Project Description

Caltrans proposes ramp pavement rehabilitation to remove 0.2' of existing asphalt and replacing it with 0.2' of rubberized asphalt in San Diego, CA, on northbound I-15 at the exit ramp to Market Street at postmile 1.7. Other activities include replacing the dike in kind, re-striping, refresh marking and markers, as well as replacing two electrical loops. All work is within the existing ramp pavement limit and there will be no staging location. This project is classified as a preventative maintenance initiative aimed at extending the service life of the existing concrete pavement through the application of a Rubber Bonded Wearing Course (Type G) overlay. All work will occur within Caltrans right-of-way. Environmental commitments for visual resources, air quality, hazardous waste/materials, and NPDES/Stormwater are included in the Environmental Commitments Record (ECR).
