Subject: **Phase I Environmental Site Assessment**
4300 Bucknall Road
San Jose, California 95130
AEI Project No. 505900

DRAFT

Dear Shannon George:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (408) 559-7600 or TGolino@aeiconsultants.com.

Sincerely,
DRAFT
Tory Golino
Senior Vice President
AEI Consultants

PROJECT SUMMARY

4300 Bucknall Road, San Jose, Santa Clara County, California 95130
AEI Project No. 505900

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by David J. Powers & Associates to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 4300 Bucknall Road, San Jose, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

Property Information	
Site Address(es)	4300 Bucknall Road, San Jose, Santa Clara County, California 95130
Property ID (APN or Block/Lot)	403-59-012
Location	Southern side of Bucknall Road, western side of South San Tomas Aquino Road and northern side of Rincon Avenue
Site and Building Information	
Approximate Site Acreage/Source	8.98/Assessor
Number of Buildings	7
Building Construction Date(s)/Source	Multiple phases (circa 1950s-1970s, 1997 and 2001)/Historical Research
Building Square Footage (SF)/Source	108,000/Client provided
Number of Floors/Stories	1 and 2
Basement or Subgrade Area(s)	None identified
Number of Units	1
Additional Improvements	Multiple sheds and storage buildings, asphalt-paved parking/drive areas, sports courts, swimming pool, concrete-paved pool deck and walkways, playgrounds, athletic field, covered patios, perimeter fencing and security gates, and landscaped areas
Property Type	Educational
On-site Occupant(s)	The Harker School - Lower School Campus
Current On-site Operations/Use	Educational uses (Kindergarten through 5th grade), general office uses and routine facility maintenance activities
Current Use of Hazardous Substances	None identified
Regulatory Information	
Regulatory Database Listing(s)	HWTS (4), HAZNET (3), CHMIRS, RCRA Non Gen/NLR (2), E Manifest (2), FINDS (2), ECHO (2), CERS HAZ Waste, CUPA Listings, HAZMAT and CERS

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1889	Unknown use/Data failure; refer to Section 1.6.1	N/A
1889-1950	Unimproved land and/or agricultural land with two structures (residences)	Aerial photographs, topographic maps
1950s-Present	Current buildings constructed as a school in multiple phases, occupied by various school/educational facilities including Bucknall Elementary School until 1997 and Harker Lower School Campus since 1997	Agency records, aerial photographs, city directories, interview, site observations

DRAFT

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Bucknall Road, followed by residences (138-146 English Rose Circle, 129 and 130 John Kirk Court, and 1661 and 1671 Bucknall Road), John Kirk Court and Whitwood Lane	Yes; refer to Section 5.1
Northeast	Intersection of Bucknall Road and South San Tomas Aquino Road, followed by a residence (2096 South San Tomas Aquino Road)	None identified
East	South San Tomas Aquino Road, followed by residences (100 and 2130-2190 South San Tomas Aquino Road, and 4191 West Rincon Avenue)	Yes; refer to Section 5.1
Southeast	Intersection of West Rincon Avenue and South San Tomas Aquino Road/Fernian Drive, followed by a residence (4192 West Rincon Avenue)	Yes; refer to Section 5.1
South	West Rincon Avenue, followed by residences (2226 Weston Drive, 2225 & 2228 Dorval Drive, 4308-4332 West Rincon Avenue, 2206 South San Tomas Aquino Road and 2207 Fernian Drive), Dorval Drive and South San Tomas Aquino Road	None identified
West	Residences (2102-2198 Weston Drive)	None identified

Findings and Opinions

Significant Data Gap(s) is defined by the current ASTM Standard E1527 as a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

AEI did not identify significant data gaps which affected our ability to identify RECs.

Recognized Environmental Condition (REC) is defined by the current ASTM Standard E1527 as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the current ASTM Standard E1527 as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of CRECs during the course of this assessment.

DRAFT

Historical Recognized Environmental Condition (HREC) is defined by the current ASTM Standard E1527 as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- Due to the age of the subject property buildings, there is a potential that ACMs are present. The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.
- Due to the age of the subject property buildings, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. However, based on the potential presence of LBP and nature of occupancy, AEI recommends a risk assessment and that the property owner implement an O&M Plan to protect the health and safety of the building occupants. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an x-ray fluorescence (XRF) survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-21, of 4300 Bucknall Road, San Jose, Santa Clara County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.

RECOMMENDATIONS

AEI recommends no further investigation for the subject property at this time.

DRAFT

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at 4300 Bucknall Road, San Jose, Santa Clara County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with the most current ASTM E1527 Standard associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by the current ASTM Standard E1527. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

DRAFT

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under the current ASTM Standard E1527.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. The current ASTM Standard E1527 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the current ASTM Standard E1527.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

DRAFT

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including the key site manager, this limiting condition is not expected to alter the overall findings of this assessment.
- AEI visited the website maintained by the San Jose Permit Center for permits and records issued by the San Jose Fire Prevention Bureau (SJFPB), San Jose Building Division (SJBD), and San Jose Planning Division (SJPD), regarding the subject property to identify any evidence of previous or current hazardous material usage, as well as historical tenants, property use, and the presence of AULs. Due to technical difficulties with the online system, various permits/documents were unable to be displayed for review. It should be noted that some of these records are not accessible through the Permit Center's website and can only be viewed by submitting a request to review to the City's Imaging Department (ID). It is common that some records may even be inaccessible to City of San Jose as well. In past experience, the ID may be able to recover some files, however such requests generally take at least two months to process and cost at least $100 to $200, or more depending on the amount of files retrieved. Based on this notion, outstanding, inaccessible City files are not deemed to be "reasonably ascertainable" as defined by the ASTM standard. Based on the information provided in the records reviewed online, as well as other sources, this limitation is not expected to alter the conclusions of this assessment.
- Due to the large volume of materials within portions of the buildings and vehicles parked within exterior areas, direct visual observation of many of the floor and wall areas of the buildings and exterior ground surfaces was not possible. Features may be present that were not observed during AEI's field reconnaissance. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.

DRAFT

1.6 Data Failure and Data Gaps

According to the current ASTM Standard E1527, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to the current ASTM Standard E1527, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to the current ASTM Standard E1527, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to the current ASTM Standard E1527, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	As noted in Section 3.0, the earliest historical resource obtained during this assessment indicated that the subject property was unimproved land and/or developed agriculturally with two structures. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously used for agricultural/residential purposes, if not undeveloped, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, historical topographic maps

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of David J. Powers & Associates. This report is for the purpose of evaluating the subject Property in connection with securing mortgage financing and has no other purpose. This report may not be relied upon by any other person or entity without the written consent of AEI either verbally or in writing. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with David J. Powers & Associates and AEI's contract and Terms and Conditions dated February 12, 2025. The limitation of liability defined in the contracted terms is the aggregate limit of AEI's liability to the client and all relying parties.

DRAFT

2.0 SITE AND VICINITY DESCRIPTION

2.1 Site Location and Description

Property Information	
Site Address(es)	4300 Bucknall Road, San Jose, Santa Clara County, California 95130
Property ID (APN or Block/Lot)	403-59-012
Location	Southern side of Bucknall Road, western side of South San Tomas Aquino Road and northern side of Rincon Avenue
Site and Building Information	
Approximate Site Acreage/Source	8.98/Assessor
Number of Buildings	7
Building Construction Date(s)/Source	Multiple phases (circa 1950s-1970s, 1997 and 2001)/Historical Research
Building Square Footage (SF)/Source	108,000/Client provided
Number of Floors/Stories	1 and 2
Basement or Subgrade Area(s)	None identified
Number of Units	1
Additional Improvements	Multiple sheds and storage buildings, asphalt-paved parking/drive areas, sports courts, swimming pool, concrete-paved pool deck and walkways, playgrounds, athletic field, covered patios, perimeter fencing and security gates, and landscaped areas
Property Type	Educational
On-site Occupant(s)	The Harker School - Lower School Campus
Current On-site Operations/Use	Educational uses (Kindergarten through 5th grade), general office uses and routine facility maintenance activities
Current Use of Hazardous Substances	None identified
Regulatory Information	
Regulatory Database Listing(s)	HWTS (4), HAZNET (3), CHMIRS, RCRA Non Gen/NLR (2), E Manifest (2), FINDS (2), ECHO (2), CERS HAZ Waste, CUPA Listings, HAZMAT and CERS

2.2 On-Site Utilities

Utility	Source/System Information
Heating System	Natural gas
Cooling System	Electricity
Potable Water	City of San Jose
Sewage Disposal/Treatment	City of San Jose

Utility source/system information listed in the table above is provided by Mr. Dan Rohrer, Facilities Manager, unless otherwise noted above.

DRAFT

2.3 Site and Vicinity Characteristics

The subject property is located in a residential area of San Jose, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Bucknall Road, followed by residences (138-146 English Rose Circle, 129 and 130 John Kirk Court, and 1661 and 1671 Bucknall Road), John Kirk Court and Whitwood Lane	Yes; refer to Section 5.1
Northeast	Intersection of Bucknall Road and South San Tomas Aquino Road, followed by a residence (2096 South San Tomas Aquino Road)	None identified
East	South San Tomas Aquino Road, followed by residences (100 and 2130-2190 South San Tomas Aquino Road, and 4191 West Rincon Avenue)	Yes; refer to Section 5.1
Southeast	Intersection of West Rincon Avenue and South San Tomas Aquino Road/Fernian Drive, followed by a residence (4192 West Rincon Avenue)	Yes; refer to Section 5.1
South	West Rincon Avenue, followed by residences (2226 Weston Drive, 2225 & 2228 Dorval Drive, 4308-4332 West Rincon Avenue, 2206 South San Tomas Aquino Road and 2207 Fernian Drive), Dorval Drive and South San Tomas Aquino Road	None identified
West	Residences (2102-2198 Weston Drive)	None identified

2.4 Physical Setting

Geologic Unit	Marine sedimentary and alluvial deposits of the Cenozoic era Source: USGS and United States Department of the Interior
Soil Series	Urban Land Elpaloalto Complex: Well drained slightly decomposed plant material, clay loam and silty clay loam with a depth of 94 inches; parent material described as alluvium derived from metamorphic and sedimentary rock and/or alluvium derived from metavolcanics; slopes ranging from 0-2% Urban Land Flaskan Complex: Well drained sandy loam, sandy clay loam, gravelly sandy clay loam and very gravelly sandy loam with a depth of 59 inches; parent material described as alluvium derived from metamorphic and sedimentary rock and/or alluvium derived from metavolcanics; slopes ranging from 0-2% Source: USDA Soil Survey
Groundwater Flow Direction	North Source: SCCEHD's May 2, 2017 Voluntary Cleanup Program Case Closure for Kirkwood Auto Center – 125 South San Tomas Aquino Road (located adjoining to the north of the subject property)
Estimated Depth to Groundwater	51.5-61.33 feet bgs Source: SCCEHD's May 2, 2017 Voluntary Cleanup Program Case Closure for Kirkwood Auto Center – 125 South San Tomas Aquino Road (located adjoining to the north of the subject property)
Surface waters on the subject property or adjoining sites	None

DRAFT

Additional Notes	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

DRAFT

3.0 HISTORICAL RECORDS REVIEW

Reasonably ascertainable standard historical sources as outlined in the current ASTM Standard E1527 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, historical topographic maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1889	Unknown use/Data failure; refer to Section 1.6.1	N/A
1889-1950	Unimproved land and/or agricultural land with two structures (residences)	Aerial photographs, topographic maps
1950s-Present	Current buildings constructed as a school in multiple phases, occupied by various school/educational facilities including Bucknall Elementary School until 1997 and Harker Lower School Campus since 1997	Agency records, aerial photographs, city directories, interview, site observations

Based on a review of aerial photographs and topographic maps, there is potential that the subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The routine application of pesticides and fertilizers is not considered a release subject to CERCLA response costs. No evidence of spilling, dumping, emitting, and/or mishandling of pesticides and/or fertilizers was identified, and thus the former agricultural uses do not represent a REC. The property is currently utilized for educational purposes. Development of the subject property likely involved grading activities which would have removed near surface soils or would have potentially involved the addition of imported soils for the landscaped areas. As such, it is considered unlikely that elevated concentrations of pesticides remain at the subject property. Based on the current property uses and/or improvements, no further action related to the former agricultural use of the subject property is warranted at this time.

If available, copies of historical sources are provided in Appendix D.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years (1939-2020, non-inclusive):

Year(s)	Subject Property Description	Adjoining Site Descriptions
1939	Agricultural land, residential-type buildings and out buildings	NORTH: Roadway followed by agricultural land NORTHEAST: Agricultural land EAST: Agricultural land SOUTHEAST: Agricultural land SOUTH: Agricultural land and roadway WEST: Agricultural land
1948, 1950	No significant changes	NORTH: Roadway followed by agricultural land and a residential-type building NORTHEAST: Roadway followed by agricultural land

Subject property:

- Agricultural land - refer to Section 3.0

Adjoining Site(s):

- Northern adjoining commercial/industrial-type buildings - refer to Section 5.1

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. Directories were reviewed in approximate five-year increments from 1950-2020, non-inclusive. Refer to the appendices for a complete list of historical subject property tenants

identified by EDR. The first listing for the subject property appeared in 1966. No potential tenants of concern were identified based on AEI's review of the historical city directories. The following table summarizes the results of the city directory search for the subject property.

Subject Property

Year(s)	Address - Occupant Listed
1966, 1970, 1975	4300 Bucknall Road – Bucknall Elementary School
1980	4300 Bucknall Road – Zonta Children's Center for Emotionally Disturbed Children
1985	4300 Bucknall Road – Four Seasons Day Care Center, My School, Inc., Simoneon Pediatric Development Center and Zonta Children's Center for Emotionally Disturbed Children
1986	4300 Bucknall Road – My School, Inc., Share N Care Children's Center and Zonta Children's Center for Emotionally Disturbed Children
1991	4300 Bucknall Road – A Special Place, Bucknall Tiny Tots, Country Lane Enrichment Center, Simoneon Pediatric Development Center
1992	4300 Bucknall Road – A Special Place, Simoneon Pediatric Development and Zonta Services
1995, 1996	4300 Bucknall Road – A Special Place, Casa Di Mir Montessori Elementary and Zonta Services for Educational
2000	4300 Bucknall Road – Harker School, Mission Electric Company
2005	4300 Bucknall Road – Harker School Foundation
2006	4300 Bucknall Road – Harker School
2010	4300 Bucknall Road – Casa Di Mir Montessori Elementary, Harker School and Mission Electric Company
2014, 2017	4300 Bucknall Road – The Harker School
2020	4300 Bucknall Road – Harker School and Mission Electric Company

If listed above, XXXX indicates that the address is valid but there is no occupancy information available.

The table below summarizes the search of historical city directories conducted for the adjoining sites. Refer to the appendices for a complete list of historical adjoining occupants identified during the review of city directories obtained from EDR.

Adjoining Site(s):

- No potential environmental concerns identified

3.5 Chain of Title

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

DRAFT

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 Local Environmental Health Department and/or State Environmental Agency

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Environmental Health Department (SCCEHD)	February 13, 2025	Online, Email	Tanaya Farahani	Records discussed below

The SCCEHD file included CERS file with hazardous material inventory that was submitted on December 18, 2012 and accepted on January 8, 2013. The file included a July 2, 2014 inspection of The Harker School, which identified violations associated with lack of hazardous waste determination (arts and crafts materials), lack of training documentation, absence of any provision for management of contaminated rags, unlabeled universal wastes, incomplete Hazardous Material Business Plan (HMBP) and lack of emergency response training. The facility reportedly had 70 gallons of muriatic acid in a storage shed, eleven 50-pound containers of calcium hypochlorite and paint. The May 13, 2016 inspection identified violations for the lack of hazardous waste determination. The facility reportedly implemented a closed-loop water recycling system in arts and crafts for brush cleaning of paints and ceramic glazes. The filters are removed from the system and managed as hazardous waste, but the settled solids in two 5-gallon buckets that are upstream from the filter were not treated as hazardous wastes. These materials were presumed to be more contaminated than the filters removed and should be treated as hazardous waste. A determination for the management of these materials was required. The file included hazardous waste manifest records for the removal of hazardous waste liquids and solids in 2016. Review of information on file for the subject property at the SCCEHD did not reveal evidence of RECs.

4.2 Fire Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
San Jose Fire Department (SJFD)	February 13, 2025	Online	Staff	No hazardous substances records on file

4.3 Building Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
San Jose Building Department (SJBD)	February 13, 2025	Online	Staff	Records discussed below. Refer to Section 1.5

The San Jose Building Department file included numerous site development permits, re-roofing, addition/alteration, building construction, fire sprinkler, sign, kitchen remodeling, tree removal and use permits for the existing Harker Bucknall School dating back to 1997. The file included a Hazardous Material Plan Review for an aboveground tank/piping system, which

DRAFT

was finalized on April 6, 1999. No details regarding this permit were included in the files. No environmentally significant information was included in the SJBD files. Review of information on file for the subject property at the SJBD did not reveal evidence of RECs.

4.4 Planning Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
San Jose Planning Department (SJPD)	February 13, 2025	Online, Telephone	Staff	No evidence indicating the existence of AULs on file for the subject property

4.5 Assessor's Office

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Assessor's Office	February 13, 2025	Online	N/A	Information obtained is discussed below

Records Summary

APN	403-59-012
Acreage	8.98 acres

VW Fuel Leak and Solvents Database	February 13, 2025	Online	Rochele Henderson	No subject property records on file

HWTS

HWTS included the following records for the subject property:

- The Harker School (4300 Bucknall Road) is an active hazardous waste transporter facility as of November 18, 2004. Manifest records identified the removal and offsite disposal of asbestos-containing wastes, other inorganic solid wastes, latex waste, off-specification, aged or surplus organic waste, laboratory waste chemicals and liquids with cadmium between 2014 and 2024.
- The Harker School (4300 Bucknall Road) is an inactive hazardous waste transporter facility as of October 25, 2000. Manifest records identified the removal and offsite disposal of asbestos-containing wastes, polychlorinated biphenyls (PCBs) and/or materials with PCBs and other organic solids in 1998.
- Bucknall School (4300 Bucknall Road) is an inactive hazardous waste transporter facility as of May 17, 1996. No manifest records were included in HWTS.

Based on the fact that these wastes were reported to be generated in the HWTS database which were disposed of off-site under waste manifest control and regulatory oversight, as well as the lack of observed interior potential subsurface conduits, the generation of these wastes is not expected to constitute a REC.

CalEPA

CalEPA records indicated that The Harker School – Lower School (4300 Bucknall Road) is a registered chemical storage and hazardous waste generator facility as of July 10, 2013. CalEPA indicated that there are two open violations from a July 2, 2014 inspection, which were associated with lack of training of property hazardous waste management practices and lack of emergency training. No additional open violations were noted in the CalEPA records. The chemical inventory included hypochlorous acid, calcium salt, hydrochloric acid and 1,2-propanediol. Review of information on file for the subject property did not reveal evidence of RECs.

4.7 Oil and Gas Wells

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Geologic Energy Management Division (CalGEM)	February 13, 2025	CalGEM Map	No

DRAFT

4.8 Oil and Gas Pipelines

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	February 13, 2025	NPMS Public Map Viewer	No

DRAFT

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The minimum search distance from the federal and state environmental records database listings specified in the current ASTM Standard E1527 is included in Section 5.1. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below as well as the total number of sites identified, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion, if any, are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern
Federal NPL (Superfund) sites	1.0			
Federal Delisted NPL sites	0.5			
Federal CERCLA removals/orders sites	0.5			
Federal CERCLA sites with NFRAP	0.5			
Federal RCRA facilities undergoing Corrective Action	1.0			
Federal RCRA TSD facilities	0.5			
Federal RCRA generators (LQG, SQG, VSQG)	SP/ADJ			
Federal RCRA NonGen/NLR sites	SP/ADJ	✔	✔	
Federal IC/EC sites	SP			
Federal ERNS sites	SP			
State/tribal "Superfund" equivalent sites	1.0			
State/tribal hazardous waste facilities	0.5			
State/tribal landfill and solid waste disposal facilities	0.5			
State/tribal leaking storage tanks	0.5		✔	
State/tribal registered storage tanks	SP/ADJ			
State/tribal voluntary cleanup sites	0.5

Facility Name	The Harker School
Address	4300 Bucknall Road
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	HWTS (4), HAZNET (3), CHMIRS, RCRA Non Gen/NLR (2), E Manifest (2), FINDS (2), ECHO (2), CERS HAZ Waste, CUPA Listings, HAZMAT and CERS
Comments	The HWTS, HAZNET and E Manifest listings for The Harker School were previously discussed in Section 4.6. The CHMIRS listing is associated with a release of approximately 6,900-gallons of sewage due to a blockage of the main line. The release was contained, did not enter a creek or other water system and was being cleaned up. The sewage release reportedly occurred on March 28, 2013. Based on the nature of the listing and lack of violations, it is not considered evidence of a REC. The RCRA database indicated that The Harker School is a registered non-generator of hazardous waste with no reported violations. The subject property is listed as a FINDS and ECHO site in association with the RCRA listings. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. Based on the nature of these listings and lack of violations, they are not considered evidence of a REC. The CERS and CUPA databases indicated that The Harker School is a registered hazardous waste generator, Hazardous Material Business Plan (HMBP) and chemical storage facility with reported violations. This site is categorized under the "Auto Wrecking/Misc Simple Facility" class. Based on AEI's experience this designation is generally not associated with actual auto wrecking operations and appears to refer to a more general indication of onsite hazardous materials usage or permitting. Based on the nature of these listings and lack of violations, they are not considered evidence of a REC.

Facility Name	Tiffany Ballesteros
Address	4192 West Rincon Avenue
Distance & Direction	Adjoining to the southeast
Hydrologic Position	Cross-gradient
Databases Listed	RCRA Non Gen/NLR(2), E Manifest(2)
Comments	The RCRA database indicated that this site is a registered non-generator of hazardous waste with no reported violations. The E Manifest listings are associated with the removal and offsite disposal of hazardous substances under manifest. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site does not represent a REC.

DRAFT

Facility Name	Kirkwood Auto Center, JD Auto, Fortech Foreign Car, Global Motors, Kirkwood Auto Clinic, Kirkwood Car Wash, Kirkwood VW Specialist, Tires Unlimited, A&J Automotive, Kirkorian, Kirkwood Transmission, Cox Garage, A1 Radiator, Shiro's
Address	125 South San Tomas Aquino Road
Distance & Direction	Adjoining to the north
Hydrologic Position	Down-gradient
Databases Listed	CPS-SLIC (2), CERS (2), CUPA Listings (13), EDR HIST Auto, HWTS (3), HIST UST, LUST, HIST LUST, SWEEPS UST, CA FID UST, Deed, HAZNET
Comments	Release Listings This site is listed with two closed release cases. AEI reviewed case records on GeoTracker. A soil contamination case associated with a release of gasoline was opened on January 1, 1990 and closed as of October 30, 1996. The Case Closure Summary indicated that this site contained three 8,000-gallon gasoline USTs that were removed on May 8, 1991. Over-excavation of contaminated soil was conducted following the removal of the USTs, but no soil samples were collected at a depth of 35 feet bgs following the soil removal. Groundwater sampling was reportedly conducted on six occasions between 1992 and 1994, and no petroleum hydrocarbons were detected in samples. There did not appear to be significant levels of residual petroleum hydrocarbons in soil and the case was closed. A second CPS-SLIC case was opened for Kirkwood Auto Center on January 5, 2010 and was closed as of May 2, 2017. This is a soil and soil vapor contamination case associated with a release of Tetrachloroethylene (PCE), Polychlorinated Biphenyls (PCBs), nickel and oils. This site was the location of an automotive repair center with 3 single story buildings, which were bult in 1971. The site has been redeveloped by Taylor Morrison for residential use (Palomar). There was also a leaking underground storage tank case at this site, which was closed in October 1996. Due to the complexity of the contaminants, this site has been broken up into three different operable units. Operable Unit 1 was associated with the former auto center (APNs 403-62-001, -002, -007, -008, and -013 through -026) and portions of the private street. Operable Unit 3 was associated with a former car wash (APNs 403-62-009 through -012) and portions of the private street. Operable Unit 2 (OU2) was associated with a former tire shop (APNs 403-62-003 through -006) and portions of the private street, which is closest to the subject property. PCE-impacted soil was removed from Operable Unit 2. Sampling reported the presence of elevated concentrations of PCE in soil vapor in the former tire shop (OU2) and former car wash (OU3) areas. The significant soil and soil vapor sampling performed across Operable Unit 2 has shown that the remedial excavations were effective at reducing soil vapor concentrations and the chemicals identified do not pose an unacceptable risk to human health. The multiple investigations were adequate to characterize the potential impacts from previous operations within Operable Unit 2, and no significant data gaps relative to past uses exist. The closest soil vapor samples collected were located approximately 70 feet north of the subject property across Bucknall Road. All concentrations of PCE, TCE and vinyl chloride were below laboratory detection limits. Benzene was detected above laboratory detection limits but below current commercial/ industrial ESLs, with the exception of one detection at 18 ug/m3, just slightly above the current ESL of 14 ug/m3. OU2 was granted closure by the SCCEHD in 2015 with no further action required. The larger release case was granted closure by the SCCEHD and RWQCB in 2017. A Deed Restriction was reportedly recorded for this site as a part of the closure of the case.

DRAFT

	Based on regulatory case closure, the relative distance, time elapsed, and the groundwater gradient, the site does not represent a REC. Non-Release Listings The CUPA listings are associated with permitted hazardous waste generation by several former automotive service tenants at this adjoining property. The EDR HIST Auto listing identified multiple automotive service tenants at this site between 1975 and 2014. The HWTS and HAZNET listings are associated with the removal and offsite disposal of hazardous substances under manifest. The UST databases identified the three above discussed 8,000-gallon gasoline USTs at this site. Based on the discussion above, the review of regulatory agency files for these listings was not deemed necessary, and the site does not represent a REC.

Facility Name	Elite Dry Cleaners
Address	128 South San Tomas Aquino Road
Distance & Direction	Approximately 1,000 feet northeast of the subject property
Hydrologic Position	Down-gradient
Databases Listed	EDR HIST Cleaners
Comments	EDR plotted the Elite Dry Cleaner site approximately 93 feet east-northeast of the subject property. However, this dry cleaner site is actually located at a retail shopping center approximately 1,000 feet northeast and down-gradient of the subject property. Based on distance, gradient and lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site does not represent a REC.

5.2 Vapor Migration

A vapor encroachment condition (VEC) is the presence or likely presence of Chemical(s) of Concern (COC) vapors in the vadose zone of the subject property caused by the release of vapors from contaminated soil and/or groundwater either on or near the subject property.

AEI conducted a limited screening for potential VECs that may affect the subject property. The VEC screening focused on the current and historical usage of the subject property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons.

Determination of AOC

To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by the current ASTM E2600 of 1,760 feet (1/3 mile) from the subject property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

DRAFT

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology:

Non-petroleum hydrocarbon COCs:

- 1,760 feet in the upgradient direction
- 365 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if Light, Non-Aqueous Phase Liquid, (LNAPL, i.e. floating product) is suspected:

- 528 feet in the upgradient direction
- 165 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if LNAPL is *not* suspected:

- 528 feet in the upgradient direction
- 95 feet in the cross-gradient direction
- 30 feet in the downgradient position

Additional adjustment of the AOC may be conducted based on AEI's professional judgment.

5.3 Per- and Polyfluoroalkyl Substances (PFAS)

As defined in Section 3.2.36 of the current ASTM Standard E1527, hazardous substance means "those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts." Hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA are outside of the scope of the current ASTM Standard E1527.

On July 8, 2024, the Final EPA rule became effective that designates perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as CERCLA hazardous substances. Per the current ASTM Standard E1527, once this rule went into effect, these substances are evaluated within the scope of this standard, and a release or likely release of PFOA and/or PFOS is considered a REC.

DRAFT

Other than PFOA/PFOS, compounds classified as PFAS are not currently classified as hazardous substances under CERCLA, and thus the potential presence of PFAS (other than PFOA/PFOS) is outside of the scope of the current ASTM Standard E1527, and does not constitute a REC at this time. However, the report User should be aware that regulatory criteria and classifications are subject to change.

AEI's research of potential PFAS contamination focuses on the release/likely release of PFOA/PFOS. However, if additional information pertaining to other PFAS is identified, AEI will also assess/discuss these compounds, as deemed applicable/appropriate within the scope of this investigation.

It should be noted that AEI's screening of PFOA/PFOS and other PFAS is based solely on review of the resources cited within this report. Identification, or lack thereof, is not a warranty that PFOA/PFOS or other PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFOA/PFOS and other PFAS, additional sources of contamination may exist at the subject property, adjoining sites and/or other nearby sites that were not identified by the limited data and screening tools cited within this report.

5.3.1 PFAS-Related Regulatory Database Listings

As an initial screening tool for potential PFAS contamination, AEI reviewed PFAS-related database listings from EDR.

5.3.2 Potential On-Site PFAS Sources/Concerns

AEI researched the standard historical and regulatory sources cited within this report to determine if a release or likely release of PFOA/PFOS has occurred at the subject property.

A voluntary industry phaseout of PFOA and PFOS was first implemented in the late 1990s and was fully implemented for PFOS by 2002 and PFOA by 2015. Although PFOA and PFOS have been generally phased out since 2015, studies have found that precursor PFAS in wastewater treatment systems may form PFOA and PFOS. As such, even after 2015, the presence of PFAS in wastewater discharges is considered a likely source of PFOA and PFOS contamination.

Potential Source	Yes	No
Past or present industrial operations that potentially included the use of PFAS (if "yes" see *Potential PFAS Sources from Industrial Uses* section/table below)		✔
The use or discharge of AFFF (if "yes" see *Potential Sources of AFFF* section/table below)		✔
Electroplating (1950s-present) NOTE: Electroplating (specifically hard chromium plating) is an industrial activity where PFAS-containing mist suppressants may have been used		✔
Agricultural uses, specifically 1970s-present that included application of biosolids/WWTP sludge that potentially contained PFAS		✔
Wastewater treatment plant (WWTP) (1960s-present)		✔
Landfill operations / waste disposal areas (1960s-present)		✔

DRAFT

Potential Source	Yes	No
Mining / quarrying / oil production		✔
Commercial car wash (1989-2010)		✔
Dry cleaner and/or commercial laundry (1970s-2010)		✔

AEI did not identify any obvious potential sources of PFAS contamination originating from on-site operations/sources.

DRAFT

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to the current ASTM Standard E1527, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative	Not provided	N/A	N/A	Not provided	Not interviewed; refer to Section 1.5
Key Site Manager	Mr. Dan Rohrer, Facility Manager, Harker School	February 21, 2025	In Person	1997	Interviewed; see Interview Summary table below

INTERVIEW SUMMARY

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Are you aware of any known plans for site redevelopment or change in site use?	N/A	No
Do you have any knowledge of previous environmental investigations conducted on site?	N/A	No
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	N/A	No
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	N/A	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	N/A	No
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	N/A	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property?	N/A	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	N/A	No
Are you aware of any fire incidents requiring fire department response?	N/A	No

Mr. Rohrer stated that a geotechnical survey was recently conducted on the southern portion of the building, which included the advancement of borings in paved areas and landscaped areas. The geotechnical investigation was being conducted as a part of a planned construction of a new building on the campus. No additional environmentally significant information was obtained from Mr. Rohrer.

DRAFT

6.1.2 Past Owners, Operators, and Occupants

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to the current ASTM Standard E1527 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Information not provided
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Information not provided
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Information not provided
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Information not provided

DRAFT

Question	Response/ Comment
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	Information not provided
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	Information not provided

6.3 Previous Reports and Other Provided Documentation

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

6.4 Environmental Lien and AUL Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

DRAFT

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	February 21, 2025
AEI Site Assessor(s)	Christopher Olsen
Property Escort(s)/ Relationship(s) to Property	Mr. Dan Rohrer, Facility Manager
Units/Areas Observed	Representative interior common areas such as: • Classrooms • Offices • Gymnasium • Kitchens • Storage rooms • Mechanical equipment rooms • Teacher's lounge Exterior areas: all exterior areas were accessed
Area(s) not accessed and reason(s)	None
Other Physical Constraints	• Large volume of parked vehicles • Large volume of stored materials Refer to Section 1.5 for discussion of limiting condition(s)
General Observations	The property is developed with seven (7) single-story and two-story structures that are occupied by Harker Lower School Campus. The buildings are used as classrooms, offices, gymnasium, commercial kitchens, teacher's lounge, restrooms, mechanical equipment rooms and storage rooms. In addition to the school buildings, the subject property is developed with multiple sheds and storage buildings, asphalt-paved parking/drive areas, sports courts, swimming pool, concrete-paved pool deck and walkways, playgrounds, athletic field, covered patios, perimeter fencing and security gates, and landscaped areas

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use (including drums, totes, and intermediate bulk containers)		
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids	✔	
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		

DRAFT

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Pools of Liquid		
Drains, Sumps, and Clarifiers	✔	✔
Pits, Ponds, and Lagoons		
Stained Soil or Pavement	✔	✔
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems or Cesspools		
Biomedical Wastes		
Other	✔	

7.1 Subject Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Elevator

The 2-story building on the subject property is equipped with a hydraulic elevator. Based on the age of the building (post-1978), it is unlikely that the hydraulic fluid within the equipment contains PCBs. No evidence of stains or leaks was observed at the base of the equipment during the site reconnaissance. The elevator is reportedly maintained by ThyssenKrupp. Based on the good condition and regular maintenance of the elevator, it is not a REC.

7.1.2 Drains, Sumps, and Clarifiers

Multiple storm drains were observed in the parking area of the subject property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not considered evidence of a REC.

The on-site kitchen drainage systems are equipped with grease traps. According to Mr. Rohrer, the traps were installed in 1997 and are periodically cleaned and emptied by a licensed contractor for off-site disposal. Based on the non-hazardous nature of material entering the grease trap, and the periodic cleanout, it is not a REC.

DRAFT

7.1.3 Stained Soil and Pavement

Minor amounts of oily surface staining were observed in the parking area. The staining appears to be from leaking vehicles and is surficial in nature. Based on the small size and the surficial nature of the staining, it is not considered evidence of a REC.

7.1.4 Other

Cleaning supplies, building maintenance supplies, and detergents are stored in the kitchens, maintenance supply storage rooms, janitorial closets and storage container. All chemicals were packaged in consumer quantities. Based on the nature of these materials, the presence of cleaning supplies at the subject property is not considered evidence of a REC.

Typical pool treatment chemicals such as muriatic acid and chlorine were observed in the pool pump room adjacent to the pool. Based on the observed conditions and small quantities in storage, the presence of the materials is not a REC.

7.2 Adjoining Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 Drains, Sumps, and Clarifiers

Several storm drains were observed in the parking areas of the adjoining properties and adjoining roadways. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not considered evidence of a REC.

7.2.2 Stained Soil and Pavement

Minor amounts of oily surface staining were observed in the adjoining roadways and parking areas. The staining appears to be from leaking vehicles and is surficial in nature. Based on the small size and the surficial nature of the staining, it is not considered evidence of a REC.

DRAFT

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refractory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property buildings, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment
Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.

Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.

8.2 Lead-Based Paint

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

DRAFT

Due to the age of the subject property buildings, there is a potential that LBP is present. Based on the potential presence of LBP, AEI recommends a lead risk assessment and that the owner implement an O&M Plan which stipulates that the assessment, repair and maintenance of damaged painted surfaces be performed to protect the health and safety of the building occupants. Local regulations may apply to LBP in association with building demolition/ renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 Naturally-Occurring Radon

Radon is a naturally-occurring, odorless, and invisible radioactive gas. According to the United States EPA, radon is the second leading cause of lung cancer. Natural radon levels vary and are closely related to geologic formations, soils, and foundation construction. Radon may enter buildings through basement sumps or other openings such as cracks and other holes in foundations.

US EPA Map

In 1993 the United States EPA prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map identifies counties of the US with the greatest potential for elevated indoor radon levels based on indoor radon measurement data, geology, soil parameters, and foundation types. The map divides the country into three radon zones based on potential radon accumulation, but is not to be considered predictive of radon accumulation.

The 1993 EPA map identifies the following three radon zones:

- Zone 1 - Highest potential for radon accumulation; average indoor radon levels may be greater than 4 pCi/L
- Zone 2 - Moderate potential for radon accumulation; average indoor radon levels may be between 2 and 4 pCi/L
- Zone 3 - Low potential for radon accumulation; average indoor radon levels may be less than 2 pCi/L

It is important to note that elevated levels of radon can be found in all three zones, and the EPA and other agencies recommend site-specific testing to determine radon levels at a specific property. Therefore, while the map does give an indication of the propensity of radon gas accumulation in structures in a county, elevated radon levels may be found in all three radon zones.

It should also be noted that EPA's 1993 Map of Radon Zones, while useful, was based on limited data collected prior to 1993 and therefore may be supplemented with available state-developed or other data to further understand the radon potential for a specific area.

According to the US EPA, the radon zone level for the County is Zone 2, which has a moderate potential for radon accumulation.

DRAFT

Radon sampling would be necessary to determine site-specific radon conditions. Radon sampling was not requested as part of this assessment.

8.4 Suspect Mold or Microbial Growth Conditions

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property buildings to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of suspect mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

DRAFT

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

4300 BUCKNALL ROAD
SAN JOSE, CA 95130

COORDINATES

Latitude (North):	37.2827180 - 37ˆ 16' 57.78''
Longitude (West):	121.9779660 - 121ˆ 58' 40.67''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	590602.3
UTM Y (Meters):	4126521.5
Elevation:	226 ft. above sea level

EXECUTIVE SUMMARY

RGA LUST ---------- Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 6 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 09/16/2024 has revealed that there are 46 E MANIFEST sites within approximately 0.25 miles of the target property.

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 28 CUPA Listings sites within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 2 DRYCLEANERS sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

DRAFT

THE HARKER SCHOOL-LOWER SCHOOL (Continued) **S109548854**

Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes: Returned to compliance on 05/19/2016. For brush cleaning of paints & ceramic glazes, facility has implemented a closed-loop water recycling system in arts and crafts. Operator stated that the filters that are removed from the system and managed as hazardous wastes but the settled solids in the two 5-gallon buckets that are upstream from the filter are not. These solids are presumed to be more contaminated than the filters that are removed and should be managed as hazardous wastes. Provide a determination as to how these solids will be managed. If hazardous, send a copy of the hazardous waste manifest to our office for review.

Violations Found: Yes

DRAFT

THE HARKER SCHOOL-LOWER SCHOOL (Continued) **S109548854**

Eval Type: Routine done by local agency
Eval Notes: A paper work review was started on 6/27/14 and a walk-through inspection of the facility occurred today. EPA ID # CAL000288394 is "Active". Hazardous waste permit is current. No containers of hazardous waste accumulation were observed during the inspection. 10 lead-acid batteries were accumulating in the "Corrosive" storage cabinet in the "Grounds Shop" area near the back loading zone. Ensure that a recycling receipt is obtained when the off-site shipment of these spent batteries occurs.
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-02-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Business plan was previously submitted electronically and was administratively accepted in CERS account # 10124260. Recommend using the on-line Emergency Response/Contingency Plan template in CERS to electronically document your emergency response plan in CERS. Facility has 70 gallons of Muriatic Acid stored in the outside storage shed near the pool equipment room; 11 x 50 lb containers of 68% Calcium hypochlorite (10 containers in the shed in the Grounds Shop area and 1 container in the pool equipment room); and 95 gallons of latex paint (13 x 5-gallon containers of latex paint {8 in the grounds shop storage cabinet and 5 in the maintenance shop} plus 30 x 1-gallon containers of latex paint in the maintenance shop). Facility has three reportable chemicals and is properly permitted for its number of reportable chemicals.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

KIRKWOOD AUTO CENTER (PALOMAR) (Continued) **S101624856**

single story buildings, which were bult in 1971. The site has been redeveloped by Taylor Morrison for residential use (Palomar). There was also a leaking underground storage tank case at this site, which was closed in October 1996. Due to the complexity of the contaminants, this site has been broken up into three different operable units: Operable Unit 1: Former Auto Center (APNs 403-62-001, -002, -007, -008, and -013 through -026) and portions of the private street, Operable unit 2: Former Tire Shop (APNs 403-62-003 through -006) and portions of the private street, and Operable Unit 3: Former Car Wash (APNs 403-62-009 through -012) and portions of the private street. PCE-impacted soil was removed from Operable Unit 2. Sampling has reported the presence of elevated concentrations of PCE in soil vapor in the former tire shop (OU2) and former car wash (OU3) areas. The elevated concentrations of PCE in soil vapor were not reported to be present in OU1. Soil Vapor Extraction (SVE) was utilized in OU3 to reduce PCE concentrations. Taylor Morrison installed a vapor intrusion mitigation system (VIMS) below the foundation of each of the affected homes (Lots 9 through 12) to protect the homes from vapor intrusion. This vapor barrier and venting system needs to be maintained for an extended period of time, and periodic reports on their effectiveness may need to be submitted to the DEH.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-12-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to perform a routine Hazardous Waste Generator inspection. A walk-through of Walgreens' pharmacy and hazardous waste storage area was conducted with Store Manager, Angelina Aldama. Noted the following: > HAZARDOUS WASTE STORAGE AREA Waste Toxics: 7 tote bins Universal Wastes: 4 bins Waste Reactives: 1 bin Waste Ignitables: 2 bins - Per Ms. Aldama, wastes are brought to a central area which is sorted daily by trained staff and shift leads via a scan system. The scan system identifies the proper hazardous waste bin in which the waste belongs, or identifies the product as non-waste, eligible for donation, and is returned to the warehouse for distribution. - No obvious incompatibles were observed. All tote bins were properly marked. > PHARMACY Non P-Listed Wastes: 3 bins P-Listed Wastes: 2 bins - Per Pharmacy employee, an inventory is done every month to account for expired items. Wastes are returned to Inmar for credit. Credit logs were reviewed, and [Truncated]

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Three historical dry cleaners (two former and one current) have been identified at two locations on the subject property. Moonlite Cleaners and Delias Cleaners occupied the former 1616 West Campbell Avenue address from 1965 to 1990. This location is now occupied by Nob Hill Market at the 1602 West Campbell Avenue address. During the dry cleaners use of the subject property suite, historical documents indicated that both cleaners utilized the chlorinated solvent tetrachloroethylene (PCE), in association with their dry cleaning operations. With the construction of the new buildings (1990-1991), Delia's Cleaners moved to a new suite/address (1610 West Campbell Avenue), and became a 'drop-off' only facility. Delia's Cleaners became a Martinizing Dry Cleaner by 1999, when a petroleum hydrocarbon-based (non-PCE) dry cleaning machine was installed. The former Kirkwood Hardware store was located at 1600 West Campbell Avenue from 1965 to 1988. This location is now occupied by the Big 5 sporting goods store at the same address. One underground storage tank (UST) for paint thinner was identified in fire department records for the hardware store. However, no documentation was identified indicating the UST was removed or that soil sampling was conducted during removal. Although the UST was described as located behind the building, its exact location or existence is uncertain. Kirkwood Printing operated at the former 1614 West Campbell Avenue address in the mid-1980s. This location is now occupied by the Elements Massage spa at the current 1604 West Campbell Avenue suite address. Historical records indicate this facility utilized solvents, developers, and fixers which contained chlorinated and/or petroleum compounds. Kirkprint operated at the current 1636 West Campbell Avenue address from 1990 to 1993. Available historical records indicated this facility utilized solvents, developers and fixers as well; although no gross violations or documented releases were noted, the potential release of hazardous materials may have occurred. Soil Vapor Extraction (SVE) began in January 2019 on the western portion of the site. In June 2019, the SVE system was moved to the eastern portion of the site.

The Resource Conservation and Recovery Act Information System

DRAFT

SHELL SERVICE STATION (Continued) **1004677545**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

review.
Violation Division: Santa Clara County Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 16137
Site Name: North Star Campbell
Violation Date: 10-19-2023
Citation: HSC 6.7 25298 - California Health and Safety Code, Chapter 6.7, Section(s) 25298
Violation Description: Failure to comply with temporary closure requirements.
Violation Notes: On 10/9/2023 tank integrity testing was conducted and was unable to verify tank integrity. The fuel within the 91 tank was removed and placed into another compatible on site. The tank has not been placed into temporary closure.
Violation Division: Santa Clara County Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 16137
Site Name: North Star Campbell
Violation Date: 10-19-2023
Citation: 23 CCR 16 2712(b)(1)(F) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(F)
Violation Description: "Failure to conduct secondary containment testing, or one or more of the following requirements: Perform the test of the secondary containment system upon installation, within six months of installation and every 36 months thereafter. Perform the test of a secondary containment component within 30 days of a repair or discontinuing vacuum, pressure or hydrostatic monitoring. Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by a certified service technician. Maintain records of secondary containment testing for 36 months."
Violation Notes: The last recorded secondary containment test that passed was completed on 6/22/2017. The site was passed due with a due date of 6/22/2020. Eco Check Compliance completed secondary containment testing on 9/22/2022 but it did not include tank testing. This test is required to be performed every 36 months. The test completed on 9/22/2022 would have cleared the previous due date and be do again no later than 6/22/2023.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DRAFT

ONE HOUR MARTINIZING DRY CLEAN (Continued) **S110502927**

Site ID: 140024
Site Name: Lux cleaners and alterations
Violation Date: 04-10-2014
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 04/20/2016. WASTE FILTERS AND CONTAMINATED SOLIDS ARE BEING COLLECTED IN AN OPEN TOP 55 GALLON DRUM WITH A SECURE LID. THE LABEL, INCLUDES ALL HAZARDOUS WASTE INFORMATIONAL ELEMENTS AS REQUIRED, EXCEPT FOR THE ACCUMULATION START DATE. THIS DATE SHOULD BE ADDED TO THE DRUM WHEN YOU FIRST BEGIN TO ADD WASTE TO THE DRUM. THE TIME UNTIL SHIPMENT IS REQUIRED (180 DAYS) IS BASED UPON THAT DATE AS PROVIDED. SEE "DRY CLEANING FACILITY REQUIREMENTS", SECTION C (HANDOUT PROVIDED).
Violation Division: Santa Clara County Environmental Health

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CENTRAL GAS (Continued) **S124437330**

Violation Date: 08-12-2020
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 10/18/2021. Fill spill container for 91 tank failed hydrostatic testing. Drain valve replaced, container retested and passed during inspection on 10/18/2021.

Eval Notes: I am on site at 1533 W Campbell Ave, Campbell. Gurbachan Chahal, Owner, is on site to provide access and records review. A 550 gallon Used Oil UST is on site, Tank ID #3, it is no longer used to collect Used Oil since June 2006. The City of Campbell no longer permitted car repair activity at this location for the service in the facility. This is in record and confirmed by An Thanh Nguyen, Smog Check Business Owner. This UST has not been closed or cleaned. It is permitted to remain in place by the Santa Clara County Fire Department. This system includes a floor drain with opening in the garage bay to the UST with a wooden lid covering the drop tube. It is approximately 4" drain pipe that rises about 4 inches above the floor. This is in the middle of the shop, between the two work bays. This Used Oil UST and drain system shall be maintained as secure, labeled properly, and inspected and recorded regularly as long as it is in place and permitted by the SCCFD. [Truncated]

CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-30-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a hazardous waste inspection. Facility is a retail store. Performed a facility walk-through with Alyssa Romero and observed the following hazardous waste in the rear stockroom: -Waste toxics: 1 x tote bin -Waste oxidizer: 1 x tote bin -Waste corrosives (bases): 1 x tote bin -Waste corrosives (acids): 1 x tote bin -Waste flammables: 1 x tote bin -Universal Waste: 1 x tote bin & 1 pallet Facility places any potential hazardous waste is placed in bags in front of store. Nightly, staff sort through bags and any hazardous waste that is identified is placed in hazardous waste tote bins in rear stockroom. Per Alyssa Romero, hazardous waste shipments occur approximately every 3 months. Managers perform weekly audits of hazardous waste storage area as well as garbage management process. Employees receive initial hazardous waste training via an online system. Guidance materials are provided by Big Lots corporate detailing hazardous waste management [Truncated]

SHERWIN-WILLIAMS #8106 (Continued) **S121790214**

1, Section(s) 265.33

Violation Description: Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.

Violation Notes: Returned to compliance on 10/17/2017. Observed a fire extinguisher in-between paint mixing area and hazardous waste storage area as well as one near sink that has not been annually maintained. Make arrangements to have fire extinguisher serviced within 30 days. Observed eye wash near sink with service tag full and indicating last inspection occurred in 2015.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date:	11-02-2021
Citation:	23 CCR 16 2715(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)
Violation Description:	Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).
Violation Notes:	Returned to compliance on 08/24/2022. Annual monitoring system certification was performed late (usually done in August; not performed until November)
Violation Division:	Santa Clara County Fire Department
Violation Program:	UST
Violation Source:	CERS,
Site ID:	6677
Site Name:	ARCO AM/PM
Violation Date:	08-12-2020
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 08/12/2020. Initial overfill prevention equipment inspection was conducted late (past 10/13/2018).

DRAFT

ARCO 5370 (Continued) **U001600894**

Violation Date:	11-02-2021
Citation:	HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description:	"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes:	Fill spill containers for 87 Master and 91 tanks failed integrity testing. Additionally, spill containers for 87 Master (potentially), 87 Siphon, and 91 tanks do not meet the 5 gallon capacity requirement (repeat violation from the 8/12/2020 inspection).

Violation Date: 08-22-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at

DRAFT

ARCO 5370 (Continued) **U001600894**

installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 01/23/2020. Audible and visual component for alerting fuel transfer operator was not functional. Observed functional on 1/23/2020.
Violation Division: Santa Clara County Fire Department

Violation Program: UST
Violation Source: CERS,

Site ID: 6677
Site Name: ARCO AM/PM
Violation Date: 08-12-2020
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Fill spill containers for 87 Master and 91 tanks failed integrity testing. Additionally, spill containers for 87 Master (potentially), 87 Syphon, and 91 tanks do not meet the 5 gallon capacity requirement.

Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: State identification # CAL000360042 is active. Only hazardous waste observed on-site at time of inspection included waste hoses contaminated with gasoline. REQUIRED ACTION: 1) Within 30 days, provide to the County 3 years worth of most recent hazardous waste disposal receipts. Note: No uniform hazardous waste manifests observed on the hazardous waste tracking system. 2) Collect gasoline contaminated waste (eg hoses) in a closed container to prevent evaporation (thermal treatment of hazardous waste). MINOR VIOLATIONS CORRECTED AT TIME OF INSPECTION: Observed an unmarked pile of gasoline contaminated hoses on the ground in the waste storage area. WASTE MARKED.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The Site consists of the parcel of land at 100 North San Tomas Aquino Road comprising a total of 9.23 acres of land. The Site is developed with three single-story commercial buildings all constructed in 1971 and is known as San Tomas Plaza. The largest building is 63,924 square feet, consists of nine retail units, and borders the eastern Site boundary (Building 1). The next largest building is 52,211 square feet, consists of six retail units, and borders the northern Site boundary (Building 2). The third and smallest building is 6,063 square feet, is designed as a single-tenant structure, and is situated on the southwestern corner of the Site (Building 3). The former dry cleaner tenant space is in the northernmost portion of Building 1 of the San Tomas Plaza strip mall. Building 1 is currently occupied by nine tenant businesses, with one unit vacant (the former dry cleaner tenant space being investigated). The former dry cleaner tenant space is bordered by Jovies Pho Restaurant on one side, and Launderlux coin operated laundromat on the other. The other Building 1 tenant spaces include Modern Haircuts barber shop, Tsing Tao Chinese restaurant, CVS Pharmacy, former D&J Hobby with a new indoor pool facility under construction, Martial Arts Studio, and Le Quy Pho restaurant. Building 2 currently is occupied by Nail and Spa salon, Delicious Donuts cafT and bakery, Payday Advance lending store, Dollar Tree retail sales, Ace Hardware store, and Med-X Fitness studio. PCE was detected at a concentration exceeding the Tier 1 ESL for risk of leaching to groundwater of 420 g/kg in the soil sample collected at a depth of 6 feet bgs, but attenuated down to between 59 and 84 g/kg in the three soil samples collected at a depth of 9 feet bgs. PCE was detected at concentrations of 130,000 and 44,000 micrograms per cubic meter of air (g/m3), respectively, in two soil-gas samples, SG-1 and SG-2, collected in July 2018 at a depth of 5 feet bgs.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

DRAFT

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

DRAFT

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

DRAFT

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

Next Scheduled EDR Contact: 04/14/2025
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data
The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Longitude (West):	121.977966 - 121ˆ 58’ 40.68’’
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	590602.3
UTM Y (Meters):	4126521.5
Elevation:	226 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5640416 SAN JOSE WEST, CA
Version Date:	2012

DRAFT

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

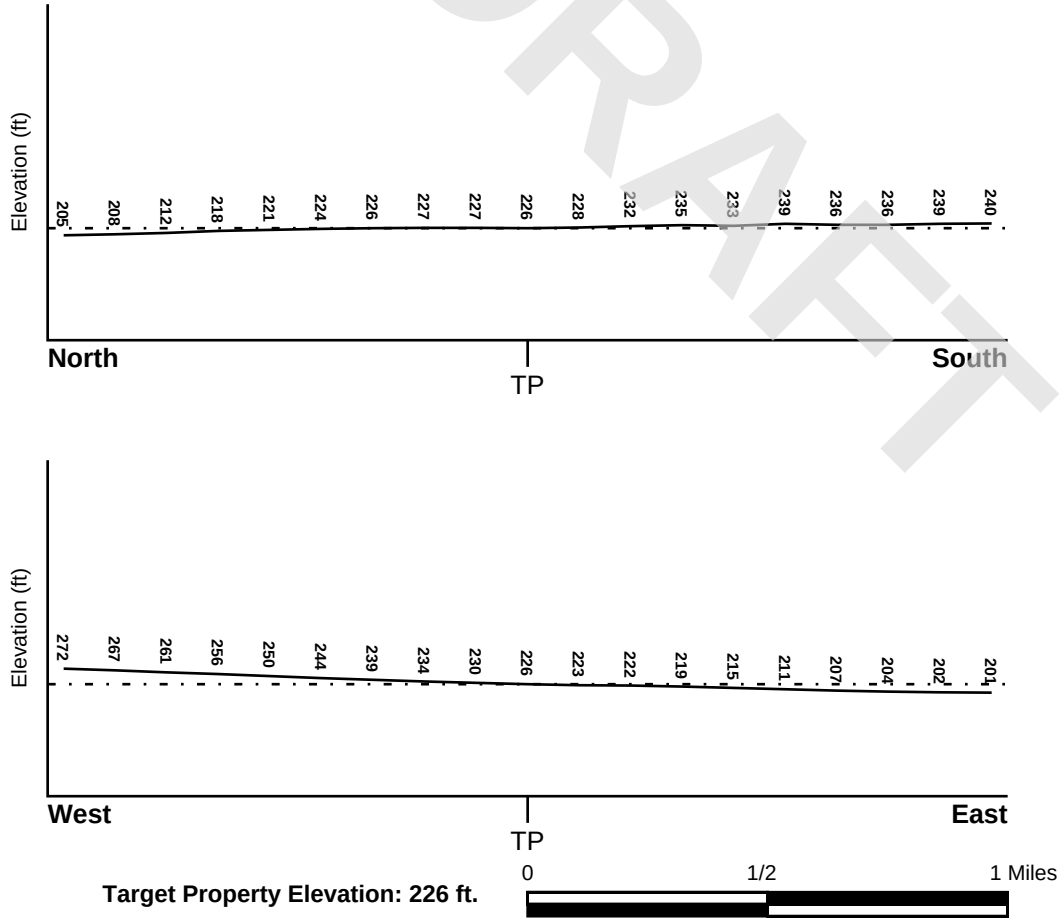

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

DRAFT

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 226 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06085C0236H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06085C0237H	FEMA FIRM Flood data

06085C0239H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JOSE WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

DRAFT

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Certified Sanborn® Map Report

02/13/25

Site Name:

505900
4300 Bucknall Road
San Jose, CA 95130
EDR Inquiry # 7898593.3

Client Name:

AEI Consultants
2500 Camino Diablo
Walnut Creek, CA 94597
Contact: Christian Cagonot

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 30AF-4027-8928

PO # 394668

Project 505900

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 30AF-4027-8928

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

AEI Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

EDR Historical Topo Map Report

02/13/25

Site Name:

505900
4300 Bucknall Road
San Jose, CA 95130
EDR Inquiry # 7898593.4

Client Name:

AEI Consultants
2500 Camino Diablo
Walnut Creek, CA 94597
Contact: Christian Cagonot

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 394668

REVIEWED
By Mickey at 4:13 pm, Aug 12, 2014

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0271425
Facility Name: THE HARKER SCHOOL-LOWER SCHOOL
Site Address: 4300 BUCKNALL RD, SAN JOSE, CA 95130

Inspection Date: 07/02/2014

HW Generator Type: <100 KG/MO.
Consent to Inspect Granted By: DAN RORHER, MAINTENANCE DIRECTOR

☐ **RCRA LQG**
☐ **Pictures Taken**
☐ **Samples Taken**

Summary of Violations & Notice to Comply

Program: PR0376562 - HAZARDOUS WASTE GENERATOR - 2240
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
G010	II	**HAZARDOUS WASTE DETERMINATION** Facility failed to determine whether a waste is a hazardous waste and/or keep copies of test results, waste analyses or other hazardous waste determination records. ***Ensure that wastes from the following activities are non-hazardous or are managed as hazardous wastes: In arts & crafts: wastewater/clay trap wastes from brush cleaning of paints and ceramic glazes. Several glazes contain soluble copper and MSDSs could not be reviewed.*** Determine whether the waste is hazardous using generator knowledge, or by having the waste analyzed by a state-certified environmental laboratory. Submit the results of your determination, including any laboratory reports, to HMCD. A list of state-certified laboratories is available at www.dhs.ca.gov/ps/ls/elap/. Cease any disposal of the waste as non-hazardous waste until the determination is complete. Keep all hazardous waste determination documents for at least 3 years from the date the waste was last shipped. [CCR 66262.11, 66262.40(c)]	
G220	M	**TRAINING: SQG** Personnel are not adequately trained on managing hazardous waste. ***Obtain training that thoroughly familiarizes employees with proper hazardous waste management practices. (Brochure for free hazardous waste management training was provided.)*** Provide training to ensure that all personnel are thoroughly familiar with proper waste handling and emergency response procedures relevant to their responsibilities during normal facility operations and emergencies. [CFR 262.34(d)(5)(iii)]	
G430	M	**MANAGEMENT OF CONTAMINATED RAGS** Facility managed hazardous waste as exempt "reusable soiled textile materials" (i.e., contaminated rags), but did not meet requirements for exemption. ***Observed paints, thinners, oils, fuels, on site but no provision for management of contaminated rags was found. Either manage these contaminated rags as hazardous waste or recycle rags through a commercial laundry and keep receipts.*** Begin managing the waste as hazardous waste, or meet all of the following: 1) the rags must be sent to an authorized commercial laundry facility, and 2) the rags must not: a) be regulated under RCRA; b) be used to clean up or control a reportable spill or release; c) be contaminated with any hazardous waste added after the original use of the rags; and d) release any free liquids. Summary of Violations & Notice to Comply

VC	Class	Violation	Corrective Actions Taken
G443	M	**CONTAINER MARKING: UNIVERSAL WASTE** Facility failed to properly label Universal Waste. ***Observed a waste CRT on top of the flammable storage cabinet near the Back Loading Zone area. Observed one crate of spent fluorescent tubes that was unlabeled in the pool equipment room.*** Clearly identify the waste type on all Universal Wastes or Universal Waste containers. The label wording must match that listed in the law or regulation for the type of Universal Waste. The labeling requirements are summarized in the Universal Waste Management Requirements document (HMCD-108) available at www.ehinfo.org/hazmat. [Note: Areas that have clear boundaries and are designated for the storage of electronic devices or CRT materials may be labeled in lieu of labeling individual wastes or waste containers.] [CCR 66273.34 HSC 25201.16(f)(6)]	

Comments: A paper work review was started on 6/27/14 and a walk-through inspection of the facility occurred today.

EPA ID # CAL000288394 is "Active". Hazardous waste permit is current.

No containers of hazardous waste accumulation were observed during the inspection.

10 lead-acid batteries were accumulating in the "Corrosive" storage cabinet in the "Grounds Shop" area near the back loading zone. Ensure that a recycling receipt is obtained when the off-site shipment of these spent batteries occurs.

Program: PR0409761 - HAZARDOUS MATERIALS BUSINESS PLAN - BP01
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
S105	M	**HMBP INCOMPLETE** The Hazardous Materials Business Plan (HMBP) submitted to HMCD is incomplete. ***DISREGARD CORRECTIVE ACTION TEXT, BELOW REGARDING SUBMITTAL OF HARD COPY FORMS. SEE www.EHinfo.org/hazmat FOR DETAILS REGARDING ELECTRONIC REPORTING REQUIREMENTS. A FACILITY RECORD FOR THIS SITE HAS ALREADY BEEN CREATED ON THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) WEBSITE AT http://cers.calepa.ca.gov. REQUEST ACCESS TO THAT CERS RECORD AND SUBMIT A REVISED HMBP WITHIN 30 DAYS.*** ***Adjust your chemical inventory to reflect what was observed during the inspection. 550 lbs of calcium hypochlorite solid (10 containers in the Grounds Shop cabinet and 1 container in the pool equipment room); 95 gallons of latex paint (40 gallons in the Grounds Shop cabinet and 55 gallons in the maintenance shop).*** Amend and resubmit the plan to HMCD with all of the required elements including: 1) a complete hazardous materials inventory, 2) a hazardous materials storage map and site plan, 3) emergency response plans and procedures, and 4) an employee training plan. The form (UN-020) is available at www.EHinfo.org/hazmat. [19 CCR 2729; SCCO B11-301]	
S130	II	**EMERGENCY RESPONSE TRAINING** Facility is subject to the Hazardous Materials Business Plan (HMBP) requirements, but failed to provide employees with required hazardous materials emergency response training. ***Obtain and document emergency response training for all employees and ensure that it is refreshed annually.*** Provide initial training for new employees and annual training for all employees. The training must cover relevant emergency response procedures for hazardous materials releases and threatened releases, as described in the HMBP. [HSC 25504(c), 19 CCR 2732]	

Comments: Business plan was previously submitted electronically and was administratively accepted in CERS account # 10124260. Recommend using the on-line Emergency Response/Contingency Plan template in CERS to electronically document

Facility Name: THE HARKER SCHOOL-LOWER SCHOOL
Site Address: 4300 BUCKNALL RD, SAN JOSE, CA 95130

Summary of Violations & Notice to Comply

your emergency response plan in CERS.

Facility has 70 gallons of Muriatic Acid stored in the outside storage shed near the pool equipment room; 11 x 50 lb containers of 68% Calcium hypochlorite (10 containers in the shed in the Grounds Shop area and 1 container in the pool equipment room); and 95 gallons of latex paint (13 x 5-gallon containers of latex paint {8 in the grounds shop storage cabinet and 5 in the maintenance shop} plus 30 x 1-gallon containers of latex paint in the maintenance shop).

Facility has three reportable chemicals and is properly permitted for its number of reportable chemicals.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 08/01/2014, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Key to Acronyms and Regulatory Terms

XX CCR	California Code of Regulations, Title XX
XX CFR	Code of Federal Regulations, Title XX
Class	Violation classification: I = Class I violation, II = Class II violation, M = Minor violation, C = Corrected minor violation [HSC §25110.8.5, HSC §25117.6, CCR §66260.10]

OFFICIAL NOTICE OF INSPECTION - SUPPLEMENTAL INFORMATION

This Official Notice of Inspection (NOI) documents the results of an inspection by HMCD, including a list of alleged violations, evidence in support of the alleged violations, corrective actions that must be taken by the facility, and general observations.

What am I supposed to do upon receiving a NOI?

- Correct the violations within 30 days of the inspection date, unless otherwise noted.
- In the "Corrective Actions Taken" column, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed.
- Certify that the facility has returned to compliance by signing and dating the certification statement at the end of the report.
- Make a photocopy of the NOI and any attachments for your records.
- Within 5 days of achieving compliance or 35 days of the inspection date, whichever comes first, return the original copy of the report and any attachments to HMCD at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716.

What if there are violations that cannot be corrected within 30 days?

For each violation that cannot be corrected within 30 days, submit a written Compliance Plan describing the corrective actions you propose to take and the date by which the actions will be completed. State law grants up to 30 days to correct minor violations without penalty. Minor violations that are uncorrected after 30 days, and class I and II violations may be subject to enforcement action. To lessen the possibility of enforcement action, correct all violations as soon as possible.

What if I disagree with a violation on the NOI?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, explain in detail why you believe the alleged violation was incorrectly cited.

What about photographs or samples taken during the inspection?

A co-located sample will be given to you upon request if adequate sample volume is available. Photographs and sample analytical results will not generally be available until after the inspection has been concluded. A copy of photographs and/or analytical results will be provided to you upon written request. Photographs and sample analytical results may be withheld in the event of a criminal investigation or other ongoing investigation.

Warning:

- It is a violation of State law to make a false statement that a facility has returned to compliance[HSC §25404.1.2(c)(2)].
- Making a false statement regarding a hazardous waste violation is punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year [HSC §25191(b)].
- Making a false statement regarding an underground storage tank violation is punishable by a fine of not less than $500 or more than $5,000 [HSC § §25299(a)(8), 25299(b)(7)].
- HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility [HSC §25187.8(i)].

PLAN CHECK ASSIGNMENT FORM

Plan Check No.: 98-02152 Submittal Date: 5/7/98 Assignment Date: 5/11/98

Project Name: HARKER/BUCKNALL Scope of Work: IA- KITCHEN REMODEL

Please review the attached plans, calculations and other documents:

Type of Plan Check	Plan Checker Assigned	Targeted Start Date	Allocated Plan Check Time
(X) Building Non-Structural	David Choi	5/14/98	hrs.
( ) Building Structural		/ /	hrs.
(X) Plumbing/Mechanical	Dave Altstadt	5/14/98	hrs.
(X) Electrical	Gil Resendiz	5/14/98	hrs.
(X) Fire	Scott McMillan/	/ /	hrs.
( ) Other 9859878		/ /	hrs.

- Building Plan Checker David Choi is the Project Manager.
- At each stage of the plan check, update the log book and computer screens.
- All plan checks shall be completed with plan check correction cover sheet and check-list sheet. If comments are also made on the plans, they shall also be noted on the check-list sheet. Return all your correction comments to Project Manager.
- Keep one copy of all correction list and correspondence in our office file. Keep one copy of all correction list in your file until permit is issued.
- If the plans are approved, then return the approved set to the Project Manager.
- For projects with consultant or 3rd party plan checker, attach copies of all comments and responses to the approved office set of plans.

Note: Plan Check starting date not to exceed the following timelines from the plan submittal date:

EXEMPTION FROM ENVIRONMENTAL REVIEW APPLICATION

TO BE COMPLETED BY PLANNING STAFF

FILE NUMBER CP09-~~029~~ 030		COUNCIL DISTRICT 1	RECEIPT #:
QUAD # 112	ZONING DISTRICT R-1-8	GENERAL PLAN DESIGNATION	AMOUNT:
			DATE:
LOCATION SW/C Buckwall Rd & San Tomas Aquino Rd			BY:

TO BE COMPLETED BY APPLICANT
(PLEASE PRINT OR TYPE)

PROJECT DESCRIPTION (Include square footage of any new construction)
INSTALLATION OF A SINGLE MODULAR CLASSROOM (APPROX. 1,056 SF)

ASSESSOR'S PARCEL NUMBER(S)	ACREAGE (gross)
403-59-012	8.98

DOES THE PROJECT INVOLVE HUD FEDERAL FUNDING? ☒ NO ☐ YES

PLEASE INDICATE WHETHER USE OF HUD FUNDING IS ANTICIPATED, FOR THE PROPOSED PROJECT.

☒ NO ☐ YES

If yes, indicate type of funding (i.e. CDBG Grant, HOME Investment Partnership Program, Section 108 Loan Guarantee, etc.), funding amount, whether awarded (if known) or application is pending, and fiscal year of award or application request.

PLEASE NOTE: Projects involving 1) acquisition of real property involving a change of use, or 2) new construction may require an Environmental Assessment (EA). Concurrent environmental review per the California Environmental Quality Act (CEQA) is also required. The obtainment of a qualified environmental consultant to provide documentation services (i.e. a combined Initial Study/EA) is strongly recommended.

PLEASE REFER TO THE ATTACHED LIST OF EXEMPTIONS AND FIND THE SECTION NUMBER OF THE EXEMPTION THAT BEST DESCRIBES YOUR PROJECT. WRITE THAT SECTION NUMBER IN THE SPACE PROVIDED.

SECTION #: 15314

Describe how your project conforms to the code section cited above:

THE PROPOSED PORTABLE CLASSROOM WILL NOT INCREASE FACULTY OR STUDENT ENROLLMENT.

CERTIFICATE OF PERMIT

NOTICE OF GRANTING OF A PERMIT
PURSUANT TO THE PROVISIONS OF
TITLE 20 OF THE SAN JOSÉ MUNICIPAL CODE

NOTICE IS HEREBY GIVEN that a permit (**File No. CP09-030**), covering all of that certain property hereinafter described is granted to **Harker School** by the Planning Commission of the City of San José on **September 23, 2009**, and becomes effective on the date recorded as shown above. This permit contained conditions, restrictions, and use limitations, which are subject to enforcement by the City. The subject property is located on the **southwest corner of Bucknall Road and San Tomas Aquino Road (4300 Bucknall Road), San José, California.** That said real property is more particularly described in the attached legal description.

Said permit is on file in the office of the Department of Planning, Building and Code Enforcement of the City of San José and is available for inspection at said office by any person interested herein.

DRAFT

City of San José
JOSEPH HORWEDEL, Director
Planning, Building and Code Enforcement

Darryl Boyd, Deputy

State of California
County of Santa Clara

On 12-3, 2010, before me, Carmen Stanley, Notary Public, personally appeared Darryl Boyd, who proved to me on the basis of satisfactory evidence to be the person whose name is subscribed to the within instrument and acknowledged to me that he executed the same in his authorized capacity, and that by his signature on the instrument the person, or the entity upon behalf of which the person acted, executed the instrument.

I certify under PENALTY OF PERJURY under the laws of the State of California that the foregoing paragraph is true and correct.

WITNESS my hand and official seal.

CARMEN STANLEY
Commission # 1792008
Notary Public - California
Santa Clara County

Pleasanton, California 94588

DRAFT

Subject: Voluntary Cleanup Program Case Closure: Kirkwood Auto Center (Palomar), 125 S. San Tomas Aquino Road, Campbell, CA Case No. 07S1W33B05s

Dear Mr. Kaushagen:

This letter confirms the completion of site investigation and remedial action activities for the release of waste formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the release of waste are greatly appreciated.

Based on information in the above-referenced file, and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and remedial action carried out at the above-referenced site satisfies the cleanup goal requirements of the remedial action agreement between the responsible party and the Department of Environmental Health as outlined in Section 101480 of the Health and Safety Code, and that no further action related to the release of waste at the site is required. It should be noted that any additional or previously unidentified contamination at this site may require further investigation or cleanup.

The data collected at the site and presented in the attached Case Closure Summary Report for Operable Unit 3 (OU3), Section 3, indicates the following soil vapor conditions were reported at the site at the time of closure:

- Soil Vapor: 270,000 micrograms per cubic meter ($\mu g/m^3$) PCE at SVP-38, 30 feet below grade and 1,600 $\mu g/m^3$ TCE at SVP-38, 30 feet below grade. The most recent maximum PCE concentration at 5 feet below grade is 1,800 $\mu g/m^3$ at SVP-38.

Site Management Requirements: Residual contamination in groundwater, soil and soil vapor remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the

Board of Supervisors: Mike Wasserman, Cindy Chavez, Dave Cortese, Ken Yeager, S. Joseph Simitian
County Executive: Jeffrey V. Smith

disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement.

OU3 of this site has been redeveloped with single family homes and a private road. In order to help prevent potential vapor intrusion, a vapor intrusion mitigation system (VIMS) has been installed beneath each of the four residential homes within OU3. Deed Restrictions have been filed for each of the properties which restrict certain activities in order to protect the VIMS from being compromised. Please refer to the Deed Restrictions, which can be located on GeoTracker (https://geotracker.waterboards.ca.gov/profile_report?global_id=T10000005089), for specific restrictions and notification requirements.

This notice is issued pursuant to subdivision (e) of Section 101480 of the Health and Safety Code. Please contact our office if you have any questions regarding this matter.

Sincerely,

Michael Balliet
Interim Director
Department of Environmental Health

CASE CLOSURE SUMMARY[1]
Voluntary Cleanup Program

Date: January 30, 2015

I. AGENCY INFORMATION

Agency Name: County of Santa Clara, Department of Environmental Health	Address: 1555 Berger Drive, #300
City/State/Zip: San Jose, CA 95112	Phone: (408) 918-3400
Responsible Staff Person: Lani Lee	Title: Senior Hazardous Materials Specialist

II. CASE INFORMATION

Site Facility Name: Kirkwood Auto Center – Operable Unit 1		
Site Facility Address: 125 S. San Tomas Aquino Road, Campbell 95008		
VCP Case No.: 07S1W33B05s* This case is comprised of 3 operable units	GT Global ID No. T10000005089	APN: 403-62-001, -002, -007, -008, and -013 through -026 and portions of the private road for the development (see Attachment 2 for a Site Plan)
Responsible Parties	Address	Phone Number
Taylor Morrison of CA, LLC, N. CA Division c/o Stuart Wagner	81 Blue Ravine Rd., Suite 220 Folsom, CA 95630	(916) 355-8900

* Closed fuel leak case 07S1W33B01f (closed 10-30-96) within Operable Unit 1.

System/Source of Contamination	Contents	Closed In Place/Removed?	Date
Hydraulic Lifts	Hydraulic Oil	Removed	5/13
Historical Agricultural Use of Property	Pesticides	Discontinued	--

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Unknown		
Site characterization complete? Yes		
Monitoring wells installed? No	Number: --	Proper screened interval? NA
Highest GW Depth Below Ground Surface: 51.5 Feet*	Lowest Depth: 61.33 feet*	Flow Direction: North*
Most Sensitive Current Use: Potential Drinking Water		

* Groundwater data as reported for the closed fuel leak case 07S1W33B04f at 1533 West Campbell Avenue (closed 2-9-06), approximately 600 feet north of the site.

[1] This case closure summary report is a summary of site conditions based on data collected at the site and included in the case file. It should be used in conjunction with the complete case file which can be reviewed online at http://geotracker.waterboards.ca.gov/

DRAFT

Kirkwood Auto Center
Operable Unit 1
125 S. San Tomas Aquino Road, Campbell
07S1W33B05s

Summary of Production Wells in Vicinity: There are no active water supply wells located within a one-mile radius of the site.	
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Basin
Is surface water affected? No	Nearest SW Name: San Tomas Aquino Creek ~2,300 feet south of the site
Off-site Beneficial Use Impacts (Addresses/Locations): None.	
Reports on file? Yes	Where are reports filed? SWRCB Geotracker Database

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Tank	10 Hydraulic Lifts	Recycled; Sims Metals, Hayward, CA	5/13

Description of Interim Remediation Activities: None.

CONTAMINANT CONCENTRATIONS IN SOIL[1]
Please see Attachment 3 for additional information on contaminant locations and concentrations

	Soil (ppm)			Soil (ppm)	
Contaminant	Max[2]	After[7]	Contaminant	Max[2]	After[7]
TPH (Hydraulic Fluid)	49,000[3]	--	Benzene	ND[6]	--
Polychlorinated Biphenyls	0.054[4]	--	Arsenic	3.0[5]	--
Organochlorine Pesticides	ND[5]	--	Lead	7.7[5]	--
Tetrachloroethene (PCE)	ND[6]	--			

Notes:

1. This table presents maximum historical contaminant concentrations in soil and documented contaminant concentrations if confirmation sampling was conducted.
2. The maximum concentration listed is the highest concentration reported for a specific constituent in soil samples collected at the site. Soil removal or remediation was not conducted in OU1.
3. Soil sample H-9-2 collected at 2 feet below the ground surface (ft bgs) during hydraulic lift removal on 6/4/2013. The Regional Screening Level (RSL) for direct contact in a residential use as set by the US EPA is 230,000 ppm for TPH(hf).
4. Soil sample H-8-8 collected at 8 ft bgs during hydraulic lift removal on 5/30/13. The Environmental Screening Level (ESL) for direct contact in a residential use as set by the Regional Water Quality Control Board – SF Bay Area is 0.22 ppm for PCBs.
5. Soil sample S3 collected at 9-inches below the ground surface on 8/15/12 was the only sample collected in OU1 that was analyzed for Organochlorine Pesticides, Arsenic and Lead.
6. All soil samples that were collected in OU1 and analyzed for these constituents were not reported to have them present above the laboratory reporting limits.
7. "--" indicates that confirmation soil sampling was not conducted.

DRAFT

CONTAMINANT CONCENTRATIONS IN SOIL VAPOR[1] Please see Attachment 4 for additional information on contaminant locations and concentrations					
	Micrograms per cubic meter			Micrograms per cubic meter	
Contaminant	Max[2]	Res. ESL[3]	Contaminant	Max[2]	Res. ESL[3]
Tetrachloroethene	150[4]	210	Acetone	53[6]	16,000,000
Trichloroethene	ND[5]	300	Toluene	26[6]	160,000
Benzene	28[6]	42			

Notes:

1. This table presents maximum historical contaminant concentrations and most recent contaminant concentrations in soil vapor reported in micrograms per cubic meter ($\mu g/m^3$).
2. The maximum concentration listed is the highest concentration reported for a specific constituent in soil vapor samples collected at the site.
3. Res. ESL – The Environmental Screening Level for residential site usage as established by the Regional Water Quality Control Board – SF Bay Area.
4. Soil vapor sample SVP-Lot-2 collected from the center of Lot 2 at 5 feet below the ground surface (ft bgs) on 11/11/14.
5. All soil vapor samples collected in OU1 were not reported to have concentrations of these constituents present above the laboratory reporting limits.
6. Soil vapor sample SVP-Lot-8 collected from the center of Lot 8 at 5 ft bgs on 11/11/14.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Environmental Health Department staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a significant risk to human health.		
Site Management Requirements: Operable Unit 1 of this site is currently being redeveloped with single family homes and a private road. The County has been notified of the ongoing redevelopment activity. Residual contamination both in soil and soil vapor remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.		
Should corrective action be reviewed if land use changes? No		
Number of Wells Commissioned: 0	Number of Wells Decommissioned: 0	Number of Wells Retained: 0
List Enforcement Actions Taken: None.		
List Enforcement Actions Rescinded: None.		

DRAFT

V. ADDITIONAL COMMENTS, DATA, ETC.

The site is approximately 2 acres in size and has been sub-divided since the case was opened. The site was developed for automotive service, car washing and fueling uses in the early 1970s and operated such activities in some capacity through late 2012. The site was sub-divided for redevelopment for residential use. The subdivision includes separate parcels for each residence, some open space and a private road.

Due to the presence of distinct release points, this site has been broken up into three different operable units:
Operable Unit 1: Former Auto Center (APNs 403-62-001, -002, -007, -008, and -013 through -026),
Operable Unit 2: Former Tire Shop (APNs 403-62-003 through -006), and
Operable Unit 3: Former Car Wash (APNs 403-62-009 through -012)

Please refer to the figure in Attachment 2, which illustrates how the private road was broken up into the different operable units.

Operable Unit 1

Site History:

Operable Unit 1 (OU1) comprises the majority of the site and includes 17 residential lots and common areas and roads of the new development. Former operations in these areas included small auto repair and service businesses. Contaminants found in this area appear to be from small surface type releases and releases from hydraulic lifts.

The underground storage tanks (USTs) associated with a previously closed fuel leak case for Kirkwood Carwash (07S1W33B01f) were located within OU1. This fuel leak case was closed October 30, 1996. At the time of case closure it was noted that residual contamination remained in soil of 320 parts per million (ppm) Total Petroleum Hydrocarbons (TPH) as Gasoline (TPHg), 0.011 ppm Toluene, 0.2 ppm Ethylbenzene, and 6.1 ppm Xylenes. At the time of closure, groundwater was not reported to have concentrations of these constituents of concern. Following case closure, the wells remained in place at the site.

2012 – In August, a near surface soil sample (S3) was collected in OU1 and analyzed for arsenic, lead and organochlorine pesticides (OCPs). It was not reported to have concentrations of OCPs present above the laboratory reporting limits and 3 ppm Arsenic and 7.7 ppm Lead.

2013 – In March, the monitoring wells associated with the closed fuel leak case were destroyed.

In May and June, hydraulic hoists were removed from OU1. Following removal, soil samples were collected from the hoist excavations and along piping. 18 soil samples were collected and were reported to contain maximum concentrations of 49,000 parts per million (ppm) Total Petroleum Hydrocarbons (TPH) as Hydraulic Fluid (TPHhf) and 0.054 Polychlorinated Biphenyls (PCBs). The highest TPHhf and PCB concentrations were reported in soil samples collected from excavations for hoists 8 and 9. It was reported that shallow soil appeared to be impacted in these excavations. The TPHhf concentrations were compared with the Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential site usage of 230,000 ppm. None of the TPHhf concentrations (including the shallow soil samples) were reported to be above the RSL.

Also at this time 2 soil samples were collected below a sump located near current parcel -018 at 3 feet below the ground surface (ft bgs). The sump was associated with the Former Tire Shop. The soil samples were analyzed for Volatile Organic Compounds (VOCs) and metals and were reported to have detectable concentrations of Tetrachloroethene (PCE) up to 0.016 ppm and metals.

A concrete patch was observed in the former A-1 Radiator & Auto Repair space and a soil sample was

DRAFT

collected from 1 foot in that area. The sample was analyzed for VOCs and metals. VOCs were not reported to be present above the laboratory reporting limits. Metals were reported to be present.

In December, 13 soil borings (SB1 through SB12 and SB17) were advanced across OU1 to approximately 20 ft bgs to define the extent of TPHhf impact to soil. 26 soil samples were collected and reported to contain maximum concentrations of 34 ppm TPHhf in the sample collected at 19.5 ft bgs in boring SB1.The soil samples were also analyzed for VOCs, which were not reported to be present above the laboratory reporting limits.

2014 – In May, 4 soil vapor probes (SVP22, SVP25, SVP31, and SVP32) were installed to 5.5 ft bgs. Soil samples were only collected for analysis from SVP22 and it was not reported to have concentrations of PCE or Benzene present above the laboratory reporting limits. The soil vapor samples were reported to have maximum concentrations of 37 micrograms per cubic meter ($\mu g/m^3$) PCE and 5.4 $\mu g/m^3$ Benzene.

In November, 17 soil vapor probes were advanced in the approximate center of each residential lot of OU1 to a depth of 5 feet. The center was selected to provide a sample representative of the potential average soil vapor concentration that may be present beneath each planned building. The soil vapor samples were reported to have maximum concentrations of 150 $\mu g/m^3$ PCE and 28 $\mu g/m^3$ Benzene, which do not exceed residential screening levels for possible risk of vapor intrusion. The maximum PCE concentration was reported for Lot 2 and the maximum Benzene concentration was reported for Lot 8. Other VOCs detected were below residential screening levels for possible risk of vapor intrusion.

Considerations and/or Variances:
There is ongoing investigation and/or remediation in operable units 2 and 3 of the site. Case closure documentation will be prepared separately for each operable unit.

VI. CLOSURE CRITERIA

Pollutant Sources are Identified and Evaluated and the Site is Adequately Characterized:
The site was historically occupied by automobile service businesses from around the 1970s until 2013. The site is broken into 3 operable units and this closure only applies to operable unit 1.

Operable Unit 1 is currently being redeveloped with single family residences and a private road. The Operable Unit 1 is adequately characterized through several phases of soil and soil vapor investigations.

Exposure Pathways, Receptors, and Potential Risks, Threats, and Other Environmental Concerns are Identified and Assessed:
Nearby receptors were identified, and exposure pathways such as direct contact, inhalation and ingestion of contaminants in soil and soil vapor were investigated and assessed through soil and soil vapor sampling and testing.

Pollutant Sources are Remediated to the Extent Feasible:
The hydraulic lifts (source of TPH hydraulic fluid detected in soil) were removed from the site. No other remedial activities were conducted in Operable Unit 1.

Unacceptable Risks to Human Health, Ecological Health, and Sensitive Receptors, Considering Current and Future Land and Water Uses, are Mitigated:
Due to the source removal, the residual contamination in soil and soil vapor at the site do not pose unacceptable risks to human health.

Residual TPHhf, PCBs, Arsenic and Lead contamination remains in soil at concentrations below residential screening levels; therefore, the residual contamination does not pose a direct contact, inhalation and ingestion risk to human receptors.

DRAFT

Residual contamination reported in soil vapor does not exceed screening levels for residential usage of the site. Based on these screening levels, the concentrations remaining in soil vapor would not pose an inhalation risk to human receptors.

Unacceptable Threats to Groundwater and Surface Water Resources, Considering Existing and Potential Beneficial Uses, are Mitigated:
Due to the implemented remedial action, the residual contamination in soil and soil vapor at the site do not pose an unacceptable risk to groundwater and surface water resources. It is likely that the concentration of contaminants will continue to decrease by natural processes over time.

Conclusion:
The Department of Environmental Health believes that the residual soil and soil vapor contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment. Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. The Department of Environmental Health recommends that this site be closed.

VII. LOCAL AGENCY REPRESENTATIVE DATA

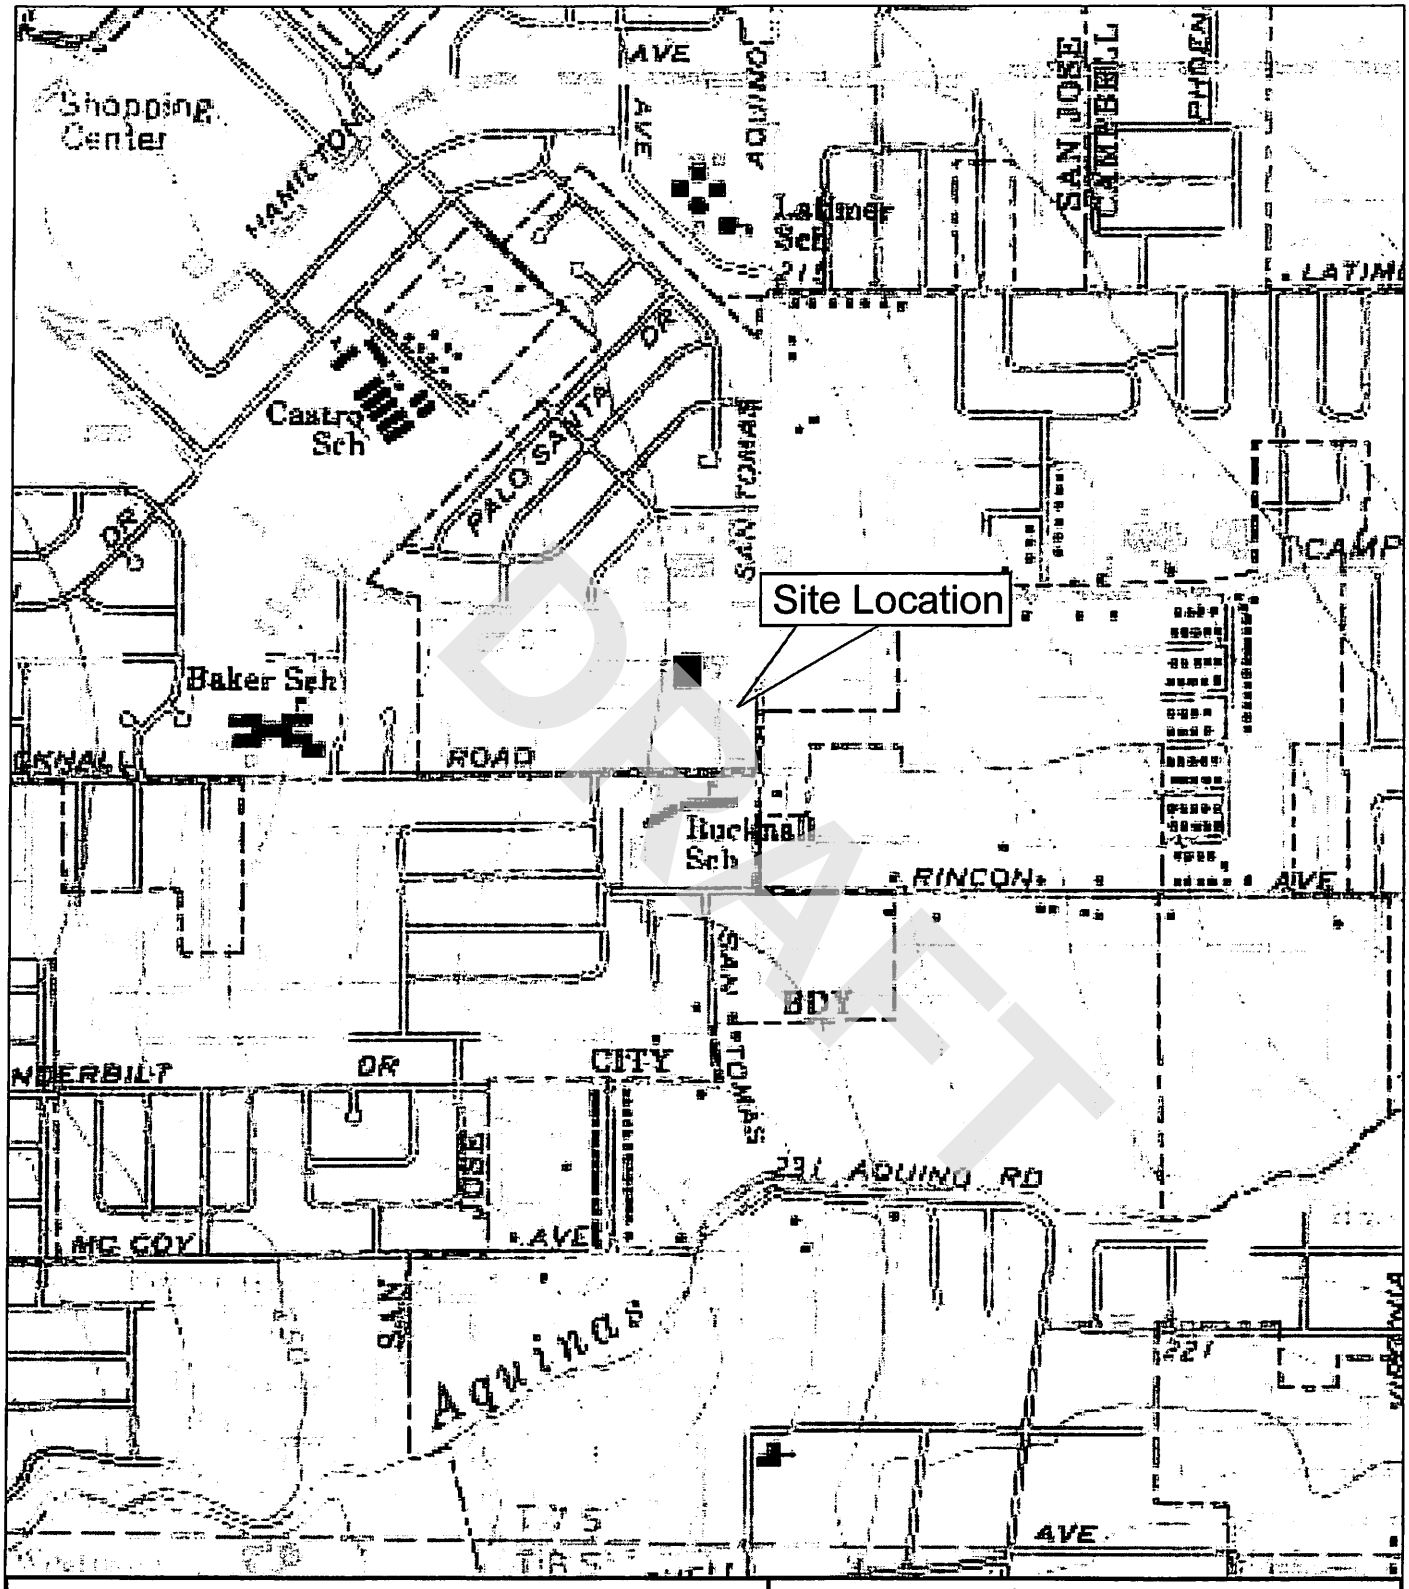

Prepared by: Lani Lee	Title: Senior Hazardous Materials Specialist
Signature:	Date: January 30, 2015
Reviewed by: Gerald O'Regan, PG	Title: Environmental Health Geologist
Signature:	Date: 2/17/2015
Approved by: Jim Blamey	Title: Director
Signature:	Date: 2/18/15

This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions. The file for this case can be reviewed online at http://geotracker.waterboards.ca.gov/

Attachments:
1. Site Vicinity Map
2. Site Plan
3. Soil Analytical Data
4. Soil Vapor Analytical Data

This document and the related Case Closure Letter shall be retained by the lead agency as part of the official site file.

CASE CLOSURE SUMMARY[1]
Voluntary Cleanup Program

Date: April 17, 2015

I. AGENCY INFORMATION

Agency Name: County of Santa Clara, Department of Environmental Health	Address: 1555 Berger Drive, #300
City/State/Zip: San Jose, CA 95112	Phone: (408) 918-3400
Responsible Staff Person: Lani Lee	Title: Senior Hazardous Materials Specialist

II. CASE INFORMATION

Site Facility Name: Kirkwood Auto Center – Operable Unit 2		
Site Facility Address: 125 S. San Tomas Aquino Road, Campbell 95008		
VCP Case No.: 07S1W33B05s* This case is comprised of 3 operable units	GT Global ID No. T10000005089	APN: 403-62-003 through -006 and portions of the private road for the development (see Attachment 2 for a Site Plan)
Responsible Parties	Address	Phone Number
Taylor Morrison of CA, LLC, N. CA Division c/o Stuart Wagner	81 Blue Ravine Rd., Suite 220 Folsom, CA 95630	(916) 355-8900

* Closed fuel leak case 07S1W33B01f (closed 10-30-96) within Operable Unit 1.

System/Source of Contamination	Contents	Closed In Place/Removed?	Date
Hydraulic Lifts	Hydraulic Oil	Removed	5/13
Tire Shop Operations	Tetrachloroethene	Discontinued	2012
Historical Agricultural Use of Property	Pesticides	Discontinued	--

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Unknown		
Site characterization complete? Yes		
Monitoring wells installed? No	Number: --	Proper screened interval? NA
GW Depth Below Ground Surface: 86 to 108 ft. as encountered in borings advanced on Operable Unit 3. Flow Direction: North*		
Most Sensitive Current Use: Potential Drinking Water		

* Groundwater flow data as reported for the closed fuel leak case 07S1W33B04f at 1533 West Campbell Avenue (closed 2-9-06), approximately 600 feet north of the site.

[1] This case closure summary report is a summary of site conditions based on data collected at the site and included in the case file. It should be used in conjunction with the complete case file which can be reviewed online at http://geotracker.waterboards.ca.gov/

Summary of Production Wells in Vicinity: There are no active water supply wells located within a one-mile radius of the site.	
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Basin
Is surface water affected? No	Nearest SW Name: San Tomas Aquino Creek ~2,300 feet south of the site
Off-site Beneficial Use Impacts (Addresses/Locations): None.	
Reports on file? Yes	Where are reports filed? SWRCB Geotracker Database

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Tank	3 Hydraulic Lifts	Recycled; Sims Metals, Hayward, CA	5/13
Soil	891 cubic yards 1,140 cubic yards	Disposed; Dumbarton Quarry, Newark, CA	7/14 11/14

Description of Interim Remediation Activities: Soil removal.

CONTAMINANT CONCENTRATIONS IN SOIL[1]

Please see Attachment 3 for additional information on contaminant locations and concentrations

	Soil (ppm)			Soil (ppm)	
Contaminant	Max[2]	After[7]	Contaminant	Max[2]	After[7]
TPH (Hydraulic Fluid)	2,100[3]	--	Benzene	ND[6]	--
Polychlorinated Biphenyls	0.023[3]	--	Arsenic	4.9[4]	--
Organochlorine Pesticides	Note[4]	--	Lead	18.6[4]	--
Tetrachloroethene (PCE)	0.033[5]	--			

Notes:

1. This table presents maximum historical contaminant concentrations in soil and documented contaminant concentrations if confirmation sampling was conducted.
2. The maximum concentration listed is the highest concentration reported for a specific constituent in soil samples collected at the site.
3. Soil sample FH-3-8 collected at 8 feet below the ground surface (ft bgs) during hydraulic lift removal on 5/30/2013. The Regional Screening Level (RSL) for direct contact in a residential use as set by the US EPA is 230,000 ppm for TPH(hf).
4. Soil sample S4 collected at 9-inches below the ground surface on 8/15/12 was reported to contain 0.0066 ppm 4,4'-DDD, 0.0274 ppm 4,4'-DDE, and 0.0087 ppm 4,4'-DDT. This was the only sample collected in OU2 that was analyzed for Organochlorine Pesticides, Arsenic and Lead.
5. Soil sample collected from 6.5 ft bgs in boring SB14 on 12/5/13.
6. All soil samples that were collected in OU2 and analyzed for these constituents were not reported to have them present above the laboratory reporting limits.
7. "--" indicates that confirmation soil sampling was not conducted. It should be noted that the areas of these maximum soil concentrations was excavated and the soil removed from the site; therefore it is likely that the concentrations remaining in soil in OU2 is lower in concentration. Soil vapor sampling supports that the soil removal activities were effective in reducing the concentrations of PCE and Benzene in soil and soil vapor.

DRAFT

CONTAMINANT CONCENTRATIONS IN SOIL VAPOR[1] Please see Attachment 4 for additional information on contaminant locations and concentrations							
	Micrograms per cubic meter				Micrograms per cubic meter		
Contaminant	Max[2]	After	Res. ESL[3]	Contaminant	Max[2]	After	Res. ESL[3]
Tetrachloroethene	3,500[4]	1,800[10]	410[12]	Vinyl Chloride	3.6[7]	3.6[7]	16
Trichloroethene	33[5]	20[11]	300	Toluene	510[8]	41[7]	160,000
Benzene	150[6]	52[7]	42[13]	1,1,1-Trichloroethane	40[5]	27[10]	2,600,000

Notes:

1. This table presents maximum historical contaminant concentrations and most recent contaminant concentrations in soil vapor reported in micrograms per cubic meter ($\mu g/m^3$).
2. The maximum concentration listed is the highest concentration reported for a specific constituent in soil vapor samples collected at the site.
3. Res. ESL – The Environmental Screening Level for residential site usage as established by the Regional Water Quality Control Board – SF Bay Area; except for Tetrachloroethene (PCE) and Benzene.
4. Soil vapor sample SVP-27A collected from Lot 4 at 10 feet below the ground surface (ft bgs) on 5/8/14.
5. Soil vapor sample SVP-27B collected from Lot 4 at 20 ft bgs on 5/8/14.
6. Soil vapor sample CSVP11 collected from Lot 4 at 5 ft bgs on 9/18/14.
7. Soil vapor sample CSVP3-S collected from Lot 5 at 5 ft bgs on 8/28/14.
8. Soil vapor sample CSVP23 collected from Lot 4 at 5 ft bgs on 9/19/14.
9. Soil vapor sample CSVP2-D collected from Lot 4 at 12.5 ft bgs on 8/28/14.
10. Soil vapor sample SVP6 collected within the roadway in front of Lot 4 at 5 ft bgs on 4/15/14. Of the sample locations not in the roadway, the maximum PCE concentration is 370 $\mu g/m^3$ in sample CSVP-3D and CSVP-4S.
11. Soil vapor sample SVP4 collected within the roadway in front of Lot 4 at 5 ft bgs on 3/12/14.
12. The screening level for PCE was calculated using the indoor air screening level of 0.41 $\mu g/m^3$ as a ceiling level divided by the attenuation factor of 0.001 for new construction (DTSC, October 2011) for a screening level of 410 $\mu g/m^3$.
13. The screening level for Benzene was calculated using the indoor air screening level of 0.084 $\mu g/m^3$ as a ceiling level divided by the attenuation factor of 0.001 for new construction (DTSC, October 2011) for a screening level of 84 $\mu g/m^3$.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes
Does corrective action protect public health for current land use? Environmental Health Department staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a significant risk to human health.
Site Management Requirements: Operable Unit 2 of this site is currently being redeveloped with single family homes and a private road. The County has been notified of the ongoing redevelopment activity. Residual contamination both in soil and soil vapor remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate

additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.		
Should corrective action be reviewed if land use changes? No		
Number of Wells Commissioned: 0	Number of Wells Decommissioned: 0	Number of Wells Retained: 0
List Enforcement Actions Taken: None.		
List Enforcement Actions Rescinded: None.		

V. ADDITIONAL COMMENTS, DATA, ETC.

The site is approximately 2 acres in size and has been sub-divided since the case was opened. The site was developed for automotive service, car washing and fueling uses in the early 1970s and operated such activities in some capacity through late 2012. The site was sub-divided for redevelopment for residential use. The subdivision includes separate parcels for each residence, some open space and a private road.

Due to the presence of distinct release points, this site has been broken up into three different operable units:
Operable Unit 1: Former Auto Center (APNs 403-62-001, -002, -007, -008, and -013 through -026),
Operable Unit 2: Former Tire Shop (APNs 403-62-003 through -006), and
Operable Unit 3: Former Car Wash (APNs 403-62-009 through -012)

Please refer to the figure in Attachment 2, which illustrates how the private road was broken up into the different operable units. This closure summary form pertains only to Operable Unit 2.

Operable Unit 2
Site History:
Operable Unit 2 (OU2) is located in the south-eastern corner of the site and includes 4 residential lots and a portion of the road for the new development. This area was historically occupied by a tire shop. Contaminants found in this area appear to be from small surface type releases and releases from hydraulic lifts.

1993 – It was reported that in September, 2 soil borings (B1 and B2) were advanced near the hydraulic lifts in this area. The soil samples collected were analyzed for Total Petroleum Hydrocarbons (TPH) as Diesel (TPHd), TPH as Motor Oil (TPHmo) and Volatile Organic Compounds (VOCs), which were not reported to be present above the laboratory reporting limits. The report of this work was not submitted to this agency.

2012 – In August, a near surface soil sample (S4) was collected in OU2 and analyzed for arsenic, lead and organochlorine pesticides (OCPs). It was reported to have maximum concentrations of 0.0066 parts per million (ppm) 4,4'-DDD, 0.0274 ppm 4,4'-DDE, 0.0087 ppm 4,4'-DDT, 4.9 ppm Arsenic and 18.6 ppm Lead.

2013 – In May, the hydraulic hoists and a service pit were removed from OU2. Following removal, 5 soil samples were collected from beneath the hoist excavations (FH-1 through FH-3) and service pit excavation. 5 soil samples were collected and were reported to contain maximum concentrations of 2,100 ppm TPH as Hydraulic Fluid (TPHhf), 0.23 Polychlorinated Biphenyls (PCBs), and 0.016 ppm Tetrachloroethene (PCE).

In December, 5 soil borings (SB13 through SB17) were advanced across OU2 to approximately 20 feet

DRAFT

below the ground surface (ft bgs) to define the extent of TPHhf and VOCs impacts to soil. 10 soil samples were collected and reported to contain maximum concentrations of 48 ppm TPHhf and 0.033 ppm PCE in the sample collected at 6.5 ft bgs in boring SB14. Benzene was not reported to be present above the laboratory reporting limits.

2014 – In March, 3 soil vapor probes (SVP3 through SVP5) were installed to 5.5 ft bgs in OU2. The soil vapor samples were reported to contain maximum concentrations of 1,700 micrograms per cubic meter ($\mu g/m^3$) PCE, 20 $\mu g/m^3$ Trichloroethene (TCE), and 1.9 $\mu g/m^3$ Benzene.

In April, 6 additional soil vapor probes (SVP6 through SVP11) were installed to 5.5 ft bgs to further define the extent of VOCs in soil vapor. 6 soil vapor samples were collected and reported to contain concentrations of 3,300 $\mu g/m^3$ PCE and 10 $\mu g/m^3$ TCE.

In May, 6 soil vapor probes (SVP26 through SVP30) were installed to 5.5 ft bgs and two were completed to 10 and 20 ft bgs. 5 soil samples were collected and were not reported to have concentrations of PCE or Benzene present above the laboratory reporting limits. The soil vapor samples were reported to have maximum concentrations of 3,500 $\mu g/m^3$ PCE, 33 $\mu g/m^3$ TCE, and 3.3 $\mu g/m^3$ Benzene.

In July, soil was excavated to a depth of approximately 7 feet and in the area of SVP27A/B to a depth of 17 feet. Confirmation soil samples were not collected from the extents of the excavation. Approximately 890 cubic yards of soil were excavated and removed from the site. The excavation was backfilled with soil generated during grading of the site, which was compacted upon placement.

In August, 8 confirmation soil vapor samples (CSVP1 through CSVP4) from 4 locations were collected from depths of 5, 12 and 22 ft bgs. The samples were reported to have maximum concentrations of 1,100 $\mu g/m^3$ PCE, 3.6 $\mu g/m^3$ Vinyl Chloride, and 52 $\mu g/m^3$ Benzene. The highest concentrations were reported in samples collected from 5 ft bgs.

In September, 21 additional soil vapor probes (CSVP5 through CSVP25) were installed to further assess the extent of soil vapor in this area. Samples were collected from 5 ft bgs, except at CSVP6 where probes were set to 5, 10, and 20 ft bgs. The soil vapor samples were reported to have maximum concentrations of 1,500 $\mu g/m^3$ PCE and 150 $\mu g/m^3$ Benzene. The Benzene detections in soil vapor in OU2 were unexpected based on previous sampling and historical site operations. The consultant concluded that the Benzene concentrations may have been from benzene-affected soils from other parts of the site that was used to backfill the excavation. Additional soil vapor sampling conducted across the site did not report the presence of elevated concentrations of Benzene.

In November, based on the additional soil vapor sampling, a portion of the previous excavation was re-excavated and extended to the west and south within lots 3 and 4. The excavation was approximately 7 feet with a portion extended to 17 feet and removed approximately 1,140 cubic yards of soil. Confirmation soil samples were not collected from the extents of the excavation. The excavation was backfilled with imported fill material.

2015 – In February, following backfill of the excavation, 10 confirmation soil vapor samples (CSVP26 through CSVP34 and CSVP34-10) were collected from 5 ft bgs and reported to contain maximum concentrations of 4.3 $\mu g/m^3$ PCE and 23 $\mu g/m^3$ Benzene. Based on this data, the soil removal reduced the soil vapor concentrations in OU2.

Considerations and/or Variances:
The consultant calculated modified screening levels for the protection of indoor air under a residential use scenario. Regional Water Quality Control Board Environmental Screening Levels (ESLs) are calculated using an attenuation factor for existing construction of 0.002 from the indoor air screening levels. Since there will be newly constructed buildings, they used an attenuation factor of 0.001 for new construction per DTSC. The screening level for PCE was calculated using the indoor air screening level of 0.41 $\mu g/m^3$

as a ceiling level divided by the attenuation factor of 0.001 for new construction for a screening level of 410 µg/m^3. The screening level for Benzene was calculated using the indoor air screening level of 0.084 µg/m^3 as a ceiling level divided by the attenuation factor of 0.001 for new construction for a screening level of 84 µg/m^3.

The maximum residual PCE concentration in soil vapor is 1,500 µg/m^3 for a sample collected within the roadway. The soil vapor samples collected from within the residential lots are less than or equal to 370 µg/m^3, which is below the calculated screening level.

There is ongoing investigation and/or remediation in operable unit 3 of the site. Case closure documentation will be prepared separately for each operable unit upon completion of work for each operable unit.

VI. CLOSURE CRITERIA

Pollutant Sources are Identified and Evaluated and the Site is Adequately Characterized:
The site was historically occupied by automobile service businesses from around the 1970s until 2013. The site is broken into 3 operable units and this closure only applies to operable unit 2.

Operable Unit 2 is currently being redeveloped with single family residences and a private road. The Operable Unit 2 is adequately characterized through several phases of soil and soil vapor investigations.

Exposure Pathways, Receptors, and Potential Risks, Threats, and Other Environmental Concerns are Identified and Assessed:
Nearby receptors were identified, and exposure pathways such as direct contact, inhalation and ingestion of contaminants in soil and soil vapor were investigated and assessed through soil and soil vapor sampling and testing.

Pollutant Sources are Remediated to the Extent Feasible:
3 hydraulic lifts were removed and approximately 2,031 cubic yards of PCE-impacted soil were removed from OU2.

Unacceptable Risks to Human Health, Ecological Health, and Sensitive Receptors, Considering Current and Future Land and Water Uses, are Mitigated:
Due to the source removal, the residual contamination in soil and soil vapor at the site do not pose unacceptable risks to human health.

Residual TPHhf, PCBs, DDD, DDE, DDT, Arsenic and Lead contamination remains in soil at concentrations below residential screening levels; therefore, the residual contamination does not pose a direct contact, inhalation and ingestion risk to human receptors.

Residual contamination reported in soil vapor does not exceed screening levels for residential usage of the site, except for samples collected within the roadway. Based on these screening levels, the concentrations remaining in soil vapor would not pose an inhalation risk to human receptors.

Unacceptable Threats to Groundwater and Surface Water Resources, Considering Existing and Potential Beneficial Uses, are Mitigated:
Due to the implemented remedial action, the residual contamination in soil and soil vapor at the site do not pose an unacceptable risk to groundwater and surface water resources. It is likely that the concentration of contaminants will continue to decrease by natural processes over time.

Kirkwood Auto Center
Operable Unit 2
125 S. San Tomas Aquino Road, Campbell
07S1W33B05s

Conclusion:
The Department of Environmental Health believes that the residual soil and soil vapor contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment. Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. The Department of Environmental Health recommends that this site be closed.

VII. LOCAL AGENCY REPRESENTATIVE DATA

DRAFT

Notes:

TPHg = total petroleum hydrocarbons as gasoline

TPHd = total petroleum hydrocarbons as diesel

TPHmo = total petroleum hydrocarbons as motor oil

TPHhf = total petroleum hydrocarbons as hydrualic fluid

PCBs = polychlorinated biphenyls

PCE = tetracholorethylene

bgs = below ground surface

mg/kg = milligrams per kilogram

<0.0050 = not detected at or above the laboratory reporting limit shown

ND = not detected at or above the laboratory reporting limit

~~SB-14~~ = strikethrough results indicates that the soil representing the sample has been removed

Screening Levels = see document text for complete descrition and source

County of Santa Clara

Department of Environmental Health
Hazardous Materials Compliance Division

CASE CLOSURE SUMMARY[1]
Voluntary Cleanup Program

Date: March 24, 2017

I. AGENCY INFORMATION

Agency Name: County of Santa Clara, Department of Environmental Health	Address: 1555 Berger Drive, #300
City/State/Zip: San Jose, CA 95112	Phone: (408) 918-3400
Responsible Staff Person: Aaron Costa	Title: Senior Hazardous Materials Specialist

II. CASE INFORMATION

Site Facility Name: Kirkwood Auto Center – Operable Unit 3		
Site Facility Address: 125 S. San Tomas Aquino Road, Campbell 95008		
VCP Case No.: 07S1W33B05s* This case is comprised of 3 operable units	GT Global ID No. T10000005089	APN: 403-62-009 through -012 and portions of the private road for the development (see Attachment 2 for a Site Plan)
Responsible Parties	Address	Phone Number
Taylor Morrison of CA, LLC, N. CA Division c/o Tyler Kaushagen	81 Blue Ravine Rd., Suite 220 Folsom, CA 95630	(916) 355-8900

* Closed fuel leak case 07S1W33B01f (closed 10-30-96) within Operable Unit 1.

System/Source of Contamination	Contents	Closed In Place/Removed?	Date
Car Wash Operations	Tetrachloroethene	Discontinued	2012
Historical Agricultural Use of Property	Pesticides	Discontinued	–

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Unknown		
Site characterization complete? Yes		
Monitoring wells installed? No	Number: --	Proper screened interval? NA
GW Depth Below Ground Surface: 86 to 108 ft. as encountered in borings advanced on Operable Unit 3. Flow Direction: North*		
Most Sensitive Current Use: Potential Drinking Water		

* Groundwater flow data as reported for the closed fuel leak case 07S1W33B04f at 1533 West Campbell Avenue (closed 2-9-06), approximately 600 feet north of the site.

[1] This case closure summary report is a summary of site conditions based on data collected at the site and included in the case file. It should be used in conjunction with the complete case file which can be reviewed online at http://geotracker.waterboards.ca.gov/

DRAFT

Kirkwood Auto Center
Operable Unit 3
125 S. San Tomas Aquino Road, Campbell
07S1W33B05s

Summary of Production Wells in Vicinity: There are no active water supply wells located within a one-mile radius of the site.	
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Basin
Is surface water affected? No	Nearest SW Name: San Tomas Aquino Creek ~2,300 feet south of the site
Off-site Beneficial Use Impacts (Addresses/Locations): None.	
Reports on file? Yes	Where are reports filed? SWRCB Geotracker Database

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Soil	Areas within OU-3 to a depth of 60-feet	Soil Vapor Extraction and Treatment	3/2016

Description of Interim Remediation Activities: Soil removal and Soil Vapor Extraction (SVE)

CONTAMINANT CONCENTRATIONS IN SOIL[1]
Please see Attachment 3 for additional information on contaminant locations and concentrations

	Soil (ppm)			Groundwater (µg/L)	
Contaminant	Max[2]	After[6]	Contaminant	Max[2]	After[6]
Tetrachloroethene (PCE)	2.030[3]	--	PCE	2.14[4]	--
		--	Benzene	0.65[5]	--

Notes:

1. This table presents maximum historical contaminant concentrations in soil and documented contaminant concentrations if confirmation sampling was conducted.
2. The maximum concentration listed is the highest concentration reported for a specific constituent in soil samples collected at the site.
3. Soil sample SVE-1-24.5 collected at a depth of 24.5 feet. There is not an applicable screening level as there is not an exposure route to deep soils.
4. Groundwater sample SB-37-W. The Maximum Contaminant Level (MCL) is 5.0 µg/L.
5. Groundwater sample SB-36-W. The MCL is 0.5 µg/L.
6. No soil or groundwater samples were collected after remedial activities.

	Micrograms per cubic meter				Micrograms per cubic meter		
Contaminant	Max[2]	After	Res. ESL[3]	Contaminant	Max[2]	After	Res. ESL[3]
Tetrachloroethene	685,000[4]	270,000[5]	410[11]	Vinyl Chloride	27.6[9]	ND[10]	16
Trichloroethene	962[4]	1,600[6]	300				
Benzene	78.3[7]	2.3[8]	84[12]				

Notes:

1. This table presents maximum historical contaminant concentrations and most recent contaminant concentrations in soil vapor reported in micrograms per cubic meter (µg/m^3).
2. The maximum concentration listed is the highest concentration reported for a specific constituent in soil vapor samples collected at the site.
3. Res. ESL – The Environmental Screening Level for residential site usage as established by the Regional Water Quality Control Board – SF Bay Area; except for Tetrachloroethene (PCE) and Benzene.
4. Soil vapor sample SVP-38-30 collected from Lot 12 at 30 feet below the ground surface (ft bgs) on 3/5/15.
5. Soil vapor sample SVP-38-30 collected from Lot 12 at 30 feet below the ft bgs on 5/13/16.
6. Soil vapor sample SVP-38-30 collected from Lot 12 at 30 feet below the ft bgs on 4/4/16.
7. Soil vapor sample SVP-38-30 collected from Lot 12 at 30 feet below the ft bgs on 3/5/16.
8. Soil vapor sample SVP-38-30 collected from Lot 12 at 30 feet below the ft bgs on 4/4/16.
9. Soil vapor sample SVP-37-15 collected from Lot 12 at 15 feet below the ft bgs on 3/5/16.
10. Vinyl chloride was not detected at or above the laboratory method detection limit in soil vapor samples collected following remediation.
11. The screening level for PCE was calculated using the indoor air screening level of 0.41 µg/m^3 as a ceiling level divided by the attenuation factor of 0.001 for new construction (DTSC, October 2011) for a screening level of 410 µg/m^3.
12. The screening level for Benzene was calculated using the indoor air screening level of 0.084 µg/m^3 as a ceiling level divided by the attenuation factor of 0.001 for new construction (DTSC, October 2011) for a screening level of 84 µg/m^3.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes
Does corrective action protect public health for current land use? Environmental Health Department staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a significant risk to human health.
Site Management Requirements: Operable Unit 3 of this site is currently being redeveloped with single family homes and a private road. A vapor intrusion mitigation system (VIMS) has been installed beneath each of the four residential homes within OU3. Deed Restrictions have been filed for each of the properties which restrict certain activities in order to protect the VIMS from being compromised. Please refer to the Deed Restrictions, which can be located on GeoTracker for specific restrictions and notification equirements. Residual contamination both in soil and soil vapor remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate

DRAFT

additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. The construction of new residential structures within OU-3 will have vapor intrusion mitigation systems (VIMSs) installed beneath the individual building foundations.

Should corrective action be reviewed if land use changes? No		
Number of Wells Commissioned: 0	Number of Wells Decommissioned: 0	Number of Wells Retained: 0
List Enforcement Actions Taken: None.		
List Enforcement Actions Rescinded: None.		

V. ADDITIONAL COMMENTS, DATA, ETC.

The site is approximately 2 acres in size and has been sub-divided since the case was opened. The site was developed for automotive service, car washing and fueling uses in the early 1970s and operated such activities in some capacity through late 2012. The site was sub-divided for redevelopment for residential use. The subdivision includes separate parcels for each residence, some open space and a private road.

Due to the presence of distinct release points, this site has been broken up into three different operable units:
Operable Unit 1: Former Auto Center (APNs 403-62-001, -002, -007, -008, and -013 through -026),
Operable Unit 2: Former Tire Shop (APNs 403-62-003 through -006), and
Operable Unit 3: Former Car Wash (APNs 403-62-009 through -012)

Please refer to the figure in Attachment 2, which illustrates how the private road was broken up into the different operable units. This closure summary form pertains only to Operable Unit 3.

Operable Unit 3
Site History:
Operable Unit 3 (OU3) is located in the north-eastern corner of the site and includes 4 residential lots and a portion of the road for the new development. This area was historically occupied by a car wash. Contaminants found in this area appear to be from small surface type releases.

Between May 2013 and March 2015, a total of 28 soil samples were collected at locations across the Site to characterize the extent of residual PCE in soils. Prior to remediation, PCE was detected in 15 of the 23 soil samples collected and analyzed between concentrations of 0.0140 and 2.030 milligrams per kilogram (mg/kg).

In October 2014, three groundwater samples were collected at the Site. Three soil borings were advanced to collect the groundwater samples to depths of between approximately 85 to 106 feet below ground surface (bgs). PCE was detected in one of the groundwater samples, SB 37-W, at a concentration of 2.1 micrograms per liter (µg/L). Benzene was detected in one of the groundwater samples, SB-36-W, at a concentration of 0.65 µg/L. No other compounds were detected.

Between March 2014 and May 2016, a total of 82 soil gas samples have been collected at the Site from a combination of individual soil gas samples points, and semi-permanent nested soil gas probes, to characterize the nature and extent of VOCs, primarily PCE, in soil gas prior to and following remediation.

DRAFT

Installation and operation of a SVET system was the recommended remedial solution to address residual PCE in the Corrective Action Plan (CAP). The SVET system was designed to extract PCE-affected soil vapor from beneath the Site from two triple-nested wells, SVE-1A/B/C and SVE-2A/B/C, screened between 7 and 60 feet below ground surface (bgs). The SVET system was operated between October 2, 2015 and March 3, 2016. A total of 5,637 hours of extraction was performed during the five months of operation of the SVET system.

Considerations and/or Variances:

The consultant prepared a Human Health Risk Calculation ("HHRC") that was performed consistent with U.S. EPA and California Department of Environmental Protection, DTSC requirements. The results indicate that the threshold and carcinogenic risk fall within acceptable risk limits for the hypothetical future resident. The HHRC calculated that the presence of VOCs beneath the new buildings, without vapor intrusion mitigation systems, may cause an excess lifetime cancer risk for a hypothetical future resident at the Site of between 1.41x10-7 following US EPA methods to 3.19x10-6, calculated with DTSC modifications, which straddles the target of 1 person in 1,000,000. This analysis does not consider the impact of the vapor barriers which will be installed beneath the residences that will further reduce any minimal risk associated with the PCE in soil vapor.

There is an off-site source of PCE to the subsurface at the adjacent property to the north, which is currently an open voluntary cleanup program case (Kirkorian Plaza T10000009089) with DEH. There has likely been some migration of PCE-affected soil vapor onto OU-3 from this adjacent site.

VI. CLOSURE CRITERIA

Pollutant Sources are Identified and Evaluated and the Site is Adequately Characterized:
The site was historically occupied by automobile service businesses from around the 1970s until 2013. The site is broken into 3 operable units and this closure only applies to operable unit 2.

Operable Unit 3 is currently being redeveloped with single family residences and a private road. The Operable Unit 3 is adequately characterized through several phases of soil, groundwater, and soil vapor investigations.

Exposure Pathways, Receptors, and Potential Risks, Threats, and Other Environmental Concerns are Identified and Assessed:
Nearby receptors were identified, and exposure pathways such as direct contact, inhalation and ingestion of contaminants in soil and soil vapor were investigated and assessed through soil and soil vapor sampling and testing.

Pollutant Sources are Remediated to the Extent Feasible:
An SVET system was operated within OU-3 between October 2, 2015 and March 3, 2016 to remove PCE-affected soil vapor and reduce PCE concentrations in soil.

Unacceptable Risks to Human Health, Ecological Health, and Sensitive Receptors, Considering Current and Future Land and Water Uses, are Mitigated:
The HHRC performed using the post-remediation PCE concentrations in soil vapor calculated that the presence of VOCs beneath the new buildings, may cause an excess lifetime cancer risk for a hypothetical future resident at the Site of between 1.41x10-7 following US EPA methods to 3.19x10-6, calculated with DTSC modifications, which straddles the target of 1 person in 1,000,000. This analysis does not consider the impact of the vapor barriers which will be installed beneath the residences that will further reduce any minimal risk associated with the PCE in soil vapor

DRAFT

Unacceptable Threats to Groundwater and Surface Water Resources, Considering Existing and Potential Beneficial Uses, are Mitigated:
Due to the implemented remedial action, the residual contamination in soil and soil vapor at the site do not pose an unacceptable risk to groundwater and surface water resources. It is likely that the concentration of contaminants will continue to decrease by natural processes over time.

Conclusion:
The Department of Environmental Health believes that the residual soil and soil vapor contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment. Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. The Department of Environmental Health recommends that this site be closed.

VII. LOCAL AGENCY REPRESENTATIVE DATA

Subject: Voluntary Cleanup Program: Kirkwood Auto Center – Operable Unit 2, 125 S. San Tomas Aquino Road, Campbell, CA; SCCo Case No. 07S1W33B05s

Dear Mr. Melander:

Thank you for submitting the Report on Soil Vapor Sampling and Closure Request Operable Unit 2, Revision 1 prepared by your consultant AEI Consultants (AEI) and dated April 3, 2015. Based on our review of the data for Operable Unit 2, no further action is required for Operable Unit 2. Investigation and remedial action activities for Operable Unit 2 have been completed.

Operable Unit 2 is comprised of parcels 403-62-003 through -006 and portions of the private road for the development (attached figure)

Please note that investigation and remedial action is ongoing in Operable Unit 3 of this site.

If you have any questions, please feel free to contact me at (408) 918-1977 or via email.

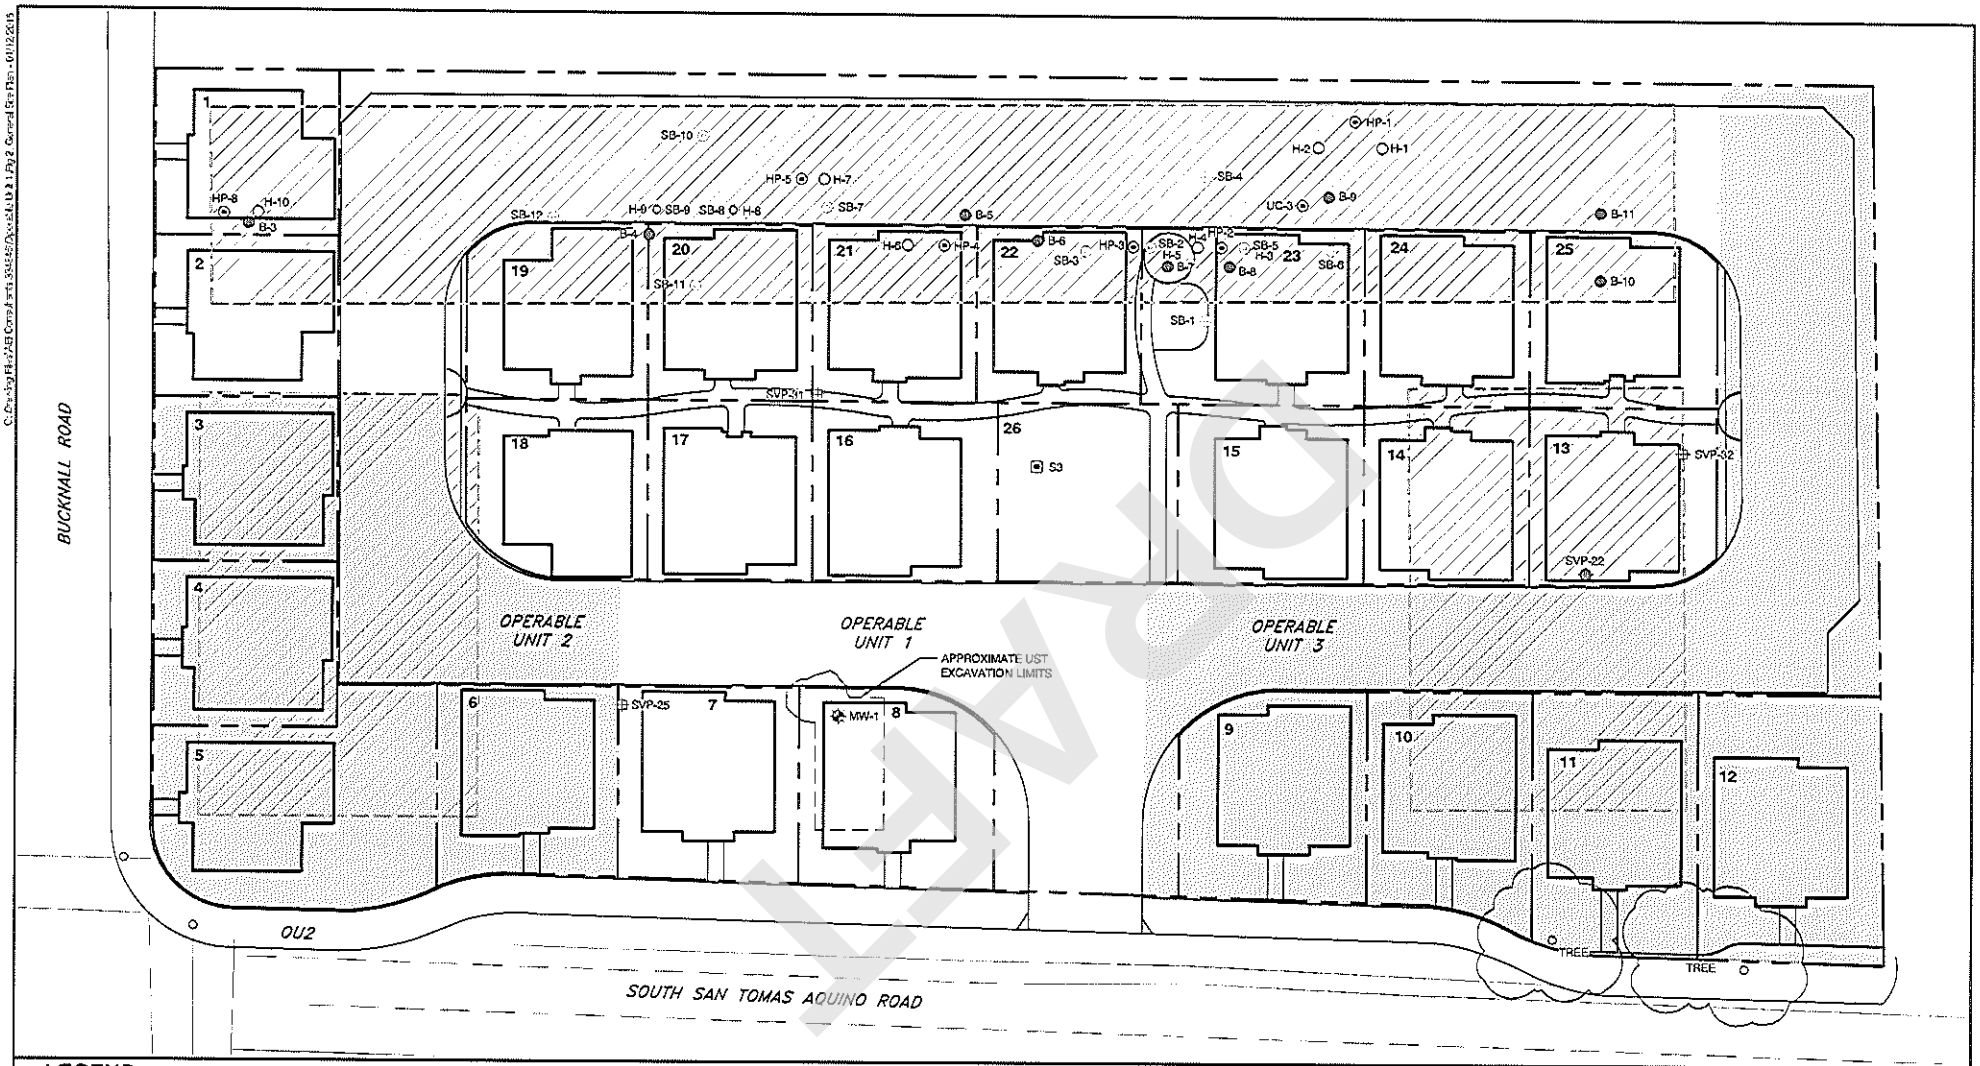

Sincerely,

Lani Lee
Senior Hazardous Materials Specialist

Dear Ms. Lee:

We submit this transmittal letter and accompanying report on Soil Vapor Sampling at the subject property referenced above. It was found that chemicals identified in soil within Operable Unit 2 (APNs 403-62-003 through -006) do not pose an unacceptable risk to hypothetical future residents.

Therefore, based upon the information presented in this document, Taylor Morrison of California, LLC requests closure for Operable Unit 2.

I declare, under penalty of perjury, that the information and/or recommendations contained in the attached proposal or report is true and correct to the best of my knowledge.

Sincerely,

Taylor Morrison

1. INTRODUCTION

On behalf of Taylor Morrison of California, LLC, AEI Consultants (AEI) has prepared this revised report on soil vapor sampling and closure request for Operable Unit 2, the former tire shop area, at the former Kirkwood Auto Center at 125 South San Tomas Aquino Road in Campbell, California ("the Site"). AEI recently completed the soil vapor sampling described in the January 27, 2015 *Work Plan, Confirmation Soil Sampling, Former Tire Shop, Operable Unit 2* as approved by the County of Santa Clara, Department of Environmental Health ("the County") in a letter dated January 30, 2015. The completion of this assessment finalizes the environmental remediation and investigation activities to assess the identified tetrachloroethylene (PCE) and benzene concentrations identified in soil vapor related to historical uses in the vicinity of the former tire shop at the Site, and the results of the recent confirmation soil sampling indicate that no unacceptable risk to a hypothetical future resident was identified. Therefore, based upon the information presented in this document, and on behalf of Taylor Morrison of California, LLC, AEI requests closure for Operable Unit 2.

This report includes a summary of the background of the investigation activities performed within Operable Unit 2, a description of the recent confirmation soil vapor sampling, and AEI's assessment of the results are presented below.

2. SITE SETTING AND BACKGROUND

The Site comprises approximately 2.03 acres and is currently undergoing redevelopment into single family homes. The Site was used for agricultural purposes between approximately 1930 and the mid-1950s. Small residential structures were present in the southern portion of the property from the mid-1940s to the early 1970s, when the Site was developed for automotive service, car washing and fueling station uses. These uses were present at the Site in some capacity through late 2012. Multiple subsurface investigations have been performed to-date to assess potential impacts to soil vapor, soil, and groundwater, during which contamination was found in Site soils and soil vapor. The Site has been separated in to three operable units to allow separate focus areas within the Site, including:

- Operable Unit 1 – Former Auto Shops (APNs 403-62-001, -002, 007, -008, and -013 through -026, and portions of the private street on Lot A)
- Operable Unit 2 – Former Tire Shop (APNs 403-62-003 through -006, and portions of the private street on Lot A)
- Operable Unit 3 – Former Car Wash (APNs 403-62-009 through -012, and portions of the private street on Lot A)

Figure 2 present the Site plan and depicts the separate operable units. This report is focused on Operable Unit 2. Operable Unit 2 is comprised areas shown to be affected by past operations of the former tire shop.

2.1 Summary of Environmental Activities

This section presents a summary of the environmental investigation activities performed within Operable Unit 2.

DRAFT

2.1.1 Site-Wide Assessment Activities

In September 1993, ATC/Diagnostics Environmental Inc. (ATC) advanced two soil borings, B-1 and B-2 within Operable Unit 2, to collect soil samples adjacent to the existing in-ground hydraulic hoists at depths ranging between 5 and 16-feet below ground surface (bgs). Soil samples collected were analyzed to total petroleum hydrocarbons as diesel (TPHd), as motor oil (TPHmo), and volatile organic compounds (VOCs). None of the analytes were detected at or above their respective laboratory method detection limits (ATC 1993).

In August 2012, one near-surface soil sample, S-4, was collected by ENGEO and analyzed for organochlorine pesticides, arsenic, and lead that may be present from former agricultural uses of the property, as part of four samples collected across the Site. Pesticide concentrations were reportedly below California Department of Toxic Substances Control (DTSC) developed California Human Health Screening Levels (CHHSLs) for residential land use. Lead and arsenic concentrations were reported to be below expected background concentrations (ENGEO 2012).

Between May 2013 and May 2014, Allwest performed multiple investigations to assess the soil and soil vapor for potential chemical and/or metal impacts as discussed below.

- In May 2013, soil samples were collected from former hoist locations within Operable Unit 2. Samples were also collected from beneath former hydraulic piping locations and an unidentified concrete square (samples identified as UC-1). A total of five soil samples were collected within Operable Unit 2 and analyzed as shown in Table 1 (Allwest 2013b).
- In December 2013, five soil borings were advanced, SB-13 through SB-17, across Operable Unit 2 to assess the nature and extent of elevated concentrations of petroleum hydrocarbons as hydraulic fluid (TPHhf) in the vicinity of the former hydraulic lifts and for VOCs. A total of ten soil samples were collected within Operable Unit 2 and analyzed as shown in Table 1 (Allwest 2014a).
- Between March and May 2014, soil and soil vapor samples were collected across Operable Unit 2 to assess the nature and extent of PCE in soil and soil vapor. A total of five soil samples and fifteen soil vapor samples were collected from locations SVP-3 through SVP-11 and SVP-26 through SVP-30 as shown in Tables 1 and 2 (Allwest 2014a, 2014b).

3. Focused Removal Actions

Two removal actions were performed to address elevated concentrations of PCE in soil vapor. The excavation activities and confirmation sampling performed is described below.

3.1 Initial Focused Removal Action

On July 1, 2014 the initial removal action was performed and completed in general accordance with the June 29, 2014 *Focused Removal Action Plan* approved and modified by the County in a letter dated July 14, 2014. The extent of the removal action was determined by a review of the soil vapor sample data and comparison to appropriate risk based screening levels as discussed below.

3.1.1 Screening Level Risk Assessment

To assess whether the chemicals detected in soil vapor at the Site present a potential risk to hypothetical receptors at the Site, AEI has compared the detected concentrations to appropriate risk based screening levels. The hypothetical receptor used in the screening analysis is a new

resident in the residential development being constructed at the Site. The risk based screening levels used modified ESLs for the protection of indoor air under a residential use scenario (Table E-3, December 2013). The ESLs for exposure to soil vapor are calculated using an attenuation factor for existing construction of (0.002) from the indoor air screening levels. However, since the hypothetical human receptor is for newly constructed buildings, the appropriate attenuation factor is 0.001 for new construction (DTSC, October 2011). The indoor air screening level for PCE is 0.41 micrograms per cubic meter (µg/m^3), which is divided by the attenuation factor of 0.001, resulting in a soil vapor screening level of 410 µg/m^3. This same approach was used for benzene.

ESLs are based upon an average exposure concentration for the duration of the exposure period. Therefore, in this analysis to provide an additional conservative measure, AEI used the screening levels not on an average basis, but as a ceiling value. Table 2 presents a summary of soil vapor analytical results for select compounds. Table 3 presents the selected screening level.

Table 3 – Summary of Soil Vapor Screening Levels at 5 feet bgs

Analyte	Indoor Air Screening Level	New Residential Construction Screening Level
Benzene	0.084 µg/m^3	84 µg/m^3
PCE	0.41 µg/m^3	410 µg/m^3

DRAFT

3.1.2 Soil Removal Activities

The excavation area and depths are shown on Figure 3. The majority of the excavation was performed to a depth of approximately seven feet bgs. A portion of the excavation in the vicinity of soil vapor samples SVP-27A/B was extended to a total depth of approximately 17 feet bgs. The excavation activities removed a total of approximately 891 cubic yards of soil. Taylor Morrison contracted Duran Venables, Inc. who profiled and transported the excavated soils to Dumbarton Quarry, in accordance with federal and state waste disposal regulations.

The excavation was backfilled with soils sourced from the Site and generally included materials from the new roadway alignment and the location of the stormwater storage/percolation area located beneath the park within Lot 26.

3.2 Confirmation Soil vapor Sampling

Following the completion of the excavation activities, and waiting approximately 57 days to allow greater than 30 days for potential chemical concentrations in soil vapor to equilibrate, confirmation soil vapor sampling was performed in accordance with the August 11, 2014 *Soil Gas Investigation Workplan* approved by the County in a letter dated August 19, 2014.

A total of eight soil vapor samples were collected and chemically analyzed. Table 1 presents a summary of the compounds detected in each sample. Table 2 presents a summary of the soil vapor analytical results for select compounds including historical sample results within Operable Unit 2. PCE was detected in each of the eight soil gas samples at a maximum concentration of

1,100 µg/m^3. Vinyl chloride was detected in one soil gas sample, CSVP-3-S, at a concentration of 3.6 µg/m^3. Benzene was detected seven samples at a maximum concentration of 52 µg/m^3.

Based upon the detection of PCE at a concentration of 1,100 in soil vapor sample CSVP-1-S located at the western portion of the excavation, additional confirmation sampling was performed to further assess the lateral and vertical extent of residual PCE in the soil vapor. The additional confirmation soil vapor sampling was performed in accordance with the August 11, 2014 *Soil Gas Investigation Workplan* approved by the County in a letter dated August 19, 2014, with the addition of using a mobile laboratory. AEI contracted a State of California-certified mobile laboratory to provide near real time data that could be used to inform the investigation. The sampling activities are described below.

The initial round of confirmation soil vapor sampling included collecting eight soil vapor samples from two depths at four locations. The preliminary results were transmitted to the County in an email dated September 10, 2014 and further discussed that same day. PCE was detected in one sample at a concentration of 1,100 micrograms per cubic meter (µg/m^3), which exceeded the site-specific screening level of 410 µg/m^3. AEI proposed to perform additional soil vapor sampling in general accordance with the August 11, 2014 work plan, and using a mobile laboratory to provide real-time data to allow the assessment to be completed in a single mobilization.

The additional confirmation sampling was performed on September 18 and 19, 2014 to delineate PCE identified in the first round of confirmation soil vapor sampling. A mobile laboratory was used to analyze soil vapor samples collected and inform the investigation. A total of 22 soil vapor samples were collected and chemically analyzed. Table 2 presents a summary of the soil vapor analytical results for select compounds including historical sample results within Operable Unit 2. PCE was detected in 17 of the 22 soil vapor samples collected and analyzed at a maximum concentration of 1,500 µg/m^3. Benzene was detected seven samples at a maximum concentration of 120 µg/m^3. At two locations CSVP-16 and CSVP-18, soil vapor samples were collected on September 18 and 19 to assess whether there was a significant change in VOC concentrations with additional equilibration time. No significant change was noted in the sample results. Based upon the distribution of the sample results, the lateral and vertical extent of PCE and benzene in the subsurface was adequately characterized.

The benzene concentrations observed were not expected and may have been from benzene-affected soils being used as import material in the excavation backfill. Since the backfill materials were sourced from the Site, a Site-wide soil vapor sampling event was performed to assess potential benzene concentrations in soil vapor. No other areas of elevated benzene concentrations in soil vapor were identified, and the sampling activities and results are described in the January 23, 2015 *Report on Soil Vapor Sampling and Closure Request, Operable Unit 1, Revision 2* submitted to the County.

3.4 Additional Focused Removal Action

As noted in the confirmation sampling performed and described above, soil vapor concentrations were identified that exceeded the site-specific screening levels for PCE and benzene. Based on the soil vapor results, an additional excavation was planned and performed

to remove soils where PCE and/or benzene concentrations in soil vapor exceeded the target concentrations. On November 24 and 25, the additional removal action was performed. As shown on Figure 3, the excavation was performed within Lots 3 and 4. The majority of the excavation was performed to a depth of approximately seven feet bgs, with a focused portion of the excavation extended to a total depth of approximately 17 feet bgs. The excavation activities removed a total of approximately 1,140 cubic yards of soil. Taylor Morrison contracted DirtMarket who profiled and transported the excavated soils to Dumbarton Quarry, in accordance with federal and state waste disposal regulations.

Soil for the backfill of the excavation was obtained from 1622 to 1730 West El Camino Real, Mountain View, California. The site soils were screening for 'clean fill' in general accordance with DTSC December 2011 *Clean Fill Advisory*. A copy of the soil sampling report is included as Appendix B. Backfill activities were completed on January 6, 2015, following a delay caused by wet weather conditions.

4. Confirmation Soil Vapor Sampling

Confirmation sampling was performed in general accordance with the January 27, 2015 *Work Plan, Confirmation Soil Vapor Sampling, Former Tire Shop, Operable Unit 2*, approved by the County in a letter dated January 30, 2015. AEI collected additional soil vapor samples to confirm that the second removal action excavation was successful at addressing PCE and benzene concentrations in soil vapor. AEI collected a total of nine shallow soil vapor samples from approximately five feet bgs, and at one location an additional soil vapor sample at ten feet bgs. The confirmation soil vapor samples are shown on Figure 3 as locations CSVP-26 through CSVP-34.

4.1 Preliminary Field Activities

Prior to beginning drilling activities, Underground Service Alert (USA) was notified. The site-specific Health and Safety Plan (HASP) was updated as necessary for this scope of work prior to mobilizing and kept on-site for the duration of field work.

4.2 Temporary Soil Gas Probe Construction

AEI contracted a California-licensed (C-57) drilling company to advance and construct the temporary soil gas probes, CSVP-26 through CSVP-34. On February 10, 2015, the soil borings were advanced with a truck-mounted direct-push drilling rig in four locations within the excavation as shown on Figure 3. At each location, temporary shallow soil gas probes were installed to depths of approximately five-feet bgs, with the exception of CSVP-34, where the deeper soil vapor probe was installed at a depth of ten-feet bgs.

Each temporary soil gas probe was constructed with a polyethylene vapor implant attached to ¼-inch tubing placed at depth and covered with approximately one-foot of sand, such that the implant was situated in the middle of the sand. The temporary soil gas probe was then sealed by backfilling the remaining section of the borehole with one-foot of dry bentonite with the remainder consisting of bentonite to surface, hydrated in six-inch lifts. A gas-tight valve was installed at the end of the sample tubing and closed to seal the tubing.

4.3 Confirmation Soil Vapor Sampling

On February 13, 2015, after waiting beyond the Advisory-recommended equilibration time of a minimum of two-hours, and five-days from a rainfall event that occurred the previous weekend, soil vapor samples were collected from each of the newly constructed soil vapor probes in general accordance with the *Advisory – Active Soil Gas Investigation, April 2012*, issued by the California Department of Toxic Substances Control (DTSC), and Los Angeles and San Francisco Regional Water Quality Control Boards ("the Advisory").

Prior to collecting the samples, a shut-in test was performed by placing a vacuum on the above-grade sampling train and vacuum canisters. The vacuum was observed for approximately one minute and verified to not change. Prior to sampling, and following purging of the sampling lines and approximately three volumes of the sand pack and dried bentonite, the purge valve was closed and the initial vacuum of the laboratory-supplied, certified clean, one-liter vacuum canister was recorded. Soil vapor samples were collected through laboratory-supplied, certified clean, regulators at approximately 150 milliliters per minute. After approximately five minutes (depending on the down-hole vacuum), or -5 in Hg vacuum in the canister, each canister was closed and removed from the sampling line and the final canister vacuum recorded. The vacuum canister sample was sealed with a gas tight cap, appropriately labeled, and entered onto a chain of custody manifest for delivery to the laboratory.

4.4 Sample Analyses

The collected soil vapor samples were transported under chain-of-custody protocol to a State of California-certified laboratory for analysis. Each soil vapor sample was analyzed for VOCs, including isopropyl alcohol as a leak check compound, using US EPA Testing Method TO-15.

4.5 Boring Destruction

Upon completion of sampling and a preliminary review of the results, in-hole tubing was removed from each of the borings.

4.6 Analytical Results

A total of ten soil vapor samples were collected and chemically analyzed. Table 4 presents a summary of the compounds detected in each sample. Table 2 presents a summary of the soil vapor analytical results for select compounds including historical sample results within Operable Unit 2. PCE was detected in one of the soil vapor samples at a concentration of 4.3 µg/m^3. Benzene was detected in each of the eight soil vapor samples collected and analyzed at a maximum concentration of 25 µg/m^3. The maximum PCE and benzene concentrations detected were well below their respective site-specific screening levels of 410 µg/m^3 and 84 µg/m^3.

4.7 Quality Assurance/Quality Control

Quality Assurance / Quality Control (QA/QC) measures were performed during the sample collection and chemical analysis processes. The ultimate objective of these QA/QC measures is to ensure that the data are of adequate quality for their intended use. During soil vapor sample collection, isopropyl alcohol (2-propanol) was used as a leak-check compound. Isopropyl alcohol was detected in two of the soil vapor samples collected and analyzed at concentrations of 360 and 900 µg/m^3. The Advisory notes that a leak check detection at up to ten times the reporting limit is acceptable. The minimum reporting limit for isopropyl alcohol is 50 µg/m^3.

DRAFT

These detections are near ten times the reporting limit. However, given the multiple sample locations providing redundant data, and that the detected concentrations of COPCs are not near the screening levels, these data are deemed acceptable. No anomalies were identified in the laboratory QA/QC processes. Therefore, based upon the review of the QA/QC results, the data are considered to be of adequate quality for their intended use.

5. CONCLUSIONS

The significant soil and soil vapor sampling performed across Operable Unit 2 has shown that the remedial excavations were effective at reducing soil vapor concentrations and the chemicals identified do not pose an unacceptable risk to human health. The multiple investigations were adequate to characterize the potential impacts from previous operations within Operable Unit 2, and no significant data gaps relative to past uses exist. Therefore, no further environmental activities are warranted at this time. On behalf of Taylor Morrison of California, LLC, AEI requests that the County close the open case associated with Operable Unit 2.

DRAFT

Notes:

TPHg = total petroleum hydrocarbons as gasoline

TPHd = total petroleum hydrocarbons as diesel

TPHmo = total petroleum hydrocarbons as motor oil

TPHhf = total petroleum hydrocarbons as hydrualic fluid

PCBs = polychlorinated biphenyls

PCE = tetracholorethylene

bgs = below ground surface

mg/kg = milligrams per kilogram

<0.0050 = not detected at or above the laboratory reporting limit shown

ND = not detected at or above the laboratory reporting limit

~~SB-14~~ = strikethrough results indicates that the soil representing the sample has been removed

Screening Levels = see document text for complete descrition and source

Re: Soil Quality Evaluation
Manzanita East and West
1622 to 1730 West El Camino Real
Mountain View, California

Dear Mr. Ducote:

We are pleased to present this letter summarizing analytical results of soil samples collected from the Manzanita East and West site at 1622 to 1730 West El Camino Real in Mountain View, California (Site, Figure 1). This work was performed in accordance with our agreement dated December 4, 2013.

PROJECT BACKGROUND

The approximately 3 acre Site is located at 1622 to 1730 West El Camino Real, Mountain View, California. The parcel located at 1622 West El Camino Real is occupied by two small one-story commercial buildings and surrounding at grade parking. The parcel located at 1720 West El Camino Real is currently occupied by the existing Tropicana Lodge and surrounding at-grade parking. The three parcels located at 1730 West El Camino Real are currently occupied by the existing Western Appliance retail store and surrounding at-grade parking. A culvert for Permanente Creek extends beneath the parking area between the Tropicana Lodge building and the commercial structures at 1622 West El Camino Real.

We understand that the existing structures and improvements will be demolished and the new residential development will be constructed on-Site. Based on our review of the site plans prepared by Hobach-Lewin, Incorporated, the planned development will likely consist of three separate podium buildings with one- to four-stories of wood frame residential construction over one level of below-grade parking. The below-grade parking will be approximately 15 feet below the existing Site grade. Soils generated during the excavation of the basement parking area will be transported off-Site for re-use or disposal.

PURPOSE

The purpose of this work was to provide soil quality data for used by third parties in their evaluation of excavated soil for re-use or disposal.

DRAFT

SOIL SAMPLING

This soil quality evaluation was performed in general accordance with the Department of Toxic Substances Control (DTSC) October 2011 Clean Fill Advisory.

On December 12, 2013, a Cornerstone field geologist directed a subsurface investigation to collect soil samples from seven exploratory borings within the proposed project area (Figure 1). The seven borings were advanced using direct push technology, with SB-1, SB-3, and SB-4 advanced to approximately 5 feet below ground surface (bgs) and SB-2, SB-5, SB-6, and SB-7 advanced to approximately 15 feet bgs.

The direct push drilling rig was equipped with a Dual Wall Sampling System to help prevent cross contamination between sampling intervals. The Dual Wall Sampler consisted of two main components: an exterior steel casing and an inner sample barrel. The outer casing has a 2-inch outer diameter (OD) and a 1.5-inch inner diameter (ID). Each sample barrel was 5 feet in length with a 1.375-inch outside diameter (OD) and a 1-inch inner diameter (ID). The Dual Wall sample barrel was loaded with a 5-foot acetate liner and installed inside the outer casing. The outer drive casing and inner sample barrel were then hydraulically pushed to a depth of approximately 5 feet. As these tools advanced, the inner sampling barrel collected the soil core sample. The sampler was then retrieved while the outer casing remained in place, protecting the integrity of the hole. A new sampler was then lowered into place and advanced another 5 feet to collect the next soil sample. This process continued until a desired depth was reached.

The seven borings were continuously logged by our on-Site geologist in general accordance with the Unified Soil Classification System (ASTM-D2487), and the boring logs are attached to this letter. Up to 1 foot of clayey fill was observed within the borings. The materials observed beneath the fill was primarily clay with some sandy clay, and clay with gravel also observed. Ground water was not encountered in any of the borings.

At each of the seven boring locations, our geologist collected one sample from the upper approximate ½ foot of soil beneath the asphalt pavement section in an acetate liner and three 5-gram Core N' One™ capsules. The samples collected in the liners were analyzed for organochlorine pesticides (OCPs) and polychlorinated biphenyls (PCBs) (EPA Test Method 8081/8082), 17 California Assessment Manual (CAM) metals (EPA Test Method 6010B), semi-volatile organic compounds (SVOCs) (EPA Test Method 8270), and diesel (TPHd) and oil-range (TPHo) petroleum hydrocarbons (EPA Test Method 8015B) with a silica gel cleanup.

For the 4 borings completed to 15 feet bgs (SB-2, SB-5, SB-6, and SB-7), samples were also collected from 5, 10, and 15 feet bgs, and analyzed for CAM-17 metals, VOCs, TPHg, TPHo, and TPHd. For the 3 borings advanced to 5 feet bgs (SB-1, SB-3, and SB-4), soil samples were also collected from approximately 5 feet bgs, but held at the laboratory pending the analytical results from the shallow samples.

ANALYTICAL RESULTS

Data summary tables, analytical data sheets, and chain of custody documentation are attached to this letter. The results were compared to California Human Health Screening Levels (CHHSLs) established by the California Environmental Protection Agency (CalEPA, 2010). For detected chemicals for which CHHSLs have not been established, Regional Screening Levels (RSLs) established by the USEPA Region 9 (USEPA, November 2013), or Environmental Screening Levels (ESLs) established by the Regional Water Quality Control Board (RWQCB) (May 2013) were used for comparison. ESLs were used in the event that both CHHSLs and RSLs are not established. Metal concentrations were also compared to typical natural background levels in Bay Area soils.

CHHSLs, RSLs, and ESLs are used to screen properties for potential human health concerns where releases of chemicals to soil have occurred. Under most circumstances, the presence of a chemical in soil below the corresponding CHHSL, RSL, or ESL can be assumed not to pose a significant risk to human health. A chemical exceeding the CHHSL, RSL, or ESL does not indicate that adverse impacts to human health are occurring or will occur, but suggests that further evaluation of potential health concerns is warranted.

The metal analytical results are presented in Table 1, and the TPH, VOC, SVOC, OCP, and PCB results are presented in Table 2. A summary of the results is provided below:

- The concentrations of metals detected were less than their respective residential CHHSLs and appeared to be typical of natural background except for chromium (Scott, 1991 and Bradford, 1996). The concentrations of chromium detected were below the residential CHHSLs but above the published regional background values. The horizontal and vertical concentrations of chromium detected were generally consistent across the site, indicating the detected concentrations are likely representative of the natural background concentrations for the Site.

- No VOCs were detected, except for acetone which was detected in the ½ foot sample from SB-2 at a concentration less than the residential RSL.

- No SVOCs or PCBs were detected in the soil samples collected.

- OCPs were detected in several of the samples analyzed, but all concentrations detected were below their applicable residential screening levels.

- TPHg was not detected in the soil samples analyzed. TPHd and TPHo concentrations detected were below their applicable screening levels except for the ½ foot sample from SB-6; the concentrations detected exceeded the residential screening level, but were below the commercial screening level. The concentrations of TPHd and TPHo from the samples collected at the depths of 5, 10, and 15 feet from the SB-6 boring were below the applicable residential screening levels.

DRAFT

CONCLUSIONS AND RECOMMENDATIONS

Based on the analytical results, the soil appears acceptable for disposal at a non-hazardous waste facility. With the exception of the TPHd and TPHo concentrations in at boring SB-6, the analytical results appear acceptable for use as unrestricted fill. We recommend forwarding these results to re-use and/or disposal facilities for their review. Note that re-use facilities may not accept soil for re-use in the area of boring SB-6. To help evaluate the lateral and vertical extent of the soil exceeding residential/unrestricted screening levels, additional sampling could be performed in the area of SB-6.

LIMITATIONS

This letter, an instrument of professional service, was prepared for the sole use of the Prometheus Real Estate Group and third parties evaluating the re-use or disposal of soil excavated from the Site, and may not be reproduced or distributed without written authorization from Cornerstone. The chemical data presented in this letter may change over time and are only valid for this time and location. Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.

CLOSING

Should you have any questions regarding this letter, or if we may be of further service, please contact us at your convenience.

Sincerely,

Cornerstone Earth Group, Inc.

Chris J. Heiny, P.G.
Senior Project Geologist

Peter Langtry, P.G., C.E.G.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
*	RPD of the LCS and LCSD exceeds the control limits
*	ISTD response or retention time outside acceptable limits
X	Surrogate is outside control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 12/12/2013 4:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4° C.

GC/MS VOA
Method 8260B: Surrogate recovery 1,2-Dichloroethane-d4 for LCSD gasoline is outside the control limit. Samples are ND. Report as is.

Method 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 150133 recovered outside control limits for the following analytes: 2-butanone, 2-hexanone and 4-methyl-2-pentanone.

Method 8260B: The continuing calibration verification (CCV) associated with batch 150133 recovered above the upper control limit for 2,2-dichloropropane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCVIS 720-150133/3).

Method 8260B: Internal standard response for the following sample 54331-15,19 exceeded the lower control limit and confirmed by reanalysis.

Method 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch #150325 recovered outside control limits for the following analytes: MEK, 2-Hexanone. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260B: The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch #150325 recovered outside control limits for the following analytes: MEK.

No other analytical or quality issues were noted.

GC/MS Semi VOA
Method 8270C: Due to the level of dilution required for the following sample, surrogate recoveries are not reported: SB-4(1/2) (720-54331-9).

Method 8270C: The following sample was diluted due to the abundance of non-target analytes: SB-2(1/2) (720-54331-3), SB-4(1/2) (720-54331-9), SB-6(1/2) (720-54331-15), SB-7(1) (720-54331-19). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

GC VOA
No analytical or quality issues were noted.

GC Semi VOA
Method 8015B: Due to the high concentration of C10-C28, the matrix spike / matrix spike duplicate (MS/MSD) for batch 150459 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 8015B: Due to the level of dilution required for the following sample, surrogate recoveries are not reported: SB-6(1/2) (720-54331-15).

Method 8015B: The Diesel Range Organics (DRO) concentration reported for the following sample is due to the presence of discrete peaks: SB-6(10) (720-54331-17), SB-6(15) (720-54331-18), SB-7(10) (720-54331-21), SB-2((15) (720-54331-6), SB-2(10) (720-54331-5).

Method 8081A: Due to the level of dilution required for the following sample, surrogate recoveries are not reported: SB-6(1/2)

DRAFT

Job ID: 720-54331-1 (Continued)

Laboratory: TestAmerica Pleasanton (Continued)

(720-54331-15).

Method 8081A: The % RPD between the primary and confirmation columns is >40% for sample SB-2(1/2) (720-54331-3). Due to the coelution of a non-target peak, the lower value has been reported instead of the higher value for the following compounds: DDD & a-chlordane.

Method 8081A: The % RPD between the primary and confirmation columns is >40% for sample SB-3(1/2) (720-54331-7). Due to the coelution of a non-target peak, the lower value has been reported instead of the higher value for the following compounds: a-chlordane.

Method 8081A: The % RPD between the primary and confirmation columns is >40% for sample SB-7(1) (720-54331-19). Due to the coelution of a non-target peak, the lower value has been reported instead of the higher value for the following compounds: DDD & a-chlordane.

No other analytical or quality issues were noted.

Metals

Method 6010B: The continuing calibration verification (CCV) associated with batch 150158 recovered above the upper control limit for Ag. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: SB-7(15) (720-54331-22).

Method 6010B: The following sample was diluted due to the abundance of non-target analyte Fe: Fe: SB-1(1/2) (720-54331-1), SB-2(1/2) (720-54331-3), SB-2((15) (720-54331-6), SB-7(15) (720-54331-22), PL-S7(4.0) (720-54298-21). Elevated reporting limits (RLs) are provided.

Method 6010B: The following sample was diluted due to the abundance of non-target analyte Fe: SB-6(10) (720-54331-17), SB-6(15) (720-54331-18), SB-7(1) (720-54331-19), SB-7(10) (720-54331-21), SB-7(5) (720-54331-20). Elevated reporting limits (RLs) are provided.

Method 6010B: The following sample was diluted due to the abundance of non-target analyte Fe: SB-2(10) (720-54331-5), SB-2(5) (720-54331-4), SB-3(1/2) (720-54331-7), SB-4(1/2) (720-54331-9), SB-5(1/2) (720-54331-11), SB-5(10) (720-54331-13), SB-5(15) (720-54331-14), SB-5(5) (720-54331-12), SB-6(1/2) (720-54331-15), SB-6(5) (720-54331-16). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted.

Organic Prep

No analytical or quality issues were noted.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Glossary of Terms & Qualifier Definitions

Client: AEI Consultants
Project: #334846; Taylor Morrison
WorkOrder: 1502548

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
TEQ	Toxicity Equivalence

Quality Control Qualifiers

F2	LCS recovery for this compound is outside of acceptance limits.

Case Narrative

Client: AEI Consultants
Project: #334846; Taylor Morrison

Work Order: 1502548
February 19, 2015

TO-15 ANALYSIS

All summa canisters are EVACUATED 5 days after the reporting of the results. Please call or email if a longer retention time is required.

In an effort to attain the lowest reporting limits possible for the majority of the TO-15 target list, high level compounds may be analyzed using EPA Method 8260B.

Polymer (Tedlar) bags are not recommended for TO15 samples. The disadvantages are listed in Appendix B of the DTSC Advisory of April 2012.

APPENDIX G

QUALIFICATIONS

DRAFT

CHRISTOPHER OLSEN

ASSOCIATE CONSULTANT

EDUCATION

- BA Environmental Studies, UC Santa Barbara
- MBA Santa Clara University, Leavey School of Business

CERTIFICATIONS

- AHERA, Asbestos Building Inspector

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. Olsen has had experience in the environmental consulting, property disclosure, and real estate due diligence industry since 1994. Mr. Olsen has performed several thousand Phase I Environmental Site Assessments (ESAs) including Fannie Mae, Freddie Mac, HUD and FDIC scopes of work. Mr. Olsen has performed asbestos, lead-based paint, radon, and mold sampling on hundreds of Phase I ESA projects. He has completed Phase I ESA projects on all property types, including heavy and light industrial, commercial office and retail, hospitality, multifamily, mobile home parks, hospital and skilled nursing facilities, resort properties, automotive service facilities, and waste processing facilities. Mr. Olsen has several years' experience reviewing Phase I ESA reports, and conducing "desk reviews" of Phase I ESAs as a third-party reviewer. Mr. Olsen has completed approximately 50 Property Condition Assessments.

PROJECT EXPERIENCE

Project experience for Mr. Olsen includes:

- **Oakridge Shopping Center, San Jose, CA -** This 1.14M SF shopping center was constructed in 1971. HRECs were identified in connection with a former auto service facility which was on site. Mr. Olsen recommended an ACM O&M plan.
- **Garaventa Transfer Station, Pittsburg, CA** - This 11.05-acre site is a recycling and solid waste transfer station. RECs were identified, and an ACM O&M plan was recommended as well as continued groundwater monitoring and remediation per RWQCB requirements.
- **Embassy Suites, South Lake Tahoe, CA** - Embassy Suites is a resort hotel. No RECs were identified; however, Mr. Olsen recommended an ACM O&M plan.
- **Durkee Industrial Facility, Richmond, CA** - This 6.32-acre commercial/industrial property was found to have multiple RECs due to historic industrial uses. Groundwater contamination was reported. Mr. Olsen recommended continued groundwater monitoring and remediation per RWQCB requirements.
- **Office Tower, 100 Van Ness Ave, San Francisco, CA** - This 29-story office tower constructed in 1973 was undergoing a complete interior renovation for conversion to residential use. Several RECs were identified due to the operation of vaulted tanks without permits or tank testing documentation.
- **Mixed-use Property, Oakland, CA** - This 2.45-acre site consisted of ten office and retail buildings constructed between 1868 and 1881. RECs were identified in connection with undocumented former onsite contaminated soil removal. Additionally, an adjacent open SLIC case (groundwater contamination) was reported.
- **Portfolio of five multifamily residential facilities, San Francisco, CA** - No RECs were found while reviewing this portfolio of multifamily residential properties in San Francisco. Mr. Olsen recommended both ACM and LBP O&M plans for these properties.

DRAFT

Megan Salcido

National Client Manager, Due Diligence

EDUCATION

- BA- Environmental Studies, Brown University, Providence, RI

CERTIFICATIONS

- EPA Accredited Asbestos Building Inspector

SUMMARY OF PROFESSIONAL EXPERIENCE

Ms. Salcido has been in the environmental industry since 2014 and provides project management and oversight to ensure compliance and satisfaction of client requirements for Phase I Environmental Site Assessments, Real Estate Transaction Screens, Database Reviews, and other similar environmental assessments. She has successfully completed assessments on a variety of residential, agricultural, commercial and complex industrial sites. Ms. Salcido is accustomed to all aspects of Due Diligence Property Assessments and the needs and requirements of a variety of reporting standards, including ASTM, EPA's All Appropriate Inquiry (AAI), and customized client formats.

PROJECT EXPERIENCE

Project experience for Ms. Salcido includes:

- Phase I Environmental Site Assessments
- Limited Environmental Site Assessments
- Environmental Transaction Screens
- Records Research with Risk Assessments
- Regulatory Database Reviews
- Historical Records Reviews
- ACM, Radon, LBP, and drinking water sampling

In addition, prior to joining the environmental consulting industry, Ms. Salcido spent four years studying a diverse range of environmental disciplines including: environmental health, coastal ecology and conservation, environmental statistics, ecology, conservation biology, environmental law and policy, and science communications.

MBH	1,000 BTUs per Hour
MCL	Maximum Contaminant Level
MDP	Main Distribution Panel
MEP	Mechanical, Electrical and Plumbing
MHP	Mobile Home Park
MMI	Modified Mercalli Intensity
MPH	Miles per Hour
MRL	Machine Room-Less
MTBE	Methyl Tertiary Butyl Ether
MTCO2e	Metric Tons of Carbon Dioxide Equivalent
NA or N/A	Not Applicable
ND	None Detected
NESHAP	National Emission Standards for Hazardous Air Pollutants
NFA	No Further Action
NFPA	National Fire Protection Association
NFRAP	No Further Remedial Action Planned
NLR	No Longer Regulated
NOV	Notice of Violation
NPL	National Priorities List
NPV	Net Present Value
NRA	Net Rentable Area
NRI	National Risk Index
O	Occupied
O&M	Operations and Maintenance
OEC	Other Environmental Consideration
OFC	Office
OH&PR / OH&P	Overhead and Profit
OPC	Opinion of Probable Cost
OSHA	Occupational Safety and Health Administration
PCA	Property Condition Assessment
PCB	Polychlorinated Biphenyl
PCE / PERC	Perchloroethylene, or Tetrachloroethylene, or Tetrachloroethene
PCR	Property Condition Report
PE	Professional Engineer
PFAS	Per- and Polyfluoroalkyl Substances

DRAFT

Acronyms & Abbreviations	
EFF AGE	Effective Age
EIFS	Exterior Insulation Finishing Systems
EMF	Electro Magnetic Fields
EMS	Energy Management System
EPA	Environmental Protection Agency
EPDM	Ethylene Propylene Diene Monomer (rubber membrane roof)
ERNS	Emergency Response Notification System
ESA	Environmental Site Assessment
ESG	Environmental, Social and Governance
EUI	Energy Use Intensity
EUL	Estimated Useful Life
EWEM	Energy and Water Efficiency Measure
F	Fahrenheit
FAR	Floor Area Ratio
FCA	Facility Condition Assessment
FCU	Fan Coil Unit
FEMA	Federal Emergency Management Agency
FF&E	Furniture, Fixtures and Equipment
FFHA	Federal Fair Housing Act
FHA	Forced Hot Air, or Fair Housing Act, or Fair Housing Adminitration
FHW	Forced Hot Water
FIRM	Flood Insurance Rate Map
FLS	Fire and Life Safety
FM	Factory Mutual
FOIA	US Freedom of Information Act
FOIL	Freedom of Information Law
FRP	Fiber Reinforced Plastic
FRT	Fire Retardant Treated
FTRP	Fire Retardant Treated Plywood
Gal	Gallon
GFA	Gross Floor Area
GFCI	Ground Fault Circuit Interrupter
GFI	Ground Fault Interrupt (circuit)
GHG	Greenhouse Gas
GIS	Geographic Information System
GPF	Gallons per Flush
GPM	Gallons per Minute
GPNA	Green Physical Needs Assessment
GPR	Ground-Penetrating Radar
GSF	Gross Square Footage
GWB	Gypsum Wall Board
HID	High Intensity Discharge
HREC	Historical Recognized Environmental Condition
HSPF	Heating Seasonal Performance Factor
HUD	Department of Housing and Urban Development
HVAC	Heating, Ventilation and Air Conditioning
IAQ	Indoor Air Quality
IBC	International Building Code
IC	Institutional Control
IM / IR	Immediate Repair
IRR	Internal Rate of Return
ISR	Impervious Surface Ratio
kBTU	Kilo-British Thermal Unit
kGal	Kilogallon
kW	Kilowatt
kWh	Kilowatt Hour

Acronyms & Abbreviations	
PGA	Peak Ground Acceleration
PML	Probable Maximum Loss
POC	Point of Contact
PSF	Pounds per Square Foot
PSQ	Pre-Survey Questionnaire
PTAC	Packaged Through-Wall Air Conditioning (Unit)
PVC	Polyvinyl Chloride
R&M	Repair and Maintain - Routine Maintenance
RCRA	Resource Conservation and Recovery Act
REC	Recognized Environmental Condition
RM	Room
ROI	Return On Investment
ROW	Right-of-Way
RP	Responsible Party
RR	Replacement Reserve
RTU	Rooftop Unit
RUL	Remaining Useful Life
SDS	Safety Data Sheet
SEDI	Statement of Energy Design Intent
SEER	Seasonal Energy Efficiency Ratio
SEL	Scenario Estimated Loss
SEMS	Superfund Enterprise Management System
SEP	Statement of Energy Performance
SF	Square Footage, or Square Feet
SIR	Savings to Investment Ratio
SL	Scenario Loss
SP	Subject Property
SQG	Small Quantity Generator
SRA	Seismic Risk Assessment
ST	Short Term
SUL	Scenario Upper Loss
SUP	Special Use Permit
SVOC	Semi-Volatile Organic Compound
SY	Square Yard
TCE	Trichloroethylene, or Trichloroethene
TE	Thermal Efficiency
TPH	Total Petroleum Hydrocarbons
TPHd / TPH-d	Total Petroleum Hydrocarbons (diesel range)
TPHg / TPH-g	Total Petroleum Hydrocarbons (gasoline range)
TPHo / TPH-o	Total Petroleum Hydrocarbons (oil range)
TPO	Thermoplastic Polyolefin Roof Membrane
TRPH	Total Recoverable Petroleum Hydrocarbons
TSD	Treatment, Storage, and Disposal
UBC	Uniform Building Code
USDA	United States Department of Agriculture
USGS	United States Geological Survey
UST	Underground Storage Tank
V	Vacant
VAV	Variable Air Volume Box
VCP	Voluntary Cleanup Program
VOC	Volatile Organic Compound
VSQG	Very Small Quantity Generator
WDO	Wood Destroying Organism
ZAR	Zoning Analysis Report

DRAFT
