

Summary Form for Electronic Document Submittal**Form F**

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Phone Number: (650) 599-1457

Project Location: Pescadero, CA

City

San Mateo County

County

Project Description (Proposed actions, location, and/or consequences).

The County of San Mateo Department of Public Works (County) is proposing a series of actions to repair culverts and construct site improvements to improve water quality and maintain proper roadway drainage conveyance along Wurr Road, Pescadero Creek Road, and Cloverdale Road near the communities of Pescadero and Loma Mar in unincorporated San Mateo County, California. The Project would include improvements such as new headwalls, and rock inlet protection and energy dissipation, installation of three new culverts, and replacement or upsizing of seven culverts along Wurr Road and Pescadero Creek Road. In addition, at the Cloverdale Road site, the Proposed Project would remove accumulated sediment and vegetation and demolish weir structures to improve fish passage. Seven culvert sites are proposed along Wurr Road, four at Pescadero Creek Road, and one at Cloverdale Road.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The Initial Study / Mitigated Negative Declaration analysis has found that potentially significant environmental effects could occur as a result of the Proposed Project, specifically related to cultural resources and noise impacts. Mitigation measures include measures requiring the presence of an archaeological monitor for Project activities at the Cloverdale Road site and measures required to reduce construction noise generated by the Project. Additionally, the Proposed Project would be implemented in accordance with applicable BMPs, from the County of San Mateo Routine Maintenance Program to avoid and minimize Project impacts. For all impacts determined to be potentially significant, identified mitigation measures would reduce those impacts to levels that are less than significant.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Concerns that have been raised by agencies and the public during the course of the Proposed Project development and permitting process, include the following:

- concern regarding the potential presence of special status terrestrial species, including marbled murrelet (*Brachyramphus marmoratus*), California red-legged frog (*Rana draytonii*), and San Francisco garter snake (*Thamnophis sirtalis tetrataenia*); and
- concern regarding the potential presence of special status aquatic species, including mCoho salmon – central California coast ESU (*Oncorhynchus kisutch*) and Steelhead – central California coast DPS (*Oncorhynchus mykiss irideus*).

Provide a list of the responsible or trustee agencies for the project.
