Project Description (Proposed actions, location, and/or consequences).

The almost 300-acre Project Site is composed of 32 parcels along the San Diego River corridor through the center of the City of Santee. The City of Santee Fire Department has initiated development of the San Diego River Fire Hazard Mitigation Plan (FHMP) to reduce wildfire risk in and around high-priority sites along the San Diego River corridor. This area lies within the wildland-urban interface and includes critical public infrastructure, adjacent residential neighborhoods, and biologically sensitive habitats. The need for a targeted, ecologically conscious approach to vegetation management is underscored by increasing fire risk, invasive plant encroachment, and complex access and ownership constraints unique to the corridor.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

To be determined.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
