Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

SCH #: _____

Project Title: Increase in Processing and Transfer of Construction, Demolition and Inert Materials, CWS-DTLA

Lead Agency: Local Enforcement Agency Los Angeles Department of Building and Safety

Contact Name: David Thompson

Email: labds.lea@lacity.org Phone Number: (213) 252-3939

Project Location: Los Angeles, Los Angeles
City *County*

Project Description (Proposed actions, location, and/or consequences).

California Waste Services, LLC is permitted for a maximum throughput of 500 tons per day (tpd) and is proposing to increase throughput to a maximum of 900 tpd. In order to assist with the proposed increase in CDI, a wood grinding system consisting of an electric Rotochopper grinder and associated conveyors capable of processing 30 to 40 tons of recycled wood per hour would be installed within the plant and wood grinding operations would be conducted within the existing facility building. An additional project feature is a storm water vault that would be constructed in the eastern portion of the property. Once constructed, storm water will be diverted to the vault which will be designed with a base mat and dry wells for filtration/infiltration to minimize off-site storm water discharges.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

For Cultural Resources and Tribal Resources, inadvertent discovery of cultural and/or tribal resources maybe encountered during construction of the storm water vault. If cultural and/or tribal resources cannot be avoided, Native American tribes identified by the Native American Heritage Commission will be contacted and a Monitoring and Treatment Plan will be completed for review and comment by consulting Tribes. A qualified archaeologist will monitor the remainder of ground disturbance and implement the Plan accordingly. Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) will be supplied to the LEA for dissemination to relevant Tribes. If cultural/tribal resources are encountered, the Lead Agency and/or Applicant will in good faith, consult with interested Tribes throughout ground disturbing activities. If human remains or funerary objects are encountered during any activities associated with the Project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease, and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the Project. In the event that paleontological resources are encountered during ground disturbance for the storm water vault, all ground disturbing work shall stop at the discovery site. At that time, a qualified paleontological monitor will be consulted to evaluate the find. Ground disturbing activities will be temporarily stopped so that the monitor can recover any specimens encountered during excavation. All fossils/specimens collected during this work will be deposited in a City of Los Angeles-approved Museum repository for curation and storage.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Not Applicable

Provide a list of the responsible or trustee agencies for the project.
