**RE: Cultural Resource Desktop Review for the Public Storage Jefferson Replacement Project in the City of Los Angeles, Los Angeles County, California**

Dear Tony Locacciato,

Chronicle Heritage was contracted by Meridian Consultants, LLC to conduct a cultural resource desktop review and produce a memorandum summarizing the results to support the Public Storage Jefferson Replacement Project (Project) in the city of Los Angeles (City), Los Angeles County, California. The proposed Project is approximately two acres and comprises APN 4205-033-014. The proposed Project will redevelop the property, including the replacement of existing mini-warehouse buildings and parking areas and the construction of new retail and mini-warehouse use areas.

Chronicle Heritage understands these studies are needed for the preparation of a Mitigated Negative Declaration in compliance with the California Environmental Quality Act (CEQA).

This memorandum summarizes the methods and results of the cultural resource desktop review completed for the Project. The desktop review included a records search of the California Historical Resources Information System (CHRIS), as well as a review of historical maps, aerial photographs, and the Bureau of Land Management General Land Office records.

## Project Location and Description

The proposed Project area is at 5741 West Jefferson Boulevard and 3336, 3348, and 3352 South La Cienega Place in the West Adams and Baldwin Hills community plan area of Los Angeles, California (Figure 1). The Project is depicted within a portions of the U.S. Geological Survey (USGS) *Hollywood* (1978), and *Beverly Hills* (1978) *California* 7.5-minute topographical maps within the Rincon de los Bueyes Land Grant UTM Zone 11, NAD 83 San Bernardino Base Meridian (Figure 2).

Public Storage Jefferson Avenue Project in the City of Los Angeles, Los Angeles County, California

Figure 2. Project location map.

## Regulatory Context

### State

#### California Environmental Quality Act

The proposed Project is subject to compliance with CEQA, as amended. Compliance with CEQA statutes and guidelines requires both public and private projects with financing or approval from a public agency to assess a project's impact on cultural resources (Public Resources Code [PRC] Section 21082, 21083.2 and 21084 and California Code of Regulations 10564.5). A proposed project that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment under CEQA (Section 15064.5(b) of the CEQA Guidelines).

Pursuant to CEQA, a historical resource is a resource listed in, or eligible for listing in, the California Register of Historic Resources (CRHR) (PRC, Sections 21083.2 and 21084.1; Section 15064.5(a) of the CEQA Guidelines). In addition, resources included in a local register of historical resources or identified as significant in a local survey conducted in accordance with state guidelines are also considered historical resources under CEQA unless a preponderance of evidence demonstrates otherwise (Section 15064.5(a) of the CEQA Guidelines). Furthermore, any object, building, structure, site, area, place, record, or manuscript determined by the Lead Agency to be significant is a historical resource provided the determination is supported by substantial evidence in light of the whole record (*Id.*). Generally, the fact that a resource is not listed in, or determined eligible for listing in, the CRHR or is not included in a local register or survey shall not preclude a Lead Agency from determining that the resource may be a historical resource (*Id.*).

#### California Register of Historical Resources Program

Created in 1992 and implemented in 1998, the CRHR is a state government program to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change (PRC Section 5024.1[a]). Certain properties, including those listed in, or formally determined eligible for listing in, the National Register of Historic Places (NRHP) and California Historical Landmarks numbered 770 and higher are automatically included in the CRHR. California Historical Landmarks are buildings, sites, features, or events that are of statewide significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other historical value. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys, or designated by local landmarks programs, may be nominated for inclusion in the CRHR. California Points of Historical Interest are buildings, sites, features, or events that are of local (city or county) significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other historical value. A resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria (PRC Section 5024.1[c]):

Criterion 1: It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

Criterion 2: It is associated with the lives of persons important in our past.

Cultural Resource Desktop Review for the  
Public Storage Jefferson Avenue Project in the City of Los Angeles, Los Angeles County, California

---

Criterion 3: It embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of an important creative individual; or possesses high artistic values.

Criterion 4: It has yielded, or may be likely to yield, information important in history or prehistory. Resources nominated to the CRHR must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. (PRC Section 5024.1).

It is possible that a resource whose integrity does not satisfy NRHP criteria may still be eligible for listing in the CRHR. A resource that has lost its historic character or appearance may still have sufficient integrity for the CRHR if, under Criterion 4, it maintains the potential to yield significant scientific or historical information or specific data. Resources that have achieved significance within the past 50 years may be also eligible for inclusion in the CRHR, provided that enough time has lapsed to obtain a scholarly perspective on the events or individuals associated with the resource (California Office of Historic Preservation [OHP] 2005).

The first step in the process is to identify cultural resources that may be impacted by a project and then to determine whether the resources are “historically significant” resources.

CEQA defines historically significant resources as, “resources listed or eligible for listing in the [CRHR]” (PRC Section 5024.1). A cultural resource may be considered historically significant if the resource is 45 years old or older or possesses integrity of location, design, setting, materials, workmanship, feeling, and association.<sup>1</sup> In addition, it must meet at least one or more of the criteria for listing on the CRHR mentioned above.

Cultural resources are buildings, sites, human-modified landscapes, traditional cultural properties, structures, or objects that may have historical, architectural, cultural, or scientific importance. CEQA states that if a project will have a significant impact on important cultural resources, deemed “historically significant,” then project alternatives and mitigation measures must be considered.

## California Assembly Bill 52

Signed into law in September 2014, California Assembly Bill 52 (AB 52) created a new class of resources (tribal cultural resources [TCRs]) for consideration under CEQA. TCRs may include sites, features, places, cultural landscapes, sacred places, or objects with cultural value to California Native American tribes that are listed or that are determined to be eligible for listing in the CRHR, included in a local register of historical resources, or a resource determined by the lead CEQA agency, in its discretion and supported by substantial evidence, to be significant and eligible for listing in the CRHR. AB 52 requires that the lead CEQA agency consult with California Native American tribes that have requested consultation for projects that may affect TCRs. The lead CEQA agency shall begin consultation with participating Native American tribes prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report. Under AB 52, a project that has potential to cause a substantial adverse change to a TCR constitutes a significant effect on the environment unless mitigation reduces such effects to a less than significant level.

---

<sup>1</sup> The OHP guidelines recognize a 45-year-old criteria threshold for documenting and evaluating cultural resources (assuming a five-year lag between resource identification and the date that planning decisions are made) (OHP 1995:2). The age threshold is an operational guideline and is not specific to CEQA statutory or regulatory codes.

## Cultural Resources Inventory

Chronicle Heritage conducted a CHRIS records search on August 14, 2024, at the South Central Coastal Information Center housed at California State University, Fullerton. The records search included the Project area and a 0.5-mile (mi) search area. The purpose of the records search was to identify any known cultural resources within and in the immediate vicinity of the Project area. The CHRIS search included a review of the NRHP, the CRHR, the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. A summary of the results of the records search is provided below.

### Previous Cultural Resource Studies

The records search results indicate that 23 previous investigations have been conducted and documented within the Project area between 1936–2014 (Table 1). One study (LA-08749) intersects the Project area and two are immediately adjacent. The results of the previous cultural resource studies conducted within 0.5-mi of the Project area are summarized below.

\* Cultural resource studies that intersect or are immediately adjacent to the Project area, representing types of cultural resources documented in the Project vicinity.

### LA-00839

In 1936, Malcolm F. Farmer drafted the *Preliminary Notes of an Archaeological Reconnaissance of Indian Camp Sites in the Baldwin Hills–Ballona Creek Region of Los Angeles County, California* (Farmer 1936). This report summarizes the geography of the Baldwin Hills of the Dominguez Range and the drainages of Ballona Creek and Centinella Creek in relation to prehistoric archaeological sites adjacent to and east of the current Project area. Farmer (Farmer 1936) describes the stratigraphy of the area and identifies strata 12 as containing “finely bedded...sand and loam with beds of peat...with fresh water, shells, and petrified, stony, silicified human bones at 20 to 25 feet”. Additionally, Farmer (1936) states that the human remains from strata 12 possibly date to the late Pleistocene. The report also contains site descriptions and hand-drawn sketch maps of eight prehistoric sites (LAN-000067, -68, -69, -70, -71, -72, -73, -74) composed of temporary habitation sites and seasonal village sites. Artifacts found in association with the sites included ground stone and flaked stone.

### LA-03501

In 1990, Brian D. Dillon, Ph.D., Consulting Archaeologist, authored the *Archaeological Record Search and Impact Evaluation for the Los Angeles Wastewater Program Management (NOS-NCOS) Project Los Angeles, California* (Dillon 1990). This report summarizes the results of archival research conducted in Los Angeles and adjacent areas. The report contains archaeological, ethnohistoric, and historic backgrounds, and archival research results including more than two dozen archaeological site descriptions. The author concluded that many of the archaeological and historical sites recorded prior to 1950 have been destroyed or severely damaged as a result of construction. Additionally, the author identifies two zones of archaeological significance in the Los Angeles area. The first occurs along the old watercourse of the Los Angeles River, later named the Ballona Creek (adjacent and west of the current Project area). This watercourse travels north and west of the Baldwin Hills Areas to the coastline at Marina del Rey. The second zone of significance identified by Dillon (1990) is the location of the Spanish Colonial Pueblos de Nuestra Senora de la Reina de los Angeles de Porciuncula, adjacent to present-day Union Station and El Pueblo State Historic Park.

### LA-08749

In 2007, Wayne H. Bonner, Senior Project Archaeologist for Michael Brandman Associates, authored the *Cultural Resources Records Search and Site Visit Results for Global Tower, LLC Candidate CA5008 (Jefferson Public Storage), 5741 West Jefferson Boulevard, Los Angeles, Los Angeles County, California* (Bonner 2007). This study intersects the location of the current Project area. Results of the study indicate that four cultural resources have been documented within 1 mi of the candidate location. Of these resources, one intersects the candidate location (CA-LAN-000074) and consists of a prehistoric seasonal village site. A site visit was conducted as part of the study, and it was noted that the ground surface of the candidate location is completely paved with asphalt and no signs of the previously recorded village site (CA-LAN-000074) were observed. The study concluded that the prehistoric sensitivity of the candidate location is “moderate” and the historic sensitivity is “low”. Further, the study indicated that historic resources will not be affected and that the previously recorded village site was likely previously destroyed by construction of the existing storage facility (Bonner 2007).

It should be noted that research conducted at the SCCIC for the current Project area indicate that CA-LAN-000074 is mapped east of and immediately adjacent to the current Project area north of

the railroad at the intersection of West Jefferson Boulevard and Fairfax Avenue (See Confidential Attachment A: Mapped Records Search Results and Attachment B: Site Record for LAN-000074).

## Previously Identified Cultural Resources

The records search indicated that 12 cultural resources have been previously documented within the 0.5-mi search area of the Project area (Table 2). Of these 12 cultural resources, four date to the prehistoric period and eight date to the historic period (see Confidential Attachment A and B). The prehistoric resources include three seasonal village sites and one site composed of human remains and mammoth bones. The historic period resources include five buildings and three structures.

**Table 2. Previously Documented Cultural Resources within 0.5-mi of the Project Area**

Primary No.	Trinomial	Period	Type	Description
P-19-000068	CA-LAN-000068	Prehistoric	Site	Seasonal Village Site; Malcolm Farmer's Baldwin Hills Site #2; Other Name: LA-67

## Historic Aerial and Topographic Map Review

As early as 1894, topographic maps depict the Project vicinity as sparsely developed. During this time, the railroad travels east-west directly south of the Project and the roadway of La Cienega Boulevard to the east is apparent. Marshlands are depicted north of the Project and correspond to blueline drainages associated with the Los Angeles River (Ballona Creek watercourse). By 1921, additional development and roadways north of the Project are visible. As early as 1948, aerial

imagery depict the Project area as graded with structures and an open field directly to the east. During this time, urban and commercial development is apparent throughout the Project vicinity including the channelized Ballona Creek watercourse. By 1952, much of the Project area and vicinity appear developed with dense residential and commercial buildings. Between 1980 and 1985, additional buildings are constructed on the Project and between 1989 and 1993, the field to the east of the Project undergoes development.

## Results

Results of the cultural resources desktop review indicate that 23 previous investigations have been conducted and documented within 0.5-mi of the Project area between 1936–2014. Twelve cultural resources have been previously documented within the 0.5-mi search area of the Project area (Confidential Attachment A). Of these previously recorded resources, four date to the prehistoric period and eight date to the historic period. The prehistoric resources include three seasonal village sites and one site with human remains and mammoth bone. The historic period resources include five buildings and three structures.

Dillon (1990) identified the watercourse of the Los Angeles River, now referred to as the Ballona Creek, as an archaeologically sensitive zone. This watercourse travels north and west of the Baldwin Hills Areas to the coastline at Marina del Rey and is adjacent to and west of the current Project area. Prehistoric seasonal village sites are associated with this watercourse.

Bonner (2007) reported previously recorded prehistoric site LAN-000074 as being within the Project area; however, archival research conducted as part of the current Project indicates that the site is just east of and immediately adjacent to the Project area near the intersection of West Jefferson Boulevard and Fairfax Ave (see Confidential Attachment A).

The City requested a Sacred Lands File (SLF) search through the Native American Heritage Commission (NAHC). The NAHC responded on June 24, 2024, stating that the results of their search were positive and recommended contacting the Gabrieleno/Tongva San Gabriel Band of Mission Indians for more information (see Attachment C). Andrew Salas, Chairman for the Gabrieleno Band of Mission Indians- Kizh Nation requested AB52 consultation with the City to discuss the Project area in further detail.

Based on the results of the cultural resources desktop review, it is recommended that the Project area and vicinity are considered moderately sensitive for prehistoric resources. This sensitivity recommendation is based on the location of previously recorded resources, including sites containing human remains, and the Project's proximity to the Ballona Creek watercourse.

No historical or archaeological resources or previously documented or designated Tribal Cultural Resources were identified on the Project area as a result of the records search. Based on the results of the records search, Chronicle Heritage does not recommend any additional cultural resource studies at this time.

In the unlikely event that cultural resources are encountered during construction activities associated with the Project, a qualified archaeologist shall be obtained to assess the significance of the find in accordance with the criteria set forth in the CRHR. In addition, Health and Safety Code 7050.5, CEQA 15064.5(e), and Public Resources Code 5097.98 mandate the process to be followed in the unlikely event of an accidental discovery of any human remains in a location other than a dedicated cemetery.

Cultural Resource Desktop Review for the  
Public Storage Jefferson Avenue Project in the City of Los Angeles, Los Angeles County, California

Thank you for contacting Chronicle Heritage for this Project. If you have any questions, please do not hesitate to contact me at (909) 362-3706 or lporras@ChronicleHeritage.com.

Sincerely,

**Chronicle Heritage**

A handwritten signature in black ink, appearing to read "Lindsay A. Porras". The signature is fluid and cursive, written in a professional style.

Isaiah Ross  
City of Los Angeles Department of City Planning

Via Email to: [Isaiah.Ross@lacity.org](mailto:Isaiah.Ross@lacity.org)

**Re: Public Storage Jefferson Replacement Project - 5741 West Jefferson Blvd. Project, Los Angeles County**

To Whom It May Concern:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Gabrieleno/Tongva San Gabriel Band of Mission Indians on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: [Andrew.Green@nahc.ca.gov](mailto:Andrew.Green@nahc.ca.gov).

Sincerely,

Andrew Green  
Cultural Resources Analyst
