Appendix A

Notice of Preparation (NOP), Initial Study, and NOP Comment Letters

A-1 Notice of Preparation

NOTICE OF PREPARATION OF A
DRAFT ENVIRONMENTAL IMPACT REPORT
FOR THE
INGLEWOOD HIGH SCHOOL RECONSTURCTION PROJECT

NOTICE IS HEREBY GIVEN that the Inglewood Unified School District (District), as lead agency under the California Environmental Quality Act (CEQA) has prepared a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the Inglewood High School Reconstruction Project (Proposed Project). IUSD has prepared an Initial Study and will prepare a focused EIR for the Project identified below:

Project Applicant: Inglewood Unified School District

Project Location: Inglewood High School is located at 231 South Grevillea Avenue, Inglewood, California, and is in the western central portion of the City of Inglewood within Los Angeles County, California. The Project Site is bounded to the north by West Manchester Boulevard, commercial uses, Inglewood City Hall and the Inglewood Public Library. Residential homes and a retirement community are located to the west of the Project Site, with residential homes and West Kelso Street to the south. Additionally, South Grevillea Avenue and a multi-family apartment building are located to the east of the Project Site.

Project Description: The Project would include demolition of the majority of the buildings located on the Project Site, the construction of six new buildings, and the modernization of two of the existing buildings. The Project would also include improvements to sports fields, courts, and lighting. Students and faculty at the Inglewood High School would be relocated to the Morningside High School, which is located approximately 1.8 miles southeast of the Project Site at 10500 Yukon Avenue, during the reconstruction of the Inglewood High School campus.

The Project would result in the construction of six new buildings on the Project site, which would provide a combined total of approximately 164,100 square feet (sf). New buildings would include:

- Building 1 - Administration and General Classrooms
- Building 2 - Food Services and Multipurpose Room (MPR)
- Building 3 - Science Labs and General Classrooms
- Building 4 - Student Life
- Building 5 - Career and Technical Education (CTE)
- Building 6- CTE and Music classrooms

In addition to the new buildings, the Project includes improvements to the Auditorium, Building O (Boys Lockers), and Building P (Physical Education and Girls Lockers).

Recreational components include the demolition and reconstruction of the basketball and tennis courts, a combination softball/football/soccer artificial turf field at the western edge of campus, and installation of lights to illuminate the courts and fields. The Project also includes walkway improvements, utility improvements, parking and fire lane improvements, a new pedestrian entrance, lighting upgrades, and landscaping improvements.

Potential Environmental Effects: IUSD has determined based on the Initial Study prepared for the Project that an EIR will be required to analyze the Project's potential environmental effects. Environmental issues identified as having the potential to result in significant impacts that require further evaluation in the EIR include: Aesthetics, air quality, cultural resources, energy, greenhouse gas emissions, geology and soils (paleontological resources), noise, transportation, and tribal cultural resources.

Document Availability: The Initial Study is available for review at the following locations:

- *Inglewood Unified High School Library* 10500 South Yukon Avenue, Inglewood, CA 90303
- *Inglewood Unified School District, Business Services* 401 South Inglewood Avenue, Inglewood, CA 90301 2nd floor
- Online at the IUSD website: https://www.inglewoodusd.com/apps/pages/public-notices

Public Comment Period for NOP: IUSD welcomes and will accept all written comments regarding the potential environmental impacts of the Project and issues and alternatives to be addressed in the EIR. All comments will be considered in preparation of the EIR. The comment period for the NOP **begins on July 16, 2025, and ends on August 14, 2025**.

Written comments should be received on or before August 8, 2025. Written comments should refer to the Inglewood HS Reconstruction Project and be addressed to: to: Jordan Miles, Inglewood Unified School District, 401 South Inglewood Avenue, Inglewood, California 90301. Your comments may also be sent via e-mail to IHSconstruction@Inglewoodusd.com.

CHAPTER 1
Introduction

1.1 Overview

The Inglewood Unified School District (District), as the lead agency under the California Environmental Quality Act (CEQA), has prepared this Initial Study (IS) to evaluate the potential environmental impacts associated with the Inglewood High School Reconstruction Project (Project). The Project involves the demolition of the existing Administration Building, the existing Music Building, the existing Performing Arts Building, and numerous existing classroom buildings. In addition, the existing Auditorium and Gymnasium would be partially renovated. Six new buildings would be constructed, including a two-story Administration and General Classroom building; a one-story Multi-Purpose Room (MPR) and Food Services building; a one- to two-story Science Labs and General Classrooms building; a one-story Student Life building; a two-story Career and Technical Education (CTE) and General Classroom building; and a one-story CTE and Music building. Recreational components include the demolition and reconstruction of the basketball and tennis courts, installation of a combination softball/football/soccer artificial turf field at the western edge of campus, and installation of lights to illuminate the courts and fields. The Project would result in the removal of the existing asphalt areas, and landscaping improvements would be included throughout the Inglewood High School campus (Project Site).

1.2 CEQA Requirements

Approval of the Proposed Project is a discretionary action and is therefore subject to the requirements of CEQA (Public Resources Code [PRC], Division 13, Sections 21000–21177) and the State CEQA Guidelines (California Code of Regulations [CCR], Title 14, Sections 15000–15387). Initial Studies/Environmental Checklist Forms such as this document are typically used as a basis for deciding whether to prepare an environmental impact report (EIR), a mitigated negative declaration (MND), or a negative declaration (ND) for a project, pursuant to CEQA.

An Initial Study/Environmental Checklist Form is intended to satisfy the requirements of CEQA (PRC Division 13, Sections 21000-21177) and the State CEQA Guidelines (14 CCR 15000-15387). CEQA encourages lead agencies and applicants to modify their projects to avoid significant adverse impacts. Per CEQA (14 CCR 15063), if the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, the Lead Agency shall prepare an EIR (or tier from a previously prepared EIR document). Based on the findings of this Initial Study, the District has determined that preparation of a focused EIR is the appropriate method to present environmental review of the Project in compliance with CEQA.

1.3 Terminology

The following terms are used to describe the level of significance of impacts.

- A finding of *no impact* is used if the analysis concludes that a project would not affect the particular topic area in any way.
- An impact is considered *less than significant* if the analysis concludes that a project would cause no substantial adverse change to the environment and requires no mitigation.
- An impact is considered *less than significant with mitigation incorporated* if the analysis concludes that a project would cause no substantial adverse change to the environment provided that environmental commitments or other enforceable measures are included as part of the Proposed Project.
- An impact is considered *potentially significant* if the analysis concludes that a project could have a substantial adverse effect on the environment.

1.4 Initial Study Organization

The content and format of this report are designed to meet the requirements of CEQA. This Initial Study identifies the potential environmental impacts of the Proposed Project to determine potential impacts and scope out topics that do not have the potential to cause a significant impact. The report contains the following sections.

- **Chapter 1, Introduction,** identifies the purpose and scope of the Initial Study.
- **Chapter 2, Project Description,** identifies the location and environmental setting of the Project Site and describes the proposed Project in detail.
- **Chapter 3, Environmental Checklist,** presents the checklist responses for each resource topic. This section identifies the potential impacts of implementing the proposed Project, and identifies references cited in this Initial Study.

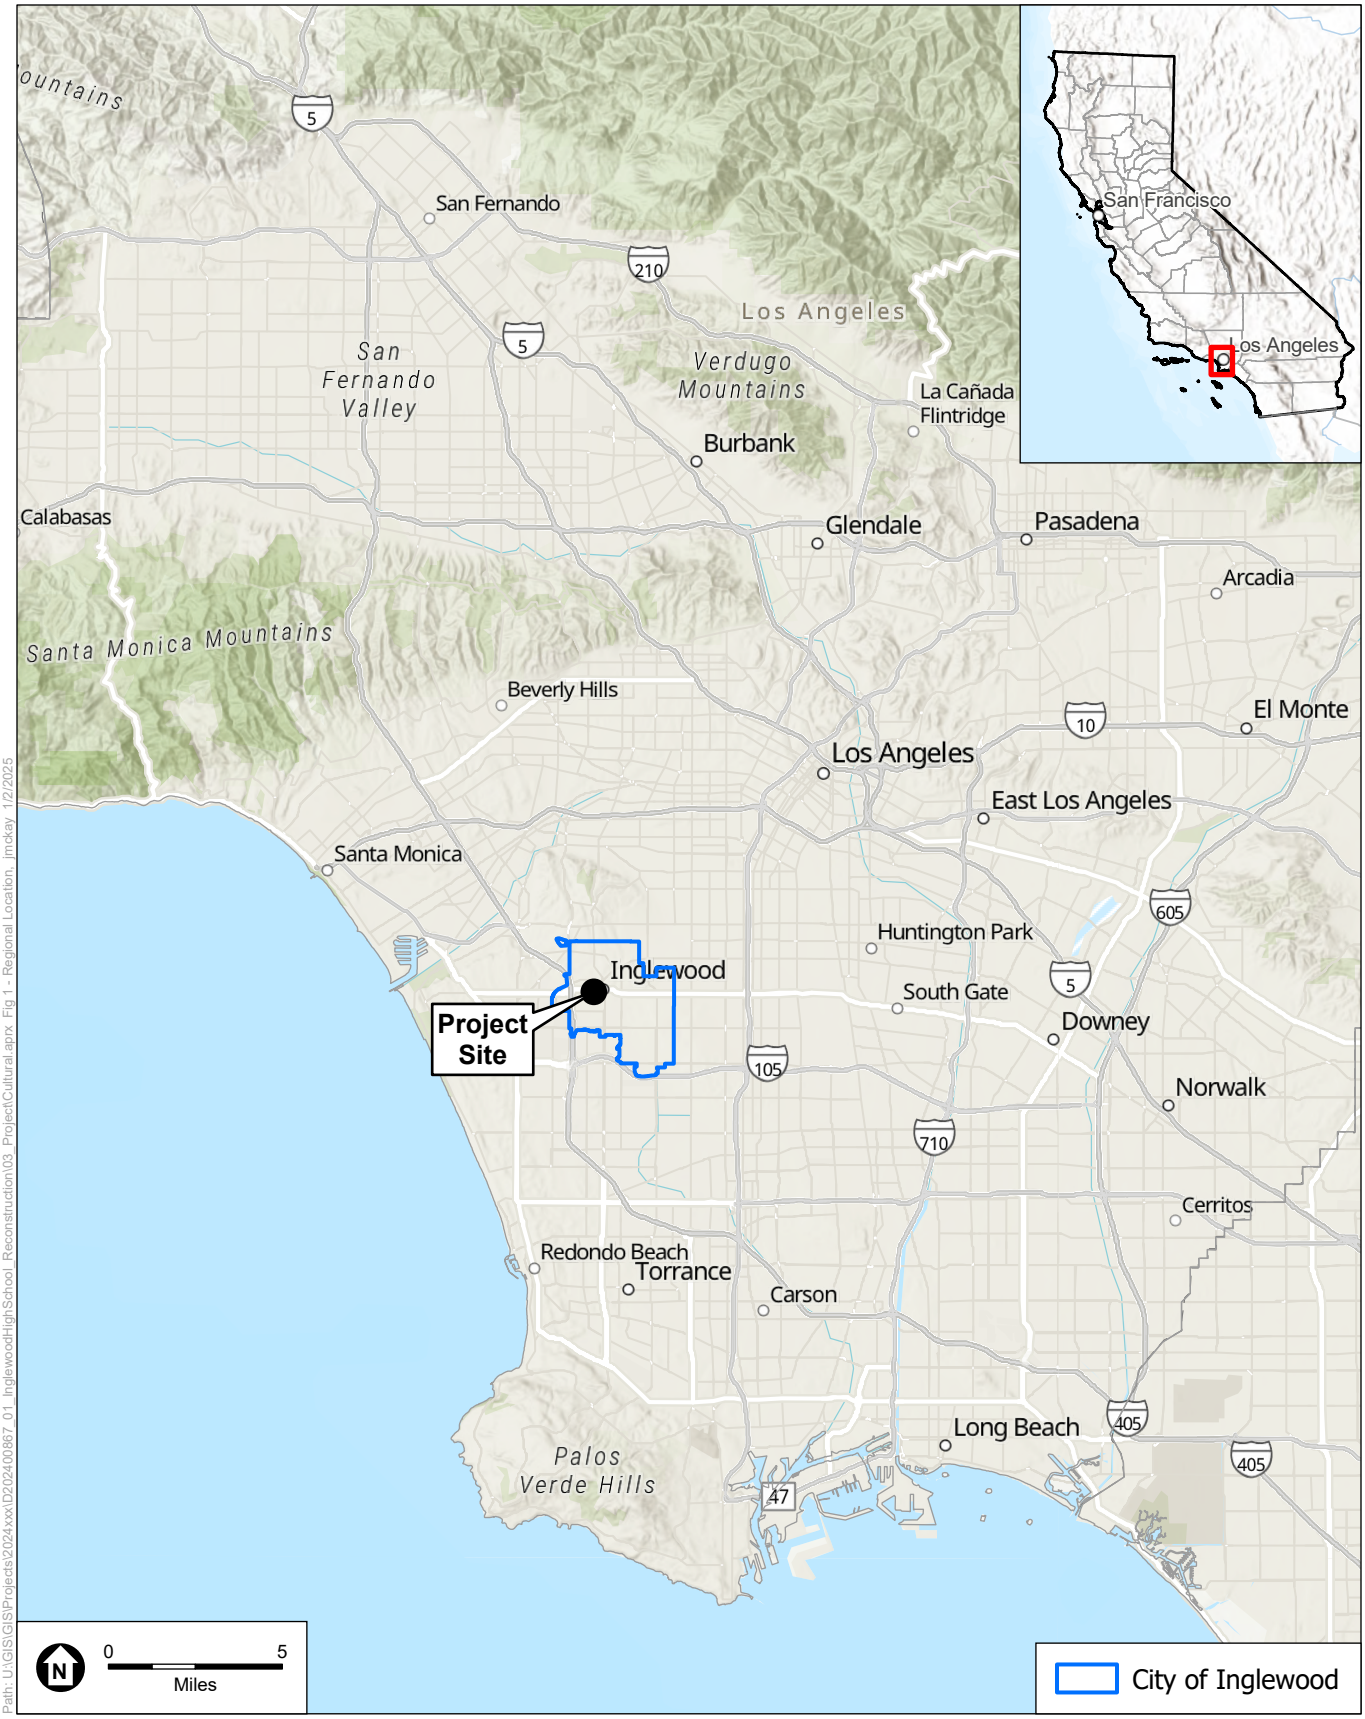
1.5 Incorporation By Reference

This IS relies on previously adopted regional and statewide plans and programs, agency standards, and background studies in its analyses, such as the South Coast Air Quality Management District's (SCAQMD) air quality management plan. Chapter 3, Environmental Checklist, provides a complete list of references used in preparing this IS.

CHAPTER 2
Project Description

2.1 Project Overview

This chapter provides a description of the proposed Inglewood High School Reconstruction Project (Project), which provides a basis for the environmental analysis contained in this Initial Study. The Project involves the demolition of the existing Administration Building, Music Building, Performing Arts Building, and numerous existing (temporary and permanent) classroom buildings. In addition, the existing Auditorium and Gymnasium would be internally renovated. Six new buildings would be constructed, including a two-story Administration and General Classroom building; a one-story Food Services and Multi-Purpose Room building; a one- to two-story Science Labs and General Classrooms building; a one-story Student Life building; a two-story Career and Technical Education building; and a one-story CTE and Music classrooms building. Recreational components include the demolition and reconstruction of the basketball and tennis courts, installation of a combination softball/football/soccer artificial turf field at the western edge of campus, and installation of lights to illuminate the courts and fields. The Project would remove existing asphalt areas, and landscaping improvements would be included throughout the Inglewood High School campus.



2.2 Environmental Setting

2.2.1 Project Location and Surrounding Uses

Inglewood High School is located at 231 South Grevillea Avenue in the western central portion of the City of Inglewood within Los Angeles County, California. As shown in **Figure 1, Regional Location Map**, the Project Site is located approximately 0.6 miles east of Interstate 405 (I-405), approximately 1.8 miles north of I-105, and approximately 4.2 miles west of I-110. The Project Site is approximately 18 acres in size and is comprised of four Assessor Parcel Numbers (APNs): 4020-017-900, 4020-016-900, 4020-025-900, and 4020-026-900.

As shown in **Figure 2, Project Location,** the Project Site is bounded to the north by West Manchester Boulevard, commercial uses, Inglewood City Hall and the Inglewood Public Library. Residential homes and a retirement community are located to the west of the Project Site, with residential homes and West Kelso Street to the south. Additionally, South Grevillea Avenue and a multi-family apartment building are located to the east of the Project Site.

The Project Site is located within a residential neighborhood comprised primarily of single-family (one- and two-story) homes, along with some commercial uses and government facilities, including Inglewood City Hall and the Public Library. The SoFi Stadium is located approximately 0.7 miles to the southeast of the Project Site, which is within the Hollywood Park Specific Plan. The Project Site is located approximately 1.8 miles northeast of the Los Angeles International Airport (LAX) and approximately 2.8 miles northwest of the Hawthorne Municipal Airport.

Inglewood High School Reconstruction

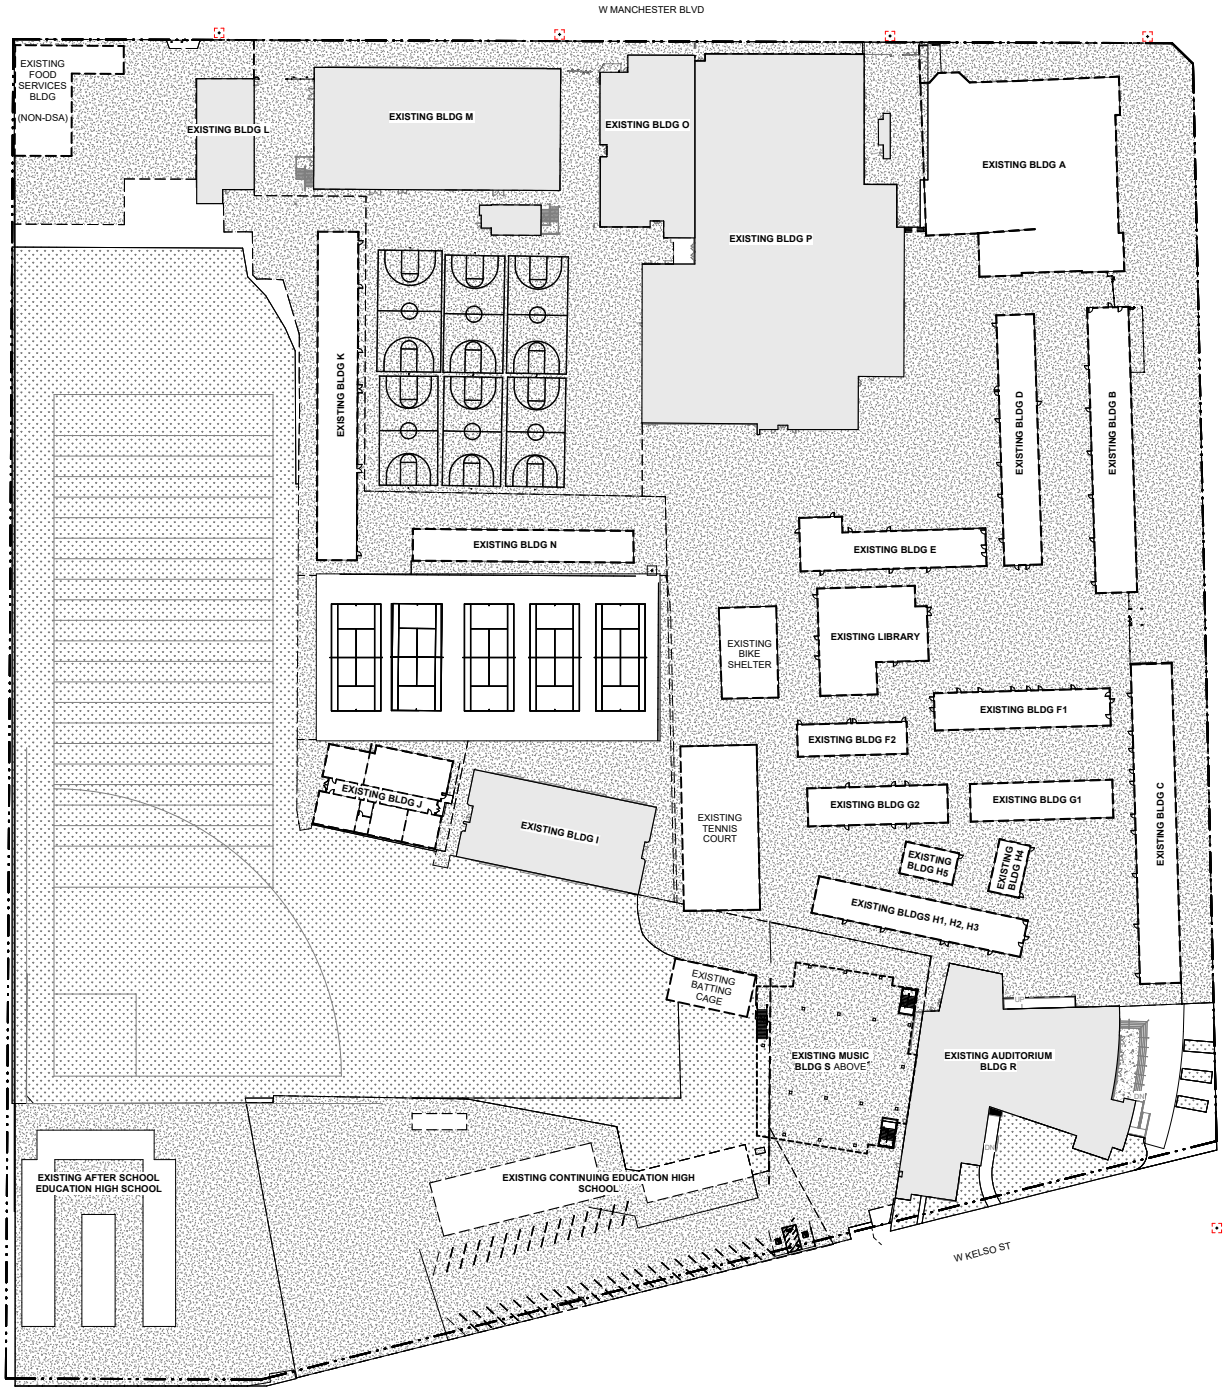
Figure 2
Project Location

ESA

2.2.2 Existing Conditions

As shown in **Figure 2**, the Project Site is occupied by Inglewood High School. The primary campus development is situated in the eastern portion of campus and consists of classroom and administrative buildings. Athletic courts and fields are located on the western portion of the campus. The Project Site is essentially flat with a grade difference of about 6 feet from the northeast corner of the property to the southwest corner. (Geolabs-Westlake Village [GWV] 2024).



The Inglewood High School campus currently includes 18 classroom buildings (including permanent classroom buildings and portable classroom buildings). In addition to classroom buildings, the Inglewood High School campus includes a fine arts and administration building, an auditorium, locker rooms, library, performing arts building, adult education building, continuing education high school, and home economics building. The existing campus buildings are labeled Buildings A through X as shown on **Figure 3, Existing Campus**.

Tennis courts, basketball courts, a batting cage, and athletic fields are located west of the majority of the classroom buildings, and extend to the western Project Site boundary. In addition, there are existing tennis courts north of Building I as well as existing basketball courts. Competition sports events occur at other District locations. Covered and uncovered walkways and student seating areas are located between the campus buildings. Landscaping is limited to trees and pockets of grass located around campus.

The Continuing Education High School and After School Education High School buildings are separated from the main campus by fences. These two buildings are located in the southwestern portion of the site along West Kelso Street and have their own parking lot and driveway. While they provide support to the high school they operate separately.

The majority of the Project Site consists of buildings, walkways, and sports fields. The western portion of the Project Site is mostly pervious and contains grasses and vegetation. There is minimal landscaping on the campus. There are 29 trees currently on the campus, which is the primary form of landscaping within the Project Site. The quantity and species of trees that exist on the campus provide limited canopy coverage. The outdoor open space and circulation areas are in some instances cracked and provide accessibility issues. Turf is present throughout several areas on campus, including at the front of the school and at the athletic field. Automatic irrigation is not currently available throughout the site. There are some benches and picnic tables and walls that provide outdoor seating. Monument signs and murals are in various locations throughout the campus.

The Inglewood High School campus currently includes a surface parking lot located west of the Auditorium along the southern edge of the campus along West Kelso Street. Access to the parking lot is via three entrances along West Kelso Street. The parking lot provides 63 total parking spaces, with 61 standard vehicle spaces and 2 ADA-accessible spaces. This parking area is currently used by faculty and staff. In addition, there is an existing parking lot south of the Music Building (Building S), which includes 30 total parking spaces. There is no visitor or student parking available on the campus. Bicycle parking is provided in a shelter between the tennis courts and the library.

Inglewood High School Reconstruction

Figure 3
Existing Campus

ESA

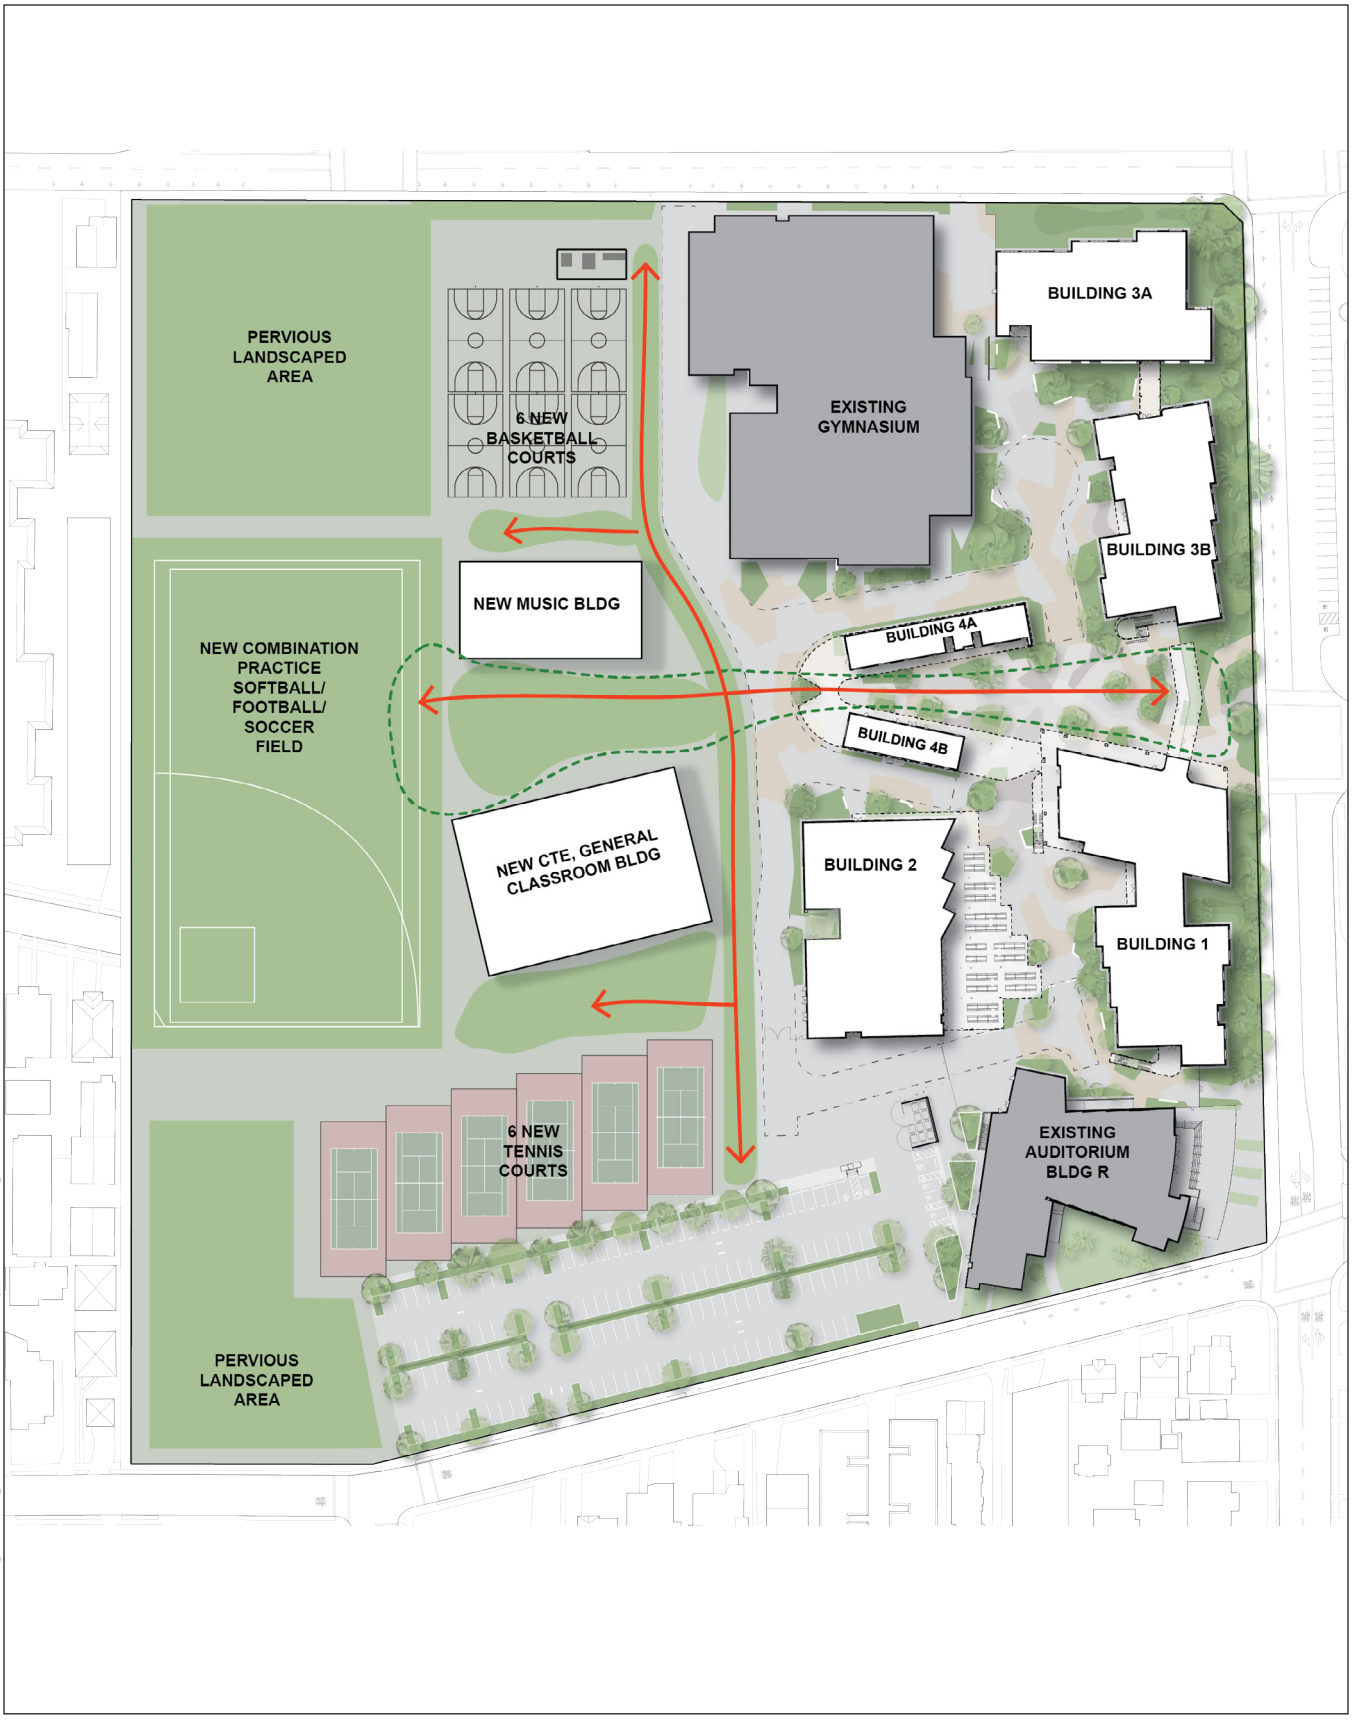
Students arrive at school by car, walk, bike, or use public transportation. School bus service is not provided except for special education students. There is currently no formal loading zone (i.e., curb markings or posted signage) designated; drop-off/pick-up loading activities occur generally along South Grevillea Avenue and West Kelso Street.

After completion of the Project, students from Morningside High School will be transferred to Inglewood High School. With the Morningside High School students being transferred to Inglewood High School, the 1,200 student capacity, for which the school is currently designed, will not be exceeded. The school year runs from late August through early June; summer school sessions also occur on campus. School hours and the associated bell schedule generally is between 8:30 a.m. to 3:15 p.m. Monday through Friday, with the exception that Tuesday end time is 2:20 p.m. In addition, several after-school clubs and organizations have activities on the campus. The campus does not include competition fields for football, softball, baseball or soccer, and these events occur at other District locations.

Based on the Inglewood Zoning Map, the Project Site is located within the Downtown Transit Oriented District of the City (City of Inglewood, 2023). More specifically, based on the Downtown Transit Oriented District Development Plan and Design Guidelines, the Project Site is located within the Civic Center District, and is zoned and designated as Civic Center (C-C). The C-C district allows government offices, schools and other public facilities, as well as limited private office and retail (City of Inglewood, 2016). The Project would be consistent with the land use designation and the zoning.

2.3 Project Characteristics

The proposed improvements would occur throughout the Inglewood High School campus. The Project would result in the demolition of the majority of the buildings located on the Project Site, the modernization of some of the existing buildings, and the construction of six new buildings. The Project would also include updated sports fields, courts, and lighting. Students and faculty at the Inglewood High School would be relocated to the Morningside High School, which is located approximately 1.8 miles southeast of the Project Site at 10500 Yukon Avenue during the renovation of the Inglewood High School campus. The Continuing Education High School and After School Education High School buildings that are located in the southwestern portion of the site along West Kelso Street would be relocated to another campus



The existing Inglewood High School campus layout and proposed demolition activities are shown on **Figure 3, Existing Campus,** and the Inglewood High School proposed components are shown on **Figure 4, Conceptual Site Plan**. As shown in **Table 1, Project Characteristics**, the Project includes the demolition of 23 buildings on the campus (Buildings A, B, C, D, E, F1, F2, G1, G2, H1, H2, H3, H4, H5, I, J, K, L, M, N, the library, music building, and food services building). In addition, hardscape including the existing tennis courts, basketball courts, batting cage, and bike shelter would be demolished. Existing trees (up to 29 trees) and vegetation would be removed during the demolition phase. A discussion of each of the proposed Project characteristics is provided below. **Table 1, Project Characteristics**.

TABLE 1
PROJECT CHARACTERISTICS

Building	Use	Status	Existing Area (Sq Ft)	New Area (Sq Ft)	Height (Ft)[1]	Stories

Inglewood High School Reconstruction

Figure 4
Conceptual Site Plan

ESA

New Buildings

The Project would result in the construction of six new buildings on the Inglewood High School Campus, which would provide a combined total of 164,103 square feet (sf). New buildings would include Administration and General Classrooms (Building 1), Food Services and Multipurpose Room (MPR) (Building 2), Science Labs and General Classrooms (Building 3), Student Life (Building 4), Career and Technical Education and General Classrooms (Building 5), and CTE and Music classrooms (Building 6).

Building 1 (Administration and General Classrooms)

Building 1 would provide approximately 48,028 sf of administration and classroom floor area. The two-story building would be located north of the existing Auditorium, and would be situated along South Grevillea Avenue. The first floor of the building would contain administration space in the northern portion of the building, and classrooms in the southern portion of the first floor and on the entire second floor of the building.

Building 2 (Food Services and MPR)

Building 2 would provide approximately 22,572 sf of food service space and multipurpose uses and would be located in the central portion of the campus. The building would contain a kitchen for food services. The building would provide primarily space for indoor eating, and would include a stage area for smaller performances or meetings. Depending on the style of tables used, the MPR would be able to accommodate between 250-350 students. The new food services building would include a conventional lunch queuing zone and would be directly adjacent to an exterior lunch shelter that covers about 350 seats.

Building 3 (Science Labs and General Classrooms)

Building 3 would provide approximately 41,630 sf of science labs and classroom space. The two-story building would be located on the northeast corner of campus, at the intersection of West Manchester Boulevard and South Grevillea Avenue. Lab classrooms would be located on the first floor of the northern portion of the building and classrooms would be provided on the first floor in the southern portion of the building as well as on the second floor of the building.

Building 4 (Student Life)

Building 4 would be located at the new entrance plaza to prioritize student culture and engagement. The building, which consists of two one-story rectangular components (Buildings 4A and 4B) in a U-shape, would be located north of Building 2 and south of the existing Gymnasium in the central portion of the campus. Building 4 would provide a total of approximately 7,873 sf for student uses. The building would provide space for student life programs such as the Dream Center, Career Center, Junior Reserve Officers' Training Corps, Associated Student Body and Student Store. The building would define a smaller courtyard that may be used for gallery events and smaller gatherings.

Building 5 (Career and Technical Education including general classrooms)

Building 5 would provide approximately 20,000 sf of career and technical and general education space. The two-story building would be located near the center of campus.

Building 6 (Career Technical Education and Music Building)

Building 6 would provide approximately 24,000 sf of classroom space. The one-story, approximately 28-foot-tall building would be located near the center of campus.

Campus Modernization

In addition to the new buildings, the Project includes improvements to modernize the campus. Improvements are proposed for, the Auditorium, Building O (Boys Lockers), and Building P (Physical Education and Girls Lockers), as described in detail below.

The existing façade of Building P would be painted, and the existing mural area at West Manchester Boulevard would remain. Only minimal improvements to resolve old California Division of State Architects (DSA) certification corrections would be made to Buildings O, P and the Auditorium.

Open Space Improvements

The modernization includes improvements to walkways throughout the campus to connect the buildings, landscaping, and seating areas. Other improvements could include, but are not limited to, signage, fencing, drinking fountains, water bottle filling stations, as required by code. A digital marquee would be installed between existing Building P and Building 3 along West Manchester Boulevard.

In the exterior spaces surrounding the existing buildings being renovated, concrete paving areas would be removed to add planting areas with native planting and shade trees. Concrete benches would be placed in these areas to provide small gathering spaces for students throughout the campus.

Utility Improvements

Electrical/Telecommunications

The electrical yard for the school would be located in the northern portion of the Project Site, along West Manchester Boulevard near the existing Southern California Edison (SCE) service. In addition, the Project would include utility and technology retrofits throughout the campus, including electrical rooms in the new buildings. Existing electrical utility connections to the demolished buildings would be removed or capped and plugged.

Electrical and utility features would include fiber optic lines, telecommunications lines, intrusion alarms, public announcement systems, fire alarms, stub conduit boxes, mounted box conduits, underground conduits and pole mounted conduits. Utility work would be coordinated with Southern California Edison (SCE). Fully automatic fire alarm systems with emergency voice/alarm communication systems would be provided in all buildings included in accordance with 2016 California Fire Code (CFC) 907.2.3 and National Fire Protection Association (NFPA) 72.

Water/Sewer

Sewer pipelines, domestic and fire water line systems, which would connect to existing mainlines, would be installed. The Project would also include connections to the existing reclaimed water lines for irrigation use. Expanded utilities services are not planned but, where feasible and based on funding, aging utility infrastructure would be replaced.

Recreational Components

The Project would replace the existing athletic field and would replace the tennis courts and basketball courts (Figure 4).

The Project includes some changes that would increase the amount of recreational space. The existing food services building on the northwest corner of the Project Site adjacent to West Manchester Boulevard would be demolished, and the athletic fields would be extended north to the street. The existing athletic field would be removed to include a 380 ft. (length) by 222 ft. (width) combination softball/football/soccer field with synthetic turf. A total of 6 light poles would be installed at the combination softball/football/soccer field. The lights would be approximately 60 to 80 feet in height.

There is a separate existing tennis court located southeast of the five tennis courts. These 6 tennis courts would be demolished and replacement tennis courts would be constructed south of the exiting basketball courts. The new courts would have vinyl coated chain-link fencing with mesh screening, and access gates with lockable latches. The tennis courts would be relocated from the current central portion of campus closer to the south of campus and the existing parking lot, as shown in the site plan (Figure 4). The tennis courts would include new lighting consisting of 6 light poles at 50ft-60ft tall. The existing basketball courts would be demolished, and new basketball courts would be constructed in the northern central portion of the site, just west of the existing gymnasium. Four light poles at 50 feet tall would be constructed at the new basketball courts.

In addition, the Project would result in the demolition of the existing batting cage, which is located west of the Music Building (Building X).

Access, Parking, and Circulation

As shown on Figure 3, vehicular access to Inglewood High School campus is currently provided by two driveways along West Manchester Boulevard and three driveways along West Kelso Street. As previously discussed, the Project Site currently includes a surface parking lot, which is located along West Kelso Street in the southern portion of the campus. Parking lot and internal circulation improvements are described below.

Parking

The Project would result in an increase of the number of total parking spaces (both accessible and non-accessible) from 93 to 158. The Project would include 128 standard stalls, 25 electric vehicle (EV) stalls (including 6 stalls with charging stations), four standard ADA stalls (including one EV), and three van ADA stalls (including one EV). New landscaping would be added within the parking lot. The Project would also provide 32 bicycle parking spaces near the campus entrance, located south of Building 3, and eight covered staff bicycle parking spaces in a lockable enclosure within Building 1.

Fire Lane Improvements

Internal vehicular circulation would be limited to emergency vehicles and would be provided via an extension of the existing fire lane, which would continue to be accessed from West Manchester Boulevard. The fire lane would go through the center of campus and would continue through the parking

lot to a driveway along West Kelso Street. The proposed fire lane improvements would comply with State standards and be reviewed by the City Fire Department.

Pedestrian Improvements

A new pedestrian entrance would be created on South Grevillea Avenue at the intersection with Nutwood Street leading into the campus, which is the historic location of the main campus entry. Accessible pedestrian pathways would be installed throughout the campus to provide links to the buildings and pedestrian access points from the adjacent streets. Additionally, the City of Inglewood and the District have begun preliminary discussions to provide a pedestrian bridge from the high school campus corner to Inglewood Public library over West Manchester Boulevard, which would provide the students access to the public library as a campus resource.

Lighting and Sound

The Project Site is located within the Outdoor Lighting Zone designation of LZ-03 for Moderately High-Urban Areas per Title 24 CCR Part 1 Section 10.114. The Project would include campus path lighting and exterior building lights. A total of 16 new Musco lights would be placed at the sports facilities, as noted above. These lights would support existing joint use activities, where fields and outdoor sports facilities are available for rental. These lights would be down-shielded to avoid light spill-over and would be directed downward towards the individual facilities.

The school's amplified sound system would allow for announcements to be heard as necessary throughout the Project Site. Sound would also be used during campus activities. All outdoor sound would be in compliance with the City's noise ordinance.

2.3.1 Landscaping Plan

The landscaping improvements included as part of the Project would consist of the installation of drought tolerant, low maintenance plants throughout the campus. In addition to the four student quads and landscaping outside of existing buildings, landscaping would be added to the perimeter of the campus and within the new parking lot. Landscape planters would be provided adjacent to the perimeter fence at most areas, which would soften the campus perimeter and provide screening. At the main entry, bermed landscape would limit the outside views, and would provide privacy from inside the campus. Low-impact development planters would be incorporated as needed to control stormwater runoff from adjacent buildings and walkways. Planting areas would also be added along West Manchester Avenue to provide green edges along this major street corridor.

All existing irrigation would be removed and replaced with a water-efficient irrigation system with a smart weather-based controller. All landscaping would be designed to use recycled water for irrigation.

2.3.2 Grading, Earthwork, Demolition, and Drainage

Construction would involve demolition of existing paving, buildings, and recreational uses; site clearing; grading and excavation for the proposed buildings; utility, circulation, and landscaping improvements, structural development; and site cleanup. Construction of the Project would result in approximately 537,600 sf of impervious surfaces and approximately 182,400 sf of pervious surfaces across the Project Site. The Project would require a maximum excavation depth of 11.5 feet and would be anticipated to

include soil cut and fill, likely resulting in soil export. Additionally, the Project would result in demolition debris, resulting from demolition of buildings, batting cage and tennis courts, basketball courts, parking lots, and concrete walkways.

Drainage improvements would be included for all recreational components and exterior finished grades or surfaces would all be designed with positive drainage away from foundations. Ground surfaces and paved surfaces within 10 feet of building foundations would be sloped between 0.5 to 5 percent to meet Americans with Disabilities Act (ADA) requirements while also providing adequate slopes for drainage. Planters would have adequate surface drainage to present standing water adjacent to foundations. Additional catch basins, storm drains, and landscape drains would be installed throughout the Project Site to ensure adequate site drainage. In addition, the following erosion and sediment control measures would be implemented during construction:

- All inlets receiving stormwater runoff from the Project Site shall be equipped with inlet protection.
- All paved areas shall be kept clear of earth materials and debris and the Project Site shall be maintained so to minimize sediment laden runoff entering the storm drain system.
- Stockpiled earthen material shall be either covered with a tarp or watered sufficiently to eliminate dust.
- 6-foot-tall dust fences shall be installed around the Project Site during construction activities.
- Fiber rolls and/or gravel bags shall be utilized to stabilize soils and prevent erosion.
- Regraded dirt shall be stabilized against erosion through hydroseeding, anchored geotextile fabric, or equivalent measure.

2.3.3 Sustainable Design Features

Per the California Energy Code Section 110.10B, the Project is required to provide at least 15 percent of the total roof area. The Project would meet this requirement and would provide the required coverage of solar ready area on building rooftops. As discussed above, the proposed parking improvements also include 25 electric vehicle parking spaces. Irrigation improvements included in the Project would use reclaimed water and check valves or anti-drain valves are required on all sprinkler heads where low point drainage could occur as part of the model water efficient landscape ordinance requirements. The Project would comply with all mandatory measures under 2022 California Green Building Standards Code (CALGREEN), Part 11, Title 24 CCR for equipment and systems efficiency.

2.4 Construction Process and Timeline

Construction would occur in multiple phases with site preparation and demolition anticipated to begin January 2026 through October 2027, with occupancy in January 2028. As indicated above, Inglewood High School students and faculty would be relocated to the Morningside High School during the reconstruction of the campus. Abatement work is conducted regularly throughout the campus, and would occur in compliance with existing regulations and standards.

The various phases of construction would consist of demolition of existing buildings, rough grading of the site, construction of new buildings, and modernization of the existing buildings. Total construction would occur for a duration of 22 months with a 5-day work week. If construction takes longer than assumed, work could occur beyond the anticipated duration.

Construction is expected to occur between 7:00 a.m. and 8:00 p.m., Monday through Friday, and would comply with the City of Inglewood Municipal Code limits regarding construction activity (Municipal Code Section 5-41).[1] Nighttime construction activities would occur in compliance with the City's Municipal Code, which requires issuance of a permit for construction equipment operated outside the hours of 7:00 a.m. – 8:00 p.m. or for work on weekends.

All construction and work areas would be clearly demarcated and student access would be prohibited, consistent with construction efforts on other District facilities. All construction equipment staging would be located on-site in clearly demarcated areas. During construction, materials and equipment may be visible from adjacent streets, however, the District would screen these areas with construction fencing. Construction workers would park on the Project Site in specially designated areas. Construction of the Project may require detours and temporary lane closures along streets bordering the Project Site. A Construction Management Plan would be prepared if required by the City.

2.5 Discretionary Approvals Required

2.5.1 Lead Agency

In conformance with CEQA Guideline Sections 15050 and 15367, the District is the Lead Agency, which is defined as the "public agency, which has the principal responsibility for carrying out or approving a project."

2.5.2 Reviewing Agencies

There are no responsible or trustee agencies. DSA will review and approve the project design for compliance with California Code of Regulations Title 24 and access compliance requirements.

2.5.3 Permits and Other Approvals

Actions and approvals that may be required from other agencies for the Proposed Project include:

- DSA –Project closeout and certification will be required during each construction phase
- State Water Resources Board - Construction General Permit coverage
- Los Angeles Regional Water Quality Control Board –National Pollutant Discharge Elimination System (NPDES) Permit coverage and review/approval Stormwater Pollution Prevention Plan (SWPPP)
- City of Inglewood Department of Public Works – Permit for construction noise if construction activities are required outside of the hours identified in the City's Municipal Code

[1] Construction could occur on weekends if schedule is running behind.

CHAPTER 3
Environmental Checklist

1. Project Title:	Inglewood High School Reconstruction Project
2. Lead Agency Name and Address:	Inglewood Unified School District 401 S. Inglewood Avenue Inglewood, CA 90301
3. Contact Person and Phone Number:	Jordan Miles, Executive Director Construction and Facilities, Inglewood Unified School District (310) 680-4898
4. Project Location:	Inglewood High School 231 South Grevillea Avenue Inglewood, CA 90301
5. Project Sponsor's Name and Address:	Inglewood Unified School District Business Services 401 S. Inglewood Avenue Inglewood, CA 90301
6. General Plan Designation(s):	Civic Center (C-C)
7. Zoning:	Civic Center (C-C)
8. Description of Project:	School improvements (see Chapter 2, Project Description)
9. Surrounding Land Uses and Setting:	North: West Manchester Boulevard; commercial uses; and Inglewood Public Library and Inglewood City Hall South: West Kelso Street; Single-family and multi-family residential East: South Grevillea Avenue; multi-family housing West: Single-family residential; retirement community
10. Other public agencies whose approval is required:	Office of the Division of State Architect; State Water Resources Board, Los Angeles Regional Water Quality Control Board, City of Inglewood
11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resource Code Section 21080.3.1:	Pursuant to Assembly Bill 52, the District sent letters to Native American tribes traditionally affiliated with the area, including Gabrieleno Band of Mission Indians – Kizh Nation, Gabrieleno/Tongva San Gabriel Band of Mission Indians, Gabrieleno Tongva Indians of California Tribal Council, Gabrieleno/Tongva Nation, Gabrielino-Tongva Tribe, Santa Rose Band of Cahuilla Indians, and Soboba Band of Luiseno Indians.

3.1 Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by the Project, involving at least one impact that is "Potentially Significant", as indicated by the checklist and discussion on the following pages.

☒ Aesthetics	☐ Agriculture/Forestry Resources	☒ Air Quality
☐ Biological Resources	☒ Cultural Resources	☒ Energy
☒ Geology/Soils	☒ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use/Planning	☐ Mineral Resources
☒ Noise	☐ Population/Housing	☐ Public Services
☐ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☐ Utilities/Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

DETERMINATION:

On the basis of this initial study:

☐ I find that the Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Date

3.2 Environmental Checklist

I. Aesthetics

Issues (and Supporting Information Sources):		*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
I.	**AESTHETICS — Except as provided in Public Resources Code Section 21099, would the project:**				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c)	Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d)	Create a new source of substantial light or glare which would adversely affect daytime or nighttime views in the area?	☒	☐	☐	☐

Discussion

a) **No Impact.** The Project Site is located within an urbanized area of the City of Inglewood (City) and is developed with the Inglewood High School. The surrounding land uses are primarily comprised of residential uses including a retirement community to the west, single-family and multi-family residential uses to the south, and residential uses including a multi-family apartment building to the east. To the north of the Project Site are located commercial uses as well as institutional uses, including the Inglewood Public Library and Inglewood City Hall.

According to the City of Inglewood General Plan Open Space Element the City is a fully developed and urbanized community. The City of Inglewood General Plan does not identify scenic vistas within the City or within the vicinity of the Project Site (City 1995). The Project would include demolition, renovation, and construction of school facilities on an existing campus. Although the proposed demolition and improvements would be visible to the public from the public right-of-way along South Grevillea Avenue, West Kelso Street, and West Manchester Boulevard, the proposed improvements would not change the current views to and from any scenic vistas, as none are present within the vicinity of the Project Site. As a result, no impacts to scenic vistas would occur. This issue will not be further evaluated in the EIR.

b) **No Impact.** According to the California Department of Transportation (Caltrans) Scenic Highways Mapping Program, there are no designated or eligible State scenic highways on or near the Project Site. The nearest eligible highway is Route 187 (Near Santa Monica)/Route 101 (Near El Rio) located approximately six miles northwest of the Project Site. The nearest Federal Byway is the Arroyo Seco Historic Parkway Scenic Byway [Interstate 110 (I-110)] located approximately nine miles northeast of the Project Site, north of downtown Los Angeles and south

of Interstate 210 in Pasadena (Caltrans, 2019). Therefore, no impacts related to scenic resources along a state scenic highway would occur. This issue will not be further evaluated in the EIR.

c) **Less Than Significant Impact.** The Project Site is located in an urbanized (urban) area within the City of Inglewood, including classroom, administrative buildings, and recreational facilities. The existing visual character surrounding the Project Site is that of a residential neighborhood, with single-family and multi-family residences surrounding the school to the south and west, commercial uses and city facilities to the north, and residential uses to the east. The Inglewood High School campus is currently developed as a high school with classroom buildings, athletic fields, and one surface parking lot. While the Project Site is relatively level, the Project Site generally slopes towards the southwest with elevations between approximately 113 and 119 feet above mean sea level.

Public views addressed in this analysis include those from West Kelso Street, West Manchester Boulevard, and S. Grevillea Avenue. Views from private residences and the adjacent commercial facilities are not considered protected views under CEQA, and therefore are not further discussed.

The Project Site is zoned and designated as Civic Center (C-C), which is the concentration of government services including, but not limited to, City Hall, Inglewood Public Library, and Inglewood High School. Therefore, the Project will not conflict with applicable zoning. In addition, none of the General Plan Elements have specific regulations governing scenic quality.

Construction. Construction of the Project would include the presence of a construction staging area and construction fencing as well as the use of heavy machinery including, but not limited to, large trucks, bulldozers, excavators and a crane. The Project Site is largely enclosed by the existing buildings, walls, and permanent fencing. The existing fencing and temporary construction fencing would screen public views of construction activities on the Project Site. Construction activities are anticipated to occur from the early 2026 for an anticipated 22 months, in various phases including demolition, grading and excavation, construction, and finish work. In addition, trucks used to haul excavation material off-site during construction would follow the City's designated truck routes to ensure large trucks would not travel through local residential streets and would utilize West Manchester Boulevard to I-405 or South Prairie Avenue or Crenshaw Boulevard to I-105 (City of Inglewood Public Works Department 2023). Visual impacts associated with construction equipment and activities on the Project Site for this temporary duration would not degrade the urbanized visual character of the Project Site or its surroundings resulting in a significant visual impact.

Operation. All proposed improvements would occur entirely within the developed Project Site. After construction, the proposed improvements would be partially viewable depending on viewing location due to the installation of new security fencing around the perimeter of the Project Site and intervening buildings and landscaping throughout the Project Site.

Prominent existing visual elements on the eastern portion of the Project Site, South Grevillea Avenue, include the existing classrooms and auditorium. Along the southern portion of the Project Site a parking lot and after school education campus buildings are visible. Views along South Grevillea Avenue would change due to the proposed parking and circulation improvements

and new security fence and landscaping. Views of the existing athletic area would change due to the construction of the new athletic facilities. Views along West Manchester Boulevard would change due to the proposed demolition of the classroom buildings located along the eastern portion of the Project Site.

Prominent existing visual elements along South Grevillea Avenue include classrooms and the existing tennis courts. However, views from this roadway are largely screened by the existing buildings and fencing. Views from West Manchester Boulevard would change due to the proposed demolition of the classroom buildings located along the northern portion of the Project Site. However, the proposed classroom buildings would be located in place of these demolished buildings. Therefore, views from West Manchester Boulevard would remain largely unchanged from existing conditions.

Despite these changes, public views along West Manchester Boulevard and South Grevillea Avenue would not be substantially altered as the proposed modifications would be consistent in size, scale and building materials of existing campus structures. Ornamental landscaping would remain or would be re-planted along the exterior perimeter of the Project Site and security fencing would be installed similar to the existing fencing surrounding the Project Site. Therefore, the visual character and quality of public views would not be significantly impacted from public viewpoints.

Due to site configuration and intervening structures and landscaping, only those buildings and activities near the perimeter of the Project Site would be visible along South Grevillea Avenue and West Manchester Boulevard. The majority of the new athletic facilities would be located in the central and western portions of the Project Site and would be visible from West Manchester Boulevard and West Kelso Street. Other modernization elements of the Project, including repairing interior and exterior finishes, replacing flooring and interior lighting, and landscaping improvements would not be visible from public vantage points due to security fencing and intervening structures and landscaping. Lastly, the proposed parking and circulation improvements would update existing parking areas on the Project Site and would not constitute a significant change in the visual quality from public views.

Overall, the visual character would be similar to the existing conditions, which is that of an existing high school, school-related uses, and athletic facilities. Moreover, the Project would replace the existing aging school infrastructure with new improved structures, and therefore would aim to improve the visual quality of public views of the Project Site. Therefore, impacts on the visual character or quality of public views of the Project Site or surrounding area would be less than significant. This issue will not be further evaluated in the EIR.

d) **Potentially Significant Impact** The Project Site is located adjacent to West Manchester Blvd, South Grevillea Avenue, and West Kelso Street which contain cars and streetlights that emit light and glare during the day and night consistent with an urban residential neighborhood. In addition, the campus currently includes limited exterior security lighting with additional lighting from street lights on adjacent roadways.

Construction activities would occur from early 2026 over a duration of approximately 22 months. Nighttime work is not expected but could occur if needed and with approval as necessary. Temporary lighting sources required for nighttime construction activities may result in sources of light for adjacent residences and result in a source of glare to motorists on adjacent roadways. Therefore, this impact is considered potentially significant and will be analyzed in the EIR.

After Project construction activities are complete, the Project would introduce new sources of artificial light throughout the Project Site. New lighting on the Project Site would include campus path lighting, a total of 16 new Musco lights at the sports facilities, and exterior building lights.

Windows are the main source of glare complaints on buildings. The EIR will analyze any potential impacts from glare associated with the Project. Due to the installation of additional lighting, especially the field lighting, this impact is considered potentially significant and will be analyzed in the EIR.

II. Agricultural and Forest Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
II. AGRICULTURAL AND FOREST RESOURCES — In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. **Would the project:**				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Discussion

a) **No Impact.** The Project Site is located in an urbanized area and is developed with the Inglewood High School. In addition, the General Plan designation and zoning for the Project site is Civic Center (C-C). According to the California Department of Conservation's Los Angeles County Important Farmland Map, the Project Site is classified as "Urban and Built-Up Land," which does not contain any agricultural uses or areas designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (California Department of Conservation 2025). Therefore, the Project would not convert farmland to a non-agricultural use and no impact would occur. This issue will not be further evaluated in the EIR.

b) **No Impact.** As noted above in threshold (a), the Project Site is currently developed as a high school within an urbanized area and does not contain any agricultural land. The Project Site is located within the Downtown Transit Oriented District of the City (City of Inglewood 2023). The Downtown Transit Oriented District Development Plan and Design Guidelines identifies that the Project Site is located within the Civic Center District and is designated and zoned as Civic Center (C-C). The C-C district allows government offices, schools and other public facilities, as well as limited private office and retail and does not allow agricultural uses (City of Inglewood 2023, City of Inglewood 2024). There are no Williamson Act contracts in the vicinity of the

Project Site (California Department of Conservation 2024). Therefore, the Project would not conflict with existing zoning for agricultural use, or a Williamson Act contract and no impact would occur. This issue will not be further evaluated in the EIR.

c) **No Impact.** As noted above in thresholds (a) and (b), the Project Site is located within an urbanized area on an existing school site. The Project Site is located within the Downtown Transit Oriented District of the City. Within the Downtown Transit Oriented District Development Plan and Design Guidelines, the Project Site is located within the Civic Center District, and is zoned and designated as Civic Center (C-C), which does not include forest lands, timberlands, or timberland zoned Timberland Production (City of Inglewood 2024). Therefore, the Project would not conflict with existing zoning for forest land and no impact would occur. This issue will not be further evaluated in the EIR.

d) **No Impact.** As noted above in threshold (c), the Project Site is currently developed as a high school and, according to the City of Inglewood General Plan and Municipal Code, is not designated as forest land (City of Inglewood 2023, City of Inglewood 2024). Therefore, the Project would not result in the loss of forest land or conversion of forest land to non-forest use; therefore, no impact would occur. This issue will not be further evaluated in the EIR.

e) **No Impact.** As noted above, construction and operation of the Project would have no impact on agriculture or forest resources. Additionally, there would be no need for land acquisitions to implement the Project. No other changes in the existing environment, which, due to their location and nature, would result in the conversion of farmland to non-agricultural use or conversion of forest land to non-forest use under the Project. Therefore, no impact would occur. This issue will not be further evaluated in the EIR.

III. Air Quality

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY — Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

Discussion

a) **Potentially Significant Impact.** The Project is located in the South Coast Air Basin, which is governed by the South Coast Air Quality Management District (SCAQMD). The SCAQMD is the air pollution control agency primarily responsible for preparing the Air Quality Management Plan (AQMP) in coordination with the California Air Resources Board (CARB), Southern California Association of Governments (SCAG), and the U.S. Environmental Protection Agency (USEPA). The AQMP is a comprehensive air pollution control program for making progress towards and attaining the established State and federal ambient air quality standards. The 2022 AQMP was adopted by the governing board of the South Coast AQMD Governing Board on December 2, 2022.

The Project would modernize Inglewood High School, which would result in an increase in air pollutant emissions during Project-related construction. Although the campus population would increase over existing conditions with the relocation of students from Morningside High School to Inglewood High School, the overall campus capacity would not increase with the Project. Since students will be shifted, the regional impact of the increase in student population will be analyzed. Therefore, the impact is considered potentially significant. An air quality assessment will be prepared to analyze the Project's potential air quality impacts and consistency with the AQMP.

b) **Potentially Significant Impact.** The Project Site is located in the South Coast Air Basin which is in nonattainment for ozone and particulate matter (PM10 and PM2.5). Construction activities associated with the Project would generate a short-term increase in air pollutants that could cumulatively contribute to the existing air quality of the region. Since students will be shifted, the regional impact of the increase in student population will be analyzed. An air quality assessment will be prepared to analyze the Project's potential air quality impacts related to criteria pollutants. This impact is considered potentially significant and will be analyzed in the EIR.

c) **Potentially Significant Impact.** Sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are schools, residences, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis.

The closest sensitive receptors include the onsite student population at Inglewood High School, as well as adjacent residential uses to the south and west, and a childcare facility and residential uses to the east. Although existing students and staff will be temporarily relocated during construction, the Project's construction activities could potentially expose nearby residents and children to elevated concentrations of air pollutant emissions from construction of the Project. In addition, potential impacts during operation will also be analyzed. Therefore, this issue will be evaluated in the EIR.

d) **Less than Significant Impact.** According to the SCAQMD CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. Since the Project would modernize and upgrade the existing Inglewood High School campus, it would not include any uses identified by the South Coast AQMD as being associated with odors.

Construction activities associated with the Project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short term in nature and cease upon the Project's completion. In addition, the Project would be required to comply with the California Code of Regulations, Title 13, sections 2449(d)(3) and 2485, which minimizes the idling time of construction equipment either by shutting equipment off when not in use or by reducing the time of idling to no more than five minutes. This would reduce detectable odors from heavy-duty equipment exhaust. Any odors generated from construction and operation of the Project are not expected to affect a substantial number of people. Therefore, impacts would be less than significant, and this issue will not be addressed in the EIR..

IV. Biological Resources

Issues (and Supporting Information Sources):	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES — Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Discussion

a) **Less Than Significant Impact.** The Project Site is developed with an existing school campus and is either paved, graded, or landscaped to support school building facilities, parking, and athletic facilities. There is no native vegetation located on the Project Site. Ornamental landscaping is present throughout the Project Site, including along the periphery of the existing parking lot and internal sidewalk and in courtyards between classrooms. Ornamental vegetation including trees occurring within the Project Site may provide suitable nesting habitat for migratory birds and raptors protected under the Federal Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code, which prohibit the take or destruction of migratory birds/raptors, their nests, and/or eggs.

Construction. Construction of the Project would include removal of existing trees and landscaping, as well as demolition of buildings and structures. Therefore, construction activities may directly and indirectly impact nesting birds within the Project Site. Construction is anticipated commence in early 2026 and take approximately 22 months. Therefore, construction is expected to overlap the avian breeding season (generally January 15 through September 15). To the extent feasible, tree and vegetation removal would take place outside of the general avian breeding season; however, if these activities occur within this season, the District and

construction contractor(s) would be required to comply with federal law and the MBTA. In compliance with federal law, a nesting bird survey would be performed by a qualified biologist within 72 hours of any construction activities including ground disturbance, tree removal or vegetation trimming during the nesting season. If active nests are identified during the survey, the qualified biologist will establish appropriate measures to avoid impacts on active nests, which may include a buffer around designated nests or other avoidance measures. The biologist will continue to monitor the nest throughout the duration of the construction activities within the vicinity of the nest, and the measures will remain in place until it has been determined the young have fledged or the nest has been abandoned.

With compliance with applicable laws and regulations protecting nesting and migratory birds, construction impacts to candidate, sensitive, or special-status species would be less than significant. This issue will not be further evaluated in the EIR.

Operation. Operational activities associated with the school and athletic facilities would continue, similar to existing conditions. Indirect impacts to nesting birds during operation of the Project may result from additional lighting onsite. If present onsite, nesting birds utilizing the ornamental landscaping are already adapted to living in an urbanized setting with the existing night lighting and event noise on-site, as well as from the adjacent residential and commercial areas and traffic along roads. Furthermore, lighting fixtures would be designed to prevent unwanted spill light, uplight, or glare. Therefore, operational impacts to habitats or sensitive species would be less than significant and this issue will not be addressed in the EIR.

b) **No Impact.** The Project Site is currently developed as an operating high school which is paved, graded, developed or landscaped. Vegetation within the Project Site is comprised of non-native grass for athletic field use and ornamental landscaping. There is no wetland or riparian habitat or other sensitive natural community on or adjacent to the Project Site. Therefore, there would be no impacts to riparian habitat or sensitive natural communities. This issue will not be further evaluated in the EIR.

c) **No Impact.** As described in threshold 4(b), there are no State or federally protected wetlands within or adjacent to the Project Site. The Project would occur entirely within the existing developed school campus. Therefore, the Project would not affect any State or federally protected wetlands either directly or indirectly. Thus, no impact would occur and this issue will not be addressed in the EIR.

d) **No Impact.** The Project Site is located in an urbanized and developed area surrounded by residential and commercial development. The Project Site is developed as an operating high school and is either paved, graded, or landscaped. The Project Site is currently used for administrative, educational, and recreational activities and is also entirely enclosed by buildings and fencing. The Project Site and surrounding area do not contain any streams or bodies of water that may be inhabited by any native resident or migratory fish species. Because the Project would occur on an existing developed school campus within a developed area, the Project Site is not considered a migratory wildlife corridor. Therefore, the Project would not result in the interference of the movement of any native or migratory species, wildlife corridors, or the use of native wildlife nursery sites. Thus, no impact would occur and this issue would not be addressed in the EIR.

e) **Less Than Significant Impact.** A significant impact could occur if a project were inconsistent with local regulations pertaining to biological resources, such as the City Protected Tree Ordinance (Section 12-113). The City of Inglewood Municipal Code protects trees having a minimum trunk diameter of eight inches measured fifty-four inches above ground and 13 specific tree species that have reached a minimum of four inches diameter trunk size. Construction of the Project would result in the removal of 26 existing trees. The Project would protect the existing palm trees on the Project Site. In addition, the Project includes planting plans to provide ornamental trees and would include additional landscaping throughout the Project Site. Some of the 26 trees to be removed are considered to be trees protected by the Inglewood Municipal Code. For those trees that are protected, the District would work with the City to evaluate those trees, apply for a permit to remove trees, and replace those trees with trees equal in size, species, and value, in compliance with the Municipal Code. Therefore, the Project would not conflict with any local policies or ordinances related to the protection of biological resources and impacts would be less than significant. This issue will not be further evaluated in the EIR.

f) **No Impact.** The Project Site is fully developed in an urbanized area of the City. There are no habitat conservation plans or similar plans for the protection of biological resources that apply to the City. Therefore, the Project would not conflict with applicable conservation plans, and no impact would occur. This issue will not be further evaluated in the EIR.

V. Cultural Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
V. CULTURAL RESOURCES — Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to in §15064.5?	☒	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☒	☐	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

Discussion

a) **Potentially Significant Impact.** According to CEQA Guidelines, a project has the potential to impact a historical resource when the project involves a "substantial adverse change" in the resource's significance. Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the historical resource would be materially impaired".

Based on visual observation of the campus, preliminary research, and evaluation of the eligibility criteria for listing of the existing school facilities at the federal, State, and local levels, ESA has identified buildings on campus that are potentially eligible for listing in the California Register of Historical Resources. Since the Project may have the potential to result in a substantial adverse change in the significance of a historical resource, as defined in CEQA Guidelines Section 15064.5, impacts are considered to be potentially significant and will be further analyzed in the EIR.

b) **Potentially Significant Impact.** The campus is a developed site, located within an urbanized mixed-use area of the City of Inglewood. Construction of the Project would generally involve demolition of a majority of the existing on-site structures, grading and foundation work, and building construction. Inadvertent archaeological discoveries are possible during the construction period, particularly during demolition, grading, or excavation, which could have the potential to impact unknown cultural resources. The Project would therefore have the potential to cause a substantial adverse change in the significance of an archaeological resource pursuant to section 15064.5. Impacts are considered to be potentially significant and will be further analyzed in the EIR.

c) **Less Than Significant Impact.** The campus was originally constructed in 1925 with subsequent improvements and additions occurring over the following decades. No known burial sites are located within the Project site and the area has been previously disturbed by development. However, in the unlikely event that human remains or funerary objects are discovered during the Project related ground-disturbing activities, Health and Safety Code section 7050.5 and Public Resources Code section 5097.98 mandate the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery. Specifically,

Health and Safety Code section 7050.5 requires that if human remains are discovered on a project site, disturbance of the site shall remain halted until the County coroner has conducted an investigation into the circumstances, manner, and cause of any death, and recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in section 5097.98 of the Public Resources Code. If the County coroner determines that the remains are not subject to his or her authority and if the coroner has reason to believe the human remains to be those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission.

Compliance with existing regulations regarding the discovery of human remains would ensure that the Project's potential impacts to human remains would be less than significant. This issue will not be further evaluated in the EIR.

VI. Energy

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
VI. ENERGY — Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐

Discussion

a) **Potentially Significant Impact.** The Project would consume energy resources during temporary construction activities, which would result in short-term energy use in the form of electricity from construction equipment and petroleum or diesel fuel from construction equipment and on-road truck and other vehicle trips. Impacts related to energy use during construction are potentially significant and will be analyzed further in the EIR.

The Project would result in the demolition of the majority of the buildings located on the Project Site, the modernization of some of the existing buildings, and the construction of six new buildings that would comply with the 2022 Building Energy Efficiency Standards. Under the 2022 standards, buildings would be more energy efficient compared to the 2019 standards. However, increased electrical, gas, and transportation energy demands may result from Project implementation. Therefore, impacts related to energy are considered potentially significant and this issue will be analyzed in the EIR.

Potentially Significant Impact. As discussed above, the Project would result in the demolition of the majority of the buildings located on the Project Site, the modernization of some of the existing buildings, and the construction of six new buildings. The existing school consumes energy for uses such as heating, cooling, and ventilation of buildings; water heating; operation of electrical systems; lighting; and use of on-site equipment and appliances. Increased electrical, gas, and transportation energy demands may result from Project implementation. Impacts are considered potentially significant and will be analyzed in the EIR.

VII. Geology, Soils, and Seismicity

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
VII. GEOLOGY and Soils — Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42.)	☐	☐	☐	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☒	☐	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐

Discussion

The following discussion is based, in part, on the *Geotechnical Investigation Report* prepared by Geolabs-Westlake Village (GWV), dated September 25, 2024, as well as the *Fault Investigation Report* prepared by GWV, dated December 7, 2023, both of which are provided in **Appendix A-2** of this document.

a.i) **Less Than Significant Impact.** Similar to all of southern California, the Project Site is in a known seismically active region as a result of being located near the active margin of the North American and Pacific tectonic plates, where the potential of seismic hazards exists. According to the Department of Conservation California Geological Survey (DOC), the northeast portion of the Project Site is located within the Newport-Inglewood-Rose Canyon Fault Zone (DOC 2024). In the event of a seismic event, the proposed improvements and recreational facilities could be subjected to seismic shaking that could damage the facilities. Although a potential effect of the environment (i.e., an earthquake) on the Project is not subject to CEQA analysis, structural and mechanical failure of facilities onset by seismic ground shaking could threaten the safety of

workers or the public, resulting in a potentially significant impact and are considered below for informational purposes.

Construction of the proposed improvements and recreational facilities would be required to comply with the recommendations provided in the *Geotechnical Investigation Report* including providing proper setbacks from the fault zone. In addition, the Project would be required to comply with all seismic-safety development requirements, including the Title 24 standards and Earthquake Design Regulations of Chapter 16A of the California Building Code under the direction and approval authority of the Division of the State Architect (DSA). As described above, project plans will be reviewed and approved by DSA and DSA will be responsible for final design review and construction oversight. Conformance with all project-specific geotechnical recommendations and applicable seismic-safety development requirements would minimize seismic ground shaking effects in the event of a major earthquake and ensure that the potential seismic or geologic hazard impacts are not significant. Therefore, impacts related to seismic ground shaking effects would be reduced to a less-than-significant level. This issue will not be further evaluated in the EIR.

a.ii) **Less Than Significant Impact.** All of Los Angeles County, including the Project Site, is located within a known seismically active region and is subject to ground shaking. As described above, the northeast portion of the Project Site is located within the Newport-Inglewood-Rose Canyon Fault Zone. Other active faults in the vicinity of the Project Site include the Palos Verdes fault approximately 14 miles south, the Whittier fault zone approximately 20 miles east, the Redondo Canyon fault approximately 10.5 miles southwest, the Santa Monica fault approximately 9 miles northwest, the Hollywood fault zone approximately 10 miles north, and the Charnock fault approximately 5 miles southeast of the Project Site. A seismic event on the Newport-Inglewood fault (or other nearby faults) could cause significant ground shaking on the Project Site. According to the *Geotechnical Investigation Report* (**Appendix A-1**), the largest magnitude earthquakes anticipated along these faults would be a magnitude 7.5 (Mw) earthquake along the San Andreas Fault and a 6.7 Mw earthquake along the Northridge Blind Thrust Fault. Due to the proximity of the site to the Newport-Inglewood Fault, near field effects from strong ground motion associated with a large earthquake along this fault may occur at the Project Site. These near field effects, including "fling" and directivity of strong ground motion, may result in significantly higher accelerations at the site.

Construction of the Project would be required to comply with the recommendations provided in the *Fault Investigation Report* and the *Geotechnical Investigation Report*. In addition, the Project would be required to comply with all seismic-safety development requirements, including the Title 24 standards and Earthquake Design Regulations of Chapter 16A of the California Building Code under the direction and approval authority of the Division of the State Architect (DSA). As described above, project plans will be reviewed and approved by DSA and DSA will be responsible for final design review and construction oversight. Implementation of all project-specific geotechnical recommendations and applicable seismic-safety development requirements would minimize seismic ground shaking effects in the event of a major earthquake and ensure that the potential seismic or geologic hazard impacts would be less than significant. Therefore, with compliance with existing regulations and standards, as noted in the *Fault Investigation Report* and

Geotechnical Investigation Report, impacts related to seismic ground shaking effects would be reduced to a less-than-significant level. This issue will not be further evaluated in the EIR.

a.iii) **Less Than Significant Impact.** Liquefaction occurs when saturated, loose to medium dense, cohesionless soils are densified by ground shaking or vibrations. According to the *Geotechnical Investigation Report* (Appendix A-1), the Liquefaction Hazards Zone on the State of California *Seismic Hazards Zones Map* indicates that the Project Site is not located in a liquefaction susceptibility zone. In addition, due to the absence of shallow groundwater and the presence of sandy soils, it was determined the potential for liquefaction at the Project Site is low. Furthermore, the potential for dry seismic settlement on the Project Site was evaluated. With an estimated peak ground acceleration of 0.99g, differential settlement on the Project Site is anticipated to be on the order of 1 inch, with differential settlement of 0.50 inch over a span of 30 feet considering earthquake ground motions with a 2% probability of exceedance in 50 years. With implementation of the design and construction recommendations provided in the *Geotechnical Investigation Report*, the proposed structures would be designed in consideration with the settlement potential on the Project Site. As a result, the Project would not expose people or structures to potentially substantial adverse effects related to liquefaction or seismic settlement, and impacts would be less than significant. This issue will not be further evaluated in the EIR.

a.iv) **No Impact.** According to the Department of Conservation California Geological Survey (DOC), the Project Site is not located in a Landslide Hazard Zone on the State of California Seismic Hazard Zones Map (DOC 2024). In addition, no evidence for landslides were observed on or in the immediate vicinity of the Project Site at the time of the field exploration conducted in support of the geotechnical investigation. Based on topographic conditions of the Project Site, which is essentially flat with a grade difference of about 6 feet from the northeast corner of the property to the southwest corner, landsliding is not considered a potential hazard at the Project Site. No impact would occur and no further analysis will be included in the EIR.

b) **Less Than Significant Impact.** The entire Project Site has been disturbed through prior development of the existing school campus. The subsurface soil profile consists of fill underlain by Older Alluvium deposits. The maximum thickness of the fill is approximately 3 feet and asphalt thickness ranges from 3 to 4 inches. Fill material on the Project Site generally consists of silty fine to medium sand that is considered moist to very moist. The underlying alluvium is also silty sand considered moist.

Construction. Construction of the Project would require grading and excavation which may result in erosion during construction activities. However, previously developed and graded areas are less likely to erode and the soils on the Project Site were previously altered from the original construction and other previous improvements on the Project Site. As stated in the Project Description above, construction would result in a net cut of materials, and approximately 4,950 cubic yards of soil would be exported off the Project Site. In compliance with the State Water Resources Board Construction General Permit, the District would be required to prepare and implement a Storm Water Pollution Prevention Plan (SWPPP), which would include best management practices (BMPs) such as erosion control requirements during construction. Per the recommendations of the *Geotechnical Investigation Report* (Appendix A-1), temporary

excavations (such as utility trenches, grading removals, and back cuts for retaining wall construction) should comply with California Division of Occupational Safety and Health requirements. Excavations for the improvements would reach a maximum of 5 ft in depth. Given the shallow depth of earthwork required for the majority of the proposed improvements and the Project Site's relatively level topography, rapid storm water runoff would be limited, and would not exacerbate erosion potential with implementation of a SWPPP. Therefore, impacts would be less than significant related to soil erosion.

Operation. Following construction, the proposed Inglewood High School campus would be covered completely by pavement, structures, and landscaping, which would not leave exposed areas of bare soil susceptible to erosion. In addition, the Project would include approximately 129,522 sf of pervious surfaces and drainage improvements across the Inglewood High School campus, such as underground storm-capture infiltration vaults, to ensure adequate site drainage is met and reduce the potential for erosion from stormwater. Refer to Section X (*Hydrology and Water Quality*) below for a detailed discussion of impacts related to erosion from stormwater. As described above, a SWPPP would be required for the Project, which would also include operational BMPs to ensure soils within all exposed soil areas of the Project Site are compacted after completion of demolition activities and maintained to avoid loss of topsoil and erosion. As such, Project operation would have a less-than-significant impact related to erosion and loss of topsoil. This issue will not be further evaluated in the EIR.

c) **Less Than Significant Impact.** As previously discussed above, the Project Site has a low potential for liquefaction, landslides, and soil erosion, and impacts are considered less than significant. Since the Project Site has been previously developed, risks for soil-related instability would be unlikely. According to the *Geotechnical Investigation Report* (Appendix A-1), foundation recommendations are general in nature, and during the design phase of the project, additional project-specific foundation design criteria can be provided. The *Geotechnical Investigation Report* includes recommendations for the installation of a retaining wall with a back drainage system to be included. Therefore, with the implementation of project-specific geotechnical report recommendations, the proposed improvements would not result in conditions on the Project Site that would result in unstable soils, resulting in an on-site or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse, and impacts would be less than significant. This issue will not be further evaluated in the EIR.

d) **Less Than Significant Impact.** Expansive soils are fine-grained soils (generally high-plasticity clays) that can undergo a significant increase in volume with an increase in water content and a significant decrease in volume with a decrease in water content. Changes in the water content of an expansive soil can result in severe distress to structures constructed upon the soil. According to the *Geotechnical Investigation Report* (Appendix A-1) prepared for the Project Site, the soils onsite are considered non-expansive. Therefore, the report includes recommendations regarding drainage and moisture content to address the potential for expansion. In addition, the report recommends that backfill for retaining walls should be properly compacted. Prior to the start of construction, the District would be required to incorporate the recommendations of the *Geotechnical Investigation Report* and any other subsequent geotechnical reports prepared for the Project into the final design plans and construction specifications. The final design plans for the Project would be reviewed by

DSA; consistent with the California Building Code. As described above, the District would be required to incorporate all recommendations from the geotechnical report into the plans in order to comply with existing regulations. With incorporation of the recommendations from the geotechnical investigations, expansive soil impacts associated with implementation of the Project would be less than significant. This issue will not be further evaluated in the EIR.

e) **No Impact.** Inglewood High School is currently developed with an existing sewer system for the disposal of wastewater that connects to the City's sewer system. The proposed improvements would not include the installation or use septic tanks or alternative wastewater disposal systems. Demolition of the existing Administration Building, Music Building, Performing Arts Building, and numerous existing (temporary and permanent) classroom buildings would not result in the generation of wastewater. Therefore, no impacts would occur and no further analysis will be included in the EIR.

f) **Potentially Significant Impact**. Paleontological resources are defined as fossilized remains of vertebrate and invertebrate organisms, fossil tracks and trackways, and plant fossils. A unique paleontological site would include a known area of fossil-bearing rock strata.

Paleontological resources are classified as nonrenewable scientific resources and are protected by State statute (Public Resources Code section 5097.5, Archaeological, Paleontological, and Historical Sites). Impacts on paleontological resources occur when excavation activities encounter fossiliferous geological deposits and cause physical destruction of fossil remains. The potential for impacts to paleontological resources to occur depends upon the sensitivity of underlying geologic units and is further influenced by the extent and depth of grading and excavation activities. Geologic mapping indicates that the surface of the Project Site is entirely underlain by middle to late-Pleistocene age alluvium (Qoa), which has a high potential for paleontological resources. Moreover, numerous paleontological resources have been recovered from deposits of similar age near the Project Site. Therefore, the potential exists for discovery of paleontological resources during ground-disturbing activities, which may result in damage or destroy paleontological resources that may be present below the ground surface. As impacts may be potentially significant, this issue will be further evaluated in the EIR.

VIII. Greenhouse Gas Emissions

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
VIII. GREENHOUSE GAS EMISSIONS — Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

Discussion

a) **Potentially Significant Impact.** Greenhouse gas (GHG) emissions contribute, on a cumulative basis, to the significant adverse environmental impacts of global climate change. No single project could generate enough GHG emissions to noticeably change the global average temperature. The combination of GHG emissions from past, present, and future projects contributes substantially to the phenomenon of global climate change and its associated environmental impacts and as such is addressed only as a cumulative impact**.**

The State of California has established a comprehensive framework to substantially reduce GHG emissions over the next 40 years and beyond. Reduction measures will occur primarily through the implementation of Assembly Bill (AB) 32, Senate Bill (SB) 32, and SB 375, which address GHG emissions on a statewide, cumulative basis.

The Project would generate GHG emissions during temporary construction activities and long-term operations. Construction would result in short-term GHG emissions produced by construction equipment exhaust as well as on-road truck and other vehicle trips. While the Project would not exceed the existing capacity of Inglewood High School, operation of the Project would result in GHG emissions from energy consumption. Therefore, this impact is considered potentially significant, and this issue will be evaluated in the EIR.

b) **Potentially Significant Impact.** The CARB Scoping Plan is California's GHG reduction strategy to achieve the state's GHG emissions reduction target, established by AB 32 and SB 32, of a 40 percent decrease in 1990 emission levels by 2030. In addition, SB 375, the Sustainable Communities and Climate Protection Act of 2008, was adopted by the legislature to reduce per capita vehicle miles traveled and associated GHG emissions from passenger vehicles.

The SCAG 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal; SCAG 2024) identifies the per capita GHG reduction goals for the SCAG region. The Project would emit GHGs during temporary construction activities and long-term operations. Therefore, this impact is considered potentially significant and will be analyzed in the EIR.

IX. Hazards and Hazardous Materials

Issues (and Supporting Information Sources):		*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
IX.	**HAZARDS AND HAZARDOUS MATERIALS — Would the project:**				
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☒

Discussion

The following hazardous materials discussion is based, in part, on the *Phase I Environmental Site Assessment Report, Inglewood High School,* (herein referred to as the "Phase I"), prepared by Smith-Emery GeoServices, dated May 14, 2002 provided in Appendix B of this document.

a) **Less Than Significant Impact**. *Construction.* Project construction would require the use of materials that are typically associated with construction activities, such as diesel fuels, hydraulic liquids, oils, solvents, and paints. However, any hazardous materials used on site would be removed in accordance with state and federal regulations regarding the transport, use, and storage of hazardous materials.

As described in Chapter 2, *Project Description*, the Project includes the demolition of buildings and hardscape on both the Inglewood High School campus. The results of the *Phase I* concluded based on the age of some of the onsite structures there is potential for asbestos-containing building materials (ACBMs) in the onsite structures. In addition, the onsite building structures were built prior to the federal regulations banning the use of lead based paint. Therefore, there is the potential for lead based paints to exist in the onsite structures. According to the *Phase I*, three

pad-mounted and two apparent dry-type transformers were observed in the Project Site; however, the transformers appeared in good condition and the potential for PCBs to have impacted the Site is considered low (Smith-Emery GeoServices 2002).

Based on the potential of hazardous materials on the Project Site, construction of the Project could require the transport of hazardous materials off-site in order to remove the demolition debris. Trucks used during construction for the transportation of hazardous materials would follow the City's designated truck routes along West Manchester Boulevard, South Prairie Avenue or Crenshaw Boulevard to regional freeways for the transport of hazardous waste to appropriate disposal facilities. The U.S. Department of Transportation Office of Hazardous Materials Safety provides regulations for the safe transportation of hazardous materials (Code of Federal Regulations Titles 40, 42, 45, and 49 and implemented by California Code of Regulations Titles 17, 19, 22, and 27), and compliance with applicable regulations as well as oversight by the appropriate federal, State, and local agencies would minimize the risk of hazardous materials exposure during transport.

In addition, implementation of the recommendations in the *Phase I*, which include compliance with existing regulations and standards, would reduce potential impacts related to the routine transport, use, and disposal of hazardous materials and any upset or accidental conditions. In accordance with the recommendations, disturbance of the hazardous materials identified on the site shall be performed by a licensed abatement contractor. Demolition of thermostats, light switches and light fixtures carefully and all hazardous materials shall be handled and disposed of at a landfill in compliance with applicable regulations. Compliance with existing Cal/OSHA lead and asbestos regulations would also be required. Furthermore, all on-site generated waste that meets hazardous waste criteria shall be stored, transported, and disposed of in accordance with the California Code of Regulations (Title 22) and in a satisfactory manner for the Los Angeles County Fire Department (LACFD). Therefore, with compliance with federal, State, and local regulations for hazards materials, construction of the proposed improvements at the school campus would not result in significant impacts regarding use, transport, or disposal of hazardous materials and any potential upset or accident conditions.

Operation. Hazardous materials currently used on the Project Site are typical cleaning chemicals and substances used for building and landscape maintenance. Since the projected operation of the Project would not increase the Site capacity, the quantity and use of hazardous materials would be similar. Therefore, operation of the Project would not result in a significant hazard to the environment through the use, transport, or disposal of hazardous materials and impacts would be less than significant. This issue will not be further evaluated in the EIR.

b) **Less Than Significant Impact.** According to the State Water Resources Control Board GeoTracker database, the historical release of petroleum products from a leaking underground storage tank (LUST) at 145 Manchester Boulevard was located within a 0.25-mile radius of the Project site. However, this potentially impacted soil only and the case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) in 1993. The *Phase I* did not identify underground storage tanks, aboveground storage tanks, radon, pits, ponds, lagoons, septic tanks, cesspools, wells, or cisterns. According to the *Phase I* prepared for the

Project, Inglewood High School is located about ½ mile west of numerous oil wells within the Potero Oil Field. The nearest active well is located approximately 2,250 feet east of the Project Site. Based on the results of the subsurface exploration, no hazardous materials associated with oil fields are anticipated.

As described above, hazardous materials would be utilized during operation, similar to existing conditions. Hazardous waste could also be removed during construction due to demolition of buildings with hazardous materials. Therefore, due to the presence and potential removal of hazardous materials during construction activities, there is the potential for release of hazardous materials if accident conditions were to occur during demolition or transport to a proper disposal facility. However, if an accident were to occur, clean up would be conducted in accordance with state and federal regulations regarding hazardous materials, including regulations under the United States Environmental Protection Agency (USEPA), Cal/OSHA, and California Department of Toxic Substances Control (DTSC). In compliance with existing regulations, the Project would include implementation of an operations and maintenance program for ACMs and the use of a licensed abatement contractor through construction. This issue will not be further evaluated in the EIR.

c) **Less Than Significant Impact.** The Project Site itself is an existing high school campus and any hazardous materials used during Project construction would be transported, used, and stored in accordance with state and federal regulations regarding hazardous materials. As detailed above in thresholds (a) and (b), the routine transport, use, or disposal of hazardous materials during construction on the Project Site (a school) would be conducted in accordance with the recommendations provided in the *Phase I* prepared for the Project and in compliance with all federal, State and local regulations regarding hazardous materials. Therefore, the handling of hazardous materials within one-quarter mile of a school site would be less than significant. This issue will not be further evaluated in the EIR.

d) **Less Than Significant Impact.** Government Code Section 65962.5, amended in 1992, requires the California Environmental Protection Agency (CalEPA) to develop and update annually the Cortese List, which is a list of hazardous waste sites and other contaminated sites. While Government Code Section 65962.5 makes reference to the preparation of a list, many changes have occurred related to web-based information access since 1992 and information regarding the Cortese List is now compiled on the websites of the Department of Toxic Substances Control (DTSC), the State Water Board, and CalEPA. The DTSC maintains the EnviroStor database, which includes sites on the Cortese List and also identifies potentially hazardous sites where cleanup actions (such as a removal action) or extensive investigations are planned or have occurred. The database provides a listing of Federal Superfund sites [National Priorities List (NPL)]; State Response sites; Voluntary Cleanup sites; and School Cleanup sites. Geotracker is the State Water Resources Control Board's (SWRCB's) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup [USTs, Department of Defense, Site Cleanup Program] as well as permitted facilities such as operating USTs and land disposal sites. CalEPA's database includes lists of sites with active Cease and Desist Orders (CDO) or Cleanup and Abatement Orders (CAO) from the State Water Board.

As part of the Phase I, a search was conducted for available Federal, State, and local environmental database records for the project site and where practicable, adjoining properties and nearby properties or surrounding areas within approximate minimum search distances from the project site. No records pertaining to hazardous material storage/use and/or the presence of active and use limitation (AULs) were on file for the Project Site. The Project Site is listed on EnviroStor database as a School Investigation site. The site is not included on the national priorities list and the cleanup status is listed as "Inactive – Needs Evaluation as of 12/24/2007". According to the listing, the potential contaminants of concern include lead and diesel fuel from past uses, such as vehicle storage/refueling, that may have impacted sediments or soil on the Project Site (DTSC 2025). A letter from DTSC dated June 7, 2007 indicates that DTSC conditionally approved the Preliminary Endangerment Assessment Workplan prepared by Ellis Environmental Management, Inc. for the Project Site, which includes activities to investigate whether historical operations onsite have impacted the Site. No further site/facility documents or correspondence were available for review on the EnviroStor database.

A regulatory agency database search report prepared by Environmental Data Resources, Inc. (EDR) was reviewed within the Phase I. According to the EDR, there are 32 Cortese sites within approximately 1 mile of the Project Site. However, no hazards associated with the transfer of these materials are currently evident at the Project Site. As discussed above, any removal ACM and LBPs from the existing on-site building would occur in adherence with existing regulations. Therefore, the Project Site is not on the Cortese List and impacts would be less than significant. This issue will not be further evaluated in the EIR.

e) **Less Than Significant Impact.** The Project Site is located approximately 3.1 miles north of the Hawthorne Municipal Airport and approximately 3.0 miles east of the Los Angeles International Airport (LAX). The Project Site is not located within the Airport Influence Area for the Hawthorne Municipal Airport. However, the southern portion of the Project Site falls within the Airport Influence Area and 65 db CNEL noise exposure contour for LAX. According to the Los Angeles County Airport Land Use Plan, the Project Site would be compatible with the ALUP as educational facilities are considered satisfactory on the land use compatibility table within the exterior exposure noise contour range of 60-65 db CNEL (ALUP). Furthermore, the Project consists of improvements to the existing Inglewood High School campus, including demolition of the existing classroom and recreational facilities and the construction of new recreational facilities, circulation improvements, and interior improvements. In addition, the Project consists of the modification of an existing school and would not increase staff or students more than maximum capacity. Therefore, the Project would not expose additional people residing or working in the vicinity of the Project Site to any safety hazards or excessive noise levels within the vicinity of a private or public airport. Impacts related to safety hazards from nearby airports would be less than significant. This issue will not be further evaluated in the EIR.

f) **Less Than Significant Impact.** *Construction.* Construction and staging for the Project would also occur on-site and would not affect traffic operations on adjacent roadways. Construction activities may result in temporary lane closures and delays for pedestrian bridge construction, but would not impede non-motorized travel or public transportation in the Project vicinity. During construction activities, heavy construction-related vehicles could interfere with emergency

response to the Project Site (e.g., slowing vehicles traveling behind the truck). However, such delays would be infrequent and brief as drivers are required to pull over to allow an emergency vehicle on-call to pass. Furthermore, the construction specifications would be reviewed and approved by DSA and would ensure that emergency vehicle access on area roadways would be maintained at all times. The Project may also require temporary sidewalk closures while repairs are performed on existing sidewalks and driveways along the perimeter of the Project Site. However, any delays would be temporary and not considered to be significant. Temporary traffic control during construction shall meet the requirements of the version of the California Manual on Uniform Traffic Control Devices (Caltrans 2014) that is effective at the time of construction. As a result, construction of the Project would not impair or physically interfere with an emergency response, and impacts would be less than significant.

Operation. The County of Los Angeles has an adopted Operational Area Emergency Response Plan (ERP, 1984) and an All-Hazard Mitigation Plan (AHMP, 2014). The ERP focuses on emergencies requiring multi-agency and/or multi-jurisdictional responses and the AHMP provides strategies, actions, and goals for reducing vulnerabilities to identified hazards and identifies facilities and equipment available for responses to disasters. The Project Site is located along West Manchester Boulevard and South Grevillea Avenue, neither of which are identified as evacuation routes according to the City General Plan. According to the Los Angeles County Department of Public Works Disaster Routes Maps for the City of Inglewood, La Brea Avenue is the closest evacuation route. The Project includes demolition of classroom buildings, improvements to an existing high school campus and would not increase school capacity, resulting in additional staff or students. The Project would not result in roadway improvements or induced traffic that would physically interfere with this disaster route nor would it impair implementation of an evacuation plan. Therefore, operation of the Project would have a less than significant impact.

The Project would not include any alterations of existing roadway features (e.g., road realignment) that would create a permanent change to access for emergency vehicles. After construction of the Project, emergency access would improve at the Project Site as a result of the proposed circulation improvements and additional parking lots on the proposed Inglewood campus. As a result, the Project would not impair or physically interfere with an emergency response, and impacts would be less than significant. This issue will not be further evaluated in the EIR.

g) **No Impact.** The Project Site is within a developed urbanized area that has not been identified as a wildland fire hazard area. According to the California Department of Forestry and Fire Protection's (CAL FIRE) Very High Fire Hazard Severity Zones (VHFHSZ) in Local Responsibility Area Map, the Project Site is not located within a fire hazard severity zone (CAL FIRE 2024). Furthermore, all construction and operational activities, aside from off-site disposal of construction debris, would occur within the already developed school campus. Therefore, the Project would not expose people or structures directly or indirectly to a significant risk of loss, injury, or death from wildfires, and no impact would occur. This issue will not be further evaluated in the EIR.

X. Hydrology and Water Quality

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
X. HYDROLOGY AND WATER QUALITY — Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of imperious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☐	☒
d) In flood hazard, tsunami, or seiche zones, risk or release of pollutants due to project inundation?	☐	☐	☐	☒
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

Discussion

The following hydrology and water quality discussion is based, in part, on the Low Impact Development (LID) Plan drafted by KPFF Consulting Engineers in May 2025, provided in Appendix C of this document.

a) **Less Than Significant Impact.** The Project includes improvements to the existing Inglewood High School campus, including the demolition of buildings and hardscape and the construction of six new buildings. Therefore, the proposed improvements would alter the existing pervious and impervious surfaces within the Project Site, which could affect water quality during construction and operation, as described below.

Construction. During construction, exposed soil could temporarily increase the amount of sediment in runoff, which could enter the existing storm drain system. The Project would be required to obtain and comply with the Construction General Permit from the State Water Resources Control Board (SWRCB). Stormwater best management practices (BMPs) would be implemented to limit erosion, minimize sedimentation, and control stormwater runoff water quality during construction activities. The Project would disturb more than one acre of soil, and

therefore, would require the preparation of a Storm Water Pollution Prevention Plan (SWPPP) are part of the Construction General Permit requirements. Construction BMPs included in the SWPPP would include, but are not limited to, erosion control measures, sediment control measures, and hazardous materials, storage, disposal, and spill measures. Compliance under the Construction General Permit and SWPPP would ensure that construction activities would not degrade the surface water quality of receiving waters to levels that would be below the standards that are considered acceptable by the LARWQCB or other regulatory agencies.

Operation. As described above, the Project would result in the demolition of majority of the existing buildings and the removal of existing asphalt areas and the construction of 6 new buildings, landscaping and drainage improvements as well as the artificial turf field at the western portion of campus. Overall, the Project would result in an increase in impervious surfaces. The Project Site has approximately 495,800 sf of impervious and 224,200 sf of pervious surfaces, and the Project would result in approximately 537,600 sf of impervious and 182,400 sf of pervious surfaces across the approximately 18-acre portion of the Project Site. Therefore, the amount of impervious surface is anticipated to increase by approximately 41,800 sf from existing conditions.

Project drainage improvements would be achieved through the installation of best management practices (BMP) methods including dry wells, catch basins, storm drains, and biofiltration planters. Portions of the roof drainage system for Buildings 1, 3A, and 3B will connect to the underground storm drain system. Stormwater of these areas will be routed to a combined system that includes three (3) drywells and an underground detention tank before it overflows to the existing 27” reinforced concrete pipe (RCP) storm drain pipe on Kelso Street. The eastern portion of the roof drainage system for Buildings 1, 3A, and 3B and adjacent landscaped areas will drain to proposed biofiltration planters located adjacent to Grevillea Avenue. Any stormwater entering these biofiltration planters that exceeds the 85th percentile storm event will overflow and discharge directly to the existing 27” RCP pipe on Kelso Street. In the western portion of the Project site, the landscaped areas and new turf field will include a combination of biofiltration planters and drywell(s). These proposed BMP methods will provide the required stormwater quality treatment as required by the County of Los Angeles Department of Public Works Low Impact Development Standards Manual, dated February 2014. With the proposed drainage systems and BMPs, impacts related to surface water and groundwater quality would be less than significant and no further analysis is required in the EIR.

b) **Less Than Significant Impact.** The Project Site is within an established urban community that is serviced by the City of Inglewood Public Works Department. The Project does not propose to use groundwater. Additionally, all Project improvements would occur within the existing school campus footprint. The Project would include approximately 182,400 sf of pervious surfaces and drainage improvements, such as catch basins, dry wells, storm drains, and landscape drains, to ensure adequate site drainage and to avoid impacts to groundwater recharge. Therefore, the Project would not interfere with groundwater recharge such that the Project may impede sustainable groundwater management of a basin. Therefore, a less than significant impact would occur related to a decrease in groundwater supplies or groundwater recharge. This issue will not be further evaluated in the EIR.

c.i) **Less Than Significant Impact.** Construction of the Project would include ground disturbing activities that could temporarily alter the ground surface, consequently altering drainage patterns. Altered drainage patterns have the potential to result in erosion or sedimentation on or off site by redirecting or concentrating flows on-site. However, as described above in threshold IX(a), the Project would be required to comply with the Construction General Permit and a SWPPP. BMPs would be implemented to minimize sedimentation at the Project Site during construction activities. Drainage within the Project Site during operations would be provided by the proposed catch basins and existing storm drain system. Additionally, no stream or river courses exist on the Site or within the Site vicinity that could be affected by the Project. Therefore, impacts on the existing drainage pattern regarding siltation or erosion on- or off-site would be less than significant and no further analysis is required in the EIR.

c.ii) **Less Than Significant Impact.** As previously discussed above, construction of the Project would temporarily alter the ground surface during construction demolition and grading, consequently altering the drainage pattern. Altered drainage patterns have the potential to result in increased runoff, which could result in flooding on or off site. However, as described above in threshold IX (a), the Project would be required to comply with the Construction General Permit and a SWPPP. BMPs would be implemented to minimize runoff at the Project Site during construction, which in turn would minimize flooding. After the completion of construction, the elevation across the Project Site would be similar to existing conditions. To treat the on-site runoff, the project will utilize a combination of drywells, underground detention tank, and biofiltration BMPs to treat the 85th percentile storm of 1.08 inches of rainfall. Drainage of the site is partially provided by percolation through on-site soils and by sheet flow directed toward the west to southwest. The majority of the existing drainage is captured within landscape and hardscape area drains and piped into an underground storm drain system. Drainage within the Project Site would be retained by the proposed dry wells, catch basins, storm drains, and biofiltration planters. These drainage improvement BMP methods would be installed throughout the Project Site to ensure that there is adequate site drainage and that runoff drains away from the new structures. Therefore, impacts on the existing drainage pattern regarding runoff in a manner that would result in flooding on- or off-site would be less than significant. This issue will not be further evaluated in the EIR.

c.iii) **Less Than Significant Impact.** As discussed in threshold X(c)(i) and (ii), above. Construction of the Project would not result in significant impacts on the existing drainage pattern due to implementation of construction BMPs that would minimize flooding and runoff. As noted above, drainage improvements and landscaping elements would be installed throughout the Project Site to ensure adequate site drainage is met and that runoff drains away from the new structures. The Project would retain 100 percent of the stormwater volume on-site through the proposed underground catch basins, dry wells, and existing storm drain system. Therefore, impacts related to runoff exceeding the drainage system capacity would be less than significant and no further analysis is required in the EIR.

c.iv) **No Impact.** The Project Site is not located within a 100-year flood hazard area, as mapped on Federal Emergency Management Agency's (FEMA) Flood Insurance Rate Map (FEMA 2018). Therefore, the Project would not impede or redirect flows, and there would be no impact. This issue will not be further evaluated in the EIR.

b) **No Impact.** The Project Site is located approximately 5 miles east of the Pacific Ocean. According to the California Geological Survey's Tsunami Hazard Area Map, the Project Site is not in an affected Quadrangle (CGS 2025). In addition, the Project Site is not located near a body of water, and therefore not at risk by seiche. As previously discussed, the Project Site is not within a 100-year flood hazard area, as mapped on FEMA's Flood Insurance Rate Map (FEMA 2018). As a result, there would be no impact regarding risks from seiche, tsunami, or flood hazards that would risk or release pollutants due to inundation. This issue will not be further evaluated in the EIR.

c) **Less Than Significant Impact.** Project construction would require a maximum excavation depth of 11.5 feet. The Seismic Hazard Zone Report for the Inglewood 7.5-Minute Quadrangle, Los Angeles County CA, Seismic Hazard Zone Report 029 (Department of Conservation, Division of Mines and Geology) indicates that the historic high groundwater is at least 50 feet below ground surface. Therefore, no impacts to groundwater quality are anticipated. Similar to existing conditions, the Project would not require the use of groundwater. The proposed infiltration system described in threshold IX (a) would ensure infiltration rates for stormwater and drainage onsite infiltrate sufficiently and are treated properly. As a result, impacts related to surface water or groundwater quality would be less than significant, and the Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. This issue will not be further evaluated in the EIR.

XI. Land Use and Planning

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XI. LAND USE AND PLANNING — Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

Discussion

a) **No Impact.** The Project would result in a renovation of the Inglewood High School campus. Since all of the construction and future operation would occur on the existing school campus, and the use of the Site as a high school would continue. Therefore, the Project would not physically divide an established community, and no impact would occur. This issue will not be further evaluated in the EIR.

b) **No Impact.** The Project is consistent with the City's General Plan land use designation (Civic Center). The C-C district allows government offices, schools and other public facilities, as well as limited private office and retail (City of Inglewood 2016). By state law, school facilities can be exempted from local zoning ordinances consistent with California Government Code Section 53094. Additionally, the Project would not result in any changes to the existing land use at the Project Site, as operations would be consistent to that of the existing campus. No habitat conservation plans or natural community conservation plans are in place or applicable to the Project Site or vicinity. Based on the analysis above, the project would be consistent with the applicable General Plan and Zoning provisions of Inglewood. Therefore, the project would not result in conflicts with the applicable General Plan or Zoning Code or any other applicable land use plan, policy, or regulation of an agency with jurisdiction over the project such that significant physical impacts on the environment would occur. Since the Project would not change the existing use, the Project would not have the potential to conflict with adjacent land uses, and therefore, no impacts would occur and no further analysis is required in the EIR.

XII. Mineral Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XII. MINERAL RESOURCES — Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Discussion

a, b) **No Impact.** The Project Site is not located in Mineral Resource Zone (MRZ) 2, which is defined as a MRZ where adequate information indicates that significant mineral deposits are present or a likelihood of their presence and development should be controlled (DOC 2021). The Project involves demolition, renovation, and construction of school facilities on an existing campus; no mineral extraction or other mining operations currently occur within the Project Site. The Project would not result in the loss of availability of known mineral resource that would be of value to the region and the residents of the State, or result in the loss of a mineral resource recovery site. Therefore, there would be no impact related to mineral resources and no further analysis is required in the EIR.

XIII. Noise

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XIII. NOISE — Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

Discussion

a) **Potentially Significant Impact.** Implementation of the Project would involve construction including demolition of a majority of the existing buildings and facilities, and operational activities that would generate noise levels that could expose sensitive receptors to noise levels in excess of noise standards. Short-term construction activities could increase noise levels at nearby sensitive land uses such as the residential uses adjacent to the Project site. Therefore, impacts regarding construction noise will be analyzed in the EIR.

Operational noise sources would include stationary sources such as heating, ventilation, and air conditioning units; activities associated with outdoor activities; and educational and recreational uses. The Project could result in operational noise impacts if the change in building locations and activities would result in an increase in noise levels that exceed thresholds identified by the Inglewood Municipal Code at off-site sensitive receptors. Impacts regarding generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project site in excess of standards established by the local general plan or noise ordinance will be analyzed in the EIR.

b) **Potentially Significant Impact.** The Project's construction can generate varying degrees of groundborne vibration, depending on the specific activities and equipment (e.g., pile drivers, jackhammers, dozers, haul trucks) used. The effect on buildings and sensitive receptors in the vicinity of the construction site varies depending on soil type, ground strata, and receptor-building construction. The Project involves demolition of the majority of existing structures, construction of new buildings, and some renovation. The construction phase has the potential to result in potentially significant impacts. The continued use of the Project Site as a school would not create operational-related groundbourne vibration. Due to the proximity of sensitive receptors and the type of construction work occurring, impacts regarding groundbourne vibrations are considered potentially significant, and will be analyzed in the EIR.

c) **Less Than Significant Impact.** The Project Site is located approximately 3.1 miles north of the Hawthorne Municipal Airport and approximately 3.0 miles east of the Los Angeles International Airport (LAX). The Project Site is not located within the Airport Influence Area for the Hawthorne Municipal Airport. However, the southern portion of the Project Site falls within the Airport Influence Area and 65 db CNEL noise exposure contour for LAX. According to the Los Angeles County Airport Land Use Plan (ALUP), the Project Site would be compatible with the ALUP as educational facilities are considered satisfactory on the land use compatibility table within the exterior exposure noise contour range of 60-65 db CNEL (ALUP). Furthermore, the Project consists of improvements to the existing Inglewood High School campus, including demolition of the existing classroom and recreational facilities and the construction of new recreational facilities, circulation improvements, and interior improvements. Therefore, the Project would not expose additional people residing or working in the vicinity of the Project Site to any safety hazards or excessive noise levels within the vicinity of a private or public airport. Impacts related to safety hazards from nearby airports would be less than significant.

XIV. Population and Housing

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XIV. POPULATION AND HOUSING — Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Discussion

a) **No Impact.** The Project Site encompasses an existing school in a built-out urbanized community. The proposed activities do not include new homes or businesses and would not result in the extension of public roads or other infrastructure. The proposed installation of new sewer pipelines, and new domestic and fire water line systems would occur within the Project site and would connect to existing mainlines. In addition, the sewer, domestic water, and fire water lines would be a replacement of existing utilities, rather than an expansion of infrastructure. Due to annually decreasing enrollment at Inglewood High School, the school capacity would be able to accommodate the existing and anticipated future student enrollment, including the relocation of students from Morningside HS to Inglewood HS. The proposed modernization improvements would not increase planned student capacity, accommodate growth, or increase enrollment or staffing, but would rather provide infrastructure improvements to serve the existing student capacity of the school. As such, the Project would not contribute to a substantial increase in unplanned population growth, and no impact would occur. This issue will not be further evaluated in the EIR.

b) **No Impact.** The Project Site encompasses an existing school in a built-out, urbanized community. No housing exists on the Project Site, and therefore the Project would not displace a substantial number of existing housing units or people, necessitating the construction of replacement housing elsewhere. Therefore, impacts associated with these issues would not occur and no further analysis is required in the EIR.

XV. Public Services

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XV. PUBLIC SERVICES — Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:				
i) Fire protection?	☐	☐	☒	☐
ii) Police protection?	☐	☐	☐	☒
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☐	☒

Discussion

a.i) **Less Than Significant Impact.** The Project Site is currently served by the Los Angeles County Fire Department (LACFD), which operates four fire stations in the City. The closest station to the Project Site is Station 171, located 0.3 mile north at 141 West Regent Street. Implementation of the Project would serve the existing Inglewood High School student body and would not increase the overall school capacity. After completion of the Project, students from Morningside High School would be transferred to Inglewood High School, but this transfer would not exceed the existing capacity of 1,200 students. Therefore, no additional student or staff capacity would result from implementation of the Project, as maximum capacity would remain the same. As such, the Project would not induce population growth directly or indirectly that could increase the demand for fire protection services at the Project Site. Furthermore, the Project Site is an existing school campus where fire protection services are already adequately provided. The campus would continue to provide a sprinkler system, fire extinguishers, and proper fire access, as required by existing regulations.

Operation of the Project would not adversely impact emergency access to the Project Site. Rather, the Project would improve emergency access through the fire lane improvements from West Manchester Boulevard, that would connect to through the parking lot to a driveway along West Kelso Street. As such, fire protection would not be significantly altered through implementation of the Project and impacts would be less than significant. This issue will not be further evaluated in the EIR.

a.ii) **Less than Significant Impact.** The Project Site is currently serviced by the City of Inglewood Police Department. The closest police station to the Project Site is the Inglewood Police Department, located 0.2 mile north at 1 West Manchester Bouvard. New buildings would replace the uses that are in the buildings that would be demolished and no increased staff or student

capacity would result from implementation of the Project. Although students from Morningside High School will be transferred to Inglewood High School, this would be anticipated to result in a shift in service within the City rather than an increase in service. In addition, the District currently has site safety personnel during school hours and at district events. After hours, through joint use agreements, site safety is provided and will continue to be provided under the Project. In addition, due to the temporary nature of the construction jobs that would be required for the various phases of construction, these jobs are anticipated to be filled by the local workforce. Therefore, the Project would not result in a direct or indirect increase in population that would contribute to substantial adverse physical impacts associated with police protection. As such, there would be a less than significant impact and no further analysis is required in the EIR.

a.iii) **No Impact.** The Project is the modernization of the existing Inglewood High School campus. As previously indicated, no increases in students or staff beyond the planned capacity would result from implementation of the Project. Construction workers to fill the temporary short-term construction jobs generated by the Project would be from the local labor force and the Project would not attract new workers to the region for the 24-month construction period. As such, the Project would not result in a demand for additional schools or school upgrades,. Therefore, the Project would not result in substantial adverse physical impacts associated with the need for new or physically altered school facilities. Therefore, the Project, which is the modernization of existing school facilities, would not result in the need for new or physically altered school facilities, the construction of which could cause significant environmental impacts. The Project would have no impact and this issue will not be further evaluated in the EIR.

a.iv) **Less Than Significant Impact.** As previously mentioned, the Project would not permanently alter operations at the existing school campus as operations at Inglewood High School would continue. Construction of the Project would temporarily prevent the use of the existing recreational facilities on the campus. Currently, the recreational facilities on the Inglewood High School campus are available with a facility use permit and are not relied on by the City for general park use. The Project includes the construction of several new recreational facilities such as new tennis courts, basketball courts, and a combination practice softball/football/soccer field, which would provide for new recreational opportunities for students at the Inglewood High School campus.

The Project would not directly or indirectly induce population growth requiring additional parks within the City. After completion of the Project, students from Morningside High School would be transferred to Inglewood High School, but this transfer would not exceed the existing capacity of 1,200 students. This transfer would be from one school directly to another, within the City, and would not induce population growth. Therefore, the Project would not result in substantial adverse physical impacts associated with the need for new or physically altered park facilities. Impacts would be less than significant and no further analysis is required in the EIR.

a.v) **No Impact.** As previously mentioned, no additional staff or student capacity would result from implementation of the Project, as the maximum capacity at the Project Site would remain the same. No additional public services would be required by the Project. Therefore, the Project would not result in substantial adverse physical impacts associated with the provision of new or

physically altered governmental facilities. As such, no impacts would occur and no further analysis is required in the EIR.

XVI. Recreation

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XVI. RECREATION:				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.** The existing school provides recreational facilities and there are City parks within close proximity of the Project Site. In addition to the existing recreational facilities on the Project Site itself (e.g., tennis courts, natural turf field, and basketball courts), Grevillea Art Park is located approximately 0.02 mile east of the Site. Rogers Park is located approximately 0.61 mile north of the Project Site. Ashwood Park is located approximately 0.77 mile to the east of the Site. After completion of the Project, students from Morningside High School would be transferred to Inglewood High School, but this transfer would not exceed the existing capacity of 1,200 students. Due to annually decreasing enrollment at Inglewood High School, the current classroom capacity would be able to accommodate the existing and anticipated future student enrollment from Morningside High School. The proposed modernization improvements would not provide additional student capacity or accommodate growth but would instead provide recreational facilities to serve the existing planned student capacity. As such, the Project would not increase the use of existing recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated. This issue will not be further evaluated in the EIR.

b) **Less Than Significant Impact.** The Project includes the addition of several recreational components through the campus renovation. The Project Site modernization would provide additional open space within the campus. Four student quads would be added to the campus: Central Quad, Academic Quad, Social Quad, and Athletic Quad. These quads would provide small gathering spaces for students throughout the campus.

The Project would extend the athletic field and would replace tennis courts, basketball courts, and a batting cage. Six new tennis courts would be constructed to the west of the existing Auditorium and north of the renovated surface parking lot. The new courts would have vinyl coated chain-link fencing with mesh screening, and access gates with lockable latches. The Project would include six new basketball courts to the west of the existing Gymnasium. In addition, a new batting cage would be constructed on the northwest end of the parking lot. A new combination practice softball/football/soccer field with artificial turf would be located on the central western portion of the Site. Landscaped areas would be located to the north and the south of the new field. The proposed recreational facilities would be provided within the Project Site to serve existing and future students and would be similar to existing facilities. Therefore, impacts would be less than significant and no further analysis is required in the EIR.

XVII. Transportation

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XVII. TRANSPORTATION — Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☒	☐	☐	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☒	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

Discussion

a) **Potentially Significant Impact.** Construction activities would require vehicles such as haul trucks, equipment delivery trucks, and worker vehicles to travel to and from the Project's Site. Implementation of the Project would result in the modification of on-site pedestrian and vehicular circulation. Vehicular access to the Inglewood High School campus is currently provided by two driveways along West Manchester Boulevard and three driveways along West Kelso Street. The Project Site currently includes a surface parking lot, which is located along West Kelso Street in the southern portion of the campus. The Project would result in an increase in the number of total parking spaces (both accessible and non-accessible) from 93 to 158. The Project would involve changes such as a new pedestrian entrance on South Grevillea Avenue at the intersection with Nutwood Street leading into the campus. Accessible pedestrian pathways would be installed throughout the campus to provide links to the buildings and pedestrian access points from the adjacent streets. Additionally, the City of Inglewood and the District have begun preliminary discussions to provide a pedestrian bridge from the high school campus corner to Inglewood Public library over West Manchester Boulevard, which would provide the students access to the public library as a campus resource. The EIR will address consistency with existing programs, plans, ordinances, or policies addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The impact is potentially significant and will be further analyzed in the EIR.

b) **Potentially Significant Impact.** CEQA Guidelines section 15064.3 pertains to the assessment of a project's potential transportation impacts based on the vehicle miles traveled (VMT) generated by a project (i.e., "the amount and distance of automobile travel attributable to a project," section 15064.3[a]). The Project would shift the overall design of the campus, and, although it would not increase the overall capacity of the school, students at Morningside High School would be transferred to the Project Site after the construction is complete, altering travel patterns for certain students. Therefore, impacts regarding vehicle miles traveled are considered potentially significant and will be analyzed in the EIR.

c) **Potentially Significant Impact.** The Project Site is located within a residential and commercial urban area. During construction, while construction personnel vehicle trips would be a compatible use on the local road networks, haul trucks and equipment deliveries to and from the Project Site throughout the day may increase hazards.

Operation of the Project is not expected to substantially increase hazards due to a geometric design feature of incompatible uses. The Project would result in the modification of on-site pedestrian and vehicular circulation. Therefore, these issues will be further analyzed in the EIR.

d) **Less Than Significant Impact.** Construction of the Project would occur in phases. Any construction-related traffic would be temporary and since the high school will be closed during construction, would not impact school activities. Notice to, and coordination with, emergency service providers, including the Inglewood Police Department and the Los Angeles County Fire Department (LACFD), would be ongoing regarding the construction schedule and worksite traffic control plans so as to coordinate emergency response routing and maintain emergency access.

The Project proposes the extension of a fire road in order to provide better emergency access through the Site. The Project would be required to incorporate all applicable design and safety requirements from the adopted fire codes, building codes, and nationally recognized fire and life safety standards of the LACFD. The Project would also be subject to review by the DSA, which oversees the design and construction for K-12 schools. The DSA would review project plans to ensure that plans, specifications, and construction comply with California's building codes (Title 24 of the California Code of Regulations). As such, since the Project would be subject to DSA plan review, the proposed design and internal circulation would meet all applicable regulations.

Due to campus vehicular circulation modifications being primarily related to improving emergency access, impacts related to emergency access would be less than significant and will not be further analyzed in the EIR.

XVIII. Tribal Cultural Resources

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XVIII. Tribal Cultural Resources — Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☒	☐	☐	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐

Discussion

a, b) **Potentially Significant Impact.** Assembly Bill (AB) 52 establishes a formal consultation process for California Native American Tribes to identify potentially significant impacts to tribal cultural resources, as defined in Public Resources Code Section 21074, as part of CEQA. As specified in Public Resources Code Section 21080.3.1 (d), within 14 days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, lead agencies must provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a Project if the tribe has submitted a written request to be notified. The tribe must respond to the lead agency within 30 days of receiving the notification if it wishes to engage in consultation on the project, and the lead agency must begin the consultation process within 30 days of receiving the request for consultation.

Per AB 52 requirements, the District sent letters to the following tribes: Gabrieleno Band of Mission Indians – Kizh Nation, Gabrieleno/Tongva San Gabriel Band of Mission Indians, Gabrieleno Tongva Indians of California Tribal Council, Gabrieleno/Tongva Nation, Gabrielino-Tongva Tribe, Santa Rose Band of Cahuilla Indians, and Soboba Band of Luiseno Indians. AB 52 consultation is ongoing; therefore, impacts are considered potentially significant and will be further analyzed in the EIR.

XIX. Utilities and Service Systems

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XIX. UTILITIES AND SERVICE SYSTEMS — Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact.**

Water

Water service is provided to the Project Site by the City, which is a member agency of the West Basin Municipal Water District (WBMWD) (City of Inglewood 2021). According to the City's 2020 Urban Water Management Plan, normal year water supply for 2025 will be 12,000 acre-feet per year, or approximately 11 million gallons per day mgd (City of Inglewood 2021).

The Project would result in the demolition of the majority of the buildings located on the Project Site, the modernization of some of the existing buildings, and the construction of five new buildings. Construction of the Project would require the use of water for activities such as dust suppression and the mixing of concrete; however, any water use during construction would be minimal and temporary.

Project operation would not result in an increase in capacity at the campus since the facility is currently designed to accommodate 1,200 students and the Project would result in the same capacity. Upon completion of the Project, students from Morningside High School \would be transferred to Inglewood High School, which added to the current enrollment would not exceed design capacity of the campus. The Project would not result in an overall increase in water demand since there would not be net new students but rather the combining of two school campuses. In addition, the Project would include the installation of upgraded domestic and fire

water line systems that would connect to existing mainlines. Therefore, the Project would not represent a new source of water demand within the City's service area, and sufficient water supplies would be available to serve the Project. The Project would not require the construction or expansion of water facilities, and impacts would be less than significant. This issue will not be further evaluated in the EIR.

Wastewater

The City's Public Works Department provides sewer service to the community through a collection system comprised of 145 miles of gravity sewer pipes ranging from four to 15 inches in diameter and 3,100 manholes (City of Inglewood 2025a). The majority of sewers tie directly into Los Angeles County Sanitation Districts' (LACSD) trunk sewers crossing through the city, which sends City wastewater out to the south to LACSD's Joint Water Pollution Control Plant (City of Inglewood 2025a). LACSD's A.K. Warren Water Resource Facility currently treats the wastewater generated by the Project Site and provides both primary and secondary treatment for approximately 246 million gallons per day (mgd) of wastewater (Los Angeles County Sanitation Districts 2025a). The Plant has a treatment capacity of 400 mgd, which leaves an available capacity of approximately 154 mgd (Los Angeles County Sanitation Districts 2025b).

As previously indicated, the Project is not anticipated to result in an increase in planned capacity, and the Project would not result in an overall increase in wastewater capacity demand since there would not be net new students but rather the combining of two school campuses. The potential increase in enrollment could result in an increase in wastewater consumption but would not exceed planned capacity. Students from Morningside High School would be transferred to Inglewood High School, but would not exceed existing capacity of 1,200 students and would not exceed current wastewater demand. In addition, the Project would include the installation of new sewer pipelines that would connect to existing mainlines. As such, the Project would not require the construction or expansion of wastewater facilities, and impacts would be less than significant and no further analysis is required in the EIR.

Stormwater Drainage

As previously mentioned above in Section IX, *Hydrology and Water Quality*, the Project would include the addition of drainage improvements and landscaping elements throughout the campus, which would reduce the rate of surface stormwater runoff. Surface runoff within the Project Site would be conveyed to and serviced by the proposed catch basins and existing storm drain system and would not require the construction or expansion of stormwater drainage facilities. As a result, impacts on the construction or expansion of stormwater drainage facilities would be less than significant. This issue will not be further evaluated in the EIR.

Electric Power and Natural Gas

The Project Site is located in a developed and urbanized area in the City that is served by existing electrical power and natural gas services. Electricity would be provided by SCE, which currently obtains 33 percent of its energy from renewable resources.[2] In addition, natural gas would be supplied by SoCalGas. As part of the Project, the proposed buildings developed on the Project

[2] Southern California Edison, 2022 Power Content Label, July 2022.

Site would incorporate energy efficient features and design elements aimed at reducing energy consumption. Some of the Project's "green building measures" as part of its design to reduce Project-related criteria pollutant emissions would include electric vehicle parking spaces, irrigation improvements, installation of a solar photovoltaic power systems, and compliance with all 2022 CALGREEN Title 24 CCR for equipment and systems efficiency. As discussed above in Response VI.a, SCE and SoCalGas both would have sufficient capacity to serve the Project's operational electricity and natural gas demand. Existing off-site electricity and natural gas infrastructure would not have to be expanded and new infrastructure would not be required to provide electrical or natural gas service to the Project during construction or operation of the Project. This issue will not be further evaluated in the EIR.

With regard to existing electrical distribution lines, the Project would be required to coordinate electrical infrastructure removals or relocations with SCE and comply with site-specific requirements set forth by SCE, which would ensure that service disruptions and potential impacts associated with grading, construction, and development within SCE easements would be minimized.

Project construction would involve installation of new natural gas connections to serve the Project Site. Since the Project Site is located in an area already served by existing natural gas infrastructure, it is anticipated that extensive off-site infrastructure improvements would not be needed to serve the Project Site. Construction impacts associated with the installation of natural gas connections are expected to be limited to shallow grading/trenching activities in order to place the lines below surface. In addition, prior to ground disturbance, project contractors would be required to notify and coordinate with SoCalGas to identify the locations and depth of all existing gas lines and avoid disruption of gas service to other properties.

Therefore, based on the above, the Project would not require or result in the relocation or construction of new or expanded electric power or natural gas facilities, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant and no further analysis is required in the EIR.

Telecommunications

The Project Site is located in a developed and urbanized area in the City that is served by existing telecommunication services. The Project would require installation of fiber optic lines, telecommunications lines, intrusion alarms, public announcement systems, fire alarms, stub conduit boxes, mounted box conduits, underground conduits and pole mounted conduits to serve the schools uses proposed on the Project Site. Construction impacts associated with the installation of new telecommunication infrastructure would primarily involve trenching in order to place the lines below ground surface. When considering impacts resulting from the installation of any required telecommunications infrastructure, all impacts are of a relatively short duration and would cease to occur when installation is complete. Installation of new telecommunications infrastructure would be limited to on-site telecommunications distribution and minor off-site work associated with connections to the public system. As telecommunication providers already deliver their services to a large number of homes in in the vicinity of the Project Site, it is anticipated that existing telecommunications facilities would be sufficient to support the Project's

needs for telecommunication services. As such, no upgrades to off-site telecommunications facilities are anticipated. Therefore, the Project would not require or result in the relocation or construction of new or expanded telecommunication facilities, the construction or relocation of which could cause significant environmental effects. Impacts would be less than significant and no further analysis is required in the EIR.

b) **Less Than Significant Impact.** As previously mentioned, after implementation of the Project, overall student capacity would remain the same. Inglewood High School has a current enrollment of 784 students and a capacity of 1,200 students. After implementation of the Project, students from Morningside High School would be transferred to Inglewood High School. Therefore, demand for water would not be significantly greater than what currently exists since there would not be net new students but rather the combining of two school campuses. As such, sufficient water supplies are available to serve the Project and impacts on water supplies would be less than significant. This issue will not be further evaluated in the EIR.

c) **Less Than Significant Impact.** Wastewater generated within the City is conveyed to the A.K. Warren Water Resource Facility, formerly known as the Joint Water Pollution Control Plant, via Sanitation Districts of Los Angeles County (LACSD) interceptor sewers. The Warren Facility currently provides primary and secondary treatment for a design capacity of 400 million gallons of wastewater per day, and serves over 4.8 million residents, businesses and industries (Los Angeles County Sanitation Districts 2025a). Improvements within the Project Site would not increase the capacity of staff or students at the school from that for which the existing facility is designed. The Project would not result in an overall increase in wastewater capacity demand since there would not be net new students but rather the combining of two school campuses Therefore, the Project would not generate greater demand for wastewater treatment compared to existing conditions. As such, LACSD would have adequate capacity to meet the Project's wastewater demand and impacts on wastewater service would be less than significant and no further analysis is required in the EIR.

d) **Less Than Significant Impact.** The waste generated during construction of the Project would mainly consist of general construction debris, including from demolition of the existing paving, buildings, and field uses, and worker personal waste. The construction contractor would be required to dispose of solid waste in accordance with local solid waste disposal requirements. The City of Inglewood is served by Consolidated Disposal Services (CDS), a subsidiary of Republic Services, Inc., which provides waste and recycling collection services for residential and commercial uses (City of Inglewood 2025b). Solid waste is taken to the CDS American Waste Transfer Station in Gardena, California where it is sorted. Solid waste is then transferred to a CDS-owned facility, the Sunshine Canyon Landfill in Sylmar, California. Construction solid waste would be taken to the Sunshine Canyon Landfill, approximately 26 miles north of the Project Site. The Sunshine Canyon Landfill has a permitted throughput of 12,100 tons per day and has a remaining capacity of 66,200,000 cubic yards (California Department of Resources Recycling and Recovery 2025). The Project would result in 16,757 cy of demolition debris, resulting from demolition of buildings, batting cage and tennis court, basketball court, parking lots, and concrete walkways. The landfill's cease operation date is anticipated to be in October

2037. Therefore, the landfill would have sufficient capacity to accommodate the Project's construction disposal needs.

The remaining disposal capacity for the County's Class III landfills is estimated at approximately 163.39 million tons as of December 31, 2018, the most recent data available.[3] In addition to in-County landfills, out-of-County disposal facilities may also be available to the City. Aggressive waste reduction and diversion programs on a Countywide level have helped reduce disposal levels at the County's landfills, and based on the Los Angeles County Integrated Waste Management Plan (ColWMP), the County anticipates that future Class III disposal needs can be adequately met through 2033 through a combination of landfill expansion, waste diversion at the source, out-of-County landfills, and other practices. It should also be noted that with annual reviews of demand and capacity in each subsequent Annual Report, the 15-year planning horizon provides sufficient lead time for the County to address any future shortfalls in landfill capacity.

Project operation would not result in an increase in capacity at the campus since the facility is currently designed to accommodate 1,200 students and the Project would result in the same capacity. Upon completion of the Project students from Morningside High School would be transferred to Inglewood High School, which added to the current enrollment, would not exceed the existing and design capacity of the campus. The Project would not result in an overall increase in solid waste production since there would not be net new students but rather the combining of two school campuses. Based on solid waste generation factors from the California Department of Resources and Recycling and Recovery (CalRecycle), the Project could generate approximately 600 lbs/day (1,200 students * 0.5 lbs/student/day available.[4]) of solid waste. As noted above, this would be similar to existing conditions due to the combining of students from the two campuses. The annual amount of solid waste generated by the Project would represent a minor percentage of the estimated 167.60 million tons of remaining disposal capacity for the County's Class III landfills. As such, the solid waste generated by the Project could be accommodated by the County's available regional landfills. Therefore, there would not be a net increase in waste production and would not affect the overall flow of the landfill.

After completion of construction, solid waste generation would not be significantly greater than what currently exists within the District. The Project Site would continue to be served by Sunshine Canyon Landfill with sufficient permitted capacity to accommodate the school's solid waste disposal needs. As a result, impacts would be less than significant and no further analysis is required in the EIR.

e) **Less Than Significant Impact.** Project would result in the demolition of the majority of the buildings located on the Project Site, the modernization of some of the existing buildings, and the construction of five new buildings. During construction, non-recyclable solid waste would be taken to Sunshine Canyon Landfill. As discussed in section XIX.d, the Project would be served by Sunshine Canyon Landfill, which is capable of accommodating the school's solid waste. The Project could generate approximately 600 lbs/day (1,200 students * 0.5 lbs/student/day available.[3]) of solid waste. The annual amount of solid waste generated by the Project would

[3] County of Los Angeles, CoIWMP 2022 Annual Report, page 63.

[4] Based on CalRecycle Educational Facilities Generation Rates of 0.5 lb/student/day.

represent a minor amount of the estimated 167.60 million tons of remaining disposal capacity for the County's Class III landfills. During operation, the Project would continue to generate municipal solid waste that would be accepted by waste haulers and landfill operators and demand for solid waste would not be significantly greater than what currently exists due to the combining of students from the two campuses. Inglewood High School would continue to comply with federal, State, and local regulations related to solid waste The District and its construction contractor would comply with all applicable laws and regulations and make every effort to reuse and/or recycle the construction debris that would otherwise be taken to a landfill. CALGreen Section 5.408, Construction Waste Reduction, Disposal and Recycling, requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse. The Project would comply with all applicable federal, state, and local statutes and regulations related to solid waste disposal. Therefore, impacts would be less than significant and this topic will not be further analyzed in the EIR.

XX. Wildfire

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XX. WILDFIRE — If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Discussion

a) **Less Than Significant Impact**. The Project Site is within a developed urbanized area and is not located within a wildland fire hazard area. According to the California Fire Very High Fire Hazard Safety Zone (CAL FIRE VHFHSZ) Local Responsibility Area Map, the Project Site is not located within a fire hazard severity zone (CAL FIRE 2024). Although access to the Project Site would be temporarily altered during construction of the Project, any such delays associated with construction work along the adjacent roadways would be infrequent and brief (drivers are required to pull over to allow an emergency vehicle on-call to pass). Contract specifications for the Project would ensure that emergency vehicle access on area roadways would be maintained at all times. In addition, according to the Los Angeles County Planning Department, the Project Site is not located on a designated Disaster Route for the City of Inglewood. Therefore, temporary construction activities would not impair or impede an emergency response or evacuation plan.

After construction of the Project, emergency access would improve from existing conditions with the proposed fire lane improvements. Current access to the Project Site for emergency vehicles is provided by two driveways along West Manchester Boulevard and three driveways along West Kelso Street. Internal vehicular circulation would be limited to emergency vehicles and would be provided via an extension of the existing fire lane, which would continue to be accessed from West Manchester Boulevard. The fire lane would go through the center of campus, and would continue through the parking lot to a driveway along West Kelso Street. The proposed fire lane improvements would comply with LACFD requirements, and LACFD will review to ensure compliance. As a result, the Project would not result in the impairment of an adopted emergency response plan or emergency evacuation plan to less than significant levels. This issue will not be further evaluated in the EIR.

b) **Less Than Significant Impact**. As detailed above in threshold XX(a), the Project Site is within a developed urbanized area and is not identified as a wildland fire hazard area.

The Project Site is essentially flat with a grade difference of about 6 feet from the northeast corner of the property to the southwest corner (GWV 2024). While construction would include materials that are considered flammable, such as fuels and household cleaners, the handling and storage of such materials would be conducted in accordance with applicable regulations. In addition, the Project would be designed and constructed in accordance with the California Fire Code and would be reviewed for compliance with the applicable codes and regulations by the DSA. Grading and excavation for the proposed buildings and recreational component footings would also reduce the slope of the Project Site. After completion of construction, the operational activities within the Project Site would not change from the existing uses of a high school. The Project would occur on a relatively flat and existing developed school site, and would not exacerbate wildfire risks, and would not expose people to pollutant concentrations for a wildfire or the spread of a wildfire. Therefore, impacts would be less than significant and no further analysis is required in the EIR.

c) **Less Than Significant Impact**. Although the Project would install new sewer pipelines, new domestic and fire water line systems, these would connect to existing mainlines. The Project would utilize existing infrastructure, including roads, water sources, and power lines surrounding the Project Site. Infrastructure is already established in the vicinity of the Project Site and additional infrastructure would not be required to support Project. Therefore, the Project would not exacerbate fire risk at the Project Site through the development of infrastructure. Thus, impacts would be less than significant and no further analysis is required in the EIR.

d) **Less Than Significant Impact**. The Project Site generally slopes towards the southwest direction from elevations of 113 ft to 119 ft. As described in Section VII (*Geology and Soils*) above, the Project Site is not considered a hillside area, is not subject to landslides, and has a relatively flat topography. All improvements that would occur within the Project Site would be subject to all requirements of the California Building Code and the California Fire Code which would reduce the extent that the Project would increase fire risk. Furthermore, the Project Site is not located within a flood hazard zone and construction of the Project would not result in significant impacts on the existing drainage pattern due to implementation of BMPs that would minimize flooding and runoff. As part of the Project, drainage patterns would be improved and designed with positive drainage away from foundations. Therefore, the Project would not expose people or structures to significant risk including downstream flooding or landslides as a result of runoff, post-fire slope stability, or drainage changes, and impacts would be less than significant. This issue will not be further evaluated in the EIR.

XXI. Mandatory Findings of Significance

Issues (and Supporting Information Sources):	*Potentially Significant Impact*	*Less Than Significant with Mitigation Incorporated*	*Less Than Significant Impact*	*No Impact*
XXI. MANDATORY FINDINGS OF SIGNIFICANCE —				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b) Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☒	☐	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

Discussion

a) **Potentially Significant Impact.** As discussed in Section IV, the Project Site is currently developed and located in an urban residential setting. No riparian habitat or other natural habitat as designated by the CDFW and USFWS are present. The potential for the presence of special status species to occur at the site is limited as vegetation and animal species supported in the limited ornamental landscaping include those that are commonly found in urban environments. The Project has the potential to directly or indirectly impact nesting birds if construction activities occur during the nesting season (generally January 15 through September 15); however, compliance with the requirements of the MBTA would ensure that the Project activities would not result in potential significant impacts on nesting birds. This topic will not be further analyzed in the EIR.

As stated in Section V, the Project would include the demolition of buildings and other ground disturbing activities within the campus during construction, which have the potential to disturb historic and archaeological resources. This topic will be further analyzed in the EIR to evaluate potential impacts and formulate any appropriate avoidance or mitigation measures, if applicable.

As stated in Section VII, Geologic mapping indicates that the surface of the Project Site is entirely underlain by middle to late-Pleistocene age alluvium (Qoa), which has a high potential for paleontological resources. Therefore, the potential exists for unanticipated discovery of paleontological resources during ground-disturbing activities, which may result in damage or destroy paleontological resources that may be present below the ground surface. As impacts may be potentially significant, this issue will be further evaluated in the EIR.

b) **Potentially Significant Impact.** A cumulative impact could occur if the Project would result in an incrementally considerable contribution to a significant cumulative impact in consideration of pas, present, and reasonably foreseeable future projects for each resource areas. Potentially significant impacts are identified in this Initial Study related to air quality, cultural resources, noise, transportation, and tribal cultural resources. Cumulative impacts to the resources for which potentially significant impacts are identified in this Initial Study will be addressed in the EIR. Mitigation measures will be recommended as needed.

c) **Potentially Significant Impact.** Construction and operation of the Project could create direct and indirect adverse effects on the public and/or the environment. The Project has the potential to impact human beings through impacts related to air quality, cultural resources, noise, and transportation. The significance of these potential impacts will be analyzed in the EIR, and applicable mitigation measures will be identified.

City of Inglewood, California.

INTRODUCTION

This report presents the results of our geotechnical investigation performed at Inglewood High School located at 231 South Grevillea Avenue in the city of Inglewood to address the modernization of portions of the school campus. It is proposed to remove and replace the administrative building and several classrooms on the campus, as well as reconfigure outside recreation areas. *This revised report provides the results of additional stormwater mitigation infiltration testing and updated geotechnical design criteria after discussions with the project civil and structural engineering consultants. Changes and or additions made to this report after its initial August 5, 2024, date have been italicized.*

The scope of work for this project included (1) review of previous work which was judged both pertinent to our purpose and readily available to our office; (2) a field investigation comprised of four Cone Penetrometer Tests (CPTs) across the site and logging and sampling of *nine* exploratory borings excavated with a truck-mounted, hollow-stem auger drill rig; (3) laboratory testing of selected retrieved samples; (4) infiltration testing of *five* of the borings; (5) geotechnical analysis of the assembled data; and (6) preparation of this report.

Field data and the approximate locations of the CPT soundings, borings and trenches excavated on the site by Geolabs–Westlake Village (GWV) and others are shown on the enclosed Geologic Map, Plate 2. Descriptions of the materials encountered in the exploratory excavations by GWV, and others are provided on the enclosed boring logs in Appendix A and fault trench logs in Appendix B. Our findings are presented in the following sections, followed by a discussion of these findings and geotechnical design

criteria.

This report is intended for submittal to the appropriate governmental authorities that control the issuance of necessary permits and provides our findings of the geotechnical investigation and appropriate design criteria for use by the project design team.

The northeast portion of the campus lies within an earthquake fault hazard zone. Details of the investigation of fault hazards at the site are addressed in the referenced report by GWV (2024). No evidence of faulting was found.

OBJECTIVE

The primary objective of this investigation was to evaluate the subsurface conditions of earth materials beneath portions of the subject site and provide appropriate design criteria for site preparation, grading, and foundations associated with the proposed campus modernization. This report also provides the results of infiltration testing of the on-site soils for stormwater infiltration.

LOCATION

The Inglewood High School campus is located at the southwest corner of West Manchester Boulevard and South Grevillea Avenue in the city of Inglewood, California (Lat: 33.961°; Long: -118.356°, see Plate 1). The site is bounded by West Manchester Boulevard to the north, South Grevillea Avenue to the east, West Kelso Street to the south, and developed residential properties to the west. Access onto the site is gained from the streets along the north, south, and east sides, with access onto the campus proper being through secured gates on all sides.

SCOPE

The scope of our investigation involved the completion of the following:

1. Review of available general geologic data. A complete list of reviewed documents is provided on Plates R1 through R5.

2. Review of a geotechnical engineering report previously prepared for the subject site by Geotechnologies, Inc. in 2001. The document reviewed is listed on Plate R3.

3. Review of a geologic/fault investigation report previously prepared for the subject site by Smith-Emery GeoServices in 2001. The document reviewed is listed on Plate R3.

4. Review of the following aerial photographs:

    a. Fairchild Aerial Surveys, June 18, 1934, Flight C-3060, Frame 115.

    b. Fairchild Aerial Surveys, August 30, 1941, Flight C-7347, Frame 2.

    c. Fairchild Aerial Surveys, July 1, 1956, Flight C-22555, Frames 19 - 24.

5. Excavation and detailed geologic logging of *nine (9)* hollow-stem auger borings.

6. Performing four (4) Cone Penetrometer Test (CPT) soundings.

7. Performing *five (5)* infiltration tests for on-site stormwater runoff infiltration.

8. Laboratory testing of recovered earth materials.

9. Engineering analysis.

10. Preparation of a Site Location Map, a site-specific Geologic Map, and a Regional Geologic Map.

11. Presentation of our procedures, findings, and geotechnical design criteria.

PROPOSED DEVELOPMENT

The findings contained in this report are based on site development plans provided by the project architects, Practice. It is proposed to modernize portions of the Inglewood High School campus by removing several classroom and administrative buildings, primarily in the eastern one-third of the site and constructing four (4) new classroom complexes and administrative buildings in their place. We understand the buildings will be a combination of one and two stories, with no subterranean levels. We have delineated the proposed building footprints on Plate 2. We also understand that portions of the existing outside recreation areas are to be modernized with new sports courts. At the time of this writing, maximum column loads are anticipated to be on the order of 300 kips dead load and 150 kips live load, with typical values on the order of 225 kips dead load and 125 kips live load. Exterior wall loads of up to 1000 plf dead load with no live load are anticipated. Grading is proposed beneath the proposed buildings in order to fill in the basement area beneath the existing administration building located in the northeast corner of the site and to provide a uniform bearing material consisting of certified compacted fill beneath all new foundations. Removal depths on the order of 9 feet below existing grade are anticipated beneath the proposed buildings. Foundations for the proposed buildings are anticipated to consist of conventional shallow isolated and spread footings, bearing in newly placed engineered compacted fill.

It is proposed to infiltrate stormwater runoff into the on-site soils using dry wells. The results of deep and shallow infiltration testing performed as part of this investigation are provided herein and may be utilized by the project consultants to design the infiltration systems. Details on the infiltration testing performed are provided in the following sections of this report.

SITE CONDITIONS

The subject property is essentially level, with overall site relief from east to west being on the

order of 5 to 6 feet. The site is developed with the Inglewood High School campus and is comprised of several one- and two-story classrooms, administrative, and accessory buildings, quad areas, sports courts, and grass fields. Portable classroom buildings are also present. The properties to the west of the campus are developed with single-family residences and apartment buildings.

Drainage of the site is partially by percolation through on-site soils and by sheet flow directed toward the west - southwest.

SITE HISTORY

Inglewood High School opened its doors in 1905. The original campus was bounded by S. Grevillea Avenue to the east, W. Manchester Boulevard to the north, S. Fir Avenue to the west, and W. Olive Street to the south. Based on research of aerial photos, the campus expanded in the late 1940's to mid-1950's. Between 1940 and 1947 portions of S. Fir Avenue and W. Olive Street were removed along with residential properties to expand the campus southward to W. Kelso Street and westward to its current boundary. From the aerial photos it appears all buildings from pre-World War II have been replaced over the years with the exception of the administration building in the northeast corner of the campus.

PREVIOUS STUDIES

It is apparent that modernization of the campus, similar to what is currently proposed, was pursued in 2001, at which time a geotechnical engineering investigation for the construction of several new buildings and the renovation of several more was performed (Geotechnologies, 2001). As part of that investigation, 34 exploratory borings 20 to 60 feet in depth were excavated using both truck-mounted drilling equipment and hand labor. The locations of those borings are shown on the enclosed Geologic Map (Plate 2) and copies of their logs are provided in Appendix A. Samples were collected and selected laboratory tests were performed, and the laboratory test results are provided in Appendix B. At essentially the same time, Smith-Emery GeoServices was retained to perform a geologic investigation/fault study for the proposed buildings located with the state-defined Alquist-Priolo Earthquake Fault Zone that encompasses the northeast corner of the school campus (see Plate 5). Smith-Emery excavated and geologically logged five (5) fault trenches to a maximum local depth of about 12 feet, although most of the trenches were 5 to 7 feet in depth. The locations of their trenches have been included on the enclosed Geologic Map, Plate 2, and their trench logs are provided in Appendix B. They generated the referenced report dated October 26, 2001, which summarized that no evidence of faulting was observed within their trenches. They did note, however, that due to the presence of buried old foundations, pipes, and an abandoned sewage disposal system consisting of a septic tank and three seepage pits located between the northernmost building and Manchester Boulevard, there were gaps in their trench data. Each of the

Smith-Emery trenches were backfilled with the native soils and compacted to at least 90 percent relative compaction, which is documented in a compaction report provided in their referenced report. It appears the modernization project was put on hold sometime after the Smith-Emery and Geotechnologies reports were completed, as the Smith-Emery report was not reviewed by the California Geological Survey (CGS) until early 2023. In the referenced CGS review letter dated January 13, 2023, CGS notes the presence of the gaps within the trench data and suggested that additional trenching be performed to ensure complete coverage beneath the proposed buildings within the AP Zone. In mid-2023, GWV was retained to perform the additional fault trenching necessary to fill in the gaps in the Smith-Emery data, and to perform additional trenching within Grevillea Avenue. Therefore, between September 22 and October 10, 2023, this firm excavated and geologically logged seven (7) fault trenches on the subject site and within Grevillea Avenue. The locations of the trenches are shown on Plate 2, and the logs of the trenches are included in Appendix B. Based on our observations of the earth materials exposed in the additional trenches, coupled with the findings reported by Smith-Emery, we concluded that there are no active faults beneath, or within 50 feet of, the proposed building locations. Our fault investigation report is dated May 1, 2024, and is referenced on Plate R3.

FIELD INVESTIGATION

As part of this geotechnical investigation, in June 2024, this firm geologically logged and sampled eight (8) 8-inch-diameter hollow-stem auger borings excavated under subcontract on the subject site. The borings ranged from 5 to 50 feet in depth. Six of these hollow-stem auger borings were utilized for on-site infiltration testing, as discussed below. In addition to the hollow-stem auger borings, four (4) CPT soundings were performed under subcontract to depths ranging from 50 feet to a maximum depth of 97.25 feet. The locations of the borings and CPT soundings are shown on Plate 2 herein and the logs are provided in Appendix A. Samples taken with the hollow-stem auger drill rig were driven with a 140 lb. automatic safety hammer lifted 30 inches. The estimated efficiency of the auto-hammer is approximately 84 percent. The samplers utilized consisted of both a lined California Modified split spoon sampler (2.375-inch id.) and a Standard Penetration Test (SPT) sampler.

At the request of the project design team, in September 2024, an additional 8-inch-diameter boring (PT-7) was drilled to a depth of 31 feet using a truck-mounted hollow-stem auger in the southwest corner of the high school campus. The boring was geologically logged and sampled, and infiltration testing was performed to determine the feasibility of an additional dry well in this location. The location of the boring is shown on the updated Geologic Map (Plate 2), and the log of the boring is provided in Appendix A. The results of the infiltration testing are discussed in the following section of this report.

Both disturbed (bulk) and relatively undisturbed samples were obtained from each boring. These samples were secured and transported to our laboratory for testing. The results of the laboratory testing are discussed in the following sections of this report and provided in Appendix D.

The locations of previous borings excavated on the site by Geotechnologies in 2001 and the fault trenches excavated by Smith-Emery in 2001 are also shown on Plate 2. The logs of their borings and fault trenches are provided in Appendices A and B, respectively.

STORMWATER INFILTRATION TESTING

Seven 8-inch-diameter borings were drilled on the subject site for the purpose of performing infiltration tests for possible stormwater infiltration. *Four* of the borings, PT-1, PT-2, PT-3 and *PT-7*, were drilled in potential dry well locations as determined by the project civil engineers and were drilled to depths of 25 *to 30* feet (plus 1 additional foot for sealing the bottom of the infiltration zone). The remaining three borings PT-4, PT-5 and PT-6 were drilled to depths of 5 feet (plus 1 additional foot for sealing the bottom of the infiltration zone) in potential shallow bioretention basin locations. The tested infiltration zones within the borings were all located in native Lakewood Formation marine deposits.

Infiltration tests were performed in accordance with the County of Los Angeles Administrative Manual GS200.1. Due to concerns regarding the potential for caving within large diameter borings drilled in the Lakewood Formation, the infiltration testing was performed in accordance with the Small Diameter Boring Infiltration Test procedure outlined in GS200.1.

Deep Dry Well Construction & Abandonment

Borings PT-1, PT-2 and PT-3 were drilled to depths of 26 feet to allow for a 1-foot bentonite plug below the infiltration zone, which was between 10 and 25 feet below the ground surface. Boring PT-7 was drilled to a depth of 31 feet to allow for a 1-foot bentonite plug below the infiltration zone, which was between 10 and 30 feet below the ground surface. After placement of the impervious plug, a 2-inch-diameter slotted PVC pipe was inserted within the infiltration zone in each boring. Solid PVC pipe was used for the remaining upper 10 feet. The annulus between the slotted pipe and the boring sides was then backfilled with #3 coarse sand to at least 12 inches above the slotted zone. The remaining annulus was backfilled with spoils from the borings. At the conclusion of testing, the pipes were left in the borings and the upper 4 inches capped with either asphalt cold patch or dirt, depending on the boring's location.

Shallow Well Construction & Abandonment

The three shallow borings intended for determining the feasibility of using bioretention basins were drilled to depths of 6 feet to allow for a 1-foot bentonite plug below the infiltration zone, which was between 4 and 5 feet below the ground surface. After placement of the impervious plug, a 2-inch-

diameter slotted PVC pipe was inserted within the infiltration zone of each boring. Solid PVC pipe was used for the remaining upper 4 feet. The annulus between the slotted pipe and the boring sides was then backfilled with #3 coarse sand to at least 12 inches above the slotted zone. The remaining annulus was backfilled with spoils from the borings. At the conclusion of testing, the pipes were removed and the borings backfilled to the ground surface with the boring spoils.

Pre-Soak Procedure for Shallow Infiltration Wells

After the construction of the three shallow infiltration wells, and approximately 14 hours before the infiltration tests were to be performed the following day, clear water from the school's on-site municipal water system delivered to each boring location using a garden hose equipped with a digital flow meter was used to pre-soak each of the three borings. The following morning, the pre-soak water remained in borings PT-4 and PT-6 with very little drop, and it was determined that those locations were not feasible for infiltration testing or shallow bioretention basins. The pre-soak water in boring PT-5 had infiltrated overnight, and additional pre-soak water was added to approximately 12 inches above the infiltration zone 1 hour before the infiltration test was started.

Pre-Soak Procedure for Deep Dry Wells

After the construction of the PT-1, PT-2 and PT-3 deep dry wells, and approximately 14 to 18 hours before the infiltration tests were to be performed, clear water from the school's municipal water system delivered to each boring using a garden hose equipped with a digital flow meter was used to pre-soak each boring. The following morning, the pre-soak water from borings PT-1 and PT-3 had infiltrated, but 10 inches of water remained in PT-2. Additional pre-soak water was added to each boring 1 hour before the infiltration test was to be begin. At the start of the pre-soak period, the water levels in PT-1 and PT-3 were established at a depth of 10 feet below ground surface, then allowed to drain for 1 hour prior to testing. In PT-2, the highest the pre-soak water level would reach after adding 375 gallons was about 14 feet. The water was then allowed to drain for 1 hour prior to starting the infiltration test.

Immediately after the construction of the PT-7 deep dry well, clear water from the school's municipal water system delivered to the boring using a garden hose equipped with a digital flow meter was used to pre-soak the boring for approximately 1.5 hours. After the addition of 68 gallons of pre-soak water during the 1.5 hours, the water level remained at 16.85' below the ground surface.

Infiltration Test Procedure

It was determined that constant head tests were appropriate for each of the *five* borings tested. Water was added to each of the *five* borings using a garden house equipped with a digital flow meter. The water depth was maintained at about 10 feet below the ground surface in PT-1, PT-2 *and PT-7* for the

duration of the test. In PT-2, the water depth was maintained at about 14 feet. The flow rate was managed throughout the testing process using the adjustable flow meter to maintain the constant head, and the gallons used during the duration of the tests were recorded at regular intervals. The recording interval for PT-1 and PT-2 was 20 minutes, while the recording interval for PT-3, PT-5, *and PT-7* was 30 minutes. The water level was maintained for at least 3 hours and until a stabilized flow rate was achieved, which was defined as when the highest and lowest readings were within 10 percent of each other for three consecutive intervals. In the case of all five borings, the flow rate stabilized before the 3-hour minimum test time was up, but the test was continued for the required 3 hours per GS200.1 guidelines. The results of the infiltration testing for each boring are included as *Plates C.1 through C.5* in Appendix C.

Data Analysis

Data analysis was performed in accordance with GS200.1. A plot of cumulative volume in gallons versus time in minutes was created for each test (see Plate G-1 in Appendix C). Per GS200.1, the raw measured infiltration rate for each test was reduced to determine design values that are estimated to represent long-term performance of the proposed dry well systems:

$$Design\ Infiltration\ Rate = \frac{Measured\ Infiltration\ Rate}{RF_t \times RF_v \times RF_s}$$

RF_t = reduction factor due to test method

RF_v = reduction factor due to site variability, etc.

RF_s = reduction factor due to siltation, plugging, and maintenance

The test method (Small Diameter Boring method) is assigned a reduction factor of 1 (RF_t = 1). A High Flow-rate reduction factor (RF_t) of 3 was assigned to all five wells. The earth materials exposed in the tested zones of the wells were fairly uniform, and the test wells were located near the proposed dry well systems and the bioretention basin location, so a factor of 1 was selected for site variability (RF_v = 1). Therefore, the measured infiltration rate for each well was reduced by a total factor of 5 to produce the long-term design infiltration rate. The project BMP designers should assign the appropriate Long-term siltation, plugging, and maintenance reduction factor based on the chosen infiltration BMPs.

Infiltration Test Results and Discussion

Testing was performed on June 10 and 11, 2024 *and September 12, 2024*. Detailed logs of the earth materials encountered in the test borings are provided on Plate PT-1 through *PT-7* in Appendix A, while the infiltration tests data and results are provided on *Plates C.1 through C.5* in Appendix C. The raw measured infiltration rates for each of the *five* borings *tested* are provided on those plates, along with the

reduced infiltration rates for use in designing the proposed BMPs. *The graphs showing infiltration rate versus time and water volume added versus time for each tested boring are provided on Plates C.6 through C.10 in Appendix C.*

Results of Shallow Infiltration Testing

Based on our observations of the pre-soak characteristics in PT-4 and PT-6, coupled with the low infiltration rate measured in PT-5, we do not consider the use of shallow bioretention basins which rely on infiltration into the underlying soils a feasible BMP option. This information has been provided to the project BMP designers, and we understand they are considering using above or below ground bioinfiltration planters that do not rely on subsurface infiltration.

Results of Deep Dry Well Infiltration Testing

Infiltration testing for the proposed dry wells indicates that the two proposed dry well locations located on the western portion of the campus, PT-1 and PT-2, have reduced infiltration rates greater than the minimum required 0.3 inches/hour per GS200.1, and these locations are considered suitable for on-site stormwater infiltration. PT-3 *and PT-7, however, have reduced infiltration rates* below the minimum required 0.3 inches/hour, and *these locations are* not considered suitable for deep dry well infiltration. The proposed infiltration BMP to be utilized for the two suitable dry well locations PT-1 and PT-2 should be designed to infiltrate in the subsurface at depths between 10 and 25 feet below the ground surface. For the design of the proposed dry well systems, the lowest reduced Infiltration Rate of 2.7 inches/hour obtained for PT-1 divided by the appropriate Long-term siltation, plugging, and maintenance reduction factor as determined by the project BMP designers should be used for both dry well locations. Based on our review of the substantial amount of subsurface geotechnical data available within a radius of about 150 feet of both PT-1 and PT-2, notably the borings excavated by Geotechnologies in 2001, it is apparent the Lakewood Formation deposits are similar in composition to what was encountered in those borings, and similar infiltration rates would be expected. We consider the lowest adjusted Infiltration Rate of 2.7 inches/hour applicable to a 50-foot radius around both PT-1 and PT-2 at the tested depth of 10 to 25 feet below the ground surface.

GEOLOGIC SETTING AND FAULTING

The site is mantled with minor amounts of undocumented artificial (af) fill having a typical thickness of less than 3 feet which overly native upper-Pleistocene-age marine sedimentary deposits herein referred to as the Lakewood Formation (Qlw). Based on previous fault trenching in 2001 and our recent supplemental fault trenching, no active faults are beneath the subject property. The reader is

directed to our referenced Fault Investigation Report dated May 1, 2024, for detailed descriptions of the on-site and regional geologic setting and a formal discussion on the regional faulting.

EARTH MATERIALS

Exploratory excavations on the subject site indicate the project area is underlain by minor amounts of artificial fill and native Lakewood Formation marine sediments. Brief summaries of the material descriptions are provided below, with detailed descriptions provided on the boring and trench logs included in Appendix A and B.

ARTIFICIAL FILL (AF)

The subject property is mantled locally with a layer of man-made undocumented artificial fill (labeled "af" on Plate 2) associated with minor past grading performed at the site and in the installation of utility lines and the abandoned septic system. Where observed in our excavations, the maximum thickness of the fill was about 3 feet. Smith-Emery reported similar fill depths, except in areas where man-made subsurface structures were encountered, notably on the north side of the campus where the septic system is located. In this area, a maximum localized fill depth of about 8 feet was reported. The on-site fault trenches excavated and logged by this firm were backfilled with the excavated native soils. Despite using a sheepsfoot wheel roller to aid in backfill compaction, due to a high moisture content, the compaction was minimal and is below the minimum standard of 90 percent relative compaction. All existing artificial fill beneath the proposed building footprints and hardscape, and all exploratory trench backfill, should be removed and properly recompacted during site development.

LAKEWOOD FORMATION (QLW)

The artificial fill is underlain by moderately dense to locally very dense native sediments assigned to the late Pleistocene Lakewood Formation (Qlw). On the referenced Regional Geologic Map (Dibblee, 2007 – Plate 4), this deposit is referred to as late Pleistocene "Older Alluvium." The Lakewood Formation encountered on site is comprised of interlayered clays, silts, and silty sands to gravelly sands. The upper 3 to 4 feet is mottled brown to very dark brown and is very fine to fine grained. The upper 6 inches is locally organic rich in areas overlain by lawns and planters. Below 4 feet, the color gradually lightens to light to dark yellowish brown with gray brown mottling to light yellow browns. Manganese and iron oxide staining is locally common below a depth of about 6 feet.

The upper 4 feet are moderately loose to moderately dense and porous and is slightly to locally highly bioturbated. Below 4 feet, the deposits generally become moderately dense to locally very dense. Vague horizontal stratification was observed locally within gravelly sand in Trench A3, otherwise the deposit was observed to be massive and structureless. The Lakewood Formation deposits below a depth

of 5 feet are considered suitable for support of new compacted fill.

GROUNDWATER

Our review of the Seismic Hazard Zone Report for the Inglewood 7.5-minute quadrangle (CGS, SHZR 027, 1998 – see Plate 6 herein) indicates that the historic high groundwater level is on the order of 50 feet or greater below the ground surface. Groundwater was not encountered in any of the on-site borings excavated by Geotechnologies or GWV, which reached depths of 60 and 50 feet, respectively. Based on the historically high groundwater levels in the site's vicinity and the absence of groundwater observed in the on-site excavations, groundwater is neither expected to be encountered during the proposed construction, nor have a detrimental effect on the project.

SEISMICITY

The subject site contains no known active or potentially active faults, nor is it within an Alquist-Priolo Earthquake Fault Zone. Therefore, the potential for ground rupture is considered to be very low. However, the property is situated within the seismically active Southern California region and ground shaking is likely to occur due to earthquakes caused by movement along faults within the region.

HISTORICAL SEISMICITY

The property has experienced ground shaking during historical times. To evaluate the historical seismicity at the site, the USGS Earthquakes Maps website was used. A search was performed of historical earthquakes within a 100 km radius of the Inglewood High School site. Results of the search note 361 earthquakes with magnitude of 4.0 or greater. The closest earthquake listed is a magnitude 4.0 earthquake that occurred within 1.9 miles of the site in April 2021, which was centered 2 km east of Lennox. The largest historical earthquake to occur within 100 km of the site was a 7.5 magnitude earthquake in 1812, centered northwest of San Bernardino. In the record search 309 earthquakes were listed with magnitudes equal to or greater than 4 and less than 5, 42 earthquakes with magnitudes equal to or greater than 5 and less than 6, nine earthquakes with magnitudes equal to or greater than 6 and less than 7, and one earthquake equal or greater than magnitude 7.

TEN LARGEST HISTORICAL EARTHQUAKES IN 100 KM RADIUS

PLACE	MAGNITUDE	DATE	DISTANCE (MI)
Northwest of San Bernardino, California	7.5	1812-12-08	49.3
Northridge, California, earthquake	6.7	1994-01-17	20.3
1971 San Fernando Earthquake, California	6.6	1971-02-09	31.5
The 1933 Long Beach, California Earthquake	6.4	1933-03-11	30.6
Cajon Pass area, northwest of San Bernardino, California	6.36	1899-07-22	54.3
Near Palmdale, California	6.3	1857-01-17	42.7

Northwest of San Bernardino, California	6.2	1894-07-30	49.2
Channel Islands region, California	6	1827-09-24	37.0
Near San Gabriel, California	6	1855-07-11	17.5
Near San Bernardino, California	6	1858-12-16	57.2

SITE CLASSIFICATION FOR SEISMIC DESIGN

The site classification for seismic design considers the response of earth materials to ground shaking. To evaluate the site earth profile, borings for this investigation included Standard Penetration Test (SPT) sampling. Cone Penetrometer Test (CPT) soundings were also performed. CPT sounding CPT-4 was performed using a seismic-cone, allowing for acquisition of shear wave velocity data.

As part of the Cone Penetrometer Tests performed for this investigation, measurements of the seismic velocity of the soil were made at approximately 5-foot depth intervals. The results from CPT-4 indicate an average shear wave velocity of 1369 ft/sec when analyzed using the methods of ASCE Standard 7-16, Chapter 20. Accordingly, the Site Class should be considered C.

GENERAL MAPPED SEISMIC GROUND MOTION VALUES

This report includes preliminary seismic ground motion values in accordance with the methodology of ASCE Standard 7-16. Seismic ground motion values were determined using the ASCE 7 Hazard Tool (https://asce7hazardtool.online). This website presents data from seismic design maps for a maximum considered earthquake ground motion, defined by an earthquake with a 2 percent probability of exceedance within a 50-year return period (recurrence interval of 2475 years). Output from these analyses is provided in Appendix E and summarized herein.

Latitude: 33.9606º Longitude: -118.356º	**Factor/Coefficient**	**Value**
Site Profile Type	Site Class	C
Short-Period MCE at 0.2s	S_s	1.915
1.0s Period MCE	S_1	0.673
Site Coefficient	F_a	1.2
Site Coefficient	F_v	1.4
Adjusted MCE Spectral Response Parameters	S_{ms} S_{m1}	2.298 0.943
Design Spectral Acceleration Parameters	S_{DS} S_{D1}	1.532 0.628
Long-Period Transition Period	T_L	8.0 sec
Peak Ground Acceleration	PGA_M	0.99

The mean earthquake magnitude was approximated using the USGS Unified Hazard Tool website

(https://earthquake.usgs.gov/hazards/interactive/index.php). For a probability of exceedance of 2% in 50 years, the deaggregated mean earthquake magnitude is estimated at 6.73 with a mean source distance of 7.4 km.

SITE-SPECIFIC SEISMIC GROUND MOTION VALUES

For this project site-specific ground motion analyses were performed in accordance with ASCE 7-16 §11.4.8. The analyses followed the procedures of §21.2 for development of risk-targeted maximum considered earthquake ground motion hazard analysis. Design response spectrum and design acceleration parameters were developed following procedures of §21.3 and §21.4, respectively.

Site-Specific MCE Spectral Response Parameters	S_{ms} S_{m1}	2.030 1.107
Site-Specific Design Spectral Acceleration Parameters	S_{DS} S_{D1}	1.353 0.738
Peak Ground Acceleration	PGA_M	0.92

LABORATORY TESTING

Undisturbed and bulk samples of soil materials encountered at the site were collected during the course of exploration. Selected laboratory tests completed on the retrieved samples and a comprehensive summary of laboratory test results is described below. Laboratory results are presented in Appendix D.

MOISTURE DENSITY

The field moisture content and dry unit weight were determined for each undisturbed sample. Dry unit weight is expressed in pounds per cubic foot and the moisture content represents a percentage of the dry unit weight. This test data is presented on the boring logs in Appendix A and in Appendix D.

PARTICLE SIZE ANALYSES AND #200 WASH

Particle size analyses (ASTM D6913) were performed (to the #200 sieve) on selected samples from the borings. The results of the particle size analyses are presented in Appendix D.

COMPACTION AND EXPANSION TESTS

To determine the compaction characteristics of the onsite materials, compaction tests are performed in general accordance with the current ASTM D1557 standard (modified proctor). The maximum dry density is reported in pounds per cubic foot and the optimum moisture content as a percentage of the maximum dry density. An expansion index test was performed in accordance with the criteria in ASTM D4829. The results of these tests are presented in the Laboratory Summary (Appendix D, Plates LS.1-LS.2).

SHEAR TEST

Shear tests were performed in a Direct Shear Machine of the strain control type in accordance with ASTM D3080. The rate of deformation is approximately 0.01 inches per minute. Selected samples, as noted in the shear test diagram, were sheared at reduced rates of deformation. Shearing occurred under a variety of confining loads in order to determine the Coulomb shear strength parameters. The test was performed on undisturbed and remolded (@ 90% relative compaction) samples in an artificially saturated condition. The test results are presented graphically in Appendix D.

CONSOLIDATION TEST

Settlement predictions of the soil's behavior under load are made on the basis of consolidation tests. A 1-inch-high sample is loaded in a geometric progression and the resulting deformation is recorded at selected time intervals. Porous stones are placed in contact with the sample (top and bottom) to permit addition and release of pore fluid. The sample is inundated at a selected load during the progression. Results are plotted on the enclosed Consolidation-Pressure Curves (See Appendix D).

LIQUEFACTION POTENTIAL

Liquefaction is a condition where the soil undergoes continued deformation at a constant low residual stress due to the build-up of high porewater pressures. The possibility of liquefaction occurring at a given site is dependent upon the occurrence of a significant earthquake in the vicinity; sufficient groundwater to cause high pore pressures; and on the grain size, relative density, and confining pressures of the soil at the site.

The subject site, like other sites in Southern California, is expected to be subjected to significant shaking from earthquakes. While the site is underlain by sandy materials, the lack of groundwater within the upper 50 feet and the high relative density of the soil renders the potential for liquefaction to be very low. The site is not located within a Seismic Hazard Zone delineated as having potential for liquefaction as mapped by the California Geological Survey (formerly CDMG) on the Inglewood 7.5 Minute Quadrangle (Plate 5, Seismic Hazard Zones Map).

SEISMICALLY INDUCED SETTLEMENT

During seismic ground shaking, seismically induced settlement can occur. The estimation of the potential seismic settlement is divided into two separate causative mechanisms. The settlement of coarse-grained soils above the groundwater table is assumed to be related primarily to ground shaking adjusting the coarse-grained soils into a tighter packing configuration. This is often referred to as seismic compression. The seismic settlement below the groundwater is assumed to be related to pore pressure changes during liquefaction. Because no groundwater was encountered during our investigation, only

seismic settlement of unsaturated soils requires further consideration.

For this investigation we have considered the evaluation procedures proposed by Robertson & Lisheng (2010) to evaluate the seismic settlement potential of unsaturated soil. This method utilizes CPT data to estimate the relative density of the in-place soils. The analysis of seismic settlement has been evaluated using a peak ground acceleration (PGA_M) of 0.99g considering a probability of exceedance of 2% in 50 years for consideration of life-safety. The estimate for differential seismic settlement is considered to be ½ of the total seismic settlement. Seismic settlement of dry sands in some cases exceed 1 inch. Grading of the near surface soils can reduce the anticipated seismic settlement. For this report various grading removals were evaluated to estimate removals needed to reduce the total seismic settlement to 1 inch or less and reduce differential settlement to ½ inch or less *over a horizontal distance of thirty feet*. In some cases, removals on the order of 9 feet from the existing ground surface are necessary to achieve these reduced seismic settlement levels. The results of the seismic settlement analyses are provided in Appendix F of this report.

HYDROCONSOLIDATION POTENTIAL

Hydroconsolidation is a condition where dry or moist soils undergo settlement upon being wetted. In many cases no additional surcharge load is necessary to trigger the hydroconsolidation.

The potential for hydroconsolidation has been evaluated based upon the results of consolidation tests performed on samples taken from the excavated borings, our review of the soil textures and density descriptions from the boring logs, review of the dry density-moisture content data, and consideration of the geologic nature of the deposits. Samples were inundated with water at loads similar to their respective overburden pressure. Based on the lack of significant collapse and age of the deposits, we consider the potential for hydroconsolidation to be very low within the marine deposits underlying the site.

LANDSLIDING AND SLOPE STABILITY

The topography of the Inglewood High School campus and immediate vicinity is essentially flat, with a grade difference of about 6 feet from the northeast corner of the property to the southwest corner. No evidence of landsliding was observed during the course of our investigations throughout the subject site. The site is not located within a Seismic Hazard Zone for earthquake-induced landsliding.

EXCEPTIONAL GEOLOGIC HAZARDS

The following paragraphs address unusual or “exceptional” geologic hazards present in the State of California and listed in California Geological Survey Note 48.

PHASE I AND II ENVIRONMENTAL SITE ASSESSMENT WORK

Such environmental consulting services are outside of our expertise and scope of work.

NATURALLY OCCURRING HAZARDOUS MATERIALS

Review of the available geologic literature does not indicate the presence of any naturally occurring hazards such as methane gas, hydrogen sulfide gas, or tar seeps at the project site.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

We defer issues with respect to the California Environmental Quality Act to the project architect and owner. No paleontological resources were observed in our exploratory excavations.

GROUNDWATER QUALITY

The Inglewood High School campus is provided potable water by the local utility. To our knowledge, no groundwater resources are extracted by the school.

ON-SITE SEPTIC SYSTEMS

The school and surrounding areas are provided with public sanitary sewer service. An existing on-site septic system was encountered in the Smith-Emery Fault Trench A located north of the existing Administration building adjacent to the south side of Manchester Boulevard. It is our understanding that the septic system is no longer being used, and it is recommended the system be properly abandoned utilizing guidelines of the local governing agency during the proposed site modernization project.

NON-TECTONIC FAULTING OF ALLUVIAL FAN DEPOSITS HAZARDS

Review of the geologic literature does not indicate the historical occurrence of nontectonic faulting in the site vicinity due to subsurface fluid withdrawal.

The lateral continuity of the marine deposits underlying the site and their low potential for hydroconsolidation indicates that the potential for non-tectonic faulting is remote.

REGIONAL SUBSIDENCE HAZARDS

Review of the USGS Areas of Land Subsidence in California website (https://ca.water.usgs.gov/-land_subsidence/california-subsidence-areas.html) indicates the project site has not been subject to historical subsidence.

VOLCANIC ERUPTIONS HAZARDS

The project site is located well outside areas of active volcanism.

TSUNAMI AND SEICH HAZARDS

Our review of CGS earthquake hazard zones maps indicates that tsunami run-up heights (16± feet) are generally confined to beach areas, and the subject site, which has an elevation of approximately 115 feet above mean sea level, is not mapped within and area susceptible to tsunamis.

Seiches are seismically induced waves or oscillations within semi-enclosed bodies of water such as lakes, reservoirs, and bays. In light of the lack of significant bodies of water adjacent to the site, the potential for a seiche to impact the site is considered low.

NATURALLY-OCCURING ASBESTOS HAZARDS

Our review of the geologic literature and exploratory findings indicate that naturally occurring asbestos minerals are not present at the site.

RADON-222 HAZARDS

The project site is not immediately underlain by formations known to emit hazardous levels of radon gas. Notwithstanding, we defer the evaluation of this environmental and public health hazard to the project environmental consultant.

FLOOD INUNDATION HAZARDS

Due to the lack of any reservoirs up gradient from the subject site, flooding as a result of dam failure is not considered to be a viable hazard. Based on the geologic and topographic setting and site elevation (115' msl), the potential for flooding at the site is considered low.

DISCUSSION AND DESIGN CRITERIA

The following discussion and design criteria are based upon our understanding of the proposed project, associated improvements, and current site conditions. Our office should be provided with specific site development plans when they are available and should be kept abreast of significant modifications to the proposed project to provide supplemental geotechnical design criteria when appropriate. Foundation recommendations are general in nature. During the design phase of the project, additional project-specific foundation design criteria can be provided.

RECOMPACTION FOR NEAR SURFACE IMPROVEMENTS

Any areas to support foundations and slabs-on-grade should have existing fill soils removed, moisture conditioned, and recompacted to at least 90 percent relative compaction. Native soils to support foundations and slabs should also be removed and recompacted. The limit of such removal and recompaction should extend at least to the bottom of existing fills, 9 feet below the existing grade (to address seismic settlement), or 3 feet below the base of foundations, whichever is deepest, and at least 5 feet beyond planned foundations and slabs.

In areas outside proposed structures, such as for proposed hardscape, street improvements, and parking lots, and areas to receive fill, removals should be performed to remove existing fills and disturbed soil to underlying competent alluvial soils. For planning purposes, considering that exploration encountered existing fills as thick as 3 feet, these removals may extend as deep as 4 feet locally. Actual removals will be

based on field conditions encountered during grading and may differ somewhat from the anticipated removals presented herein.

As previously discussed, the fault trenches excavated on the subject site by this firm in 2023 were backfilled with the trench spoils, but due to a high moisture content the compaction of the material was minimal. It is recommended that all trench backfills be removed and recompacted to at least 90 percent relative compaction during the proposed site development. The two trenches excavated in Grevillea Avenue were backfilled with slurry and do not require further mitigation.

GRADING – ENGINEERED FILLS

We anticipate that minor cut and fill grading and removal and recompaction of near surface pad soils will be necessary to provide structural support for the proposed structures, as well as prepare subgrade for paving and to provide suitable site drainage for the proposed site development. The following criteria pertain to the placement of, and preparation for, engineered fills;

1. The on-site soils are suitable for use as structural fill. Any import materials that are to be used as structural fill should be approved by this office prior to placement.
2. All vegetation (trees and tree roots), trash debris, asphalt, or other deleterious material should be stripped from the area to be recompacted or to receive the proposed improvements.
3. Compressible soils that lie within any areas to be filled should be removed to relatively incompressible material and replaced as properly compacted fill. Portions of the compressible materials that are sufficiently thin may be scarified, watered or air dried to approximately the material's optimum moisture content, and compacted in-place. A combination of removal and recompaction in-place may be used, providing the recommended compaction is obtained throughout the recommended depth interval. Unsuitable soils (artificial fill) should be removed to firm and unyielding native deposits.
4. Shrinkage refers to the lesser volume of fill that results from a given volume of excavation. The shrinkage of the Lakewood Formation materials is anticipated to be between 5% and 10%.
5. Subsidence includes the general lowering of the ground due to in-place compaction by construction equipment. Subsidence is anticipated to range from 1.0 to 3.0 tenths of a foot in the alluvial areas.
6. The maximum dry density and optimum moisture content of the material to be used as compacted fill should be determined in accordance with the standard test method ASTM D1557 (“modified proctor”). The density of earth materials is to be measured using the nuclear gauge (ASTM D6938) or sand cone (ASTM D1556) test methods. The frequency of field density tests should be at least one density test for every 500 cubic yards of fill or each 18 vertical inches of fill.

7. Exposed surfaces should be scarified, moistened or air dried as appropriate, and compacted to 90 percent of the material's maximum dry density prior to placement of fill.
8. We recommend a uniform blanket of compacted fill be created for support of structural footings (for buildings and retaining walls with conventional foundations). The fill cap should extend to at least 3 feet below the base of proposed footings, or 9 feet below the existing grade to address seismic settlement concerns, and 5 feet beyond their perimeter. Special consideration should be paid to locations where existing improvements (utilities, power poles, etc.) interfere with the creation of the desired fill cap. Such conditions should be brought to the attention of this office so that the specific site conditions may be evaluated and recommendations provided.
9. Areas that are to be paved should be scarified to at least ***12*** **inches** below the existing grade or into existing native deposits, whichever is deeper, brought to near the material's optimum moisture content, and compacted to at least 90 percent relative compaction.
10. Fill materials should be placed in thin lifts not exceeding 8 inches in thickness, watered to near the material's optimum moisture content, and compacted to at least 90 percent relative compaction prior to placing the next lift.
11. The areas of the previous fault trenches should be removed to the bottom of the trench excavation (approximately 9 feet in depth) and replaced as compacted fill in accordance with recommendations herein.
12. The 90 percent relative compaction standard applies to the face of fill slopes. This may be achieved by overfilling the constructed slope and trimming to a compacted finished surface, rolling the slope face with a sheepsfoot, or any method that achieves the desired product.
13. All grading should comply with the grading specifications and requirements of the governing agency.

RECOMMENDED FOUNDATIONAL MATERIAL

Based on the findings from this investigation, certified engineered fill is suitable for foundational support of structures with a minimum foundation embedment of 24 inches below the adjacent grade.

TEMPORARY EXCAVATIONS

Temporary excavations required for rough grading (such as excavations associated with removal and recompaction) may be made vertical within the native marine deposits up to a maximum height of 5 feet. That portion of the excavation above a height of 5 feet, and any portion exposing artificial fill or residual soil, should be laid back to 1:1 (H:V) unless specific alternative treatments are evaluated and found acceptable. Where spatial limitations prevent the use of sloping of excavation sidewalls, or where

the excavation will undermine adjacent structures or the public right-of-way, geotechnical design criteria for temporary shoring has been provided.

Temporary excavations (such as utility trenches, grading removals, and backcuts for retaining wall construction) should comply with CAL/OSHA requirements. The safety and stability of excavations for the planned improvements are the responsibility of the contractor. The materials encountered in the exploratory excavations are classified as Type "C" soils.

TEMPORARY SHORING

In areas where sloping of the sidewalls of temporary excavations is not possible due to property line constraints or existing adjacent structures, shoring may be used as an alternative. The following geotechnical recommendations are provided for shoring consisting of cantilever soldier piles with lagging. These recommendations are general in nature; additional recommendations may be warranted once construction methods and specific data regarding the shoring design are available.

For cantilevered shoring that is free to deflect at least 0.002H (where H is the retained height), an active-earth lateral pressure with a triangular distribution equivalent fluid pressure of 35 pcf may be used to model lateral earth pressures for a level retained surface. For shoring that is restrained from deflecting or that will be incorporated into the restrained basement walls, a constant at-rest lateral earth pressure of 20H may be used.

Nearby traffic loads within a 1:1 projection from the base of the excavation should be incorporated into the design loading. The lateral load from traffic surcharges should be continued to a depth of 10 feet or to the bottom depth of the excavation, whichever is less.

Cantilever soldier piles are anticipated to resist lateral movement or overturning through transmission of these lateral forces to the soils below the excavation elevation. The passive resistance provided by the soils below the base of the excavation can be assumed to be an allowable pressure of 500 psf/ft to a maximum of 7500 psf (considering a factor of safety of 1.5) for piles spaced at least 3 pile diameters apart. This passive resistance is applicable for undisturbed soil in direct contact with the soldier pile. The depth of the pile penetration below the base of the excavation must be sufficient to resist the lateral movement and over-turning of the soldier pile system. We recommend that passive resistance be ignored for a depth equal to 1.5 times the effective pile diameter below the base of the excavation. The effective pile diameter is considered the dimension of the soldier pile taken parallel to the line of the wall for driven piles, or the diameter of the drilled hole, whichever is greater.

Drilled holes may be backfilled with structural concrete below the excavation line. The remainder of the hole may be backfilled to the ground surface with sand-cement slurry or lean concrete that is strong

enough to prevent collapse of the hole, but weak enough to be excavated for installation of lagging.

Wood or steel lagging should be used to support the excavation wall between the soldier piles. If the lagging is to remain in place permanently, then treated lumber should be used for the wood lagging. Much of the lateral force is anticipated to be distributed to the cantilever soldier piles through soil arching. Therefore, the lagging may be designed to resist 60% of the theoretical lateral load on a simple span but need not exceed a value of 400 psf (without surcharges). For the arching effect to occur, the backside of the soldier pile must bear against the soil. Placement of lagging behind the back flange of the soldier pile is not recommended.

FOUNDATION SYSTEMS

Based on review of preliminary geotechnical data for the site, the proposed structures may be supported on conventional spread and continuous foundations. Foundation design criteria are based, in part, upon the expansive properties of the materials anticipated to be present near the finished pad grade. Laboratory testing to verify the expansive properties of the near-pad-grade materials should be performed at the completion of rough grading.

Conventional Foundations

Continuous or pad footings may be used to support the proposed structures. In order to achieve the capacities specified below, they should be founded a minimum of 24 inches into engineered fill, with the concrete placed against in-place, undisturbed material. Foundation design criteria are based, in part, upon the expansive properties of the materials anticipated to be present near the finished pad grade. Laboratory testing to verify the expansive properties of the near-pad-grade materials should be performed at the completion of rough grading. The following table presents typical foundation design criteria.

FOUNDATION DESIGN PARAMETER	DESIGN CRITERIA	UNITS	NOTES
	EI = 0-20		
Pre-Saturation depth	moisten	in	
Allowable Bearing Capacity (net) (FS>3)	3000	psf	1,2
Allowable Lateral Resistance (FS=1.5)	250	psf/ft	2,3
Maximum Allowable Lateral Resistance	3000	psf	2,3
Coefficient of Friction (FS=1.0)	0.40		
Minimum Embedment Below Adjacent Grade	24	in	4
Minimum Reinforcement	2 - #4, 1 near top and 1 near bottom		

FOUNDATION DESIGN PARAMETER	DESIGN CRITERIA	UNITS	NOTES
	EI = 0-20		
SLAB-ON-GRADE DESIGN PARAMETER			
Minimum Concrete Thickness	5	in	
Minimum Reinforcement (On-Center-Each-Way)	#4 @ 16"		
NOTES			
1) Bearing portions of all footings should be at least 5 feet (measured horizontally) from the face of adjacent descending slopes. All footings should bear at least 3 feet below an imaginary plane projected upward at 1.5:1 from the toe of locally over-steepened slopes. Pad footings should be at least 24 inches square. Continuous footings should be at least 12 inches wide for one-story and 15 inches wide for two-story construction.			
2) May be increased by 1/3 for short duration loading such as by wind or seismic forces.			
3) Decrease by 1/3 when combined with friction.			
4) Applies to exterior footings.			

Modulus of Subgrade Reaction

We understand that buildings may include braced frames and/or other elements supported on foundations designed using elastic principles. For elastic design of foundations, a modulus of subgrade reaction (k() of 200 pounds per cubic inch (psi/in) is considered appropriate for the anticipated bearing soils consisting of silty sand at near optimum moisture. This modulus considers a 1-foot by 1-foot plate. The following equations (Terzaghi, 1955) may be used to convert this modulus for use with larger load areas.

$$K_v = K_{v1}\left[\frac{B+1}{2B}\right]^2$$

Where: K_v =Vertical subgrade modulus
K_{v1} =Subgrade modulus for 1'x1' plate
B =Foundation width in feet

Slab-on-Grade

Approximately 6 inches of sand should be placed across the slab subgrade, with a vapor retarder placed on top of the sand in all areas where moisture penetration of the slab is undesirable. The vapor retarder should consist of a Class A (ASTM E1745), minimum 10 mil thick, polyolefin plastic. Concrete for the floor slab should be placed directly upon the vapor retarder. The vapor retarder should be placed in general conformance with ASTM E1643. The permeance (propensity to transmit water) and strength of vapor retarder, as well as the water/cement ratio, mix design and strength of the concrete, will influence a variety of things, including slab finishing, construction

schedules, moisture released from the slab, and floor coverings. Project design and construction professionals should consider these factors when developing specifications for, and/or selecting materials for, the vapor retarder, concrete, and floor covering.

Cast-In-Place Foundations

The planned buildings will be acted upon by transient lateral forces such as wind and seismic. Deep foundations may be used to resist uplift created by these forces. The following sections present geotechnical design criteria for deep foundations. *Deep foundations and shallow foundations often behave somewhat differently when acted upon by vertical or lateral forces. This office should be contacted to evaluate specific conditions where shallow foundations and deep foundations are both used for a building.*

Deep Foundation Vertical Capacity

Cast-in-place deep foundations can be cast in drilled holes extending into the existing earth materials. The bearing capacity of these deep foundations was analyzed considering side friction only for vertical capacity. Deep foundations can be designed for compression using an allowable skin friction capacity of 333 psf is considered appropriate for the site conditions. The allowable compressible vertical capacity has a factor of safety of two applied to the ultimate side friction values. To achieve the full vertical capacities, deep foundations should be spaced no closer than three pile diameters center-to-center.

Uplift resistance can be derived from side friction along the pile and the weight of the pile. The allowable side friction values used to resist uplift can be developed by applying a factor of safety of 3.0 to the ultimate compression side friction values. For short duration loading (i.e., by wind and seismic loading), the allowable capacities may be determined using a factor of safety of 2.0 applied to the ultimate side friction values.

Deep Foundation Settlement

The settlement for the proposed cast-in-place deep foundations supported via side friction is not anticipated to exceed ¼ inch of settlement.

Deep Foundation Installation

Concrete must be placed in direct contact with the undisturbed in-place materials in order to achieve the specified capacities. Groundwater was not encountered in the exploratory excavations. During the investigation, caving of the hollow-stem exploratory borings did occur occasionally in clean coarse sand. Stabilization of the excavation is anticipated to be necessary where clean coarse sand is encountered. Methods of stabilization include casing and/or the use of drilling fluids.

Adjacent deep foundation excavations should not be open at the same time. We recommend deep foundations be completed and the concrete allowed to be set up prior to excavation of an adjacent deep foundation location.

Cast-in-place deep foundations are a non-displacement type of foundation. Their construction will produce spoil materials. Accommodation should be made for removal of this volume of material from the site.

RETAINING WALL RECOMMENDATIONS

Development plans may include retaining walls. Foundation design criteria are provided in the preceding section. Lateral loading criteria for cantilevered wall designs with level backfills are presented in the table below. The loading criteria are in part a function of the type of backfill material. Criteria for various Unified Soil Classification designations are provided. Earth materials supported by the retaining wall and bearing support may be assumed to have a total soil unit weight of 125 pcf.

Lateral Design(1)

	Equivalent Fluid Density (pcf)
USCS Class:	GW, GP, GM, SW, SP, SM
Active Pressure	35
At-rest Pressure	60

(1) Considering Table 1610A.1 of the 2019 CBC and laboratory strength results.

Retaining walls that are free to deflect at the top may be designed for active pressure. Retaining walls that are restrained at the top should be designed for at-rest pressure. The 2019 CBC §1610A.1 allows basement walls which extend not more than 6 feet below grade with supporting flexible floor systems to be designed for active pressure.

The equivalent fluid densities in the table should be increased for walls supporting slopes steeper than 5:1 (H:V). The values should be increased 1 pcf for each 2 degrees of backfill gradient. For example, ascending backfill with a gradient of 2:1 may use an equivalent fluid density that is increased by 13 pcf. Recommendations for other backfill conditions may be provided upon request.

All retaining walls should be provided with adequate backdrainage systems. Pipe outlets are generally preferred over weep holes. Free draining material should be used behind weep holes or about pipe drains. Care should be exercised to see that weep holes are installed and maintained above the finish grade adjacent to the face of the wall. Waterproofing should be included in the design where moisture penetration of the wall and mineral deposits/staining on the wall face are undesirable.

Backfill for retaining walls should be properly compacted. Use of expansive soil as backfill for retaining walls will result in a surcharge to the wall, the magnitude of which is dependent upon the

expansion index of the backfill. An impervious cap should be provided at the top of the backfill to retard infiltration of water. A typical backfill detail is provided in Appendix G of this report.

Seismic Increment of Earth Pressure

As required by California Building Code §1803A.5.12 geotechnical reports for structures assigned to Seismic Design Category D, E or F must include information regarding lateral pressures on foundation walls and retaining walls due to earthquake motions. Recent writings such as Lew et al. (2010), Al Atik et al. (2010), and Sitar and Wagner (2015) attempt to address the appropriate means to implement this code requirement. These works conclude in part that seismic earth pressures can be neglected when the peak ground acceleration is below 0.3g. For this site, the peak ground acceleration is above this threshold.

For retaining walls, the following design criteria are provided considering the general provisional recommendations proposed by Sitar and Wagner (2015) for walls founded on non-saturated, level ground conditions. Per CBC §1803A.5.12 item 1, the seismic earth pressure increment need only be included in design when walls support more than six feet of backfill. When this criterion is met, cantilever walls free to move and rotate can be designed for a seismic earth pressure increment considering an equivalent fluid pressure of 21 pcf and 58 pcf for level and sloping backfill, respectively (triangular pressure distribution). Walls restricted from moving or rotating, such as basement walls, can be designed for a seismic earth pressure increment considering an equivalent fluid pressure of 48 pcf (triangular pressure distribution). The resultant of this seismic earth pressure increment is considered to act at one-third H above the base of the wall. The seismic earth pressure increment should be applied to the active earth pressure for both the free-to-rotate and restrained cases. Often, for the case of walls restricted from moving or rotating, this combination of active earth pressure and seismic earth pressure increment will not exceed the at-rest earth pressure for the static case when considering factored loads used for the basic load combinations prescribed in the California Building Code.

Factors of Safety

The factor of safety for the allowable bearing pressure provided is greater than three. The allowable passive pressure provided is based upon a factor of safety of *1.5*. The factor of safety for the sliding friction is one. The factor of safety for the active pressure is one.

With regard to retaining walls, the California Building Code calls for a 1.5 factor of safety for both sliding and overturning. We defer to the California Building Code and the project structural engineer on this matter.

ELEVATOR PITS AND RETAINING WALL BACKDRAINAGE

Subsurface elevator pits and retaining walls should be provided with waterproofing and backdrains as illustrated in Plate RW1 in Appendix G for the alleviation of porewater pressure. Such drains should be connected to a nearby storm drain or be provided gravity-flow outletting to a sump. In lieu of installing such

backdrainage measures, retaining walls would need to be designed considering hydrostatic pressure.

SETTLEMENT

Static settlement of shallow spread foundations is anticipated to be minor, on the order of ¾ inch. Differential settlement between footings is anticipated to be less than ⅜ inch over a span of 30 feet. We anticipate the majority of settlement to occur during construction. Total seismic settlement is anticipated to be on the order of 1 inch, with differential settlement of 1/2 inch over a span of 30 feet considering earthquake ground motions with a 2% probability of exceedance in 50 years.

CORROSIVITY

For structural elements, a site is considered to be corrosive if one or more of the following conditions exist for the representative soil samples taken at the site: Chloride concentration is 500 ppm or greater, sulfate concentration is 2000 ppm or greater, or the pH is 5.5 or less (Caltrans, 2015; GMED, 2013). For structural elements, the minimum resistivity of soil and/or water indicates the relative quantity of soluble salts present in the soil or water. In general, a minimum resistivity value for soil and/or water less than 1000 ohm-cm indicates the presence of high quantities of soluble salts and a higher propensity for corrosion.

Samples from the soil at the site have been forwarded to consulting corrosion engineers, Project X Corrosion Engineering, for testing. Resistivity results indicate resistivity of saturated samples of 11,390 ohm-cm. Soluble sulfate test results yielded concentrations of less than 0.0277 percent by mass. This level of soluble sulfate is in the S0 exposure class per Table 19.3.1.1 of ACI 318-14. Chlorides were 34.3 ppm. The pH was determined to be approximately 6.5.

Based on these results, the on-site soil does not meet any of the corrosion criteria. Samples of the on-site soils are not considered corrosive to structural elements based on the aforementioned definition.

UTILITY TRENCH EXCAVATIONS

Utility trenches excavated parallel or nearly parallel to footings should not be excavated below a plane having a 2:1 (H:V) projection for the line 9 inches above the base of the footing and should not be excavated closer than 18 inches from the face of a footing, as outlined in CBC §1809A.14.

UTILITY TRENCH BACKFILL

Backfill for utility trench excavations should be compacted to at least 90 percent relative compaction. Where installed in sloping areas, the backfill should be properly keyed and benched. Two-sack sand slurry may be utilized as backfill in non-structural areas to expedite backfilling and construction

PRELIMINARY PAVEMENT STRUCTURAL SECTIONS

Preliminary pavement structural section information for the project has been prepared

considering typical subgrade soils encountered on the Inglewood High School campus. The following tables present typical pavement section recommendations. These consider an R-value of 45 for subgrade soils.

AC PAVEMENT RECOMMENDATION

Assumed Traffic Index	Thickness of Asphalt Concrete (in)	Thickness of Crushed Aggregate Base (in)
5 (Parking Stalls & Access Lanes)	3.0	6.0
7 (Entrance & Service Lanes)	4.0	8.5

CONCRETE PAVEMENT RECOMMENDATION

Assumed Traffic Category	Thickness of Concrete (inches)	Thickness of Crushed Aggregate Base (inches)
Parking Stalls & Access Lanes	5.0	4.0
Entrance & Service Lanes	6.5	4.0

Based on the 'R' value, sand or base is typically not required under curbs, gutters and free-floating sidewalks.

R-value tests should be performed at the completion of grading and final pavement section designs should be developed at that time based on the results of that testing.

Landscape watering should be kept to a minimum. Cutoff walls should be considered in areas that abut landscape planters. This would help prevent irrigation water from infiltrating into the adjacent subgrade. The cutoff walls should extend 6 inches into native subgrade soils.

Prior to placement of base and asphaltic concrete, the upper 12 inches of the subgrade must be scarified, watered, and compacted to 95 percent of the material's maximum dry density. If fills are required to reach the top of the subgrade, they must be consistent with the 'R' values that were used in this report.

CONCRETE

Joints are placed in concrete pavement to control cracking and facilitate construction (ACI, 330R). We defer the design of the joints to the pavement designer. The use of distributed steel reinforcement is in part a function of the joint configuration. Therefore, we also defer this aspect of the design to the designer. However, sufficient steel should be used to control cracks caused by temperature variations. Our analysis indicates this quantity of reinforcement steel should be no less than #4 rebar positioned at

16 inches on-center in each direction. The Manual of Concrete Practice (ACI 330R) provides design information regarding these aspects of the design.

All work and materials must comply with the latest applicable specifications of the governing jurisdiction.

FLATWORK

The on-site soils are considered non-expansive. All flatwork, such as sidewalks or other concrete not subject to vehicle loads, may be designed for non-expansive soils condition. Concrete should be at least a nominal 4 inches thick. The top *12* inches of subgrade material beneath proposed flatwork and hardscape should be removed and recompacted to at least a relative compaction of 90 percent.

SEPTIC SYSTEM ABANDONMENT

Fault Trench A excavated by Smith-Emery in 2001 encountered an on-site septic system consisting of a septic tank and three brick-lined seepage pits. The locations of the septic system elements are shown on Plate 2. It is our understanding this system is no longer being used, and it is recommended that it be properly abandoned in accordance with Los Angeles County and/or city of Inglewood requirements. This typically involves removing the septic tank and backfilling the excavation with compacted fill and cleaning out the seepage pits and backfilling them with slurry.

DRAINAGE

Positive drainage should be established to carry pad water away from structures and foundations, and to prevent uncontrolled or sheet flow over manufactured slopes. We recommend as steep a gradient as possible be established around the structure, to the street or other non-erosive drainage devices. Fine-grade fills placed to create pad drainage should be compacted in order to retard infiltration of surface water.

Preserving proper surface drainage is also important. Planters, decorative walls, plants, trees or accumulations of organic matter should not be allowed to retard surface drainage. Area drains and roof gutters (if present) should be kept free of obstruction. Roof gutters (if present) and condensation lines from air conditioners should outlet to area drains or paved areas which conduct the water to the street. Positive drainage along the backs of retaining walls should be maintained. Any other measures that will facilitate positive surface drainage should be employed.

activities.

CONSTRUCTION MONITORING

Prior to finalizing grading plans, foundation plans, and project specifications should be submitted to this office for our review. The purpose of that review is to confirm that geotechnical design criteria have been properly incorporated into the project design. Additional geotechnical design criteria may be provided at that

time if such are considered warranted.

Placement of all fill and backfill should be monitored by representatives of this office. This includes our observation of prepared bottoms prior to filling. Supplemental recommendations may prove warranted based upon the materials exposed in the actual excavations.

Foundation excavations should be observed by representatives of this office to see if the recommended penetration of proper supporting fill materials has been achieved. Such observations should be made prior to placing concrete, steel, or forms. This office should be notified at least 24 hours prior to placing concrete, steel or forms.

CLOSURE

This geotechnical report has been prepared in accordance with generally accepted engineering practices at this time and location. No other warranties, neither express nor implied, are made as to the professional advice provided under the terms of our agreement and included in this report.

Thank you for this opportunity to be of service. Please do not hesitate to call if you have any questions regarding this report.

Respectfully submitted,

PLATE 4

EARTHQUAKE ZONES OF REQUIRED INVESTIGATION MAP

MAP EXPLANATION

EARTHQUAKE FAULT ZONES

Earthquake Fault Zones
Zone boundaries are delineated by straight-line segments; the boundaries define the zone encompassing active faults that constitute a potential hazard to structures from surface faulting or fault creep such that avoidance as described in Public Resources Code Section 2621.5(a) would be required.

Active Fault Traces
Faults considered to have been active during Holocene time and to have potential for surface rupture: Solid Line in Black or Red where Accurately Located; Long Dash in Black or Solid Line in Purple where Approximately Located; Short Dash in Black or Solid Line in Orange where Inferred; Dotted Line in Black or Solid Line in Rose where Concealed; Query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by fault creep.

SEISMIC HAZARD ZONES

Liquefaction Zones
Areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

Earthquake-Induced Landslide Zones
Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

OVERLAPPING EARTHQUAKE FAULT AND SEISMIC HAZARD ZONES

Overlap of Earthquake Fault Zone and Liquefaction Zone
Areas that are covered by both Earthquake Fault Zone and Liquefaction Zone.

Overlap of Earthquake Fault Zone and Earthquake-Induced Landslide Zone
Areas that are covered by both Earthquake Fault Zone and Earthquake-Induced Landslide Zone.

Note: Mitigation methods differ for each zone – AP Act only allows avoidance; Seismic Hazard Mapping Act allows mitigation by engineering/geotechnical design as well as avoidance.

LITHOLOGY

af Artificial Fill: Gravelly Sand to Silty Sand, light to medium brown to locally yellowish brown, sand is generally fine to medium grained, moderately loose, contains minor amounts of man-made debris except locally in Trench A1 where abundant angular asphalt pieces up to 6 inches in size are present, small active roots common except where covered by concrete or asphalt, moist to very moist beneath lawn areas, dry to damp elsewhere.

Qlw Lakewood Formation: Slightly Clayey Sand to Silty Sand to Gravelly Sand, varies from mottled brown to very dark brown (7.5YR 4/3 to 10YR 2/2) in the upper 3 to 4 feet to brown to dark yellowish brown (10YR 3/3 to 10YR 4/4) with gray brown (10YR 5/2) mottling below (color lightens with depth), sand is typically very fine to fine grained to about 6 feet then increases in grain size to medium to coarse grained below, orange oxide staining common below 6 feet, upper 4 feet is moderately loose to moderately dense and porous, and is bioturbated, slightly porous and dense to locally very dense below 4 feet (density increases with depth), very minor scattered subrounded gravel in upper 6 feet, grades to dense gravelly sand with very minor pockets of clean fine sand below 6 feet, vague horizontal stratification observed in Trench A3 within gravelly sand, otherwise deposit was observed to be massive, upper 6 inches is organic rich beneath lawn areas, abundant small active roots in upper 4 feet beneath lawn and planter areas, few scattered small roots elsewhere, moist to very moist to a depth of about 4 feet beneath lawn areas, damp to slightly moist elsewhere.

Depth	Geology	Sample Description	ST	w	DD	S	Max	Opt	EI	LL	PI	% Gravel	% Sand	%Fines	W.O. 9711

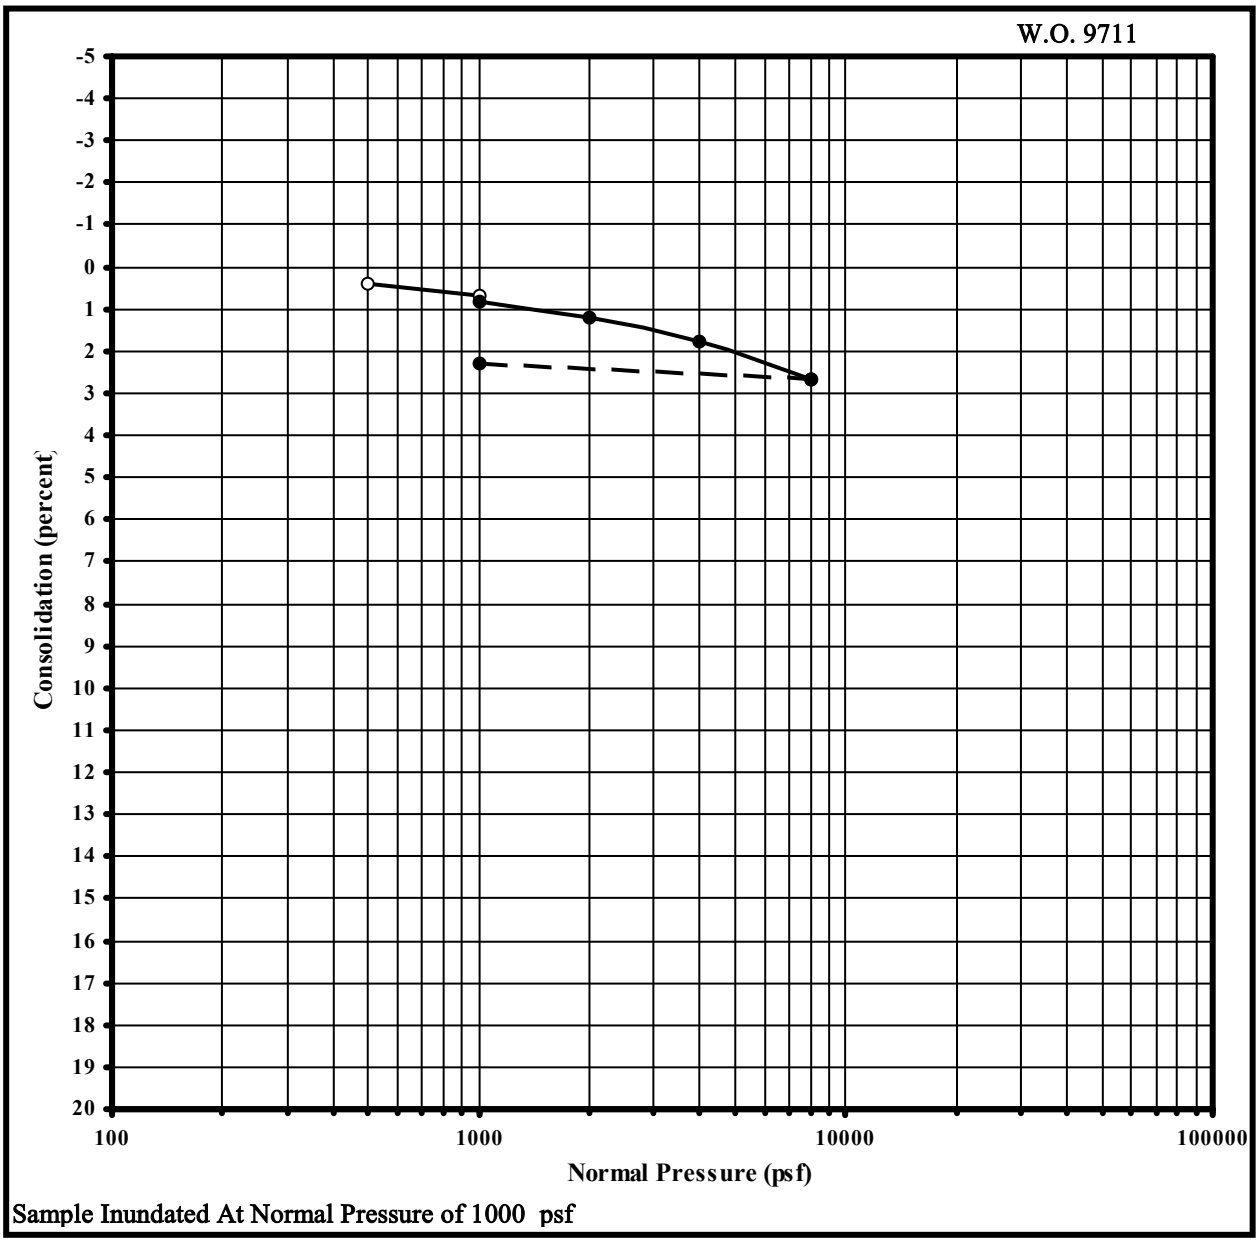
LEGEND

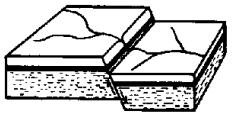
Depth = Sample Depth (ft) below ground surface
ST = Sample Type*
w = Initial Moisture Content (%)
DD = Initial Dry Unit Weight (pcf)
Max = Maximum Dry Unit Weight (pcf)
Opt = Optimum Moisture Content (%)
EI = Expansion Index
S = Degree of Saturation (%)

LL = Liquid Limit
PI = Plasticity Index
e = Void Ratio
n = Porosity (%)
WD = Initial Wet Unit Weight (pcf)
SD = Saturated Unit Weight (pcf)
BD = Bouyant (Submerged) Unit Weight (pcf) - Assuming water unit weight of 62.4 pcf



Consol = Consolidation Test Diagram (Plate No.)
Shear = Shear Test Diagram (Plate No.)

* Sample Types: (U) = relatively Undisturbed; (S) = SPT; (B) = Bulk; (N) = Nuclear; (SC) = Sand Cone



CONSOLIDATION RESULTS

Undisturbed Sample

Cations and Anions, except Sulfide and Bicarbonate, tested with Ion Chromatography
mg/kg = milligrams per kilogram (parts per million) of dry soil weight
ND = 0 = Not Detected | NT = Not Tested | Unk = Unknown
Chemical Analysis performed on 1:3 Soil-To-Water extract
PPM = mg/kg (soil) = mg/L (Liquid)

Note: Sometimes a bad sulfate hit is a contaminated spot. Typical fertilizers are Potassium chloride, ammonium sulfate or ammonium sulfate nitrate (ASN). So this is another reason why testing full corrosion series is good because we then have the data to see if those other ingredients are present meaning the soil sample is just fertilizer-contaminated soil. This can happen often when the soil samples collected are simply surface scoops. This is why it's best to dig in a foot, throw away the top and test the deeper stuff. Dairy farms are also notorious for these items.

If one sample pops up much more corrosive than all others, we would recommend collecting more samples surrounding the problem sample location to determine if the peak is isolated to it. This allows us to conclude it was a contaminated sample and able to declare it an outlier.

APPENDIX E

Seismicity Analyses

August 5, 2024
W.O. 9711.002
Revised September 25, 2024

INTRODUCTION

Project design in California requires assessment of seismic ground motions at the site location. The California Building Code (CBC) allows two separate methodologies, ground motions determined from mapped ground motion acceration parameters, and development of site-specific ground motions. This section of the report addresses the use of site-specific ground motion procedures.

PROJECT LOCATION

This project is the campus of Inglewood High School in the city of Inglewood. Project coordinates of Latitude 33.9606 degrees and Longitude -118.3560 degrees were assigned for this project.

SITE CONDITIONS

Ground motions are affected by the average shear wave velocity in the upper 100 feet (Vs30). For this site a Seismic Cone Penetrometer Test (SCPT) sounding was extended to a depth of nearly 100 feet with shear wave measurements taken at 5-foot intervals. Using the methodology provided in ASCE Standard 7-16 §20.4, the average shear wave velocity Vs30 at the site was estimated to be 425 m/s. That puts the site in site class C. Using ASCE Standard 7-22, which is expected to be adopted in the next triennial building code cycle, the site class will be CD.

SITE-SPECIFIC GROUND MOTION HAZARD ANALYSES

Geolabs – Westlake Village has performed a site-specific risk-targeted maximum considered earthquake (MCE_R) ground motion analyses in general accordance with ASCE 7-16, Chapter 21, §21.2. During the course of this analyses, the following general sequence of steps were performed.

- Site coordinates were obtained using Google Earth computer software
- A risk category was provided to our office by the design team
- The shear wave velocity Vs30 for the site was determined
    - Shear wave velocity was obtained using CGS map sheet 48: Shear-wave Velocity in Upper 30m of Surficial Geology (Vs30).
    - SCPT data was used to develop a site-specific shear-wave profile and average shear wave velocity in the upper 100 feet using the methodology of ASCE 7-16 §20.4.
- The site class was assigned based on the Vs30 information.
    - The current California Building Code (CBC) triennial cycle incorporates by reference ASCE 7-16, while the next cycle of the CBC will incorporate ASCE 7-22. Site classes in these two ASCE documents differ, so the site class has been determined in accordance with both documents.
- Mapped ground motion coefficients were obtained using the ASCE7 Hazard Tool Website.
- Basin effect coefficients Z1.0 and Z2.5 were obtained using OpenSHA Site Data Application (1.5.2)
- A site-specific deaggregation was performed using the USGS hazards interactive website to determine fault scenarios anticipated to be capable of producing significant contribution to ground motion at the site.
- Known active fault traces within a 30 km radius were determined using the UCERF3_EventSet_All data file.
- For these faults, fault parameters such as maximum magnitude, average dip, slip rate, dip direction, and depth were obtained from the UCERF3_EventSet_All data file and Open File Report ofr2013-1165 Table B1.
- Probabilistic MCE_R Response Spectrum was developed.

  - Using on-site Vs30 data, Response Spectrum for the Vs30 obtained from sCPT data was developed using the OpenSHA Hazard Spectrum GUI 1.5.2 application considering 5% damping and 1% probability of collapse in 50 years. This application produces GMRot50 response spectrum.
    - GMRot50 spectral accelerations were scaled in accordance with ASCE 7-16 to develop the maximum response.
    - Method 1 of ASCE 7-16 §21.2.1.1 was used to develop the probabilistic MCE_R ground motions.
      - Risk coefficients C_R and C_1 were obtained using the ATC Hazards by Location tool.
  - Probablistic MCE_R Response Spectrum was also developed using the ASCE7 Hazard Tool Website and site classes C and CD.
  - For this project, the probabilistic spectrum considering the site-specific Vs30 of 425 m/s was considered the Probabilistic MCE_R Response Spectrum.
- Deterministic MCE_R Response Spectrum was developed.
  - The USGS Earthquake Hazard Toolbox Response Spectra tool was used to develop 84^{th}-percentile spectra with 5% damping for the faults considered to significantly contribute to ground motions at the site.
    - Scenario earthquakes contributing less than 10% of the largest contributor at each period was ignored.
    - The largest spectral acceleration at each period was used.
  - The 84^{th}-percentile spectra were adjusted to the maximum direction in accordance with ASCE 7-16 §21.2.
- Site-Specific MCE_R spectral acceleration at any period was considered to be the lesser of the probabilistic and deterministic ground motions.
- Design Response was developed
  - The design spectral acceleration at any period was not allowed to be less than 80 percent of the spectral acceleration determined using the general methodology of ASCE 7-16 §11.4.6.
- Maximum Considered Earthquake spectral acceleration at any period was considered to be 1.5 times the design spectral acceleration value.
- Design ground motion acceleration parameters were developed in general accordance with ASCE 7-16 §21.4

Output from this site-specific ground motion hazard analyses are included in the following enclosures.

Overall vertical settlements report

Procedure for the estimation of seismic induced settlements in dry sands

Average shear stress, τ_{av}

$$\tau_{av} = CSR^{*} \cdot \sigma_{v0}' = 0.65 \cdot \frac{\alpha_{max}}{g} \cdot \sigma_{v0} \cdot r_a$$

Estimate small shear strain modulus, G_0

$$G_0 = 0.0188 \cdot \left[10^{(0.55 I_c + 1.68)}\right] \cdot (q_t - \sigma_v)$$

Estimate shear strain amplitude, γ

(based on Pradel (1998))

$$\gamma = \left[\frac{1 + \alpha \cdot e^{bR}}{1 + \alpha}\right] \cdot R \cdot 100\ (\%)$$

$$R = \frac{\tau_{av}}{G_0} \text{ (Note } \tau_{av} \text{ and } G_0 \text{ same units)}$$

$$\alpha = 0.0389 \cdot \left(\frac{\sigma_v}{p_a}\right) + 0.124$$

$$b = 6400 \cdot \left(\frac{\sigma_v}{p_a}\right)$$

Estimate volumetric strain in 15 cycles

$$\varepsilon_{vol(15)} = \gamma \cdot \left[\frac{(N_1)_{60,cs}}{20}\right]^{-1.20}$$

$$(N_1)_{60,cs} = \frac{Q_{tn,cs}}{8.5 \cdot \left[1 - \frac{I_c}{4.6}\right]}$$

Volumetric strain in design earthquake

$$\Sigma_{vol} = \varepsilon_{vol(15)} \cdot \left[\frac{N_c}{15}\right]^{0.45}$$

$$N_c = (M - 4)^{2.17}$$

Seismic settlement, s

$$s = 2 \cdot \int_0^{GWT} \Sigma_{vol} \cdot dz$$

Robertson, P.K. and Lisheng, S., 2010, "Estimation of seismic compression in dry soils using the CPT" FIFTH INTERNATIONAL CONFERENCE ON RECENT ADVANCES IN GEOTECHNICAL EARTHQUAKE ENGINEERING AND SOIL DYNAMICS, Symposium in honor of professor I. M. Idriss, San Diego, CA

INTRODUCTION

This report presents the results of our fault investigation performed at Inglewood High School located at 231 South Grevillea Avenue in the city of Inglewood to determine the presence or absence of surface traces of the Inglewood fault. It is proposed to remove and replace the administrative building and several classrooms on the campus. Several of these new buildings will be located within a state-defined Alquist-Priolo Earthquake Fault Zone (see Plates 2 and 4).

This report is intended for submittal to the appropriate governmental authorities that control the issuance of necessary permits and provides our findings of the fault investigation and appropriate building setback distances.

OBJECTIVE

The primary objective of this investigation was to determine if active faults (as defined by the Alquist-Priolo Earthquake Fault Zoning Act of 1972) are present on the subject site and to determine an appropriate building setback distance from active faults should they be encountered. The northeast corner of the subject site is located within an Alquist-Priolo Earthquake Fault Zone (AP Zone) defined by the California Division of Mines and Geology in 1986 (now California Geological Survey), as shown on the attached Earthquake Zones of Required Investigation Map (Plate 4). Governing agencies require fault investigations be performed on sites located within these zones when structures intended for human occupancy are proposed.

Additional information regarding AP Zones is provided below.

LOCATION

The Inglewood High School campus is located at the southwest corner of West Manchester Boulevard and South Grevillea Avenue in the city of Inglewood, California (Lat: 39.9512°; Long: 118.3430°, see Plate 1). The site is bounded by West Manchester Boulevard to the north, South Grevillea Avenue to the east, West Kelso Street to the south, and developed residential properties to the west. Access onto the site is gained from the streets along the north, south, and east sides, with access onto the campus proper being through secured gates on all sides.

SCOPE

The scope of our investigation involved the completion of the following:

1. Review of available general geologic data. A complete list of reviewed documents is provided on Plates R-1 through R-5.

2. Review of several fault investigation reports previously prepared for the subject property and for properties in the near vicinity of the site. A complete list of reviewed reports and corresponding review agency letters arranged by site address is provided on Plates R-1 through R-5. The locations of the various reviewed fault investigations have been indicated on Plate 4.

3. Review of a geotechnical engineering report previously prepared for the subject site by Geotechnologies, Inc. in 2001. The document reviewed is listed on Plate R.

4. Review of the following aerial photographs:

    a. Fairchild Aerial Surveys, June 18, 1934, Flight C-3060, Frame 115.

    b. Fairchild Aerial Surveys, August 30, 1941, Flight C-7347, Frame 2.

    c. Fairchild Aerial Surveys, July 1, 1956, Flight C-22555, Frames 19 - 24.

5. Excavation and detailed geologic logging of seven (7) fault trenches excavated on the subject property and in South Grevillea Avenue.

6. Preparation of a Site Location Map, a site-specific Geologic Map, a Regional Geologic Map, a map showing Earthquake Zones of Required Investigation, and a plate providing the Fault Trench Logs.

7. Presentation of our procedures, findings, and recommendations.

PROPOSED DEVELOPMENT

The findings contained in this report are based on preliminary plans provided by the project architects, GGA+. It is proposed to modernize portions of the Inglewood High School campus by removing several classroom and administrative building, primarily in the northeast and eastern portions of the site and constructing four (4) new classroom and administrative buildings in their place. Although the final configuration of the buildings is pending, we understand the buildings will be a combination of one and two stories. We have delineated the anticipated building footprints on Plate 2.

SITE CONDITIONS

The subject property is essentially level, with overall site relief from east to west being on the order of 5 to 6 feet. The site is developed with the Inglewood High School campus and is comprised of several one and two story classrooms, administrative, and accessory buildings, quad areas, sports courts, and grass fields. Portable classroom buildings are also present. The properties to the west of the campus are developed with single-family residences and apartment buildings.

Drainage of the site is partially by percolation through on-site soils and by sheetflow directed toward the west - southwest.

SITE HISTORY

Inglewood High School opened its doors in 1905. Since that time, buildings have been removed and new ones added, and the grass field areas have been modified. Based on our review of aerial photographs, the campus was enlarged toward the south sometime between 1941 and 1956 to extend to Kelso Street. The west, east, and north boundaries do not appear to have changed over time.

It is apparent that modernization of the campus, similar to what is currently proposed, was pursued in 2001, at which time Geotechnologies, Inc. was retained to perform a geotechnical engineering investigation for the construction of several new buildings and the renovation of several more. As part of their investigation, they excavated 34 exploratory borings 20 to 60 feet

in depth using both truck-mounted drilling equipment and hand labor. Samples were collected and laboratory tests were performed. They reported their findings and design recommendations in their referenced report dated September 24, 2001. At essentially the same time, Smith-Emery GeoServices was retained to perform a geologic investigation/fault study for the proposed buildings located within the AP Zone, notably in the northeast corner of the school campus. Smith-Emery excavated and geologically logged five (5) fault trenches to a maximum local depth of about 12 feet, although most of the trenches were 5 to 7 feet in depth. The locations of their trenches have been included on the enclosed Geologic Map, Plate 2. They generated the referenced report dated October 26, 2001, which summarized that no evidence of faulting was observed within their trenches. They did note, however, that due to the presence of buried old foundations, pipes, and an abandoned sewage disposal system consisting of a septic tank and three seepage pits located between the northernmost building and Manchester Boulevard, there were gaps in their trench data. Each of the Smith-Emery trenches were backfilled with the native soils and compacted to at least 90 percent relative compaction, which is documented in a compaction report provided in their referenced report. It appears the modernization project was put on hold sometime after the Smith-Emery and Geotechnologies reports were completed, as the Smith-Emery report was not reviewed by the California Geological Survey (CGS) until early 2023. In the referenced CGS review letter dated January 13, 2023 (provided in Appendix A), CGS notes the presence of the gaps within the trench data and suggests that additional trenching be performed to ensure complete coverage beneath the proposed buildings within the AP Zone. In mid-2023, Geolabs–Westlake Village was retained to perform the additional fault trenching necessary to fill in the gaps in the Smith-Emery data, and to perform additional trenching within Grevillea Avenue. The additional trenching in Grevillea Avenue was performed with the intent of exploring further east to allow more flexibility in the eastern limit of the proposed buildings. This report provides the findings of the supplemental fault trenching and provides appropriate building setback distances based on the geologic conditions encountered.

FIELD INVESTIGATION

This firm excavated and geologically logged seven (7) fault trenches on the subject site and within Grevillea Avenue between September 22 and October 10, 2023, in association with

this fault investigation. The locations of the trenches are shown on Plate 2 herein. Prior to beginning the trenching program, a map showing the proposed fault trench locations was provided to CGS for their review. The trenching began after receiving confirmation from CGS that the trenching program appeared acceptable. All fault trenches were geologically logged by the undersigned engineering geologist. Trenches A2 and C2 were observed by Mr. Michael J. DeFrisco, engineering geologist with CGS, prior to backfilling. Due to safety concerns with leaving the trenches open for an extended period, the remaining trenches were not observed by a CGS geologist, but rather were backfilled as soon as possible after logging by the undersigned geologist. The fault trenches were excavated approximately 6 to 10 feet in depth and extended at least 5 feet into competent native upper Pleistocene Lakewood Formation deposits. Most trenches were excavated with vertical trench walls supported with hydraulic shoring. However, due to caving in the upper few feet and the availability to trim the trench walls to a 1:1 slope ratio, the upper 5 feet of the trench walls of Trench A2 and C3, and the northern 16 feet of Trench C2, were trimmed to 1:1. The eastern ends of Trenches A4 and C4, excavated in the western lane of Grevillea Avenue, were tunneled below the pavement about 3 feet past the centerline of the street to ensure the trenching extended at least 50 feet beyond the anticipated limits of the easternmost building footprints. Similarly, the eastern end of Trench C2 was tunneled beneath a buried abandoned concrete storm drain inlet structure, but due to concerns about the integrity of the structure, the tunneling was halted. This necessitated excavating Trench C3 further to the north to ensure coverage in this area. Due to favorable lighting, in most instances the south trench walls were selected for logging, which were scraped clean and smooth to expose the earth materials. Field mapping of the trench walls was performed at a scale of 1 inch equals 5 feet. The logs of fault trenches are provided as Plate 5.

Trenches A1 through A3 and C1 through C3 were backfilled with the earth materials excavated from the trenches. Attempts were made to compact the backfill using a sheepsfoot wheel roller, but due to a relatively high moisture content and the desire to fill in the trenches as quickly as possible, the material was only marginally compacted. This trench backfill will require removal and recompaction to building code standards during the proposed site development. Trenches A4 and C4, excavated in Grevillea Avenue, were backfilled with slurry in accordance

with City of Inglewood requirements.

ALQUIST-PRIOLO EARTHQUAKE FAULT ZONE

As previously stated, the northeast corner of the property is located within a state-defined Alquist-Priolo Earthquake Fault Zone (AP Zone). The Alquist-Priolo Earthquake Fault Zoning Act (the Act), passed in 1972, is intended to mitigate the hazard of surface faulting to structures intended for human occupancy. It requires local governing agencies to regulate most construction projects located within these zones by requiring a geologic fault investigation to verify the absence, or presence, of active faults on the property. The Act defines an active fault as one that shows evidence of rupture during the Holocene epoch (past approximately 11,000 years). If an active fault is found, a structure intended for human occupancy may not be placed over the trace of the fault. Generally, a building setback zone is established, and all structures intended for human occupancy must be located outside of the building setback zone. A portion of the AP Zone map from CGS (Inglewood Quadrangle), showing the subject site and locations of researched nearby fault investigations, is provided herein as Plate 4. The approximate limits of the AP Zone from the map have also been transferred onto the site-specific Geologic Map (Plate 2).

With regards to the subject site, the site is located within an AP Zone established for the Inglewood fault, which is one of several fault splays comprising the Newport-Inglewood fault zone (Bryant, 1988). The Newport-Inglewood fault zone was originally zoned as an AP Zone in 1976, and at that time, the southern limits of the zone in the vicinity of the subject property included the entire Inglewood High School campus and areas west and extended past Kelso Street to the south. After re-evaluating the zones, a revised Earthquake Fault Zone map was issued in 1986, and on that map only the northeast corner of the high school property is included within the AP Zone (see Plate 4).

NEWPORT-INGLEWOOD FAULT ZONE

The subject site is located within the Newport-Inglewood fault zone (NIFZ), which extends for a lateral distance of about 42 miles, from Newport mesa northwest to Cheviot Hills. The NIFZ is comprised of a structurally complex series of left-stepping en echelon discontinuous right-lateral strike-slip faults and associated folds, with lesser normal and reverse faults (Bryant, 1988).

While the majority of slip along the faults within the zone has been right-lateral, there is a lesser component of vertical slip. According to Bryant (1988), the magnitude of right-lateral displacement along the NIFZ is not well known, but estimates range from as little as 600 feet to as much as 2 miles since its development in the late Miocene epoch. Similarly, the slip rate along the NIFZ is poorly constrained, with estimates ranging from 0.03 to 6.0 mm per year. The California Geological Survey assigns a late Quaternary and Holocene slip rate of 1+/-0.5 mm per year.

The NIFZ is seismically active and is responsible for the highly destructive 1933 M 6.3 Long Beach earthquake, as well as several moderate earthquakes in 1920, 1933, and 1944 (M 4.4 - M 5.4). No fault ground rupture was reported in association with any of these earthquakes, although ground failure as a result of liquefaction, seismic settlement, and lateral spreading was observed (Bryant, 1988). However, none of these geologic hazards were reported to have occurred on, or in the near vicinity of, the subject property.

As shown on Plate 4, the southern-most mapped trace of the Inglewood fault terminates at Manchester Boulevard approximately 200 feet east of the subject property.

REVIEW OF NEARBY FAULT INVESTIGATIONS

As part of this investigation, we have researched available fault investigation reports available on the CGS website for nearby properties. The reviewed reports are provided in the list of references on Plates R-1 through R-5, and the locations of the investigations are shown on the AP Zone map (Plate 4). No evidence of active faulting was encountered on any of the properties evaluated in the reviewed reports.

RESULTS OF FAULT INVESTIGATION

Seven fault trenches were excavated and geologically mapped on the subject site as part of this investigation and to supplement the previous five trenches excavated by Smith-Emery in 2001. The locations of all trenches excavated on the property are shown on Plate 2. The graphic logs of our trenches, including detailed descriptions of the earth materials encountered, are provided as Plate 5.

SITE STRATIGRAPHY

The subject property is mantled locally with a layer of man-made uncertified artificial fill (labeled "af") associated with minor past grading performed at the site and in the installation of utility lines and the abandoned septic system. Where observed in our fault trenches, the maximum thickness of the fill was about 3 feet. Smith-Emery reported similar fill depths, except in areas where man-made subsurface structures were encountered, notably on the north side of the campus where the septic system is located. In this area, a maximum localized fill depth of about 8 feet was reported. The artificial fill is underlain by moderately dense to locally very dense, albeit unconsolidated, native sediments assigned to the upper Pleistocene Lakewood Formation (Qlw). On the referenced Regional Geologic Map (Dibblee, 2007 – Plate 3), this deposit is referred to as late Pleistocene "Older Alluvium". The Lakewood Formation encountered on site is comprised of slightly clayey sand to silty sand to gravelly sand, with the grain size and gravel content generally increasing with depth. The upper 3 to 4 feet is mottled brown to very dark brown and is very fine to fine grained. The upper 6 inches is locally organic rich in areas overlain by lawns and planters. Below 4 feet, the color gradually lightens to brown to dark yellowish brown with gray brown mottling and the grain size increases to medium to locally coarse grained with scattered gravel (see Photo 1 below).

Photo 1 – View west at Trench C2 showing color gradation.

The upper 4 feet are moderately loose to moderately dense and porous and is slightly to locally highly bioturbated. Below 4 feet, it becomes moderately dense to locally very dense. Vague horizontal stratification was observed locally within the gravelly sand in Trench A3, otherwise the deposit is massive and structureless. Orange oxide stains are relatively common below a depth of 6 feet (see Photo 2 below).

Photo 2 – View east at east end of Trench A3 showing oxide staining below 6'.

Detailed lithologic descriptions of the earth materials encountered are provided on the Fault Trench Logs, Plate 5.

FAULTING

No evidence of faulting, such as offset contacts or layers, shears, or fractures, was observed in any of the fault trenches excavated and logged by this firm, and no faulting was reported by Smith-Emery in their trenches excavated in 2001. It is our conclusion that the subject property is not underlain by active faults.

BUILDING SETBACK DISTANCES

The AP Act requires that structures intended for human occupancy be setback a sufficient distance from any known active fault trace, with a minimum setback distance of 50 feet typically being required. As shown on Plate 2, all portions of the proposed buildings should maintain a minimum 50 foot horizontal setback distance from the east ends of Trenches A4 and C4. The 50

foot setback zone is shown on the enclosed Geologic Map, Plate 2.

CLOSURE

This fault investigation report has been prepared in accordance with generally accepted engineering practices at this time and location. No other warranties, either express or implied, are made as to the professional advice provided under the terms of our agreement and included in this report.

Thank you for this opportunity to be of service. Please do not hesitate to call if you have any questions regarding this report.

PLATE 1

EARTHQUAKE ZONES OF REQUIRED INVESTIGATION MAP

MAP EXPLANATION

EARTHQUAKE FAULT ZONES

Earthquake Fault Zones
Zone boundaries are delineated by straight-line segments; the boundaries define the zone encompassing active faults that constitute a potential hazard to structures from surface faulting or fault creep such that avoidance as described in Public Resources Code Section 2621.5(a) would be required.

Active Fault Traces
Faults considered to have been active during Holocene time and to have potential for surface rupture; Solid Line in Black or Red where Accurately Located; Long Dash in Black or Solid Line in Purple where Approximately Located; Short Dash in Black or Solid Line in Orange where Inferred; Dotted Line in Black or Solid Line in Rose where Concealed; Query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by fault creep.

SEISMIC HAZARD ZONES

Liquefaction Zones
Areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

Earthquake-Induced Landslide Zones
Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

OVERLAPPING EARTHQUAKE FAULT AND SEISMIC HAZARD ZONES

Overlap of Earthquake Fault Zone and Liquefaction Zone
Areas that are covered by both Earthquake Fault Zone and Liquefaction Zone.

Overlap of Earthquake Fault Zone and Earthquake-Induced Landslide Zone
Areas that are covered by both Earthquake Fault Zone and Earthquake-Induced Landslide Zone.

Note: Mitigation methods differ for each zone – AP Act only allows avoidance; Seismic Hazard Mapping Act allows mitigation by engineering/geotechnical design as well as avoidance.

LITHOLOGY

af Artificial Fill: Gravelly Sand to Silty Sand, light to medium brown to locally yellowish brown, sand is generally fine to medium grained, moderately loose, contains minor amounts of man-made debris except locally in Trench A1 where abundant angular asphalt pieces up to 6 inches in size are present, small active roots common except where covered by concrete or asphalt, moist to very moist beneath lawn areas, dry to damp elsewhere.

Qlw Lakewood Formation: Slightly Clayey Sand to Silty Sand to Gravelly Sand, varies from mottled brown to very dark brown (7.5YR 4/3 to 10YR 2/2) in the upper 3 to 4 feet to brown to dark yellowish brown (10YR 3/3 to 10YR 4/4) with gray brown (10YR 5/2) mottling below (color lightens with depth), sand is typically very fine to fine grained to about 6 feet then increases in grain size to medium to coarse grained below, orange oxide staining common below 6 feet, upper 4 feet is moderately loose to moderately dense and porous, and is bioturbated, slightly porous and dense to locally very dense below 4 feet (density increases with depth), very minor scattered subrounded gravel in upper 6 feet, grades to dense gravelly sand with very minor pockets of clean fine sand below 6 feet, vague horizontal stratification observed in Trench A3 within gravelly sand, otherwise deposit was observed to be massive, upper 6 inches is organic rich beneath lawn areas, abundant small active roots in upper 4 feet beneath lawn and planter areas, few scattered small roots elsewhere, moist to very moist to a depth of about 4 feet beneath lawn areas, damp to slightly moist elsewhere.

APPENDIX A

CGS Review Letter dated January 13, 2023

December 7, 2023
W.O. 9711

Jordan Miles
Deputy Chief Facilities Planning & Construction Officer
Inglewood Unified School District
401 South Grevillea Avenue
Inglewood, CA 90103

January 13, 2023

Subject: **Fault Hazard Review for**
Inglewood High School – Modernization Project
231 South Grevillea Avenue, Inglewood, CA
CGS Application No. 03-CGS5657

Dear Mr. Miles:

In accordance with your request and transmittal of documents received on November 3, 2022, the California Geological Survey (CGS) has reviewed the fault hazard evaluation report prepared for the subject project at Inglewood High School. Based on the Site Data Report that we received with the application for this project, we understand this is a review of the fault rupture evaluation previously conducted at the site for future modernization and renovation/replacement of existing buildings including the administration building, auditorium, and gymnasium. This review was performed in accordance with Title 24, California Code of Regulations, 2022 California Building Code (CBC) and followed CGS Note 48 guidelines. We reviewed the following report:

> **Report of Limited Geologic Investigation/Fault Study, Inglewood High School, 231 South Grevillea, Inglewood, California:** Smith-Emery GeoServices, 791 East Washington Boulevard, Los Angeles, California 90021; SEG File No. 31446-1, SEG Report No. G-01-8692, report dated October 26, 2001, 10 pages, 6 plates, 2 appendices.

Based on the Site Data Report that we received for this project, it is our understanding the specific scope of work for modernization of the high school campus has not yet been determined but will most likely include demolition of existing buildings and construction of new classroom buildings, along with renovation or replacement of the administration building, gymnasium, and auditorium. We note the above-referenced report reviewed for this project only addressed fault rupture hazard and the results of a limited evaluation of the Alquist-Priolo Earthquake Fault Zone (APEFZ) for the Inglewood fault. The report did not address other engineering geology, seismology, and geologic hazards at the site. We anticipate the consultants will provide an assessment of the engineering geology and seismology issues at the site in accordance with CGS Note 48 and the 2022 CBC at a later time.

Fault Rupture Hazard Evaluation

In the referenced report by Smith-Emery GeoServices, the consultants provided results of a fault rupture hazard evaluation at the northeastern portion of the high school campus in 2001. The investigation was performed under the direction of Edgar W. Lundeen, Certified Engineering Geologist 386, whose licensed expired in 2007, and included excavation and logging of five trenches. The trenches were reportedly 2 to 3 feet wide and 5 to 12 feet deep, and exposed fill materials and terrace deposits/older alluvium of the Pleistocene Lakewood Formation. The consultants reported the site is located approximately 300 feet west-southwest of the mapped trace of the Inglewood fault and is partially located within an Alquist-Priolo Earthquake Fault Zone (APEFZ) for the Inglewood fault segment of the Newport-Inglewood fault zone. They also reported that faults were identified during an investigation of the Inglewood fault conducted at 225 North La Brea (Triad Geotechnical Consultants, Inc., 1992), located north-northwest of the high school campus. Based on the results of the investigation within the APEFZ at the northeastern portion of Inglewood High School campus, the consultants reported that no evidence of faulting, surface rupture, shear zones, or significant calcium carbonate deposits was encountered and that no faults or disturbances of subsurface materials were exposed in the trenches.

CGS provides the following comments on the investigation conducted in 2001 by Smith-Emery GeoSevices:

- The log of Trench A indicates that gaps totaling approximately 28 feet in length (measured horizontally along the bottom of the trench) did not expose native Lakewood Formation soils and were not investigated for faults due to the presence of artificial fill, brick-lined seepage pits, and a septic tank.
- A gap approximately 30 feet in length between Trenches A and B was not excavated/investigated due to the presence of a surface drain and equipment storage building. The consultants suggested that Trenches C, D, and E should be considered to overlap the gap between Trenches A and B; however, CGS notes that Trenches C, D, and E were excavated approximately 400 feet south of Trenches A and B, and we question the conclusion that Trenches C, D, and E adequately evaluate potential fault rupture hazard across the gap between Trenches A and B.
- Trench A and Trench C do not appear to adequately evaluate potential fault rupture hazard in the vicinity of existing Building B and the area east of Trench C as illustrated on Plate No. 4 – Plot Plan.

The application that we received for this project indicates that future reports will be prepared by Ryan Prose, Certified Engineering Geologist 2625, and Larry Stark, Registered Geotechnical Engineer 2772, with Geolabs-Westlake Village. To address the fault hazard at this campus, CGS recommends the consultants review the referenced report by Smith-Emery GeoServices, any additional fault investigations available in the immediate site vicinity, Fault Evaluation Report 173 (CDMG, 1985), and this letter, and provide an assessment of the investigation and fault rupture hazard with respect to areas within the APEFZ not adequately evaluated or investigated, or provide revised conclusions and recommendations as necessary. The consultants are encouraged to discuss fault rupture hazard as it relates to proposed development at the campus with CGS.

In conclusion, ***the fault hazard concerns at this site are not adequately assessed in the referenced report***. It is recommended that additional information be provided as requested in this letter and in accordance with CGS Note 48. The consultants are reminded that one copy of all supplemental documents should be submitted, should include the CGS application number, and should be uploaded directly to CGS at this link: https://www.conservation.ca.gov/cgs/upload-school. If you have any further questions about this review letter, please contact the primary reviewer at (213) 598-1541 or michael.defrisco@conservation.ca.gov .

INTRODUCTION

Smith-Emery GeoServices has performed a Phase I Environmental Site Assessment at 231 South Grevillea Avenue, in the City of Inglewood, Los Angeles County, California as shown on the Vicinity Map, Plate No. 1. The layout of the subject site and the adjacent sites is shown on the Site Schematic, Plate No. 2. Photographs of the site are displayed as Plates No. 3A - 3C. Copies of the historical Sanborn Maps are included as Plates No. 4A - 4D. A copy of the regulatory database report is included in Appendix A. Copies of the subject site documentation are included in Appendix B. The literature referenced is listed in Appendix C.

SCOPE OF WORK

The scope of work for this study included the following:

1. Site reconnaissance;
2. Drive-by survey of surrounding land use;
3. Review of historical aerial photograph;
4. Review of historical Sanborn Maps;
5. Review of historical city directories;
6. Review of the history and past usage of the referenced site and surrounding properties;
7. Summary of regional geology and hydrology;
8. Review of files at local, state, and federal agencies to identify spills, tank leaks, hazardous materials storage, oil wells, underground tanks, landfills, or industrial discharge in the site vicinity, and;
9. Preparation of this report presenting our findings.

Please note that sampling and chemical analysis of soils, groundwater, and/or building materials was not within the scope of this study.

The following information sources were utilized during the course of this investigation:

***United States**
Environmental Protection Agency
U. S. Geologic Survey

***State of California**
Department of Toxic Substances Control
Department of Conservation, Division of Oil and Gas and Geothermal Resources

SITE HISTORY/SETTING

SITE DESCRIPTION

Smith-Emery GeoServices has performed a Phase I Environmental Site Assessment at 231 South Grevillea Avenue in the City of Inglewood, Los Angeles County, California. The site is located approximately 0.9 mile southeast of the Centinela Creek in the northern portion of the West Coast Groundwater Basin. The San Diego (405) Freeway is located approximately 0.7 miles west of the subject site. The site is occupied by numerous structures and is used as the Inglewood High School. The entire property is approximately 700,000 square feet in size. The elevation of the site is approximately 115 feet above mean sea level (USGS Inglewood Quadrangle).

LEGAL DESCRIPTION

According to records at the Los Angeles County Assessors Office the site is located in the City of Inglewood, County of Los Angeles, and State of California and is described as: Lot BD by Manchester Boulevard E by Grevillea Avenue SW C/L of Olive Street cavated and W by C/L of Fir Avenue vacated vac Sts and Blk 231 and part of Lot A see Assessor Mapbook for missing portion 3, 4, 7 and 8 Blk 230 Inglewood. A copy of the descriptions and assessors maps is included in Appendix B.

HISTORICAL SITE ADDRESSES

According to the Sanborn Maps the historical site addresses include: 100, 130, 206, and 214 West Manchester Boulevard; 201, 205, 207, 215, 221, 303, 309, 319, and 325 Grevillea Avenue; 100, 116, 118, and 138 West Pimiento; and 181 Olive.

GENERAL SITE HISTORY

An outline of the general history of the site is listed below. Each item listed will be described in greater detail in the Sanborn Map, Aerial Photograph, and City Directory sections of this report.

Subject Site

- Before 1912 to the 1950s: The site was used for school and residential purposes.
- 1950s to the present: The site has been used for school purposes. Minor printing and limited private auto repair operations were also performed onsite.
- Currently the school is identified as Inglewood High School and is used by the Inglewood School District.

Adjacent Sites

- Historically, the adjacent sites have been used for gas station, commercial, and residential purposes. The gas station was located to the north across Manchester Boulevard.

SITE RECONNAISSANCE

A reconnaissance of the site was performed by Smith-Emery GeoServices (SEG) personnel on May 7, 2002. The property was observed for, but not limited to, evidence of underground storage tanks (USTs), above ground storage tanks (ASTs), drums, sumps, pits, lagoons, leach fields, dry wells, suspected polychlorinated biphenyls (PCBs), asbestos

containing building materials, potential contamination, and onsite handling of hazardous materials and wastes.

The site is bordered to the north by the Manchester Boulevard, across which are two structures occupied by the Inglewood Library and the Los Angeles County Health Center. Residential dwellings border the site to the west and to the south across Kelso Street. The site is bordered to the east by Grevillea Avenue, across which are three commercial structures. The surrounding area is commercial and residential in land use. The layout of the structures and other items onsite is shown on the Site Schematic, Plate No. 2. Photographs of the site are displayed a Plates No. 3A - 3C.

The site is approximately 700,000 square feet in size. Multiple structures were located on the northern and eastern portions of the property. Several exterior drains were observed across the site, however, no staining was observed. Paved basketball courts were observed on the north-central portion of the site. Parking areas were observed on the southern portion of the site. Open grass and/or dirt field areas were observed on the southern and western portions of the site.

The structures observed onsite appeared to consist of three types of construction. Five structures including the auditorium, gymnasium, and administration building appeared to consist of concrete tilt-up construction. Permanent classroom buildings appeared to generally consist of wood frame construction with a stucco exterior. Portable classroom buildings appeared to consist of wood frame construction.

Interior building materials observed at the site include: a suspended ceiling containing 2 by 4-foot acoustical ceiling tiles and fluorescent light fixtures, concrete flooring, 12 by 12-inch glued-on ceiling tiles, 12 by 12-inch and 9 by 9-inch vinyl floor tiles, and drywall covered walls and ceilings. The site is currently occupied by Inglewood High School and used for student and adult education purposes.

One classroom currently used for printing purposes, and reportedly for the past 17 years, was located at the south end of the classroom building on the northwest portion of the site. This classroom was observed to contain several containers of new and waste inks (soy-based, water-based, and rubber-based). A licensed hazardous waste disposal company reportedly picks up the waste products on an as-needed basis. Small quantities of solvent-based cleaners were also reportedly used in this area. No floor drains were observed in this area; however, an area of staining was observed which was reportedly associated with a former camera that had leaked photo-development chemicals.

An auto repair shop was observed on the northwest portion of the site. This structure was observed to contain one 55-gallon drum of oil and concrete floors, which appeared in good condition with only minor staining observed adjacent to one of the two interior floor drains.

Numerous batteries, reportedly part of the emergency back-up lighting system, were observed in the basement of the administration building along with an apparent boiler and associated holding tank. No evidence of any clarifiers or underground storage tanks was observed onsite.

Site Reconnaissance Summary:

- The site is presently occupied by the Inglewood High School for classroom and administrative purposes. One building containing two floor drains is currently used for auto shop purposes; however, only minor staining was observed. One classroom is currently used for printing purposes and small quantities of solvents are occasionally used for cleaning purposes. Hazardous wastes generated at the site are reportedly picked up by a licensed disposal company and appropriately disposed of on an as-needed basis. No other items of environmental concern were observed on the property. Based on our reconnaissance, the current site operations are unlikely to have impacted the property. However, the back-up batteries associated with the emergency lighting system should be appropriately disposed of at the end of their useful life.

INTERVIEWS

The plant manager, Mr. Tony Washington, was contacted by SEG for an interview. Mr. Washington stated that he has been familiar with the facility for approximately 21 years and was unaware of the existence of any onsite underground storage tanks, clarifiers, or any environmental concerns at the property. According to Mr. Washington, hazardous materials use and storage at the site was limited to commercially available custodial cleaning supplies, chemicals used for printing, reagents used in the chemistry laboratory, and oil used in the automotive repair shop. Limited asbestos survey and abatement activities had reportedly been performed at the site in association with past remodeling activities. A grease trap and three brick-lined seepage pits are reportedly present on the north side of the administration building.

ADJACENT SITES

The adjacent site to the north, across Manchester Boulevard, was occupied by the Inglewood City Library and the Los Angeles County Health Center. The adjacent sites to south, across West Kelso Street, and to the west are occupied by residential structures. The adjacent sites to the east are occupied by three commercial structures. The layout of the subject site and the adjacent sites is shown on the Site Schematic, Plate No. 2.

SANBORN MAP REVIEW

Sanborn Maps were originally compiled for fire insurance purposes. Private companies working for the insurance industry provided information regarding risks associated with fires in structures. These maps often contained detailed information regarding the history and past uses of a property. Sanborn Map coverage was available for the subject site and the adjacent sites for the years 1912, 1923, 1950, and 1966. The Sanborn Maps are displayed as Plates No. 4A - 4D. The following descriptions are summaries of the Sanborn Maps reviewed.

1912 Sanborn Map

The eastern portion of the site appeared to be occupied by a structure identified as Union High School and the northern portion of the site appeared to be occupied by several single-family residential dwellings. The remaining portion of the site shown on the 1912 Sanborn Map appeared to be occupied by vacant land, South Fir Avenue, Olive Street, and residential dwellings located south of Olive Street. West Pimiento Street borders the site to the north and South Grevillea Avenue borders the site to the east. Portions of the subject

site to the south of Olive Street and west of South Fir Avenue were not depicted on the 1912 Sanborn Map.

The adjacent sites to the north and east, and the surrounding area appeared to be occupied by vacant land or residential dwellings. The adjacent sites to the south and west were not depicted on the 1912 Sanborn Map.

1923 Sanborn Map

The northeast portion of the site appeared to be occupied by several residential dwellings. Five main school structures were observed on the southeast portion of the site. The observed structures included a Manual Arts building, a Domestic Science building, an Administration/Auditorium building, a Science building, and a Gymnasium. The Manual Arts building was indicated to have been used for auto repair and woodworking purposes. According to the map, a tank located near the northeast corner of the Gymnasium was used to feed outside fire hydrants. The west-central portion of the site appeared to be vacant except for two grandstands located adjacent to the east side of South Fir Avenue. The southern and western portions of the site, across Olive Street to the south and across South Fir Avenue to the west, several residential dwellings were observed.

The adjacent site to the north appeared to be occupied by residential dwellings, a grocery store, and vacant land. The adjacent sites to the south, east, and west were not depicted on the 1923 Sanborn Map.

1950 Sanborn Map

The site boundaries appeared to have been expanded to the west approximately 200 feet and to the south to West Kelso Avenue. West Pimiento was renamed Manchester Boulevard.

The site continued to be occupied by the Manual Arts building, Domestic Science building, Administration/Auditorium building, and Gymnasium (converted for girls use only), however, the Science building observed in the 1923 Sanborn Map had been demolished and reconstructed in a different configuration by 1950. The site also appeared to be occupied by a Fine Arts building, a Boys Gymnasium, a Boys Locker Room, a Shop building (used mostly for woodworking purposes), an Auto Repair Shop building, a Machine Shop building, a Music Room, a Classroom building, and an Auditorium. The northeast portion of the Fine Arts building appeared to contain a basement used for printing purposes.

Two small structures located on the southwest portion of the site appeared to be used for Home Arts and Arts and Crafts purposes. A power transformer appeared to be located near the northwest corner of the auditorium.

The adjacent sites to the south and east were not depicted on the 1950 Sanborn Map. The adjacent site to the west appeared to be occupied by residential dwellings. The adjacent site to the north appeared to be occupied residential dwellings, retail stores, and a gas station. The gas station was located on the northeast corner of South Fir Avenue and Manchester Boulevard.

1966 Sanborn Map

The site continued to be occupied by the Science building, the Fine Arts building, the Gymnasium, the Shop building (used mostly for woodworking purposes), the Auto Repair Shop building, the Machine Shop building, the Music Room, the Classroom building, and the Auditorium. The addition of a Music building was made to the west side of the Auditorium.

One retail store was observed on the northwest portion of the site. Several new classroom buildings used for sewing/homemaking, student lounge, biology lab, and journalism/printing purposes were observed in the area of the former Girls Gymnasium, Administration/Auditorium building, Manual Arts building, and Domestic Science building which had been demolished.

The adjacent sites to the south and east were not depicted on the 1966 Sanborn Map. The adjacent site to the west appeared to be occupied by residential dwellings and a commercial structure. The adjacent site to the north continued to appear to be occupied residential dwellings, retail stores, and a gas station.

Sanborn Map Review Summary:

- The site was historically used for residential and school purposes. Items observed on the subject site include historical printing areas in the northeast/basement portion of the Fine Arts building and the Journalism/Printing building. However, based on the absence of floor drains or evidence of staining observed in the historical printing areas during our site reconnaissance, no further investigation is recommended. One of the adjacent sites to the north located at 145-147 Manchester Boulevard was a gas station. However, our research did not reveal any evidence of impacted resources.

AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs were obtained from Environmental Data Resources, Inc. The photographs include the years 1928, 1947, 1952, 1965, 1976, 1989, and 1994. The purpose of our review of aerial photographs was to examine the property and surrounding areas for any signs of potential negative environmental impact.

Items searched for in each photograph included, but were not limited to: evidence of tanks or gas stations on the subject or surrounding properties; evidence of any industrial site usage which may have impacted the subsurface soils; historical drains and water drainage pathways; areas which show evidence of drums or excessive debris; soil areas suspected as being discolored or stained; areas of distressed vegetation, etcetera. A list of specific photograph dates and sources is provided in Appendix C. The following descriptions are summaries of the aerial photographs reviewed.

1928 Aerial Photograph

The site appeared to be occupied by numerous residential dwellings, nine structures used for school purposes, and an oval-shaped track. The adjacent sites to the north, west, and south appeared to be occupied by residential dwellings. The adjacent site to the east appeared to be occupied by a park. The surrounding area in the vicinity of the site appeared to be occupied by residential and commercial developments with vacant land scattered throughout.

1947 Aerial Photograph

The site appeared to have been expanded to Kelso Street to the south and approximately 150 feet to the east, and appeared to be occupied by thirteen structures used for school purposes.

The areas formerly occupied by South Fir Avenue, Olive Street, and residential dwellings appeared to have been demolished and re-graded for future development. The seven structures occupying the eastern portion of the site remained essentially unchanged from the 1928 aerial photograph, however, the western portion of the site appeared to be occupied by six structures.

The adjacent sites to the north appeared to be occupied by commercial and residential structures. The adjacent sites to the west and south appeared to be occupied by residential dwellings. The adjacent site to the east appeared to be occupied by a park. The surrounding area appeared to be occupied by residential and commercial developments.

1952 Aerial Photograph

The site appeared to be occupied by numerous structures used for school purposes. The adjacent sites remained essentially unchanged from the 1947 aerial photograph. The surrounding area appeared to consist of residential and commercial developments.

1965 Aerial Photograph

The site appeared to be occupied by numerous structures in a configuration similar to that of the currently existing site configuration, however, the southwestern portion of the site appeared to consist of a grass field. The adjacent sites remained essentially unchanged from the 1952 aerial photograph. Development of the San Diego (405) Freeway was observed approximately 0.7 miles west of the subject site. Some of the residential developments in the vicinity of the site in the 1952 aerial photograph appeared to have been replaced with commercial developments.

1976 Aerial Photograph

The site remained essentially unchanged from the 1965 aerial photograph. Residential structures appeared to occupy the adjacent sites to the west. Residential and commercial structures appeared to occupy the adjacent sites to the north and south. A park appeared to occupy the adjacent site to the east. Additional commercial development was observed in the vicinity of the subject site.

1989 Aerial Photograph

The site, adjacent sites, and surrounding area remained essentially unchanged from the 1976 aerial photograph except that the southern portion of the subject site appeared to have been paved and used for parking purposes.

1994 Aerial Photograph

The site, adjacent sites, and surrounding area remained essentially unchanged from the 1989 aerial photograph except that the southeast portion of the subject site appeared to be occupied by four small structures.

BUILDING PERMIT REVIEW

Addresses for the subject and adjacent properties were requested from the City of Inglewood, Department of Building and Safety. The purpose of our review of building permits, grading and soils reports, and other documents is to construct a chain of ownership and history of construction activities onsite.

Items considered in the course of building permit research included: construction or demolition of any structures that may have a potential negative environmental impact, previous site usage, previous ownership, and any other historical information. However, according to personnel at the City of Inglewood Department of Building and Safety, the California Department of State Architects (DSA) maintained the permit records. The permit records are not practically reviewable/reasonably ascertainable under the ASTM Standard, since specific application numbers were required by the personnel at the DSA in order to retrieve the appropriate building permits. Since SEG has no permit numbers and is unable to obtain them, this research was not required to be completed under the ASTM Standard.

CITY DIRECTORY SEARCH

The purpose of the City Directory research was to determine the businesses that were historically located onsite. City Directories have been published for cities and towns across the US since the 1700s. Originally a list of residents, the City Directory developed into a sophisticated tool for locating individuals and businesses in particular. With each address the directory lists the name of the resident or if a business operated from this addresses, and a street index. While city directory coverage is usually comprehensive for major cities, it may be sporadic for rural areas and small towns. The following summarizes the City Directory research completed by EDR. Copies of the City Directory information are included in Appendix B

231 South Grevillea Avenue (Subject Site)

Date	Tenant
1920 through 1948	Not listed in research source
1950	Centinela Valley Union High School District
1951 through 1958	Not listed in research source
1960	Inglewood Unified School District High School
1961 through 1963	Not listed in research source
1964	Inglewood Unified School District Administration
1965 through 2000	Not listed in research source

Based on our review of the historical city directories, all of the adjacent sites appeared to be used for residential or commercial purposes that do not pose an environmental threat to the subject property.

REGIONAL HYDROGEOLOGY

The subject site lies at an elevation of approximately 115 feet above sea level in the West Coast Basin physiographic province. Hydrogeologic units beneath the site consist of members of the upper Pleistocene Lakewood Formation, which is underlain by lower Pleistocene deposits of the San Pedro Formation. The Lakewood Formation in the area of the site consists of fine to medium sand with variable amounts of gravel, sandy silt, and clays of marine and continental origin. The formation is marked by rapid lithologic changes in the shallow subsurface as well as discontinuous permeable zones.

The site is located on a downthrust block between the Charnock Fault to the west and the Inglewood Fault to the east. The site is partially located within the Alquist Priolo Special Studies Zone associated with the Inglewood Fault. The soils underlying the site are not located within an area that is subject to liquefaction as indicated on the Reconnaissance Seismics Hazards Map of the Inglewood Quadrangle dated March 25, 1999.

The principle shallow aquifer of the Lakewood Formation within the West Coast Basin is the Gage Aquifer, which is approximately 60 feet thick in the vicinity of the site. The base of this aquifer is reportedly at an elevation of 110 feet below mean sea level (DWR Bulletin 104A).

According to the Los Angeles Department of Public Works Hydrologic Records the following municipal water wells are in the vicinity of the site:

Well Number	Date Measured	Thomas Guide Map Location	Depth to Water (feet)	Top of Casing (ft above MSL)	Groundwater Elevation (ft above MSL)
1362-P	11/03/98	673 E7	181.3	170.0	-11.3
1353-V	04/29/92	703 D2	204.8	155.0	-49.8
1364-L	04/22/94	703 E3	233.8	152.0	-81.8
1364-J	11/1/93	703 E4	244.0	137.0	-107.0

Depth to groundwater in the area of the site varies between approximately 180 and 245 feet below ground surface. Regional groundwater flow is complicated by the presence of nearby faults but is expected to be southeasterly based on information reported by the Los Angeles County Department of Public Works, Hydrologic Records Division.

HAZARDOUS SUBSTANCE SEARCH

An investigation of existing potentially hazardous substances on or adjacent to the site was conducted by file searches at the regulatory agencies mentioned in the "Scope of Work" section of this report. Any sites, which generate or store hazardous waste or toxic materials, were considered relevant to our investigation. Also, any such sites, which may be located, hydrologically up-gradient of the subject site were considered relevant.

UNDERGROUND STORAGE TANKS

Information concerning underground storage tanks (USTs) on the subject and adjacent properties was requested from the Los Angeles County Department of Public Works, Environmental Programs Division. No UST records were on file for the subject site or the adjacent sites.

HAZARDOUS MATERIALS INVENTORY

Information concerning hazardous materials storage on the subject and adjacent properties was requested from the Los Angeles County Department of Health Services, Public Health Investigation. Record searches for hazardous materials inventories were not completed by the Public Health Investigation prior to completion of this report. However, based on the historical usage of the subject site as a school, it is unlikely that any hazardous materials were used/stored onsite.

REGULATORY LIST REVIEW

An outside information service, EDR, was contracted to perform a database search of government record sources and to provide a compiled report of listed sites within a one mile radius of the subject property. EDR's report is attached as Appendix A of this report and should be referenced for specific information and explanation of government records sources, dates of source listings, and locations of sites. The list of records searched, summary of listed sites, and the potential for listed sites to impact the subject property are discussed as follows:

Database	Description	Search Distance (miles)
NPL	National Priorities List (Superfund)	1.0
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System	0.5
CORRACTS	Corrective Action Report	1.0
RCRIS-TSD	Resource Conservation and Recovery Information System (Transport, Storage and Disposal Facilities)	0.5
RCRIS GNTR	RCRA registered small or large generators of hazardous waste	0.25
AWP	Annual Work Plan	1.0
Cal-Sites	Known and Potential Hazardous Waste Sites	1.0
CORTESE	Hazardous Waste & Substances Site List	1.0
STATE LANDFILL	Active, Closed and Inactive Landfills	0.5
LUST	Leaking Underground Storage Tank Incident Reports	0.5
Toxic Pits	Toxic Pits cleanup facilities	0.5
State Deed RSTR	Sites with deed restrictions	0.5
Water Wells	Federal and State Drinking Water Sources	0.5
RCRA Viol.	RCRA Violations/enforcement actions	0.25
TRIS	Toxic Release Inventory Database	0.25
UST	Registered underground database	0.25
CA BEP	California Bond Expenditure Plan	1.0
ROD	Record of Decision	1.0

Most of the listings in the EDR do not report appear to have impacted the subject site with hazardous materials based on one or more of the following reasons:

- Listed on CERCLIS but a preliminary assessment has determined that no hazard was identified and no further action is needed.
- Listed as having registered underground storage tanks (USTs), or as small or large quantity generators only, and are not listed on any other lists indicating that a release to the environment had occurred.
- Listed on LUST as having a leaking tank but is greater than 0.25 miles from the subject site, is located hydrologically cross or down gradient, or is indicated to have a signed-off site status.
- Listed on other listings and in our opinion is unlikely to have impacted the subject site based on one or more of the following reasons: located hydrologically cross or downgradient, have a signed-offsite status, is located over 0.25 miles away from the subject site, and/or lack of impacted resources.

The following sites do not fall into these categories and are discussed as follows:

Subject Site

Map ID No. 1 (Inglewood High School) 231 South Grevillea Avenue, Inglewood

- The subject site is listed on FINDS, HAZNET, and RCRIS-SQG as a small quantity generator of hazardous materials and as having disposed of asbestos containing building materials. One time disposal of asbestos containing building materials is unlikely to have impacted the subject sites resources. Based on our site reconnaissance, one classroom is currently used for printing purposes and small quantities of solvents are occasionally used for cleaning purposes. Minor auto repair operations are also conducted onsite. Hazardous wastes generated at the site are reportedly picked up by a licensed disposal company and appropriately disposed of on an as-needed basis. No other items of environmental concern were observed on the property. Based on our reconnaissance, the current site operations are unlikely to have impacted the property.

Regulatory Database Review Conclusions:

- The subject site listed on the regulatory database as a small quantity generator of hazardous materials and as having disposed of asbestos containing building materials. One time disposal of asbestos containing building materials is unlikely to have impacted the subject sites resources. Based on our reconnaissance, the current site printing and minor auto repair operations are unlikely to have impacted the property. The other listed sites are not expected to have impacted the subject site based on the previously stated reasons.

EVALUATION OF ADDITIONAL RISKS

PETROLEUM ACTIVITY

The California Department of Conservation, Division of Oil and Gas and Geothermal Resources (DOGGR) regulates the drilling, operation, and abandonment of gas and oil wells throughout the State of California. If an active, idle, or abandoned well is located on or adjacent to a proposed construction site, DOGGR requires a site plan review prior to issuing a building permit. Abandoned oil wells must meet the current regulatory standards.

The DOGGR Regional Wildcat Map W1-5 and Oil Field Map 123 were reviewed to determine the location of petroleum activity in the area of the property. The site is located in Township-2-South, Range-14-West, and Section 28/33. According to the DOGGR Maps, no wells are located on the subject site or the adjacent sites. Numerous oil wells were observed within the Potrero Oil Field located approximately 0.5 mile to the east of the site. The three wells nearest the subject site are described as follows:

Well Name/Year	Drilled By/Depth (feet)	Direction	Current Status
City of Los Angeles/ 1949	Cleveland Oil Company/ 10,399 feet bgs	2,600 feet WNW.	Plugged and abandoned dry hole
Inter-coast O. Co. G.P./ 1930	Inter-coast Oil & Transport Co. Ltd./1,020 feet bgs	2,600 feet ENE.	Plugged and abandoned dry hole
Thornton/ 1929	J. A. Woodward Jr./5,001 feet bgs	2,250 feet E.	Plugged and abandoned dry hole

Petroleum Activity Summary:

- Based on a review of Maps W1-5 and 123, the potential for petroleum-related problems at the subject site is considered to be low.

ASBESTOS POTENTIAL

Asbestos is a natural occurring mineral fiber utilized in a multitude of building material products due to its high tensile strength and excellent fire resistant properties. The EPA has defined asbestos materials as being either friable or non-friable materials. Friable material is defined as being easily broken or crushed by hand pressure (e.g., soft acoustical ceilings or blown-on fireproofing).

Non-friable asbestos is generally found in pre-manufactured products that bind the asbestos in an adhesive material, such as roofing felts, floor tile, transite pipe and mastics. This is significant, due to the ability to create a fiber release and cause human exposure during normal activities. The EPA currently does not require the removal of asbestos-containing materials that do not present a problem for human exposure. Most friable asbestos-containing materials were banned in building materials by 1978.

On November 9, 1994, a new FED-OSHA ruling became effective which redefined building materials perceived as asbestos-containing into four classes of work and modified the way in which these asbestos-containing materials are handled. Under this ruling, "thermal system insulation and sprayed-on or troweled on or otherwise applied surfacing materials installed before 1980 are considered presumed asbestos-containing material (PACM) unless sampled and identified by a certified individual as to asbestos content".

These materials are considered high risk materials for abatement and their removal is classified under Class I removal activities. Other building materials such as "floor or ceiling tiles, siding, roofing, transite panels, (floor sheeting, floor or roof mastics) are also

considered PACM" unless sampled and identified by a certified individual as to asbestos content but are considered low risk materials for abatement and their removal is classified under Class II, III and IV removal and repair and maintenance operations.

Significant under these new regulations is the deletion of the category of "Small Scale Short Term Duration" removal activities which regularly allowed Class I through IV activities to proceed with less regulatory oversight. Under the NESHAPS laws of 1976 and as later amended, asbestos does not have to be removed from a facility until such time as it undergoes major renovations or is demolished. Until that time, the present emphasis by the EPA is to recommend repair of any damaged areas and management of the asbestos-containing materials.

Prior to any renovation work being done involving ACBM of 260 lineal feet or 160 square feet in area, the local branch of the EPA must be notified. Prior to the demolition of any building or house, mandatory bulk sampling must be accomplished and, if asbestos is present, notification must be made to the local branch of the EPA and Air Quality Management District. In California, for the removal of any ACBM greater than 0.1 percent by weight, notifications must also be made to CAL-OSHA and a licensed contractor with an asbestos certification is required for any work which exceeds 100 square feet.

Asbestos Potential Summary

- Some of the structures onsite were built prior the 1978 federal regulations banning the use of asbestos containing building materials (ACBMs). Hence, there is the potential for ACBMs to exist in the onsite structures. 8-inch vinyl floor tiles were observed in some of the classrooms. The 8-inch vinyl floor tiles are generally known to contain asbestos. We recommend a complete asbestos survey prior to any structural renovation or demolition activities that would potentially disturb the existing building materials.

LEAD POTENTIAL

Lead and lead compounds can be found in many types of paint. In 1978, the Consumer Product Safety Commission set the allowable lead levels in paint at 0.06% by weight in a dry film of newly applied paint. In the 1970's, the chief concern of lead paint was its cumulative effect on bodily systems, primarily when paint chips containing lead were ingested by children. Research in the early 1980's showed that lead dust is of special concern, because the smaller particles are more easily absorbed by the body. Common methods of paint removal, such as sanding, scraping, and burning, create excessive amounts of dust. Lead dust is especially hazardous to young children because they spend a lot of time on the floor and engage in a great deal of hand-to mouth activity, increasing their potential for exposure. Lead based paints were commonly used on buildings built prior to 1970's.

Lead Potential Summary

- The onsite structures were built prior to the federal regulations banning the use of lead based paints. Hence, there is the potential for lead based paints to exist in the onsite structures. We recommend a lead survey prior to any significant structural renovation or demolition activities, which would potentially disturb the existing building materials.

PCB POTENTIAL

Polychlorinated biphenyls (PCBs) were once used as industrial chemicals whose high stability contributed to both their commercial usefulness and their long-term deleterious environmental and health effects. These substances have been listed as carcinogens by the Environmental Protection Agency (EPA). PCBs were banned from use in electrical capacitors, electrical transformers, vacuum pumps, and gas turbines in 1977.

Three pad-mounted and two apparent dry-type transformers were observed within the school premises. The transformers appeared in good condition. Fluorescent light fixtures were observed on the subject site. Fluorescent light ballasts manufactured prior to the late 1970's may contain PCBs. Any fluorescent light ballasts not marked "no PCBs" should be disposed of appropriately at the end of their service life.

PCB Potential Summary:

- Based on the above information, the potential for PCBs to have impacted the site is considered to be low.

RADON POTENTIAL

High levels of radon may be found in every state. Medical and environmental studies have shown that radon can be a health risk, primarily as a cause of lung cancer. Radon is a naturally occurring colorless, odorless and tasteless gas produced by the decay of uranium and radium. Radon levels vary from place to place depending on the underlying geology.

Radon Potential Summary

- Based on our research at the Department of Health Services, State Department of Radon the radon level for Los Angeles County averages approximately 2 picoCuries/liter (pCi/L), below the 4.0 pCi/L action level set by the Environmental Protection Agency.

SUMMARY AND CONCLUSIONS

SUMMARY

Smith-Emery GeoServices has performed a Phase I Environmental Site Assessment at 231 South Grevillea Avenue in the City of Inglewood, County of Los Angeles, California. The site is located approximately 0.7 miles southeast of the Centinela Creek in the northern portion of the West Coast Groundwater Basin. The San Diego (405) Freeway is located approximately 0.6 miles west of the subject site. The entire property is approximately 700,000 square feet in size. The site is occupied by a numerous structures used for classroom and administrative purposes. The elevation of the site is approximately 115 feet above mean sea level (USGS Inglewood Quadrangle).

The following items were found during the course of our research:

Site History

- Before 1912 to the 1950s, the site was used for school and residential purposes. From 1950s to the present the site has been used for school purposes. Minor printing and limited private auto repair operations were also performed onsite (see Plate No. 2 for locations). However, based on our site reconnaissance, lack of evidence of any significant usage of hazardous materials, and/or any evidence of impacted resources at the regulatory agencies, these former printing and auto repair operations are unlikely to have impacted the subject site. Currently the school is identified as Inglewood High School and used by the Inglewood School District.

Site Reconnaissance

- The site is presently occupied by Inglewood High School and used for classroom and administrative purposes. One classroom is currently used for printing purposes and small quantities of solvents are occasionally used for cleaning purposes (see Plate No. 2 for location). Hazardous wastes generated at the site are reportedly picked up by a licensed disposal company and appropriately disposed of on an as-needed basis. No other items of environmental concern were observed on the property. Based on our reconnaissance, the current site operations are unlikely to have impacted the property. However, the back-up batteries associated with the emergency lighting system should be appropriately disposed of at the end of their useful life.

Underground Storage Tanks (USTs)

- No UST records were on file for the subject site or the adjacent sites at the Los Angeles County DPW.

Regulatory Database/ Hazardous Materials

- The subject site listed on the regulatory database as a small quantity generator of hazardous materials and as having disposed of asbestos containing building materials. One time disposal of asbestos containing building materials is unlikely to have impacted the subject sites resources. Based on our reconnaissance, the current and former site printing and minor auto repair operations are unlikely to have impacted the property. The other listed sites are not expected to have impacted the subject site based on the previously stated reasons.

PCB, Radon Gas, and Petroleum Related Concerns

- Based on our research, the potential for PCBs, petroleum, and radon gas related problems at the subject site are considered to be low.

Asbestos/Lead Potential

- The onsite structures were built prior to the federal regulations banning the manufacture of asbestos containing building materials (ACBMs) and lead based paints. Based on the age of the structures we recommend complete asbestos and lead surveys prior to any significant structural renovations or demolition activities that would disturb the existing building materials.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM practice E-1527-00 of the site known as 231 South Grevillea Avenue in the City of Inglewood, California. Any exceptions to, or deletions from, this practice are described in the various sections of this report. **This assessment has revealed no evidence of negative recognized environmental conditions in connection with the property. However, based on the age of some of the onsite structures we recommend complete asbestos and lead surveys prior to any significant structural renovations or demolition activities that would disturb the existing building materials.**

LIMITS OF LIABILITY

The findings, conclusions, and recommendations contained in this report are based onsite conditions as they existed at the time of our investigation. Our review of all documents, lists, databases, and public agency files has been conducted with due diligence. However, our conclusions are based on available information and are further subject to constraints imposed by public agencies on review procedures and information retrieval. As a result, Smith-Emery GeoServices may have been unable to identify potential concerns.

Smith-Emery GeoServices assumes no responsibility for conditions that did not come to our attention despite reasonable care nor for conditions, which were not generally recognizable as environmentally unacceptable at the time of this report.

Opinions and judgments expressed are based on our understanding and interpretations of currently available regulatory standards and should not be construed as legal opinions or advice.

The factual data and interpretations contained herein pertain to the specific project described in this report and are not applicable to any other project or site. This document has been prepared for the sole use and benefit of the **Encorp Environmental Management and Services. Encorp Environmental Management and Services may designate assignees to this report, which may assume the same rights of reliance as Encorp Environmental Management and Services for all errors and omissions, but are bound by the terms and conditions of the original contract.** Any reliance on this document by any other person or entity shall be at that party's sole risk.

Our investigation was performed using the standard of care and level of skill ordinarily exercised under similar circumstances by reputable environmental assessors and geologists currently practicing in these or similar localities. No other warranty, express or implied, is made as to the conclusions and professional advice included in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

TARGET PROPERTY INFORMATION

ADDRESS

231 SOUTH GREVILLEA AVENUE
INGLEWOOD, CA 90301

COORDINATES

Latitude (North):	33.961300 - 33° 57' 40.7"
Longitude (West):	118.355000 - 118° 21' 18.0"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	374804.7
UTM Y (Meters):	3758497.8

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property:	2433118-H3 INGLEWOOD, CA
Source:	USGS 7.5 min quad index

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following government records. For more information on this property see page 6 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
INGLEWOOD HIGH SCHOOL 231 S GREVILLEA AVE INGLEWOOD, CA 90301	RCRIS-SQG FINDS HAZNET	CAD104286380

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

FEDERAL ASTM STANDARD

NPL ..... National Priority List
Proposed NPL ..... Proposed National Priority List Sites
CERCLIS ..... Comprehensive Environmental Response, Compensation, and Liability Information System
CERC-NFRAP ..... CERCLIS No Further Remedial Action Planned
CORRACTS ..... Corrective Action Report

EDR PROPRIETARY HISTORICAL DATABASES

See the EDR Proprietary Historical Database Section for details

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-LQG list, as provided by EDR, and dated 12/01/2001 has revealed that there is 1 RCRIS-LQG site within approximately 0.25 miles of the target property.

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there are 32 Cortese sites within approximately 1 mile of the target property.

CA SLIC: SLIC Region comes from the California Regional Water Quality Control Board.

A review of the CA SLIC list, as provided by EDR, has revealed that there is 1 CA SLIC site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
FAITHFUL CENTRAL BAPTIST CHURC	321 EUCALYPTUS AVENUE	1/4 - 1/2 NW	62	48

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there are 25 HAZNET sites within approximately 0.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/29/02
Date Made Active at EDR: 02/25/02
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 02/04/02
Elapsed ASTM days: 21
Date of Last EDR Contact: 02/04/02

Date of Last EDR Contact: 02/04/02

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/21/01
Date Made Active at EDR: 02/04/02
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 12/26/01
Elapsed ASTM days: 40
Date of Last EDR Contact: 03/25/02

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 11/21/01
Date Made Active at EDR: 02/04/02
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 12/26/01
Elapsed ASTM days: 40
Date of Last EDR Contact: 03/25/02

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 11/14/01
Date Made Active at EDR: 01/14/02
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 11/14/01
Elapsed ASTM days: 61
Date of Last EDR Contact: 03/11/02

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 12/01/01
Date Made Active at EDR: 04/08/02
Database Release Frequency: Varies
Date of Data Arrival at EDR: 02/04/02
Elapsed ASTM days: 63
Date of Last EDR Contact: 03/04/02

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 08/08/00
Date Made Active at EDR: 09/06/00
Database Release Frequency: Varies
Date of Data Arrival at EDR: 08/11/00
Elapsed ASTM days: 26
Date of Last EDR Contact: 02/01/02

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99
Database Release Frequency: Biennially
Date of Last EDR Contact: 03/18/02
Date of Next Scheduled EDR Contact: 06/17/02

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies
Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: NTIS
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 09/30/00
Database Release Frequency: Annually

Date of Last EDR Contact: 04/09/02
Date of Next Scheduled EDR Contact: 07/08/02

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 01/29/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 02/04/02
Date of Next Scheduled EDR Contact: 05/06/02

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 10/29/01
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/08/02
Date of Next Scheduled EDR Contact: 07/08/02

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4526
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 09/30/01
Database Release Frequency: Annually

Date of Last EDR Contact: 04/22/02
Date of Next Scheduled EDR Contact: 07/22/02

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 02/14/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/08/02
Date of Next Scheduled EDR Contact: 07/08/02

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 12/14/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 04/01/02
Date of Next Scheduled EDR Contact: 07/01/02

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 02/26/02
Date of Next Scheduled EDR Contact: 05/27/02

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-260-3936
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 12/01/01
Database Release Frequency: Annually

Date of Last EDR Contact: 02/12/02
Date of Next Scheduled EDR Contact: 05/13/02

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 03/11/02
Date of Next Scheduled EDR Contact: 06/10/02

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/99
Database Release Frequency: Annually

Date of Last EDR Contact: 03/25/02
Date of Next Scheduled EDR Contact: 06/24/02

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 03/11/02
Date of Next Scheduled EDR Contact: 06/10/02

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Telephone: 202-564-2501
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 01/11/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 03/25/02
Date of Next Scheduled EDR Contact: 06/24/02

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA
Telephone: 202-564-2501

Date of Government Version: 01/14/02
Database Release Frequency: Quarterly

Date of Next Scheduled EDR Contact: 06/24/02

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

STATE OF CALIFORNIA ASTM STANDARD RECORDS

AWP: Annual Workplan Sites
Source: California Environmental Protection Agency
Telephone: 916-323-3400
Known Hazardous Waste Sites. California DTSC's Annual Workplan (AWP), formerly BEP, identifies known hazardous substance sites targeted for cleanup.

Date of Government Version: 11/08/00
Date Made Active at EDR: 03/02/01
Database Release Frequency: Annually
Date of Data Arrival at EDR: 01/31/01
Elapsed ASTM days: 30
Date of Last EDR Contact: 02/04/02

CAL-SITES: Calsites Database
Source: Department of Toxic Substance Control
Telephone: 916-323-3400
The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database.

Date of Government Version: 10/01/00
Date Made Active at EDR: 11/22/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 10/30/00
Elapsed ASTM days: 23
Date of Last EDR Contact: 04/12/02

CHMIRS: California Hazardous Material Incident Report System
Source: Office of Emergency Services
Telephone: 916-845-8400
California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/94
Date Made Active at EDR: 04/24/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 03/13/95
Elapsed ASTM days: 42
Date of Last EDR Contact: 03/01/02

CORTESE: "Cortese" Hazardous Waste & Substances Sites List
Source: CAL EPA/Office of Emergency Information
Telephone: 916-445-6532
The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

Date of Government Version: 04/01/01
Date Made Active at EDR: 07/26/01
Database Release Frequency: Varies
Date of Data Arrival at EDR: 05/29/01
Elapsed ASTM days: 58
Date of Last EDR Contact: 01/28/02

NOTIFY 65: Proposition 65 Records
Source: State Water Resources Control Board
Telephone: 916-445-3846
Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk.

Date of Government Version: 10/21/93
Date Made Active at EDR: 11/19/93
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 11/01/93
Elapsed ASTM days: 18
Date of Last EDR Contact: 04/22/02

TOXIC PITS: Toxic Pits Cleanup Act Sites
Source: State Water Resources Control Board
Telephone: 916-227-4364
Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/95
Date Made Active at EDR: 09/26/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 08/30/95
Elapsed ASTM days: 27
Date of Last EDR Contact: 02/04/02

SWF/LF (SWIS): Solid Waste Information System
Source: Integrated Waste Management Board
Telephone: 916-341-6320
Active, Closed and Inactive Landfills. SWF/LF records typically contain an inve ntory of solid waste disposal facilities or landfills. These may be active or i nactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 03/15/02
Date Made Active at EDR: 04/16/02
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/18/02
Elapsed ASTM days: 29
Date of Last EDR Contact: 03/18/02

WMUDS/SWAT: Waste Management Unit Database
Source: State Water Resources Control Board
Telephone: 916-227-4448
Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/00
Date Made Active at EDR: 05/10/00
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 04/10/00
Elapsed ASTM days: 30
Date of Last EDR Contact: 03/12/02

LUST: Leaking Underground Storage Tank Information System
Source: State Water Resources Control Board
Telephone: 916-341-5740
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 01/17/02
Date Made Active at EDR: 02/12/02
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 01/21/02
Elapsed ASTM days: 22
Date of Last EDR Contact: 04/12/02

CA BOND EXP. PLAN: Bond Expenditure Plan
Source: Department of Health Services
Telephone: 916-255-2118
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/89
Date Made Active at EDR: 08/02/94
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 07/27/94
Elapsed ASTM days: 6
Date of Last EDR Contact: 05/31/94

CA UST:

UST: Active UST Facilities
Source: SWRCB
Telephone: 916-341-5700
Active UST facilities gathered from the local regulatory agencies

Date of Government Version: 01/17/02
Date Made Active at EDR: 02/12/02
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 01/21/02
Elapsed ASTM days: 22
Date of Last EDR Contact: 04/16/02

CA FID UST: Facility Inventory Database
Source: California Environmental Protection Agency
Telephone: 916-445-6532
The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/94
Date Made Active at EDR: 09/29/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 09/05/95
Elapsed ASTM days: 24
Date of Last EDR Contact: 12/28/98

HIST UST: Hazardous Substance Storage Container Database
Source: State Water Resources Control Board
Telephone: 916-341-5700
The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

Date of Government Version: 10/15/90
Date Made Active at EDR: 02/12/91
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 01/25/91
Elapsed ASTM days: 18
Date of Last EDR Contact: 07/26/01

STATE OF CALIFORNIA ASTM SUPPLEMENTAL RECORDS

AST: Aboveground Petroleum Storage Tank Facilities
Source: State Water Resources Control Board
Telephone: 916-227-4382
Registered Aboveground Storage Tanks.

Date of Government Version: 02/27/02
Database Release Frequency: Quarterly
Date of Last EDR Contact: 02/04/02
Date of Next Scheduled EDR Contact: 05/06/02

CLEANERS: Cleaner Facilities
Source: Department of Toxic Substance Control
Telephone: 916-225-0873
A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; drycleaning plants, except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

Date of Government Version: 03/18/02
Database Release Frequency: Annually
Date of Last EDR Contact: 04/08/02
Date of Next Scheduled EDR Contact: 07/08/02

CA WDS: Waste Discharge System
Source: State Water Resources Control Board
Telephone: 916-657-1571
Sites which have been issued waste discharge requirements.

Date of Government Version: 03/18/02
Database Release Frequency: Quarterly
Date of Last EDR Contact: 03/19/02
Date of Next Scheduled EDR Contact: 06/24/02

DEED: List of Deed Restrictions
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

Date of Government Version: 02/11/02
Database Release Frequency: Semi-Annually
Date of Last EDR Contact: 04/11/02
Date of Next Scheduled EDR Contact: 07/08/02

HAZNET: Hazardous Waste Information System
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/00
Database Release Frequency: Annually

Date of Last EDR Contact: 02/12/02
Date of Next Scheduled EDR Contact: 05/13/02

LOCAL RECORDS

ALAMEDA COUNTY:

Local Oversight Program Listing of UGT Cleanup Sites
Source: Alameda County Environmental Health Services

EDR PROPRIETARY HISTORICAL DATABASES

EDR Historical Gas Station and Dry Cleaners: EDR has searched select national collections of business directories and has collected listings of potential dry cleaner and gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning and gas station/filling station/service station establishments. The categories reviewed included, but were not limited to: *gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, dry cleaner, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc.*

This information is meant to assist and complement environmental professionals in their conduct of environmental site assessments, and is not meant to be a substitute for a full historical investigation as defined in ASTM E1527. The information provided in this proprietary database may or may not be complete; i.e., the absence of a dry cleaner or gas station/filling station/service station site does not necessarily mean that such a site did not exist in the area covered by this report.

(A note on "dry cleaning" sites: it is not possible for EDR to differentiate between establishments that use PERC on–site as a cleaning solvent and sites that function simply as drop–off and pick–up locations or that are traditional wet cleaning/laundry facilities. Therefore, it is essential for environmental professionals to incorporate professional judgment in the evaluation of each site.)

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

INGLEWOOD HIGH SCHOOL
231 SOUTH GREVILLEA AVENUE
INGLEWOOD, CA 90301

TARGET PROPERTY COORDINATES

Latitude (North):	33.961300 - 33° 57' 40.7"
Longitude (West):	118.355003 - 118° 21' 18.0"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	374804.7
UTM Y (Meters):	3758497.8

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property: 2433118-H3 INGLEWOOD, CA
Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property: General West

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0650360000A / CBNP

Additional Panels in search area: 0601370085C / CBPP
0601370090C / CBPP

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
INGLEWOOD	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	2.0 miles
Status:	Not found

AQUIFLOW®

Search Radius: 2.000 Miles.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Eocene
Code:	Te *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**

sandy loam

stratified
very gravelly - sandy loam
weathered bedrock
silty clay loam
gravelly - fine sandy loam
clay loam
sand
very fine sandy loam

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

STATE RECORDS

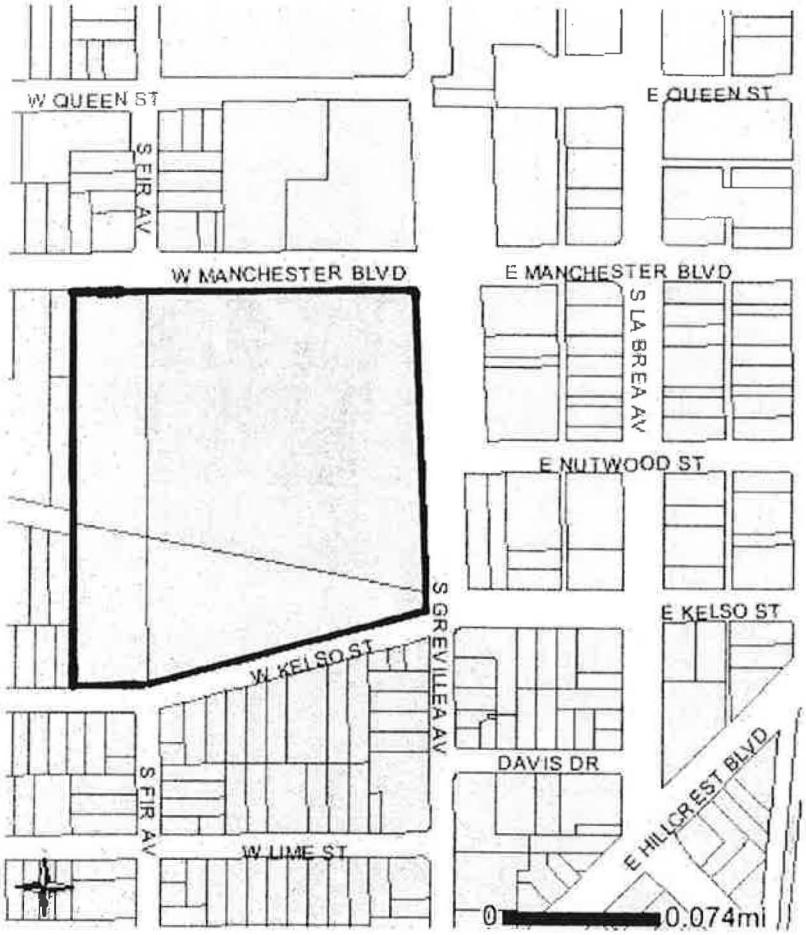
California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations for District 2 and 6
Source: Department of Conservation
Telephone: 916-323-1779

RADON

Area Radon Information: The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones: Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.



OTHER

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.4, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

City Directories
City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice." (ASTM E 1527-00, Section 7.3.4, page 12.)*

4. SUMMARY

- *City Directories:*

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2000. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8 of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

Glossary of Terms

A.A.A.

Aerial photograph flyer: Agriculture Adjustment Administration (Federal).

A.S.C.S

Aerial photograph flyer: Agricultural Stabilization and Conservation Service (Federal)

Address in Research Source

Indicates that a property is listed at a different address than the one provided by the user. Generally occurs when a property is located on a corner or, when the physical address of a property is different than its mailing address.

Address Not Listed in Research Source

Occurs when a specific site address is not listed in city directories and/or fire insurance maps.

Adjoining

Any property that is contiguous, or a property that would be contiguous if not for a public thoroughfare, to the target property. *To differentiate from each adjoining property, stand at the target property's "front door" facing the street.*

Adjoining Back

Property directly to the rear of the target property. (Applies only to fire insurance map data.)

Adjoining Front

Property directly in front of the target property. (Applies only to fire insurance map data.)

Adjoining Left

Property directly to the left of the target property. (Applies only to fire insurance map data.)

Adjoining Right

Property directly to the right of the target property. (Applies only to fire insurance map data.)

Adjoining Surrounding Area

Property that may adjoin the target property but due to lack of specific map information cannot be located precisely. This situation typically occurs when city directory information, but not fire insurance map information, is available.

C.A.S

Aerial photograph flyer: Chicago Aerial Survey (private).

C.S.S.

Aerial photograph flyer: Commodity Stabilization Service (Federal).

Cartwright

Aerial photograph flyer: Cartwright (private)

CD

City Directory

Commercial

Any property including, but not limited to, property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units.

Commercial or Industrial

Property that has either a commercial *or* an industrial use. Examples include retail stores, manufacturing facilities, factories, and apartment buildings.

D.N.R.

Aerial photograph flyer: Department of National Resources (state).

D.O.T.

Aerial photograph flyer: Department of Transportation (state).

Fairchild

Aerial photograph flyer: Fairchild (private).

FIM

Fire Insurance Map

Flood Insurance Rate Maps

Flood Insurance Rate Maps are produced by the Federal Emergency Management Agency (FEMA). These maps indicate special flood hazard areas, base flood elevations and flood insurance risk zones.

Flood Prone Area Maps

Flood Prone Area maps are produced by the United States Geological Survey (USGS). Areas identified as flood prone have been determined by available information gathered from past floods.

F.S.

Aerial photograph flyer: Forest Service (Federal).

Geonex

Aerial photograph flyer: Geonex (private).

M.C.

Aerial photograph flyer: Metropolitan Council of the Twin Cities Area (state).

Mark Hurd

Aerial photograph flyer: Mark Hurd (private)

N.A.P.P.

Aerial photograph flyer: National Aerial Photography Program (Federal).

National Wetland Inventory Maps

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a division of the U.S. Department of the Interior. Wetland and deepwater habitat information is identified on a 7.5 minute U.S.G.S. topographic map. The classification system used categorizes these habitats into five systems: marine, estuarine, riverine, lacustrine and palustrine.

No Return

Indicates that site owner was unavailable at time of surveyor's contact. *(Applies only to city directories.)*

No Structure Identified on Parcel

Used when site boundaries and/or site address is indicated on a fire insurance map: no structure details exist.

Other

Occurs when the site's classification is different that EDR's standard categories. Examples may include undeveloped land and buildings with no specified function.

P.M.A.

Aerial photograph flyer: Production and Marketing Administration (Federal).

Pacific Aerial

Aerial photograph flyer: Pacific Aerial (private)

Portion

Refers to the fire insurance map information identified on the four quadrants of a target or adjoining property. The portions are referred to as *Frontright*, *Frontleft*, *Backright*, and *Backleft* and are determined as if one were standing at the front door, facing the street.

Property Not Defined

Used when property is not clearly demarcated on a fire insurance map.

Residential

Any property having fewer than five dwelling units used exclusively for residential purposes.

Residential with Commercial Uses (a.k.a. Multiple Purpose Address)

A business (firm) and residence at the same address. Examples include a doctor, attorney, etc. working out of his/her home.

Sidwell

Aerial photograph flyer: Sidwell (private).

Site Not Mapped

Occurs when an adjoining property has not been mapped by fire insurance map surveyors. (Applies only to fire insurance map data.)

Teledyne

Aerial photograph flyer: Teledyne (private)

Topographic Maps

Topographic maps are produced by the United States Geological Survey (USGS). These maps are color coded line and symbol representations of natural and selected artificial features plotted to scale.

Turnbow

Aerial photograph flyer: Michael Turnbow (private)

I. INTRODUCTION

A. Vicinity Map

B. Project Description

This project is located at 231 South Grevillea Avenue, Inglewood, CA 90301 and sits on an 18.24-acre site. The project will be split into three packages, each with separate and unique construction schedules. This LID report will cover the scope of all packages: 1, 2, and 4. Package 1 and 2 will consist of one LID design and package 4 will consist of its own LID design. The project site is bounded by Manchester

Boulevard to the north, Grevillea Avenue to the east, Kelso Street to the south, and residential developments to the west.

The development involves the demolition of existing campus buildings, paved surfaces, grass fields, basketball courts, and a parking lot. The proposed developments consist of educational buildings, paved walkways, a reconfigured parking lot, basketball courts, and a turf athletic field. The development will also propose accessible paths of travel to various areas within the site, including, but not limited to, student buildings, courtyards, and accessible parking spaces.

C. Purpose and Scope

The project falls under the jurisdiction of the Division of the State Architect (DSA). The purpose of the report is:

- To reduce the proposed development's impact on existing hydrological conditions.
- To provide sufficient detailed information to support hydraulic design of storm drainage facilities.
- To minimize, to maximum extent practicable, the introduction of pollutants of concern that may result in significant impacts generated from site runoff directly connected to the stormwater conveyance system.

The site improvements will need to include post-construction stormwater best management practices (BMP's) to comply with current stormwater regulations. Operations and maintenance are required at each post-construction BMP, as specified in this report.

D. Drainage Conditions

Existing Drainage

Under existing conditions, the runoff from building roofs is discharged at-grade via roof drains and downspouts and sheet flows to on-site catch basins. Hardscape and landscaped areas are collected by a series of catch basins that discharge below grade into the existing underground storm drain system that ultimately discharges into the existing 27" reinforced concrete pipe (RCP) storm drain on Kelso Street. The existing 27" RCP pipe is owned and maintained by the Los Angeles County Flood Control District. Small portions along the north and south side of the project site sheet flow to Manchester Boulevard and Kelso Street, respectively. A small portion along the east side sheet flows to Grevillea Avenue.

It is unknown whether there is an existing stormwater treatment system implemented for the existing site conditions. See Appendix A for the existing drainage map.

Proposed Drainage

Package 1 and 2

Under proposed conditions, hardscaped and landscaped areas will sheet flow to several proposed area drains and catch basins located throughout the site and connected to the proposed underground storm drain network. Portion of the roof drainage system for Buildings 1, 3A, and 3B will connect to the underground storm drain system. Stormwater of these areas will be routed to a combined system that includes (3) drywells and an underground detention tank before it overflows to the existing 27" RCP storm drain pipe on Kelso Street. The eastern portion of the roof drainage system for Buildings 1, 3A, and 3B and adjacent landscaped areas will drain to proposed biofiltration planters located adjacent to Grevillea Avenue. Any stormwater entering these biofiltration planters that exceeds the 85th percentile storm event will overflow and discharge directly to the existing 27" RCP pipe on Kelso Street.

Package 4

Under proposed conditions, package 4 will include a new turf athletic field and landscaped areas. Given that the developments of this package are in its preliminary stages, the LID design will consider a combination of biofiltration planters and drywell(s). This area is intended to sheet flow into biofiltration planters with the residual design volume entering the drywells for deep infiltration.

The proposed BMPs will provide the required stormwater quality treatment as required by the County of Los Angeles Department of Public Works Low Impact Development Standards Manual, dated February 2014. See Appendix B for LID Calculations and Appendix C for LID Plan and Details. The proposed storm drain overflow pipe is sized based on the 25-year storm event.

E. Proposed Low Impact Design Results

Calculation results are based on *the County of Los Angeles Department of Public Works Low Impact Development Standards Manual*, dated February 2014. Methods for calculating Standard Urban Stormwater Mitigation Plan flow rates and volumes are based on the 85th Percentile, 24-hour rain event determined from the *County of Los Angeles Department of Public Works Hydrology Map*. BMPs are prioritized in order of design preference (per the County of Los Angeles LID Handbook). The allowable BMP methods (in order of priority) are:

1. BMPs that promote infiltration;
2. BMPs that store and beneficially use stormwater runoff; and,
3. BMPs that utilize runoff for water conservation use include, but not limited to, BMPs that incorporate vegetation to promote pollutant removal and runoff volume reduction and integrate multiple uses, and BMPs that percolate runoff through engineered soil and allow it to discharge downstream slowly.

Based on the geotechnical report, infiltration is considered feasible only at the southern side of the project site where a drywell system is being proposed for packages 1 and 2. At the northern side where infiltration is not feasible, lined biofiltration planters are being proposed to mitigate the portion of the proposed building's roof runoff for package 1. Package 4 infiltration testing is pending to determine if infiltration is feasible. See Appendix E for Geotechnical Report. To treat the on-site runoff, the project will utilize a combination of drywells, underground detention tank, and biofiltration BMPs to treat the 85th percentile storm of 1.08 inches of rainfall.

Site specific hydrological analyses for LID calculations for the developed conditions are shown in Appendix B. As stated earlier in the report, the site is broken down into three different packages. Tables 1, 2, and 3 show the site's subdrainage areas and their corresponding required treatment flows and storage volume requirements. Treatment flows were calculated using the Los Angeles County Public Works HydroCalc Calculator. See Appendix A for drainage management areas (DMA's) and Appendix B for LID calculations.

Table 3 – LID Summary

II. BEST MANAGEMENT PRACTICES (BMP'S)

A. Structural BMPs

1. Maxwell Drywell

A total of three drywells are being proposed to mitigate a portion of the runoff generated in packages 1 and 2. The storm drain system, which consists of catch basins, area drains, and an underground storm drain pipe network discharges first into the pre-treatment system and then ultimately into the drywells system. The drywells are meant to allow stormwater to infiltrate underlying soils. The stormwater volume not capable of infiltrating will be discharged into an underground storage tank. One drywell is being proposed for package 4 in combination with biofiltration planters.

Calculations are attached in Appendix B.

2. Oldcastle StormCapture

The stormwater volume not capable of infiltrating will be discharged into an underground storage tank. The detention tank is meant to slowly release stormwater back into the drywells for infiltration. Any stormwater exceeding the 85th percentile volume will overflow out the detention tank and discharge into the existing 27" RCP on Kelso Street.

Calculations are attached in Appendix B.

3. Biofiltration Planters

Biofiltration planters are located to the east of the proposed Buildings 1, 3A, and 3B (within package 1 and 2) and designed to treat roof stormwater from portion of the roofs. The southern parking lot (within

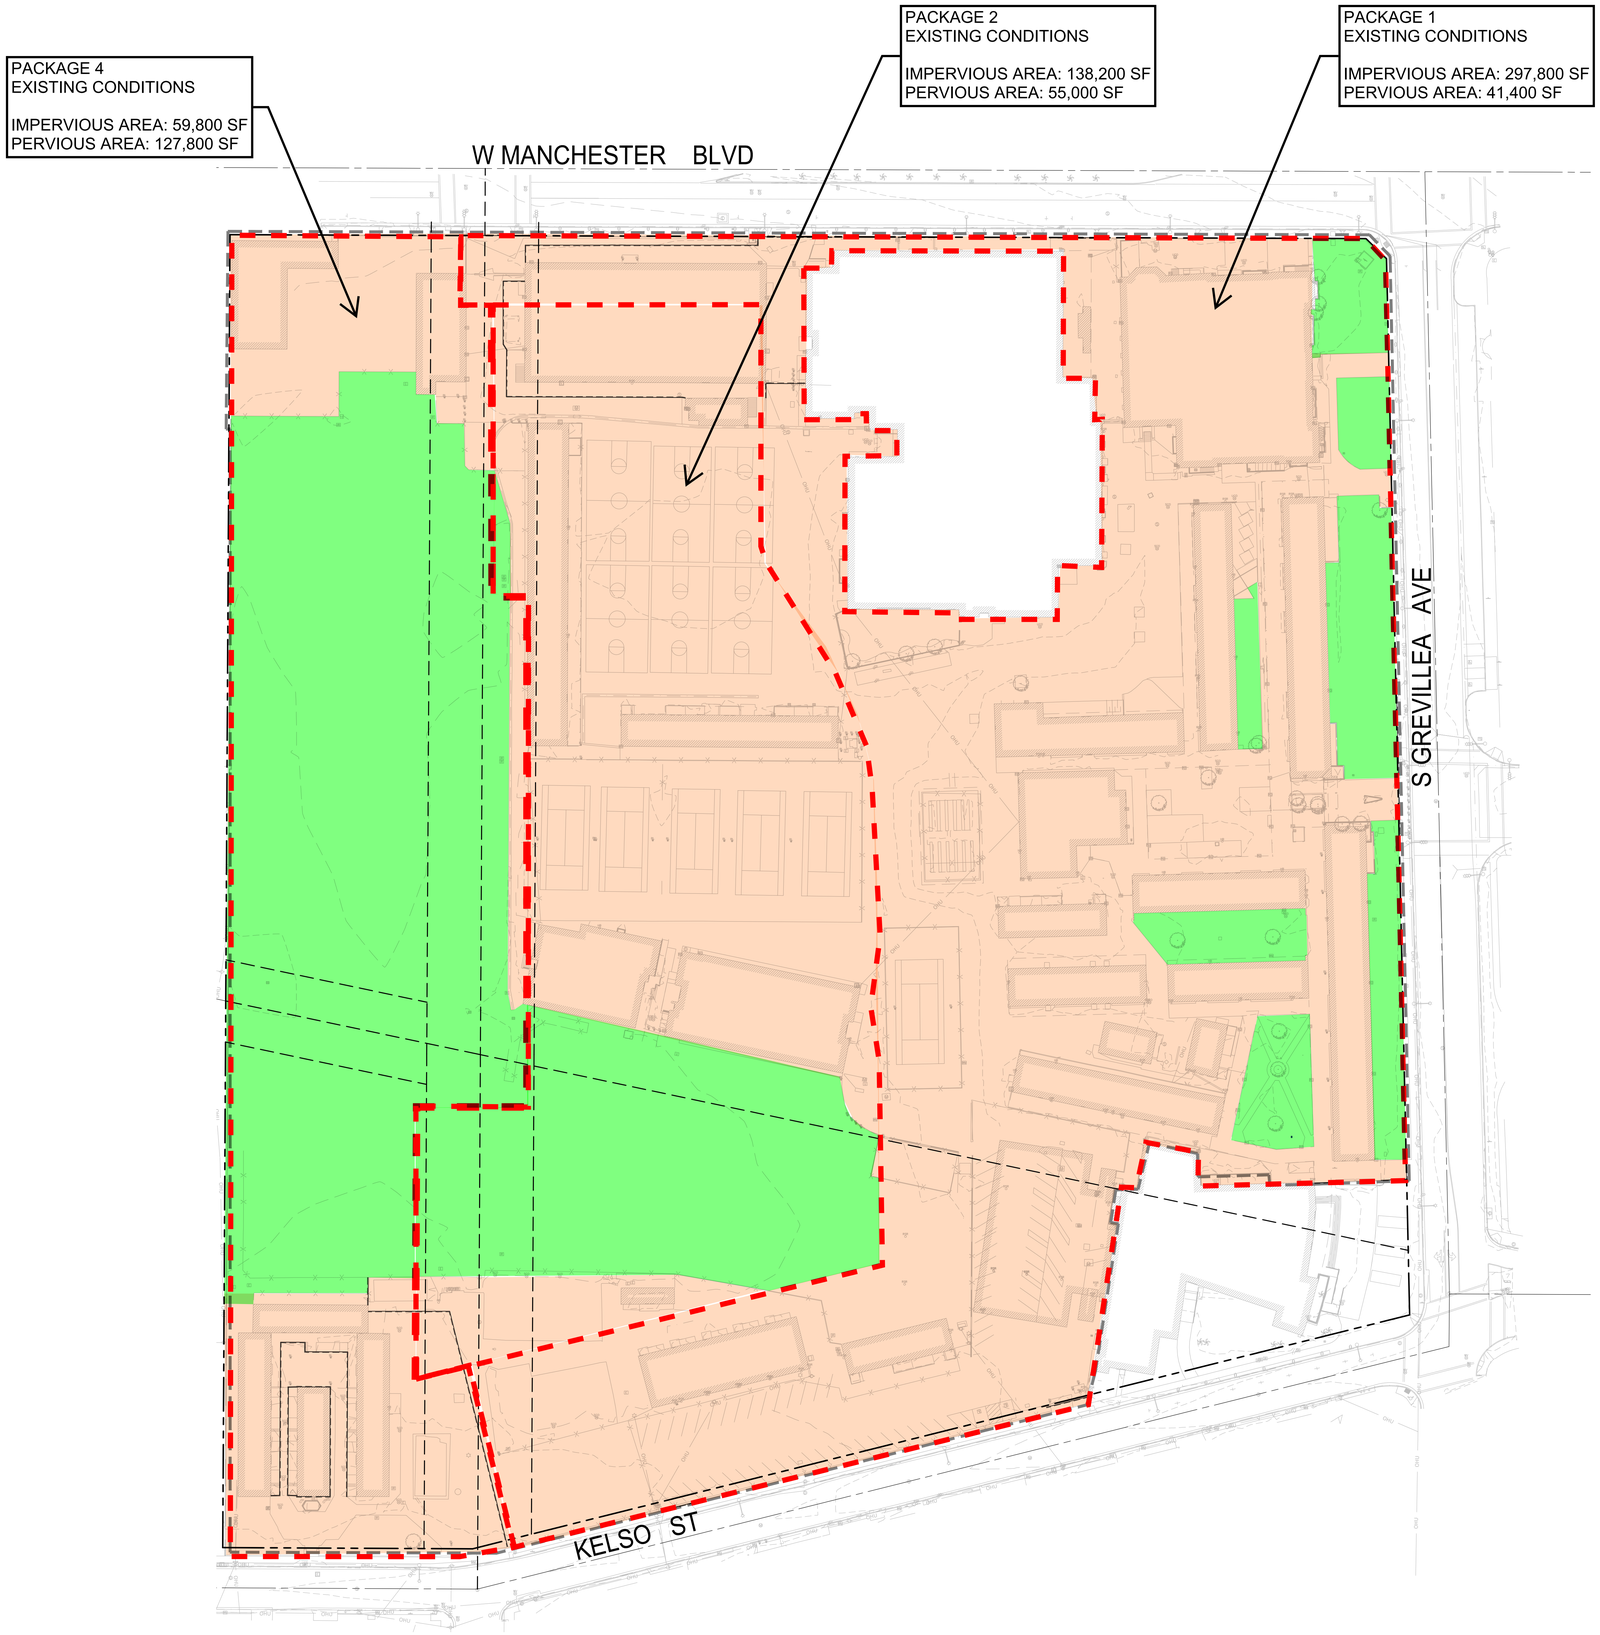
packages 1 and 2) will sheet flow into additional biofiltration planters. Additionally, package 4 will also propose the use of biofiltration planers in combination with a drywell.

Biofiltration systems use vegetation and soil or other infiltration media to treat stormwater runoff. Stormwater passes through the vegetation and infiltration media to remove pollutants of concern.

B. Non-Structural BMPs

1. Education and Training

Annual training of employees in chemical management and proper methods of handling and disposal of waste shall be provided. Employees should understand the on-site BMPs and their maintenance requirements.



2. Operation and Maintenance

All BMPs shall be operated, monitored, and maintained for the life of the project. All structural BMPs shall be inspected, cleaned out, and where necessary, repaired, at the minimum frequency each respective BMP maintenance guide states. Refer to Appendix D for operation and maintenance guides.

Debris and other water pollutants removed from structural BMPs during cleanout shall be contained and disposed of in a proper manner. The drainage system and the associated structures and BMPs shall be maintained according to manufacturer's specifications and to ensure maximum pollutant removal efficiencies.

(SS1) PVC, SDR-35 SANITARY SEWER PIPE PER DETAIL 5, SHEET C6.00. SIZE AND SLOPE PER PLAN.

(SS2) POINT OF CONNECTION 5 FEET FROM BUILDING FACE. SEE PLUMBING DRAWINGS FOR CONTINUATION.

(SS3) CLEANOUT PER DETAIL 6, SHEET C6.00.

(SS4) SANITARY SEWER PRECAST CONCRETE MANHOLE PER APWA STANDARD PLAN 200-2.

(SS5) POINT OF CONNECTION TO EXISTING SANITARY SEWER MAIN PER APWA STANDARD PLAN 222-2. SIZE AND LOCATION OF EXISTING LINE TO BE VERIFIED PRIOR TO INSTALLATION OF PROPOSED LINE. CONTRACTOR SHALL NOTIFY THE EOR IF CONDITIONS DIFFER.

(SS6) GREASE INTERCEPTOR. SEE PLUMBING DRAWINGS FOR DETAILS AND SPECIFICATIONS. SHOWN FOR COORDINATION PURPOSES ONLY.

(SS7) CONNECT TO EXISTING PIPE. EXISTING PIPE TO BE VERIFIED BY CONTRACTOR PRIOR TO TO INSTALLATION.

(SS8) PRECAST CONCRETE CATCH BASIN. JENSEN PRECAST PRODUCTS OR APPROVED EQUIVALENT.

(SS9) NEUTRALIZATION TANK. SEE PLUMBING DRAWINGS FOR DETAILS AND SPECIFICATIONS.

(SS10) FOX DRAIN. SEE PLUMBING DRAWINGS FOR DETAILS AND SPECIFICATIONS.

(SS11) PVC SDR-35 SANITARY SEWER PER CITY OF INGLEWOOD DRAWING NO. W-355 SHEET 4 AND DETAIL 2, SHEET C6.02. SIZE PER PLAN.

DOMESTIC WATER

(W1) PVC C-900 DOMESTIC WATER PIPE PER DETAIL 5, SHEET C6.00. SIZE PER PLAN.

(W2) POINT OF CONNECTION 5 FEET FROM BUILDING FACE. SEE PLUMBING DRAWINGS FOR CONTINUATION.

(W3) BACKFLOW PREVENTION DEVICE PER DETAIL 4, SHEET C6.01.

(W4) WATER METER PER DETAIL 9, SHEET C6.01.

(W5) POINT OF CONNECTION TO EXISTING WATER MAIN. SIZE AND LOCATION OF EXISTING LINE TO BE VERIFIED PRIOR TO INSTALLATION OF PROPOSED LINE. CONTRACTOR SHALL NOTIFY THE EOR IF CONDITIONS DIFFER.

(W6) THRUST BLOCK PER DETAIL 8, SHEET C6.00.

(W7) PVC C-900 DOMESTIC WATER PIPE PER CITY OF INGLEWOOD DRAWING NO. W-355 SHEET 4 AND DETAIL 2, SHEET C6.02, SIZE PER PLAN.

IRRIGATION

(IR1) IRRIGATION LINE. SEE LANDSCAPE DRAWINGS FOR CONTINUATION, DETAILS, AND SPECIFICATIONS. SHOWN FOR COORDINATION PURPOSES ONLY.

FIRE WATER

(F1) PVC C-900 FIRE WATER PIPE PER DETAIL 5, SHEET C6.00. SIZE AND MATERIAL PER PLAN.

(F2) POINT OF CONNECTION 5 FEET FROM BUILDING FACE. SEE PLUMBING DRAWINGS FOR CONTINUATION.

(F3) BACKFLOW PREVENTION DEVICE PER CITY OF INGLEWOOD DRAWING NO. W-355, SHEET 29 AND DETAIL 5, SHEET C6.01.

(F4) WATER METER PER CITY OF INGLEWOOD DRAWING NO. W-355 SHEETS 23.1-23.3 AND DETAIL 9, SHEET C6.01.

(F5) POINT OF CONNECTION TO EXISTING WATER LINE PER CITY OF INGLEWOOD DRAWING NO. W-355 SHEET 5 AND DETAIL 8, SHEET C6.01. SIZE AND LOCATION OF EXISTING LINE TO BE VERIFIED PRIOR TO INSTALLATION OF PROPOSED LINE. CONTRACTOR SHALL NOTIFY THE EOR IF CONDITIONS DIFFER.

(F6) THRUST BLOCK PER DETAIL 8, SHEET C6.00.

(F7) EXISTING FIRE HYDRANT.

(F8) FIRE HYDRANT PER DETAIL 7, SHEET C6.01.

(F9) FIRE DEPARTMENT CONNECTION. SEE FIRE PROTECTION DRAWINGS FOR DETAILS AND SPECIFICATIONS.

(F10) POST INDICATOR VALVE. SEE FIRE PROTECTION DRAWINGS FOR DETAILS AND SPECIFICATIONS.

(F11) PVC C-900 FIRE WATER PIPE PER CITY OF INGLEWOOD DRAWING NO. W.355 SHEET 4 AND DETAIL 2, SHEET C6.02. SIZE PER PLAN.

OTHER UTILITIES

(U1) GAS PIPE AND EQUIPMENT. SEE PLUMBING DRAWINGS FOR DETAILS AND SPECIFICATIONS. SHOWN FOR COORDINATION PURPOSES ONLY.

(U2) ELECTRICAL CONDUIT AND EQUIPMENT. SEE ELECTRICAL DRAWINGS FOR DETAILS AND SPECIFICATIONS. SHOWN FOR COORDINATION PURPOSES ONLY.

(U3) TELECOM CONDUIT AND EQUIPMENT. SEE TELECOM DRAWINGS FOR DETAILS AND SPECIFICATIONS. SHOWN FOR COORDINATION PURPOSES ONLY.

If this sheet is smaller than 36" high by 48" wide then it has been reduced.

UTILITY CONSTRUCTION NOTES:

STORM DRAIN

- (SD1) PVC, SDR-35 STORM DRAIN PIPE PER DETAIL 5, SHEET C6.00. SIZE AND SLOPE PER PLAN.
- (SD2) POINT OF CONNECTION 5 FEET FROM BUILDING FACE. SEE PLUMBING DRAWINGS FOR CONTINUATION.
- (SD3) CLEANOUT PER DETAIL 6, SHEET C6.00.
- (SD4) PRECAST CONCRETE CATCH BASIN. JENSEN PRECAST PRODUCTS OR APPROVED EQUIVALENT.
- (SD5) POINT OF CONNECTION TO EXISTING STORM DRAIN MAIN. SIZE AND LOCATION OF EXISTING LINE TO BE VERIFIED PRIOR TO INSTALLATION OF PROPOSED LINE. CONTRACTOR SHALL NOTIFY THE EOR IF CONDITIONS DIFFER.
- (SD6) STORM DRAIN MANHOLE PER APWA STANDARD PLAN 201-3.
- (SD7) OLDCASTLE DRYWELL OR APPOVED EQUIVALENT. PER DETAIL 3, SHEET C6.01.
- (SD8) OLDCASTLE PRETREATMENT SYSTEM OR APPROVED EQUIVALENT.
- (SD9) PLANTER DRAIN PER DETAIL 7, SHEET C6.00.
- (SD10) TRENCH DRAIN PER DETAIL 10 ON SHEET C6.00.
- (SD11) CONNECT TO EXISTING PIPE. EXISTING PIPE TO BE VERIFIED BY CONTRACTOR PRIOR TO INSTALLATION.
- (SD12) DOWNSPOUT. SEE ARCHITECTURAL DRAWINGS FOR CONTINUATION.
- (SD13) BIOFILTRATION PLANTER PER DETAIL 12 ON SHEET C6.01.
- (SD14) OLD CASTLE BIORETENTION TANK OR APPROVED EQUIVALENT. PER DETAIL 1, SHEET C6.02.
- (SD15) POINT OF CONNECTION TO RAISED PLANTER. SEE LANDSCAPE DRAWINGS FOR PLANTER DRAIN DETAILS.
- (SD16) POINT OF CONNECTION TO RETAINING WALL FOOTING. SEE LANDSCAPE DRAWINGS FOR WALL DETAILS.

SANITARY SEWER

- (SS1) PVC, SDR-35 SANITARY SEWER PIPE PER DETAIL 5, SHEET C6.00. SIZE AND SLOPE PER PLAN.
- (SS2) POINT OF CONNECTION 5 FEET FROM BUILDING FACE. SEE PLUMBING DRAWINGS FOR CONTINUATION.
- (SS3) CLEANOUT PER DETAIL 6, SHEET C6.00.
- (SS4) SANITARY SEWER PRECAST CONCRETE MANHOLE PER APWA STANDARD PLAN 200-2.
- (SS5) POINT OF CONNECTION TO EXISTING SANITARY SEWER MAIN PER APWA STANDARD PLAN 222-2. SIZE AND LOCATION OF EXISTING LINE TO BE VERIFIED PRIOR TO INSTALLATION OF PROPOSED LINE. CONTRACTOR SHALL NOTIFY THE EOR IF CONDITIONS DIFFER.
- (SS6) GREASE INTERCEPTOR. SEE PLUMBING DRAWINGS FOR DETAILS AND SPECIFICATIONS. SHOWN FOR COORDINATION PURPOSES ONLY.
- (SS7) CONNECT TO EXISTING PIPE. EXISTING PIPE TO BE VERIFIED BY CONTRACTOR PRIOR TO TO INSTALLATION.
- (SS8) PRECAST CONCRETE CATCH BASIN. JENSEN PRECAST PRODUCTS OR APPROVED EQUIVALENT.
- (SS9) NEUTRALIZATION TANK. SEE PLUMBING DRAWINGS FOR DETAILS AND SPECIFICATIONS.
- (SS10) FOX DRAIN. SEE PLUMBING DRAWINGS FOR DETAILS AND SPECIFICATIONS.
- (SS1) PVC SDR-35 SANITARY SEWER PER CITY OF INGLEWOOD DRAWING NO. W-355 SHEET 4 AND DETAIL 2, SHEET C6.02. SIZE PER PLAN.

DOMESTIC WATER

- (W1) PVC C-900 DOMESTIC WATER PIPE PER DETAIL 5, SHEET C6.00. SIZE PER PLAN.
- (W2) POINT OF CONNECTION 5 FEET FROM BUILDING FACE. SEE PLUMBING DRAWINGS FOR CONTINUATION.
- (W3) BACKFLOW PREVENTION DEVICE PER DETAIL 4, SHEET C6.01.
- (W4) WATER METER PER DETAIL 9, SHEET C6.01.
- (W5) POINT OF CONNECTION TO EXISTING WATER MAIN. SIZE AND LOCATION OF EXISTING LINE TO BE VERIFIED PRIOR TO INSTALLATION OF PROPOSED LINE. CONTRACTOR SHALL NOTIFY THE EOR IF CONDITIONS DIFFER.
- (W6) THRUST BLOCK PER DETAIL 8, SHEET C6.00.
- (W7) PVC C-900 DOMESTIC WATER PIPE PER CITY OF INGLEWOOD DRAWING NO. W-355 SHEET 4 AND DETAIL 2, SHEET C6.02, SIZE PER PLAN.

IRRIGATION

- (IR1) IRRIGATION LINE. SEE LANDSCAPE DRAWINGS FOR CONTINUATION, DETAILS, AND SPECIFICATIONS. SHOWN FOR COORDINATION PURPOSES ONLY.

FIRE WATER

- (F1) PVC C-900 FIRE WATER PIPE PER DETAIL 5, SHEET C6.00. SIZE AND MATERIAL PER PLAN.
- (F2) POINT OF CONNECTION 5 FEET FROM BUILDING FACE. SEE PLUMBING DRAWINGS FOR CONTINUATION.

MaxWell® Plus

TORRENT RESOURCES
AN OLDCASTLE INFRASTRUCTURE COMPANY

January 2021

Company Overview

Torrent Resources (www.TorrentResources.com) is a full-service drainage solutions partner with a team of experts ready to address ever-growing stormwater management needs in California, Arizona, and throughout the western United States. Since 1972, Torrent Resources has set the standard in design and construction of stormwater drywell systems for the mitigation of excess surface runoff. In 1974, the company revolutionized the industry with its exclusive ***MaxWell***® system – unmatched in efficiency and reliability by any other type of stormwater drywell system. To date, more than 70,000 MaxWell drywells have been installed and are successfully operating for both our municipal and private development customers.

Torrent Resources is a wholly-owned subsidiary of Oldcastle Infrastructure (www.oldcastleinfrastructure.com)

MaxWell Drywell System Description

The MaxWell is an enhanced stormwater treatment drywell which utilizes deep infiltration to capture and treat surface runoff and recharge groundwater. Maxwell drywells are used either as a stand-alone Best Management Practice (BMP) or in combination with other storage/treatment BMPs. The MaxWell system is not intended to provide significant storage volume, but instead is designed to dispose of accumulated stormwater to ensure maximum pretreatment efficiency.

A key feature of the MaxWell system is its pretreatment settling chamber(s) designed to remove sediment, debris, floating hydrocarbons, and other organic compounds prior to recharging the treated stormwater back into the sub-grade. The water is then further treated by the soil as it passes through the vadose zone to eventually replenish the groundwater resources.

There are two main types of MaxWell drywells systems, 1) the MaxWell IV, and 2) the MaxWell Plus. The ***MaxWell IV*** (the fourth iteration of enhanced drywell since 1974) provides pretreatment with a single 4-ft diameter settling chamber. The chamber is typically 15 - 25 feet deep with up to a 10-ft riser pipe (sump) fitted with a debris shield and screen to ensure stormwater is treated before entering the drywell rock shaft (4 - 6 feet diameter, up to 120 feet deep). The debris shield forces water to be drawn into the system from several inches beneath the surface, effectively isolating and containing floating trash, paper, debris and pavement oils within the chambers. The ***MaxWell Plus*** provides an additional chamber to increase pretreatment. The primary settling chamber includes a vented and screened outlet to capture trash, debris, and pollutants before treated water can enter the second chamber.

Each MaxWell chamber is equipped with two hydrophobic floating absorbent pillows, which will remove a wide range of hydrocarbons and organic liquids. The sponges are 100% water repellant, and wick floating petrochemical compounds from the surface of the water. Each pillow has a removal capacity of up to 1.35 gallons to accommodate effective, long-term treatment.

Typically, each chamber is equipped with a bolted 30” diameter cast-iron grate or solid manhole lid, at the surface. These metal grates and covers are embossed with the Torrent Resources company name, the MaxWell trade name, and the words “Storm Water Only” as a general reminder to the public as to the intended usage of the structure. In some cases, alternative covers may be required by a local jurisdiction and/or to address project constraints.

Note: The operation, inspection, and maintenance procedures described herein, can be performed without entering the drywell chambers. Should chamber entry be required for repairs or other unforeseen reasons, proper confined space protocols, equipment, and training shall be used.

Operation

All water is routed through the drywell system via gravity flow. There are no mechanical moving parts or electrical equipment. Any flow monitoring equipment is considered separate from the MaxWell system and not covered within this document. Likewise, all pipes and any apparatus used to bring water to and from the drywell are considered separate from the MaxWell system.

Inspection

Protocol

Inspection of MaxWell systems can be performed from the surface without entering the drywell. Inspections will typically require the following equipment:

- 3/4” socket wrench to remove/replace grate/lid bolts
- A manhole lid puller/lifter or similar means to safely remove the manhole lid
- Flashlight and/or mirror to reflect light into chamber
- 25-ft + measuring tape
- *Maintenance Data and Warranty Information* sheet provided by Torrent Resources after installation.
- Where necessary, appropriate traffic control and pedestrian safety measures may be needed to safely inspect the drywell.

The inspection should include, at a minimum, the following observations for each drywell/settling chamber:

1. Ensure that water in the chambers has drawdown within the required time (varies by jurisdiction, typically 48-96 hours). It is normal for a few inches of water to remain at the bottom of slurry-bottom chambers.
2. Ensure that there are no obstructions, trash, or debris that prevent water from entering or leaving the drywell chambers.
3. Measure the amount of sediment and trash accumulation by using a tape measure to determine the depth of material and subtracting that amount from the total chamber depth (reference *Maintenance Data and Warranty Information* sheet). If 2 feet or more of material has accumulated, then maintenance should be performed. For the MaxWell Plus system, it is common to see significantly more accumulation in the primary settling chamber.
4. Observe the presence and condition of all hydrocarbon pillows. Each chamber should have two hydrocarbon pillows. Pillows should be intact and free to float.
5. Ensure that all screens, shields, and pipes are intact and not damaged.
6. Most chambers have a concrete bottom. However, in some cases the bottom is made of geotextile fabric. If applicable, ensure the geotextile fabric is completely covering the bottom surface area and not damaged.

If drywell grates/lids were removed during inspection, replace (clean lip, if necessary, to ensure a flush fit) and re-secure with bolts.

Frequency

It is recommended that systems are inspected at least once each year and after major storms.

Maintenance

Protocol

Maintenance of MaxWell systems can be performed from the surface without entering the drywell. Maintenance operations will typically require the following equipment:

- 3/4” socket wrench to remove/replace grate/lid bolts
- A manhole lid puller/lifter or similar means to safely remove the manhole lid
- A long/extendable hook to remove riser pipe screen
- Flashlight and/or mirror to reflect light into chamber
- Vacuum truck with extension hose and jet rod
- Replacement absorptive pillows
- *Maintenance Data and Warranty Information* sheet provided by Torrent Resources after installation.
- Where necessary, appropriate traffic control and pedestrian safety measures may be needed to safely inspect the drywell.

Typical maintenance shall include removing all surface grates/lids to clean and service the drywell chambers. Removal of accumulated trash, debris, and sediment shall be done using a hydro-vacuum truck (see photo below). The hydro-vacuum truck utilizes streams of air and high-pressure water to dislodge built-up material, which is then removed via a vacuum hose and stored within the truck’s tank until proper disposal. Obstructions or accumulated debris on inlets, screens, and/or connecting pipes is removed by jet-rodding (typically included on the hydro-vacuum truck) and then vacuumed. If the riser screen requires cleaning, the riser shield is fitted with a metal loop and can removed/replaced from the surface with a long hook. Certain MaxWells utilize a geotextile fabric bottom within the chambers; care should be taken to note the depth of the chamber and ensure that the fabric is not damaged or removed during the vacuuming process.

Absorbent pillows are typically removed during hydro-vacuum operations and disposed of with removed debris and sediment. If pillow replacement is required prior to hydro-vacuum operation, new pillows can be dropped in the chambers.

Following hydro-vacuum operations, drywell grates/lids should be replaced (clean lip, if necessary, to ensure a flush fit) and re-secured with bolts.

All removed material, including absorptive pillows, shall be disposed of in accordance with local regulations.

A written log shall be kept of all inspections and maintenance actions performed on the drywell systems Hydro-vacuum maintenance typically requires 2-4 hours per drywell system.

Refer to **Appendix A** for detailed maintenance steps and blank inspection and maintenance log.

Typical hydro-vacuum truck used for drywell maintenance

Frequency

The need for maintenance is assessed and determined by annual/post-storm inspections, as described above, and can vary from year to year. Additionally, the frequency of recurrent maintenance is heavily dependent on many factors including, but not limited to drywell drainage area size and condition, as well as the size and condition of any upstream BMPs. The following should therefore be considered only as general estimates for maintenance intervals:

Hydro-vacuum and jet-rod cleaning:

1-2 years for:

- urban right-of-ways and parcels with high trash, debris, and/or sediment loads

or

- drainage areas larger than 10 acres

3-5 years for:

- drainage areas with upstream BMPs and/or pretreatment (i.e. trash capture devices)

or

- drainage areas smaller than 5 acres

Pillow replacement:

1-5 years

Hydrocarbon pillows are typically replaced during hydro-vacuum cleaning; however, it is possible the pillows may need to be replaced sooner than a hydro-vacuum cleaning is required. This may be the case for drainage areas that have heavy vehicular use, but low sediment/trash loads (i.e. parking lots).

Repairs

Protocol

Should repairs be needed, all materials shall be replaced in accordance with the design specifications for the drywell. Confined space entry to the drywell may be required and shall only be done by trained staff with proper safety equipment.

Frequency

As needed.

Torrent Resources can be contracted to assist with any MaxWell maintenance and/or repairs.

Lifespan

Torrent Resources has been installing MaxWell systems since 1974. Most of these drywells are still successfully operating today. With proper maintenance, a MaxWell drywell system will provide an efficient stormwater management solution for many decades. All MaxWell systems include a 5-year limited warranty – refer to the *Maintenance Data and Warranty Information* sheet provided by Torrent Resources after installation for warranty details.

STORMCAPTURE®

Inspection and Maintenance Guide

Water

Description

The StormCapture® system is an underground, modular, structural precast concrete storage system for stormwater detention, retention, infiltration, harvesting and reuse, and water quality volume storage. The system's modular design utilizes multiple standard precast concrete units with inside dimensions of 7 feet by 15 feet (outside dimensions of 8 feet by 16 feet) to form an underground storage system. The inside height of the StormCapture system can range from 2 feet to 14 feet. This modular design provides limitless configuration options for site-specific layouts.

StormCapture components can be provided as either open-bottom modules to promote infiltration or closed-bottom modules for detention. In some cases, StormCapture modules can be placed in a checkerboard configuration for an even more efficient design. A Link Slab, with a footprint of 9 feet by 17 feet, is then used to bridge each space without a module.

The standard StormCapture design incorporates lateral and longitudinal passageways between modules to accommodate internal stormwater conveyance throughout the system. These passageways may be classified as either a "window configuration" with standard 12-inch tall sediment baffles extending up from the floor of the module to the bottom of the window, or a "doorway configuration" without the sediment baffles. The function and drainage rate of a StormCapture system depends on site-specific conditions and requirements.

Stormwater typically enters the StormCapture system through an inlet pipe. Grated inlets can also be used for direct discharge into the system. The StormCapture system is rated for H-20 traffic loading with limited cover. Higher load requirements can also be accommodated. In addition, StormCapture systems are typically equipped with a limited number of maintenance modules that provide access to the system for ongoing inspection and maintenance.

Function

The StormCapture system is primarily used to manage water quantity by temporarily storing stormwater runoff from impervious surfaces to prevent flooding, slow down the rate at which stormwater leaves the site, and reduce receiving stream erosion. In addition, the StormCapture system can be used to capture stormwater runoff for water quality treatment. Regardless of how the StormCapture system is used, some sedimentation may occur in the modules during the time water is stored.

Configurations

The configuration of the StormCapture systems may vary, depending on the water quality and/or quantity requirements of the site. StormCapture configurations for detention, retention/infiltration, and retention/harvesting are described below.

Detention

StormCapture Detention systems are designed with a closed bottom to detain stormwater runoff for controlled discharge from the site. This design may incorporate a dead storage sump and a permanent pool of water if the outlet pipe is higher than the floor elevation. Discharge from the system is typically controlled by an outlet orifice and/or outlet weir to regulate the rate of stormwater leaving the system. StormCapture Detention systems are typically designed with silt-tight joints, however when conditions exist that require a StormCapture system to be watertight, the system may be wrapped in a continuous, impermeable geomembrane liner. If the StormCapture Detention system includes Link Slabs, a liner must be used to detain water since the chambers under each Link Slab have no floor slab. In this case, care must be taken by maintenance personnel not to damage the exposed liner beneath each Link Slab.

Retention/Infiltration

StormCapture Retention/Infiltration systems are designed with an open bottom to allow for the retention of stormwater onsite through infiltration into the base rock and surrounding soils. For infiltration systems, the configuration of the base of the StormCapture system may vary, depending on the needs of the site and the height of the system. Some systems may use modules that have fully open bottoms with no concrete floor, while other systems may use modules that incorporate floor openings in the base of each module. These are typically 24-inch by 24-inch openings. For open-bottom systems, concrete splash pads may be installed below inlet grate openings and pipe inlets to prevent erosion of base rock. A StormCapture Infiltration system may have an elevated discharge pipe for peak overflow.

Retention/Harvesting

StormCapture Retention/Harvesting systems are similar to detention systems using closed-bottom modules, but stormwater is typically retained onsite for an extended period of time and later reused for non-potable applications or irrigation. For rainwater harvesting systems, an impermeable geomembrane liner is typically installed around the modules to provide a water-tight system.

Inspection and Maintenance Overview

State and local regulations typically require all stormwater management systems to be inspected on a regular basis and maintained as necessary to ensure performance and protect downstream receiving waters. Inspections should be used to evaluate the conditions of the system. Based on these inspections, maintenance needs can be determined. Maintenance needs vary by site and system. Using this Inspection & Maintenance Guide, qualified maintenance personnel should be able to provide a recommendation for maintenance needs. Requirements may range from minor activities such as removing trash, debris or pipe blockages to more substantial activities such as vacuuming and removal of sediment and/or non-draining water. Long-term maintenance is important to the operation of the system since it prevents excessive pollutant buildup that may limit system performance by reducing the operating capacity and increasing the potential for scouring of pollutants during periods of high flow.

Only authorized personnel shall inspect and/or enter a StormCapture system. Personnel must be properly trained and equipped before entering any underground or confined space structure. Training includes familiarity with and adherence to any and all local, state and federal regulations governing confined space access and the operation, inspection, and maintenance of underground structures.

Inspection and Maintenance Frequency

The StormCapture system should be inspected on a regular basis, typically twice per year, and maintained as required. The maintenance frequency will be driven by the amount of runoff and pollutant loading encountered by a given system. Local jurisdictions may also dictate inspection and maintenance frequencies.

Inspection Equipment

The following equipment is helpful when conducting StormCapture inspections:

- Recording device (pen and paper form, voice recorder, iPad, etc.)
- Suitable clothing (appropriate footwear, gloves, hardhat, safety glasses, etc.)
- Traffic control equipment (cones, barricades, signage, flagging, etc.)
- Manhole hook or pry bar
- Confined space entry equipment, if needed
- Flashlight
- Tape measure
- Measuring stick or sludge sampler
- Long-handled net (optional)

Inspection Procedures

A typical StormCapture system provides strategically placed access points that may be used for inspection. StormCapture inspections are usually conducted visually from the ground surface, without entering the unit. This typically limits inspection to the assessment of sediment depth, water drain down, and general condition of the modules and components, but a more detailed assessment of structural condition may be conducted during a maintenance event.

To complete an inspection, safety measures including traffic control should be deployed before the access covers are removed. Once the covers have been removed, the following items should be inspected and recorded (see form provided at the end of this document) to determine whether maintenance is required:

- Observe inlet and outlet pipe penetrations for blockage or obstruction.
- If possible, observe internal components like baffles, flow control weirs or orifices, and steps or ladders to determine whether they are broken, missing, or possibly obstructed.
- Observe, quantify, and record the sediment depths within the modules.
- Retrieve as much floating trash as possible with a long-handled net. If a significant amount of trash remains, make a note in the Inspection & Maintenance Log.
- For infiltration systems, local regulations may require monitoring of the system to ensure drain down is occurring within the required permit time period (typically 24 to 72 hours). If this is the case, refer to local regulations for proper inspection procedure.

Maintenance Indicators

Maintenance should be scheduled if any of the following conditions are identified during the inspection:

- Inlet or outlet piping is blocked or obstructed.
- Internal components are broken, missing, or obstructed.
- Accumulation of more than six inches of sediment on the system floor or in the sump, if applicable.
- Significant accumulation of floating trash and debris that cannot be retrieved with a net.
- The system has not drained completely after it hasn't rained for one to three days, or the drain down does not meet permit requirements.
- Any hazardous material is observed or reported.

Maintenance Equipment

The following equipment is helpful when conducting StormCapture maintenance:

- Suitable clothing (appropriate footwear, gloves, hardhat, safety glasses, etc.)
- Traffic control equipment (cones, barricades, signage, flagging, etc.)
- Manhole hook or pry bar
- Confined space entry equipment, if needed
- Flashlight
- Tape measure
- Vacuum truck

Maintenance Procedures

Maintenance should be conducted during dry weather when no flow is entering the system. Confined space entry is usually required to maintain the StormCapture. Only personnel that are OSHA Confined Space Entry trained and certified may enter underground structures. Once safety measures such as traffic control have been deployed, the access covers may be removed and the following activities may be conducted to complete maintenance:

- Remove trash and debris using an extension on the end of the boom hose of the vacuum truck. Continue using the vacuum truck to completely remove accumulated sediment. Some jetting may be necessary to fully evacuate sediment from the system floor or sump. Jetting is acceptable in systems with solid concrete floors or base slabs (referred to as closed-bottom systems). However, jetting is not recommended for open-bottom systems with a gravel foundation since it may cause bedding displacement, undermining of the foundation, or internal disturbance.
- All material removed from the system during maintenance must be disposed of in accordance with local regulations. In most cases, the material may be handled in the same manner as disposal of material removed from sumped catch basins or manholes.
- Inspect inlet and outlet pipe penetrations for cracking and other signs of movement that may cause leakage.
- Inspect the concrete splash pads (applicable for open-bottom systems only) for proper function and placement.
- Inspect the system for movement of modules. There should be less than 3/4-inch spacing between modules.
- Inspect the general interior condition of modules for concrete cracking or deterioration. If the system consists of horizontal joints as part of the modules, inspect those joints for leakage, displacement or deterioration.

Be sure to securely replace all access covers, as appropriate, following inspection and/or maintenance. If the StormCapture modules or any of the system components show significant signs of cracking, spalling, or deterioration or if there is evidence of excessive differential settlement between modules, contact Oldcastle Infrastructure at **800-579-8819.**

Appendix E
Geotechnical Report

Both disturbed (bulk) and relatively undisturbed samples were obtained from each boring. These samples were secured and transported to our laboratory for testing. The results of the laboratory testing are discussed in the following sections of this report and provided in Appendix D.

The locations of previous borings excavated on the site by Geotechnologies in 2001 and the fault trenches excavated by Smith-Emery in 2001 are also shown on Plate 2. The logs of their borings and fault trenches are provided in Appendices A and B, respectively.

STORMWATER INFILTRATION TESTING

Seven 8-inch-diameter borings were drilled on the subject site for the purpose of performing infiltration tests for possible stormwater infiltration. *Four* of the borings, PT-1, PT-2, PT-3 and *PT-7*, were drilled in potential dry well locations as determined by the project civil engineers and were drilled to depths of 25 *to 30* feet (plus 1 additional foot for sealing the bottom of the infiltration zone). The remaining three borings PT-4, PT-5 and PT-6 were drilled to depths of 5 feet (plus 1 additional foot for sealing the bottom of the infiltration zone) in potential shallow bioretention basin locations. The tested infiltration zones within the borings were all located in native Lakewood Formation marine deposits.

Infiltration tests were performed in accordance with the County of Los Angeles Administrative Manual GS200.1. Due to concerns regarding the potential for caving within large diameter borings drilled in the Lakewood Formation, the infiltration testing was performed in accordance with the Small Diameter Boring Infiltration Test procedure outlined in GS200.1.

Deep Dry Well Construction & Abandonment

Borings PT-1, PT-2 and PT-3 were drilled to depths of 26 feet to allow for a 1-foot bentonite plug below the infiltration zone, which was between 10 and 25 feet below the ground surface. Boring PT-7 was drilled to a depth of 31 feet to allow for a 1-foot bentonite plug below the infiltration zone, which was between 10 and 30 feet below the ground surface. After placement of the impervious plug, a 2-inch-diameter slotted PVC pipe was inserted within the infiltration zone in each boring. Solid PVC pipe was used for the remaining upper 10 feet. The annulus between the slotted pipe and the boring sides was then backfilled with #3 coarse sand to at least 12 inches above the slotted zone. The remaining annulus was backfilled with spoils from the borings. At the conclusion of testing, the pipes were left in the borings and the upper 4 inches capped with either asphalt cold patch or dirt, depending on the boring's location.

Shallow Well Construction & Abandonment

The three shallow borings intended for determining the feasibility of using bioretention basins were drilled to depths of 6 feet to allow for a 1-foot bentonite plug below the infiltration zone, which was between 4 and 5 feet below the ground surface. After placement of the impervious plug, a 2-inch-

diameter slotted PVC pipe was inserted within the infiltration zone of each boring. Solid PVC pipe was used for the remaining upper 4 feet. The annulus between the slotted pipe and the boring sides was then backfilled with #3 coarse sand to at least 12 inches above the slotted zone. The remaining annulus was backfilled with spoils from the borings. At the conclusion of testing, the pipes were removed and the borings backfilled to the ground surface with the boring spoils.

Pre-Soak Procedure for Shallow Infiltration Wells

After the construction of the three shallow infiltration wells, and approximately 14 hours before the infiltration tests were to be performed the following day, clear water from the school's on-site municipal water system delivered to each boring location using a garden hose equipped with a digital flow meter was used to pre-soak each of the three borings. The following morning, the pre-soak water remained in borings PT-4 and PT-6 with very little drop, and it was determined that those locations were not feasible for infiltration testing or shallow bioretention basins. The pre-soak water in boring PT-5 had infiltrated overnight, and additional pre-soak water was added to approximately 12 inches above the infiltration zone 1 hour before the infiltration test was started.

Pre-Soak Procedure for Deep Dry Wells

After the construction of the PT-1, PT-2 and PT-3 deep dry wells, and approximately 14 to 18 hours before the infiltration tests were to be performed, clear water from the school's municipal water system delivered to each boring using a garden hose equipped with a digital flow meter was used to pre-soak each boring. The following morning, the pre-soak water from borings PT-1 and PT-3 had infiltrated, but 10 inches of water remained in PT-2. Additional pre-soak water was added to each boring 1 hour before the infiltration test was to be begin. At the start of the pre-soak period, the water levels in PT-1 and PT-3 were established at a depth of 10 feet below ground surface, then allowed to drain for 1 hour prior to testing. In PT-2, the highest the pre-soak water level would reach after adding 375 gallons was about 14 feet. The water was then allowed to drain for 1 hour prior to starting the infiltration test.

Immediately after the construction of the PT-7 deep dry well, clear water from the school's municipal water system delivered to the boring using a garden hose equipped with a digital flow meter was used to pre-soak the boring for approximately 1.5 hours. After the addition of 68 gallons of pre-soak water during the 1.5 hours, the water level remained at 16.85' below the ground surface.

Infiltration Test Procedure

It was determined that constant head tests were appropriate for each of the *five* borings tested. Water was added to each of the *five* borings using a garden house equipped with a digital flow meter. The water depth was maintained at about 10 feet below the ground surface in PT-1, PT-2 *and PT-7* for the

duration of the test. In PT-2, the water depth was maintained at about 14 feet. The flow rate was managed throughout the testing process using the adjustable flow meter to maintain the constant head, and the gallons used during the duration of the tests were recorded at regular intervals. The recording interval for PT-1 and PT-2 was 20 minutes, while the recording interval for PT-3, PT-5, *and PT-7* was 30 minutes. The water level was maintained for at least 3 hours and until a stabilized flow rate was achieved, which was defined as when the highest and lowest readings were within 10 percent of each other for three consecutive intervals. In the case of all five borings, the flow rate stabilized before the 3-hour minimum test time was up, but the test was continued for the required 3 hours per GS200.1 guidelines. The results of the infiltration testing for each boring are included as *Plates C.1 through C.5* in Appendix C.

Data Analysis

Data analysis was performed in accordance with GS200.1. A plot of cumulative volume in gallons versus time in minutes was created for each test (see Plate G-1 in Appendix C). Per GS200.1, the raw measured infiltration rate for each test was reduced to determine design values that are estimated to represent long-term performance of the proposed dry well systems:

$$Design\ Infiltration\ Rate = \frac{Measured\ Infiltration\ Rate}{RF_t \times RF_v \times RF_s}$$

RF_t = reduction factor due to test method

RF_v = reduction factor due to site variability, etc.

RF_s = reduction factor due to siltation, plugging, and maintenance

The test method (Small Diameter Boring method) is assigned a reduction factor of 1 (RF_t = 1). A High Flow-rate reduction factor (RF_t) of 3 was assigned to all five wells. The earth materials exposed in the tested zones of the wells were fairly uniform, and the test wells were located near the proposed dry well systems and the bioretention basin location, so a factor of 1 was selected for site variability (RF_v = 1). Therefore, the measured infiltration rate for each well was reduced by a total factor of 5 to produce the long-term design infiltration rate. The project BMP designers should assign the appropriate Long-term siltation, plugging, and maintenance reduction factor based on the chosen infiltration BMPs.

Infiltration Test Results and Discussion

Testing was performed on June 10 and 11, 2024 *and September 12, 2024*. Detailed logs of the earth materials encountered in the test borings are provided on Plate PT-1 through *PT-7* in Appendix A, while the infiltration tests data and results are provided on *Plates C.1 through C.5* in Appendix C. The raw measured infiltration rates for each of the *five* borings *tested* are provided on those plates, along with the

reduced infiltration rates for use in designing the proposed BMPs. *The graphs showing infiltration rate versus time and water volume added versus time for each tested boring are provided on Plates C.6 through C.10 in Appendix C.*

Results of Shallow Infiltration Testing

Based on our observations of the pre-soak characteristics in PT-4 and PT-6, coupled with the low infiltration rate measured in PT-5, we do not consider the use of shallow bioretention basins which rely on infiltration into the underlying soils a feasible BMP option. This information has been provided to the project BMP designers, and we understand they are considering using above or below ground bioinfiltration planters that do not rely on subsurface infiltration.

Results of Deep Dry Well Infiltration Testing

Infiltration testing for the proposed dry wells indicates that the two proposed dry well locations located on the western portion of the campus, PT-1 and PT-2, have reduced infiltration rates greater than the minimum required 0.3 inches/hour per GS200.1, and these locations are considered suitable for on-site stormwater infiltration. PT-3 *and PT-7, however, have reduced infiltration rates* below the minimum required 0.3 inches/hour, and *these locations are* not considered suitable for deep dry well infiltration. The proposed infiltration BMP to be utilized for the two suitable dry well locations PT-1 and PT-2 should be designed to infiltrate in the subsurface at depths between 10 and 25 feet below the ground surface. For the design of the proposed dry well systems, the lowest reduced Infiltration Rate of 2.7 inches/hour obtained for PT-1 divided by the appropriate Long-term siltation, plugging, and maintenance reduction factor as determined by the project BMP designers should be used for both dry well locations. Based on our review of the substantial amount of subsurface geotechnical data available within a radius of about 150 feet of both PT-1 and PT-2, notably the borings excavated by Geotechnologies in 2001, it is apparent the Lakewood Formation deposits are similar in composition to what was encountered in those borings, and similar infiltration rates would be expected. We consider the lowest adjusted Infiltration Rate of 2.7 inches/hour applicable to a 50-foot radius around both PT-1 and PT-2 at the tested depth of 10 to 25 feet below the ground surface.

GEOLOGIC SETTING AND FAULTING

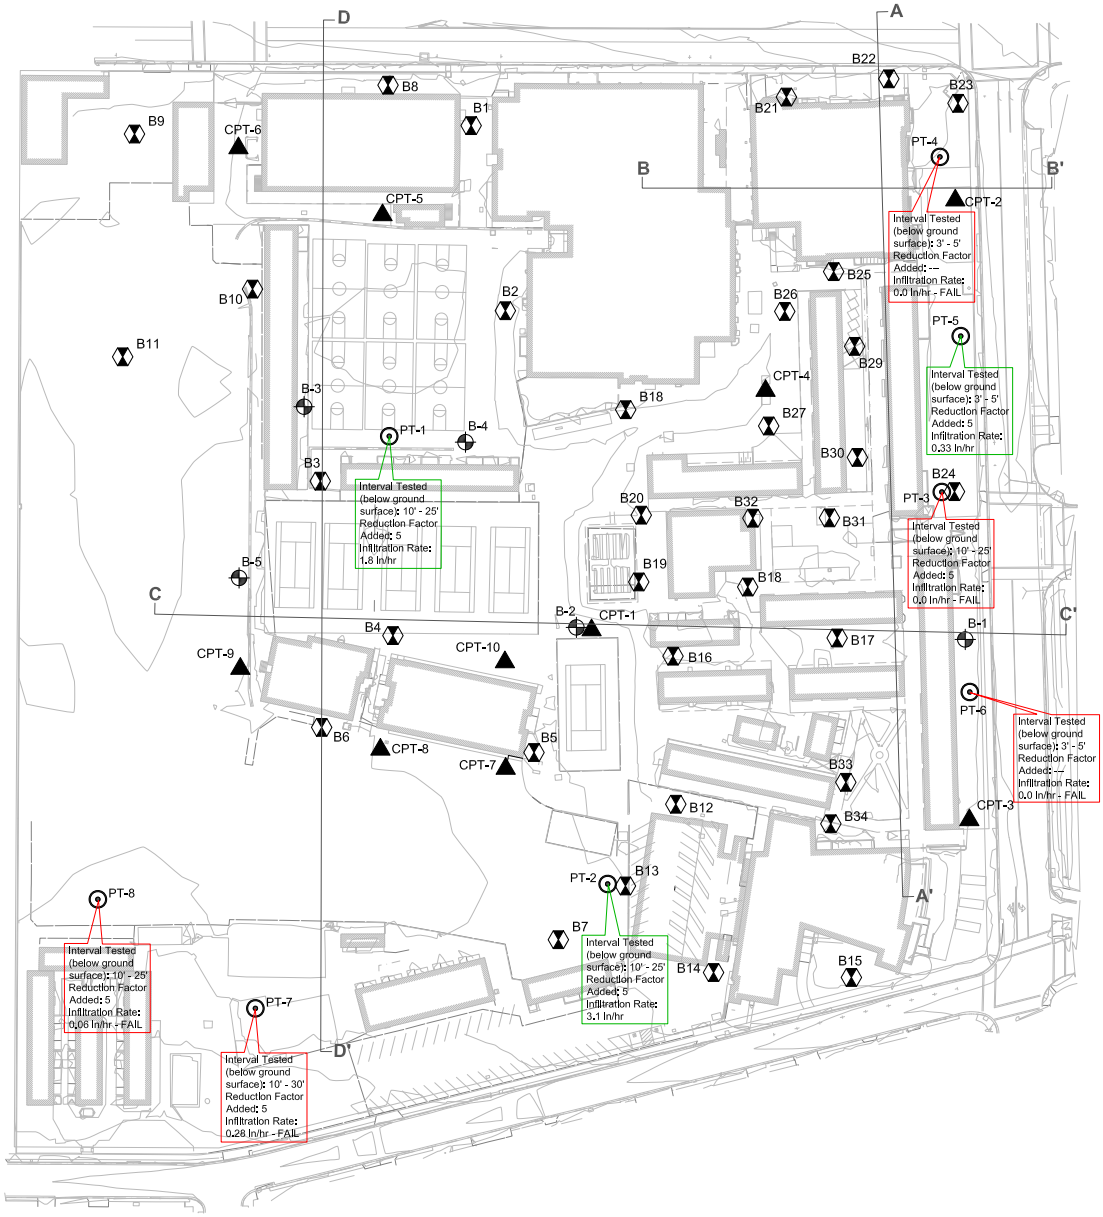
The site is mantled with minor amounts of undocumented artificial (af) fill having a typical thickness of less than 3 feet which overly native upper-Pleistocene-age marine sedimentary deposits herein referred to as the Lakewood Formation (Qlw). Based on previous fault trenching in 2001 and our recent supplemental fault trenching, no active faults are beneath the subject property. The reader is

of 5 feet are considered suitable for support of new compacted fill.

GROUNDWATER

Our review of the Seismic Hazard Zone Report for the Inglewood 7.5-minute quadrangle (CGS, SHZR 027, 1998 – see Plate 6 herein) indicates that the historic high groundwater level is on the order of 50 feet or greater below the ground surface. Groundwater was not encountered in any of the on-site borings excavated by Geotechnologies or GWV, which reached depths of 60 and 50 feet, respectively. Based on the historically high groundwater levels in the site's vicinity and the absence of groundwater observed in the on-site excavations, groundwater is neither expected to be encountered during the proposed construction, nor have a detrimental effect on the project.

SEISMICITY



The subject site contains no known active or potentially active faults, nor is it within an Alquist-Priolo Earthquake Fault Zone. Therefore, the potential for ground rupture is considered to be very low. However, the property is situated within the seismically active Southern California region and ground shaking is likely to occur due to earthquakes caused by movement along faults within the region.

HISTORICAL SEISMICITY

The property has experienced ground shaking during historical times. To evaluate the historical seismicity at the site, the USGS Earthquakes Maps website was used. A search was performed of historical earthquakes within a 100 km radius of the Inglewood High School site. Results of the search note 361 earthquakes with magnitude of 4.0 or greater. The closest earthquake listed is a magnitude 4.0 earthquake that occurred within 1.9 miles of the site in April 2021, which was centered 2 km east of Lennox. The largest historical earthquake to occur within 100 km of the site was a 7.5 magnitude earthquake in 1812, centered northwest of San Bernardino. In the record search 309 earthquakes were listed with magnitudes equal to or greater than 4 and less than 5, 42 earthquakes with magnitudes equal to or greater than 5 and less than 6, nine earthquakes with magnitudes equal to or greater than 6 and less than 7, and one earthquake equal or greater than magnitude 7.

Jordan Miles
Inglewood Unified School District
401 S Inglewood Avenue
Inglewood CA 90301

RE: Inglewood High School
Reconstruction Project - NOP
SCH# 2025070682
GTS# 07-LA-2025-04858

Dear Jordan Miles,

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above-referenced project. The Inglewood Unified School District is proposing a Reconstruction Project for Inglewood High School, which will include the demolition of a majority of the existing classroom buildings. Six new buildings would be constructed, including a two-story Administration and General Classroom building; a one-story Food Services and Multi-Purpose Room building; a one- to two-story Science Labs and General Classrooms building; a one-story Student Life building, a one-story Career and Technical Education and classrooms building, and a one-story Career and Technical Education and Music classrooms building. In addition, the existing Auditorium and Gymnasium, would be internally renovated. The Project would remove existing asphalt areas, and sports court/field and landscaping improvements would be included throughout the Inglewood High School campus. In addition, the Project would include campus path lighting, exterior building lights, and sports facility lighting.

The nearest State facility is U.S. Highway I-405. After reviewing the Notice of Preparation (NOP), Caltrans has the following comments:

Caltrans encourages the Lead Agency to incorporate multi-modal infrastructure along and within school boundaries to meet community placemaking and safe urban design objectives. This infrastructure, encompassing ADA-compliant design, adequate sidewalks, high-visibility crosswalks, Class IV bike lanes, and bike parking, is crucial for establishing a fully accessible Complete Street that supports pedestrians, bicyclists, and transit riders. This includes reducing the amount of parking whenever possible, as research looking at the relationship between land-use, parking, and transportation indicates that the amount of car parking supplied can undermine a project's ability to encourage public transit and active modes of transportation. For any project to better promote public transit and reduce vehicle miles traveled, we recommend the implementation of Transportation Demand Management (TDM) strategies as an alternative to building car parking.

Caltrans recommends limiting large truck travel and construction traffic to off-peak commute hours. A permit for any heavy construction equipment and or materials that require the use of oversized transport vehicles on State highways. If construction traffic is expected to cause issues on any State facilities, please submit a construction traffic control plan detailing potential impacts for Caltrans review.

Should you have any questions, please feel free to contact Nestor Lemus, the project coordinator, at Nestor.Lemus@dot.ca.gov and refer to GTS # 07-LA-2025-04858.

Sincerely,

Anthony Higgins for
MIYA EDMONSON

SUBJECT: NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE INGLEWOOD HIGH SCHOOL RECONSTRUCTION PROJECT, SCH NO. 2025070682, LOS ANGELES COUNTY, CA

Dear Jordan Miles:

The California Department of Fish and Wildlife (CDFW) reviewed the Notice of Preparation (NOP) from Inglewood Unified School District (IUSD) for the Inglewood High School Reconstruction Project (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines[1].

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, CDFW appreciates the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Fish & G. Code, § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW may also act as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law[2] of any species protected under the California Endangered Species Act (CESA; Fish & G. Code, § 2050 et seq.) or the Native Plant Protection Act (NPPA; Fish & G. Code, §1900 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

PROJECT DESCRIPTION SUMMARY

Proponent: IUSD

Objective: The objective of the Project is to renovate the Inglewood High School campus through demolition and construction of new buildings. The majority of buildings would be demolished, and six new buildings would be constructed on campus. The locker rooms and auditorium buildings would be updated to be modernized, and the adult education building would remain the same. Sport fields, courts, and lighting would be redone and updated. Landscaping would occur throughout the campus with drought-tolerant native plants and trees. Lighting would be installed for campus pathways, buildings, and outdoor sports lights that would be down-shielded to avoid light spill-over. Lastly, improvements would include walkways, utilities, parking, fire lanes, and pedestrian entrances.

Location: The Project encompasses 18 acres located at 231 South Grevillea Avenue, in the city of Inglewood, Los Angeles County. The Assessor's Parcel Numbers (APN) associated with the Project site include 4020-017-900, 4020-016-900, 4020-025-900, and 4020-026-900.

Timeframe: Construction would occur in multiple phases with site preparation and demolition anticipated to begin January 2026 through October 2027.

Biological Setting: The Project is situated in a residential neighborhood in a highly urbanized city. The site is bounded on all sides by residences and commercial uses. Given that the Project site is currently a high school, the majority of the site is developed with existing vegetation maintained to support various sport activities. In total, there are 29 trees throughout the high school campus that would be impacted by the Project. No streams or sensitive natural communities are within or adjacent to the Project site. The Project site is not within a designated Significant Ecological Area within Los Angeles County or a critical habitat area for special-status species. No biological survey was conducted within the Project site and no specific mitigation measures regarding biological resources were provided in the Initial Study. The Project may impact common species including nesting birds and raptors.

[2] "Take" is defined in Section 86 of the Fish and Game Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill."

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist IUSD in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources.

Specific Comments

1) Nesting Birds and Raptors. To avoid impacts to nesting birds and raptors, CDFW recommends that clearing of vegetation occur outside of the peak avian breeding season, which generally runs from February 1 through September 1 (as early as January 1 for some raptors). If Project construction is necessary during the bird breeding season, a qualified biologist with experience in conducting breeding bird surveys should conduct a nesting bird and raptor survey within three days prior to work in the area. If an active nest is identified, a buffer shall be established between the construction activities and the nest so that nesting activities are not interrupted. For the given Project site, CDFW generally recommends a 100-foot buffer from common avian species, 300 feet for listed or highly sensitive, and 500 feet for raptors. The buffer should be delineated by temporary fencing and remain in effect as long as construction is occurring. No Project construction shall occur within the fenced nest zone until the young have fledged, are no longer being fed by the parents, have left the nest, and will no longer be impacted by the Project. Reductions in the nest buffer distance may be appropriate depending on the avian species involved, ambient levels of human activity, screening vegetation, or possibly other factors.

2) Landscaping. IUSD intends to install landscaping throughout the renovated campus. CDFW recommends IUSD provide a native plant palette for the Project. The Project's landscaping plan should be disclosed and evaluated in the DEIR for potential impacts on biological resources such as natural communities adjacent to the Project site (e.g., introducing non-native, invasive species). CDFW supports the use of native plants for the Project. CDFW strongly recommends avoiding non-native, invasive species for landscaping and restoration, particularly any species listed as 'Moderate' or 'High' by the California Invasive Plant Council[3] CDFW supports the use of native species found in naturally occurring plant communities within or adjacent to the Project site. In addition, CDFW supports planting species of trees, such as oaks (Quercus genus), and understory vegetation (e.g., ground cover, subshrubs, and shrubs) that create habitat and provide a food source for birds. CDFW recommends retaining any standing, dead, or dying tree (snags) where possible because snags provide perching and nesting habitat for birds and raptors. Finally, CDFW supports planting species of vegetation with high insect and pollinator value.

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

General Comments

1) Disclosure. The DEIR should provide an adequate, complete, and detailed disclosure about the effects which a proposed project is likely to have on the environment (Pub. Resources Code, § 20161; CEQA Guidelines, § 15151). Such disclosure is necessary so CDFW may provide comments on the adequacy of proposed avoidance, minimization, or mitigation measures, as well as assess the significance of the specific impact relative to plant and wildlife species impacted (e.g., current range, distribution, population trends, and connectivity).

2) Project Description and Alternatives. To enable adequate review and comment on the proposed Project from the standpoint of the protection of fish, wildlife, and plants, CDFW recommends the following information be included in the DEIR.

   a. A complete discussion of the purpose and need for, and description of the proposed Project.

   b. A range of feasible alternatives to the Project location to avoid or otherwise minimize direct and indirect impacts on sensitive biological resources and wildlife movement areas. CDFW recommends IUSD select Project designs and alternatives that would avoid or otherwise minimize direct and indirect impacts on biological resources. CDFW also recommends IUSD consider establishing appropriate setbacks from sensitive and special status biological resources. Setbacks should not be impacted by ground disturbance or hydrological changes from any future Project-related construction, activities, maintenance, and development. As a general rule, CDFW recommends reducing or clustering a development footprint to retain unobstructed spaces for vegetation and wildlife and provide connections for wildlife between properties and minimize obstacles to open space.

   c. Project alternatives should be thoroughly evaluated, even if an alternative would impede, to some degree, the attainment of the Project objectives or would be more costly (CEQA Guidelines, § 15126.6). The DEIR shall include sufficient information about each alternative to allow meaningful evaluation, public participation, analysis, and comparison with the proposed Project (CEQA Guidelines, § 15126.6).

   d. Where the Project may impact aquatic and riparian resources, CDFW recommends IUSD select Project designs and alternatives that would fully avoid impacts to such resources. CDFW also recommends an alternative that would not impede, alter, or otherwise modify existing surface flow, watercourse and meander, and water-dependent ecosystems and natural communities. Project designs should consider elevated crossings to avoid channelizing or narrowing of watercourses. Any modifications to a river, creek, or stream may cause or magnify upstream bank erosion, channel incision, and drop in water level, which may cause the watercourse to alter its course of flow.

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

3) Biological Baseline Assessment. An adequate biological resources assessment should provide a complete assessment and impact analysis of the flora and fauna within and adjacent to the Project site and where the Project may result in ground disturbance. The assessment and analysis should place emphasis on identifying endangered, threatened, rare, and sensitive species; regionally and locally unique species; and sensitive habitats. An impact analysis will aid in determining the Project's potential direct, indirect, and cumulative biological impacts, as well as specific mitigation or avoidance measures necessary to offset those impacts. CDFW also considers impacts to Species of Special Concern (SSC) a significant direct and cumulative adverse effect without implementing appropriate avoidance and/or mitigation measures. The DEIR should include the following information.

a. Information on the regional setting is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region (CEQA Guidelines, § 15125(c)). The DEIR should include measures to fully avoid and otherwise protect Sensitive Natural Communities. CDFW considers Sensitive Natural Communities as threatened habitats having both regional and local significance. Natural communities, alliances, and associations with a State-wide rarity ranking of S1, S2, and S3 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by visiting the Vegetation Classification and Mapping Program - Natural Communities webpage[4].

b. A thorough, recent, floristic-based assessment of special status plants and natural communities following CDFW's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities*[5]. Botanical field surveys should be comprehensive over the entire Project site, including areas that will be directly or indirectly impacted by the Project. Adjoining properties should also be surveyed where direct or indirect Project effects could occur, such as those from fuel modification, herbicide application, invasive species, and altered hydrology. Botanical field surveys should be conducted in the field at the times of year when plants will be both evident and identifiable. Usually, this is during flowering or fruiting. Botanical field survey visits should be spaced throughout the growing season to accurately determine what plants exist in the Project site. This usually involves multiple visits to the Project site (e.g., in early, mid, and late season) to capture the floristic diversity at a level necessary to determine if special status plants are present.

c. Floristic alliance- and/or association-based mapping and vegetation impact assessments conducted on the Project site and within adjacent areas. The Manual of California Vegetation[6], second edition, (Sawyer, Keeler-Wolf, & Evens,

[4] https://wildlife.ca.gov/Data/VegCAMP/Natural-Communities
[5] https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=18959&inline
[6] https://vegetation.cnps.org/

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

2009) should also be used to inform this mapping and assessment. Adjoining habitat areas should be included in this assessment where the Project's construction and activities could lead to direct or indirect impacts off-site.

d. A complete and recent assessment of the biological resources associated with each habitat type in the Project site and within adjacent areas. A full literature review includes but is not limited to CDFW's California Natural Diversity Database[7] (CNDDB). The CNDDB should be accessed to obtain current information on any previously reported sensitive species and habitat. An assessment should include a minimum nine-quadrangle search of the CNDDB to determine a list of species potentially present in the Project site. A nine-quadrangle search should be provided in the Project's CEQA document for adequate disclosure of the Project's potential impact on biological resources.

e. A complete, recent, assessment of endangered, rare, or threatened species and other sensitive species within the Project site and adjacent areas, including SSC and California Fully Protected Species (Fish & G. Code, §§ 3511, 4700, 5050, and 5515). Species to be addressed should include all those which meet the CEQA definition of endangered, rare, or threatened species (CEQA Guidelines, § 15380). Seasonal variations in use of the Project site should also be addressed such as wintering, roosting, nesting, and foraging habitat. Focused species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, may be required if suitable habitat is present. See CDFW's Survey and Monitoring Protocols and Guidelines[8] for established survey protocol. Acceptable species-specific survey procedures may be developed in consultation with CDFW and U.S. Fish and Wildlife Service.

f. A recent wildlife and rare plant survey. A lack of records in the CNDDB does not mean that rare, threatened, or endangered plants and wildlife do not occur. Field verification for the presence or absence of sensitive species is necessary to provide a complete biological assessment for adequate CEQA review (CEQA Guidelines, § 15003(i)). CDFW generally considers biological field assessments for wildlife to be valid for a one-year period, and assessments for rare plants may be considered valid for a period of up to three years. Some aspects of the proposed Project may warrant periodic updated surveys for certain sensitive taxa, particularly if Project implementation build out could occur over a protracted time frame or in phases.

4) Direct and Indirect Impacts on Biological Resources. The DEIR should provide a thorough discussion of direct and indirect impacts expected to affect biological resources with specific measures to offset such impacts. The DEIR should address the following.

[7] https://wildlife.ca.gov/Data/CNDDB
[8] https://wildlife.ca.gov/conservation/survey-protocols

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

a. A discussion of potential impacts from lighting, noise, temporary and permanent human activity, and exotic species, and identification of any mitigation measures. A discussion regarding Project-related indirect impacts on biological resources. These include resources in nearby public lands, open space, adjacent natural habitats, riparian ecosystems, and any designated and/or proposed or existing reserve lands (e.g., preserve lands associated with a Natural Community Conservation Plan (Fish & G. Code, § 2800 et. seq.)).

b. A discussion of both the short-term and long-term effects of the Project on species population distribution and concentration, as well as alterations of the ecosystem supporting those species impacted (CEQA Guidelines, § 15126.2(a)).

c. Impacts on, and maintenance of, wildlife corridor/movement areas, including access to undisturbed habitats in areas adjacent to the Project, should be fully analyzed and discussed in the DEIR.

d. A discussion of post-Project fate of drainage patterns, surface flows, and soil erosion and/or sedimentation in streams and water bodies. The discussion should also address the potential water extraction activities and the potential resulting impacts on habitat supported by the groundwater. Measures to mitigate such impacts should be included.

e. An analysis of impacts from proposed changes to land use designations and zoning, and existing land use designation and zoning located nearby or adjacent to natural areas that may inadvertently contribute to wildlife-human interactions. A discussion of possible conflicts and mitigation measures to reduce these conflicts should be included in the DEIR.

5) Cumulative Impact. Cumulative impacts on biological resources can result from collectively significant projects which are individually insignificant. The Project, when considered collectively with prior, concurrent, and probable future projects, may have a significant cumulative effect on biological resources. The Project may have the potential to substantially reduce the number or restrict the range of endangered, rare, or threatened species. Species that may be impacted by the Project include, but are not limited to, the biological resources described in this letter.

Accordingly, CDFW recommends the DEIR evaluate the Project's potential cumulative impacts on biological resources. The Project may have a "significant effect on the environment" if the possible effects of the Project are individually limited but cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects (Pub. Resources Code, § 21083(b)). IUSD's conclusions regarding the significance of the Project's cumulative impact should be

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

justified and supported by evidence to make those conclusions. Specifically, if IUSD concludes that the Project would not result in cumulative impacts on biological resources, the IUSD, "shall identify facts and analysis supporting IUSD's conclusion that the cumulative impact is less than significant" (CEQA Guidelines section § 15130(a)(2)).

6) Mitigation Measures. Public agencies have a duty under CEQA to prevent significant, avoidable damage to the environment by requiring changes in a project through the use of feasible alternatives or mitigation measures (CEQA Guidelines, §§ 15002(a)(3), 15021). Pursuant to CEQA Guidelines section 15126.4, an environmental document shall describe feasible measures which could mitigate impacts below a significant level under CEQA. Mitigation measures must be feasible, effective, implementable, and fully enforceable/imposed by IUSD through permit conditions, agreements, or other legally binding instruments (Pub. Resources Code, § 21081.6(b); CEQA Guidelines, § 15126.4).

   a. The DEIR should provide mitigation measures that are specific and detailed (i.e., responsible party, timing, specific actions, location) in order for a mitigation measure to be fully enforceable and implemented successfully via a mitigation monitoring and/or reporting program (Pub. Resources Code, § 21081.6; CEQA Guidelines, § 15097).

   b. If a proposed mitigation measure would cause one or more significant effects, in addition to impacts caused by the proposed Project, the DEIR should include a discussion of the effects of proposed mitigation measures (CEQA Guidelines, § 15126.4(a)(1)). In that regard, the DEIR should provide an adequate, complete, and detailed disclosure about the Project's proposed mitigation measure(s). Adequate disclosure is necessary so CDFW may assess the potential impacts of proposed mitigation measures.

7) Compensatory Mitigation. The DEIR should include compensatory mitigation measures for the Project's significant impacts (direct and/or through habitat modification) to sensitive and special status plants, animals, and habitats. Mitigation measures should emphasize avoidance and minimization of Project-related impacts. For unavoidable impacts, on-site habitat restoration or enhancement should be discussed in detail. If on-site mitigation is not feasible or would not be biologically viable and therefore inadequate to mitigate the loss of biological functions and values, off-site mitigation through habitat creation and/or acquisition and preservation in perpetuity should be addressed. Areas proposed as mitigation lands should be protected in perpetuity with a conservation easement and financial assurance and dedicated to a qualified entity for long-term management and monitoring.

8) Long-term Management of Mitigation Lands. For proposed mitigation lands, the DEIR should include measures to protect the targeted habitat values in perpetuity. The mitigation should offset Project-induced qualitative and quantitative losses of

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

biological resources. Issues that should be addressed include (but are not limited to) restrictions on access, proposed land dedications, monitoring and management programs, control of illegal dumping, water pollution, and increased human intrusion. An appropriate endowment should be set aside to provide for long-term management of mitigation lands.

9) CESA. CDFW considers adverse impacts to a species protected by CESA to be significant. Take of any endangered, threatened, candidate species, or NPPA-listed plant species that results from the Project is prohibited, except as authorized by state law (Fish & G. Code §§ 2080, 2085; Cal. Code Regs., tit. 14, §786.9). Consequently, if the Project or any Project-related activity will result in take of a species designated as endangered or threatened, or a candidate for listing under CESA, CDFW recommends that the Project proponent seek appropriate take authorization under CESA prior to implementing the Project. Appropriate authorization from CDFW may include an Incidental Take Permit (ITP) or a consistency determination in certain circumstances, among other options (Fish & G. Code, §§ 2080.1, 2081, subds. (b) and (c)). Early consultation is encouraged, as significant modification to a Project and mitigation measures may be required to obtain a CESA Permit.

   To ensure CDFW will be able to use IUSD's CEQA document for the issuance of an ITP, the DEIR should address all Project impacts to CESA-listed species and specify a mitigation, monitoring, and reporting program that will meet the requirements of an ITP.

10) Translocation/Salvage of Plants and Animal Species. Translocation and transplantation is the process of removing plants and wildlife from one location and permanently moving it to a new location. CDFW generally does not support the use of translocation or transplantation as the primary mitigation strategy for unavoidable impacts to endangered, rare, or threatened plants and animals. These efforts are experimental, and the outcome is unreliable. CDFW has found that permanent preservation and management of habitat capable of supporting these species is often a more effective long-term strategy for conserving plants and animals and their habitats.

11) Scientific Collecting Permit. A Scientific Collecting Permit would be necessary if there is a plan to capture and relocate wildlife. Pursuant to the California Code of Regulations, title 14, section 650, qualified biologist(s) must obtain appropriate handling permits to capture, temporarily possess, and relocated wildlife to avoid harm or mortality in connection with Project-related activities. CDFW has the authority to issue permits for the take or possession of wildlife, including mammals; birds, nests, and eggs; reptiles, amphibians, fish, plants; and invertebrates (Fish & G. Code, §§ 1002, 1002.5, 1003). A Scientific Collecting Permit is required to monitor project impacts on wildlife resources, as required by environmental documents, permits, or other legal authorizations; and, to capture, temporarily possess, and relocate wildlife to avoid harm or mortality in connection with

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

otherwise lawful activities (Cal. Code Regs., tit. 14, § 650). For more information, please see CDFW's Scientific Collecting Permit webpage[9].

12) Wetland Resources. CDFW, as described in Fish and Game Code section 703(a), is guided by the Fish and Game Commission's (Commission) policies[10]. Through its Wetlands Resources policy, the Commission "…seek[s] to provide for the protection, preservation, restoration, enhancement, and expansion of wetland habitat in California" (California Fish and Game Commission, 2005). It is the policy of the Commission to strongly discourage development in or conversion of wetlands. It opposes, consistent with its legal authority, any development or conversion that would result in a reduction of wetland acreage or wetland habitat values. To that end, the Commission opposes wetland development proposals unless, at a minimum, project mitigation assures there will be 'no net loss' of either wetland habitat values or acreage. The Commission strongly prefers mitigation which would achieve expansion of wetland acreage and enhancement of wetland habitat values."

    a. The Wetlands Resources policy provides a framework for maintaining wetland resources and establishes mitigation guidance. CDFW encourages avoidance of wetland resources as a primary mitigation measure and discourages the development or type conversion of wetlands to uplands. CDFW encourages activities that would avoid the reduction of wetland acreage, function, or habitat values. Once avoidance and minimization measures have been exhausted, a project should include mitigation measures to assure a "no net loss" of either wetland habitat values, or acreage, for unavoidable impacts to wetland resources. Conversions include, but are not limited to, conversion to subsurface drains, placement of fill or building of structures within the wetland, and channelization or removal of materials from the streambed. All wetlands and watercourses, whether ephemeral, intermittent, or perennial, should be retained and provided with substantial setbacks, which preserve the riparian and aquatic values and functions benefiting local and transient wildlife populations. CDFW recommends mitigation measures to compensate for unavoidable impacts be included in the DEIR and these measures should compensate for the loss of function and value.

    b. The Fish and Game Commission's Water policy guides CDFW on the quantity and quality of the waters of this State that should be apportioned and maintained respectively so as to produce and sustain maximum numbers of fish and wildlife; to provide maximum protection and enhancement of fish and wildlife and their habitat; encourage and support programs to maintain or restore a high quality of the waters of this State; prevent the degradation thereof caused by pollution and contamination; and, endeavor to keep as much water as possible open and accessible to the public for the use and enjoyment of fish and wildlife. CDFW

[10] https://fgc.ca.gov/About/Policies/Miscellaneous

Docusign Envelope ID: 44B5C97A-C818-48FF-B91C-89FEA2E76BE6

recommends avoidance of water practices and structures that use excessive amounts of water, and minimization of impacts that negatively affect water quality, to the extent feasible (Fish & G. Code, § 5650).

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNDDB website[11] provides direction regarding the types of information that should be reported and allows on-line submittal of field survey forms.

In addition, information on special status native plant populations and sensitive natural communities, should be submitted to CDFW's Vegetation Classification and Mapping Program using the Combined Rapid Assessment and Relevé Form[12].

IUSD should ensure data collected for the preparation of the DEIR is properly submitted.

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by IUSD and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

CONCLUSION

CDFW appreciates the opportunity to comment on the NOP to assist IUSD in identifying and mitigating Project impacts on biological resources.

RE: NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR INGLEWOOD HIGH SCHOOL RECONSTRUCTION PROJECT DATED JULY 16, 2025, STATE CLEARINGHOUSE NUMBER 2025070682

Dear Jordan Miles,

The Department of Toxic Substances Control (DTSC) reviewed the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for Inglewood High School Reconstruction Project (Project). The Project will include the demolition of most of the existing classroom buildings. Six new buildings would be constructed, including a two-story Administration and General Classroom building; a one-story Food Services and Multi-Purpose Room building; a one- to two-story Science Labs and General Classrooms building; a one-story Student Life building, a one-story Career and Technical Education and classrooms building, and a one-story Career and Technical Education and Music classrooms building. In addition, the existing Auditorium and Gymnasium would be internally renovated. Lastly, the Project would remove existing asphalt areas, and sports court/field and landscaping improvements would be included throughout the Inglewood High School campus. In addition, the Project would include campus path lighting, exterior building lights, and sports facility lighting. DTSC recommends and requests consideration of the following comments:

1. If the district plans to use California Department of Education (CDE) State funds for the Project, then the district shall comply with the requirements of Education Code (EDC), §17210, §17213.1, and §17213.2, unless otherwise specifically exempted under section §17268. If the district is not using CDE State funds for the Project, or is otherwise specifically exempt under section §17268, DTSC recommends the district continue to investigate, clean up the Site under the oversight of Los Angeles County and in concurrence with all applicable DTSC guidance documents, if necessary. For more information on the CDE State funding, please visit the Office of Public-School Construction webpage. A local education agency may also voluntarily request the CDE site/plan approval for locally funded site acquisitions and new construction projects. In these cases, CDE will require DTSC to review and approve prior to its final approval, except when exempt under section 17268.
2. All imported soil/fill material should be tested to assess any contaminants of concern meet screening levels as outlined in DTSC's Preliminary Endangerment Assessment Guidance Manual. Additionally, DTSC advises referencing the DTSC Information Advisory Clean Imported Fill Material Fact Sheet if importing fill is necessary. To minimize the possibility of introducing contaminated soil/fill material, there should be documentation of the origins of the soil/fill material and, if applicable, sampling be conducted to ensure that the imported soil/fill material are suitable for the intended land use. The soil sampling should include analysis based on the source of the soil/fill and knowledge of prior land use.

DTSC appreciates the opportunity to comment on the NOP of a DEIR for Inglewood High School Reconstruction Project. If you would like to proceed with DTSC's school environmental review process, please visit DTSC's Evaluating & Clean-up School 3-Step Process to begin a Phase I Environmental Site Assessment. If you have any questions or would like clarification on DTSC's comments, please respond to this letter or via our CEQA Review email for additional guidance.

Re 2025070682 Inglewood High School Reconstruction Project Los Angeles County

Dear Mr. Miles:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

a. A brief description of the project.

b. The lead agency contact information.

c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).

d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.

b. Recommended mitigation measures.

c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

a. Type of environmental review necessary.

b. Significance of the tribal cultural resources.

c. Significance of the project's impacts on tribal cultural resources.

d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.

b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

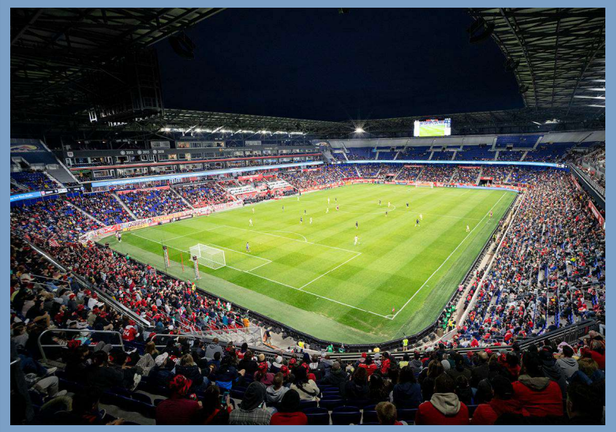
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@NAHC.ca.gov.

Sincerely,



Andrew Green

Inglewood HS - construction new build Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Building Construction (2026) - Unmitigated

3.3. Building Construction (2027) - Unmitigated

3.5. Architectural Coating (2026) - Unmitigated

3.7. Architectural Coating (2027) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Inglewood HS - construction new build
Construction Start Date	7/1/2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	17.6
Location	231 S Grevillea Ave, Inglewood, CA 90301, USA
County	Los Angeles-South Coast
City	Inglewood
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4551
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
High School	178	1000sqft	2.74	177,739	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	266,609	88,870	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
High School	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	532	0.03	< 0.005
2027	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.03	annual days of extreme heat
Extreme Precipitation	5.60	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	35.2
AQ-PM	74.0
AQ-DPM	78.6
Drinking Water	53.5
Lead Risk Housing	75.2
Pesticides	0.00
Toxic Releases	87.4
Traffic	33.8
Effect Indicators	—
CleanUp Sites	17.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0
Healthy Places Index Score for Project Location (b)	17.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	See assumptions for more details.
Construction: Construction Phases	See assumptions sheet for more details.
Construction: Off-Road Equipment	See assumptions sheet for more details.
Construction: Trips and VMT	rounded up default trips
Construction: Architectural Coatings	rounded up values

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Inglewood HS - construction repair work
Construction Start Date	9/15/2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	17.6
Location	231 S Grevillea Ave, Inglewood, CA 90301, USA
County	Los Angeles-South Coast
City	Inglewood
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4551
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
High School	73.2	1000sqft	1.56	73,174	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.03	annual days of extreme heat
Extreme Precipitation	5.60	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	35.2
AQ-PM	74.0
AQ-DPM	78.6
Drinking Water	53.5
Lead Risk Housing	75.2
Pesticides	0.00
Toxic Releases	87.4
Traffic	33.8
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	41.4
Haz Waste Facilities/Generators	84.6
Impaired Water Bodies	0.00
Solid Waste	70.9

Sensitive Population	—
Asthma	92.4
Cardio-vascular	86.8
Low Birth Weights	24.6
Socioeconomic Factor Indicators	—
Education	67.6
Housing	94.7
Linguistic	66.6
Poverty	83.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	15.91171564
Employed	29.51366611
Median HI	14.69267291
Education	—
Bachelor's or higher	23.67509303
High school enrollment	100
Preschool enrollment	35.28807905
Transportation	—
Auto Access	15.55241884
Active commuting	88.4383421
Social	—
2-parent households	5.10714744
Voting	30.11677146

Neighborhood	—
Alcohol availability	4.516874118
Park access	11.53599384
Retail density	87.61709226
Supermarket access	80.25150776
Tree canopy	25.48440909
Housing	—
Homeownership	4.914667009
Housing habitability	3.849608623
Low-inc homeowner severe housing cost burden	0.911074041
Low-inc renter severe housing cost burden	46.37495188
Uncrowded housing	27.38354934
Health Outcomes	—
Insured adults	29.96278712
Arthritis	4.9
Asthma ER Admissions	9.7
High Blood Pressure	2.8
Cancer (excluding skin)	38.7
Asthma	2.6
Coronary Heart Disease	3.3
Chronic Obstructive Pulmonary Disease	3.4
Diagnosed Diabetes	0.9
Life Expectancy at Birth	30.3
Cognitively Disabled	20.1
Physically Disabled	5.2
Heart Attack ER Admissions	9.1
Mental Health Not Good	10.5
Chronic Kidney Disease	2.1

Obesity	1.7
Pedestrian Injuries	63.9
Physical Health Not Good	5.3
Stroke	0.9
Health Risk Behaviors	—
Binge Drinking	95.6
Current Smoker	10.6
No Leisure Time for Physical Activity	10.8
Climate Change Exposures	—

Other Decision Support	—
2016 Voting	11.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0

Healthy Places Index Score for Project Location (b)	17.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.03	annual days of extreme heat
Extreme Precipitation	5.60	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	35.2
AQ-PM	74.0

AQ-DPM	78.6
Drinking Water	53.5
Lead Risk Housing	75.2
Pesticides	0.00
Toxic Releases	87.4
Traffic	33.8
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	41.4
Haz Waste Facilities/Generators	84.6
Impaired Water Bodies	0.00
Solid Waste	70.9
Sensitive Population	—
Asthma	92.4
Cardio-vascular	86.8
Low Birth Weights	24.6
Socioeconomic Factor Indicators	—
Education	67.6
Housing	94.7
Linguistic	66.6
Poverty	83.4
Unemployment	79.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	15.91171564

Employed	29.51366611
Median HI	14.69267291
Education	—
Bachelor's or higher	23.67509303

2016 Voting	11.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0
Healthy Places Index Score for Project Location (b)	17.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.
