Project Description (Proposed actions, location, and/or consequences).

The proposed project includes redevelopment of a 9.2-acre site and minor improvements to the SCE Walnut Substation that abuts the project site. The proposed project includes the construction and operation of an approximately 400-megawatt battery energy storage system (BESS) facility and associated site and infrastructure improvements on the project site. Development of the BESS facility requires demolition of all existing buildings, structures, hardscapes, and minimal landscaping on-site. The minor improvements to the SCE Walnut Substation would help interconnect and transfer power between the proposed BESS facility and SCE Walnut Substation.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The proposed project would result in significant impacts to Cultural Resources, Hazards and Hazardous Materials, Noise, and Tribal Cultural Resources. See detailed mitigation measures outlined in the public draft Initial Study/MND.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
