street and South Eucalyptus Avenue to the west (**Figure 2**). It is also situated within an unsectioned area of Township 2 South, Range 14 West on the Inglewood, CA U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (**Figure 3**).

Project Description

The primary campus development is currently situated in the eastern portion of campus and consists of classroom and administrative buildings. Athletic courts and fields are located on the western portion of the campus. The campus currently includes 18 classroom buildings (including permanent classroom buildings and portable classroom buildings). In addition to classroom buildings, the campus includes a fine arts and administration building, an auditorium, locker rooms, library, performing arts building, adult education building, continuing education high school, and home economics building. The existing campus buildings are labeled Buildings A through X as shown on **Figure 4**. Tennis courts, basketball courts, a batting cage, and athletic fields are located west of the majority of the classroom buildings and extend to the western Project Site boundary. In addition, there are existing tennis courts north of Building I as well as existing basketball courts. The Continuing Education High School and After School Education High School buildings are separated from the main campus by fences. These two buildings are located in the southwestern portion of the site along West Kelso Street and have their own parking lot and driveway.

The Project would result in the demolition of the majority of the buildings located on the Project Site, the modernization of some of the existing buildings, and the construction of six new buildings. The proposed demolition activities are shown on Figure 4, and the Inglewood High School proposed components are shown on **Figure 5**. New buildings would include Administration and General Classrooms (Building 1), Food Services and Multipurpose Room (MPR) (Building 2), Science Labs and General Classrooms (Building 3), Student Life (Building 4), Career and Technical Education and General Classrooms (Building 5), and CTE and Music classrooms (Building 6).

The Project also proposes improvements to access, parking and circulation including increasing the total number of parking spaces, improving the campus fire lane, limiting internal vehicle circulation, building a new pedestrian entrance and bridges, and constructing accessible pathways throughout the campus. Lighting, sound systems, and landscaping will be improved across the campus as well. Lastly, the Project proposes improvements to the campus open space including walkways and four new student quads, improvements to electrical/telecommunication and water/sewer utilities, improvements and additions to recreational spaces that would replace the existing athletic field and would replace the tennis courts and basketball courts. The maximum depth of ground disturbance would reach down to 11.5 feet below ground surface (bgs).

Regulatory Framework

Cultural resources fall within the jurisdiction of several levels of government. The framework for the identification and, in certain instances, protection of cultural resources is established at the federal level, while the identification, documentation, and protection of such resources are often undertaken by state and local governments. As described below, the principal state, and local laws governing and influencing the preservation of cultural resources of national, State, regional, and local significance include the following:

- The California Environmental Quality Act
- The California Register of Historical Resources
- The California Health and Safety Code
- The California Public Resources Code
- Assembly Bill 52 and Related Public Resources Code Sections

State

California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified in Public Resources Code (PRC) Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on historical or unique archaeological resources. Under CEQA Section 21084.1, a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment.

CEQA Guidelines Section 15064.5 recognizes that historical resources include: (1) resources listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources; (2) resources included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any objects, buildings, structures, sites, areas, places, records, or manuscripts which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light of the whole record.

If a lead agency determines that an archaeological site is a historical resource, the provisions of PRC Section 21084.1 and CEQA Guidelines Section 15064.5 apply. If an archaeological site does not meet the criteria for a historical resource contained in the CEQA Guidelines, then the site may be treated in accordance with the provisions of PRC Section 21083, if it meets the criteria of a unique archaeological resource. As defined in PRC Section 21083.2, a unique archaeological resource is an archaeological artifact, object, or site, about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information;

- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological site meets the criteria for a unique archaeological resource as defined in PRC Section 21083.2, then the site is to be treated in accordance with the provisions of PRC Section 21083.2, which state that if the lead agency determines that a project would have a significant effect on unique archaeological resources, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place.[1] If preservation in place is not feasible, mitigation measures shall be required. The CEQA Guidelines note that if an archaeological resource is neither a unique archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment.[2]

A significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5(a). Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired".[3] According to CEQA Guidelines Section 15064.5(b)(2), the significance of a historical resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that:

A. Convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

B. Account for its inclusion in a local register of historical resources pursuant to PRC Section 5020.1(k) or its identification in a historical resources survey meeting the requirements of PRC Section 5024.1(g) Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

C. Convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a Lead Agency for purposes of CEQA.

In general, a project that complies with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings is considered to have impacts that are less than significant.[4]

California Register of Historical Resources

The California Register of Historical Resources (California Register) is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and

1 California Public Resources Code Section 21083.1(a), accessed February 9, 2021, http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=21083.2.

2 CEQA Guidelines Section 15064.5(c)(4).

3 CEQA Guidelines Section 15064.5(b)(1).

4 CEQA Guidelines Section 15064.5(b)(3).

feasible, from substantial adverse change."[5] The California Register was enacted in 1992, and its regulations became official on January 1, 1998. The California Register is administered by the California Office of Historic Preservation (OHP). The criteria for eligibility for the California Register are based upon National Register of Historic Places (National Register) criteria.[6] Certain resources are determined to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register. To be eligible for the California Register, a prehistoric or historic-period property must be significant at the local, State, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and,
- Those California Points of Historical Interest that have been evaluated by the State Office of Historic Preservation (OHP) and have been recommended to the State Historical Resources Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historic districts; and,

[5] California Public Resources Code Section 5024.1(a), accessed February 9, 2021, http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=5024.1.

[6] California Public Resources Code Section 5024.1(b), accessed February 9, 2021, http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=5024.1.

- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

California Health and Safety Code

California Health and Safety Code Sections 7050.5, 7051, and 7054 address the illegality of interference with human burial remains (except as allowed under applicable PRC Sections), and the disposition of Native American burials in archaeological sites. These regulations protect such remains from disturbance, vandalism, or inadvertent destruction, and establish procedures to be implemented if Native American skeletal remains are discovered during construction of a project, including treatment of the remains prior to, during, and after evaluation, and reburial procedures.

California Public Resources Code (PRC)

California PRC Section 5097.98, as amended by Assembly Bill 2641, provides procedures in the event human remains of Native American origin are discovered during project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the Native American Heritage Commission (NAHC), upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods. In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the landowner rejects the recommendation of the descendant, the landowner may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

Assembly Bill 52 and Related Public Resources Code Sections

Assembly Bill (AB) 52 was approved by California State Governor Edmund Gerry "Jerry" Brown, Jr. on September 25, 2014. The act amended California PRC Section 5097.94, and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 applies specifically to projects for which a Notice of Preparation (NOP) or a Notice of Intent to Adopt a Negative Declaration or Mitigated Negative Declaration (MND) will be filed on or after July 1, 2015. The primary intent of AB 52 was to include California Native American Tribes early in the environmental review process and to establish a new category of resources related to Native Americans that require consideration under CEQA, known as tribal cultural resources. PRC Section 21074(a)(1) and (2) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe" that are either included or determined to be eligible for inclusion in the California Register or included in a local register of historical resources, or a resource that is determined to be a tribal cultural resource by a lead agency, in its discretion and supported by substantial evidence. On July 30, 2016, the California Natural Resources Agency adopted the final text for tribal cultural resources update to Appendix G of the CEQA Guidelines, which was approved by the Office of Administrative Law on September 27, 2016.

PRC Section 21080.3.1 requires that within 14 days of a lead agency determining that an application for a project is complete, or a decision by a public agency to undertake a project, the lead agency provide formal notification to the designated contact, or a tribal representative, of California Native American Tribes that are traditionally and culturally affiliated with the geographic area of the project (as defined in PRC Section 21073) and who have requested in writing to be informed by the lead agency (PRC Section 21080.3.1(b)). Tribes interested in consultation must respond in writing within 30 days from receipt of the lead agency's formal notification and the lead agency must begin consultation within 30 days of receiving the tribe's request for consultation (PRC Sections 21080.3.1(d) and 21080.3.1(e)).

PRC Section 21080.3.2(a) identifies the following as potential consultation discussion topics: the type of environmental review necessary; the significance of tribal cultural resources; the significance of the project's impacts on the tribal cultural resources; project alternatives or appropriate measures for preservation; and mitigation measures. Consultation is considered concluded when either: (1) the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or (2) a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached (PRC Section 21080.3.2(b)).

If a California Native American tribe has requested consultation pursuant to Section 21080.3.1 and has failed to provide comments to the lead agency, or otherwise failed to engage in the consultation process, or if the lead agency has complied with Section 21080.3.1(d) and the California Native American tribe has failed to request consultation within 30 days, the lead agency may certify an EIR or adopt an MND (PRC Section 21082.3(d)(2) and (3)).

PRC Section 21082.3(c)(1) states that any information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public without the prior consent of the tribe that provided the information. If the lead agency publishes any information submitted by a California Native American tribe during the consultation or environmental review process, that information shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.

Local

City of Inglewood General Plan

The City of Inglewood's General Plan does not identify any goals or policies related to archaeological or cultural resources.

County of Los Angeles General Plan

The Conservation and Natural Resources Element (the Element) of the County's General Plan indicates that "Historic, cultural, and paleontological resources are an important part of Los Angeles County's identity" (Los Angeles County General Plan 2015: 163). The Element provides the following goal and policies for the treatment of cultural resources:

Goal C/NR 14: Protected historic, cultural, and paleontological resources.

Policy C/NR 14.1: Mitigate all impacts from new development on or adjacent to historic, cultural, and paleontological resources to the greatest extent feasible.

Policy C/NR 14.2: Support an inter-jurisdictional collaborative system that protects and enhances historic, cultural, and paleontological resources.

Policy C/NR 14.3: Support the preservation and rehabilitation of historic buildings.

Policy C/NR 14.5: Promote public awareness of historic, cultural, and paleontological resources.

Policy C/NR 14.6: Ensure proper notification and recovery processes are carried out for development on or near historic, cultural, and paleontological resources.

Prehistoric Setting

Based on recent research in the Southern California region (Douglass et al. 2016), the following prehistoric chronology has been divided into four general time periods: the Paleocoastal Period (12,000 to 8,500 Before Present [B.P.]), the Millingstone Period (8,500 to 3,000 B.P.), the Intermediate Period (3,000 to 1,000 B.P.), and the Late Period (1,000 B.P. to Anno Domini [A.D.] 1542). This chronology is manifested in the archaeological record by particular artifacts and burial practices that indicate specific technologies, economic systems, trade networks, and other aspects of culture.

Paleocoastal Period (12,000–8,500 B.P.)

While it is not certain when humans first came to California, their presence in Southern California by about 9,600 cal B.C. has been well documented. At Daisy Cave, on San Miguel Island, cultural remains have been radiocarbon dated to between 11,100 and 10,950 B.P. (Byrd and Raab 2007). During this time period, the climate of Southern California became warmer and more arid and the human population, residing mainly in coastal or inland desert areas, began exploiting a wider range of plant and animal resources (Byrd and Raab 2007). In the Project vicinity, evidence of Paleocoastal occupation is sparse, and none has been confirmed by scientific dating methods (such as radiocarbon dating) (Douglass et al. 2016).

Millingstone Period (8,500–3,000 B.P.)

During this time period, there is evidence for the processing of acorns for food and a shift toward a more generalized economy. The first evidence of human occupation in the Los Angeles area dates to at least 9,000 years B.P. and is associated with the Millingstone cultures (Wallace 1955; Warren 1968). Millingstone cultures were characterized by the collection and processing of plant foods, particularly acorns, and the hunting of a wider variety of game animals (Byrd and Raab 2007; Wallace 1955). Millingstone cultures also established more permanent settlements that were located primarily on the coast and in the vicinity of estuaries, lagoons, lakes, streams, and marshes where a variety of resources, including seeds, fish, shellfish, small mammals, and birds, were exploited. Early Millingstone occupations are typically identified by the presence of handstones (manos) and millingstones (metates), while those Millingstone occupations dating later than 5,000 B.P. contain a mortar and pestle complex as well, signifying the exploitation of acorns in the region. Cogged stones (cog-shaped stones) and discoidal (stone discs) are also indicative of the Millingstone Period.

In the vicinity of the Project Site, sites that date to this time period appear to have been small settlements or campsites reflecting resource gathering groups exploiting nearby lagoon or marshland (inland swamp) resources and specialized resource processing (such as shellfish). There is a gap in the archaeological record between 6,000 and 5,000 B.P., which suggests that the Project Site vicinity was sparsely occupied or abandoned during this time frame (Douglass et al. 2016).

Intermediate Period (3,000–1,000 B.P.)

During this time period, many aspects of Millingstone culture persisted, but a number of socioeconomic changes occurred (Erlandson 1994; Wallace 1955; Warren 1968). The native populations of Southern California were becoming less mobile and populations began to gather in small sedentary villages with satellite resource-gathering camps. Increasing population size necessitated the intensified use of existing terrestrial and marine resources (Erlandson 1994). Evidence indicates that the overexploitation of larger, high-ranked food resources may have led to a shift in subsistence towards a focus on acquiring greater amounts of smaller resources, such as shellfish and small-seeded plants (Byrd and Raab 2007). This period is characterized by increased labor specialization, expanded trading networks for both utilitarian and non-utilitarian materials, and extensive travel routes. Trade increased dramatically during this period, with asphaltum (tar), seashells, and steatite being traded from Southern California to the Great Basin. Use of the bow and arrow spread to the coast around 1,500 B.P, largely replacing the dart and atlatl (Homburg et al. 2014). Increasing population densities, with ensuing territoriality and resource intensification, may have given rise to increased disease and violence between 3,300 and 1,650 B.P. (Raab et al. 1995).

The Intermediate Period is characterized by a lack of manos, metates, and core tools, an increase in the use of mortars and pestles, and the introduction of stone-lined earthen ovens. There is a wider variety and increased numbers of projectile points, and flexed burials are common (Douglass et al. 2016).

In the Project Site vicinity, the population density increased, possibly as a result of the migration of eastern desert Takic peoples into the Los Angeles Basin, which is postulated to have begun by the end of the late Millingstone period and to have continued into the late Intermediate period. The Takic incursion resulted in the introduction of new material culture and mortuary practices, and an increase in genetic variation, population, number of sites, and focus on terrestrial resources. Changes in climate may also have contributed to the increased occupation of the area, as a wetter environment led to increased biological diversity. During this time, the Ballona wetlands (located approximately 5.75 miles northwest of the Project Site) shifted from an open embayment to a more closed, brackish environment. Lowland sites were likely occupied on a seasonal or semi-permanent basis as resource processing camps, with semi-permanent settlements on the bluff tops. Other important local developments during this time period include organized site structure with designated areas for different types of activities, and the rise of the mourning ceremony with the ritual destruction and burial of ground stone and the deceased's personal possessions. Local settlement patterns reflect functional rather than social differentiation (Douglass et al. 2016).

Late Period (1,000 B.P.–A.D. 1542)

The Late Period is associated with the florescence of the Gabrielino, who are estimated to have had a population numbering around 5,000 in the pre-contact period. The Gabrielino occupied what is presently Los Angeles County and northern Orange County, along with the southern Channel Islands, including Santa Catalina, San Nicholas, and San Clemente (Kroeber 1925). This period saw the development of elaborate

trade networks and use of shell-bead currency. Fishing became an increasingly significant part of subsistence strategies at this time, and investment in fishing technologies, including the plank canoe, are reflected in the archaeological record (Erlandson 1994; Raab et al. 1995). At this time, settlement is believed to have consisted of dispersed family groups that revolved around a relatively limited number of permanent village settlements that were located centrally with respect to a variety of resources (Koerper et al. 2002).

In contrast to other parts of Southern California, occupation of sites in the Project Site vicinity appears to decrease during the early Late period, probably due to changing climate that resulted in an overall decline in precipitation, and episodic drought and flooding (the onset of the Late Period coincided with the medieval climatic anomaly [or MCA], a period of extended drought that occurred between A.D. 800 and 1350) (Douglass et al. 2016).

Ethnographic Setting

The Project Site is situated within land traditionally occupied by the Gabrielino (including the Tongva and Kizh). The following summary is not intended to provide a comprehensive account of this group but is instead a brief historical overview based on available information from resources cited below.

Gabrielino (or Tongva or Kizh)

The term "Gabrielino" is a general term that refers to those Native Americans who were sent by the Spanish to the Mission San Gabriel Arcángel. (Bean and Smith 1978). Two indigenous terms are commonly used by tribal groups to refer to themselves and are preferred by descendant groups: Tongva and Kizh (Heizer 1968). Prior to European colonization, the Gabrielino occupied a diverse area that included: the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Bean and Smith 1978). Their neighbors included the Chumash and Tataviam to the north, the Juañeno to the south, and the Serrano and Cahuilla to the east. The Gabrielino are reported to have been second only to the Chumash in terms of population size and regional influence (Bean and Smith 1978). The Gabrielino language was part of the Takic branch of the Uto-Aztecan language family.

The Gabrielino Indians were hunter-gatherers and lived in permanent communities located near the presence of a stable food supply. Subsistence consisted of hunting, fishing, and gathering. Small terrestrial games were hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows (Bean and Smith 1978). Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. The Gabrielino are estimated to have had a population numbering around 5,000 in the pre-contact period (Kroeber 1925). The Late Prehistoric period, spanning from approximately 1,500 years B.P. to the mission era, is the period associated with the florescence of the Gabrielino (Wallace 1955). Coming ashore near Malibu Lagoon or Mugu Lagoon in October of 1542, Juan Rodriguez Cabrillo was the first European to make contact with the Gabrielino Indians. Maps produced by early explorers indicate that at least 26 Gabrielino villages were within proximity to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river (Gumprecht 2001).

Maps produced by early explorers indicate that at least 26 Gabrielino villages were within proximity to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river

(Gumprecht 2001). Review of a map titled *Kirkman-Harriman Pictorial and Historical Map of Los Angeles County* (Kirkman 1938) shows that an unnamed settlement/village is located southeast and at the foot of Baldwin Hills and north of Aguaje de la Centinela. The Kirkman (1938) map also depicts an "Old Salt Road" used by Native Americans in the vicinity of the Project Site. This salt road appears to be connected with the Old Salt Lake used by Native Americans.

The closest named settlements to the Project Site are *Saa'anga* and *Waachnga*. Review of a map titled *Gabrielino Communities Located on the Los Angeles-Santa Ana Plain* by William McCawley (1996) indicates that the settlement of *Saa'anga* was located approximately 2.5 miles away from the Project Site, while the settlement of *Waachnga* was situated approximately 2 miles away. Both of these settlements are depicted as located close to Ballona Creek.

Historic Setting

Spanish Period (A.D. 1542–1821)

Although Spanish explorers made brief visits to the Southern California region in 1542 and 1602, sustained contact with Europeans did not commence until the onset of the Spanish Period. In 1769 Gaspar de Portolá led an expedition from San Diego, passing through the Los Angeles Basin and the San Fernando Valley, on its way to the San Francisco Bay (McCawley 1996). Father Juan Crespi, who accompanied the 1769 expedition, noted the suitability of the Los Angeles area for supporting a large settlement. This was followed in 1776 by the expedition of Father Francisco Garcés (Johnson and Earle 1990).

In the late 18th century, the Spanish began establishing missions in California and forcibly relocating and converting native peoples. Mission San Gabriel Arcángel was founded on September 8, 1771, and Mission San Fernando Rey de España on September 8, 1797. By the early 1800s, the majority of the surviving Gabrielino population had entered the mission system, either at San Gabriel or San Fernando. Mission life offered some degree of security in a time when traditional trade and political alliances were failing, and epidemics and subsistence instabilities were increasing (Jackson 1999). These lifestyle changes also brought with it significant negative consequences for Gabrielino health and cultural integrity.

On September 4, 1781, *El Pueblo de la Reina de los Angeles* was established not far from the site where Portolá and his men camped during their 1769 excursion, with a land grant of 28 acres issued to California Governor Felipe de Neve in 1781 (Gumprecht 2001). The pueblo was first established in response to the increasing agricultural needs of Spanish missions and presidios in Alta California. The original pueblo consisted of a central square surrounded by 12 houses and a series of agricultural fields. Thirty-six fields occupied 250 acres between the town and the river to the east (Gumprecht 2001).

By 1786, the flourishing pueblo attained self-sufficiency and funding by the Spanish government ceased. Fed by a steady supply of water and an expanding irrigation system, agriculture and ranching grew, and by the early 1800s the pueblo produced surplus wheat, corn, barley, and beans for export. A large number of livestock, including cattle and sheep, grazed in the surrounding lands (Gumprecht 2001).

The Protohistoric Period (A.D. 1540–1770) and the Mission Period (A.D. 1769–1830) largely fall within this period, and are the terms often used in the archaeological record to refer to sites occupied during these two timeframes.

Mexican Period (A.D. 1821–1848)

Mexico gained its independence from Spain in 1821 (Gumprecht 2001). Mexico promoted the settlement of California with the issuance of land grants. In 1833, Mexico began the process of secularizing the missions, reclaiming the majority of mission lands and redistributing them as land grants. According to the terms of the Secularization Law of 1833 and Regulations of 1834, at least a portion of the lands would be returned to the Native populations, but this did not always occur (Milliken et al. 2009).

Many ranchos continued to be used for cattle grazing by settlers during the Mexican Period. Hides and tallow from cattle became a major export for Californios,[7] many of whom became wealthy and prominent members of society. The Californios led generally easy lives, leaving the hard work to vaqueros and Indian laborers (Pitt 1994; Starr 2007).

The Rancho Period (A.D. 1834–1848) falls within this period, and is often used in the archaeological record to refer to sites occupied during this timeframe.

American Period (A.D. 1848–Present)

Mexico ceded California to the United States as part of the Treaty of Guadalupe Hildalgo in 1848. California officially became one of the United States in 1850. While the treaty recognized right of Mexican citizens to retain ownership of land granted to them by Spanish or Mexican authorities, the claimant was required to prove their right to the land before a patent was given. The process was lengthy and generally resulted in the claimant losing at least a portion of their land to attorney's fees and other costs associated with proving ownership (Starr 2007).

When the discovery of gold in northern California was announced in 1848, a huge influx of people from other parts of North America flooded into California and the population of Los Angeles County tripled between 1850 and 1860. The increased population provided an additional outlet for the Californios' cattle. As demand increased, the price of beef skyrocketed and Californios reaped the benefits. However, a devastating flood in 1861, followed by droughts in 1862 and 1864, led to a rapid decline of the cattle industry; over 70 percent of cattle perished during these droughts (McWilliams 1946; Dinkelspiel 2008). These natural disasters, coupled with the burden of proving ownership, caused many Californios to lose their lands during this period. Former ranchos were subsequently subdivided and sold for agriculture and residential settlement (Gumprecht 2001; McWilliams 1946).

Los Angeles County was connected to the transcontinental railroad via San Francisco on September 5, 1876, and the population again exploded. The Southern California region would experience its greatest growth in the 1880s when two more direct rail connections to the East Coast were constructed. The Southern Pacific completed its second transcontinental railway, the Sunset Route from Los Angeles to New Orleans, in 1883 (Orsi 2005). In 1885, the Santa Fe Railroad completed a competing transcontinental railway to San Diego, with connecting service to Los Angeles (Mullaly and Petty 2002). The resulting fare wars led to an unprecedented real estate boom. Despite a subsequent collapse of the real estate market, the population of Los Angeles increased 350 percent from 1880 to 1890 (Dinkelspiel

[7] Spanish-speaking, Catholic persons of Latin American descent born in Alta California between 1769 and 1848.

2008). The Los Angeles region continued on its upward trajectory in the first few decades of the 20th century with the rise of tourism, automobile travel, and the movie industry (McWilliams 1946).

Archival Research

SCCIC Records Search

A records search for the Project Site was conducted on January 17, 2025, at the CHRIS-SCCIC housed at California State University, Fullerton by ESA. The records search included a review of all recorded cultural resources (archaeological and historic architectural) and previous studies within the Project Site and a 0.50-mile radius. A previous records search for another project conducted by ESA and located in the vicinity of the Project Site was also reviewed for previously recorded archaeological resources (ESA 2023).

Previous Cultural Resources Investigations

The records search results indicate that 15 cultural resources studies have been conducted within a 0.50-mile radius of the Project Site. Approximately 5 percent of the 0.50-mile records search radius has been included in previous cultural resources assessments involving pedestrian surveys. Of the 15 previous assessments, one study (LA-02904) covered the Project Site as well as a large area along the western coastal zone of the Los Angeles Basin; however, this study only consisted of a literature review and did not include a pedestrian survey of the Project Site.

Previously Recorded Cultural Resources

The records search results indicate that a total of six cultural resources have been recorded within the 0.50-mile radius. Of the six resources, all are historic architectural resources (P-19-186693, -188843, -189454, -189987, -190143, and -190144). None of these resources are located within the Project Site; however, one (P-19-186693) is located within 100 feet of the Project Site. No archaeological resources (historic or prehistoric) have been previously recorded within the Project Site or 0.50-mile radius. However, review of a previous records search for another project located in the vicinity of the Project Site indicates that a total of five prehistoric archaeological resources (CA-LAN-59, -60, -213, -216, -2768) have been recorded in the general vicinity of the Project Site (**Table 1**). More specifically, these prehistoric archaeological resources were recorded in the vicinity of Centinela Creek and approximately 1.8 to 2.8 miles from the Project Site. The current Project Site is also located in the immediate vicinity of Centinela Creek.

Other Research

Additional archaeological resources (the report for which have not yet been archived at the CHRIS-SCCIC as it is still in progress) were identified approximately 4.5 miles from the Project Site during ground disturbing activities in connection with a development project in Downtown Culver City (ESA 2022). These include two isolated prehistoric metates that were recovered in the upper six feet of disturbed fill sediments in an area of the property that had been previously developed with a large warehouse building.

Sacred Lands File Search

The NAHC maintains a confidential Sacred Lands File (SLF) which contains sites of traditional, cultural, or religious value to the Native American community. The NAHC was contacted on December 20, 2024, to request a search of the SLF. The NAHC responded to the request in a letter dated January 9, 2025, indicating that the results were negative. However, the NAHC noted that the absence of site information does not mean the absence of cultural resources in a project area (**Appendix B**).

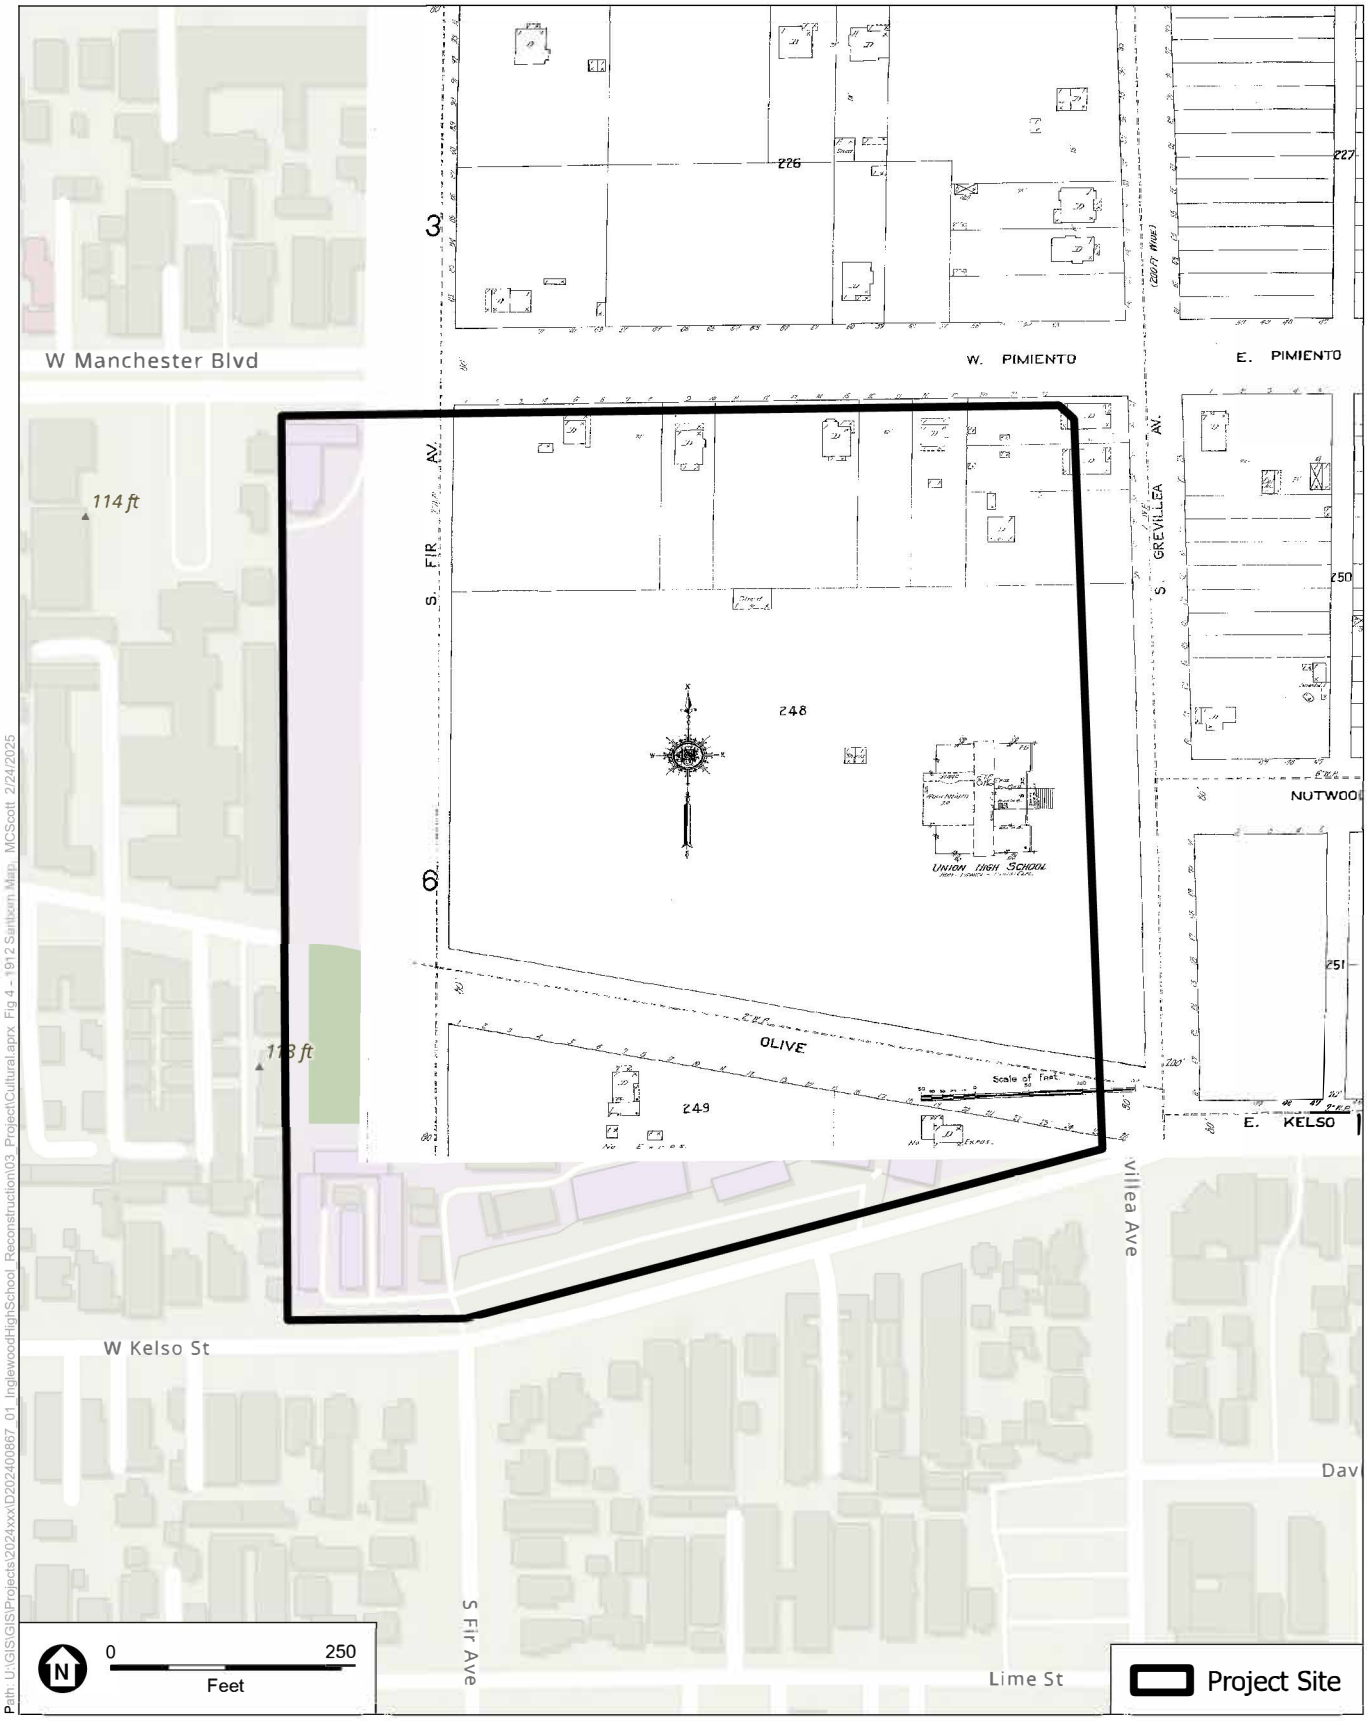
Land Use History of the Project Site

Historic maps, Sanborn Fire Insurance (Sanborn) maps, and aerial photographs were examined to provide historical information about land uses of the Project Site and to contribute to an assessment of the Project Site's archaeological sensitivity. Available topographic maps include the 1894 Redondo 15-minute quadrangle (TopoView 2025). Sanborn maps for the following years were reviewed: 1912, 1922, 1950 (Los Angeles Public Library 2025), and 1966 (Smith-Emery GeoServices 2002). Aerial photographs from 1952, 1980, 1993, 2003, 2014 (historicaerials.com 2025), and 2025 were also reviewed (BingMaps 2025).

The 1894 historic map shows that the Project Site was located within several subdivided lots and that an unnamed road crossed the western portion of the Project Site in a north-south direction. A small structure is also shown within the northeastern portion of the Project Site and the Atchison Topeka and Santa Fe Railroad and Centinela Creek are depicted approximately 0.20-0.25 miles north of the Project Site.

The 1912 Sanborn map covers approximately 75 percent of the Project Site; the westernmost and southernmost portions of the Project Site are not depicted. Approximately seven residential dwellings with potential outbuildings at the rear of the properties are observed along the northernmost portion of

the Project Site along W. Pimento (now known as W. Manchester Blvd). Union High School and two outbuildings are shown along the east central portion of the Project Site and along Grevillea Ave. The southern portion of the Project Site is bisected by Olive St., and S. Fir Ave. is observed along the western portion of the Project Site. Two residential dwellings with outbuildings are also shown south of Olive St. (**Figure 6**).



The 1922 Sanborn map shows that the school had been expanded to include five buildings (Administration/Auditorium, Manuel Arts, Domestic Science, Science, and Gymnasium), including an addition to the first building observed in the 1912 Sanborn map. The 1922 Sanborn map also shows that approximately 15 residential dwellings with outbuildings and garages were located south of Olive St. and approximately 15 residential dwellings with outbuildings were situated west of S. Fir Ave (**Figure 7**).

The 1950 Sanborn map indicates that the residential dwellings along the northern portion of the Project Site had been removed to make way for a Fine Arts building, a Boys Gymnasium and locker room, a swimming tank, and a Shops building. A "Machine Shop and Sheet Metal Works", a music room, and other classrooms were also constructed in the central portion of the Project Site. An auditorium was constructed along Olive St. and the residential dwellings once observed in the southern portion of the Project Site in the 1922 Sanborn map are no longer depicted. The 1950 Sanborn map also shows that the residential dwellings west of S. Fir Ave. had also been removed by this time and an Auto Shop, Home Arts, and Arts and Crafts buildings had been constructed (**Figure 8**).

The 1952 aerial photograph shows a running track field along the western portion of the Project Site.

The 1966 Sanborn map shows that a music building was constructed to the west of the auditorium. Several new classroom buildings (used for sewing/homemaking, student lounge, a biology lab, printing/journalism purposes) were observed in the area of the former Administration, Manuel Arts, Domestic Science buildings, which had been demolished. Additionally, the 1966 Sanborn map no longer depicts S. Fir Ave and Olive St. as bisecting the Project Site.

The 1980 aerial photograph shows the existence of a small surface parking lot along the southernmost portion of the Project Site and tennis courts and basketball courts in the central portion of the Project Site. The 1993 aerial photograph depicts long rectangular buildings along the southwestern portion of the Project Site. Lastly, the 2003, 2014, and 2025 aerial photographs show no changes to the Project Site.

Geologic Map Review

Review of the surficial geologic map of the Long Beach 30' X 60' Quadrangle indicates that the Project Site is underlain by old alluvial valley deposits (mapped as Qoa) consisting of "slightly to moderately consolidated, moderately dissected clay, silt and sand, and gravel along stream valleys and alluvial flats of larger rivers" (Bedrossian et al., 2012). These deposits date to the Late to Middle Pleistocene.

Geotechnical Report Review

ESA reviewed the geotechnical report prepared for the Project prepared by Geolabs-Westlake Village (2024). The geotechnical report indicates that a total of nine 8-inch diameter hollow-stem auger borings (B1, B2, PT1-PT7) were excavated across the Project Site ranging in depth from 5 to 50 feet in depth. Six of these borings were utilized for on-site infiltration testing. The geotechnical analysis indicates that concrete, sidewalk, lawn, or asphalt was found at the surface down to approximately 1-1.5 feet bgs, followed by undocumented artificial fill (associated with past grading, installation of utility lines, and an abandoned septic system) up to a maximum thickness of 3 feet. However, there is also a narrow strip of land along the northeastern-most boundary of the campus where the maximum fill depth is 8 feet, which is related to the installation of the septic system. Older alluvium, herein referred to as the Lakewood Formation (Qlw), composed of clays, silts, and silty-to-gravelly sands were found beneath the fill materials. Plate 5 of the geotechnical report shows trench profiles with Qlw extending to 10 feet bgs. The Lakewood Formation soils initially vary from mottled brown to very dark brown in the upper 3 to 4 feet to increasingly lighter colors at depths. At 4 feet bgs, the Lakewood Formation soils become brown to dark yellowish-brown with gray-brown mottling (Geolabs-Westlake Village 2024).

The geotechnical report notes formations not recognized in the regional mapping of Dibblee and Minch (2007) or Bedrossian et al. (2012). Dibblee and Minch (2007) distinguish two marine Pleistocene formations below the older alluvium: the San Pedro Sand and the Inglewood Formation. Both of these formations are not exposed near the Project Site but crop out in the Windsor Hills to the north. The "Lakewood Formation" is used to denote non-marine Pleistocene deposits in the coastal region of the Los Angeles Basin (California Department of Water Resources, 1961). The name is primarily used in subsurface logs to denote a critical aquifer (e.g., Reicheard et al., 2003). In this report, ESA prefers to use the more general "Older Alluvium" to capture a fuller picture of the Pleistocene deposits, regardless of formal formation designation.

Pedestrian Survey

An archaeological survey of the Project Site was conducted on February 3, 2025, by ESA Cultural Resources Specialist Ellen McIlvain, B.A. The survey was aimed at identifying surface evidence of archaeological resources within the Project Site. Approximately 35 percent of the Project Site was subject to an opportunistic survey that targeted areas with exposed ground surface, such as landscaped areas, including the front lawn of the campus and athletic fields. Ground surface visibility within the landscaped areas ranged from approximately 0-10 percent, due to grass and artificial turf that covered the unpaved ground (**Figures 9–11**). The remaining 65 percent of the Project Site was not surveyed as it is currently developed with buildings and hardscape surfaces (asphalt and concrete). No archaeological resources or other indicators of archaeological materials, such as midden soils or shell were observed within the areas surveyed.

Subsurface Sensitivity Assessment

Prehistoric Archaeological Analysis

Review of the geotechnical report indicates that fill materials occur within the Project Site from the surface down to 3 feet bgs, although there is also a narrow strip of land along the northeastern-most boundary of the campus where the maximum fill depth is 8 feet. The geologic map showed that alluvium sediments (dating back to the Late and Middle Pleistocene) are mapped within the Project Site. The geotechnical report mentioned that these older alluvium sediments (associated with the Lakewood Formation) are found beneath the fill materials. Additionally, five prehistoric archaeological resources have been recorded outside the 0.50-mile radius, but in close proximity to Centinela Creek, which demonstrates prehistoric occupation was a common occurrence in the vicinity of this creek. Given the Project Site's location in the vicinity of Centinela Creek (approximately 800 feet away from the Project Site) (TopoView 2025), an unnamed Native American village in the vicinity (Kirkman 1938), and the "Old Salt Road" used by Native Americans (Kirkman 1938), the Project Site has the potential to retain buried prehistoric archaeological resources. Moreover, although the Project Site is developed, construction of the majority of existing buildings dating between the early 1910s to the 1960s would not likely have involved particularly deep excavation that would have displaced archaeological resources. The only areas where deep excavation has taken place is Building A, which has a partial basement and Building P which has a pool. Additionally, in cases where later development does disturb native sediments, archaeological materials can become intermixed or redeposited within historic fill such as in the case with the two prehistoric metates encountered during monitoring (in the upper six feet of disturbed fill materials) in connection with a development project in Downtown Culver City located approximately 4.5 miles from the Project Site in a similar geologic setting and underneath buildings. Given these findings, there is at least a moderate potential for prehistoric archaeological materials to be encountered as a result of Project-related ground-disturbing activities.

Historical Archaeological Analysis

Per review of the Sanborn maps, development at the Project Site began by at least the 1910s. The 1912 Sanborn map shows that Union High School and two outbuildings are located within the east central portion of the Project Site and several residential dwellings with outbuildings existed along the northernmost portion of the Project Site and south of Olive St. The 1922 Sanborn map shows that the school had been expanded and that approximately 15 residential dwellings with outbuildings and garages were located south of Olive St. and approximately 15 residential dwellings with outbuildings were situated west of S. Fir Ave. The 1950 Sanborn map shows that the residential dwellings along the northern, southern, and western portions of the Project Site had been removed. Approximately 75 percent of the Project Site is currently developed with buildings and pavement (concrete walkways, athletic facilities and a surface parking lot), while approximately the remaining 25 percent is covered by sod/grass. Building A is known to have a partial basement, while a portion of Building P is known to contain a pool. Therefore, if any resources once existed within Buildings A and P, these are likely to have been destroyed during deep excavations for the pool and basement. However, there is still potential for unearthing resources along the northwestern, southern and western portions of the Project Site, as these areas have not been subject to deep excavations and are not known to contain basements or pools. Currently the western portion is covered by sod and the southernmost portion is developed with some buildings and a surface parking lot. Pavement/parking lots have the potential to cap and preserve archaeological resources below the surface as excavations for these are typically shallow and would therefore not disturb or displace deeper archaeological resources, and the pavement could have served as a barrier that could have prevented further impacts to any such resources. Given the potential for past land uses [residential dwellings with outbuildings and garages] to have capped and sealed archaeological resources, the potential to encounter historic-period archaeological resources along the northwestern, southern, and western portions, is considered moderate to high.

Summary of Results and Recommended Mitigation Measures

The archaeological sensitivity assessment has indicated that the potential for encountering prehistoric archaeological resources at the Project Site is moderate, while the potential for historic-period archaeological resources is considered moderate to high. Therefore, impacts to previously unknown buried archaeological resources would be potentially significant, and the following mitigation measures are provided in order to reduce impacts to archaeological resources to a less-than-significant level under CEQA.

> **Mitigation Measure CUL-1:** Prior to ground disturbing activities, the District shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology (Qualified Archaeologist) to oversee an archaeological monitor who shall be present during construction excavations such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the Project. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated, and the depth of excavation, and if found, the abundance and type of archaeological resources encountered, as determined by the Qualified Archaeologist. The frequency of monitoring shall be determined based on the factors presented above and can be reduced to part-time inspections. The monitoring can also be ceased as determined appropriate by the Qualified Archaeologist if older Quaternary alluvium sediments (not conducive to retaining prehistoric archaeological resources) are encountered. Prior to

commencement of excavation activities, an Archaeological and Cultural Resources Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the Qualified Archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

Mitigation Measure CUL-2: In the event that historic or prehistoric archaeological resources (e.g., bottles, foundations, refuse dumps, Native American artifacts or features, etc.) are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. An appropriate buffer area shall be established by the Qualified Archaeologist around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by project construction activities shall be evaluated by the Qualified Archaeologist and a Gabrielino Tribe. If the resources are Native American in origin, the Gabrielino Tribe shall consult with the District and Qualified Archaeologist regarding the treatment and curation of any prehistoric archaeological resources. If a resource is determined by the Qualified Archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the Qualified Archaeologist shall coordinate with the District to develop a formal treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. The treatment plan shall incorporate the Gabrielino Tribe's treatment and curation recommendations. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. The treatment plan shall include measures regarding the curation of the recovered resources that may include curation at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material and/or the Gabrielino Tribe. If no institution or the Gabrielino Tribe accept the resources, they may be donated to a local school or historical society in the area for educational purposes.

Mitigation Measure CUL-3: Upon completion of the archaeological monitoring, the Qualified Archaeologist shall prepare a final report and appropriate California Department of Parks and Recreation Site Forms at the conclusion of archaeological monitoring. The report shall include a description of resources unearthed, if any, treatment of the resources, results of the artifact processing, analysis, and research, and evaluation of the resources with respect to the California Register of Historical Resources and CEQA. The report and the Site Forms shall be submitted to the District, the South Central Coastal Information Center, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the Project and required mitigation measures.

Fatima Clark

Archaeologist

EDUCATION

BA, Anthropology, California State University, Fullerton

17 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Orange County Certified Archaeologist

HAZWOPER Certified

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima has 17years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to California Department of Transportation (Caltrans) requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Relevant Experience

Los Angeles Department of Water and Power, Fort Independence Travel Plaza Power Project, Independence (Owens Valley), CA. *Project Manager*. Fatima is in the process of preparing the cultural resources assessment in compliance with NEPA, Section 106, and CEQA. LADWP proposes to install 13 new temporary poles, one (1) anchor, and replace one (1) existing pole for a 34.5 kV line extension to provide power during construction of a new Travel Center at 141 N. Highway 395 in Fort Independence, Inyo County, California.

Landify ECT Corporation, Lower Sweetwater Park Project, City of Chula Vista, CA. *Project Manager*. Fatima has prepared a cultural resources assessment in compliance with CEQA. The Project proposes to redevelop the existing 21.3 acre Project Site with sports facilities within the City of Chula Vista.

County of Los Angeles, Department of Public Works, Whittier Boulevard Underground Utility Project, Los Angeles County, CA. *Project Co-Manager.* Fatima prepared the cultural resources assessment in support of a Class 2 Categorical Exemption. The project consists of the removal of utility poles and overhead lines, and the excavation for underground utility lines along Whittier Boulevard right-of-way. One historical resource, the early-to-mid 20th century Los Angeles Railway (or Yellow Cars), was identified in the project area as a result of archival research and geotechnical investigations. Fatima also managed the archaeological monitoring of construction activities and prepared the monitoring report.

City of Carson, Avocet Energy Storage System Project, City of Carson, CA. *Archaeologist.* Fatima managed the preparation of the archaeological and paleontological resources assessment reports in compliance with CEQA. The proposed Project includes the development of an approximately 200-megawatt battery energy storage system on a

6.96-acre site (BESS site), improvements and upgrades to the existing SCE Hinson Substation (SCE Hinson Substation site), the construction of a gen-tie line to connect to substation to the BESS site (proposed gen-tie line route), and other associated improvements. The proposed gen-tie route would cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach.

Storm Properties, Inc. Storm Hill Lane Project, Rolling Hills, CA. *Project Manager.* Fatima managed the day-to-day coordination for the monitoring and preparation of the archaeological/paleontological monitoring report pursuant to CEQA. As a result of the monitoring, several fossils were identified and these are currently being analyzed. The Project requires the reconstruction and expansion of Storm Hill Lane from the currently addressed and developed lot at 4 Storm Hill Lane to the three undeveloped lots.

Kiewit Infrastructure West Co., Ballona Wetlands Sequence 1 & 2 Restoration, Culver City, CA. *Project Manager.* Fatima managed the coordination for the monitoring with the archaeological and biological monitors, as well as coordination with the client. ESA's monitors were present during trenching and grading within portions of Ballona Creek in Culver City.

Southern California Association of Governments (SCAG) 2024 Connect SoCal Program PEIR, Los Angeles, Riverside, San Bernardino, Orange, Imperial and Ventura, CA. *Deputy Project Manager.* Fatima led the preparation of the PEIR Sections (cultural, paleontological, and tribal resources), as well as coordinated the Native American consultation efforts. Connect SoCal 2024 is a long-range comprehensive plan for the region's multi-modal transportation system. Preparing the Plan is one of SCAG's primary statutory responsibilities under federal and state law. A regional transportation plan (RTP) is the mechanism used in California by both metropolitan planning organizations and regional transportation planning agencies to conduct long-range (at least 20-year) planning in their regions. SCAG must adopt an RTP and update it every four years, or more frequently, if the region is to receive federal and state transportation dollars for public transit, streets/roads, and bicycle and pedestrian improvements.

Culver City, Crossings Campus (Culver City & City of Los Angeles, CA). *Deputy Project Manager.* Fatima led the preparation of the archaeological resources report and coordinated the preparation of the paleontological resources report. Fatima also led the preparation of the EIR sections (cultural, paleo, tribal). Culver Crossings Properties LLC, the Applicant, proposes to develop an office project (Project) on an approximately 4.46-acre site (Project Site) comprised of two properties: one 1.63-acre parcel is located in the City of Culver City (City), while the second 2.83-acre parcel is located in the City of Los Angeles.

County of San Diego Department of Parks and Recreation, Sweetwater Campground Geotech Boring Monitoring, San Diego County, CA. *Project Co- Manager.* Fatima co-managed the archaeological monitoring and coordinated with Red Tail for Native American monitoring and the County of San Diego Department of Parks and Recreation during Geotech borings for the Project.

Los Angeles County Department of Regional Planning, East San Gabriel Valley Area Plan (ESGVAP) Program EIR, Eastern Portion of Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The ESGVAP is part of the Los Angeles County 2035 General Plan, which will require an amendment. The ESGVAP is a long-range policy document developed to guide long-term growth of the area through development of a guiding vision, goals, policies, and implementation actions for the unincorporated communities in the East San Gabriel Valley. The ESGVAP's planning area consists of 24 unincorporated islands and communities and encompasses a total land area of 210.5 square miles.

Fatima Clark (Continued)

Archaeologist

Los Angeles County Department of Regional Planning, Los Angeles County 2045 Climate Action Plan (CAP) Update and PEIR, Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The County adopted the *Unincorporated Los Angeles County Community Climate Action Plan 2020* (2020 CCAP) in 2015 as a component of the Air Quality Element of the General Plan. The 2020 CCAP aligned with General Plan goals, policies, and programs, as well as several other existing programs in Los Angeles County. The 2020 CCAP was the first attempt to set greenhouse gas (GHG) emissions reduction goals in Los Angeles County. Although the targets for the 2020 CCAP were ultimately not fully met, the plan provided a road map for implementing the County's GHG reduction measures. The 2020 CCAP actions were implemented through County Code amendments and programs related to climate action. The Draft 2045 CAP builds on previous work and defines new reduction targets beyond the year 2020.

Eastern Municipal Water District, San Jacinto Valley Groundwater Treatment Facility Project, San Jacinto, CA. *Archaeologist.* Fatima assisted with the Phase II archaeological testing for the Project. The site was the location of the region's first trading post/general store, established ca. 1868. It later became the Palma Hotel, constructed by Henry T. Hewitt. The hotel was also used as a Riverside County hospital before it was destroyed in an earthquake in 1899.

San Manuel Band of Mission Indians, Sand Canyon Flood Control Permitting Project, San Bernardino County, CA. *Archaeologist.* Fatima was in charge of preparing the cultural resources assessment in compliance with Section 106. Fatima also conducted the pedestrian survey. The San Manuel Band of Mission Indians is considering taking over operation and maintenance of a concrete-lined channel and debris basin (known as Sand Creek) along Sand Canyon, within unincorporated San Bernardino County.

City of Long Beach, 615 E. Ocean Boulevard Project, Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in support of an addendum to the Certified City of Long Beach Downtown Plan Program Environmental Impact Report. The Project would develop a 21-story high-rise residential building on an approximately 0.4-acre site located at 615 East Ocean Boulevard within the City's limits (Project site).

City of Long Beach Department of Development Services, Planning Bureau, 7250 Carson Street Project, City of Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in compliance with CEQA. The Project Applicant proposes to subdivide a 20-acre parcel into two parcels (Parcel A and Parcel B). Other than the approval of the tentative parcel map to subdivide the existing parcel, no proposed improvements or development for Parcel A are included as part of the Project. Development of Parcel B (Project Site) would include the development of two fast-food restaurants and parking spaces.

City of Diamond Bar, Crooked Creek Residential Subdivision Project, Los Angeles County, CA. *Archaeologist.* Fatima conducted the archaeological and paleontological resources assessments in compliance with CEQA and the City of Diamond Bar General Plan Policy RC-P-42. The studies included records searches, pedestrian survey, and subsurface sensitivity assessments. No cultural resources were identified in the project site, but the area was found to have the potential to contain subsurface prehistoric archaeological resources and paleontological resources. The project consisted of the development of seven single-family residences and associated infrastructure on approximately 2.5 acres. The project required approval of a Vesting Tentative Tract Map, Conditional Use Permit, Tree Permit, and Development Review.

40-Hour HAZWOPER Training – Update, 2023

PROFESSIONAL AFFILIATIONS

Society for American Archaeology

Society for California Archaeology

Pacific Coast Archaeological Society

Kyle Garcia has over 21 years of experience in the archaeology and prehistory of southern California, and meets and exceeds the Secretary of Interior Standards qualificaitons for a prehistoric and historic archaeolgoist. During his career, he has authored or contributed to more than 800 projects subject to the requirements of the California Environmental Quality Act, the National Environmental Policy Act (NEPA), and regulations implementing Section 106 of the National Historic Preservation Act (Section 106 of the NHPA). He is well-versed in the archaeological resources of California's coastal, interior, and island settings. He is skilled in evaluation historic and prehistoric archaeological resources; agency and Native American consultation; pedestrian surveys, testing and evaluation excavations as well as archaeological and paleontological construction monitoring, and laboratory processing. During his tenure, he has authored or contributed to more than 400 technical reports and sections to support all levels of CEQA and NEPA documents. Kyle's portfolio of projects includes energy, water, and transportation infrastructure as well as residential, commercial, mixed-use, institutional, and urban redevelopment serving public and private sector clients. Kyle has conducted archaeological work throughout California and is a certified archaeologist and paleontologist in Riverside, Santa Barbara, and Orange counties.

Relevant Experience

Archaeological/Paleontological Monitoring. Kyle has managed more than 120 archaeological and/or paleontological construction monitoring projects in Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. He has a commanding knowledge of the procedures to implement in the event of an inadvertent discovery during construction, and how to navigate an applicant or lead agency though that process to ensure compliance with the project's mitigation measures or conditions of approval and to reach consensus on treatment of the discovery, especially if the discovery is Native American in origin.

Paleontology. In addition to his archaeological work, Kyle has been cross-trained in paleontological mitigation monitoring and assisted in the excavations of a Miocene whale fossil near Irvine and a new species of extinct tuna in Laguna Niguel, California. Kyle has also managed or conducted more than 200 paleontological assessments and 40 paleontological monitoring projects throughout southern California. He has assisted ESA's paleontologists with the preparation of paleontological reports in compliance with CEQA and local paleontological guidelines, including guidelines for the Society for Vertebrate Paleontology.

Project Experience

Archaeological and Paleontological Monitoring for the LAX Crossfield Taxiway Improvements, Los Angeles, CA. *Project Manager/Archaeological Monitor.* Between 2009-2010, Kyle performed archaeological and paleontological monitoring services during

earthmoving operations associated with the development of the Crossfield Taxiway project in accordance with established mitigation measures from the LAX Crossfield Taxiway Project (CFTP) EIR. PCR conducted archaeological and paleontological field visits, paleontological sediment sampling, and monitoring of earthmoving operations associated with the construction of CFTP until activities requiring monitoring ended. These operations included excavations for filter boxes, water pipeline installation, and the realignment of World Way West. In addition to monitoring, Kyle performed an archaeology and paleontology training session for appropriate project personnel involved with construction of the project. The training session focused on how to identify archaeological and paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. No resources were identified during the monitoring effort and these findings were summarized in a report that was submitted to Los Angeles World Airports. Kyle served as project director/manager, crew chief, monitor, and co-author of the final report.

University High School Beautification Project, Los Angeles, CA. *Archaeologist*. Kyle performed archaeological monitoring during earth-moving activities on the campus. The archaeological monitoring program ensured the protection of the village site and springs, and resulted in the discovery of remains of the original portico of the Administration Building which was destroyed by the Long Beach Earthquake of 1933.

Rancho Campana High School and Performing Arts Center Construction Monitoring, Camarillo, CA. *Project Manager*. Kyle led the archaeological and paleontological monitoring for the project as a part of ESA's on-call contract with Oxnard Union High School. He managed and coordinated the effort and prepared the associated report. ESA identified two archaeological resources (56-001512/CA-VEN-1512 and 56-001513/CA-VEN-1513H) during monitoring efforts and several paleontological localities during the monitoring and sediment screening activities and worked together with the Ventureño Chumash regarding treatment for the archaeological resources. Although several archaeological and paleontological resources were encountered during the construction monitoring efforts, the resources were treated in accordance with the mitigation measures and, as a result, the impacts to the resources were reduced to a less than significant level pursuant to the CEQA.

Citron (Stella Park) Townhome Development, Escondido, CA: *Project Manager.* Kyle served as the project manager responsible for overseeing the archaeological and Native American monitoring at the project in accordance with the Conditions of Approval. The project included the construction of a 65-unit townhome development on a vacant 2.29-acre site in the City of Escondido.

Archaeological Monitoring, Test Excavations, and Data Recovery Excavations During Construction of the Crystal Geyser Roxane Cabin Bar Ranch Water Bottling Facility, Olancha, Inyo County, CA. *Principal Investigator/Project Director/Manager/Crew Chief.* Kyle managed/directed archaeological construction monitoring services in accordance with the Cultural Resources mitigation measures in the Mitigation Monitoring and Reporting Program (MMRP) of the EIR for the project. During initial clearing and grubbing activities associated with the project, five prehistoric archeological resources were encountered. Kyle assisted the Applicant in developing a cultural resources treatment plan to address identify, evaluate, and mitigate project impacts to these resources to a less than significant level. Pursuant to the MMRP, this treatment plan was developed in coordination with ESA (Kyle), the County, CG Roxane, and the Lone-Pine Pauite-Shoshone Reservation. The treatment plan included measures for resource avoidance, additional survey, and the excavation of nine controlled excavation units and multiple mechanical backhoe trenches across the project site. More than a 1,000 artifacts have been recovered from this project. This project began in 2015 and continues today.

LICENSES/PERMITS

BLM California CRUP # CA-21-27

Salpi is a cultural resources specialist with over 8 years of experience working on archaeological survey, data recovery, and monitoring projects. Salpi is experienced at planning fieldwork and leading field teams in survey, data collection, and resource recordation. She regularly prepares site forms, conducts presence/absence and evaluation testing efforts and data recovery excavation, and prepares technical reports documenting those efforts and presenting them to clients. Salpi has particular experience with energy and water infrastructure and other development projects across southern California, western Arizona, southern Nevada, and Texas and is expert in identifying and documenting resources in these geographies. She is familiar with the National Historic Preservation Act Section 106 (Section 106), National Environmental Protection Act (NEPA), and California Environmental Quality Act (CEQA) cultural resource compliance processes and has worked closely with federal and state agencies, private developers, tribes, and other stakeholders in implementing cultural resources requirements.

Relevant Experience

Ten West Link Transmission Line Project, Riverside County, CA and La Paz County, AZ. *Senior Cultural Resources Specialist (November 2022 – Present).* Environmental Science Associates (ESA) was retained by Delaney Colorado River Transmission LLC to provide archaeological monitoring during construction as well as perform archaeological and historic architectural resource documentation and evaluation in compliance with Section 106, NEPA, and CEQA requirements. The project involves the construction of 125 miles of high voltage electrical transmission line from Tonopah, AZ, to Blythe, CA. The corridor spans numerous federal, state, and private jurisdictions with varied cultural resource requirements necessitating sophisticated tracking and implementation of numerous agency jurisdiction–specific mitigations. The project passes through many Abandoned Mine Land areas and ESA's team has identified, documented, and evaluated a wide array of historic mining and mining related features such as prospects, cairns and claim markers, roads and trails, mine openings, can and other refuse scatters, and other mining related infrastructure. The project footprint also encompasses culturally sensitive areas important to multiple tribes including the Colorado River Indian Tribes (CRIT). ESA's team is working alongside the construction contractor, tribal monitors from multiple tribes, and with the BLM in two states. Salpi serves as the Field Lead and Deputy Project Manager for the Project where she co-directs a crew of up to 20 archaeogists and coordinates with up to 10 CRIT tribal monitors.

Avocet Battery Energy Storage System Project, Carson City, CA. *Senior Cultural Resources Specialist (September 2023 – December 2023).* Environmental Science Associates (ESA) has been retained by the City of Carson (City) to prepare a cultural resources assessment for the Avocet Energy Storage System Project in support of an Initial Study/Mitigated Negative Declaration (IS/MND). The Project includes the development of an approximately 200-megawatt battery energy storage system (BESS). The Project would

consist of lithium-ion batteries installed in racks, inverters, medium-voltage (MV) transformers, switchgear, a collector substation, and other associated equipment to interconnect into the Southern California Edison (SCE) Hinson Substation. The Project would also include four generation transmission (gen-tie) lines to interconnect the Project to the SCE Hinson Substation. The City is the lead agency pursuant to the California Environmental Quality Act (CEQA). Dorian served Testing Plan author and planned and directed onsite archaeological testing/excavation as part of the assessment. Salpi also authored the results of the testing.

San Manuel Band of Mission Indians, San Manuel Ancestral Land Exchange, San Bernardino County, CA. *Senior Cultural Resources Specialist.* Yuhaaviatam of San Manuel Nation, a Federally-recognized Indian Tribe, formerly known as the San Manuel Band of Mission Indians and the Forest Service, United States Department of Agriculture entered into an Agreement to Initiate the San Manuel Ancestral Land Exchange. ESA prepared a cultural Resources Assessment in support of the Land Exchange. The study was conducted in compliance with Section 106 of the National Historic Preservation Act (NHPA) of 1966 and considered a 2,997-acre study area, comprised of the combined six privately owned Non-Federal Parcels and two USFS-administered Federally Parcels. Salpi authored portions of the reports, completed DPRs and DPR updates, and planned and led a portion of the surveys.

Scotty's Castle Archaeological Monitoring, Death Valley National Park, CA. *Senior Cultural Resources Specialist (March 2023 – February 2024).* Environmental Science Associates (ESA) was retained by Tepa EC to provide archaeological monitoring during trenching in connection with restoring heating, ventilation, and air-conditioning (HVAC) systems damaged during the 2015 flood at Scotty's Castle in Death Valley National Park, CA. Scotty's Castle is listed in the National Register of Historic Places (NRHP) as the Death Valley Scotty Historic District (78000297) and is located within culturally sensitive areas. Salpi serves as the Project Manager. She supervises the ESA archaeological field monitor, manages logistics, and attends weekly meetings with DEVA NPS and contractors to ensure trenching conducted in the vicinity of the historic buildings is monitored.

Driftwood Solar Project, Kern County, CA. *Senior Cultural Resources Specialist (July 2021 - Present).* Environmental Science Associates (ESA) has been retained by EDP Renewables North America, LLC to prepare a Cultural Resource Assessment in support of an Environmental Impact Report (EIR) being prepared pursuant to the California Environmental Quality Act (CEQA). The Project proposes to redevelop approximately 2,674 acres of contiguous private agricultural lands for the installation and operation of solar photovoltaic energy generating facilities, as well as the construction of an approximately 12 to 13-mile-long gen-tie alignment. Salpi authored the report and Field Directed the cultural resources field survey.

Leprino Wastewater Discharge Project, Kings County, CA. *Senior Cultural Resources Specialist (February 2023 – March 2023).* Environmental Science Associates (ESA) was retained by the Leprino Foods Company to prepare a Cultural Resource Assessment in support of a Mitigated Negative Declaration (MND) being prepared pursuant to the California Environmental Quality Act (CEQA). The Project proposed to increase the use of recycled water from Leprino's cheese processing facilities to irrigate approximately 2,400 acres of non-food crops at the River Ranch property through an existing conveyance and irrigation canal system. This assessment included a cultural resources records search through the Southern San Joaquin Valley Information Center (SSJVIC), a Sacred Lands File (SLF) search through the California Native American Heritage Association (NAHC), and land use history research. The Central Valley Water Board (CVWB) was the is the lead agency pursuant to CEQA. Salpi planned and led the pedestrian survey and prepared the archaeological and paleontological memoranda for this project.

Re: Inglewood High School Reconstruction Project, Los Angeles County

To Whom It May Concern:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

INGLEWOOD HIGH SCHOOL
Historic Resources Assessment

Executive Summary

Environmental Science Associates (ESA) has been retained by Inglewood Unified School District (or District) to prepare a Historic Resources Assessment (Report) for the proposed Inglewood High School Reconstruction Project (Project). The focus of this Report is to identify and evaluate any significant historical resources located on the Inglewood High School (IHS) campus for compliance with the California Environmental Quality Act (CEQA). The campus is located at 231 S. Grevillea Avenue within the City of Inglewood (City), Los Angeles County (County), California on assessor parcel number (APN) 4020-025-900. The Inglewood Unified School District (District) is the lead agency pursuant to CEQA. The proposed Project involves improvements to the existing Inglewood High School (Project Site) including the demolition of several existing buildings. Additionally, several existing buildings would be partially renovated, and new buildings would be constructed. Outdoor playing fields would be demolished and reconstructed and new landscaping and circulation would be introduced to the campus.

ESA evaluated IHS for potential eligibility for listing in the National Register of Historic Places (National Register) and the California Register of Historical Resources (California Register) as a potential historic district. Because the District governs the school property, and because the City of Inglewood does not have a preservation ordinance or local landmarks designation program and has not developed criteria for designation, IHS was not evaluated for local eligibility.

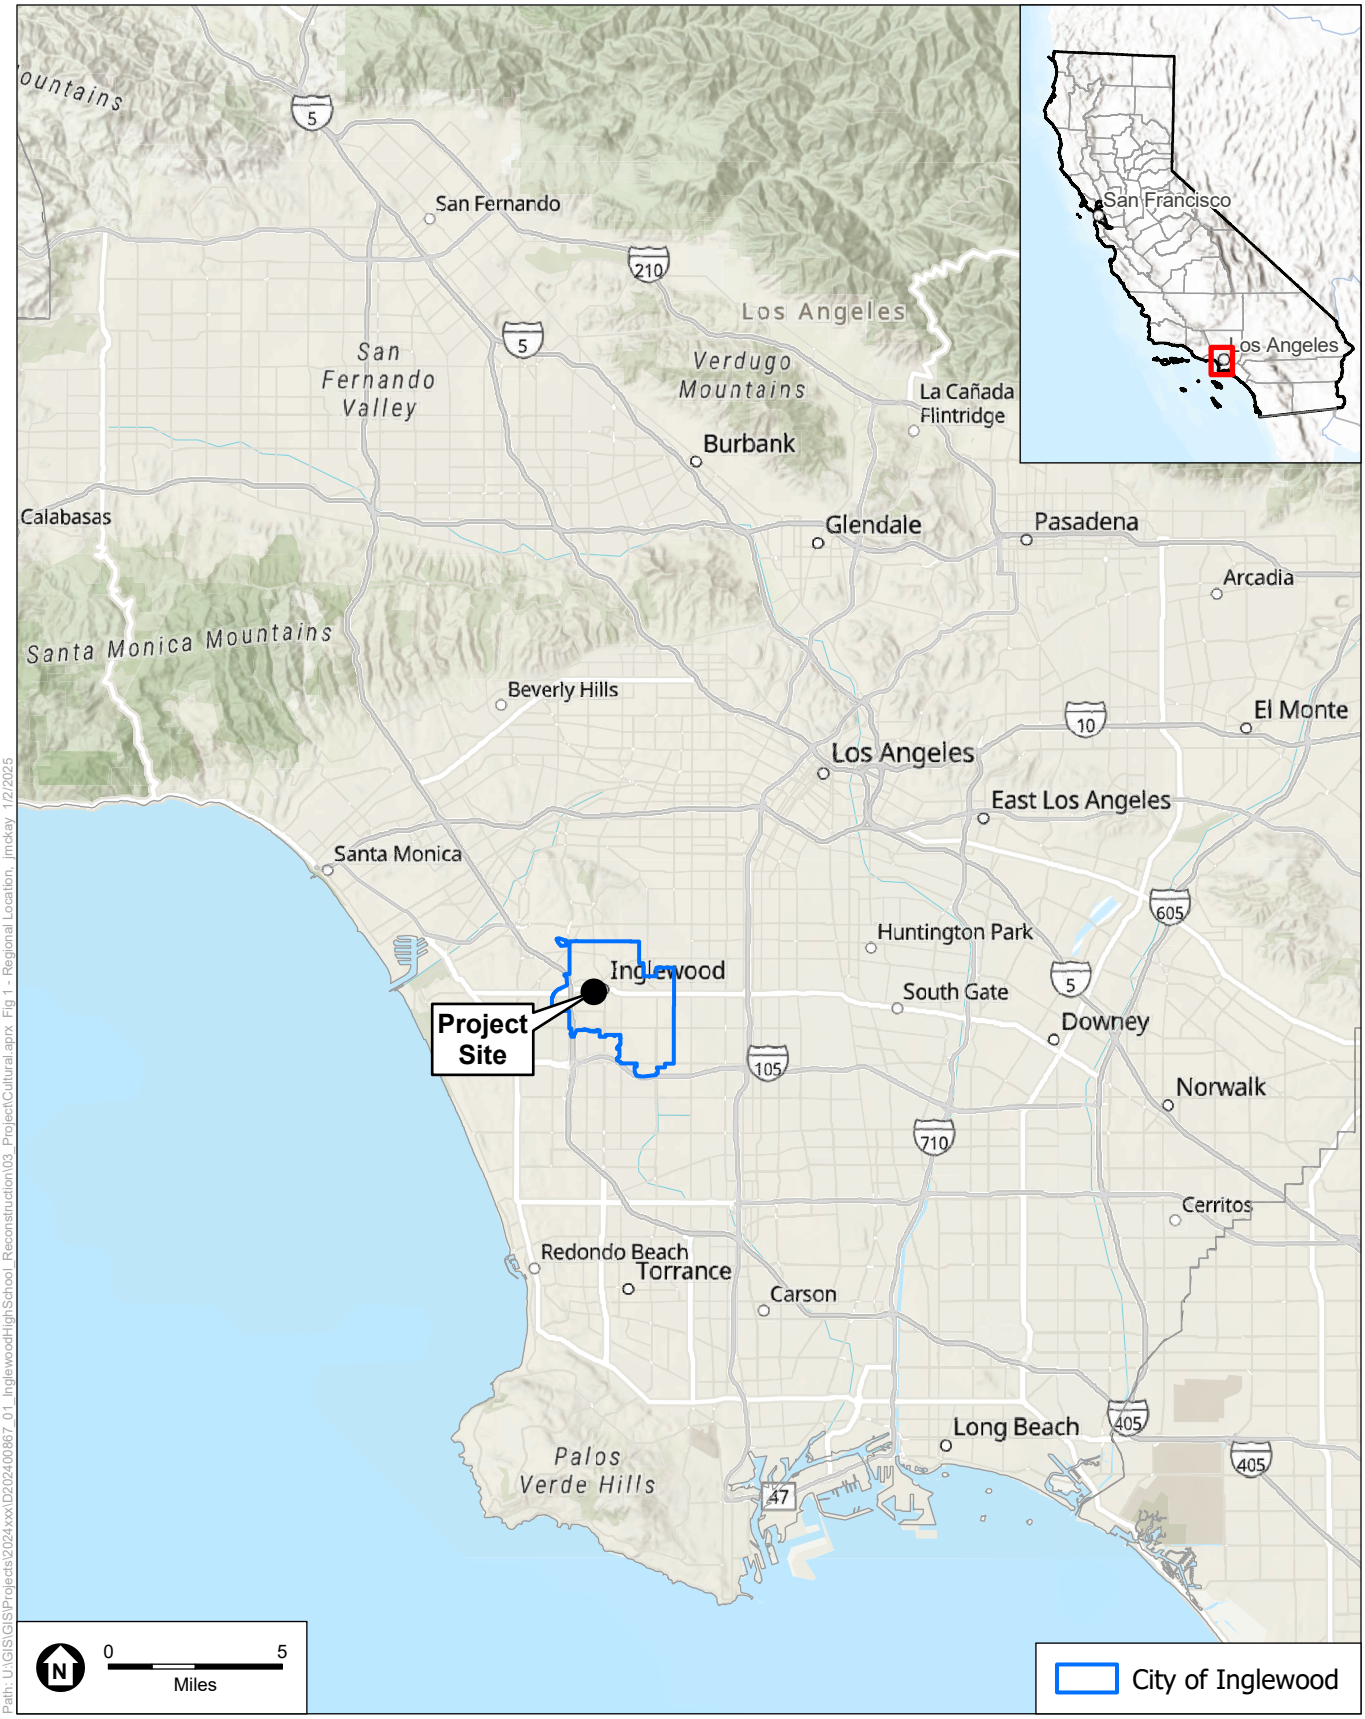
As the IHS campus meets the California Office of Historic Preservation's 45-year-old age threshold for consideration as a potential historic resource, the property, with 20 buildings and related site features that meet the same age threshold, was evaluated collectively for historic significance as a historic district under National Register criteria and California Register criteria. As a result of ESA's research and survey investigations, the IHS campus is recommended ineligible as a potential historic district under National Register criteria or California Register criteria as the campus does not collectively represent a significant period or pattern of regional, state, or national development, and is not a representative example of a Functionalist School Plant type, or of a master architect-designed campus master plan.

However, as part of this research, ESA determined that three individual buildings on the IHS campus, which meet the 45-year age threshold, appear to rise to a level of individual significance due to their historic associations and architecture and design. These buildings, Building A, Building I, and Building M, were each individually evaluated as historic resources under National Register criteria and California Register criteria. The results of these historic resources evaluations are as follows:

Building A, Auditorium is recommended eligible as an individual resource under National Register Criteria A at the local level and California Register Criteria 1 as a good example of retrofitted institutional architecture in Inglewood, which resulted from Federal relief effort programs following the 1933 Long Beach Earthquake. Building A is also recommended eligible under National Register Criteria C at the local level and California Register Criteria 3 as it embodies the distinctive characteristics of a type, period, and construction method as an excellent example of a PWA Moderne-style institution in Inglewood, and as a good representative example of master architect T. C. Kistner's body of work. Building A has a period of significance of 1936, which reflects the completion date of the retrofit construction.

Building I, Classroom is recommended eligible as an individual resource under National Register Criteria A at the local level and California Register Criteria 1 for its association with educational development in Inglewood during the Great Depression, and as a product of the Field Act following the 1933 Long Beach Earthquake in Southern California. Building I is also recommended eligible under National Register Criteria C at the local level and California Register Criteria 3 as a rare example of the PWA Moderne style as applied to a school building in Inglewood. Further, the building is important as a unique example of master architect T. C. Kistner's work. Building I has a period of significance of 1936, which reflects its date of construction.

Building M, Shop is recommended eligible as an individual resource under National Register Criteria A at the local level and California Register Criteria 1 due to its role in the area's postwar reconversion as an educational facility that responded to the rapidly evolving aerospace and defense industry. Building M is also recommended eligible under National Register Criteria C at the local level and California Register Criteria 3 as a rare example of an industrial utilitarian shop property type as applied to a public-school campus, both locally and regionally. Further, the building appears to be significant within master architect H. L. Gogerty's extensive body of work as a remaining example of a small, multi-use shop institutional building. Building M has a period of significance of 1946, which reflects its date of construction.



In addition, Buildings M and L were evaluated as contributors to a small, two-building historic district under National Register criteria and California Register criteria. Building L, Auto Shop and Building M, Shop are recommended eligible as contributing resources to the IHS Industrial Shop Historic District under National Register Criteria C at the local level and California Register Criteria 3 as they embody a unique building typology as examples of mid-20th century industrial utilitarian shops as applied to a public school campus. Additionally, the district appears to be significant within master architect H. L. Gogerty's extensive body of work as a rare example of a mid-20th-century grouping of small, multi-use shop institutional buildings. The historic district has a period of significance of 1948 to 1949, which reflects the construction dates of the grouping.

Introduction

Location

IHS is located to the east of the community of Morningside Park, in the central portion of the City of Inglewood within Los Angeles County, California. As shown in **Figure 1,** *Regional Location*, the Project Site is located 0.72 miles east of Interstate (I-) 405,1.82 miles north of I-105, and 4.23 miles west of I-110. The entire campus is considered to constitute the Project Site. The Project Site is located entirely within APN 4020-025-900.

The Project Site is bounded to the north by W. Manchester Boulevard, which includes the Inglewood Civic Center and commercial uses. S. Grevillea Avenue along with Grevillea Art Park are located along the western border of the Project Site, with residences along W. Kelso Street to the south. Additional single- and multi-family development abuts the Project Site to the west, and W. Olive Street bisects this development. The current surrounding neighborhood and campus configuration are shown in **Figure 2,** *Project Location*. The Campus building configuration with construction dates are shown in **Figure 3**, *Inglewood High School Building Site Map.*

Research and Field Methodology

Professionals involved in the preparation of this report are as follows: Architectural History Program Manager Shannon L. Papin, M.A. provided senior technical and compliance oversight; and report authors were Alison Garcia Kellar, M.S., Senior Architectural Historian, and Valerie Smith, M.S., Architectural Historian. Each of these contributing authors meets the *Secretary of the Interior's Professional Qualification Standards* in history and architectural history. Professional qualifications are provided in **Appendix A**.

The following tasks were performed:

- A pedestrian survey and digital photography was undertaken on January 18, 2025, to document the existing conditions of the campus and the surrounding vicinity.
- Site-specific research on the campus was conducted utilizing building plans, *The Los Angeles Times*, Newspapers.com, select IHS yearbooks, the Collection of Inglewood Local History Photographs, the Los Angeles Public Library Photo Collection, and other published sources.
- Review and analysis of ordinances, statutes, regulations, bulletins, and technical materials relating to federal and state, designation assessment processes, and related programs.
- Completion of a historic resource assessment of the potential historic resource based upon criteria used by the National Register and the California Register.
- Review and analysis of the proposed project for compliance with CEQA impacts thresholds pursuant to CEQA Guidelines Title 14, Article 5, Section 15054.5.

The term "historic properties" refers to "any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register" (36 CFR Part 800.16[*l*][1]). The implementing regulations (36 CFR Part 800) describe the process for identifying and evaluating historic properties, assessing the potential adverse effects of federal undertakings on historic properties, and seeking to develop measures to avoid, minimize, or mitigate adverse effects.

National Register of Historic Places

The National Register was established by the NHPA of 1966, as "an authoritative guide to be used by federal, State, and local governments, private groups and citizens to identify the Nation's historic resources and to indicate what properties should be considered for protection from destruction or impairment" (36 CFR 60.2) (U.S. Department of the Interior, 2002). The National Register recognizes a broad range of cultural resources that are significant at the national, state, and local levels and can include districts, buildings, structures, objects, prehistoric archaeological sites, historic-period archaeological sites, traditional cultural properties, and cultural landscapes. As noted above, a resource that is listed in or eligible for listing in the National Register is considered "historic property" under Section 106 of the NHPA.

To be eligible for listing in the National Register, a property must be significant in American history, architecture, archaeology, engineering, or culture. Properties of potential significance must meet one or more of the following four established criteria:

A. Are associated with events that have made a significant contribution to the broad patterns of our history;

B. Are associated with the lives of persons significant in our past;

C. Embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

D. Have yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting one or more of the criteria of significance, a property must have integrity. Integrity is defined as "the ability of a property to convey its significance" (U.S. Department of the Interior, 2002). The National Register recognizes seven qualities that, in various combinations, define integrity. The seven factors that define integrity are location, design, setting, materials, workmanship, feeling, and association. To retain historic integrity a property must possess several, and usually most, of these seven aspects. Thus, the retention of the specific aspects of integrity is paramount for a property to convey its significance.

Ordinarily religious properties, moved properties, birthplaces or graves, cemeteries, reconstructed properties, commemorative properties, and properties that have achieved significance within the past 50 years are not considered eligible for the National Register unless they meet at least one of the four significance criteria listed above, one of the Criteria Considerations (A-G), in addition to meeting at least one of the and possessing integrity (U.S. Department of the Interior, 2002).

State

California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified at Public Resources Code (PRC) Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on historical or unique archaeological resources. Under CEQA (Section 21084.1), a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

The *CEQA Guidelines* (Title 14 California Code of Regulations [CCR] Section 15064.5) recognize that historical resources include: (1) a resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (California Register); (2) a resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light

of the whole record. The fact that a resource does not meet the three criteria outlined above does not preclude the lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

A significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in *CEQA Guidelines* Section 15064.5(a). Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired" (*CEQA Guidelines* Section 15064.5[b][1]). According to *CEQA Guidelines* Section 15064.5(b)(2), the significance of a historical resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that:

A. Convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

B. Account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

C. Convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a Lead Agency for purposes of CEQA.

In general, a project that complies with the Secretary of the Interior's Standards for the Treatment of Historic Properties is considered to have mitigated its impacts to historical resources to a less-than-significant level (*CEQA Guidelines* Section 15064.5[b][3]).

California Register of Historical Resources

The California Register is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1[a]). The criteria for eligibility for the California Register are based upon National Register criteria (PRC Section 5024.1[b]). Certain resources are determined by the statute to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register.

To be eligible for the California Register, a prehistoric or historic-period property must be significant at the local, state, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and,
- Those California Points of Historical Interest that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historical resources contributing to historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

The City of Inglewood

The City of Inglewood does not have a preservation ordinance; however, the 1980 *Inglewood General Plan* (General Plan) includes goals for the preservation and reuse of historic resources. The General Plan includes goals for the City's unique districts within the Downtown Transit Oriented District (TOD) area, each with their own unifying character or identity that should be preserved and enhanced which includes the following: Historic Downtown, Civic Center, TechTown, Beach Avenue, Fairview West, Hillcrest and Queen Street. Of these, the General Plan recognizes the Fairview Heights neighborhood as historic and includes goals to preserve its historic character. The General Plan requires the preservation of buildings that have been designated as historic and encourages the reuse of other historic buildings.[1] Further, the Los Angeles Conservancy states:

> The City prepared a historic resource survey in 1998 that focused on Inglewood's downtown area. The 1998 Main Street Inglewood Survey surveyed a total of 112 potentially eligible properties that

[1] City of Inglewood, "Amendment: City of Inglewood Land Use Element, Inglewood General Plan, Resolution: 1761," 1980, amendment adopted 2016, accessed February 7, 2025, https://www.cityofinglewood.org/DocumentCenter/View/132/Land-Use-Element-1980-Amended-1986-2009-2016.

are located within the area bounded by La Brea Avenue to the west, Locust Street to the east, Florence Avenue to the north, and Hillcrest Boulevard to the south.

While the City has not commissioned a survey update by professional preservation consultants, the Centinela Valley Historical Society is currently preparing a windshield survey of the northwest residential area of the city."[2]

Archival Research

South Central Coastal Information Center Records Search

A cultural resources records search was conducted at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton on January 16, 2025. The records search included the IHS campus and a 0.25-mile radius for historic architectural resources. The SCCIC houses the pertinent archaeological and historic site and survey information necessary to determine whether architectural resources are known to exist within the project area. The archival research also included a review of the California Historical Resources Information System (CHRIS), which includes the National Register, the California Register, California Historical Landmarks and California Points of Historical Interest. The City of Inglewood does not have a historic preservation ordinance and does not maintain a local designation program. The results of the archival research indicate twenty-three resources within a 0.25-mile radius of IHS, which are presented in **Table 1**.

Resource Descriptions (with a view of the project area)

Lundeberg WPA Transportation Mural (19-186693)

Located 0.02-miles east of IHS along Grevillea Avenue, Grevillea Art Park includes the "History of Transportation" – an 8-foot tall petrachrome mural that spans 240 feet long.[3] The mural spans much of the western edge of campus. Created by artist Helen Lundeberg in 1939, it was originally constructed in adjacent Edward Vincent, Jr. Park (formerly Centinela Park). The artwork was part of the Great Depression-era WPA Federal Art Project (FAP) and is considered to be the largest petrachrome mural, comprised of 60 cast concrete and terrazzo panels each featuring different mosaic scenes of early Inglewood transportation history through the 1930s. The mural was moved and restored to its current location across from IHS between 2003 and 2007. The mural has a status code of "1CS," and is included on the California Register.

Inglewood Civic Center

The Inglewood Civic Center complex is located 0.03-miles north of IHS and has direct views of the school. The Los Angeles Conservancy describes the Inglewood Civic Center as follows:

> Inglewood's twenty-nine-acre Civic Center contains its City Hall, main library, a fire station, a police facility, a parking garage, and a public health complex in a square bounded by La Brea Avenue, Florence Avenue, Manchester Boulevard, and Fir Avenue. Completed in 1973, the Civic Center was designed by Charles Luckman Associates to revitalize Inglewood's civic and business district. Its plan aimed to increase mobility in the area for both pedestrians and cars, and create landscaped open space in the heart of the city. The complex's most impressive buildings are its eight-story City Hall, standing atop a wide, two-story base, and its four-level library building, which is supported on tall columns. Both are Brutalist in style, with their monumental concrete bulks serving as both structure and ornamentation. The library includes an interesting mural-in-concrete called The Written Word, created by sculptor Tom Van Sant and looking like modern rock art images rising up a tall column. All of the buildings are tied together by a landscape designed by landscape architect Robert Herrick Carter. It features expansive green spaces and multiple pedestrian malls and bridges, including elevated walkways that help facilitate foot traffic. Inglewood's Civic Center is a successful rethinking of the city's governmental core, combining a verdant landscape with monumental concrete buildings to create a flowing and vibrant urban center.[4]

230 S. Grevillea

230 S. Grevillea, a single-family home with a view of the campus. Constructed in 1933, the property was evaluated as part of a HUD survey and was found ineligible for the National Register. The property is located 0.04-miles east of IHS.

Previous Evaluations of Inglewood High School

IHS has not been previously evaluated for historical significance. The property is not listed in the State of California Built Environment Resource Directory (BERD) for the County of Los Angeles, nor is it listed in the National or California Register. The campus is not situated in a designated historic district.

Building A is included in the national online database, “The Living New Deal,” which was recommend by SurveyLA for locating and documenting important extant WPA and New Deal buildings and public art.[5]

Potentially Eligible Historic Resources

The following potentially eligible resources were identified in ESA’s windshield survey of the surrounding area and are located adjacent to the project site, offering a view of the campus. The potentially eligible resources have not been previously identified in a historic survey and are not included in the BERD.

100 E. Nutwood Street

100 E. Nutwood Street is a two-story building located 0.05-miles east of IHS. According to aerial photographs, the property was constructed between 1941 and 1952. The building was designed in the

[4] Los Angeles Conservancy, “Place: Inglewood Civic Center,” Los Angeles Conservancy website, https://www.laconservancy.org/learn/historic-places/inglewood-civic-center/.

[5] The Living New Deal, “Inglewood High School: Fine Arts Building, Inglewood CA,” The Living New Deal website.

Mid-Century Modern style and is reflective of a commercial or office building. The building is zoned as an institutional/school property. The property appears to have been associated with the 100 Black Men of Los Angeles, which is an active non-profit civic and community organization that serves disadvantaged and underrepresented segments of the community that was founded in 1981.[6] As such, it may have contemporary historic associations with the Black community in the Los Angeles area.

102 E. Kelso Street

102 E. Kelso Street is an altered Period Revival style church building located .02-miles southeast of IHS. The property is presently known as Blood of Jesus Prayer & Deliverance Ministries and it was constructed in 1922. In the 1980s and 1990s, the church was known as a Church of Christ, Scientist, and in the early 2000s the church was known was Straight-Way Church. The property has direct views of the IHS campus.

200 W. Kelso Street

200 W. Kelso Street is presently a multi-family residence which is located about .07-miles southwest of IHS. Originally constructed in 1908, the property appears to have once been a single-family home that was later converted into two units. The property sits on an 8,221 square foot lot, which is larger than the other residential parcels in the immediate area. While the property appears to have been altered, it retains characteristics of the American Foursquare style and is unique as an early example of two-story housing constructed in the first decade of the 20th century within the vicinity of the project. As such, the property may have historic associations with early residential development in the Inglewood/Centinela area. The property has direct views of the IHS campus.

130 W. Kelso Street

130 W. Kelso Street is a one-story single-family home that is located .03-miles south of IHS. Constructed in 1911, the building appears to be an altered bungalow-style home and a rare and early remaining example of single-family residential development from the 1910s in the immediate area. As such, the property may have historic associations with early residential development in the Inglewood-Centinela area. The property has indirect views of the IHS campus.

144 W. Kelso Street

144 W. Kelso Street is a one-story single-family home which is located .05-miles southwest of IHS. Constructed in 1913, the building appears to be an altered bungalow-style home and a rare and early remaining example of single-family residential development from the 1910s in the immediate area. As such, the property may have historic associations with early residential development in the Inglewood-Centinela area. The property has indirect views of the IHS campus.

210 S. Eucalyptus Street

210 S. Eucalyptus Street is a one-story single-family home which is located .09-miles west of IHS. Constructed in 1912, the building appears to be an intact bungalow-style home, a rare and early remaining example of single-family residential development from the 1910s in the immediate area. As such, the property may have historic associations with early residential development in the Inglewood-Centinela area. The property has no views of the IHS campus.

Historic Context

The historic contexts detailed below present the history of the area and IHS and were developed to document and support the identification and evaluation of historic architectural resources. Research indicates IHS is associated with the following historical contexts and themes:

- *History of Inglewood: Settlement, Development and Growth* (1822 - present);
- *Inglewood Unified School District: Early History, Establishment and Expansion* (1905 - present);
- *Secondary School Education in Inglewood, CA*, with the following sub-themes: *Post–1933 Long Beach Earthquake School Plants* (1933–1945); *Early Experiments in the Modern, Functionalist School Plant* (1933–1945); and *The Postwar Modern Functionalist School Plant* (1945–1969);
- *Architecture and Engineering*, with the following sub-themes: *Public Works Administration Moderne Style* (1929-1948) and *Late Moderne Style* (1937-1960); *Mid-Century Modernism/Regional Modernism* (1945-1960); and Industrial Utilitarian subthemes: *Daylight Factory* (1910-1940) and *Carpentry Shop* (1900-1965).

The History of Inglewood: Settlement, Development and Growth (1822–Present)

During the rancho period in Alta California, the area that is now the City of Inglewood was part of the *Rancho Aguaje de la Centinela* and the *Rancho Sausal Redondo* and was under the rule of the Mexican government. A year after Mexico gained independence from Spain and control of California in 1822, Los Angeles resident Antonio Avila received a land grant for *Rancho Sausal Redondo* and grazed cattle there as well. The rancho encompassed the areas that are now the Cities of Redondo Beach, Inglewood, Hawthorne, El Segundo, Lawndale, Manhattan Beach and Hermosa Beach. In 1834 Ygnacio Machado, one of the original leather jacket soldiers that escorted settlers to Los Angeles, built the Centinela Adobe. The Centinela Adobe was in the center of what became a 2,200-acre ranch on a portion of the *Rancho Sausal Redondo*. Machado had moved onto what he claimed was still public land, which was granted to him as the *Rancho Aguaje de la Centinela*.

Soon after, Machado traded the *Rancho Aguaje de la Centinela* for a keg of whiskey and a home in the Pueblo of Los Angeles. The property traded hands many times and was eventually acquired by a Scottish nobleman named Robert Burnett, who eventually added the much larger *Rancho Sausal Redondo* to his holdings and once again combined the ranchos. Burnette eventually returned to Scotland and leased the ranch to a Canadian immigrant who was considered by many to be the founding father of Inglewood: Daniel Freemen. In spite of drought and other hardship Freeman successfully farmed barley on the ranch, and purchased it from Burnette with gold in 1885. Freeman went on to become a major land developer in Inglewood.[7]

Centinella Springs (California Historical Landmark 363), or Aguaje de Centinela, was a valued source of spring water for the *Rancho Aguaje de la Centinela* and was described as continuously existing since the

[7] John Kielbasa, *Historic Adobes of Los Angeles County* (Pittsburgh: Dorrance Publishing Co., 1998).

Pleistocene Era. The site is still located at the corner of Centinela Avenue and Florence Boulevard.[8] Excursion trains from Los Angeles brought many prospective land buyers to Inglewood and it was able to grow to 300 residents by 1888. On May 21, 1888, a school opened with 33 students. Around this time, businesses, including Mrs. Belden's Boarding House, two grocery stores, a drug store, a planning mill, a wagon repair shop, a plumbing shop, a livery stable, and five real estate offices, were built on Commercial Street (now La Brea).[9] With a population of about 1,200, Inglewood was incorporated on February 10, 1908.

On the evening of June 21, 1920, a large earthquake struck Inglewood. While there was a lot of damage to buildings, there was no loss of life. The next few days saw a large number of tourists coming to Inglewood to view the damage. The climate impressed the visitors who had previously never been to Inglewood, and many settled there. The population grew to 3,286 in 1920, and in the next two years the population doubled, making Inglewood the fastest growing city in the nation at that time.[10]

The Andrew Bennett Ranch was leased by the City of Los Angeles and converted into Mines Field in 1927, the airport of Los Angeles. National Air Races were held on Mines Field in 1927, and the first passenger flight landed in 1928. In 1929, the Graf Zeppelin (a German hydrogen filed ridged airship) landed on the Mines Field.[11]

The 1932 Olympic Games were held in Los Angeles, and three Inglewood High School alumni won medals. Many buildings in Inglewood were used as training facilities, and the marathon route went through the town.[12] Until World War II, Inglewood had largely been supported by agricultural industry. The defense industries, in response to WWII, transformed Inglewood into an urban community when industrial activities brought more people to live in the city. In 1946, major airlines moved operations to the Los Angeles International Airport (LAX) airport and two new hangers needed to be constructed.[13] In 1949, the airport was designated as an intercontinental air terminal by the federal government.[14]

In 1967, The Forum was opened as the home of the Los Angeles Lakers of the National Basketball Association and the Los Angeles Kings of the National Hockey League. It also hosted a number of events such as concerts, rodeos, boxing, the circus, and ice shows.[15] The Forum underwent a rehabilitation, was listed on the National Register and the California Register, and reopened in 2014. Additionally, at that time, The Form underwent an adaptation from an arena primarily designed for sporting events to an arena primarily used for music and entertainment events.

In the 1970s, a new health center and library were built on W. Manchester Boulevard as part of the new City of Inglewood Civic Center which was dedicated in 1973. The Airport Park View Motel opened

between Hollywood Park Race Track and The Forum.[16] Many senior housing developments were also built in Inglewood during the 1970s.

More recent developments include the closure of the Hollywood Park Racetrack, in 2013, and demolition of the track in 2016. A new NFL stadium, the SoFi Stadium, is part of a new mixed-use development in Inglewood that includes commercial office space, retail, a hotel, residential units and outdoor parks was recently constructed and is now in operation.[17] The stadium is home to the Los Angeles Chargers and the Los Angeles Rams, and recently hosted Super Bowl LVI and will host the Opening and Closing Ceremonies of the Olympic Games in 2028.

Inglewood Unified School District: Early History, Establishment and Expansion (1905–Present)

Originally, the Inglewood Union High School District was separate from the Inglewood School District.[18] The Inglewood Union High School District began in 1905 and its territory included all of Inglewood, Jefferson (later Lennox), Hawthorne, Lawndale, Hyde Park, El Segundo, and the Wiseburn School District.[19] El Segundo withdrew from the Inglewood Union High School District on November 22, 1925, and formed the El Segundo High School District.

The Inglewood Union High School District's name was changed to the Centinela Valley Union High School District in November of 1944. Roughly ten years later, in July of 1954, Inglewood's two high schools - Inglewood High School and Morningside High School - withdrew from the Centinela Valley Union High School District and formed the Inglewood Unified School District.[20] This establishment may have been the result of the post-World War II population boom, as a similar pattern of expansion was evident within the Los Angeles City school districts with the formation of the nearby Los Angeles Unified School District by 1960, during the same period.[21]

The Centinela Valley Union High School District still exists today and is presently a component of the El Camino Community College District.[22] Today, the Inglewood Unified School District is comprised of twelve elementary schools and six secondary schools.[23]

Post-1933 Long Beach Earthquake School Plants (1933-1945)

Some of the IHS campus masonry buildings received a retrofit after the 1933 Long Beach earthquake, overseen by San Diego-based master architect T.C. Kistner. The only remaining building still extant on the campus today that dates to the pre-earthquake period is Building A (Administration). It was originally

constructed in 1925 and then reinforced for building safety and redesigned in the PWA Moderne style after the 1933 earthquake. Building I, Classroom, was designed by Kistner in the PWA Moderne style with adherence to the Field Act and constructed in 1936. The Field Act was a California state law that mandates earthquake-resistant construction for public school buildings. The act was one of the first pieces of legislation in the United States that mandated earthquake-proof construction resulting from the 1933 earthquake, in which 230 Southern California school were rendered unsafe. The *Los Angeles Unified School District Historic Context Statement, 1870 to 1969* (LAUSD Historic Context Statement) details the development of the Los Angeles Unified School District (LAUSD) and examines it in the context of school design in the United States.[24] The City of Los Angeles citywide context statement recognizes that WPA buildings that overlap with its Post-1933 Long Beach Earthquake sub-theme, Education sub-context, and Public School theme require unique evaluation considerations.[25] As Building A is located in the City of Inglewood, which does not have such developed historic context statements or thematic framework for evaluation, the adjacent City of Los Angeles framework is appropriate for application as the building reflects the aforementioned sub-theme, sub-context, and theme. LAUSD's *Post-1933 Long Beach Earthquake School Plant* theme provides background of this period of school building design and planning and relevant excerpts are included below:[26]

> The March 1933 Long Beach earthquake was one of the decade's most significant events for the region's built environment. The 6.5-magnitude earthquake caused significant damage and losses; in Long Beach, more than two-thirds of the city's schools were in need of demolition and reconstruction. In Los Angeles, 40 unreinforced masonry school buildings were destroyed. In addition, after a survey of Los Angeles schools within 10 days of the earthquake, all damaged or "precariously placed" chimneys, parapets, fire walls, and ornamentation were removed. Fortunately, the earthquake took place when school was not in session.
>
> The Long Beach earthquake posed a disaster for the district but also an opportunity for the region's architects. While change and reform in school plant design were already underway, the Long Beach earthquake and the mini–school construction boom it triggered provided ample opportunities to test new ideas about school architecture and campus planning in Southern California.
>
> These changes also affected the state overall. One month following the earthquake, through the efforts of California Assembly member Charles Field, the State of California adopted the Field Act. Similar legislation had already been passed following the 1925 earthquake in the City of Santa Barbara. With this, the state had adopted building codes tailored to upgrading seismic stability. In 1927, the City of Los Angeles revised its own City Building Ordinance and adopted additional requirements for schoolhouse construction. All new construction after 1927 adopted the updated building codes, which included requirements for fire resistant corridors, stairs, and exterior walls and for reinforced concrete beams within floors and roofs. By the time the 1933 earthquake struck, these post-1927 schools indeed proved more resilient.
>
> Through the Field Act, the lessons learned in the Long Beach earthquake were used to further strengthen school building codes. The law directed the State Division of Architecture to design and enforce regulations to ensure earthquake-resistant buildings. State oversight and implementation of

[25] Daniel Prosser, "Los Angeles Citywide Historic Context Statement, Context: Public and Private Institutional Development, 1850-1980, Sub-Context: New Deal Programs," Prepared for the City of Los Angeles Department of City Planning, Office of Historic Resources, June 2017, 2.

[26] Sapphos Environmental, Inc., *Los Angeles Unified School District Historic Context Statement, 1870 To 1969*, Prepared for LAUSD, March 2014, 62-65; 137.

building codes/construction inspections were also established. Additionally, the City of Los Angeles Board of Education again revisited its own building codes. Post-1933 elementary school buildings were not to exceed one story in height, and high school buildings were limited to two stories (this would change over time, given the tremendous demand for classroom space in the postwar period and relative scarcity and expense of large lots).

New buildings incorporated the latest construction techniques and prominently showcased the use of modern materials such as steel and reinforced concrete. On sites where soil load-bearing properties were found to be too low for steel and concrete, demolished schools were replaced with relatively earthquake-resistant wood-frame buildings. In cases where damaged buildings were rehabilitated, methods included installing reinforcing steel columns, beams, and diagonal bracing, exterior refacing with reinforced gunite and installation of reinforced concrete walls.

Following the earthquake, the district planned for phased reconstruction. Available at the time were a total of $5.3 million in unsold bonds. The PWA purchased the bonds and granted additional matching funds for school reconstruction efforts. A total of $12.1 million was ultimately raised for the 1933 to 1935 reconstruction program. Approximately $250,000 funded the construction of temporary classroom housing, in order to minimize the interruption of the school year. An estimated 879 tents and 139 bungalows were initially erected to house the district's enrollment of 300,000 students.

As the school reconstruction program progressed, final steps included reinforcing or replacing 132 unreinforced masonry buildings, strengthening 275 buildings constructed since 1927, replacing 51 wood-frame buildings, and eliminating all temporary classroom housing. By 1937, over $34 million had been spent on post-earthquake school construction, repairs, retrofitting, and rehabilitation. The advent of World War II put substantial investments in schools on hold (after war's end, a $75 million bond issue kick-started these efforts).

As reconstruction began, Los Angeles City school districts intended to build new seismically sound buildings but also facilities with regionally inflected styles. As the Los Angeles Times reported in 1934, new and repaired buildings would be designed for "absolute safety with simplicity and beauty of architecture in harmony with the atmosphere and traditions of Southern California." Many designs were executed by the district's architectural department, under the direction of Alfred Nibecker, but bids were also issued to outside architects, with the intention of awarding the work to a wide field of architects. In addition, new buildings were to be explicitly Southern Californian in design but "free of needless ornamentation." This represented a move away from 1920s period-revival styles but also a nod to earthquake safety, since applied ornament often failed and fell to the ground during earthquakes.

Post-1933 Long Beach Earthquake School Plant character-defining features for individual buildings include:

- One-story massing for elementary schools; up to two stories for middle and senior high schools
- Reinforced concrete, steel- or wood-frame construction
- Classroom wings designed for easy access and views to outdoors—with variations including L-, H-, T-shaped building plans
- Generous expanses of windows, including steel- and wood-framed multilight windows, awning and hopper casements, clerestories, and large-pane fixed windows; window groupings often mark the location of classrooms
- Stylistically more streamlined and less ornamental than 1920s period-revival styles

- Emphasis on "traditional Southern Californian" styles, such as Spanish Colonial and Mission Revival
- Styles can also include PWA Streamline Moderne, Art Deco, Late Moderne, and proto-modern styles
- May have been partially or fully funded through Works Progress Administration (WPA), 1935 to 1943
- WPA projects may include significant interior artwork such as murals, paintings and sculpture
- May have been designed by a prominent architect of the period

Post-1933 Long Beach Earthquake School Plant character-defining features for a campus/district include:

- Unified site plan consisting of buildings and structures designed and sited according to their use
- Use of designed outdoor and landscaped spaces, for outdoor study, recreation and dining
- Often displays connecting sheltered corridors throughout campus
- Emphasis on a more expansive site plan
- Varied collection of buildings, differentiated by function and use (rather than a single building with all functions inside)
- Might include an elaborate administration building, located near the campus entrance; administration buildings usually serve as the focal point of the campus
- Campus often composed of groupings of classroom wings, auditoriums, gymnasiums, cafeterias, and outdoor recreation and dining areas
- Middle or senior high schools might include a gymnasium designed in the style of the campus overall

Early Experiments in The Modern, Functionalist School Plant, (1933–1945)

Building J and Building K, designed by architect John C. Austin in 1941, were constructed on the IHS campus. The buildings were designed in the utilitarian style with a few characteristics from modern, functionalist school design including reinforced concrete, steel or wood-frame construction, cement or stucco cladding, and plentiful windows including steel and wood-framed multilight windows, double-hung sashes, awning and hopper casements, clerestories, and fixed panes. Historical correspondence related to modifications to the campus in the Inglewood HS files details that the buildings were constructed to adhere to the Field Act with Federal New Deal labor. Excerpts from the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969: Early Experiments in The Modern, Functionalist School Plant* theme are included below[27]:

> The reform movement was not concerned with bringing modernist style, per se, to school plant design. The real push was for a more "functional" school. If the function of a school was educating children—and if educational methods and curricula had improved and evolved—then school plant

[27] Sapphos Environmental, Inc., *Los Angeles Unified School District Historic Context Statement, 1870 To 1969*, Prepared for LAUSD, March 2014, 62-65; 137.

> design had to evolve as well. Building plans, campuses, and interiors were increasingly designed to be more child-centered and flexible…
>
> The emergence of modern architectural design provided a quantum leap forward for this new wave of reform. Modernism embraced honesty in structure and materials and a functional design driven not by a given style or ornamental program but by the building's
>
> purpose. By the postwar period, this debate had been settled, and modernism did become the preferred (though not exclusive) idiom for American school plants. But in the 1930s, this movement, which brought together ideas about educational reform, modern architecture, and research in building sciences, was just taking root.
>
> […]
>
> Not all examples of the functional school plant were modernist in the sense of being antihistoricist. Most 1930s schools continued to display stylistic programs and ornamentation, though tastes had shifted to PWA Moderne, Streamline Moderne, Art Deco, and streamlined versions of historic-eclectic styles, such as the Spanish Colonial Revival. School plants embracing the new ideas might express their function clearly, with a
>
> differentiated, unified campus plan, but they might also display a specific style. These examples were widely praised and published as representative of the 1930's movement toward more functional school plants.

Functionalist School Plant character-defining features for buildings and structures include:

- One-story massing for elementary schools; up to two stories for middle and senior high schools
- Usually reinforced concrete, steel- or wood-frame construction, clad in cement/stucco
- Classrooms are often single- or double-loaded finger-like wings, arranged along a central axis or semicircle
- Classrooms open directly onto patios/play areas through glass doors or movable walls
- Varying elevations might display differentiated window sizes and configurations, in order to tailor interior light to sun patterns and create cross-lit classrooms
- Windows are plentiful and include steel- and wood-framed multilight windows, in double-hung sashes, awning and hopper casements, clerestories, and fixed panes
- Displays an informal, non-monumental scale and spare ornamental program
- Stylistically modern; might display the influence of Late Moderne or PWA Streamline Moderne
- May have been partially or fully funded through WPA, 1935 to 1943; WPA projects may include significant interior artwork such as murals, paintings and sculpture
- May have been designed by a prominent architect of the period

Functionalist School Plant character-defining features for a campus/district include:

- A unified, non-monumental, nonhierarchical site plan

- Displays inventive site plan incorporating buildings, landscaped courtyards, and circulation corridors into a unified campus design
- Swaths of landscaped patios and terraces adjacent to classroom wings
- Designed outdoor spaces, including patios, courtyards
- Use of outdoor corridors, with simple canopy supports and posts or pilotis, form links between classrooms and other buildings

The Postwar Modern Functionalist School Plant (1945-1969)

From 1945 to 1965, architect H.L. Gogerty and his later firm Porter, Gogerty, Meston & Associates designed Buildings B, C, D, E, F1, G1, H1-H3, L, M, O, P, Q, R, S, the arcade with "Inglewood High School" signage, and likely other landscaped site elements at campus. The following buildings are articulated in the Mid-Century Modern style: B, C, D, E, F1, G1, H1-H3, Q, and S. Buildings L, M, and O are in an Industrial Utilitarian style with Buildings L and M being examples of a daylight factory and carpentry shop typologies. Buildings P and R are designed in the Late Moderne style. The buildings were constructed during the immediate postwar period, a time when architects throughout the region were moving away from an earlier Functionalist school plant and transitioning to the modern Functionalist school plant. Relevant excerpts from the *Los Angeles Unified School District Historic Context Statement, 1870 to 1969: Postwar Modern, Functionalist School Plant* theme are included below:[28]

> In the postwar period, the functional modern school plant quickly became the norm throughout the United States and in Los Angeles. As school districts struggled to keep up with demand, architects had ample opportunities to test new ideas. The emphasis on the child-friendly school meant a continuing focus on improving and standardizing environmental controls, such as lighting, ventilation, heating and cooling systems, and interior design. While three main plan types emerged during this era—the finger-plan, cluster-plan, and open-plan school—there were many combinations and variations on the basic themes. Stylistically, as well, postwar schools might exhibit textbook features of the International Style, more regionally inflected modernism, or variations on the styles popular in the postwar period.
>
> First and foremost, the postwar school was designed to be more informal, accessible, and child-friendly. A more accessible school generally signaled lower massing, though junior and high schools might still climb two or three stories, especially given the pressing need for more schools. In general, the preferred, more domestic scale was reflected in one-story massing and low ceilings, which made classrooms more intimate. Generous panels of glazing provided light and outdoor access, with larger windows on north elevations and often clerestory windows on southern sides, to balance cross-lighting. With the advent of air-conditioning, schools in the early 1960s tended to diminish generous expanses of glazing. The need for economical construction and finely tuned environmental features and controls accompanied a continued national call for standardization of school design.
>
> Campus planning and site-specific design also became increasingly important, as new residential areas emerged from former agricultural lands, and school builders and planners had the acreage to plan an entire campus created for new residential communities. In this era, ideas about planning at the scale of the neighborhood included the generous use of outdoor spaces and landscaping and

[28] Sapphos Environmental, Inc., *Los Angeles Unified School District Historic Context Statement, 1870 To 1969*, Prepared for LAUSD, March 2014, 114, 142.

> a zoned design that turned the campus inward and separated pedestrians and automobile traffic, for safety and accessibility. Although many variations were proposed, the modern campus plan called for "small separate units connected by arcades or passageways and attractively grouped. This type of arrangement is quite flexible and eliminates much of the institutional atmosphere of the large compact structures."

Character-defining features for buildings and structures under this theme:

- Building plans and site design clearly express their function; classroom wings often exhibit one-story "finger-like" wings, arranged on an axis
- Easily identifiable indoor-outdoor spaces, connections to classrooms through the incorporation of patios, courtyards, and outdoor canopied corridors
- One-story massing, particularly for elementary schools; up to two to three stories for junior and high schools
- Building types and plans expressive of postwar ideals in school design; these can include (1) finger-plan schools (usually in 1940s through 1950s); (2) cluster-plan schools (beginning in 1950s); and (3) variations and combinations of these typologies clearly expressive of the ideals for informality, indoor-outdoor connections, and zoned planning for the site
- Varying elevations might display differentiated window sizes and configurations, in order to tailor interior light to sun patterns and create cross-lit classrooms

Character-defining features for campuses/districts under this theme:

- Unified campus design includes most or all of the following attributes: lack of formality and monumentality; low massing (usually one stories for classrooms and up to two stories for auditoriums/multipurpose rooms); strong geometric ordering of buildings and outdoor spaces; decentralized, pavilion-like layout; rational, function driven site design; buildings extend across the site; buildings are oriented to outdoor spaces (courtyards, patios, outdoor areas), purposeful indoor-outdoor integration
- Automobile traffic/drop-off areas separated from campus; linked to interior via extended canopied corridors
- Buildings often turn inward, toward green spaces and courtyards, lawns
- Outdoor corridors, sheltered beneath simple canopies, forming links between the buildings of the campus
- Classrooms often consist of a series of axial, modular units
- An informal, domestic scale for the buildings and campus might be especially evident in elementary schools
- Swaths of patios, terraces, and plantings adjacent to and alternating with buildings
- Generous expanses of windows, including steel- and wood-framed multilight windows, in awning and hopper casements, clerestories, and fixed panes
- Flat roof or broken-plane roof often used for lighting and acoustical issues

- Modular design, with a rhythmic, asymmetrical but balanced composition
- Usually displays a modern design idiom, usually either regional modernist (with use of native materials such as stone, brick, and wood siding and/or framing), International Style modernist, or, by the early 1960s, Late Modern (more expressive and sculptural)
- Some examples might include some degree of historicist detailing or styles popular in the postwar period (such as American Colonial Revival); these are less common than modernist examples
- May have been designed by a prominent architect of the period
- Often associated with post–World War II suburbanization and growth near major employment centers beyond the city periphery (such as the San Fernando Valley and southwest Los Angeles)
- Often built in residential neighborhoods on large expanses of land, with swaths of land devoted to landscape design and playing fields (in particular for high school campuses)

Public Works Administration Moderne Style (1929-1948)

As detailed above, portions of the IHS campus received a retrofit after the 1933 Long Beach earthquake. Two extant buildings remain from that period including: Building A, which was reinforced and redesigned in the Public Works Administration (PWA) Moderne style in 1934, and Building I, which was designed in the PWA Moderne style and constructed in 1936. As detailed below, the PWA Moderne style was the result of the evolution of formal design principles combined with the contemporary aesthetics of the high-style Art Deco and Moderne architectural style, resulting in a recognizable and simplified style that became popularized during the Great Depression. Both buildings were designed by architect T.C. Kistner.

A federal Great Depression era program, the Works Progress Administration (WPA), provided funding for the seismic reinforcements to Building A. As such, limited excerpts from SurveyLA's *WPA, 1935-1943* thematic context are included below to provide contextual background about other relevant New Deal government programs and funding that allowed for the retrofit and stylistic changes to Building A, and for the construction of Building I:[29]

> *The Creation of the WPA in 1935*
>
> By the beginning of 1935 it was clear that the Depression was not going to end soon, and that something other than an emergency program with a stated dissolution date was needed. It was also clear, with the victory of the Democrats in the November 1934 midterm election, that Roosevelt had a mandate to act on this realization. The result was the Works Progress Administration.
>
> While patterned after the FERA and in particular the CWA, the WPA differed in one significant way. It was structured as an on-going program, with no set end date. The intention was to continue so long as public employment was needed. It established the federal government as the employer of last resort for the foreseeable future.
>
> […]

[29] SurveyLA, Los Angeles Citywide Historic Context Statement: *Public and Private Institutional Development, 1850-1980*, June 2017, 3-39.

The PWA dated from 1933 and was initially seen as the primary means of creating jobs through federal expenditures. But because of the nature of its projects and its need to follow standard procedures of public bidding, it moved relatively slowly and hired relatively few low-skilled workers. By 1935 Roosevelt was impatient with its pace and its inability to get jobs to the unskilled most in need. The creation of the WPA was a response to this impatience.

WPA Construction Projects

[…]

The goal of the WPA was to provide jobs primarily for unskilled and semi-skilled workers. If the

proposed project required a relatively higher proportion of skilled workers, the sponsor had to pay for them as part of its contribution. This was particularly the case in new construction of public buildings such as recreation centers and firehouses, which required a relatively high percentage of skilled building trade members. Overall about thirty percent of the employees on public building projects were skilled.

[…]

The WPA Comes to Los Angeles

In the summer of 1935, when the WPA began to organize itself, Los Angeles County had about 100,000 individuals – heads of families or single men and women – on relief who were considered employable and qualified for the WPA. In light of this need, the county received about forty percent of the two hundred-million-dollar federal allocation made to California. This was estimated to be enough to put 96,000 individuals to work by November. It would include more than 60,000 skilled and unskilled workers assigned to construction.

For its state and local management, the WPA initially made use of experts previously involved in relief programs. The first WPA Administrator for California was Frank McLaughlin, who was already serving as the state's relief administrator. The assumption was that the WPA would take the place of the state agency. Ralph Dalton, a former executive with the PWA, was sent from Washington to become the Los Angeles County WPA Director. Included in his staff was a member of the planning division of the Los Angeles County Relief Administration, who had also been an executive with the local CWA.

The WPA soon established itself as a presence in the economy of Southern California. During 1936 it spent $45,504,446 in Los Angeles County. It gave employment to 53,229 on average over the year. It started with 58,209 in January, rose to 65,170 in February, dropped to 45,164 in August, and rose again to 49,195 in November. At the beginning of January of 1937 it had 47,304 on its rolls. By July of 1937 the WPA had created a support system for its construction projects.

Stand-Alone Public Buildings

This was the area in which the WPA and the PWA most overlapped. Cooperation between the two agencies was evident in the Los Angeles School Project. The Project was a program to upgrade or replace schools in light of the damage resulting from the 1933 Long Beach earthquake. Between 1934 and 1938, a board of architects, engineers, and construction experts supervised work on schools that included the Emerson School, Thomas Jefferson High School, and Hollywood High School (listed in the National Register of Historic Places). More than half the funds were supplied by the PWA, and projects were bid out to private contractors through the traditional method of public construction. The WPA provided unskilled labor for such tasks as demolition and small repairs, and also occasionally decoration through its Art Project.

[…]

The following definitions provide additional information about the government programs that are applicable to the New Deal era history of Building A:

> WPA: "The Works Progress Administration, later renamed the Work Projects Administration, was created in 1935 and dissolved in 1943. The purpose of the WPA was to provide jobs to the unemployed, regardless of field or talent. All were hired and paid by the federal government directly. The quality of the work was secondary to the provision of employment. Construction projects were generally small-scale and labor intensive. Artists employed under the WPA in its Federal Arts Project, with rare exception, worked on local and state government buildings, and not on federal buildings (see the PWA below)."[30]
>
> PWA: "The Public Works Administration was created in 1933 and dissolved in 1939. It was a source of funding, and not an employment program. The purpose of the PWA was to provide grants for largescale public works projects. It relied on the traditional practices of government construction, awarding contracts to private entities through competitive bidding. Workers on PWA projects were employees of these private entities and not of the government. The primary goal of the PWA was to build needed infrastructure rather than to provide jobs for those on relief. Artists for PWA-funded federal projects, such as post offices, were chosen through competitions run by a section of the Treasury Department. Quality of the work, rather relief for unemployed artists, determined the selection."[31]
>
> CWA: "The Civil Works Administration was created In November of 1933 and dissolved in March of 1934. It was intended as large-scale but short-term enlargement of the FERA, to provide work during the winter of 1933-1934. It included a great number of small-scale construction projects and served as a model for the WPA."[32]
>
> SERA: "The State Emergency Relief Administration (SERA) was created in 1933 as a provision of the Unemployment Bond Relief Act. In 1935, SERA was succeeded by the State Relief Administration (SRA). Both agencies were created to help alleviate certain conditions caused by the Great Depression, and their responsibilities included the distribution of state and federal funds for unemployment relief. The activities of the State Relief Administration frequently overlapped activities of other local, federal and even state agencies created for similar purposes. Consequently, the organization of the SRA was constantly changing and it is difficult to decisively state the number or names of the agency's divisions at any given date.[33]

While the extensive retrofit of Building A was undertaken as a WPA Great Depression-era project, the building's architectural style is considered to be PWA Moderne, as is the style of Building I. As such,

excerpts related to the PWA Moderne architectural style including character-defining features as included in SurveyLA's *L.A. Modernism, 1919-1980* context statement are presented below:[34]

> Generally speaking, and with some notable exceptions, the Streamline Moderne style was best suited to commercial and residential property types and was not applied with regularity to civic and institutional buildings. In part this was practical, and due to the fact that Streamline Moderne's distinguishing characteristics proved somewhat incongruent with the large, monumental edifices in which civic institutions tended to be housed. However, it also alluded to the fact that the style's sleek, industrial aesthetic and overt visual references to the future were not particularly well aligned with government agencies' overarching goal at the time, which was to reaffirm their authority and promote an image of stability amid the financial turmoil associated with the Great Depression.
>
> In spite of its name, the PWA Moderne style was not just applied to buildings and infrastructure projects that were financed by federal agencies. As the 1930s progressed, and the style became more recognizable and widely accepted, it was also adapted to other types of buildings. It specifically emerged as a favorite stylistic choice among telephone companies and other utility providers and quickly attained a close visual association with telephone exchanges, water and power substations, and various other buildings for municipal infrastructure. PWA Moderne was also sometimes applied to some commercial properties, usually office buildings and financial institutions, whose occupants sought to evoke the same overarching sense of power, authority, stability, and security as the government. Stylistically, PWA Moderne architecture struck a middle ground between the formality of the Beaux Arts tradition and the contemporary aesthetic of the Art Deco and Moderne styles.
>
> […]
>
> The PWA Moderne style is also clearly expressed in the design of public school campuses that were constructed (or, in many cases reconstructed) by the Los Angeles Unified School District (LAUSD) in the 1930s. The school district presided over a remarkably ambitious building program in the wake of the 1933 Long Beach Earthquake, which called into question the structural stability of public buildings and resulted in a series of state-mandated building reforms that were collectively known as the Field Act. Many of the existing schools within LAUSD's jurisdiction were either rebuilt from the ground up, or were substantially remodeled and reskinned to comply with the mandates enumerated by the Field Act. Consistent with that era's prevailing trends in civic and institutional architecture, the myriad buildings and campuses that were associated with this building program exuded the formality and austerity that so strongly characterized the PWA Moderne style.
>
> PWA Moderne style schools can be found across Los Angeles, but are particularly plentiful in areas of the city that had been firmly established by the onset of World War II. Some notable examples include Susan Miller Dorsey High School in West Adams (1937, listed in the California Register) by H.L. Gogerty and C.E. Noerenberg; Hollenbeck Middle School in Boyle Heights (1936, listed in the California Register) by Alfred P. Rosenheim; Florence Nightingale Junior High School in Cypress Park (1937-39) by John C. Austin and Frederick M. Ashley; San Pedro High School (1936, listed in the California Register) by Gordon Kaufmann; and David Starr Jordan High School (1938, Listed in the California Register).

[34] SurveyLA, *Los Angeles Citywide Historic Context Statement: Architecture and Engineering: L.A. Modernism, 1919-1980,* August 2021, 79-89.

In addition to the above context, the *LAUSD Context Statement* details the following information about PWA Moderne as it relates to school buildings[35]:

> Created by the National Industrial Recovery Act, the Public Works Administration (PWA) was founded within a few months of the March 1933 Long Beach Earthquake. Following widespread damage to Los Angeles public schools in the wake of the earthquake, much school reconstruction work was funded by the PWA. Consequently, a substantial number of Los Angeles public schools either built or remodeled during this time exhibit some degree of PWA Moderne styling. Also referred to as "Stripped Classicism," the PWA Moderne often incorporates elements of a number of styles, including Classical Revival, Spanish Colonial Revival, Art Deco, and Streamline Moderne.
>
> Compared with the Streamline Moderne, the PWA Moderne was more formal and symmetrical in its overall design, with less emphasis on curvilinear shapes and horizontality. This style is found throughout the United States, particularly for institutional buildings funded through the PWA. Although the PWA program was terminated in 1943, buildings continued to display these stylistic features.

PWA Moderne style character-defining features include:

- Emphasis on verticality
- Flat roofs
- Formal symmetry and massing
- Smooth wall surfaces, such as stucco, marble, terrazzo, polished stone (and brick, although rare)
- Pier supports, often fluted or reeded, separating recessed window channels (rather than columns)
- Windows arranged in vertical recessed bays
- Stripped appearance with minimal ornamentation, including some zigzags, medallions, or plaster reliefs
- May have regional influence, exhibiting characteristics of the Spanish Colonial Revival or Mediterranean Revival style
- Incorporation of shallow relief panels and interior murals

Late Moderne Style (1937-1960)

As detailed in the *LAUSD Historic Context Statement* context, common styles for Southern California schools in the 20th century included Spanish Colonial, Mission Revival, PWA Moderne, Streamline Moderne, Art Deco, and Late Moderne. Buildings R and P are articulated in the Late Moderne style with designs by H.L. Gogerty. His austere building designs featured smooth stucco cladding and horizontal bands of windows with projecting frames which are characteristics of the Late Moderne style. As LAUSD does not have a dedicated architectural context for Late Moderne, excerpts about the Late Moderne

[35] Sapphos Environmental, Inc., *Los Angeles Unified School District Historic Context Statement, 1870 To 1969, Prepared for LAUSD*, March 2014, 124.

architectural style including the character-defining features from the SurveyLA's *L.A. Modernism 1919-1980* report are included below: [36]

> The Moderne movement, as epitomized by the stylized geometries and glitzy ornament of Art Deco, the sweeping, graceful curves Streamline Moderne, and the muted Classical forms and motifs of PWA Moderne, had unequivocally fizzled out by World War II. These were architectural styles that bore a strong visual association with the societal values and economic conditions of the Depression era, both for better and for worse. By the end of the war, architects and the American public began to gravitate away from these idioms, which were increasingly seen as outmoded and passé, and toward new modes of architectural expression that were more closely aligned with the International style.
>
> But the Moderne movement did not simply disappear from the American architectural lexicon overnight. It took time for architects and the public to accept and fully embrace this paradigm shift from familiar Depression era architecture to the more authentic and expressive qualities underpinning postwar Modernism. And, since the imposition of building moratoria brought new construction to a halt during the wartime years, architects and designers were simply not able to experiment with new forms, styles, and motifs during this time as they otherwise would have.161 What resulted, then, in the very early postwar period was a hybrid of those architectural styles of the late Depression years – Streamline Moderne and PWA Moderne – and the International style that was quickly coming into vogue. The aesthetic that emerged from this stylistic melding resulted in the emergence of a distinct architectural style that is known as Late Moderne. Late Moderne is considered to be the final phase of the Moderne movement in that it "extend[ed] the Streamline Moderne idiom into the post-war era."
>
> Since the Late Moderne style was relatively short-lived and represents a continuation of existing architectural trends – as opposed to a fresh, innovative approach to design – it has historically evaded critical attention and to this day remains relatively unacknowledged.
>
> The Late Moderne style certainly carries forward elements of the Moderne school from which it emerged. Like the Streamline Moderne and PWA Moderne styles, Late Moderne style buildings exhibit a prevailing sense of horizontality. Like their predecessors, their massing tends to be heavy, and in contrast to the structural expressionism of the International style their volumes tend to be more contained as to conceal structure. Materials such as natural stone and Roman brick are often used in addition to, or sometimes in lieu of stucco to provide buildings with a sense of warmth and texture.
>
> However, the Late Moderne style is also defined by characteristics that deviate from other Moderne idioms and clearly draw upon the tenets of the International style. Specifically, the rounded corners and teardrop forms evident in Streamline Moderne are replaced with rigid rectangular forms and sharp angularity. Building forms tend to be boxier than they are aerodynamic, and consist of compositions of solid rectilinear volumes that are placed in balanced contrast to one another. Exterior surfaces are either characterized by large, windowless expanses or feature continuous horizontal bands of windows.
>
> Other common features of the Late Moderne style pertain to decorative features and the application of ornament. Buildings designed in the style adhere to a distinctive ornamental catalog comprising fins, grids, and pylons, often with holes or squared voids "punched" into

[36] SurveyLA, *Los Angeles Citywide Historic Context Statement: Architecture and Engineering: L.A. Modernism, 1919-1980, August 2021*, 91-102.

> them. Commercial examples of the style typically feature prominent entryways and display windows that are exaggerated in size and are surmounted by a broad, curvilinear freeform canopy or soffit. Façades are often dominated by prominently soaring pylons that were emblazoned with neon or other visually prominent signage. It was also not uncommon for building interiors to exhibit some characteristics of the Hollywood Regency style.
>
> However, it is the bezeled window that is perhaps the most readily identifiable exterior feature of Late Moderne style buildings. The typical bezeled window consists of a horizontal band of fenestration that is prominently set within a protruding, bezel-like flange, often composed of a material and color that contrasts with the adjacent wall surface and makes the band of windows "pop out." Often, bezels would "extend beyond the windows to wrap around corners or dive into the ground in an inverted L-shape, giving the façade a look of tautness" and emphasizing its prevailing sense of horizontality.

Late Modern Style character-defining features for individual buildings include:

- Horizontal orientation
- Concrete construction
- Flat or nearly flat roof
- Smooth stucco cladding
- Horizontal bands of bezeled windows with projecting frames
- Metal, often steel-sash, windows
- Unadorned wall surfaces, with minimal ornament

Mid-Century Modernism/Regional Modernism (1945-1960)

From 1945 to 1965, H.L. Gogerty and his later firm Porter, Gogerty, Meston & Associates designed Buildings B, C, D, E, F1, G1, H1-H3, Q, and S. As identified in the *LAUSD Historic Context Statement*, the Mid-Century Modernism, or Regional Modernism style was discussed as follows:

> Mid-Century Modernism, or Regional Modernism, represents a middle ground between the formal, machine-age aesthetic of the International Style and a regional idiom reflecting local precedent and identity. In the postwar period through the 1960s, as practiced in Southern California, Mid-Century Modernism took its cues from the region's first-generation modernist architects such as Richard Neutra, Rudolph Schindler, Gregory Ain, Frank Lloyd Wright, and Harwell Hamilton Harris. In the postwar period, second-generation practitioners such as Raphael Soriano, Whitney Smith, and A. Quincy Jones, among many others, established Los Angeles as a center for innovative architectural design and culture.
>
> Mid-Century Modernism is characterized by an honest expression of structure and function, with little applied ornament. Aesthetic effect is achieved through an asymmetrical but balanced, rhythmic design composition, often expressed in modular post-and-beam construction. Whether wood or steel, post-and-beam construction allowed for open floor plans, ease of expansion, and generous expanses of glazing to heighten indoor-outdoor integration. Infill panels of wood or glass are common, with glazing often extending to the gable. Buildings are generally one to two-stories, with an emphasis on simple, geometric forms. Capped with low-pitched gabled or flat roofs, a Mid-Century Modern building often displays wide eaves and cantilevered canopies, supported on spider-leg or post

supports. Sheathing materials vary, with wood, stucco, brick and stone, or steel-framing and glass. Windows are generally flush-mounted, with metal frames.

This style was seen in postwar institutional and commercial buildings, as well as residences, from 1945 until circa 1975, when Title 24 restrictions on the use of glass curtailed the expansive glazing that characterizes the style. Typical Character-Defining Features:

- Horizontal design composition and massing; generally one to two stories
- Simple, geometric volumes
- Flat or shed roof, often with wide, cantilevered overhangs
- Exterior materials include stucco, brick, or concrete
- Modular design and planning
- Aesthetic qualities derive from use of simply treated materials and excellent craftsmanship
- Direct expression of structural systems, often in wood or steel post-and-beam
- Lack of historicizing ornament
- Generous expanses of fenestration, including bands of grouped multi-light windows
- Extensive use of sheltered exterior corridors, with flat or slightly sloped roofs supported by posts, piers, or pipe columns[37]

Industrial Utilitarian: Daylight Factory (1910-1940) and Carpentry Shop (1900-1965)

From 1948 to 1949, the Industrial Utilitarian style buildings L and M from plans by H.L. Gogerty, were constructed as an auto repair shop, and a woodworking and drafting shop. No architectural context has been developed by SurveyLA for the Industrial Utilitarian style so as per the guidance from SurveyLA, excerpts related to the Industrial Design and Engineering theme, the Daylight Factory property type, and the Carpentry Shop property type from the *Industrial Development, 1850-1980* context were used to contextualize the buildings. Further, as no context has been developed for industrial architecture as it applies to school properties, the properties don't align fully within the theme of a daylight factory or carpentry shop, but they are the typologies that most closely apply to Buildings L and M. Relevant excerpts from the context theme and eligibility criteria are included below:[38]

> In the 19th century, prior to the emergence of engineers who specialized in industrial design, a manufacturer would often direct a local builder with common engineering knowledge to construct a building of the manufacturer's design. On some occasions, they would use plans distributed by the manufacturers of their key machinery…. A successful industrial building needed to address many unique factors, including adequate lighting, ventilation, fire-resistance, vibration and noise, large, oddly-shaped equipment, efficient work-flows, and product logistics. In the late 19th century, these issues were compounded by rapidly changing technology and led to the emergence of industrial engineering as a distinct sub-field in engineering.

[37] "Los Angeles Unified School District: Historic Context Statement, 1870 to 1969," 126–127.

[38] SurveyLA, *Los Angeles Citywide Historic Context Statement: Industrial Development, 1850-1980*, September 2011; rev. February 2018, 197.

Lighting and Ventilation

One of the most important issues that needed to be addressed in the design of industrial buildings was lighting. Workshops and factories in the 19th century were wholly dependent on daylight to provide illumination of the workspace. This limited working hours and drove designers to develop new ways to bring in the maximum amount of available light. In the mid-19th century, some manufacturers were experimenting with "window walls," where vertical rows of windows set between structural members increased the ratio of windows to wall space. Factories with load-bearing brick walls were structurally limited in increasing fenestration for lighting, but it could be accomplished by introducing one or two wood-framed window walls into the building. With the advent of steel framing and mill construction, designers used the newfound structural freedom to create curtain walls of glass. Around the turn of the century steel industrial sash was introduced from England. With their thin frames, industrial sash dramatically increased the amount of glazing on the wall. In addition, they were viewed as more economical to maintain than wood and were non-combustible. The sash was fitted with pivoting panels that could provide ventilation without letting in rain. By 1910, steel industrial sash had become the standard windows for industrial buildings. The marketing of steel sash as "daylight units" helped to coin the term "daylight factory" to refer to reinforced concrete and steel buildings with steel sash.

Almost immediately following the introduction of steel sash to walls of factories, designers started to use them on the roof as well. They developed a variety of roof forms and patterns for skylights. The monitor roofline was popular because it also provided ventilation, pulling hot air up through the open sash for the entire length of the building. A sawtooth roof was generally oriented to the north to bring indirect light in without also heating up the building with direct sunlight. From these two basic forms came many others that modified variables of lighting, ventilation, material cost, height, and interior supports.

Manufacturers were among the most eager customers of the nascent utility companies. Electrical lighting was used in an industrial setting as early as the 1880s in Lowell, Massachusetts textile mills. Electric lights had the potential to increase production hours beyond the day and to provide needed illumination in areas of poor illumination. However, it was not until high-wattage, high-pressure mercury lamps and fluorescent lamps were developed in 1935 and 1938 that factories could work independent from daylight illumination. Combined with the recent development of air conditioning and forced air ventilation, manufacturers found that they could create controlled conditions that were not subject to weather. One of the first windowless "controlled conditions" plants ever created was the Simonds Saw & Steel Company plant in Fitchburg, Massachusetts. The controlled conditions model picked up after World War II and remains the standard for manufacturing.

Daylight Factory character-defining features include: [39]

- Constructed between 1910 and 1940 for industrial use
- Exemplifies the use of industrial sash and distinctive roof forms to maximize and control the level of sunlight inside the building
- 1–2 stories in height (2nd story is often a mezzanine level)
- Continuous industrial steel sash on two or more elevations

[39] SurveyLA notes: "Date range encompasses brief but prolific period during which daylight factories were part of the standard industrial design, from the introduction of industrial sash to rise of the controlled conditions factory during and after World War II." SurveyLA, *Los Angeles Citywide Historic Context Statement: Industrial Development, 1850-1980*, September 2011; rev. February 2018, 204.

- Oversized bays of industrial sash
- Sawtooth, butterfly, Aiken, or monitor rooflines
- Extensive skylights (in the absence of more dramatic rooflines)
- Often designed in prevalent architectural styles of period
  - May also be a significant example of an architectural style from the period of significance and/or the work of a noted architect

Further, Building M more closely resembles woodworking shop property type with industrial daylight factory features. As such, in addition to the daylight factory type context and character-defining features presented above, information on the carpentry shop property type is included as follows: [40]

> Carpentry shops are often hard to distinguish from other shops and warehouses. However, the presence of "cyclones" on the roof often reflects a building's use as a carpentry shop. Cyclones are cylindrical metal structures that filter dust particles from air inside a shop. Otherwise, a carpentry shop will generally reflect the same industrial engineering and design as other shops from its era, with early-mid 20th century day-lighting and an overall utilitarian appearance.
>
> Carpentry shops are one of a few extant property types that represent the early building industry in Los Angeles. Intact carpentry shops may be significant for their association with an important builder or building materials fabricator whose workmanship is broadly represented in the Los Angeles built environment

Carpentry Shop character-defining features include: [41]

- Retains most of the essential physical features from the period of significance
- One or more buildings housing carpentry equipment and lumber storage
- Cyclones on roof to filter sawdust from the interior
- Building usually utilitarian in design
- Shops may have industrial sash, sawtooth/monitor rooflines, skylights, or other daylight features

T.C. Kistner, Architect

Theodore Charles Kistner was a San Diego-based architect who designed hundreds of schools, public buildings, and military bases in Southern California from the 1920s through the postwar period.[42] Kistner was later a partner in Kistner, Wright & Wright and designed several of modern projects, including the Kidney Center of Los Angeles (1955), Cerritos College (1961), the Peck-Norman Building (1965), and the Norwalk Civic Center (1965).[43] Kistner designed Building I, and designed alterations to Building A which were undertaken in the 1930s.

John C. Austin, Architect

John C. Austin was a Pasadena-based architect who was notable for his public, civic, and institutional buildings in the Los Angeles area, including the Los Angeles Hall of Justice (1925), Los Angeles City Hall (1926-1928), Beverly Hills City Hall (1932), Griffith Observatory (1934-1935).[44] The postwar public buildings designed by his firm Austin, Field & Fry are recognized as some of the most important in the region and include the Otis Art Institute (1957), the UCLA Faculty Center (1959), and the U.S. Custom House at the Port of Los Angeles (1967).[45] The LAUSD Context Statement includes Austin and his partner firms in the list of "the region's most prominent master architects…who were responsible for numerous [school] designs…since the early twentieth century."[46] Austin designed Buildings J and K which were constructed in 1941 and 1942, respectively.

Henry L. Gogerty, Architect

Henry "Hank" L. Gogerty was born in Iowa and graduated from the University of Illinois with a degree in engineering and architecture. He served in field artillery during World War I and then established an architecture firm in Los Angeles, forming a short-lived partnership with Carl Jules Weyl (Gogerty and Weyl) in 1926. When the collaboration with Weyl dissolved in 1928, Gogerty founded his practice, H.L. Gogerty and Associates. In 1964, Gogerty formed a partnership with Kal H. Porter & Associates and Port, Price & Meston & Associates, resulting in the firm Porter, Gogerty, Meston & Associates.[47]

Gogerty's early work with Weyl was predominately focused on commercial buildings such as the Fred C. Thompson Building in 1927 (LAHCM #1196) other Hollywood commissions such as the Palace Theater, Baine Building, and Shane Building which today are contributing buildings to the National Register "Hollywood Boulevard Commercial and Entertainment Historic District".[48] In 1929, Gogerty designed his first art deco building, the Yucca-Vine Tower, which was nominated for an LAHCM in 2024. At the time of its design, Gogerty was noted as being one of the most in-demand architects in Los Angeles.[49]

The majority of Gogerty's work was in school design, and during the span of his career, Gogerty designed more than 350 schools in Southern California, including over 30 WPA-funded schools in the Los Angeles area.[50] The LAUSD Context Statement lists Gogerty as one of "the region's most prominent master architects… responsible for numerous [school] designs…since the early twentieth century." His work was frequently featured in architectural magazines and newspapers, and he was described in 1945 as having "made a specialty of school house building."[51] Two of his innovative modernist school campuses include Dorsey Susan Miller High School (with architect C.E. Noerenberg) (1936-1938) and Visalia Unified

School District (1950).[52] The LAUSD Context Statement describes the Dorsey School as an early experiment with a Finger-Plan School, describing the following: "Other school plants began exploring the new currents in modern, function-driven design. Henry L. Gogerty and C. E. Noerenberg's Susan Miller Dorsey High School is one such example. While the 1937 design drew inspiration from the PWA Moderne, the classrooms, patio spaces, and radial site plan, with classrooms extending outward like spokes of a wheel, were innovative for the time."[53] The school was also featured in *Architectural Record* as a prototype for airplane hangars, another typology for which Gogerty was innovative and became known for, as described in further detail below.[54] In 1956, Gogerty's design for the arcade at IHS was photographed by renowned modernist photographer Julius Shulman and is included in the *LAUSD Historic Context Statement*.[55]

Gogerty's innovative industrial designs for industrial aircraft properties began with the 1928 design for the Grand Central Air Terminal in Glendale, a mix of Spanish Colonial Revival and Art Deco, which was listed on the National Register in 2017.[56] In 1940, Gogerty designed the administration building at Los Angeles International Airport in collaboration with architects Walker and Eisen, McNeal Swasey, and Sumner Spaulding.[57] In 1941, Gogerty designed the Hughes Aircraft Company complex in Culver City (now Playa Vista), and he soon became recognized as an "innovator in aviation for his designs for the Hughes Aircraft Company facilities."[58] The Playa Vista complex included cargo plane assembly buildings and the hangar where the famous "Spruce Goose" plane was constructed. The 274,000 square-foot building was considered a "singular engineering achievement in wood framing," and the entire complex was listed on the National Register as a historic district in 1991. A HAER report on file with the Library of Congress details that the site "primarily developed between 1941 and 1953…and the structures of the Hughes Aircraft Company, Culver City plant, constitute a unique and remarkable intact example of one of the first large-scale aircraft production centers. It provides a physical link with the historical origin and evolution of the aviation and aerospace industry, and a technological economy which has played an essential role in the development of modern Southern California."[59] Gogerty transferred his technological knowledge and innovative industrial design skills to the more modest shop buildings on the IHS campus. Uniquely, Building L and M on the IHS campus share some design features with his Hughes Aircraft campus which was identified as a historic resource, including sawtooth roofs and matching industrial sash windows with similar boxed frames.

Additional Research

Additional site-specific research was conducted on IHS utilizing the following sources: City directories, plans and aerial photographs, historical photographs and articles from *The Los Angeles Times, The Register,* and *The Daily Breeze* newspapers, the Los Angeles County Assessor website, and other published sources. Research was conducted at the IHS campus library inside Building Q.

Historic maps and aerial photographs were examined to provide historical information about IHS and the land uses surrounding the campus. Historic aerial photographs taken in 1928, 1934, 1941, 1956, and 1968 were examined. A Sanborn Fire Insurance Map that covered the campus was created in 1950.

Architectural drawings obtained from the District were essential in preparing the construction history for IHS from 1934 to 1980. Select representative early architectural drawings for Buildings A, I, L, and M on file with the District are compiled in **Table 2** and are included in **Appendix B**. There were no building permits available for the campus. The earliest plan on file dated to 1934, was for modifications to Building A as part of the extensive rehabilitation undertaking that followed the 1933 Long Beach Earthquake. Campus master plans were not located.

Inglewood High School Establishment and Construction History

The IHS campus was developed over the course of nearly nine decades, with currently extant buildings constructed between 1925 and 1991.[60]As discussed above, at the turn of the 20th century, the land that surrounded what would become the IHS campus was largely dedicated to agricultural development, a pattern that would continue through the next few decades before the rise of defense and aerospace

[60] GGA Architecture, "Inglewood High School Modernization Basis of Design," prepared for the Inglewood Unified School District, 2024, 12.

industries. These local industry shifts were reflected in changes to the IHS campus and its curriculum, which offered relevant training opportunities for students entering the workforce before, during, and shortly after World War II. A substantial postwar yet discontiguous construction campaign to accommodate more students expanded the campus to its present configuration as it largely exists today. A summary table of the building data for each building is included in **Table 3** *IHS Campus Building Data*.

1900s - Originally named Union High School, planning for IHS began in 1905. An eight-acre site on S. Grevillea Avenue bordered by W. Pimento Street to the north (present-day Manchester Boulevard) and Olive Street to the south was selected for the campus in 1906.[61] Bonds were issued in the same year to aid with construction costs.[62] By 1907, a stone wall foundation had been laid for the original main school building, which was located near the center of the parcel.[63] The two-story with basement building was designed in the Classical Revival style and was articulated with red and cream brick.[64] The multi-functional structure was used as a study hall, assembly space, offices, teachers' restrooms, and classrooms. Shortly after the construction of this first campus building, the City of Inglewood was formally incorporated in 1908.

1910s - In 1913, a bond was issued for $150,000 to construct a new group of "Polytechnic buildings" on the IHS campus.[65] The following year, school trustees opened bids for the construction of five new buildings in addition to the existing school building. Architect Norman F. Marsh won the bid and designed five Classical Revival-style brick buildings to complement the original 1907 building, establishing a unified campus. The new grouping was designed to form a quadrangle with the original 1907 building, which was then remodeled for administrative use as part of this construction campaign.[66] An arcade, or covered walkway, was constructed to connect the original 1907 building to a new household building to the north and a new science building to the south. A manual arts building, gymnasium, and small boiler room were constructed on the west portion of the campus (**Figure 4**). In 1916, trustees were awarded $35,000 for the construction of a western auditorium wing to the administration building. On February 29, 1916, the new auditorium wing and additional buildings were dedicated and opened to the public.[67] During this period, a steam plant sat towards the center of the campus, which served as a generator providing heat, power, and light to IHS. It is no longer extant.

Figure 4
The campus as it appeared in 1915, with recent additions to the 1907 administration building at the center.

1920s - In the early decades of the 20th century, IHS operated a demonstration farm, known as the Inglewood High School Farm, as part of its agricultural department curriculum (**Figure 5**). The ten-acre farm was located approximately ½ a mile to the southwest of campus at Kelso Street and Inglewood Avenue.[68] Considered an important part of the school's programming for male students, practical farming coursework reflected the local economy, preparing them for life after graduation as farmers or stockmen. The IHS farm had barns, corrals, hog houses, tractors, horses, and herds of both hogs and cattle, with a residence for the farm supervisor. According to a 1921 newspaper article, the "program included plant growth and field work, animal husbandry and dairying, soils, horticulture and fertilizer, farm surveying, irrigation practice and farm management."[69] IHS held an annual "Farm Day," which included a livestock judging contest with ten competing high school teams.[70]

In 1924, a $200,000 bond allowed for an additional construction campaign at the school. Plans for new buildings were created by Los Angeles architect George A. Howard Jr., and were designed to match the early Classical Revival-style design of the campus. Buildings constructed at this time included a boys' gymnasium with a swimming pool to be built to the northwest of the early administration building with additional classrooms added at the administration building.[71] At the time, the gym was considered to be one of the most modern gymnasiums in Southern California due to its innovative and efficient features.[72]

Figure 5
The Inglewood Union High School Farm located approximately ½ a mile away from campus, 1924

Further, in 1925, a new two-story Fine Arts Building with a basement was constructed at the northeast corner of campus, along S. Grevillea Avenue and Manchester Boulevard (**Figures 6 to 8**). Today, the Fine Arts Building, now known as Building A, remains the oldest extant building on campus. It was later modified from a Classical Revival style building to a PWA Moderne-style in the 1930s, as discussed below.[73]

SOURCE: UC Regents, 1928

Figure 8

Aerial view of campus in 1928

1930s - In March of 1933, the Long Beach earthquake caused substantial damage to the Classical Revival-style IHS campus.[74] Architect T.C. Kistner had been engaged to fireproof the fine arts building (Building A) just prior to the earthquake, and his involvement continued after the event to address campus-wide building reconstruction and structural strengthening efforts.[75] As a result of Kistner's engagement after the earthquake, the renovation and retrofit of Building A was featured in a *The Architect and Engineer* magazine article written by the project's structural engineer William T. Wright. Building A was described as a national example of how an existing building was "successfully treated" after an earthquake in order to strengthen and reinforce it for future use. Building A was further noted for its dramatic stylistic transformation from the Classical Revival style to the PWA Moderne style, which the article referred to as a "facelifting" effort.[76]As part of this process, four inches of brickwork were removed and replaced with gunite, a material consisting of cement, sand and water, sprayed onto the exterior (**Figure 9**). New columns and beams were installed for reinforcement, fireproof stairways were introduced, roof trusses were reinforced, and new windows were installed for improved lighting. These facelifting efforts were cost effective and allowed for federal Great Depression-era relief labor by the Civilian Works Administration (CWA) and State Emergency Recovery Agency (SERA), while effectively reenvisioning the building into a contemporary adaptation of Classical Revival architecture. The article described this modernization as:

> Plain surfaces with simple ornamentation properly arranged to enhance the beauty of the structure. The name "Fine Arts" alone would bring such a style to one's mind and the designer carried this throughout his work. The economy of the work is found in the use of materials could readily be incorporated into the strengthening program with as little extra cost for ornamentation as possible.[77]

While students returned to campus in April 1935, the final repairs and transformation of Building A continued through 1936 (**Figure 10**).[78] Today, Building A largely reflects the post-1933 modernization efforts in Long Beach following the earthquake. As applicable to Building A, the *LAUSD Context Statement* notes that "it is common to find 1920s-era schools that were remodeled following the earthquake; such schools might exhibit the building plans and configurations typical of the 1920s but with 1930s PWA Moderne and Streamline Moderne detailing."[79] In October of 1935, the school district passed a bond issue vote for $300,000 for the continued rehabilitation of the earthquake-damaged campus which was aided by PWA grants.[80] In 1936, Building I, Classroom was constructed to PWA Moderne style designs by architect T.C. Kistner, located southeast of Building A.

SOURCE: UC Regents, 1934

Figure 10
Aerial view of campus in 1934By the mid-1930s, the school's notable farming program came to an end.

In 1933, the Inglewood High School Farm's agricultural grounds were proposed to be converted into an athletic field which would allow students greater opportunity for outdoor activities that were not possible on the main campus' then-current athletic grounds.[81] The land would become Sentinel Field and later Caroline Coleman Stadium.

1940s - The closure of the school farm allowed for a significant change in the school's vocational curriculum, which for decades had strongly reflected its surrounding agricultural industry. The Inglewood area's shift from agriculture to the aerospace and defense industry was fueled by the development of the nearby Mines Field which would later become the Los Angeles International Airport (LAX), and the development of the U. S. Air Force's Space and Missile Program in Inglewood. This rapid change was

[81] "Inglewood," *Los Angeles Times*, December 31, 1933: 100.

reflected in IHS' campus development and academic offerings throughout the 1940s and into the post-World War II development boom.

In the fall of 1940, the "Inglewood adult education center and evening high school" opened for adult night school courses at the IHS campus.[82] In addition to science and arts courses, a substantial portion of the adult education center's offerings included courses in cooperation with the state and national defense program, including pre-employment courses, wood pattern making, plaster pattern making, and machine shop courses. Additional supplementary trade courses included elementary template layout and lofting, advanced aircraft lofting, aircraft sheet metal layout, and aircraft welding.[83] WPA workers were able to take advantage of such vocational training courses at IHS, having been selected for their "aptitude and ability to be trained for national defense."[84] Similarly, 33 other high schools in Southern California had defense training programs in place during this time. By early 1941, enrollment in the defense training programs at the IHS campus totaled approximately 1,200 students, notably with class offerings including machine shop and sheet metal working.[85] Updates to unspecified campus buildings included the installation of approximately $200,000 worth of machine tools, lathes, and welding equipment for defense industry training.[86] Two buildings, Building J, Classroom Building K, Shop and were constructed in 1941 and 1942, respectively, to designs by architect John C. Austin. The modest building designs reflect the Industrial Utilitarian style.

After the United States entered into World War II in December 1941, industry in Inglewood was markedly dominated by production plants, aerospace manufacturing, and associated support activities. On the home front, IHS offered opportunities for adult education training, including vocational courses such as architectural, aeronautical, and mechanical drafting, blueprint reading, carpentry, machine shop, and welding.[87] A canning center was established on the campus in 1945, which operated on a 12-hour schedule in which more than 1,000 women attended instructional sessions in order to use the campus' canning facilities.[88] In 1945, a substantial campus expansion and building program for both IHS and nearby Leuzinger High School valued at over $2,075,000 was proposed.[89] Campus development from this period included the construction of a two-story 24,000 square foot shop building, Building M, which was to be used for classroom space. In August of 1945, Building M was approved for construction by the Civilian Production Administration (CPA). The CPA absorbed the functions of the War Production Board (WPB), which was a federal wartime government agency established to oversee and coordinate American industry to wartime production during World War II.[90] The WPB monitored the construction of factories that produced essential war materials, ultimately contributing to the efficiency of postwar economic reconversion.[91]

With the war ending in September of 1945, Inglewood became fueled by postwar prosperity and experienced rapid suburban growth, marked by commercial, civic, and residential development. Postwar IHS campus development included significant expansion efforts that required demolishing the remaining original 1907-1925 Classical Revival-style buildings (except for Building A) to make space for the construction of modern educational buildings.[92]

Campus development in the late 1940s included the construction of the one-story, roughly 3,360-square-foot automobile shop Building L. Initially referred to as "Auto Shop 'Unit Q'," the 1948 plans for Building L indicate that its entrance and orientation were designed to line up with those of existing Building M, next door. As originally designed by master architect Henry L. Gogerty, Building L included a tool room and office within the smaller one-story room, a cast stone wash sink, two roll-up garage doors, and an open space dedicated to the following: work area, engine area, machine area, and instruction area. A smaller room located adjacent to the arcade was to be used for athletic equipment. The 1948 plan notes suggest that a covered open-air arcade was planned to connect Buildings L and M, while other plans indicate that a further arcade extension *beyond* Building L was considered for a later date. The building's 1949 plumbing plans included three additional "future shops," similarly rectangular in footprint, which were to be attached to the west of Building L, the Auto Shop, yet these were never constructed.

As portions of original early 20th century IHS campus were demolished in a piecemeal fashion following the 1933 Long Beach earthquake, the campus was subsequently slowly redeveloped over time with limited efforts in the 1930s and 40s, followed by more rapid infill redevelopment resuming after the war. In 1947, demolition began for the former 1914 science building that was damaged in the earthquake, which was to make space for new classroom buildings that would open in the years that followed.[93] Most of the new IHS buildings constructed in the postwar period were designed by architect Henry L. Gogerty in a variety of modern architectural styles, including Industrial Utilitarian, Late Moderne, and Mid-Century Modern styles. Master architect Gogerty was well-known for his elaborate Mid-Century Modern campus master plans for new southern California schools; however, no master plan was located for the mid-century redevelopment of the IHS campus. Campus upgrades to bring modern cohesion to the school during this period included new flagpoles, an arcade entrance with signage along S. Grevillea Avenue, planters, landscaping, and covered walkways.

In 1948, the construction of the two-story shop classroom Building M was finalized. The building included instructional rooms for drawing and drafting, woodworking shop spaces, assembly areas, lumber/tool rooms, and a finishing room.[94] The following year, a new one-story automobile shop building was constructed (Building L, Auto Shop), to the immediate west of Building M. These two industrial shop buildings were designed by master architect Henry L. Gogerty, share site and building character-defining features, and were situated along Manchester Avenue, offering direct street access to the thoroughfare. Additional new postwar development between the late 1940s through the 1950s included: Building C, Classroom (1948); Building R, Auditorium (1949); Building O, Locker Building (1949);

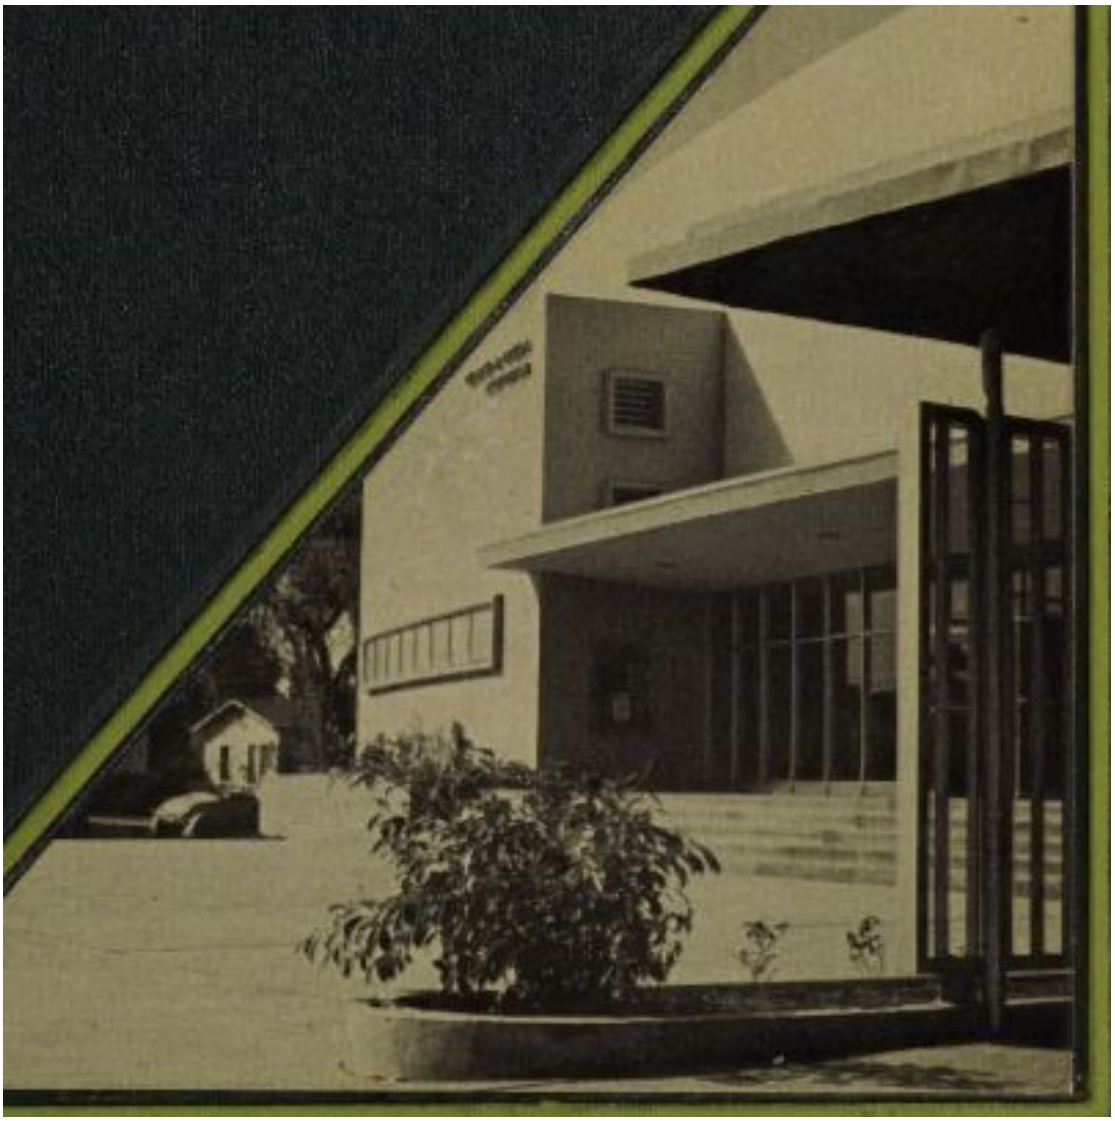
[94] "Shop Building Plan Approved," *Los Angeles Times*, August 17, 1946: 11.



Building B, Classroom (1950); Building D, Classroom (1955); Building E, Classroom (1955); Building G1, Classroom (1955); Building Q, Library (1955); and Building P, Gymnasium (1956).

The new auditorium building, Building R, was celebrated in the IHS yearbook as "modern in design—facile in operation—overwhelming in innovation." (**Figure 11**)[95] A 1950 Sanborn Fire Insurance map depicts the campus with many of the new buildings (**Figure 12**), and the 1951 school yearbook included an image of Building C at that time (**Figure 13**). In 1954, renowned photographer Julius Shulman, who worked closely with modernist architects, photographed the campus' modern arcade and Building B at the eastern portion of campus along S. Grevillea. Although not located within the Los Angeles Unified School District, Shulman's 1956 photo of this portion of IHS is included in the *LAUSD Context Statement* as a representative example of a modern school plant of the period (**Figures 14 and 15**). The bleachers in the new 1956 gymnasium (Building P) were featured in a *Progressive Architecture* magazine advertisement with gymnasium architect Gogerty listed as designing and implementing the innovative "power-operated gymstands" supplied by Wayne Iron Works of Pennsylvania.[96] The Inglewood Public Library's collection includes a photograph of Building A taken in the 1960s (**Figure 16**). In 1965, a rendering of the Music Building (Building S) was published in the *Los Angeles Times* as designed by Gogerty and his partners at Porter, Gogerty, Meston & Associates (**Figure 17**). The cost was estimated at $240,000 and the building was to be elevated on concrete columns to allow for band and music student parking below.[97] The building included band and choral rooms, practice rooms, a music library, drama and piano rooms, and uniform and robe storage. An aerial photograph taken in 1965 depicts the campus with the Mid-Century improvements (**Figure 18**).

1980s and 1990s - A food service building (Building FS) was added to the far northwest portion of the campus in 1987. Between 1991 and 1995, Buildings F2, H4, H5, and N were constructed which occurred in conjunction with campus-wide renovations of existing buildings.

Architectural Resources Survey and Architectural Descriptions

ESA architectural historians conducted a historic architectural resources survey of the IHS on January 25, 2025. Detailed notes and digital photographs were taken, and the survey work utilized the survey methodology of the State Office of Historic Preservation (OHP). Survey photographs are included in **Appendix C**. IHS was documented on California Department of Parks and Recreation (DPR) 523 form series (**Appendix D**).

Site

Inglewood High School, a public high school campus, is located at 231 S. Grevillea Avenue in the city of Inglewood, Los Angeles County. The campus is bounded by W. Manchester Boulevard to the north, S. Grevillea Avenue to the east, Kelso Street to the south, and commercial and residential development to the west. The surrounding neighborhood includes the 1970s Inglewood Civic Center to the north; Grevillea Art Park, multi-family housing, a commercial building and a church to the east; multi-family housing and single-family residences which were constructed between the 1920s and the 1960s to the south; and a combination of 1920s and 1930s single-family homes, and mid-century period multi-family housing to the west. The Subject Property houses Inglewood High School, Inglewood Continuation High School, and a District food services building.

Twenty-four buildings comprise the IHS campus. The earliest building on campus dates to 1925 (Building A), with one building constructed in the 1930s (Building I), seven buildings constructed in the 1940s (Buildings C, J, K, L, M, O, and R), eight buildings constructed in the 1950s (Buildings B, D, E, F1, G1, H1-H3, Q and P), and three buildings constructed in the 1960s (Buildings G2, S, and X). These 20 buildings reflect the historic period for the property. Due to the incongruous nature of campus historic period development from the 1920s through the 1960s, the campus does not reflect an established master-plan campus type, as would have been expected of a high school campus designed during a single time period. Later campus development efforts in the 1990s included four buildings (Buildings F2, H4, H5, and N).

The campus features tennis courts and six basketball courts, located near the center of the property, with a large playing field situated along the western boundary, which includes two baseball diamonds. Picnic tables and umbrellas are located in the northeastern part of the campus, with another outdoor seating area located south of this, further east. A gated parking area sits along W. Kelso Street. The campus is enclosed by a continuous, non-original chain-link fence, with metal access gates located along W. Manchester Boulevard and S. Grevillea Avenue. The primary pedestrian entrance onto campus is along S. Grevillea Avenue and includes a mid-century arcade with Inglewood High School signage, a flagpole, and brick planters. The Inglewood Continuation High School, which will not be evaluated as part of this study due to age, includes paved recreational play areas.

The campus features concrete and asphalt-paved areas that serve as walkways, courtyard spaces, and play areas, with some buildings equipped with expansive overhangs that cover paved pathways. The primary landscaped areas include swaths of grass along S. Grevillea Avenue at the eastern edge of campus. There are a few trees and shrubbery located within the campus.

Building A, Administration,1925; renovation,1936

Building A, Administration is located in the northeastern portion of the Inglewood HS campus. Building A is a one and two-story building over a raised basement constructed in 1925. It contains a two-story H-shaped main portion, and a one-story rectangular wing that extends from the west elevation. The massing is formal and generally symmetrical, with rectangular and curved volumes that project slightly from the corners of the building. The building is brick masonry construction that was reinforced with a steel continuous truss system, beams, and columns, and is sheathed in Gunite. It features a flat roof with a raised parapet. The building is arranged into vertical bays divided by plaster reeded pilasters that rise from wide concrete piers leading from the foundation level. Formerly, c. 1960s awning and fixed windows were situated between pilasters in recessed channels, which have since been removed. Horizontal accent moldings form the spandrels above the fenestration. The exterior is enlivened with cast concrete and plaster zigzag and diamond motifs, tiered vertical line designs, dentil moldings, and a geometric block cornice. A rounded clock in a square frame sits at the roofline in the southwest corner. At the east elevation, shallow tiered vertical pilasters with incised vertical lines form an entrance surround which contains a double-leaf metal door surmounted by an eight-light transom. Incised lettering above the transom reads “Fine Arts Building.” Secondary entrances include double-leaf and single-leaf metal doors on the north, west, and south elevations.

Noted exterior alterations following the 1930s retrofit include the replacement of doors and glazing in the original window openings. These minor alterations occurred as part of a renovation by master architect H.L. Gogerty, who designed the majority of the other buildings on the Inglewood H.S. campus. Correspondence regarding the upgrades for Building A began in 1953; however, it is unclear whether any of the changes were implemented in the 1950s or if the work commenced in 1960, the date of the plans on file with the district. In addition to the window glazing that is shown in the 1960s plans by Gogerty, a new door opening was added on the north elevation, along with a set of non-original concrete stairs that were to serve as a loading area.[98] Wire glass skylights were also altered during the renovations by Gogerty’s firm, and aerial photographs show that most of the original skylights have been covered or removed. Visual inspection yielded that the original incised lettering over the north entrance, “Truth is Beauty,” was replaced at an unknown date with the contemporary lettering: “Inglewood High School Bldg A Administrative Offices.” A ramp was added to the southwest corner of the south elevation to meet ADA and egress requirements at an unknown date. In 2025, the building’s 1960s era windows were removed from the building. Few alterations have occurred to the exterior, and most, if not all, appear to be generally compatible with the 1930s design and have been articulated sensitively by master architect Gogerty. The stage area includes original 1925 and later 1933 designed elements, including a proscenium arch, plaster pilasters, a series of steps, elaborate wood door surrounds, wood doors and metal hardware. The first floor’s double-loaded corridor was reconfigured in 1960 to include the current wood paneling and display cases, and metal staircase handrails were also added at this time.

[98] Inglewood High School District Files. A-163. Correspondence letters H.L. Gogerty and the District. 1953, District plans as revised, H.L. Gogerty, 1962.

Building A at IHS is listed in "The Living New Deal" national database referenced above by SurveyLA. It is depicted on the website map as an extant resource with the following description:

> The Fine Arts building at Inglewood High School in Inglewood, CA, was reconstructed in 1936 by the Works Progress Administration (WPA) following damage incurred during the devastating 1933 Long Beach earthquake. Work crews removed brickwork to make the building more earthquake safe, installed new columns and beams to carry vertical loads, built a new fireproof stairway, rearranged windows to bring in more light, and updated the heating system.[99]

Building B, Classroom, 1950

Designed in a Mid-Century Modern style, Building B is a rectangular, one-story building. The building is wood with reinforced board-form concrete walls, is partially sheathed with stucco and has a pitched flat roof. The entrance doors are single-leaf metal doors (replacement). A flat canopy extends from the roofline along the northeast corner and the west elevation. Fenestration includes horizontal bands of steel industrial sash, awning, and fixed windows. Other features include metal vents, metal fire hose cases, and concrete locker curbs and bays. Visual inspection reveals that the following alterations have occurred at the exterior: the steel sash windows have been painted over, removed, or altered; the original metal and wood doors have been replaced; metal lockers have been removed; and the original display cases on the west elevation have been removed. The interior has since been renovated and features contemporary finishes (in 1965, and possibly again in 1995).

Landscaped elements were designed in conjunction with Building B, as evidenced in the original building plans. An entrance arcade with a metal canopy supported by aluminum columns and sliding metal gates sits between Buildings B and C. Designed in conjunction with Building B according to original drawings, the arcade includes "Inglewood High School" metal lettering attached to the top of the canopy. A metal sunshade is situated in the northwest corner of Building C and extends across the walkway. Also included in the plans for the building are geometric flagstone planters located on the campus side of the arcade, in front of Buildings B and C, and a flagpole with a cast concrete base featuring a Native American headdress and a cast metal medallion with a Native American bust relief. The medallion lettering reads "Inglewood High School Class of 1950." These campus features, designed as part of Building B, have been painted over but remain extant. The arcade appears to be missing metal panels and may no longer be operable as shown in the original plans.

Building C, Classroom, 1948-1949

Designed in a Mid-Century Modern style, Building C is a rectangular, one-story building. The building is constructed of wood with reinforced concrete walls sheathed in stucco and features a pitched flat roof. The entrance doors are single-leaf metal doors (replacement). A concrete and wood canopy extends from the west elevation. Fenestration includes horizontal bands of steel industrial sash, awning, and fixed windows. Other features include metal gable and foundation vents, and concrete locker curbs and bays. Visual inspection reveals that the following alterations have occurred at the exterior: the steel sash windows have been painted over, removed, or altered; the original metal and wood doors have been replaced; and the metal lockers have been removed. Original display cases on the west elevation have also

[99] The Living New Deal, "Inglewood High School: Fine Arts Building, Inglewood CA," The Living New Deal website.

been removed. The interior has since been renovated and includes contemporary finishes (possibly in 1995).

Building D, Classroom, 1955

Designed in a Mid-Century Modern style, Building D is a rectangular, one-story building. It is capped with a flat roof, featuring low parapets at the south and north ends. A concrete and wood canopy extends from the roof on the west and south elevations. The building is constructed of wood, reinforced with concrete and steel, and is sheathed with stucco. The entrance doors appear to be non-original and consist of single-leaf metal doors, and some have metal vents. Fenestration includes horizontal bands of steel industrial sash, awning, and fixed windows. Other features include metal foundation vents, an intercom box attached to the west elevation, and concrete locker curbs. In the courtyard in front of the east elevation, sculptural concrete tables and benches are arranged on geometric concrete squares diagonally on the grass. Original plans or permits were not located. However, based on visual inspection, the following alterations appear to have occurred to the exterior: steel sash windows have been painted over, removed, or altered, security bars have been added to some of the windows, the doors do not appear to be original, and metal lockers have been removed. Renovations occurred in 1995, which may have included the interior.

Building E, Classroom, 1955

Designed in a Mid-Century Modern style, Building E is a rectangular, one-story building. A one-story portion extends from the west elevation and may be an addition. The main building portion includes a flat roof with low parapets at the west and east ends. The building is wood with reinforced concrete and is sheathed with stucco and vertical metal siding. The entrance doors appear to be non-original and consist of single-leaf metal doors. Fenestration includes horizontal bands of steel industrial sash, awning, and fixed windows. A green and white tile mosaic inlaid in the concrete walkway at the north elevation contains a large green “I” and “Class of 56” lettering. A walk-up window with metal pipe railings forms a waiting area labeled as the “Sentinel Spirit Store” at the north elevation. An intercom box and siren are situated on the north elevation. Original plans or permits were not located. However, based on visual inspection the following alterations appear to have occurred to the exterior: steel sash windows have been painted over, removed, or altered, and security bars have been added to some of the windows. The doors do not appear to be original. Renovations occurred in 1995, which may have included the interior.

Building F1, Classroom, 1955

Designed in a Mid-Century Modern style, Building F1 is a one-story building that is rectangular in plan. It is capped with a flat roof. The building is wood with reinforced concrete walls and is sheathed with stucco. The entrance doors appear to be non-original and consist of metal doors. Fenestration includes horizontal bands of steel industrial sash, awning, and fixed windows. A metal sunshade extends below the roof of the south elevation. Other features include a metal intercom box and metal attic vents. Original plans or permits were not located. However, based on visual inspection the following alterations appear to have occurred to the exterior: steel sash windows have been painted over, removed, or altered, including a door or window wall arrangement in the southwest corner. The doors do not appear to be original. Renovations occurred in 1995, which may have included the interior.

Building G1, Classroom, 1955

Designed in a Mid-Century Modern style, Building G1 is a one-story building that is rectangular in plan. It is capped with a flat roof and a concrete and wood canopy extends from the roof on the south elevation. The building is wood with reinforced concrete walls and is sheathed with stucco. The entrance doors appear to be non-original and consist of single-leaf metal doors. Fenestration includes horizontal bands of steel industrial sash awning and fixed windows. Other features include an intercom box and concrete locker curbs. Original plans or permits were not located. However, based on visual inspection the following alterations appear to have occurred to the exterior: steel sash windows have been painted over, removed, or altered, the doors do not appear to be original, and one door opening and frame on the north elevation has been plastered over. The metal lockers have been removed. Renovations occurred in 1974 and 1995 which may have included the interior.

Building G2, Classroom, 1963

Designed in a Mid-Century Modern style, Building G2 is a one-story building that is rectangular in plan. It is capped with a low-pitched gable roof with deep overhanging eaves. The building is constructed of wood and is sheathed with stucco and non-original plywood. The entrance doors appear to be non-original and consist of single-leaf metal doors. Fenestration includes horizontal bands of steel industrial sash, awning, and fixed windows. Other features include metal gable vents with wood frames, concrete locker curbs, and concrete stoops. Original plans or permits were not located. However, based on visual inspection the following alterations appear to have occurred to the exterior: steel sash windows have been painted over, removed, or altered, metal lockers have been removed, and the doors do not appear to be original.

Building H1-H3, Classroom, 1955

Designed in a Mid-Century Modern style, Building H1-H3 is a one-story building that is rectangular in plan. It is capped with a flat roof, featuring low parapets at the east and west ends. A concrete and wood canopy extends from the roof on the south elevation. The building is wood with reinforced concrete walls and is sheathed with stucco. The entrance doors appear to be non-original and consist of single-leaf metal doors. Fenestration includes horizontal bands of steel industrial sash, awning, and fixed windows. Original plans or permits were not located. However, based on visual inspection the following alterations appear to have occurred to the exterior: steel sash windows have been painted over, removed, or altered, and the doors do not appear to be original.

Building I, Classroom, 1936

Designed in a PWA Moderne style, Building I is a one-story structure with a rectangular plan, characterized by formal symmetry and massing. The building is reinforced board-formed concrete sheathed with stucco and has a flat roof with a low parapet. A metal coping border at the roofline surmounts shallow square relief patterns at the entablature. Building I is divided into four bays by fluted pilasters, with groupings of five fixed aluminum window assemblies that sit below horizontal speedline banding. Each bay includes a curved cast-concrete window planter with geometric brackets and circular medallion designs below the windows. The entrances on the west and east contain replacement metal doors that sit recessed under a wood and metal canopy flanked by curved concrete walls, with a curved

entrance porch and curved pony wall. The following alterations have occurred to the exterior: original doors and transoms have been replaced, windows and transoms have been covered or painted over.

Building J, Classroom, 1941

Designed in a utilitarian style, Building J is a one-story building that is rectangular in plan. It is capped with a flat roof over the main portion and features a curved roofline along the northern elevation, allowing for a taller interior volume. The building is constructed of wood and concrete and is sheathed with stucco. Replacement metal double-leaf doors are accessed by concrete steps with low pony walls at the west and east elevations. Original divided light wood sash windows with transoms have been removed and plastered over, with the exception of windows in the northwest corner. Other features include an intercom on the exterior wall and metal foundation vents with metal hoods. This building was renovated in 1976, 1978, 1982, and 1995, and a few original features remain.

Building K, Shop, 1942

Designed in an industrial utilitarian style, Building K is a one-story building that is rectangular in plan. It is capped with a high-pitched gable roof supported by a wood truss. The roof is punctuated by gabled dormers with metal louvre vents. The building is of wood and concrete construction. It is sheathed with stucco. Fenestration consists of industrial metal sash windows and clerestory metal sash industrial windows. The entrance doors are single- and double-leaf metal doors, situated on the east elevation. A wooden awning, supported by non-original metal posts, extends from the east elevation. The following alterations have occurred to the exterior: original wood panel doors have been replaced with metal doors, steel sash windows and glass have been removed or painted over, and the interior was renovated (possibly in 1954 and 1995).

Building L, Auto Shop, 1949

Designed in an industrial, utilitarian style with elements of a daylight factory typology, Building L is a one-story building generally rectangular in plan, featuring a square volume that projects from the southwest corner. This volume includes a canopy supported by metal pipes. It is capped with a flat and sawtooth roof and is supported by a steel truss. The building is constructed of wood and reinforced concrete and sheathed in stucco. The entrance doors are single-leaf metal doors. Fenestration includes the previously mentioned continuous skylights in the sawtooth roof, as well as continuous horizontal bands of steel sash windows (awning and fixed) with projecting frames. There are two garage doors on the north elevation: an original one with windows in the top portion and wood panels in the bottom, and a replacement roll-up metal garage door. Building L included a tool room and office within the smaller one-story room (overall volume extant), a cast stone wash sink (extant), two roll-up garage doors (one extant), and an open space dedicated to the following: work area, engine area, machine area, and instruction area. The following alterations have occurred to the exterior: an original multi-lite garage door has been replaced with a metal roll-up garage door, select steel sash windows have been removed, painted, or altered, and an entrance in the southwest corner has been enclosed. The interior was renovated (possibly in 1995).

Building M, Shop, 1948

Designed in an industrial, utilitarian style with elements of a daylight factory typology, Building M is a one- and two-story building that is generally rectangular in plan. The building was designed by H.L. Gogerty with Julian T. Stafford as the structural engineer. The one-story portion to the north, fronting Manchester Boulevard, is capped with a flat and sawtooth roof with steel and wire glass continuous skylights. The two-story portion on the south end of the building contains a flat composition roof. The building is constructed with a steel frame and reinforced concrete. Concrete stairways with pipe metal railings on the southwest and southeast corners lead to a covered walkway. The entrance doors on both floors are double and single-leaf metal doors and are possibly replacements to the original kalamein doors. Fenestration includes the previously mentioned continuous skylights in the sawtooth roof, continuous horizontal bands of steel sash clerestory windows with projecting frames across the second story, and continuous horizontal bands of steel sash windows with projecting frames that punctuate the elevations of the first story. Metal cyclones for filtering sawdust particles are situated on the western elevation, a remnant of the original use of the building as a woodworking shop. The following are alterations to the exterior: some windows panes have been painted over, original wire glass shop display windows on the first floor have been removed or covered, a few windows next to entrances on the second floor have been removed or covered, and two roll-up garage doors have replaced original metal doors on the first floor. The interior was renovated (possibly in 1995).

Building O, Boys Locker Room, 1948-1950

Designed in an industrial utilitarian style, Building O is a one and two-story building that is irregular in plan. It is capped with a flat roof. The building is constructed of reinforced concrete and is sheathed with stucco. The entrance doors are replacement single and double-leaf metal doors surmounted by original glazed transoms. Fenestration features continuous horizontal bands of steel sash windows (awning and fixed) with projecting frames, as well as steel skylights that punctuate the roof. The following alterations have occurred to the exterior: steel sash windows have been painted or security bars added, half-glazed doors have been replaced, and skylights have been covered or painted over.

Building P, Gymnasium, 1958

Designed in a Late Moderne style, Building P is a one and two-story building with a partial basement. It is irregular in plan. The building is of reinforced concrete with tilt up walls that support a flat steel-framed roof. The building is austere and visual interest is added with geometric volumes clad in stucco, geometric patterns in concrete walls, and thin vertical piers that divide the exterior with horizontal bands of bezeled steel sash windows with projecting frames. There are overhanging concrete canopies supported by metal pipe railings in the northwest and northeast corner. Doors consist of double and single-leaf metal doors and glazed transoms surmount some. The building was altered in 1986, which included the replacement of the bleachers, and may have also been when the alteration of windows that had been painted over occurred.

Building Q, Library, 1955

Designed in a Mid-Century Modern style, Building Q is a one- and two-story L-shaped building. The one-story portion extends from the southwest corner. It is capped with a flat roof. The building is

constructed of wood with reinforced concrete walls and is sheathed with stucco and vertical wood siding. The primary east elevation is recessed under an overhanging roof and flanked by projecting side walls, framing the elevation. The entrance doors appear to be non-original and consist of single and double-leaf metal doors. Fenestration includes horizontal bands of industrial steel sash, awning, and fixed windows. A concrete and wood canopy extends from the southeast corner and a portion of the primary east elevation. A wooden clock that is missing the hands is incorporated into the vertical wood siding in the southeast corner of the primary east elevation, and an original intercom box is also situated on the east elevation. Original plans or permits were not located. However, based on visual inspection, the following alterations appear to have occurred to the exterior: steel sash windows have been painted over, removed, or altered, and the doors do not appear to be original. Renovations occurred in 1974 and 1995, which may have included the interior.

Building R, Auditorium, 1949-1950

Designed in a Late Moderne style, Building R is a three-story building with a partial mezzanine and partial basement. It is irregular in plan and contains one-story volumes that project from the main two-story portion at the southeast, southwest, and northwest ends. The building is of reinforced concrete construction with a steel-framed flat roof. At the primary east elevation, projecting geometric volumes clad in smooth stucco and a curved portion with a curved canopy add visual interest to an otherwise austere design. Fenestration includes horizontal bands of bezeled steel sash windows with projecting frames. Cement steps lead to the main entrance, which fronts S. Grevillea and features plate glass doors and transoms set within aluminum frames. Other features include a ticket window with a projecting frame on the wall in the south corner of the entrance, metal vents in projecting frames, and geometric vents punched out in the concrete walls. The building was altered in 1955, 1962, and 1995, which appear to have included changes to the interior.

Building S, Music, 1965

Designed in a Mid-Century Modern style, Building S is a two-story building that is rectangular in plan with a main portion that rises slightly above two projecting rectangular volumes attached to the north and south elevations. The building is lifted on concrete pilotis with a parking lot situated under the building and is attached to the west elevation of Building R. It is capped with a flat roof with a low parapet. The building has reinforced concrete construction and is sheathed with stucco. The entrance doors appear to be non-original and consist of single and double-leaf metal doors. The building is generally void of fenestration, and where windows are present, they consist of industrial steel sash windows. Original plans or permits were not located. However, based on visual inspection, the following alterations appear to have occurred to the exterior: steel sash windows have been removed or altered, and a stairway on the southeast corner has been filled in. Renovations occurred in 2001, which may have included the interior.

Building X, Adult Education, 1960

Designed in a Mid-Century Modern style, Building X is a one-story building that is rectangular in plan and is attached to the southwest corner of Building R. It is capped with a flat roof with a low parapet at the southeast corner. The building is constructed of wood with reinforced steel and is sheathed with stucco and vertical metal siding. Fenestration includes steel industrial sash windows with transoms. Metal muntins extend to the ground on the east elevation. The entrance doors appear to be original and consist

of single-leaf metal doors. An original vertical metal louver next to the door on the west elevation is original, according to plans. Aluminum lettering “Adult Education Building” is on the east elevation and appears to have been moved from the original location on the south elevation. The following alterations appear to have occurred to the exterior: steel sash windows have security bars over them, and the metal doors may not be original.

Buildings Less Than 45 Years in Age

The following buildings do not meet the 45-years of age threshold at which buildings should be evaluated as historic resources and therefore were not described above or evaluated: Building FS, Food Service (1987); Building F2, Classroom (1991), Building H4, Classroom (1991), Building H5, Classroom (1991), and Building N, Classroom (1991).

Eligibility Assessment

As the IHS campus meets the California Office of Historic Preservation's 45-year-old age threshold for consideration as a potential historic resource, the property, with its 20 historic-period age buildings and related site features, was evaluated collectively for historic significance as a historic district under National Register criteria and California Register criteria. Additionally, ESA collectively evaluated a grouping of 16 mid-20th-century classroom and support buildings that meet the 45-year-age threshold and share architectural themes and periods of construction for individual significance under National Register criteria and California Register criteria. Further, as part of this research, ESA determined that three individual buildings on the IHS campus that meet the 45-year age threshold appear to reach a level of individual significance for their historic associations and architecture and design. These buildings, Building A, Building I, and Building M, were each formally individually evaluated as historic resources under National Register criteria and California Register criteria. Further, shop Buildings L and M were collectively evaluated as a small historic district under National Register criteria and California Register criteria.

The IHS campus and Buildings A, I, L, and M, were evaluated using the following historical contexts and themes:

- *History of Inglewood: Settlement, Development and Growth* (1822 - present);
- *Inglewood Unified School District: Early History, Establishment and Expansion* (1905 - present);
- *Secondary School Education in Inglewood, CA*, with the following sub-themes: *Post–1933 Long Beach Earthquake School Plants* (1933–1945); *Early Experiments in the Modern, Functionalist School Plant* (1933–1945); and *The Postwar Modern Functionalist School Plant* (1945–1969);
- *Architecture and Engineering*, with the following sub-themes: *Public Works Administration Moderne Style* (1929-1948) and *Late Moderne Style* (1937-1960); *Mid-Century Modernism/Regional Modernism* (1945-1960); and Industrial Utilitarian subthemes: *Daylight Factory* (1910-1940) and *Carpentry Shop* (1900-1965).

As the City of Inglewood does not have developed historic context statements or eligibility standards for evaluation, the adjacent City of Los Angeles framework outlined in SurveyLA and the *LAUSD Historic Context Statement* framework are appropriate to apply as the IHS campus reflects the above contexts, themes, subthemes, and property types.

Significance Evaluations

IHS Campus District Evaluation

ESA evaluated the IHS campus, with its 20 historic period structures and associated campus landscape for potential eligibility for listing in the National Register and California Register as a historic district. IHS was evaluated against the following historical and architectural themes: (1) *History of Inglewood: Settlement, Development and Growth* (1822–present), (2) *Inglewood Unified School District: Early History, Establishment and Expansion* (1905–present), (3) *Post-1933 Long Beach Earthquake School Plants* (1933-1945); (4) *Early Modern Functionalist School Plants* (1933-1945); and (5) *Postwar Modern Functionalist School Plants* (1945-1969).

Criterion A/1: Events

The land that would become the IHS campus was formerly agrarian land, and a robust agricultural industry characterized Inglewood in the late 19th century up through the first three decades of the 20th century. IHS began in 1907 with a single classroom building that contained all of the school's operations. The campus would expand over the next 20+ years to include a stately grouping of Classical Revival structures oriented along S. Grevillea Avenue. The surrounding agricultural industry was so prevalent that IHS had a working farm located half a mile away from the main campus that offered students husbandry and farming training. Today, no remnants of the school's early agricultural history are evident on the campus. The farm closed by the 1930s, at a time when new defense and aerospace industries were starting up, and no association to this agricultural history remains in the built environment of IHS. These local industry shifts were reflected in changes to the campus and its curriculum, which offered relevant training opportunities for students entering the workforce before, during, and shortly after World War II. As Inglewood became increasingly industrialized in the mid-20th century, IHS responded to the emerging aerospace and aviation industries, as well as related defense industries, by offering relevant training programs and coursework on campus, which was open to both IHS students and community members. Two shop buildings (Buildings L and M) were constructed to accommodate these larger industrial changes, however they do not collectively form a historic district reflective of the wartime and postwar shift in curriculum programming.

The campus as a whole does not have historic associations with the Post 1933 Long Beach patterns of development, as only one remaining building was retrofitted during this period (Building A), and one new building (Building I) was constructed as part of wider-reaching federally funded Great Depression era programming. Following World War II, a substantial yet discontiguous construction campaign to accommodate higher enrollment expanded the campus largely to its present configuration. During this time, many low-scale, utilitarian school buildings were added to the campus as a means of infilling the space formerly occupied by the early Classical Revival school buildings. The mid-century construction was not reflective of a cohesive pattern of development at the campus.

Further, the Inglewood Union High School District formed in 1905, and the first building on the IHS campus was built in 1907. This non-extant building was the only campus building for several years, until the campus expanded in the mid-1920s around the time when the El Segundo community withdrew from the district, forming its own. The later, larger period of expansion at IHS was undertaken following World War II, around the time that the city's two high schools, Inglewood and Morningside, formed the Inglewood Unified School District as it exists today. The formation of IUSD may have been a response to the city's population boom, a pattern which similarly occurred in the City of Los Angeles and across the country following the war. Inglewood itself underwent a significant transformation during this time, from a largely agricultural-based economy to one supported heavily by industrial activities. This shift brought more workers and their families into Inglewood at mid-century. Yet despite these vast changes in Inglewood, the IHS campus was not developed as a cohesive ensemble of buildings with a shared goal over time, but rather a more disjointed effort. In this, research did not indicate that the buildings that comprise the IHS campus collectively demonstrate the history of the IUSD or of the City due to numerous demolition and infill campaigns over time. As such, the campus does not rise to a necessary level of significance as a collection of 20th century era school buildings in Inglewood worthy of consideration as a historic district. Additionally, research did not indicate that this campus was the site of a significant event.

For the reasons listed above, IHS does not qualify as a historic district under Criteria A/1 for its early associations with Inglewood's settlement, growth or development history.

Criterion B/2: Significant Persons

Research did not indicate that the campus was associated with a person or people of significance in the community, state, or nation. As such, IHS does not appear eligible for the National Register or California Register as a historic district under Criterion B/2.

Criterion C/3: Design/Construction

The IHS campus was developed over nearly nine decades, with currently extant buildings constructed between 1925 (with a retrofit and stylistic transformation in 1934), the 1940s through the 1960s, the 1980s, and the 1990s. As such, the campus is reviewed under three different school plant contexts, which are reflective of the various periods of development of the extant school buildings.

The IHS campus was initially constructed in 1907, and additional buildings were constructed throughout the early decades of the 20th century. In 1933, the Long Beach Earthquake caused substantial damage to the campus, resulting in the eventual demolition of several structures and the renovation/retrofit of others. As part of recovery efforts, the only early building still extant today is Building A, which was constructed in 1925 and later underwent renovation modifications designed by architect T. C. Kistner, refashioning the former Classical Revival building in the PWA Moderne style. Building I, designed by Kistner, was added to the campus in 1936 in the PWA Moderne style. As such, the two buildings that remain from the Post-1933 Long Beach Earthquake School Plant theme are Building A and Building I. Collectively, these two buildings do not reflect a unified historic district as they do not represent the overarching characteristics of a Post-1933 Long Beach Earthquake School plant campus in southern California. As such, the IHS campus is not eligible as a historic district under the Post-1933 Long Beach Earthquake School Plant theme.

Buildings J and K, designed by architect John C. Austin in 1941, were constructed on the campus in a utilitarian style with limited characteristics from the principles of the Early Modern Functionalist School of Plant design. These two buildings were added to the westernmost extent of campus as infill to accommodate more classroom functions, just eight years after the earthquake, at a time when the campus still contained most of its early Classical Revival structures oriented east along S. Grevillea Avenue. As such, buildings J and K do not reflect a cohesive historic district at the IHS campus as they do not embody the principles of the Early Modern Functionalist School Plants or pre-war campus planning philosophies.

Architect H. L. Gogerty is credited with the designs of fourteen (14) buildings constructed at the campus following World War II, reflective of the postwar need for more educational facilities, which spanned from 1945 to 1965 at IHS. Architect Gogerty was likely involved in the creation of a larger plan for IHS following World War II, as he was a prominent architect specializing in the design of school campuses in Southern California during this period. However, no mid-century master plan was located for IHS. The pattern of infill during the postwar years did not appear to follow a standardized, cohesive school plant layout as identified in the *LAUSD Historic Context Statement.* The school's mid-century development served to infill vacant areas of campus following the piecemeal demolition of earlier 20th-century buildings. This development appeared to be reactionary and not the result of deliberate campus planning

that would have been common for new suburban campuses that were entirely designed and constructed at once. While the eastern portion of campus reflects limited character-defining features of a Postwar Modern, Functionalist School Plant, including a lack of formality and monumentality, low-scale massing, and modular design, taken together with the buildings from earlier periods of development, the campus does not reflect a unified school plant typology. Specifically, the campus does not reflect notable unified campus design principles of a Postwar Modern, Functionalist School Plant, including a strong geometric ordering of buildings and outdoor spaces, a shared clear path of travel/circulation, function-driven site design, or purposeful indoor-outdoor integration. As such, the campus is not eligible as a historic district under the Postwar Modern Functionalist School Plant theme.

However, two shop buildings (Buildings L and M) were evaluated and collectively form a historic district as unique examples of mid-20th century industrial utilitarian shops as applied to a public school campus, included below.

The campus reflects various periods of development and stylistic contributions as devised by three master architects. The extant buildings and site features represent a collection of piecemeal architecture without a unified layout, cohesive aesthetic, or consistently designed features across the campus. This eclectic character, demonstrated by various periods of construction and architectural styles, has rendered a non-cohesive campus that does not express the principles or values associated with an early or a mid-century school plant.

For the reasons listed above, IHS does not qualify as a historic district under Criteria C/3 as an exemplification of southern California design ideals for type of school planning under the context of institutional architecture/educational facilities in the Los Angeles area.

Criterion D/4: Data Potential

IHS is not likely to yield any information important to prehistory or history. Therefore, IHS does not meet the above criterion.

Integrity Analysis

An integrity evaluation was not completed for the campus as a whole since it was not found to be eligible under Criterion A/1-D/4.

Individual Building Evaluations – Ineligible

Classroom Buildings B, C, D, E, F1, G1, G2, H1-3 and Support Buildings O, Q, P, R, S and X

The following 14 historic-period buildings on the IHS campus with construction dates from 1948 to 1965 were evaluated for individual significance: classroom Buildings B, C, D, E, F1, G1, G2, H1-3 and support Buildings O, Q, P, R, S and X. These buildings were constructed over roughly 17 years to infill areas of the campus that were demolished over time due to deteriorating conditions or to address the growing school's needs. Based on their similar typology and mid-century construction dates, they have been grouped as a batch for purposes of this evaluation. As discussed above in the IHS Historic District evaluation, none of these 14 structures possess significant historic associations with the IUSD or with the City of Inglewood. They do not date to the school's original founding or construction campaign, and

while they were built in response to the mid-20th-century post-WW II development, there are no specific associations with this period of suburban growth in Inglewood or the rise of the military-industrial complex in the greater metropolitan Los Angeles area. They are not associated with important persons, notable educators or any significant members of the Inglewood community. These 14 structures reflect standard Southern California school buildings of the period and are not distinguishable for their architectural style or design, despite their connection to master architect H. L. Gogerty. This grouping is not significant from an architectural perspective for its simplified application of Mid-Century Modern design elements, nor does the grouping reflect a single particular school plan type. Unlike Buildings A, I, L, and M, which are all important examples of an architectural style or building typology, the grouping of 14 buildings are somewhat generic and simplified school structures built during the post war era. As such, classroom Buildings B, C, D, E, F1, G1, G2, H1-3 and support Buildings O, Q, P, R, S and X are not eligible for the NRHP or CRHR as individual historic resources under Criteria A/1, B/2, or C/3.

Building J

Classroom Building J is one-story structure constructed in 1941. Master architect John C. Austin designed the vernacular interwar classroom building in a utilitarian style. Unlike Building I, which is evaluated individually below, Building J is not associated with any significant activities, development campaigns, or programs at the campus, within the IUSD, or within the City of Inglewood. Building J is not associated with any notable persons or groups. Further, the nondescript school building lacks notable character-defining features of a particular style, unlike Building L. As such, Building J is ineligible as an individual historic resource under Criteria A/1, B/2, or C/3.

Building K

Shop Building K was constructed as a one-story shop building in 1941. Originally built for metal work, the building was later used for home economics classes. Master architect John C. Austin designed the building in a utilitarian style. Unlike Buildings L and M, which were similarly built for shop purposes, Building K does not possess important historic associations with significant activities, development campaigns, or programming at the campus, the District, or within the City. Building K is not associated with any notable persons or groups. Additionally, the vernacular wood-framed building, which includes a hipped roof and is elongated in plan, is a simple, utilitarian building and does not rise to a level of significance for its architecture or design. As such, Building K is ineligible as an individual historic resource under Criteria A/1, B/2, or C/3.

Individual Building Evaluations - Eligible

ESA evaluated three buildings that rose to a level of discrete significance for historic associations with events or design, as individual historic resources. As a result of research, survey, and analysis, Building A, Administration; Building I, Classroom; and Building M, Shop, are recommended eligible as individual resources as presented below. Further, ESA evaluated a grouping of two buildings that rose to a level of discrete significance for design, as a historic district. Buildings L, Shop and Building M, Shop are recommended eligible as contributors to the potential IHS Industrial Shop Historic District as presented below.

Building A, Administration

Building A was evaluated against the following historical and architectural themes: (1) *History of Inglewood: Settlement, Development and Growth* (1822–present), (2) *Inglewood Unified School District: Early History, Establishment and Expansion* (1905–present), (3) *Post-1933 Long Beach Earthquake School Plants* (1933-1945); and (4) *Public Works Administration Moderne Style* (1929-1948).

Criterion A/1: Events

Building A is a two-story administration building located in the northeastern corner of the IHS campus. Initially constructed in 1925 in the Classical Revival style designed by architect George A. Howard Jr., the building was damaged in the 1933 Long Beach Earthquake. The resulting Field Act mandated seismic safety standards for Southern California schools, which led to the retrofit and renovation of campus masonry buildings. During this time, Building A was transformed into the fashionable PWA Moderne style. Building A represents a significant milestone in the City of Inglewood's institutional history and the history of the Inglewood Unified School District, particularly in the context of implementing new school safety standards. The building is associated with education in Inglewood and the impact of the Field Act following the 1933 Long Beach Earthquake.

Master architect T. C. Kistner and master engineer William T. Wright were responsible for the retrofitting plans and architectural design of the building in 1934. The PWA Moderne style was popular during the Great Depression and was articulated on buildings developed by government relief projects. During this period the government created jobs for architects, designers, builders, and laborers by putting them to work on new government, civic, and institutional buildings including post offices, train stations, public schools, museums, bridges, and dams throughout the United States. WPA funding was provided for the seismic reinforcements and the transformation of Building A into the PWA Moderne style. SERA and CWA programs were utilized for all labor on Building A except for the structural work, thus providing income to many unemployed skilled and unskilled workers during the Great Depression. In this, Building A is directly associated with WPA programs and activities including PWA funding and labor-intensive government construction programs of the 1930s.

As such, Building A appears to be eligible as an individual resource on the National Register at the local level of significance, and the California Register under Criterion A/1 as a good example of institutional architecture in Inglewood following the 1933 Long Beach Earthquake which resulted from Federal relief effort programs in Southern California.

Criterion B/2: Significant Persons

Based upon the Criterion B/2: Significant Persons, research did not indicate that Building A was associated with a person or people of significance in the community, state, or nation. As such, Building A does not appear eligible for the National Register or California Register under Criterion B/2.

Criterion C/3: Design/Construction

As described above, Building A was constructed in 1925 in the Classical Revival style designed by architect George A. Howard Jr. The building was damaged in the 1933 Long Beach Earthquake, and the Field Act mandated seismic safety standards for Southern California schools. This led to a retrofit and renovation of the masonry buildings on the IHS campus. Master architect T. C. Kistner, and master

engineer William T. Wright, were responsible for retrofitting the masonry campus buildings in 1934. The fine arts building, now Building A, Administration, was transformed from the Classical Revival style to the PWA Moderne style by Kistner's innovative design. The PWA Moderne style reflects a greater use of conservative and classical elements with a distinct monumental feel. PWA Moderne style design features commonly applied to institutional and civic architecture were considered modern and progressive, and included specifically engineered elements to withstand seismic activity after the Long Beach earthquake of 1933, as required by the Field Act. The style, which includes Art Deco and Streamline motifs, gave schools in the 1930s in Southern California a contemporary, stylized yet formal appearance. Today, Building A is the only remaining example on the IHS campus of a post-earthquake retrofit of a masonry building. As such, Building A embodies the distinctive characteristics of a type, period, and construction method, and is an excellent example of a PWA Moderne-style institutional building that underwent retrofitting following the 1933 Long Beach Earthquake in Inglewood.

Extensive extant character-defining features of the PWA Moderne style incorporated in Kistner's rehabilitation design for Building A include: formal symmetry and massing with curved and rectangular volumes, brick masonry construction with reinforced steel trusses, beams and columns, gunite sheathing, a flat roof with a raised parapet, plaster reeded pilasters on wide concrete piers, recessed window channels with horizontal line spandrels, cast concrete and plaster zigzag and diamond motifs, tiered vertical line accents, dentil moldings, a geometric block cornice, a stylized clock at the roofline, and incised lettering above the main entrance door that reads "Fine Arts Building."

Building A represents a significant example in master architect T.C. Kistner's body of work, as it articulates a creative, modern, and seismic solution applied to an existing masonry building following the 1933 earthquake and subsequent Field Act requirements. As part of this process, four inches of brickwork were removed and replaced with gunite, new columns and beams were installed for reinforcement, fireproof stairways were introduced, roof trusses were reinforced, and new windows were installed for improved lighting. In 1936, the retrofit and transformation of Building A was featured in *Architect and Engineer* magazine in an article written by the project structural engineer William T. Wright. The building was described as a national example of how an existing building was successfully retrofitted after an earthquake to strengthen and reinforce it for future use. Building A was further noted for a dramatic and favorable stylistic transformation from the Classical Revival style to the PWA Moderne style.

As such, Building A appears to be eligible as an individual resource on the National Register at the local level and the California Register under Criterion C/3 an excellent example of a PWA Moderne-style institutional building in Inglewood and as an example of master architect T. C. Kistner's body of work. The period of significance is 1936, the date of the retrofit construction completion.

Criterion D/4: Data Potential

Building A is not likely to yield any information important to prehistory or history. Therefore, Building A does not meet the above criterion.

Integrity Analysis

Building A underwent a substantial rehabilitation in the 1930s and has since had tenant improvements over the years. Its period of significance is 1936, which includes modifications made to it since the 1933

earthquake, which is reflected in its significant associations. In 2025, the mid-century era windows were removed from the building, while the early wood window frames remain. The building continues to convey its significance and association with the WPA programs, a Post-1933 Earthquake design and retrofit, and as an excellent example of a PWA Moderne-style school building. It therefore retains the majority of the aspects of integrity.

Location

Building A retains integrity of location. The subject building has not been moved from its original site since its construction in 1925 and was not moved during the 1936 retrofit and rehabilitation.

Design

Building A largely retains integrity of design. The subject building retains its form, massing, and design intent from its 1936 period of significance. While there have been minor modifications to the exterior of the building, including the replacement of original windows and doors within the original openings, this is a minor alteration. A ramp and stairs on two elevations were added for ADA requirements and egress however these are also relatively minor and reversible. The second floor's floor plan remains intact from the 1930s period; however, in 1960, the first floor underwent limited reprogramming to include the present double-loaded corridor and glass display cases. The original fenestration patterns and openings remain intact, and the overall form, structure, and style (including pilasters, plaster and cast-concrete decorative features) remain from the 1930s PWA Moderne building. The later mid-century windows have since been removed while the early wood frames remain.

Setting

Building A retains integrity of setting. The early 1900s improvements to the neighborhood included the original IHS building and some adjacent single-family residences from that era. The IHS campus continued to be developed with new construction throughout the 1920s, as additional single-family residences were built in the surrounding neighborhood. An extant greenbelt east of Building A along S. Grevillea Avenue appears on 1920s aerials and today contains a relocated WPA mural. The mural was saved from demolition, and it corresponds with the WPA association of Building A. The changing setting, including infill from mid-century through to the present, follows the development patterns common to Greater Los Angeles neighborhoods, which have not eroded the historic setting of Building A. The campus itself has undergone several periods of redevelopment since its inception in the early 1900s and represents a typical pattern of modernization for a school campus. Yet, Building A has remained an important component of the campus with its prominent orientation at the corner of S. Grevillea Avenue and Manchester Avenue and serves as a historic anchor for the early setting of the neighborhood.

Materials

Building A retains the majority of its historic materials from the period of significance of 1936. Some of the subject building's historic materials have been removed and replaced, such as steel industrial sash windows, which were replaced with contemporary windows. Exterior doors from the period of significance have been replaced with modern metal doors. Overall, most historic materials remain, including gunite facing, and decorative details of plaster and cast-concrete. The contemporary windows and doors in the original openings appear to be mostly compatible with the historic materials that remain.

Workmanship

Building A retains integrity of workmanship. As discussed above, the building retains the majority of its original materials. These materials are still extant and therefore continue to exhibit their original workmanship, which reflects a skillful "facelift" of a Classical Revival style building to the PWA Moderne style. Workmanship is reflected in the reeded pilasters, the application of gunite, and the use of plaster and cast concrete for ornamentation and vertical door surrounds, creating a masterful PWA Moderne building. While some modifications have been made, the building continues to convey physical evidence of aesthetic and technological principles from its 1936 period of significance.

Feeling

Building A retains integrity of feeling. The building retains integrity of location, design, materials, and workmanship and is therefore still able to convey the feeling of a 1930s PWA Moderne building through its physical appearance. The building overall retains most of its essential and distinctive features and appearance through its architectural forms and details.

Association

Building A retains integrity of association. The building retains integrity of location, design, materials, workmanship, and feeling. Taken together, these aspects of integrity convey the building's associations with school design and the impact of the Field Act following the 1933 Long Beach Earthquake, and the subsequent modern transformation of Building A from a Classical Revival to a PWA Moderne-style building, and WPA programs and construction methods of the 1930s.

Building I, Classroom

Building I was evaluated against the following historical and architectural themes: (1) *History of Inglewood: Settlement, Development and Growth* (1822–present), (2) *Inglewood Unified School District: History, Establishment and Expansion* (1905–present), (3) *Post-1933 Long Beach Earthquake School Plants* (1933-1945); and (4) *Public Works Administration Moderne Style* (1929-1948).

Criterion A/1: Events

Building I is a one-story classroom building situated in the central southern portion of the IHS campus. Constructed in 1936, the building was designed in the PWA Moderne style according to plans drawn up by master architect T.C. Kistner and master engineer William T. Wright. Following the 1933 Long Beach Earthquake, the Field Act mandated seismic safety standards for schools in Southern California, resulting in specific design principles and review processes for institutional buildings. Building I exemplifies the implementation of innovative mandated school building safety standards, as mandated by the Field Act, and the progressive PWA Moderne style of the 1930s. Building I is directly associated with Federal Great Depression-era programs and activities, including PWA funding and labor, which reflect a unique period in United States history. Building I is one of two extant examples of PWA Moderne style architecture on campus, and it is a good example of post-earthquake Field Act standards as applied to a new building on a high school campus.

The building is associated with educational development in Inglewood during the Great Depression as it was funded and constructed by Federal relief programs. As such, Building I appears to be eligible for the National Register at the local level of significance and the California Register under Criterion A/1.

Criterion B/2: Significant Persons

Research did not indicate that Building I was associated with a person or people of significance in the community, state, or nation. As such, Building I does not appear eligible for the National Register or California Register under Criterion B/2.

Criterion C/3: Design/Construction

Building I was constructed in 1936 by designs to by T.C. Kistner who was hired to retrofit the masonry buildings on campus, and to design new Building I, after the 1933 earthquake. Building I is a modest adaptation of the contemporary PWA Moderne style. The PWA Moderne style was popular during the Great Depression and was frequently used on buildings constructed as part of government relief projects. Building I retains the majority of its character-defining features from its original date of construction including formal symmetry and massing, stucco sheathing, board-form concrete, a flat roof with a raised parapet, reeded pilasters, recessed window channels with horizontal line spandrels, curved concrete window planters with circular medallion designs, and curved concrete walls with concrete low piers framing the entrances. As such, Building I embodies the distinctive characteristics of a type, period, and method of construction as a good example of the PWA Moderne-style as applied to an institutional building in Inglewood.

Further, Building I represents a modest version of the stylization and features that master architect Kistner designed for the monumental retrofit of Building A. During the early decades of the 20th century, Kistner was known for his designs of hundreds of schools, public buildings, and military bases in Southern California. Building I appears to be significant as an example of the master architects' work during the post-1933 Long Beach Earthquake school design period as articulated on a compact, stand-alone, one-story classroom.

As such, Building I appears to be eligible as an individual resource for the National Register at the local level of significance and the California Register under Criterion C/3 for as a good example of the PWA Moderne style as applied to a school building, and as a good example of master architect T. C. Kistner's work. The period of significance is 1936, the date of construction.

Criterion D/4: Data Potential

Building I is not likely to yield any information important to prehistory or history. Therefore, Building I does not meet the above criterion.

Integrity Analysis

No major alterations have been made to Building I and it retains all aspects of integrity. The building continues to convey its significance as an excellent example of a modest PWA Moderne-style classroom.

Location

Building I retains integrity of location. The subject building has not been moved from its original site since its construction in 1936.

Design

Building I retains integrity of design. The subject building retains its original plan, form, massing, and design intent from its 1936 period of significance. While there have been minor modifications to the

exterior of the building, including the replacement of original windows and doors, the alterations are relatively minor and reversible. The original fenestration patterns and openings remain intact, and the overall form, structure, and style, including pilasters, plaster, and cast-concrete decorative features, remain from the 1930s PWA Moderne building.

Setting

Building I retains integrity of setting. The early 1900s improvements to the neighborhood included the original IHS building and adjacent single-family residences from that era. The area continued to be developed with new construction throughout the 1920s, as additional single-family residences and a church were built in the neighborhood. Infill occurred in the neighboring blocks over the years as well as the construction of a civic center complex to the north. The changing setting follows the development patterns common to Greater Los Angeles neighborhoods and has not eroded the historic setting of Building I. The campus itself has undergone considerable modifications since its inception in 1907, through the 1990s, and represents a typical pattern of modernization for a school campus.

Materials

Building I retains the majority of its historic materials from the period of significance of 1936. Some of the subject building's historic materials have been removed and replaced, such as double-hung divided light windows and transoms, which have been covered or replaced with contemporary windows. Doors from the period of significance were replaced with modern metal doors. Overall, the majority of historic materials remain, including board-form concrete and gunite and ornament of wood, plaster, and cast-concrete. While some historic fabric has been replaced it is mostly compatible with the historic materials that remain.

Workmanship

Building I retains integrity of workmanship. As discussed above, the building retains the majority of its original materials. These materials are still extant and therefore continue to exhibit the original workmanship on a PWA Moderne-style classroom. Workmanship is reflected in the reeded pilasters, plaster and cast concrete ornamentation, curved walls and piers around entrances, and other stylized PWA Moderne features. While minor modifications have been made, the building continues to convey physical evidence of the aesthetic and technological principles from its 1936 period of significance.

Feeling

Building I retains integrity of feeling. The building retains integrity of location, design, materials, and workmanship and is therefore still able to convey the feeling of a 1930s PWA Moderne building through its physical appearance. The building overall retains most of its essential and distinctive features and appearance through its architectural forms and details.

Association

Building I retains integrity of association. The building retains integrity of location, design, materials, workmanship, and feeling. Taken together, these aspects of integrity convey the building's associations with school design, the impact of Field Act requirements following the 1933 Long Beach Earthquake, and the unique and modern design of Building I, a modest PWA Moderne-style building.

Building M, Shop

Building M was evaluated against the following historical and architectural themes: (1) *History of Inglewood: Settlement, Development and Growth* (1822–present), (2) *Inglewood Unified School District: Early History, Establishment and Expansion* (1905–present), and (3) *Industrial Utilitarian: Carpentry Shop* (1900-1965).

Criterion A/1: Events

Building M, a one and two-story shop and classroom building, is located in the northern portion of the IHS campus. Built in 1948, it was designed by master architect H.L. Gogerty as a carpentry shop type with industrial daylight factory features.

The shift from agriculture to the aerospace and defense industry in Inglewood was fueled by the development of the nearby Mines Field, which would later become the Los Angeles International Airport (LAX), and the development of the U. S. Air Force's Space and Missile Program, also in Inglewood. The expansion of LAX and the rapid development of a local defense industry attracted new residents to the area, leading to significant city growth in the 1930s and 1940s. As Inglewood became increasingly industrialized, leading up to, during, and after World War II, IHS responded to the developing aerospace and aviation industries, as well as related defense industries, by offering defense training programs on campus, which were open to both IHS students and community members. Building M was intentionally designed for use in woodshop classes and was likely also used for post-war vocational training, reflecting a building type more commonly associated with the private aerospace and defense industries, as well as the airport's expansion. Original plans indicate that Building M included a machine and aeronautical drawing room, an architectural and mechanical drafting room, woodworking shop spaces, assembly areas, lumber and tool rooms, and a finishing room. Similarly, the Inglewood adult education center and evening high school on campus offered vocational courses in conjunction with state and national defense programs, including courses in wood and plaster pattern making, machine shop courses, aircraft sheet metal layout, and aircraft welding. While Building M was constructed just before the war efforts ended, the growing adjacent aerospace and defense industry in the Los Angeles area offered jobs for graduates entering the workforce.

Further, Building M was approved for construction by the Civilian Production Administration (CPA), which had absorbed the functions of the federal wartime government agency, the War Production Board (WPB). The WPB was initially established to oversee and convert American industry to wartime production during the war, yet at war's end, it contributed to the reconversion of such operations. Thus, Building M was an essential facility in the area's postwar reconversion, and the vocational training and coursework offerings as part of the curriculum here reflected the rise of a prominent and transformative industry at the local and regional level.

As such, the building appears to be individually eligible for the National Register at the local level of significance and the California Register under Criterion A/1. The period of significance is 1948, the original date of construction.

Criterion B/2: Significant Persons

Research did not indicate that Building M was associated with a person or people of significance in the community, state, or nation. As such, Building M does not appear eligible for the National Register or California Register under Criterion B/2.

Criterion C/3: Design/Construction

As described above, Building M was evaluated using SurveyLA's Industrial Utilitarian contexts for a carpentry shop type with industrial daylight factory features, as it contains elements of these two typologies. The building contains a complex system of steel frame construction with reinforced concrete, as well as concrete stairways with pipe metal railings and metal cyclones for filtering sawdust particles. Gogerty's design incorporated other character-defining features of industrial daylight factories, including a sawtooth roof with wire glass skylights, continuous bands of steel sash windows in projecting frames, and reinforced steel and concrete construction. The design exemplifies wartime manufacturing, shop, and defense daylight factory facilities as combined with technological and innovative features of contemporary industrial buildings. While the building as designed was reflective of a woodworking shop and daylight factory - two building types commonly associated with industry - Building M was constructed as a teaching facility in which students could learn a wide-variety of tangible, in-demand skills ranging from designing and drafting to construction and assembly of wood, metal, and plaster wares. In this, Building M's presence on a high school campus represents a unique building type and style in Inglewood and throughout Southern California, embodying the distinctive characteristics of a type, period, and construction method in institutional architecture. The building serves as an excellent example of a rare industrial utilitarian shop property type as applied to a high school campus, both locally and regionally.

Additionally, Building M represents a significant and understated example of master architect H.L. Gogerty's body of work through the articulation of a modern and functional design with innovative and fireproof technology, including reinforced steel and concrete. Gogerty's design incorporated elements found in industrial daylight factories for a successful shop building that allowed for natural light, ventilation, and a variety of workspaces and classrooms for IHS students and community members to garner vocational skills. The shop building reflects a modest version of Gogerty's more complex buildings designed during this period, which were commissioned for private aircraft and defense complexes including the processing, electronics, assembly and manufacturing buildings at the Hughes Aircraft Company. Building M appears to be significant within the master architect's extensive work as a remaining example of a small, multi-use shop building on a high school campus.

As such, the building appears to be individually eligible for the National Register at the local level of significance and the California Register under Criterion C/3. The period of significance is 1948, the original date of construction.

Criterion D/4: Data Potential

Building M is not likely to yield any information important to prehistory or history. Therefore, Building M does not meet the above criterion.

Integrity Analysis

No major alterations have been made to Building M as it retains all aspects of integrity. The building continues to convey its significance as an excellent example of a carpentry shop with features of the daylight factory type in the industrial utilitarian style.

Location

Building M retains integrity of location. The subject building has not been moved from its original site since its construction in 1948.

Design

Building M retains integrity of design. The subject building retains its original plan, form, massing, and design intent from its 1948 period of significance. While there have been minor modifications to the exterior of the building, including the replacement or covering of some original windows and doors, the alterations are relatively minor and reversible. The original fenestration patterns and openings remain intact, and the overall form, structure, and style as designed by master architect Gogerty, such as the distinctive sawtooth roof with steel sash windows for light and ventilation, and steel and concrete structural features, remain from the 1940s building.

Setting

Building M retains integrity of setting. The neighborhood was generally developed in the 1920s with single-family residences; however, infill occurred from the 1960s to the present. The changing setting follows the development patterns common to Greater Los Angeles neighborhoods and has not eroded the historic setting of Building M. The campus itself has undergone considerable modifications since its inception in 1907, through the 1990s, and represents a typical pattern of modernization for a school campus. Yet, Building M has remained an essential component of the campus with its prominent orientation fronting Manchester Avenue and demonstrating the 1940s building additions to the campus.

Materials

Building M retains the majority of its historic materials from the period of significance from 1948. Some of the subject building's historic materials have been removed and replaced, such as some windows and doors in the original openings. Overall, the majority of historic materials remain, including steel and concrete framing, steel sash windows and skylights, metal cyclones, concrete walkways and stairs, and metal pipe railings. Very little of the historic fabric has been replaced, and any replacements have been mostly compatible with the historic materials that remain.

Workmanship

Building M retains integrity of workmanship. As discussed above, the building retains the majority of its original materials. These materials are still extant and therefore continue to exhibit their original workmanship, as a daylight factory typology used as a campus classroom. Workmanship is reflected in the technological and innovative features in the use of steel and reinforced concrete construction, steel sash windows and the sawtooth roof executed seamlessly. While some minor modifications have been made, the building continues to convey physical evidence of aesthetic and technological principles from its 1948 period of significance.

Feeling

Building M retains integrity of feeling. The building retains integrity of location, design, materials, and workmanship and is therefore still able to convey the feeling of a 1940s industrial daylight factory building on a high school campus through its physical appearance, particularly the continuous steel sash windows and distinctive sawtooth roof. The building overall retains most of its essential and distinctive features and appearance through its architectural forms and details.

Association

Building M retains integrity of association. The building retains integrity of location, design, materials, workmanship, and feeling. Taken together, these aspects of integrity convey the building's associations with an industrial daylight factory shop design on a high school campus.

IHS Industrial Shop Historic District

Buildings L and M were evaluated under the following historical and architectural themes: (1) *History of Inglewood: Settlement, Development and Growth* (1822–present), (2) *Inglewood Unified School District: Early History, Establishment and Expansion* (1905–present), and (3) *Industrial Utilitarian: Carpentry Shop* (1900-1965) and recommended eligible as contributors to a two-building historic district, the IHS Industrial Shop Historic District .

Criterion A/1: Events

With the rise of the City of Inglewood's prominence as the center of the nation's aircraft industry by 1941, the high school similarly adapted its curriculum and community offerings to include extensive vocational training through two prominent programs that continued in some capacity after World War II - the Adult Education Program and the defense training curriculum. Notably, new campus buildings were needed to accommodate these programs, which served adults in the area and high school students alike. Two buildings in the northwestern corner of the IHS campus share a unique building typology as examples of mid-20th century industrial utilitarian shops as applied to a public-school campus.

Criterion B/2: Significant Persons

Research did not indicate that Buildings L and M were associated with a person or people of significance in the community, state, or nation. As such, the IHS Industrial Shop Historic District does not appear eligible for the National Register or California Register under Criterion B/2.

Criterion C/3: Design/Construction

Buildings M and L were constructed within a year of one another, between 1948 and 1949, and both were designed by master architect H. L. Gogerty. As described above, Gogerty's extensive body of work included hundreds of Southern California school buildings, in addition to airplane-focused facilities. As designed by notable architect Gogerty with stylistic features reflective of those present at his recently constructed Hughes Aircraft Company complex, the two industrial utilitarian buildings oriented adjacent to one another along W. Manchester Boulevard, share several of the same character-defining features of a daylight factory and appear to be unique to a public-school campus both locally and regionally. Further, as designed, the buildings' entrance overhangs and shared walkway align with one another, suggesting a planned collective relationship between the two structures in this portion of campus.

As such, when taken together, contributing shop Buildings M and L reflect a small, intact historic district on the IHS campus, the IHS Industrial Shop Historic District, and appear eligible under National Register Criteria C at the local level and California Register Criteria 3. The IHS Industrial Shop Historic District retains historic integrity and has a period of significance of 1948-1949, which reflects its dates of construction.

Criterion D/4: Data Potential

Buildings L and M collectively are not likely to yield any information important to prehistory or history. Therefore, the IHS Industrial Shop Historic District does not meet the above criterion.

Integrity Analysis

No major alterations have been made to Buildings L and M as they retain all aspects of integrity. The buildings continue to convey their significance as a unique example of mid-20th century industrial shop grouping on a public-school campus with features of the daylight factory type in the industrial utilitarian style.

Location

Buildings L and M retain integrity of location. The IHS Industrial Shop Historic District has not been moved from its original site since its construction between 1948 and 1949.

Design

Buildings L and M retain integrity of design. The subject building retains its original plan, form, massing, and design intent from its 1948 period of significance. While there have been minor modifications to the exterior of the building, including the replacement or covering of some original windows and doors, the alterations are relatively minor and reversible. The original fenestration patterns and openings remain intact, and the overall form, structure, and style as designed by master architect Gogerty, such as the distinctive sawtooth roof with steel sash windows for light and ventilation, and steel and concrete structural features, remain from the 1940s building.

Setting

Buildings L and M retain integrity of setting. The neighborhood was generally developed in the 1920s with single-family residences; however, infill occurred from the 1960s to the present. The changing setting follows the development patterns common to Greater Los Angeles neighborhoods and has not eroded the historic setting of Building M. The campus itself has undergone considerable modifications since its inception in 1907, through the 1990s, and represents a typical pattern of modernization for a school campus. Yet, Building M has remained an essential component of the campus with its prominent orientation fronting Manchester Avenue and demonstrating the 1940s building additions to the campus.

Materials

Buildings L and M retain the majority of their historic materials from the period of significance from 1948. Some of the subject building's historic materials have been removed and replaced, such as some windows and doors in the original openings. Overall, the majority of historic materials remain, including steel and concrete framing, steel sash windows and skylights, metal cyclones, concrete walkways and stairs, and metal pipe railings. Very little of the historic fabric has been replaced, and any replacements have been mostly compatible with the historic materials that remain.

Workmanship

Buildings L and M retain integrity of workmanship. As discussed above, the building retains the majority of its original materials. These materials are still extant and therefore continue to exhibit their original workmanship, as a daylight factory typology used as a campus classroom. Workmanship is reflected in the technological and innovative features in the use of steel and reinforced concrete construction, steel sash windows and the sawtooth roof executed seamlessly. While some minor modifications have been made, the building continues to convey physical evidence of aesthetic and technological principles from its 1948 period of significance.

Feeling

Buildings L and M retain integrity of feeling. The grouping retains integrity of location, design, materials, and workmanship and is therefore still able to convey the feeling of a 1940s industrial daylight factory building on a high school campus through its physical appearance, particularly the continuous steel sash windows and distinctive sawtooth roof. The building overall retains most of its essential and distinctive features and appearance through its architectural forms and details.

Association

Buildings L and M retain integrity of association. The grouping retains integrity of location, design, materials, workmanship, and feeling. Taken together, these aspects of integrity convey the building's associations with an industrial daylight factory shop design on a high school campus.

Findings and Conclusions

Historic Resource Evaluation Findings

ESA evaluated the IHS for potential eligibility for listing in the National Register and California Register as a historic district. As indicated above, the IHS campus does not appear to be eligible as a historic district under any criteria. Additionally, ESA evaluated Building A, Administration, Building I, Classrooms, and Building M, Shop for potential individual eligibility for listing in the National Register and California Register as an individual resource. Additionally, ESA evaluated Buildings L and M and they are recommended eligible as contributors to a discrete historic district for listing in the National Register and California Register.

As detailed in the evaluations above, all three buildings are recommended individually eligible for listing in the National Register at the local level and the California Register under Criterion A/1 and C/3 as follows:

Building A, Auditorium is recommended eligible as an individual resource under National Register Criteria A at the local level and California Register Criteria 1 as a good example of retrofitted institutional architecture in Inglewood, which resulted from Federal relief effort programs following the 1933 Long Beach Earthquake. Building A is also recommended eligible under National Register Criteria C at the local level and California Register Criteria 3 as it embodies the distinctive characteristics of a type, period, and construction method as an excellent example of a PWA Moderne-style institution in Inglewood, and as a good representative example of master architect T. C. Kistner's body of work. Building A has a period of significance of 1936, which reflects the completion date of the retrofit construction.

Building I, Classroom is recommended eligible as an individual resource under National Register Criteria A at the local level and California Register Criteria 1 for its association with educational development in Inglewood during the Great Depression, and as a product of the Field Act following the 1933 Long Beach Earthquake in Southern California. Building I is also recommended eligible under National Register Criteria C at the local level and California Register Criteria 3 as a rare example of the PWA Moderne style as applied to a school building in Inglewood. Further, the building is important as a unique example of master architect T. C. Kistner's work. Building I has a period of significance of 1936, which reflects its date of construction.

Building M, Shop is recommended eligible as an individual resource under National Register Criteria A at the local level and California Register Criteria 1 due to its role in the area's postwar reconversion as an educational facility that responded to the rapidly evolving aerospace and defense industry. Building M is also recommended eligible under National Register Criteria C at the local level and California Register Criteria 3 as a rare example of an industrial utilitarian shop property type as applied to a public-school campus, both locally and regionally. Further, the building appears to be significant within master architect H. L. Gogerty's extensive body of work as a remaining example of a small, multi-use shop institutional building. Building M has a period of significance of 1948, which reflects its date of construction.

Further, ESA determined that two buildings on the IHS campus, which meet the 45-year age threshold, appear to rise to a level of significance as contributors to a historic district due to their historic associations and architectural design. These buildings, Building L and Building M, were evaluated as contributors to a small, two-building historic district under National Register criteria and California Register criteria. Building L, Auto Shop and Building M, Shop are recommended eligible as contributing resources to the IHS Industrial Shop Historic District under National Register Criteria C at the local level and California Register Criteria 3 as they embody a unique building typology as examples of mid-20th century industrial utilitarian shops as applied to a public-school campus. Additionally, the district appears to be significant within master architect H. L. Gogerty's extensive body of work as a rare example of a mid-20th century grouping of small, multi-use shop institutional buildings. The historic district has a period of significance of 1948 to 1949, which reflects the grouping's date of construction.

Below are the character-defining features of Buildings A, I, L, and M:

Character-Defining Features

Building A, Administration

- Formal symmetry and massing with curved and rectangular volumes
- Brick masonry construction with reinforced steel trusses, beams and columns, gunite sheathing
- Flat roof with a raised parapet
- Plaster reeded pilasters on wide concrete piers
- Recessed window channels with horizontal line spandrels
- Cast concrete and plaster zigzag and diamond motifs, tiered vertical line accents, dentil moldings, and a geometric block cornice
- Stylized clock at the roofline

- Incised ghost lettering above the entrance door that reads “Fine Arts Building”

Building I, Classrooms

- Formal symmetry and massing
- Curved walls and low piers at the entrances
- Reinforced steel trusses, beams and columns, stucco sheathing
- Flat roof with a raised parapet
- Plaster reeded pilasters
- Recessed window channels with horizontal line spandrels
- Cast concrete and plaster ornamentation including curved planters with medallion designs and vertical speedline accents

Building L, Auto Shop

- One-story height
- Sawtooth roofline with extensive wire glass skylights
- Continuous industrial steel sash windows including clerestories; projecting frames
- Steel frame construction with reinforced concrete
- Concrete walkways
- Utilitarian in design

Building M, Shop

- One- and two- story height
- Sawtooth roofline with extensive wire glass skylights
- Continuous industrial steel sash windows including clerestories; projecting frames
- Steel frame construction with reinforced concrete
- Concrete stairways and walkways with pipe metal railings
- Cyclones on roof to filter sawdust from the interior
- Building usually utilitarian in design

National Trust for Historic Preservation and NTHP Forum, Member

Preservation Action, Member

Shannon L. Papin is a Senior Architectural Historian and Cultural Resource Specialist with 25 years of professional experience in architectural history, historic resource management, and historic preservation planning, policy, and economics. Her qualifications meet and exceed the Secretary of the Interior's Professional Qualification Standards in History and Architectural History. Shannon has a proven track record of historic resources management and preservation consultation services for all stages of project development, preparation of required documentation for environmental compliance, project review and permitting, and implementation of mitigation measures. She has authored numerous historic resource assessments, State and National Register Nominations, historic structure reports, CEQA Impacts Analysis, historic resource technical reports, feasibility studies, LAHCM nominations, and HABS/HAER reports. She has managed and conducted planning and technical studies for a broad range of clients and projects throughout Southern California, New Mexico, and South Dakota.

Previous Experience

Historic Preservation

Isadore House Significance Evaluation and Historic Structure Report, Isadore House, Los Angeles, CA. *Project Manager.* Shannon prepared a structural assessment, documentation, and evaluation of Isadore House, a historic property owned by the Recreation and Parks of the City of Los Angeles. The Report included a CEQA impacts analysis in preparation for a planned redevelopment.

Sunshine House Historic Structure Report, Los Angeles, CA. *Project Manager.* Shannon prepared a structural assessment, documentation, and evaluation of the Sunshine House, the former caretaker's residence at the Silver Lake Reservoir Complex, owned by LADWP.

Garvanza Pump Station, Historic Structure Report, Los Angeles, CA. *Project Manager.* Shannon prepared a structural assessment, documentation, and evaluation of the Garvanza Pump Station, a historic building associated with the former Garvanza Reservoir in northeast Los Angeles, owned by LADWP.

Hermon Park Building Evaluations, Los Angeles, CA. *Project Manager.* Shannon prepared a memorandum that included structural assessments, documentations, and evaluations of two fire-damaged buildings located within Hermon Park, a National Register-eligible property that is part of the Arroyo Seco Park system and owned by the City of Los Angeles. This project was done under an on-call contract with City of Los Angeles Recreation and Parks.

Seismic Retrofit Project, Lockwood Elementary School, Los Angeles, CA. *Project Manager*. Shannon managed a documentation project for LAUSD campus in Hollywood in preparation for a planned seismic retrofit. Project deliverables includes character-defining matrixes and California DPR forms for multiple historical resources.

Seismic Retrofit Project, First Street Elementary School, Los Angeles, CA. *Project Manager*. Shannon managed a documentation project for LAUSD campuses in Boyle Heights in preparation for a planned seismic retrofit. Project deliverables includes character-defining matrixes and California DPR forms for multiple historical resources.

Historic Structure Report, New Mexico Veteran's Home, Truth or Consequences. *Project Manager.* Shannon served as the Project Manager on the preparation of an Historic Structure Report for a 1937 hospital for crippled children, including historic narrative and context, evaluation of significance, documentation of original construction and later modifications, and historic preservation recommendations.

California Environmental Quality Act

Alhambra Health Center, Historic Resource Assessment and Focused EIR, Alhambra, California. *Project Manager for Historic Resource/Principal Architectural Historian.* Shannon led the historic resource analysis for the Alhambra Health Center EIR, prepared by ESA for the City of Alhambra. The project would redevelop a 23,000-sf medical facility constructed in 1930 and found eligible for the National Register of Historic Places. ESA's environmental analysis found the project would result in a significant and unavoidable impact. In addition to the initial assessment of the building, Shannon was responsible for developing a range of feasible alternatives to avoid or reduce impacts, authoring architectural studies on the adaptive reuse and rehabilitation of the structure, and assisting in the public review process including conducted several public outreach meetings with community stakeholders and preservation advocates.

West San Gabriel Valley Area Plan, San Gabriel Valley, California. *Project Manager for Historic Resource/Principal Architectural Historian.* Shannon led the preparation of a historic context and reconnaissance level architectural survey of eight areas of unincorporated Los Angeles County in the West San Gabriel Valley. She also was responsible for crafting the Historic Preservation element of the Area Plan.

Culver Crossings Historic Resource Assessment and EIR, Culver City and Los Angeles, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of a large industrial site located on the border of Los Angeles and Culver City for a proposed redevelopment. Work involved research on the property and its history as well as an evaluation of the site's eligibility and CEQA impacts analysis for the Project, including the National Register eligible Helms Bakery Complex located immediately adjacent.

Silver Lake Reservoir Complex EIR and Impacts Analysis, Los Angeles, CA. *Senior Architectural Historian.* Shannon conducted research on the historic development of the Silver Lake Reservoir Complex and identified all previously identified historic resources within 0.25-mile of the perimeter of the site to conduct a direct, indirect, and cumulative impacts analysis for the Complex's proposed master plan.

615 East Ocean Boulevard, Historic Resource Assessment and MND, Long Beach, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of a restaurant located in Long Beach for a proposed redevelopment. Work involved research on the property and its history and an evaluation of the site's eligibility and impact assessment for a historic apartment building adjacent to the site.

1715 – 1739 Bronson Avenue, CEQA Impacts Analysis, Los Angeles, CA. *Project Manager.* Shannon analyzed the potential impacts of construction of a 24-story, mixed-use project in Hollywood, adjacent to the historic Lombardi House for compliance with CEQA impacts threshold and for conformance with the SOI Standards.

3623 Hayden Place Historic Resource Assessment and MND, Culver City, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of three former industrial buildings in the Hayden Tract of Culver City

for a proposed demolition. Work involved research on the properties, their history, construction and alterations, and the significant tenants that originally constructed the building. The report included an evaluation of the site's eligibility and potential impacts on adjacent historic resources.

3550 Hayden Place Historic Resource Assessment and MND, Culver City, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of a large industrial site located in the Hayden Tract of Culver City for demolition. Work involved research on the property and its history as well as an evaluation of the site's eligibility and potential impacts on adjacent historical resources.

1600 Naud and 1635 – 1639 Main Street Historic Resource Assessment and MND, Los Angeles, CA. *Senior Architectural Historian*. Shannon managed cultural portion of CEQA environmental review process for a former Carnation milk and ice cream campus as a potential historic district, as well as four individual eligibility evaluations, analysis of projects impacts and recommendations on adaptive reuse and mitigation.

Section 106 and NEPA

San Manuel Land Exchange, San Bernardino National Forest, Big Bear, California. *Senior Architectural Historian.* Shannon managed the Historic portion of a multi-year project that entailed a land swap between the U.S. Forest Service and the San Manuel tribe. She authored historic resource assessments of multiple rural land parcels in the San Bernardino National Forest. Work involved research on the mining and recreational history of the region as well as an evaluation of the site's eligibility.

LA River Phase IV Bike Path CEQA/NEPA, Los Angeles, California. *Senior Architectural Historian.* Shannon managed the Historic portion of a project developing a bike and pedestrian path located in Griffith Park and areas of South Burbank. She worked with CalTrans and the City of Los Angeles to manage the project approvals for work within historic Griffith Park and the equestrian community of Burbank.

Union Pacific Railroad, Crestmore Cement Plant, Riverside, CA

Shannon authored a historic resource assessment of rail spur located on the site of a 1908 cement plant in Riverside, CA.

EWMP Addendum, Compton Boulevard Historic Survey, Compton, CA. *Project Manager.* Shannon conducted an architectural survey of a seven square mile area in Compton, including the identification of potentially significant resources for state, local, and national eligibility, integrity evaluation, and research and writing of an accompanying historical context. The Report included a CEQA impacts analysis in preparation for a planned streetscape project.

Historic Resource Assessments

3916 Martin Luther King Jr. Boulevard Historic Resource Assessment, Los Angeles, California. *Project Director.* Shannon managed and authored a historic resource assessment of the historic office building of the first African-American-owned bank in Los Angeles for a proposed redevelopment. Work involved research on the property and its history and an evaluation of the site's eligibility. Associated historic contexts included the history of financial services in the African-American community of Los Angeles.

1038 Venice Boulevard Historic Resource Assessment, Los Angeles, California. *Project Manager.* Shannon authored a historic resource assessment of a 1920 commercial office building in Los Angeles for a proposed redevelopment. Work

involved research on the property and its history as well as an evaluation of the site's eligibility and potential impacts on the adjacent historic district.

1000 – 1018 Croft Avenue Historic Resource Assessment, Hollywood, California. *Project Manager.* Shannon managed historic resource assessments for four historic multi-family properties located on the border of West Hollywood. Work involved research on the properties and their histories as well as an evaluation of the sites' eligibility.

133 Vieudelou Avenue, Historic Resource Assessment, Avalon, CA. *Project Manager.* Shannon authored a documentation and evaluation of the oldest private residence in the City of Avalon, Catalina, a Folk Victorian style single-family residence constructed in 1888.

301 Beacon Street, Historic Resource Assessment, Avalon, CA. *Project Manager.* Shannon prepared a documentation and evaluation of a 1923 Mediterranean Revival apartment building located in the City of Avalon, Catalina.

High Desert Hospital, Historic Resource Assessment, Lancaster, CA. *Project Manager.* Shannon authored a documentation and evaluation of High Desert Hospital and Coroner's Office, a historic property owned by the LADPW. The Report included a CEQA impacts analysis in preparation for a planned redevelopment.

Mayfield Junior School Historic Resource Evaluation, Pasadena, CA. *Project Manager.* Shannon surveyed entire campus and prepared an evaluation of three historic resources under an on-call contract with the City of Pasadena including CEQA impacts analysis for a proposed master plan.

8025 Santa Monica Boulevard Historic Resource Assessment and CEQA Impacts Analysis, West Hollywood, CA. *Project Manager.* Shannon analyzed the potential impacts of construction of a 24-story, mixed-use project in Hollywood, adjacent to the historic Lombardi House for compliance with CEQA impacts threshold and for conformance with the SOI Standards.

910 North Roxbury Drive Historic Resource Assessment, Beverly Hills, CA. *Project Manager Shannon* assessed the eligibility of an American Colonial Revival residence designed by master architect Robert V. Derrah in Beverly Hills. The report involved digital and archival research and an assessment of the home's integrity using historic plans and images.

1707 Tropical Drive Historic Resource Assessment, Beverly Hills, CA. *Architectural Historian.* Claire assessed the eligibility of an American Colonial Revival residence built by Carleton Lyle Burgess and occupied by Edward Paul Dentzel. Research included construction chronology and identification of alterations, research on the builder and occupants, and analysis of neighborhood integrity.

448 West Cypress Historic Resource Assessment, Glendale, CA. *Project Manager* Shannon authored a Historic Resource Assessment of an industrial warehouse constructed in the Tropico neighborhood of Glendale in 1908. Research included an integrity evaluation, research on Tropico's history as an early agricultural center, and the strawberry industry.

28307 Agoura Road Historic Resource Assessment, Agoura Hills, CA. *Project Manager.* Shannon authored a Historic Resource Assessment for a 1940s commercial property in Agoura Hills. Work involved researching the rural character and history of Agoura Hills, conducting research at the Agoura Hills Library and Building Division, identifying occupants of the structure, and assessing the property's eligibility.

Nominations

Shannon L. Papin (Continued)

Architectural History Program Manager, Southern California

Kun House II Los Angeles Historic Cultural Monument Nomination, Los Angeles, CA. *Project Manager.* Shannon prepared LAHCM nomination for the Joseph Kun House II, 1950 residence designed by Richard Neutra and presented the nomination to the Cultural Heritage Commission.

1828 Edgemont Street Los Angeles Historic Cultural Monument Nomination, Hollywood, CA. *Project Manager.* Shannon prepared LAHCM nomination for a 1940 Garden Apartment complex in Hollywood and presented the nomination to the Cultural Heritage Commission.

Pasadena Avenue Historic District, Pasadena, CA. *Project Manager.* Shannon completed re-survey and prepared State and National Register Nomination of historic district that included approximately 130 residential resources.

State & National Register Nomination, Ashley Pond Residence (535 East Palace Avenue), Santa Fe, NM. *Project Manager.* Shannon prepared State and National Register nomination of a 1925 residence and compound designed by John Gaw Meem.

Multiple Property Documentation Form for the Cañon neighborhood, Taos, NM. *Project Manager.* Shannon performed the initial neighborhood survey, individual nominations for three resources, and associated historic context. The properties listed included a residential compound, a guesthouse/hotel and a community chapel.

Architectural Surveys

Architectural Survey of the Sioux Falls Historic District & Pettigrew Heights neighborhood, Sioux Falls, SD. *Project Manager.* Shannon served as the Project Manager on the re-survey of a 1974 National Register district, including approximately 240 residential resources. New survey of an adjoining neighborhood with approximately 120 residential resources. She also prepared survey reports with recommendations on district expansion and new district possibilities.

County-wide Architectural Surveys, South Dakota. *Project Manager.* Shannon served as the Project Manager on four county-wide architectural surveys, including integrity evaluation, identification of potentially significant resources for inclusion in the National Register of Historic Places; research and writing of an accompanying historic context.

- Tripp County: 1,617 square miles, 351 surveyed resources.
- McPherson County: 1,152 square miles, 168 surveyed resources.
- Walworth County: 745 square miles, 211 surveyed resources.
- Moody County: 521 square miles, 204 surveyed resources

Cultural Resource Surveys. Shannon performed cultural resource surveys for a variety of compliance documents including Environmental Impacts Reports, Section 106, Section 4F, and NEPA compliance. Project duties included consultation with states, local municipalities, tribes and planning consultants, as well as overseeing the archaeological portion of the survey.

- Cold War Era Properties Survey, Shaw Air Force Base, Sumter, SC
- Property Surveys for EA, Fort Bliss Army Base, El Paso, TX
- Portales Railroad Depot Focus Area, Portales, NM
- Washington Avenue Pedestrian Improvements, Lovington, NM
- Environmental Assessment, Water Control Facilities, Montezuma, NM
- Interstate 25 Landscape Improvements, Glorieta/Rowe, NM
- 12.68-mile Pipeline Expansion, Bosque, NM
- Housing Rehabilitation Project, Santo Domingo Pueblo
- NM Visual Impact Assessment, various Plateau Cell Towers, NM

Shannon L. Papin (Continued)

Architectural History Program Manager, Southern California

- Construction at Day School Complex, Picuris Pueblo, Penasco, NM
- Santa Fe County Courthouse, Santa Fe, NM

Historic American Building Surveys, Walker Air Force Base, Roswell, NM. *Project Manager*. Shannon prepared the building documentation (HABS Level III standard) of three buildings at the former Walker Air Force Base as well as the former Roswell Airfield Terminal Building

Historic American Building Surveys, Kirtland Air Force Base, Albuquerque, NM. *Project Manager*. Shannon prepared the building documentation (HABS Level II standard) of the 21st EOD Headquarters at Kirtland Air Force Base.

Historic American Building Surveys, White Sands Missile Range, Alamogordo, New Mexico. *Architectural Historian*. Shannon prepared the building documentation (HABS Level II standards) of the old Officer's Club at White Sands Missile Range.

National Conference of State Historic Preservation Officers,Washington D.C. *Director of Communications and State Services.* Shannon served as the primary liaison and resource for all fifty-nine State Historic Preservation Offices and represented NCSHPO to Congress and the federal government as well as the press, partner organizations and general public. Worked extensively with the National Park Service and the Advisory Council onHistoric Preservation and served on task forces dealing with the Section 106 review process, the Secretary of the Interior's Standards for Rehabilitation of Historic Buildings, and National Register Criteria and Processes.

CarrAmerica Urban Development, Inc., Washington, DC. *Development Associate.* Shannon was the assistant for multiple downtown development projects including a mixed-use project of approximately 450,000 square feet combining office, residential, andpreferred arts retail in the redevelopment of three historic buildings. Duties included assistance with project approvals, design review, due diligence,acquisition and development documents, pro forma analysis as well as workingwith public and private groups to garner support and necessary approvals.

Alison Garcia Kellar

Senior Architectural Historian

EDUCATION

MS, Historic Preservation, University of Pennsylvania

BA, Design, University of California at Davis

13 YEARS EXPERIENCE

PROFESSIONAL AFFILIATIONS

California Preservation Foundation, Member

Society of Architectural Historians, Member

National Trust for Historic Preservation, Member

Alison is a senior architectural historian with 13 years of professional experience with a background in historic preservation, design, and museum collections. Her work with historic resources and cultural heritage in California has included managing and authoring historic resource assessments, National Register Nominations, historic structure reports, feasibility studies, in addition to extensive archival research and resource documentation. Alison applies her understanding of preservation design and historic interiors to inform impacts analyses for proposed redevelopment and recommendations for adaptive reuse.

Relevant Experience

Morningside High School Historic Resources Assessment and Impacts, Inglewood, CA. *Senior Architectural Historian.* Alison was the lead author of the Historic Resources Assessment which determined that the high school campus buildings and landscape are significant as a potential historic district. Constructed in 1950, the property is significant for its association with the challenges of public-school integration in California and within the City of Inglewood, for its Mid-Century Modern architectural style, and for its association with notable modernist architectural firms. Alison assembled the construction history for the campus and created a character-defining features analysis identifying features at the campus, and specifically, interior and exterior features of the theatre building. Alison reviewed the upgrade project to ensure that the project met the SOI Standards and CEQA compliance. She authored and oversaw the production of a HABS report to document the campus prior to selective demolition and project construction.

3619 Martin Luther King Jr. Boulevard Historic Resources Evaluation, Los Angeles, CA. *Project Manager and Senior Architectural Historian.* Alison was the lead author of the Historic Resources Assessment which determined that the Mid-Century Modern commercial bank building is eligible at the local level for its association with mid-century commercial development in Crenshaw, importance as a Black banking business, and for its association with notable Black bank owner, Peter W. Dauterive. Constructed as the Santa Barbara Savings and Loan Bank in 1963, the bank building was later operated by Founders Savings and Loan, a Black-owned banking institution. Alison conducted in-depth research regarding the development of the Crenshaw Shopping District that rose to prominence following World War II, profiling its decline after the 1965 City-wide Watts Riots which led to tremendous City disinvestment in predominantly African American and other minority communities. The report will be used for future redevelopment efforts.

Cultural Resources Management Plan, San Diego County Dept. of Parks & Recreation, San Diego County, CA. *Project Manager and Senior Architectural Historian.* Alison serves as the cultural resources project manager and lead author of a cultural resources management plan report for a historic ranch property in east San Diego County. She oversaw and coordinated a multi-day site visit to document the rural historic district which included up to 28 built resources comprising a former late 19th/early 20th century

ranching complex. Alison worked closely with ESA's archeology group and a subconsultant team of architects, engineers, and cost estimators to conduct conditions assessments and provide practical recommendations which will guide future preservation and management efforts.

San Diego Rowing Club Plan Review and Impacts Analysis, San Diego, CA. *Project Manager and Senior Architectural Historian.* Alison oversees preservation consulting services for the San Diego Rowing Club, local historic site #105. Built in 1900, the building was converted into a restaurant in the 1980s. Reviewing existing nominations, archival collections and background documentation, Alison worked to compile the construction chronology and develop a character-defining features matrix identifying original extant features. She coordinated with the project applicant to sensitively guide the design of a new adaptive reuse project to be in conformance with the Secretary of the Interior's Standards to retain its integrity and historic status.

MacArthur Park Historic Viaduct Railings Historic Structure Evaluation and Treatment Plan, Los Angeles, CA. *Senior Architectural Historian.* Alison was the lead author of a report that documents and recommends treatments for a historic 1938 concrete wall that lines either side of Wilshire Boulevard through McArthur Park. Alison conducted extensive archival research on the park and on the walls, and later conducted a significance evaluation for the walls. She conducted a character-defining features analysis for the walls and associated roadway which helped to inform architectural and structural recommendations with a team of subconsultants. Alison coordinated with the engineering and architectural contractor subconsultants to compile recommendations and present them to the City.

Weintraub Real Estate Group, Orchid Tree Inn Historic Preservation Consulting Services, Palm Springs, CA. *Deputy Project Manager.* Alison is on the management team for ESA's providing of historic preservation services for a boutique resort hotel project that will incorporate and rehabilitate two locally designated historic resources in Palm Springs—the Palm Springs Community Church and the Orchid Tree Inn. ESA prepared a Historic Resources Assessment Report, Character Defining Features Analysis, and Conditions Assessment, as well as provided preservation consulting services for conformance with the SOI Standards. ESA assisted with several challenges, including preservation of the partially damaged (burned roof) masonry Gothic Revival-style Community Church; rehabilitation of the bungalow court based on historic photographs and physical analysis; and accommodation of utility, ADA, and structural code upgrades. ESA is reviewing construction plans and preparing an SOI Standards conformance review and CEQA impacts analysis for the final project.

Whittier Public Library Historic Resources Assessment, Whittier, CA. *Senior Architectural Historian.* Alison was the lead author of the Historic Resources Assessment which determined that the library is significant as an individual resource under National Register Criteria A and C. Constructed in 1958, the property is significant for its association with Mid-Century Modernism, postwar period institutional properties, and architect William Henry Harrison. Alison assembled the construction history for the library and the Whittier Civic Center. She created a detailed character-defining features analysis identifying significant and contributing features at the property's interior, exterior, and site. Alison coordinated with the project architect to ensure that the project met the SOI Standards in order to meet community's contemporary needs while respecting the building's historic character. Alison authored and oversaw the production of a HABS report to document the library building prior to selective demolition and project construction.

Earl Carroll Theatre Historic Structures Report, Los Angeles, CA. *Senior Architectural Historian.* Alison was the lead author of the Historic Structure Report created for the rehabilitation of the historic Earl Carroll Theatre in Hollywood. Constructed in 1938, the property is significant for its association with owner-operator Earl Carroll, Hollywood nightlife,

and architect Gordon B. Kaufmann. The theatre is a listed LA Historic-Cultural Monument and has been identified as eligible for the National Register. In recent years the theatre was rented by television studios as sound stages, and as a result some public areas had been modified. Alison assisted with the preparation of the historic structures report and conducted supplemental in-depth research, participated with the creation of a detailed interior and exterior character-defining features analysis, and assisted with the analysis of the theatre's current condition. She developed recommendations in compliance with the SOI standards that sensitively guide ongoing preservation efforts.

Mt. Helix Park Rock Wall Short-Term Preservation Project, San Diego, CA. *Senior Architectural Historian.* Alison is serving as the deputy project manager for a rehabilitation project to document and provide short term preservation recommendations for the 1932 rock wall that borders a hilltop park. Work has included documentation of failing portions of the rock wall with digital photograph, extensive research through local archives, and the development of a character-defining features matrix for the rock walls. Working closely with Mel Green Associates and Silman Structural Engineers, ESA has developed treatment and stabilization recommendations for the deteriorating rock wall portions.

Old Police Headquarters Assembly Building Peer Review, San Diego, CA. *Project Manager, Senior Architectural Historian.* Alison is conducting a peer review for proposed rehabilitation modifications and tenant improvement to a historic former police headquarters in San Diego. Work has included a review of historic documentation including nomination forms and original plans, and a review of the applicant's proposed plans to modify the historic building into an events space. Alison is recommending that the applicant include a more robust Standards review discussion, provide supportive graphics, reference historic documentation, and a create more comprehensive project description for the proposed submission to be adequately substantiated for City review and approval.

Benjamin Franklin Elementary School Historic Resource Evaluation and Mitigated Negative Declaration, San Diego, CA. *Senior Architectural Historian.* Alison conducted an HRA for the 1930s, 40s, and 50s-designed elementary school campus. The property was found to be a historic district eligible for its association with the post-war development of the Kensington neighborhood, and for its association with two master San Diego architects. The proposed project was reviewed for compliance with the Secretary of the Interior's Standards, and a CEQA analysis was performed, resulting in the Mitigation Measures and design considerations for future construction within the district. Alison authored and oversaw the production of a HABS report to document the campus and its buildings prior to project construction.

Celes King III Swimming Pool Historic American Building Survey, Los Angeles, CA. *Senior Architectural Historian, Deputy Project Manager.* ESA was hired to conduct HABS documentation for the City of Los Angeles Park and Recreation Department. Constructed in the early 1960s, the Celes King III Swimming Pool was designed by architect Albert Criz in the Mid-Century Modern-Expressionist style. Alison conducted in-depth research related to the history of the surrounding recreational complex, construction of the swimming pool, architect, and neighboring communities.

Long Beach Unified School District, ESSER Shade Structure Impacts Analysis Report, Long Beach, CA. *Senior Architectural Historian, Project Manager.* Alison conducted a survey of five Long Beach Unified School District schools which were previously determined to be historical resources. Alison documented the current conditions of each school's outdoor recreational play area as part of the impacts analysis study which evaluated the potential effects of new outdoor shade structures at each of the schools. She reviewed project site plans and canopy specifications for compliance with CEQA and for conformance with the SOI Standards. Alison oversaw the development of a California Built Environment Resources Directory (BERD) and City of Long Beach Designated Landmarks list search to identify adjacent historical

resources. She analyzed each school against the project for direct and indirect analysis and reviewed each proposed project against the SOI Standards, determining that project would have no adverse effects to historic resources.

Alpine Village Preservation Consulting Services, Unincorporated Los Angeles County, CA. *Senior Architectural Historian.* Alison was the lead author of the preliminary historical significance evaluation determination for the Alpine Village complex, a European-style shopping center located near Torrance, California. Comprised of seven buildings constructed between 1969 and 1974, the complex is an example of an increasingly rare type of roadside architecture and retains high historic integrity. Alison participated in conducting in-depth construction chronology research, determining the complex's period of significance, and identified both interior and exterior character-defining features for the property to help guide ongoing planning efforts.

City of Laguna Beach, Historic Preservation Services, Laguna Beach, CA. *Deputy Project Manager.* Alison supported ESA's contract administrator for numerous studies including Historic Resources Assessments (HRAs), Secretary of the Interior's Standards (SOI) Plan Reviews, character-defining features reports and CEQA impacts analyses, as well as rehabilitation plans and conducted construction monitoring for a wide variety of projects. ESA assists project applicants from due diligence through design development and environmental review to reduce impacts to historical resources for compliance with CEQA and the City's preservation ordinance. Projects include 1065 Marine Drive, 31204 Ceanothus, 989 Cliff Drive, and 951 Cliff Drive.

City of Santa Monica On-Call Historic Preservation Services, Santa Monica, CA. *Deputy Project Manager.* Alison supported ESA's contract administrator for on-call historic preservation services with the City of Santa Monica. Alison and ESA's historic division has prepared hundreds of studies including preliminary assessments, landmark assessments, structure of merit assessments, Secretary of the Interior's Standards plan reviews and preservation recommendations, landscape assessments, character-defining features reports and CEQA impacts analyses.

989 Cliff Drive Historic Resources Evaluation and Impacts Analysis, Laguna Beach, CA. *Senior Architectural Historian and Project Manager.* Alison served as the project manager and provided research assistance and guidance for the development of the Historic Resources Assessment for the 1928 Mediterranean Revival style residence, which is an identified historic resource. Further, Alison oversaw the development of impacts analysis to assess impacts to the property's historic garage which included creating a character-defining features analysis to ensure that the integrity of the property will be protected and maintained as part of the new proposed project.

989 Cliff Drive Historic Resources Evaluation and Impacts Analysis, Laguna Beach, CA. *Senior Architectural Historian and Project Manager.* Alison served as the project manager and provided research assistance and guidance for the development of the Historic Resources Assessment for the 1928 Mediterranean Revival style residence, which is an identified historic resource. Further, Alison oversaw the development of impacts analysis to assess impacts to the property's historic garage which included creating a character-defining features analysis to ensure that the integrity of the property will be protected and maintained as part of the new proposed project.

Long Beach Airport Airplane Showroom, Long Beach, CA. *Senior Architectural Historian.* Alison provided research assistance related to regional general aviation in the post-World War II era for an EIR amendment project. ESA conducted preliminary research to determine that an existing airport building which was most recently used as a terminal building was formerly a mid-20th century airplane showroom. As part of this research effort, Alison compiled the overall history of the Long Beach airport, in addition to reviewing patterns of both roadside architecture and car showroom which were researched for comparison between airplane and car sale marketing efforts.

Alison Garcia Kellar (Continued)

Senior Architectural Historian

McDonnell Douglas Assembly and Warehouse Building, Long Beach, CA. *Senior Architectural Historian, Project Manager.* Alison served as the project manager for a mitigation document which evaluated a historic assembly and warehouse building constructed for the production of the DC-10 luxury commercial aircraft in 1967. Located adjacent to the Long Beach Airport, the building was later repurposed for the development and assembly of the C-17 military cargo aircraft in the 1980s. The property was determined to be significant for its association with aviation history in Southern California and in Long Beach and is reflective of an industry that was critical in the post-World War II economic development of the region. The historic resources assessment was required as part of a larger PEIR effort.

31204 Ceanothus Drive Plan Review and Impacts Analysis, Laguna Beach, CA. *Senior Architectural Historian.* Alison served as the project manager for the plan review for an undeveloped portion of property that was once associated with the locally designated Halliburton House. The proposed new hillside residential project was reviewed for conformance with the Standards utilizing the National Park Service's *National Register Bulletin 30: How to Evaluate and Document Rural Historic Landscapes* and *Preservation Brief 36: Protecting, Treatment and Management of Historic Landscapes,* and for compliance with a previously established Project Design Feature and for conformance with mitigation measures for the historic adjacent property.

2949 S. Coast Highway, Laguna Beach, CA. *Senior Architectural Historian and Project Manager.* Alison served as the project manager and co-author for a plan review of a locally designated resource which was formerly a mixed-use building constructed in 1929. The property had since been converted into a single-family residence and included a large contemporary addition. Work included the assessment of unpermitted previous modifications and design consultation with the property owner in order to assess the home against CEQA impacts thresholds and for conformance with the Standards.

400 Walker Drive Historic Resources Assessment, Beverly Hills, CA. *Senior Architectural Historian.* Alison was the co-author of an HRA which involved research and an evaluation of a Mid-Century Modern style single-family residence. Designed by notable architect William R. Stephenson in 1962, the property is located in the Trousdale Estates neighborhood. ESA developed a new context for the neighborhood and conducted historic research to determine that extensive property modifications had occurred over time, diminishing the property's historic integrity.

1202 3rd Street Promenade Preservation Consulting, Santa Monica, CA. *Senior Architectural Historian*. Constructed in 1949 as a JC Penny department store, the commercial building was designed in the Late Moderne style. ESA previously worked to produce a Landmark Assessment Report, and today, the property is recognized as a City of Santa Monica Landmark. Alison conducted a SOI Standards conformance review of a proposed tenant improvement project for a Certificate of Appropriateness.

1221 Hermosa Avenue Preservation Consulting, Hermosa Beach, CA. *Senior Architectural Historian*. ESA serves as a historic preservation consultant to the City of Hermosa Beach, and has a longstanding relationship with the building at 1221 Hermosa Boulevard, known as the Bijou Building. The building is a former historic theatre and bank designed in the Neo-Classical Revival style, constructed in 1923. Alison evaluated proposed tenant improvement modifications including the removal of non-original features and the retention of original features related to original theatre and bank uses. Alison has conducted design reviews which included an understanding of all modifications to the space over time, character-defining features analyses, and reviews of proposed plans against CEQA thresholds and the SOI Standards for compliance. Alison is currently participating with overseeing the construction monitoring efforts for the theatre space as part of this ongoing project.

Alison Garcia Kellar (Continued)

Senior Architectural Historian

3325 Monterey Road CEQA Impacts Analysis and Design Review, San Marino, California. *Senior Architectural Historian.* A two-story Art Deco style single-family residence, constructed in 1927 in San Marino, California was determined to be a historic resource. Proposed modifications to the residence included a two-story rear addition and building rehabilitation. Alison assisted with preservation design consultation and conducted a plan review for conformance with the SOI Standards for the proposed project. She coordinated with the project architect to better convey preservation components of the proposed work into the drawing set for city review. The review required a character-defining features analysis to determine the level of significance of the remaining features.

Marston Middle School Historic Resource Evaluation, San Diego, CA. *Senior Architectural Historian.* Alison conducted an HRA for 1954 constructed middle school campus. Comprised of seven buildings, the property was found to be a historic district eligible for its association with the post-war development of Clairemont, and for innovative master planned campus that exemplified indoor-outdoor Mid-Century Modern schools of the era. The proposed project to modify the campus and upgrade the historic buildings was reviewed for compliance with the SOI Standards, and a CEQA analysis was performed, resulting in the Mitigation Measures and design considerations for future construction within the district.

Universal Hilton Historic Resources Technical Report and Environmental Impacts Report for 555 W Universal Terrace Parkway, Los Angeles, CA. *Senior Architectural Historian.* The Universal Hilton Hotel was designed by master architect, William L. Pereira in 1983 in the Postmodern style. As one of Pereira's final commissions, the hotel building was originally part of a master plan and was designed to accommodate visitors to the expanding Universal Theme Parks. Alison conducted in-depth architect and postmodern style research, and evaluated the property for historic significance as part of the Historic Resources Technical Report.

California Department of Water Resources, Pools 20/21 and 17/18 Liner and Embankment Raise Project, Coalinga, CA. *Senior Architectural Historian.* Alison conducted the reconnaissance-level windshield survey to document potentially eligible historic resources present at the California Aqueduct project site. Alison produced a character-defining features table and historic contexts for the evaluation which evaluated potentially eligible resources under applicable national, state, and local criteria. Alison conducted a windshield survey to identify potentially eligible resources adjacent to the project site. She developed a context for Kettleman City, a bedroom community of small cottages that grew overnight to accommodate oil workers due to the discovery of oil in the foothills. Alison is serving as a co-author on the cultural resources report and will conduct an analysis of the potential for indirect effects to eligible resources.

Cross Creek Cultural Resources Assessment, Malibu, CA. *Senior Architectural Historian.* The owner of several parcels of undeveloped land along Cross Creek in Malibu requested a feasibility-level Cultural Resources Assessment study prior to determining a desired program for development. The former agrarian land included four industrial buildings. Alison conducted extensive archival research, reviewing County-issued building permits and historic aerial photographs in order to document the property's development over time. Alison authored developmental contexts related to the residential and commercial development of the former agricultural land at the project site. The property was evaluated for historic significance under local, state, and national framework, which aided to assist the client with future planning for the site.

Los Cerritos Wetlands Restoration Plan Program, Cultural Resource Assessment, Seal Beach, CA. *Senior Architectural Historian.* The Los Cerritos Wetlands Restoration EIR project will reinstate historic wetlands to a previously developed oil rig/production site that has been in operation since the early 20th century. As part of the larger restoration

plan program, ESA was hired to conduct a cultural resources study to observe, document, and prepare preliminary mitigation measures related to identified built environment resources. Alison collaborated with the archeology team during a field visit to identify potential sites for later investigative studies. She reviewed historic aerial photographs and conducted research to determine the companies and general ages of oil-industry related infrastructure including oil rigs, operations sheds, and decommissioned tank farms. Mitigation recommendations presented for the structures included Historic Resource Assessment reports to be conducted in the future.

1101 N. Vermont Avenue Historic Resource Assessment, Los Angeles, CA. *Senior Architectural Historian.* The client is proposing to redevelop a site with a previously identified historic resource, a Mediterranean Revival commercial building constructed in the 1920s. Alison oversaw and co-authored the production of a Historic Resource Evaluation (HRA) to establish the building's historic significance, which included extensive research about the building, its site, associated designers, relevant patterns of development, and an analysis of the building's historic integrity. Upon completion of the HRA report, the optional service of design advice and preservation guidance may be employed to assist the client in the preparation of a CEQA impacts analysis, Standards review, and mitigation recommendations as the client moves forward to redevelop the property while maintaining a portion or all of the historic resource intact.

McDonnell Hall/Our Lady of Guadalupe Chapel Historic Structures Report, San Jose, CA. *Architectural Historian, Project Manager.* Constructed as a parish church in 1914, the building moved to its current location in 1953. Here, the building served as a newly formed Catholic Mission, the Center of Our Lady of Guadalupe. The property is associated with civil rights activist and labor rights leader Cesar Chavez, and the mid-20th century Mexican American civil rights movement. Alison served as the lead author of the HSR and assisted with the research, production, and design recommendations, including bringing the building back to its appearance during its period of significance, which required a meticulous analysis of the building's historic integrity. As a result of these efforts, the property is now listed as a National Historic Landmark.

Historic YMCA Hotel Preservation Consulting in the Embarcadero, San Francisco, CA. *Senior Architectural Historian, Project Manager.* Built in the early 20th century, the building was formerly a YMCA hotel used by young navy men and is currently a hotel along the waterfront with an adjacent YMCA recreational center. The hotel was proposing modifications which included rehabilitation work and reconfiguring the interior lobby space. Alison researched and documented the interior evolution by reviewing old plans, movies filmed on-location, post cards, and existing fabric. She established the building's construction chronology with a focus on the building's public spaces at the interior, overseeing the entire production of the report and created recommendations to update the client's proposed plans which included acceptable sensitive modifications to historic features and recommendations for potential future demolition.

Palo Alto History Museum Historic Preservation Consulting, Palo Alto, CA. *Architectural Historian.* The Spanish Revival style Roth Building was the original location of the Palo Alto Medical Foundation. The former medical building is undergoing a conversion into a local history museum with gallery space, interpretive areas, and archival and study rooms. Alison assisted with secondary research efforts of both the medical foundation and the building, upon modifications to the museum's scope of work. She conducted a Part 2 Federal historic rehabilitation tax credit application review which included recommendation to best comply with the Secretary of the Interior's Standards for Historic Preservation.

Half Moon Bay Barn and Jail Museum Historic Resource Evaluation and Preservation Consulting, Half Moon Bay, CA. *Senior Architectural Historian, Project Manager.* The City of Half Moon Bay was working with a local historical society

to implement a history museum at the site of its early 20th century jail and adjacent barn. Alison conducted an in-depth historic resource assessment then reviewed proposed plans for buildings and site modifications to accommodate gallery space, offices, and archival storage. Coordinating with project architects, she assisted with the creation of recommendations for project compliance with the Secretary of the Interior's Standards for Rehabilitation

Toscano Hotel Preservation Consulting, Sonoma State Historic Park, Sonoma, CA. *Senior Architectural Historian.* The two-story wood framed Toscano Hotel was constructed in the 1850s and is a contributing resource to the Sonoma Plaza National Historic Landmark District and the Sonoma Plaza National Register Historic District. Alison conducted Secretary of the Interior's Standards reviews of proposed changes to the interior of the building. Proposed changes included the conversion of a portion of the building from a hotel saloon museum display area into a retail concession area for the California State Parks. Project recommendations included sensitive design solutions to maintain original features.

Golden Gate Village Historic Resource Evaluation, Marin City, CA. *Senior Architectural Historian, Project Manager.* The Golden Gate Village low-income housing complex was constructed in 1958 to house many of the former Marinship workers and their families. Designed by notable mid-century designers including Aaron G. Green, John Carl Warnecke, and Lawrence Halprin, the property serves as an example of a well-designed housing complex, significant as a product of post-war urban development and for its prominent mid-century designers. Alison performed the site visit and conducted research through local and private archival repositories, plan analysis, and interviews, to produce the report narrative and historic evaluation for the property. Today, the property is listed on the National Register of Historic Places.

Lockheed Missiles and Space Historic American Building Survey (HABS), Sunnyvale, CA. *Architectural Historian, Project Manager.* The Lockheed Martin Space Systems Company had an important association with the development of the defense industry and advanced communications systems in the San Francisco Bay Area. Large-scale technological contributions to defense-related pursuits were achieved here through aerospace manufacturing, research, and development. Subject buildings were utilitarian, constructed of concrete tilt-up construction and were representative of industrial buildings developed for sensitive defense purposes of the era. Alison conducted a site visit, coordinated professional photography, and conducted extensive archival research to create the narrative for the HABS documentation in accordance with NPS standards. She assisted in providing the client with mitigation measures and coordinated with municipal agencies throughout the project development and submission process.

Delta Feasibility Study, Walnut Grove, CA. *Senior Architectural Historian, Project Manager.* Three historic buildings were identified for feasibility studies, including the adaptive reuse of a church for artist live/work and performance/gallery space; the adaptive reuse of a one-roomed school house into a community center; and the construction of a park to commemorate Asian American Heritage. Work included a market demand analysis, conceptual plan, cost estimate, and potential partnerships and funding. Serving as the project manager and primary author, Alison coordinated site visits and served as the day-to-day contact for the sub consultant team. She undertook extensive primary source research, she assisted with the creation of rehabilitation recommendations.

915 Laurel Avenue Preservation Consulting, San Mateo, CA. *Architectural Historian.* Alison conducted a Historic Resource Assessment of a one-story Spanish Revival home, and later performed a Secretary of the Interior's Standards review of proposed modifications to add more square footage to the historic home. Guided the property owner to refine their concept while working closely with San Mateo Panning to come to an agreeable solution for the historic property to maintain its aesthetic within the neighborhood, while achieving more space.

Alison Garcia Kellar (Continued)

Senior Architectural Historian

630 Purissima Street Historic Resource Assessment and Preservation Consulting, Half Moon Bay, CA. *Senior Architectural Historian, Project Manager*. Alison conducted a Historic Resource Assessment and an analysis of proposed modifications to an early 20th century Craftsman-style home. Working closely with the City of Half Moon Bay, she provided the building owner with design recommendations and guidance compliant with the Secretary of the Interior's Standards for Rehabilitation.

1303 North Central Avenue Historic Resource Assessment, Glendale, CA. *Senior Architectural Historian.* Alison oversaw and conducted the HRA for a 1960s multi-family apartment complex located in the West Glendale neighborhood. Comprised of three two-story interrelated structures and a central open-air courtyard, work included an intensive field visit to the property site, research at local repositories and the Glendale Planning Division, original plan review, and a thorough understanding of existing related context statements. While the project was reflective of a garden apartment of its era, ESA determined that the property did not rise to a level of historic significance warranted for listing on the National Register or California Register.

311 and 317 5th Street, Huntington Beach Historic Resource Assessment and CEQA Impacts Analysis, Huntington Beach, CA. *Senior Architectural Historian.* Alison prepared an HRA for two subject buildings, followed by CEQA and SOI analyses for their proposed redevelopment. The HRA includes a shared property development for the two adjacent parcels, one which is improved with a Craftsman-style residence, and the other improved with a Zigzag Moderne commercial building. Research included an analysis of previously prepared historic surveys of the area, extensive property research, and historic integrity. Recommendations for the project to better comply with the SOI Standards and with CEQA regulations were created.

930 S. Mansfield Historic Resource Assessment and CEQA Impacts Analysis, Los Angeles, CA. *Senior Architectural Historian.* Alison coordinated efforts to prepare an HRA which included an update to the surrounding historic district and an impacts analysis for a proposed project. Several contributing structures in the Mediterranean Revival and Spanish Revival residential historic district had recently been demolished or heavily altered. Alison conducted a design review of a proposed contemporary 6-story multi-family project at the project site that would sit amidst the extant low-profile revival style buildings in the historic district. Alison created recommendations for a more compliant new project design within the district.

Valerie is an architectural historian with experience in historic preservation that includes archival research, historic resource assessments, historic preservation consulting such as plan reviews and construction monitoring, feasibility studies, resource surveys, conservation projects, conditions assessment reports, and knowledge of materials science. Valerie's studio art background and photography training have proven helpful for onsite documentation and HABS photography. In addition to historic preservation and photography, Valerie has 18 years of professional experience in finance and investor relations, with strong client and project management skills.

Relevant Experience

252 June Street, Preservation Plan Review, Hancock Park, Los Angeles, CA. *Architectural Historian.* Valerie authored a Plan Review for compliance with the Hancock Park HPOZ Preservation Plan and Historical Resources CEQA Impacts Analysis for a proposed project located at 252 S. June Street. The lot was improved with a two-story single-family residence constructed in 1933 in the Monterey Revival style that was badly damaged by fire and was to be demolished for a new residence. The new residence was designed in a contemporary style with Tudor Revival references. ESA made some recommendations of modifications to the plans that would allow the new construction to fit more seamlessly into the historic neighborhood.

3916 Martin Luther King Jr, Historic Resource Assessment, Los Angeles, CA. *Architectural Historian.* Valerie co-authored the production of a Historic Resource Evaluation (HRA) to establish the building's historic significance in the Crenshaw neighborhood of Los Angeles. Valerie's research provided context for a 1962 bank building in the International Style that was occupied by a Black-owned savings and loan company for over twenty years. The founder, Peter Dauterive was instrumental in race relations in Los Angeles and provided financial services to underserved communities, served on the board of various foundations, and started a scholarship fund at USC for minority students.

Ventura County Transportation Commission, US 101 Improvement Project, Ventura County, CA. *Architectural Historian*. While working for ICF, Valerie assisted with a large-scale Cultural Heritage Survey as part of the US 101 Improvement Project. The project included the survey of over 100 buildings in the study area located throughout San Buenaventura (Ventura), Camarillo and Oxnard, California. As part of this effort, Valerie wrote historic context statements on various property types and architectural styles including manufactured homes, post-war restaurants, commercial buildings, and Mid-Century Modern-style architecture. She researched, documented, and evaluated the individual properties and prepared compliance reports and DPR forms.

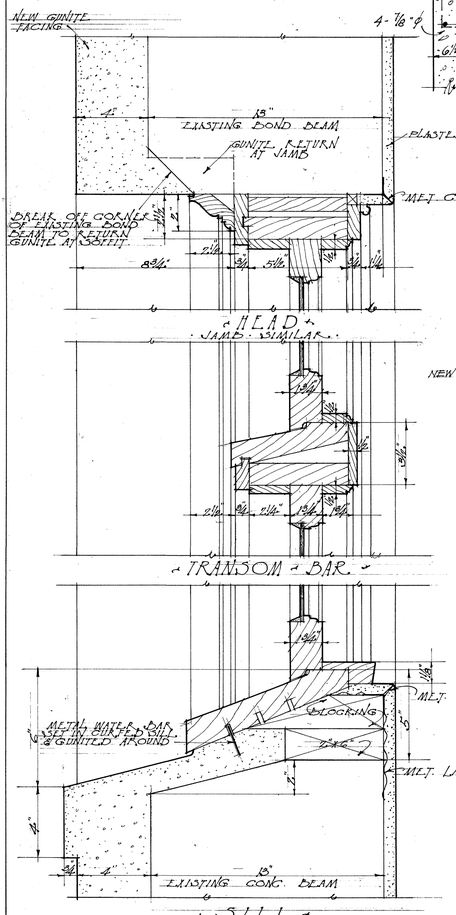
Valerie Smith (Continued)

Architectural Historian

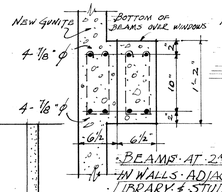
133 Vieudelou Avenue, Historic Resource Assessment, Catalina Island, CA. *Architectural Historian*. Valerie researched the oldest house in Avalon, Catalina Island and compiled a Historic Resource Assessment. The house belonged to a family who settled on the island during the early days of development into a resort town. The house is Folk Victorian style and constructed in 1888. The property was found eligible for the National Register and California Register for its significance under Criterion A, B, and C.

West San Gabriel Valley, Historic Context Statement, Los Angeles County, CA. *Architectural Historian*. Valerie authored the residential section of the West San Gabriel Historic Context Statement which involved extensive research, and the development of architectural context narratives and residential resource registration requirements. Valerie conducted an archival record search at the South Central Coastal Information Center (SCCIC) to determine the presence of cultural resources in eight unincorporated study areas.

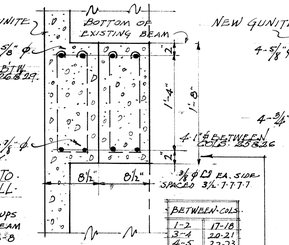
211 Emerald Bay, California Register Nomination, Orange County, CA. *Architectural Historian*. Valerie provided architectural historian services which included research, the development of historical contexts, and the preparation of a nomination for the California Register of Historical Resources for a property in Emerald Bay. 211 Emerald Bay is in a planned coastal "garden suburb" that was developed beginning in 1929. The community was designed by renowned landscape architect Mark Daniels and notable Pasadena architects such as Roland Coate and H. Palmer Sabin. The house at 211 Emerald Bay contributed to the early development of the neighborhood and is one of the last remaining intact examples of the Mediterranean Revival aesthetic developed by the architectural review board and original developer.



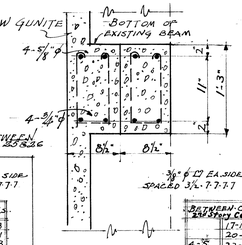
AGBU Manoogian-Demirdjian School Improvements, Categorical Exemption, Canoga Park, CA. *Architectural Historian*. Valerie provided research, wrote historical contexts, conducted a site visit, and compiled a Department of Parks and Recreation form 523 and Notice of Exemption for an Armenian-American school in Canoga Park. The school is operated by the Armenian General Benevolent Union (AGBU), and the organization purchased the parcel in 1985. The campus was originally an LAUSD campus, and the AGBU has made improvements to accommodate the Armenian student body occupying the campus. The buildings are a mixture of 1962 Mid-Century Modern and post-1996 buildings.



Modernist house, Peer Review, Laguna Beach, CA. *Architectural Historian*. Valerie peer-reviewed a California Register of Historical Resources nomination that had been drafted by other historians for a house in Laguna Beach. As part of the peer review, Valerie wrote a historic context statement for modernist architecture in Laguna Beach, focusing on 1960s and 1970s expressionist /organic single-family properties. The house was representative of a local, regional, and national trend for the design of houses by architects practicing in a modernist style. Valere drafted a script and provided guidance to the client and team for the presentation to the California State Historical Resources Commission at the quarterly meeting.



615 E. Ocean Boulevard, Historic Resource Assessment, and Impacts, Long Beach, CA. *Architectural Historian.* Valerie researched and evaluated a 1970s commercial vernacular restaurant that was originally a Copper Penny Family Restaurant. The building design was a modest interpretation of the Late Hollywood Regency style and consisted of a simple box design capped with a mansard roof.



Los Angeles Housing Department (LAHD), Section 106 Reviews, Los Angeles County, CA. *Architectural Historian*. While working for ICF, Valerie surveyed and researched buildings within areas of potential effect for various projects as part of the Section 106 requirements for the City of Los Angeles. She drafted DPR documents and completed deliverables for development projects. As part of her responsibilities, she wrote building descriptions, conducted site visits, conducted research, and evaluated buildings located in the vicinity of development projects.

Energy Calculations

E.1 Construction Energy Calculations

Inglewood High School
Construction Energy Analysis

Annual Fuel Summary

	Heavy-Duty Construction Equipment
154,660	Total Project Consumption
78,513	Annual Consumption
	Haul Trucks
87,004	Total Project Consumption
44,167	Annual Consumption
	Vendor Trucks
81,027	Total Project Consumption
41,133	Annual Consumption
	Workers
114,943	Total Project Consumption
58,351	Annual Consumption
168,031	Project Consumption of diesel for Haul Trucks and Vendors
85,301	Annual Consumption
322,691	Total Gallons Diesel
114,943	Total Gallons Gasoline

1.97 Estimated Project Construction Duration (years)

163,814 Annual Average Gallons Diesel
58,351 Annual Average Gallons Gasoline

Los Angeles County (2023)			Percent of Annual Project Compared to Los Angeles County
Source	**Fuel Type**	**Gallons**	
Workers	Gasoline	3,039,000,000	0.0019%
Off-Road/Vendor/Haul Trucks	Diesel	443,425,076	0.037%

Notes:

Gasoline and diesel amounts from California Energy Commission, California Retail Fuel Outlet Annual Reporting (CEC-A15) Results, 2024. Available at: https://ww2.energy.ca.gov/almanac/transportation_data/gasoline/piira_retail_survey.html. Diesel is adjusted to account for retail (65.4%) and non-retail (34.6%) diesel sales.

Annual Electricity Summary

Temporary Construction Trailer - Electricity	40.94	MWh/year
Water Conveyance for Dust Control	40.96	MWh/year
Annual Total	**81.90**	**MWh/year**

2023 Southern California Edison Total Sales (MWh)	81,841,000
Project percentage	0.00010%

Sources and Assumptions:

CalEEMod Appendix A, Pg. 8, based on given piece of equipment can pass over in an 8-hour workday

conservatively assumed acerage per day would be 3 times the project site acerage (3 times watering a day)

-Electricity Intensity Factors, South Coast - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. “Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

EXECUTIVE SUMMARY

Inglewood High School Reconstruction Project Paleontological Resources Assessment Report

The Inglewood Unified School District (District) proposes the Inglewood High School Reconstruction Project (Project) on an approximately 18-acre site composed of four Assessor Parcel Numbers (APNs): 4020-017-900, 4020-016-900, 4020-025-900, and 4020-026-900, located in the City of Inglewood.

Environmental Science Associates (ESA) has prepared this paleontological resources assessment for the Project to identify potential impacts to paleontological resources in accordance with the California Environmental Quality Act (CEQA). The scope of work for this assessment included a geologic map and literature review, review of a site specific Preliminary Geotechnical Investigation report (Geotechnical Report) conducted for the Project, a paleontological resources records search through the Natural History Museum of Los Angeles County (NHMLAC), and the recommendation of mitigation measures to reduce impacts from the Project to paleontological resources to a less than significant level. The District is the lead agency pursuant to CEQA.

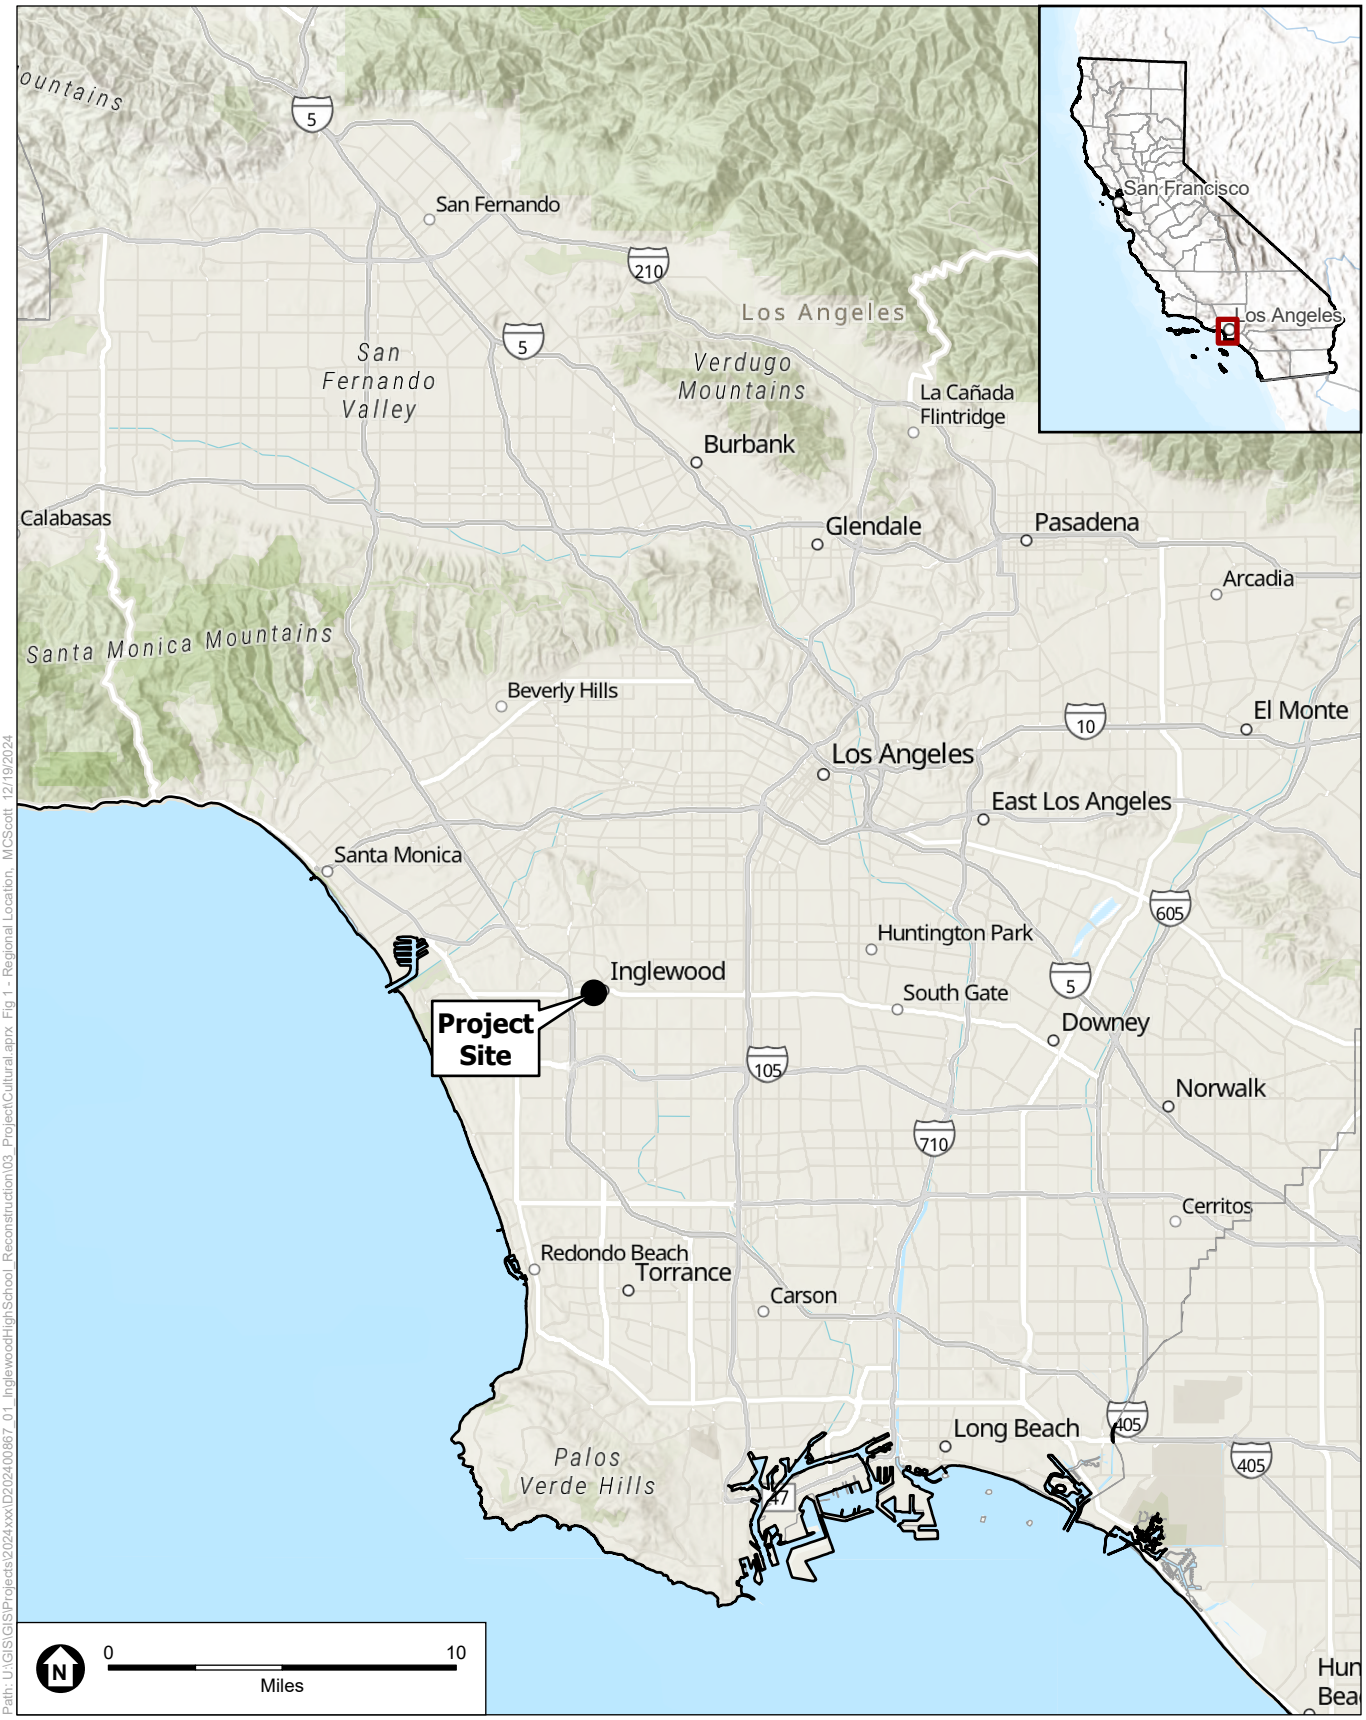
Geologic mapping indicates that the entire surface of the Project Site is underlain by middle to late Pleistocene-age alluvium (Qoa), also referred to in the subsurface as the Lakewood Formation, which has a high sensitivity for paleontological resources. The paleontological records search conducted through the NHMLAC also indicates that older (Pleistocene-age) geologic units in the vicinity of the Project Site have produced paleontological resources (including fossil specimens of horse, camel, mammoth, pond turtle, ground sloth, mastodon, mammoth, camel, turkey, saber-toothed cat, horse, deer, sharks, bony fish, and rays).

The potential to encounter buried paleontological resources below artificial fill during construction of the Project is considered high. Therefore, as the Project could directly or indirectly destroy unique paleontological resources, impacts on buried paleontological resources are considered potentially significant. As such, recommended mitigation measures, including retention of a Qualified Paleontologist, paleontological resources monitoring, and procedures to be followed in the event of the discovery of paleontological resources, are provided in the *Summary of Findings and Recommended Mitigation Measures* section of this report in order to reduce impacts to paleontological resources to a less than significant level under CEQA.

INGLEWOOD HIGH SCHOOL RECONSTRUCTION PROJECT

Inglewood High School Reconstruction Project Paleontological Resources Assessment Report

Introduction

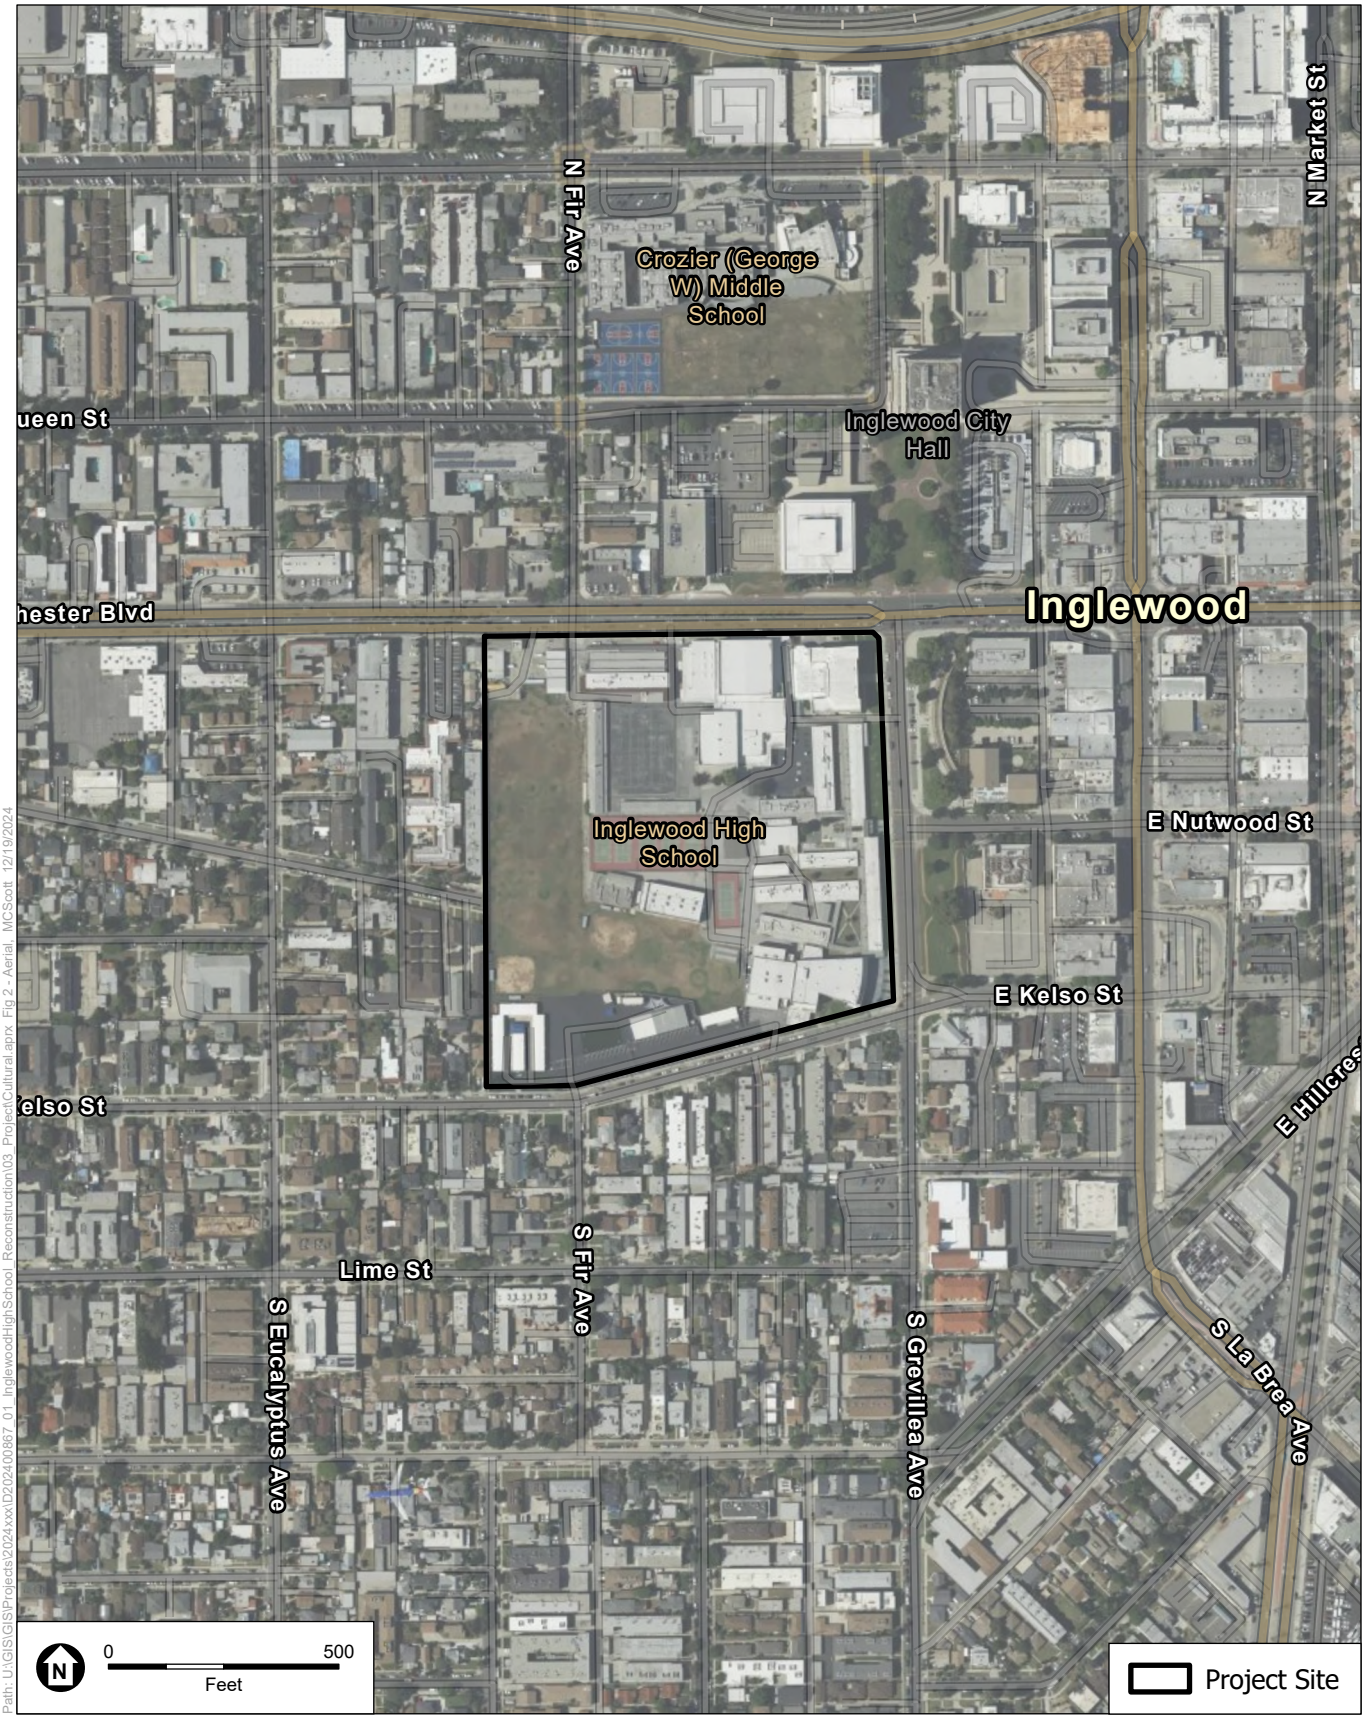


The Inglewood Unified School District (District) proposes the Inglewood High School Reconstruction Project (Project) on an approximately 18-acre site composed of four Assessor Parcel Numbers (APNs): 4020-017-900, 4020-016-900, 4020-025-900, and 4020-026-900, located in the City of Inglewood (City).

Environmental Science Associates (ESA) has prepared this paleontological resources assessment for the Project to identify potential impacts to paleontological resources in accordance with the California Environmental Quality Act (CEQA). The scope of work for this assessment included a geologic map and literature review, review of a site specific Preliminary Geotechnical Investigation report (Geotechnical Report) conducted for the Project, a paleontological resources records search through the Natural History Museum of Los Angeles County (NHMLAC), and the recommendation of mitigation measures to reduce impacts from the Project to paleontological resources to a less than significant level. The District is the lead agency pursuant to CEQA.

ESA personnel involved in the preparation of this report are as follows: Fatima Clark, B.A. Project Manager and report contributor; Russell Shapiro, Ph.D., Principal Investigator and report author; Kyle Garcia, M.A., RPA, Senior Reviewer; Salpi Bocchieriyan, M.A., RPA, report contributor; and Chance Scott, GIS specialist. Resumes of key personnel are included in **Appendix A** of this report.

Project Location



The Inglewood High School campus (Project Site or campus) is located at 231 S. Grevillea Avenue in the western central portion of the city within Los Angeles County, California (**Figure 1**). The Project Site is bounded by West Manchester Boulevard to the north, West Kelso Street to the south, South Grevillea Avenue to the east, West Olive Street and South Eucalyptus Avenue to the west (**Figure 2**). It is also situated within an unsectioned area of Township 2 South, Range 14 West on the Inglewood, CA U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (**Figure 3**).

Project Description

The primary campus development is currently situated in the eastern portion of campus and consists of classroom and administrative buildings. Athletic courts and fields are located on the western portion of the campus. The campus currently includes 18 classroom buildings (including permanent classroom buildings and portable classroom buildings). In addition to classroom buildings, the campus includes a fine arts and administration building, an auditorium, locker rooms, library, performing arts building, adult education building, continuing education high school, and home economics building. The existing campus buildings are labeled Buildings A through X as shown on **Figure 4**. Tennis courts, basketball courts, a batting cage, and athletic fields are located west of the majority of the classroom buildings and extend to the western Project Site boundary. In addition, there are existing tennis courts north of Building I as well as existing basketball courts. The Continuing Education High School and After School Education High School buildings are separated from the main campus by fences. These two buildings are located in the southwestern portion of the site along West Kelso Street and have their own parking lot and driveway.

The Project would result in the demolition of the majority of the buildings located on the Project Site, the modernization of some of the existing buildings, and the construction of six new buildings. The proposed demolition activities are shown on Figure 4, and the Inglewood High School proposed components are shown on **Figure 5**. New buildings would include Administration and General Classrooms (Building 1), Food Services and Multipurpose Room (MPR) (Building 2), Science Labs and General Classrooms (Building 3), Student Life (Building 4), Career and Technical Education and General Classrooms (Building 5), and CTE and Music classrooms (Building 6).

The Project also proposes improvements to access, parking and circulation including increasing the total number of parking spaces, improving the campus fire lane, limiting internal vehicle circulation, building a new pedestrian entrance and bridges, and constructing accessible pathways throughout the campus. Lighting, sound systems, and landscaping will be improved across the campus as well. Lastly, the Project proposes improvements to the campus open space including walkways and four new student quads, improvements to electrical/telecommunication and water/sewer utilities, improvements and additions to recreational spaces that would replace the existing athletic field and would replace the tennis courts and basketball courts. The maximum depth of ground disturbance would reach down to 11.5 feet below ground surface (bgs).

Regulatory Framework

Paleontological resources are limited, nonrenewable resources of scientific, cultural, and educational value that are afforded protection under state laws and regulations. The following section summarizes the applicable state laws and regulations, as well as professional standards.

State

California Environmental Quality Act

The CEQA Guidelines (California Code of Regulations Title 14, Chapter 3, Section 15000 et seq.), define the procedures, types of activities, individuals, and public agencies required to comply with CEQA. As part of CEQA's Initial Study process, one of the questions that must be answered by the lead agency relates to paleontological resources: "Will the proposed project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (CEQA Guidelines Appendix G, Section VII, Part f).

The loss of a significant paleontological resource, which includes any identifiable fossil that is unique, unusual, rare, uncommon, diagnostically, or stratigraphically important, and/or those that add to an existing body of knowledge in specific areas—stratigraphically, taxonomically, and/or regionally—would be a significant environmental impact. Direct impacts to paleontological resources primarily concern the potential destruction of nonrenewable paleontological resources and the loss of information associated with these resources. This includes the unauthorized collection of fossil remains. If potentially fossiliferous bedrock or surficial sediments are disturbed, the disturbance could result in the destruction of paleontological resources and subsequent loss of information.

The CEQA threshold of significance for a significant impact to paleontological resources is reached when a project is determined to "directly or indirectly destroy a significant paleontological resource or unique geologic feature" (CEQA Guidelines Appendix G, Section VII, Part f). In general, for project sites that are underlain by paleontologically sensitive geologic units, the greater the amount of ground disturbance, the higher the potential for significant impacts to paleontological resources.

California Penal Code Section 622.5

California Penal Code Section 622.5 provides the following: "Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historical interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor."

California PRC Section 5097.5

California Public Resources Code (PRC) Section 5097.5 provides protection for paleontological resources on public lands, where Section 5097.5(a) states, in part, that:

> *No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds,*

> *paleontological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other paleontological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.*

Local

City of Inglewood General Plan

The City's General Plan does not contain any goals or policies for the preservation of paleontological resources.

Society of Vertebrate Paleontology Standard Guidelines

The Society of Vertebrate Paleontology (SVP) Guidelines (SVP, 2010) outline professional protocols and practices for conducting paleontological resource assessments and surveys, monitoring and mitigation, data and fossil recovery, sampling procedures, specimen preparation, identification, analysis, and curation. Most practicing professional vertebrate paleontologists adhere closely to the SVP's assessment, mitigation, and monitoring requirements as specifically provided in its standard guidelines. Most state and local regulatory agencies accept and use the professional standards set forth by the SVP.

Paleontological Resources Significance Criteria

As defined by the SVP (2010:11), significant nonrenewable paleontological resources are:

> *Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).*

Multiple paleontological studies have additional criteria for the assessment of significance for fossil discoveries (e.g., Murphey et al., 2019; Murphey and Daitch, 2007; Scott and Springer, 2003). In general, these studies assess fossils as significant if one or more of the following criteria apply:

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein.
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas.
4. The fossils demonstrate unusual or spectacular circumstances in the history of life.
5. The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.

In summary, significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important (Murphey et al., 2019; Murphey and Daitch, 2007; Scott and Springer, 2003). Any identifiable vertebrate fossil is significant (SVP, 2010). Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important (Scott and Springer, 2003; Scott et al., 2004).

Paleontological Potential

Paleontological potential is defined as the potential for a geologic unit to produce scientifically significant fossils. This is determined by rock type, the past history of the geologic unit in producing significant fossils, and the fossil localities recorded from that unit. Paleontological potential is derived from the known fossil data collected from the entire geologic unit and not just from one specific survey. In its "Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources," the SVP (2010) defines four categories of paleontological sensitivity (potential) for rock units: high, low, undetermined, and no potential.

- **High Potential.** Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcaniclastic formations (e. g., ashes or tephras), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e. g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstones, fine-grained marine sandstones, etc.).
- **Low Potential.** Reports in the paleontological literature or field surveys by a qualified professional paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections, or based on general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, e. g. basalt flows or Recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.
- **Undetermined Potential.** Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located excavations into subsurface stratigraphy.
- **No Potential.** Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and

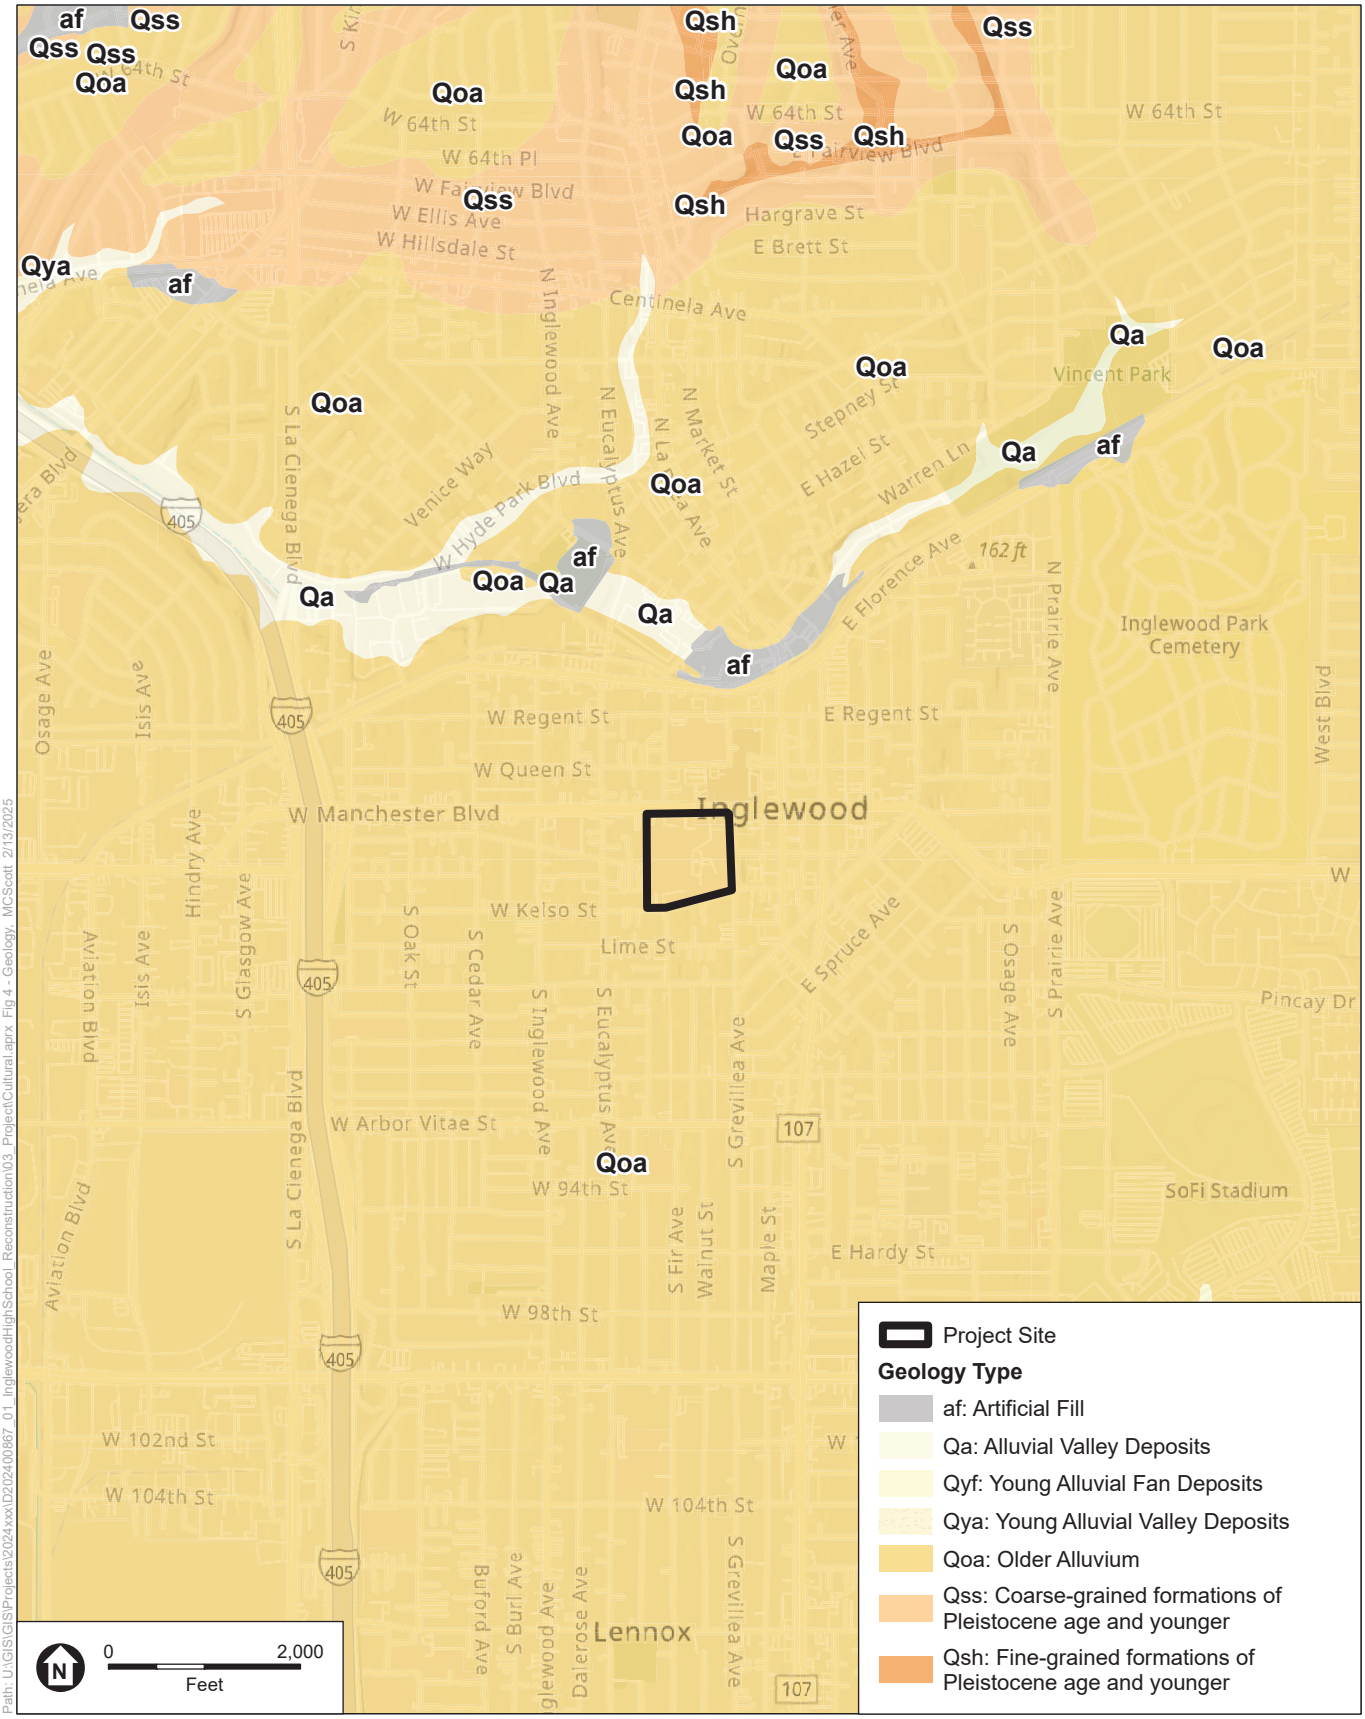
plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection nor impact mitigation measures relative to paleontological resources.

For geologic units with high potential, full-time monitoring is generally recommended during any project-related ground disturbance. For geologic units with low potential, monitoring will not generally be required. For geologic units with undetermined potential, field surveys by a qualified vertebrate paleontologist should be conducted to specifically determine the paleontological potential of the rock units present within the study area.

Methods

The Project Site was the subject of thorough background research and analysis to assess its paleontological sensitivity. The research included geologic map and literature review, review of the Geotechnical Report prepared for the Project, and a paleontological records search conducted by the NHMLAC.

Results



Geologic Setting

The Project Site is situated in the northern portion of the Los Angeles Basin (Basin), a structural depression approximately 50 miles long and 20 miles wide (Yerkes et al., 1965; Ingersoll and Rumelhart, 1999). The Los Angeles Basin formed through tectonic subsidence, starting in the Miocene epoch, about 18 million years ago (Sylvester and O'Black, 2018). The current basin is largely composed of Quaternary aged alluvial and fluvial deposits with hills of older sediments projecting above the valley floor, such as the Windsor Hills, north of the Project Site (Dibblee and Minch, 2007).

Geologic Map and Literature Review

Review of the surficial geologic map of the Long Beach 30' X 60' Quadrangle indicates that the Project Site is underlain by old alluvial valley deposits (mapped as Qoa) consisting of "slightly to moderately consolidated, moderately dissected clay, silt and sand, and gravel along stream valleys and alluvial flats of larger rivers" (Bedrossian et al., 2012). These deposits date to the Late to Middle Pleistocene (**Figure 6**).

Alluvial sediments that date to the middle Holocene or older have a rich fossil history in southern California and particularly the Los Angeles Basin. The most common fossils include the bones of mammoth, bison, horse, wolf, camel, antelope, and giant ground sloth, as well as small animals such as rodents, birds, and lizards (Graham and Lundelius, 1994; Jefferson, 1991a and b; Miller, 1971). In addition to illuminating the striking differences between Southern California in the Pleistocene and today, this abundant fossil record has been vital in studies of extinction (e.g., Sandom, et al., 2014; Barnosky et al., 2004), ecology (e.g., Connin et al., 1998), and climate change (e.g., Roy et al., 1996). Based on the reports received from the NHMLAC, similar significant vertebrate fossils were collected from less than two miles of the Project Site in Pleistocene alluvium.

Geologic Map

ESA

Review of Geotechnical Report

ESA reviewed the geotechnical report for the Project prepared by Geolabs-Westlake Village (2024). The geotechnical report indicates that a total of nine 8-inch diameter hollow-stem auger borings (B1, B2, PT1-PT7) were excavated across the Project Site ranging in depth from 5 to 50 feet in depth. Six of these borings were utilized for on-site infiltration testing.

The geotechnical analysis found that the surface of the Project Site is composed of concrete, sidewalk, lawn, or asphalt beginning at the surface to approximately 1-1.5 feet bgs. Below the concrete, sidewalk, lawn, or asphalt, the Project Site is mostly capped with man-made undocumented artificial fill (associated with past grading, installation of utility lines, and an abandoned septic system) up to a maximum thickness of 3 feet. There is also a narrow strip of land along the northeastern-most boundary of the campus where the maximum fill depth is 8 feet, and it is related to the installation of the septic system. Older alluvium, herein referred to as the Lakewood Formation (Qlw), composed of clays, silts, and silty to gravelly sands were found beneath the fill materials. Plate 5 of the geotechnical report shows trench profiles with Qlw extending up to 10 feet bgs. The Lakewood Formation soils initially vary from mottled brown to very dark brown in the upper 3 to 4 feet to increasingly lighter colors at depths. At 4 feet bgs Lakewood Formation soils become brown to dark yellowish brown with gray brown mottling. Grain size also increases with depth and below 6 feet staining from orange oxide becomes common (Geolabs-Westlake Village, 2024).

The geotechnical report notes formations not recognized in the regional mapping of Dibblee and Minch (2007) or Bedrossian et al. (2012). Dibblee and Minch (2007) distinguish two marine Pleistocene formations below the older alluvium: the San Pedro Sand and the Inglewood Formation. Both of these formations are not exposed near the Project Site but crop out in the Windsor Hills to the north. The “Lakewood Formation” is used to denote non-marine Pleistocene deposits in the coastal region of the Los Angeles Basin (California Department of Water Resources, 1961). The name is primarily used in subsurface logs to denote a critical aquifer (e.g., Reicheard et al., 2003). In this report, ESA prefers to use the more general “Older Alluvium” to capture a fuller picture of the Pleistocene deposits, regardless of formal formation designation. This will allow alignment between the published maps and reports and the museum records searches.

Natural History Museum of Los Angeles County Records Search

In addition to the literature search, ESA requested a database search on December 24, 2024, from the Natural History Museum of Los Angeles County (NHMLAC) for records of fossil localities in and around the Project Site. The purpose of the museum records search was to: (1) determine whether any previously recorded fossil localities occur in the Project Site, (2) assess the potential for disturbance of these localities during construction, and (3) evaluate the paleontological sensitivity within the Project Site and vicinity. The results from the NHMLAC were received on December 30, 2024 (**Appendix B**). The results indicate that no fossil localities fall within the Project Site, but that fossil localities do exist nearby from the same

sedimentary deposits that occur in the Project Site, either at surface or at depth (**Table 1**). Fossil localities (including horse, camel, mammoth, bison, hares, weasels, peccary, antelope, birds, sloth, mastodon, saber-toothed cat, deer, and species in the Elephant clade) are situated within approximately 0.78 and 2.00 miles away from the Project Site. These localities were found at unknown depths and depths between 14 and 40 feet bgs.

TABLE 1
SUMMARY OF NHMLAC FOSSIL LOCALITIES

Locality Number	Formation	Taxa	Depth
LACM VP 3264	Unknown formation (Pleistocene sands)	Elephant clade (Proboscidea)	25 ft bgs
LACM VP 3252	Unknown formation (Pleistocene)	Bison (Bison), Camel (Camelops)	Unknown
LACM VP 7332	Unknown formation (Pleistocene; silty sand)	Mammoth (Mammuthus)	40 ft bgs
LACM VP 1180, 4942	Unknown formation (Pleistocene, massive sandy mudstone w scattered pieces of gravel)	Mammoth (Mammuthus); bison (Bison); hare (Lepus)	16 ft bgs
LACM VP 3789	Unknown (Pleistocene; pebbly gray-green to brown mud that directly overlies a gray-green fine sand)	Mammoth (Mammuthus)	14 ft bgs
LACM VP 1170	Unknown formation (Pleistocene)	Sloth (Megalonyx), camel (Camelops), weasel (Mustela frenata), bison (Bison), deer (Odocoileus), sabertooth cat (Smilodon), pronghorn antelope (Capromeryx), Mastodon (Mammut), peccary (Platygonus), horse (Equus), coot (Fulica), unidentified birds (Aves)	Unknown

Paleontological Sensitivity Analysis

The literature and geologic mapping review and the records search results presented above were used to assign paleontological sensitivity to the geologic units at surface and underlying the Project Site, following the guidelines of the SVP (2010):

- **Qoa:** The late to middle Pleistocene alluvium that underlies the entire Project Site is of an age and sedimentary facies that has yielded abundant, diverse, and scientifically-significant fossils in the Los Angeles Basin. This determination is based on the published literature and museum records of the NHMLAC. Therefore, the Older Alluvium is assigned **High Potential** for significant paleontological resources.

Summary of Findings and Recommendations

Geologic mapping indicates that the surface of the Project Site is entirely underlain by middle to late-Pleistocene age alluvium (Qoa), which has a high potential for paleontological resources. Moreover, numerous paleontological resources have been recovered from deposits of similar age near the Project Site. Specifically, fossils have been recovered from both 'Older Alluvium' and the 'Lakewood Formation.' Given the positive results of NHMLAC records search and the rich literature on fossils of a similar age in the Los Angeles Basin, it is likely that excavations for the Project below the artificial fill has the potential to encounter buried paleontological resources. Therefore, as the Project could directly or indirectly destroy unique paleontological resources. As such, the following recommendations are provided below in order to reduce impacts to paleontological resources to a less than significant level under CEQA.

1. Prior to ground disturbing activities, the Applicant shall retain a Qualified Paleontologist meeting the Society of Vertebrate Paleontology (SVP) standards for a Professional Paleontologist. The Qualified Paleontologist shall examine construction plans and prepare a Paleontological Resources Impact Mitigation Plan (Plan). This Plan shall include geological and paleontological contextual information, methods for paleontological construction monitoring, protocols for inadvertent discoveries, methods for sediment sampling and screening, including requirements for the radiocarbon dating of specimens or other materials, and final reporting requirements. The Qualified Paleontologist shall attend a pre-construction meeting to discuss the monitoring requirements to construction personnel and shall be responsible for overseeing paleontological monitors (meeting SVP standards) that will observe grading and excavation activities.
2. Paleontological monitoring shall be conducted during construction excavations into undisturbed older alluvial sediments (also noted as the Lakewood Formation) that exceed three feet in depth. Monitoring shall consist of visually inspecting fresh exposures of rock for larger fossil remains and, where appropriate, collecting and wet screening sediment samples of promising horizons for smaller fossil remains. If significant vertebrate fossils are found by screening, it will be necessary to collect a 6,000-pound sample for screening, per Society of Vertebrate Paleontology Guidelines (SVP, 2010). The sample can be collected by construction machinery and stockpiled and processed in a safe location on site, or transported to another site for processing. The frequency of monitoring inspections shall be determined by the Qualified Paleontologist and shall be based on the rate of excavation and grading activities, the materials being excavated, and the depth of excavation, and if found, the abundance and type of fossils encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined adequate by the Qualified Paleontologist.
3. If a potential fossil is found, the Qualified Paleontologist shall have authority to temporarily stop excavation activity or to temporarily divert or redirect grading and excavation activities in the area of the exposed fossil to facilitate evaluation of the discovery. An appropriate buffer area shall be established by the Qualified Paleontologist around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. At the Qualified Paleontologist's discretion, and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock/sediment samples for initial processing and evaluation. If preservation in place is not feasible, the Qualified Paleontologist shall implement a paleontological salvage program to remove the resources from their location.

4. Any fossils recovered during Project-related excavations shall be prepared to the point of identification. The residue form sediment samples shall be dried and sorted with a binocular dissecting microscope. Both macrofossils and vertebrate microfossils shall be prepared to the point of identification, identified, and curated into an accredited repository. The Qualified Paleontologist shall prepare a final report summarizing the results of the monitoring and salvaging efforts, the methodology used in these efforts, as well as a description of the fossils collected and their significance. The report shall accompany the specimens to the accredited repository. The report shall also be submitted by the Applicant to the Inglewood Unified School District to signify the satisfactory completion of the Project and required mitigation measures.

PROFESSIONAL AFFILIATIONS

Geobiology Society; Treasurer

Society for Sedimentary Geology (SEPM); Vice-President

Society for Vertebrate Paleontology

As a principal investigator, Dr. Russell Shapiro has been involved in review of paleontological resource reports and evaluating proposed mitigation plans. Dr. Shapiro researches and prepares environmental impact reports regarding cultural resources (fossils), conducts field (geological and paleontological) surveys, and oversees ground disturbance at construction sites for Environmental Quality compliance (CEQA, NEPA, and the Paleontological Resources Preservation Act). As a Qualified Paleontologist, Dr. Shapiro has also reviewed resource planning documents for several counties in California and was the lead on the Bureau of Land Management's assessment of fossil resources of Northern California.

In his academic role as Professor of Geology, Dr. Shapiro teaches several paleontology courses including "Applied Paleontology" which is a modified "Cultural Resources" course, focusing on budgeting, CEQA and NEPA regulations, field surveys, GIS projections, fossil recovery, and curation. He also teaches in the annual Field Camp courses and manages the rock preparation lab and maintains the microscopes.

Relevant Experience

California Department of Water Resources, California Aqueduct Subsidence Program, Statewide, CA. *Paleontology.* The California Aqueduct Subsidence Program (CASP) is designed to rehabilitate and modernize this critical water infrastructure by addressing existing and future subsidence related effects on the Aqueduct in the SJFD and SLFD. Since 2019, ESA has been assisting DWR in developing and implementing strategies and compliance solutions supporting the continued operation of a reliable water conveyance infrastructure that is resilient to the effects of subsidence. Dr. Shapiro is providing oversight and review of paleontological resources analysis.

Cawelo Water District, Famoso Basin Pipeline Project CEQA and NEPA Compliance, Bakersfield, CA. *Paleontology.* The project involved constructing 2 miles of a buried intertie pipeline and a turnout at the Friant-Kern Canal. A key resource area for the project was the historical significance of the Friant-Kern Canal. Dr. Shapiro is providing oversight and review of paleontological resources analysis.

Rosedale-Rio Bravo Water Storage District and Irvine Ranch Water District, Kern Fan Groundwater Storage Project, Kern County, CA. *Paleontology*. ESA prepared the CEQA-Plus EIR for the Kern Fan Groundwater Storage Project located outside of Bakersfield in western Kern County. The project will be integrated into Rosedale's existing Conjunctive Use Program and will provide the Authority with additional recharge, storage capability and operational flexibility. The project has received a conditional award of funding through the California Water Commission's Water Storage Investment Program (WSIP), which is funded by the Proposition 1 Water Quality, Supply and Infrastructure Act of 2014. Pursuant to the award of funds under the WSIP, up to 25,000 AF of unallocated State Water Project Article 21 water would be stored for California Department of Water Resources in

an "Ecosystem Account" and would be used by the State of California to alleviate stress on endangered and threatened species in the Sacramento-San Joaquin River Delta. Dr. Shapiro provided oversight and review of paleontological resources analysis.

Santa Monica Mountains Conservancy, Topanga Lagoon Restoration Project EIR/EA, Santa Monica Mountains National Recreation Area, CA. *Paleontology.* The restoration planning for Topanga Lagoon included a review of existing data and additional data collection including hydrologic modeling, any technical studies/surveys needed to inform the restoration design; stakeholder engagement; and development of three integrated conceptual restoration design alternatives which addressed the ecological restoration of the lagoon, the alignment of a new PCH bridge, and enhanced visitor services in the project area. Dr. Shapiro is providing oversight and review of paleontological resources analysis.

Los Angeles Department of Water and Power, Operation NEXT and Hyperion 2035 Water Supply Program CEQA-Plus PEIR, Los Angeles County, CA. *Paleontology.* The City is proposing to implement a new recycled water infrastructure system that would maximize recycled water production at the Hyperion Water Reclamation Plant and construct new treatment, conveyance, storage, and distribution infrastructure to augment local water supplies by up to approximately a third of the city's water supply. ESA is currently preparing the Draft PEIR. The Operation NEXT and Hyperion 2035 Program PEIR is a CEQA-Plus document that has programmatic assessment of certain components. Dr. Shapiro provided oversight and review of paleontological resources analysis.

ReneSola Gentry Solar Project, Paleontological Resource Assessment Report, Lincoln, California. *Principal Investigator, Mapping*. Literature, geological map, and museum review for fossil resources. Field mapping of entire property. Final product included a mitigation and monitoring plan.

Paleontological Sensitivity Analysis Report, Elk Grove, California; Pacific Gas and Electric. *Principal Investigator*. Literature, geological map, and air photo archival report on the potential fossil yield for a proposed pipeline. Recommendations based on searches of museum collections of relevant geological formations. Deliverables consisted of a sensitivity report and appendix of known fossil occurrences by taxa and location.

Mojave Solar Project Cultural Services; San Bernardino County, California; CH2M Hill. *Principal Investigator.* Reviewed technical report; advised on scientific analyses.

El Camino Real Bridge Replacement Environmental Services; San Luis Obispo County, California, Quincy Engineering. *Principal Investigator*. Reviewed technical report for CEQA/NEPA documentation, technical studies, and permitting, for the replacement of the El Camino Real bridge over Santa Margarita Creek in Atascadero.

San Bernardino County General Plan Update: Paleontological Resources Technical Report. *Primary Reviewer***.** External reviewer for general plan update. Involved assessing all geological formations in San Bernardino County and museum records of significant fossils.

Recent Significant Excavations

Miocene Vertebrates of the Sheldon Wildlife National Refuge. Oversaw operations to conduct significant collection of Miocene-age fossils from volcanic sediments for the U.S. Fish and Wildlife Service. Duties included field collection and high-resolution GPS mapping, fossil preparation and identification, curation at the Gateway Science Museum.

Eocene Horses from Black Butte Lake Reservoir. Field jacketing and preparation of fossil horse skull material from the reservoir under the direction of the U.S. Army Corps of Engineers. Fossils were prepared, identified, and returned to the Army Corps for public display.

Russell S. Shapiro, PhD (Continued)

Principal Investigator

Pleistocene Camelid from Nevada. This project grew out of a paleontological resource assessment field survey. During the survey, a semi-articulated rear leg of a late Pleistocene camelid was collected and prepared. A manuscript was published in 2016.

Fatima Clark

Archaeologist

EDUCATION

BA, Anthropology, California State University, Fullerton

17 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Orange County Certified Archaeologist

HAZWOPER Certified

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima has 17 years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to California Department of Transportation (Caltrans) requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Relevant Experience

Los Angeles Department of Water and Power, Fort Independence Travel Plaza Power Project, Independence (Owens Valley), CA. *Project Manager*. Fatima is in the process of preparing the cultural resources assessment in compliance with NEPA, Section 106, and CEQA. LADWP proposes to install 13 new temporary poles, one (1) anchor, and replace one (1) existing pole for a 34.5 kV line extension to provide power during construction of a new Travel Center at 141 N. Highway 395 in Fort Independence, Inyo County, California.

Landify ECT Corporation, Lower Sweetwater Park Project, City of Chula Vista, CA. *Project Manager*. Fatima has prepared a cultural resources assessment in compliance with CEQA. The Project proposes to redevelop the existing 21.3 acre Project Site with sports facilities within the City of Chula Vista.

County of Los Angeles, Department of Public Works, Whittier Boulevard Underground Utility Project, Los Angeles County, CA. *Project Co-Manager.* Fatima prepared the cultural resources assessment in support of a Class 2 Categorical Exemption. The project consists of the removal of utility poles and overhead lines, and the excavation for underground utility lines along Whittier Boulevard right-of-way. One historical resource, the early-to-mid 20th century Los Angeles Railway (or Yellow Cars), was identified in the project area as a result of archival research and geotechnical investigations. Fatima also managed the archaeological monitoring of construction activities and prepared the monitoring report.

City of Carson, Avocet Energy Storage System Project, City of Carson, CA. *Archaeologist.* Fatima managed the preparation of the archaeological and paleontological resources assessment reports in compliance with CEQA. The proposed Project includes the development of an approximately 200-megawatt battery energy storage system on a

6.96-acre site (BESS site), improvements and upgrades to the existing SCE Hinson Substation (SCE Hinson Substation site), the construction of a gen-tie line to connect to substation to the BESS site (proposed gen-tie line route), and other associated improvements. The proposed gen-tie route would cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach.

Storm Properties, Inc. Storm Hill Lane Project, Rolling Hills, CA. *Project Manager.* Fatima managed the day-to-day coordination for the monitoring and preparation of the archaeological/paleontological monitoring report pursuant to CEQA. As a result of the monitoring, several fossils were identified and these are currently being analyzed. The Project requires the reconstruction and expansion of Storm Hill Lane from the currently addressed and developed lot at 4 Storm Hill Lane to the three undeveloped lots.

Kiewit Infrastructure West Co., Ballona Wetlands Sequence 1 & 2 Restoration, Culver City, CA. *Project Manager.* Fatima managed the coordination for the monitoring with the archaeological and biological monitors, as well as coordination with the client. ESA's monitors were present during trenching and grading within portions of Ballona Creek in Culver City.

Southern California Association of Governments (SCAG) 2024 Connect SoCal Program PEIR, Los Angeles, Riverside, San Bernardino, Orange, Imperial and Ventura, CA. *Deputy Project Manager.* Fatima led the preparation of the PEIR Sections (cultural, paleontological, and tribal resources), as well as coordinated the Native American consultation efforts. Connect SoCal 2024 is a long-range comprehensive plan for the region's multi-modal transportation system. Preparing the Plan is one of SCAG's primary statutory responsibilities under federal and state law. A regional transportation plan (RTP) is the mechanism used in California by both metropolitan planning organizations and regional transportation planning agencies to conduct long-range (at least 20-year) planning in their regions. SCAG must adopt an RTP and update it every four years, or more frequently, if the region is to receive federal and state transportation dollars for public transit, streets/roads, and bicycle and pedestrian improvements.

Culver City, Crossings Campus (Culver City & City of Los Angeles, CA). *Deputy Project Manager.* Fatima led the preparation of the archaeological resources report and coordinated the preparation of the paleontological resources report. Fatima also led the preparation of the EIR sections (cultural, paleo, tribal). Culver Crossings Properties LLC, the Applicant, proposes to develop an office project (Project) on an approximately 4.46-acre site (Project Site) comprised of two properties: one 1.63-acre parcel is located in the City of Culver City (City), while the second 2.83-acre parcel is located in the City of Los Angeles.

County of San Diego Department of Parks and Recreation, Sweetwater Campground Geotech Boring Monitoring, San Diego County, CA. *Project Co- Manager.* Fatima co-managed the archaeological monitoring and coordinated with Red Tail for Native American monitoring and the County of San Diego Department of Parks and Recreation during Geotech borings for the Project.

Los Angeles County Department of Regional Planning, East San Gabriel Valley Area Plan (ESGVAP) Program EIR, Eastern Portion of Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The ESGVAP is part of the Los Angeles County 2035 General Plan, which will require an amendment. The ESGVAP is a long-range policy document developed to guide long-term growth of the area through development of a guiding vision, goals, policies, and implementation actions for the unincorporated communities in the East San Gabriel Valley. The ESGVAP's planning area consists of 24 unincorporated islands and communities and encompasses a total land area of 210.5 square miles.

Salpi Bocchieriyan, RPA

Senior Cultural Resources Specialist

EDUCATION

M.A., Archaeology, Cornell University, 2020

BA, Anthropology, University of Colorado, Boulder, 2016

8 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Implementing the National Environmental Policy Act and National Historic Preservation Act

Register of Professional Archaeologists #18203

Society for California Archaeology 2023-2024

LICENSES/PERMITS

BLM California CRUP # CA-21-27

Salpi is a cultural resources specialist with over 8 years of experience working on archaeological survey, data recovery, and monitoring projects. Salpi is experienced at planning fieldwork and leading field teams in survey, data collection, and resource recordation. She regularly prepares site forms, conducts presence/absence and evaluation testing efforts and data recovery excavation, and prepares technical reports documenting those efforts and presenting them to clients. Salpi has particular experience with energy and water infrastructure and other development projects across southern California, western Arizona, southern Nevada, and Texas and is expert in identifying and documenting resources in these geographies. She is familiar with the National Historic Preservation Act Section 106 (Section 106), National Environmental Protection Act (NEPA), and California Environmental Quality Act (CEQA) cultural resource compliance processes and has worked closely with federal and state agencies, private developers, tribes, and other stakeholders in implementing cultural resources requirements.

Relevant Experience

Ten West Link Transmission Line Project, Riverside County, CA and La Paz County, AZ. *Senior Cultural Resources Specialist (November 2022 – Present).* Environmental Science Associates (ESA) was retained by Delaney Colorado River Transmission LLC to provide archaeological monitoring during construction as well as perform archaeological and historic architectural resource documentation and evaluation in compliance with Section 106, NEPA, and CEQA requirements. The project involves the construction of 125 miles of high voltage electrical transmission line from Tonopah, AZ, to Blythe, CA. The corridor spans numerous federal, state, and private jurisdictions with varied cultural resource requirements necessitating sophisticated tracking and implementation of numerous agency jurisdiction–specific mitigations. The project passes through many Abandoned Mine Land areas and ESA's team has identified, documented, and evaluated a wide array of historic mining and mining related features such as prospects, cairns and claim markers, roads and trails, mine openings, can and other refuse scatters, and other mining related infrastructure. The project footprint also encompasses culturally sensitive areas important to multiple tribes including the Colorado River Indian Tribes (CRIT). ESA's team is working alongside the construction contractor, tribal monitors from multiple tribes, and with the BLM in two states. Salpi serves as the Field Lead and Deputy Project Manager for the Project where she co-directs a crew of up to 20 archaeogists and coordinates with up to 10 CRIT tribal monitors.

Avocet Battery Energy Storage System Project, Carson City, CA. *Senior Cultural Resources Specialist (September 2023 – December 2023).* Environmental Science Associates (ESA) has been retained by the City of Carson (City) to prepare a cultural resources assessment for the Avocet Energy Storage System Project in support of an Initial Study/Mitigated Negative Declaration (IS/MND). The Project includes the development of an approximately 200-megawatt battery energy storage system (BESS). The Project would

consist of lithium-ion batteries installed in racks, inverters, medium-voltage (MV) transformers, switchgear, a collector substation, and other associated equipment to interconnect into the Southern California Edison (SCE) Hinson Substation. The Project would also include four generation transmission (gen-tie) lines to interconnect the Project to the SCE Hinson Substation. The City is the lead agency pursuant to the California Environmental Quality Act (CEQA). Dorian served Testing Plan author and planned and directed onsite archaeological testing/excavation as part of the assessment. Salpi also authored the results of the testing.

San Manuel Band of Mission Indians, San Manuel Ancestral Land Exchange, San Bernardino County, CA. *Senior Cultural Resources Specialist.* Yuhaaviatam of San Manuel Nation, a Federally-recognized Indian Tribe, formerly known as the San Manuel Band of Mission Indians and the Forest Service, United States Department of Agriculture entered into an Agreement to Initiate the San Manuel Ancestral Land Exchange. ESA prepared a cultural Resources Assessment in support of the Land Exchange. The study was conducted in compliance with Section 106 of the National Historic Preservation Act (NHPA) of 1966 and considered a 2,997-acre study area, comprised of the combined six privately owned Non-Federal Parcels and two USFS-administered Federally Parcels. Salpi authored portions of the reports, completed DPRs and DPR updates, and planned and led a portion of the surveys.

Scotty's Castle Archaeological Monitoring, Death Valley National Park, CA. *Senior Cultural Resources Specialist (March 2023 – February 2024).* Environmental Science Associates (ESA) was retained by Tepa EC to provide archaeological monitoring during trenching in connection with restoring heating, ventilation, and air-conditioning (HVAC) systems damaged during the 2015 flood at Scotty's Castle in Death Valley National Park, CA. Scotty's Castle is listed in the National Register of Historic Places (NRHP) as the Death Valley Scotty Historic District (78000297) and is located within culturally sensitive areas. Salpi serves as the Project Manager. She supervises the ESA archaeological field monitor, manages logistics, and attends weekly meetings with DEVA NPS and contractors to ensure trenching conducted in the vicinity of the historic buildings is monitored.

Driftwood Solar Project, Kern County, CA. *Senior Cultural Resources Specialist (July 2021 - Present).* Environmental Science Associates (ESA) has been retained by EDP Renewables North America, LLC to prepare a Cultural Resource Assessment in support of an Environmental Impact Report (EIR) being prepared pursuant to the California Environmental Quality Act (CEQA). The Project proposes to redevelop approximately 2,674 acres of contiguous private agricultural lands for the installation and operation of solar photovoltaic energy generating facilities, as well as the construction of an approximately 12 to 13-mile-long gen-tie alignment. Salpi authored the report and Field Directed the cultural resources field survey.

Leprino Wastewater Discharge Project, Kings County, CA. *Senior Cultural Resources Specialist (February 2023 – March 2023).* Environmental Science Associates (ESA) was retained by the Leprino Foods Company to prepare a Cultural Resource Assessment in support of a Mitigated Negative Declaration (MND) being prepared pursuant to the California Environmental Quality Act (CEQA). The Project proposed to increase the use of recycled water from Leprino's cheese processing facilities to irrigate approximately 2,400 acres of non-food crops at the River Ranch property through an existing conveyance and irrigation canal system. This assessment included a cultural resources records search through the Southern San Joaquin Valley Information Center (SSJVIC), a Sacred Lands File (SLF) search through the California Native American Heritage Association (NAHC), and land use history research. The Central Valley Water Board (CVWB) was the is the lead agency pursuant to CEQA. Salpi planned and led the pedestrian survey and prepared the archaeological and paleontological memoranda for this project.

To:	Ms. Meghan Gibson Environmental Science Associates	Date:	September 18, 2025
From:	Francesca S. Bravo Chin S. Taing, PTP, RSP1 Linscott, Law & Greenspan, Engineers	LLG Ref:	1-24-4672-1
Subject:	**Vehicle Miles Traveled (VMT) Screening Assessment for Inglewood High School Reconstruction Project – City of Inglewood, California**		

This memorandum has been prepared by Linscott, Law & Greenspan, Engineers ("LLG") to provide a Vehicle Miles Traveled ("VMT") screening assessment for the Inglewood High School Reconstruction ("Project") located at 231 South Grevillea Avenue ("Project site") in the City of Inglewood, California ("City"). The Project consists of the demolition of the majority of the buildings located on site, the modernization of some of the existing buildings, and the construction of six new buildings on the Inglewood High School campus. The Project Site location and general vicinity are shown in ***Figure 1***.

Based on the City of Inglewood *Transportation Impact Analysis Guidelines*[1] and subsequent coordination with the City staff, the Project satisfies one of the three VMT screening criteria. Accordingly, it is concluded that further VMT analysis would not be required for the Project.

This VMT screening assessment provides: 1) a description of the existing setting; 2) a description of the proposed Project; 3) a summary of the City of Inglewood's VMT screening criteria; 4) a VMT screening assessment for the proposed Project; 5) review of consistency with the City's adopted policies, plans or programs; 6) and a qualitative assessment of the Project's impact on active transportation and public transit in the project vicinity.

Existing Setting

The Project site is located at 231 South Grevillea Avenue in the western central portion of the City of Inglewood, California. The Project site is generally bounded by West Manchester Boulevard to the north, West Kelso Street to the south, Grevillea Avenue to the east, and residential homes and a retirement community to the west.

Students currently arrive at school by car, walk, bike, or use public transportation. School bus service is not provided except for special education students. Drop-off/pick-up loading activities occur generally along South Grevillea Avenue and West Kelso Street while there is currently no formal loading zone (i.e., curb markings or posted signage) designated. The school year runs from late August through early June; summer school

[1] *Transportation Impact Analysis Guidelines,* City of Inglewood Department of Public Works, October 2022.

sessions also occur on campus. School hours and the associated bell schedule are generally between 8:30 AM to 3:15 PM Monday through Friday, with the exception that Tuesday end time is 2:20 PM.

Project Description

The proposed Inglewood High School Reconstruction Project (the "Project") consists of the demolition of the majority of the buildings, the modernization of some of the existing buildings, and the construction of six new buildings on the Inglewood High School campus. New buildings would include Administration and General Classrooms (Building 1), Food Services and Multipurpose Room (MPR) (Building 2), Science Labs and General Classrooms (Building 3), and Student Life (Building 4), CTE Classrooms and General Classrooms (Building 5), CTE and Music Classrooms (Building 6). In addition to the new buildings, the Project includes other improvements to modernize the campus. Recreational components include the demolition and reconstruction of the basketball and tennis courts, a combination softball/football/soccer field at the western edge of campus, and new lighting for the courts and fields. The Project also includes walkways throughout the campus to connect the buildings, landscaping, and seating areas.

A new pedestrian entrance would be created on S. Grevillea Avenue at the intersection with Nutwood Street leading into the campus, which is the historic location of the main campus entry. Accessible pedestrian pathways would be installed throughout the campus to provide links to the buildings and pedestrian access points from the adjacent streets. The Project would also provide 32 bicycle parking spaces near the campus entrance, located south of Building 3, and eight covered staff bicycle parking spaces in a lockable enclosure within Building 1.

Inglewood High School had a student enrollment of 748 students for the 2024-2025 academic year (IUSD, 2025) with an estimated 66 staff members employed at the school. However, the school has a capacity for 1,200 students and enrollment has been declining. For purposes of the VMT screening assessment and project trip generation forecasts, the existing student-to-staff population ratio of 11.33 (748 students/66 staff) was applied to the future enrollment capacity of 1,200 students to determine the future staff population of 106, which is a net increase of 40 staff members from existing condition. In addition, new recreational facilities including one joint use field (for either football, soccer, or softball), six basketball courts, and six tennis courts will be available for public rental usage during the weekday evenings (i.e., from 4:00 PM to 10:00 PM) and weekend days (i.e., from 6:00 AM to 10:00 PM). Thus, the project trip generation forecasts account for the potential staff increase and the public rental usage of the new recreational facilities for both weekday and weekend peak conditions.

Construction would occur in two phases and is anticipated to begin by January 2026 with occupancy in January 2028. The conceptual site plan for the campus reconstruction is shown in ***Figure 2***. Students and faculty at the Inglewood High School would be

temporarily relocated to the Morningside High School, which is located approximately 1.8 miles southeast of the Project site at 10500 Yukon Avenue, during the renovation of the Inglewood High School campus. The Continuing Education High School and After School Education High School buildings would be relocated to another campus.

Vehicle Miles Traveled

In September 2013, the Governor's Office signed Senate Bill 743 ("SB 743"), starting a process that fundamentally changes the way transportation impact analysis is conducted under the California Environmental Quality Act ("CEQA"). Within the State's CEQA Guidelines, these changes include the elimination of auto delay, level of service ("LOS"), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant traffic impacts. SB 743 identifies VMT as the most appropriate CEQA transportation metric, along with the elimination of auto delay/LOS for CEQA purposes statewide. The justification for this paradigm shift is that LOS impacts lead to improvements that increase roadway capacity and therefore induce more traffic and greenhouse gas emissions.

City of Inglewood VMT Screening Criteria

The City's TIA Guidelines identify VMT as the primary metric for determining CEQA level transportation impacts of development projects. The City's TIA Guidelines include VMT screening criteria, guidelines, and thresholds for measuring transportation impacts under CEQA.

Traditionally, public agencies have set certain thresholds to determine whether a project requires detailed transportation analysis or if it could be assumed to have less than significant environmental impacts without additional study. Consistent with the recommendations provided by OPR in the Technical Advisory, the City's Guidelines recognize three screening criteria which may be applied to screen proposed projects out of detailed VMT analysis. These criteria are based on a proposed project's number of daily vehicle trips, classification as a local serving retail use, and inclusion of affordable housing. Proposed projects are not required to satisfy all of the screening criteria in order to screen out of further VMT analysis; satisfaction of one criterion is generally sufficient for screening purposes. Projects, or project components, which are screened out of detailed VMT assessment based on these criteria are presumed to have less than significant transportation impacts. Projects or project components which are not screened out would be required to conduct a formal VMT transportation impact analysis in order to determine the significance of project impacts.

Non-Retail Project Trip Generation Screening Criteria

Section 3.2.1. of the City's TIA Guidelines state that: "[i]f the answer is no to the question below, further analysis is not required, and a less than significant determination can be made.

- Does the development project generate a net increase of 250 or more daily vehicle trips?"

The City's TIA Guidelines further indicate that a proposed project's daily vehicle trip generation should be estimated using the most recent edition of the Institute of Transportation Engineers' (ITE) Trip Generation Manual, or through use of empirical trip generation data if the project's land use is not listed in the Manual.

The trip generation forecast for the Project is summarized in ***Table 1***. As presented in *Table 1*, the Project is forecast to generate a total of 1,536 weekday daily vehicle trips, and the answer to the screening question is "Yes". Therefore, the non-retail project trip generation screening criterion is not satisfied.

Retail Project Site Plan Screening Criteria

New local serving retail development typically redistributes shopping trips rather than creating new ones. By adding retail opportunities into the urban fabric and improving retail destination proximity, local serving retail developments tend to shorten trips and reduce VMT, and may be presumed to cause less than significant impacts. Consistent with OPR's guidance, the City assumes that retail projects of any type which are less than 50,000 square feet may be considered local serving retail.

Therefore, Section 3.1.2 of the TIA Guidelines state: "[a] project that contains a local serving retail use is assumed to have less than significant VMT impacts for the retail portion of the project. If the answer to the following question is no, a less than significant determination can be made for the portion of the project that contains retail uses.

- Does the project contain retail uses that exceed 50,000 square feet of gross floor area?"

Based on City staff review of the proposed Project utilizing the City's VMT Calculator Tool, the faculty/staff increase from the Project is estimated to result in an office equivalency of 12,270 square feet and much less than 50,000 square feet of retail use.

As mentioned in the City's Resolution and OPR's Technical Advisory, local serving uses typically redistributes and reroutes local trips rather than create new trips. By adding local serving opportunities into the urban fabric and thereby improving destination proximity,

local-serving projects tend to shorten trips and reduce VMT. It is also noted that lead agencies may presume such local-serving projects create a less than significant transportation impact. Similarly, the Inglewood High School Reconstruction Project will continue to serve the local population as a public educational institution as well as offering usage of the new recreational facilities on campus by the local community, thereby shortening travel distances and reducing VMT. Thus, both the educational and recreational components of the Project can be presumed to result in a less than significant VMT impact based on State guidance because it would reduce VMT by shortening trip lengths, similar to other local-serving retail developments and local-serving projects. Thus, the Project is presumed to have a less than significant impact on VMT on the basis of the local serving nature; therefore, this screening criterion applies for the Project.

Residential Land Use Base Screening Criteria

In the Technical Advisory, OPR refers to research indicating that low-income housing in infill locations generally improves the jobs-housing match, shortening commutes and reducing VMT. OPR asserts that evidence supports presuming less than significant transportation impacts for 100 percent affordable residential developments, and that a project consisting of a high percentage of affordable housing may be a basis for a lead agency to find a less than significant impact on VMT, thereby screening out of detailed VMT analysis.

Consistent with the recommendations provided by OPR, Section 3.2.1 of the City's TIA Guidelines indicate that certain projects which further the State's affordable housing goals are presumed to have less than significant impacts on VMT. The Guidelines state: "[i]f the project requires discretionary action and the answer is yes to the question below, further analysis is not required, and a less than significant determination can be made.

- Are 100% of the units, excluding manager's units, set aside for lower income households?"

As the proposed Project does not plan to provide 100% lower-income housing or any housing; therefore, this screening criterion does not apply.

VMT Screening Summary

The City of Inglewood has adopted three screening criteria which may be applied to screen proposed projects out of detailed VMT analysis. The Project does not meet the criteria to be screened out of VMT analysis based on the non-retail project trip generation or the residential land use base screening criteria. The Project does, however, meets the criteria for a local serving project and is screened out of further VMT analysis. The screening criterion is based on the presumption that local serving projects would reduce VMT by

shortening trip lengths. Therefore, through satisfaction of the screening criteria, the Project is determined to result in a less than significant transportation impact.

Consistency with Adopted Policies, Plans, or Programs

The 2019 City of Inglewood Mobility Plan provides the framework for addressing current and future infrastructure needs and establishes the vision, goals, policies, infrastructure enhancements and program requirements to improve the City's local transportation network and access to the regional transportation system. The relevant goals and objectives are identified below as well as the corresponding strategies to achieve the goals and objectives:

- Goal No. 1: Sustainability and Environmental Considerations

  Strategy 1.1 – Relieve Congestion. The City will apply Transportation Demand Management programs aimed to reduce travel of single-occupancy vehicle trips during peak commute hours. Some key components of the TDM programs may include, but are not limited to the following: a) offer employee incentives to walk, bicycle, or take transit to work, etc. b) provide bicycle-friendly facilities at employment areas, and c) facilitate carpool or vanpool programs for employees.

- Goal No. 3: Create an Efficient, Balanced, Multimodal Mobility Network

  Strategy 3.1 – Complete Streets. Develop and enhance a pedestrian network that consists of elements that encourage walking to/from destinations and first/last mile options. Provide bicycle infrastructure including, but not limited to, bike paths, bicycle lanes, hubs, and secure bicycle parking at major transit locations.

- Goal No. 5: Safety – Maintain and promote safety for pedestrians, bicyclists, motorists, transit riders, trucks and delivery vehicles.

  Strategy 5.1 – Promote Safer Transportation Network. Provide the most feasible, most appropriate multimodal infrastructure that is safe and accessible to every member of the community, especially vulnerable populations such as children and the elderly. Provide and maintain adequate sidewalk widths and amenities to ensure a safe experience for pedestrians citywide.

  Strategy 5.2 – Provide Safety Education and Implement Safety Programs to Public Schools. Implement a Safe Route to School Plan that would determine the routes used by the students and measures to improve mobility/safety/infrastructure to school. Implement Safe Route to School Programs to all Inglewood public schools. Provide active transportation safety education to the community. Use Neighborhood Traffic Control techniques when excessive vehicle speed, excessive volume, or pedestrian/vehicle safety concerns warrant them.

The City's *General Plan* Land Use Element, that was amended in 2009, outlines the following circulation goals and objectives that are consistent with the City's Mobility Plan:

- Promote and support adequate public transportation within the City and the region,
- Develop modified traffic systems that will discourage through traffic from utilizing neighborhood streets,
- Develop a safe and adequate pedestrian circulation system which is barrier free for the handicapped.

The purpose of the City's *Active Transportation and Safe Routes to School Master Plan (ATP/SRTS)*[2] is to create a Complete Streets update to the City of Inglewood General Plan. The ATP/SRTS Plan sets forth goals, policies and strategies pertaining to accident and traffic safety, transit and public transportation, ensuring easy and convenient access to the regional facilities, bicycle routes and pedestrian facilities, among other things. Relevant adopted policies include:

- Policy 1.2: Ensure that planning, design and implementation documents are adhered to – Ensure that new development projects go through review processes for compliance with the ATP/SRTS.
- Policy 1.3: Revise the Municipal Code on crosswalk installation, removal, and enhancement – Adopt the high-visibility continental crosswalk treatment as the standard along school routes and crossings with multi-lane streets, and where pedestrian activity demands it.
- Policy 3.1: Achieve a safe, comfortable and attractive pedestrian environment for people of all ages and abilities – Explore the use of 15 mph school zones by conducting necessary analysis.
- Policy 4.1: Facilitate the provision of quality bicycle support facilities at local and regional destinations – Provide convenient, highly visible, and secure bicycle parking at schools, parks, public buildings, private development including the Hollywood Park development site, and other destinations where demand is needed.
- Policy 5.1: Encourage and support comprehensive pedestrian and bicycle safety education awareness programs for pedestrians, bicyclists, and motorists – Work with local schools to implement and institutionalize a comprehensive pedestrian

[2] *City of Inglewood Active Transportation and Safe Routes to School Master Plan*, adopted May 17, 2022.

and bicycle education program that teaches all school children to follow the rules of the road. Encourage schools and school districts to implement a comprehensive pedestrian and bicycle education program for their students, faculty and staff. Encourage the inclusion of pedestrian and bicycle education for crossing guards and bus drivers in their training programs.

- Policy 5.2: Actively encourage City staff, employees, residents, visitors and students to walk and bicycle as often as possible – Encourage schools to coordinate a "Bike to School Day" event. Encourage schools to participate in "International Walk to School Day" every October.

- Policy 6.1: Provide equal pedestrian and bicycle access for all through public engagement, program delivery, and capital investment – Strengthen partnerships with the County of Public Health, community-based organizations, school district, faith-based institutions and others that can help to realize the economic, health and societal benefits of walking and bicycling to the greater public.

- Policy 6.2: Improve personal safety for students walking and bicycling to school – Ensure students feel safe while walking and bicycling to and from school by providing enhanced street lighting and maintaining overgrown shrubbery along sidewalks.

The ATP/SRTS includes specific improvements to address pedestrian and bicycle safety concerns. As part of the Plan preparation, a SRTS workshop was held and involved collaboration between the City and stakeholders to improve the safety of students traveling to/from school with an increased focus on students and road safety. The following study intersection improvements were also identified in the ATP/SRTS to address safety and crossing concerns near the Inglewood High School campus:

- Manchester Avenue/Grevillea Avenue – Add yellow continental crosswalks and advance stop lines to all legs of the intersection, add crossing islands to the west leg, reduce curb return on the southeast corner, add curb extension to the southwest corner, add bus bulb to the south side of the east leg, add tactile warning devices to the north side of the east and west legs.

- Grevillea Avenue/Nutwood Street – Add yellow continental crosswalks and advance stop lines to all legs of the intersection, reduce curb return on the northeast corner, add curb extensions to the west side of the north leg and east side of the south leg, add large curb extensions to the east leg to align with the on-street angled parking.

Intersection improvements are also proposed for other intersections (i.e., Manchester Boulevard/Cedar Avenue, Florence Avenue/Eucalyptus Avenue, Grevillea Avenue/Lime Street) in the vicinity of the campus including installations of yellow continental crosswalks, advance stop lines, pedestrian hybrid beacons, crossing islands, additional pedestrian crossing signage, and LED flashing lights to STOP signs.

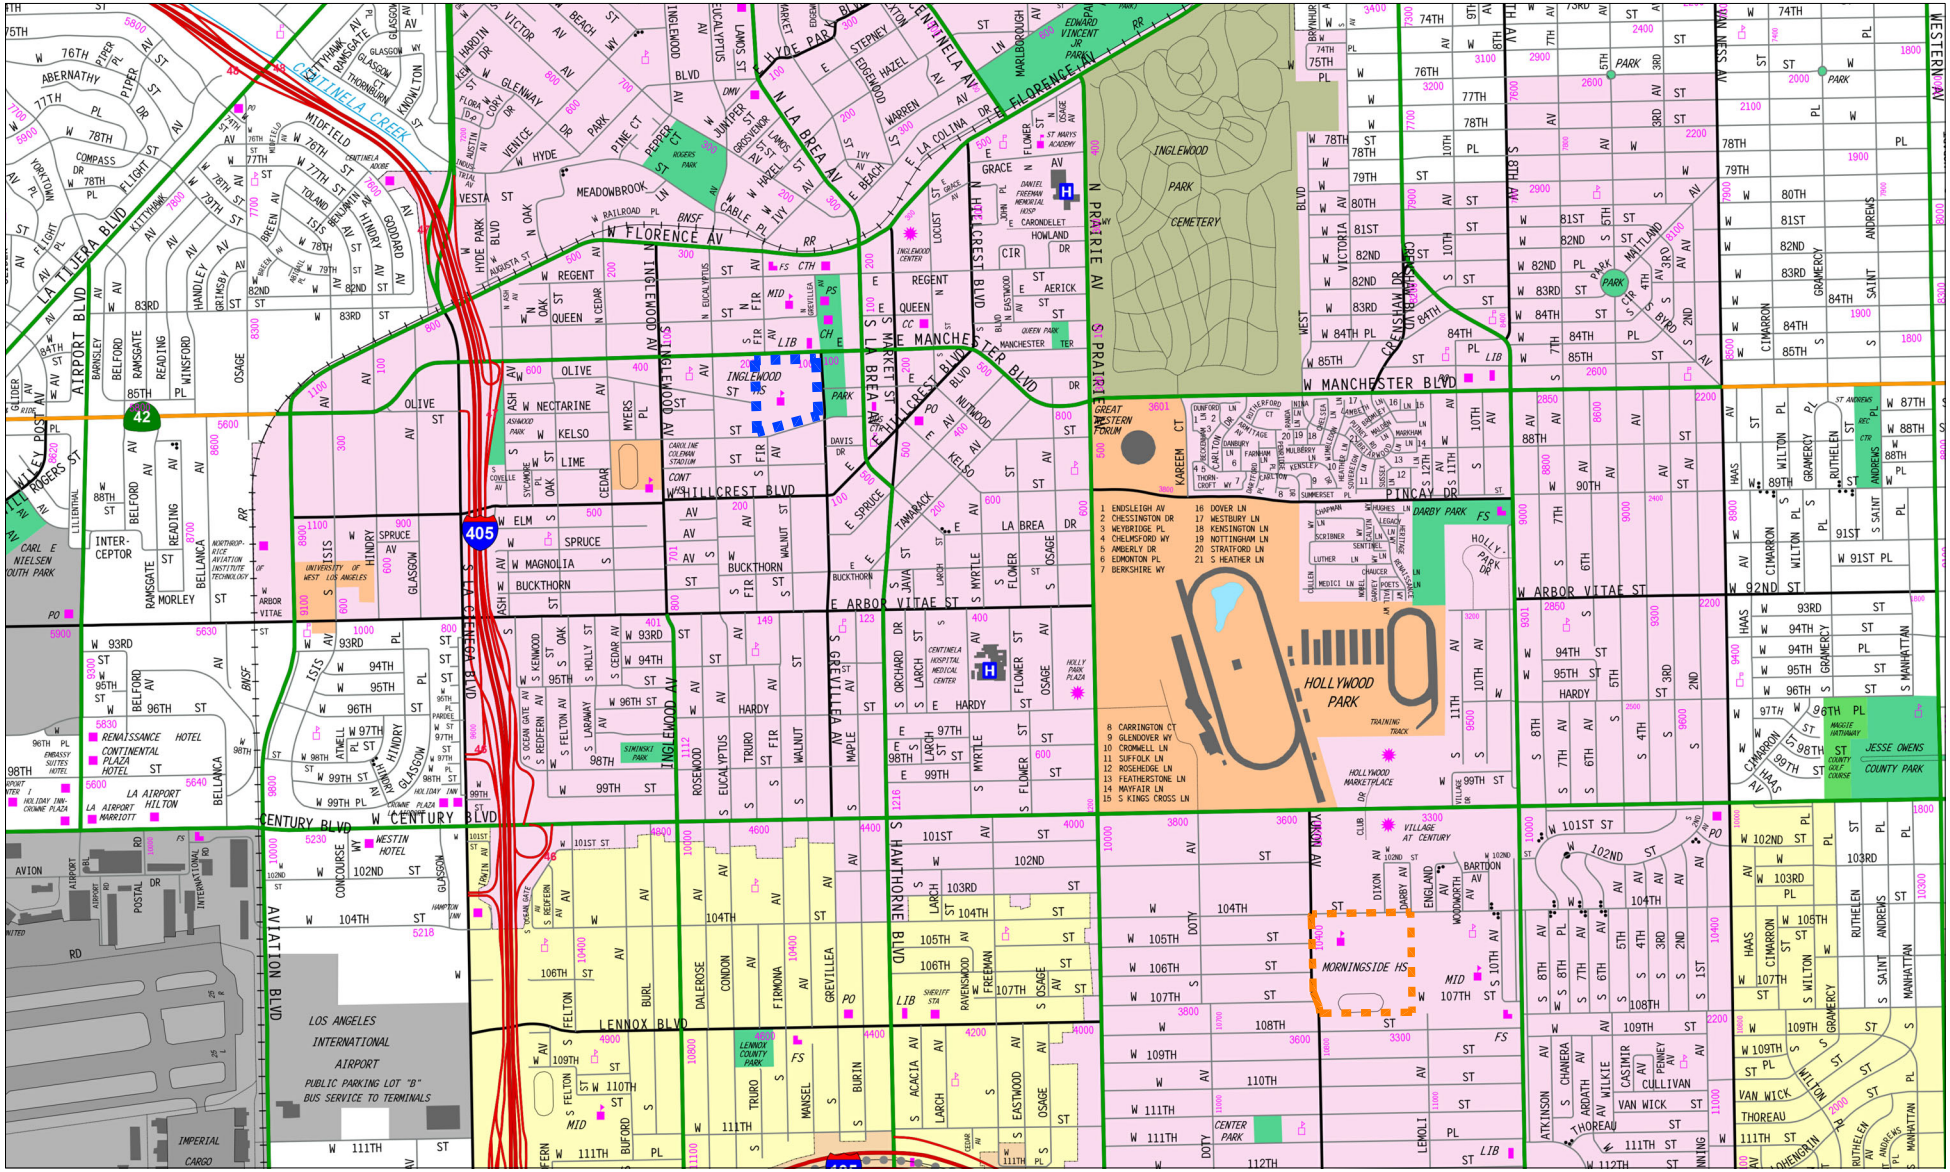
Qualitative Impact Conclusions

The proposed Project is not expected to result in a significant impact on active transportation or public transit in the vicinity of the Project site. As described herein, the Project site is planned to accommodate pedestrian and bicycle access via exclusive walkways which connect the site to the public sidewalks. The walkways minimize the extent of pedestrian and bicycle interaction with vehicles at the site and provide a comfortable, convenient, and safe environment which in turn can encourage use of active transportation modes. The Project site is further planned to provide bicycle parking facilities for use on-site by students, faculty/staff, visitors, etc. to the campus. As mentioned previously, the Project would also provide 32 bicycle parking spaces near the campus entrance, located south of Building 3, and eight covered staff bicycle parking spaces in a lockable enclosure within Building 1. The Project is therefore found to be in alignment with the City's General Plan, the City's Mobility Plan, as well as the ATP/SRTS Plan goals to promote pedestrian and bicycle safety and provide appropriate and supportive active multi-modal transportation infrastructure.

The Project is located adjacent to Manchester Boulevard, which is currently served by public bus transit service provided by the Los Angeles County Metropolitan Transportation Authority (Metro). As such, the Project site is within walking distance from existing bus stops located along Manchester Boulevard, east and west of Grevillea Avenue, and along Eucalyptus Avenue at Kelso Street. The proposed Project is not expected to affect access or safety at the existing bus stops, nor is it expected to hinder public transit service along Manchester Boulevard. The Project is not expected to preclude the City from constructing bicycle facilities or pursuing bicycle network improvements along local roadways within the study area. Development of the proposed Project will not prevent the City from completing any proposed transit, bicycle, or pedestrian facilities.

Since the Project is not found to result in conflicts with adopted policies, plans, or programs, nor is it expected to negatively affect the performance or safety of existing or planned pedestrian, bicycle, or transit facilities, it is determined that the Project will have a less than significant impact on active transportation and public transit in the vicinity of the Project site.

Conclusions



This memorandum provides a VMT screening assessment for the proposed Inglewood High School Reconstruction Project located at 231 South Grevillea Avenue in the City of Inglewood, California. The conclusions of the VMT screening assessment are as follows:

- The Project proposes the demolition of the majority of the buildings, the modernization of some of the existing buildings, and the construction of six new buildings on the Inglewood High School campus. In addition, new recreational facilities including one joint use field (for either football, soccer, or softball), six basketball courts, and six tennis courts will be available for public rental usage during the weekday evenings and weekend days. Students and faculty at the Inglewood High School would be temporarily relocated to the Morningside High School during the renovation of the Inglewood High School campus. Construction would occur in two phases and is anticipated to begin by January 2026 with occupancy in January 2028.

- Based on the Project's local serving nature of the education and recreational components, the Project satisfies one of the VMT screening criteria recognized in the City's TIA Guidelines. Accordingly, it can be concluded that the Project would be exempt from requiring further VMT analysis and that the Project's transportation impacts related to VMT are less than significant.

- The Project is not found to result in conflicts with adopted policies, plans, or programs, nor is it expected to negatively affect the performance or safety of existing or planned pedestrian, bicycle, or transit facilities. Thus, it is determined that the Project will have a less than significant impact on active transportation and public transit in the vicinity of the Project site.

West Hills, CA 91307

Re: Inglewood High School Reconstruction Project - Tribal Consultation per Assembly Bill 52

Dear Chairperson Alvarez:

This letter is to provide written notification in compliance with Assembly Bill 52 (AB 52). As such and pursuant to Section 21080.3.1 (d) of the Public Resources Code, if you wish to initiate consultation, please submit your written request for consultation with the Inglewood Unified School District (District) regarding the Inglewood High School Reconstruction Project (campus/Project) and its potential impacts to tribal cultural resources within 30 days from receipt of this letter.

The campus is approximately 18 acres in size and is located at 231 S. Grevillea Avenue in the western central portion of the City of Inglewood. The campus is specifically located immediately southwest of the intersection of W. Manchester Boulevard and S. Grevillea Avenue (**Figures 1 and 2**). The campus includes an auditorium, portable classroom buildings, several permanent classroom buildings, a gymnasium, a cafeteria, a library, tennis courts, a field, and asphalt play courts. There is a surface parking lot located west of the auditorium building, along the southern edge of the campus.

The District conducted a Site & Building Analysis that confirmed the need to upgrade or replace buildings that are 60 to 100 years old, as well as the need to upgrade and replace major infrastructure systems, including power, storm drainage, water for fire protection, and fire alarms.

The District will be preparing an Initial Study for the Project. The Project will include the demolition of the existing Administration Building, the existing Music Building, and numerous existing classroom buildings. In addition, the existing Auditorium, Gymnasium, and three other buildings will be partially renovated. Four new buildings will be constructed, including a two-story Administration and General Classroom building; a one-story Multi-Purpose Room and Food Services building; a one- to two-story building with Lab Classrooms, General Classrooms, and a Media Resources Center; and a one-story building with student-oriented programs. The Project will integrate the new buildings into the existing campus to create a village feel, with buildings oriented towards shared courtyards to promote social engagement and safe learning areas. The Project will include the removal of asphalt areas, and landscaping will be installed throughout the campus. The maximum depth of ground disturbance would reach down to approximately 10 feet below ground surface.

James Morris, Ed.D., County Administrator

GOVERNING BOARD: Carliss R. McGhee, Ph.D., President, Trustee #2, Ernesto Castillo, J.D., Vice President, Trustee #5, Brandon G. Myers Member, Trustee # 3, Joyce Randall, M.A, Trustee #1, Margaret Turner-Evans, M.A., Trustee # 4

Re: Inglewood High School Reconstruction Project - Tribal Consultation per Assembly Bill 52

Dear Chairperson Goad:

This letter is to provide written notification in compliance with Assembly Bill 52 (AB 52). As such and pursuant to Section 21080.3.1 (d) of the Public Resources Code, if you wish to initiate consultation, please submit your written request for consultation with the Inglewood Unified School District (District) regarding the Inglewood High School Reconstruction Project (campus/Project) and its potential impacts to tribal cultural resources within 30 days from receipt of this letter.

The campus is approximately 18 acres in size and is located at 231 S. Grevillea Avenue in the western central portion of the City of Inglewood. The campus is specifically located immediately southwest of the intersection of W. Manchester Boulevard and S. Grevillea Avenue (**Figures 1 and 2**). The campus includes an auditorium, portable classroom buildings, several permanent classroom buildings, a gymnasium, a cafeteria, a library, tennis courts, a field, and asphalt play courts. There is a surface parking lot located west of the auditorium building, along the southern edge of the campus.

The District conducted a Site & Building Analysis that confirmed the need to upgrade or replace buildings that are 60 to 100 years old, as well as the need to upgrade and replace major infrastructure systems, including power, storm drainage, water for fire protection, and fire alarms.

The District will be preparing an Initial Study for the Project. The Project will include the demolition of the existing Administration Building, the existing Music Building, and numerous existing classroom buildings. In addition, the existing Auditorium, Gymnasium, and three other buildings will be partially renovated. Four new buildings will be constructed, including a two-story Administration and General Classroom building; a one-story Multi-Purpose Room and Food Services building; a one- to two-story building with Lab Classrooms, General Classrooms, and a Media Resources Center; and a one-story building with student-oriented programs. The Project will integrate the new buildings into the existing campus to create a village feel, with buildings oriented towards shared courtyards to promote social engagement and safe learning areas. The Project will include the removal of asphalt areas, and landscaping will be installed throughout the campus. The maximum depth of ground disturbance would reach down to approximately 10 feet below ground surface.

James Morris, Ed.D., County Administrator
GOVERNING BOARD: Carliss R. McGhee, Ph.D., President, Trustee #2, Ernesto Castillo, J.D., Vice President, Trustee #5, Brandon G. Myers Member, Trustee # 3, Joyce Randall, M.A, Trustee #1, Margaret Turner-Evans, M.A., Trustee # 4
ADMINISTRATION: Bernadette Lucas, Ed.D., Chief Academic Officer, Brian Coffey, Ed.D., Chief Human Resources Officer, Raphael Guzman, Assistant Superintendent Business Services/Chief Business Official

Per AB 52, you have the right to consult on a proposed public or private project prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. As identified above, you have 30 calendar days from receipt of this letter to notify us in writing that you wish to consult on this Project. The District understands that information you provide may be sensitive, protected or confidential. Any information provided, or any exchange of information regarding tribal cultural resources as a result of consultation with the District will be recorded and managed in accordance with state law (California Code of Regulations Section 15120(d), Public Resources Code Sections 5097.9, 5097.993, 21082.3). Please provide your contact information, and mail or email your request to me at the address below.

Re: Inglewood High School Reconstruction Project - Tribal Consultation per Assembly Bill 52

Dear Chairperson Schenk:

This letter is to provide written notification in compliance with Assembly Bill 52 (AB 52). As such and pursuant to Section 21080.3.1 (d) of the Public Resources Code, if you wish to initiate consultation, please submit your written request for consultation with the Inglewood Unified School District (District) regarding the Inglewood High School Reconstruction Project (campus/Project) and its potential impacts to tribal cultural resources within 30 days from receipt of this letter.

The campus is approximately 18 acres in size and is located at 231 S. Grevillea Avenue in the western central portion of the City of Inglewood. The campus is specifically located immediately southwest of the intersection of W. Manchester Boulevard and S. Grevillea Avenue (**Figures 1 and 2**). The campus includes an auditorium, portable classroom buildings, several permanent classroom buildings, a gymnasium, a cafeteria, a library, tennis courts, a field, and asphalt play courts. There is a surface parking lot located west of the auditorium building, along the southern edge of the campus.

The District conducted a Site & Building Analysis that confirmed the need to upgrade or replace buildings that are 60 to 100 years old, as well as the need to upgrade and replace major infrastructure systems, including power, storm drainage, water for fire protection, and fire alarms.

The District will be preparing an Initial Study for the Project. The Project will include the demolition of the existing Administration Building, the existing Music Building, and numerous existing classroom buildings. In addition, the existing Auditorium, Gymnasium, and three other buildings will be partially renovated. Four new buildings will be constructed, including a two-story Administration and General Classroom building; a one-story Multi-Purpose Room and Food Services building; a one- to two-story building with Lab Classrooms, General Classrooms, and a Media Resources Center; and a one-story building with student-oriented programs. The Project will integrate the new buildings into the existing campus to create a village feel, with buildings oriented towards shared courtyards to promote social engagement and safe learning areas. The Project will include the removal of asphalt areas, and landscaping will be installed throughout the campus. The maximum depth of ground disturbance would reach down to approximately 10 feet below ground surface.

James Morris, Ed.D., County Administrator

GOVERNING BOARD: Carliss R. McGhee, Ph.D., President, Trustee #2, Ernesto Castillo, J.D., Vice President, Trustee #5, Brandon G. Myers Member, Trustee # 3, Joyce Randall, M.A, Trustee #1, Margaret Turner-Evans, M.A., Trustee # 4

ADMINISTRATION: Bernadette Lucas, Ed.D., Chief Academic Officer, Brian Coffey, Ed.D., Chief Human Resources Officer, Raphael Guzman, Assistant Superintendent Business Services/Chief Business Official

Per AB 52, you have the right to consult on a proposed public or private project prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. As identified above, you have 30 calendar days from receipt of this letter to notify us in writing that you wish to consult on this Project. The District understands that information you provide may be sensitive, protected or confidential. Any information provided, or any exchange of information regarding tribal cultural resources as a result of consultation with the District will be recorded and managed in accordance with state law (California Code of Regulations Section 15120(d), Public Resources Code Sections 5097.9, 5097.993, 21082.3). Please provide your contact information, and mail or email your request to me at the address below.
