Project Title: Emergency Permit for Management of Hazardous Waste, California State University, East Bay - Concord Campus, Concord, California

Project Location: 4700 Ygnacio Valley Road, Concord, California 94521

County: Contra Costa

Project Applicant: Lyanh Luu, EH&S Director

Approval Action Under Consideration by DTSC: Emergency Permit

Statutory Authority: California Health and Safety Code, Chapter 6.5

Project Description: The California Department of Toxic Substances Control (DTSC), pursuant to authority granted under California Code of Regulations (CCR), Title 22, Division 4.5, Chapter 20, Sec. 66270.61, has issued an Emergency Permit to California State University, East Bay - Concord Campus (EPA ID# CAD983661521) to treat hazardous waste through a controlled reaction with a chemical solution. Specifically, one (1) 500-milliliter container of 4-Methyl-2-Pentanol; two (2) 1-liter containers and three (3) 100-milliliter containers of Cyclohexene; and one (1) 500-gram container and one (1) 100-gram container of 2,4 Dinitrophenylhydrazine must be stabilized prior to transport to an authorized hazardous waste treatment, storage, and disposal facility.

These chemicals are currently being stored at California State University, East Bay - Concord Campus located at 4700 Ygnacio Valley Road, Concord, California 94521. DTSC has determined as a safety precaution to prevent an accident or severe injury, an Emergency Permit should be issued to chemically stabilize the hazardous waste prior to storage and eventual transportation off-site.

State of California – California Environmental Protection Agency
Department of Toxic Substances Control

Background: The container has peroxide formation present on either the inside, outside, or the bottom of the chemical's container, as well as the thread container caps. The presence of peroxide formation may be unstable at relatively low concentrations, resulting in fire and/or explosion if improperly handled. Shock-sensitive materials can decompose or detonate with external energy when dry or concentrated. If the material is improperly handled, there is a potential for a reaction, which includes fire, deflagration, or detonation. Due to the presence of peroxide formation and shock sensitive materials, DTSC considers this chemical to be an imminent and substantial endangerment to human health and the environment. Chemical stabilization is recommended prior to transport to a permitted treatment, storage, and disposal facility.

Project Activities: The treatment of these hazardous wastes involves the addition of a solution to the containers in a controlled manner to reduce the reactive or ignitable characteristics of the chemical. Treatment will take place within a designated exclusion zone. Only technicians from Clean Harbors will be allowed in the exclusion zone. Movement, preparation, and treatment of the containers will be in accordance with established standards.

Within 10 business days of the expiration of this permit, California State University, East Bay – Concord Campus will submit a final report, signed in accordance with Title 22, CCR Sec. 66270.11(d). The report shall include certification that the treatment area has been cleared of all residual hazardous waste generated from this emergency treatment and all generated waste has been properly managed. The Emergency Permit is effective beginning March 20, 2026 and shall expire on May 19, 2026.

Name of Public Agency Approving Project: Department of Toxic Substances Control

Name of Person or Agency Carrying Out Project: Clean Harbors Environmental Services

Exempt Status: Emergency Project Public Resources Code (PRC), Sec. 21080(b)(4); 14 CCR, Sec.15269(b)(c)

Reasons Why Project is Exempt: This action is necessary to prevent an emergency. Chemical stabilization of this chemical is necessary prior to transportation to an authorized hazardous waste treatment, storage, and disposal facility to prevent accidental fire and/or explosion during transport.
