Project Description (Proposed actions, location, and/or consequences).

The Project would involve replacing the electrical distribution system within the compressor station to increase reliability, maintainability, and operational safety. As part of the Project, the station's existing electrical power switchgear, motor control center (MCC), and load center would be replaced or modified, and connecting conduit and new or replacement cable would be installed between the switchgear and MCC locations.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The Project would have a potentially significant effect on Biological Resources, Cultural Resources, and Tribal Resources. Mitigation measures would be implemented that would reduce the impact of the Project on these resource areas to less than significant. Mitigation measures include preconstruction surveys for species within the Project site, protocol to inhibit the spread of invasive species on the Project site, archaeological monitoring, and protocol for discovery of archaeological resources or tribal cultural resources. The Project would also apply various applicant proposed measures, which are listed in detail in Section 5, Mitigation Monitoring and Reporting Plan, of the IS/MND.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
