Sacramento, California 95826

Project Title: Emergency Permit for Management of Hazardous Waste, EMD Millipore Sigma Company, Visalia, California

Project Location: 8511 West Riggin Avenue, Visalia, California 93291

County: Tulare

Project Applicant: Rolando Martinez, Associate Manager

Approval Action Under Consideration by DTSC: Emergency Permit

Statutory Authority: California Health and Safety Code, Chapter 6.5

Project Description: The California Department of Toxic Substances Control (DTSC), pursuant to authority granted under California Code of Regulations (CCR), Title 22, Division 4.5, Chapter 20, Sec. 66270.61, has issued an Emergency Permit to EMD Millipore Sigma Company, (EPA ID# CAR000301093) to treat hazardous waste through a controlled reaction with a chemical solution. Specifically, fourteen (14) 4-liter containers and one (1) 500-milliliter container of Ethyl Ether; twenty-three (23) 100-milliliter containers and forty-six (46) 25-milliliter containers of Diethyl Ether; one (1) 1-liter container of Tetrahydrofuran; two (2) 250-milliliter containers and three (3) 1-liter containers of Ethyl Vinyl Ether; and six (6) 500-milliliter containers of Styrene must be stabilized prior to transport to an authorized hazardous waste treatment, storage, and disposal facility.

These chemicals are currently being stored at EMD Millipore Sigma Company located at 8511 West Riggin Avenue, Visalia, California 93291. DTSC has determined as a safety precaution to prevent an accident or severe injury, an Emergency Permit should be issued to chemically stabilize the hazardous waste by Clean Harbors Environmental Services (Clean Harbors) prior to storage and eventual transportation off-site.

Background: The containers have peroxide formation present on either the inside, outside, or the bottom of the chemicals' containers, as well as the thread container caps. The presence of peroxide formation may be unstable at relatively low concentrations, resulting in fire and/or explosion if

State of California – California Environmental Protection Agency
Department of Toxic Substances Control

improperly handled. Due to the presence of peroxide formation, DTSC considers these chemicals to be an imminent and substantial endangerment to human health and the environment. Chemical stabilization is recommended prior to transport to a permitted treatment, storage, and disposal facility.

Project Activities: The treatment of these hazardous wastes involves the addition of a solution to the containers in a controlled manner to reduce the reactive or ignitable characteristics of the chemicals. Treatment will take place within a designated exclusion zone. Only technicians from Clean Harbors will be allowed in the exclusion zone. Movement, preparation, and treatment of the containers will be in accordance with established standards.

Within 10 business days of the expiration of this permit, EMD Millipore Sigma Company will submit a final report, signed in accordance with Title 22, CCR Sec. 66270.11(d). The report shall include certification that the treatment area has been cleared of all residual hazardous waste generated from this emergency treatment and all generated waste has been properly managed. The Emergency Permit is effective beginning July 28, 2025, and shall expire on September 26, 2025.

Name of Public Agency Approving Project: Department of Toxic Substances Control

Name of Person or Agency Carrying Out Project: Clean Harbors Environmental Services

Exempt Status: Emergency Project Public Resources Code (PRC), Sec. 21080(b)(4); 14 CCR, Sec.15269(b)(c)

Reasons Why Project is Exempt: This action is necessary to prevent an emergency. Chemical stabilization of the chemicals is necessary prior to transportation to an authorized hazardous waste treatment, storage, and disposal facility to prevent accidental fire and/or explosion during transport.

The administrative record for this project is available to the public by appointment at the following location:
