

APPENDIX D - TRUCK ROUTES PLAN UPDATE TRANSPORTATION ANALYSIS

JULY 10, 2026

Mr. Rafael Garcia
CITY OF PERRIS
135 North D Street
Perris, CA 92570

**SUBJECT: TRUCK ROUTES PLAN UPDATE TRANSPORTATION ANALYSIS, CITY OF PERRIS
(REVISED JULY 10, 2026)**

Dear Mr. Garcia:

1.0 INTRODUCTION

RK ENGINEERING GROUP, INC. (RK) has prepared this revised Transportation Analysis for the proposed Update to the City of Perris Truck Routes Plan (hereinafter referred to as “project”).

The purpose of this study is to assist the City of Perris in amending its General Plan Circulation Element and Truck Routes Plan in accordance with the requirements of California Assembly Bill (AB) 98. AB 98 mandates that cities identify and establish truck routes that safely accommodate truck activity while minimizing exposure to sensitive receptors and limiting the use of local and collector streets.

This study evaluates the existing and proposed truck routes within the City of Perris and develops baseline and forecast traffic volumes for designated Truck Routes. In addition, this study assesses potential impacts to vehicle miles traveled (VMT) resulting from the proposed truck routes modifications pursuant to California Environmental Quality Act (CEQA) requirements.

A copy of the current City of Perris Truck Routes Map from the General Plan Circulation Element, showing the designated study area truck route roadway segments (Segments 1-34), is provided in **Exhibit A-1**. The study area also consists of additional roadway segments that may experience changes in traffic patterns associated with the proposed Truck Routes Plan Update. These additional study area roadway segments (Segments 35-59) are shown in **Exhibit A-2**.

2.0 PROJECT DESCRIPTION

The City of Perris is amending its General Plan Circulation Element to revise the City's designated Truck Routes Map in accordance with the requirements of AB 98. The update consists of adding one (1) new truck route segment and removing three (3) existing segments based on roadway conditions, adjacent land uses, and compliance with AB 98 criteria. The purpose of the amendment is to ensure that designated truck routes utilize appropriate arterials and commercially oriented corridors, avoid sensitive receptors, and reflect current and planned industrial activity within the City.

Table 1 lists the 59 study area roadway segments included in this analysis. The proposed changes to the Truck Routes Map include the following:

- **Addition of Case Road from Bonnie Drive to Watson Road - Segment 22**

A new truck route is proposed to be included along Case Road between Bonnie Drive and Watson Road, as a recently approved industrial project is located at the southwest corner of Watson Road and Case Road. Case Road is classified as a Secondary Arterial in the City's General Plan Circulation Element. There are no sensitive areas along this roadway as it's adjacent to the EMWD sewer treatment facility and the I-215 Freeway. Currently, trucks are not allowed to travel southbound on Case Road to Ethanac Road or westbound on Watson Road to Murrieta Road, and this recommendation will not change this restriction.

Exhibit B includes a location map of the proposed truck route addition on Case Road.

- **Removal of Ellis Avenue from McPherson Road to Goetz Road - Segments 15, 16 & 17**

This segment of Ellis Avenue is proposed for removal as a designated truck route because it is predominantly bordered by residentially zoned properties and remains unimproved west of "A" Street. These conditions conflict with AB 98 requirements intended to direct truck traffic away from residential areas and sensitive receptors. **Exhibit C** includes a location map of the proposed truck route removal on Ellis Avenue.

- **Removal of Ellis Avenue from the Ellis Realignment Overpass and Sherman Road - Segment 19**

The segment of Ellis Avenue between the Ellis Realignment Overpass and Sherman Road is proposed to be removed, as it does not meet the required freeway interchange spacing requirements and is located within a conservation area of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) and a Floodway, where development rights are restricted. These restrictions make the corridor unsuitable for continued designation as a truck route. **Exhibit D** includes a location map of the proposed truck route removal on Ellis Avenue.

- **Removal of San Jacinto Avenue from I-215 and Dunlap Drive - Segments 14 & 33**

The segment of San Jacinto Avenue between I-215 and Dunlap Drive is proposed for removal from the City's Truck Routes Map due to its proximity to existing and planned residential neighborhoods and Bob Long Park along the northern frontage. This segment also includes the removal of a portion of Redlands Avenue from San Jacinto Avenue to I-215. The presence of these sensitive receptors is inconsistent with AB 98 guidance to minimize truck travel adjacent to residential and park uses. **Exhibit E** includes a location map of the proposed truck route removal on San Jacinto Avenue.

3.0 AB 98 COMPLIANCE

The California Assembly Bill 98 (AB 98) adds Section § 65302.02 to the California Government Code, which directs cities and counties to update the circulation element of their general plans to identify and establish designated truck routes for goods-movement. The City of Perris is located within a “warehouse concentration region” and is thus required to comply with the new law by January 1, 2026.

Some of the key requirements of AB 98, Section § 65302.02, as it relates to this analysis, include the following:

- (a) Identify and establish specific travel routes for the transport of goods, materials, or freight for storage, transfer, or redistribution to safely accommodate additional truck traffic and avoid residential areas and sensitive receptors, as defined by Government Code Section 65098.
- (b) Maximize the use of interstate or state divided highways as preferred routes for truck routes. The county or city shall also maximize use of arterial roads, major thoroughfares, and local roads that predominantly serve commercial, agricultural, or industrial uses when state or interstate highways are not utilized. Truck routes shall comply with the following:
 - (1) Major or minor collector streets and roads that predominantly serve commercial, agricultural, or industrial uses shall be used for truck routes only when strictly necessary to reach existing industrial zones.
 - (2) Trucks shall be routed via transportation arteries that minimize exposure to sensitive receptors.
- (c) On or after January 1, 2028, all proposed development of a logistics use development, as defined in subdivision (d) of Section 65098, shall be accessible via arterial roads, major thoroughfares, or roads that predominantly serve commercial, agricultural, or industrial uses.
- (d) The purpose of this section is to ensure that logistics use developments are sited in locations that minimize adverse impacts on residential communities and enhance transportation efficiency. This is achieved by restricting logistics use developments to roadways that are suited to handle the associated traffic and that predominantly serve commercial, agricultural, or industrial uses.
- (e) For purposes of this section, local roads shall be considered to predominantly serve commercial, agricultural, or industrial uses if more than 50 percent of the properties fronting the road within 1,000 feet of the truck entrances and exits are designated for commercial or industrial use according to the local zoning ordinance.
- (f) The county or city may consult with the Department of Transportation and the California Freight Advisory Committee for technical assistance.

- (g) The county or city shall provide for posting of conspicuous signage to identify truck routes and additional signage for truck parking and appropriate locations for idling and parking.
- (h) The county or city shall make truck routes publicly available in geographic information system (GIS) format and share GIS maps of the truck routes with warehouse operators, fleet operators, and truck drivers.

Jurisdictions within the warehouse concentration region have had until January 1, 2026 to make these amendments, while all other jurisdictions must complete these revisions by January 1, 2028. Pursuant to Government Code Section 65302.02(i)(1), the California Attorney General may impose a fine against a jurisdiction that is in violation of this section of up to \$50,000 every six months if the required updates have not been made.

3.1 COLLECTOR AND LOCAL ROAD COMPATIBILITY

AB 98 emphasizes that logistics-related development must be accessible via arterial roads, major thoroughfares, or roads that predominantly serve commercial, agricultural, or industrial uses. If a truck route is designated along a collector or local road, it must meet two key criteria: (1) at least 50 percent of the properties fronting the roadway within 1,000 feet of the truck entrances and exits must be designated for commercial, agricultural, or industrial use, and (2) the route must avoid concentrations of sensitive receptors such as residences, schools, hospitals, day-care facilities, and parks.

The City's updated truck routes map has been reviewed with respect to the AB 98 criteria above. The findings are as follows:

- All designated truck routes within the City of Perris are located on roadways classified as expressways, arterials, or secondary arterials. There are no truck routes designated along collector or local streets, with the exception of one segment; Segment 26 – Western Way, from the northern City limits to Harley-Knox Boulevard.
- **Truck Route Segment 26, Western Way**, from the northern City limits to Harley-Knox Boulevard is located on an unclassified/local road, per the City of Perris General Plan Circulation Element. The segment traverses a corridor that is entirely surrounded by land uses that are zoned General Industrial and Light Industrial, and no residential or other sensitive receptor land uses (e.g., schools, hospitals, day-care facilities, parks) front along the roadway within 1,000 feet. Therefore, routing truck traffic along this corridor does not conflict with the AB 98 requirement of having at least 50 percent of the properties fronting the roadway be commercial, agricultural, or industrial use.
- Since no other truck route segments run along collector or local streets, the requirement to meet 50 percent of commercial/agricultural/industrial frontage does not apply for the remainder of the network.

Therefore, the City's map meets the AB 98 requirements.

4.0 EXISTING TRAFFIC VOLUMES

Existing traffic count data was collected for all study area roadway segments. The purpose of the existing traffic counts is to establish baseline traffic conditions and truck volumes by vehicle type and axle classification.

Traffic data were collected in 2024, 2025, and 2026. All counts include 24-hour two-way average daily traffic (ADT) counts with the following vehicle classifications:

- Passenger vehicles
- Two-axle trucks
- Three-axle trucks
- Four-axle trucks
- Five-axle trucks
- Six or greater-axle trucks

The baseline year for this analysis is 2025, consistent with the year the CEQA Notice of Preparation of a Draft EIR was circulated. Accordingly, roadway segments with traffic counts collected in 2024 were adjusted to 2025 baseline conditions by applying a two-percent annual growth factor, consistent with City of Perris growth projections. This revised analysis also expands the study area to include an additional 25 roadway segments (Segments 35-59), for which traffic counts were collected in 2026 and represent existing baseline conditions.

Table 2 summarizes the existing traffic conditions along the 59 study area truck route segments, including total daily traffic volumes and truck classifications for Existing conditions.

Appendix A includes copies of the traffic count worksheets.

5.0 TRAFFIC FORECASTING METHODOLOGY

This section describes the methodology used to develop existing and future traffic volumes for the study area roadway segments. The analysis combines observed traffic count data with forecasts from the Riverside County Transportation Model (RIVCOM) Version 4.0 to evaluate the effects of the proposed Truck Routes Plan Update on traffic patterns throughout the City of Perris and the surrounding transportation network.

The proposed project does not generate new vehicle trips or increase roadway capacity. Instead, the project modifies designated truck routes, which may result in the redistribution of truck traffic between roadway segments. Accordingly, the regional travel demand model was used to quantify changes in travel patterns associated with the proposed Truck Routes Plan Update. Traffic volumes presented in this report were developed by combining observed traffic count data with the changes in travel

patterns identified by the regional travel demand model through a post-processing methodology described in the following subsections.

5.1 RIVCOM REGIONAL TRAVEL DEMAND MODEL

Traffic forecasts for this analysis were developed using RIVCOM Version 4.0, the regional travel demand model maintained by the Western Riverside Council of Governments (WRCOG). RIVCOM is the preferred regional travel forecasting model for the City of Perris and agencies throughout Western Riverside County and represents the most current regional travel demand forecasting tool available for transportation planning and environmental analyses within the study area.

RIVCOM is a regional, multimodal travel demand model that forecasts traffic volumes based on projected land use, population, employment, and transportation network characteristics. The model includes a 2018 base year and a 2045 forecast year.

5.2 MODEL ADJUSTMENTS

The No Project model scenarios represent the City's existing designated truck routes network as identified in the current City of Perris General Plan Circulation Element. The With Project model scenarios were developed by modifying the regional roadway network to reflect the proposed Truck Routes Plan Update. In addition, several minor network coding refinements were made to the base model to improve the representation of existing truck travel patterns. These refinements ensure that the model more accurately reflects observed truck routing behavior and existing traffic counts by directing truck traffic to the existing designated truck route network. The same background network refinements were incorporated into both the No Project and With Project scenarios so that the effects of the proposed Truck Routes Plan Update could be evaluated independently of the base model refinements. The network coding modifications incorporated into the regional travel demand model are documented in Appendix B.

The proposed Truck Routes Plan Update includes one (1) truck route addition and three (3) truck route removals. These network modifications were incorporated into each of the With Project model scenarios to evaluate changes in regional truck travel patterns associated with the proposed Truck Routes Plan Update.

For the Future Cumulative (Year 2045) analysis, the regional travel demand model was also updated to incorporate the socioeconomic data associated with the Perris Valley Towne Centre, New Perris Commerce Center, and Stoneridge developments. These project-specific socioeconomic modifications were applied to both the Future Cumulative No Project and Future Cumulative With Project scenarios so that the only distinction between the two scenarios is implementation of the proposed Truck Routes Plan Update. The cumulative socioeconomic modifications incorporated into the regional travel demand model are also documented in **Appendix B**.

The RIVCOM regional travel demand model reports vehicle assignments separately for passenger vehicles, Single Unit Trucks (SUT), and Multi-Unit Trucks (MUT). The proposed Truck Routes Plan

Update is intended to regulate Multi-Unit Trucks, which generally represent larger semi-tractor trailer trucks, while Single Unit Trucks represent local delivery and service vehicles that are not intended to be restricted by the proposed truck route modifications.

RIVCOM does not allow network modifications to be applied independently by truck classification. Roadway links may only be coded to either allow truck travel or prohibit truck travel. Consequently, the network coding required to simulate the proposed Truck Routes Plan Update affected both SUT and MUT vehicles during the traffic assignment process. To reflect the intent of the proposed Truck Routes Plan Update, the model results were post-processed so that only the incremental changes in MUT traffic were incorporated into the final traffic forecasts. For purposes of this analysis, MUT traffic was represented by the observed four-axle, five-axle, and six-or-more axle truck classifications, with the model-derived MUT volumes proportionally distributed among these observed axle classifications based on the existing truck composition for each roadway segment. Passenger vehicle traffic and Single Unit Truck (SUT) traffic were maintained based on the observed traffic counts and regional growth forecasts and were not modified by the proposed Truck Routes Plan Update.

5.3 TRAFFIC VOLUME DEVELOPMENT

The model results were post-processed using observed traffic count data to develop the final traffic volumes presented in this analysis. The post-processing methodology is consistent with the guidance presented in the *National Cooperative Highway Research Program (NCHRP) Report 765, Analytical Travel Forecasting Approaches for Project-Level Planning and Design, Chapter 6*, which combines observed traffic count data with the incremental changes in traffic from the model to develop the final traffic forecasts.

The traffic volumes for each analysis scenario were developed as follows:

- **Existing Without Project Conditions:** Existing without project traffic volumes were established directly from the observed traffic counts described in Section 4.0. Existing Without Project traffic volumes are shown in **Table 2**.
- **Existing With Project Conditions:** Existing With Project traffic volumes were developed by applying the incremental changes in MUT traffic as a result of the project and interpolated between 2018 Base Model and 2045 Future Model (non-cumulative) scenarios. Existing With Project traffic volumes are shown in **Table 3**.
- **Future (Year 2045) Without Project Conditions:** Future traffic volumes were developed by applying the incremental regional growth identified in the 2045 Future Model No Project scenario to the observed Existing Conditions traffic volumes. Future (Year 2045) Without Project traffic volumes are shown in **Table 4**.
- **Future (Year 2045) With Project Conditions:** Future With Project traffic volumes were developed by applying the incremental MUT traffic changes associated with the proposed

Truck Routes Plan Update to the Future (Year 2045) Without Project Conditions. Future (Year 2045) With Project traffic volumes are shown in **Table 5**.

- **Future (Year 2045) Cumulative Without Project Conditions:** Future cumulative traffic volumes were developed using the 2045 Future Cumulative Model No Project scenario, which incorporates the cumulative socioeconomic growth associated with the Perris Valley Towne Centre, New Perris Commerce Center, and Stoneridge developments. Future (Year 2045) Cumulative Without Project traffic volumes are shown in **Table 6**.
- **Future (Year 2045) Cumulative With Project Conditions:** Future cumulative traffic volumes were developed by applying the incremental MUT traffic changes associated with the proposed Truck Routes Plan Update to the Future (Year 2045) Cumulative Without Project Conditions. Future (Year 2045) Cumulative With Project traffic volumes are shown in **Table 7**.

Appendix B includes the volume development worksheets and socio-economic changes made for the cumulative scenarios in RIVCOM.

6.0 VEHICLE MILES TRAVELED (VMT) ANALYSIS

This section summarizes the results of the Vehicle Miles Traveled (VMT) analysis conducted for the City of Perris Truck Routes Plan Update. The analysis follows the *City of Perris Transportation Impact Analysis Guidelines for CEQA, May 12, 2020* (TIA Guidelines), which establish the City's methodology and significance thresholds for evaluating VMT impacts under CEQA.

The Truck Routes Plan Update differs from both a traditional land use development project and a roadway capacity expansion project. The project does not generate new vehicle trips through the addition of residential, commercial, or industrial development, nor does it increase roadway capacity through the construction of additional travel lanes or new roadway facilities. Instead, the project consists of modifications to designated truck routes intended to improve truck operations and maintain consistency with the requirements of AB 98. As a result, the primary transportation effect of the project is the potential reassignment of truck travel to different roadways within the transportation network.

To evaluate these effects, the RIVCOM regional travel demand model was used to compare existing and future travel patterns under both Without Project and With Project conditions. Two geographic study areas were evaluated. First, a Citywide boundary link-level VMT analysis was conducted to assess changes in travel occurring on roadway segments within the City of Perris. Second, a regional 20-mile boundary link-level VMT analysis was conducted to evaluate whether truck route modifications within the City would result in measurable changes in travel patterns within the broader regional transportation network.

As described in Section 5.0, the traffic forecasting analysis utilized the Riverside County Transportation Model (RIVCOM) Version 4.0 to develop Existing, Future (Year 2045), and Future Cumulative (Year 2045) Without Project and With Project traffic scenarios. The VMT analysis presented herein utilizes

these same traffic forecasting scenarios and corresponding regional travel demand model outputs to evaluate changes in VMT associated with implementation of the proposed Truck Routes Plan Update. No additional model runs or network modifications were performed for the VMT analysis.

For each study area, VMT was evaluated under Base Model (Year 2018), Existing (Year 2025), and Future Model (Year 2045) conditions under both Without Project and With Project scenarios.

6.1 PERRIS CITYWIDE BOUNDARY LINK-LEVEL VMT ANALYSIS

The Citywide boundary link-level VMT analysis evaluates changes in travel occurring on roadway segments within the City of Perris, as shown in **Table 8**.

The implementation of the Truck Routes Plan Update results in nominal changes in total VMT under all analysis years. The magnitude of the increase is minimal and does not represent a substantial change in travel behavior or travel demand. This slight change falls within the range of normal model sensitivity and system variation typically associated with regional travel demand forecasting. WRCOG recently published guidance regarding VMT screening that recognizes minor changes in regional VMT may reflect inherent model variation rather than meaningful changes in travel behavior. Although the WRCOG memorandum was developed for land use screening purposes, it provides useful context for interpreting the results of this analysis.

Since the project does not result in a capacity increasing project, and does not affect the land use patterns, development intensity, or jobs-housing relationships, the impact is considered less than significant.

6.2 20-MILE REGIONAL BOUNDARY LINK-LEVEL VMT ANALYSIS

The 20-mile regional boundary link-level VMT analysis evaluates changes in travel occurring on roadway segments throughout the broader regional transportation network surrounding the City of Perris, as shown in **Table 9**.

The 20-mile regional analysis indicates that implementation of the Truck Routes Plan Update results in negligible changes in total regional VMT and VMT per service population. Under Base Model (Year 2018), Existing (Year 2025) and Future Model (Year 2045) conditions, the project results in a slight increase in total regional VMT. These minor increases reflect localized rerouting of truck traffic resulting from the proposed truck route modifications.

Under Future Cumulative (Year 2045) conditions, the project results in a slight reduction in total regional VMT and VMT per service population. This reduction is attributable to the cumulative development assumptions incorporated into the regional travel demand model. The Future Cumulative model includes the Perris Valley Towne Centre, New Perris Commerce Center, and Stoneridge developments, which were assumed to have direct or indirect truck access via San Jacinto Avenue under the Without Project scenario. Under the proposed Truck Routes Plan Update, portions of San Jacinto Avenue would no longer be designated as truck routes. As a result, the model no longer assigns truck travel to these roadway segments in the same manner as the Without Project scenario.

This change in network connectivity results in a reduction in forecast truck travel assigned to these development zones and a corresponding reduction in regional VMT. As a result, the reduction in regional VMT is attributable to the truck route restrictions incorporated into RIVCOM. Under the With Project scenario, the cumulative development sites no longer have designated truck route access, resulting in fewer truck trips being generated by these traffic analysis zones and a corresponding reduction in regional VMT.

Overall, the magnitude of the observed changes is extremely small relative to total regional travel occurring within the 20-mile study area and falls within the range of normal model sensitivity associated with regional travel demand forecasting. The results therefore support the conclusion that the Truck Routes Plan Update does not induce additional vehicle travel and does not result in a substantial change in regional travel behavior. Accordingly, the regional VMT impacts associated with the project are considered less than significant.

7.0 CEQA SIGNIFICANCE DISCUSSION

Pursuant to CEQA Guidelines Section 15064.3(a), VMT refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the project on transit and non-motorized travel.

In November 2017, the Governor's Office of Planning and Research published a Technical Advisory on Evaluating Transportation Impacts in CEQA. The Technical Advisory provides technical recommendations regarding assessment of VMT, thresholds of significance, and mitigation measures. According to the Technical Advisory, the types of transportation projects that would likely lead to a measurable and substantial increase in vehicle travel generally include the addition of through lanes on existing or new highways, including general purpose lanes, HOV lanes, peak period lanes, auxiliary lanes, or lanes through grade-separated interchanges.

The Technical Advisory states that the term "automobile" refers to on-road passenger vehicles, specifically cars and light trucks. As such, under CEQA, VMT does not apply to medium/heavy trucks or buses.

The evaluation of VMT impacts for development projects requires consideration of two distinct approaches for assessing VMT impacts established in the City's TIA Guidelines.

- (1) The City of Perris utilizes a *VMT per service population* metric for assessing impacts from development projects, and
- (2) The City of Perris utilizes *induced VMT* as a metric for assessing impacts from roadway improvement and capacity-increasing projects.

The proposed project is not a land use development project, nor does it involve physical roadway improvements that increase capacity. As such, it does not fall squarely within either of the defined significance categories.

The TIA Guidelines specify that an induced VMT analysis is applicable to transportation projects that would “likely lead to a measurable and substantial increase in vehicle travel,” including the addition of new through lanes or other roadway capacity enhancements. The Truck Routes Plan Update does not modify roadway geometry, add capacity, or improve travel times in a manner that would induce additional vehicle travel. As a result, it does not meet the criteria for an induced VMT impact under CEQA.

Furthermore, the policy objectives underlying the State of California’s goals established in Senate Bill (SB) 743, and subsequently the City’s TIA Guidelines, are primarily directed toward reduction of home-based VMT, enhancement of multimodal accessibility, and improvement of jobs/housing balance. The rerouting of heavy trucks for regulatory compliance and community protection purposes does not conflict with these policy objectives and is not the type of travel behavior that CEQA’s VMT metric was intended to regulate.

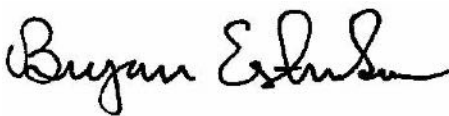

Considering the applicability of the VMT per service population threshold, the absence of any capacity-increasing roadway elements, the nature of the VMT increase as diverted rather than induced travel, and the underlying legislative intent of SB 743, the Truck Routes Plan Update would result in a **less than significant transportation impact related to vehicle miles traveled under CEQA.**

8.0 CONCLUSION

RK Engineering Group, Inc. appreciates this opportunity to work with the CITY OF PERRIS on this project. If you have any questions regarding this review, or need further clarification, please contact us at (949) 474-0809.

Sincerely,

RK ENGINEERING GROUP, INC.
