Project Title: Upper Mainstem Scott River Habitat Enhancement Project: Phase II

Project Location: Scott River near Etna, Siskiyou County, California

Project Description:

The goal of the project is to improve ecological function through implementation of instream and floodplain restoration treatments on the Scott River, a tributary to the Klamath River, in Siskiyou County, California. The project site is located in the Scott Valley and covers an approximately 4-mile-long contiguous stretch of the Scott River, encompassing around 700 acres of the river channel and floodplain. Planned restoration treatments include side channel excavation, channel contouring, installation of instream large woody structures (e.g., engineered log jams), riparian planting, and other enhancements to improve instream and off-channel habitat, enhance floodplain connectivity, improve riparian health, establish drought resiliency, and reduce sediment and erosion affecting aquatic habitats as well as adjacent agricultural lands.

This Notice of Determination is to advise that the SRCD (☒ Lead Agency or ☐ Responsible Agency) has approved the Upper Mainstem Scott River Habitat Enhancement Project: Phase II on 12 February 2026 and has made the following determinations related to the MND:

1. The project will NOI have a significant effect on the environment.
2. A Negative Declaration was prepared for this project pursuant to the provisions of CEQA.
3. Mitigation measures were made a condition of the approval of the project.
5. A Mitigation Monitoring and Reporting Program was adopted for this project.
6. A statement of overriding considerations was not adopted for this project.
7. Findings were made pursuant to the provisions of CEQA.

This is to certify that the final Negative Declaration with comments and responses and record of project approval are available to the general public. The Siskiyou Resource Conservation District is the custodian of these documents. Please contact Evan Senf at sisqrcd@sisqtel.net to arrange document viewing.
