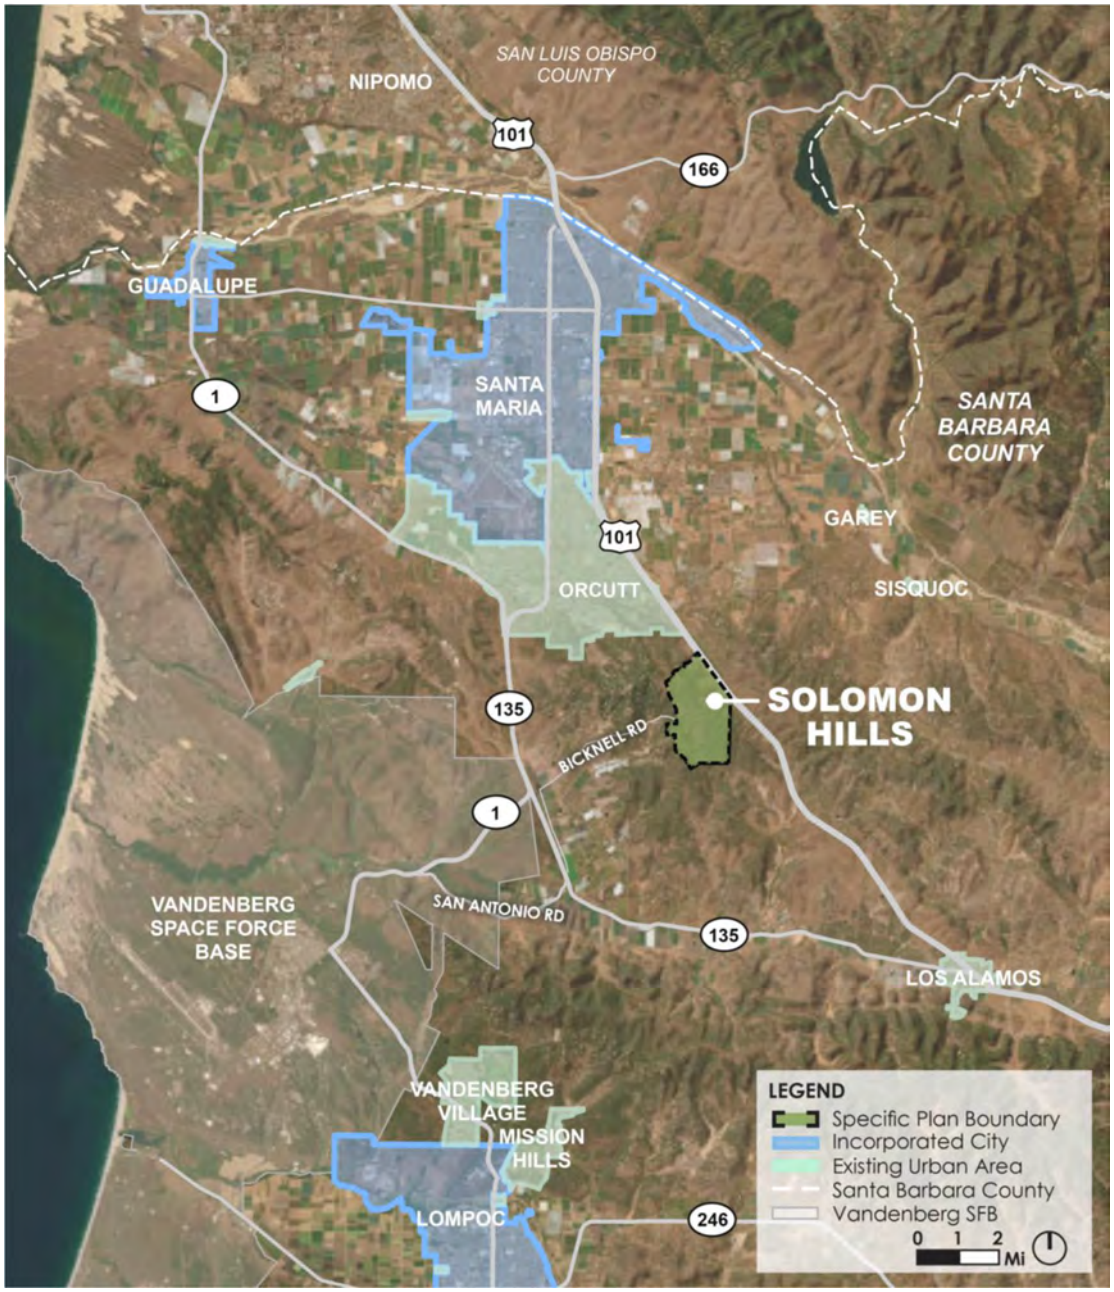
1.0 INTRODUCTION

SCS Engineers (SCS) prepared this Air Quality Study for the Solomon Hills Project (Project). The Project's primary and underlying purpose is to create a new community with a range of housing types, and a mix of commercial, office, public, quasi-public, recreational and open space uses. The goal of this study was to estimate the Project's direct and indirect emissions from short-term construction and long-term operation for comparison to County air quality thresholds of significance for impacts to the environment [1].



Following this Introduction, Section 2 provides a summary of the Project. Section 3 then discusses the environmental and regulatory setting for the Project while Section 4 discusses the methodology used in this study. Section 5 summarizes the Project's air quality impacts prior to mitigation. Section 6 then summarizes the Project's level of significance and any required mitigation measures. Finally, the appendices contain supporting documentation.

2.0 PROJECT DESCRIPTION

2.1 LOCATION

The Project Area is located adjacent to and west of Highway 101, south of Orcutt by 0.7 miles, east of Highway 135 by two miles and north of Los Alamos by six miles. It encompasses portions of three legal parcels owned by Solstra Inc., including APN's 101-020-041, 043, 085, 086, and 087 totaling 4,195.2 acres (see Figure 1).

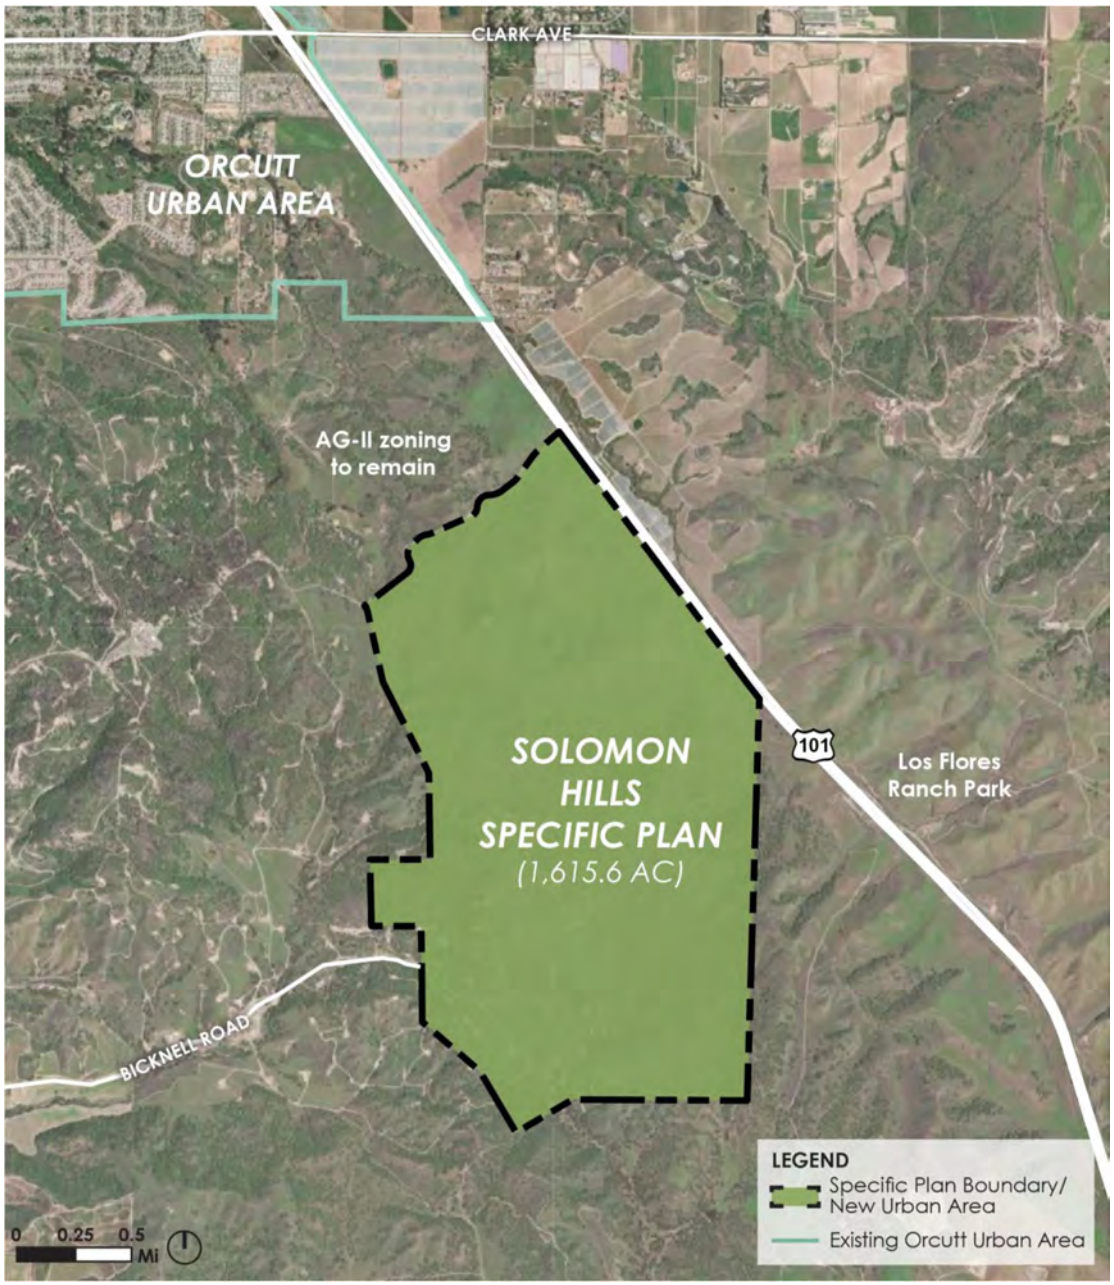


Figure 1. Project Location

2.2 EXISTING CONDITIONS

The Project Area is currently zoned AG-II-100 with a Land Use Designation of Agricultural Commercial (AC). Current land uses include grazing and oil and gas production (see Figure 2). Approximately 80% of the Project Are falls within the Orcutt Oil Field [2]. All existing oil and gas wells located within the Project Area will be permanently abandoned while associated pipelines, equipment, and sumps will be removed.

Figure 2. Existing Conditions

2.3 SOLOMON HILLS PROJECT

The Project proposes to create Santa Barbara County's first new community that will result in a sustainable, resilient and healthy environment for its residents. The Project establishes a holistic framework for Smart Growth with a redevelopment of private lands historically used for grazing and oil and gas production. It's proposed Specific Plan includes the design and implementation of a central village closely surrounded by several neighborhoods, office and commercial space, a TK-8 school, fire/sheriff station, parks, open space and public trails to allow walking and biking as an easy alternative to vehicle transport.

The Project's proposed Specific Plan allows for a balance of land uses primarily serving working families allowing 4,000 single and multi-family residential units, 650,000 square feet of commercial retail and office use and space, public and institutional uses and space, and recreational and open space uses. Critical infrastructure includes water supply and a water reclamation facility, interchange improvements along Hwy 101, additional secondary access along Hwy 101 and Hwy 135 and several active and passive parks and public trails. Public benefits include developer sponsored Affordable housing near commercial and transportation access points, utility and access improvements that minimize traffic impacts to neighboring properties, new public trail access into the Orcutt Hills, recreational improvements and public access to the Newlove Picnic Grounds, the preservation of open space ridgelines and valleys for habitat protection and the abandonment and remediation of all oilfield features and operations. The Project is designed to be built in four (4) buildout phases over a fourteen-year period for the orderly delivery of the Project. Phased grading, access, utility, horizontal and public improvements are scheduled ahead of and to align with the same buildout phases. See Appendix H for details.

Construction includes:

- Abandonment of 34 active oil wells and re-abandonment of an additional 31 previously abandoned wells if required due to grading operations, removal of oilfield infrastructure, and remediation of impacted soil;
- Site grading;
- Building construction;
- On-site roads (including a double-lane roundabout on the access road near the US-101 Ramps); and
- Off-site road improvements for:
    - Bicknell / Graciosa Road Paved to Highway 135;
    - Frontage Road to Existing Solomon Summit Interchange Highway 101;
    - Solomon Summit Lane Improvements Highway 101; and
    - New Interchange Highway 101.

The Project also includes the following design features which are feasible for reducing emissions:

- Energy Efficiency from Buildings
    - All new construction per current building code (e.g., California's Title 24 Building Energy Efficiency Standards).
    - All electric except for limited natural gas in certain commercial operations.
    - Solar panels on all residential, commercial, office, and retail.
    - Batteries installed in commercial, office, and retail.
    - Supplemental clean and renewable electricity provided by Central Coast Community Energy (3CE).

    - No fireplaces or wood stoves.
- Transportation Efficiency
    - Dense/walkable community with significant pedestrian and bike connectivity.
    - Electric vehicle (EV) ready chargers in all homes and throughout community, including office and retail.
    - EV bike rentals throughout community.
- Water Efficiency
    - WaterSense best management pratices (BMPs).
    - Water efficient fixutres.
    - Weather-based smart irrigation controllers.
    - Small lots with limited turf and xeric landscaping.
    - Recycled water for irrigation.
- Smart Community Design
    - Residential, office and retail designed together.
    - Major dedicated pedestrian and bike paths throughout.
    - Activity nodes or major event centers with various functions within a 5 minute walk.
    - Transit stops.
    - Village farmer's market.
    - Smaller houses and smaller lots in the main village to reduce walking distances.
    - Concentration of affordable and higher density multi-family near retail center.
    - Concentration of homes around new K-8 school to promote walking.
    - Active parks, trail and paths to promote EV Bikes and hiking.
    - Oak Tree Management and Replacement Plan.
    - Recreational and open space uses.

3.0 ENVIRONMENTAL AND REGULATORY SETTING

3.1 REGIONAL CLIMATE

Local air quality is affected by the regional climate and meteorology as weather conditions control the transport and diffusion of emitted pollutants. Climate deals with long-term weather patterns while meteorology deals with short-term daily and hourly weather conditions.

Climate in the Project region is characterized as Mediterranean with warm, dry summers and cool, relatively damp winters. Maximum summer temperatures average 70 degrees Fahrenheit (F) near the coast and high 80s to low 90s inland. Minimum winter temperatures range from 40 degrees F near the coast and in the 30s inland.

Rainstorms can occur periodically (typically from October to April) but tropical air masses can occasionally produce rainfall during the summer months. Annual rainfall ranges from 10 to 18 inches along the coast, with increased rainfall at higher elevations. [12]

The Project site is located within the South Central Coast Air Basin. An air basin is a region with similar weather conditions and geographic features. The Project site is located in the Solomon Hills, at elevations higher than the City of Santa Maria. Topography influences local meteorology and air quality by altering wind patterns (e.g., mountains can block, redirect, or channel wind flow), creating variations in the weather (e.g., temperature, precipitation, wind speed, wind direction). [23]

3.2 NATIONAL AIR QUALITY

Air quality is regulated at the national level by the United States Environmental Protection Agency (EPA). EPA has adopted various rules and regulations to protect air quality including the Clean Air Act and National Ambient Air Quality Standards (NAAQS) [13]. The NAAQS establish acceptable levels of exposure for criteria pollutants:

1. Carbon monoxide (CO);
2. Lead (Pb);
3. Nitrogen dioxide (NO_2);
4. Ozone (O_3);
5. Particulate matter less than 10 microns in size (PM_{10});
6. Particulate matter less than 2.5 microns in size ($PM_{2.5}$); and
7. Sulfur dioxide (SO_2).

In addition, the federal Clean Air Act regulates 188 air toxic pollutants known as Hazardous Air Pollutants (HAPs). HAPs are pollutants that are either known or suspected to cause cancer, other serious health effects, or adverse environmental effects. [24] The federal Clean Air Act does not regulate odors directly, but does regulate other pollutants that may cause nuisance odors (e.g., certain HAPs).

3.3 STATE AIR QUALITY

Air quality is regulated at the state level by the California Air Resources Board (CARB). CARB has adopted various rules and regulations to protect air quality including the California Ambient Air Quality Standards (CAAQS) [14]. The CAAQS establish acceptable levels of exposure/environmental impacts for:

1. Carbon monoxide (CO);
2. Lead (Pb);
3. Nitrogen dioxide (NO_2);
4. Ozone (O_3);
5. Particulate matter less than 10 microns in size (PM_{10});
6. Particulate matter less than 2.5 microns in size ($PM_{2.5}$);
7. Sulfur dioxide (SO_2);
8. Visibility reducing particles;
9. Sulfates;
10. Hydrogen sulfide; and
11. Vinyl chloride.

CARB also regulates toxics air contaminants (TACs) through regulations and programs such as but not limited to:

- AB 617 Community Air Protection Program;
- AB 1807 - Toxics Air Contaminant Identification and Control;
- AB 2588 Air Toxics Hot Spots Information and Assessment; and
- Airborne Toxic Control Measures (ATCMs).

Under Senate Bill 1137 (SB1137), California's Department of Conservation Geologic Energy Management Division (CalGEM) established new safety requirements to protect public health by creating a 3,200-foot Health Protection Zone (HPZ) between oil and gas operations and community spaces (e.g., homes, schools, hospitals, and other sensitive locations where people live, work, and gather). Currently, there are 54 active oil and gas production wells outside the Specific Plan Boundary within a 3,200 foot range (see Appendix I). The oil and gas production well operator will comply with air monitoring and other requirements outlined in SB 1137 as sensitive receptor locations are constructed within the prescribed range.

In addition, California Health and Safety Code Section 41700 states that:

> "a person shall not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or that endanger the comfort, repose, health, or safety of any of those persons or the public, or that cause, or have a natural tendency to cause, injury or damage to business or property."

Under the California Environmental Quality Act (CEQA), odors from discretionary projects are reviewed for potential nuisance issues.

3.4 REGIONAL / LOCAL AIR QUALITY

California is divided geographically into 15 air basins which have similar meteorological and topographic geographic conditions throughout in order to manage air resources on a regional basis. In this case, the Project is located within the South Central Coast air basin which consists of San Luis Obispo, Santa Barbara, and Ventura Counties [19].

California has 35 local air districts that are responsible for regional air quality planning, monitoring, and stationary source and facility permitting throughout the State [20]. In this case, the Santa Barbara County Air Pollution Control District (SBCAPCD) is responsible for regulating air quality in the Project region.

To protect air quality, various rules, regulations, and plans have been adopted such as but not limited to [25]:

- SBCAPCD's
  - Rules and regulations; and
  - Clean Air Plan and Ozone Plan;
- Santa Barbara County's
  - 2030 Climate Action Plan;
  - Comprehensive Plan Air Quality Supplement; and
  - Grading ordinance.

Short-term and/or long-term health effects can result from exposure to air pollution. In this region, the following pollutants are of most concern [26]:

- Ground-level ozone (O_3) is the principal component of smog and is formed when sunlight reacts with nitrogen oxides (NO_x) and reactive organic compounds (ROCs). Short-term exposure to ozone can result in irritation (eye, nose, and throat), coughing, chest tightness, shortness of breath, and aggravated respiratory conditions. Long-term exposure to ozone can lead to increased lung cancer risk, reduced lung function, and premature death.
- Fine particles in the air known as particulate matter less than 10 microns in diameter (PM_{10}) and less than 2.5 microns in diameter ($PM_{2.5}$) can be inhaled and lodged in the lungs, potentially resulting in respiratory illness and increased incidence of heart problems. Such fine particles can be emitted directly (e.g., diesel exhaust particulate matter from combustion) or can be formed from pre-cursor pollutants such as nitrogen oxides (NO_x) and/or sulfur oxides (SO_x).
- Air toxics are chemicals that can cause cancer and other serious health problems.

Children, the elderly, and people with existing health conditions are most sensitive to the effects of air pollution.

The SBCAPCD operates various air monitoring stations to measure urban and regional air quality, with the closest station located in Santa Maria. Previously, the Santa Maria monitoring station was located at 906 S. Broadway (approximately seven miles from the Project boundary) prior to being shut down in the first quarter of 2021. The SBCAPCD then relocated the Santa Maria monitoring station to 3700 Orcutt Rd (approximately four miles from the Project boundary) and restarted monitoring operations in the fourth quarter of 2022 [27]. The Santa Maria monitoring data from the SBCAPCD Annual Air Quality Reports and the CARB website represent the best available information regarding the air quality conditions at the Project site. [16, 17, 21]

A region is considered to be in attainment when measured airborne pollutant concentrations are below the applicable NAAQS and/or CAAQS. Currently, Santa Barbara County is in attainment for all federal ambient air quality standards. However, Santa Barbara County is nonattainment-transitional for the State ozone standard and nonattainment for the State PM_{10} standard. Table 1 illustrates how air quality from the Santa Maria monitoring station compares with the various federal (NAAQS) and state (CAAQS) ambient air quality standards. [16, 17, 21]

Table 1. Santa Maria Air Monitoring Data

Pollutant	Averaging Time	Category	Status *	Standard	2020 Maximum	2021 Maximum	2022 Maximum	Units

3.5 SENSITIVE AND RESIDENTIAL RECEPTORS

Children, the elderly, and people with existing health conditions are most sensitive to the effects of air pollution. Air pollutants with potential health effects include criteria pollutants (e.g., carbon monoxide, oxides of nitrogen, particulate matter) and toxic air contaminants (e.g., benzene, formaldehyde, diesel particulate matter).

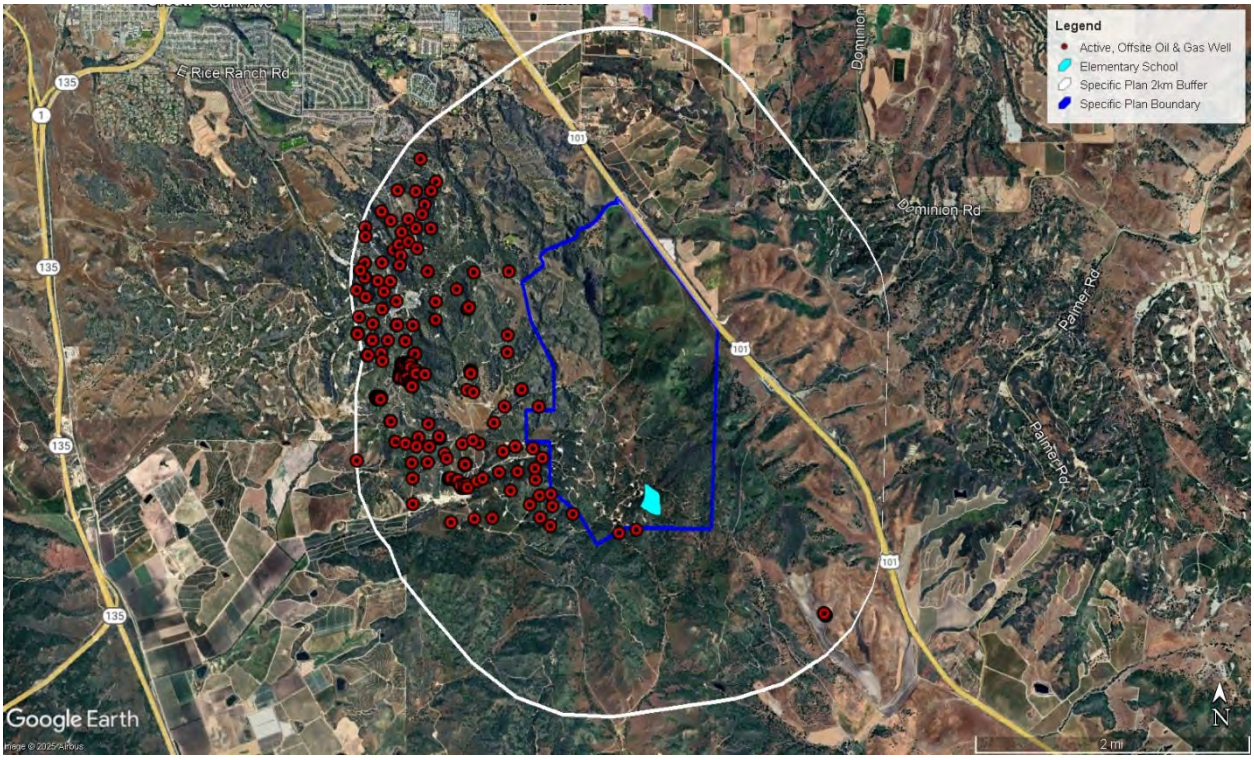
3.5.1 Sensitive Receptors

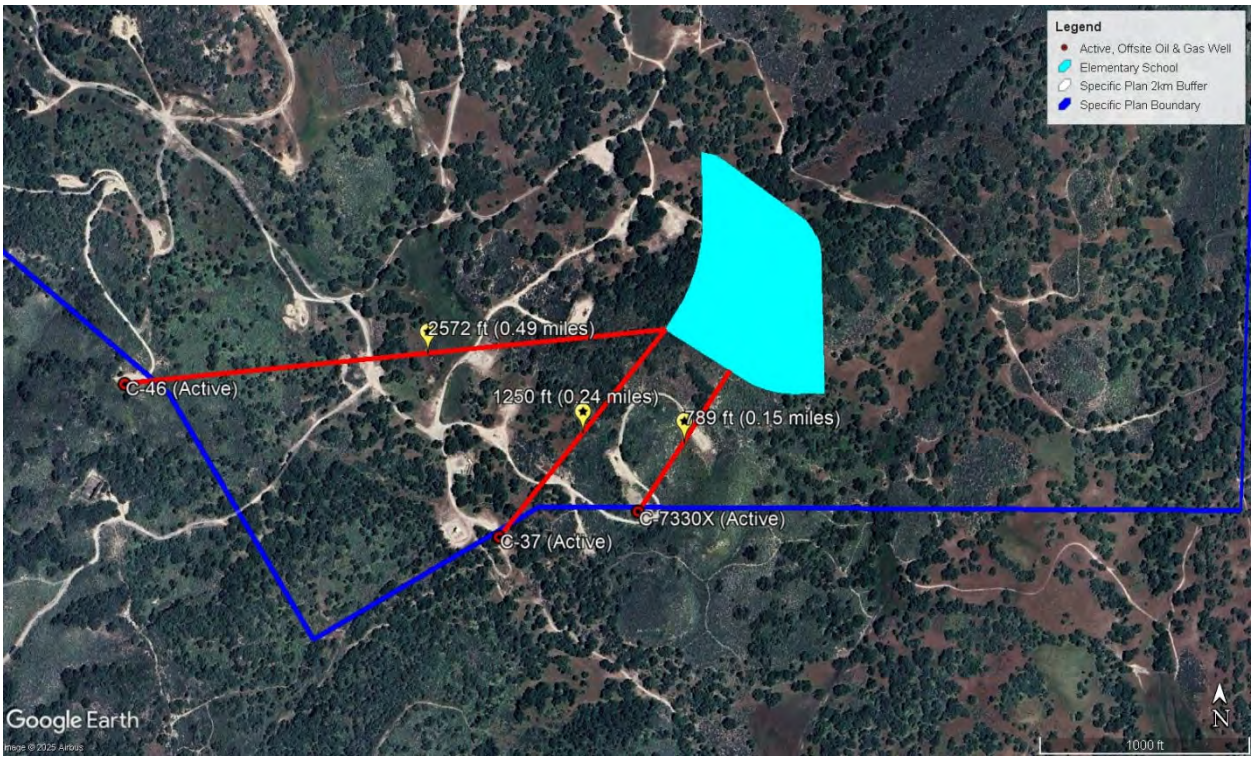
The Project's on-site Elementary School is the only one sensitive receptor (e.g., hospital, daycare, child care, adult care, school, or convalescent home) within two kilometers of the Project's Specific Plan Boundary (the typical search radius used in Health Risk Assessments prepared for the SBCAPCD). Under CEQA Section 21151.8, siting a new school should consider existing facilities that emit toxic or hazardous air pollutants. Based upon Google Earth imagery, the location of the Project's on-site Elementary School is approximately:

- 0.15 miles from the closest off-site active oil and gas production well (see below for details).
- 0.4 miles from on-site Project commercial operations.
- 0.7 miles from on-site Project wastewater reclamation facility operations.
- 1.0 mile from off-site agricultural fields.
- 1.1 miles from Highway 101.

Figure 3 displays the location of the proposed Elementary School as well as the 201 active, offsite, oil and gas wells within two kilometers of the Project's Specific Plan Boundary (see Appendix J). As shown in Figure 4, there are two, active, off-site, oil and gas wells within 0.25 miles of the school boundary (C-37 and C-7330X). The two active wells are expected to be plugged by the operator. Once plugged, the closest active oil and gas well to the school boundary would be 0.49 miles away.

Figure 3. Sensitive Receptors within 2 Kilometers of Project Specific Plan Boundary





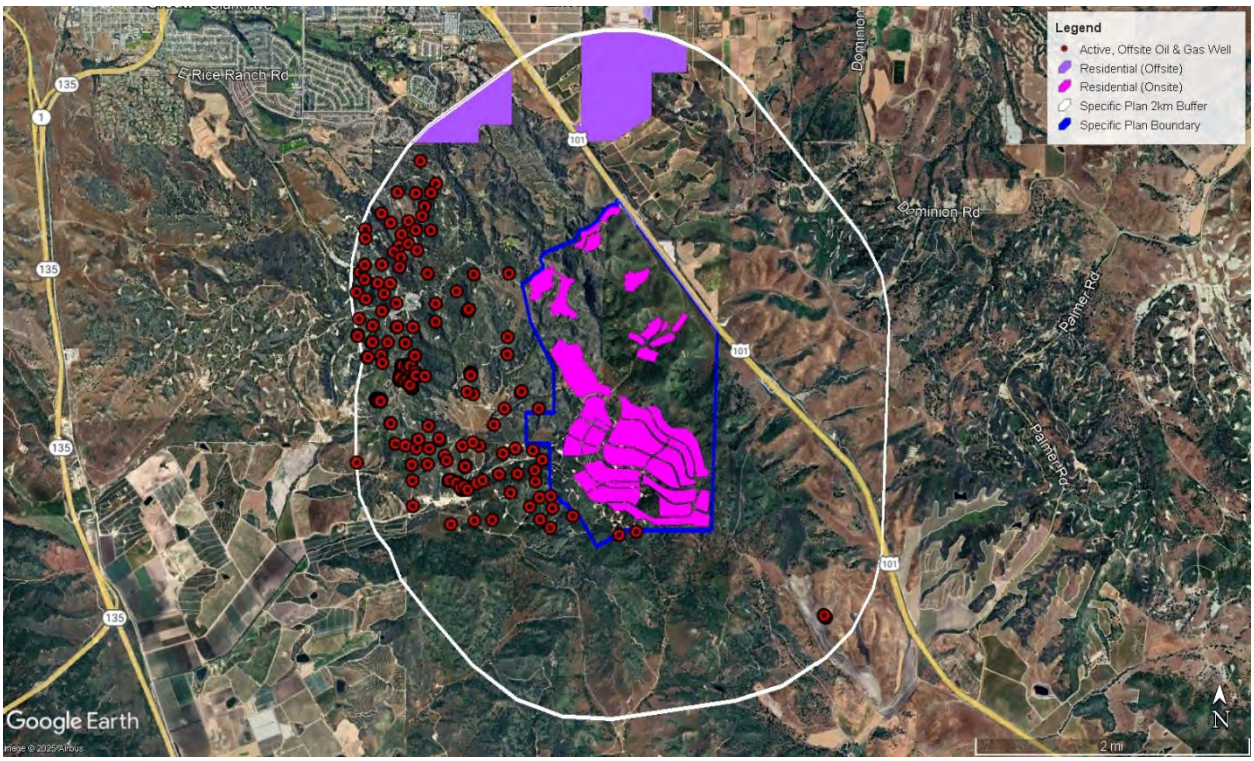


Figure 4. Active, Offsite, Oil and Gas Wells Closest to the School

3.5.2 Residential Receptors

The Project will include 4,000 new residences onsite. In addition, there are two existing residential areas within two kilometers of the Project's Specific Plan Boundary. Figure 5 displays these residential areas in relation to the 201 active, offsite, oil and gas wells within two kilometers of the Project's Specific Plan Boundary (see Appendix J).

Figure 5. Residential Locations (New Onsite and Existing Offsite within 2 Kilometers)

3.5.3 Existing Sources Nearby

Existing emission sources in the vicinity include (but are not limited to):

- Oil and gas production operations (e.g., from oil and gas wells, diesel fueled well workover equipment, vehicles traveling to/from the well sites).
- Agricultural operations (e.g., pesticides and fugitive road dust).
- Traffic along surface streets and Highway 101.

3.6 THRESHOLDS OF SIGNIFICANCE

The significance of the Project's potential air quality impacts must be determined for both construction and operational emissions. If the Project's air quality impacts are potentially significant, then mitigation measures are required and post-mitigation impacts must be determined.

The following thresholds of significance are from Appendix G of the CEQA Guidelines where a proposed Project may have a significant air quality impact if it would:

a) Conflict with or obstruct implementation of the applicable air quality plan?
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?
d) Expose sensitive receptors to substantial pollutant concentrations?
e) Create objectionable odors affecting a substantial number of people?

According to the Santa Barbara County's Environmental Thresholds and Guidelines Manual [1], a significant adverse air quality impact may occur when a project, individually or cumulatively, triggers any one of the following:

- interferes with progress toward the attainment of the ozone standard by releasing emissions which equal or exceed the established long-term quantitative thresholds for NO_x and ROC;
- equals or exceeds the state or federal ambient air quality standards for any criteria pollutant (as determined by modeling).

The Santa Barbara County's Environmental Thresholds and Guidelines Manual [1] also requires the following be addressed:

- Cumulative air quality impacts and consistency with the policies and measures in the Air Quality Supplement of the Comprehensive Plan, other general plans, and the Air Quality Attainment Plan (AQAP).
- Emissions which may affect sensitive receptors (e.g. children, elderly or acutely ill);
- Toxic or hazardous air pollutants in amounts which may increase cancer risk for the affected population; or
- Odor or another air quality nuisance problem impacting a considerable number of people.

Santa Barbara County's significance criteria in the Santa Barbara County Environmental Thresholds and Guidelines Manual can be satisfied by compliance with the SBCAPCD's thresholds of significance including any modeling evaluations required for criteria pollutants and/or toxic air contaminants.

In addition, the Project's consistency with the Clean Air Plan and Ozone Plan is based upon how SBCAPCD plans to meet the state 8-hour ozone standard by reducing NO_x and ROC (ozone pre-cursor) emissions by predicting vehicle activity trends and implementing stationary and mobile source control measures so that changes in land use do not interfere with progress towards the attainment and maintenance of State and Federal ambient air quality standards.

3.6.1 Construction

The County of Santa Barbara has not adopted thresholds of significance for construction emissions. [1] However, SBCAPCD uses 25 tons per year of NO_x or ROCs as a guideline for determining the significance of construction impacts. [28]

3.6.2 Operation

Operation of the Project will not have a significant air quality effect on the environment if: [1]

- Emissions from all project sources (mobile and stationary, excluding Portable Equipment Registration Program (PERP)) are less than the daily trigger for offsets set in the SBCAPCD New Source Review Rule, for any pollutant (currently 55 pounds per day for NO_x and ROC, and 80 pounds per day for PM_{10}); and
- Emissions are less than 25 pounds per day of NO_x or ROC from motor vehicle trips only; and
- Emissions will not cause or contribute to a violation of any California or National Ambient Air Quality Standard (except ozone); and
- Emissions will not exceed the SBCAPCD health risk public notification thresholds adopted by the SBCAPCD Board; and
- Emissions will be consistent with the adopted federal and state Air Quality Plans; and
- Carbon monoxide (CO) impacts including existing background levels are less than the California one-hour standard of 20 parts per million (i.e., impacts do not result in a CO "hot spot").

Due to the County's non-attainment status for ozone and the regional nature of the pollutant, if a project's total emissions of the ozone precursors, NO_x or ROC, exceed the long-term threshold, then the project's cumulative impacts will be considered significant. For projects that do not have significant ozone precursor emissions or localized pollutant impacts, emissions have been taken into account in the AQAP growth projections and therefore, cumulative impacts may be considered to be insignificant.

4.0 METHODOLOGY

4.1 SOURCES AND POLLUTANTS EVALUATED

Project construction emission sources modeled in this study included:

- Demolition
  - Concrete/industrial saws
  - Excavators
  - Dozers
- Site preparation including remediation
  - Dozers
  - Tractors/loaders/backhoes
- Grading
  - Excavators
  - Graders
  - Dozers
  - Scrapers
  - Tractors/loaders/backhoes
- Building construction
  - Cranes
  - Forklifts
  - Generator sets
  - Tractors/loaders/backhoes
  - Welders
- Paving
  - Pavers
  - Paving equipment
  - Rollers
- Architectural coatings
  - Air compressors
  - Coatings
- Road construction
  - Crawler tractors
  - Excavators
  - Graders
  - Rollers
  - Scrapers
  - Signal boards
  - Tractors/loaders/backhoes
  - Air compressors
  - Generator sets
  - Plate compactors
  - Pumps
  - Rough terrain forklifts
  - Pavers
  - Paving equipment
- Dust from material movement and roads
- Construction vehicles
- Electricity

- Vegetative changes
- Off-site utility and recreational improvements.

Project operational emission sources modeled in this study included:

- 4,000 residential units (condos/townhouses, single family homes, and apartments)
- Commercial retail (125,000 building square feet)
- Commercial offices (525,000 building square feet)
- Elementary school (110,000 building square feet)
- Police/Fire facility (10,000 building square feet)
- Wastewater reclamation facility (5,000 building square feet)
- Parks
- Parking lots
- Vehicle fuel combustion and road dust
- Consumer products
- Architectural coatings
- Landscaping equipment
- Energy use
- Water, wastewater, and waste
- Refrigerants
- Vegetation changes

Emissions were quantified for carbon monoxide (CO), oxides of nitrogen dioxide (NO_x) [ozone precursor], particulate matter less than 10 microns in size (PM_{10}), particulate matter less than 2.5 microns in size ($PM_{2.5}$), reactive organic gases (ROG) / reactive organic compounds (ROC) [ozone precursor], and sulfur dioxide (SO_2) as follows:

Category	Sources	Emissions Quantified (X = Yes)					
		CO	NO_x	PM_{10}	$PM_{2.5}$	ROG/ ROC	SO_2
Construction	Project combustion	X	X	X	X	X	X
Construction	Project dust			X	X		
Construction	Project paving					X	
Construction	Project architectural coatings					X	
Construction	Project vegetation		X	X	X	X	X
Operation	Baseline wells					X	
Operation	Project mobile	X	X	X	X	X	X
Operation	Project area	X	X	X	X	X	X
Operation	Project energy	X	X	X	X	X	X
Operation	Project vegetation		X	X	X	X	X

Note, refrigerants and electricity were evaluated separately in the Project's greenhouse GHG study while impacts relating to air toxic emissions and odors were addressed qualitatively.

4.2 BASELINE EMISSIONS

Sixty-three (63) oil and gas wells were identified in the Project Description (32 active, 25 plugged, 2 canceled, and 4 idle) [2]. Emissions of ROCs from active wells were estimated using the CARB Regulation for the Mandatory Reporting of Greenhouse Gas Emissions Section 95153(p) and emission factors from the SBCAPCD [3]. See Appendix A for details.

4.3 PROJECT EMISSIONS

4.3.1 CalEEMod

Construction and operation emissions from the Project were estimated using the California Emissions Estimator Model (CalEEMod) Version 2022.1.1.29 [4]. CalEEMod was developed for the California Air Pollution Officers Association (CAPCOA) in collaboration with California's Air Districts to estimate project emissions based on proposed land uses, sizes, general location, and approximate start dates for construction and operations. For modeling purposes, the Project was broken down into 38 groups for analysis (see Table 2 and Table 3). The modeled construction schedule in Table 4 was based upon available information in Appendix H. The first full year of operation was 2046. Note, these dates may be conservative so predicted emissions may also be conservative.

Table 4. CalEEMod Project Schedule Modeled

Construction Phase	Construction Start Date	Construction End Date	Grading (weeks)	Grading (million cubic yards)
1	1/1/2030	12/31/2035	36	11.4
2	1/1/2036	12/31/2038	9	4.0
3	1/1/2039	12/31/2044	23	7.8
4	1/1/2045	6/30/2045	5	0.8

4.3.2 Construction

Project construction emissions were modeled based upon the following:

- Available project data provided by Solstra.
- Construction schedule broken down into four phases beginning in year 2030 (see Table 4).
- Electricity from Central Coast Community Energy (3CE) was assumed to be 100% renewable from solar and wind.
- Landscape parameters were not available and were estimated as follows:
    - Residential landscape area = 50% of (lot area – building foot print area).
    - Retail landscape area = 30% of lot area.
    - Commercial office landscape area = 20% of lot area.
- Parking lot parameters were not available and were estimated as follows:
    - Total area – building footprint area – landscape area.
- Special landscape area (recycle water) was based on the Project's Treated Effluent Reuse and Storage Areas Memorandum [8].
- Off-site road construction/improvements were estimated to be seven miles in length based on schematics from the Project's traffic report and Google Earth imagery.
- Off-site utility and recreational improvements were included.
- CalEEMod defaults were used except as noted below.
- Number and types of construction equipment estimated using CalEEMod and the construction schedule in Table 4.
- Grading material volumes based on Table 4. Hauling distance for on-site grading material assumed to be five miles (i.e., from one location to another within the project boundary).
- Construction analysis included 2,560 tons for oilfield demolition. Demolition hauling distance assumed a worst case one-way distance of 110 miles to the McKittrick landfill (13 haul trips).
- Construction analysis included 13,743 cubic yards [31] of soil for remediation as part of site preparation. Remediation hauling distance assumed a worst case one-way distance of 110 miles to the McKittrick landfill (34 haul trips).
- Soil type was assumed to be sand gravel for road construction.
- Vegetation land use change was based on development acres. Soil type was estimated as Entisols using UC Davis' SoilWeb [10].
- Dust control measures were assumed to be mandatory under County regulations and were incorporated into the modeling as follows:
    - Construction dust from material movement
        - watering of exposed areas twice per day.
    - Construction on-road fugitive dust
        - water unpaved roads twice daily.
        - limit vehicle speeds on unpaved roads to 25 mph.

See the CalEEMod reports in Appendix C for details.

4.3.3 Operation

Project operation emissions were modeled based upon the following:

- Available project data provided by Solstra.
- First full year of operation was 2046.
- Electricity from Central Coast Community Energy (3CE) was assumed to be 100% renewable from solar and wind.
- Landscape parameters were not available and were estimated as follows:
    - Residential landscape area = 50% of (lot area – building foot print area).
    - Retail landscape area = 30% of lot area.
    - Commercial office landscape area = 20% of lot area.
- Parking lot parameters were not available and were estimated as follows:
    - Total area – building footprint area – landscape area.
- Special landscape area (recycle water) was based on the Project's Treated Effluent Reuse and Storage Areas Memorandum [8].
- CalEEMod defaults were used except as noted below.
- Vehicle trips per day and vehicle miles traveled (VMT) per day based on Project's traffic study report [5]. Average daily Project trips on the weekend expected to be 6% lower than average weekday trips.
- No fireplaces or wood stoves.
- Residential units do not have natural gas connections. Therefore, residential natural gas consumption predicted by CalEEMod was converted into additional residential electricity consumption. See Appendix B for details.
- Standard mitigation measures in CalEEMod were not selected to avoid under reporting emissions. For example, the Project includes design features include solar panels on all residential, commercial, office, and retail; batteries installed in commercial, office, and retail; electric vehicle (EV) ready chargers in all homes and throughout community, including office and retail; and EV bike rentals throughout community.
- Indoor water demand was assumed equal to the predicted wastewater influent rate [6, 7].
- Outdoor water demand was equal to total water demand minus indoor water demand [6].
- Vegetation land use change was based on development acres. Soil type was estimated as Entisols using UC Davis' SoilWeb [10].
- Vegetation sequestration was based on the Project's Oak Tree Management and Replacement plan [9]. Sequestration parameters were estimated using the i-Tree Planting Calculator [11]. Sequestration was modeled as "Quercus acutifolia" since the quercus species listed in the oak tree plan were not available in i-Tree.

See Appendix B for the residential natural gas usage conversion into additional electricity usage. See the CalEEMod report in Appendix D for details.

4.4 CARBON MONOXIDE HOT SPOTS

Carbon monoxide "hot spots" can occur at severely congested intersections. Based upon the Project's traffic study [5], two existing intersections had a level of service (LOS) of "D" or below:

- Intersection #10 (E Stowell Road at Nicholson Avenue/US-101 northbound ramps) for peak PM traffic:
  - LOS of "D" for existing conditions
  - LOS of "D" for existing plus buildout conditions
- Intersection #11 (E Main Street at US-101 southbound ramps) for peak AM traffic:
  - LOS of "C" for existing conditions
  - LOS of "D" for existing plus buildout conditions

Therefore, these two intersections were selected for CO hot spot modeling using the American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD).

Note, the Project's traffic study [5] indicated that one new intersection (Intersection #22 US-101 ramps at Project access roadway roundabout) would have a LOS of "F" for existing plus project buildout conditions. Based upon information from Solstra, this intersection will be modified to achieve a LOS of "C" or better by the completion of Construction Phase 1. Therefore, Intersection #22 was not modeled for CO hot spots.

4.4.1 CO Emission Factors

CO emission factors for Intersection #10 and Intersection #11 were developed using EMFAC 2025 V2.0.0 CO emission factors for Santa Barbara County [18] and the Project's fleet mix estimated by CalEEMod. CO emission factors for approaching/departing emissions within 150 meters of the intersection were based upon a speed of 5 miles per hour (mph). CO emission factors for approaching/departing emissions 150 to 750 meters from the intersection were based upon a speed of 20 mph. See the CO emission factor calculations in Appendix E for details.

4.4.2 AERMOD Source Parameters

Each vehicle route modeled was first broken down into four major segments based upon the direction of travel [22]:

- Approaching the intersection center (20 mph from 750 meters to 150 meters away)
- Approaching the intersection center (5 mph from 150 meters to 0 meters away)
- Departing the intersection center (5 mph from 0 meters to 150 meters away)
- Departing the intersection center (20 mph from 150 meters to 750 meters away).

Figure 6 displays the routes modeled for Intersection #10 while Figure 7 displays the routes modeled for Intersection #11. Each major segment was then broken down into smaller line segments for modeling using AERMOD. See the AERMOD CO modeling source parameters in Appendix F for details.

Figure 6. Intersection #10 Routes Modeled

Figure 7. Intersection #11 Routes Modeled

4.4.3 AERMOD Modeling

AERMOD [15] was used to model the peak CO impacts in the vicinity of Intersections #10 and #11 using the following data and options:

- UTM Zone 10;
- Regulatory defaults;
- Output peak 1-hour and peak 8-hour concentrations;
- Rural dispersion mode;
- Source parameters in Appendix F;
- All sources operating simultaneously;
- Flagpole receptor height of 1.8 meters;
- 5 meter spaced receptor grids within 100 meters of the modeled routes;
- Nested grids over the surrounding area out to two kilometers;
- Representative, AERMOD-ready meteorological data from the SBCAPCD (Santa Maria Airport 2012-2016); and
- 1/3 arc-second terrain data from the National Elevation Dataset (NED).

See the AERMOD CO modeling output file in Appendix G for details.

5.0 PROJECT IMPACTS PRIOR TO MITIGATION

5.1 CONSTRUCTION

Table 5 summarizes the peak daily emissions by construction phase while Table 6 summarizes the peak annual emissions by construction phase. As noted in Section 3.6.1, the County of Santa Barbara has not adopted thresholds of significance for construction emissions, however, SBCAPCD uses 25 tons per year of ROC or NO_x as a guideline for determining the significance of construction impacts. Based upon the analysis conducted, the only threshold exceeded was the 25 ton per year NO_x threshold during just construction Phase 1. See the CalEEMod reports in Appendix C for details.

Table 5. Peak Daily Construction Emissions by Phase

Phase	Category	Maximum Pounds per Day (lb/day)									
		ROG	NO_x	CO	SO_2	PM_{10} Exhaust	PM_{10} Dust	PM_{10} Total	$PM_{2.5}$ Exhaust	$PM_{2.5}$ Dust	$PM_{2.5}$ Total

5.2 OPERATION

Table 7 summarizes the peak daily operation emissions while Table 8 summarizes the annual operation emissions. See the baseline emission calculations in Appendix A and the CalEEMod report in Appendix D for details. As noted in Section 3.6.2, the County of Santa Barbara has adopted the following daily thresholds of significance for operational emissions:

- 55 lb/day NO_x (all project sources excluding PERP)
- 55 lb/day ROC (all project sources excluding PERP)
- 80 lb/day PM_{10} (all project sources excluding PERP)
- 25 lb/day NO_x (motor vehicle trips)
- 25 lb/day ROC (motor vehicle trips)

Based upon the analysis conducted, the following thresholds were exceeded:

- Total Project maximum daily emissions of ROG due to area sources such consumer products, architectural coatings, and landscape equipment.
- Total Project maximum daily emissions of PM_{10} due to fugitive dust from mobile sources.
- Project mobile maximum daily emissions of ROG and NO_x.

Table 7. Peak Daily Operation Emissions

5.3 ODOR

Odors are considered nuisances under CEQA if a project has the potential to impact a considerable number of people [1]. Wastewater treatment plants and water reclamation facilities (WRF's) are common sources of odor. The Project's WRF will be a new facility so it does not have a history of odor complaints. The WRF will comply with applicable SBCAPCD requirements which includes odor management if it occurs.

Other potential sources of odor from the Project could include commercial operations such as food preparation facilities (e.g., fast food and barbeque restaurants, bakeries, and coffee roasters). The Project school will be located approximately 0.4 miles away from the nearest commercial area. However, several Project residential areas could be adversely impacted by odors from adjacent/ nearby Project commercial operations.

Also, the Project does not include any wood-burning fireplaces which are the cause of many public nuisance complaints received by SBCAPCD during winter months.

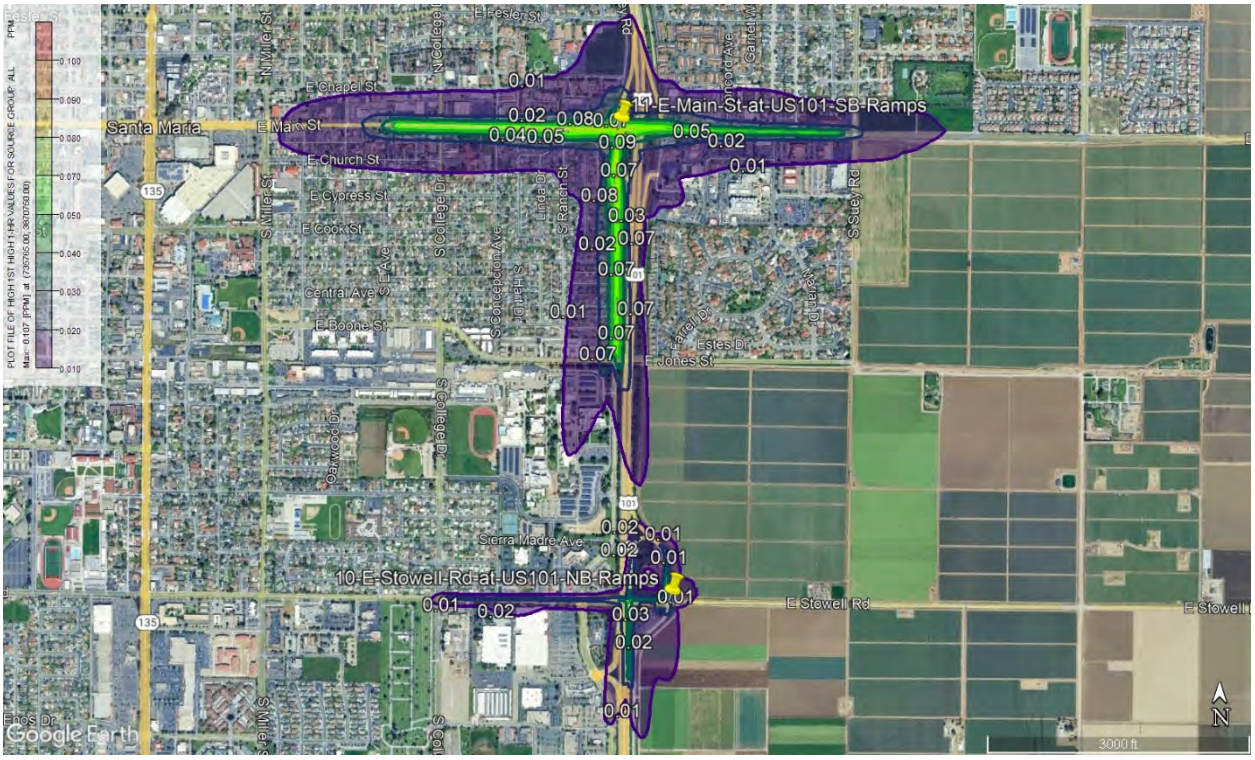
5.4 CARBON MONOXIDE (CO) HOT SPOTS

AERMOD was used to predict the increase in carbon monoxide (CO) concentrations near Intersection #10 and Intersection #11 due to the proposed Project. The Project's incremental impacts were then added to background levels of CO measured in Santa Maria [17] for comparison to the appropriate NAAQS and CAAQS. Table 9 summarizes the CO modeling results which were all below the applicable air quality standards. Figure 8 displays the Project's peak 1-hour incremental carbon monoxide (CO) impacts not including background levels. Figure 9 displays the Project's peak 8-hour incremental carbon monoxide (CO) impacts not including background levels.

Table 9. Carbon Monoxide (CO) Hot Spots Modeling Results

Averaging Time	Category	Project Peak Concentration (ppm)	Background Concentration (ppm)	Total Concentration (ppm)	Air Quality Standard (ppm)	Air Quality Standard Exceeded?
1-Hour	State	0.107	1.3	1.41	20	No
1-Hour	Federal	0.107	1.3	1.41	35	No
8-Hour	State	0.041	1.3	1.34	9	No
8-Hour	Federal	0.041	1.3	1.34	9	No

Figure 8. Project Peak 1-Hour Carbon Monoxide Impacts (ppm)



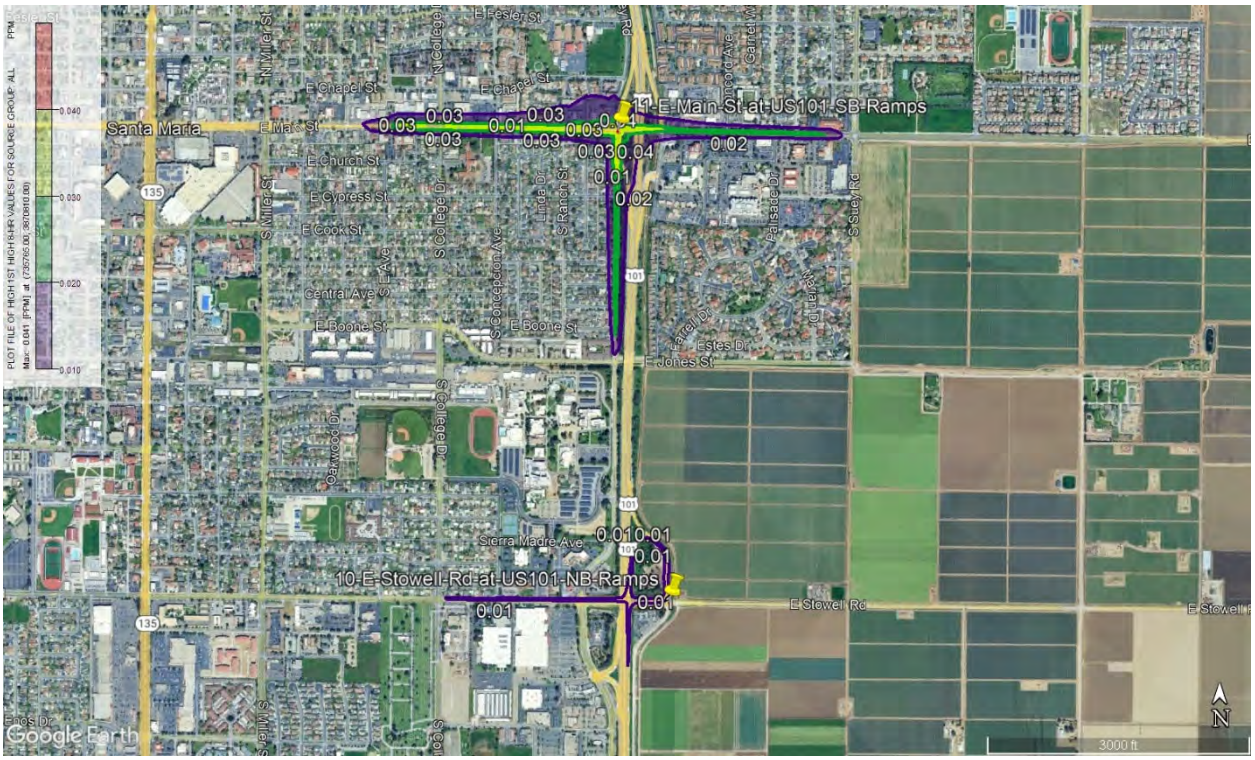


Figure 9. Project Peak 8-Hour Carbon Monoxide Impacts (ppm)

5.5 AIR TOXICS

Toxic air contaminants include pollutants such as benzene, formaldehyde, diesel particulate matter, etc. Exposure to such pollutants can result in adverse health effects. The Project will emit toxic air contaminants during construction and operation from sources such as (but not limited to):

- Project construction activities (e.g., from diesel fueled equipment, demolition of onsite oil and gas production equipment, removal of contaminated soil for offsite remediation/ disposal, architectural coatings).
- Project commercial/retail uses (e.g., from natural gas fired equipment).
- Project water reclamation facility (e.g., from process equipment treating sewage).
- Project traffic (e.g., from gasoline and diesel fueled vehicles, fugitive road dust).

As a result, the Project will comply with applicable federal, state, and regional/local air toxic regulations. For example, particulate emissions from diesel exhaust are classified as carcinogenic by the state of California. In lieu of a Project Construction Health Risk Assessment (HRA), the Project will implement Attachment B in Appendix K to the maximum extent feasible to reduce construction diesel particulate and NOx emissions.

Also, note that construction of the Project's school will be completed in Phase 3. By the time the school is operational, most if not all of the Project's grading will have been completed.

5.6 CUMULATIVE

Cumulative impacts refer to the impacts of the proposed Project plus other current and known/predictable future projects in the South Central Coast air basin. Section 5.1 and Section 5.2 indicate the Project's incremental impacts on air quality without any mitigation measures. Other current and future projects will be required to comply with applicable federal, state, and regional/local air quality regulations to protect air quality. Due to the County's non-attainment status for ozone and the regional nature of the pollutant, if a project's total emissions of the ozone precursors, NO_x or ROC, exceed the long-term threshold, then the project's cumulative impacts will be considered significant. Since the Project's incremental impacts in Table 7 are considered significant, the project's cumulative impacts are also considered significant.

Santa Barbara County is nonattainment-transitional for the State ozone standard. The Project will emit the ozone pre-cursors NO_X and ROC (e.g., due to increased population, increased vehicular activity) which could interfere with attainment by exceeding long term ROC/NO_X thresholds. Existing sources also emit the ozone pre-cursors NO_X and ROC, so the project's cumulative impacts could also interfere with attainment.

The SBCAPCD's 2022 Ozone Plan addresses local plans to attain the California 8-hour ozone standard by using 2018 as a baseline year and then projecting growth profiles for years 2025, 2035, and 2045. The 2022 Ozone Plan includes the following growth projections for the year 2045: [29]

- 16% increase in population;
- 16% increase in housing
- 6% increase in vehicle miles traveled (VMT); and
- 30% increase in natural gas combustion from commercial operations.

However, the proposed Project is potentially inconsistent with the SBCAPCD's current Ozone Plan since the 2022 Ozone Plan may not have accounted for the Project's population growth. If not accounted for, then the Project could have a significant impact on air quality. The SBCAPCD is currently developing the triannual 2025 Ozone Plan to incorporate revised population growth data, general plan updates, and any new control measures necessary to maintain air quality standards. The County may continue to consult with the SBCAPCD during the preparation of the Project EIR for consistency with the Ozone Plan.

Santa Barbara County is nonattainment for the State PM_{10} standard. Both the Project and existing sources emit PM_{10} which could interfere with attainment. Therefore, the Project will comply with applicable dust control measures as required for discretionary construction activities under the County Grading Ordinance and the 1979 Air Quality Attainment Plan.

The Santa Barbara County Planning and Development Land Use Element Air Quality Supplement [30] encourages mixed use development and alternative transportation modes aimed at reducing air pollutant emissions. The Project description includes features for smart community design and transportation efficiency that are consistent with the Air Quality Supplement.

The Project's odor impacts from the WRF and commercial operations are potentially significant. Therefore, cumulative odor impacts including existing sources are also potentially significant.

The Project will emit air toxic pollutants during construction and operation. As a result, the Project will comply with applicable federal, state, and regional/local air toxic regulations. In addition, any existing, stationary sources of air toxics near the Project site will comply with applicable federal, state, and regional/local air toxic regulations (e.g., AB 2588 Health Risk Assessments) by including Project receptors as required.

6.0 PROJECT LEVEL OF SIGNIFICANCE

6.1 PRIOR TO MITIGATION

Project construction emissions will have a temporary, significant impact on air quality as annual NO_x emissions will meet or exceed the SBCAPCD's guideline for determining significance (25 tpy NO_x) in Phase 1 years 2030, 2031, and 2032. In addition, Project construction emissions have the potential to cause significant impacts by violating an air quality standard.

Project operational emissions will have a significant impact on air quality by exceeding the County thresholds shown in Table 10. The Project includes design features (see Section 2.3) that minimize operational air quality impacts per square foot of the Project and per the service population. County's thresholds of significance, however, are based upon flat pound per day rates. The Project includes other sustainable features which will further reduce air quality impacts, including inclusion of major dedicated pedestrian and bike paths throughout, activity nodes and major event centers with various functions within a five (5) minute walk, smaller houses and smaller lots in the main village to reduce walking distances, concentration of affordable and higher density multi-family near retail center, concentration of homes around new TK-8 school to promote walking, electric vehicle (EV) ready chargers in all homes and throughout community, including office and retail, and solar panels on all residential, commercial, office, and retail and batteries in commercial, office, and retail. However, due to the size of the Project, operational emissions exceed the daily thresholds.

Table 10. Summary of Operational Emission Significant Impacts

Operational Sources	Pollutant	Operational Emissions (lb/day)	Emissions Threshold (lb/day)
All	ROC	334.0	55
	PM_{10}	157.5	80
Mobile only	ROC	93.4	25
	NO_x	49.1	25

In addition, the Project's odor impacts from the WRF and commercial operations are potentially significant.

6.2 AFTER MITIGATION

Santa Barbara County is nonattainment-transitional for the State ozone standard and nonattainment for the State PM_{10} standard. The Project could potentially violate an air quality standard or substantially contribute to an air quality violation since the Project emits ozone pre-cursors (NO_x and ROCs) as well as particulate matter (PM_{10}). The Project would result in a cumulatively considerable net increase of the ozone pre-cursors NO_x and ROC as well as PM_{10} which exceed the thresholds in Table 7. Therefore, the following mitigation measures are recommended to reduce emissions from the Project:

- Comply with applicable dust control measures as required for discretionary construction activities under the County Grading Ordinance and the 1979 Air Quality Attainment Plan.
- Earthmoving activities comply with applicable SBCAPCD rules (e.g., Rule 302 Visible Emissions, Rule 303 Nuisance, and Rule 345 Control of Fugitive Dust from Construction and Demolition Activities)
- Implement Attachment A in Appendix K to the maximum extent feasible to reduce fugitive dust emissions and impacts.
- Attachment B in Appendix K will be implemented to the maximum extent feasible to reduce construction diesel particulate and NO_x emissions.
- To minimize and/or eliminate potential impacts from siting of development on former oil field operations, the County should ensure all oil wells are properly plugged and abandoned before start of construction.
- Commit to use of electrified off-road landscaping equipment for on-going operations and maintenance where feasible.

In addition, odor impacts from the Project's WRF are potentially significant. Therefore, the following mitigation measure is recommended to reduce potential WRF odor impacts to less than significant:

- Develop and implement an Odor Management Plan (OMP) that includes:
    - Name and telephone number of contact person(s) at the facility responsible for logging in and responding to odor complaints.
    - Policy and procedure describing the actions to be taken when an odor complaint is received, including the training provided to the facility's staff on how to respond.
    - Description of potential odor sources at the facility.
    - Description of potential methods for reducing odors, including minimizing idling of delivery and service trucks and buses, process changes, facility modifications and/or feasible add-on air pollution control equipment, etc.
    - Contingency measures to curtail emissions in the event of an odor complaint.

Unmitigated Project operation emissions are significant. As described above in Section 2.3, Project operational emissions already include many project design features to avoid potential air quality impacts and reduce emissions per resident in the community (e.g., solar, battery storage, etc.).

Additional onsite measures may be feasible to reduce impacts such as (but not limited to) transportation reduction measures (commute trip reduction programs for commercial uses, subsidized transit programs etc.), use of zero-emission landscape equipment and on-road vehicles (school buses, trucks for commercials uses), etc.

Even with incorporation of feasible mitigations listed above, the Project's operational air quality impact may still be considered Significant and Unavoidable (Class I).

19	Apartments Mid Rise	593,579	5,001,257	1,465,785	2,059,364

Notes:
CalEEMOD was first used to estimate the initial electricity and natural gas usages for each residential land use subtype.
Residential units do not use natural gas per the project description.
Initial residential natural gas usage was converted to additional residential electricity usage (kWh/3.412 kBTU).
CalEEMOD adjusted residential electricity usage was then equal to the initial plus the additional (converted) usages.

Appendix C

CalEEMod Reports - Construction

Solomon Hills - Construction Phase 1 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Linear, Grubbing & Land Clearing (2031) - Unmitigated

3.3. Linear, Grubbing & Land Clearing (2032) - Unmitigated

3.5. Linear, Grubbing & Land Clearing (2033) - Unmitigated

3.7. Linear, Grubbing & Land Clearing (2034) - Unmitigated

3.9. Linear, Grubbing & Land Clearing (2035) - Unmitigated

3.11. Linear, Grading & Excavation (2031) - Unmitigated

3.13. Linear, Grading & Excavation (2032) - Unmitigated

3.15. Linear, Grading & Excavation (2033) - Unmitigated

3.17. Linear, Grading & Excavation (2034) - Unmitigated

3.19. Linear, Grading & Excavation (2035) - Unmitigated

3.21. Linear, Drainage, Utilities, & Sub-Grade (2031) - Unmitigated

3.23. Linear, Drainage, Utilities, & Sub-Grade (2032) - Unmitigated

3.25. Linear, Drainage, Utilities, & Sub-Grade (2033) - Unmitigated

3.27. Linear, Drainage, Utilities, & Sub-Grade (2034) - Unmitigated

3.29. Linear, Drainage, Utilities, & Sub-Grade (2035) - Unmitigated

3.31. Linear, Paving (2031) - Unmitigated

3.33. Linear, Paving (2032) - Unmitigated

3.35. Linear, Paving (2033) - Unmitigated

3.37. Linear, Paving (2034) - Unmitigated

3.39. Linear, Paving (2035) - Unmitigated

3.41. Demolition (2030) - Unmitigated

3.43. Site Preparation (2030) - Unmitigated

3.45. Grading (2030) - Unmitigated

3.47. Building Construction (2030) - Unmitigated

3.49. Building Construction (2031) - Unmitigated

3.51. Building Construction (2032) - Unmitigated

3.53. Building Construction (2033) - Unmitigated

3.55. Building Construction (2034) - Unmitigated

3.57. Building Construction (2035) - Unmitigated

3.59. Paving (2030) - Unmitigated

3.61. Paving (2031) - Unmitigated

3.63. Paving (2032) - Unmitigated

3.65. Paving (2033) - Unmitigated

3.67. Paving (2034) - Unmitigated

3.69. Paving (2035) - Unmitigated

3.71. Architectural Coating (2030) - Unmitigated

3.73. Architectural Coating (2031) - Unmitigated

3.75. Architectural Coating (2032) - Unmitigated

3.77. Architectural Coating (2033) - Unmitigated

3.79. Architectural Coating (2034) - Unmitigated

3.81. Architectural Coating (2035) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Solomon Hills - Construction Phase 1
Construction Start Date	1/1/2030
Lead Agency	Santa Barbara County Planning and Development
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.90
Precipitation (days)	26.2
Location	34.827445, -120.377753
County	Santa Barbara
City	Unincorporated
Air District	Santa Barbara County APCD
Air Basin	South Central Coast
TAZ	3377
EDFZ	6
Electric Utility	Central Coast Community Energy
Gas Utility	Southern California Gas

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
Grazing	Entisols	241	0.00

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
Grassland	241	0.00

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.53	annual days of extreme heat
Extreme Precipitation	4.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	62.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	11.7
AQ-PM	8.00
AQ-DPM	8.70
Drinking Water	64.8
Lead Risk Housing	12.1
Pesticides	97.3
Toxic Releases	9.03
Traffic	9.21
Effect Indicators	—
CleanUp Sites	83.9
Groundwater	100

Haz Waste Facilities/Generators	96.5
Impaired Water Bodies	99.2
Solid Waste	83.5
Sensitive Population	—
Asthma	48.0
Cardio-vascular	15.8
Low Birth Weights	49.0
Socioeconomic Factor Indicators	—
Education	63.0
Housing	5.01
Linguistic	45.4
Poverty	28.6
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	61.45258565
Employed	61.79905043
Median HI	72.86025921

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	73.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Assumed 100% renewable solar and wind from Central Coast Community Energy (3CE).
Land Use	Per available project data.
Operations: Hearths	Per available project data.
Operations: Energy Use	Based on available project data. Residential units do not use any natural gas. Therefore, the total natural gas usage initially predicted by CalEEMOD for each residential land use was converted from kBTU/yr into kWh/yr and then added to the total electricity usage initially predicted by CalEEMOD for each residential land use.
Operations: Water and Waste Water	Per available project data.
Operations: Solid Waste	Per available project data.
Construction: Construction Phases	Based on available project data.

Construction: Trips and VMT	Based on available project data.
Construction: Electricity	Based on 100% renewable energy from solar and wind.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Solomon Hills - Construction Phase 2
Construction Start Date	1/1/2036
Lead Agency	Santa Barbara County Planning and Development
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.90
Precipitation (days)	26.2
Location	34.827445, -120.377753
County	Santa Barbara
City	Unincorporated
Air District	Santa Barbara County APCD
Air Basin	South Central Coast
TAZ	3377
EDFZ	6
Electric Utility	Central Coast Community Energy
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.53	annual days of extreme heat
Extreme Precipitation	4.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	62.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A

Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	11.7
AQ-PM	8.00
AQ-DPM	8.70
Drinking Water	64.8
Lead Risk Housing	12.1
Pesticides	97.3
Toxic Releases	9.03
Traffic	9.21
Effect Indicators	—
CleanUp Sites	83.9
Groundwater	100
Haz Waste Facilities/Generators	96.5
Impaired Water Bodies	99.2
Solid Waste	83.5
Sensitive Population	—
Asthma	48.0
Cardio-vascular	15.8
Low Birth Weights	49.0
Socioeconomic Factor Indicators	—
Education	63.0
Housing	5.01
Linguistic	45.4
Poverty	28.6
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	61.45258565
Employed	61.79905043
Median HI	72.86025921
Education	—
Bachelor's or higher	63.26190171
High school enrollment	17.87501604
Preschool enrollment	28.78224047
Transportation	—
Auto Access	70.20402926
Active commuting	84.53740536
Social	—
2-parent households	98.29334018
Voting	97.60041062
Neighborhood	—
Alcohol availability	93.08353651
Park access	5.646092647
Retail density	1.065058386
Supermarket access	18.22148082
Tree canopy	80.45682022
Housing	—
Homeownership	79.5970743
Housing habitability	80.75195688
Low-inc homeowner severe housing cost burden	44.56563583
Low-inc renter severe housing cost burden	90.87642756

Uncrowded housing	62.10701912
Health Outcomes	—
Insured adults	38.59874246
Arthritis	0.0
Asthma ER Admissions	56.5
High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	44.8
Cognitively Disabled	52.2
Physically Disabled	27.7
Heart Attack ER Admissions	79.8
Mental Health Not Good	0.0
Chronic Kidney Disease	0.0
Obesity	0.0
Pedestrian Injuries	19.6
Physical Health Not Good	0.0
Stroke	0.0
Health Risk Behaviors	—
Binge Drinking	0.0
Current Smoker	0.0
No Leisure Time for Physical Activity	0.0
Climate Change Exposures	—
Wildfire Risk	3.6
SLR Inundation Area	0.0

Children	87.0
Elderly	8.4
English Speaking	73.6
Foreign-born	32.0
Outdoor Workers	3.7
Climate Change Adaptive Capacity	—
Impervious Surface Cover	96.3
Traffic Density	8.8
Traffic Access	0.0
Other Indices	—
Hardship	31.5
Other Decision Support	—
2016 Voting	88.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	73.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Assumed 100% renewable solar and wind from Central Coast Community Energy (3CE).
Land Use	Per available project data.
Operations: Hearths	Per available project data.
Operations: Energy Use	Based on available project data. Residential units do not use any natural gas. Therefore, the total natural gas usage initially predicted by CalEEMOD for each residential land use was converted from kBTU/yr into kWh/yr and then added to the total electricity usage initially predicted by CalEEMOD for each residential land use.
Operations: Water and Waste Water	Per available project data.
Operations: Solid Waste	Per available project data.
Construction: Construction Phases	Based on available project data.
Construction: Trips and VMT	Based on available project data.
Construction: Electricity	Based on 100% renewable energy from solar and wind.
Construction: Dust From Material Movement	Based on available project data.

Grazing	Entisols	270	0.00

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
Grassland	270	0.00

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.53	annual days of extreme heat
Extreme Precipitation	4.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	62.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	11.7
AQ-PM	8.00

AQ-DPM	8.70
Drinking Water	64.8
Lead Risk Housing	12.1
Pesticides	97.3
Toxic Releases	9.03
Traffic	9.21
Effect Indicators	—
CleanUp Sites	83.9
Groundwater	100
Haz Waste Facilities/Generators	96.5
Impaired Water Bodies	99.2
Solid Waste	83.5
Sensitive Population	—
Asthma	48.0
Cardio-vascular	15.8
Low Birth Weights	49.0
Socioeconomic Factor Indicators	—
Education	63.0
Housing	5.01
Linguistic	45.4
Poverty	28.6
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	61.45258565

Employed	61.79905043
Median HI	72.86025921
Education	—
Bachelor's or higher	63.26190171
High school enrollment	17.87501604
Preschool enrollment	28.78224047
Transportation	—
Auto Access	70.20402926
Active commuting	84.53740536
Social	—
2-parent households	98.29334018
Voting	97.60041062
Neighborhood	—
Alcohol availability	93.08353651
Park access	5.646092647
Retail density	1.065058386
Supermarket access	18.22148082
Tree canopy	80.45682022
Housing	—
Homeownership	79.5970743
Housing habitability	80.75195688
Low-inc homeowner severe housing cost burden	44.56563583
Low-inc renter severe housing cost burden	90.87642756
Uncrowded housing	62.10701912
Health Outcomes	—
Insured adults	38.59874246
Arthritis	0.0
Asthma ER Admissions	56.5

High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	44.8
Cognitively Disabled	52.2
Physically Disabled	27.7
Heart Attack ER Admissions	79.8
Mental Health Not Good	0.0
Chronic Kidney Disease	0.0
Obesity	0.0
Pedestrian Injuries	19.6
Physical Health Not Good	0.0
Stroke	0.0
Health Risk Behaviors	—
Binge Drinking	0.0
Current Smoker	0.0
No Leisure Time for Physical Activity	0.0
Climate Change Exposures	—
Wildfire Risk	3.6
SLR Inundation Area	0.0

2016 Voting	88.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	73.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Characteristics: Utility Information	Assumed 100% renewable solar and wind from Central Coast Community Energy (3CE).
Land Use	Per available project data.
Operations: Hearths	Per available project data.
Operations: Energy Use	Based on available project data. Residential units do not use any natural gas. Therefore, the total natural gas usage initially predicted by CalEEMOD for each residential land use was converted from kBTU/yr into kWh/yr and then added to the total electricity usage initially predicted by CalEEMOD for each residential land use.
Operations: Water and Waste Water	Per available project data.
Operations: Solid Waste	Per available project data.
Construction: Construction Phases	Based on available project data.
Construction: Trips and VMT	Based on available project data.
Construction: Electricity	Based on 100% renewable energy from solar and wind.
Construction: Dust From Material Movement	Based on available project data.

Solomon Hills - Construction Phase 4 Detailed Report

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
Grazing	Entisols	54.2	0.00

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
Grassland	54.2	0.00

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.53	annual days of extreme heat
Extreme Precipitation	4.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	62.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	11.7
AQ-PM	8.00

AQ-DPM	8.70
Drinking Water	64.8
Lead Risk Housing	12.1
Pesticides	97.3
Toxic Releases	9.03
Traffic	9.21
Effect Indicators	—
CleanUp Sites	83.9
Groundwater	100
Haz Waste Facilities/Generators	96.5
Impaired Water Bodies	99.2
Solid Waste	83.5
Sensitive Population	—
Asthma	48.0
Cardio-vascular	15.8
Low Birth Weights	49.0
Socioeconomic Factor Indicators	—
Education	63.0
Housing	5.01
Linguistic	45.4
Poverty	28.6
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	61.45258565

Employed	61.79905043
Median HI	72.86025921
Education	—

2016 Voting	88.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	73.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Characteristics: Utility Information	Assumed 100% renewable solar and wind from Central Coast Community Energy (3CE).
Land Use	Per available project data.
Operations: Hearths	Per available project data.
Operations: Energy Use	Based on available project data. Residential units do not use any natural gas. Therefore, the total natural gas usage initially predicted by CalEEMOD for each residential land use was converted from kBTU/yr into kWh/yr and then added to the total electricity usage initially predicted by CalEEMOD for each residential land use.
Operations: Water and Waste Water	Per available project data.
Operations: Solid Waste	Per available project data.
Construction: Construction Phases	Based on available project data.
Construction: Trips and VMT	Based on available project data.
Construction: Electricity	Based on 100% renewable energy from solar and wind.
Construction: Dust From Material Movement	Based on available project data.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Solomon Hills - Operation
Operational Year	2046
Lead Agency	Santa Barbara County Planning and Development
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	2.90
Precipitation (days)	26.2
Location	34.827445, -120.377753
County	Santa Barbara
City	Unincorporated
Air District	Santa Barbara County APCD
Air Basin	South Central Coast
TAZ	3377
EDFZ	6
Electric Utility	Central Coast Community Energy
Gas Utility	Southern California Gas
App Version	2022.1.1.29

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.53	annual days of extreme heat
Extreme Precipitation	4.80	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	62.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A

Drought	0	0	0	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	1	1	1	2
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	11.7
AQ-PM	8.00
AQ-DPM	8.70
Drinking Water	64.8
Lead Risk Housing	12.1
Pesticides	97.3
Toxic Releases	9.03
Traffic	9.21
Effect Indicators	—
CleanUp Sites	83.9
Groundwater	100
Haz Waste Facilities/Generators	96.5
Impaired Water Bodies	99.2
Solid Waste	83.5
Sensitive Population	—
Asthma	48.0
Cardio-vascular	15.8
Low Birth Weights	49.0
Socioeconomic Factor Indicators	—
Education	63.0
Housing	5.01
Linguistic	45.4
Poverty	28.6
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	61.45258565
Employed	61.79905043
Median HI	72.86025921
Education	—
Bachelor's or higher	63.26190171
High school enrollment	17.87501604
Preschool enrollment	28.78224047
Transportation	—
Auto Access	70.20402926
Active commuting	84.53740536
Social	—
2-parent households	98.29334018
Voting	97.60041062
Neighborhood	—
Alcohol availability	93.08353651

2016 Voting	88.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	43.0
Healthy Places Index Score for Project Location (b)	73.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Assumed 100% renewable solar and wind from Central Coast Community Energy (3CE).
Land Use	Per available project data.
Operations: Hearths	Per available project data.
Operations: Energy Use	Based on available project data. Residential units do not use any natural gas. Therefore, the total natural gas usage initially predicted by CalEEMOD for each residential land use was converted from kBTU/yr into kWh/yr and then added to the total electricity usage initially predicted by CalEEMOD for each residential land use.
Operations: Water and Waste Water	Per available project data.
Operations: Solid Waste	Per available project data.

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses RURAL Dispersion Only.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Accepts FLAGPOLE Receptor . Heights.
      * The User Specified a Pollutant Type of: AQTR

 **Model Calculates  2 Short Term Average(s) of:   1-HR   8-HR

 **This Run Includes:    162 Source(s);       1 Source Group(s); and   45854 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      0 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:    162 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.
```

**The AERMET Input Meteorological Data Version Date: 16216

**Output Options Selected:
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 79.60 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 9.7 MB of RAM.

**Input Runstream File: aermod.inp
**Output Print File: aermod.out

**File for Saving Result Arrays: SOLOMON.SV1
**Detailed Error/Message File: SOLOMON.ERR
**File for Summary of Results: SOLOMON.SUM
