RE: Arborist Report based on Site Visit 8/18/23

Arborist Report

We visited the site on Friday 18 August 2023 to document the existing trees. Most of the trees to be reviewed were off-site, some within dense undergrowth. As we approached each tree, we first confirmed the trees' genus and species, measured the diameter at breast height, and tagged and number all trees larger than 6" in diameter. We estimated the height and breadth of canopy; evaluated their condition (health rating 1-5 where 1 is poor and 0 is dead), established their location with coordinates, and photograph. Upon completion of the site visit we compiled the information, crafted the exhibit as requested (see below), and created a map indicating the tree locations and approximate size and location of the tree dripline (i.e., canopy).

With additional information provided by your architects, we were able to indicate the location of trees that will remain, trees where there would be encroachment into the existing drip line, percentage of encroachment, and trees requested for removal.

The Arborist Report was crafted to satisfy the following requirement, the preparation of a Tree Exhibit:

Arborist Report. An arborist report is necessary to complete the environmental review of the proposed project. Please refer to the arborist report attachment for County requirements and format:

Request for a Tree Exhibit. In reviewing aerial imagery of the subject parcel, there appear to be existing trees located on the subject parcel or overhanging onto the subject parcel. Please provide a tree exhibit that accurately depicts the location, trunk size, species, and drip lines (i.e., a circle with the trunk as the center and the longest limb as the outer radius) of all existing trees (6 inches in diameter at breast height [dbh] or larger) on or overhanging onto the subject parcel. This exhibit should identify the location of trees that will remain, trees where there would be encroachment into the existing drip line and percentage of encroachment, and trees requested for removal.

Respectfully submitted,

Jeffrey F. Gamboni, ASLA
