1.0 EXECUTIVE SUMMARY

Environmental Audit, Inc. (EAI) was retained by Karney Properties Co. (KPC) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the real property identified as 5210 Pacific Concourse Drive in an unincorporated area of Los Angeles County, California 90045, known as Del Aire (see Figure 1). Other addresses known to presently be associated with the property include 11855 S. La Cienega Boulevard, Hawthorne, and 5210 Pacific Concourse, Inglewood. Collectively, all of these addresses are referred to herein as the "Site." EAI was informed that: (1) Paccon LP and 5210 Concourse LP, as tenants in common (Owner) own the Site; (2) KPC manages the property; and (3) Owner is considering financing for the Site and is interested in determining if there are any recognized environmental conditions associated with the Site.

The Site is comprised of one parcel of real property totaling approximately 9.2 acres and presently contains one two-story building totaling approximately 169,758 square feet constructed in or around 2001 (see Figure 2). The first floor of the building is presently occupied by Siemens Healthcare Diagnostics Inc. (Siemens), and the second floor is vacant. Additionally, there is an unattached steel building of approximately 400 square feet used for the storage of hazardous materials and waste. The majority of the Site is covered by improvements or asphalt/concrete paved areas, and landscaping.

Siemens conducts research, development and production of intermediates for use in finished medical devices at the Site. These activities include light manufacturing fabricating, research, product development and recycling of products and equipment. Between 2001 and 2004, it is reported that a technology company and healthcare company occupied the Site. Prior to 2001, the Site contained single-family residential homes from the mid-1940s to early-1970s, when most of the homes were removed. The Site remained vacant for years after the residential homes were removed and prior to development of the current facility. Prior to the mid-1940s, the Site was used for agricultural purposes.

The Phase I ESA was conducted by EAI in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E1527 – "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*" dated 2013 (ASTM, E1527-13) and ASTM Standard E2600 – "*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*," dated 2010 (ASTM, E2600-10) in order to determine if there are any recognized environmental conditions associated with the Site. Federal law (Comprehensive Environmental Response, Compensation, and Liability Act [CERCLA] of 1980, as amended) addresses liability and liability protections for environmental contamination. All Appropriate Inquiry (AAI) is the process for evaluating a property's environmental conditions for the purpose of qualifying for certain liability protection under CERCLA. On November 1, 2005, the U.S. Environmental Protection Agency (EPA) published and codified a final rule as Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312), setting federal standards and practices for the conduct of AAI. These federal regulations took

effect on November 1, 2006. The EPA has determined that ASTM Standard E1527-13 is consistent and compliant with the AAI regulations.

For purposes of this report, there are three types of recognized environmental conditions as defined below:

- **Recognized Environmental Condition (REC)**: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- **Controlled Recognized Environmental Condition (C-REC)**: a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in-place subject to the implementation of required controls. Examples of controls include property and use restrictions, activity and use limitations, institutional controls and engineering controls.

- **Historical Recognized Environmental Condition (H-REC)**: a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

A *de minimis* condition is defined herein as a condition that generally does not represent a threat to human health or the environment and that would generally not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Based on the information contained and/or referenced herein, EAI concludes the following:

- **REC**:
  - None
- **C-REC**:
  - None
- **H-REC**:
  - None

- **De Minimis Conditions**:

  - Former historical use of the Site for agricultural and residential purposes
  - Minor oil stains on paved areas used for parking

No further action is required for the Site at this time.

2.0 INTRODUCTION

2.1 PURPOSE

The purpose of the Phase I ESA was to determine if there are any RECs, C-RECs and/or H-RECs associated with the Site.

2.2 SCOPE OF WORK

The Phase I ESA was conducted by EAI in general accordance with ASTM, E1527-13 and ASTM, ASTM, E2600-10. The scope of the Phase I ESA included:

- **Records Review**: Review available public records associated with the Site and surrounding properties. Records included, but were not limited to:

  - Prior assessments of the Site
  - Site land use and zoning maps
  - Geologic, topographical and hydrogeologic maps
  - Environmental database indices
  - Aerial photographs
  - Sanborn Fire Insurance maps
  - Information available at local, regional, state and federal regulatory agencies

- **Site Reconnaissance and Interviews**: Interview appropriate personnel and conduct a detailed walk-through inspection of the Site and existing conditions to determine whether:

  - Hazardous substances are/were used on the Site
  - Hazardous wastes are/were generated as a result of Site operations
  - There is any evidence of Site contamination
  - There is the potential for Site activities to impact the environment

  An inspection of the properties neighboring the Site was also made from the property line, public right-of-way, or similar vantage point.

- **Report Preparation**: Preparation of a report presenting the findings of the Phase I ESA, including recommendations.

2.3 USER PROVIDED INFORMATION

EAI questioned Steven Walton of KPC regarding his knowledge of the Site. A summary of the answers to the questions is provided below.

	YES	NO

• Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?		✓
• Do you have any specialized knowledge or experience related to the property or nearby properties?		✓
• Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? *Prior Phase I ESA conducted in 2017*.	✓	
• Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?		✓

3.0 SITE DESCRIPTION

The Site is comprised of one parcel of real property totaling approximately 9.2 acres and presently contains one two-story building totaling approximately 169,758 square feet constructed in or around 2001 (see Figure 2). The first floor of the building is occupied by Siemens, and the second floor is vacant. Additionally, there is an unattached steel building of approximately 400 square feet used for the storage of hazardous materials and waste. The majority of the Site is covered by improvements or asphalt/concrete paved areas, and landscaping.

The Site is supplied water by Golden State Water Company, electricity by Southern California Edison and gas by Southern California Gas.

3.1 ASSESSOR'S PARCEL NUMBER

The County of Los Angeles identifies the Site by the following Assessor's Parcel Number and address (APN) (see Appendix A):

APN	Address	Size (acres)
4140-016-164	11855 S. La Cienega Boulevard, Hawthorne, CA 90250	~9.2

3.2 LAND USE AND ZONING

The Site is zoned by the County of Los Angeles as MPD (Manufacturing-Industrial Planned).

3.2.1 Current

The Site currently is and has been occupied by Siemens since 2004. Siemens conducts research, development and production of intermediates for use in finished medical devices at the Site. These activities include light manufacturing fabricating, research, product development and recycling of products and equipment.

3.2.2 Historical

Between 2001 and 2004, it is reported that a technology company and healthcare company occupied the Site. Prior to 2001, the Site contained single-family residential homes from the mid-1940s to early-1970s, when most of the homes were removed. The Site remained vacant for years after the residential homes were removed and prior to development of the current facility. Prior to the mid-1940s, the Site was used for agricultural purposes.

3.2.3 Surrounding

The Site is located in an area of mixed light industrial, commercial and residential land use (see Figure 3). To the north across Pacific Concourse Drive are residential apartments, parking structure for the residential apartments, courthouse, National University, Argosy University, and UCLA Health. To the east across La Cienega Boulevard is a light industrial park consisting of the Napa Center Kids Foundation and Eagle Rider motorcycles. Immediately to the south and west are residential homes.

3.3 PHYSICAL SETTING

According to the United States Geological Survey (USGS) 7.5-Minute Topographic Map for Inglewood, California, revised 2018, the Site topographic elevation is approximately 90 feet above mean sea level (MSL), and local topography slopes to the east (see Figure 1). The Pacific Ocean is located approximately 3.75 miles west of the Site.

The Site is located in the El Segundo Sand Hills portion of the West Coast Basin of the coastal plain within the Los Angeles Basin. The sediments beneath the area are unconsolidated and consist primarily of sand and silt. Starting from the surface, the geological formations are described as the Older Dune Sand, the Lakewood Formation, and the San Pedro Formation. The older Dune Sand is composed of fine to medium grained sand with some silt and clay lenses. It extends to approximately 70 feet below ground surface (bgs) and is known to contain perched groundwater. The underlying Bellflower aquitard consists of fine grained continental and marine sediments that extends from the base of the of the Older Dune Sand to the top of the Gage Aquifer, with a thickness of approximately 30 feet. The underlying Gage aquifer is composed of fine to medium grained sand with some gravel, silty sand, and clay.

Based on information obtained for a property located at 5201 W. Imperial Highway, Westchester, approximately 1,300 – 1,400 feet north of the Site, the depth to groundwater in April 2020, ranged from approximately 47 to 52 feet (bgs) with a north-northwest groundwater flow direction (see ARCADIS, 2020).

4.0 RECORDS REVIEW

Numerous information sources were reviewed to develop an understanding of the current and historical land use practices at the Site and surrounding properties that may impact the Site, associated with the handling, use, storage and/or disposal of hazardous substances or wastes. Specific sources of information reviewed and activities conducted included:

- Prior assessments of the Site
- Land use and zoning maps
- Geologic, hydrogeologic and topographic maps
- Sanborn Maps
- Aerial photographs
- Environmental database indices
- Records available at local, regional, state and federal regulatory agencies

It should be noted that regulatory agency records often are incomplete or inaccurate. Such records do not necessarily include information regarding all possible sources of contamination at a given site. EAI makes no claim that the agency records described herein are the only agency records that contain information regarding the Site and/or surrounding properties.

4.1 PRIOR ASSESSMENTS OF THE SITE

A prior Phase I ESA of the Site was conducted by TRC Environmental Corporation (TRC), on behalf of Siemens, in 2017 (see Appendix B). TRC reported historical use of the Site, prior to development in 2001 with the building presently located thereon, as agricultural followed by residential. Between 2001 and 2004, it is reported that a technology company and healthcare company occupied the Site, and that Siemens occupied the Site in 2004. TRC concluded no evidence of RECs, C-RECs, H-RECs or de minimus conditions associated with the Site.

4.2 ENVIRONMENTAL DATABASE INDICES

EAI retained Environmental Data Resources, Inc. (EDR) to complete a search of available public record database indices (see Appendix C). For search purposes, EDR was instructed to use the 5210 Pacific Concourse Drive, Inglewood address. The radius search distances for the various federal, state, local and tribal database lists reviewed complies with the requirements of ASTM, E1527-13. The Site was identified on the following database lists reviewed by EDR, all with an address of 5210 Pacific Concourse Drive, Los Angeles address:

Entity	Database
Siemens Healthcare Diagnostics Inc.	RCRA-LQG, FINDS, ECHO, LOS ANGELES CO. HMS
5210 Concourse LP and Paccon	LOS ANGELES CO. HMS

Entity	Database
Thermo Fisher Scientific[(a)]	HWTS, CERS HAZ WASTE, HAZNET, LOS ANGELES CO. HMS, CERS
5210 Concourse General LLC	LOS ANGELES CO. HMS

(a) Siemens is identified as the parent company

The Site was not identified on any of the database lists reviewed by EDR as known or suspected to be contaminated, but identified as a Site known to generate hazardous waste and wastewater.

EDR identified several properties within the area of the Site that are known or suspected to be contaminated, currently/formerly contain USTs, generate hazardous wastes, and suspected to be the location of historical gas stations (see Appendix C, Executive Summary Page 2 through Executive Summary Page 3). Table 1 summarizes those properties within the vicinity of the Site identified on database lists reviewed by EDR.

4.3 SANBORN FIRE INSURANCE MAPS

Sanborn Maps were prepared for fire insurance underwriting purposes and describe the construction and relative fire resistance of buildings. For search purposes, EDR was instructed to use the 5210 Pacific Concourse Drive, Inglewood address. These maps typically also depict the location of fire prevention devices, gasoline storage tanks, water lines, cisterns, and any potentially flammable materials.

According to EDR, Sanborn Map coverage is not available for the Site (see Appendix D).

4.4 CITY DIRECTORY ABSTRACT REPORT

Appendix E contains a copy of the EDR City Directory Abstract report for the Site, which provides information obtained for the Site and selected off-site properties near the Site based on review of city directories, e.g., telephone books. For search purposes, EDR was instructed to use the 5210 Pacific Concourse Drive, Inglewood address. Directories covering the time period ranging between 1920 and 2015 were reviewed by EDR. The following entity was identified for the Site:

Year	Address	Entity
2015	5210 Concourse Drive	Siemens OBS

Between the 1940s and 1970s, numerous single-family residential homes were located on the property that presently comprises the Site. EAI was unable to ascertain the addresses associated with these single-family residential homes that were likely to have had addresses on 118th Place, 119th Street and/or 119th Place. In EAI's opinion, it is likely that some of the properties identified in the EDR City Directory Abstract report with addresses on 118th Place,

119th Street and 119th Place, the majority of which are identified as individuals (typically meaning residential use), are associated with the Site.

4.5 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps covering the Site from 1896, 1924, 1930, 1948, 1950, 1952, 1964, 1972, 1981, 2012 and 2018 were reviewed as part of the assessment process. Copies of these maps, except for the 2018 map, are contained in Appendix F. The 2018 map was used to make Figure 1.

4.6 AERIAL PHOTOGRAPHS

Aerial photographs covering the Site from 1923, 1928, 1938, 1947, 1952, 1963, 1972, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016 and 2018 were reviewed as part of the assessment process. Copies of these photographs are contained in Appendix G, except for the 2018 photograph, which was used for Figure 2 through Figure 5.

- **1923**: Depicts the Site and all adjacent property as agricultural, with small structures, scattered through the area.

- **1928 and 1933**: Depicts the Site and all adjacent property in essentially the same condition as the 1923 photograph, except two structures are now located on the southeastern portion of the Site.

- **1947, 1952 and 1963**: Depicts the Site and surrounding properties as single family residential homes. In the 1963 photograph, the 405 Freeway is now present to the east.

- **1972, 1977 and 1983**: Most of the homes have been removed from the Site and the property north and east of the Site. The surrounding area remains primarily residential.

- **1989**: Depicts the Site as vacant and graded. Three commercial buildings north of the Site have been constructed, which presently are the location of National University, Argosy University, and UCLA Health. Work associated with the 105 Freeway to the north is depicted.

- **1994**: Depicts the Site and surrounding property in essentially the same condition as the 1989 photograph, except upgrades to the 105 Freeway and 405 Freeway have been completed.

- **2002 and 2005**: Depicts the Site and surrounding property to in essentially the same as today, except for property immediately north of the Site (where apartments are presently located), which is vacant.

- **2009, 2010, 2012, 2016 and 2018**: Depicts the Site and all surrounding property in essentially the same condition as today.

4.7 OIL AND GAS WELLS

On October 5, 2020, EAI went online to the California Department of Conservation, Geologic Energy Management Division (CalGEM) Well Finder database to review its records. According to CalGEM, there are no wells active or abandoned located on the Site. The closest active well (API 0403707568) is located over one mile southwest of the Site. The closest abandoned well (API 0403705655) is located approximately 660 feet southwest of the Site in the residential area (see Figure 3). Details on the wells are available on the CalGEM website.
https://maps.conservation.ca.gov/doggr/wellfinder/#openModal/-118.94276/37.12009/6

4.8 COUNTY OF LOS ANGELES

On September 3, 2020, EAI went online to the County of Los Angeles Department of Regional Planning GIS-NET application and obtained a copy of the parcel profile report for the Site (see Appendix H). EAI also reviewed records maintained by the County of Los Angeles Department of Public Works (DPW) available online from their Building Permit Viewer website (see Appendix I). The earliest record is a grading permit application by Overton, Moore & Associates for a "building pad site for Phase II Pacific Concourse Project" dated September 11, 1989. Other permits issued in 2000 through early 2002 include electrical, HVAC, plumbing, sewer, fire suppression and landscaping permits all associated with construction of a new office building. A certificate of occupancy was issued on February 26, 2001 for a "NEW 170,000 SQ FT 2-STORY COMMERCIAL BLDG; CORE, SHELL ONLY." The other remaining permits are related to improvements made by tenants

4.9 SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

EAI went online to the South Coast Air Quality Management District (SCAQMD), Facility Information Detail (FIND) website to determine if they have any records for the Site. Records for 5210 Pacific Concourse Drive were found for the following two entities (see Appendix J):

Name	Facility ID	Equipment List	Permit Status
Diagnostic Products Corporation	141355	I C E (50-500 HP) EM Elec Gen-Diesel (Permit No. 432333)	Inactive
Siemens Healthcare Diagnostics	150830	I C E (50-500 HP) EM Elec Gen-Diesel (Permit No. F87835)	Active
		Boiler (<2 MMBTU/HR) R-222 (ID No. 482674)	--
		Rule 1415 Plan Notifications (ID No. 553748)	--
		Rule 1415 Plan Notifications (ID No. 594144)	--

Permit number 432333 was issued to Diagnostic Products Corporation in 2004 for an emergency generator with a 208 BHP diesel fueled internal combustion engine. Siemens Healthcare Diagnostics was issued permit number F87835 for the same emergency generator in 2007. Rule 1415 Plan Notifications are related to reporting the types of refrigerants used in stationary air conditioning systems.

4.10 DEPARTMENT OF TOXIC SUBSTANCES CONTROL

EAI went online to the Department of Toxic Substances Control (DTSC), Hazardous Waste Tracking System (HWTS) website to determine if they have any records for the Site. Two hazardous waste generator identification numbers for the Site were found as follows (see Appendix K).

1. **Thermo Fisher Scientific**: 5210 Pacific Concourse Drive, ID number CAC002866175, listed as inactive as of September 24, 2016. Waste shipments are identified in 2016 for CA Waste Code 331: Off-Spec, Aged, or Surplus Organics.

2. **Siemens Healthcare Diagnostics**: 11855 La Cienega Boulevard, ID number CAR000155226, listed as active. Waste shipments are identified in 2006 through 2018 for multiple waste codes, including but not limited to:

   CA Waste Code 212: Oxygenated Solvents
   CA Waste Code 221: Waste Oil and Mixed Oil
   CA Waste Code 331: Off-Spec, Aged, or Surplus Organics
   CA Waste Code 551: Laboratory Waste Chemicals

   Laboratory waste chemicals are the largest volume of waste generated by Siemens, followed by oxygenated solvents.

Siemens also generates medical waste such as biohazardous reusable pharmaceuticals and pathogens (see Appendix K, last page).

4.11 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

A limited environmental liens and activity and use limitations search was conducted for the Site and the Site was not identified on the records reviewed. The records reviewed (October 5, 2020) are available on the GeoTracker database reports tab, deed restrictions/land use restrictions/covenants section. Below is the link to the GeoTracker website.
https://geotracker.waterboards.ca.gov/

5.0 SITE AND NEIGHBORING PROPERTY INSPECTION

On September 25, 2020, EAI staff (Allen Kim) conducted a walk-through and inspection of the Site and reconnaissance of the neighboring property. The off-site properties were inspected from the property line, public right-of-way, or similar vantage points. EAI staff was accompanied during the Site inspection by Allison Cicero and Robert Castro of Siemens, Clay Blockley of Newmark, Knight and Frank (real estate advisor to KPC), and Steven Walton of KPC. Siemens reported that operations at the Site have not changed since the prior Phase I ESA was conducted in 2017. Appendix G contains copies of photographs taken during the Site inspection. See Figure 4 for photograph locations and directions.

5.1 SITE

At the time of the Site inspection, the first floor of the building was occupied by Siemens and the second floor was vacant. EAI confirmed that the entire second floor of the building was vacant (see Photograph 7 and Photograph 8).

Due to the sensitive nature of Siemens operations EAI was not given full access to the Site and no access was provided to production areas. The vast majority of the rooms on the first floor were either lab space (see Photograph 5) or office space (see Photograph 6). A room for producing distilled water, via reverse osmosis, which is used in their process (see Photograph 9), and a cafeteria/kitchen (see Photograph 10) are also located on the first floor. The cafeteria/kitchen reportedly has not been used for several months. Other notable features observed include several eye wash stations and floor drains, work stations with fume hoods, janitorial supplies cabinet, emergency generator (see Photograph 11), fork lift with propane fuel storage (see Photograph 12), compressed carbon dioxide storage (see Photograph 19), dry ice containers and a large trash compactor.

Siemens reportedly uses numerous chemicals in their production processes for medical devices and generates multiple types of hazardous wastes (see Section 4.10). An unattached steel building of approximately 400 square feet is used for the storage of hazardous materials and wastes (see Figure 2). The building is equipped with a fire suppression system and secondary containment (see Photograph 13 through Photograph 18). Materials and wastes, which were contained in drums, plastic and glass bottles, and cans, all appeared to be properly labeled as to their contents. There was no visible evidence of staining or a release.

During the Site inspection, EAI requested that Siemens provide a list of the chemicals used at the Site. Siemens subsequently notified KPC that they would not provide a list of the chemicals used at the Site. However, based on the records reviewed as part of this investigation and since Siemens has indicated that actives at the Site have not changed since the prior Phase I ESA was conducted, the 580 chemicals identified in 2017 are still representative of the chemicals used at the Site. For ease of reference, we have included the list of chemicals in Appendix L.

5.1.1 Physical Features

Summarized below are observations relative to selected Site physical features.

- **Property Boundaries**: Clearly defined by Site fencing (block wall) and landscaped parking berms to the west, Pacific Concourse Drive to the north, La Cienega Boulevard to the east, and Site fencing (block wall) to the south.

- **Locations of Past On-Site Operations**: None identified.

- **Underground Storage Tanks (USTs)**: None.

- **Aboveground Storage Tanks (ASTs)**: None, other than a small (less than 50-gallon) tank, with secondary containment, associated with the emergency generator.

- **Hydraulic Lifts**: None. Three hydraulic elevators and one hydraulic trash compactor are located on the Site.

- **Equipment Known/Likely to Contain Polychlorinated Biphenyls (PCBs)**: Fluorescent lights were observed throughout the building. PCBs were used as coolants and insulators in electrical transformers beginning in 1929. Exposure to PCBs has since been found to cause liver ailments, skin lesions, tumors, and growth and reproductive harm. Use of PCBs has been regulated since 1977.

  Based on the date of construction of the building, the light ballasts may contain small quantities of PCBs. In small quantities, these ballasts may be disposed of in a municipal solid waste landfill. However, the EPA advises that an accumulation of a large number of ballasts for disposal should be handled as a PCB waste and disposed of properly in accordance with local, state and federal regulations.

- **Unidentified Substance Containers**: None.

- **Drains, Clarifiers, Sumps**: Several drains associated with eye wash stations, bathrooms, and cafeteria/kitchen. Interceptors/separators associated with wastewater generation (see wastewater) and a grease trap associated with the cafeteria/kitchen are located on the Site (see Figure 2).

- **Pits, Ponds, Lagoons, Waste Piles**: None.

- **Wells (including dry, irrigation, injection, oil, monitoring, etc.)**: None.

- **Septic Systems**: None, Site was connected to the sanitary sewerage system when initially developed (see Appendix I).

- **Air Emissions**: Fume hoods were observed in the laboratory areas; however, Siemens informed EAI staff that the fume hoods are ductless and recirculating through filters, thus not exhausting to the atmosphere. Diesel emissions associated with the emergency generator (see Figure 2).

- **Odors**: None.

5.1.2 Asbestos Containing Building Materials

While the use of asbestos in the manufacture of most building materials has not been fully prohibited by federal law, the use of asbestos, for the most part, has been voluntarily discontinued since the late 1970s. Some non-friable materials, e.g., wall materials and stucco, roofing material, floor tile and mastic, may have been manufactured with asbestos materials and may have been used into the early 1980s.

Since the structure located on the Site was erected in 2001, it is unlikely that asbestos containing building materials were used in its construction. However, the only definitive method of identifying asbestos containing building materials at the Site is to complete an asbestos investigation.

5.1.3 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940's. While other pigments were used in the 1950s, the use of lead in paint continued until the mid-1970s. In 1978, the Consumer Products Safety Commission banned paint and other surface coating materials that contain lead.

Since the structure located on the Site was erected in 2001, it is unlikely that lead-based paint was used. However, the only definitive method of identifying lead-based paint at the Site is to complete a lead investigation.

5.1.4 Radon

Radon is a gas that can seep into structures constructed in areas with soils containing uranium. Radon travels through soil and enters the structure through cracks and holes in basement walls, floor drains, or other openings. The EPA's map of Radon Zones assigns each of the counties in the United States to one of three zones. The zone designations were determined by assessing five factors that are known to be important indicators of radon potential; indoor random measurements, geology, aerial radioactivity surveys, soil parameters and foundation types. The Radon Zone Level for Los Angeles County is 2 (see Appendix C, page A-18). Zone 2 areas are predicted to have an average indoor radon screening potential between 2 pico curies per liter (pCi/L) and 4 pCi/L.

Based on the location of the Site, it is unlikely that the Site contains elevated levels of radon. However, the only definitive method of identifying specific radon levels for the Site is to complete a radon test.

5.2 NEIGHBORING PROPERTY

EAI completed a visual inspection of the adjoining properties from the Site property line and public areas adjacent to or on the adjoining properties. See Section 3.2.3 and Figure 3 for specifics on neighboring land uses.

6.0 INTERVIEWS

The following individuals were interviewed either by telephone, electronically (i.e., fax or email) or in person to ascertain information regarding historical and current land use associated with the Site and/or surrounding area.

Allison Cicero	Siemens – Current tenant, prior property owner
Robert Castro	Siemens – Current tenant, prior property owner

7.0 DISCUSSION

7.1 SITE

Prior to the mid-1940s, the Site was used for agricultural purposes. Pesticides and/or herbicides are typically used on agricultural lands. Improper use of these agricultural chemicals may result in residual agricultural chemicals in soil at elevated concentrations. However, under normal application practices and with the passage of time these agricultural chemicals typically degrade and should not be problematic. Since it has been at least 73 years since the Site was last used for agricultural purposes, it is unlikely that elevated concentrations of agricultural chemicals are present at the Site.

From the mid-1940s to early-1970s, the Site contained single-family residential homes. Most of homes associated with the Site were removed in the early-1970s, and the Site remained primarily vacant until 2001, when the present development was constructed. Between 2001 and 2004, it is reported that a technology company and healthcare company occupied the Site. Siemens, the current tenant, began operations at the Site in 2004.

In EAI's opinion, historical land uses and the current land use at the Site is not problematic. However, the only definitive method of determining the presence or absence of contamination at any property is media sampling and testing.

7.2 OFF-SITE PROPERTIES

EDR identified several properties in the area of the Site that are known or suspected to be contaminated. Table 1 lists the properties known or suspected to be contaminated within the area of the Site and the status of each property, e.g., closed and no further action is required or case is currently active or needs evaluation. The five closest properties to the Site identified as known or suspected to be contaminated are (see Figure 5):

1. **Ogden Food Service – 5251 W. Imperial Highway:** The Ogden site is located north of the Site across the 105 Freeway. Investigation of the Ogden site for metals in soil was conducted under oversight by the Department of Toxic Substances Control (DTSC). DTSC closed the Ogden site on October 25, 1994.

2. **Imperial Investment Company – 5261 W. Imperial Highway:** The Imperial site (a,k.a, Spring View site) is located north of the Site across the 105 Freeway immediately west of the Ogden site. Soil, soil gas, and groundwater investigations of the Imperial site have been conducted under oversight by the California Regional Water Quality Control Board, Los Angeles Region (RWQCB). Soil, soil gas and groundwater are impacted by total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs). Soil vapor extraction (SVE) is planned for the Imperial site to address vadose zone contamination.

The following two groundwater zones have been identified for the Imperial site: (1) Zone A1 where groundwater depths range between approximately 38 and 58 feet bgs, with a northwest groundwater flow direction; and (2) Zone A2 where groundwater depths range between approximately 61 and 63 feet bgs, with an east-northeast groundwater flow direction (see EFI, 2020). Both of these groundwater flow directions place the Site up-gradient from the Imperial site. Based on the reported groundwater flow directions and contaminant concentrations in the groundwater monitoring wells located closest to the Site, i.e., MW-2A1, MW-3A1 and MW-18A1 from April 2020 (see Appendix N), in EAI' opinion, there is little potential for contamination at the Imperial site to impact the Site. Additional information for the Imperial site is available at the GeoTracker link provided below.
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000005793

3. **Shell/Chevron #9-7795 – 5201 W. Imperial Highway**: The Chevron site is located north of the Site across the 105 Freeway immediately east of the Ogden site. A gas station was formerly located on the Chevron site. Soil, soil gas and groundwater investigations have been conducted under oversight by the RWQCB. The primary chemicals of concern are TPH, benzene, toluene, ethylbenzene, xylenes, methyl tertiary butyl ether (MTBE) and tertiary butyl alcohol (TBA). Groundwater is present beneath the Chevron site at depths ranging between approximately 47 and 52 feet bgs with a reported north-northeast groundwater flow direction. This groundwater flow direction places the Site up-gradient from the Chevron site. Based on the reported groundwater flow direction and contaminant concentrations in the groundwater monitoring wells located closest to the Site, i.e., MW-16 and MW-17 from April 2020 (see Appendix O), in EAI's opinion, there is little potential for contamination at the Chevron site to impact the Site. Additional information for the Chevron site is available at the GeoTracker link provided below.
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0603701034

4. **Watch Holding, LLC – 11200 Hindry Avenue**: The Watch site is located north of the Site across the 105 Freeway and for purposes of this report includes 11120/11160/11200 and 11220 Hindry Avenue, and 11101 and 11105 S. La Cienega Boulevard. Soil, soil gas and groundwater investigations have been conducted under oversight by the RWQCB. VOCs are the primary chemicals of concern, e.g., trichloroethene (TCE), tetrachloroethene (PCE) and their degradation products. SVE and groundwater extraction and treatment are being implemented at the Site. Three groundwater zones identified as Zone A1, Zone A2 and Zone B1 have been identified for the Watch site. Based on the reported groundwater flow directions and contaminant concentrations in the groundwater monitoring wells located closest to the Site, i.e., MW-18A, MW-34A and MW-35A from April 2020 (see Appendix P), in EAI's opinion, there is little potential for contamination at the Watch site to impact the Site. Additional information for the Watch site is available at the GeoTracker link provided below.
https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL0603709431

5. **Trustees of the Highland – 11950 Aviation Boulevard**: The Trustees site is located southwest of the Site. The listing is associated with a gasoline release that reportedly impacted only soil. On July 30, 2003, the RWQCB closed the Trustees site.

For the properties identified as closed, EAI has assumed no potential impacts to off-site properties of any significance, otherwise; closure of these properties would not have been issued by the lead agency.

7.3 VAPOR ENCROACHMENT SCREENING

ASTM, E2600-10 provides guidance for conducting a vapor encroachment survey (VES). The purpose of the VES is to determine whether a vapor encroachment condition (VEC) exists at the Site from chemicals of concern (COC) that may migrate as vapors onto the Site as a result of contaminated soil and/or ground water near or on the Site. The screening involves a two tiered approach to assessing a VEC risk as described below.

7.3.1 Tier I – Search Distance Test/Chemicals of Concern Test

The search distance test involves a review of the regulatory database report and available historical records to make a determination if any known or suspect potentially contaminated properties exist within the area of the Site, a.k.a., Area of Concern (AOC). High risk properties typically include current and former gas stations, current and former dry cleaners and industrial sites. The AOC is defined as any up gradient properties within the ASTM, E1527-13 standard search distances and any cross or down gradient properties within 1/3 mile (approximately 1,430 feet) for solvents and petroleum products.

If the contamination at the known or potentially contaminated property within the AOC consists of COC, then a potential Vapor Encroachment Condition (pVEC) exists and Tier II evaluation is recommended. If no known or potentially contaminated properties with COC exist within the AOC, no further screening is necessary. Several properties within the AOC were identified by EDR that were considered to pose a pVEC (see Table 1).

7.3.2 Tier II – Plume Test

The plume test assesses whether or not a plume is close enough to the Site to result in a VEC. Step 1 is to determine the distance from the Site to edge of a plume in any direction, and Step 2 to determine if the plume is related to COC. COC are typically defined as VOCs, such as chlorinated solvents and petroleum hydrocarbons, but can also include naturally occurring substances such as methane. A VEC is assumed to exist if a plume of COC or free petroleum product is accumulating above the water table within 100 feet of the Site or if a plume of dissolved COC is within 30 feet of the Site. Groundwater monitoring wells associated with the known off-site impacted properties are located over 1,000 feet of the Site (see Section 7.2), and

therefore, none of these off-site properties pose a VEC to the Site pursuant to the Tier II screening requirements listed above.

7.4 DATA GAPS

During the course of this review, no significant data gaps were identified that affected EAI's ability to identify RECs, C-RECs and/or H-RECs for the Site.

7.5 DEVIATIONS, DELETIONS AND EXCEPTIONS

EAI made no significant variation to ASTM, E1527-13 during this assessment. However, from information available, notable exceptions comprise the following:

- Title report was not reviewed.
- Property valuation information was not reviewed.
- Resumes for the preparers of this report are not included, but are available upon request.

7.6 SPECIAL CONTRACTUAL CONDITIONS

No special agreements exist between KPC and EAI. EAI does not have any financial interest in the real property that comprises the Site.

EXECUTIVE SUMMARY

TRC Environmental Corporation (TRC) was retained by Siemens Real Estate (SRE) (also known as "Client" or "User") to perform a Phase I Environmental Site Assessment (Phase I ESA) of the facility located at 5210 Pacific Concourse in Los Angeles, California 90045 (herein referred to as the "Site"). TRC's assessment was conducted in connection with the Client's planned sale of the Site. The Phase I ESA described in this report was performed in accordance with the scope and limiting conditions of the American Society of Testing and Materials Practice E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E 1527-13). Limiting conditions and/or deviations from the ASTM E 1527-13 standard are described in Section 1.3 of this report or Section 8.0.

The approximately 9.236-acre Site consists of one two-story building totaling approximately 165,981 square feet. The first floor is occupied by Siemens Healthcare Diagnostics Inc., and the second floor is presently unoccupied. Additionally, the Site utilizes an outside storage building, approximately 400 square feet, for the storage of hazardous materials and waste. The Siemens Healthcare Diagnostics operation formerly occupied the entire building.

As a result of the Phase I ESA, including but not limited to our visual observations at the Site; review of historical information, environmental databases, and information provided by the User; interviews with current Site representatives; and TRC's professional judgment, no evidence of *recognized environmental conditions* (RECs) associated with the Site, as defined by the ASTM E 1527-13 standard were identified.

The following data gaps were identified:

- The obvious uses of the Site were identified from the present back to 1923, the date of the earliest resource that was reasonably ascertainable and contained information as to the Site's use. The Site was identified as agricultural land in the 1923 aerial photograph. The use of the Site as agricultural land in 1923 could not definitively be identified as the Site's first use. Historical topographic maps were reviewed back to 1896; however, historical topographic maps do not generally provided information regarding property use. Although additional standard historical sources listed in ASTM E 1527-13 were not reviewed, it is not expected that any information reviewed prior to 1923 would substantially change the findings and conclusions of this report.
- The Site has been utilized for agricultural purposes prior to 1952, during which herbicides and pesticides may have been used. No orchards were identified on the Site through the review of historical sources and interviews with the site contacts and prior owners. Given that no spills were historically identified on the Site related to herbicides and pesticides, TRC opines use on the actual Site would have had "application" concentrations of herbicides and pesticides administered, if any. TRC cannot rule out the possibility of historical herbicide and pesticide use, but given the provided information to TRC for this assessment, the Site does not appear likely to have been impacted by releases of herbicides and pesticides. Additional information that varies significantly from the sources provided to TRC, may affect the conclusions of this assessment.

This Executive Summary is part of this complete report; any findings, opinions or conclusions in this Executive Summary are made in context with the complete report. TRC recommends that the User read the entire report for all supporting information related to findings, opinions and conclusions.

1.0 INTRODUCTION

TRC Environmental Corporation (TRC) has prepared this Phase I Environmental Site Assessment (ESA) for SRE (hereinafter "Client" or "User").

This report was prepared for and may be relied upon by Client for the purposes set forth herein; it may not be relied on by any party other than the Client and reliance may not be assigned without the express approval of TRC. Authorization for third party reliance on this report will be considered by TRC if requested by the Client. TRC reserves the right to deny reliance on this report by third parties.

1.1 Background

The following Phase I ESA was performed for the facility located at 5210 Pacific Concourse in an unincorporated area of the County of Los Angeles, California 90045 (hereinafter the "Site"). Site location maps are included as **Figures 1 and 2**. This Phase I ESA has been prepared by TRC in accordance with the American Society for Testing and Materials E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E 1527-13) and is intended for the sole use of SRE.

The purpose of this assessment is to identify *Recognized Environmental Conditions* (RECs) at the Site, as defined by the ASTM E 1527-13 standard. The completion of this Phase I ESA report may be used to satisfy one of the requirements for the User to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limited liability protections pursuant to Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), thereby constituting *all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial or customary practice* as defined by 42 U.S.C. §9601(35)(B) of CERCLA.

TRC understands that this assessment is not funded with a federal grant awarded under the U.S. EPA Brownfields Assessment and Characterization program nor is this assessment being performed to qualify for Small Business Administration (SBA) funding.

The Scope of Services for this Phase I ESA included the following tasks:

- Site and vicinity reconnaissance;
- Site and vicinity description and physical setting;
- Historical source review and description of historical Site conditions;
- Interviews with owners, operators, and/or occupants of the Site, and/or local officials;
- Review of environmental databases and regulatory agency records;
- Review of previous environmental reports/documentation, as applicable;
- Review of environmental liens, if provided or authorized by the User; and
- Preparation of a report summarizing findings, opinions and conclusions.

1.2 Data Basis

This Phase I ESA was conducted in connection with the Client's planned transaction involving the Site.

1.3 Limitations, Exceptions and Deviations

1.3.1 Accuracy and Completeness

The ASTM E 1527-13 standard recognizes inherent limiting conditions for Phase I ESAs that apply to this report, including:

- Uncertainty Not Eliminated – No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Data gaps identified during this Phase I ESA are listed in Section 8.4.
- Not Exhaustive – A Phase I ESA is not an exhaustive investigation.
- Past Uses of the Property – A review of standard historical sources at intervals less than five years is not required.

Additional descriptions and details regarding this assessment as a limited inquiry, warrantees, representations, continued validity, and User reliance are discussed in Section 8.0.

1.3.2 Deviations to ASTM E 1527-13 Standard

Notwithstanding additions to the ASTM E 1527-13 standard, as listed in Sections 1.2 and 9, if applicable, no significant deviations or deletions to the ASTM standard were made during this Phase I ESA.

1.3.2.1 Additional Services

Items outside the scope of the ASTM E 1527-13 standard include, but are not limited to:

- Asbestos-containing building materials
- Radon
- Lead-based paint
- Lead in drinking water
- Wetlands
- Regulatory compliance
- Cultural and historic resources
- Industrial hygiene
- Health and safety
- Ecological resources
- Endangered species
- Indoor air quality unrelated to *releases* of *hazardous substances* or *petroleum products* into the environment
- Biological agents
- Mold

No additional services were performed during this Phase I ESA.

1.3.3 Site Reconnaissance Limitations

The following limitations were encountered during the Site reconnaissance.

- The Environmental Assessor was not allowed entry into the Laboratories, Research and Development areas or Biohazardous materials storage room due to the proprietary nature of the products and chemicals stored and used within those areas.
- The integrity and functionality of underground structures (e.g., floor drains, separators, etc.) could not be discerned during the site visit given their underground nature.

1.3.4 Significant Assumptions

During this Phase I ESA, TRC relied on database information; interviews with Site representatives, regulatory officials, and other individuals having knowledge of Site operations; and information provided by the User as requested in our authorized Scope of Work. TRC has assumed that the information provided is true and accurate. Reliance on electronic database search reports is subject to the limiting conditions set forth in those reports. TRC did not independently verify the information provided. TRC found no reason to question the validity of the information received unless explicitly noted elsewhere in this report. If other information is discovered and/or if previous reports exist that were not provided to TRC, our conclusions may not be valid.

According to the ASTM E 1527-13 standard, certain tasks that may help identify the presence of RECs associated with the Site are generally conducted by the Phase I ESA User. These tasks include: providing, or authorizing the *environmental professional* to obtain, recorded land title records for environmental liens or activity and land use limitations; providing specialized knowledge related to RECs at the Site (e.g., information about previous ownership or environmental litigation); providing commonly known or *reasonably ascertainable* information within the local community about the *property* that is material to RECs in connection with the *property*; and informing the *environmental professional* if, as believed by the User, the purchase price of the *property* is lower than the fair market value due to contamination. A list of requested information was included in TRC's proposal. Information provided by the User pursuant to that request is provided below. A copy of the User questionnaire is included in **Appendix II**. Specific documents provided by the User include:

- Site plans
- Environmental permits or licenses (Air, Water, Land, Waste, DOT)
- Chemical Inventory List, Material Safety Data Sheets (MSDS) are kept with the Key Site Manager and can be requested if needed.
- Hazardous Materials Permits
- Hazardous waste generator manifests

6.1.1 Title & Judicial Records for Environmental Liens or Activity and Use Limitations

The User has not provided TRC with information associated with a review of title & judicial records for environmental liens or activity and use limitations (AULs) associated with the Site and may remain as a User requirement to satisfy All Appropriate Inquiries.

If requested by the User as part of the scope of work for this assessment, information obtained by TRC regarding the search of applicable title and judicial records for the Site is discussed in Section 6.2.3.

6.1.2 Specialized Knowledge

The User was not aware of specialized knowledge related to RECs at the Site.

6.1.3 Property Value Reduction Issues

The User was not aware of property valuation reduction issues regarding the Site.

6.1.4 Commonly Known or Reasonably Ascertainable Information

TRC was supplied with commonly known and/or reasonably ascertainable information regarding the Site by the Key Site Manager. This information was used during this Phase I ESA and has been incorporated in this report as applicable.

6.1.5 Reason for Conducting Phase I ESA

It is TRC's understanding that the User requires a Phase I ESA for making the property ready for sale.

Historical Sanborn® Fire Insurance Maps (Sanborn Maps) were originally produced for assessing fire insurance liability in urban areas in the United States. The maps provide detailed information (i.e., building construction, facility occupants, storage tank locations, and hazardous material storage areas), which can be used as a resource to document land use and structural change over time. Research concerning the availability of Sanborn Maps in the vicinity of the Site was conducted by EDR; however, EDR stated that Sanborn Map coverage does not exist for the Site or nearby surrounding area.

Surrounding Properties

TRC evaluated the following factors to determine whether additional environmental records with respect to the surrounding properties should be reviewed:

(1) Whether the property is up-gradient or down-gradient of the Site based on the local topography and the assumed northeastern shallow ground water flow direction.

(2) Readily available information provided pertaining to soil and hydrogeological characteristics; identified contaminant characteristics and the potential presence for reasonably ascertainable preferential pathways and boundaries (i.e. major thorough fares, natural boundaries, natural conduits i.e. Karst terrain, and water bodies, etc.).

(3) Property case status (i.e., whether the applicable environmental agency has issued a No Further Action letter).

(4) Type of database and whether the presence of contamination is known.

(5) The distance between the listed property and the Site.

Based on this evaluation, TRC limited the review of additional environmental records to the single property listed below, since the potential for the environmental condition of the Site to have been impacted by the other properties identified by the database search is considered low.

Facility Name and/or Address	Northrop Grumman El Segundo, located at 1 Hornet Way
Approximate Location Relative to Site	0.4 miles (2,115 feet) west from the Site
Presumed Hydrogeologic Setting	Up-gradient

The ICIS listing pertains to eight (8) administrative-Formal listings NOV's for air compliance issues. The US AIRS listing pertains to this facility's Major TVM air permit that has been active since 1986. Compliance monitoring has occurred at least once a year since 1986 and multiple violations were reported and achieved compliance shortly after the violation. The FINDS and ECHO listings pertains to this facility's registration on the RCRA database, no further pertinent information is provided.

In addition to the EDR provided database and Site reconnaissance observations, a vapor encroachment screening application was utilized by TRC as part of this Phase I ESA to evaluate the complex urban/industrial setting of the Site. Potential vapor encroachment conditions were not identified for the Site including the Site itself and the adjacent properties described above. The Vapor Encroachment Application is included with the EDR regulatory database search in **Appendix I**.

6.2.3 Title & Judicial Records for Environmental Liens or Activity and Use Limitations

Completion of an additional title and judicial record search was beyond the scope of this Phase I, was not requested by the User, and remains a User requirement.

6.2.4 Other Environmental Record Sources

Per the ASTM standard, local or additional state records were reviewed to enhance and supplement the ASTM-required federal and state records reviewed and discussed earlier in this report. Local sources that were contacted to obtain this information include: Department of Health/Environmental Division and Fire Department. Information from these sources is discussed below:

Source	Available Information
Department of Health/ Environmental Division	The County of Los Angeles Department of Public Health, Environmental Health, was contacted on May 31, 2017 in regards to obtaining records pertaining to the Site, including records regarding nuisance complaints, septic systems used on-Site or nearby, wells, and/or uncontrolled access or dumping. A response to this request has not yet been received.
Fire Department	The Los Angeles Fire Department was contacted on May 31, 2017 in regards to obtaining records pertaining to the Site, including records regarding chemical release incidents, major fire incidents, hazardous substances at the Site or adjacent properties, and USTs. A response to this request has not yet been received.

7.0 KEY HEALTH AND SAFETY TOPICS

7.1 Health and Safety Management

According to facility personnel, the health and safety management of the facility is performed by designated personnel. The facility maintains a health and safety policy which is provided to all facility personnel.

7.2 Health and Safety Budget

According to facility personnel, the annual health and safety budget typically operates on an as needed basis, with the exception of known annual certifications, equipment maintenance and inspections.

7.3 Hazardous Materials

According to facility personnel and as observed during the Site visit, hazardous materials are utilized and stored at the Site. These hazardous materials are further discussed in Section 4.

7.4 Workplace Noise

According to facility personnel, no workplace noise concerns were identified at the Site.

7.5 Emergency Preparedness, Fire and Explosions

According to facility personnel, no fires or explosions have occurred at the facility. The facility maintains written protocols for handling emergencies which are further discussed in Section 3.8.

7.6 Accident Investigation, First Aid, Medical Surveillances and Work Related Illnesses

According to facility personnel, the facility does not conduct any regular medical surveillance programs; however, first aid is provided by trained on-Site personnel for minor incidents (i.e., scraps, cuts, etc.). Additionally, no work related illnesses or accident investigations have occurred within the last five years according to facility personnel.

7.7 Audits, Inspections and Enforcement Actions

According to facility personnel, inspections by regulatory agencies have been performed at the facility within the last three years. Additionally, no enforcement actions were known to have occurred according to facility personnel and none were identified in the EDR database report.

8.0 FINDINGS, OPINIONS AND CONCLUSIONS

Potential findings can include RECs, controlled RECs (CRECs), historical RECs (HRECs), and *de minimis* conditions, pursuant to the ASTM E 1527-13 standard.

RECs are defined as the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to any *release* to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*.

HRECs are defined as a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property* use restrictions, *activity and use limitations, institutional controls*, or *engineering controls*).

CRECs are defined as a REC resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations, institutional controls*, or *engineering controls*).

De minimis conditions are defined as a condition that generally does not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs nor CRECs.

TRC has performed a Phase I ESA in conformance with the scope and limiting conditions of ASTM Practice E 1527-13 at the property located at 5210 Pacific Concourse in Los Angeles, California 90045 (Site), see **Appendices VI and VII**. Deviations from this practice are described in Section 1.3 of this report.

8.1 RECs

This assessment has revealed no evidence of RECs in connection with the Site.

8.1.1 CRECs

This assessment has revealed no evidence of CRECs in connection with the Site.

8.2 HRECs

This assessment has revealed no evidence of HRECs in connection with the Site.

8.3 *De Minimis* Conditions

This assessment has revealed no evidence of *de minimis* conditions in connection with the Site.

8.4 Data Gaps

TRC has made appropriate inquiries into the commonly known and reasonably ascertainable resources concerning the historical ownership and use of the Site back to the first development per 40 CFR Part 312.24 (*Reviews of Historical Sources of Information*). Data gaps identified during this assessment including the following.

1. The obvious uses of the Site were identified from the present back to 1923, the date of the earliest resource that was reasonably ascertainable and contained information as to the Site's use. The Site was identified as agricultural land in the 1923 aerial photograph. The use of the Site as agricultural land in 1923 could not definitively be identified as the Site's first use. Historical topographic maps were reviewed back to 1896; however, historical topographic maps do not generally provided information regarding property use. Although additional standard historical sources listed in ASTM E 1527-13 were not reviewed, it is not expected that any information reviewed prior to 1923 would substantially change the findings and conclusions of this report.
2. The Site has been utilized for agricultural purposes prior to 1952, during which herbicides and pesticides may have been used. No orchards were identified on the Site through the review of historical sources and interviews with the site contacts and prior owners. Given that no spills were historically identified on the Site related to herbicides and pesticides, TRC opines use on the actual Site would have had "application" concentrations of herbicides and pesticides administered, if any. TRC cannot rule out the possibility of historical herbicide and pesticide use, but given the provided information to TRC for this assessment, the Site does not appear likely to have been impacted by releases of herbicides

and pesticides. Additional information that varies significantly from the sources provided to TRC, may affect the conclusions of this assessment.

Based on historical sources and prior reports reviewed, Data Gap Numbers 1 – 2 are not considered *significant*.

8.5 Other Noteworthy Issues

This assessment has revealed no evidence of other noteworthy issues that warrant further discussion in this Section. Additional Representations and Limiting Conditions

The Client is advised that the Phase I ESA conducted at the Site is a limited inquiry into a property's environmental status, cannot wholly eliminate uncertainty, and is not an exhaustive assessment to discover every potential source of environmental liability at the Site. Therefore, TRC does not make a statement; i) of warranty or guarantee, express or implied for any specific use; ii) that the Site is free of RECs or environmental impairment; iii) that the Site is "clean"; or iv) that impairments, if any, are limited to those that were discovered while TRC was performing the Phase I ESA. This limiting statement is not meant to compromise the findings of this report; rather, it is meant as a statement of limiting conditions within the ASTM standard and intended scope of this assessment. Specific limiting conditions identified during the Site reconnaissance are described in Section 1.3.3. Subsurface conditions may differ from the conditions implied by surface observations, and can be evaluated more thoroughly through intrusive techniques that are beyond the scope of this assessment. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes.

This report presents TRC's site reconnaissance observation, findings, and conclusions as they existed at the time of the Site reconnaissance. TRC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. TRC makes no guarantees as to the accuracy or completeness of information obtained from others during the course of this Phase I ESA report. It is possible that information exists beyond the scope of this assessment, or that information was not provided to TRC. Additional information subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. TRC is under no obligation to update this report to reflect such subsequent information. The findings presented in this report are based upon reasonably ascertainable information and observed Site conditions at the time of the assessment.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not assessed. Regardless of the findings stated in this report, TRC is not responsible for consequences or conditions arising from facts that were not fully disclosed to TRC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information regarding surrounding area properties was requested for approximate minimum search distances and was assumed to be correct and complete unless obviously

contradicted by TRC's observations or other credible referenced sources reviewed during the assessment.

TRC is not a professional title insurance or land surveyor firm and makes no guarantee, explicit or implied, that any land title records acquired or reviewed, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

8.5.1 Warranties and Representations

This report does not warrant against: (1) operations or conditions which were not evident from visual observations or historical information provided; (2) conditions which could only be determined by physical sampling or other intrusive investigation techniques; (3) locations other than the client-provided addresses and/or legal parcel description; or (4) information regarding off-site location(s) (with possible impact to the Site) not published in publicly available records.

8.5.2 Continued Validity and User Reliance

This report is presumed to be valid, in accordance with, and subject to, the limiting conditions specified in the ASTM E 1527-13 standard, for a period of 180 days from completion, or until the Client obtains specific information that may materially alter a finding, opinion, or conclusion in this report, or until the Client is notified by TRC that it has obtained specific information that may materially alter a finding, opinion, or conclusion in this report. Additionally, pursuant to the ASTM E 1527-13 standard, this report is presumed valid if completed less than 180 days prior to the date of acquisition of the property or (for transactions not involving an acquisition) the date of the intended transaction.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 02/07/2017 has revealed that there is 1 SEMS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 02/07/2017 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/31/2016 has revealed that there are 15 CA ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.25 miles of the target property.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 5836

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 2581

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 67278

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Dichloroethane (DCA), Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	Pastushin Industries occupied the property located at 11200 Hindry Avenue (Site) in the early 1960s in the manufacturing of wing fuel tanks for aircrafts, and used/stored chlorinated solvents. Later, Hughes Aircraft occupied the Site from 1965 to 1991, for office space and assembly of radar equipment, and used/stored chlorinated solvents. In 1991, the former building was demolished and three new buildings were built, and currently occupied are by offices, freight transportation services companies, and other commercial businesses. Soil vapor, soil and groundwater is impacted with volatile organic compounds (VOCs), mostly trichloroethylene (TCE) and 1,2-dichloroethane (1,2-DCA). Additional Off-Site investigation for the delineation of the VOCs plume in soil vapor, soil, and groundwater were conducted in 2011 and early 2012. An interim remedial system to address soil gas/soil and groundwater impacts at the Site and immediate vicinity is scheduled to start operations by October 2014.

to 1967, Hughes operated an underground storage tank (UST) with waste solvent which was removed in 1967. In 1991, the Site's buildings were demolished and two new ones were built, which are currently occupied by airfreight companies for office and warehouse use. Historical activities at the Site by Hughes caused the discharge of volatile organic compounds (VOCs) into the ground. The Los Angeles Regional Water Quality Control Board identified Raytheon Company as the responsible party to investigate and cleanup the unauthorized discharges, because Raytheon Company is the successor of Hughes. Site investigations started in 1990. Soil vapor, soil, and groundwater are mainly impacted with trichloroethene (TCE), and tetrachloroethene (PCE). A pilot test to extract VOCs-impacted soil vapor and groundwater and treat them on-site with a portable synthetic media system was conducted in 2011. An interim remedial system to address soil gas/soil and groundwater impacts at the Site and immediate vicinity is being implemented, subject to access agreements with property owners

Site History:	The property located at 11100 Hindry Avenue (Site) was occupied from the mid 1950's to 1972 by Hughes Aircraft Company (Hughes) as a machine shop. Historical activities at the Site and near adjacent properties by Hughes caused the discharge of volatile organic compounds (VOCs) into the ground. The Los Angeles Regional Water Quality Control Board (Regional Board) identified Raytheon Company as the responsible party to investigate and cleanup the unauthorized discharges, because Raytheon Company is the successor of Hughes. Site investigations under Regional Board oversight started in 2006. The soil vapor, soil and groundwater beneath the Site is impacted with VOCs, mainly Trichloroethene (TCE) and Tetrachloroethene (PCE). In 2013, indoor air sampling activities havwere conducted at the Site's commercial building to evaluate human health risks related to vapor intrusion. A sub-slab depressurization (SSD) system has been operating at the Site building since June 2014. Based on the indoor air investigation results, and the operation of the SSD system,

adverse human health effects related to the contaminants of concern are negligible at the commercial building

Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The Department will either enter into an interagency agreement with the Department of Defense or will issue an order. The Department has budgeted $15,000 for oversight/monitoring costs. DHS will seek 100 percent cost recovery for its direct costs plus staff costs and overhead related to the project. The Department of Defense is expected to fund all remedial investigation and cleanup activities.
Site Description: The Fort McArthur site is a former nike missile base located in the White's Point area of San Pedro. The Army transferred the site to the Air Force for housing and the Air Force transferred part of the site to the City of Los Angeles for a park. Thesite is located at 25th Street and Western Avenue in San Pedro.
Hazardous Waste Desc: Ninety-six acres of the original 561-acre complex remain under Air Force control. The remaining properties were disposed of as surplus. An initial assessment study was performed on the active ninety-six acres of Fort McArthur. Nine acres of potential contamination were identified. Only two areas are recommended by the Air Force for further site characterization. Released wastes include pesticides and battery acids.
Threat To Public Health & Env: Residues of hazardous wastes in the soil are the only identified environmental threat. Ground water is intruded by seawater and is unsuitable at this time for use as a drinking water supply. There is no known exposure at this time.
Site Activity Status: The installation restoration program (IRP) has been initiated at this base. Currently, the program is in the operations/remedial action phase of the mitigation process.

Description:	During World War II, this approximately 570-acre site was used by the U.S. Army Air Force for military flights. The site occupies the majority of a one square mile section near the easternmost portion of the Los Angeles International Airport in the City of Los Angeles, Los Angeles County, California. It is bordered by Imperial Boulevard to the south, Sepulveda Boulevard to the west, Century Boulevard to the north and Aviation Boulevard (formerly Redondo Boulevard) to the east, and it occupies the majority of Section 6, Township 3 South, Range 14 West. In 1943, the City of Los Angeles reportedly turned the operation of the airport over to the federal government for the "duration." During that period, existing hangars, offices, and other facilities were taken over by the Army and Navy air transport. Currently this site is owned by the City of Los Angeles and is entirely within the boundaries of Los Angeles International Airport (LAX).
Current Program:	Not reported
History:	In 1940 and 1941, the Army obtained two leases from the City of Los Angeles for land at the Los Angeles Municipal Airport (Mines Field) site. This 570-acre site, which was originally known as Mines Field, was established as a municipal airport in 1928. During World War II, it was used by the U.S. Army Air Force for military flights.

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

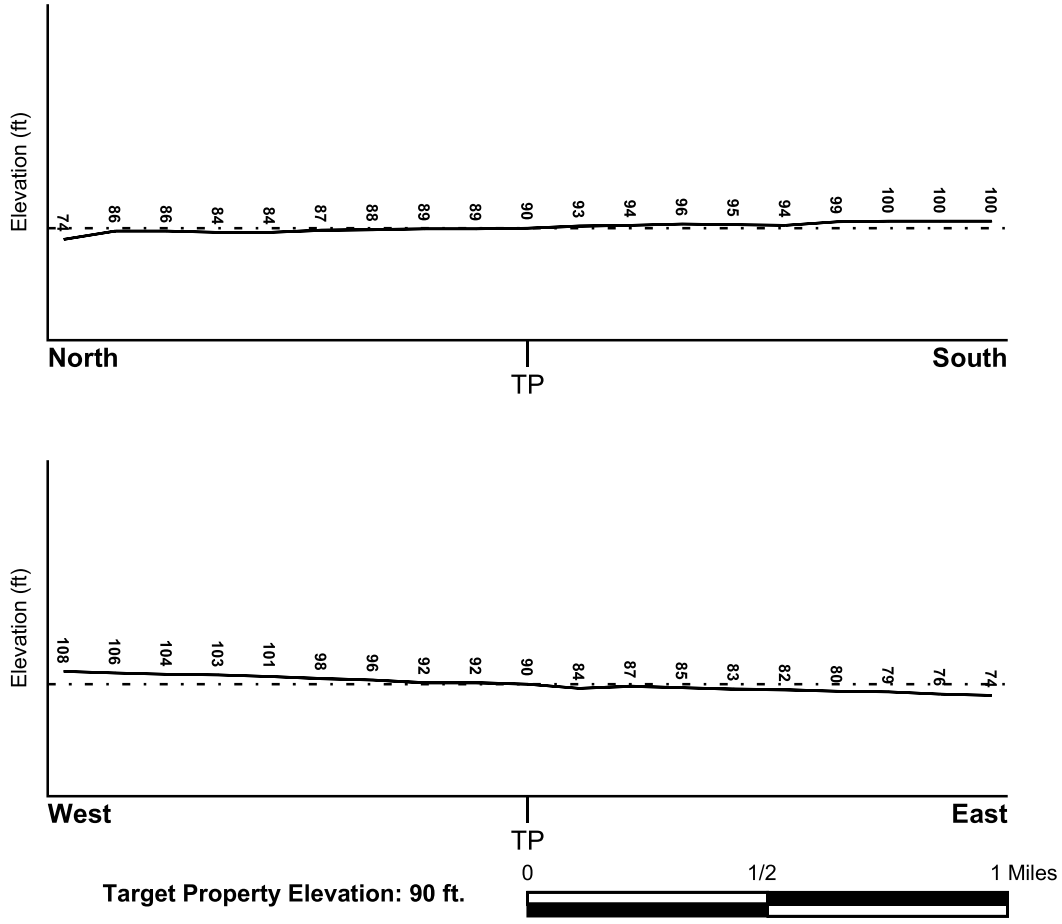

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	DELHI
Soil Surface Texture:	sand
Hydrologic Group:	Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.
Soil Drainage Class:	Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Hydrologic Group:	Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.
Soil Drainage Class:	Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 5836

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 2581

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST
Standard Environmental Record Source: Other Records
Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE

Pursuant to the American Society for Testing and Materials E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E 1527-13), in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The User should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

The "User" is defined in the ASTM E 1527-13 standard as *the party seeking to use Practice E 1527 to complete an environmental site assessment of the Site. A User may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager*.

Purpose of ASTM Phase I (potential purchase, potential sale, re-finance, update the environmental condition of the Site, Lease termination or initiation, etc.)
Potential sale of site and leaseback of a portion of the building;

(1.) Environmental cleanup liens that are filed or recorded against the Site (40 CFR 312.25)
Did a search of recorded land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the Site under federal, tribal, state or local law?

Yes	No
☐	☒

NOTE 1 — In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

None known to Siemens.

(2.) **Activity and land use limitations (AULs) that are in place on the Site or that have been filed or recorded against the Site (40 CFR 312.26(a)(1)(v) and (vi))**

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the Site and/or have been filed or recorded against the Site under federal, tribal, state or local law?

Yes ☐ No ☒

None Known.

(3.) **Specialized knowledge or experience of the person seeking to qualify for the *Landowner Liability Protection* (LLP) (40 CFR 312.28)**

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ☐ No ☒

(4.) **Relationship of the purchase price to the fair market value of the Site property (40 CFR 312.29)**

Does the purchase price being paid for the Site property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes ☒ No ☐

(5.) ***Commonly known* or *reasonably ascertainable* information regarding the Site property (40 CFR 312.30)**

Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

(a.) Can you provide any information regarding the past uses of the Site?
(b.) Can you provide any information regarding specific chemicals that are present or once were present at the Site?
(c.) Can you provide any information regarding spills or other chemical releases that have occurred at the Site?
(d.) Can you provide any information regarding any environmental cleanups that have occurred at the Site?

Yes ☒ No ☐

The Healthineers operation formerly occupied the entire building; there is a radioactive license that demonstrates the site has no storage area for radio active materials. The Healthineers EHS officer will need to be interviewed to provide site specific use and information on chemicals used at the site. There is an outside HAZARDOUS WASTE STORAGE TRAILER.

(6.) **The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)**
Based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of releases at the Site?

Yes	No
☐	☒

None.

(7.) **Proceedings Involving the Site**
Are you aware of**:** (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Site; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site?

Yes	No
☐	☒

(8.) **Questions Regarding Helpful Documents**
Are you aware of the presence of any of the documents listed below and, if so, whether copies can and will be provided to TRC within reasonable time and cost constraints?

	Yes	No
- Environment site assessment reports	☐	☒
Environment compliance audit reports	☐	☒
- Environmental permits (e.g., solid waste disposal permits; hazardous waste disposal permits; wastewater permits; National Pollutant Discharge Elimination System [NPDES] permits; or underground injection permits)	☐	☒

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

AREAS OF EXPERTISE

Mr. Kallini has consulting expertise in the following specialized areas:

- Phase I Environmental Site Assessments
- Phase II Soil and Groundwater Investigations
- Brownfields and Voluntary Action Programs
- Remedial Investigation / Feasibility Studies and RCRA Corrective Actions
- Merger & Acquisition Due Diligence
- Litigation Support

REPRESENTATIVE EXPERIENCE

Mr. Kallini is a Geologist and Senior Project Manager for environmental site assessments involving subsurface and hydrogeologic interpretation to evaluate chemical releases throughout the United States, many in support of corporate merger and acquisition activities, litigations, private party voluntary actions (VAP), and state and federal consent orders and corrective actions (RCRA, CERCLA).

Business Value: Mr. Kallini provides a straight forward presentation of technically complex conditions in business terms by advising clients in the acquisition or divestiture of their real properties and operating businesses where environmental liabilities have potentially complicated the deal. He meets the needs of the business executive and/or legal counsel, focusing on risk resolution, liability definition and associated financial implications.

Specialties: Mr. Kallini is a seasoned Project Manager skilled in supporting his clients' needs for definition and resolution of complex environmental risk. He has performed and managed hundreds of pre-acquisition/pre-divestiture Phase I and Phase II site assessments for various commercial and manufacturing facilities. Mr. Kallini's technical expertise includes hazardous waste site/Brownfield site

investigations, CERCLA/RCRA consent orders; and aquifer characterization with hydrogeologic investigations including contaminant assessment and migration analyses. He is experienced in feasibility screening and conceptual design and operation of soil and groundwater remediation systems, including air sparging, bioremediation, soil vapor extraction, dual phase extraction, *in situ* chemical oxidation and reduction, thermal technologies, and others.

Vernay Laboratories, Inc., RCRA Corrective Action – Yellow Springs, OH (Geologist and Senior Project Manager: Since 2002)
Mr. Kallini is managing the U.S. EPA – Region 5 RCRA Corrective Action process at a closed manufacturing facility in southwest Ohio. Mr. Kallini managed, investigated and addressed soil and groundwater contamination in glacial till and fractured carbonate and shale bedrock impacted with chlorinated solvents (DNAPL) to include logging over 2,000 feet of bedrock core. This included assistance on the Current Conditions, QAPP, SAP, RFI, Risk Assessment, fate & transport modeling for the off-site plume, and CA725/CA750/ reports. Several interim actions have been conducted, and the project is in the final stages of the Corrective Measures Proposal. TRC has also provided litigation support and expert testimony in defense of multiple third-party claims.

Siemens Industries, Inc., Voluntary Action Program Property – Urbana, OH (Geologist and Senior Project Manager: Since 2001)
Mr. Kallini is providing project management and reporting for investigation, remediation, litigation support, public interaction, specialist coordination, and voluntary action associated with a 2-mile portion of a 4-mile-long commingled chlorinated solvent plume in a prolific buried valley aquifer system. The project has involved extensive regulatory interaction, specific and periodic reporting, fate and transport modeling, risk issues including vapor intrusion, soil and ground water remediation (air sparging, soil vapor extraction, *in situ* thermal treatment), long-term monitoring, regular public interaction and technical support for a Class Action Settlement.

Brownfield Redevelopments – (Geologist and Senior Project Manager: Since 2003)
Mr. Kallini managed environmental assessments and remediation for local government/developers for the redevelopment of former commercial and industrial properties. The projects included preliminary site selection based on brownfield screening criteria, identification of financial incentives, and integrating remediation and risk management with the redevelopment and construction plan. State and federal brownfield grants and loans in excess of $15 million were obtained for these projects. All projects were completed under Ohio's VAP.

The Carlyle Group, Due Diligence Support – (Project Manager and Senior Project Manager: Since 2005)

Mr. Kallini managed merger and acquisition due diligence in order to quantify the environmental liabilities associated with private and public companies targeted for acquisition or divestiture, whether in the U.S. or internationally. He has experience in several industries including steel and aluminum pipe manufacturing, retail petroleum, and aerospace.

Due Diligence – Upstream Oil and Gas Production (Senior Project Manager, Since 2012)
Mr. Kallini served as Team Leader in the due diligence evaluation of multiple oil fields with tank batteries, wellhead sites and miles of crude oil gathering pipelines in Powder River Basin. He identified the environmental and compliance defects, quantified the resulting liabilities and compliance cost estimates, and provided useful client deliverables for transactional negotiations and/or agency closures.

Vorys, Sater, Seymour and Pease LLP, City of Cleveland vs. Standex Corporation – Cleveland, OH (Senior Project Manager: 2010-2011)
Mr. Kallini provided litigation support for cost recovery by Standex, the former owner of the property, for unnecessary costs incurred by Standex as a result of brownfields redevelopment activities by the City of Cleveland resulting in a consent order between Standex and U.S. EPA. The work involved historical review and evaluation of additional potential PCB sources at the property over more than five decades. The suit was settled by insurance companies in favor of Standex.

Confidential Law Firm Client, Rubber Parts Manufacturing Site – Hillsdale, MI (Senior Project Manager: 2011)
Mr. Kallini has provided litigation support against a breach of contract suit for environmental cleanup brought against a major environmental consulting firm. The project involved historical review, consideration of available remediation technologies at the time of implementation for groundwater remediation in fractured bedrock, recognition of changes in regulatory requirements during the course of remediation, and appropriateness of their response including the state of knowledge of the site conceptual model and appropriateness of remedy selection.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 19 ENVIROSTOR sites within approximately 1 mile of the target property.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

SIEMENS HEALTHCARE DIAGNOSTICS INC (Continued) **1007447327**

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 67791

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 62095.7

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

SIEMENS HEALTHCARE DIAGNOSTICS INC (Continued) **1007447327**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

- Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
- Site History: The Site is located at 5261 West Imperial Highway, in Los Angeles, and consists of one commercial building and adjacent paved parking lot. Investigations were conducted at the Site in 2010 and 2011. Volatile organic compounds (VOCs) and total petroleum hydrocarbons (TPH) were detected in soil matrix and soil vapor samples collected from the Site. Additional investigations were conducted in 2016 at the Site to further assess soil matrix, soil vapor, and groundwater. Based on the results of this investigation, and to protect human health and groundwater resources, soil vapor and soil remediation is required. Four dual nested groundwater monitoring wells were installed at the Site in 2016. Groundwater monitoring is conducted on a semi-annual basis according to a monitoring schedule specified by the Los Angeles Regional Water Quality Control Board. A soil remedial action plan was approved by the Regional Board in 2018. A soil vapor extraction (SVE) system is scheduled to be installed in 2019 at the Site to treat contaminants in the vadose zone. SVE system installation has been delayed.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 58750

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 58750

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

aircrafts. Hughes Aircraft occupied the Site from 1965 to 1991, for office space and assembly of radar equipment, and used/stored chlorinated solvents. In 1991, the former building was demolished and three new buildings were built (11120 Hindry Avenue, 11200 Hindry Avenue, and 11160 Hindry Avenue), which are currently occupied by offices, freight transportation services companies, and other commercial businesses. Soil vapor, soil and groundwater beneath the site is impacted with volatile organic compounds (VOCs), mostly trichloroethylene (TCE) and 1,2-dichloroethane (1,2-DCA). Off-Site investigations (at 11220 Hindry) for the delineation of the VOCs plume in soil vapor, soil, and groundwater were conducted in 2011 and early 2012. An interim remedial system to address soil gas/soil and groundwater impacts at the Site and immediate vicinity has been operating since March 2019.

Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The property located at 11101-11105 South La Cienega Blvd. (Site) was occupied by Hughes Aircraft Company (Hughes) from 1957 to 1988, and operated the Microwave Tube and Radar System Divisions. Hughes operations involved the use of spray booths, exterior chemical storage rooms, acid waste tank, and chemical mixing room. From 1958

11105 LA CIENEGA PROPERTIES (Continued) **S108211351**

to 1967, Hughes operated an underground storage tank (UST) with waste solvent which was removed in 1967. In 1991-1993, the 11101 S. La Cienega building was remodeled, and the 11105 S. La Cienega building was constructed. Historical activities at the Site by Hughes caused the unauthorized discharge of chlorinated volatile organic compounds (VOCs) into the subsurface, impacting soil, soil vapor, and groundwater. The Los Angeles Regional Water Quality Control Board identified Raytheon Company as the responsible party to investigate and cleanup the unauthorized discharges, because Raytheon Company is the successor of Hughes. Site investigations started in 1990. Soil vapor, soil, and groundwater are mainly impacted with trichloroethene (TCE), and tetrachloroethene (PCE). A pilot test to extract VOCs-impacted soil vapor and groundwater and treat them on-site with a portable synthetic media system was conducted in 2011. An interim remedial system to address soil gas/soil and groundwater impacts at the Site and immediate vicinity has been operating since March 2019. Off-Site Indoor Air Investigations were conducted at two properties, 11201-11211 La Cienega Blvd, and 11231 La Cienega Blvd. The results are being reviewed and evaluated by the California Office of Environmental Health Hazard Assessment.

Site History:	The property located at 11100 Hindry Avenue (Site) was occupied from the mid 1950's to 1972 by Hughes Aircraft Company (Hughes) as a machine shop. Historical activities at the Site and near adjacent properties by Hughes caused the discharge of volatile organic compounds (VOCs) into the ground. The Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) identified Raytheon Company as the responsible party to investigate and cleanup the unauthorized discharges, because Raytheon Company is the successor of Hughes. Site investigations under Regional Board oversight started in 2006. The soil vapor, soil and groundwater beneath the Site is impacted with VOCs, mainly Trichloroethene (TCE) and Tetrachloroethene (PCE). In 2013, indoor air sampling activities were conducted at the Site's commercial building to evaluate human health risks related to vapor intrusion. A sub-slab depressurization (SSD) system has been operating at the Site building since June 2014. Based on the indoor air investigation results, and the operation of the SSD system, adverse human health effects related to the contaminants of concern are negligible at the commercial building. An interim remedial system (System) to address soil gas/soil and groundwater impacts at the Site and immediate vicinity has been operating since March 2019. In January 2020, the Los Angeles Water Board approved the temporary shutdown of the SSD system for one year. During this year, data will be collected and analyzed. The SSD system may be removed or may continue operations. During the shutdown, the System will be providing adequate negative pressure under the Site building as the SSD system was providing.

Comments: DTSC received a non-emergency hazardous subtances release report dated November 1, 1995. The site was previously used for gas station, lumbar yard, and dry cleaners. The Phase II investigation indicates that the site's soil is contaminated with PCE, TCE, and Chloroform. Groundwater is is also contaminated with detected levels of petroleum hydrocarbons, BTEX, PCE, and DCA. Due to evidence of a release of hazardous substances, DTSC recommeds that a PEA be conducted to evaluate the site. DTSC notified the PRPs thereof.

Comments: The Deprtment received a Notice of Intent to sue under RCRA dated September 28, 1993. On November 8, 1993 the Dept. issued the Information Request. The information received indicates that the site is used for auto repair and gasoline service station and contaminated with petroleum hydrocarbons The Department's contact with the Los Angeles City Fire Department, Underground Tank Program indicates that the site is under the jurisdiction of the LA City Fire Dept. Due to LA City jurisdiction, the Department's involvement is unnecessary.

Project Revenue Source Desc:	The Department will either enter into an interagency agreement with the Department of Defense or will issue an order. The Department has budgeted $15,000 for oversight/monitoring costs. DHS will seek 100 percent cost recovery for its direct costs plus staff costs and overhead related to the project. The Department of Defense is expected to fund all remedial investigation and cleanup activities.
Site Description:	The Fort McArthur site is a former nike missile base located in the White's Point area of San Pedro. The Army transferred the site to the Air Force for housing and the Air Force transferred part of the site to the City of Los Angeles for a park. Thesite is located at 25th Street and Western Avenue in San Pedro.
Hazardous Waste Desc:	Ninety-six acres of the original 561-acre complex remain under Air Force control. The remaining properties were disposed of as surplus. An initial assessment study was performed on the active ninety-six acres of Fort McArthur. Nine acres of potential contamination were identified. Only two areas are recommended by the Air Force for further site characterization. Released wastes include pesticides and battery acids.
Threat To Public Health & Env:	Residues of hazardous wastes in the soil are the only identified environmental threat. Ground water is intruded by seawater and is unsuitable at this time for use as a drinking water supply. There is no known exposure at this time.
Site Activity Status:	The installation restoration program (IRP) has been initiated at this base. Currently, the program is in the operations/remedial action phase of the mitigation process.

Description: During World War II, this approximately 570-acre site was used by the U.S. Army Air Force for military flights. The site occupies the majority of a one square mile section near the easternmost portion of the Los Angeles International Airport in the City of Los Angeles, Los Angeles County, California. It is bordered by Imperial Boulevard to the south, Sepulveda Boulevard to the west, Century Boulevard to the north and Aviation Boulevard (formerly Redondo Boulevard) to the east, and it occupies the majority of Section 6, Township 3 South, Range 14 West. In 1943, the City of Los Angeles reportedly turned the operation of the airport over to the federal government for the "duration." During that period, existing hangars, offices, and other facilities were taken over by the Army and Navy air transport. Currently this site is owned by the City of Los Angeles and is entirely within the boundaries of Los Angeles International Airport (LAX).
History: In 1940 and 1941, the Army obtained two leases from the City of Los Angeles for land at the Los Angeles Municipal Airport (Mines Field) site. This 570-acre site, which was originally known as Mines Field, was established as a municipal airport in 1928. During World War II, it was used by the U.S. Army Air Force for military flights.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

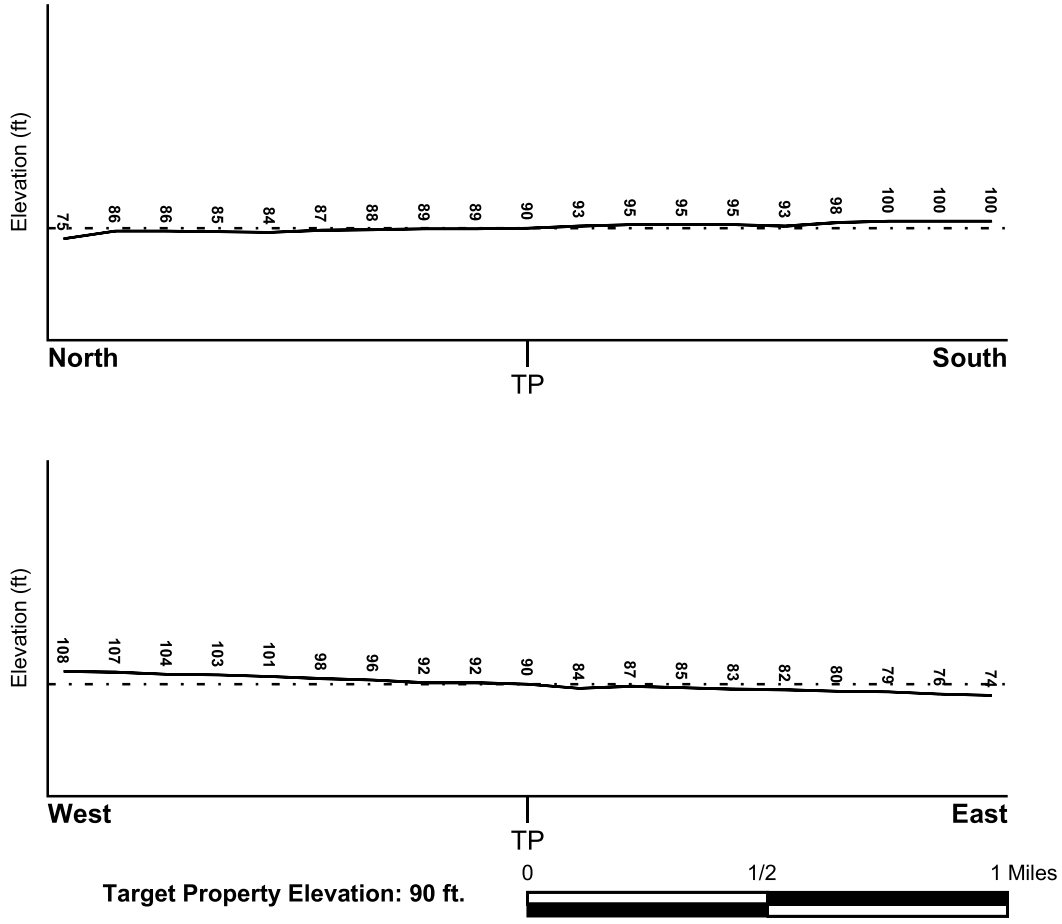

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	DELHI
Soil Surface Texture:	sand
Hydrologic Group:	Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.
Soil Drainage Class:	Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2015. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Based upon our observations, it is our judgment that the landscape work was performed in accordance with the approved plans and specifications, and with acceptable workmanship. There are a few items the Contractor needs to repair and adjust which have been written up in the final field report.

Since the final field report was conducted on February 26, 2002, the Contractor has not had a chance to mitigate all the items listed on the final report. However the Contractor is aware of the necessary items which require modification and adjustment.

RE: **Cross Pointe**
21006
Subject: **Final completion for Douglas & Crosspointe**

Gentlemen:

Please see attached notice of completion for your files for both projects. These are being sent to be recorded today. The pending issue on the crosspointe inspection card is the release of the soils and geology review of the final grading report. I understand the request to get a copy of a release of the review form for the bank, and I will get that from the proper authority. I have attempted to make contact with Bob Thomas at LA County, and left messages. If you would like to try to push the progress his number is 626 458 4925.

Sincerely,

BEST MANAGEMENT PRACTICES FOR CONSTRUCTION ACTIVITIES*

Storm Water Pollution Control Requirements for Construction Activities
Minimum Water Quality Protection Requirements for All Development Construction Projects/Certification Statement

The following is intended minimum notes or as an attachment for construction and grading plans and represent the minimum standards of good housekeeping which must be implemented on all construction sites regardless of size. (Applies to all permits)

- ☐ Eroded sediments and other pollutants must be retained on site and may not be transported from the site via sheetflow, swales, area drains, natural drainage courses or wind.
- ☐ Stockpiles of earth and other construction related materials must be protected from being transported from the site by the forces of wind or water.
- ☐ Fuels, oils, solvents and other toxic materials must be stored in accordance with their listing and are not to contaminate the soil and surface waters. All approved storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of in a proper manner. Spills may not be washed into the drainage system.
- ☐ Non-stormwater runoff from equipment and vehicle washing and any other activity shall be contained at the project site.
- ☐ Excess or waste concrete may not be washed into the public way or any other drainage system. Provisions shall be made to retain concrete wastes on site until they can be disposed of as solid waste.
- ☑ Trash and construction related solid wastes must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.
- ☐ Sediments and other materials may not be tracked from the site by vehicle traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the public way. Accidental depositions must be swept up immediately and may not be washed down by rain or other means.
- ☐ Any slopes with disturbed soils or denuded of vegetation must be stabilized so as to inhibit erosion by wind and water.
- ☐ Other: _____

As the project owner or authorized agent of the owner, I have read and understand the requirements listed above, necessary to control storm water pollution from sediments, erosion, and construction materials, and I certify that I will comply with these requirements.

GROUNDWATER GRAB SAMPLING DATA WERE ALSO USED TO GENERATE ISOCONCENTRATION CONTOURS; DATA IS SUMMARIZED IN THE UPDATED SITE CONCEPTUAL MODEL 11120/11160/11200 HINDRY AVENUE (SLIC 1125A), 11101/11105 SOUTH LA CIENEGA BOULEVARD (SLIC 1125B), AND 11100 HINDRY AVENUE (SLIC 1125C), LOS ANGELES, CALIFORNIA, DATED 27 SEPTEMBER 2017.

5. SPRING VIEW WELLS WERE SAMPLED BY OTHERS ON 29 APRIL 2020.

6. GROUNDWATER SAMPLES WERE NOT COLLECTED FROM MW-8A2, MW-16A2, MW-24A2, MW-27A2, MW-31A2, AND MW-32A2 BECAUSE EITHER THE WELL WAS DRY OR THE GROUNDWATER ELEVATIONS DECREASED BELOW THE PLACEMENT OF THE PDB BAG. FOR THE APPLICABLE WELLS, A PDB BAG WAS RE-INSTALLED AT A DEEPER DEPTH.

7. HISTORICAL RESULTS WERE USED TO GENETRATE ISOCONCENTRATION CONTOURS IN AREAS WHERE WELLS WERE DRY OR NOT SAMPLED.
