

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Euclid Avenue Bridge Project

Lead Agency: City of Chino, Public Works Department

Contact Name: Michele Hindersinn, Senior Engineer

Email: euclid@cityofchino.org

Phone Number: (909) 334-3513

Project Location: Chino

City

San Bernardino County

County

Project Description (Proposed actions, location, and/or consequences).

The Project would include construction of a new viaduct structure (i.e. " Euclid Avenue Viaduct ") that crosses above Pomona Rincon Road and over Chino Creek within the Prado Basin. A viaduct is a bridge that consists of a series of arches, piers or columns supporting an elevated road or railway. The Project would widen the new bridge to four lanes to match the existing roadway capacity and add bicycle and pedestrian lanes, facilitating traffic circulation. The proposed Project would also install retaining walls and imported fill soils. The maximum height of the viaduct is not anticipated to exceed approximately 28 feet above ground level.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The proposed Project would have permanent and temporary impacts to critical habitat for least Bell's vireo and southwestern willow flycatchers, endangered birds. The proposed Project would also have permanent and temporary impacts to riparian/wetland habitat associated with Chino Creek. Potential mitigation measures include avoiding construction in the nesting season of least Bell's vireo and southwestern willow flycatchers to the greatest extent feasible, and where not feasible, implement buffers, noise monitoring, and noise attenuation measures. Mitigation for cultural and tribal cultural resources would require Native American and archaeological monitoring during ground-disturbing activities, preparation of a Cultural Resource Management Plan, worker sensitivity training, and procedures to halt work, evaluate discoveries, and treat any cultural resources, tribal cultural resources, or human remains encountered during construction. Mitigation for geology and soils would address the discovery of any paleontological resources by requiring work to halt in the immediate area until a qualified paleontologist evaluates the resource. With the implementation of these mitigation measures, impacts would be reduced to less than significant.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

There are no known areas of controversy.

Provide a list of the responsible or trustee agencies for the project.

California Department of Fish and Wildlife, Inland Deserts Region 6
California Regional Water Quality Board, Region 8 Santa Ana
U.S. Fish and Wildlife Service
U.S. Army Corp of Engineers
