Commerce, California 90040

RE: Amargosa and Palmeto High-Cube Warehouse Truck Trip Generation Comparison Analysis
Project No.: 19522

Dear Mr. Namvar:

Ganddini Group, Inc. is pleased to provide this Truck Trip Generation Comparison Analysis for the proposed Amargosa and Palmeto High-Cube Warehouse Project. The purpose of this trip generation comparison analysis is to evaluate the change in truck trip generation that can be expected between the proposed project and an alternative land use consisting of commercial retail. This Truck Trip Generation Comparison Analysis supplements the Amargosa and *Palmetto High-Cube Warehouse Traffic Impact Analysis* (Ganddini Group, Inc., August 18, 2022). We trust the findings of this analysis will aid you and the City of Hesperia in assessing the project.

PROJECT DESCRIPTION

The project site is located on the northwest corner of Amargosa Road and Palmetto Way in the City of Hesperia. The project site is currently undeveloped. Figure 1 illustrates the project location map.

The 30.52-acre project site is proposed to include a 499,850 square foot high-cube fulfillment center warehouse building. The proposed project is anticipated to be constructed and fully operational by year 2024. The project site is proposed to provide three access driveways on Palmetto Way. All three project driveways are proposed to be full access. The project west driveway will be truck only. The project central driveway and project east driveway will provide access for both auto and trucks. Figure 2 illustrates the project site plan.

PROJECT TRIP GENERATION

Table 1 shows the project trip generation based upon rates obtained from the Institute of Transportation Engineers (ITE) *Trip Generation Manual* (11th Edition, 2021). ITE land use code 155 (High-Cube Fulfillment Center Non-Sort) has been used to estimate the site-specific trip generation estimates for up to 499,700 square feet of high-cube fulfillment center (non-sort) use.

The project vehicle trips are converted to Passenger Car Equivalent (PCE) trips based on truck rates (as a percentage of a total vehicle trips) from the ITE *Trip Generation Manual* and truck axle mix data recommended by the South Coast Air Quality Management District (SCAQMD).

As shown in Table 1, the proposed project is forecast to generate approximately 1,083 daily PCE trips, including 90 PCE trips during the AM peak hour and 81 PCE trips during the PM peak hour.

ALTERNATIVE LAND USE DETERMINATION

To determine the truck trips generated for a comparative commercial retail development, juxtaposed to the proposed industrial project, existing commercial retail developments near the project site were considered for analysis. It was determined that the Dunia Plaza development located approximately 2.5 miles northeast of the project along Amargosa Road south of Bear Valley Road provides the ideal location. This shopping center provides various commercial retail land uses, has driveways that allow for the ability to conduct project specific trip generation without interaction with other land uses, and has a total building square footage near the 500,000 square foot proposed project square footage.

It should be noted that this commercial retail development, like the proposed development, is also located along Amargosa Road between Bear Valley Road to the north and Main Street to the south.

Figure 3 shows the commercial retail development that was analyzed. This includes Dunia Plaza, Restaurant Row, and Cracker Barrel Old Country Store. The 16 driveway locations that provide access to/from the commercial retail development are depicted in Figure 3.

The Dunia Plaza development is 601,781 square feet. The Restaurant Row development is 14,750 square feet with Cracker Barrel Old Country Store providing an additional 9,113 square feet. The commercial retail development is a combined 625,644 square feet. Project square footage information for Dunia Plaza was provide by GVD Commercial Properties, Inc. (project management company for Dunia Plaza). Restaurant Row square footage was provided through the City of Victorville Planning Commission Staff Report (September 14, 2016) for PLN16-00014 with the Cracker Barrel Old Country Store square footage provided via LoopNet. Attachment A includes this information.

TRIP GENERATION SURVEY FOR THE EXISTING COMMERCIAL DEVELOPMENT

Existing volumes are based upon 24-hour roadway segment counts separating passenger cars and trucks by axle obtained on Tuesday, August 15, 2023 during typical weekday conditions when schools were in session. The weekday AM peak period was counted between 7:00 AM and 9:00 AM and the weekday PM peak period was counted between 4:00 PM and 6:00 PM; these periods generally capture the peak times for commuter traffic when the roadway system is typically experiencing peak demand. The actual peak hour within each two-hour count period is determined based on the sum of the four consecutive 15-minute periods with the highest total volume. Thus, the weekday PM peak hour may be 4:45 PM to 5:45 PM if those four consecutive 15-minute periods have the highest total volume. Attachment B includes the traffic counts.

Table 2 shows the inbound traffic volumes combined for all 16 driveways and Table 3 shows the outbound traffic volumes combined for all 16 driveways. Table 4 shows the total inbound and outbound traffic volumes combined for all 16 driveways.

ALTERNATIVE LAND USE TRIP GENERATION

Table 5 shows the alternative land use (commercial retail) trip generation based on the traffic volume counts (Tables B-1 to Table B-32 in Attachment B) for 625,644 square feet of commercial retail use.

As shown in Table 5, the alternative (commercial retail) land use currently generates a total of approximately 33,057 daily trips, including 1,182 trips during the AM peak hour and 2,643 trips during the PM peak hour.

As also shown in Table 5, the alternative (commercial retail) land use currently generates a total of approximately 34,145 PCE daily trips, including 1,262 PCE trips during the AM peak hour and 2,691 trips during the PM peak hour.

Table 5 also shows the number of daily, AM peak hour, and PM peak hour truck volumes. The alternative (commercial retail) land use currently generates a total of approximately 1,093 daily truck trips, including 67 truck trips during the AM peak hour and 49 truck trips during the PM peak hour.

ALTERNATIVE LAND USE TRIP GENERATION WITH COMPARATIVE SQUARE FOOTAGE

Table 6 shows the alternative land use (commercial retail) trip generation based on the trip generation rates established through the existing traffic count surveys (see Table 37) for the commercial retail development selected for analysis, for a comparative 499,850 square foot commercial retail development.

As shown in Table 6, the alternative (499,850 square feet of commercial retail) land use is projected to generate a total of approximately 26,410 daily trips, including 944 trips during the AM peak hour and 2,112 trips during the PM peak hour.

As also shown in Table 6, the alternative (499,850 square feet of commercial retail) land use is projected to generate a total of approximately 27,280 PCE daily trips, including 1,007 PCE trips during the AM peak hour and 2,149 trips during the PM peak hour.

Table 6 also shows the number of daily, AM peak hour, and PM peak hour truck volumes. The alternative (499,850 square feet of commercial retail) land use is projected to generate a total of approximately 873 daily truck trips, including 54 truck trips during the AM peak hour and 39 truck trips during the PM peak hour.

TRIP GENERATION COMPARISON

Table 7 shows the difference in project trip generation between the proposed project and the alternative (499,850 square feet of commercial retail) land use. As shown in Table 7, the proposed project is forecast to generate approximately 25,505 fewer daily trips compared to a shopping center land use of equivalent size, including 870 fewer trips during the AM peak hour and 2,035 fewer trips during the PM peak hour.

As also shown in Table 7, the proposed project is forecast to generate approximately 758 fewer daily truck trips compared to a shopping center land use of equivalent size, including 44 fewer truck trips during the AM peak hour and 37 fewer truck trips during the PM peak hour. Therefore, the proposed project is forecast to generate a 659% reduction of daily truck trips compared to a shopping center land use of equivalent size, including a 435% reduction in truck trips during the AM peak hour and a 1,857% reduction in truck trips during the PM peak hour.

Mr. Ramin Namvar
RACHAMIN 5, LLC
September 6, 2023

CONCLUSION

Based on the trip generation comparison analysis, the proposed project consisting of a 499,850 square foot high-cube fulfillment center warehouse building is forecast to generate substantially fewer truck trips (up to 659% fewer daily truck trips) compared to an alternative land use composed of 499,850 square feet of commercial retail.

We appreciate the opportunity to assist you on this project. Should you have any questions or if we can be of further assistance, please do not hesitate to call at (714) 795-3100 x 103.

Sincerely,

GANDDINI GROUP, INC.
Bryan Crawford | Senior Associate
Giancarlo Ganddini, PE, PTP | Principal

ABOUT 11612 AMARGOSA RD VICTORVILLE, CA 92392

Marcus and Millichap has been selected to exclusively represent the sale of Restaurant Row in Victorville, California, a portfolio of category leading national and regional restaurants. The subject property

consists of newly constructed prototypical Cracker Barrel restaurant consisting of 9,113 square feet sitting on an approximate 2.2 acre parcel of land.
The building was tastefully constructed with all of the rustic features Cracker Barrel Old Country Store restaurants are well known for, covered front porch with rocking chairs, brown paneled siding, metal roof and authentic Americana antiques. The offering is a 15 year corporate ground lease (fee interest), with publicly traded Cracker Barrel restaurant (Nasdaq:CBRL) with 10% rent increases every 5 years. This is southern California's first Cracker Barrel and the grand opening was an overwhelming success that generated a tremendous wait from loyal Cracker Barrel patrons. Cracker Barrel has a cult following throughout the country and this location is well positioned along Amorgosa Road and the I-15 freeway. Cracker Barrel Old Country Store, Inc. was established in 1969 in Lebanon, Tennessee. There are currently 640 locations throughout the U.S.
The real estate is well positioned in the trade located adjacent to the I-15 Freeway and Bear Valley Road on and off ramps. Fronting both Amargosa Road and the I-15 freeway the property has excellent identity and traffic

exposure.
The location is prime in the trade area as evidenced by the new development that includes a new 75 room Wyndham Hotel and resort, Super Walmart, Kohl's and Home Goods, TJ Max, 24 Hour Fitness currently under construction at the site. Additionally, a proposed 128 bed trauma center, medical office building, physician village, day care, spiritual care development with a hotel has been approved with all entitlements. This project is comprised of 98 acres along Amargosa Road between Bear Valley and Main Street just 2.8 miles from the subject property. The project part is of the St. Joseph / St. Mary Healthcare system. Restaurant Row is a synergistic mix of restaurants consisting of Starbucks Coffee, nectar juice bar, Which Wich Sandwiches, Pieology Pizza, Ono Hawaiian Barbeque, Café Rio Mexican Grill, Habit Burger and Bj's Pizza. Access points and drive aisles provide excellent ingress and egress from the Wyndham, Walmart and Kohl's for easy access to all of the restaurants. 76% of the leasable area (4 of 6 tenants) have corporate signature absolute net leases. The remaining two tenants are strong franchisees with excellent operational histories and personal rent

guarantees.
The investment provides annual rent growth with increasing cash flow and yield, protecting against inflation with a diversified base of strong restaurant tenants.
The Victor Valley includes the communities of Adelanto, Apple Valley, Hesperia, Lucerne Valley, Oak Hills, Phelan, Victorville and Wrightwood.
Victorville is the business hub of the area and draws consumers from well beyond its immediate area. It is the largest commercial center between San Bernardino and the Nevada border.
The city of Victorville is home to a large and diverse pool of workers and is home to 34 universities, colleges and technical schools providing an abundant supply of skilled labor.

Appendix M – Vehicle Miles Travelled Analysis

TECHNICAL MEMORANDUM

TO: For applicant submittal to the CITY OF HESPERIA

FROM: Bryan Crawford, Giancarlo Ganddini | Ganddini Group, Inc.

DATE: July 8, 2025

SUBJECT: Amargosa and Palmetto High-Cube Warehouse Project
Vehicle Miles Traveled Analysis
GGI Project No. 19522

The purpose of this memorandum is to evaluate the project's vehicle miles traveled (VMT) impact in the context of the California Environmental Quality Act (CEQA) based on the methodology and thresholds established by the City of Hesperia as the Lead Agency. We trust the findings of this analysis will aid the City of Hesperia in assessing the project.

PROJECT DESCRIPTION

The 30.52-acre project site is located on the northwest corner of Amargosa Road and Palmetto Way in the City of Hesperia, California. The currently vacant site is proposed to be developed with a 499,714 square foot high-cube fulfillment center warehouse building. The project site is proposed to provide three access driveways on Palmetto Way. All three project driveways are proposed to be full access. The project west driveway will be truck only. The project central driveway and project east driveway will provide access for both auto and trucks. The site plan is provided in Attachment A.

PROJECT TRIP GENERATION

For informational purposes, the project trip generation estimate is provided in Attachment B as documented in the *Amargosa and Palmetto High-Cube Warehouse Revised Traffic Impact Analysis* (Ganddini Group, February 28 2025). As shown in Attachment B, the proposed project is forecast to generate 905 daily trips, including 74 trips during the AM peak hour and 77 trips during the PM peak hour. As also shown in Attachment B, the proposed project is forecast to generate 1,083 daily Passenger Car Equivalent (PCE) trips, including 90 PCE trips during the AM peak hour and 81 PCE trips during the PM peak hour.

VMT BACKGROUND

California Senate Bill 743 (SB 743) directs the State Office of Planning and Research (OPR) to amend the California Environmental Quality Act (CEQA) Guidelines for evaluating transportation impacts to provide alternatives to Level of Service that "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." In December 2018, the California Natural Resources Agency certified and adopted the updated CEQA Guidelines package. The amended CEQA Guidelines, specifically Section 15064.3, recommend the use of Vehicle Miles Travelled (VMT) as the primary metric for the evaluation of transportation impacts associated with land use and transportation projects. In general terms, VMT quantifies the amount and distance of automobile travel attributable to a project or region. All agencies and projects State-wide are required to utilize the updated CEQA guidelines recommending use of VMT for evaluating transportation impacts as of July 1, 2020.

The updated CEQA Guidelines allow for lead agency discretion in establishing methodologies and thresholds provided there is substantial evidence to demonstrate that the established procedures promote the intended goals of the legislation. Where quantitative models or methods are unavailable, Section 15064.3 allows agencies to assess VMT qualitatively using factors such as availability of transit and proximity to other destinations. The Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (State of California, December 2018) ["OPR Technical Advisory"] provides technical considerations regarding methodologies and thresholds with a focus on office, residential, and retail developments as these projects tend to have the greatest influence on VMT.

Based on guidance from the OPR Technical Advisory, the City of Hesperia adopted the *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service (LOS)* (July 2020) ["TIA Guidelines"], which establishes the City approved methodologies and thresholds.

SCREENING ASSESSMENT

The City TIA Guidelines identify screening criteria for certain types of projects that typically reduce VMT and may be presumed to result in a less than significant VMT impact. To qualify for VMT screening, the project need only satisfy one of the following screening criteria:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

Based on initial review, the project does not satisfy any of the screening criteria; therefore, further analysis for non-screened development is warranted in accordance with the City's TIA Guidelines.

METHODOLOGY

The following section documents the analytical methodology and thresholds of significance as specified in the City TIA Guidelines.

VMT Assessment for Non-Screened Development

The project-generated VMT and project effect on VMT are calculated using San Bernardino Transportation Analysis Model (SBTAM) for the following scenarios:

- Baseline Conditions: This scenario reflects the existing SBTAM base year model.
- Baseline Plus Project: This scenario reflects the existing SBTAM base year model run with the addition of project socio-economic data (SED) to the project traffic analysis zone (TAZ).
- Cumulative No Project: This scenario reflects the existing SBTAM future year model (2050).
- Cumulative Plus Project: This scenario reflects a new SBTAM future year model run with the addition of project SED to the TAZ.

Thresholds of Significance

Project-Generated VMT

A project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

- The baseline project-generated VMT per service population exceeds the San Bernardino County regional average baseline VMT per service population; or
- The cumulative project-generated VMT per service population exceeds the San Bernardino County regional average baseline VMT per service population.

Project Effect on VMT

The project's effect on VMT would be considered significant if it resulted in either of the following conditions to be satisfied:

- The baseline link-level boundary (County of San Bernardino) VMT per service population increases under the plus project condition compared to the no project condition; or
- The cumulative link-level boundary (County of San Berardino) VMT per service population increases under the plus project condition compared to the no project condition.

The cumulative no project reflects the adopted Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). Accordingly, cumulative impacts shall be considered less than significant if a project is consistent with the RTP/SCS, absent substantial evidence to the contrary.

NEED FOR CUMULATIVE VMT IMPACTS EVALUATION

As specified in the City TIA Guidelines, cumulative impacts shall be considered less than significant if a project is consistent with the RTP/SCS, absent substantial evidence to the contrary.

The project is located within the Southern California Association of Governments (SCAG) Metropolitan Planning Organization (MPO). SCAG is the MPO responsible for development of Connect SoCal 2024, the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) for the region. Through the local input process, SCAG solicited input from all 197 local jurisdictions, including the City of Hesperia, regarding current land use, socio-economic projections, sustainability and transit measures to develop the Connect SoCal plan and growth projections through the horizon year 2050. The information collected and used in development of the SCAG's long-range plans and environmental goals is documented in Data/Map Books for each jurisdiction.

Based on review of the Data/Map Book for the City of Hesperia, the project site is zoned for commercial retail use per SCAG's land use codes. Since the project proposes a GPA from Regional Commercial (RC) to Com/Ind Business Park (CIBP), evaluation of potential cumulative VMT impacts was determined to be necessary.

PROJECT-GENERATED VMT

In accordance with the City TIA Guidelines, project-generated VMT was calculated using SBTAM+ (version 3.2). The SBTAM model is a trip-based travel demand model developed and maintained by the San Bernardino County Transit Authority (SBCTA). The model analyzes a complex system of inputs such as highway networks, socio-economic data (SED), driver behavior, and goods movement to forecast travel patterns as the region

grows and changes. The SBTAM model covers the entire SCAG region, but the model data is more refined and focused within San Bernardino County as opposed to other areas of the region.

To evaluate project VMT within SBTAM, the project land use must be converted into socio-economic data (SED). Table 1 below shows the project's employment estimate based on employment factors obtained from the Southern California Association of Governments (SCAG) *Employment Density Study Summary Report* (October 31, 2001).

Table 1
Employment Estimates

Employment Density Factors			
Land Use	Employment Density Factor		
Regional Retail	1,009	SF	per Employee
Warehouse	1,195	SF	per Employee

SBTAM SED Inputs		
Land Use	SF[1]	Employees
Proposed Project		
Warehouse	499,714	418
Existing General Plan Buildout Use to be Displaced		
Regional Retail	-499,714	-495
SBTAM Project SED Updates		
Warehousing Employment (Baseline and Cumulative)		+418
Other Retail Employment (Cumulative Only)[2]		-113

Source: SCAG Employment Density Study Summary Report (October 31, 2001)

Notes:
1. SF = Square Feet
2. The SBTAM only assumes 69 retail employees for baseline and 182 retail employees for cumulative SED inputs; therefore, the retail SED displacement was constrained to hold the baseline SED estimates (i.e., the proposed project would result in no additional retail employees compared to baseline).

The project is proposing a General Plan Amendment (GPA) to change the land use from Regional Commercial (RC) to Com/Ind Business Park (CIBP). Based on SCAG's employment density factors, the current General Plan land use of 499,714 square feet of commercial retail would equate to approximately 495 employees; however, the cumulative model only includes 182 retail employees within the project TAZ. Therefore, the number of commercial retail employees that would be displaced in the cumulative model was constrained to 113, thus reflecting no additional retail employees in the project TAZ for year 2050 with project conditions.

The project site is located in TAZ 53908201. The project SED (418 employees) was added to TAZ 53908201. The project-generated VMT was determined as the net change in total VMT for the project TAZ between without and with project model runs. Table 2 shows the daily VMT estimates for the project TAZ.

Table 2
Daily VMT Estimates for Project TAZ

Scenario	Without Project				With Project				Net Change (i.e., Project VMT)			
	VMT	POP	EMP	VMT per SP	VMT	POP	EMP	VMT per SP	VMT	POP	EMP	VMT per SP
Baseline (2019)	38,820	790	117	42.8	69,639	790	535	52.6	30,819	0	418	73.7
Cumulative (2050)	136,709	806	1,230	67.2	148,582	806	1,535	63.5	11,873	0	305	38.9

Source: SBTAM+ (v3.2), Baseline (2019) and Cumulative (2050) models, TAZ 53908201.
Notes:
1. VMT = Vehicle Miled Traveled; POP = Population; EMP = Employment; SP = Service Population (Population + Employment)

As specified in the City's TIA Guidelines, the threshold for project-generated VMT is based on the San Bernardino County regional average baseline VMT per service population. The numeric threshold of 32.7 VMT per service population referred to in the City's TIA Guidelines was calculated based on an earlier version of the SBTAM model that was current at the time of preparation of the guidelines. Since the project VMT was calculated based on the latest SBTAM+ model (version 3.2), an updated numerical threshold was calculated using the latest SBTAM+ model to provide an "apples-to-apples" comparison of the project's impact relative to the Countywide average.

Table 3 shows the Countywide daily VMT estimates for using the latest SBTAM+ model (version 3.2).

Table 3
Countywide Daily VMT Estimates

Scenario	San Bernardino County			
	Total VMT	POP	EMP	VMT per SP
Baseline	117,898,127	2,217,168	859,874	38.3

Source: SBTAM+ (v3.2), baseline (2019) model.
Notes:
1. VMT = Vehicle Miled Traveled; POP = Population; EMP = Employment; SP = Service Population (Population + Employment)

As shown in Table 3, the San Bernardino County regional average baseline is equal to 38.3 VMT per service population.

Table 4 shows the project-generated VMT impact assessment.

Table 4
Project-Generated VMT Impact Assessment

Scenario	Project-Generated VMT Impact Assessment			
	Project VMT per SP[1]	Threshold[2]	Above/Below Threshold (%)	Significant VMT Impact?
2019 (Baseline)	73.7	38.3	+92.4%	Yes
2050 (Cumulative)	38.9	38.3	+1.6%	Yes

Notes:
1. VMT = Vehicle Miled Traveled; SP =Service Population (Population + Employment)
2. Per current SBTAM+ (v3.2).

It is noted that, although the project-generated VMT is estimated to exceed the Countywide average, the proposed project would improve the VMT per service population generated by the TAZ compared to development of the site as a regional retail use per the current General Plan land use designation.

Threshold: A project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

- The baseline project-generated VMT per service population exceeds the San Bernardino County regional average baseline of 38.3 VMT per service population; or
- The cumulative project-generated VMT per service population exceeds the San Bernardino County regional average baseline of 38.3 VMT per service population.

Finding: As shown in Table 4, the project-generated VMT is estimated to equal 73.7 VMT per service population for baseline conditions and 38.9 VMT per service population for cumulative conditions, both of which exceed the City-established threshold of 38.3 VMT per service population. Therefore, the project-generated VMT results in a significant impact without mitigation based on the City-established thresholds.

Recommendation

It is recommended that the project implement transportation demand management (TDM) measures to reduce single-occupancy vehicle trips to the extent feasible; however, implementation of such measures are not anticipated to reduce the project's impact to a less than significant level. Guidance from the California Air Pollution Control Officers Association (CAPCOA) *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (December 2021) ["CAPCOA Handbook"] includes information on nine (9) trip reduction program measures that may apply at the project/site level. Guidance from the CAPCOA Handbook states that the maximum reduction possible is 45 percent. It is likely that many of the trip reduction measures identified in the CAPCOA Handbook will not be feasible given the nature of industrial operations. Additionally, even if the maximum VMT reduction of 45 percent is achievable, the project-generated VMT would still exceed the County-established threshold. Other mitigation measures identified in the City's TIA Guidelines, such as modifying the project's built environment or participating in a VMT fee program, are not feasible at the project level or are not currently available. Therefore, the project-generated VMT impact would remain significant and unavoidable.

PROJECT EFFECT ON VMT

The project's effect on VMT was also evaluated using the current SBTAM+ model. Table 5 summarizes the link-level boundary VMT per service population within the County boundary for without and with project conditions.

Table 5
Project Effect VMT Impact Assessment

Scenario	Link-Level VMT Impact Assessment				
	Countywide Link-Level VMT	POP	EMP	Link-Level VMT per SP	Significant Project Effect on VMT?
Baseline (2019) Without Project	67,280,657	2,217,168	859,874	21.9	No
Baseline (2019) With Project	67,242,096	2,217,168	860,292	21.8	
Cumulative (2050) Without Project	94,743,867	2,622,252	1,144,814	25.2	No
Cumulative (2050) With Project	94,734,460	2,622,252	1,145,056	25.1	

Source: SBTAM+ (v3.2), Baseline (2019) and Cumulative (2050) models.

Notes:

1. VMT = Vehicle Miled Traveled; POP = Population; EMP = Employment; SP = Service Population (Population + Employment)

Threshold: The project's effect on VMT would be considered significant if it resulted in either of the following conditions to be satisfied:

- The baseline link-level boundary (County of San Bernardino) VMT per service population increases under the plus project condition compared to the no project condition; or
- The cumulative link-level boundary (County of San Berardino) VMT per service population increases under the plus project condition compared to the no project condition.

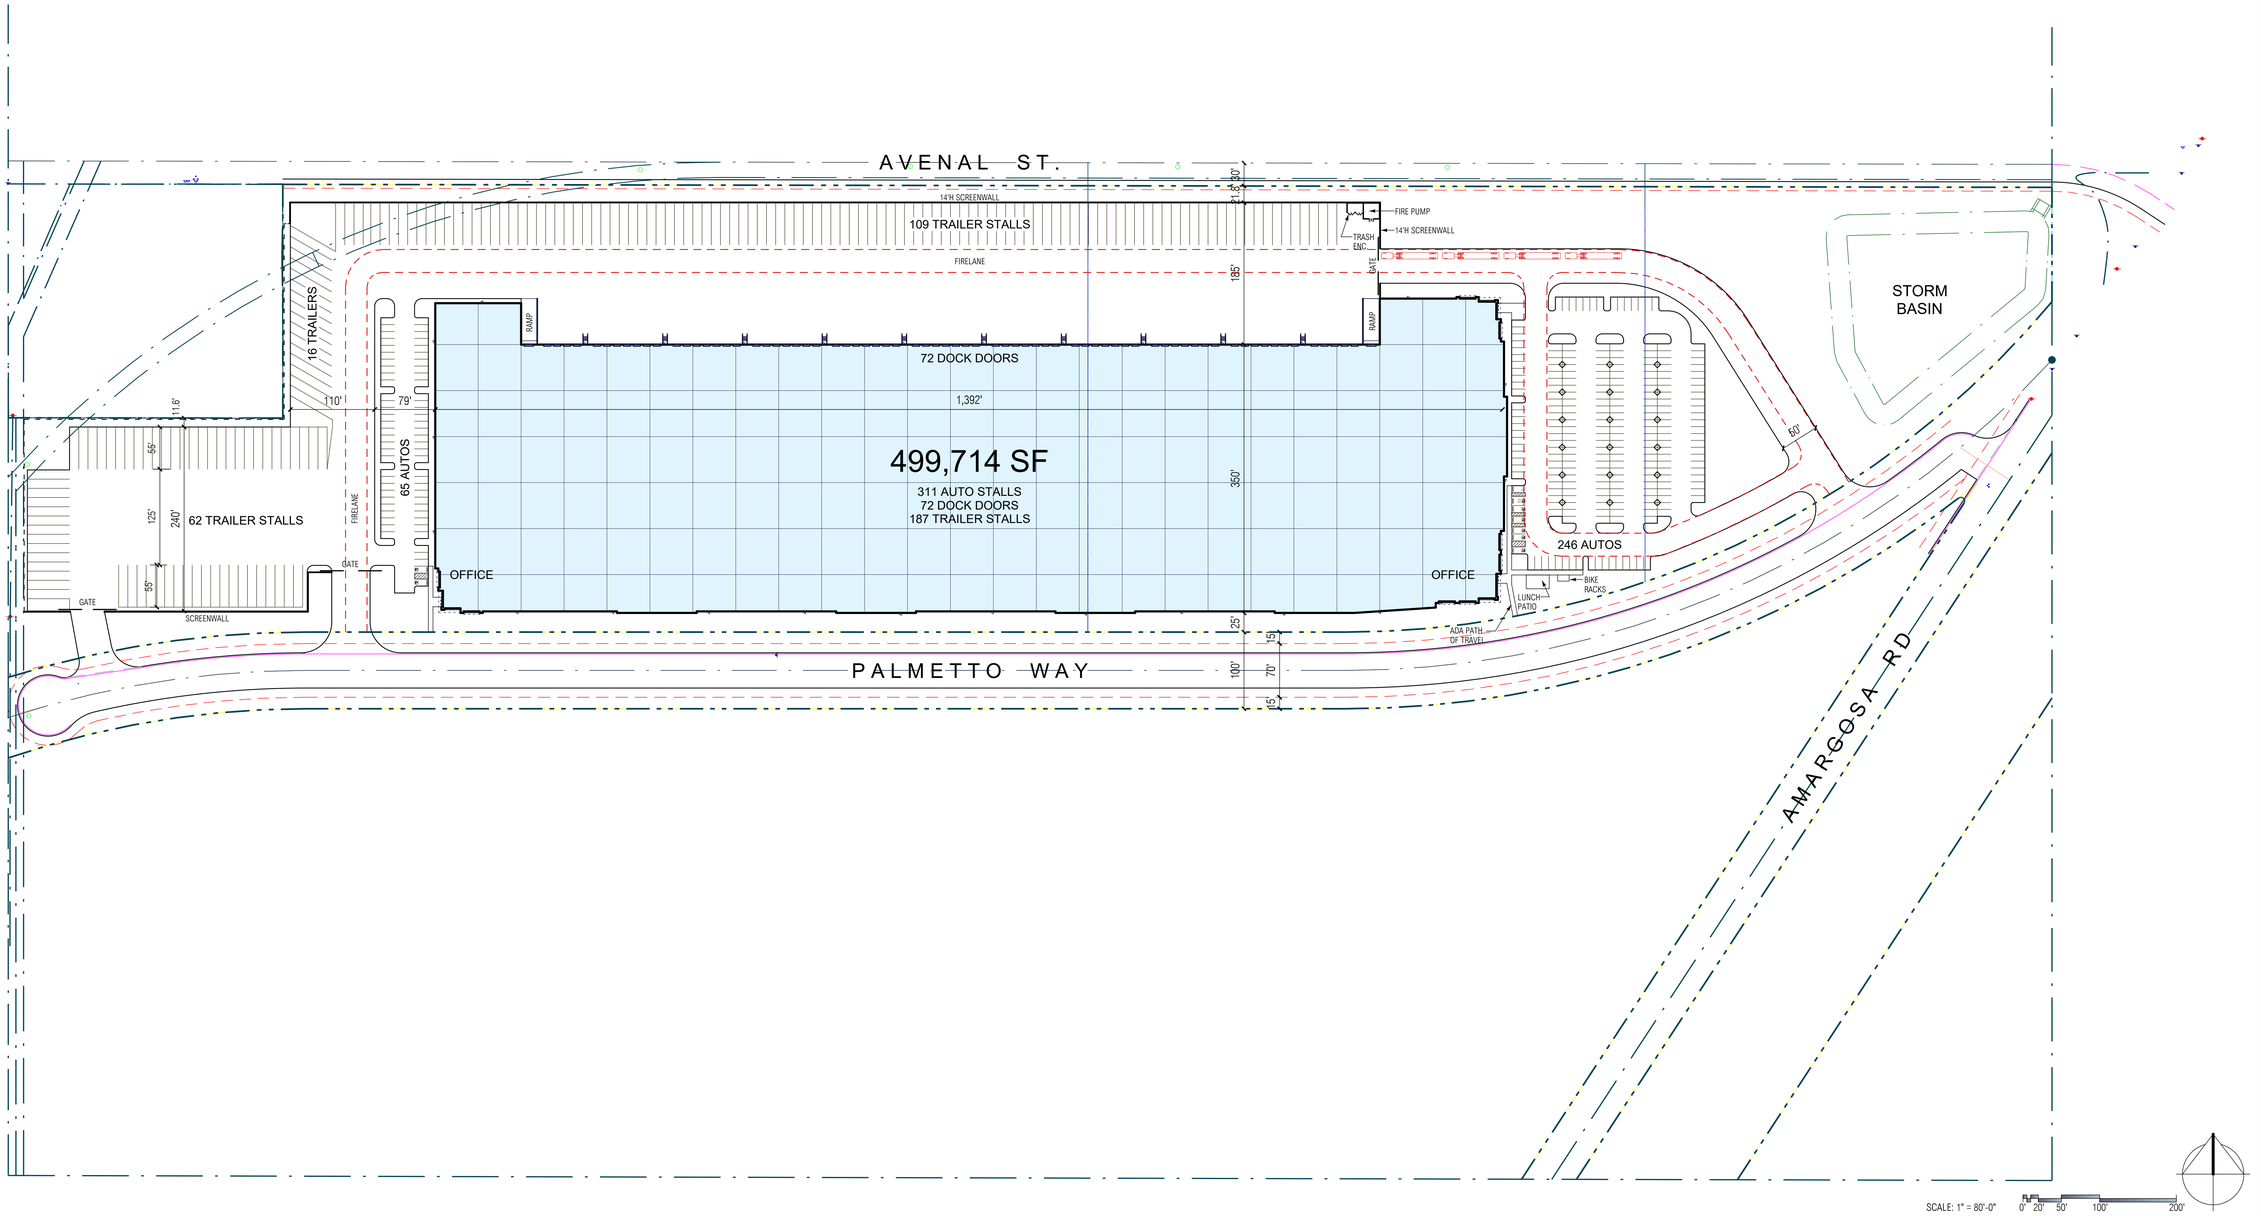
Finding: As shown in Table 5, the link-level VMT per service population within the County boundary is forecast to decrease from 21.9 to 21.8 VMT per service population for baseline plus project conditions and decrease from 25.2 to 25.1 VMT per service population for cumulative plus project conditions compared to the no project conditions. Therefore, the project effect on VMT is less than significant without mitigation based on the City-established thresholds.

CONCLUSIONS

The project-generated VMT is estimated to equal 73.7 VMT per service population for baseline conditions and 38.9 VMT per service population for cumulative conditions, both of which exceed the City-established threshold of 38.3 VMT per service population. Therefore, the project-generated VMT results in a significant impact without mitigation based on the City-established thresholds.

The link-level VMT per service population within the County boundary is forecast to decrease from 21.9 to 21.8 VMT per service population for baseline plus project conditions and decrease from 25.2 to 25.1 VMT per service population for cumulative plus project conditions compared to the no project conditions. Therefore, the project effect on VMT is less than significant without mitigation based on the City-established thresholds.

It is recommended that the project implement transportation demand management (TDM) measures to reduce single-occupancy vehicle trips to the extent feasible; however, implementation of such measures are not anticipated to reduce the project's impact to a less than significant level. Therefore, the project-generated VMT impact would remain significant and unavoidable.



We appreciate the opportunity to assist you with this project. Please contact us at (714) 795-3100 if we can be of further assistance.

Notice of Preparation (NOP) of a Draft Environmental Impact Report

Appendix M.1 – Revised Vehicle Miles Traveled Analysis

TECHNICAL MEMORANDUM

TO: For applicant submittal to the CITY OF HESPERIA

FROM: Po Leung, Bryan Crawford, Giancarlo Ganddini | Ganddini Group, Inc.

DATE: July 8, 2025 (Revision 1)

SUBJECT: Amargosa and Palmetto High-Cube Warehouse Project
Vehicle Miles Traveled Analysis
GGI Project No. 19522

The purpose of this memorandum is to evaluate the project's vehicle miles traveled (VMT) impact in the context of the California Environmental Quality Act (CEQA) based on the methodology and thresholds established by the City of Hesperia as the Lead Agency. We trust the findings of this analysis will aid the City of Hesperia in assessing the project.

PROJECT DESCRIPTION

The 30.52-acre project site is located on the northwest corner of Amargosa Road and Palmetto Way in the City of Hesperia, California. The currently vacant site is proposed to be developed with a 499,714 square foot high-cube fulfillment center warehouse building. The project site is proposed to provide three access driveways on Palmetto Way. All three project driveways are proposed to be full access. The project west driveway will be truck only. The project central driveway and project east driveway will provide access for both auto and trucks. The site plan is provided in Attachment A.

PROJECT TRIP GENERATION

For informational purposes, the project trip generation estimate is provided in Attachment B as documented in the *Amargosa and Palmetto High-Cube Warehouse Revised Traffic Impact Analysis* (Ganddini Group, February 28 2025). As shown in Attachment B, the proposed project is forecast to generate 905 daily trips, including 74 trips during the AM peak hour and 77 trips during the PM peak hour. As also shown in Attachment B, the proposed project is forecast to generate 1,083 daily Passenger Car Equivalent (PCE) trips, including 90 PCE trips during the AM peak hour and 81 PCE trips during the PM peak hour.

VMT BACKGROUND

California Senate Bill 743 (SB 743) directs the State Office of Planning and Research (OPR) to amend the California Environmental Quality Act (CEQA) Guidelines for evaluating transportation impacts to provide alternatives to Level of Service that "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." In December 2018, the California Natural Resources Agency certified and adopted the updated CEQA Guidelines package. The amended CEQA Guidelines, specifically Section 15064.3, recommend the use of Vehicle Miles Travelled (VMT) as the primary metric for the evaluation of transportation impacts associated with land use and transportation projects. In general terms, VMT quantifies the amount and distance of automobile travel attributable to a project or region. All agencies and projects State-wide are required to utilize the updated CEQA guidelines recommending use of VMT for evaluating transportation impacts as of July 1, 2020.

The updated CEQA Guidelines allow for lead agency discretion in establishing methodologies and thresholds provided there is substantial evidence to demonstrate that the established procedures promote the intended goals of the legislation. Where quantitative models or methods are unavailable, Section 15064.3 allows agencies to assess VMT qualitatively using factors such as availability of transit and proximity to other destinations. The Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (State of California, December 2018) ["OPR Technical Advisory"] provides technical considerations regarding methodologies and thresholds with a focus on office, residential, and retail developments as these projects tend to have the greatest influence on VMT.

Based on guidance from the OPR Technical Advisory, the City of Hesperia adopted the *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service (LOS)* (July 2020) ["TIA Guidelines"], which establishes the City approved methodologies and thresholds.

SCREENING ASSESSMENT

The City TIA Guidelines identify screening criteria for certain types of projects that typically reduce VMT and may be presumed to result in a less than significant VMT impact. To qualify for VMT screening, the project need only satisfy one of the following screening criteria:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

Based on initial review, the project does not satisfy any of the screening criteria; therefore, further analysis for non-screened development is warranted in accordance with the City's TIA Guidelines.

METHODOLOGY

The following section documents the analytical methodology and thresholds of significance as specified in the City TIA Guidelines.

VMT Assessment for Non-Screened Development

The project-generated VMT and project effect on VMT are calculated using San Bernardino Transportation Analysis Model (SBTAM) for the following scenarios:

- Baseline Conditions: This scenario reflects the existing SBTAM base year model.
- Baseline Plus Project: This scenario reflects the existing SBTAM base year model run with the addition of project socio-economic data (SED) to the project traffic analysis zone (TAZ).
- Cumulative No Project: This scenario reflects the existing SBTAM future year model (2050).
- Cumulative Plus Project: This scenario reflects a new SBTAM future year model run with the addition of project SED to the TAZ.

Thresholds of Significance

Project-Generated VMT

A project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

- The baseline project-generated VMT per service population exceeds the San Bernardino County regional average baseline VMT per service population; or
- The cumulative project-generated VMT per service population exceeds the San Bernardino County regional average baseline VMT per service population.

Project Effect on VMT

The project's effect on VMT would be considered significant if it resulted in either of the following conditions to be satisfied:

- The baseline link-level boundary (County of San Bernardino) VMT per service population increases under the plus project condition compared to the no project condition; or
- The cumulative link-level boundary (County of San Berardino) VMT per service population increases under the plus project condition compared to the no project condition.

The cumulative no project reflects the adopted Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). Accordingly, cumulative impacts shall be considered less than significant if a project is consistent with the RTP/SCS, absent substantial evidence to the contrary.

NEED FOR CUMULATIVE VMT IMPACTS EVALUATION

As specified in the City TIA Guidelines, cumulative impacts shall be considered less than significant if a project is consistent with the RTP/SCS, absent substantial evidence to the contrary.

The project is located within the Southern California Association of Governments (SCAG) Metropolitan Planning Organization (MPO). SCAG is the MPO responsible for development of Connect SoCal 2024, the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) for the region. Through the local input process, SCAG solicited input from all 197 local jurisdictions, including the City of Hesperia, regarding current land use, socio-economic projections, sustainability and transit measures to develop the Connect SoCal plan and growth projections through the horizon year 2050. The information collected and used in development of the SCAG's long-range plans and environmental goals is documented in Data/Map Books for each jurisdiction.

Based on review of the Data/Map Book for the City of Hesperia, the project site is zoned for commercial retail use per SCAG's land use codes. Since the project proposes a GPA from Regional Commercial (RC) to Com/Ind Business Park (CIBP), evaluation of potential cumulative VMT impacts was determined to be necessary.

PROJECT-GENERATED VMT

In accordance with the City TIA Guidelines, project-generated VMT was calculated using SBTAM+ (version 3.2). The SBTAM model is a trip-based travel demand model developed and maintained by the San Bernardino County Transit Authority (SBCTA). The model analyzes a complex system of inputs such as highway networks, socio-economic data (SED), driver behavior, and goods movement to forecast travel patterns as the region

grows and changes. The SBTAM model covers the entire SCAG region, but the model data is more refined and focused within San Bernardino County as opposed to other areas of the region.

To evaluate project VMT within SBTAM, the project land use must be converted into socio-economic data (SED). Table 1 below shows the project's employment estimate based on employment factors obtained from the Southern California Association of Governments (SCAG) *Employment Density Study Summary Report* (October 31, 2001).

Table 1
Employment Estimates

Employment Density Factors	
Land Use	Employment Density Factor
Warehouse	1,195 SF per Employee

SBTAM SED Inputs		
Land Use	SF[1]	Employees
Proposed Project		
Warehouse	499,714	418

Source: SCAG Employment Density Study Summary Report (October 31, 2001)

Notes:
1. SF = Square Feet

To isolate project-generated VMT, the existing SED data within the project site's TAZ 53908201 was moved to a neighboring TAZ 53918203 with existing residential and employment-based land uses (TAZ 53918203). Based on the employment density factors shown in Table 1, the project SED (418 employees) was added to the project TAZ 53908201. Table 2 shows the daily VMT estimates for the project TAZ.

Table 2
Daily VMT Estimates for Project TAZ

Scenario	TAZ 53908201		
	VMT	EMP	VMT per SP
2019	19,944	418	47.7
2050	34,632	418	82.9

Source: SBTAM+, Baseline (2019) and Cumulative (2050) models.

As specified in the City's TIA Guidelines, the threshold for project-generated VMT is based on the San Bernardino County regional average baseline VMT per service population. The numeric threshold of 32.7 VMT per service population referred to in the City's TIA Guidelines was calculated based on an earlier version of the SBTAM model that was current at the time of preparation of the guidelines. Since the project VMT was calculated based on the latest SBTAM+ model (version 3.2), an updated numerical threshold was calculated using the latest SBTAM+ model to provide an "apples-to-apples" comparison of the project's impact relative to the Countywide average.

Table 3 shows the Countywide daily VMT estimates for using the latest SBTAM+ model (version 3.2).

Table 3
Countywide Daily VMT Estimates

Scenario	San Bernardino County			
	Total VMT	POP	EMP	VMT per SP
Baseline	117,898,127	2,217,168	859,874	38.3

Source: SBTAM+ (v3.2), baseline (2019) model.
Notes:
1. VMT = Vehicle Miled Traveled; POP = Population; EMP = Employment; SP = Service Population (Population + Employment)

As shown in Table 3, the San Bernardino County regional average baseline is equal to 38.3 VMT per service population.

Table 4 shows the project-generated VMT impact assessment.

Table 4
Project-Generated VMT Impact Assessment

Scenario	Project-Generated VMT Impact Assessment			
	Project VMT per SP[1]	Threshold[2]	Above/Below Threshold (%)	Significant VMT Impact?
2019 (Baseline)	47.7	38.3	+24.5%	Yes
2050 (Cumulative)	82.9	38.3	+116.4%	Yes

Notes:
1. VMT = Vehicle Miled Traveled; SP = Service Population (Population + Employment)
2. Per current SBTAM+ (v3.2).

Threshold: A project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

- The baseline project-generated VMT per service population exceeds the San Bernardino County regional average baseline of 38.3 VMT per service population; or
- The cumulative project-generated VMT per service population exceeds the San Bernardino County regional average baseline of 38.3 VMT per service population.

Finding: As shown in Table 4, the project-generated VMT is estimated to equal 47.7 VMT per service population for baseline conditions and 82.9 VMT per service population for cumulative conditions, both of which exceed the City-established threshold of 38.3 VMT per service population. Therefore, the project-generated VMT results in a significant impact without mitigation based on the City-established thresholds.

Project-Generated VMT Mitigation

As outlined in the City TIA Guidelines, the following choices are available to mitigate VMT impacts:

1. Modify the project's-built environment characteristics to reduce VMT generated by the project.
2. Implement Transportation Demand Management (TDM) measures to reduce VMT generated by the project.
3. Participate in a VMT fee program and/or VMT mitigation exchange/banking program (if they exist) to reduce VMT from the project or other land uses to achieve acceptable levels.

As of May 2025, the San Bernardino County Transportation Authority (SBCTA) is developing a pilot VMT Mitigation Bank; however, the program is not formally in effect and this form of mitigation is therefore infeasible. Attachment B of the City TIA Guidelines outline seven (7) measures deemed appropriate for most of the San Bernardino region/City of Hesperia based on the SBCTA Implementation Study. These measures are generally based on 2010 research from the California Air Pollution Control Officers Association (CAPCOA). The updated CAPCOA *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (2024) ["CAPCOA Handbook"] outlines a total of 39 measures aimed at reducing transportation-related greenhouse gas emissions (GHG), many of which include VMT reduction as a co-benefit. Like the findings of the SBCTA Implementation Study, few of these measures, if any, are applicable to development projects in the San Bernardino and City of Hesperia. Attachment C contains a detailed review of each measure and its relevance to the proposed project.

As outlined in Attachment C, no measures could be identified that would result in any appreciable level of VMT reduction. The primary constraints include the nature of the proposed warehousing use, which limits the ability to provide a mix of on-site land uses, and limited infrastructure for alternative modes of transportation in the project vicinity. Therefore, the project-generated VMT impact would remain significant and unavoidable.

PROJECT EFFECT ON VMT

The project's effect on VMT was also evaluated using the current SBTAM+ model. Table 3 summarizes the link-level boundary VMT per service population within the County boundary for without and with project conditions.

Table 5
Project Effect VMT Impact Assessment

Scenario	Link-Level VMT Impact Assessment				
	Countywide Link-Level VMT	POP	EMP	Link-Level VMT per SP	Significant Project Effect on VMT?
Baseline (2019) Without Project	67,280,657	2,217,168	859,874	21.9	No
Baseline (2019) With Project	67,311,167	2,217,168	860,292	21.9	
Cumulative (2050) Without Project	94,743,867	2,622,252	1,144,751	25.2	No
Cumulative (2050) With Project	94,754,786	2,622,252	1,145,169	25.2	

Source: SBTAM+ (v3.2), Baseline (2019) and Cumulative (2050) models.

Notes:

1. VMT = Vehicle Miled Traveled; POP = Population; EMP = Employment; SP = Service Population (Population + Employment)
2. All SED in the Project TAZ (53908201) from the Cumulative Without Project was moved to a neighboring zone for Cumulative With Project conditions. Therefore, since the portion of retail growth within the Project TAZ that would be displaced by the proposed project is still included, Cumulative With Project link-level VMT is overestimated, resulting in a conservative analysis.

Threshold: The project's effect on VMT would be considered significant if it resulted in either of the following conditions to be satisfied:

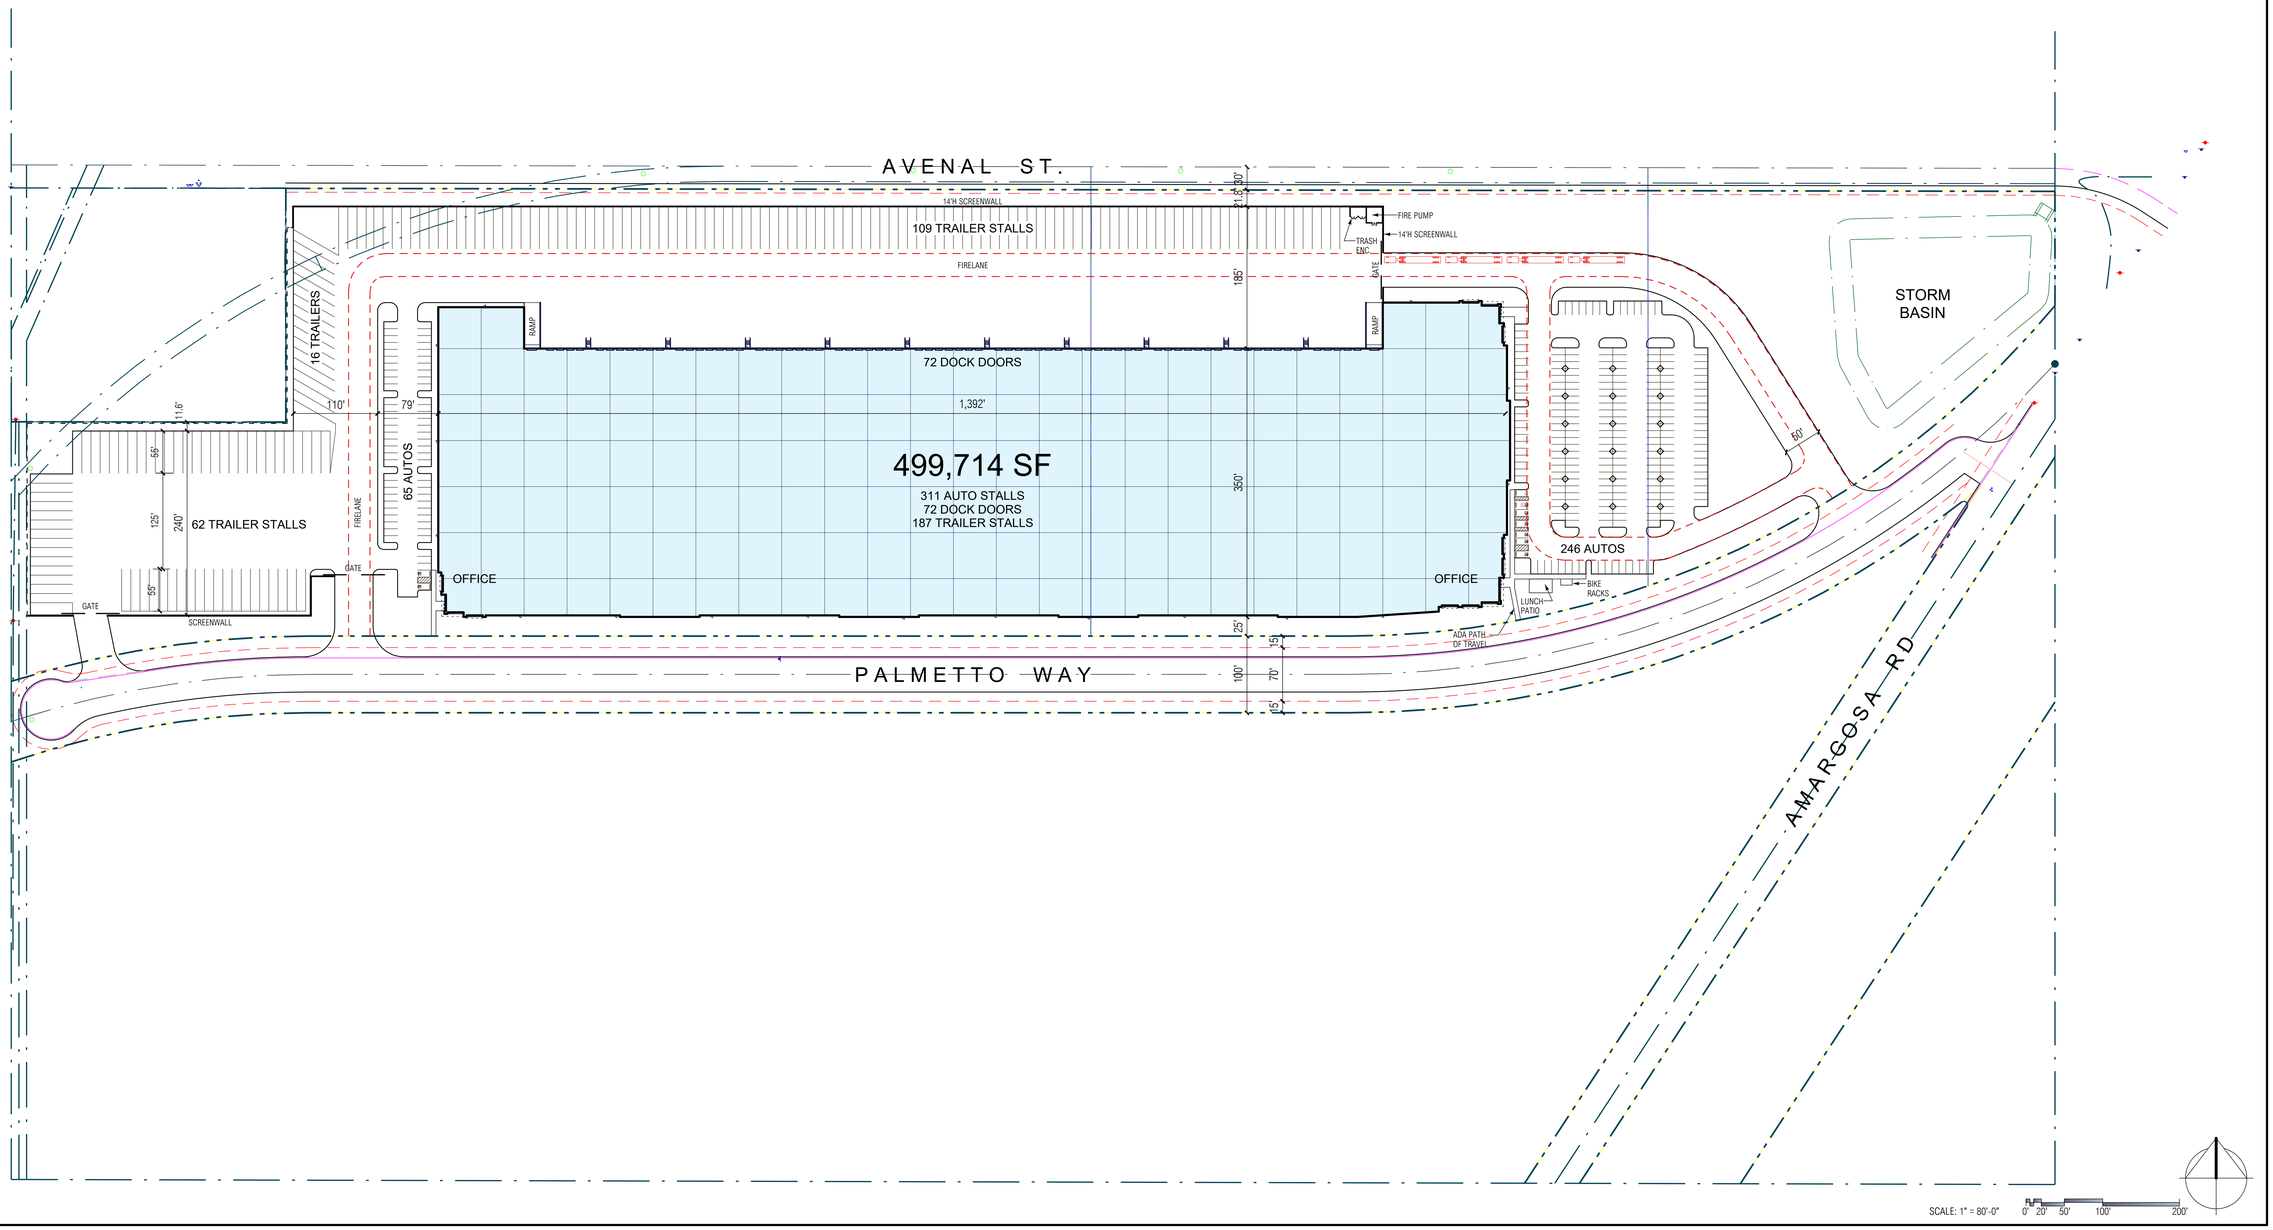
- The baseline link-level boundary (County of San Bernardino) VMT per service population increases under the plus project condition compared to the no project condition; or
- The cumulative link-level boundary (County of San Berardino) VMT per service population increases under the plus project condition compared to the no project condition.

Finding: As shown in Table 5, the link-level VMT per service population within the County boundary is forecast to remain at 21.9 VMT per service population for baseline plus project conditions and 25.2 VMT per service population for cumulative plus project conditions compared to the no project conditions. Therefore, the project effect on VMT is less than significant without mitigation based on the City-established thresholds.

CONCLUSIONS

The project-generated VMT is estimated to equal 47.7 VMT per service population for baseline conditions and 82.9 VMT per service population for cumulative conditions, both of which exceed the City-established threshold of 38.3 VMT per service population. Therefore, the project-generated VMT results in a significant impact without mitigation based on the City-established thresholds. No measures could be identified that would result in any appreciable level of VMT reduction. The primary constraints include the nature of the proposed warehousing use, which limits the ability to provide a mix of on-site land uses, and limited infrastructure for alternative modes of transportation in the project vicinity. Therefore, the project-generated VMT impact would remain significant and unavoidable.

The link-level VMT per service population within the County boundary is forecast to remain at 21.9 VMT per service population for baseline plus project conditions and 25.2 VMT per service population for cumulative plus project conditions compared to the no project conditions. Therefore, the project effect on VMT is less than significant without mitigation based on the City-established thresholds.



We appreciate the opportunity to assist you with this project. Please contact us at (714) 795-3100 if we can be of further assistance.

ATTACHMENT C

FEASIBILITY ASSESSMENT OF POTENTIAL VMT REDUCTION MEASURES

Table C1 (1 of 3)
Feasibility Assessment of Potential VMT Mitigation Measures

Measure[1]	Scale of Application	Maximum Potential VMT Reduction	Feasible for Project/ Regional Context?	Assessment
LAND USE				
T-1 Increase Residential Density	Project/Site	30.00%	No	The project seeks to maximize use of the site for the proposed warehousing use. Due to the nature of warehousing operations, it is not feasible to add residential uses to the project.
T-2 Increase Job Density	Project/Site	30.00%	No	The proposed project would increase job density; however, the additional jobs created by the project is already accounted for in the VMT results calculated from the travel demand model. It is not appropriate to apply the CAPCOA formula for GHG reduction to the calculated VMT results.
T-3 Provide Transit-Oriented Development	Project/Site	31.00%	No	The project site is not located near an existing or planned transit station or high-quality transit corridor.
T-4 Integrate Affordable and Below Market Rate Housing	Project/Site	28.60%	No	The project seeks to maximize use of the site for the proposed warehousing use. Due to the nature of warehousing operations, it is not feasible to add residential uses to the project.
T-17 Improve Street Connectivity	Plan/Community	30.00%	No	Not applicable at the project/site level.
T-55 Infill Development	Project/Site	30.00%	No	Not feasible due to regional context or proposed use. This measure only applies to infill housing developments that allow residents to live closer to downtown areas.
TRIP REDUCTION PROGRAMS[2]				
T-5 Implement Commute Trip Reduction Program (Voluntary)	Project/Site	4.00%	No	Potential VMT reduction associated with this measure would only apply to the employee commute portion of the total VMT calculated for the project. This measure would implement a voluntary commute trip reduction program comprised of the elements described in Measures T-7 through T-11; however, there are no existing transit stops within reasonable walking distance of the project site and no existing bicycle facilities in the project vicinity. Given the lack of access to alternative transportation modes, this measure is not expected to achieve any appreciable level of VMT reduction.
T-6 Implement Commute Trip Reduction Program (Mandatory Implementation and Monitoring)	Project/Site	26.00%	No	Potential VMT reduction associated with this measure would only apply to the employee commute portion of the total VMT calculated for the project. This measure would include all other elements described for Measure T-5 plus mandatory trip reduction requirements, plus regular monitoring/reporting and penalties for non-compliance to ensure the calculated VMT reduction matches the observed VMT reduction. There are no existing transit stops within reasonable walking distance of the project site and no existing bicycle facilities in the project vicinity. Given the lack of access to alternative transportation modes, this measure is not expected to achieve any appreciable level of VMT reduction.
T-7 Implement Commute Trip Reduction Marketing	Project/Site	4.00%	No	This measure would be incorporated into Measure T-5.
T-8 Provide Ridesharing Program	Project/Site	8.00%	No	This measure would be incorporated into Measure T-5.
T-9 Implement Subsidized or Discounted Transit Program	Project/Site	5.50%	No	This measure would be incorporated into Measure T-5.

Table C1 (2 of 3)
Feasibility Assessment of Potential VMT Mitigation Measures

Measure[1]	Scale of Application	Maximum Potential VMT Reduction	Feasible for Project/ Regional Context?	Assessment
T-10 Provide End-of-Trip Bicycle Facilities	Project/Site	4.40%	No	This measure would be incorporated into Measure T-5.
T-11 Provide Employer-Sponsored Vanpool	Project/Site	20.40%	No	This measure would be incorporated into Measure T-5.
T-12 Price Workplace Parking	Project/Site	20.00%	No	This measure requires access to alternative modes of transportation to effectively reduce VMT. There are no existing transit stops within reasonable walking distance of the project site and no existing bicycle facilities in the project vicinity. Given the lack of access to alternative transportation modes, this measure is not feasible.
T-13 Implement Employee Parking Cash-Out	Project/Site	12.00%	No	This measure requires access to alternative modes of transportation to effectively reduce VMT. There are no existing transit stops within reasonable walking distance of the project site and no existing bicycle facilities in the project vicinity. Given the lack of access to alternative transportation modes, this measure is not feasible.
T-23 Provide Community-Based Travel Planning	Plan/Community	2.30%	No	Not applicable at the project/site level.
PARKING OR ROAD PRICING MANAGEMENT				
T-14 Provide Electric Vehicle Charging Infrastructure	Project/Site	-	No	Only reduces GHG emissions; no VMT reduction co-benefit.
T-15 Limit Residential Parking Supply	Project/Site	13.70%	No	The project does not include residential uses.
T-16 Unbundle Residential Parking Costs from Property Cost	Project/Site	15.70%	No	The project does not include residential uses.
T-24 Implement Market Price Public Parking (On-Street)	Plan/Community	30.00%	No	Not applicable at the project/site level.
NEIGHBORHOOD DESIGN				
T-18 Provide Pedestrian Network Improvement	Plan/Community	6.40%	No	Not applicable at the project/site level.
T-19A Construct or Improve Bike Facility	Plan/Community	0.80%	No	Not applicable at the project/site level.
T-19B Construct or Improve Bike Boulevard	Plan/Community	0.20%	No	Not applicable at the project/site level.
T-20 Extend Bikeway Network	Plan/Community	0.50%	No	Not applicable at the project/site level.
T-21A Implement Conventional Carshare Program	Plan/Community	0.15%	No	Not applicable at the project/site level.
T-21B Implement Electric Carshare Program	Plan/Community	0.18%	No	Not applicable at the project/site level.
T-22A Implement Pedal (Non-Electric) Bikeshare Program	Plan/Community	0.02%	No	Not applicable at the project/site level.
T-22B Implement Electric Bikeshare Program	Plan/Community	0.06%	No	Not applicable at the project/site level.
T-22C Implement Scootershare Program	Plan/Community	0.07%	No	Not applicable at the project/site level.

Table C1 (3 of 3)
Feasibility Assessment of Potential VMT Mitigation Measures

Measure[1]	Scale of Application	Maximum Potential VMT Reduction	Feasible for Project/ Regional Context?	Assessment
T-22D Transition Conventional to Electric Bikeshare	Plan/Community	0.06%	No	Not applicable at the project/site level.
TRANSIT				
T-25 Extend Transit Network Coverage or Hours	Plan/Community	4.60%	No	Not applicable at the project/site level.
T-26 Increase Transit Service Frequency	Plan/Community	11.30%	No	Not applicable at the project/site level.
T-27 Implement Transit-Supportive Roadway Treatments	Plan/Community	0.60%	No	Not applicable at the project/site level.
T-28 Provide Bus Rapid Transit	Plan/Community	13.80%	No	Not applicable at the project/site level.
T-29 Reduce Transit Fares	Plan/Community	1.20%	No	Not applicable at the project/site level.
T-46 Provide Transit Shelters	Plan/Community	0.32%	No	Not applicable at the project/site level.
CLEAN VEHICLES AND FUELS				
T-30 Use Cleaner-Fuel Vehicles	All	-	No	Only reduces GHG emissions; no VMT reduction co-benefit.
SCHOOL PROGRAMS				
T-40 Establish a School Bus Program	Project/Site	57.00%	No	This measure is only applicable for school/educational land uses.
T-56 Active Modes of Transportation for Youth	Project/Site	22.20%	No	This measure is only applicable for school/educational land uses.

Appendix N – NOP ISMND Comments

City of Hesperia

Gateway to the High Desert

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT

Date: September 16, 2025

To: State Agencies, Responsible Agencies, Local and Public Agencies, and Interested Parties

From/Lead Agency: City of Hesperia, Planning Department

Subject: **Notice of Preparation of an Environmental Impact Report for the Amargosa Road and Palmetto Way Industrial Warehouse Building**

This Notice of Preparation (NOP) has been prepared to notify agencies and interested parties that the City of Hesperia (City), as lead agency, is commencing the preparation of an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA) to evaluate the potential environmental effects associated with implementation of the Amargosa Road and Palmetto Way Industrial Warehouse Building Project (Project).

The City is requesting input from interested individuals, organizations, and agencies regarding the scope and content of the environmental analysis to be included in the EIR. In accordance with CEQA, the City requests that agencies provide comments on the environmental issues related to the statutory responsibilities of their particular agency. This NOP contains a description of the Project, its location, and a preliminary determination of the environmental resource topics to be addressed in the EIR.

Project Location

The approximately 30.52-acre Project site is located in the southwestern portion of the City of Hesperia, within the Victor Valley region of San Bernardino County. The site consists of three parcels (APNs: 0405-072-52, 53, and 55) and is currently vacant, with level terrain and a mix of disturbed vegetation and Joshua tree woodland. The site is bounded by Avenal Street to the north, Palmetto Way to the south, and Amargosa Road to the east, with regional access provided by Interstate 15.

Project Summary

Rachamin 5, LLC ("Applicant") proposes to construct a 499,714-square-foot industrial warehouse and distribution center on approximately 30.52 acres in the City of Hesperia. The facility would include approximately 10,000 square feet of office space and 489,714 square feet of warehouse/distribution space, along with 72 loading docks, 256 tractor-trailer stalls, 251 passenger vehicle parking spaces, stormwater facilities, sidewalks, and landscaping. The Project site consists of three parcels (APNs: 0405-072-52, 53, and 55) located south of Avenal Street, north of Palmetto Way, and west of Amargosa Road.

To implement the Project, the Applicant would need to obtain, at a minimum, the following discretionary permits/approvals:

- Specific Plan Amendment to modify the Project site's Main Street and Freeway Corridor Specific Plan land use designation from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP).
- Conditional Use Permit to permit the construction and operation of a warehousing and distribution center of a size greater than 200,000 square feet in the Commercial/Industrial Business Park zone.
- Development Code Amendment to designate Amargosa Road as a new truck route from Avenal Street to Main Street in compliance with AB 98.
- Certification of the Final Environmental Impact Report.
- Incidental Take Permit from California Department of Fish and Wildlife (CDFW) for removal of Western Johsua Tree.

Potential Environmental Impacts of the Project

As discussed in the attached Initial Study, the EIR will evaluate whether implementation of the Project may potentially result in one or more significant environmental impacts. The potential environmental effects to be addressed in the EIR will include but may not be limited to the following:

- Greenhouse Gas Emissions
- Transportation/Traffic

The EIR will also address all other CEQA-mandated topics, including cumulative impacts and alternatives.

Public Scoping Comment Period

The City has established a 30-day public scoping period from September 16, 2025, to October 16, 2025. During the scoping period, the City's intent is to disseminate Project information to the public and solicit comments from agencies, organizations, and interested parties, including nearby residents and business owners, regarding the scope and content of the environmental information to be included in the EIR, including mitigation measures or Project alternatives to reduce potential environmental effects.

During this period, this NOP and the attached Initial Study may be accessed electronically at the following website: https://www.hesperiaca.gov/1466/Environmental-Review-Documents

This NOP and the attached Initial Study are also available for review in person at Hesperia City Hall, Planning Department, 9700 Seventh Avenue, Hesperia, California 9234. All comments must be received in writing by October 16, by 5:00 p.m., which is the end of the 30-day public scoping period. All written comments should indicate an associated contact person for the agency or organization, if applicable, and reference the Project name in the subject line. Pursuant to CEQA, responsible agencies are requested to indicate their statutory responsibilities in connection with the Project when responding. Please mail or email comments and direct any questions to the following contact person:

CHAPTER ONE – INTRODUCTION

1.1 Purpose and Authority

Pursuant to Section 15367 of the State CEQA Guidelines, the City of Hesperia ("City") is the lead agency for the Project. The lead agency is the public agency that has the principal responsibility for carrying out or approving a project.

As set forth in the State CEQA Guidelines Section 15070, an IS/MND can be prepared when the Initial Study has identified potentially significant environmental impacts, but revisions have been made to a project, prior to public review of the Initial Study, that would avoid or mitigate the impacts to a level considered less than significant; and there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment.

The environmental documentation, which is ultimately selected by the City in accordance with CEQA, is intended as an informational document undertaken to provide an environmental basis for subsequent discretionary actions upon the project. The resulting documentation is not, however, a policy document and its approval and/or certification neither presupposes nor mandates any actions on the part of those agencies from whom permits and/or other discretionary approvals would be required.

The environmental documentation is subject to a public review period of 30 days. During this review, public agency comments related to environmental issues should be addressed to the City. The City will consider the comments received as a part of the Project's environmental review and will include them as part of the Initial Study/Mitigated Negative Declaration documentation for adoption.

1.2 Documents Incorporated by Reference

As permitted by Section 15150 of the CEQA Guidelines, this IS/MND references several technical studies and analyses. Information from the documents incorporated by reference is briefly summarized in the appropriate section(s). The relationship between the incorporated part of the referenced document and the IS/MND has also been described. The documents and other sources used in the preparation of this IS/MND include, but are not limited to:

- City of Hesperia General Plan 2010
- City of Hesperia General Plan Update Final Environmental Impact Report (December 16, 2010)
- City of Hesperia Municipal Code (Codified through Ordinance No. 2022-13, passed September 6, 2022)
- City of Hesperia Main Street and Freeway Corridor Specific Plan (October 16, 2008; amended July 15, 2021)
- City of Hesperia Climate Action Plan (July 20, 2010)
- General Plan Land Use/Zoning Map (February 7, 2020)
- San Bernardino County Countywide Plan 2020

1.3 Documents Prepared for the Project

The stand-alone technical studies prepared for the Project are appended to the IS/MND as follows:

- Air Quality Impact Analysis
- Mobile Source Health Risk Assessment
- Biological Resources Assessment Report
- Cultural and Paleontological Resources Assessment
- Energy Analysis
- Geotechnical Investigation
- Greenhouse Gas Analysis
- Preliminary Hydrology Report
- Conceptual Water Quality Management Plan
- Noise Impact and Vibration Analysis
- Traffic Impact Analysis
- Trip Generation Comparison Analysis
- Vehicle Miles Travelled Analysis

CHAPTER TWO – PROJECT DESCRIPTION

2.1 Project Location and Existing Project Site

The City of Hesperia ("City") is located within the southwestern portion of San Bernardino County, refer to *Figure 1, Regional Vicinity Map*. On a regional basis, the City is accessible via Interstate 15 (I-15), U.S. Federal Highway 395 (US-395), and State Route 18 (SR-18). Jurisdictions surrounding the City of Hesperia include the City of Adelanto to the northwest, Town of Apple Valley to the northeast, City of Victorville to the north, and unincorporated San Bernardino County to the south, east and west.

The Project site is comprised of three (3) parcels (APNs: 0405-072-52, 53, and 55) that total approximately 30.52 acres. The site consists of vacant land that is characterized by level terrain and a mixture of ruderal/disturbed vegetation and Joshua tree woodland. The site is bounded by Avenal Street to the north, Palmetto Way to the south, and Amargosa Road to the east, refer to *Figure 2, Aerial Imagery Map*. Specifically, the Project site is in Section 14, Township 4 North, Range 5 West, as depicted on the U.S. Geological Survey Baldy Mesa, California 7.5-minute topographic quadrangle map.

2.2 Project Characteristics

Rachamin 5, LLC., ("Applicant") proposes to construct up to a 499,714 square-foot industrial building and associated improvements, including loading docks, tractor-trailer stalls, passenger vehicle parking spaces, stormwater facilities, sidewalks, and landscape area. The Project includes approximately 10,000 square feet of office space, 489,714 square feet of industrial/warehouse space, and 255,000 square feet of landscape improvements.

1. Project Trip Generation Comparison

The Project site has a General Plan land use designation of Main Street and Freeway Corridor Specific Plan – Regional Commercial (RC). Project implementation requires a Specific Plan Amendment to modify the Project site's Main Street and Freeway Corridor Specific Plan land use designation from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP). Ganddini Group, Inc. prepared a Trip Generation Comparison Analysis for the proposed Amargosa Road and Palmetto Way Industrial Warehouse Building Project, dated September 6, 2023 (Appendix L). The purpose of the Trip Generation Comparison Analysis is to evaluate the difference in trips generated by the proposed Project under the Commercial/Industrial Business Park (CIBP) land use designation in comparison to an alternative use that is permitted under the existing Regional Commercial (RC) land use designation.

The Trip Generation Comparison Analysis forecasts the proposed Project trip generation based upon rates obtained from the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021). ITE land use code 155 (High-Cube Fulfillment Center Non-Sort) has been used to estimate the site-specific trip generation estimates for up to 499,700 square feet of high-cube fulfillment center (non-sort) use. Comparatively, the Trip Generation Comparison Analysis forecasts an alternative commercial retail land use trip generation based on regression equations from the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021). ITE land use code 820 (Shopping Center

(>150k)) has been used to estimate the site-specific trip generation estimates for up to 499,850 square feet of commercial retail use. Which resulted in more trips than the warehousing alternative.

The proposed Project vehicle trips are converted to Passenger Car Equivalent (PCE) trips based on truck rates (as a percentage of a total vehicle trips) from the ITE Trip Generation Manual and truck axle mix data recommended by the South Coast Air Quality Management District (SCAQMD). For the alternative commercial retail land use, it should be noted that commercial retail land uses will often locate next to busy roadways to attract motorists already on the street. Therefore, Ganddini reduced the initial trip generation forecast by the applicable pass-by trip rate when calculating the net new trips that will be added to the surrounding street system. However, pass-by trip adjustments were not applied to the alternative commercial retail land use trip generation in accordance with pass-by rates noted in the ITE Trip Generation Manual (11th Edition, 2021) since Amargosa Road adjacent to the Project site is a low volume roadway and pass-by trips would be minimal.

The proposed Project is forecast to generate approximately 1,083 daily Passenger Car Equivalent (PCE) trips, including 90 PCE trips during the AM peak hour and 81 PCE trips during the PM peak hour. Truck trips would amount to 293 total daily trips, 26 am trips and 6 pm trips. The alternative commercial retail land use is forecast to generate a total of approximately 27,280 daily trips, including 1,007 PCE trips during the AM peak hour and 2,149 PCE trips during the PM peak hour without a pass-by trips reduction. Therefore, the proposed Project is forecast to generate approximately 25,505 fewer daily trips compared to a commercial retail land use of equivalent size, including 870 fewer trips during the AM peak hour and 2,035 fewer trips during the PM peak hour.

Based on the Trip Generation Comparison Analysis, the proposed Project consisting of a 499,850 square foot high-cube fulfillment center warehouse building is forecast to generate substantially fewer trips (up to 659% fewer daily trips) compared to an alternative land use composed of 499,850 square feet of commercial retail.

In addition to trip generation forecasts, Ganddini calculated directional distribution patterns for the Project generated trips and the alternative commercial retail land use generated trips. One hundred percent (100%) of the Project inbound, and outbound truck traffic will be distributed from and towards Main Street. Additionally, seventy-five percent (75%) of the Project inbound, and outbound car traffic will be distributed from and towards Main Street and only twenty-five percent (25%) of the Project inbound and outbound car traffic will be distributed from and towards Bear Valley Road. Comparatively, sixty percent (60%) of the alternative commercial retail land use traffic will be distributed towards Main Street and forty percent (40%) of the alternative commercial retail land use traffic will be distributed towards Bear Valley Road.

The Trip Generation Comparison Analysis also includes comparison of the intersection turning movement volumes for the proposed Project and the alternative commercial land use. The alternative commercial retail land use is expected to generate significantly more AM and PM peak hour intersection turning movement volumes compared to the proposed Project for all turning movements at each study area intersection where peak hour trips are expected to be added.

2. On-Site and Off-Site Improvements

The Project includes improvements along Palmetto Way and Avenal Street, including frontage landscaping and pedestrian improvements. Project landscape conforms to City requirements for industrial uses (Main Street and Freeway Corridor Specific Plan Chapter 11: *Industrial Design Standards and Guidelines*, Section D). Frontage landscaping includes a variety of trees, shrubs, plants, and land covers within the Project frontage's landscape setback area, as well as within the landscape areas found around the proposed industrial/warehouse building to comprise 19.1% (255,000 SF) of the Project site.

3. Site Access, Circulation, and Parking

Regional access to the Project site is provided via I-15 and Amargosa Road. The proposed Project includes three (3) driveways off Palmetto Way. Direct access to the paved tractor-trailer parking area is provided by a 45-foot truck only driveway at the southwest corner of the site and a 50-foot driveway on the south side of the site for both autos and trucks. Direct access to the paved passenger vehicle parking area is provided by a 50-foot driveway at the southeast corner of the site for both autos and trucks. In total, the proposed Project includes 72 loading dock positions, 256 tractor-trailer stalls, and 251 passenger vehicle parking spaces.

4. Utility Improvements

The proposed Project includes a combination of an at grade detention basin and underground infiltration basin to treat stormwater runoff for water quality purposes. Additionally, due to the vacant, undeveloped nature of the Project site, both dry and wet utilities, including domestic water, sanitary sewer, and electricity, need to be extended onto the Project site.

5. Operations

A tenant for the Project has not been identified at this time; however, the facility is designed to accommodate approximately 500 to 600 employees. Hours of operation are anticipated to be 24 hours a day, 7 days a week.

6. Specific Plan Amendment and Zone Change and Development Code Amendment

The General Plan land use designation of the Project site is Main Street and Freeway Corridor Specific Plan – Regional Commercial (RC) and the zoning designation is Regional Commercial (RC). Implementation of the Project requires a Specific Plan Amendment to modify the Project site's Main Street and Freeway Corridor Specific Plan land use designation from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP), refer to *Figure 3, Existing and Proposed Land Use Designation*. Additionally, the Project involves a Zone Change to modify the Project site's zoning from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP), refer to *Figure 4, Existing and Proposed Zoning*.

Additionally, the Project is required to submit a Development Code Amendment application to amend the approved truck route to designate Amargosa Road as a new truck route from Avenal Street to Main Street, in compliance with AB 98. This amendment ensures consistency with City truck route requirements and state regulations for industrial, and warehouse uses.

2.3 Project Approvals

As part of the Project, the Project Applicant is requesting approval of the following entitlements:

- **Specific Plan Amendment** to modify the Project site's Main Street and Freeway Corridor Specific Plan land use designation from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP).
- **Conditional Use Permit** to permit the construction and operation of a warehousing and distribution center of a size greater than 200,000 square feet in the Commercial/Industrial Business Park zone.
- **Development Code Amendment** to designate Amargosa Road as a new truck route from Avenal Street to Main Street in compliance with AB 98.

Subsequent non-discretionary approvals (which would require separate processing through the City) would include, but may not be limited to, a grading permit, building permits, and occupancy permits.

CHAPTER THREE – ENVIRONMENTAL CHECKLIST

3.1 Project Summary

1. Project Title:
Amargosa Road and Palmetto Way Industrial Warehouse Building

2. Lead Agency Name and Address:
City of Hesperia,
9700 Seventh Avenue
Hesperia, CA 92345

3. Contact Person and Phone Number:
Edgar Gonzalez, Senior Planner
Planning Division
P: (760) 947-1330
E: egonzalez@hesperiaca.gov

4. Project Location:
The City of Hesperia ("City") is located within the southwestern portion of San Bernardino County, refer to *Figure 1, Regional Vicinity Map*. On a regional basis, the City is accessible via Interstate 15 (I-15), U.S. Federal Highway 395 (US-395), and State Route 18 (SR-18). Jurisdictions surrounding the City of Hesperia include the City of Adelanto to the northwest, Town of Apple Valley to the northeast, City of Victorville to the north, and unincorporated San Bernardino County to the south, east and west.

The Project site is comprised of three (3) parcels (APNs: 0405-072-52, 53, and 55) that total approximately 30.52 acres. The site consists of vacant land that is characterized by level terrain and a mixture of ruderal/disturbed vegetation and Joshua tree woodland. The site is bounded by Avenal Street to the north and west, Palmetto Way to the south, and Amargosa Road to the east, refer to *Figure 2, Aerial Imagery Map*. Specifically, the Project site is in Section 14, Township 4 North, Range 5 West, as depicted on the U.S. Geological Survey Baldy Mesa, California 7.5-minute topographic quadrangle map.

5. Project Applicant's Name and Address:
Mr. Ramin Namvar
Rachamim 5, LLC
6001 E. Slauson Avenue
Commerce, CA 90040

6. General Plan Designation:
Existing: Main Street and Freeway Corridor Specific Plan – Regional Commercial (RC)

Proposed: Main Street and Freeway Corridor Specific Plan – Commercial/Industrial Business Park (CIBP)

(see *Figure 3, Existing and Proposed Land Use Designation*)

7. Zoning:

Existing: Regional Commercial (RC)

Proposed: Commercial/Industrial Business Park (CIBP)

(see *Figure 4, Existing and Proposed Zoning)*

8. Project Description:

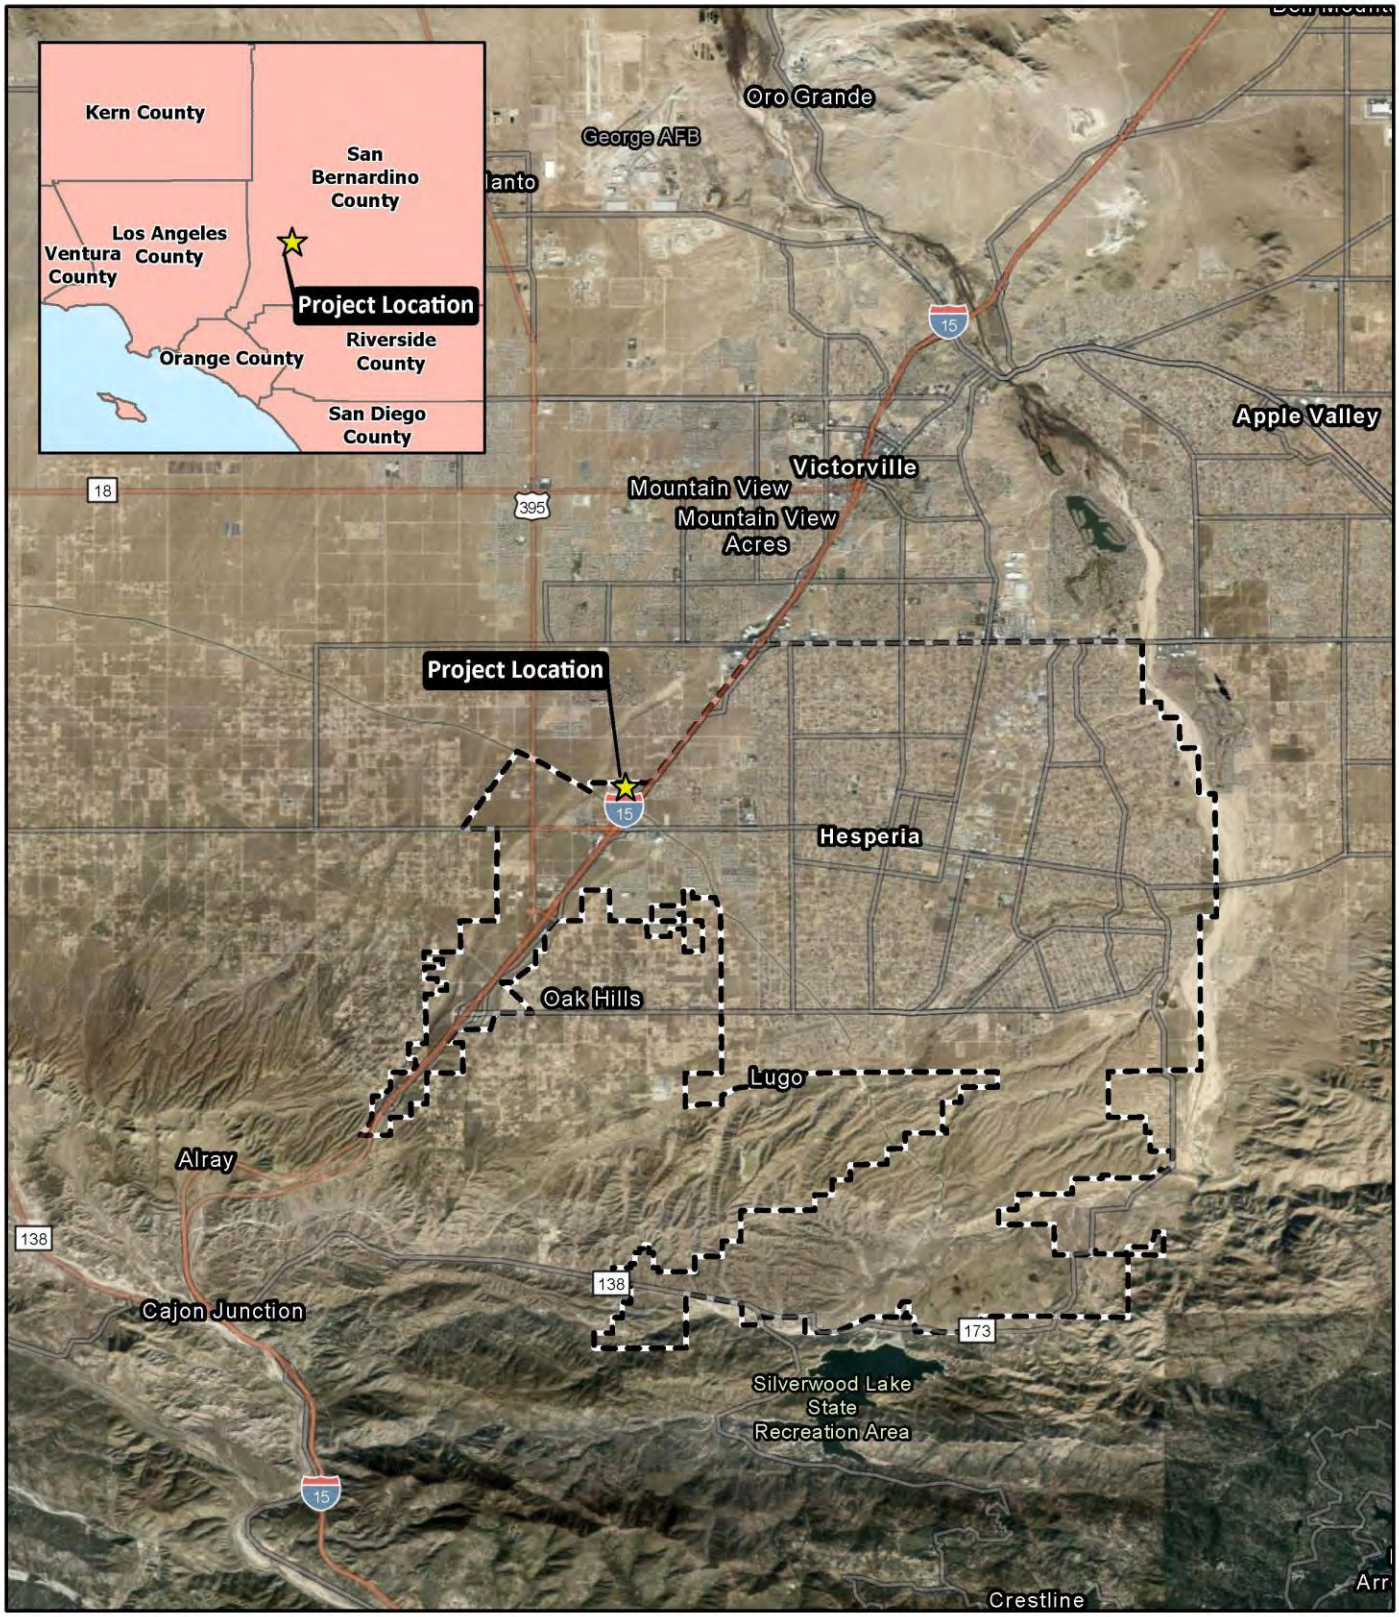
Rachamin 5, LLC., ("Applicant") proposes to construct up to a 499,714 square-foot industrial building and associated improvements, including loading docks, tractor-trailer stalls, passenger vehicle parking spaces, stormwater facilities, sidewalks, and landscape area on approximately 30.52 acres in the City of Hesperia ("City"). The Project includes approximately 10,000 square feet of office space, 489,714 square feet of industrial/warehouse space, and 255,000 square feet of landscape improvements. In total, the proposed Project includes 72 loading dock positions, 256 tractor-trailer stalls, and 251 passenger vehicle parking spaces, refer to *Figure 5, Site Plan* (July 2022). The Project site is comprised of three (3) parcels (APNs: 0405-072-52, 53, and 55) and is located south of Avenal Street, north of Palmetto Way, and west of Amargosa Road. Project implementation involves a Specific Plan Amendment to modify the Project site's Main Street and Freeway Corridor Specific Plan land use designation from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP), and a Zone Change to modify the Project site's zoning from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP). Additionally, the Project requires a Conditional Use Permit to permit the construction and operation of a warehousing and distribution center of a size greater than 200,000 square feet in the Commercial/Industrial Business Park zone.

9. Surrounding Land Uses and Setting:

Land uses surrounding the Project site primarily consist of vacant land, along with some scattered residential, industrial, and utility uses. Specific land uses located in the immediate vicinity of the Project site are provided in the table below.

Location	Existing Land Use	Land Use / Zoning Designation (MSFC-SP)
Project Site	Vacant Land	Regional Commercial (RC)
North	Vacant/Residential	City of Victorville
South	Distribution Warehouse	Commercial Industrial Business Park (CIBP)
East	Amargosa Road/I-15 Freeway	Regional Commercial (RC)
West	Vacant/Utility Building	Regional Commercial (RC)

10. Other Public Agencies Whose Approval is Required (e.g., permits, financing approval, or participation agreement)



- California Department of Fish and Wildlife

11. California Native American Tribes

Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

The City, Lead Agency, has initiated the AB 52 process sending letters the applicable tribes on October 17, 2024. Three tribes were contacted: The Cabazon Band of Mission Indians, Torres Martinez Desert Cahuilla Indians, and the Yuhaaviatam of San Manual Nation. The Yuhaaviatam of San Manual Nation provided mitigation measures. These mitigation measures are incorporated into Section XVIII. Tribal Cultural Resources of this IS/MND. Consultation will continue through grading operations as required by AB 52.

3.2 Environmental Factors Potentially Affected

The environmental factors checked below (☒) would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐	Aesthetics	☐	Agriculture and Forestry Resources	☐	Air Quality
☐	Biological Resources	☐	Cultural Resources	☐	Energy
☐	Geology/Soils	☒	Greenhouse Gas Emissions	☐	Hazards & Hazardous Materials
☐	Hydrology/Water Quality	☐	Land Use/Planning	☐	Mineral Resources
☐	Noise	☐	Population/Housing	☐	Public Services
☐	Recreation	☒	Transportation/Traffic	☐	Tribal Cultural Resources
☐	Utilities/Service Systems	☐	Wildfire	☐	Mandatory Findings of Significance

3.3 Determination

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION has been prepared.

☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been adequately analyzed in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

_____ _____

Edgar Gonzalez — Date
Senior Planner

3.4 Evaluation of Environmental Impacts

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the Project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors, as well as general standards (e.g., the Project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant Impact with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses," as described in (5) below, may be cross referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

    a) **Earlier Analysis Used.** Identify and state where they are available for review.

    b) **Impacts Adequately Addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

    c) **Mitigation Measures.** For effects that are "Less than Significant Impact with Mitigation Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the Project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources: A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

    a) the significance criteria or threshold, if any, used to evaluate each question; and

    b) the mitigation measure identified, if any, to reduce the impact to less than significant.

CHAPTER FOUR – INITIAL STUDY CHECKLIST AND SUBSTANTIATION

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
I. Transportation/Traffic – Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☒	☐	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☒	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐

Discussion of Impacts

Would the project:

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Less than Significant Impact with Mitigation Incorporated: A Traffic Impact Analysis (TIA) was prepared by Ganddini Group, Inc dated August 18, 2022. A revised TIA was completed by Ganddini Group on August 21, 2025. The purpose of the TIA is to assess

potential transportation impacts resulting from development of the proposed Project both in the context of the California Environmental Quality Act (CEQA) and City of Hesperia discretionary authority. In accordance with City of Hesperia Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment (LOS) (July 2020), existing and future conditions were analyzed for the proposed Project. Based on the study intersections identified in the approved scoping agreement, the study area consists of the following study intersections within the City of Hesperia and California Department of Transportation jurisdictions:

1. Amargosa Road (NS) at Palmetto Way (EW)
2. Key Pointe Drive (NS) at Amargosa Road (EW)
3. Key Pointe Drive (NS) at Main Street (EW)
4. I-15 SB Offramp (NS) at Main Street (EW)
5. I-15 NB Ramps (NS) at Main Street (EW)
6. Project West Driveway (NS) at Palmetto Way (EW)
7. Project Central Driveway (NS) at Palmetto Way (EW)
8. Project East Driveway (NS) at Palmetto Way (EW)

The following scenarios were analyzed during typical weekday AM and PM peak hour conditions:

- Existing
- Opening Year (2027) Without Project
- Opening Year (2027) With Project
- General Plan Buildout (2040) Without Project
- General Plan Buildout (2040) With Project

All study intersections are forecast to operate within acceptable Levels of Service (D or better) during peak hour conditions for Existing, Opening Year (2027) Without Project, and Opening Year (2027) With Project scenarios. Additionally, all study intersections except for the Key Pointe Drive (NS) at Main Street (EW) intersection are forecast to operate within acceptable Levels of Service (D or better) during peak hour conditions for General Plan Buildout (2040) With Project and General Plan Buildout (2040) Without Project scenarios.

The Key Pointe Drive (NS) at Main Street (EW) intersection is projected to operate at an unacceptable Level of Service (E or F) during the PM peak hour for General Plan Buildout (2040) With Project and General Plan Buildout (2040) Without Project scenarios. Mitigation Measure **TRANS-1** requires that the Project's fair share is contributed, as determined by the City, to construct a second southbound left turn lane at Key Pointe Drive (NS) at Main Street (EW). **TRANS-1** will ensure that the proposed Project will result in no substantial operational deficiencies at the study intersections for General Plan Buildout (2040) With Project conditions, and impacts will be reduced to less than significant.

A Trip Generation Comparison Analysis was prepared by Ganddini Group, Inc dated November 28, 2022, and updated on February 28, 2025, and updated again on July 8, 2025. The Project proposes a Specific Plan Amendment to modify the Project site's Main Street and Freeway Corridor Specific Plan land use designation from Regional Commercial (RC) to Commercial/Industrial Business Park (CIBP). The purpose of the analysis is to evaluate the change in trip generation that can be expected between the proposed Project which is permitted under the CIBP land use designation, and an alternative land use consisting of

commercial retail that is permitted under the existing RC land use designation. The proposed Project is forecast to generate approximately 1,083 daily Passenger Car Equivalent (PCE) trips, including 90 PCE trips during the AM peak hour and 81 PCE trips during the PM peak hour. The alternative land use consisting of commercial retail is forecast to generate a total of approximately 25,505 daily trips, including 870 fewer trips during the AM peak hour and 2,035 trips during the PM peak hour.

For the alternative commercial retail land use, it should be noted that commercial retail land uses will often locate next to busy roadways to attract motorists already on the street. Therefore, Ganddini reduced the initial trip generation forecast by the applicable pass-by trip rate when calculating the net new trips that will be added to the surrounding street system. However, pass-by trip adjustments were not applied to the alternative commercial retail land use trip generation in accordance with pass-by rates noted in the ITE Trip Generation Manual (11th Edition, 2021) since Amargosa Road adjacent to the Project site is a low volume roadway and pass-by trips would be minimal.

The proposed Project is forecast to generate approximately 25,505 fewer daily trips compared to a commercial retail land use of equivalent size, including 870 fewer trips during the AM peak hour and 2,035 fewer trips during the PM peak hour. Based on the trip generation comparison analysis, the proposed Project consisting of a 499, 714 square-foot industrial building is forecast to generate substantially fewer trips (up to 659% fewer daily trips) compared to an alternative land use composed of 499,714 square feet of commercial retail. Therefore, the Project would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities, impacts would be less than significant.

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Potentially Significant Impact: CEQA Guidelines Section 15064.3 subdivision (b) regards Vehicle Miles Traveled (VMT) and whether the land use project will generate vehicle miles traveled in excess of an applicable threshold of significance. Based on the VMT Analysis prepared by Ganddini Group (dated July 8, 2025), the Project is estimated to generate 73.7 vehicle miles traveled (VMT) per service population under baseline conditions and 38.9 VMT per service population under cumulative conditions. Both estimates exceed the City's established VMT significance threshold of 38.3 VMT per service population. Therefore, the Project would result in a significant transportation impact without mitigation. This topic will be further analyzed in an EIR for the Project.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less than Significant Impact: The Project would not result in any major modifications to the existing access or circulation features. The proposed Project does not include any sharp curves or traffic intersection crossings. Therefore, the Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses, a less than significant impact would occur.

d) Result in inadequate emergency access?

Less than Significant Impact: The proposed Project is compatible with the design and

operation of the street network and would not result in any major modifications to the existing access or circulation features. The Project proposes three (3) driveways off Palmetto Way. Direct access to the paved tractor-trailer parking area is provided by a 45-foot truck only driveway at the southwest corner of the site, and a 50-foot auto and truck driveway on the south side of the site. Direct access to the paved passenger vehicle parking area is provided by a 50-foot auto and truck driveway at the southeast corner of the site. The Project conforms with local, state, and federal regulations regarding circulation and traffic pattern design. The driveways accommodate traditional fire apparatus, allowing for adequate emergency access. The Project would not result in inadequate emergency access to the Project site. Thus, a less than significant impact would occur.

Mitigation Measures

Mitigation:

(a)

TRANS-1: Contribute fair share, as determined by the City, to construct a second southbound left turn lane at Key Pointe Drive (NS) at Main Street (EW).

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
II. Aesthetics – Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

4. California Department of Transportation, 2018. List of eligible and officially designated State Scenic Highways. 2018. Available on-line at: Scenic Highways | Caltrans

Discussion of Impacts

a) Would the project have a substantial adverse effect on a scenic vista?

Less than Significant Impact: The Hesperia General Plan identifies scenic resources within the City such as the Mojave River, the San Gabriel and San Bernardino Mountains, the Mojave Desert and other surrounding mountains and valleys. The City also consists of numerous washes and other natural water courses such as the Oro Grande Wash, Antelope Valley Wash, Unnamed Wash #2 (Honda Valley Wash), and Unnamed Wash #1 east of Interstate 15. The designated washes provide physical and visual relief from the urban developments and direct stormwater flow safely through the City.

The Project site is located east of the Oro Grande Wash, adjacent to the Wash Protection Overlay boundary. General Plan Exhibit OS-7 identifies three (3) preservation areas within the Oro Grande Wash and the Unnamed Wash #1 that have minimal disturbance and exemplify natural desert habitat. The designated preservation areas within the Wash Protection Overlay boundary are located approximately one (1) mile south, 3.45 miles southwest, and four (4) miles southwest of the Project site. The portion of the Oro Grande Wash adjacent to the Project site has been extensively used by off-road motorcycles and is designated as Recreational-Commercial. The Recreational-Commercial designation allows a broader range of intensive recreational uses. Although the designation allows a greater range of uses, there are restrictions on buildings and development to preserve general landform and landscape. The Recreational-Commercial designation is also utilized as a buffer between the commercial/industrial land uses located adjacent to the freeway and the residential land uses within Oak Hills.

The proposed Project consists of an industrial building up to 499,714 square feet and associated improvements, including loading docks, tractor-trailer stalls, passenger vehicle parking spaces, stormwater facilities, sidewalks, and landscape area. The Project site is not located within the Wash Protection Overlay and the proposed development does not extend into the Wash Protection Overlay boundary. Scenic views from the Project site include distant views of the San Bernardino and San Gabriel Mountains, located south, southwest, and southeast of the site as well as views of the Mojave Desert. The Project site is surrounded by vacant land and residential uses to the north, vacant land and a utility building to the west, Amargosa Road and I-15 Freeway to the east, and a distribution warehouse to the south. The existing distribution warehouse south of the Project site disrupts south, southwest, and southeast views from the Project site. Furthermore, the proposed Project is consistent in scale and character with the existing distribution warehouse. Therefore, Project impacts on a scenic vista would be less than significant.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Less than Significant Impact: The Project site is not located within or adjacent to a scenic highway corridor and does not contain scenic resources, such as rock outcroppings or historic buildings. The nearest State-designated scenic highway is a portion of SR-2 located approximately 15.7 miles southwest of the Project site. Additionally, the nearest State-eligible scenic highway is a portion of SR-138 located approximately 8.0 miles south of the Project site. Therefore, Project impacts on scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway would be less than significant.

c) In nonurbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less than Significant Impact: The Project site is located within an urbanized area and is surrounded by vacant land and residential uses to the north, vacant land and a utility

building to the west, Amargosa Road and I-15 Freeway to the east, and a distribution warehouse to the south. The proposed Project complies with the development standards of the CIBP zone and the Industrial Design Standards and Guidelines within the Main Street and Freeway Corridor Specific Plan (MSFC-SP). The design specifications for the Project will be reviewed by the City for compliance with all applicable provisions set forth by the City's Development Code and the Specific Plan. As part of the City's development review process, the Project's architectural plans are reviewed by City staff and the Planning Commission to determine whether Project design conforms to the Development Code and Specific Plan. Furthermore, the proposed Project is consistent in scale and visual character with the existing distribution warehouse south of the Project site. Therefore, the Project would not conflict with applicable zoning or other regulations governing scenic quality and impacts would be less than significant.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less than Significant Impact: The proposed Project would introduce new sources of light at the Project site including building, parking, and security lighting. Specific Plan Section II, Chapter 11, Item 14 includes design standards for outdoor lighting that apply to industrial development within the MSFC-SP. The MSFC-SP lighting standards govern the placement and design of outdoor lighting fixtures to ensure adequate lighting for public safety while also minimizing light pollution and glare and precluding public nuisances (e.g., unusually high intensity or poor directional lighting that intrudes into neighboring properties or public rights-of-way). Although the proposed Project would be required to adhere to the applicable requirements of the Specific Plan, the proposed Project would introduce new sources of light and glare as the Project includes the construction of an industrial building on an undeveloped Project site. Conformance with the Specific Plan would minimize the potential for the Project to result in adverse light and glare impacts. Therefore, additional light sources are not anticipated to be substantial enough to adversely affect day or nighttime views in the area, a less than significant impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
III. Agriculture and Forestry Resources – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to the information compiled by the California Department of Forestry and Fire Protection regarding the State's inventory of forest land, including the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined by Public Resource Code section 122220(g)), timberland (as defined by Public Resource Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    - Open Space Element
    - Conservation Element
2. Draft Environmental Impact Report for the City of Hesperia General Plan Update, May 26, 2010.
    - 3.2 – Agricultural Resources

3. California Department of Conservation (CDC), California Important Farmland Finder (CIFF), 2018

Discussion of Impacts

a) Would the project convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency to non-agricultural use?

No Impact: The CDC Farmland Mapping and Monitoring Program (FMMP) identifies and maps significant farmland. Farmland is classified using a system of five categories including Prime Farmland, Farmland of Statewide Importance, Unique Farmland, Farmland of Local Importance or Potential, and Grazing Land. The classification of farmland is determined by a soil survey conducted by the Natural Resources Conservations Service (NRCS) which analyses the suitability of soils for agricultural production. Based on the California Important Farmland Finder, the Project site is classified as "Grazing Land". Therefore, the proposed Project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use. No impact would occur.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact: The Project site is currently zoned as Regional Commercial (RC) and the proposed zoning designation is Commercial/Industrial Business Park (CIBP). According to the Hesperia General Plan Update Environmental Impact Report (EIR) Exhibit 3.2-2 Williamson Act Map, the Project site is not subject to a Williamson Act Contract. Additionally, there are no properties within the Project's vicinity subject to a Williamson Act Contract. Therefore, the proposed Project would have no potential to conflict with existing zoning for agricultural use, or a Williamson Act contract. No impact would occur.

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined by Public Resource Code section 122220(g)), timberland (as defined by Public Resource Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))?

No Impact: The Project site is designated Regional Commercial (RC) and the proposed zoning designation is Commercial/Industrial Business Park (CIBP). According to the City's Zoning Map, the Project site is not located within or adjacent to forest land, timberland, or timberland zoned Timberland Production. Therefore, no impact would occur.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact: The Project site is currently vacant and consists of disturbed native vegetation. The site contains sparsely scattered shrubs, trees, and vegetation communities that would not qualify as forest land. Thus, the proposed Project would not result in the conversion of forest land to non-forest use. No impact would occur.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or conversion of forest land to non-forest use?

No Impact: As previously discussed under Section II (a), the Project site is classified as "Grazing Land" by the California Department of Conservation and does not meet the definition of Farmland (i.e., "Prime Farmland," "Unique Farmland," or "Farmland of Statewide Importance"). The Project site contains no active agricultural uses under existing conditions. Accordingly, implementation of the Project would not convert areas on the subject property classified as Farmland to non-agricultural use. Additionally, neither the Project site nor its surroundings contain forest land. Therefore, the Project would not result in the conversion of forest land to non-forest use. No impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. Air Quality – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?	☐	☐	☒	☐

Project Impacts and Mitigation Measures

5. Amargosa and Palmetto High-Cube Warehouse Mobile Source Health Risk Assessment City of Hesperia. Urban Crossroads, Inc. February 1, 2023 (Appendix B)

Discussion of Impacts

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less than Significant Impact: The Project site is located within the Mojave Desert Air Basin (MDAB) and is under the jurisdiction of the Mojave Desert Air Quality Management District (MDAQMD). The MDAQMD encompasses approximately 20,000 square miles including San Bernardino County's High Desert and Riverside County's Palo Verde Valley. The MDAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards through the implementation of an Air Quality Management Program (AQMP).

Currently, the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) are exceeded in most parts of the MDAB. The attainment

status of criteria pollutants in the MDAB is shown in Table 4-1 below. In response, the MDAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

Table 4-1 Attainment Status of Criteria Pollutants in the MDAB

Criteria Pollutant	State Designation	Federal Designation
O_3 – 1-hour standard	Nonattainment	--
O_3 – 8-hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Nonattainment
$PM_{2.5}$	Attainment	Unclassifiable/Attainment
CO	Attainment	Unclassifiable/Attainment
NO_2	Attainment	Unclassifiable/Attainment
SO_2	Unclassifiable/Attainment	Unclassifiable/Attainment
Pb	Attainment	Unclassifiable/Attainment

Note "-" = The national 1-hour O3 standard was revoked effective June 15, 2005.

The Federal Particulate Matter Attainment Plan and Ozone Attainment Plan for the Mojave Desert set forth a comprehensive set of programs that will lead the MDAB into compliance with federal and state air quality standards. The control measures and related emission reduction estimates within the Federal Particulate Matter Attainment Plan and Ozone Attainment Plan are based upon emissions projections for a future development scenario derived from land use, population, and employment characteristics defined in consultation with local governments. Accordingly, conformance with these attainment plans for development projects is determined by demonstrating compliance with the indicators discussed below:

Criterion 1 - Local land use plans and/or population projections

The existing General Plan land use designation of the Project site is Main Street and Freeway Corridor Specific Plan – Regional Commercial (RC) and the proposed designation is Main Street and Freeway Corridor Specific Plan – Commercial/Industrial Business Park (CIBP). The Project uses are allowed under the site's proposed CIBP General Plan land use designation. The Project requires a Specific Plan Amendment and a Zone Change affecting the Project site. The CIBP land use designation allows for a maximum FAR of 0.5 and the proposed Project site has a FAR of 0.376 which is in conformance with the CIBP land use designation. The CIBP land use designation is intended to provide for service commercial, light industrial, light manufacturing, and industrial support uses, mainly conducted in enclosed buildings, which will produce only a small environmental impact, such as noise, vibration, air pollution, glare, or waste disposal.

Criterion 2 - All MDAQMD Rules and Regulations

The Project would be required to comply with all applicable MDAQMD Rules and Regulations, including, but not limited to Rules 401 (Visible Emissions), 402 (Nuisance), and 403 (Fugitive Dust).

Criterion 3 - Demonstrating that the project will not increase the frequency or severity of a violation in the federal or state ambient air quality standards

Consistency Criterion No. 3 refers to violations of the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional significance thresholds were exceeded. As evaluated in the Air Quality Impact Analysis (Appendix A), the Project's regional construction and operational-source emissions would not exceed applicable regional significance thresholds.

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. Additionally, Project construction and operational-source emissions would not exceed the regional significance thresholds. Further, the Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase. The Project is therefore considered to be consistent with the AQMP and a less than significant impact is expected.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less than Significant Impact: The CAAQS designate the Project site as nonattainment for O3 (1-hour and 8-hour) and PM10, and the NAAQS designates the Project site as nonattainment for O3 (8-hour) and PM10. The AQMD states that individual projects that do not generate operational or construction emissions that exceed the MDAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed MDAQMD thresholds for project-specific impacts would be considered cumulatively considerable. The following analysis is based on the Air Quality Impact Analysis prepared by Urban Crossroads (Appendix A).

The MDAQMD has developed regional significance thresholds for criteria pollutants, as summarized in Table 4-2. The MDAQMD's Guidelines indicate that any projects in the MDAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

Table 4-2 Maximum Daily Regional Emissions Thresholds

Pollutant	Daily Threshold (lbs/day)
CO	548 lbs/day
NO_x	137 lbs/day
VOC	137 lbs/day lbs/day
SO_x	137 lbs/day
PM_{10}	82 lbs/day

$PM_{2.5}$	65 lbs/day

*lbs/day – Pounds Per Day

Construction Related Impacts

The Project involves construction activities associated with site preparation, grading, building construction, paving, and architectural coating. Construction activities associated with the Project would result in emissions of VOCs, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$. Construction is scheduled to occur from January 2023 to December 2023. Table 4-3 presents the results of the Project's regional construction impact assessment.

Table 4-3 Emissions Summary of Construction - Without Mitigation

Year	Emissions (pounds/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2023	2.70	16.30	36.00	0.04	3.91	1.37
Winter						
2023	70.80	89.00	73.50	0.12	13.50	7.97
Maximum Daily Emissions	**70.80**	**89.00**	**73.50**	**0.12**	**13.50**	**7.97**
MDAQMD Regional Threshold	137	137	548	137	82	65
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

The Project-specific evaluation of emissions presented in Tables 4-3 demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

Operation Related Impacts

Long-term air quality impacts generally involve mobile source emissions generated from project-related traffic and stationary source emissions. Operational emissions would be expected from the following primary sources—mobile source emissions, area source emissions, energy source emissions, and on-site cargo handling equipment emissions. The estimated emissions generated by Project operations are shown in Table 4-4, which presents the results of the Project's regional operation impact assessment. The Project would not exceed the thresholds of significance established by the MDAQMD for emissions of any criteria pollutant. Therefore, operational emissions would be less than significant.

Table 4-4 Summary of Peak Operational Emissions

Source	Emissions (pounds/day)					
	VOC	NO_X	CO	SOx	PM_{10}	$PM_{2.5}$
Summer						
Mobile Source	4.67	13.60	62.00	0.21	5.55	1.22
Area Source	15.10	0.18	21.70	<0.005	0.03	0.04
Energy Source	0.14	2.55	2.14	0.02	0.19	0.19
On-Site Equipment Source	0.23	0.75	32.89	0.00	0.06	0.05

Total Max Daily Emissions	**20.14**	**17.08**	**118.73**	**0.23**	**5.83**	**1.50**
MDAQMD Regional Threshold	137	137	548	137	82	65
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**
Winter						
Mobile Source	4.27	14.60	46.70	0.20	5.55	1.22
Area Source	11.50	0.00	0.00	0.00	0.00	0.00
Energy Source	0.14	2.55	2.14	0.02	0.19	0.19
On-Site Equipment Source	0.23	0.75	32.89	0.00	0.06	0.05
Total Max Daily Emissions	**16.14**	**17.90**	**81.73**	**0.22**	**5.80**	**1.46**
MDAQMD Regional Threshold	137	137	548	137	82	65
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operational-source air pollutant emissions would not result in an exceedance of regional thresholds. The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is designated non-attainment under an applicable federal or state ambient air quality standard. Therefore, the proposed Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

c) Expose sensitive receptors to substantial pollutant concentrations?

Less than Significant Impact: Sensitive receptors in the Project study area are listed below. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site.

- Residence at 13030 Avenal Street, approximately 71 feet north of the Project site.
- Residence at 13164 Avenal Road, approximately 76 feet north of the Project site.
- Residence at 10445 Avenal Street, approximately 1,263 feet east of the Project site.
- Residence at 13500 Live Oak Street, approximately 1,071 feet southeast of the Project site.
- Residence at 10376 Wellington Road, approximately 227 feet north of the Project site.
- MGA Entertainment, Inc., located at 10200 Amargosa Road, approximately 201 feet south of the Project site.

The Project would have a potentially significant health risk impact if it results in a maximum incremental cancer risk from emission of Toxic Air Contaminants (TACs) of ≥ 10 in one million and/or a chronic & acute hazard index that is ≥1.0. In the case of the Project, the TAC of concern is diesel particulate matter (DPM) that could be generated by Project construction activities, and on-site and off-site DPM that would result from on-going Project operations. Urban Crossroads, Inc. prepared a Mobile Source Health Risk Assessment (Appendix B), dated February 1, 2023, to evaluate the potential mobile-

source emissions health risk impacts associated with the development of the proposed Project.

The maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 2.13 in one million, and the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 0.20 in one million, which is less than the MDAQMD significance threshold of 10 in one million. Additionally, non-cancer risks were estimated to be <0.01 for both construction and operational impacts, which would not exceed the applicable threshold of 1.0. Table 4-5 provides a summary of the combined construction and operational cancer and non-cancer risks.

Table 4-5 Summary of Construction and Operational Cancer and Non-Cancer Risks

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor	2.22	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor	≤0.01	1.0	NO

The Project-specific evaluation of mobile-source emissions demonstrates that the Project would not result in any potentially significant health risk impacts from exposure to DPM emissions. Project construction and operation will not cause a significant human health or cancer risk to adjacent land uses, a less than significant impact would occur.

d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

Less than Significant Impact: The Project will not involve land uses that are typically associated with odor complaints such as, agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The Project would also be required to comply with MDAQMD Rule

402 (Nuisance) to prevent occurrences of public nuisances. Therefore, odors associated with the Project construction and operations would be less than significant and no mitigation is required.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
V. Biological Resources: Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☒	☐	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☒	☐	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

12. Amargosa Road & Palmetto Way Spec. Industrial Project Biological Resources Assessment Report. Casc Engineering and Consulting, Inc. October 2022. (Appendix C)

Discussion of Impacts

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS)?

Less Than Significant Impact with Mitigation Incorporated: Casc Engineering and Consulting (Casc) biologist performed a biological site assessment and species inventory at the Project site from April through July of 2022. Prior to circulation of the Draft EIR, biological surveys will be conducted to confirm potential impacts on biological resources. The results of the assessment are included in the Biological Resource Assessment Report (Appendix C). Prior to the site assessment, Casc's biologists researched readily available information, including previous studies and reports, relevant literature, databases, agency websites, Geographic Information Systems (GIS) data, maps, aerial imagery from public domain sources, and in-house records. Desktop research was performed to assess habitats, special-status plant and wildlife species, identify jurisdictional features that may occur within the Project impact area, identify critical habitat and wildlife corridors that may occur in and near the Project site, and to identify and review local or regional plans, policies, and regulations that may apply to the Project site.

A habitat assessment of the Project site and a 500-foot buffer was assessed for special status species including Joshua tree (*Yucca brevifolia*), western burrowing owl (*Athene cunicularia)*, Mohave ground squirrel (*Xerospermophilus mohavensis*), and desert tortoise (*Gopherus agassizii*). The Biological Resources Assessment Report includes a compendium of all plants and animals observed during the site visits from April through July of 2022.

Focused surveys were conducted during the breeding season for burrowing owl (April, June, July, and August 2022). Burrowing owl was absent from the Survey Area at the time of the

surveys. No additional scat, pellets, or other sign was observed near the burrows or anywhere within the Survey Area to indicate occupation. As suitable habitat does exist at the Project Site a 14-30 day preconstruction survey for this species is required per Mitigation Measure **BIO-3**. Mitigation Measure **BIO-3** will ensure that burrowing owl have not occupied the site since the focused surveys were conducted during the 2022 breeding season.

Focused surveys were conducted for Mohave ground squirrel with a total of three trapping sessions which occurred during April, May, and June 2022. Mohave ground squirrel was not captured during the protocol level sessions and is not expected to occur at the Project site. Implementation of the Project will not result in the loss of individual Mohave ground squirrel, nor will Project development adversely affect local or regional populations of these species.

Focused surveys for desert tortoise were performed during April 2022. During the focused surveys no sign (scat, burrows, etc.) of this species was noted and this species is not expected to occur at the Project Site. Implementation of the Project will not result in the loss of individual desert tortoise, nor will Project development adversely affect local or regional populations of these species.

The Project site is undeveloped and has been disturbed by grading. The vegetation is growing and is of small stature where grading has occurred in the past. The Survey Area is dominated by disturbed native vegetation, ruderal species, and friable soils. Wildlife diversity during the field survey was generally low, likely due to the low diversity of the plant assemblage. The commonly observed species within the Survey Area were mourning dove (*Zenaida macroura*) and common raven (*Corvus corax*).Vegetation on site consists of Larrea tridentata-Ambrosia dumosa Shrubland Alliance with dominant species being white bursage (*Ambrosia dumosa*), creosote bush (*Larrea tridentata*) and Mexican tea (*Ephedra trifurca*), and Joshua tree (*Yucca brevifolia*).

Casc's biologist performed an inventory of all Joshua trees within the Survey Area. A total of fifty-two (52) live Joshua trees and seven (7) dead Joshua trees were recorded during the April 27, 2022 site visit. This data is included in *Table 1. Western Joshua Tree Inventory* within the Biological Resource Assessment Report. Per CDFW requirements, each Joshua tree noted in *Table 1. Wester Joshua Tree Inventory* was photographed, general health assessment (height, branching, clonal, etc.) performed, and a GPS location of each tree was recorded.

Shrubs and Western Joshua tree located within the Survey Area provide nesting habitat for a number of nesting bird species. Several nests of cactus wren (*Campylorhynchus brumeicapillus*) were found during the site survey. Other avian species with potential to nest on the Project Site included mourning dove (*Zenaida macroura Calypte anna*), American crow (*Corvus brachyrhynchos*), common raven (*Corvus corax*), and house finch (Carpodacus mexicanus). Turkey vulture (*Cathartes aura*) was also noted during the survey and can utilize the site for foraging and thermoregulation. Black-tailed jackrabbit (*Lepus californicus*) is expected to nest and forage on site. And coyote (*Canis latrans*) was observed foraging as evidenced by the presence of sign (scat and tracks).

With incorporation of Mitigation Measures **BIO-1** through **BIO-5**, direct or indirect impacts through habitat modifications on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service would be less than significant.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less Than Significant Impact with Mitigation Incorporated: The Joshua tree is a candidate species in the initial stages of consideration for listing as endangered under the California Endangered Species Act (CESA) (Office of Administrative Law's Notice ID #Z2019-1112-01 and Z2020-0924-01 Petition to list Western Joshua Tree (*Yucca brevifolia*) as an Endangered Species). Therefore, the incorporation of Mitigation Measures **BIO-1** (Incidental Take Permit from CDFW) and **BIO-2** (Desert Native Plant Protection and Relocation Plan) will reduce potential impacts to a less-than-significant level.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact: The Biological Resource Assessment Report states there is no riparian vegetation within the Project site boundary or in the adjacent buffer areas (see Appendix C). No ephemeral drainage channels, wetlands, or vernal pools were observed on the Project site during the survey. Development of the Project site as proposed would not result in impacts to riparian vegetation community because these resources do not occur on the Project site or within the area of project impacts. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No Impact: The Biological Resource Assessment Report states there were no distinct wildlife corridors identified on the Project site or in the immediate area. Additionally, the Project site is not within an area that includes sensitive habitats (e.g., wetlands, vernal pools, critical habitats for sensitive species, etc.). The proposed Project is not anticipated to interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites since the site does not include disturbances to any sensitive areas. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than Significant Impact with Mitigation Incorporated: During October 2020, CDFW proposed the Joshua tree as a candidate threatened species. As a candidate species, the Joshua tree must be evaluated as a threatened species. On October 15, 2020, the County of San Bernardino released a statement regarding Joshua tree preservation. Due to the CDFW listing, the County cannot issue a permit to take (by removal of transplanting) any Joshua tree (sbcounty.gov). Therefore, the Project proponent shall apply for an Incidental Take Permit (ITP) through CDFW. The Project shall also comply with the City's Municipal Code (Chapter 16.24) requiring Joshua tree preservation. Thus, with Municipal Code compliance and the incorporation of Mitigation Measures **BIO-1** (Incidental Take Permit from CDFW) and **BIO-2** (Desert Native Plant Protection and Relocation Plan),

Project impacts will be reduced to less than significant.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact: The General Plan does not identify the Project site, nor the vicinity to be within a Habitat Conservation Plan (HCP) and will not conflict with the provisions of an adopted HCP, Natural Community Conservation Plan (NCCP), or other approved local, regional or State HCP since there is no adopted HCP or NCCP in the Project area or local region. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

Mitigation Measures

Mitigation:

(a,b,e)

BIO-1: Incidental Take Permit from CDFW

Mitigation for direct impacts to the Western Joshua Trees within the Project Site shall be fulfilled through attainment of a Western Joshua Tree Conservation Act (WJTCA) Incidental Take Permit. An Incidental Take Permit (ITP) application and supporting documentation shall be submitted to CDFW for review and approval for removal of Western Joshua trees on the Project site. An ITP establishes a performance standard requiring that the impacts be "minimized and fully mitigated" with "measures that are roughly proportional in extent to the impact of the authorized taking on the species." Therefore, additional mitigation measures, such as the purchase of credits from an approved conservation or mitigation bank, land acquisition, or entry into a conservation easement, will be determined in consultation with CDFW to meet ITP requirements.

A completed application requires a completed CEQA document to accompany the ITP application and fee. CDFW requires the CEQA document to have a state clearing house number, show proof of filing fees, and that the document has been circulated. CDFW will then review the ITP and CEQA document and make a determination of mitigation.

(a,b,e)

BIO-2: Desert Native Plant Protection and Relocation Plan

A Desert Native Plant Protection and Relocation Plan (Plan) for the proposed Project shall be composed that will provide detailed specifications for the proposed treatment, avoidance, or relocation of all smoke trees (Cotinus sp.), species in the Agavacea family, mesquite (Prosopis sp.), large creosote bushes (Larrea sp.), Western Joshua trees, and any other plants protected by the State Desert Native Plant Act. Further, the Protected Desert Plant Plan will provide measures to meet the requirements of Chapter 16.24 of the City if Hesperia's (City) Municipal Code to protect, preserves, and mitigate impacts to Western Joshua tree. The City's Protected Plan Policy (HMC 16.24) states the following for commercial and industrial projects:

- The Plan shall be certified by an arborist or registered botanist.
- An application and fee shall be completed and paid to the City of Hesperia.

- Healthy, transplantable Western Joshua trees shall be relocated on-site or may be placed in an adoption program.

The Desert Native Plant Protection and Relocation Plan will address requirements of the City's Protected Plant Policy and provide details from the initial survey of the site's Western Joshua trees and other sensitive desert plant species, detailed specifications for the protection of trees to be preserved on site, and relocation/salvage requirements for those trees or bushes requiring removal and relocation. Specifically, the Plan will include site location and characteristics; relocation requirements including Western Joshua tree and other sensitive desert plant species report and removal/relocation and transplanting specifics; success criteria and associated necessary fees, protective measures prior to, during and after construction, and maintenance after construction.

(a)

BIO-3: Pre-Construction Western Burrowing Owl Clearance Surveys

In accordance with the Staff Report on Burrowing Owl Mitigation (CDFW 2012), two (2) pre-construction clearance surveys shall be conducted 14-30 days and 24 hours prior to any vegetation removal or ground disturbing activities. Once surveys are completed, the qualified biologist shall prepare a final report documenting surveys and findings. If no burrowing owls or occupied burrows are detected, Project construction activities may begin. If an occupied burrow is found within the Project Site during pre-construction clearance surveys, a burrowing owl exclusion and mitigation plan shall be prepared and submitted to the County, which may consult with CDFW for review, prior to initiating Project construction activities.

(a)

BIO-4: Passive and Active Relocation of Western Burrowing Owls

If Western burrowing owls are observed on the Project site during preconstruction surveys, CDFW shall be immediately notified to determine if avoidance of the nest is appropriate until the nest is vacated or to gain concurrence from CDFW on active or passive relocation actions. All passive or relocation activities shall be in concurrence with CDFW guidelines (Staff Report on Burrowing Owl Mitigation 2012).

If burrowing owls are present and nesting on-site the following steps shall be necessary to reduce impacts to less than significant. These steps may be augmented by recommendations from CDFW:

a. Occupied burrows shall not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that: (1) owls have not begun egg-laying and incubation; or (2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.

b. A qualified biologist shall exclude all owls from active burrows using one-way doors. Concurrently, all inactive burrows and other sources of secondary refuge for burrowing owls shall be collapsed and removed from the site.

c. Following and 24 to 48-hour observation period, all vacated burrows shall be collapsed.

d. A qualified biologist shall conduct a post-exclusion survey confirming the absence of burrowing owls on the Project site. Should newly occupied burrows be discovered on the Project site the exclusion activities shall be repeated.

(a)

BIO-5: Nesting Bird Preconstruction Surveys

If it is not feasible to avoid the nesting bird season (typically January through July for raptors and February through August for other avian species), a qualified biologist shall conduct a pre-construction nesting bird survey for avian species to determine the presence/absence, location, and status of any active nests on or directly adjacent to the Project site. If active nests are located, the extent of the survey buffer area surrounding the nest should be established by the qualified biologist to ensure that direct and indirect effects to nesting birds are avoided. To avoid the destruction of active nests and to protect the reproductive success of birds protected by the MBTA and the CFGC, the nesting bird survey shall occur no earlier than seven (7) days prior to the commencement of construction.

In the event that active nests are discovered, a suitable buffer (distance to be determined by the biologist) shall be established around such active nests, and no construction within the buffer allowed, until the biologist has determined that the nest(s) is no longer active (i.e., the nestlings have fledged and are no longer reliant on the nest).

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Cultural Resources – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐

4. Cultural and Paleontological Resources Assessment for Palmetto Way Industrial Building Project, City of Hesperia, San Bernardino County, California. Duke Cultural Resources Management, LLC. September 23, 2022. (Appendix D)

Discussion of Impacts

a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant in §15064.5 of the CEQA Guidelines?

Less than Significant Impact: A Cultural and Paleontological Resources Assessment was prepared by Duke Cultural Resources Management, LLC (Duke CRM) dated September 23, 2022 (Appendix D). On September 12, 2022, Duke CRM staff performed a records search. The records search included a review of all recorded cultural resources within a ½ mile radius of the Project, as well as a review of known cultural resource survey and excavation reports. The records search identified three (3) cultural resources within ½ mile of the Project, none of which are located within the current Project area. Resource P-36-0021351 is the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR)-eligible California Aqueduct, located 670 feet from the southwest corner of the Project. Resource P-36-021288, located 2,400 feet northeast of the Project area, is a mid-20th century trash deposit consisting primarily of cans for which CRHR eligibility has not been determined. P-36-021366 is a mid-20th century trash scatter for which CRHR eligibility has not been determined.

On July 27, 2022, Duke CRM archaeologist conducted an intensive pedestrian field survey of the Project area. No cultural or paleontological resources were observed during the field survey. The Project site consisted of little to no vegetation with scattered debris and a motocross track established on the eastern half of the Project area. As a result of negative findings during the South Central Coastal Information Center (SCCIC) records search and field survey, Duke CRM finds that the Project has a low potential to impact cultural resources.

The Project site is currently vacant and there are no known historically or culturally significant resources, structures, buildings, or objects located within the Project area. The Project site does not contain any previously recorded cultural and/or paleontological resources. In addition, the property has been disturbed by grading and motor vehicle use on the site. Thus, the Project site would not cause an adverse change in the significance of a historical resource and impacts to historic resources would be less than significant.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the CEQA Guidelines?

Less than Significant Impact with Mitigation Incorporated: As concluded in the Cultural and Paleontological Resources Assessment prepared by Duke CRM (Appendix D), the Project area does not contain previously recorded cultural and/or paleontological resources. In addition, the property has been disturbed by grading and motor vehicle use on the site. Although, it is not anticipated that unknown cultural resources exist on-site, Mitigation Measure **CUL-1** is identified to ensure that in the event that unanticipated resources are encountered during grading activities, potential impacts would remain less than significant. In the event archeological resources are discovered, grading activities must cease, a qualified archeologist must be consulted, and all discoveries must be documented accordingly. Implementation of the Project is not anticipated to result in a substantial adverse change in the significance of an archeological resource pursuant to Section 15064.5 of the CEQA Guidelines. A less than significant impact with mitigation incorporated would occur.

c) Disturb any human remains, including those outside of formal cemeteries?

Less than Significant Impact with Mitigation Incorporated: Duke CRM conducted a review of online historical aerial photographs and historical USGS quad maps utilizing University of California, Santa Barbara Frame Finder, historicaerials.com, and USGS Historical Topographic Map Explorer. Review of the images dating back to 1902 did not identify possible formal or informal cemeteries in the area. Therefore, a low likelihood exists that human remains could be uncovered during ground-disturbing activities. However, these findings do not preclude the existence of previously unknown human remains located below the ground surface, which may be encountered during construction excavations associated with the proposed Project. As a result, Mitigation Measure **CUL-1** has been identified to reduce potentially significant impacts to previously unknown human remains that may be unexpectedly discovered during project implementation to a less than significant level. Consistent with State law, if at any time during grading human remains are found, the Project is to be conditioned to halt work and contact the San Bernardino County Coroner's Office. Based on compliance with existing regulations and the implementation of Mitigation Measure **CUL-1**, the Project's potential to disturb human remains is considered less than significant with mitigation.

Mitigation Measures

Mitigation:

(b,c)

CUL-1: Inadvertent Finds

In the event that cultural resources are discovered during Project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease. A qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards shall be retained to assess the significance of the find. Work may continue on other portions of the Project site outside the buffered area during this assessment. If the discovery is determined to be of Native American origin, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as outlined in TCR-1, and provided information following the archaeologist's initial assessment to allow for Tribal input on the significance and recommended treatment of the resource.

CUL-2: Monitoring Plan

If significant pre-contact cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

CUL-3: Human remains discovery

If human remains or funerary objects are encountered, all work shall stop in the area (within a 100-foot buffer of the find) and the County Coroner must be notified immediately in accordance with California Health and Safety Code Section 7050.5. No further disturbance shall occur until the Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. If the remains are determined to be prehistoric, the Coroner shall notify the Native American Heritage Commission (NAHC), which will identify and notify the Most Likely Descendant (MLD). With permission of the landowner or authorized representative, the MLD may inspect the site and shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and nondestructive analysis of the remains and any associated items.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. Energy – Would the project:				
a) Result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a State or Local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    a. Conservation Element
2. City of Hesperia Climate Action Plan, July 20, 2010.
3. Amargosa and Palmetto High-Cube Warehouse Energy Analysis City of Hesperia. Urban Crossroads, Inc. February 1, 2023. (Appendix E)

Discussion of Impacts

a) Result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less than Significant Impact: The proposed Project would impact energy resources during construction and operation. The construction activities for the Project would include site preparation, grading, building construction, paving, and architectural coating. The Project would consume energy resources during construction in three (3) general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project site, construction worker travel to and from the Project site, as well as delivery and haul truck trips (e.g., hauling of demolition material to off-site reuse and disposal facilities);
2. Electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power; and,
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Urban Crossroads prepared an Energy Analysis dated February 1, 2023, to quantify anticipated energy usage associated with construction and operation of the Project, determine if the usage amounts are efficient, typical, or wasteful for the land use type, and to emphasize avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy.

Construction Related Impacts

Construction of the Project would result in fuel consumption from construction tools and equipment, vendor and haul truck trips, and vehicle trips generated from construction workers traveling to and from the site. Construction activities and corresponding fuel energy consumption would be temporary and localized. Construction equipment used by the Project would result in single event consumption of approximately 41,845 gallons of diesel fuel (Appendix E). There are no unusual Project characteristics that would cause construction equipment to be less energy efficient compared with other similar construction sites in other parts of the State. Additionally, Project construction equipment would conform to the applicable CARB emissions standards, acting to promote equipment fuel efficiencies.

Operational Related Impacts

Project facility operational energy demands are estimated at 9,499,636 kBTU/year of natural gas and 2,457,929 kWh/year of electricity. Natural gas would be supplied to the Project by SoCalGas, and electricity would be supplied by SCE. The Project proposes conventional industrial uses reflecting contemporary energy efficient/energy conserving designs and operational programs. The Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other industrial uses of similar scale and configuration.

The Project includes the implementation of sidewalks, facilitating and encouraging pedestrian access. Facilitating pedestrian and bicycle access would reduce VMT and associated energy consumption. In compliance with the California Green Building Standards Code and City requirements, the Project would promote the use of bicycles as an alternative means of transportation by providing short-term and/or long-term bicycle parking accommodations. Additionally, the Project will comply with the applicable Title 24 standards. Compliance itself with applicable Title 24 standards will ensure that the Project energy demands would not be inefficient, wasteful, or otherwise unnecessary.

As supported by the preceding, Project construction and operations would not result in the inefficient, wasteful, or unnecessary consumption of energy. Further, based on the results of the Energy Analysis, the energy demands of the Project can be accommodated within the context of available resources and energy delivery systems. The Project would therefore not cause or result in the need for additional energy-producing or energy transmission facilities. The Project would not create or otherwise result in a potentially significant impact affecting energy resources or energy delivery systems, a less than significant impact would occur.

b) Conflict with or obstruct a State or Local plan for renewable energy or energy efficiency?

Less Than Significant Impact: The applicable state plans that address renewable energy and energy efficiency are CALGreen, the California Energy Code, and California's Renewable Portfolio Standard. Under the California Renewables Portfolio Standard, the State of California is transitioning to renewable energy through the California's Renewable Energy Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. Electricity production from renewable sources is generally considered carbon neutral. Executive Order S-1408, signed in November 2008, expanded the state's renewable portfolios standard (RPS) to 33 percent renewable power by 2020. This standard was adopted by the legislature in 2011 (SB X1-2). Senate Bill 350 (de Leon) was signed into law September 2015 and establishes tiered increases to the RPS—40 percent by 2024, 45

percent by 2027, and 50 percent by 2030. Senate Bill 350 also set a new goal to double the energy-efficiency savings in electricity and natural gas through energy efficiency and conservation measures. On September 10, 2018, Governor Brown signed SB 100, which supersedes the SB 350 requirements. Under SB 100, the RPS for public owned facilities and retail sellers consist of 44 percent renewable energy by 2024, 52 percent by 2027, and 60 percent by 2030. Additionally, SB 100 also established a new RPS requirement of 50 percent by 2026. The bill also established a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045. Under SB 100 the state cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

The statewide RPS goal is not directly applicable to individual development projects, but to utilities and energy providers such as SCE, which is the utility company that would provide all electricity needs for the Project. Additionally, the Project would comply with the Building Energy Efficiency Standards (Title 24) and CALGreen. Therefore, implementation of the Project would not conflict or obstruct plans for renewable energy. Thus, a less than significant impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. Geology and Soils– Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault. Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐

4. Geotechnical Investigation Proposed Warehouse NWC Palmetto Way and Amargosa Road Hesperia, California. Southern California Geotechnical, Inc. July 18, 2022. (Appendix F)

Discussion of Impacts

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault. Refer to Division of Mines and Geology Special Publication 42.

Less than Significant Impact: The Alquist-Priolo Earthquake Fault Zoning Act (Act) was passed in 1972 to mitigate the hazard of surface faulting to structures for human occupancy. The Act's main purpose is to prevent the construction of buildings used for human occupancy on the surface trace of active faults. The Act requires the State Geologist to establish regulatory zones, known as "Alquist-Priolo (AP) Earthquake Fault Zones," around the surface traces of active faults and to issue appropriate maps. If an active fault is found, a structure for human occupancy cannot be placed over the trace of the fault and must be set back from the fault (typically 50 feet).

Neither the site nor any area within the jurisdictional boundaries of the City are within an Alquist-Priolo Earthquake Fault Zone. The Project site is not included within any Earthquake Fault Zones as created by the Alquist-Priolo Earthquake Fault Zoning Act. A Geotechnical Investigation was prepared by Southern California Geotechnical (SCG), dated July 18, 2022. SCG did not identify any evidence of faulting during geotechnical investigations. Additionally, the San Andreas Fault is the closest identified Alquist-Priolo Earthquake Fault Zone to the Project site, approximately 12 miles southeast of the site. As there are no known faults located on the Project site and there is no evidence of faulting, the potential for the proposed Project to expose people or structures to adverse effects related to ground rupture is nil. Therefore, a less than significant impact would occur.

ii. Strong seismic ground shaking?

Less than Significant Impact: The Project site is located in a seismically active area of southern California and is expected to experience moderate to severe ground shaking during the lifetime of the Project. However, as stated under section (i) above, the Project site is not located within an Alquist-Priolo Earthquake Fault Zone. The ground shaking risk is not considered substantially different than that of other properties within the City. As a mandatory condition of Project approval, the City will require that the proposed structures be constructed in accordance with the 2019 California Building Code (CBC), Title 24, and the City Building Code, which are

designed to preclude significant adverse effects associated with strong seismic ground shaking. The future buildings and workers on the Project site have the potential to be exposed to strong seismic ground shaking associated with seismic events. Adherence to the recommendations outlined in the City's General Plan and Municipal Code, as well as conditions of approval and the 2019 California Building Code (CBC) Guidelines that are currently adopted by the City, will ensure potential impacts related to strong seismic shaking are less than significant.

iii. Seismic-related ground failure, including liquefaction?

Less than Significant Impact: Liquefaction is a phenomenon associated with shallow groundwater combined with the presence of loose, fine sands, and/or silts within a depth of 50-feet below grade or less. Liquefaction occurs when saturated, loose, fine sands and/or silts are subjected to strong ground shaking resulting from an earthquake event. Due to the increasing overburden pressure with depth, liquefaction of granular soils is generally limited to the upper 50 feet of a soil profile. Increasing duration of the ground shaking during a seismic event can also increase the potential for liquefaction.

Based on review of the City's General Plan Seismic Hazard Zones map, the Project site is not located within a designated zone of liquefaction susceptibility. Additionally, the site is underlain by moderate to high strength alluvium, and the lack of a historic high groundwater table within the upper 50± feet. Therefore, liquefaction is not considered to be a design concern for the Project (Appendix F), a less than significant impact would occur.

iv. Landslides?

Less than Significant impact: Seismically induced landslides and slope failures are common occurrences during or soon after large earthquakes. According to City's General Plan Seismic Hazard Zones map, the Project site is not located within an area that has potential for earthquake-induced landslides. Additionally, the Project site and surrounding areas are relatively flat. Project implementation would not directly or indirectly induce risk of landslide, a less than significant impact would occur.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Less than Significant Impact: Construction activities associated with the Project would involve earth movement and the exposure of soil, which would temporarily increase erosion susceptibility. In the long-term, development of the subject property would increase impervious surface cover and permanent landscaping on the Project site, thereby reducing the potential for erosion and loss of topsoil that currently occurs. The Project would be required to adhere to standard regulatory requirements, including, but not limited to, requirements of the City's National Pollutant Discharge Elimination System (NPDES) Construction General Permit, which requires adoption of an appropriate Storm Water Pollution Prevention Plan (SWPPP) and implementation of Best Management Practices (BMPs) to reduce erosion from storm water runoff. Based on the preceding, potential impacts associated with erosion or changes in topography, including loss of topsoil are considered less than significant.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less than Significant Impact with Mitigation Incorporated: Based on a lack of documentation regarding the placement and compaction of the existing fill materials, the soils of the Project site are considered to consist of undocumented fill. Therefore, the fill soils in their present condition are not suitable for the support of the foundation loads of the proposed building. The fill soils are underlain by native alluvium which possesses varying strengths and densities. The results of laboratory testing indicate that the near-surface soils within the upper 5 to 6± feet possess a potential for moderate to severe collapse when exposed to moisture infiltration as well as moderate consolidation when exposed to load increases in the range of those that will be exerted by the new foundations (Appendix F).

The Project will be required to comply with all requirements and recommendations outlined in the Geotechnical Investigation prepared by Southern California Geotechnical, as required by Mitigation Measure **GEO-1**. Furthermore, the Project will comply with all applicable provisions of the Uniform Building Code (UBC) and California Building Code (CBC) that would act to minimize any unstable soils or unstable geologic units that may be encountered. On this basis, the potential for the Project to be located on a geologic units or soil that is unstable, or that would become unstable as a result of the Project and potentially result in on- or off-site landslides, lateral spreading, subsidence, liquefaction or collapse is less than significant with mitigation incorporated.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less than Significant Impact: Expansive soils contain significant amounts of clay particles that swell considerably when wet and shrink when dry. Foundations constructed on these soils are subject to uplifting forces caused by swelling. Without proper mitigation measures, heaving and cracking of both building foundations and slabs-on-grade could result. Laboratory testing performed on a representative sample of the near surface soils indicates that these materials are considered to be non-expansive. Therefore, no design considerations related to expansive soils are considered warranted for the Project site (Appendix F). The subsurface soils at the site are considered non-expansive and a less than significant impact would occur.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste-water disposal systems where sewers are not available for the disposal of waste water?

No Impact: The Project site is serviced by the City of Hesperia Water District for potable water and sewage. The Project does not propose to utilize a septic tank or alternative wastewater disposal system. Therefore, no impact will occur.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less than Significant Impact with Mitigation Incorporated: A Cultural and Paleontological Resources Assessment was prepared by Duke Cultural Resources Management, LLC (Duke CRM) dated September 23, 2022 (Appendix D). Duke CRM requested that the Western

Science Center (WSC) perform a paleontological records search for known fossil localities within, and in the vicinity of, the Project site. On May 27, 2022, the WSC found that there have been no paleontological resources discovered within the Project area or within a one (1) mile search radius. However, significant fossils have been discovered in similar sediments in other areas of southern California.

The Project is located on Pleistocene age (Qa) sediments. Research indicates that there is a high sensitivity for paleontological resources in the old alluvial deposits that underlie the Project site. Therefore, significant and unique paleontological resources may be impacted by the Project during earth disturbing activities in this area. Mitigation Measure **GEO-2** will ensure that paleontological monitoring is conducted where ground disturbance exceeds four (4) feet below surface within the Project site, which reduces the potential for impacts to paleontological resources to a level that is less than significant under CEQA.

Mitigation Measures

Mitigation:

VII. (c)

GEO-1: **Grading and Construction**
The Project shall incorporate the recommendations provided in the Geotechnical Investigation prepared by Southern California Geotechnical, dated July 18, 2022 (Appendix F). The recommendations are presented in the following sections of the report: Site Grading Recommendations, Construction Considerations, Foundation Design and Construction, Floor Slab Design and Construction, Retaining Wall Design and Construction, and Pavement Design Parameters.

(f)

GEO-2: **Paleontological Monitoring**
A paleontological monitor shall be present during ground disturbing activities below four (4) feet in depth within the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation).

1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols.
2. The paleontological monitor shall be present full-time during ground disturbance below 4 feet in depth within the Project, including but not limited to grading, trenching, utilities, and off-site easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced.
3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered.
4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area.

5. In consultation with the qualified paleontologist, the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared.
6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately.
7. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation, scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find.

5. Amargosa and Palmetto High-Cube Warehouse Greenhouse Gas Analysis City of Hesperia. Urban Crossroads, Inc. February 1, 2023. (Appendix G)

Discussion of Impacts

a) Generate greenhouse gas emissions either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact: Urban Crossroads conducted a Greenhous Gas Analysis for the proposed Project, dated February 1, 2023. The analysis provides the estimated GHG emissions that will result from Project construction and operation. Construction related GHG emissions are quantified and amortized over the life of the Project, which is identified as a 30-year period, in accordance with the MDAQMD which follows the South Coast Air Quality Management District (SCAQMD) recommendation. Project operational emissions would consist of mobile source emissions, area source emissions, energy source emissions, on-site cargo handling equipment emissions, solid waste management, and water supply, treatment, and distribution.

On July 20, 2010, the City of Hesperia adopted the Climate Action Plan (CAP), which provides a framework for reducing GHG emissions and managing resources to best prepare for a changing climate. The CAP recommends GHG emissions targets that are consistent with the reduction targets of the State of California and presents a number of strategies that will make it possible for the City to meet the recommended targets.

Prior to the implementation of current regulatory requirements, Project GHG emissions would total approximately 5,793.17 MTCO2e per year. However, after implementation of current regulatory requirements, Project GHG emissions would total approximately 4,894.17 MTCO2e per year. The Project GHG emissions estimates presented in Table 8-1 reflect contemporary GHG emissions regulatory actions enacted subsequent to adoption of the City's 2010 CAP. These regulatory actions (notably implementation of the Renewables Portfolio Standard) would yield an approximate 9% reduction in Project GHG emissions from sources other than vehicles. An additional 7% reduction in GHG emissions (primarily from vehicular/mobile sources) would be achieved through on-going implementation of the Pavley Fuel Efficiency Standards. These measures, which are not reflected in the CAP, would reduce Project GHG emissions by approximately 16% (Appendix G).

Table 9-1 Project Net Greenhouse Gas Emissions with Implementation of Current Regulatory Requirements

Source	Emissions (MT/yr)				
	CO_2	CH_4	N_2O	R	Total CO_2E
Annual construction-related emissions amortized over 30 years	28.93	1.00E-03	1.33E-03	2.50E-02	29.37
Mobile Source	2,895.00	0.06	0.25	4.43	2,975.00
Area Source	7.30	< 0.005	< 0.005	0.00	7.51
Energy Source	893.00	0.08	0.01	0.00	896.00
Water Source	146.00	3.77	0.09	0.00	267.00
Waste Source	41.91	4.19	0.00	0.00	147.00
On-Site Equipment Source	0.00	0.00	0.00	0.00	572.30
Total CO_2E (All Sources)	**4,894.17**				

The Project has the potential to generate a total of approximately 4,894.17 MTCO2e/yr, after control measures as summarized on Table 8-1, and meets the City's CAP target of a 12% reduction. While the City has not formally adopted a numeric significance threshold, it has previously relied on the SCAQMD-recommended threshold of 3,000 MTCO2e per year to evaluate whether a project may result in a significant GHG impact under CEQA. The SCAQMD, as the expert air quality agency in Southern California, provides substantial evidence that this threshold is consistent with State policy goals and 2050 GHG reduction targets, capturing approximately 90% of emissions from similar land uses, consistent with Executive Order S-3-05's goal of reducing GHG emissions to 80% below 1990 levels by 2050. This threshold applies to residential, commercial, and industrial projects, including warehouses and industrial parks (SCAQMD 2008).

Because the Project's estimated GHG emissions (4,894.17 MTCO2e per year) exceed the SCAQMD 3,000 MTCO2e/year threshold, the Project would be considered to have the potential to result in a significant GHG impact. This impact will be further analyzed in the Draft Environmental Impact Report (DEIR), and Appendix G will be updated to include detailed SCAQMD threshold analyses. Compliance with the CAP, while reducing emissions, does not eliminate the need for this additional analysis.

An individual project cannot generate enough GHG emissions to influence global climate change. The project participates in this potential impact by its incremental contribution combined with the cumulative increase of all other sources of GHGs, which when taken together may have a significant impact on global climate change... The project exceeds the SCAQMD thresholds and therefore impacts are potentially significant and will be studied further in the Project's EIR.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact: The Project exceeds the SCAQMD-recommended threshold of 3,000 MTCO2e per year. Therefore, the Project has the potential to result in a significant GHG impact. This impact will be further analyzed in the Draft Environmental Impact Report (DEIR), and the Greenhouse Gas Analysis (Appendix G), will be updated to include a detailed analysis of the Project relative to the SCAQMD threshold.

Mitigation Measures

Mitigation:

Mitigation measures will be evaluated in the Project's DEIR.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact

Discussion of Impacts

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact: Project implementation would not cause routine transport, use, or disposal of hazardous materials. However, equipment used and stored at the site during Project construction and operation will utilize substances considered to be hazardous by regulatory bodies, such as diesel fuel and gasoline. These types of materials are not acutely hazardous, and all storage, handling, use, and disposal of these materials are regulated by federal and state requirements. Project construction and operational activities are required to strictly adhere to federal and state requirements. The use, transport, storage, and disposal of hazardous materials must comply with existing regulations established by several agencies, including the Department of Toxic Substances Control (DTSC), the U.S. Environmental Protection Agency (EPA), the US Department of Transportation (USDOT), the Occupational Safety & Health Administration (OSHA), the California Code of Regulations (CalOSHA), and the state Unified Hazardous Waste and Hazardous Materials Management Regulatory Program. The amount of hazardous material discharge during construction is expected to be less than significant, and the Project would be required to comply with applicable laws, ordinances, and procedures. Thus, Project impacts would be less than significant.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact: As discussed in Section IX(a), any handling activities associated with hazardous or potentially hazardous materials would comply with all applicable federal, state, and local agencies and regulations. Both short-term construction and long-term operation of the proposed Project would comply with all applicable federal, State, and local agencies and regulations with the policies and programs established by agencies such as the EPA, Department of Transportation, Department of Toxic Substances Control, Cal/OSHA, Resource Conservation and Recovery Act (RCRA), and the state Unified Hazardous Waste and Hazardous Materials Management Regulatory Program. Adherence to the applicable policies and programs of these agencies would

ensure that any transport or interaction with hazardous materials would occur in the safest possible manner, reducing the opportunity for the accidental release of hazardous materials into the environment. Any handling of hazardous materials would be limited in both quantities and concentrations. Based on the preceding, impacts would be less than significant.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact: The closest schools to the Project site are Topaz Preparatory Academy approximately 1.0 mile east of the site, Mirus Secondary School approximately 1.3 miles southeast of the site, and Maple Elementary School approximately 1.5 miles northeast of the site. As previously discussed, handling activities associated with hazardous or potentially hazardous materials would comply with all applicable federal, state, and local agencies and regulations. Project construction and operation is anticipated to handle and use diesel fuel and gasoline. Any handling of hazardous materials would be limited in both quantities and concentrations. Given that there are no schools within one-quarter mile of the proposed Project, no impact would occur.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact: Government Code Section 65962.5 describes that before an application for a development project is completed, the Applicant and/or Lead Agency shall indicate whether the site is included on any of the lists compiled pursuant to that section and identify which list(s). According to the Cortese List (DTSC, EnviroStor 2019), the Project site is not included on a list of hazardous materials sites. Nor are there any hazardous materials sites listed in the vicinity of the Project site. Therefore, the proposed Project would not create a significant hazard and no impact would occur.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact: The nearest airport is Hesperia Airport approximately 5.3 miles southeast of the site. The Project site is not within an airport influence area or safety zone. Given the Project site's distance from any airport, the Project will not create a safety hazard or excessive noise for people residing or working in the Project area. Thus, no impact would occur.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact: The City adopted its Hazard Mitigation Plan (HMP) in 2017. The HMP requires the proposed Project to comply with the City's Emergency Operations Plan. The Project site and immediate surroundings do not contain emergency shelters or facilities. Additionally, the Project does not involve construction or operational

characteristics which would interfere or impact emergency response or evacuation of the Project site or immediate surrounding area. Egress and ingress to the Project site will be maintained and circulation on-site is provided to comply with County and City requirements. Therefore, potential impacts to the implementation of or physical interference with an adopted emergency response plan or emergency evacuation plan would be less than significant and no mitigation would be required.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less than Significant Impact: Impacts associated with wildland fires are also addressed in Section XX, *Wildfire,* of this Initial Study. The potential for wildland fires represents a hazard, particularly within areas adjacent to open space or within close proximity to wildland fuels. The proposed Project would remove the sparse desert vegetation that currently occupies the Project site. Additionally, the Project would comply with the California Fire Code. The San Bernardino County Fire Station 305 is located approximately 2.7 southwest of the Project site. Compliance with the San Bernardino County Fire Department's regulations and policies would ensure that the Project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Impacts would be less than significant.

7. Conceptual Water Quality Management Plan for Hesperia Spec Industrial. WestLAND Group, Inc. July 13, 2022. (Appendix I)

Discussion of Impacts

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Less than Significant Impact: In order to comply with the New Development and Redevelopment Standards of the Mojave River Watershed NPDES Permit (Phase II Small MS4 General Permit), a Conceptual Water Quality Management Plan (WQMP) was prepared by WestLAND Group, dated July 13, 2022 to determine the best capability of the Project to use BMPs to manage and capture stormwater runoff. With the implementation of the Stormwater Quality Control Measures outlined in the WQMP as approved by the City, the volume of stormwater runoff and potential pollution loads in stormwater runoff will be reduced to the maximum extent possible. The WQMP describes spill prevention, control and cleanup BMPs which reduce the potential for soil contamination and/or groundwater contamination.

Additionally, WestLAND Group prepared a Hydrology Report dated July 2022. The purpose of the Hydrology Report is to identify the mitigation measures that must be implemented during final design in order to ensure that the project does not have adverse impacts to downstream properties. Based on the report, the Project includes a combination of an at grade detention basin and underground infiltration basin to treat stormwater runoff. The proposed development provides enough volume to capture the entire runoff volume generated from a 100-year storm event and does not release any runoff off-site for up to a 100-year storm event. The Project conforms with conditions related to water quality standards and waste discharge requirements to reduce the potential to substantially degrade surface or groundwater quality. Thus, a less than significant impact would occur.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less than Significant Impact: The Project site is serviced by the Hesperia Water District. Water supply is obtained entirely from groundwater located in the Alto Sub-Basin of the Mojave River Watershed and groundwater aquifer. The City's municipal water system extracts its water supply from the underground aquifers through 18 active groundwater wells located throughout the City. According to the Hesperia Water District 2020 Urban Water Management Plan (UWMP), Hesperia has reliable supplies to meet its retail customer demands in normal, single dry years, and five consecutive dry year conditions through 2045.

Development of the proposed Project would increase the amount of impervious surface on-site which could reduce the amount of water percolating down into the underground aquifer that underlies the Project site and a majority of the City. However, the Project's proposed drainage system implements the BMPs provided in the Hydrology Report and WQMP to ensure that Project impacts are less than significant.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) result in substantial erosion or siltation on- or off-site;

Less than Significant Impact: The proposed Project would not alter the existing drainage pattern of the site or area in a manner which would result in substantial erosion or siltation on- or off-site. Project flows are collected through the nearest catch basin which is conveyed to infiltration/retention basins via a storm drain system. The storm drain system is designed to efficiently direct flow into infiltration/detention basins, as well as a single underground infiltration basin. The proposed Project conveys flows into the underground infiltration system and when filled, flows will be conveyed into the infiltration/retention basin. The proposed development provides enough volume to capture the entire runoff volume generated from a 100-year storm event and does not release any runoff off-site for up to a 100-year storm event (Appendix I). Therefore, a less than significant impact would occur.

ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; or

Less than Significant Impact: As indicated in section i) above, the proposed Project includes a combination of above ground and underground infiltration/retention basins to capture Project runoff. Therefore, Project implementation would have a less than significant impact on surface runoff both on- and offsite.

iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less than Significant Impact: The Project proposes enough volume to capture the entire runoff volume generated from a 100-year storm event and will not release any runoff off-site for up to a 100-year storm event. To store the volume, the development proposes a combination of above ground and underground infiltration/retention basins. Since the development will not release runoff off-site, the development will not negatively impact downstream conditions (Appendix H). Therefore, Project impacts would be less than significant.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

No Impact: The Project site is not located in a flood hazard, tsunami, or seiche zone. The Pacific Ocean is located over 70 miles southwest of the Project site. Consequently, there is no potential for tsunamis to impact the Project. In addition, no steep hillsides subject to mudflow are located on or near the Project site. According to the City's General Plan, the Project site is not located within a dam inundation area and there is

no levee located within the vicinity of the Project site. There is no potential for inundation. Accordingly, the Project site has no potential to be impacted by seiches, mudflows, and/or tsunamis. No impact would occur.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less than Significant Impact: A WQMP and Hydrology Report were prepared by WestLAND Group to determine the best capability of the Project to use BMPs to manage and capture stormwater runoff. With the implementation of the Stormwater Quality Control Measures outlined in the WQMP and Hydrology Report as approved by the City, the volume of stormwater runoff and potential pollution loads in stormwater runoff will be reduced to the maximum extent possible. The Project is designed to meet City regulations regarding construction and operation for the Project. Thus, the Project will comply with City water quality control plans and sustainable groundwater management plans to reduce impact to a less than significant impact level.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. Land Use and Planning – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    a. Land Use Element
2. Hesperia Main Street and Freeway Corridor Specific Plan, amended July 15, 2021.
    a. Chapter 5 Land Use Districts
3. Draft Environmental Impact Report for the City of Hesperia General Plan Update, May 26, 2010.
    a. 3.9 – Land Use Planning

Discussion of Impacts

Would the project:

a) Physically divide an established community?

No Impact: According to the City's General Plan, the Project site is designated as Regional Commercial (RC) and the proposed land use designation is Commercial/Industrial Business Park (CIBP). The Project site is currently vacant, and the surrounding areas include vacant land and residential uses to the north, vacant land and a utility building to the west, Amargosa Road and I-15 Freeway to the east, and a distribution warehouse to the south. Therefore, no established communities exist within the Project site, nor does the Project propose or require elements or operations that would divide an off-site community. Based on the preceding, the Project would not physically divide an established community and no impact would occur.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant Impact: The General Plan land use designation for the Project site is Regional Commercial (RC) and the proposed land use designation is Commercial/Industrial Business Park (CIBP). The Project is consistent with the land use designation of CIBP (with approval of a Conditional Use Permit, as discussed below). Approval of the proposed Specific Plan Amendment would eliminate any potential inconsistency between the proposed Project and the site's existing land use designation.

As the City's General Plan Land Use Map and the Zoning Map are the same, the existing zoning designation for the Project site is Regional Commercial (RC) and the proposed zoning designation is Commercial/Industrial Business Park (CIBP). Therefore, approval of the proposed Zone Change would eliminate any potential inconsistency between the proposed Project and the site's existing zoning (with approval of a Conditional Use Permit, as discussed below).

Among the permitted uses in the CIBP zone, warehousing and wholesale distribution centers are permitted at 200,000 square feet or less. Warehouses and wholesale distribution centers over 200,000 square feet are conditionally permitted. The Specific Plan states that the maximum gross floor area ratio in CIBP zone is 0.50. Additionally, maximum building height within the zone is 60 feet with the exception that building heights shall be limited to 45 feet within the portion of the site that falls within 100 feet of an adjacent residential zone. For properties that are located west of the Interstate 15, building height is limited to 60 feet at the front setback line, thereafter, height may be increased at the rate of 1 foot in height for every additional 3-foot increase in the front yard setback, up to a maximum building height of 150 feet (City of Hesperia 2021).

The Applicant proposes to construct up to a 499,714 square-foot industrial building and associated improvements, including loading docks, tractor-trailer stalls, passenger vehicle parking spaces, stormwater facilities, sidewalks, and landscape area, which would require a Conditional Use Permit. As part of the Project approvals, the Project Applicant is requesting approval of a Conditional Use Permit. Assuming that the City's decisionmakers approve the Conditional Use Permit, the Project would be an allowable use within the CIBP zone. Additionally, the Project plans would be reviewed by City staff to ensure consistency with all applicable development standards and regulations. Therefore, implementation of the proposed Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation, a less than significant impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. Mineral Resources – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    a. Open Space Element

    b. 3.10 – Mineral Resources
3. California Department of Conservation, Mineral Land Use Classification. Accessed January 16, 2023.

Discussion of Impacts

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

a-b) No Impact: According to the California Department of Conservation, Mineral Land Classification map, the Project site is part of the 1993 Open File Report (OFR) 92-06 and the 1994 OFR 94-07. However, the Project site is not located within an area known to be underlain by regionally- or locally-important mineral resources, as disclosed by the City's General Plan and the associated General Plan DEIR (City of Hesperia, 2010, p. 3.10-3). Furthermore, the Project site is not located in a Significant Mineral Aggregate Resource Area (SMARA). Accordingly, implementation of the proposed Project would not result in the loss of availability of a known mineral resource that would be of value to the region or the residents of the State of California. Additionally, there are no resource recovery sites delineated within the City boundaries, Project vicinity, or surrounding areas. Therefore, the proposed Project would not result in the loss of availability of locally important mineral resources and no impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. Noise – Would the project result in:				
a) Generation of a substantial, temporary, or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Project Impacts and Mitigation Measures

    a. Section 16.20.125 Noise
4. Amargosa and Palmetto High-Cube Warehouse Noise Impact and Vibration Analysis City of Hesperia. Urban Crossroads, Inc. January 27, 2023. (Appendix J)

Discussion of Impacts

Would the project result in:

a) Generation of a substantial, temporary, or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less than Significant Impact: The Project includes approximately 10,000 square feet of office space, 489,714 square feet of industrial/warehouse space, and 255,000 square feet of landscape improvements. In total, the proposed Project includes 72 loading dock positions, 256 tractor-trailer stalls, and 251 passenger vehicle parking spaces. The Project will produce noise levels that are associated with construction and industrial activities. Urban Crossroads prepared a Noise Impact and Vibration Analysis dated January 27, 2023

(Appendix J). The Noise Impact and Vibration Analysis was prepared to satisfy applicable City of Hesperia standards and thresholds of significance based on guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines.

Construction Related Impacts:
The City's Municipal Code Section 16.20.125, *Noise,* states that construction activities are limited to the hours of 7:00 a.m. to 7:00 p.m. on any day and at any time on Sundays and federal holidays. Neither the City of Hesperia General Plan or County Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers for CEQA analysis purposes. Therefore, a numerical construction threshold based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA Leq as a reasonable threshold for noise sensitive residential land use (Appendix J).

Construction noise levels will vary due to each stage of construction requiring a specific equipment mix, depending on the work to be completed. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. Project construction activities are expected to occur in the following stages: site preparation, grading, building construction, paving, and architectural coating. Table 14-1 presents the combined noise levels for the loudest construction equipment, assuming they operate at the same time.

Table 14-1 Construction Reference Noise Levels

Construction Stage	Reference Construction Activity	Reference Noise Level @ 50 Feet (dBA L_{eg})	Combined Noise Level (dBA L_{eg})	Combined Sound Power Level (PWL)
Site Preparation	Crawler Tractors	78	80	112
	Hauling Trucks	72		
	Rubber Tired Dozers	75		
Grading	Graders	81	83	115
	Excavators	77		
	Compactors	76		
Building Construction	Cranes	73	81	115
	Tractors	80		
	Welders	70		
Paving	Pavers	74	83	115
	Paving Equipment	82		
	Rollers	73		
Architectural Coating	Cranes	73	77	109
	Air Compressors	74		
	Generator Sets	70		

As shown in Table 14-1 above, modeled unmitigated construction noise levels reached up 83 dBA Leq, assuming all equipment for the stage is utilized at the same time. To evaluate whether the Project will generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA Leq is

used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime 80 dBA Leq significance threshold during Project construction activities with a maximum noise level of 59.7 dBA Leq, as shown on Table 14-2. Therefore, the noise impacts due to Project construction noise are considered less than significant at all receiver locations.

Table 14-2 Construction Level Compliance

Receiver Location	Construction Noise Levels (dBA L_{eg})		
	Highest Construction Noise Levels	Threshold	Threshold Exceeded?
R1	59.7	80	No
R2	59.5	80	No
R3	45.1	80	No
R4	47.1	80	No
R5	55.9	80	No

It is anticipated that nighttime concrete pouring activities will occur as a part of Project building construction activities. Nighttime concrete pouring activities are often used to support reduced concrete mixer truck transit times and lower air temperatures than during the daytime hours and are generally limited to the actual building pad area. Since the nighttime concrete pours will take place outside the permitted City of Hesperia Municipal Code, Section 16.20.125.E.3 hours of 7:00 a.m. to 7:00 p.m. on any day and at any time on Sundays and federal holidays, the Project Applicant will be required to obtain authorization for nighttime work from the City of Hesperia.

As shown on Table 14-3, the noise levels associated with the nighttime concrete pour activities are estimated to range from 29.9 to 47.3 dBA Leq at the nearest noise sensitive receiver locations and will satisfy the City of Hesperia 55 dBA Leq nighttime stationary-source exterior hourly average Leq residential noise level threshold at all the receiver locations. Based on the results of this analysis, all nearest noise receiver locations will experience less than significant impacts due to the Project related nighttime concrete pour activities.

Table 14-3 Nighttime Concrete Pour Noise Level Compliance

Receiver Location	Use	Construction Noise Levels (dBA Leq)		
		Paving Construction	Nighttime Threshold	Threshold Exceeded?
R1	Residence	47.3	55	No
R2	Residence	47.2	55	No
R3	Residence	29.9	55	No
R4	Residence	31.7	55	No
R5	Residence	40.3	55	No

Operation Related Impacts:

Potential noise impacts associated with the operations of the Project are a result of loading dock activity, trailer parking activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements. To present the potential worst-case noise conditions, this analysis provided below assumes the Project would be operational 24

hours per day, seven days per week. Consistent with similar warehouse and industrial uses, the Project business operations would primarily be conducted within the enclosed buildings, except for traffic movement, parking, as well as loading and unloading of trucks at designated loading bays.

To estimate the Project operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the proposed Project. Table 14-4 presents the projected noise levels assuming the worst-case noise environment for loading dock activity, trailer parking activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements all operating at the same time.

Table 14-4 Operational Reference Noise Level Measurements

Noise Source	Noise Source Height (Feet)	Min./Hour		Reference Noise Level (dBA L_{eq}) @ 50 Feet	Sound Power Level (dBA)
		Day	Night		
Loading Dock Activity	8’	60	60	65.7	111.5
Trailer Parking Activity	8’	60	60	62.8	103.4
Roof-Top Air Conditioning Units	5’	39	28	57.2	88.9
Trash Enclosure Activity	5’	10	10	57.3	89.0
Parking Lot Vehicle Movements	5’	60	60	52.6	81.1
Truck Movements	8’	60	60	59.8	93.2

Using the reference noise levels to represent the proposed Project operations that include loading dock activity, trailer parking activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements, Urban Crossroads, Inc. calculated the operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the receiver locations. To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Hesperia exterior noise level standards at nearby noise-sensitive receiver locations. Table 14-5 shows the operational noise levels associated with the Project will satisfy the City of Hesperia exterior noise level standards. Therefore, operational impacts are less than significant.

Table 14-5 Operational Noise Level Compliance

Receiver Location	Project Operational Noise Levels (dBA Leq)		Noise Level Standards (dBA Leq)		Noise Level Standards Exceeded?	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	45.9	45.9	60	55	No	No
R2	41.2	41.2	60	55	No	No
R3	37.6	37.5	60	55	No	No
R4	43.6	43.6	60	55	No	No
R5	47.7	47.7	60	55	No	No

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise levels measurements for the nearby receiver locations potentially impacted by Project operational noise sources. As indicated

on Table 14-6, the Project will generate daytime operational noise level increases ranging from 0.0 to 1.3 dBA Leq at the nearest receiver locations. Table 14-7 shows that the Project will generate a nighttime operational noise level increase ranging from 0.0 to 1.5 dBA Leq at the nearest receiver locations. The Project-related operational noise level increases will satisfy the operational noise level increase significance criteria. Therefore, the incremental Project operational noise level increase is considered less than significant at all receiver locations.

Table 14-6 Daytime Project Operational Noise Level Increases

Receiver Location	Total Project Operational Noise Level	Measurement Location	Reference Ambient Noise Levels	Combined Project and Ambient	Project Increase	Increase Criteria	Increase Criteria Exceeded?
R1	45.9	L1	61.0	61.1	0.1	5.0	No
R2	41.2	L2	55.6	55.8	0.2	5.0	No
R3	37.6	L3	58.6	58.6	0.0	5.0	No
R4	43.6	L4	62.7	62.8	0.1	5.0	No
R5	47.7	L5	52.3	53.6	1.3	5.0	No

Table 14-7 Nighttime Project Operational Noise Level Increases

Receiver Location	Total Project Operational Noise Level	Measurement Location	Reference Ambient Noise Levels	Combined Project and Ambient	Project Increase	Increase Criteria	Increase Criteria Exceeded?
R1	37.9	L1	65.7	65.7	0.0	1.5	No
R2	36.1	L2	55.2	55.3	0.1	5.0	No
R3	39.9	L3	43.2	44.9	1.7	5.0	No
R4	45.5	L4	45.8	48.7	2.9	5.0	No
R5	42.4	L5	50.8	51.4	0.6	5.0	No

Traffic generated by the operation of the proposed Project will influence the traffic noise levels in surrounding off-site areas and at the Project site. To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, Urban Crossroads developed noise contours based on the Amargosa and Palmetto High-Cube Warehouse Traffic Impact Analysis prepared by the Ganddini Group, Inc. (Appendix K). Noise contours were used to assess the Project's incremental traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA noise levels.

Opening Year (2024) without Project conditions exterior noise levels range from 60.9 to 78.2 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Opening Year (2024) with Project conditions will range from 65.0 to 78.2 dBA CNEL. Therefore, the Project off-site traffic noise level increases range from 0.0 to 4.1 dBA CNEL. Based on the significance criteria for off-site traffic noise, land uses adjacent to the study area roadway segments would experience less than significant noise level increases on receiving land uses due to the Project-related traffic.

Additionally, General Plan Buildout (2040) without Project exterior noise levels range from 67.6 to 78.6 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. General Plan Buildout (2040) with Project conditions will range from

77.1 to 80.5 dBA CNEL. Therefore, Project off-site traffic noise level increases range from 0.0 to 1.3 dBA CNEL. Based on the significance criteria for off-site traffic noise, land uses adjacent to the study area roadway segments would experience less than significant noise level increases on receiving land uses due to the Project-related traffic. Therefore, Project operational impacts would be less than significant.

b) Generation of excessive ground borne vibration or ground borne noise levels?

Less than Significant Impact:

Construction Effects:
Project construction can generate varying degrees of groundborne vibration, depending on the construction procedure and the construction equipment used. Operation of construction equipment generates vibrations that spread through the ground and dimmish in amplitude with distance from the source. The effect on buildings located in the vicinity depends on soil type, ground strata, and construction characteristics of receiver buildings. The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at high levels. Ground-borne vibrations from construction activities rarely reach levels that damage structures.

At distances ranging from 71 to 1,263 feet from Project construction activities, construction vibration velocity levels range from 0.000 to 0.0.19 in/sec PPV. Based on maximum acceptable continuous vibration threshold of 0.2 PPV (in/sec), the typical Project construction vibration levels will fall below the building damage thresholds at all the noise sensitive receiver locations. Therefore, the Project-related vibration impacts are considered less than significant during typical construction activities at the Project site (Appendix J).

Ground-borne vibration decreases rapidly with distance. The vibration levels reported at the sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter. The potential impacts associated with construction vibration would be less than significant. Operation of the Project would not create significant groundborne vibration or groundborne noise. Thus, impacts are less than significant.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact: The Project site is not located within an airport land use plan, within two miles of a public airport, or within the vicinity of a private airstrip. The nearest airport is Hesperia Airport approximately 5.3 miles southeast of the site. The Project site is not within an airport influence area or safety zone. Given the Project site's distance from the private airport, the Project would not expose people residing or working in the Project Area to excessive noise levels. No impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. Population and Housing – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Project Impacts and Mitigation Measures

1. City of Hesperia General Plan, 2010.
    a. Land Use Element
2. Draft Environmental Impact Report for the City of Hesperia General Plan Update, May 26, 2010.
    a. 3.12 – Population and Housing

Discussion of Impacts

Would the project:

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less than Significant Impact: The CEQA Guidelines Section 15126.2(e) states growth-inducing impacts are not assumed to be beneficial, detrimental, or of little significance to the environment, but that a proposed project should be assessed in how it could foster economic growth or population growth, or the construction of additional housing, either directly or indirectly. The most immediate presence of potential growth related to the proposed Project would be the labor force associated with the construction and operation of the industrial building. The Project does not propose new residential development and would not directly contribute to population growth within the City.

Project-related employment demands would likely be filled by the existing personnel pool within the City and neighboring communities, with little or no measurable increase in the City's resident population. Significant population growth is therefore not anticipated to result from Project implementation. The Project is consistent with the goals of the Main Street and Freeway Corridor Specific Plan to facilitate and encourage development in the areas surrounding Main Street and the freeway. Although the Project may include infrastructure improvements such as paving along the Project

frontage or constructing a new curb, gutter, and sidewalk, these improvements would be concentrated to the immediate surroundings of the Project site and are unlikely to encourage unanticipated population growth. Based on the preceding, the potential for the Project to induce substantial growth directly or indirectly is considered less than significant.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact: No houses currently exist within the Project site. Additionally, the Project does not propose uses or activities that would otherwise displace housing assets or persons. Based on the preceding, the proposed Project would have no impact related to displacement of housing or people.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. Public Services – Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service rations, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☒	☐
ii) Police protection?	☐	☐	☒	☐
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☒	☐

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    a. Land Use Element
2. Draft Environmental Impact Report for the City of Hesperia General Plan Update, May 26, 2010.
    a. 3.13 – Public Services

Discussion of Impacts

Would the project:

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service rations, response times or other performance objectives for any of the public services:

i) Fire protection?

Less than Significant Impact: Fire protection services to the Project site are provided by the San Bernardino County Fire Department. The Project site is served by the San Bernardino County Fire Station 305, located at 8331 Caliente Road, approximately 2.7 miles southwest of the Project site. There are two additional fire stations in the City,

Station 304 located at 15660 Eucalyptus Street and Station 302 located at 17288 Olive Street. The proposed Project does not include the construction or modification of fire protection facilities.

The Project will be constructed to current building code requirements regarding fire suppression and access. Furthermore, the Project will be subject to the review and approval of the San Bernardino County Fire Department. According to the Hesperia General Plan EIR, there are adequate firefighting resources in the region to serve the proposed Project. Therefore, construction of a new or expanded fire station would not be required.

Incremental fire protection service demands generated by the Project are offset through Project payment of City of Hesperia Development Impact Fees. A portion of the City's Development Impact Fees are allocated for fire protection services. The Project Applicant would pay incumbent City Development Impact Fees at issuance of building permit(s). Based on the foregoing, the proposed Project would receive adequate fire protection service and would not result in the need for new or physically altered fire protection facilities. Impacts to fire protection facilities would be less than significant.

ii) Police protection?

Less than Significant Impact: Police protection services to the Project site are provided by the San Bernardino County Sheriff's Department. The Project site is served by the Hesperia Police Department, located at 15840 Smoke Tree Street, approximately 3.2 miles southeast of the site. The Project would introduce a new industrial facility and employees to the Project site, which would result in an incremental increase in demand for police protection services. However, the Project is not anticipated to require or result in the construction of new or physically altered police facilities. Additionally, incremental police protection service demands generated by the Project are offset through Project payment of City of Hesperia Development Impact Fees. Based on the foregoing, the proposed Project would receive adequate police protection service, and would not result in the need for new or physically altered police protection facilities. Impacts on police protection facilities would be less than significant.

iii) Schools?

Less than Significant Impact: The Project site is located within the Hesperia Unified School District. Nearby schools include Topaz Preparatory Academy approximately 1.0 mile east of the site, Mirus Secondary School approximately 1.3 miles southeast of the site, and Maple Elementary School approximately 1.5 miles northeast of the site. The proposed Project would not create a direct demand for public school services, as the Project does not include residential uses. However, the Project may contribute indirectly to the demand for public school services if Project employees and their school age children relocate to school districts serving the City. Project impacts would be incremental and would be offset through Project payment of City of Hesperia Development Impact Fees. As the Project would not directly generate students and indirect impacts would be incremental, the Project would not cause or contribute to a need to construct new or physically altered public school facilities, and Project impacts on schools would be less than significant.

iv) Parks?

Less than Significant Impact: The proposed Project would not increase the demand for public park facilities and would not result in the need to modify existing or construct new park facilities. As discussed in the *XVI. Recreation* section of this Initial Study, the Project does not include any type of residential use or other land use that may generate a population that would increase the demand for public park facilities. As such, implementation of the proposed Project would not adversely affect parks and public facilities or require the construction of new or modified public facilities, a less than significant impact would occur.

v) Other public facilities

Less than Significant Impact: Demand for public facilities is generated by the population within a facility's service area. The Project would not induce population growth and therefore would not create a demand for public facilities/services, including libraries, community recreation centers, post offices, and animal shelters. As such, implementation of the proposed Project would not adversely affect or require the construction of new or modified public facilities, a less than significant impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. Recreation				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    a. Land Use Element
2. Hesperia Main Street and Freeway Corridor Specific Plan, amended July 15, 2021.
    a. Chapter 14 Open Space and Streetscape Improvements
3. Draft Environmental Impact Report for the City of Hesperia General Plan Update, May 26, 2010.
    a. 3.14 – Recreation
4. California Government Code § 66477

Discussion of Impacts

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

a-b) No Impact: The Applicant proposes to construct an industrial building up to 499,714 square feet and associated improvements. The Project does not include any type of residential use or other land use that may generate a population that would increase the utilization of existing neighborhood and regional parks or other recreational facilities. Accordingly, implementation of the proposed Project would not result in substantial physical deterioration of an existing neighborhood or regional park. The Project does not include any new on- or off-site recreation facilities, nor the expansion of any existing off-site recreational facilities. Thus, environmental effects related to the use, construction, or expansion of recreational facilities would not occur with implementation of the proposed Project. No impact on recreational facilities would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. Tribal Cultural Resources – Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☒	☐	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

Project Impacts and Mitigation Measures

    a. 3.5 – Cultural Resources
3. Title 16 – Development Code of the Hesperia Municipal Code
    a. Section 16.20.305 Change of use, alteration or demolition of a registered landmark or historic resource
4. Cultural and Paleontological Resources Assessment for Palmetto Way Industrial Building Project, City of Hesperia, San Bernardino County, California. Duke Cultural Resources Management, LLC. September 23, 2022. (Appendix D)

Discussion of Impacts

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

Less than Significant Impact with Mitigation Incorporated: A Cultural and Paleontological Resources Assessment was prepared by Duke Cultural Resources Management, LLC (Duke CRM) dated September 23, 2022 (Appendix D). On September

12, 2022, Duke CRM staff performed a records search. The records search included a review of all recorded cultural resources within a ½ mile radius of the Project, as well as a review of known cultural resource survey and excavation reports. The records search identified three (3) cultural resources within ½ mile of the Project, none of which are located within the current Project area. Resource P-36-0021351 is the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR)-eligible California Aqueduct, located 670 feet from the southwest corner of the Project. Resource P-36-021288, located 2,400 feet northeast of the Project area, is a mid-20th century trash deposit consisting primarily of cans for which CRHR eligibility has not been determined. P-36-021366 is a mid-20th century trash scatter for which CRHR eligibility has not been determined.

On July 27, 2022, Duke CRM archaeologist conducted an intensive pedestrian field survey of the Project area. No cultural or paleontological resources were observed during the field survey. The Project site consisted of little to no vegetation with scattered debris and a motocross track established on the eastern half of the Project area. As a result of negative findings during the South Central Coastal Information Center (SCCIC) records search and field survey, Duke CRM finds that the Project has a low potential to impact cultural resources.

Duke CRM submitted an inquiry to the State of California Native American Heritage Commission (NAHC) to ascertain the presence of known sacred sites, Native American cultural resources, and/or Native American human remains within the boundaries of the proposed Project. The NAHC response letter dated June 21, 2022, indicated Native American cultural resources have been identified within the general vicinity of the Project location (Appendix D). The letter indicated that the Chemehuevi Indian Tribe and the San Manuel Band of Mission Indians shall be contacted. Mitigation Measure **TCR-1** ensures that the Chemehuevi Indian Tribe and the San Manuel Band of Mission Indians are contacted and reduces project impacts to less than significant.

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Less than Significant Impact with Mitigation Incorporated: As discussed above in section (a), the NAHC response letter dated June 21, 2022, indicated Native American cultural resources have been identified within the general vicinity of the Project location (Appendix D). The letter indicated that the Chemehuevi Indian Tribe and the San Manuel Band of Mission Indians shall be contacted. The City conducted consultation with 3 tribes starting in October of 2024. The Yuhaaviatam of San Manuel Nation provided mitigation, which has been incorporated into this initial study. Mitigation Measure **TCR-1, and TCR-2** ensures that the San Manuel Band of Mission Indians are contacted and reduces project impacts to less than significant.

Mitigation Measures

Mitigation:

(a, b)

TCR-1: Tribal Notification and Monitoring Plan

The Yuhaaviatam of San Manuel Nation Cultural Resources Management Department (YSMN) shall be contacted, as detailed in CUL-1, of any pre-contact cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a Cultural Resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.

TCR-2: Tribal Coordination and Documentation Sharing with YSMN

Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. Utilities and Service Systems – Would the project:				
a) Require or result in the relocation or construction of new or expanded water or wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    a. Land Use Element
2. Draft Environmental Impact Report for the City of Hesperia General Plan Update, May 26, 2010.
    a. 3.16 – Utilities and Service Systems

Discussion of Impacts

Would the project:

a) Require or result in the relocation or construction of new or expanded water or wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less than Significant Impact: Water and sewer services will be provided to the Project site by the City of Hesperia Water District. The City will require payment of applicable water and sewer connection and service fees for the Project. Fee payment will provide funds for water and wastewater system maintenance and future expansion, acting to offset the Project's incremental demands for water and wastewater collection and treatment services. The proposed Project includes a combination of an above ground infiltration basin and underground CMP infiltration basin to treat stormwater runoff for water quality purposes. Electrical services will be provided to the Project by Southern California Edison and gas will be provided by the Southwest Gas Corporation. Due to the vacant, undeveloped nature of the Project site, both dry and wet utilities, including domestic water, sanitary sewer, and electricity, need to be extended onto the Project site. However, the proposed Project will not require or result in the relocation or construction of new or expanded water or wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities. Therefore, environmental impacts related to the construction and relocation of utility facilities would be less than significant.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Less than Significant Impact: The City of Hesperia 2020 Draft Urban Water Management Plan (UWMP) and 2008 Water Master Plan provide a framework that accommodate for future growth within the City. According to the 2020 UWMP from the Hesperia Water District, the District has not experienced water supply constraints or deficiencies. Table 19-1 describes data from the 2020 Draft UWMP which shows that the District's base years for average, single dry, and multiple dry years are sufficient in meeting historical water demands.

Table 19-1 Five Consecutive Dry Years Water Supply and Demand through 2045 (acre-feet per year)

		2025	2030	2035	2040	2045
First Year	Supply Totals	15,250	16,290	16,990	17,740	18,420
	Demand Totals	15,250	16,290	16,990	17,740	18,420
	Difference	0	0	0	0	0
Second Year	Supply Totals	15,460	16,430	17,140	17,880	18,540
	Demand Totals	15,460	16,430	17,140	17,880	18,540
	Difference	0	0	0	0	0
Third Year	Supply Totals	15,670	16,570	17,290	18,020	18,660
	Demand Totals	15,670	16,570	17,290	18,020	18,660
	Difference	0	0	0	0	0
Fourth Year	Supply Totals	15,880	16,710	17,440	18,160	18,780
	Demand Totals	15,880	16,710	17,440	18,160	18,780
	Difference	0	0	0	0	0

Fifth Year	Supply Totals	16,090	16,850	17,590	18,300	18,900
	Demand Totals	16,090	16,850	17,590	18,300	18,900
	Difference	0	0	0	0	0

As illustrated in Table 19-1, the City's water demands can be met under multiple dry years. Future water supply will meet projected demand due to diversified supply and conservation measures. The Hesperia Water District has sufficient water resources available to supply water service to the Project. Sufficient water supplies are available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Therefore, impacts associated with water supply availability would be less than significant.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less than Significant Impact: Wastewater services are provided by the Victor Valley Wastewater Reclamation Authority (VVWRA). VVWRA owns and operates the Hesperia Subregional Water Recycling Facility. Currently, this facility is capable of treating up to 1.0 million gallons per day (mgd) of wastewater that is expandable to 4.0 mgd. The Hesperia Subregional Water Recycling Facility is connected to an interceptor system that extends approximately 15 miles from the regional treatment facility (Victorville) south to I Avenue and Hercules in the City of Hesperia. No solid waste is treated at the Hesperia Subregional Water Recycling Facility. Solid waste is returned to the sewer line where it continues via VVWRA's 3-mile interceptor to the VVWRA Regional Wastewater Treatment Plant (RWWTP) in Victorville. When measured in 2016, the RWWTP treated on average 12.5 mgd of wastewater and had a maximum treatment capacity of 18.0 mgd. (City of Hesperia 2016, 2021; Hesperia Water District 2016, 2021). According to the wastewater generation rates used in the Project's air quality, greenhouse gas emissions, and energy analyses, the Project would generate approximately 0.332057 mgd of wastewater. Wastewater from the proposed Project is not anticipated to exceed the capacity to the wastewater treatment provider, even when considering existing and cumulative demand. Project impacts are expected to be less than significant.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less than Significant Impact: Approximately 75% or more of solid waste generated by the City is being recycled (Advance Disposal 2021), exceeding the 50 percent requirement pursuant to the California Integrated Waste Management Act of 1989 (AB939). Sanitation services are administered by Advance Disposal, located at 17105 Mesa Street, Hesperia. Any remaining waste is collected and hauled to the Victorville Sanitary Landfill at 18600 Stoddard Wells Road in Victorville, owned and operated by the County of San Bernardino. The Victorville Landfill has a maximum permitted daily throughput of 3,000 tons, has a maximum capacity of 93,400,000 cubic yards, and has a remaining capacity of 79,400,000 cubic yards. As of 2020, this landfill was expected to remain open for another 27 years. Based on the CalRecycle Industrial Section

Generation Rates chart, the Project would generate approximately 30,675 pounds of solid waste per day.

Table 19-2 Estimated Solid Waste Generation

Waste Generation Source	Square Feet	Generation Rate, pounds per day	
		Per square foot	Total
Industrial	489,850	.0625 pounds	30,615 (lbs/day)
Office	10 ,000	0.006 pounds	60 (lbs/day)
Source: CalRecycle, 2019b, Estimated Solid Waste Generation Rates (ca.gov)			

Industrial waste, defined in Section 17225.35 of Title 14 of the California Code of Regulations, is not subject to the requirements of the AB 341 regulation (CalRecycle, 2019b). The industrial uses proposed by the Project, and solid waste generated by those uses, would not otherwise conflict with federal, state, and local statutes and regulations related to solid waste. Based on the preceding, the potential for the Project to generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals is less than significant.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less than Significant Impact: The Project would be implemented and operated in compliance with applicable City General Plan Goals and Policies, and would comport with City Zoning regulations—specifically, the Project would comply with local, state, and federal initiatives and directives acting to reduce and divert solid waste from landfill waste streams. As described in section (d) above, the Project would comply with the California Integrated Waste Management Act of 1989 (AB 939) and AB 341 as implemented by the City. The proposed Project is required to comply with all applicable federal, state, County, and City statues and regulations related to solid waste as a standard project condition of approval. Therefore, a less than significant impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. Wildfire – If located in or near a State Responsibility Area ("SRA"), lands classified as very high fire hazard severity zone, or other hazardous fire areas that may be designated by the Fire Chief, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

Project Impacts and Mitigation Measures

Sources:

1. City of Hesperia General Plan, 2010.
    a. Safety Element
2. California Department of Forestry and Fire Protection. Very High Fire Hazard Severity Zones in LRA – Western Riverside County. December 2009.

Discussion of Impacts

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact: Wildland fire protection in California is the responsibility of the state, local government, or the federal government. The Project site is located within a Local Responsibility Area (LRA), as identified on the latest Fire Hazard Severity Zone (FHSZ) map prepared by the California Department of Forestry and Fire Protection (CALFIRE). The Project site is not located in a State Responsibility Area (SRA) or classified as a Very High Fire Severity Zone (VHFSZ) within a LRA. The proposed Project does not block access to the Project site or to surrounding properties and does not impede the City's evacuation program. Furthermore, the Project will be subject to the review and approval of

the San Bernardino County Fire Department. Based on the preceding, the potential for the Project to substantially impair an adopted emergency response or evacuation plan is less than significant.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less than Significant Impact: As discussed above in section (a), the Project site is not located within a SRA fire hazard zone. The Project site is relatively flat and does not contain considerable slopes that would exacerbate wildfire risk. Additionally, the Project site currently consists of sparse desert vegetation that would be removed with Project implementation. Prevailing winds are a concern throughout the desert region. However, the proposed Project does not cause greater wildfire risks than other developments throughout the City of Hesperia. Therefore, a less than significant impact would occur.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less than Significant Impact: The Project does not require the installation or maintenance of associated infrastructure that would exacerbate fire risks or result in temporary or ongoing impacts to the environment. Although the Project may include infrastructure improvements such as paving along the Project frontage or constructing a new curb, gutter, and sidewalk, these improvements would be concentrated to the immediate surroundings of the Project site and are unlikely to exacerbate fire risk, a less than significant impact would occur.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less than Significant Impact: According to General Plan Exhibit SF-2, the Project site is identified within FEMA Zone X, which designates areas that are outside of the 100-year flood or are protected from the 100-year flood by levees. Additionally, the Project site and the site's surroundings are relatively flat. Therefore, the Project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, a less than significant impact would occur.

	Potentially Significant Impact	Less Than Significant Impact with Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. Mandatory Findings of Significance				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California History or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? (Cumulatively considerable means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☒	☐	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

Discussion of Impacts

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California History or prehistory?

Less than Significant Impact with Mitigation Incorporated: The proposed Project would not substantially impact any scenic vistas, scenic resources, or the visual character of the area, and would not result in excessive light or glare. The Project site is located within an area that contains vacant land, residential uses, and light industrial/warehouse uses. The proposed Project would not significantly impact any sensitive species, plant communities, fish, wildlife, or habitat for any sensitive species with incorporation of Mitigation Measures **BIO-1** through **BIO-5**.

As described in Section VI and Section XVIII, adverse impacts to historical resources would be less than significant with incorporation of Mitigation Measures **CUL-1** and **TCR-1**. Based on the preceding analysis of potential impacts in the responses to Sections I through XX, no evidence is presented that the proposed Project would degrade the quality of the environment.

Impacts related to degradation of biological resources and cultural resources would be less than significant with mitigation incorporated.

b) Does the project have impacts that are individually limited, but cumulatively considerable? (Cumulatively considerable means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Potentially Significant Impact: Cumulative impacts can result from the interactions of environmental changes resulting from one proposed Project with changes resulting from other past, present, and future projects that affect the same resources, utilities and infrastructure systems, public systems, transportation network elements, air basin, watershed, or other physical conditions. Such impacts could be short-term and temporary, usually consisting of overlapping construction impacts, as well as long-term, due to the permanent land use changes and operational characteristics involved with the proposed Project.

The Project's estimated greenhouse gas emissions exceed the SCAQMD-recommended threshold of 3,000 MTCO2e per year. As such, the Project could contribute incrementally to cumulatively significant GHG impacts in combination with other past, present, and reasonably foreseeable projects. These cumulative impacts will be fully analyzed in the Draft Environmental Impact Report (DEIR).

Where appropriate, the environmental checklist questions above include discussion regarding cumulative impacts of the Project when developed in conjunction with related projects. Adherence to applicable regulations would reduce certain environmental impacts; however, because the Project exceeds the SCAQMD GHG threshold, its contribution to cumulative GHG emissions may be significant. Therefore, GHG-related cumulative impacts are considered potentially significant and will be further evaluated in the DEIR.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impact: Based on the analysis of the Project's impacts in this Initial Study, there are no significant long-term effects related to noise, hazardous materials, , increased demand for water use, wastewater disposal, and electricity use, or increased demand on emergency response services; however the Project's estimated greenhouse gas emissions and VMT exceed applicable thresholds and therefore have the potential to cause adverse effects on human beings directly or indirectly.

While temporary construction-related effects remain less than significant, and the Project is generally consistent with applicable plans, GHG and VMT-related impacts are considered potentially significant and will be addressed in the forthcoming DEIR.

CHAPTER FIVE – MITIGATION, MONITORING, AND REPORTING PROGRAM (MMRP)

Mitigation measures are included within each section of the initial study checklist and are provided below. Table 5-: Mitigation Monitoring and Reporting Program outlines the potential impacts and mitigation measures of the proposed Project and assigns responsibility for the oversight of each mitigation measure. This Table shall be included in all bid documents and included as a part of the Project development.

Table 5-1. Mitigation Monitoring and Reporting Program

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
Transportation/Traffic				
I. Transportation/ Traffic	**TRANS-1:** Contribute fair share as determined by the City to construct a second southbound left turn lane at Key Pointe Drive (NS) at Main Street (EW).	Applicant and City of Hesperia	Prior to issuance of occupancy permit	Less than Significant
Biological Resources				
V. Biological Resources	**BIO-1 Incidental Take Permit from CDFW** Mitigation for direct impacts to the Western Joshua Trees within the Project Site shall be fulfilled through attainment of a Western Joshua Tree Conservation Act (WJTCA) Incidental Take Permit. An Incidental Take Permit (ITP) application and supporting documentation shall be submitted to CDFW for review and approval for removal of Western Joshua trees on the Project site. An ITP establishes a performance standard requiring that the impacts be "minimized and fully mitigated" with "measures that are roughly proportional in extent to the impact of the authorized taking on the species." Therefore,	Applicant and City of Hesperia	Prior to issuance of grading permit	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	additional mitigation measures, such as the purchase of credits from an approved conservation or mitigation bank, land acquisition, or entry into a conservation easement, will be determined in consultation with CDFW to meet ITP requirements. A completed application requires a completed CEQA document to accompany the ITP application and fee. CDFW requires the CEQA document to have a state clearing house number, show proof of filing fees, and that the document has been circulated. CDFW will then review the ITP and CEQA document and make a determination of mitigation.			
V. Biological Resources	**BIO-2 Desert Native Plant Protection and Relocation Plan** A Desert Native Plant Protection and Relocation Plan (Plan) for the proposed Project shall be composed that will provide detailed specifications for the proposed treatment, avoidance, or relocation of all smoke trees (Cotinus sp.), species in the Agavacea family, mesquite (Prosopis sp.), large creosote bushes (Larrea sp.), Western Joshua trees, and any other plants protected by the State Desert Native Plant Act. Further, the Protected Desert Plant Plan will provide measures to meet the requirements of Chapter 16.24 of the City if Hesperia's (City) Municipal Code to protect, preserves, and mitigate impacts to Western Joshua tree. The	Applicant and City of Hesperia	Prior to issuance of grading permit	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	City's Protected Plan Policy (HMC 16.24) states the following for commercial and industrial projects: • The Plan shall be certified by an arborist or registered botanist. • An application and fee shall be completed and paid to the City of Hesperia. • Healthy, transplantable Western Joshua trees shall be relocated on-site or may be placed in an adoption program. The Desert Native Plant Protection and Relocation Plan will address requirements of the City's Protected Plant Policy and provide details from the initial survey of the site's Western Joshua trees and other sensitive desert plant species, detailed specifications for the protection of trees to be preserved on site, and relocation/salvage requirements for those trees or bushes requiring removal and relocation. Specifically, the Plan will include site location and characteristics; relocation requirements including Western Joshua tree and other sensitive desert plant species report and removal/relocation and transplanting specifics; success criteria and associated necessary fees, protective measures prior to, during and after construction, and maintenance after construction.			

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
V. Biological Resources	**BIO-3 Pre-Construction Western Burrowing Owl Clearance Surveys** In accordance with the Staff Report on Burrowing Owl Mitigation (CDFW 2012), two (2) pre-construction clearance surveys shall be conducted 14-30 days and 24 hours prior to any vegetation removal or ground disturbing activities. Once surveys are completed, the qualified biologist shall prepare a final report documenting surveys and findings. If no burrowing owls or occupied burrows are detected, Project construction activities may begin. If an occupied burrow is found within the Project Site during pre-construction clearance surveys, a burrowing owl exclusion and mitigation plan shall be prepared and submitted to the County, which may consult with CDFW for review, prior to initiating Project construction activities.	Applicant and City of Hesperia	14-30 days and 24 hours prior to any vegetation removal or ground disturbing activities.	Less than Significant
V. Biological Resources	**BIO-4 Passive and Active Relocation of Western Burrowing Owls** If Western burrowing owls are observed on the Project site during preconstruction surveys, CDFW shall be immediately notified to determine if avoidance of the nest is appropriate until the nest is vacated or to gain concurrence from CDFW on active or passive relocation actions. All passive or relocation activities shall be in concurrence with CDFW guidelines (Staff Report on Burrowing Owl Mitigation 2012).	Applicant and City of Hesperia	If Western burrowing owls are observed on the Project site during preconstruction surveys	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	If burrowing owl are present and nesting on-site the following steps shall be necessary to reduce impacts to less than significant. These steps may be augmented by recommendations from CDFW: a. Occupied burrows shall not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFW verifies through non-invasive methods that: (1) owls have not begun egg-laying and incubation; or (2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival. b. A qualified biologist shall exclude all owls from active burrows using one-way doors. Concurrently, all inactive burrows and other sources of secondary refuge for burrowing owls shall be collapsed and removed from the site. c. Following and 24 to 48-hour observation period, all vacated burrows shall be collapsed. d. A qualified biologist shall conduct a post-exclusion survey confirming the absence of burrowing owls on the Project site. Should newly occupied burrows be discovered on the Project			

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	site the exclusion activities shall be repeated.			
V. Biological Resources	**BIO-5 Nesting Bird Preconstruction Surveys** If it is not feasible to avoid the nesting bird season (typically January through July for raptors and February through August for other avian species), a qualified biologist shall conduct a pre-construction nesting bird survey for avian species to determine the presence/absence, location, and status of any active nests on or directly adjacent to the Project site. If active nests are located, the extent of the survey buffer area surrounding the nest should be established by the qualified biologist to ensure that direct and indirect effects to nesting birds are avoided. To avoid the destruction of active nests and to protect the reproductive success of birds protected by the MBTA and the CFGC, the nesting bird survey shall occur no earlier than seven (7) days prior to the commencement of construction. In the event that active nests are discovered, a suitable buffer (distance to be determined by the biologist) shall be established around such	Applicant and City of Hesperia	Within 7-days of the commencement of construction activities (if construction activities commence during the nesting/breeding season of native bird species – February through August).	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	active nests, and no construction within the buffer allowed, until the biologist has determined that the nest(s) is no longer active (i.e., the nestlings have fledged and are no longer reliant on the nest).			
Cultural Resources				
VI. Cultural Resources	**CUL-1 Inadvertent Finds** In the event that cultural resources are discovered during Project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease. A qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards shall be retained to assess the significance of the find. Work may continue on other portions of the Project site outside the buffered area during this assessment. If the discovery is determined to be of Native American origin, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as outlined in TCR-1, and provided information following the archaeologist's initial assessment to allow for Tribal input on the significance and recommended treatment of the resource.	Applicant and City of Hesperia	If previously unidentified cultural materials are unearthed during construction	Less than Significant
VI. Cultural Resources	**CUL-2: Monitoring Plan** If significant pre-contact cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring	Applicant and City of Hesperia	If previously unidentified cultural materials are unearthed during construction	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.			
VI. Cultural Resources	**CUL-3: Human remains discovery** If human remains or funerary objects are encountered, all work shall stop in the area (within an 100-foot buffer of the find) and the County Coroner must be notified immediately in accordance with California Health and Safety Code Section 7050.5. No further disturbance shall occur until the Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. If the remains are determined to be prehistoric, the Coroner shall notify the Native American Heritage Commission (NAHC), which will identify and notify the Most Likely Descendant (MLD). With permission of the landowner or authorized representative, the MLD may inspect the site and shall complete the inspection within 48 hours of notification by the NAHC. The MLD may recommend scientific removal and nondestructive analysis of the remains and any associated items.	Applicant and City of Hesperia	If previously unidentified human remains are unearthed during construction	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
Geology and Soils				
VIII. Geology and Soils	**GEO-1 Grading and Construction** The Project shall incorporate the recommendations provided in the Geotechnical Investigation prepared by Southern California Geotechnical, dated July 18, 2022 (Appendix F). The recommendations are presented in the following sections of the report: Site Grading Recommendations, Construction Considerations, Foundation Design and Construction, Floor Slab Design and Construction, Retaining Wall Design and Construction, and Pavement Design Parameters.	Applicant and City of Hesperia	Prior to start of construction	Less than Significant
VIII. Geology and Soils	**GEO-2 Paleontological Monitoring** A paleontological monitor shall be present during ground disturbing activities below four (4) feet in depth within the Project. The monitor shall work under the direct supervision of a qualified paleontologist (B.S./B.A. in geology, or related discipline with an emphasis in paleontology and demonstrated competence in paleontological research, fieldwork, reporting, and curation). 1. The qualified paleontologist shall be on-site at the pre-construction meeting to discuss monitoring protocols. 2. The paleontological monitor shall be present full-time during ground	Applicant and City of Hesperia	During ground disturbing activities below four (4) feet in depth within the Project	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	disturbance below 4 feet in depth within the Project, including but not limited to grading, trenching, utilities, and off-site easements. If, after excavation begins, the qualified paleontologist determines that the sediments are not likely to produce fossil resources, monitoring efforts shall be reduced. 3. The monitor shall be empowered to temporarily halt or redirect grading efforts if paleontological resources are discovered. 4. In the event of a paleontological discovery the monitor shall flag the area and notify the construction crew immediately. No further disturbance in the flagged area shall occur until the qualified paleontologist has cleared the area. 5. In consultation with the qualified paleontologist, the monitor shall quickly assess the nature and significance of the find. If the specimen is not significant it shall be quickly mapped, documented, removed, and the area cleared. 6. If the discovery is significant the qualified paleontologist shall notify the CLIENT and CITY immediately. 7. In consultation with the CLIENT and CITY the qualified paleontologist shall develop a plan of mitigation which will likely include full-time monitoring, salvage excavation,			

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
	scientific removal of the find, removal of sediment from around the specimen (in the laboratory), research to identify and categorize the find, curation of the find in a local qualified repository, and preparation of a report summarizing the find.			
Tribal Cultural Resources				
XVIII. Tribal Cultural Resources	**TCR-1: Tribal Notification and Monitoring Plan** The Yuhaaviatam of San Manuel Nation Cultural Resources Management Department (YSMN) shall be contacted, as detailed in CUL-1, of any pre-contact cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a Cultural Resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site.	Applicant and City of Hesperia	If previously unidentified cultural materials are unearthed during construction	Less than Significant

Section Number	Mitigation Measures	Responsible for Monitoring	Timing	Impact after Mitigation
XVIII. Tribal Cultural Resources	**TCR-2: Tribal Coordination and Documentation Sharing with YSMN** Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project	Applicant and City of Hesperia	If previously unidentified cultural materials are unearthed during construction	Less than Significant

EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this *Amargosa and Palmetto High-Cube Warehouse Air Quality Impact Analysis* (AQIA) are summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the *California Environmental Quality Act (CEQA) Guidelines* (1). Table ES-1 shows the findings of less than significant for each potential air quality impact under CEQA. As shown, no mitigation measures (MM) are required.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings	
		Unmitigated	Mitigated
Regional Construction Emissions	3.4	*Less Than Significant*	*n/a*
Regional Operational Emissions	3.5	*Less Than Significant*	*n/a*
CO "Hot Spot" Analysis	3.6	*Less Than Significant*	*n/a*
Air Quality Management Plan	3.7	*Less Than Significant*	*n/a*
Sensitive Receptors	3.8	*Less Than Significant*	*n/a*
Odors	3.9	*Less Than Significant*	*n/a*
Cumulative Impacts	3.10	*Less Than Significant*	*n/a*

ES.2 STANDARD REGULATORY REQUIREMENTS/BEST AVAILABLE CONTROL MEASURES

Measures listed below (or equivalent language) shall appear on all Project grading plans, construction specifications and bid documents, and the City shall ensure such language is incorporated prior to issuance of any development permits. Mojave Desert Air Quality Management District (MDAQMD) Rules that are currently applicable during construction activity for this Project include but are not limited to Rule 1113 (Architectural Coatings) (2). It should be noted that these Best Available Control Measures (BACMs) are not mitigation as they are standard regulatory requirements. As such, credit for Rule 1113 has been taken.

MDAQMD RULE 1113

This rule serves to limit the Volatile Organic Compound (VOC) content of architectural coatings used on projects in the MDAQMD. Any person who supplies, sells, offers for sale, or manufactures

any architectural coating for use on projects in the MDAQMD must comply with the current VOC standards set in this rule (2)[1].

ES.3 CONSTRUCTION-SOURCE MMS

The Project would not exceed any thresholds of significance for construction-source emissions. As such, a less than significant impact would occur for Project-related construction-source emissions and no mitigation would be required.

ES.4 OPERATIONAL-SOURCE MMS

The Project would not exceed any thresholds of significance for operational-source emissions. As such, a less than significant impact would occur for Project-related operational-source emissions and no mitigation would be required.

[1] Only paints no more than 50 g/L of VOC consistent with MDAQMD Rule 1113 for flat coatings shall be used.

This page intentionally left blank

1 INTRODUCTION

This report presents the results of the AQIA prepared by Urban Crossroads, Inc., for the proposed Amargosa and Palmetto High-Cube Warehouse (Project).

The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the Project and recommend measures to mitigate impacts considered potentially significant in comparison to thresholds established by the MDAQMD.

1.1 SITE LOCATION

The proposed Project is located on the northwest corner of Amargosa Road, and Palmetto Way in the City of Hesperia as shown on Exhibit 1-A.

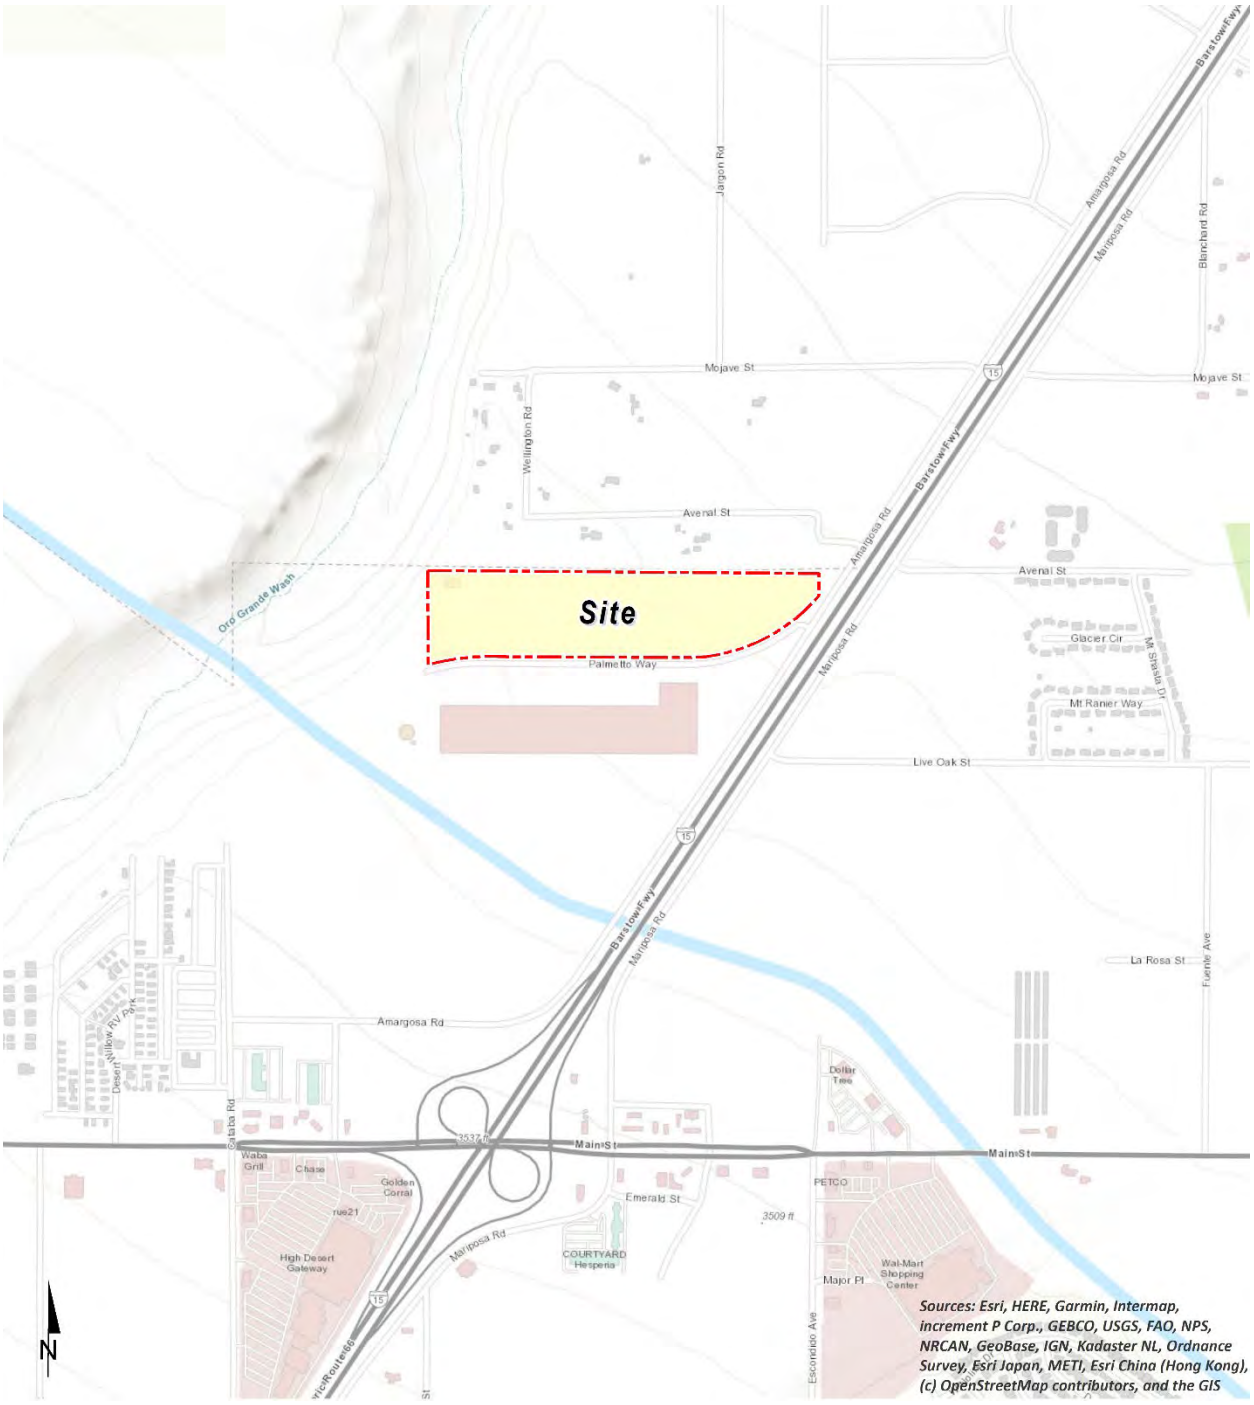
1.2 PROJECT DESCRIPTION

The proposed Project is to consist of 499,850[2] square high-cube fulfillment center warehouse building as shown on Exhibit 1-B. The proposed project is anticipated to be constructed and fully operational by year 2024.

It is expected that the Project business operations would primarily be conducted within the enclosed building, except for traffic movement, parking, as well as loading and unloading of trucks at designated loading bays. This analysis includes a conservative assumption of on-site Project-related emission sources for potential future tenants, including architectural coatings, consumer products, landscape maintenance equipment, natural gas, electricity, mobile operations, and on-site cargo handling equipment. This analysis is intended to describe air quality impacts associated with the expected typical operational activities at the Project site. To present a conservative approach, this report assumes the Project would operate 24-hours daily for seven days per week.

2 The proposed building square footage utilized in this analysis is based on a previous site plan which assumed a slightly smaller building square footage. Nonetheless, the emissions analyzed in this report would not change and a less than significant impact is expected.

EXHIBIT 1-A: LOCATION MAP



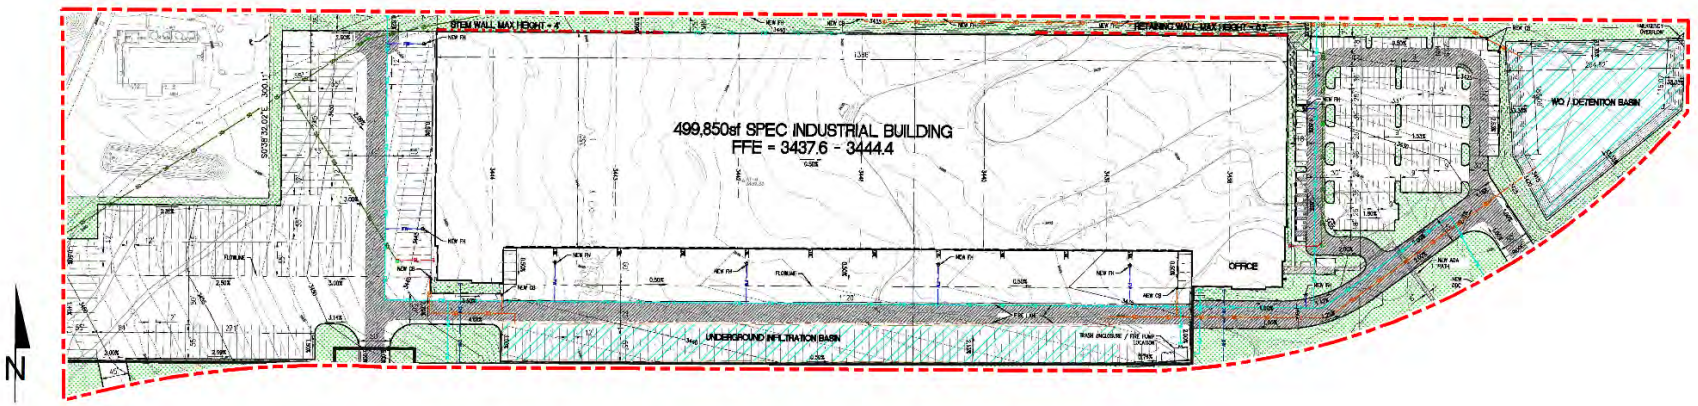


EXHIBIT 1-B: SITE PLAN

This page intentionally left blank

2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

2.1 MOJAVE DESERT AIR BASIN

The Project site is located in the portion of the County of San Bernardino, California, that is part of the Mojave Desert Air Basin (MDAB) and is under the jurisdiction of the MDAQMD. The air quality assessment for the Project evaluates emissions impacts associated with short-term construction and long-term operation of the Project. A number of air quality modeling tools are available to assess the air quality impacts of projects. In addition, certain air districts, such as the MDAQMD, have created guidelines and requirements to conduct air quality analyses. The MDAQMD's current guidelines, included in its *California Environmental Quality Act and Federal Conformity Guidelines* (August 2016), were adhered to in the assessment of air quality impacts for the Project.

2.2 REGIONAL CLIMATE

Air quality in the Project area is not only affected by various emissions sources (mobile, industry, etc.) but is also affected by atmospheric conditions such as wind speed, wind direction, temperature, and rainfall.

The MDAB is an assemblage of mountain ranges interspersed with long broad valleys that often contain dry lakes. Many of the lower mountains within the vast terrain rise from 1,000 to 4,000 feet above the valley floor. Prevailing winds in the MDAB are out of the west and southwest. These prevailing winds are due to the proximity of the MDAB to coastal and central regions and the blocking nature of the Sierra Nevada Mountains to the north; air masses pushed onshore in Southern California by differential heating are channeled through the MDAB. The MDAB is separated from the Southern California coastal and Central California valley regions by mountains (highest elevation is approximately 10,000 feet), whose passes form the main channels for these air masses. The Mojave Desert is bordered on the southwest by the San Bernardino Mountains, separated from the San Gabriel Mountains by the Cajon Pass (4,200 feet). A lesser pass lies between the San Bernardino Mountains and the Little San Bernardino Mountains in the Morongo Valley. The Palo Verde Valley portion of the Mojave Desert lies in the low desert, at the eastern end of a series of valleys (notably the Coachella Valley), whose primary channel is the San Gorgonio Pass (2,300 feet) between the San Bernardino and San Jacinto Mountains.

During the summer, the MDAB is generally influenced by a Pacific subtropical high cell that sits off the coast, inhibiting cloud formation and encouraging daytime solar heating. The MDAB is rarely influenced by cold air masses moving south from Canada and Alaska, as these frontal systems are weak and diffuse by the time they reach the desert. Most desert moisture arrives from infrequent warm, moist, and unstable air masses from the south. The MDAB averages between three and seven inches of precipitation per year (from 16 to 30 days with at least 0.01 inch of precipitation). The MDAB is classified as a dry-hot desert climate, with portions classified

as dry-very hot desert, to indicate that at least three months have maximum average temperatures over 100.4° F.

Snow is common above 5,000 feet in elevation, resulting in moderate snowpack and limited spring runoff. Below 5,000 feet, any precipitation normally occurs as rainfall. Pacific storm fronts normally move into the area from the west, driven by prevailing winds from the west and southwest. During late summer, moist high-pressure systems from the Pacific collide with rising heated air from desert areas, resulting in brief, high-intensity thunderstorms that can cause high winds and localized flash flooding.

2.3 CRITERIA POLLUTANTS

Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and health effects are identified below (3):

TABLE 2-1: CRITERIA POLLUTANTS

Criteria Pollutant	Description	Sources	Health Effects
Carbon Monoxide (CO)	CO is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone (O_3), motor vehicles operating at slow speeds are the primary source of CO in the MDAB. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen supply to the heart. Inhaled CO has no direct toxic effect on the lungs but exerts its effect on tissues by interfering with oxygen transport and competing with oxygen to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for oxygen supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia

Criteria Pollutant	Description	Sources	Health Effects
			(oxygen deficiency) as seen at high altitudes.
Sulfur Dioxide (SO_2)	SO_2 is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO_2 oxidizes in the atmosphere, it forms sulfates (SO_4). Collectively, these pollutants are referred to as sulfur oxides (SO_X)	Coal or oil burning power plants and industries, refineries, diesel engines	A few minutes of exposure to low levels of SO_2 can result in airway constriction in some asthmatics, all of whom are sensitive to its effects. In asthmatics, increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO_2. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO_2. Animal studies suggest that despite SO_2 being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract. Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO_2 levels. In these studies, efforts to separate the effects of SO_2 from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically, or one pollutant alone is the predominant factor.

Criteria Pollutant	Description	Sources	Health Effects
NO_X	NO_X consist of nitric oxide (NO), nitrogen dioxide (NO_2) and nitrous oxide (N_2O) and are formed when nitrogen (N_2) combines with oxygen (O_2). Their lifespan in the atmosphere ranges from one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. Nitrogen oxides are typically created during combustion processes and are major contributors to smog formation and acid deposition. NO_2 is a criteria air pollutant and may result in numerous adverse health effects; it absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the seven types of nitrogen oxide compounds, NO_2 is the most abundant in the atmosphere. As ambient concentrations of NO_2 are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO_2 than those indicated by regional monitoring station.	Any source that burns fuel such as automobiles, trucks, heavy construction equipment, farming equipment and residential heating.	Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO_2 at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO_2 in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups. In animals, exposure to levels of NO_2 considerably higher than ambient concentrations result in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of O_3 exposure increases when animals are exposed to a combination of O_3 and NO_2.
O_3	O_3 is a highly reactive and unstable gas that is formed when VOCs and NO_X, both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. O_3 concentrations are generally highest during the summer	Formed when reactive organic gases (ROG) and nitrogen oxides react in the presence of sunlight. ROG sources include any source	Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for O_3 effects. Short-term exposure (lasting for a

Criteria Pollutant	Description	Sources	Health Effects
	months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.	that burns fuels, (e.g., gasoline, natural gas, wood, oil) solvents, petroleum processing and storage and pesticides.	few hours) to O_3 at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated O_3 levels are associated with increased school absences. In recent years, a correlation between elevated ambient O_3 levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who participate in multiple outdoor sports and live in communities with high O_3 levels. O_3 exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes O_3 may be more toxic than exposure to O_3 alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.
Particulate Matter	PM_{10} (Particulate Matter less than 10 microns): A major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. Particulate matter pollution is a major cause of reduce visibility	Sources of PM_{10} include road dust, windblown dust and construction. Also formed from other pollutants (acid rain, NO_X, SO_X,	A consistent correlation between elevated ambient fine particulate matter (PM_{10} and $PM_{2.5}$) levels and an increase in mortality rates, respiratory infections, number and severity of

Criteria Pollutant	Description	Sources	Health Effects
	(haze) which is caused by the scattering of light and consequently the significant reduction air clarity. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they may be deposited, resulting in adverse health effects. Additionally, it should be noted that PM_{10} is considered a criteria air pollutant. $PM_{2.5}$ (Particulate Matter less than 2.5 microns): A similar air pollutant to PM_{10} consisting of tiny solid or liquid particles which are 2.5 microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include sulfates formed from SO_2 release from power plants and industrial facilities and nitrates that are formed from NO_X release from power plants, automobiles and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. $PM_{2.5}$ is a criteria air pollutant.	organics). Incomplete combustion of any fuel. $PM_{2.5}$ comes from fuel combustion in motor vehicles, equipment and industrial sources, residential and agricultural burning. Also formed from reaction of other pollutants (acid rain, NO_X, SO_X, organics).	asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in lifespan, and an increased mortality from lung cancer. Daily fluctuations in $PM_{2.5}$ concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long term exposure to particulate matter. The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM_{10} and $PM_{2.5}$.
Volatile Organic Compounds (VOC)	VOCs are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic compounds) have different levels of reactivity; that is, they do not react at the same speed or do not	Organic chemicals are widely used as ingredients in household products. Paints, varnishes and wax all contain organic solvents, as do many cleaning, disinfecting, cosmetic, degreasing and hobby products.	Breathing VOCs can irritate the eyes, nose and throat, can cause difficulty breathing and nausea, and can damage the central nervous system as well as other organs. Some VOCs can cause cancer. Not all VOCs have all these health effects, though many have several.

Criteria Pollutant	Description	Sources	Health Effects
	form O_3 to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms VOC and ROG (see below) interchangeably.	Fuels are made up of organic chemicals. All of these products can release organic compounds while you are using them, and, to some degree, when they are stored.	
Reactive Organic Gases (ROG)	Similar to VOC, ROGs are also precursors in forming O_3 and consist of compounds containing methane, ethane, propane, butane, and longer chain hydrocarbons, which are typically the result of some type of combustion/decomposition process. Smog is formed when ROG and nitrogen oxides react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O_3, which is a criteria pollutant. The terms ROG and VOC (see previous) interchangeably.	Sources similar to VOCs.	Health effects similar to VOCs.
Lead (Pb)	Lead is a heavy metal that is highly persistent in the environment and is considered a criteria pollutant. In the past, the primary source of lead in the air was emissions from vehicles burning leaded gasoline. The major sources of lead emissions are ore and metals processing, particularly lead smelters, and piston-engine aircraft operating on leaded aviation gasoline. Other stationary sources include waste incinerators, utilities, and lead-acid battery manufacturers. It should be noted that the	Metal smelters, resource recovery, leaded gasoline, deterioration of lead paint.	Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are associated with increased blood pressure.

Criteria Pollutant	Description	Sources	Health Effects
	Project does not include operational activities such as metal processing or lead acid battery manufacturing. As such, the Project is not anticipated to generate a quantifiable amount of lead emissions.		Pb poisoning can cause anemia, lethargy, seizures, and death; although it appears that there are no direct effects of Pb on the respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.
Odor	Odor means the perception experienced by a person when one or more chemical substances in the air come into contact with the human olfactory nerves.	Odors can come from many sources including animals, human activities, industry, natures, and vehicles.	Offensive odors can potentially affect human health in several ways. First, odorant compounds can irritate the eye, nose, and throat, which can reduce respiratory volume. Second, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system. Finally, unpleasant odors can trigger memories or attitudes linked to unpleasant odors, causing cognitive and emotional effects such as stress.

2.4 EXISTING AIR QUALITY

Existing air quality is measured at established MDAQMD air quality monitoring stations. Monitored air quality is evaluated in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) currently in effect are shown in Table 2-2 (4).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards. At the time of this AQIA, the most recent state and federal standards were updated by CARB on May ,4 2016 and are presented in Table 2-2. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O_3, CO (except 8-hour Lake Tahoe), SO_2 (1 and 24 hour), NO_2, PM_{10}, and $PM_{2.5}$ are not to be exceeded. All others are not to be equaled or exceeded. It should be noted that the three-year period is presented for informational purposes and is not the basis for how the State assigns attainment status. Attainment status for a pollutant means that the Air District meets the standards set by the United State Environmental Protection Agency (EPA) or the California EPA (CalEPA). Conversely, nonattainment means that an area has monitored air quality that does not meet the NAAQS or CAAQS standards. In order to improve air quality in nonattainment areas, a State Implementation Plan (SIP) is drafted. The SIP outlines the measures that the state will take to improve air quality. Once nonattainment areas meet the standards and additional redesignation requirements, the EPA will designate the area as a maintenance area (5).

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (1 OF 2)

Ambient Air Quality Standards						
Pollutant	**Averaging Time**	**California Standards [1]**		**National Standards [2]**		
		Concentration [3]	**Method [4]**	**Primary [3,5]**	**Secondary [3,6]**	**Method [7]**
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3	15 µg/m^3	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m^3)		9 ppm (10 mg/m^3)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m^3)	Gas Phase Chemiluminescence	100 ppb (188 µg/m^3)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)		0.053 ppm (100 µg/m^3)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m^3)	Ultraviolet Fluorescence	75 ppb (196 µg/m^3)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m^3)	
	24 Hour	0.04 ppm (105 µg/m^3)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m^3	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m^3 (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m^3		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

See footnotes on next page …

For more information please call ARB-PIO at (916) 322-2990 **California Air Resources Board (5/4/16)**

TABLE 2-2: AMBIENT AIR QUALITY STANDARDS (2 OF 2)

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

For more information please call ARB-PIO at (916) 322-2990 **California Air Resources Board (5/4/16)**

2.5 REGIONAL AIR QUALITY

Air pollution contributes to a wide variety of adverse health effects. The EPA has established NAAQS for six of the most common air pollutants: O_3, PM_{10}, $PM_{2.5}$, CO, NO_2, SO_2 and Pb which are known as criteria pollutants. The MDAQMD monitors levels of various criteria pollutants at 6 permanent monitoring stations throughout the air district (6). On February 20, 2019, CARB posted the 2018 amendments to the state and national area designations. See Table 2-3 for attainment designations for the MDAB and the Southeast Desert Air Basin (SDAB) (7). Appendix 2.1 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the MDAB and SDAB.

TABLE 2-3: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE MDAB

Criteria Pollutant	State Designation	Federal Designation
O_3 – 1-hour standard	Nonattainment	--
O_3 – 8-hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Nonattainment
$PM_{2.5}$	Attainment	Unclassifiable/Attainment
CO	Attainment	Unclassifiable/Attainment
NO_2	Attainment	Unclassifiable/Attainment
SO_2	Unclassifiable/Attainment	Unclassifiable/Attainment
Pb	Attainment	Unclassifiable/Attainment

Note: See Appendix 2.1 for a detailed map of State/National Area Designations within the MDAB and SDAB
"-" = The national 1-hour O_3 standard was revoked effective June 15, 2005.

2.6 LOCAL AIR QUALITY

Relative to the Project site, the nearest long-term air quality monitoring site for O_3 and PM_{10} was obtained from the MDAQMD Hesperia-Olive Street monitoring station, located approximately 5.08 miles east of the project site in Hesperia. Data for CO, NO_2, and $PM_{2.5}$ was obtained from the MDAQMD Victorville-Park Avenue, located approximately 5.75 miles northeast of the project site in Victorville. It should be noted that the Victorville-Park monitoring station was utilized in lieu of the Hesperia-Olive Street monitoring station only where data was not available from the nearest monitoring site.

The most recent three (3) years of data available is shown on Table 2-4 and identifies the number of days ambient air quality standards were exceeded for the study area, which is considered to be representative of the local air quality at the Project site. Data for O_3, CO, NO_2, PM_{10}, and $PM_{2.5}$ was obtained using the CARB iADAM: Air Quality and Data Statistics and the Air Quality and Meteorological Information System (AQMIS) (8) (9). Data for SO_2 has been omitted as attainment is regularly met and few monitoring stations measure SO_2 concentrations. It should be noted that the table below is provided for informational purposes.

TABLE 2-4: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2018-2020

Pollutant	Standard	Year		
		2018	2019	2020
O_3				
Maximum Federal 1-Hour Concentration (ppm)		0.113	0.108	0.118
Maximum Federal 8-Hour Concentration (ppm)		0.100	0.088	0.094
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	9	9	9
Number of Days Exceeding State/Federal 8-Hour Standard	> 0.070 ppm	71	47	46

2.7 REGULATORY BACKGROUND

2.7.1 FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the NAAQS for O_3, CO, NO_X, SO_2, PM_{10}, and Pb (10). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (11). The CAA also mandates that states submit and implement SIPs for local areas not meeting these

standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (12) (13). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$. Table 2-3 (previously presented) provides the NAAQS within the MDAB.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of NO_X which are emitted as byproducts of the combustion process.

2.7.2 CALIFORNIA REGULATIONS

CARB

CARB, which became part of the CalEPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO_4, visibility, hydrogen sulfide (H_2S), and vinyl chloride (C_2H_3Cl). However, at this time, H_2S and C_2H_3Cl are not measured at any monitoring stations in the MDAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (14) (10).

Local air quality management districts, such as the MDAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g., motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;

- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

TITLE 24 ENERGY EFFICIENCY STANDARDS AND CALIFORNIA GREEN BUILDING STANDARDS

California Code of Regulations (CCR) Title 24 Part 6: The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, commercial, and school buildings that went in effect on August 1, 2009, and is administered by the California Building Standards Commission.

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2022 California Green Building Code Standards that will be effective on January 1, 2023. The CEC anticipates that the 2022 energy code will provide $1.5 billion in consumer benefits and reduce GHG emissions by 10 million metric tons (15). The Project would be required to comply with the applicable standards in place at the time building permit document submittals are made. These require, among other items (16):

NONRESIDENTIAL MANDATORY MEASURES

- Short-term bicycle parking. If the new project or an additional alteration is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5% of new visitor motorized vehicle parking spaces being added, with a minimum of one two-bike capacity rack (5.106.4.1.1).
- Long-term bicycle parking. For new buildings with tenant spaces that have 10 or more tenant-occupants, provide secure bicycle parking for 5% of the tenant-occupant vehicular parking spaces with a minimum of one bicycle parking facility (5.106.4.1.2).
- Designated parking for clean air vehicles. In new projects or additions to alterations that add 10 or more vehicular parking spaces, provide designated parking for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles as shown in Table 5.106.5.2 (5.106.5.2).
- EV charging stations. New construction shall facilitate the future installation of EV supply equipment. The compliance requires empty raceways for future conduit and documentation that the electrical system has adequate capacity for the future load. The number of spaces to be provided for is contained in Table 5.106. 5.3.3 (5.106.5.3). Additionally, Table 5.106.5.4.1 specifies requirements for the installation of raceway conduit and panel power requirements for medium- and heavy-duty electric vehicle supply equipment for warehouses, grocery stores, and retail stores.

- Outdoor light pollution reduction. Outdoor lighting systems shall be designed to meet the backlight, uplight and glare ratings per Table 5.106.8 (5.106.8).
- Construction waste management. Recycle and/or salvage for reuse a minimum of 65% of the nonhazardous construction and demolition waste in accordance with Section 5.408.1.1. 5.405.1.2, or 5.408.1.3; or meet a local construction and demolition waste management ordinance, whichever is more stringent (5.408.1).
- Excavated soil and land clearing debris. 100% of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reuse or recycled. For a phased project, such material may be stockpiled on site until the storage site is developed (5.408.3).
- Recycling by Occupants. Provide readily accessible areas that serve the entire building and are identified for the depositing, storage, and collection of non-hazardous materials for recycling, including (at a minimum) paper, corrugated cardboard, glass, plastics, organic waste, and metals or meet a lawfully enacted local recycling ordinance, if more restrictive (5.410.1).
- Water conserving plumbing fixtures and fittings. Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the following:
  - Water Closets. The effective flush volume of all water closets shall not exceed 1.28 gallons per flush (5.303.3.1)
  - Urinals. The effective flush volume of wall-mounted urinals shall not exceed 0.125 gallons per flush (5.303.3.2.1). The effective flush volume of floor- mounted or other urinals shall not exceed 0.5 gallons per flush (5.303.3.2.2).
  - Showerheads. Single showerheads shall have a minimum flow rate of not more than 1.8 gallons per minute and 80 psi (5.303.3.3.1). When a shower is served by more than one showerhead, the combine flow rate of all showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi (5.303.3.3.2).
  - Faucets and fountains. Nonresidential lavatory faucets shall have a maximum flow rate of not more than 0.5 gallons per minute at 60 psi (5.303.3.4.1). Kitchen faucets shall have a maximum flow rate of not more than 1.8 gallons per minute of 60 psi (5.303.3.4.2). Wash fountains shall have a maximum flow rate of not more than 1.8 gallons per minute (5.303.3.4.3). Metering faucets shall not deliver more than 0.20 gallons per cycle (5.303.3.4.4). Metering faucets for wash fountains shall have a maximum flow rate not more than 0.20 gallons per cycle (5.303.3.4.5).
- Outdoor potable water uses in landscaped areas. Nonresidential developments shall comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent (5.304.1).
- Water meters. Separate submeters or metering devices shall be installed for new buildings or additions in excess of 50,000 sf or for excess consumption where any tenant within a new building or within an addition that is project to consume more than 1,000 gallons per day (GPD) (5.303.1.1 and 5.303.1.2).
- Outdoor water uses in rehabilitated landscape projects equal or greater than 2,500 sf. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 sf requiring a building or landscape permit (5.304.3).

- Commissioning. For new buildings 10,000 sf and over, building commissioning shall be included in the design and construction processes of the building project to verify that the building systems and components meet the owner's or owner representative's project requirements (5.410.2).

2.7.3 AIR QUALITY MANAGEMENT PLANNING

Currently, the NAAQS and CAAQS are exceeded in most parts of the MDAB. The NAAQS, the Project region within the MDAB is in nonattainment for O_3 (8-hour) and PM_{10}. For the CAAQS, the Project region within the MDAB is in nonattainment for O_3 (1-hour and 8-hour) and PM_{10}. In response, the MDAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards (17). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.7.

This page intentionally left blank

3 PROJECT AIR QUALITY IMPACT

3.1 INTRODUCTION

The Project has been evaluated to determine if it will violate an air quality standard or contribute to an existing or projected air quality violation. Additionally, the Project has been evaluated to determine if it will result in a cumulatively considerable net increase of a criteria pollutant for which the MDAB is non-attainment under an applicable federal or state ambient air quality standard. The significance of these potential impacts is described in the following section.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the Initial Study Checklist in Appendix G of the *State CEQA Guidelines* (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (1):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The MDAQMD has developed regional significance thresholds for regulated pollutants, shown below in Table 3-1. The MDAQMD's *Guidelines* indicate that any projects in the MDAB with daily regional emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact (18).

TABLE 3-1: MAXIMUM REGIONAL DAILY EMISSIONS THRESHOLDS

Pollutant	Daily Threshold (lbs/day)
CO	548 lbs/day
NO_X	137 lbs/day
VOC	137 lbs/day
SO_X	137 lbs/day
PM_{10}	82 lbs/day
$PM_{2.5}$	65 lbs/day

Note: lbs/day – pounds per day

3.3 MODELS EMPLOYED TO ANALYZE AIR QUALITY

3.3.1 CALEEMOD

Land uses such as the Project affect air quality through construction-source and operational-source emissions.

In May 2022 California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts, including SCAQMD, released the latest version of CalEEMod version 2022.1. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation (19). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendices 3.1 and 3.2.

3.4 CONSTRUCTION EMISSIONS

Construction activities associated with the Project will result in emissions of VOCs, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$. Construction related emissions are expected from the following construction activities:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

GRADING ACTIVITIES

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions." Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. Based on consultation with the client, it is anticipated that approximately 300 cubic yards of soil import will be required. Although it is anticipated that soil will be imported from within the City of Hesperia, a conservative hauling trip distance of 20 miles was utilized.

OFF-SITE UTILITY AND INFRASTRUCTURE IMPROVEMENTS

In addition, to support the Project development, there will be paving for off-site improvements associated with roadway construction and utility installation, as well as installation of fire hydrants and street lighting. It is expected that the off-site construction activities would not take place at one location for the entire duration of construction. Impacts associated with these activities are not expected to exceed the emissions identified for Project-related construction activities since the off-site construction areas would have physical constraints on the amount of

daily activity that could occur. The physical constraints would limit the amount of construction equipment that could be used, and any off-site and utility infrastructure construction would not use equipment totals that would exceed the equipment totals on Table 3-3. As such, no impacts beyond what has already been identified in this report are expected to occur.

3.4.1 CONSTRUCTION DURATION

Construction is expected to commence in January 2023 and will last through December 2023. Construction duration by phase is shown on Table 3-2. The construction schedule utilized in the analysis represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent.[3] The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per *CEQA Guidelines*. The duration of construction activity was based on the 2024 opening year.

3.4.2 CONSTRUCTION EQUIPMENT

Site specific construction fleet may vary due to specific project needs at the time of construction. The associated construction equipment was generally based on CalEEMod defaults. A detailed summary of construction equipment assumptions by phase is provided at Table 3-3. Please refer to specific detailed modeling inputs/outputs contained in Appendix 3.1 of this analysis.

TABLE 3-2: CONSTRUCTION DURATION

Phase Name	Start Date	End Date	Days
Site Preparation	1/15/2023	2/1/2023	13
Grading	2/1/2023	3/31/2023	43
Building Construction	3/15/2023	11/30/2023	187
Paving	11/15/2023	12/30/2023	33
Architectural Coating	11/6/2023	12/30/2023	40

TABLE 3-3: CONSTRUCTION EQUIPMENT ASSUMPTIONS

Phase Name	Equipment	Number	Hours Per Day
Site Preparation	Crawler Tractors	4	8
	Rubber Tired Dozers	3	8
Grading	Excavators	2	8

[3] As shown in the CalEEMod User's Guide Version 2022.1, Section 4.3"OFFROAD Equipment" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

Phase Name	Equipment	Number	Hours Per Day
	Graders	1	8
	Rubber Tired Dozers	1	8
	Scrapers	2	8
	Crawler Tractors	2	8
Building Construction	Cranes	1	8
	Forklifts	3	8
	Generator Sets	1	8
	Tractors/Loaders/Backhoes	3	8
	Welders	1	8
Paving	Pavers	2	8
	Paving Equipment	2	8
	Rollers	2	8
Architectural Coating	Air Compressors	1	8

3.4.3 CONSTRUCTION EMISSIONS SUMMARY

IMPACTS WITHOUT MITIGATION

CalEEMod calculates maximum daily emissions for summer and winter periods. As such, the estimated maximum daily construction emissions without mitigation for both summer and winter periods are summarized on Table 3-4. Detailed construction model outputs are presented in Appendix 3.1. Under the assumed scenarios, Project construction-source emissions would not exceed the applicable MDAQMD regional thresholds for any criteria pollutant. As such, emissions generated during Project construction are less than significant and mitigation is not required.

TABLE 3-4: EMISSIONS SUMMARY OF CONSTRUCTION – WITHOUT MITIGATION

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2023	2.70	16.30	36.00	0.04	3.91	1.37
Winter						
2023	70.80	89.00	73.50	0.12	13.50	7.97
Maximum Daily Emissions	**70.80**	**89.00**	**73.50**	**0.12**	**13.50**	**7.97**
SCAQMD Regional Threshold	137	137	548	137	82	65
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod construction-source emissions are presented in Appendix 3.1.

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the Project will result in emissions of VOCs, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$. Operational emissions would be expected from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions
- On-Site Cargo Handling Equipment Emissions

Unless otherwise noted, all emissions modeling presented herein employed CalEEMod default inputs and parameters.

3.5.1 AREA SOURCE EMISSIONS

ARCHITECTURAL COATINGS

Over a period of time the buildings that are part of this Project will require maintenance and will therefore produce emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings.

CONSUMER PRODUCTS

Consumer products include, but are not limited to detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants.

LANDSCAPE MAINTENANCE EQUIPMENT

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. It should be noted that as October 9, 2021, Governor Gavin Newsom signed AB 1346. The bill aims to ban the sale of new gasoline-powered equipment under 25 gross horsepower (known as small off-road engines [SOREs]) by 2024.

3.5.2 ENERGY SOURCE EMISSIONS

COMBUSTION EMISSIONS ASSOCIATED WITH NATURAL GAS AND ELECTRICITY

Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas. However, because electrical generating facilities for the Project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the MDAB, criteria pollutant emissions from offsite generation of electricity are generally excluded from the evaluation of significance and only natural gas use is considered.

3.5.3 MOBILE SOURCE EMISSIONS

The Project related operational air quality emissions derive primarily from vehicle trips generated by the Project, including employee trips to and from the site and truck trips associated with the proposed uses. Trip characteristics available from the *Amargosa and Palmetto High-Cube Warehouse Trip Generation Comparison Analysis* were utilized in this analysis (20).

3.5.3.1 APPROACH FOR ANALYSIS OF THE PROJECT

In order to determine emissions from passenger car vehicles, the CalEEMod defaults were utilized for trip length and trip purpose for the proposed industrial land uses.

For the proposed industrial uses, it is important to note that although the *Amargosa and Palmetto High-Cube Warehouse Trip Generation Comparison Analysis* does not breakdown passenger cars by type, this analysis assumes that passenger cars include Light-Duty-Auto vehicles (LDA), Light-Duty-Trucks (LDT1[4] & LDT2[5]), Medium-Duty-Vehicles (MDV), and Motorcycles (MCY) vehicle types. To account for emissions generated by passenger cars, the following fleet mix was utilized in this analysis:

TABLE 3-5: PASSENGER CAR FLEET MIX

Land Use	% Vehicle Type				
	LDA	LDT1	LDT2	MDV	MCY
High Cube Fulfillment (Non-Sort Facility) Warehouse	52.72%	4.97%	22.22%	17.18%	2.88%

Note: The Project-specific passenger car fleet mix used in this analysis is based on a proportional split utilizing the default CalEEMod percentages assigned to LDA, LDT1, LDT2, MDV, and MCY vehicle types.

To determine emissions from trucks for the proposed industrial uses, the analysis incorporated SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 40 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using traffic trip percentages taken from the *Amargosa and Palmetto High-Cube Warehouse Trip Generation Comparison Analysis*. The trip length function for the general light industrial and manufacturing uses has been revised to 30.47 miles with an assumption of 100% primary trips for the proposed industrial land uses.

In order to be consistent with the *Amargosa and Palmetto High-Cube Warehouse Trip Generation Comparison Analysis*, trucks are broken down by truck type. The truck fleet mix is estimated by rationing the trip rates for each truck type based on information provided in the *Amargosa and Palmetto High-Cube Warehouse Trip Generation Comparison Analysis*. Heavy trucks are broken down by truck type (or axle type) and are categorized as either Light-Heavy-Duty Trucks (LHDT1[6] & LHDT2 [7])/2-axle, Medium-Heavy-Duty Trucks (MHDT)/3-axle, and Heavy-Heavy-Duty Trucks

[4] Vehicles under the LDT1 category have a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs.

[5] Vehicles under the LDT2 category have a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs.

[6] Vehicles under the LHDT1 category have a GVWR of 8,501 to 10,000 lbs.

[7] Vehicles under the LHDT2 category have a GVWR of 10,001 to 14,000 lbs.

(HHDT)/4+-axle. To account for emissions generated by trucks, the following fleet mix was utilized in this analysis:

TABLE 3-6: TRUCK FLEET MIX

Land Use	% Vehicle Type			
	LHDT1	LHDT2	MHDT	HHDT
High Cube Fulfillment (Non-Sort Facility) Warehouse	13.03%	3.49%	20.87%	62.61%

Note: Project-specific truck fleet mix is based on the number of trips generated by each truck type (LHDT1, LHDT2, MHDT, and HHDT) relative to the total number of truck trips.

FUGITIVE DUST RELATED TO VEHICULAR TRAVEL

Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of break and tire wear particulates.

3.5.4 ON-SITE CARGO HANDLING EQUIPMENT EMISSIONS

It is common for warehouse buildings to require the operation of exterior cargo handling equipment in the building's truck court areas. For this particular Project, on-site modeled operational equipment includes up to two (2) 200 horsepower (hp), compressed natural gas or gasoline-powered tractors/loaders/backhoes operating at 4 hours a day[8] for 365 days of the year.

3.5.6 OPERATIONAL EMISSIONS SUMMARY

As previously stated, CalEEMod utilizes summer and winter EMFAC2021 emission factors in order to derive vehicle emissions associated with Project operational activities, which vary by season. The estimated operational-source emissions are summarized on Table 3-7. Detailed operation model outputs for the Project are presented in Appendix 3.2. As shown on Table 3-7, the Project's daily regional emissions from on-going operations will not exceed any of the thresholds of significance.

[8] Based on Table II-3, Port and Rail Cargo Handling Equipment Demographics by Type, from CARB's Technology Assessment: Mobile Cargo Handling Equipment document, a single piece of equipment could operate up to 2 hours per day (Total Average Annual Activity divided by Total Number Pieces of Equipment). As such, the analysis conservatively assumes that the tractor/loader/backhoe would operate up to 4 hours per day.

TABLE 3-7: SUMMARY OF PEAK OPERATIONAL EMISSIONS

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Mobile Source	4.67	13.60	62.00	0.21	5.55	1.22
Area Source	15.10	0.18	21.70	< 0.005	0.03	0.04
Energy Source	0.14	2.55	2.14	0.02	0.19	0.19
On-Site Equipment Source	0.23	0.75	32.89	0.00	0.06	0.05
Total Maximum Daily Emissions	**20.14**	**17.08**	**118.73**	**0.23**	**5.83**	**1.50**
MDAQMD Regional Threshold	137	137	548	137	82	65
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**
Winter						
Mobile Source	4.27	14.60	46.70	0.20	5.55	1.22
Area Source	11.50	0.00	0.00	0.00	0.00	0.00

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: CalEEMod operational-source emissions are presented in Appendix 3.2.

3.6 CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific CO "hot spots" is not needed to reach this conclusion. An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur.

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment.

To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards, as shown on Table 3-8.

TABLE 3-8: CO MODEL RESULTS

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Boulevard/Veteran Avenue	4.6	3.5	3.7
Sunset Boulevard/Highland Avenue	4	4.5	3.5
La Cienega Boulevard/Century Boulevard	3.7	3.1	5.2
Long Beach Boulevard/Imperial Highway	3	3.1	8.4

Source: 2003 AQMP, Appendix V: Modeling and Attainment Demonstrations
Notes: Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (*1992 CO Plan*), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 8.4 ppm 8-hr CO concentration measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 7.7 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (21). In contrast, an adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

Traffic volumes generating the CO concentrations for the "hot spot" analysis is shown on Table 3-9. The busiest intersection evaluated was that at Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vph and AM/PM traffic volumes of 8,062 vph and 7,719 vph respectively (21). The *2003 AQMP* estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations (4.6 ppm x 4= 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm)[9].

TABLE 3-9: TRAFFIC VOLUMES

Intersection Location	Peak Traffic Volumes (vph)				
	Eastbound (AM/PM)	Westbound (AM/PM)	Southbound (AM/PM)	Northbound (AM/PM)	Total (AM/PM)
Wilshire Boulevard/Veteran Avenue	4,954/2,069	1,830/3,317	721/1,400	560/933	8,062/7,719
Sunset Boulevard/Highland Avenue	1,417/1,764	1,342/1,540	2,304/1,832	1,551/2,238	6,614/5,374
La Cienega Boulevard/Century Boulevard	2,540/2,243	1,890/2,728	1,384/2,029	821/1,674	6,634/8,674
Long Beach Boulevard/Imperial Highway	1,217/2,020	1,760/1,400	479/944	756/1,150	4,212/5,514

Source: 2003 AQMP

[9] Based on the ratio of the CO standard (20.0 ppm) and the modeled value (4.6 ppm)

Trip generation estimates for the Project indicate that the proposed warehouse uses would generate an estimated maximum of approximately 77 trips during the PM peak hour.

Moreover, the ambient 1-hr CO concentration within the Project study area is estimated to be 5.461 ppm (data from Victorville station for 2020). Therefore, even if the traffic volumes for the Project were double or even triple of the traffic volumes generated at the Long Beach Blvd. and Imperial Hwy. intersection, coupled with the on-going improvements in ambient air quality, the Project would not be capable of resulting in a CO "hot spot" at any study area intersections.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph)—or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (22).

Based on the preceding, the potential for the project to result in or cause adverse CO "hotspots" is considered less-than-significant.

3.7 AQMP

The Federal Particulate Matter Attainment Plan and Ozone Attainment Plan for the Mojave Desert set forth a comprehensive set of programs that will lead the MDAB into compliance with federal and state air quality standards. The control measures and related emission reduction estimates within the Federal Particulate Matter Attainment Plan and Ozone Attainment Plan are based upon emissions projections for a future development scenario derived from land use, population, and employment characteristics defined in consultation with local governments. Accordingly, conformance with these attainment plans for development projects is determined by demonstrating compliance the indicators discussed below:

3.7.1 CONSISTENCY CRITERION NO. 1

Local land use plans and/or population projections

The existing General Plan Land Use designation of the Project site is "General Commercial" (C2). The Project uses are allowed under the site's existing C2 General Plan Land Use designation. The Project does not propose or require a General Plan Amendment affecting the Project site or any off-site City of Hesperia properties. The C2 land use designation allows for a maximum FAR of 1.0, the proposed Project site has a FAR of 0.376 which is in conformance with the C2 land use designation. The C2 land use designation is intended for goods and services of general nature, as well as professional offices that meet both short and long term needs of the City's population (23). The Project Applicant proposes land uses that are consistent with development anticipated under the site's existing General Plan designation. The Project would therefore conform to local land use plans.

3.7.4 CONSISTENCY CRITERION NO. 2

All MDAQMD Rules and Regulations

The Project would be required to comply with all applicable MDAQMD Rules and Regulations, including, but not limited to Rules 401 (Visibile Emissions), 402 (Nuisance), and 403 (Fugitive Dust).

3.7.3 CONSISTENCY CRITERION NO. 3

Demonstrating that the project will not increase the frequency or severity of a violation in the federal or state ambient air quality standards

Consistency Criterion No. 3 refers to violations of the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional significance thresholds were exceeded. As evaluated, the Project's regional construction and operational emissions would not exceed applicable regional significance thresholds. As such, a less than significant impact is expected.

AQMP CONSISTENCY CONCLUSION

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. Additionally, Project construction and operational-source emissions would not exceed the regional or localized significance thresholds. Further, the Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The Project is therefore considered to be consistent with the AQMP.

3.8 POTENTIAL IMPACTS TO SENSITIVE RECEPTORS

As per the MDAQMD's *Guidelines*, the following project types located within a specified distance to an existing or planned sensitive receptor land use must be evaluated to determine exposure of substantial pollutant concentrations to sensitive receptors (18):

- Any industrial project within 1,000 feet;
- A distribution center (40 or more trucks per day) within 1,000 feet;
- A major transportation project (50,000 or more vehicles per day) within 1,000 feet;
- A dry cleaner using perchloroethylene within 500 feet;
- A gasoline dispensing facility within 300 feet.

As the Project consists of approximately 499,700 sf of warehousing use, the potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Sensitive receptors can include uses such as long-term health care facilities, rehabilitation centers, and retirement homes. Residences, schools, playgrounds, childcare centers, and athletic facilities can also be considered as sensitive receptors.

Receptors in the Project study area are described below and shown on Exhibit 3-A. All distances are measured from the Project sites boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project sites. The selection of receptor locations

is based on Federal Highway Administration (FHWA) guidelines and is consistent with additional guidance provided by Caltrans and the Federal Transit Administration (FTA). Distance is measured in a straight line from the project boundary to each receptor location.

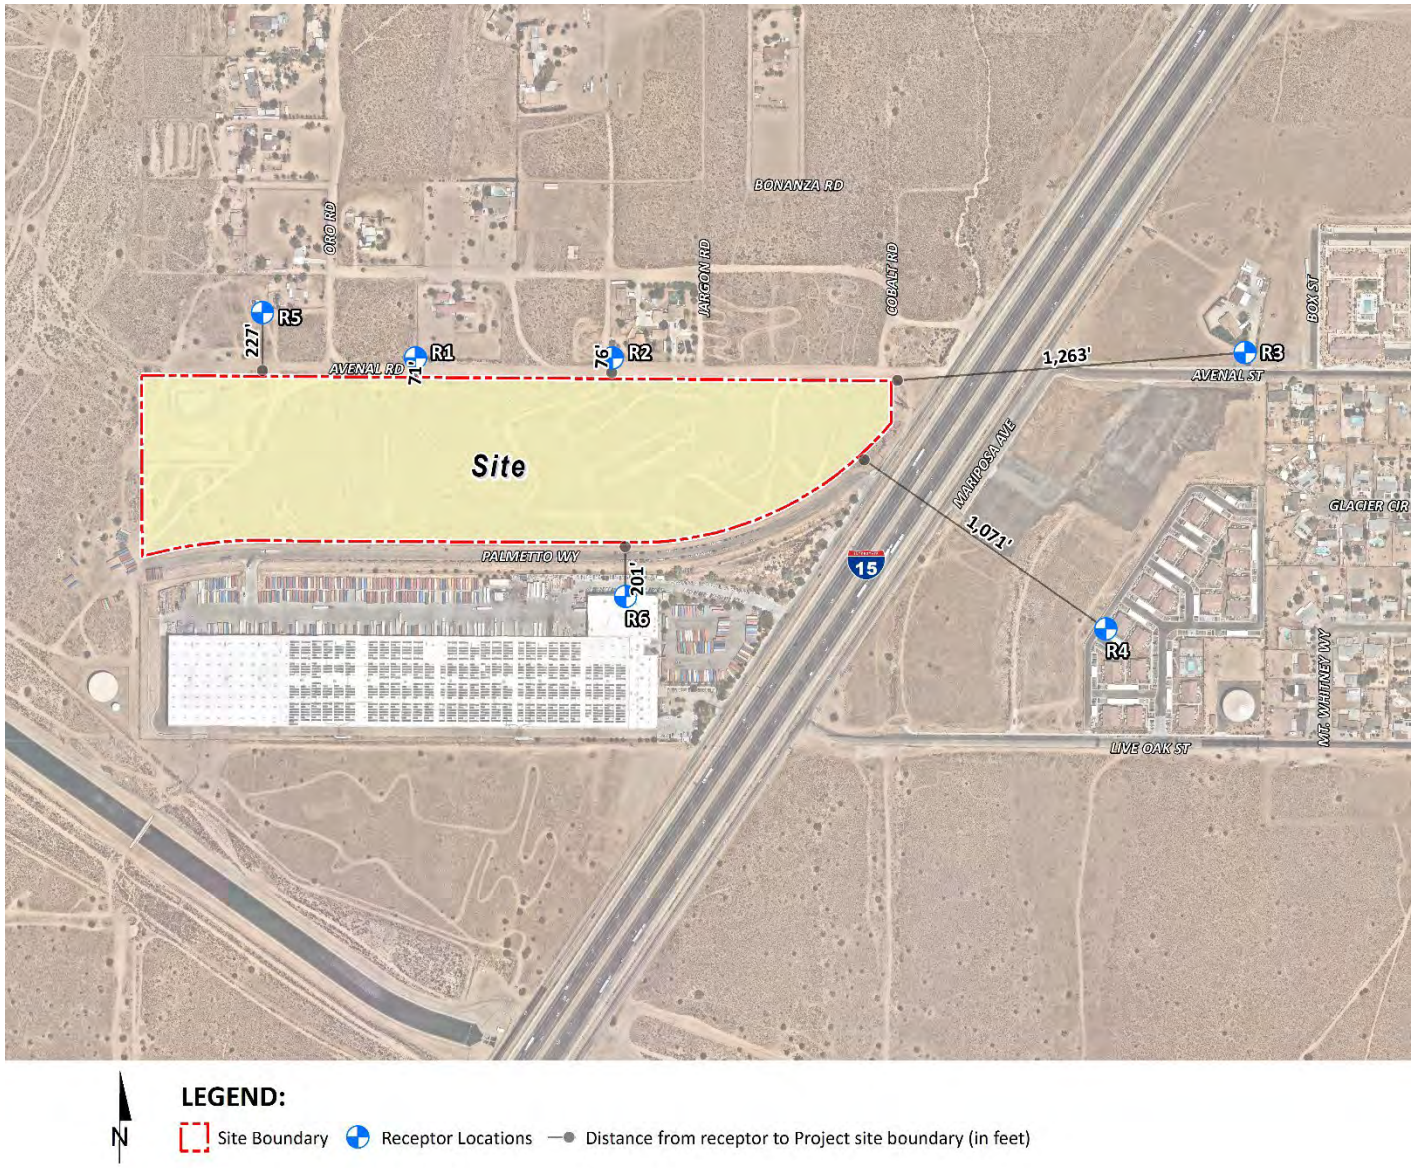
R1: Location R1 represents the existing residence at 13030 Avenal Street, approximately 71 feet north of the Project site. R1 is placed in the private outdoor living areas (backyard) facing the Project site.

R2: Location R2 represents the existing residence at 13164 Avenal Road, approximately 76 feet north of the Project site. R2 is placed in the private outdoor living areas (backyard) facing the Project site.

R3: Location R3 represents the existing residence at 10445 Avenal Street, approximately 1,263 feet east of the Project site. R3 is placed in the private outdoor living areas (backyard) facing the Project site.

R4: Location R4 represents the existing residence at 13500 Live Oak Street, approximately 1,071 feet southeast of the Project site Since there are no private outdoor living areas (backyards) facing the Project site, receptor R4 is placed at the residential building façade.

R5: Location R5 represents the existing residence at 10376 Wellington Road, approximately 227 feet north of the Project site. R5 is placed in the private outdoor living areas (backyard) facing the Project site.



R6: Location R6 represents MGA Entertainment, Inc., located at 10200 Amargosa Road, approximately 201 feet south of the Project site.

Based on Exhibit 3-A, and as described above, the nearest sensitive receptor is a residence at 13030 Avenal Street, approximately 71 feet north of the Project site.

The Project would have a potentially significant health risk impact if it results in a maximum incremental cancer risk from emission of Toxic Air Contaminants (TACs) of ≥ 10 in one million and/or a chronic & acute hazard index that is ≥1.0. In the case of the Project, the TAC of concern is diesel particulate matter (DPM) that could be generated by Project construction activities, and on-site and off-site DPM that would result from on-going Project operations.

For purposes of this evaluation, a Health Risk Assessment (HRA) has been prepared by Urban Crossroads, Inc. under a separate cover. The results of the *Amargosa and Palmetto High-Cube Warehouse Mobile Source Health Risk Assessment* (Urban Crossroads, Inc.) indicate that the Project would not result in any potentially significant health risk impacts from exposure to DPM emissions (24).

EXHIBIT 3-A: SENSITIVE RECEPTOR LOCATIONS

3.9 ODORS

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not propose or require land uses that would be substantive sources of objectionable odors. Potential temporary and intermittent odors may result from construction equipment exhaust, the application of asphalt and architectural coatings, Temporary and intermittent construction-source emissions are controlled through existing requirements and industry Best Management Practices (BMPs) addressing proper storage of and application construction materials.

Over the life of the Project, odors may result from storage of municipal solid waste pending its transport to area landfills. . Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City of Hesperia's solid waste regulations.

The Project would also be required to comply with MDAQMD Rule 402. Rule 402 provides that "[a] person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property." (25). Based on the preceding, the potential for the Project to create objectionable odors affecting a substantial number of people is considered less-than-significant.

3.10 CUMULATIVE IMPACTS

The MDAQMD relies on the SCAQMD guidance for determining cumulative impacts. The SCAQMD has recognized that there is typically insufficient information to quantitatively evaluate the cumulative contributions of multiple projects because each project applicant has no control over nearby projects.

The SCAQMD published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (26). In this report the SCAQMD clearly states (Page D-3):

> *"…the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for toxic air contaminant (TAC) emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Consistent with above SCAQMD guidance, Project operational or construction emissions that do not exceed the MDAQMD's project-specific thresholds would not cause a cumulatively considerable increase in emissions for those pollutants for which MDAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Conversely, Project construction and operational emissions that exceed MDAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

CONSTRUCTION IMPACTS

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that Project construction-source air pollutant emissions would not result in exceedances of MDAQMD thresholds. Therefore, Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

OPERATIONAL IMPACTS

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that Project operational-source air pollutant emissions would not result in exceedances of MDAQMD thresholds. Therefore, Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

APPENDIX 2.1:

STATE/FEDERAL ATTAINMENT STATUS OF CRITERIA POLLUTANTS

APPENDIX C

MAPS AND TABLES OF AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

APPENDIX C

MAPS AND TABLES OF AREA DESIGNATIONS FOR STATE AND NATIONAL AMBIENT AIR QUALITY STANDARDS

This attachment fulfills the requirement of Health and Safety Code section 40718 for CARB to publish maps that identify areas where one or more violations of any State ambient air quality standard (State standard) or national ambient air quality standard (national standard) have been measured. The national standards are those promulgated under section 109 of the federal Clean Air Act (42 U.S.C. 7409).

This attachment is divided into three parts. The first part comprises a table showing the levels, averaging times, and measurement methods for each of the State and national standards. This is followed by a section containing maps and tables showing the area designations for each pollutant for which there is a State standard in the California Code of Regulations, title 17, section 70200. The last section contains maps and tables showing the most current area designations for the national standards.

Ambient Air Quality Standards

(Updated 5/4/16)

Pollutant	Averaging Time	California Standards [1]		National Standards [2]		
		Concentration [3]	Method [4]	Primary [3,5]	Secondary [3,6]	Method [7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m³)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m³)		0.070 ppm (137 µg/m³)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m³	Gravimetric or Beta Attenuation	150 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m³		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m³	Gravimetric or Beta Attenuation	12.0 µg/m³	15 µg/m³	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m³)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m³)		9 ppm (10 mg/m³)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m³)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m³)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m³)		0.053 ppm (100 µg/m³)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m³)	Ultraviolet Fluorescence	75 ppb (196 µg/m³)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m³)	
	24 Hour	0.04 ppm (105 µg/m³)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m³	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m³ (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m³		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	**No National Standards**		
Sulfates	24 Hour	25 µg/m³	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m³)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m³)	Gas Chromatography			

See footnotes on next page ...

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.

8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

12. The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$)as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

14. In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

Area Designations for the State Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a State standard set forth in the California Code of Regulations, title 17, section 60200. Each area is identified as attainment, nonattainment, nonattainment-transitional, or unclassified for each pollutant, as shown below:

Attainment	A
Nonattainment	N
Nonattainment-Transitional	NA-T
Unclassified	U

In general, CARB designates areas by air basin for pollutants with a regional impact and by county for pollutants with a more local impact. However, when there are areas within an air basin or county with distinctly different air quality deriving from sources and conditions not affecting the entire air basin or county, CARB may designate a smaller area. Generally, when boundaries of the designated area differ from the air basin or county boundaries, the description of the specific area is referenced at the bottom of the summary table.

[1] AB 3048 (Olberg) and AB 2525 (Miller) signed into law in 1996, made changes to Health and Safety Code, section 40925.5. One of the changes allows nonattainment districts to become nonattainment-transitional for ozone by operation of law.

Area Designations for the National Ambient Air Quality Standards

The following maps and tables show the area designations for each pollutant with a national ambient air quality standard. Additional information about the federal area designations is available on the U.S. EPA website:

https://www.epa.gov/green-book

Over the last several years, U.S. EPA has been reviewing the levels of the various national standards. The agency has already promulgated new standard levels for some pollutants and is considering revising the levels for others. Information about the status of these reviews is available on the U.S. EPA website:

https://www.epa.gov/criteria-air-pollutants

Designation Categories

Suspended Particulate Matter (PM_{10}). The U.S. EPA uses three categories to designate areas with respect to PM_{10}:

- Attainment (A)
- Nonattainment (N)
- Unclassifiable (U)

Ozone, Fine Suspended Particulate Matter ($PM_{2.5}$), Carbon Monoxide (CO), and Nitrogen Dioxide (NO_2). The U.S. EPA uses two categories to designate areas with respect to these standards:

- Nonattainment (N)
- Unclassifiable/Attainment (U/A)

The national 1-hour ozone standard was revoked effective June 15, 2005, and the area designations map reflects the 2015 national 8-hour ozone standard of 0.070 ppm. Area designations were finalized on August 3, 2018.

On December 14, 2012, the U.S. EPA established a new national annual primary $PM_{2.5}$ standard of 12.0 µg/m^3. Area designations were finalized in December 2014. The current designation map reflects the most recently revised (2012) annual average standard of 12.0 µg/m^3 as well as the 24-hour standard of 35 µg/m^3, revised in 2006.

On January 22, 2010, the U.S. EPA established a new national 1-hour NO_2 standard of 100 parts per billion (ppb) and retained the annual average standard of 53 ppb. Designations for the primary NO_2 standard became effective on February 29, 2012. All areas of California meet this standard.

Sulfur Dioxide (SO_2). The U.S. EPA uses three categories to designate areas with respect to the 24-hour and annual average sulfur dioxide standards. These designation categories are:

- Nonattainment (N),
- Unclassifiable (U), and
- Unclassifiable/Attainment (U/A).

On June 2, 2010, the U.S. EPA established a new primary 1-hour SO_2 standard of 75 parts per billion (ppb). At the same time, U.S. EPA revoked the 24-hour and annual

average standards. Area designations for the 1-hour SO_2 standard were finalized on December 21, 2017 and are reflected in the area designations map.

Lead (particulate). The U.S. EPA promulgated a new rolling 3-month average lead standard in October 2008 of 0.15 µg/m^3. Designations were made for this standard in November 2010.

Designation Areas

From time to time, the boundaries of the California air basins have been changed to facilitate the planning process. CARB generally initiates these changes, and they are not always reflected in the U.S. EPA's area designations. For purposes of consistency, the maps in this attachment reflect area designation boundaries and nomenclature as promulgated by the U.S. EPA. In some cases, these may not be the same as those adopted by CARB. For example, the national area designations reflect the former Southeast Desert Air Basin. In accordance with Health and Safety Code section 39606.1, CARB redefined this area in 1996 to be the Mojave Desert Air Basin and Salton Sea Air Basin. The definitions and boundaries for all areas designated for the national standards can be found in Title 40, Code of Federal Regulations (CFR), Chapter I, Subchapter C, Part 81.305. They are available on the web at:

https://ecfr.io/Title-40/se40.20.81_1305

* Definitions and references for all areas can be found in 40 CFR, Chapter I, Part 81.305.
NOTE: This map and table reflect the 2015 8-hour ozone standard of 0.070 ppm.

[1] For this purpose, the Sacramento Metro Area comprises all of Sacramento and Yolo Counties, the Sacramento Valley Air Basin portion of Solano County, the southern portion of Sutter County, and the Sacramento Valley and Mountain Counties Air Basins portions of Placer and El Dorado counties.

[2] South Central Coast Air Basin Channel Islands:
Santa Barbara County includes Santa Cruz, San Miguel, Santa Rosa, and Santa Barbara Islands.
Ventura County includes Anacapa and San Nicolas Islands.
South Coast Air Basin:
Los Angeles County includes San Clemente and Santa Catalina Islands.

[1] U.S. EPA designation puts the Sacramento Valley Air Basin portion of Placer County in the Mountain Counties Air Basin.

[2] Air quality in Sacramento County meets the national PM_{10} standards. The request for redesignation to attainment was approved by U.S. EPA in September 2013.

[3] The request for redesignation to attainment for the Imperial Valley Planning Area was approved by U.S. EPA and in September 2020, effective October 2020.

[4] Air quality in Coachella Valley meets the national PM_{10} standards. A request for redesignation to attainment has been submitted to U.S. EPA.

* Definitions and references for all areas can be found in 40 CFR, Chapter I, Part 81.305. This map reflects the 2006 24-hour $PM_{2.5}$ standard as well as the 1997 and 2012 $PM_{2.5}$ annual standards.

[1] For this purpose, Sacramento Metro Area comprises all of Sacramento and portions of El Dorado, Placer, Solano, and Yolo Counties. Air quality in this area meets the national $PM_{2.5}$ standards. A Determination of Attainment for the 2006 24-hour $PM_{2.5}$ standard was made by U.S. EPA in June 2017.

[2] Air quality in this area meets the national $PM_{2.5}$ standards. A Determination of Attainment for the 2006 24-hour $PM_{2.5}$ standard was made by U.S. EPA in June 2017.

[3] Those lands of the Santa Rosa Band of Cahulla Mission Indians in Riverside County are designated Unclassifiable/Attainment.

[4] That portion of Imperial County encompassing the urban and surrounding areas of Brawley, Calexico, El Centro, Heber, Holtville, Imperial, Seeley, and Westmorland. Air quality in this area meets the national $PM_{2.5}$ standards. A Determination of Attainment for the 2006 24-hour $PM_{2.5}$ standard was made by U.S. EPA in June 2017.

[1] South Central Coast Air Basin Channel Islands:
Santa Barbara County includes Santa Cruz, San Miguel, Santa Rosa, and Santa Barbara Islands.
Ventura County includes Anacapa and San Nicolas Islands.
Note that the San Clemente and Santa Catalina Islands are considered part of Los Angeles County, and therefore, are included as part of the South Coast Air Basin.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	786,896	262,299	49,795

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	—	—	45.5	0.00	—
Grading	300	—	172	0.00	—
Paving	0.00	0.00	0.00	0.00	19.1

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Unrefrigerated Warehouse-No Rail	0.00	0%
Parking Lot	3.93	100%
Other Non-Asphalt Surfaces	15.1	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2023	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	33.6	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	22.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	0	0	0	N/A
Snowpack	N/A	N/A	N/A	N/A
Air Quality	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	1	1	4
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A

Drought	1	1	1	2
Snowpack	N/A	N/A	N/A	N/A
Air Quality	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	32.2
AQ-DPM	57.9
Drinking Water	29.7
Lead Risk Housing	13.8
Pesticides	0.00
Toxic Releases	25.0
Traffic	83.1
Effect Indicators	—
CleanUp Sites	73.4
Groundwater	0.00
Haz Waste Facilities/Generators	65.9

Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	84.6
Cardio-vascular	99.5
Low Birth Weights	5.81
Socioeconomic Factor Indicators	—
Education	67.1
Housing	11.2
Linguistic	19.9
Poverty	67.2
Unemployment	82.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	66.22610035
Employed	25.70255357
Education	—
Bachelor's or higher	31.64378288
High school enrollment	2.258437059
Preschool enrollment	41.10098807
Transportation	—
Auto Access	89.83703323
Active commuting	14.92364943

Climate Change Adaptive Capacity	—
Impervious Surface Cover	86.5
Traffic Density	80.1
Traffic Access	23.0
Other Indices	—
Hardship	53.1
Other Decision Support	—
2016 Voting	53.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	52.0
Healthy Places Index Score for Project Location (b)	42.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health and Equity Evaluation Scorecard not completed.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Construction: Construction Phases	Client indicated construction schedule
Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases Standard 8-hour work day
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction

This page intentionally left blank

APPENDIX 3.2:

CALEEMOD OPERATIONAL EMISSIONS MODEL OUTPUTS

14848-Palmetto Industrial (Operations) Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	14848-Palmetto Industrial (Operations)
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	1.40
Location	34.436795901992426, -117.37836806854374
County	San Bernardino-Mojave Desert
City	Hesperia
Air District	Mojave Desert AQMD
Air Basin	Mojave Desert
TAZ	5106
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southwest Gas Corp.

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	500	1000sqft	11.5	499,700	255,000	—	—	—
Parking Lot	508	Space	3.93	0.00	0.00	—	—	—

Other Non-Asphalt Surfaces	659	1000sqft	15.1	0.00	0.00	—	—	—
User Defined Industrial	500	User Defined Unit	0.00	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit

Temperature and Extreme Heat	33.6	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	22.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	0	0	0	N/A
Snowpack	N/A	N/A	N/A	N/A
Air Quality	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	1	1	4
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	1	1	1	2
Snowpack	N/A	N/A	N/A	N/A
Air Quality	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	32.2
AQ-DPM	57.9
Drinking Water	29.7
Lead Risk Housing	13.8

Pesticides	0.00
Toxic Releases	25.0
Traffic	83.1
Effect Indicators	—
CleanUp Sites	73.4
Groundwater	0.00
Haz Waste Facilities/Generators	65.9
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	84.6
Cardio-vascular	99.5
Low Birth Weights	5.81
Socioeconomic Factor Indicators	—
Education	67.1
Housing	11.2
Linguistic	19.9
Poverty	67.2
Unemployment	82.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	66.22610035
Employed	25.70255357
Education	—

Bachelor's or higher	31.64378288
High school enrollment	2.258437059
Preschool enrollment	41.10098807
Transportation	—
Auto Access	89.83703323
Active commuting	14.92364943

EXECUTIVE SUMMARY

This report evaluates the potential mobile-source emissions health risk impacts associated with the development of the proposed Project. More specifically, potential health risk impacts that could result from exposure to Toxic Air Contaminants (TACs), in this case, diesel particulate matter (DPM) generated by heavy-duty diesel trucks accessing the site. This section summarizes the significance criteria and Project health risks.

The results of the health risk assessment from Project-generated DPM emissions are provided in Table ES-1, ES-2, and ES-3, presented subsequently.

CONSTRUCTION IMPACTS

The land use with the greatest potential exposure to Project construction-source DPM emissions is Location R2 which is located approximately 76 feet north the Project site at an existing residence located at 13164 Avenal Road. R2 is placed in the private outdoor living area (backyard) facing the Project site. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 2.13 in one million, which is less than the Mojave Desert Air Quality Management District's (MDAQMD) significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity. All other receptors during construction activity would experience less risk than what is identified for this location. The nearest modeled receptors are illustrated on Exhibit 2-D.

OPERATIONAL IMPACTS

Residential Exposure Scenario:

The residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R4 which is located approximately 1,071 feet southeast of the Project site at an existing residence located at 13500 Live Oak Street. Since there are no private outdoor living areas facing the Project site, R4 is placed at the building façade nearest the Project site. At the MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 0.20 in one million, which is less than the MDAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Because all other modeled residential receptors are exposed to lesser concentrations and are located at a greater distance from the Project site than the MEIR analyzed herein, and TACs generally dissipates with distance from the source, all other residential receptors in the vicinity of the Project site would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby residences. The nearest modeled receptors are illustrated on Exhibit 2-D.

Worker Exposure Scenario[1]*:*

The worker receptor land use with the greatest potential exposure to Project operational-source DPM emissions is Location R6, which represents the potential worker receptor approximately 201 feet south of the Project site. At the maximally exposed individual worker (MEIW), the maximum incremental cancer risk impact is 0.04 in one million which is less than the MDAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Because all other modeled worker receptors are located at a greater distance than the MEIW analyzed herein, and DPM dissipates with distance from the source, all other worker receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent workers. The nearest modeled receptors are illustrated on Exhibit 2-D.

School Child Exposure Scenario:

Proximity to sources of toxics is critical to determining the impact. In traffic-related studies, the additional non-cancer health risk attributable to proximity was seen within 1,000 feet and was strongest within 300 feet. California freeway studies show about a 70-percent drop-off in particulate pollution levels at 500 feet. Based on California Air Resources Board (CARB) emissions and modeling analyses, an 80-percent drop-off in pollutant concentrations is expected at approximately 1,000 feet from a distribution center (1).

The 1,000-foot evaluation distance is supported by research-based findings concerning Toxic Air Contaminant (TAC) emission dispersion rates from roadways and large sources showing that emissions diminish substantially between 500 and 1,000 feet from emission sources.

A one-quarter mile radius, or 1,320 feet, is commonly utilized for identifying sensitive receptors, such as schools, that may be impacted by a proposed project. This radius is more robust than, and therefore provides a more health protective scenario for evaluation than the 1,000-foot impact radius identified above.

There are no schools within ¼ mile of the Project site. The nearest school is Topaz Preparatory Academy, which is located approximately 5,580 feet southeast of the Project site. Because there is no reasonable potential that TAC emissions would cause significant health impacts at distances of more than ¼ mile from the air pollution source, there would be no significant impacts that would occur to any schools in the vicinity of the Project.

CONSTRUCTION AND OPERATIONAL IMPACTS

The land use with the greatest potential increased cancer risk due to exposure to Project construction-source and operational-source DPM emissions is Location R2. At this location, the

1 MDAQMD guidance does not require assessment of the potential health risk to on-site workers. Excerpts from the document OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines—The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2003), also indicate that it is not necessary to examine the health effects to on-site workers unless required by RCRA (Resource Conservation and Recovery Act) / CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) or the worker resides on-site.

maximum incremental cancer risk attributable to Project construction and operational DPM source emissions is estimated at 2.22 in one million, which is less than the threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction and operational activity. All other receptors during construction and operational activity would experience less risk than what is identified for this location. The nearest modeled receptors are illustrated on Exhibit 2-D.

TABLE ES-1: SUMMARY OF CONSTRUCTION CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
0.96 Year Exposure	Maximum Exposed Sensitive Receptor	2.13	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor	≤0.01	1.0	NO

TABLE ES-2: SUMMARY OF OPERATIONAL CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor	0.20	10	NO
25 Year Exposure	Maximum Exposed Worker Receptor	0.04	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor	≤0.01	1.0	NO
Annual Average	Maximum Exposed Worker Receptor	≤0.01	1.0	NO

TABLE ES-3: SUMMARY OF CONSTRUCTION AND OPERATIONAL CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor	2.22	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor	≤0.01	1.0	NO

1 INTRODUCTION

The purpose of this Health Risk Assessment (HRA) is to evaluate Project-related impacts to nearby sensitive receptors (residents) and workers as a result of heavy-duty diesel trucks accessing the site.

The MDAQMD identifies that if a proposed Project is expected to generate/attract heavy-duty diesel trucks, which emit DPM, preparation of a mobile source HRA is recommended. This document serves to meet the MDAQMD's recommendation for preparation of an HRA. The mobile source HRA has been prepared in accordance with all relevant and appropriate procedures presented by the United States Environmental Protection Agency (U.S. EPA), California EPA and MDAQMD. Cancer risk is expressed in terms of expected incremental incidence per million population. The MDAQMD has established an incidence rate of ten (10) persons per million as the maximum acceptable incremental cancer risk due to DPM exposure from a project such as the proposed Project. This threshold serves to determine whether or not a given project has a potentially significant development-specific and cumulatively considerable impact.

The MDAQMD has also established non-carcinogenic risk parameters for use in HRAs. Non-carcinogenic risks are quantified by calculating a "hazard index," expressed as the ratio between the ambient pollutant concentration and its toxicity or Reference Exposure Level (REL). An REL is a concentration at or below which health effects are not likely to occur. A hazard index less of than one (1.0) means that adverse health effects are not expected. In this HRA, non-carcinogenic exposures of less than 1.0 are considered less-than-significant. Both the cancer risk and non-carcinogenic risk thresholds are applied to the nearest sensitive receptors below.

1.1 SITE LOCATION

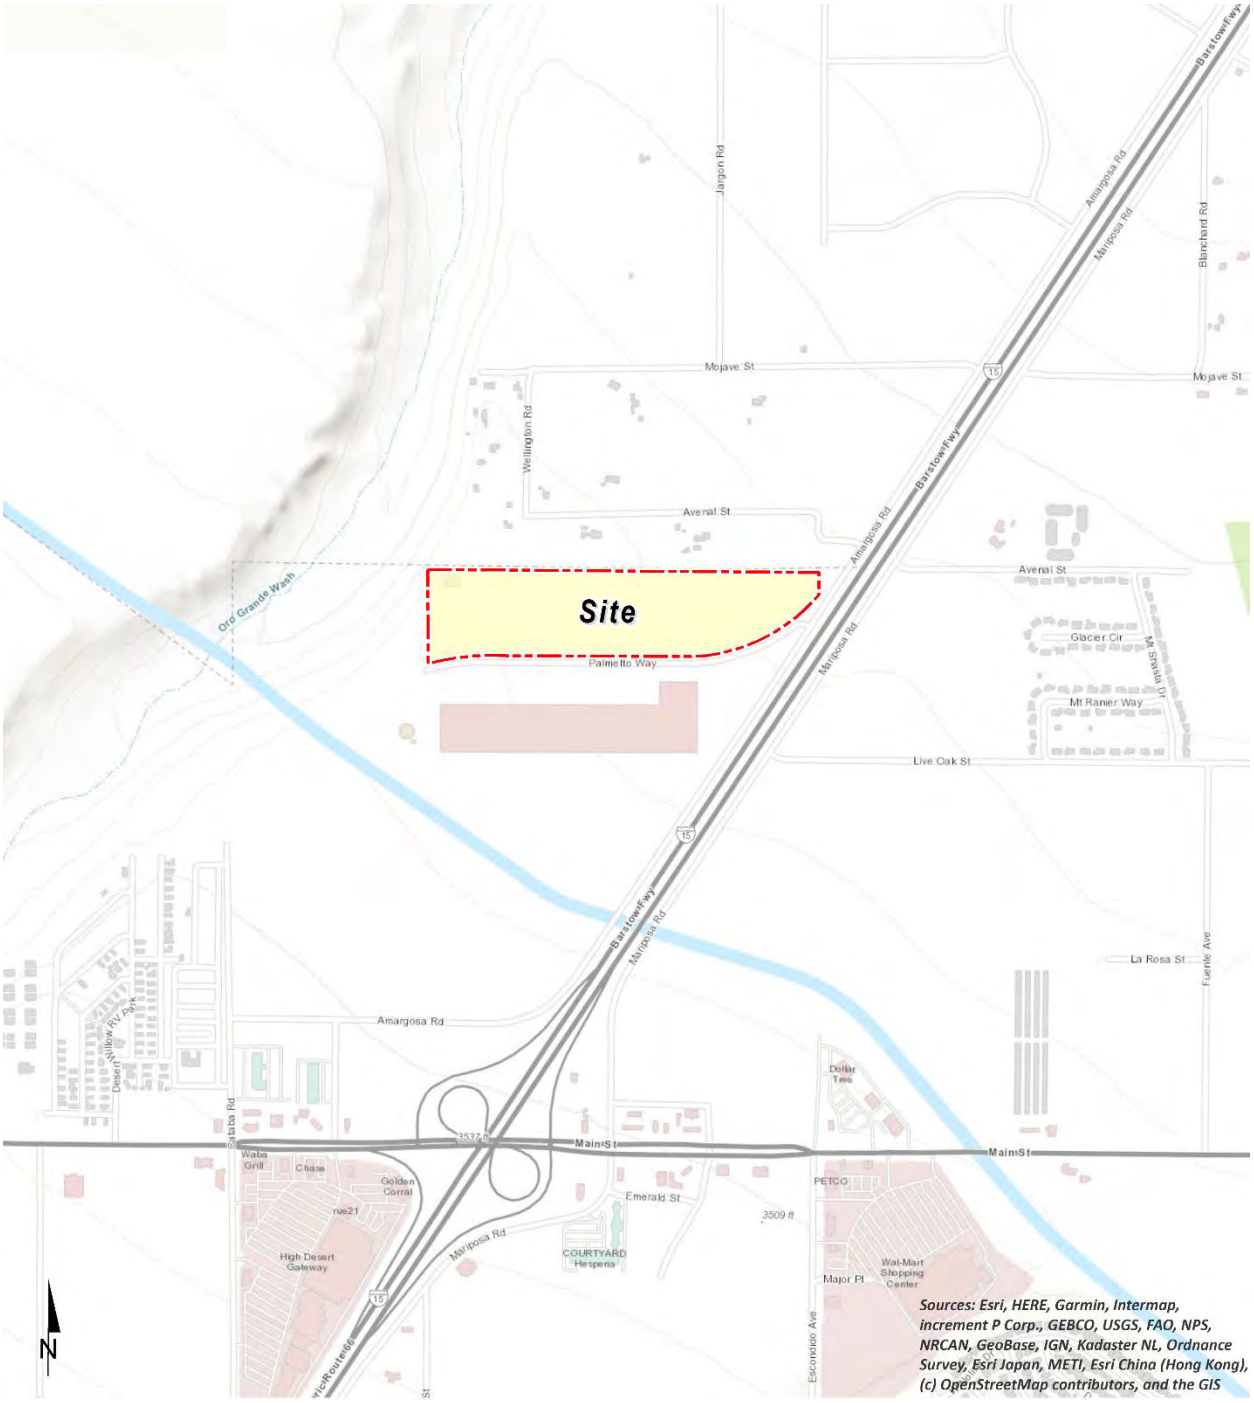
The proposed Project is located on the northwest corner of Amargosa Road, and Palmetto Way in the City of Hesperia as shown on Exhibit 1-A.

1.2 PROJECT DESCRIPTION

The proposed Project is to consist of 499,850[2] square high-cube fulfillment center warehouse building as shown on Exhibit 1-B. the proposed project is anticipated to be constructed and fully operational by year 2024.

2 The proposed building square footage utilized in this analysis is based on a previous site plan which assumed a slightly smaller building square footage. Nonetheless, the emissions analyzed in this report would not change and a less than significant impact is expected.

EXHIBIT 1-A: LOCATION MAP



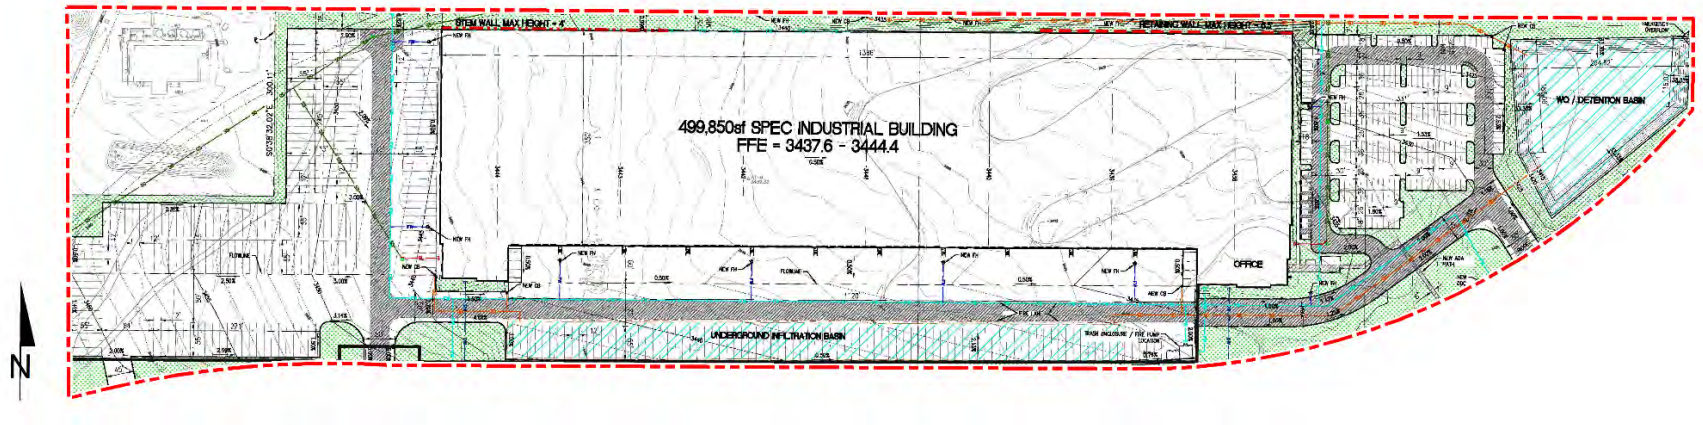


EXHIBIT 1-B: SITE PLAN

This page intentionally left blank

2 BACKGROUND

2.1 BACKGROUND ON RECOMMENDED METHODOLOGY

This HRA is based on applicable guidelines to produce conservative estimates of human health risk posed by exposure to DPM. The conservative nature of this analysis is due primarily to the following factors:

- The ARB-adopted diesel exhaust Unit Risk Factor (URF) of 300 in one million per $\mu g/m^3$ is based upon the upper 95 percentile of estimated risk for each of the epidemiological studies utilized to develop the URF. Using the 95th percentile URF represents a very conservative (health-protective) risk posed by DPM because it represents breathing rates that are high for the human body (95% higher than the average population).
- The emissions derived assume that every truck accessing the Project site will idle for 15 minutes under the unmitigated scenario, and this is an overestimation of actual idling times and thus conservative.[3] The California Air Resources Board (CARB's) anti-idling requirements impose a 5-minute maximum idling time and therefore the analysis conservatively overestimates DPM emissions from idling by a factor of 3.

2.2 CONSTRUCTION HEALTH RISK ASSESSMENT

2.2.1 EMISSIONS CALCULATIONS

The emissions calculations for the construction HRA component are based on an assumed mix of construction equipment and hauling activity as presented in the *Amargosa and Palmetto High-Cube Warehouse Air Quality Impact Analysis* ("technical study") prepared by Urban Crossroads, Inc. (2).

Construction related DPM emissions are expected to occur primarily as a function of heavy-duty construction equipment that would be operating on-site.

As discussed in the technical study, the Project would result in approximately 250 total working-days of construction activity. The construction duration by phase is shown on Table 2-1. A detailed summary of construction equipment assumptions by phase is provided at Table 2-2. The CalEEMod emissions outputs are presented in Appendix 2.1. The modeled emission sources for construction activity are illustrated on Exhibit 2-A.

[3] Although the Project is required to comply with ARB's idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions should be estimated for 15 minutes of truck idling (personal communication, in person, with Jillian Wong, December 22, 2016), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc.

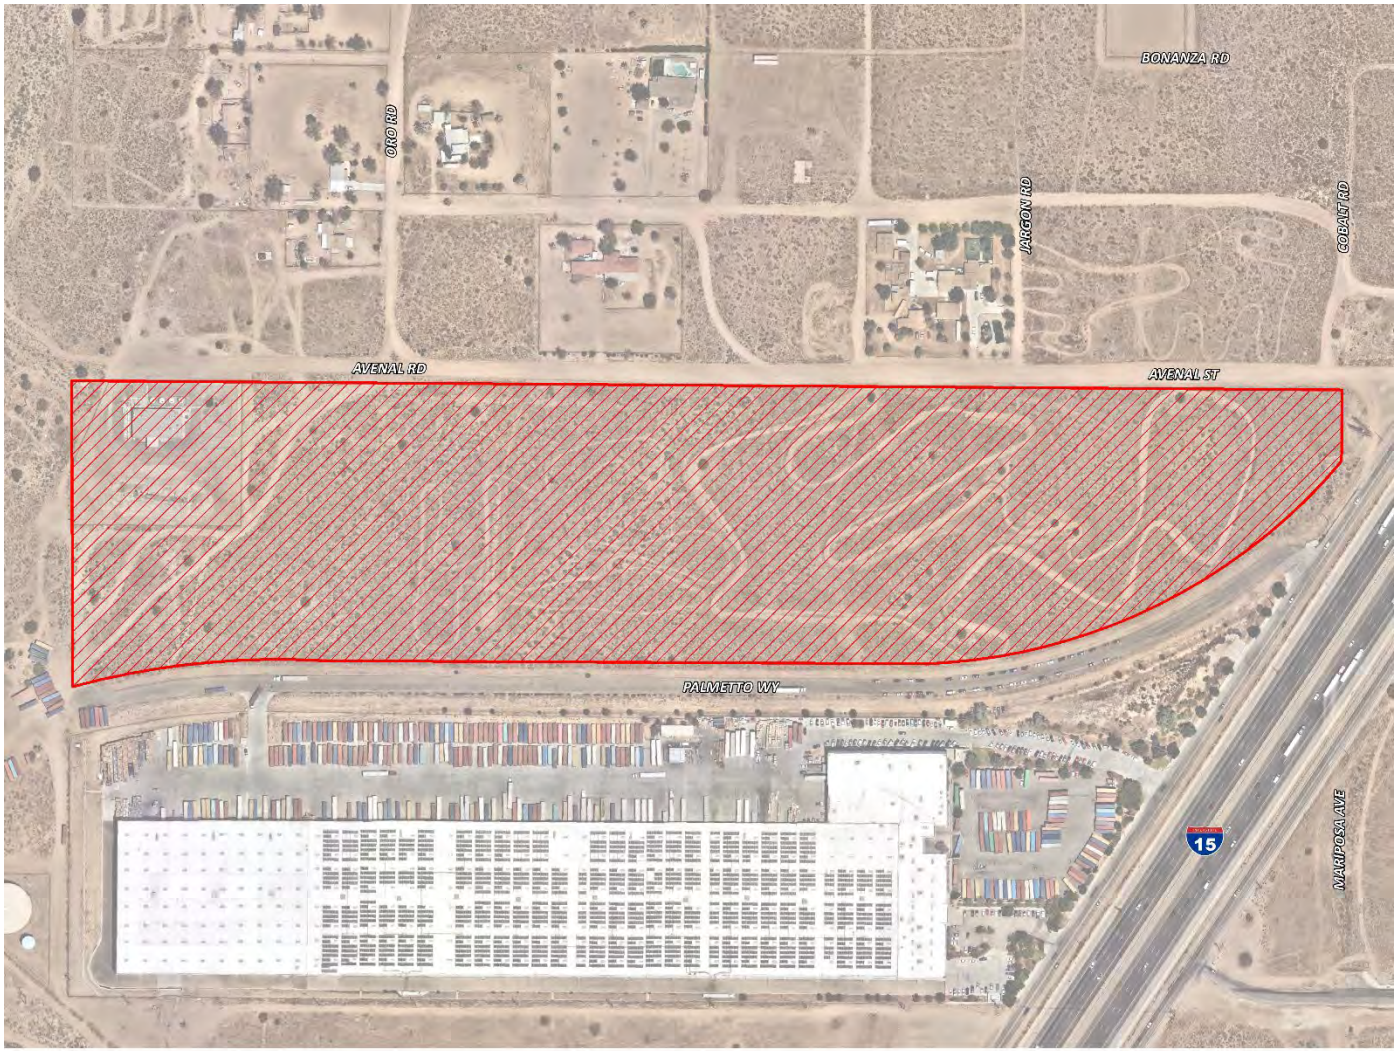

TABLE 2-1: CONSTRUCTION DURATION

Phase Name	Start Date	End Date	Days
Site Preparation	1/15/2023	2/1/2023	13

EXHIBIT 2-A: MODELED CONSTRUCTION EMISSION SOURCES

2.3 OPERATIONAL HEALTH RISK ASSESSMENT

2.3.1 ON-SITE AND OFF-SITE TRUCK ACTIVITY

Vehicle DPM emissions were calculated using emission factors for particulate matter less than 10µm in diameter (PM_{10}) generated with the 2021 version of the EMission FACtor model (EMFAC) developed by the CARB. EMFAC 2021 is a mathematical model that CARB developed to calculate emission rates from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the ARB to project changes in future emissions from on-road mobile sources (3). The most recent version of this model, EMFAC 2021, incorporates regional motor vehicle data, information and estimates regarding the distribution of vehicle miles traveled (VMT) by speed, and number of starts per day.

Several distinct emission processes are included in EMFAC 2021. Emission factors calculated using EMFAC 2021 are expressed in units of grams per vehicle miles traveled (g/VMT) or grams per idle-hour (g/idle-hr), depending on the emission process. The emission processes and corresponding emission factor units associated with diesel particulate exhaust for this Project are presented below.

For this Project, annual average PM_{10} emission factors were generated by running EMFAC 2021 in EMFAC Mode for vehicles in the San Bernardino County jurisdiction. The EMFAC Mode generates emission factors in terms of grams of pollutant emitted per vehicle activity and can calculate a matrix of emission factors at specific values of temperature, relative humidity, and vehicle speed. The model was run for speeds traveled in the vicinity of the Project. The vehicle travel speeds for each segment modeled are summarized below.

- Idling – on-site loading/unloading and truck gate
- 5 miles per hour – on-site vehicle movement including driving and maneuvering
- 25 miles per hour – off-site vehicle movement including driving and maneuvering.

Calculated emission factors are shown at Table 2-3. As a conservative measure, a 2024 EMFAC 2021 run was conducted and a static 2024 emissions factor data set was used for the entire duration of analysis herein (e.g., 30 years). Use of 2024 emission factors would overstate potential impacts since this approach assumes that emission factors remain “static” and do not change over time due to fleet turnover or cleaner technology with lower emissions that would be incorporated into vehicles after 2024. Additionally, based on EMFAC 2021, Light-Heavy-Duty Trucks are comprised of 59.6% diesel, Medium-Heavy-Duty Trucks are comprised of 75.1% diesel, and Heavy-Heavy-Duty Trucks are comprised of 99.7% diesel. Trucks fueled by diesel are accounted for by these percentages accordingly in the emissions factor generation. Appendix 2.2 includes additional details on the emissions estimates from EMFAC.

The vehicle DPM exhaust emissions were calculated for running exhaust emissions. The running exhaust emissions were calculated by applying the running exhaust PM_{10} emission factor (g/VMT) from EMFAC over the total distance traveled. The following equation was used to estimate off-site emissions for each of the different vehicle classes comprising the mobile sources (4):

$Emissions_{speedA}$ (g/s) = $EF_{RunExhaust}$ (g/VMT) * Distance (VMT/trip) * Number of Trips (trips/day) / seconds per day

Where:

$Emissions_{speedA}$ (g/s): Vehicle emissions at a given speed A;

$EF_{RunExhaust}$ (g/VMT): EMFAC running exhaust PM_{10} emission factor at speed A;

Distance (VMT/trip): Total distance traveled per trip.

Similar to off-site traffic, on-site vehicle running emissions were calculated by applying the running exhaust PM_{10} emission factor (g/VMT) from EMFAC and the total vehicle trip number over the length of the driving path using the same formula presented above for on-site emissions. In addition, on-site vehicle idling exhaust emissions were calculated by applying the idle exhaust PM_{10} emission factor (g/idle-hr) from EMFAC and the total truck trip over the total assumed idle time (15 minutes). The following equation was used to estimate the on-site vehicle idling emissions for each of the different vehicle classes (4):

$Emissions_{idle}$ (g/s) = EF_{idle} (g/hr) * Number of Trips (trips/day) * Idling Time (min/trip) *

60 minutes per hour / seconds per day

Where:

$Emissions_{idle}$ (g/s): Vehicle emissions during idling;

EF_{idle}(g/s): EMFAC idle exhaust PM_{10} emission factor.

TABLE 2-3: 2024 WEIGHTED AVERAGE DPM EMISSIONS FACTORS

Speed	Weighted Average
0 (idling)	0.08786 (g/idle-hr)
5	0.02217 (g/s)
25	0.00958 (g/s)

Each roadway was modeled as a line source (made up of multiple adjacent volume sources). Due to the large number of volume sources modeled for this analysis, the corresponding coordinates of each volume source have not been included in this report but are included in Appendix 2.3. The DPM emission rate for each volume source was calculated by multiplying the emission factor (based on the average travel speed along the roadway) by the number of trips and the distance traveled along each roadway segment and dividing the result by the number of volume sources along that roadway, as illustrated on Table 2-4. The modeled emission sources are illustrated on Exhibit 2-B for on-site sources and Exhibit 2-C for off-site sources. The modeling domain is limited to the Project's primary truck route and includes off-site sources in the study area for more than ¾ mile. This modeling domain is more inclusive and conservative than using only a ¼ mile modeling domain which is the distance supported by several reputable studies which conclude that the greatest potential risks occur within a ¼ mile of the primary source of emissions (1) (in the case of the Project, the primary source of emissions is the on-site idling and on-site travel).

EXHIBIT 2-B: MODELED ON-SITE EMISSION SOURCES

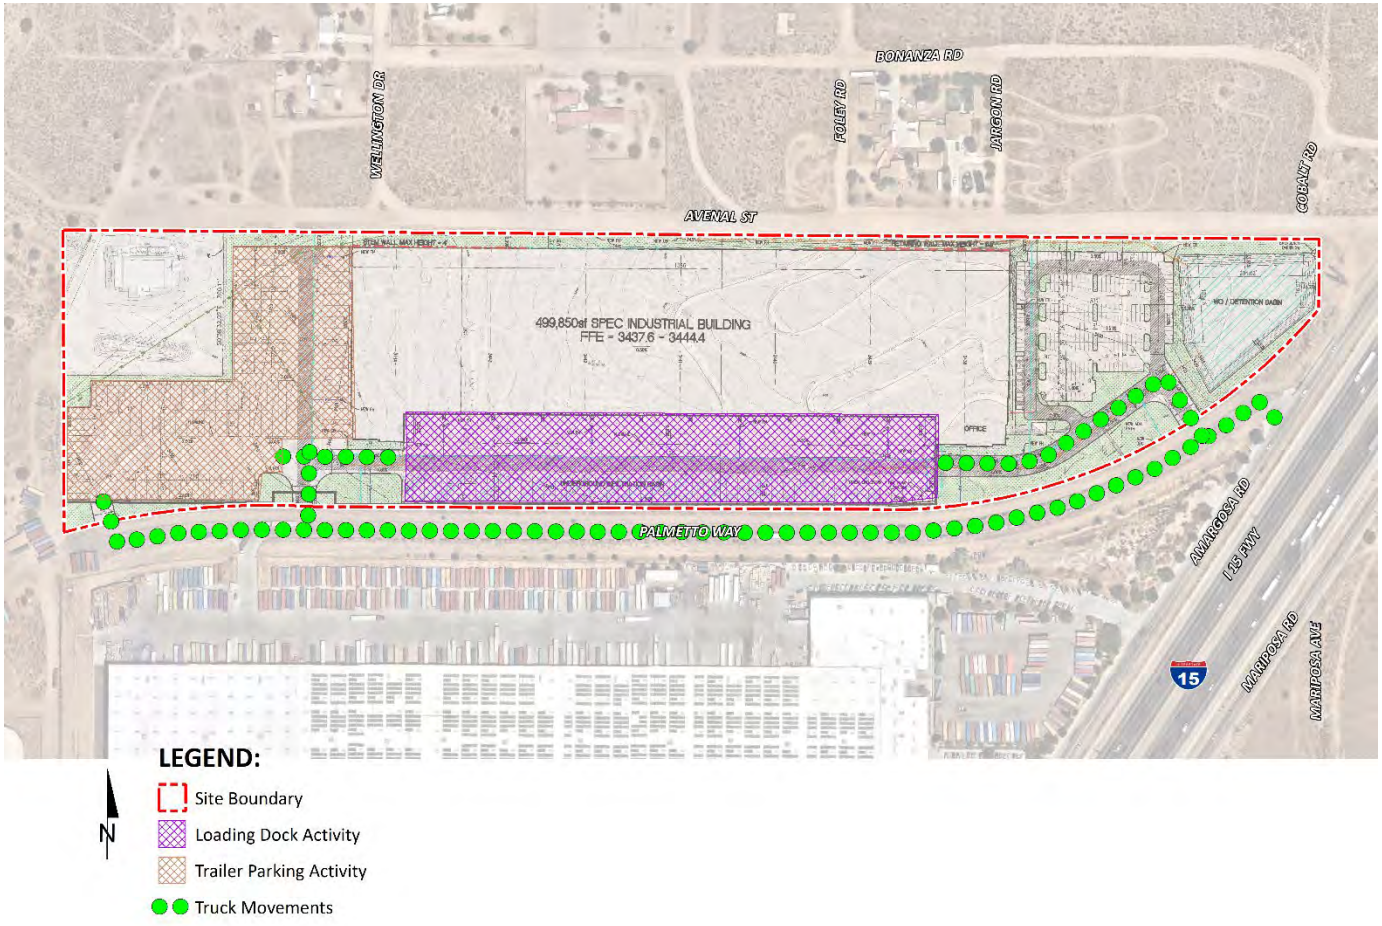

EXHIBIT 2-C: MODELED OFF-SITE EMISSION SOURCES

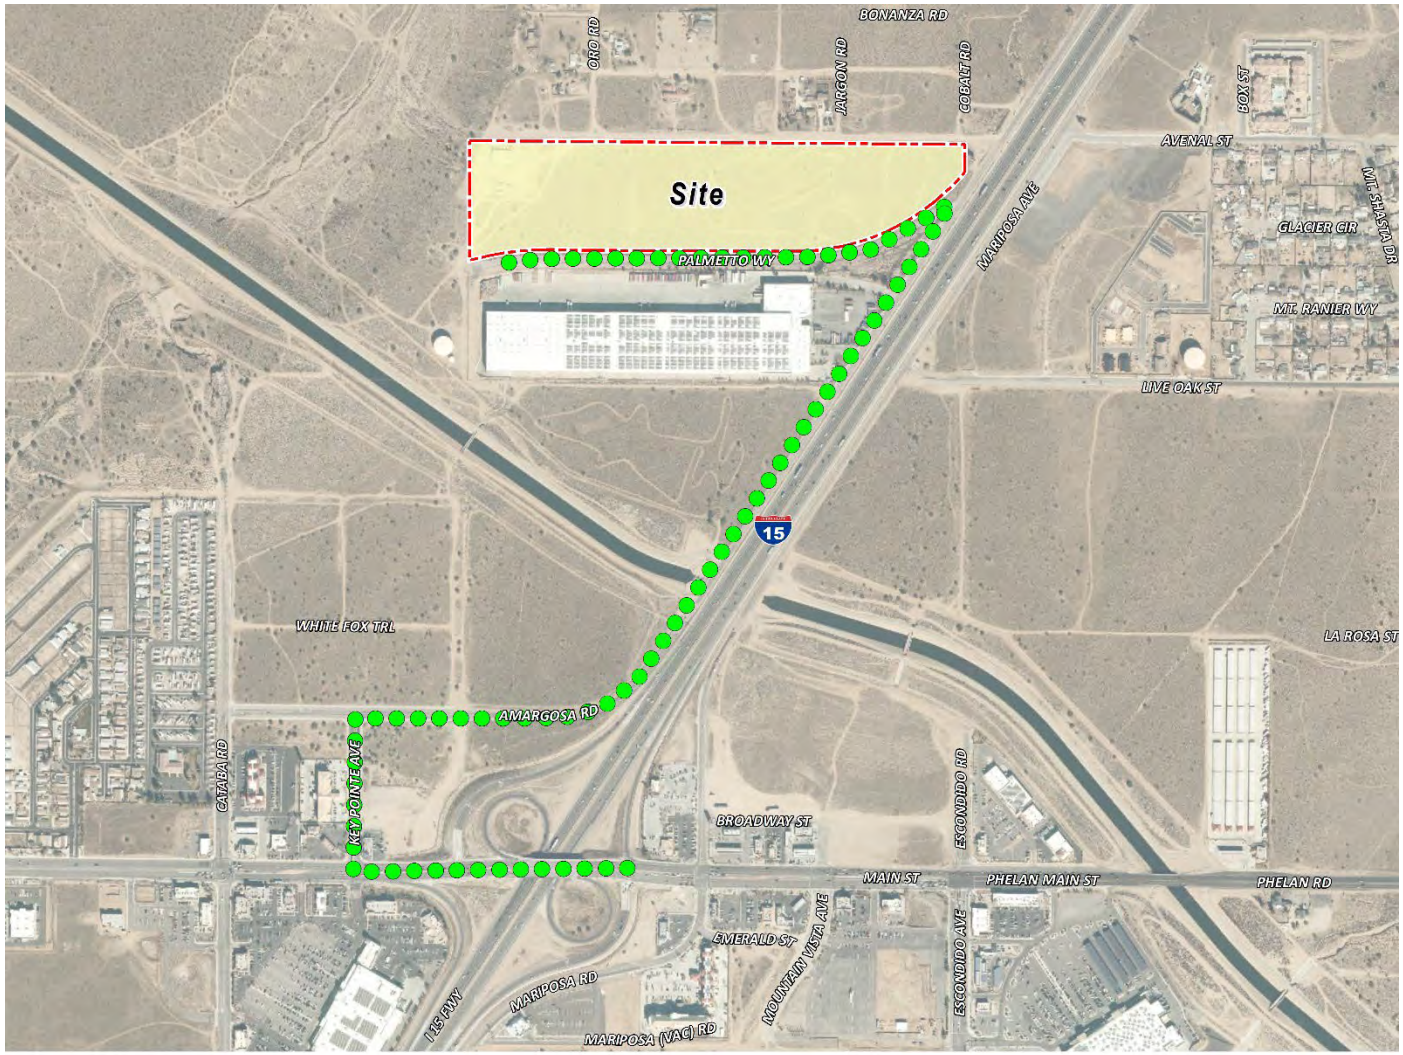

TABLE 2-4: DPM EMISSIONS FROM PROJECT TRUCKS (2024 ANALYSIS YEAR)

Truck Emission Rates						
Source	Trucks Per Day	VMT [a] (miles/day)	Truck Emission Rate [b] (grams/mile)	Truck Emission Rate [b] (grams/idle-hour)	Daily Truck Emissions [c] (grams/day)	Modeled Emission Rates (g/second)

Off-Site Travel - Palmeto Way 25% Inbound/Outbound	29	10.63	0.0096		0.10	1.179E-06
Off-Site Travel - Amargosa Road 100% Inbound/Outbound	115	89.98	0.0096		0.86	9.979E-06
Off-Site Travel - Main Street 100% Inbound/Outbound	115	66.31	0.0096		0.64	7.354E-06

[a] Vehicle miles traveled are for modeled truck route only.

[b] Emission rates determined using EMFAC 2021. Idle emission rates are expressed in grams per idle hour rather than grams per mile.

[c] This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes.

On-site truck idling was estimated to occur as trucks enter and travel through the Project site. Although the Project's diesel-fueled truck and equipment operators will be required by State law to comply with CARB's idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions be calculated assuming 15 minutes of truck idling (5), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc. As such, this analysis calculates truck idling at 15 minutes, consistent with SCAQMD's recommendation. Even though the Project is not within the jurisdiction of the SCAQMD, these recommendations are relevant for CEQA purposes since MDAQMD does not provide similar guidance.

The Project is expected to generate a total of approximately 905 vehicular trip-ends (actual vehicles) per day (453 vehicles inbound + 453 vehicles outbound) which includes 790 two-way passenger car trip-ends (395 passenger cars inbound + 395 passenger cars outbound) and 115 two-way truck trip-ends per day (58 trucks inbound + 58 trucks outbound) (6).

2.4 EXPOSURE QUANTIFICATION

The Environmental Protection Agency's (U.S. EPA's) AERMOD model has been utilized for this analysis. For purposes of this analysis, the Lakes AERMOD View (Version 11.0.0) was used to calculate annual average particulate concentrations associated with site operations. Lakes AERMOD View was utilized to incorporate the U.S. EPA's latest AERMOD Version 22112 (7).

The model offers additional flexibility by allowing the user to assign an initial release height and vertical dispersion parameters for mobile sources representative of a roadway. For this HRA, the roadways were modeled as adjacent volume sources. Roadways were modeled using the U.S. EPA's haul route methodology for modeling of on-site and off-site truck movement. More specifically, the Haul Road Volume Source Calculator in Lakes AERMOD View has been utilized to determine the release height parameters. Based on the US EPA methodology, the Project's modeled sources would result in a release height of 3.49 meters, and an initial lateral dimension of 4.0 meters, and an initial vertical dimension of 3.25 meters.

Model parameters are presented in Table 2-5 (8). The model requires additional input parameters including emission data and local meteorology. Meteorological data from the Daggett Airport monitoring station located in MDAQMD was used to represent local weather conditions and prevailing winds (9).

TABLE 2-5: AERMOD MODEL PARAMETERS

Dispersion Coefficient (Urban/Rural)	Rural
Terrain (Flat/Elevated)	Elevated (Regulatory Default)
Averaging Time	1 year (5-year Meteorological Data Set)
Receptor Height	0 meters (Regulatory Default)

Universal Transverse Mercator (UTM) coordinates for World Geodetic System (WGS) 84 were used to locate the Project site boundaries, each volume source location, and receptor locations in the Project site's vicinity. The AERMOD dispersion model summary output files for the

proposed Project are presented in Appendix 2.3. Modeled sensitive receptors were placed at residential and non-residential locations.

Receptors may be placed at applicable structure locations for residential and worker property and not necessarily the boundaries of the properties containing these uses because the human receptors (residents and workers) spend a majority of their time at the residence or in the workplace's building, and not on the property line. It should be noted that the primary purpose of receptor placement is focused on long-term exposure. For example, the HRA evaluates the potential health risks to residents and workers over a period of 30 or 25 years of exposure, respectively. Notwithstanding, as a conservative measure, receptors were placed at either the outdoor living area or the building façade, whichever is closer to the Project site.

For purposes of this HRA, receptors include both residential and non-residential (worker) land uses in the vicinity of the Project. These receptors are included in the HRA since residents and workers may be exposed at these locations over a long-term duration of 30 and 25 years, respectively. This methodology is consistent with MDAQMD and OEHHA recommended guidance.

Any impacts to residents or workers located further away from the Project site than the modeled residential and workers would have a lesser impact than what has already been disclosed in the HRA at the MEIR and MEIW because concentrations dissipate with distance.

All receptors were set to existing elevation height so that only ground-level concentrations are analyzed. United States Geological Survey (USGS) Digital Elevation Model (DEM) terrain data based on a 7.5-minute topographic quadrangle map series using AERMAP was utilized in the HRA modeling to set elevations (10).

Discrete variants for daily breathing rates, exposure frequency, and exposure duration were obtained from relevant distribution profiles presented in the 2015 OEHHA Guidelines. Tables 2-6 through 2-8 summarize the Exposure Parameters for Residents and Workers based on 2015 OEHHA Guidelines. Appendix 2.4 includes the detailed risk calculation.

TABLE 2-6: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (CONSTRUCTION ACTIVITY)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
0 to 2	1,090	10	0.96	1.0	260	8

TABLE 2-7: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (30 YEAR RESIDENTIAL)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
-0.25 to 0	361	10	0.25	0.85	350	24

16 to 41	230	1	25	250	12

2.5 CARCINOGENIC CHEMICAL RISK

Excess cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens over a specified exposure duration. The estimated risk is expressed as a unitless probability. The cancer risk attributed to a chemical is calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the chemical-specific cancer potency factor (CPF). A risk level of 10 in one million implies a likelihood that up to 10 people, out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of toxic air contaminants over a specified duration of time.

Guidance from CARB and the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) recommends a refinement to the standard point estimate approach when alternate human body weights and breathing rates are utilized to assess risk for susceptible subpopulations such as children. For the inhalation pathway, the procedure requires the incorporation of several discrete variates to effectively quantify dose. Once determined, contaminant dose is multiplied by the cancer potency factor (CPF) in units of inverse dose expressed in milligrams per kilogram per day $(mg/kg/day)^{-1}$ to derive the cancer risk estimate. Therefore, to assess exposures, the following dose algorithm was utilized.

$$DOSE_{air} = (C_{air} \times [BR/BW] \times A \times EF) \times (1 \times 10^{-6})$$

Where:

$DOSE_{air}$ = chronic daily intake (mg/kg/day)

Cair = concentration of contaminant in air (ug/m^3)

[BR/BW] = daily breathing rate normalized to body weight (L/kg BW-day)

A = inhalation absorption factor

EF = exposure frequency (days/365 days)

BW = body weight (kg)

1×10^{-6} = conversion factors (µg to mg, L to m^3)

$RISK_{air} = DOSE_{air} \times CPF \times ED/AT$

Where:

$DOSE_{air}$ = chronic daily intake (mg/kg/day)

CPF = cancer potency factor

ED = number of years within particular age group

AT = averaging time

2.6 NON-CARCINOGENIC EXPOSURES

An evaluation of the potential noncarcinogenic effects of chronic exposures was also conducted. Adverse health effects are evaluated by comparing a compound's annual concentration with its toxicity factor or Reference Exposure Level (REL). The REL for diesel particulates was obtained from OEHHA for this analysis. The chronic reference exposure level (REL) for DPM was established by OEHHA as 5 µg/m^3 (11).

The non-cancer hazard index was calculated as follows:

The relationship for the non-cancer health effects of DPM is given by the following equation:

$$HI_{DPM} = C_{DPM}/REL_{DPM}$$

Where:

HI_{DPM} = Hazard Index; an expression of the potential for non-cancer health effects.

C_{DPM} = Annual average DPM concentration (µg/m^3).

REL_{DPM} = Reference exposure level (REL) for DPM; the DPM concentration at which no adverse health effects are anticipated.

2.7 POTENTIAL PROJECT-RELATED DPM SOURCE CANCER AND NON-CANCER RISKS

CONSTRUCTION IMPACTS

The land use with the greatest potential exposure to Project construction-source DPM emissions is Location R2 which is located approximately 76 feet north the Project site at an existing residence located at 13164 Avenal Road. R2 is placed in the private outdoor living area (backyard) facing the Project site. At the MEIR, the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 2.13 in one million, which is less than the

MDAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity. All other receptors during construction activity would experience less risk than what is identified for this location. The nearest modeled receptors are illustrated on Exhibit 2-D.

OPERATIONAL IMPACTS

Residential Exposure Scenario:

The residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R4 which is located approximately 1,071 feet southeast of the Project site at an existing residence located at 13500 Live Oak Street. Since there are no private outdoor living areas facing the Project site, R4 is placed at the building façade nearest the Project site. At the MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 0.20 in one million, which is less than the MDAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Because all other modeled residential receptors are exposed to lesser concentrations and are located at a greater distance from the Project site than the MEIR analyzed herein, and TACs generally dissipates with distance from the source, all other residential receptors in the vicinity of the Project site would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby residences. The nearest modeled receptors are illustrated on Exhibit 2-D.

Worker Exposure Scenario[4]*:*

The worker receptor land use with the greatest potential exposure to Project operational-source DPM emissions is Location R6, which represents the potential worker receptor approximately 201 feet south of the Project site. At the MEIW, the maximum incremental cancer risk impact is 0.04 in one million which is less than the MDAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Because all other modeled worker receptors are located at a greater distance than the MEIW analyzed herein, and DPM dissipates with distance from the source, all other worker receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent workers. The nearest modeled receptors are illustrated on Exhibit 2-D.

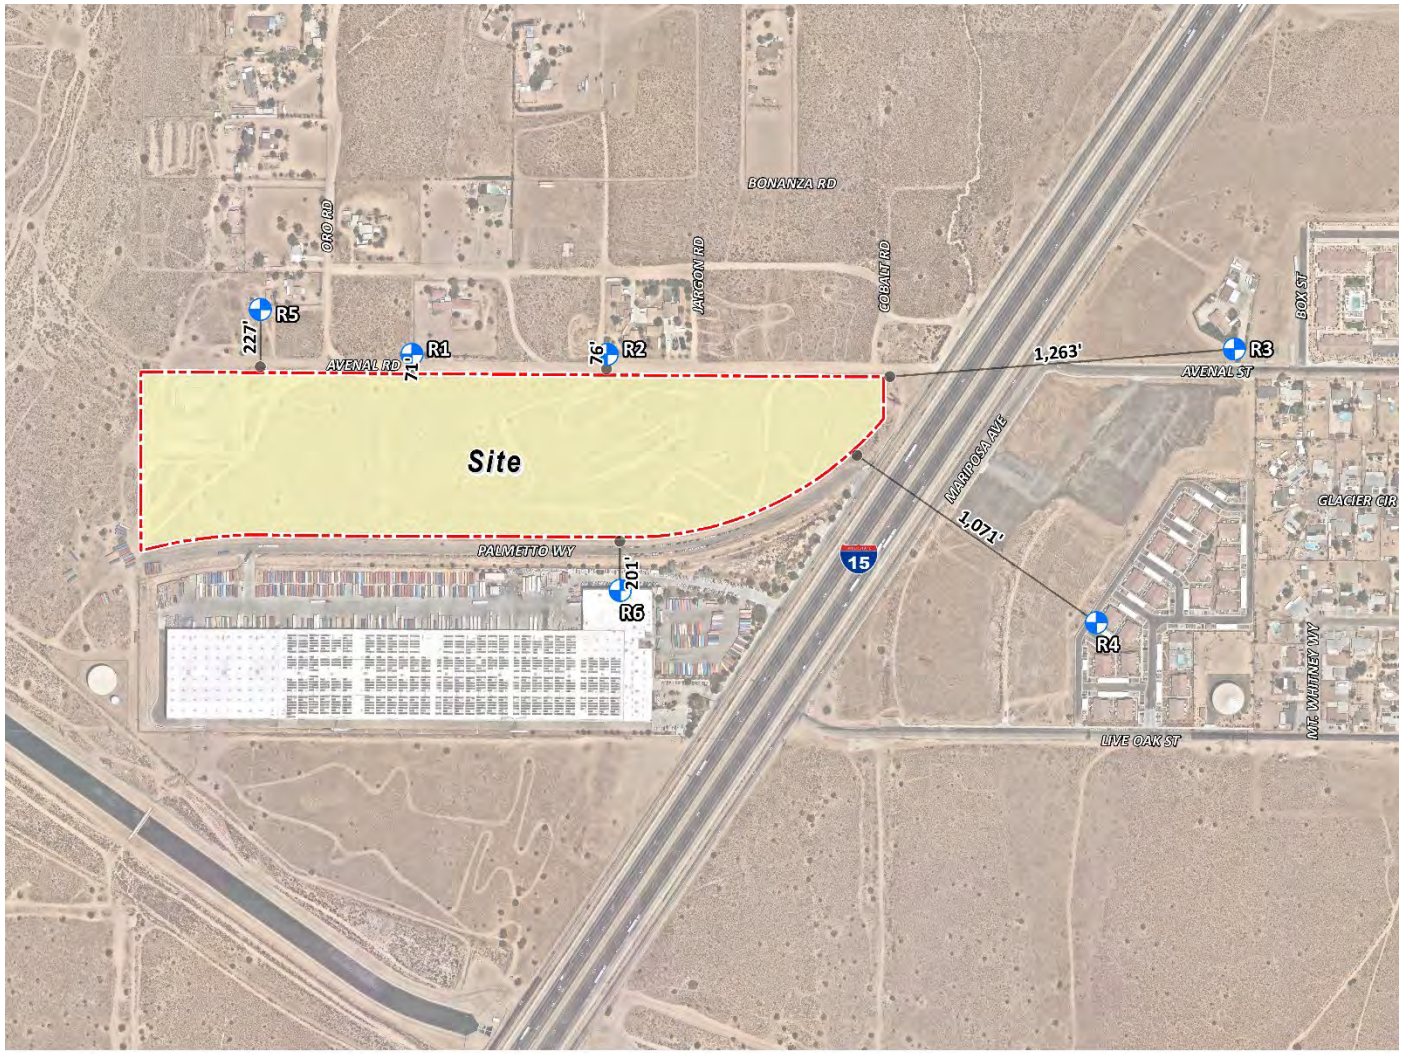
4 MDAQMD guidance does not require assessment of the potential health risk to on-site workers. Excerpts from the document OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines—The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2003), also indicate that it is not necessary to examine the health effects to on-site workers unless required by RCRA (Resource Conservation and Recovery Act) / CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) or the worker resides on-site.

School Child Exposure Scenario:

Proximity to sources of toxics is critical to determining the impact. In traffic-related studies, the additional non-cancer health risk attributable to proximity was seen within 1,000 feet and was strongest within 300 feet. California freeway studies show about a 70-percent drop-off in particulate pollution levels at 500 feet. Based on California Air Resources Board (CARB) emissions and modeling analyses, an 80-percent drop-off in pollutant concentrations is expected at approximately 1,000 feet from a distribution center (1).

The 1,000-foot evaluation distance is supported by research-based findings concerning Toxic Air Contaminant (TAC) emission dispersion rates from roadways and large sources showing that emissions diminish substantially between 500 and 1,000 feet from emission sources.

A one-quarter mile radius, or 1,320 feet, is commonly utilized for identifying sensitive receptors, such as schools, that may be impacted by a proposed project. This radius is more robust than, and therefore provides a more health protective scenario for evaluation than the 1,000-foot impact radius identified above.



There are no schools within ¼ mile of the Project site. The nearest school is Topaz Preparatory Academy, which is located approximately 5,580 feet southeast of the Project site. Because there is no reasonable potential that TAC emissions would cause significant health impacts at distances of more than ¼ mile from the air pollution source, there would be no significant impacts that would occur to any schools in the vicinity of the Project.

CONSTRUCTION AND OPERATIONAL IMPACTS

The land use with the greatest potential increased cancer risk due to exposure to Project construction-source and operational-source DPM emissions is Location R2. At this location, the maximum incremental cancer risk attributable to Project construction and operational DPM source emissions is estimated at 2.22 in one million, which is less than the threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction and operational activity. All other receptors during construction and operational activity would experience less risk than what is identified for this location. The nearest modeled receptors are illustrated on Exhibit 2-D.

It should be noted that the receptors presented in Exhibit 2-D do not represent all modeled receptors.

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	33.6	annual days of extreme heat
Extreme Precipitation	4.95	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	22.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	0	0	0	N/A
Snowpack	N/A	N/A	N/A	N/A
Air Quality	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	1	1	4
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A

Drought	1	1	1	2
Snowpack	N/A	N/A	N/A	N/A
Air Quality	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91.1
AQ-PM	32.2
AQ-DPM	57.9
Drinking Water	29.7
Lead Risk Housing	13.8
Pesticides	0.00
Toxic Releases	25.0
Traffic	83.1
Effect Indicators	—
CleanUp Sites	73.4
Groundwater	0.00
Haz Waste Facilities/Generators	65.9

Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	84.6
Cardio-vascular	99.5
Low Birth Weights	5.81
Socioeconomic Factor Indicators	—
Education	67.1
Housing	11.2
Linguistic	19.9
Poverty	67.2
Unemployment	82.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	66.22610035
Employed	25.70255357
Education	—
Bachelor's or higher	31.64378288
High school enrollment	2.258437059
Preschool enrollment	41.10098807
Transportation	—
Auto Access	89.83703323
Active commuting	14.92364943
Social	—

2-parent households	97.98537149
Voting	43.48774541
Neighborhood	—
Alcohol availability	89.68304889
Park access	26.5622995
Retail density	22.41755422
Supermarket access	25.03528808
Tree canopy	7.25009624
Housing	—
Homeownership	84.70422174
Housing habitability	80.57230848
Low-inc homeowner severe housing cost burden	56.2941101
Low-inc renter severe housing cost burden	70.48633389
Uncrowded housing	64.30129603
Health Outcomes	—
Insured adults	59.70742974
Arthritis	0.6
Asthma ER Admissions	14.5
High Blood Pressure	1.1
Cancer (excluding skin)	0.9
Asthma	37.3
Coronary Heart Disease	1.0
Chronic Obstructive Pulmonary Disease	1.6
Diagnosed Diabetes	6.3
Life Expectancy at Birth	28.4
Cognitively Disabled	58.3
Physically Disabled	16.0

Heart Attack ER Admissions	1.2
Mental Health Not Good	58.7
Chronic Kidney Disease	1.3
Obesity	41.7
Pedestrian Injuries	90.6
Physical Health Not Good	24.5
Stroke	2.9
Health Risk Behaviors	—
Binge Drinking	95.3
Current Smoker	59.6
No Leisure Time for Physical Activity	48.5
Climate Change Exposures	—
Wildfire Risk	0.0
SLR Inundation Area	0.0
Children	33.8
Elderly	53.1
English Speaking	52.3
Foreign-born	39.5
Outdoor Workers	27.8
Climate Change Adaptive Capacity	—
Impervious Surface Cover	86.5
Traffic Density	80.1
Traffic Access	23.0
Other Indices	—
Hardship	53.1
Other Decision Support	—
2016 Voting	53.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	52.0
Healthy Places Index Score for Project Location (b)	42.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health and Equity Evaluation Scorecard not completed.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Construction: Construction Phases	Client indicated construction schedule
Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases Standard 8-hour work day
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction

[a] Vehicle miles traveled are for modeled truck route only.

[b] Emission rates determined using EMFAC 2021. Idle emission rates are expressed in grams per idle hour rather than grams per mile.

[c] This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes.

 - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
```

```
     * Use Calms Processing Routine.
     * Use Missing Data Processing Routine.
     * No Exponential Decay.
     * Model Uses RURAL Dispersion Only.
     * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
     * CCVR_Sub - Meteorological data includes CCVR substitutions
     * TEMP_Sub - Meteorological data includes TEMP substitutions
     * Model Assumes No FLAGPOLE Receptor Heights.
     * The User Specified a Pollutant Type of: DPM

 **Model Calculates ANNUAL Averages Only

 **This Run Includes:    313 Source(s);       1 Source Group(s); and      39 Receptor(s)

               with:      0 POINT(s), including
                          0 POINTCAP(s) and      0 POINTHOR(s)
                and:    313 VOLUME source(s)
                and:      0 AREA type source(s)
                and:      0 LINE source(s)
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  19191

 **Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and Missing
                                                                 Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   588.30 ;  Decay Coef. =
 0.000     ;  Rot. Angle =     0.0
                Emission Units = GRAMS/SEC                                ;  Emission Rate
                Unit Factor =   0.10000E+07
                Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.8 MB of RAM.

 - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses RURAL Dispersion Only.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: DPM
```

```
 **Model Calculates ANNUAL Averages Only

 **This Run Includes:    438 Source(s);       1 Source Group(s); and      39 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    438 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  19191

 **Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and Missing
                                                                 Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   588.30 ;  Decay Coef. =
 0.000     ;  Rot. Angle =     0.0
                Emission Units = GRAMS/SEC                              ;  Emission Rate
                Unit Factor =   0.10000E+07
                Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

BIOLOGICAL RESOURCES ASSESSMENT REPORT

The undersigned certifies that this Report is a complete and accurate account of the findings and conclusions of a biological resources assessment for the above-referenced project.

Kimberly Boydstun
Senior Biologist/Project Manager

October 2022

Executive Summary

On behalf of Rachamim 5, LLC, CASC Engineering and Consulting (CASC) has prepared this Biological Resources Assessment Report for development of an industrial warehouse on vacant 30.52-acres in the City of Hesperia, San Bernardino County. California. The total Survey Area consisted of 45.61-acres in total [Project Site (30.52-acres) and a 500-foot buffer area]. The Project Site is undeveloped land. Project Impacts will occur on the entire 30.52-are Project Site. One (1) natural vegetation community, *Larrea tridentata-Ambrosia dumosa* Shrubland Alliance, was observed and mapped within the boundaries of the Survey Area.

Based on the results of focused surveys and a review of specific habitat preferences, occurrence records, known distributions, and elevation ranges, it was determined that the Project Site has a low probability to support ayenia (*Ayenia compacta*) (CRPR 2B.3), Lincoln rockcress (*Boechera lincolnensis*) (CRPR 2B.3), Latimer's woodland-gilia (*Saltugilia latimeri*) (CRPR 1B.2), alkali mariposa-lily (*Calchortus striatus*) (CRPR 1B.2),pygmy poppy (*Canbya candida*) (CRPR 4.2), white-bracted spineflower (*Chorizanthe xanti* var. *leucotheca*) (CRPR 1B.2), Booth's evening primrose (*Eremothera boothii* ssp. *boothii*) (CRPR 2B.3), short-joint beavertail (*Opuntia basilaris* var. brachyclada) (CRPR 1B.2), and Parish's brittlescale (*Atriplex parishii*) (CRPR 1B.1). Focused surveys were conducted during the appropriate blooming season for each of these species (April – July). None of these special-status species were observed during the focused surveys. These species were absent during the spring/summer focused surveys and are therefore not expected to occur on the Project Site.

Western Joshua tree (State Listed-Candidate Species) was present on the Project Site. The location of fifty-two (52) live trees and seven (7) dead trees were recorded and are presented in this report. Relocation criteria (defined by CDFW) determined that thirty-one (31) of the Western Joshua trees meet the criteria for relocation. If Western Joshua tree can be incorporated into the Project Site landscape or avoided this would help to reduce the mitigation obligation. If avoidance of the Western Joshua Trees cannot be accompdated, then an Incidental Take Permit from CDFW must be acquired for Project development. CDFW will impose appropriate mitigation for "take" or disturbance of these trees.

Western burrowing owl (*Athene cunicularia*, SSC) is a locally significant species within San Bernardino County. Habitat conditions on the Project Site are suitable for burrowing owl. During the habitat assessment several burrows were noted of appropriate size to support this species at the Project Site. Focused surveys were conducted during the breeding season for this species (April, June, July and August 2022). Burrowing owl was absent from the Survey Area at the time of the surveys. No additional scat, pellets, or other sign was observed near the burrows or anywhere within the Survey Area to indicate occupation. As suitable habitat does exist at the Project Site a 14-30 day preconstruction survey for this species is recommended. This will ensure

that burrowing owl have not occupied the site since the focused surveys were conducted during the 2022 breeding season.

The Project Site is within the southern margin of the historical range of the Mohave ground squirrel (*Xerospermophilus mohavensis,* ST). Habitat conditions on the Project Site are suitable for Mohave ground squirrel and it was determined that this species has moderate potential of occurrence. Focused surveys were conducted for this species with a total of three trapping sessions which occurred during April, May, and June 2022. Mohave ground squirrel was not captured during the protocol level sessions and is not expected to occur at the Project Site. Implementation of the Project will not result in the loss of individual Mohave ground squirrel, nor will Project development adversely affect local or regional populations of these species.

The Survey Area has a low potential to support desert tortoise (*Gopherus agassizii*, FE/SE). While suitable habitat is present in the Survey Area, it is outside of the current known range for this species. Further, desert tortoise has not been recorded near the Project Site for many years. The local desert tortoise population has undergone severe declines over time. Focused surveys for desert tortoise were performed during April 2022. During the focused surveys no sign (scat, burrows, etc.) of this species was noted and this species is not expected to occur at the Project Site. Implementation of the Project will not result in the loss of individual desert tortoise, nor will Project development adversely affect local or regional populations of these species.

Finally, there is no U.S. Fish and Wildlife Service-designated critical habitat within the Survey Area, and there are no wetland or non-wetland jurisdictional features on the Project Site.

Section 1 Introduction

On behalf of Rachamim 5, LLC, CASC Engineering and Consulting (CASC) has prepared this Biological Resources Assessment Report for development of an industrial warehouse on vacant parcels in Hesperia, California. This Report describes the biological resources, record searches and literature review, survey methodology, and results of the biological resources survey and review conducted for the Project.

1.1 PROJECT LOCATION

The Project is located on Palmetto Way, in Hesperia, San Bernardino County, California (Figure 1, Regional Vicinity). The property consists of three parcels, Accessor's Parcel Number: 0405-075-[52, 53,55] US Geological Society (USGS) 7.5-minute *Baldy Mesa SE* Quadrangle (Figure 2, USGS Quadrangle Map), Township 4 north, range 5 west, (latitude *117.3777327°W, longitude 34.4366696°N).*

1.2 PROJECT BACKGROUND AND DESCRIPTION

Rachamim 5, LLC proposes to construction of a 498,500 square foot Industrial Warehouse Building (Project) with up to 25,000 square feet of office space. The proposed Project will include 76 loading dock doors, 182 truck/trailer parking spaces and 281 auto parking spaces on three (3) parcels consisting of approximately 30.52 undeveloped acres within the City of Hesperia in the Regional Commercial Zone. The parcels are bounded on the north by Avenal Street, south by Palmetto Way, Amargosa Road and Interstate-15 to the east, and open space to the west. Three (3) entrances to the site are provided, one (1) on the east side from Palmetto Way, one (1) from Palmetto Way on the south side of the site, and a proposed third entrance/exit onto Palmetto Way from the truck/trailer parking area at the southwest corner of the site. The facility will be built on spec and will be designed to accommodate 500 to 600 employees; there is no tenant currently attached to the project. Project Site plans are provided in Appendix A, Conceptual Plans.

1.3 PURPOSE OF DOCUMENT

This Report documents all biological resources identified within the Survey Area during general biological resource survey conducted by CASC Biologists. The Survey Area included the Project Site plus a 500-foot buffer. The Survey Area was surveyed to determine the likelihood of State-listed and/or federally-listed rare, threatened, or endangered species, and other special-status[1] plants, animals, and natural communities (Figure 3, Photo Point Location Map). This Report includes an analysis of the potential for the Survey Area to support special-status plant and wildlife

[1] As used in this Report, "special-status" refers to plant and wildlife species that are federally-/State-listed, proposed, or candidates; plant species that have been designated a California Rare Plant Rank species by the California Native Plant Society; wildlife species that are designated by the California Department of Fish and Wildlife as Fully Protected, Species of Special Concern, or Watch List species; and State/locally rare vegetation communities.

species and special-status vegetation communities that have been previously recorded, or are known to occur within the vicinity, and that are subject to provisions of the Federal Endangered Species Act (FESA) of 1973, Migratory Bird Treaty Act (MBTA), California Endangered Species Act (CESA), California Environmental Quality Act (CEQA), California Fish and Game Code (CFGC), California Native Plant Protection Act, California Desert Native Plants Act (CDNPA), Bald and Golden Eagle Protection Act, and other local policies and ordinances protecting biological resources.

Section 2 Methodology

2.1 LITERATURE REVIEW AND DATABASE SEARCHES

Prior to conducting the field surveys, CASC conducted a thorough literature review and records search of the Survey Area encompassing a nine (9) quad search of the U.S. Geological Survey (USGS). The Survey Area is located between *Baldy Mesa* quadrangle and *Hesperia* quadrangle (north of the California Aqueduct*).* A search of the adjacent quadrangles was conducted: *Shadow Mountain SE, Adelanto, Victorville, Phelan, Telegraph Peak, Cajon, and Silverlake Lake,* California. The nine (9) quad search was used for the CDFW Biogeographic Information and Observation System (CDFW 2022a), CDFW California Natural Diversity Database (CNDDB) RareFind 5 (CDFW 2022b), and the California Native Plant Society (CNPS) Online Inventory of Rare and Endangered Plants (CNPS 2022). In addition, the Survey Area was used to generate a Species and Resources List from the U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation online system (IPaC; USFWS 2022a). This helped to identify special-status plant and wildlife species, vegetation communities, and other biological resources that have been previously documented within, near, and/or that have the potential to occur within the Survey Area. The *Special Animals List* (CDFW 2022c, *Special Vascular Plants, Bryophytes, and Lichens List* (CDFW 2022d), and CNPS California Rare Plant Ranking System (CRPR) were reviewed for the current status of rare and endangered plant and wildlife species. Other resources reviewed include the USFWS Critical Habitat for Threatened & Endangered Species Mapper (USFWS [ArcGIS Online] 2022); recent and historical aerial photography (Google Earth Pro 2022); the U.S. Department of Agriculture, Natural Resources Conservation Service (USDA) Web Soil Survey (USDA 2022a); and USFWS National Wetland Inventory (NWI) Mapper (USFWS 2022b).

2.2 GENERAL BIOLOGICAL RESOURCES SURVEY

Following the literature review, CASC's Biologists Kimberly Boydstun and Cory Peterson, conducted a general biological resources assessment of the entire Survey Area. The Survey Area is defined as the Project Site plus a 500-foot buffer where accessible and shown on Figure 3. Undeveloped property to the west of the Project Site was also inventoried. Properties to the east is Amargosa Road and Interstate 15, to the south is a Palmetto Way and an existing warehouse, to the north is private residences which were fenced. These areas to the north, south, and east were not inventoried. The first site assessment was performed on April 27, 2022, between the hours of 0815 and 1500, with weather conditions consisting of temperatures ranging from 47 to 75 degrees Fahrenheit (°F), winds approximately 2 to 3 miles per hour, and clear skies. The second site assessment was performed on May 2, 2022, between the hours of 1000 to 1330, with weather conditions consisting of temperatures ranging from 68 to 76°F, winds approximately 2-3 miles per hour, and clear skies. The surveys were conducted to document existing site conditions, obtain an inventory of plant and wildlife species, map vegetation communities/land uses, determine the potential for special-status plant and wildlife resources to occur within the

Survey Area, perform a Joshua tree (*Yucca brevifolia*) inventory, and to identify any jurisdictional aquatic features. Representative photographs of the Project Site are provided at the end of this Report in Appendix B, Project Site Photographs. Figure 3, Photo Point Location Map, shows the location and direction each photo was taken.

2.2.1 Vegetation/Land Use Mapping and Plant Species Inventory

Classification of the vegetation communities and other land uses within the Survey Area is based on the descriptions of terrestrial vegetation classification systems described in *A Manual of California Vegetation* (MCV Sawyer et al. 2009) and cross referenced with the *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986). The vegetation on site was classified as *Larrea tridentata-Ambrosia dumosa* Shrubland Alliance. Plant species nomenclature and taxonomy follow *The Jepson Manual: Vascular Plants of California, second edition* (Baldwin et al. 2012). Refer to Appendix C, Plant Compendia for a complete list of plant species observed within the Survey Area.

2.2.2 General Wildlife Observations

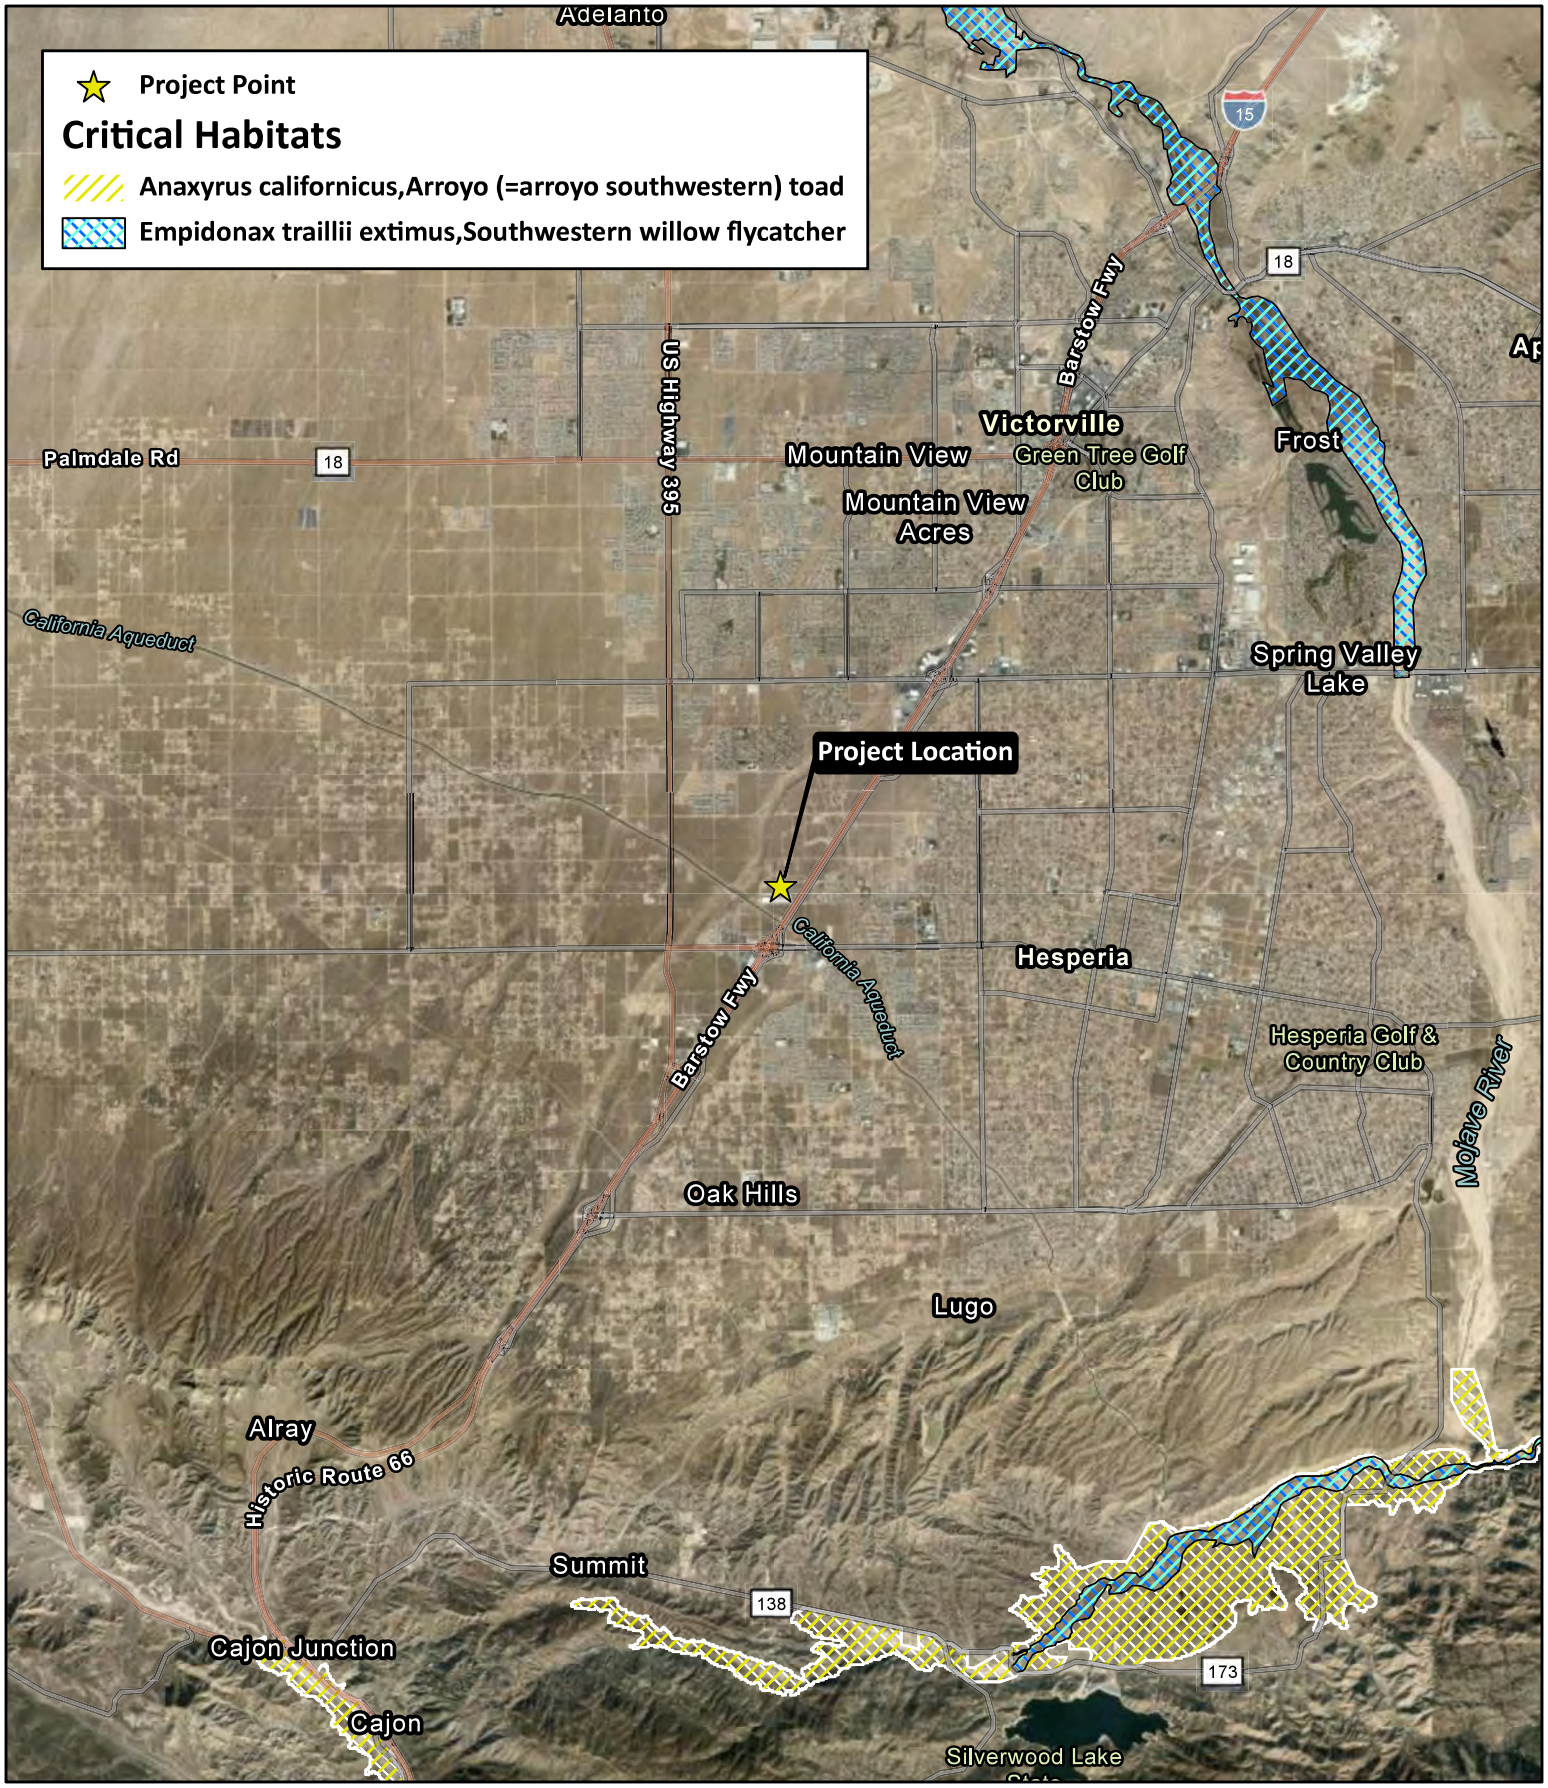
Field guides used to assist with identification of species during the habitat assessment included *The Sibley Guide to Birds* (Sibley 2014) for birds, *A Field Guide to Western Reptiles and Amphibians* (Stebbins 2003) for herpetofauna and *A Field Guide to Mammals of North America* (Reid 2006). Although common names of wildlife species are well standardized, scientific names are provided immediately following common names of wildlife species in this Report (first reference only). To the extent possible, nomenclature of birds follows the most recent annual supplement of the American Ornithological Union's *Checklist of North American Birds* (Chesser et al. 2020), nomenclature of amphibians and reptiles follows *Scientific and Standard English Names of Amphibians and Reptiles of North America North of Mexico, with Comments Regarding Confidence in Our Understanding* (Crother 2012), and nomenclature for mammals follows the *Revised Checklist of North American Mammals North of Mexico* (Bradley et al. 2014). All wildlife species observed and/or otherwise detected through sign (e.g., tracks, scat) were recorded. Other wildlife species may occupy the Survey Area but, in some cases, may be nocturnal and not easily detectable during the day without extensive survey efforts during the appropriate season. Some species are transients or migrants and may occupy the Survey Area other times of the year outside of the time that the field survey was conducted. Refer to Appendix D, Wildlife Compendia for a complete list of wildlife species observed or otherwise detected within the Survey Area.

2.3 OTHER FIELD STUDIES

A database search of the CDFW's CNDDB was used to identify and map all known ~~(~~federally and State Threatened species) locations within one (1) to five (5) miles of the Project Site as well as a comprehensive literature review of available previous biological studies and environmental documents completed for the Project and its vicinity. CASC's Biologists also reviewed USFWS

Critical Habitat documentation to determine the Project's location in relation to Critical Habitat (Figure 4, Critical Habitat) (USFWS [ArcGIS Online] 2022). There is no critical habitat on or within close proximity to the Project Site. CASC's Biologists conducted 100-percent visual coverage of the Survey Area and performed a habitat assessment and burrow search of the Project Site specifically for Western burrowing owl and desert tortoise.

2.3.1 Special-Status Plants



A database search of the CDFW's CNDDB and the CNPS Online Inventory of Rare and Endangered Plants was used to identify and map rare plant records from a 9-quad search within a five (5) mile radius of the Project Site. Based on the database search and literature review, it was determined that a total of nine (9) special-status plant species have the probability of occurrence in the general range of the Survey Area. Appendix E, CNDDB Summary Table from California Department of Fish and Wildlife (CDFW), California Natural Diversity Database (CNDDB) search conducted for the Project.

2.3.2 Special-Status Wildlife

A database search of the CDFW's CNDDB and RareFind/Bios Online Inventory was used to identify and map wildlife records from a 9-quad search within a five (5) mile radius of the Project Site. Based on the database search and literature review, it was determined that a total of forty-six (46) special-status wildlife species have the probability of occurrence within the general range of the Survey Area. Specific habitat requirements and a records search for each species were considered and it was determined that three (3) species had a high probability of occurrence within the local vicinity of the Project Site. Appendix E, CNDDB Summary Table search conducted for the Project.

2.3.3 Jurisdictional Features Analysis

CASC conducted a thorough literature review of relevant resources to obtain an initial understanding of the environmental setting and to preliminarily identify features that could be regulated by the jurisdictional agencies. CASC reviewed the USFWS NWI Mapper (USFWS 2022b). Appendix F shows the results of the NWI Mapper search. There are no jurisdictional features on the Project Site.

Section 3 Existing Conditions

The following is a summarization of the results of the database review and general biological resources survey performed by CASC. Discussions regarding the general environmental setting, vegetation communities and other land uses present, and plant and wildlife species observed are presented below. Representative photographs of the Project Site are provided in Appendix B, and a complete list of all the plant and wildlife species observed within the Survey Area during the field survey is provided in Appendix C and D, respectively.

3.1 ENVIRONMENTAL SETTING

The Project Site consists of 30.52-undeveloped acres and is located north of Palmetto Way, south of unimproved Avenal Street, and east of Amargosa Road in Hesperia, California. Access to the entire site was unobstructed and the biologists were able to perform a one hundred percent visualization of the Project Site. A large industrial building resides south of the Project Site, to the north along Avenal Street are homes with fenced yards, to the east is Amargosa Road and I-15, and to the west is a fenced utilities yard and open space.

3.1.1 Climate

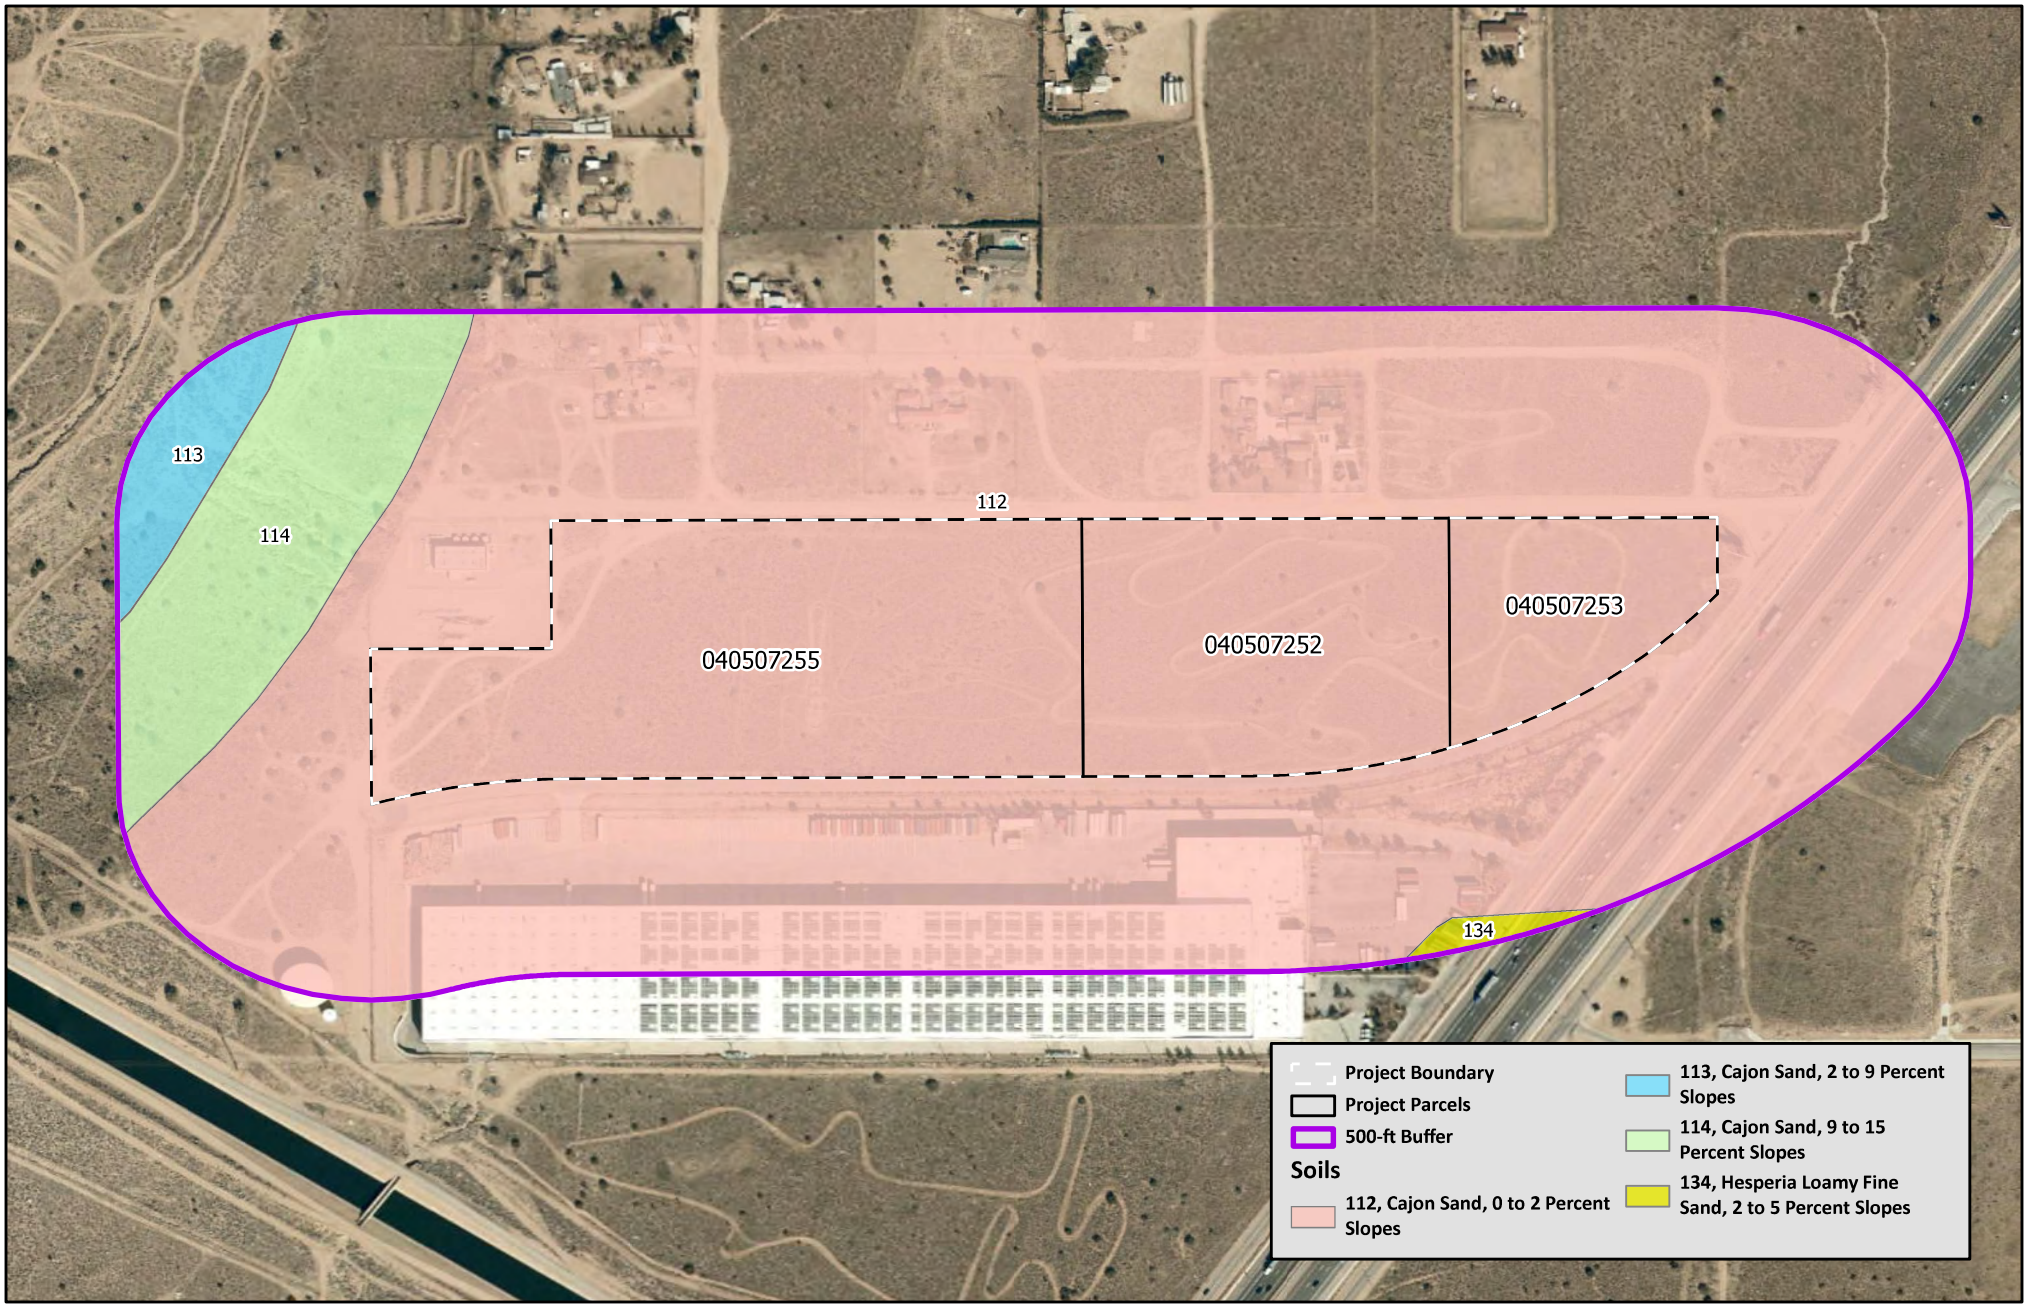
The Survey Area, located in the high desert, has an arid climate characterized by cool winters and hot summers. With an average annual high temperature typically of approximately 79°F, highs in the summer average approximately 100°F and lows in the winter averaging approximately 4 °F, and low humidity throughout the year. Average annual precipitation for the Hesperia, California, area is approximately 5.06 inches (U.S. Climate Data 2021).

3.2 TOPOGRAPHY AND SOILS

The Survey Area is in a region of San Bernardino County known as the “High Desert” due to its approximate elevation of 3,600 feet above mean sea level (amsl). Much of the Survey Area is relatively flat, with surface elevations varying between approximately 3,468 feet amsl in the southwestern corner to approximately 3,443 feet amsl in the northeastern corner.

Soils within the Survey Area and in adjoining areas were reviewed prior to the field survey using the Web Soil Survey (USDA 2021a) (Figure 5, USDA Soils Map). Mapped soils within the Survey Area include the following:

- Cajon Sand, 0 to 2 Percent Slopes
- Cajon Sand, 2 to 9 Percent Slopes
- Cajon Sand, 9 to 15 Percent Slopes
- Hesperia Loamy Fine Sand, 2 to 5 Percent Slopes



3.3 VEGETATION COMMUNITIES AND OTHER LAND USES

The Project Site is undeveloped and has been disturbed by grading which appears to have been from some time ago as the vegetation is growing back but is of small stature. Impacts will encompass the entire 30.52-acres of the Project Site. The vegetation community within the Survey Area was identified as *Larrea tridentata-Ambrosia dumosa* Shrubland Alliance with dominant species being white bursage (*Ambrosia dumosa*), creosote bush (*Larrea tridentata*) and Mexican tea *(Ephedra trifurca).* Joshua tree (*Yucca brevifolia*) (CDFW Candidate Listed species) is present on the Project Site. A complete list of all species recorded within the Survey Area can be found in Appendices C and D.

CASC's biologists recorded a total of fifty-two (52) live Western Joshua tree within the Project boundary. Seven (7) dead Joshua trees were recorded as it is required by CDFW to record the location of dead trees. Western Joshua tree were also recorded within the Project buffer. GPS was used to record the location of all dead and viable Western Joshua trees on the Project Site (Figure 6, Joshua Tree and Potential Burrow Locations). The Project Site was visited multiple times to perform focused plant and wildlife surveys. During each visit the biologists completed a compendia of plants and wildlife observed. Appendix C and D lists all species observed during the field surveys. Field surveys occurred from April through July of 2022.

3.4 GENERAL WILDLIFE OBSERVATIONS

The Survey Area is dominated by disturbed native vegetation, ruderal species, and friable soils. Wildlife diversity during the field survey was generally low, likely due to the low diversity of the plant assemblage. The commonly observed species within the Survey Area was mourning dove (*Zenaida macroura*) and common raven (*Corvus corax*). Refer to Appendix C for a complete list of wildlife species observed during the field surveys.

3.5 REGULATORY SETTING

3.5.1 Federal Regulations

Federal Endangered Species Act (FESA) of 1973

As defined within the FESA of 1973, an endangered species is any animal or plant listed by regulation as being in danger of extinction throughout all, or a significant portion, of its geographical range. A threatened species is any animal or plant that is likely to become endangered within the foreseeable future throughout all or a significant portion of its geographical range. Without a special permit, federal law prohibits the "take" of any individuals or habitat of federally-listed species. Under Section 9 of the FESA, "take" is defined as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect or attempt to engage in any such conduct." The term "harm" has been clarified to include "any act which actually kills or injures fish or wildlife and emphasizes that such acts may include significant habitat modification or degradation that significantly impairs essential behavioral patterns of fish or wildlife." Enforcement of FESA is administered by the USFWS.

Under the definition used by the FESA, "Critical Habitat" refers to specific areas within the geographical range of a species that were occupied at the time it was listed that contain the physical or biological features that are essential to the survival and eventual recovery of that species and that may require special management considerations or protection, regardless of whether the species is still extant in the area.

Migratory Bird Treaty Act (MBTA)

Pursuant to the MBTA (16 U.S. Government Code [USC] 703) of 1918, as amended in 1972, federal law prohibits the taking of migratory birds or their nests or eggs (16 USC 703; 50 CFR 10, 21). The statute states:

"Unless and except as permitted by regulations made as hereinafter provided in this subchapter, it shall be unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, kill, attempt to take, capture, or kill...any migratory bird, any part, nest, or egg of any such bird...included in the terms of the [Migratory Bird] conventions…"

The Act covers the taking of any nests or eggs of migratory birds, except as allowed by permit pursuant to 50 CFR, Part 21. Disturbances causing nest abandonment and/or loss of reproductive effort (i.e., killing or abandonment of eggs or young) may also be considered a "take." This regulation seeks to protect migratory birds and active nests.

In 1972, the MBTA was amended to include protection for migratory birds of prey (e.g., raptors). Six (6) families of raptors occurring in North America were included in the amendment: Accipitridae (kites, hawks, and eagles); Cathartidae (New World vultures); Falconidae (falcons

and caracaras); Pandionidae (ospreys); Strigidae (typical owls); and Tytonidae (barn owls). The provisions of the 1972 amendment to the MBTA protects all species and subspecies of the families listed above. The MBTA protects over 800 species including geese, ducks, shorebirds, raptors, songbirds and many relatively common species.

Executive Order 13112 – Invasive Species

On February 3, 1999, President William J. Clinton signed Executive Order 13112 requiring federal agencies to combat the introduction or spread of invasive species in the United States. The order defines invasive species as "any species, including its seeds, eggs, spores, or other biological material capable of propagating that species, that is not native to that ecosystem whose introduction does or is likely to cause economic or environmental harm, or harm to human health." Federal Highway Administration guidance issued August 10, 1999 directs the use of the State's invasive species list, maintained by the California Invasive Species Council to define the invasive plants that must be considered as part of the NEPA analysis for a proposed project. Under the Executive Order, federal agencies cannot authorize, fund, or carry out actions that it believes are likely to cause or promote the introduction or spread of invasive species in the United States or elsewhere unless all reasonable measures to minimize risk of harm have been analyzed and considered.

3.5.2 State Regulations

California Environmental Quality Act (CEQA)

CEQA provides for the protection of the environment within the State of California by establishing State policy to prevent significant, avoidable damage to the environment through the use of alternatives or mitigation measures for projects. It applies to actions directly undertaken, financed, or permitted by State lead agencies. If a project is determined to be subject to CEQA, the lead agency will be required to conduct an Initial Study (IS); if the IS determines that the project may have significant impacts on the environment, the lead agency will subsequently be required to write an Environmental Impact Report (EIR). A finding of non-significant effects will require either a Negative Declaration or a Mitigated Negative Declaration instead of an EIR. Section 15380 of the CEQA Guidelines independently defines "endangered" species as those whose survival and reproduction in the wild are in immediate jeopardy, while "rare" species are defined as those who are in such low numbers that they could become endangered if their environment worsens.

California Endangered Species Act (CESA)

In addition to federal laws, the State of California has its own CESA, enforced by the CDFW. The CESA program maintains a separate listing of species beyond the FESA, although the provisions of each act are similar.

State-listed threatened and endangered species are protected under provisions of the CESA. Activities that may result in "take" of individuals (defined in CESA as; "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") are regulated by CDFW. Habitat degradation or modification is not included in the definition of "take" under CESA. Nonetheless, CDFW has interpreted "take" to include the destruction of nesting, denning, or foraging habitat necessary to maintain a viable breeding population of protected species.

California Fish and Game Code (CFGC)

Sections 3503, 3503.5, 3511, and 3513

The CDFW administers the CFGC. There are particular sections of the CFGC that are applicable to natural resource management. For example, Section 3503 makes it unlawful to destroy any birds' nest or any birds' eggs that are protected under the MBTA. Further, any birds in the orders Falconiformes or Strigiformes (Birds of Prey), such as hawks, eagles, and owls, are protected under Section 3503.5 which makes it unlawful to take, possess, or destroy their nest or eggs. A consultation with CDFW may be required prior to the removal of any bird of prey nest that may occur on a project site. Section 3511 lists fully protected bird species, where the CDFW is unable to authorize the issuance of permits or licenses to take these species. Pertinent species that are State fully protected include golden eagle (*Aquila chrysaetos*) and white-tailed kite (*Elanus leucurus*). In addition, Section 3513 makes it unlawful to take or possess any migratory nongame bird as designated in the MBTA or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA.

Section 4150

Section 4150 of the CFGC protects nongame mammals, defined as any naturally-occurring mammal in California that is not a game mammal, fully protected mammal, or fur-bearing mammal. Nongame mammals, which includes bats and bat roosts, may not be taken or possessed except as provided by the CFGC or in accordance with applicable regulations.

Section 749.11, Title 14, California Code of Regulations

The proposed addition of Section 749.11, Title 14, California Code of Regulations creates a special order allowing incidental take of western Joshua tree during CESA candidacy necessary to address this emergency.

On September 22, 2020, the Commission determined that listing may be warranted pursuant to FGC Section 2074.2. Western Joshua tree became a candidate species under CESA, effective upon publication of the notice of findings on October 9, 2020 (Office of Administrative Law notice number Z2020- 0924-01). Pursuant to FGC Section 2074.6, the Department will undertake a one-year status review. After the Commission receives the Department's status review, the

Commission will make a final decision on listing. As of October 12, 2022, the final decision by the Commission has been postponed until February 2023.

Statutory Authority

Candidate species are protected from take under CESA pursuant to FGC Section 2085 during the remainder of the CESA listing. Under FGC Section 2084, CESA provides that the Commission may adopt regulations to authorize take of candidate species, based on the best available scientific information, when the take is otherwise consistent with CESA. As with all regulations, the Commission may adopt a regulation under Section 2084 on an emergency basis when it determines that a situation exists which threatens public health and safety or general welfare.

Another means to allow take of CESA candidate species is by Incidental Take Permit (ITP) pursuant to FGC Section 2081, subdivision (b), from the Department. An ITP allows a permittee to take CESA listed or candidate species if such taking is incidental to, and for the purpose of, carrying out an otherwise lawful activity, including for research or monitoring activities of such activity.

Native Plant Protection Act

Sections 1900–1913 of the CFGC were developed to preserve, protect, and enhance Rare and Endangered plants in the State of California. The act requires all State agencies to use their authority to carry out programs to conserve Endangered and Rare native plants. Provisions of the Native Plant Protection Act prohibit the taking of listed plants from the wild and require notification of the CDFW at least ten days in advance of any change in land use which would adversely impact listed plants. This allows the CDFW to salvage listed plant species that would otherwise be destroyed.

California Desert Native Plants Act (CDNPA)

Division 23 of the California Food and Agriculture Code consists of the CDNPA. The CDNPA was developed to protect certain species of California desert native plants from unlawful harvesting on both public and privately-owned lands. The CDNPA only applies within the boundaries of Imperial, Inyo, Kern, Los Angeles, Mono, Riverside, San Bernardino, and San Diego Counties. Within these counties, the CDNPA prohibits the harvest, transport, sale, or possession of specific native desert plants unless a person has a valid permit or wood receipt, and the required tags and seals. The appropriate permits, tags and seals must be obtained from the sheriff or commissioner of the county where collecting will occur, and the county will charge a fee.

3.5.3 Local Policies and Ordinances

San Bernardino County Countywide Plan

The Conservation Element of the County of San Bernardino General Plan identifies measures to preserve the unique environmental features and natural resources of the desert region, including native wildlife and vegetation. One role of the Conservation Element involves the identification of a community's natural resources and the adoption of policies for their preservation, development, and wise use.

Section 4 Results

The following discusses the potential for special-status plant and wildlife species and special-status vegetation communities to occur within the Survey Area. The CNDDB and CNPS Online Inventory were queried for reported locations of special-status plant and wildlife species as well as special-status natural vegetation communities within the 9-quad search radius. All CNDDB occurrences, documentation of special-status species and vegetation communities, and USFWS-designated Critical Habitat within a five (5) mile radius of the Project Site are shown in Figure 4. An evaluation of the potential for each species identified in the database records search to occur within the Survey Area is presented in the following section.

4.1 SPECIAL-STATUS SPECIES

The field survey was conducted to assess the conditions of the habitat(s) within the boundaries of the Survey Area to determine if the existing vegetation communities, at the time of the field survey, have the potential to provide suitable habitat(s) for special-status plant and wildlife species. Additionally, the potential for special-status species to occur within the Survey Area was determined based on the reported locations in the CNDDB and CNPS Online Inventory and the following:

- **Present**: the species was observed or detected within the Survey Area during the field survey.
- **High**: Recent occurrence records indicate that the species has been known to occur on or within one (1) mile of the Survey Area and the Survey Area is within the normal or expected range of this species. Intact, suitable habitat preferred by this species occurs within the Survey Area and/or there is viable landscape connectivity to a local known extant population(s) or sighting(s).
- **Moderate**: Recent occurrence records indicate that the species has been known to occur within one (1) mile of the Survey Area and the Survey Area is within the normal expected range of this species. There is suitable habitat within the Survey Area but the site is ecologically isolated from any local known extant populations or sightings.
- **Low**: Recent occurrence records indicate that the species has been known to occur within 5 miles of the Survey Area, but the Survey Area is outside of the normal expected range of the species and/or there is poor quality or marginal habitat within the Survey Area.
- **Not Expected**: There are no occurrence records of the species occurring within 5 miles of the Survey Area, there is no suitable habitat within the Survey Area, and/or the Survey Area is outside of the normal expected range for the species.
- **Absent**: The species has been determined to conclusively be absent from the Survey Area.

The literature search identified many species having the probability of occurrence on the Project Site. Special-status plant and wildlife species were evaluated for their potential to occur within the Survey Area based on habitat requirements, availability and quality of suitable habitat, and known distributions. After these considerations, the biologists identified nine (9) special-status plant species and three (3) special-status wildlife species as having the highest probability of occurrence. A complete table of special-status species queried for this report can be found in Appendix E, as well as definitions for ranking of each category (Appendix E, page 10).

4.1.1 Special-Status Plant Species

Nine (9) special-status plant species were identified from literature search and local knowledge and familiarity as having potential to occur within the region of the Survey Area. Focused surveys were conducted on April 6, May 26, and July 7, 2022 by senior biologist Philippe Vergne of Envira. Based on the results of focused surveys and a review of specific habitat preferences, occurrence records, known distributions, and elevation ranges, it was determined that the Project Site has a **low** probability to support these species. Additionally, these species were **absent** during the focused surveys**.** Focused surveys for the following species were performed: ayenia (*Ayenia compacta*) (CRPR 2B.3), Lincoln rockcress (*Boechera lincolnensis*) (CRPR 2B.3), Latimer's woodland-gilia (*Saltugilia latimeri*) (CRPR 1B.2), alkali mariposa-lily (*Calchortus striatus*) (CRPR 1B.2),pygmy poppy (*Canbya candida*) (CRPR 4.2), white-bracted spineflower (*Chorizanthe xanti* var. *leucotheca*) (CRPR 1B.2), Booth's evening primrose (*Eremothera boothii* ssp. *boothii*) (CRPR 2B.3), short-joint beavertail (*Opuntia basilaris* var. brachyclada) (CRPR 1B.2), and Parish's brittlescale (*Atriplex parishii*) (CRPR 1B.1). None of these special-status species were observed during the field surveys performed nor are they expected to occur at the Project Site. The focused plant survey report completed by Envira can be reviewed in Appendix G. It details the dates, weather conditions and habitat associations considered for each plant species.

CRPR: California Rare Plant Rank

1B.1	Plants rare, threatened, or endangered in California and elsewhere; seriously threatened in California
1B.2	Plants rare, threatened, or endangered in California and elsewhere; fairly threatened in California
2B.3	Plants rare, threatened, or endangered in California, but more common elsewhere; not very threatened in California
4.2	Plants of limited distribution; fairly threatened in California

Western Joshua Tree Inventory

CASC's biologist performed an inventory of Western Joshua trees (*Yucca brevifolia*, State Listed as Candidate Threatened) and locally sensitive cactus within the Survey Area (Project Site and the 500-foot buffer). Fifty-two (52) live Joshua trees were recorded during the April 27, 2022 site visit. Additionally, seven (7) dead Joshua trees were recorded on the Project Site. Data on Western Joshua tree within the buffer was recorded as required by CDFW but are not presented in Table 1 Western Joshua Tree Inventory. Per CDFW reporting requirements, the Western Joshua trees in Table 1 was photographed, a general health assessment performed (height, branching, clonal, etc.), and GPS location of each tree was noted (Table 1, Western Joshua Tree Inventory). *Sololocator* was used to correspond the photographs and GPS locations of the Joshua trees on the Project Site and within the buffer.

Highlighted in blue in Table 1 are those Western Joshua trees deemed appropriate for relocation according to the CDFW criteria (see below, Section 4.1.2 Criteria for Relocation). Highlighted in yellow are the largest and healthiest trees on site. Avoidance or relocation of Western Joshua trees will reduce the mitigation obligation with avoidance being the preferred strategy followed by on-site relocation of Western Joshua trees. Thirty-one (31) of the Western Joshua trees meet the criteria for relocation, the very best specimens can be selected to improve the chances of survival and overall success. If Western Joshua tree can be incorporated into the Project Site landscape or avoided this would help to reduce the mitigation obligation. Avoidance and relocation are highly valued by the California Department of Fish and Wildlife. Table 1 shows the GPS location of all Western Joshua tree on-site, their approximate height and a general health assessment.

Table 1. Western Joshua Tree Inventory

Tree Number	Approx Height inches/foot	Health/Notes	Location/GPS Coordinate	Panicle* (Bloom)
1	4-foot	Good, 2-trunks, clonal	117°38'15"W 34°43'60"N	No
2	4-foot	Good, 1-trunk	117°38'14"W 34°43'59"N	No
3	5-foot	Good; 1-trunk	117°38'11"W 34°43'58"N	No
4	5½-foot	Good; 1-trunk	117°38'03"W 34°43'59"N	No
5	1-foot	Poor, 1-trunk, laying over, yellow	117°38'03"W 34°43'63"N	No
6	3½ -foot	Good; 1-trunk	117°38'03"W 34°43'64"N	No
7	1-foot	Good; 1-trunk	117°38'06"W 34°43'65"N	No
8	Flat on ground	Poor, 1-trunk, yellow	117°38'04"W 34°43'61"N	No
9	2-foot	Poor, 1-trunk, on ground, yellow	117°38'02"W 34°43'67"N	No
10	3½ -foot	Good; 1-trunk	117°38'01"W 34°43'67"N	No
11	5-foot	Good, 1-trunk	117°38'03"W 34°43'69"N	No

12	5-foot and 4½ foot	Good, 2-trunks, clonal	117°38'02"W 34°43'71"N	No
13	4-foot	Good, 1-trunk	117°38'01"W 34°43'70"N	No
14	20-foot	Good, single trunk	117°37'99"W 34°43'72"N	Yes
15	3½-foot 1-foot	Good, 2-trunks; clonal	117°37'97"W 34°43'71"N	No
16	3½-foot 1-foot	Good, 2-trunks, clonal	117°37'98"W 34°43'69"N	No
17	4-foot	Good, 1-trunk	117°37'96"W 34°43'68"N	No
18	3½-foot	Good; 1-trunk	117°37'98"W 34°43'64"N	No
19	5-foot	Good, 1-trunk	117°37'98"W 34°43'63"N	No
20	2-foot 4½-foot	Good, 2-trunks, clonal	117°37'95"W 34°43'60"N	No
21	4½-foot	Good, 1-trunk	117°37'95"W 34°43'59"N	No
22	3-foot	Good, 1-trunk	117°37'95"W 34°43'59"N	No
23	3-foot	Good, 1-trunk	117°37'93"W 34°43'61"N	No
24	6-foot	Good, 1-trunk	117°37'94"W 34°43'61"N	No
25	4-foot	Good, 1-trunk	117°37'92"W 34°43'63"N	No
26	6½-foot	Good, 1-trunk	117°37'94"W 34°43'68"N	No
27	4-foot	Good, 1-trunk	117°37'94"W 34°43'68"N	No
28	3½-foot	Good, 1-trunk	117°37'93"W 34°43'69"N	No
29	2-foot	Good, 1-trunk	117°24'8"W 34°24'48"N	No
30	2-foot	Good, 1-trunk	117°37'92"W 34°43'67"N	No
31	2-foot	Good, 1-trunk	117°37'90"W 34°43'67"N	No
32	3-foot	Good; 1-trunk	117°37'90"W 34°43'65"N	No
33	3½-foot	Good, 1-trunk	117°37'87"W 34°43'71"N	No
34	3½-foot	Good, 1-trunk	117°37'87"W 34°43'71"N	No
35	25-foot	Good, 1-trunk	117°37'82"W 34°43'74"N	Yes
36	2-foot	Good, 1-trunk	117°37'81"W 34°43'71"N	No
37	3-foot	Good, 1-trunk	117°37'80"W 34°43'71"N	No
38	Dead, 15-foot	Dead, laying on ground	117°24'6"W 34°24'49"N	No
39	Dead, 8-foot	Dead, laying on ground	117°37'76"W 34°43'66"N	No
40	Dead, 6-foot	Dead, laying on ground	117°37'70"W 34°43'71"N	No
41	Dead, 10-foot	Dead, laying on ground	117°37'68"W 34°43'61"N	No
42	Dead	Dead	117°37'64"W 34°43'60"N	No
43	15-foot	Good, 1-trunk	117°37'61"W 34°43'62"N	Yes
44	18-foot	Good, 1-trunk	117°37'59"W 34°43'63"N	Yes
45	Dead	Dead	117°37'61"W 34°43'64"N	No
46	12-foot	Good, 1-trunk	117°37'59"W 34°43'65"N	No
47	20-foot	Poor, 1-trunk, dying	117°37'57"W 34°43'68"N	Yes
48	7-foot	Good, 1-trunk	117°37'58"W 34°43'69"N	No
49	1-foot	Good, 1-trunk	117°37'58"W 34°43'70"N	No
50	18-foot	Good, 1-trunk	117°37'54"W 34°43'69"N	Yes

51	8-foot	Good, 1-trunk	117°37'54"W 34°43'69"N	No
52	20-foot	Good, 1-trunk	117°37'52"W 34°43'67"N	Yes
53	4-foot	Good, 1-trunk, leaning	117°37'53"W 34°43'68"N	No
54	4-foot	Poor, 1-trunk, broken crown, yellow	117°37'51"W 34°43'72"N	No
55	4-foot	Good, 1-trunk	117°24'60"W 34°24'46"N	No
56	Dead	Dead	117°37'37"W 34°43'66"N	No
57	1, 2, and 3-foot	Good, 3-trunks, clonal	117°37'35"W 34°43'71"N	No
58	18-foot	Moderate, 1-trunk	117°37'49"W 34°43'62"N	No
59	15-foot	Moderate, 1-trunk, crown broken	117°37'54"W 34°43'60"N	Yes

Blue Highlight: Suitable for relocation according to CDFW parameters.

Yellow Highlight: Largest trees, if possible, preserve in place to reduce mitigation obligation.
