  - Inspect and check water storage systems
  - Inspect hot water heaters, chill water units, water treatment systems
  - Inspect overhead cranes and hoists for proper operations
  - Determine if potable water still being feed to the building
  - Determine if surrounding roadways are accessible

Appendix E – FLOOD RESPONSE PLAN

California is the nation's most populous state with 38.5 million residents who both live and have built a massive economy in an arid desert. State's dams, canals, and infrastructures have never been tested by any prolonged flood event in recent history. The fact is, California is on record for having staggering wet periods with above average rainfall that can deliver devastating floods without notice. Currently, the National Weather Service's Climate Prediction Center, along with numerous other experts, have predicted that California has a 95 percent chance of experiencing a devastating El Nino event in 2016 and it may be one of the most fiercest El Nino events ever recorded in Southern California. The Southern California storm season generally begins in late October and continues through the end of April.

Nutrilite, located at 5600 Beach Boulevard, Buena Park, CA, is located directly within Flood Zone 06059C0038J and is managed by the Orange County Flood Control. The south perimeter of the campus is bordered by the Brea Creek flood channel which runs approximately 200 yards, east to west, along the south border before crossing Beach Boulevard. Most of the surrounding streets parallel Beach Boulevard and intersect the adjacent railroad system tend to flood during periods of significant rain fall and create traffic flow issues in and around the campus. The most significant risk for a potential flood is to the South Complex due to the proximately to the channel and the potential the channel has to deliver a large amount of water in a short time period. The South Complex further has a number of perimeter doors that are approximately 24 to 36 inches above the channel and potentially could be breached by water allowing water to enter the interior areas of the complex. Upon our recent inspection, only one storm drain was located in or around the South Complex. Water will naturally flow to the lowest points and the South Complex has been graded in order to flow back out onto Beach Boulevard.

PURPOSE: The purpose of this plan is to identify procedures in accordance with the existing Site Emergency Plan and to prepare for a potential flood event. This plan will also define actions to be taken prior to any flood event to best protect the physical buildings, protect manufacturing, and to reduce potential down time to the plant. It further prioritizes those actions to be taken and to who has the responsibility for them in the event of an event.

FLOOD WATCH: A "flood watch" is defined as any warning issued by either local officials or services indicating that there is a strong likelihood for a flood event in the area to take place. In the event of a flood watch, Facilities and Protection Services will be responsible to monitor the perimeter to include doorways, parking lots, and the adjacent Break Creek channel. Special attention should be placed on the channel and the South Complex perimeter and doorways. Monitoring also includes watching for local weather updates and news reports specific to the flood watch. The Site Emergency Manger will be advised of the issued flood watch and any current conditions. Updates will provided every hour or until the warning is downgraded. The Site Emergency Manger will provide directions and follow the existing site emergency plan to include authorizing the implementation of flood supplies, staging of flood supplies, or any other actions required in support of the business operations. The Site Emergency Manger may further activate the Emergency Operations Center. If at any point the Brea Creek flood channel reaches a height of less than one foot from breaching, Protection Services and Facilities will update the Site Emergency Manger as well as issue a Send Word Now alert to Nutrilite Leadership and immediately begin deploying emergency barriers.

FLOOD WARNING: A "flood warning" is issued by local officials or services and indicates a flood event is imminent somewhere in the general vicinity. In the event of a flood warning, both Facilities and Protection Services will monitor perimeter areas, both exterior and interior doorways, roof tops, parking lots, and the Brea Creek flood channel. They will continue to monitor the local weather and news reports and conduct patrols in and around the grounds. Special attention should be given to the Break Creek flood channel, perimeter interior and exterior doorways, building roof tops, and the chiller plant. The Site Emergency Manger will be advised of the warning as well as current site conditions. Updates will be communicated every thirty minutes or until the event has ended. The Site Emergency Manger will activate the Emergency Operations Center (EOC) and prepare the site for potential business disruptions. Protection Services will issue Nutrilite leadership Send Word Now alerts with updated information as needed. Facilities, Protection Services, and Custodial will begin to deploy flood barriers to "high priority" locations along the South Complex to include doorways 36 or less inches above the Brea Creek channel (building 10, 9, 8, 6, 4, 3, and 1).

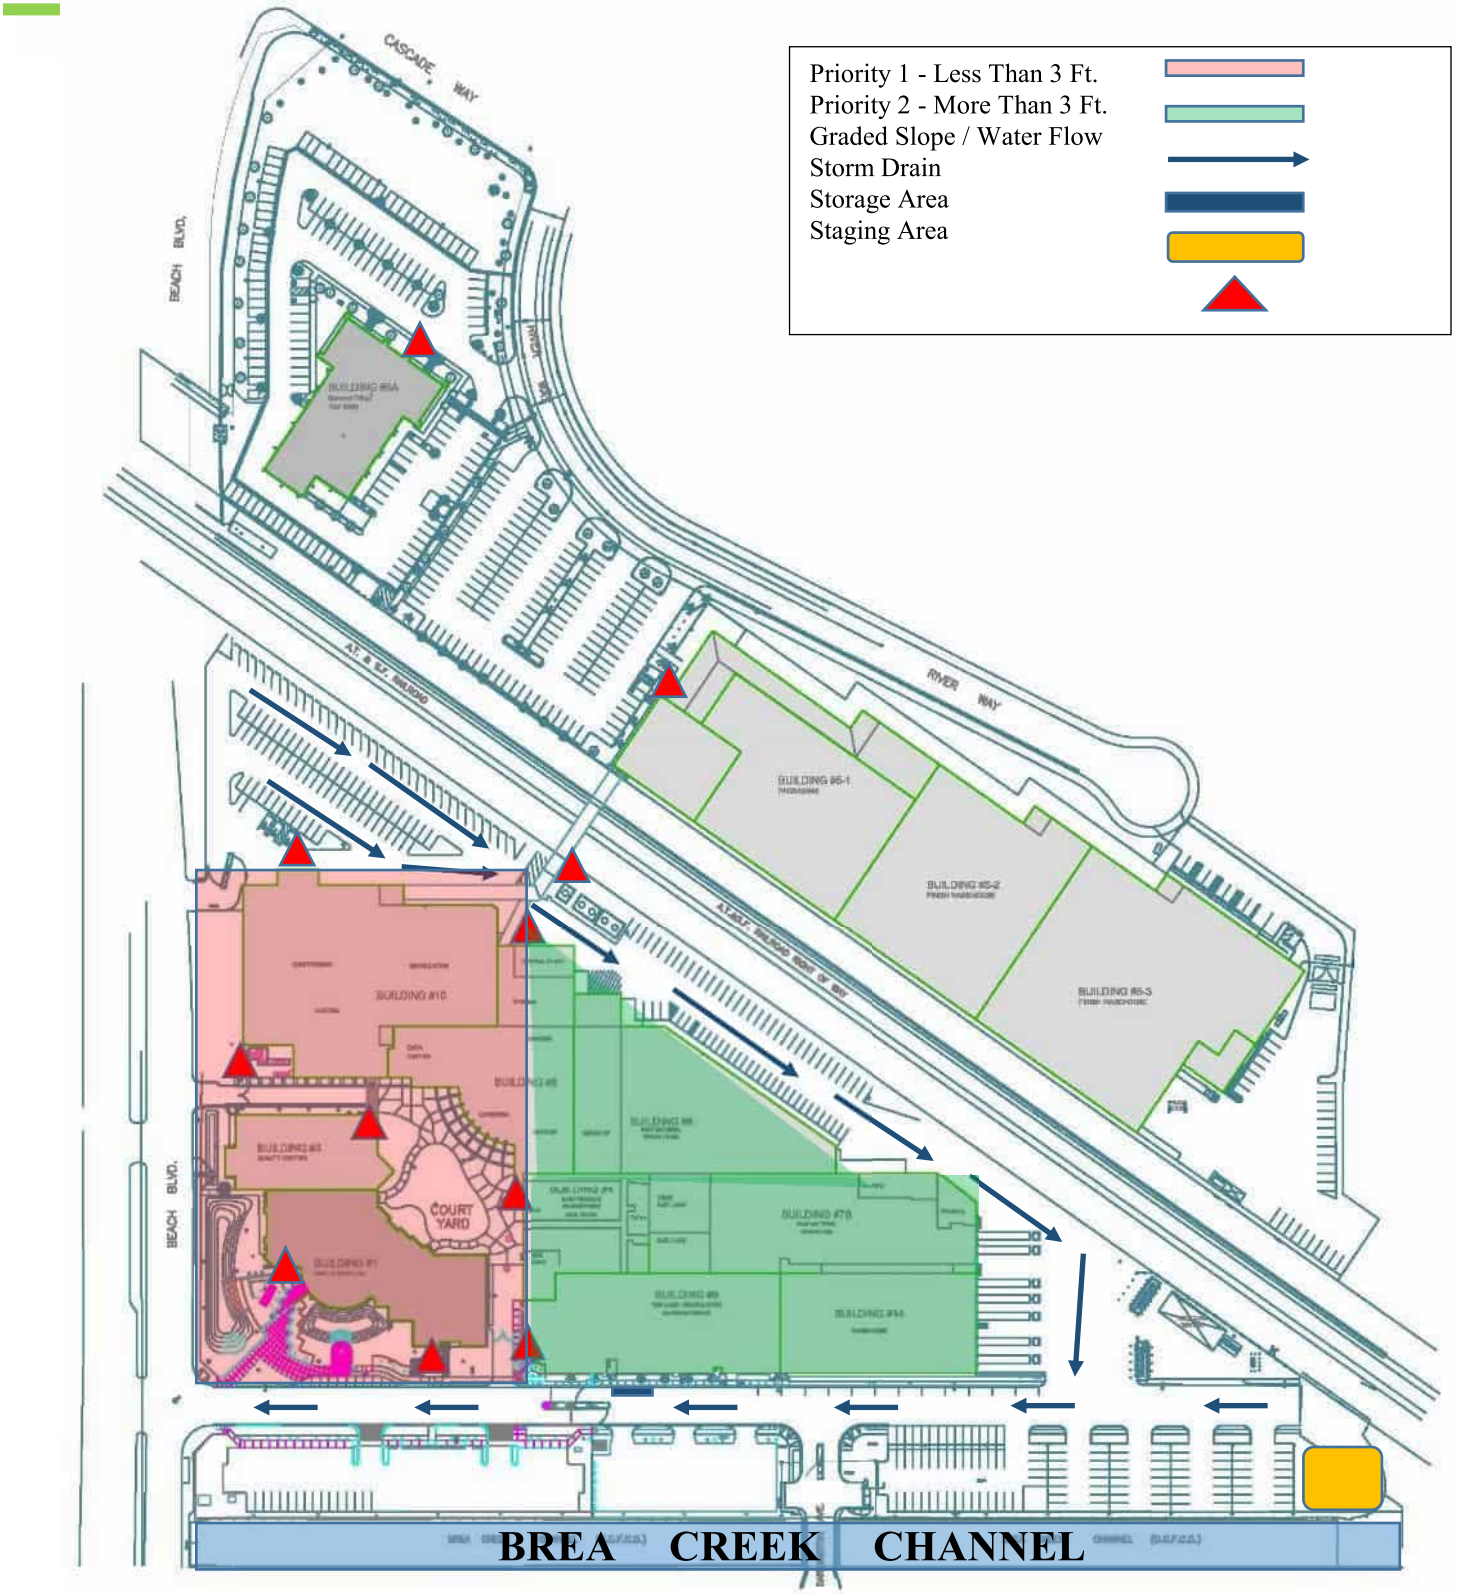
PREVENTATIVE MAINTENANCE: Protection Services, Custodial and Facilities are tasked with conducting frequent checks of inventory and developing preventative maintenance patrols to ensure all required equipment is in general

working order, that supplies are on hand, and the campus is prepared to respond to a flood event. Facilities will be responsible for the maintenance of pumps, drains, and mechanical equipment as well to ensure a supply of wet vacs, carpet fans, and dehumidifiers are maintained in Nutrilite inventory. Protection Services is responsible to ensure flood supplies are on site, staging locations are set up and monthly inspections are completed for all required equipment. In addition, Protection Services will conduct monthly inspection of the Brea Creek channel and work with OC Flood Control on maintenance issues as needed. Custodial is responsible to ensure mops, towels, water extraction and absorbent equipment is available. Facilities will further be responsible to ensure an emergency "water removal" or "water damage" vendor is readily available.

PROTECTION PRIORITIES:
SOUTH COMPLEX – Building 10, 8, 6, 4, 3 , 1, 9

- Manufacturing Areas
- IT, Security, Cooling Tower, Electrical Closets
- NCOH Lobby, Building 9 Lobby

CLEAN UP:



- Business Resumption Plan (24 - 48 Hours)
- Removal of remaining water, mud, and debris
- Test water quality for pathogens
- Salvageable materials and equipment - inventory damages
- Remove deployed flood equipment
- Cleaning and drying of essential equipment
- Dehumidify/dry all wet areas.
- Preserve equipment and materials
- Salvageable supplies and business equipment
- Conduct safety walkthrough

Storm Operations Center: The OC Public Works/Storm Operations Center is activated when heavy to extreme rainfall is predicted or occurs and/or when storm run-off conditions are such that there is a probability of flood damage. The Operations Center will monitor the emergency storm situation on a 24-hour basis. Flood control channels will be patrolled and if needed, emergency equipment and personnel will be deployed to reinforce the levees.

- 714.955.0200
- 714.955.0378 fax

Emergency Operations Center: If conditions worsen and progress into Local Emergency conditions, in addition to the Storm Operations Center, the County's Emergency Operations Center will also be activated. News media will be notified of the Local Emergency declaration. In such case, you can contact both the Storm Operations Center and the Emergency Operations Center.

- 714.628.7054
- 714.628.7008 24-hour emergency dispatch
- 714.628.7154 fax

Appendix F – EMERGENCY SHUT-OFF & GENERATORS

Shut-off Valve Color Coding

GREEN	TURNS OFF ALL WATER VALVES FOR BUILDNG'S 3, 4, 5, 6, 7, 8, 10, 14
BLACK	SECONDARY WATER SHUT-OFF FOR BUILDING 10.
SILVER	TURNS OFF GAS VALVES FOR BUILDING 5.
RED	TURNS OFF MAIN GAS VALVES AND TURNS OFF GAS FOR ALL OTHER BUILDINGS, ON THE SOUTH COMPLEX.

****INDIVIDUAL WATER HAND VALVE TURNS OFF BUILDING 11, NO WRENCH NEEDED.***

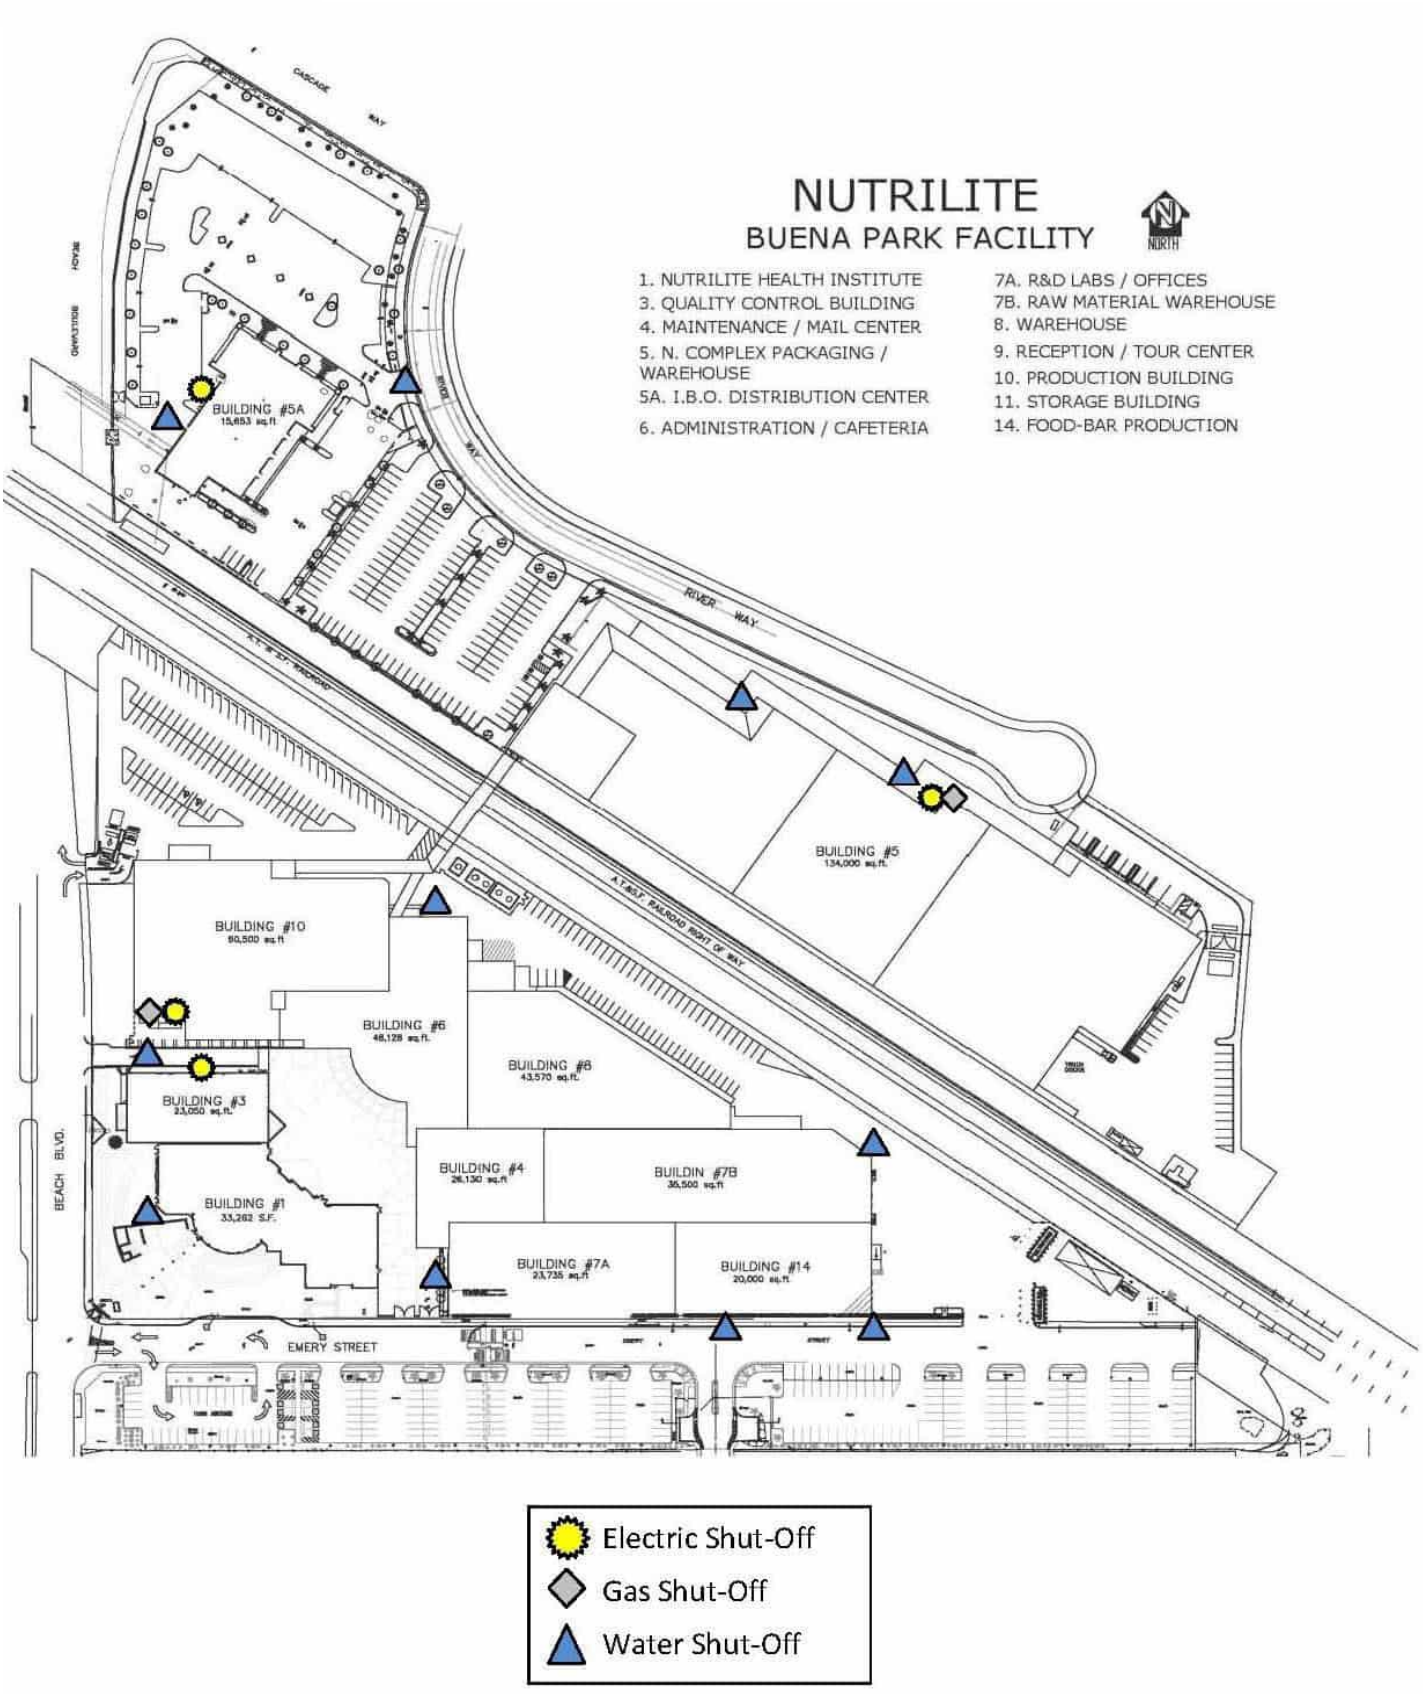
Shut-off Locations: Water

BLDG – 1	INSIDE BLDG. 3, SOUTH SIDE, 2ND FLOOR UTILITY CLOSET
BLDG'S – 4, 6, 7A, 8, 10	MAIN WATER SHUT-OFF VALVES ARE IN A SMALL VAULT IN BEACH BLVD. SIDEWALK WEST OF BUILDING 10, JUST NORTH OF THE SOUTHWEST CORNER OF BUILDING 10.
BLDG'S – 7B, 14	MAIN WATER SHUT-OFF VALVE IS LOCATED ON THE SOUTHSIDE OF BUILDING 14 IN A SMALL VAULT IN THE GRASS AREA.
BLDG – 5	MAIN WATER SHUT-OFF VALVE IS LOCATED ON THE NORTH SIDE OF BUILDING IN THE GRASS AREA NORTH OF DOOR 5-5.

Shut-off Locations: Gas

BLDG – 1	INSIDE BLDG. 3, SOUTH SIDE, 2ND FLOOR UTILITY CLOSET
BLDG – 3	MAIN GAS SHUT-OFF VALVE IS LOCATED ON NORTH SIDE OF BUILDING, TOWARDS WEST END.
BLDG'S – 4, 6, 7, 8, 10, 14	MAIN GAS SHUT-OFF LOCATED EAST OF GATE 7C IN THE YELLOW BARRIER AREA
BLDG – 5	MAIN GAS SHUT-OFF VALVE IS LOCATED OUTSIDE OF DOOR 5-5 IN THE PLANTER AREA.

Shut-off Locations: Electrical



****ALL ELECTRICAL THAT WILL BE SHUT DOWN IN AN EMERGENCY WILL BE DONE FROM ONE OF THE PLANT'S THREE MAIN ELECTRICAL PANELS TO MAKE SURE THAT THERE IS NO POWER FLOWING THROUGH***

BLDG – 3	MAIN ELECTRICAL SHUT-OFF PANEL IS LOCATED IN THE ELECTRICAL ROOM INSIDE DOOR 3-3.
BLDG – 5	MAIN ELECTRICAL SHUT-OFF PANEL IS LOCATED INSIDE OF THE PACAKGING MACHINE ROOM.
FACILITY	MAIN ELECTRICAL PANELS ARE LOCATED EAST OF GATE 7B.

HAZARDOUS WASTE SPECIALIST I
anesbit@ochca.com

THE ITEMS NOTED BELOW WERE OBSERVED DURING COURSE OF THE SITE VISIT. ANY VIOLATIONS OBSERVED MUST BE CORRECTED

OPENING COMMENTS

INSPECTOR COMMENTS
On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Melisa Hernandez, EHS manager. Inspection was conducted with Michael Palazzola of OCHCA.

Walked throughout the facility. Observed hazardous waste storage areas.

Facility manufactures a variety of different vitamins, this is the production side of the facility. Most of the waste the facility generates is from the Quality assurance labs and off spec material.

Containers were closed and properly labeled. There was one 55 gallon drum of hazardous waste that was not closed properly, the funnel was in the bung of the drum and the funnel did not close to prevent a release.
The hazardous waste accumulation area had adequate aisle space. Empty drums were properly labeled as empty.

The following documents were available and reviewed: manifests, biennial report, emergency contingency plan, documented annual employee training, and written inspection schedule and log.

The dumpster/enclosure was observed, no signs of dumping.

Based upon their 2016 manifests, this facility is no longer a RCRA LQG, they are now a SQG.

Ownership and employee count were confirmed, facility has 750 employees.

VIOLATIONS OBSERVED

I145 - All hazardous waste containers were closed when not in active use Failure to properly close hazardous waste containers when not in active use. 22 CCR 15 66265.173
-Used oil drum had a funnel in the bung and was not closed to prevent a release while not actively adding or removing waste.

-Maintain drum to be closed to prevent a release while not actively adding or removing waste, please correct this violation within 30 days.

HAZARDOUS WASTE GENERATOR INSPECTION REPORT

FACILITY NAME: NUTRILITE-ACCESS BUSINESS GROUP	FACILITY ADDRESS: 5600 BEACH BLVD, BUENA PARK, CA 90621
MAILING ADDRESS: 5600 BEACH BLVD, BUENA PARK CA 90622	CERS ID: 10512649 EPA ID: CAR000168666
C/O - OWNER: ACCESS BUSINESS GROUP LLC	INSPECTOR: KYLE FENNESSY
FACILITY ID: FA0024067 / RELATED ID: PR0029531 / SERVICE: A01 - ROUTINE INSPECTION	INSPECTION DATE: 11/6/2018
PROGRAM DESCRIPTION: 5117 - HAZARDOUS WASTE GENERATOR 501+ EMPLOYEE	REINSPECTION DATE: NEXT ROUTINE

Consent to enter, inspect, and take photos of the facility was given by: Melisa Carlos, EHS Analyst

The following items have been inspected. If there were violations, this document constitutes a Summary of Violations and Notice to Comply and the Violation Degree column is marked Minor, Class I, or Class II. A violation that is corrected at the time of inspection is marked COS. Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

IN = IN COMPLIANCE OUT = OUT OF COMPLIANCE NA = NOT APPLICABLE UD = UNDETERMINED COS = CORRECTED ON SITE

Violation Status	Viol No.	Summary	Violation Degree
☐ ■ ☐ ☐ ☐ ☐	I026	Maintains adequate aisle space Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Department that aisle space is not needed for any of these purposes. 22 CCR 12 66262.34(a)(4); 22 CCR 15 66265.35	CUPA - MINOR VIOLATION COMPLY BY: 12/6/2018

Inspector Comments:

OBSERVATION: The hazardous waste storage area located in the outdoor storage container did not have adequate aisle space allowing for unobstructed movement. Approximately 4-5 pallets of drums were observed to be stored without proper aisle space, and were difficult to reach and read labels. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that adequate aisle space has been provided within 30 days.

Overall Inspection Comments:

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Melisa Carlos, EHS Analyst.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Manifests were available and reviewed.

Employees are reported to be trained.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

HAZARDOUS WASTE GENERATOR INSPECTION REPORT

Facility Name	SITE ADDRESS	CERS ID	INSPECTION DATE
NUTRILITE-ACCESS BUSINESS GROUP	5600 BEACH BLVD, BUENA PARK, CA 90621	10512649	11/06/2018

Please note that a SB-14 Hazardous Waste Source Reduction Report will be required to be completed for the year 2019 if the facility passes the Large Quantity Hazardous Waste Generator threshold for the year 2018.

ATTENTION: There is 1 item marked above in violation. To verify compliance, a reinspection may occur at any time after the indicated correction date for each violation. Non-compliance could result in reinspection fees, permit revocation, and/or administrative, civil, or criminal penalties. Any time granted for correction of the violation(s) does not preclude enforcement action by the Orange County Environmental Health Division or any other agencies.

SIGNATURE(S) OF ACKNOWLEDGEMENT

TITLE: EHS Analyst

Signing for the receipt of the above report is not an admission of the facts of the violations set forth herein.

ADDITIONAL FEES:
Uncorrected violations may lead to follow-up actions, which may incur additional fees. The purpose of these fees is to shift costs away from compliant operators and impose fees on those facilities that fail to readily comply with the applicable laws and regulations. The amount of the fee is to cover all of the cost associated with the service. For the most current fees, please refer to http://ochealthinfo.com/eh/home/fees or call (714) 433-6000.

Consent to enter, inspect, and take photos of the facility was given by: None on File

OPENING COMMENTS

In office for off-site re-inspection following a routine inspection. Facility has provided a complete materials inventory to the agency via email. Although some materials listed are considered hazardous at high concentrations, the materials that are used for supplements are regulated under the FDA. Since they are regulated under the FDA, they are not required to be regulated by Environmental Health. Non-supplement hazardous materials were added to the chemical inventory on CERS. Facility has uploaded an updated site map and emergency response contingency plan. Map and plans are accurate and were accepted by the regulator. Violations I632, I169, I736 have been corrected.

FACILITY ID FA0024067	RELATED ID PR0029531	SERVICE: A01 - ROUTINE INSPECTION	INSPECTION DATE 10/29/2019
PROGRAM DESCRIPTION 5217 - RCRA HW LQG 501+ EMPLOYEES			REINSPECTION DATE: NEXT ROUTINE

Consent to enter, inspect, and take photos of the facility was given by: Melisa Carlos, EHS Analyst

OPENING COMMENTS

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Melisa Carlos, EHS Analyst.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Waste observed on site:
- Sodium Hydroxide
- Aerosol waste
- Waste oil
- Zinc Copper waste
- Cellulose
- Collagen
- Ethyl waste
- Lab waste
- Alcohol waste
- Methyl Hex waste

Manifests were available and reviewed. Waste hauled approximately every month. Manifests for 2018 and 2019 indicate facility is a RCRA Large Quantity Generator.

Employees are trained. Training records include employee name, title, and frequency of training. Records are incomplete and do not include job descriptions.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

Facility is required to complete a Biennial Report. The report is due March 1, 2020.

SB14 documentation not available for review. Missing documents include source reduction, hazardous waste management performance, and summary progress reports.

VIOLATIONS OBSERVED

I023 - Met all requirements for hazardous waste satellite accumulation Failure to meet the following conditions of satellite accumulation regulations: • Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator • Total time hzardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accumulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. • The generator complies with sections 66265.171, 66264.172, and 66265.173(a). • The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information • Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area • 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated 22 CCR 12 66262.34(e)
OBSERVATION: Observed one 55gal drum of waste aerosol cans with accumulation start date of 10/23/18. Satellite waste cannot accumulate on site for greater than 365 days. CORRECTIVE ACTIONS: Have aerosol waste disposed of using a hazardous waste hauler immediately and provide manifests to the agency.

RCRA LQG INSPECTION REPORT

Facility Name	Site Address	CERS ID	INSPECTION DATE
NUTRILITE-ACCESS BUSINESS GI	5600 BEACH BLVD, BUENA PARK, CA 90621	10512649	10/29/2019

I047 - Prepared a summary progress report and submitted it to the DTSC every four years Failure of a large quantity generator to prepare a summary progress report every four years, using DTSC's Form # 1262 (3/99) titled "Summary Progress Report". 22 CCR 31 67100.9
OBSERVATION: Facility failed to submit a summary progress report (SB14) to DTSC and failed to keep a copy on site for review. Facility must submit report for the years 2015-2018 and must keep a copy on site at the generating facility. CORRECTIVE ACTIONS: Create and submit a summary progress report to the DTSC, including a source reduction plan and hazardous waste management performance report. Keep copies of the reports on site for review. Send documents to the agency within 30 days.

VIOLATIONS OBSERVED

I126 - Trained facility personnel annually and maintained required documentation until closure Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a writted description fo the type and amount of both introductory and continuing training that will be given to each person filling a position. 22 CCR 12 66262.34(a)(4); 22 CCR 15 66265.16
OBSERVATION: Hazardous waste training records do not include job descriptions for all employees listed. Training records are to include employee name, job title, job description, and training frequency. CORRECTIVE ACTIONS: Provide list of job descriptions and the training matrix to the agency within 30 days. Keep job descriptions with training records on site.

I562 - Labeled all containers or portable tanks containing hazardous waste Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. 22 CCR 12 66262.34(f)
Observed one 55gallon drum of corrosive waste with hazardous properties mislabeled as "Flammable" stored next to waste labeled as corrosive. Flammable and corrosive wastes are to be stored in separate areas in order to prevent a fire hazard. EHS analyst confirmed waste is corrosive and corrected label during inspection. Violation corrected on site.

OPENING COMMENTS

In office for off site re-inspection following a routine hazardous waste inspection. Facility has provided Source Reduction Report (SB14) document to the agency via email. SB14 document reports plans to reduce waste from three waste streams: solvent lab waste, aerosols, saniwise six. SB14 document includes appropriate information and elements from the required summary progress report, hazardous waste management performance report, and source reduction review. Report indicates waste streams have been reduced from past levels and plans are in place to further reduce waste generation. SB14 document reviewed and accepted by regulator. Violation I047 corrected.

Training			
☐ ■ ☐ ☐ ☐ ☐	I126	Trained facility personnel annually and maintained required documentation until closure Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a writted description fo the type and amount of both introductory and continuing training that will be given to each person filling a position. 22 CCR 12 66262.34(a)(4); 22 CCR 15 66265.16	**CUPA - CLASS II VIOLATION** **COMPLY BY: 12/03/20**

Inspector Comments:

Training records are missing the following elements: employee job and job description. Facility must provide the missing elements to the agency within 30 days. Violation will start at Class II since violation is recalcitrant.

Violation Status	Viol No.	Summary	Violation Degree
☐ ■ ☐ ☐ ☐ ☐	I206	Prepared a Biennial Report, submitted to DTSC, and kept for 3 years Failure of a large quantity RCRA generator to prepare the Biennial report (Form 8700), and submit to DTSC by March 1st on even numbered years ; and maintain it onsite for three years. 22 CCR 15 66262.40(b), 66262.41	**CUPA - CLASS II VIOLATION** **COMPLY BY: 12/03/20**

Inspector Comments:

Biennial report for previous years is not on site and available for review. Biennial report was due 03/01/20 and must be completed since site had been a RCRA LQG in previous years. Send biennial report to the agency within 30 days.

RCRA LQG INSPECTION REPORT

Facility Name	Site Address	CERS ID	INSPECTION DATE
NUTRILITE-ACCESS BUSINESS GI	5600 BEACH BLVD, BUENA PARK, CA 90621	10512649	11/03/2020

Overall Inspection Comments:

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by manager Melisa Carlos.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Waste observed on site:
- Lab waste (methanol, mixed corrosive waste) - Several 1 gallon glass bottles in lab area, 55gal drum in storage
- Absorbent waste - 55gal
- Used oils - 55gal
- Aerosol waste - 55gal
- Acid cleaner - 10gal
- Hand sanitizer - 25gal
- Waste sulfates - 55gal
- Methanol waste - 30gal

Manifests were available and reviewed. Waste hauled approximately every two weeks. Facility is a non-RCRA large quantity generator. Facility has not generated enough RCRA waste within the last 12 months to be a RCRA LQG, will change program of site to status: non_RCRA 500+ employees.

Training records were available for review. Facility must include a list of job titles and descriptions with training records.

Emergency plan is posted in safety office.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

Facility must enter correct EPA ID Number into CERS.

ATTENTION: There are 2 items marked above in violation. To verify compliance, a reinspection may occur at any time after the indicated correction date for each violation. Non-compliance could result in reinspection fees, permit revocation, and/or administrative, civil, or criminal penalties. Any time granted for correction of the violation(s) does not preclude enforcement action by the Orange County Environmental Health Division or any other agencies.

SIGNATURE(S) OF ACKNOWLEDGEMENT

NAME:
TITLE:

Signing for the receipt of the above report is not an admission of the facts of the violations set forth herein.

ADDITIONAL FEES:
Uncorrected violations may lead to follow-up actions, which may incur additional fees. The purpose of these fees is to shift costs away from compliant operators and impose fees on those facilities that fail to readily comply with the applicable laws and regulations. The amount of the fee is to cover all of the cost associated with the service. For the most current fees, please refer to http://ochealthinfo.com/eh/home/fees or call (714) 433-6000.

Consent to enter, inspect, and take photos of the facility was given by: None on File

OPENING COMMENTS

In office for off site re-inspection following a routine hazardous waste inspection. Facility has provided training records via email for all employees that handle hazardous waste. Training records include training date, job title, and a job description page was included in the facility's email. Training records reviewed and accepted by regulator. Violation I126 corrected.

Biennial report has not been received by the county. Violation I206 remains uncorrected.

The following items have been inspected. If there were violations, this document constitutes a Summary of Violations and Notice to Comply and the Violation Degree column is marked Minor, Class I, or Class II. A violation that is corrected at the time of inspection is marked COS. Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

Overall Inspection Comments:

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by manager Melisa Carlos.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Waste observed on site:
- Absorbent waste = 55gal
- Aerosol waste = 110gal solid
- Used oil = 60gal
- Waste cosmetics = 220gal
- Sodium Hydroxide = 30gal
- Waste cleaner = 5gal
- Antifreeze = 5gal
- Waste vortex = 55gal
- Solvent Lab waste = 110gal
- Waste hydraulic oil = 55gal

Manifests were available and reviewed. Waste hauled approximately every two weeks. Facility is a large quantity generator of CA waste.

Employees are reported to be trained. Training records include all required elements.

SB14 and biennial report available for review.

Emergency plan is posted in offices and waste storage areas.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

No violations were noted. Orange County Environmental Health greatly appreciates your efforts to comply with all health, safety, and environmental laws and regulations applicable to your facility.

Inspector Comments:

OBSERVATION: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Missing materials: EcoStar, Q Purple, XY bleach, Waste cosmetics. Incorrect amounts: Argon, helium, Quorom Clear, Quorom Pink. CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities within 30 days.

Overall Inspection Comments:

On site for routine hazardous materials and business emergency plan inspection. The inspection was conducted with manager Melisa Carlos.

Observed the facility and inspected hazardous materials storage. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure:

- **AC55 Red = 55gal**
- **Argon Gas = 1500cuft**
- **Conquest cleaner = 385gal**
- **Formula 815 = 110gal**
- **Freon = 1000cuft**
- **Helium = 1500cuft**
- **Lead acid batteries = 500gal**
- **Propane = 300gal**
- **Nitrogen = 2000cuft**
- **Quorom Clear = 495gal**
- **Quorom Pink = 660gal**
- **Vortexx = 110gal**
- **Waste flammables = 110gal**

The following are not listed on the CERS inventory:

- **EcoStar =60gal**
- **Q Purple = 165gal**

Subject: Soil and Ground Water
Contamination Study
(CECC Project No. 86-42209-01)

Dear Mr. Donovan:

This report presents the results of our soil and ground water contamination study for your facility. This work was conducted in accordance with our proposal dated 2 December 1986, authorized by you on December 11, 1986.

Background Information

Nutrilite Products, Inc. was directed to develop and submit a site assessment plan to the Orange County Health Care Agency (County) relative to gasoline contaminated soil, as indicated in a County letter dated November 18, 1986. Our site assessment plan was submitted on behalf of you to the County on December 18, 1986. The County approved our plan on January 8, 1987 with some modifications. We submitted an addendum to our original assessment plan to the County on January 13, 1987.

Field Exploration

We conducted exploratory drilling at the referenced facility on January 13 and 14 and February 16, 1987. For locations of the facility and our borings, you should refer to Figures 1 and 2 (following text). Five 8-inch diameter hollow-stem auger holes were drilled to depths of 55 feet around the tank cavity.

The drilling operation was performed under the supervision of a Certified Engineering Geologist from our office. Borings B-1 through B-4 were continuously logged by a staff geologist at the time of drilling. Soil samples were collected at 5-foot intervals in each boring. Two ground water samples were extracted from boring B-4. Initial on-site screening of the soil samples was conducted using a Photovac Model Tip II photoionization detector. All samples collected were immediately sealed and

A Wholly Owned Subsidiary of
The Converse Professiona Group

placed in an ice chest for shipment to a state certified laboratory. A sample chain of custody record was established and maintained throughout the program. A copy of this record is attached in Appendix B. We drilled boring B-5 on February 16, 1987 to obtain a second set of ground water samples for re-analysis. Boring B-5 was not logged during the drilling operation.

Drill spoils were placed immediately into Dot 17H steel drums, which were properly labelled. These drums are presently being stored at the facility. The borings were backfilled with a sand/cement slurry to minimize downward migration of contaminants that might be present.

Subsurface Conditions

In general, the subject site is underlain by older alluvial deposits associated with southwest draining Coyote Creek. The subsoils encountered included interlayered silty clay, silty sand, sandy silt and sand. A generally medium to course-grained sand was encountered below 40-45 foot depths in our borings (see Appendix A for more detailed descriptions of subsurface conditions).

Ground water was encountered in the borings at about a depth of 44 feet below the ground surface. Whether this first water-bearing zone is in hydraulic continuity with a deeper aquifer could not be ascertained based on available data. This preliminary information together with more regional conditions indicate that the ground-water flow direction is probably to the southwest.

Chemical Tests

A photoionization detector was used during the drilling and sampling program to check for volatile organics as soil was extracted from the boreholes. The highest readings in boring B-1 were obtained at the 5-, 10-, and 40-foot depths, and in borings B-2 and B-3 at the 40-foot depths. The highest readings on the photovac from B-4 were obtained at the 10- and 40-foot depths.

where is the grH2O gradient

Samples from depth intervals in borings where no, or low levels of, volatile organics were detected were composited into 6 samples - two from borings B-2 and B-3 and one each from borings B-1 and B-4 (see Appendix B).

With regard to the soil samples analyzed, no hydrocarbon contamination was detected in the samples tested. Benzene, toluene, ethylbenzene, xylenes, and total fuel hydrocarbons were analyzed in the laboratory for each prepared soil sample, except for the 40-foot depth sample immediately above the water table in each of 4 borings. This method used gas chromatography/flame ionization detection in accordance with EPA Method 8015 (modified). The 40-foot depth samples were analyzed for purgeable aromatics using gas chromatography/photoionization in accordance with EPA Method 8020.

Ground-water samples were extracted from boring B-4 at the time of drilling using a stainless steel bailer. The ground-water sample was analyzed to detect the presence of purgeable halocarbons and purgeable aromatics in accordance with EPA Methods 601/602. The laboratory test revealed benzene at a concentration of 4.8 ug/L (equivalent to parts per billion) and above the State action level for drinking water of 0.70 ug/L. Toluene was detected at 2.6 ug/L, and ortho and para xylene were detected at 0.93 ug/L, compared to State action levels of 100 ug/L and 620 ug/L, respectively (see Appendix B). To establish the validity of the apparent benzene concentration in the ground water, an additional boring (B-5) was drilled on 16 February 1987. A ground-water sample obtained from boring B-5 was submitted to the laboratory.

This latter ground-water sample analyzed in accordance with EPA 602 revealed benzene at a concentration of 0.67 ug/L - below the State action level (see Appendix B).

Soil Disposal

We believe, based on our test results, that the excavated drill spoils contained in the on-site Dot 17H drums are not contaminated. It is our opinion that these soils may be used in the tank cavity backfill, provided that the material is properly compacted.

We understand that the stockpiled soil in close proximity to the existing cavity was contaminated at the time of tank removal. This soil needs to be treated or properly disposed of. If this soil is to be used in the backfill, on-site treatment and/or chemical testing would be required prior to placement in the cavity.

Conclusions

Subsoils around the tank cavity at a distance of about 5-10 feet beyond the excavation do not appear to be contaminated based on our study. Remnant hydrocarbon constituents were noted in ground water at a depth of about 44 feet; but, the reported concentrations were below State action levels.

After you have a chance to review this report, we would be available to answer any questions you may have.

Respectfully submitted,

KEY TO SOIL SYMBOLS AND TERMS

TERMS USED IN THIS REPORT FOR DESCRIBING SOILS ACCORDING TO THEIR TEXTURE OR GRAIN SIZE DISTRIBUTIONS ARE GENERALLY IN ACCORDANCE WITH THE UNIFIED SOIL CLASSIFICATION SYSTEM.

MAJOR DIVISIONS			GROUP SYMBOLS	TYPICAL NAMES
Coarse-grained soils (More than half of material is larger than No. 200 sieve size)	Gravels (More than half of coarse fraction is larger than No. 4 sieve size)	Clean gravels (Little or no fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines
			GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with fines (Appreciable amount of fines)	GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction is smaller than No. 4 sieve size)	Clean sands (Little or no fines)	SW	Well-graded sands, gravelly sands, little or no fines
			SP	Poorly-graded sands, gravelly sands, little or no fines
		Sands with fines (Appreciable amount of fines)	SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, sand-clay mixtures
Fine-grained soils (More than half of material is smaller than No. 200 sieve)	Silts and clays (Liquid limit less than 50)		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands, or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silty clays of low plasticity
	Silts and clays (Liquid limit greater than 50)		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
			CH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity, organic silts
	Highly organic soils		Pt	Peat and other highly organic soils

TERMS DESCRIBING CONDITION, CONSISTENCY AND HARDNESS

COARSE GRAINED SOILS (major portion retained on No. 200 sieve): Includes (1) clean gravels, (2) silty or clayey gravels, and (3) silty, clayey or gravelly sands. Consistency is rated according to relative density, as determined by laboratory tests.

Descriptive Term	Relative Density
Very loose	0 to 15%
Loose	15 to 40%
Medium dense	40 to 70%
Dense	70 to 85%
Very dense	85 to 100%

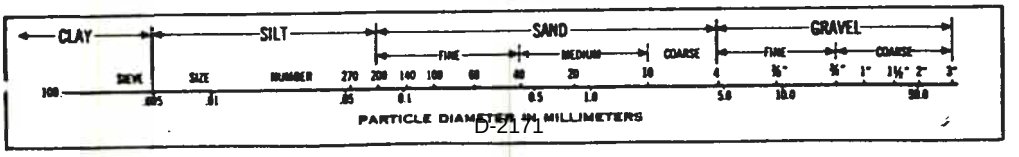
FINE GRAINED SOILS (major portion passing No. 200 sieve): Includes (1) inorganic and organic silts and clays, (2) gravelly, sandy or silty clays, and (3) clayey silts. Consistency is rated according to shearing strength, as indicated by penetrometer readings or by direct shear tests.

Descriptive Term	Shear Strength (ksf)
Very soft	less than 0.25
Soft	0.25 to 0.50
Firm	0.50 to 1.00
Stiff	1.00 to 2.00
Very stiff	2.00 to 4.00
Hard	4.00 and higher

ROCK: Includes gravels, cobbles, rock, caliche and bedrock materials. Hardness is related to field identification procedures described below.

Descriptive Term	Field Identification Test
Soft	Can be dug by hand and crushed by fingers
Moderately hard	Friable, can be gouged deeply with knife and will crumble readily under light hammer blows
Hard	Knife scratch leaves dust trace, will withstand a few hammer blows before breaking
Very hard	Scratched with knife with difficulty, difficult to break with hammer blows

SOIL MOISTURE



From low to high the soil moisture is indicated by:

Dry
Slightly moist
Moist
Very moist
Wet

SIZE PROPORTIONS

Designation	Percent by Weight
Trace	0 to 10
Little	10 to 20
Some	20 to 35
And	35 to 50

APPENDIX B

CHEMICAL ANALYSES

Analytical Technologies, Inc. Corporate Offices: 5550 Morehouse Drive San Diego, CA 92121 (619) 458-9141

ATI I.D. 01609

February 6, 1987

Converse Environmental Consultants
3185-D Airway Avenue
Costa Mesa, California 92626

Attention : Henry Ames
Project : Nutrilite 86-42209-01

On Febraury 15, 1987, Analytical Technologies, Inc. received thirty-one (31) soil samples and one (1) water sample for analysis. Twenty-three (23) of the soil samples were composited into six (6) composite samples. The six (6) composited samples and four of the discrete soil samples were analyzed for fuel hydrocarbons, and benzene, ethylbenzene, toluene, and xylenes. The remaining four (4) discrete soil samples were analyzed for the purgeable aromatic compounds. The water sample was analyzed for the purgeable aromatics and halocarbons.

The fuel hydrocarbons and benzene, toluene, ethylbenzene, and xylenes were analyzed using gas chromatography/flame ionization detection in accordance with EPA method 8015 (modified for fuel analysis).

The purgeable halocarbons were analyzed using gas chromatography/hall detection in accordance with EPA method 601. The purgeable aromatics were analyzed using gas chromatography/photoionization detection in accordance with EPA

method 602 for the water sample, and EPA method 8020 for the soil samples. The sample results have been corrected for the constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

Note: The samples from this project will be disposed of thirty (30) days from the date of this report. If an extended storage period is required, please contact our sample control department before the scheduled disposal date.

Project : Nutrilite
Project No. : 86-42209-01

Attention : Dale Brandon

On February 17, 1987, Analytical Technologies, Inc. received one (1) water sample for analyses. The sample was analyzed for purgeable aromatic compounds.

The purgeable aromatics were analyzed using gas chromatography/ photoionization detection in accordance with EPA method 602. The sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the surrogate percent recoveries are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

COMMENTS

COMMENTS:

COMPLETE AND ATTACH A CLEANUP TRACKING REPORT IF ANY CLEANUP WORK OR PLANNING HAS STARTED

HSC 05 (10/85)

INSTRUCTIONS

1. GENERAL

In box titled "EMERGENCY", indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

In space provided, enter state tank ID number if known. State ID numbers have been assigned to all tanks that are on file with the State Water Resources Control Board. Enter today's date in the box titled "Report Date". Enter local and Regional Water Quality Control Board case numbers if known. Enter the US EPA facility number if applicable.

2. REPORTED BY

Enter your name, telephone number and address. Indicate which party you represent, and provide company or agency name.

3. RESPONSIBLE PARTY

Enter the name, telephone number, contact person, and address of the party responsible for the leak, or mark unknown. For tank leaks, the responsible party would normally be the tank owner.

4. SITE LOCATION

Enter information regarding the tank facility and surrounding area. If a known tank or facility is not involved, enter general location of the contamination site as best possible; i.e., street, city, county, zip, cross street, and type of area.

5. IMPLEMENTING AGENCIES

Enter names of the local agency, Regional Board and/or Toxic Substances Control Division (TSCD) regional office involved and a contact person and telephone number for each.

6. SUBSTANCES INVOLVED

Enter the CAS number(s) (if known), name(s), and quantities lost of all hazardous substances involved. Attach an extra sheet if more than two substances are involved. Be as specific as possible.

7. DISCOVERY/ABATEMENT

Provide information regarding the discovery and abatement of the discharge. More than one box may be checked in the sections titled "How Discovered" and "Method Used To Stop Discharge" if appropriate.

8. SOURCE/CAUSE

Indicate source(s) of discharge. Provide details on tank age; capacity and material if a tank is involved. Check box(es) indicating cause of discharge. More than one box may be checked if appropriate.

9. RESOURCES AFFECTED/AT RISK

In section titled "RESOURCES AFFECTED" indicate whether any of the resources listed have been affected ("YES"), will not be affected ("NO"), or may be affected ("THREATENED") by the release. Check "UNKNOWN" if unsure of the status of a resource. Specify any unlisted resources which are, or may be, involved under "OTHER". The same instructions apply to the section titled "WATER SUPPLIES AFFECTED." Give the number of water wells affected or threatened, if known. Provide the name of the groundwater basin underlying the site, if known, in the space provided.

10. COMMENTS

Use this space to elaborate on any aspects of the incident. Comments on cleanup work or planning or related investigations should be reported on a separate Cleanup Tracking Report.

11. SIGNATURE

Sign the form in the space provided.

Subject: Remedial Action at 5600 Beach Blvd., Buena Park, CA.

Dear Mr. Donovan:

This is in response to your request for a confirmation of the completion of this remediation project. With the provision that the results obtained during the site investigation were accurate and representative of existing conditions, it is the position of this office that remediation of soil contamination has been completed.

It should be pointed out that this letter does not relieve you of any responsibilities mandated under the California Health and Safety Code if additional or previously unidentified contamination is discovered at the subject site.

If you have any questions regarding this matter, please contact Patricia Henshaw at (714) 834-6667.

Very truly yours,

Subject: Soil and Ground Water Contamination Study
Nutrilite Products, Inc.
(CECC Project No. 86-42209-01)

Dear Ms. Henshaw:

Please find attached a copy of our 14 April 1987 Soil and Ground Water Contamination Study conducted at the referenced site. This is in response to your 18 November 1986 letter and was performed in accordance with our 18 December 1986 Assessment Plan and 13 January 1987 addendum letter.

If you have any questions, please call me or Dale Brandon at (714) 545-3210.

Sincerely,

CONVERSE ENVIRONMENTAL CONSULTANTS CALIFORNIA

Mark E. Bryant

Subject: Response to County Review of
Site Characterization Plan for
Nutrilite Products, Inc.
5600 Beach Blvd., Buena Park, Ca
(CECC Project No. 86-42209-01)

Dear Ms. Henshaw:

As discussed with you on 13 January 1987, this letter is in response to your 8 January 1987 review of our 18 December 1986 Assessment Plan for the referenced site. This letter should be considered an addendum to our 18 December 1986 plan. Your comments are provided herein for reference. Our responses are also provided below.

Comment

1. Samples may be composited from ~~one~~ a boring only if the on-site photoionization detector indicates no contamination. Samples from the capillary zone should be analyzed separately, whether or not the on-site photoionization detector indicates contamination.

Response

1. If significant levels of organics are present in soil samples at the time of sampling, as indicated by the photoionization detector, these samples will be analyzed discretely. Otherwise, samples from borings where the photoionization detector does not indicate significant levels of contamination will be composited for analysis as previously proposed. We will attempt to obtain soil samples from the capillary zone in as many borings as possible.

Comment

2. Samples must be analyzed by modified EPA 8015 (total petroleum hydrocarbons) and EPA 8020 (benzene, toluene, xylene and ethyl benzene).

A Wholly Owned Subsidiary of
The Converse Professional Group

Response

2. As discussed, soil samples are to be analyzed using EPA Method 8015 (modified). Benzene, toluene, xylene and ethyl benzene fractions in soils are recorded using this analysis and will be reported in addition to the total hydrocarbon as requested. We also plan to test one (1) soil sample obtained from the capillary zone, or immediately above the water table, in accordance with EPA 8020 as requested. We understand that if significant contamination is indicated based on the test results, additional sampling and testing may be required.

We trust that this proposed program will comply with Orange County Health Care Agency's concern with documentation of contamination conditions existing at the Nutrilite Products, Inc. facility at this time. If you have any questions or comments relative to this letter, please feel free to contact the undersigned at (714) 261-7246.

Respectfully submitted,

Attention: Mr. Mark Bryant

Subject: Site Assessment Plan for site subsurface investigation
Dated: December 18, 1986 Submitted By: Converse Environmental
for Nutrilite Products, Inc.

Dear Mr. Bryant:

Please be advised that this office has reviewed the above referenced sampling plan. We have found the plan to be adequate to initiate the investigation of the extent of contamination at this site, provided the following considerations are addressed:

1. Samples may be composited from ~~one~~ a boring, only if the on-site photoionization detector indicates no contamination. Samples from the capillary zone should be analyzed separately, whether or not the on-site photoionization detector indicates contamination.
2. Samples must be analyzed by modified EPA 8015 (total petroleum hydrocarbons) and EPA 8020 (benzene, toluene, xylene and ethyl benzene).

It should be noted that additional sampling may be necessary should the results of the sampling effort not adequately define the extent of contamination.

If you have any questions, please contact me at (714) 834-6667.

Very truly yours,

Patricia Henshaw

Subject: Site Characterization for
Nutrilite Products, Inc.
5600 Beach Boulevard
Buena Park, California
(CECC Project No. 86-42209-01)

Dear Ms. Henshaw:

Converse Environmental Consultants California (CECC) on behalf of Nutrilite Products, Inc., submits the following site assessment plan to identify the extent of soil and ground water contamination at the referenced site (see Figure 1). This program will also provide data on the ground water gradient and document soil conditions near the underground tank that was previously in use as requested in your 18 November 1986 letter submitted to Nutrilite Products, Inc.

In accordance with County requirements, we will utilize those methods required to establish the chemical nature of the soil contamination, the vertical and horizontal extent of the plume resulting from the tank leakage, quantitative data regarding contamination concentration, and whether ground water has been affected. Additionally, reference material on local geologic and hydrogeologic data will be incorporated into the site assessment plan, if available. We propose initially to auger 4 soil borings on the subject property to determine plume geometry, depth to ground water, the ground water gradient, the soil profile, and chemical characteristics of the contaminant both qualitatively and quantitatively (see Figure 2 attached).

The soil borings will be augered to depths of 40 feet, and soil samples will be collected at 5-foot intervals. These samples will then be analyzed for the presence of the contaminant. Indications are that we will encounter ground water within 40 feet of the surface. If shallow ground water is encountered, the borings will end in this zone and ground water samples will be collected. Samples of the soil and ground water will then be analyzed for the presence of the contaminant. The borings will be backfilled

A Wholly Owned Subsidiary of
The Converse Professional Group

with a cement grout slurry to prevent downward migration of contaminants that might be present. Drill spoils will be stored on site in Dot approved steel drums until a decision on the mode of disposal is reached based on the laboratory results.

From the analytical data already obtained during excavation of the tank, it appears likely that the soil contaminant is a gasoline fuel. CECC proposes that soil samples collected in each boring be composited into two sets from each boring. Thus, there will be 8 total soil samples to be analyzed plus one ground water sample. If significant levels of contamination are found in a particular composited sample, additional analyses could be performed on individual samples comprising the composite. These individual samples are retained in the laboratory until they are no longer required. It is recommended that the presence of purgeable halocarbons and non-halogenated organics be determined in accordance with EPA Method 601/602, and EPA Method 418.1 for total hydrocarbons. No → 8015 / 8020 use

Initial on-site screening of the samples will be conducted using a Photovac Model TIP II photoionization detector. This instrument is capable of detecting a wide range of organics at the part per million level. All borings will be logged, the soil samples will be immediately sealed and placed in an ice chest, and a sample custody record established. Samples will then be transported to a state certified laboratory for testing.

On receipt of the laboratory results, interpretation of the data will be made and a report prepared for Nutrilite Products, Inc. for submittal to the Health Care Agency. This report will form the basis for a more definitive site investigation, if required, or the basis for the site remedial action program. We will ultimately have to characterize the nature and source of the contamination. An estimate of the volume of released contaminant will be needed to assist in the formulation of the remedial action program. Potential impacts on ground water uses, if any, will also be addressed.

We trust that this proposed program will comply with Orange County Health Care Agency's concern with documentation of contamination conditions existing at the Nutrilite Products facility at this time. If you have any questions or comments relative to this plan, please feel free to contact the undersigned at (714) 261-7246.

Nutrilite Products, Inc.
5600 Beach Boulevard
P.O. Box 5940
Buena Park, California 90622-5940

Attention: Mr. Kenneth Johnson, Sr.

Subject: Soil Contamination at 5600 Beach Blvd., Buena Park, CA.

Dear Mr. Johnson:

Based on inspections and field tests conducted on October 23, 1986, it has been determined that gasoline contaminated soil is present at the subject location.

This Agency, which is authorized to enforce both the State Hazardous Waste and Underground Tank Laws and Regulations, (Chapters 6.5 and 6.7 of the California Health and Safety Code and Titles 22 and 23 of the California Administrative Code) directs Nutrilite Products, Inc., to develop and submit a site assessment plan to this office within thirty (30) days of receipt of this latter. The plan must include the proposed methods to obtain the following information:

a. Identification of the nature, source, and estimated volume of released contaminants.

b. Identification of the lateral and vertical extent of soil and groundwater contamination and the concentration of contaminants.

c. Proposed number and location of samples and borings.

d. Proposed laboratory analyses and methods.

e. Depth to groundwater and groundwater gradient.

f. Description of the soil profile.

g. Hydrogeological setting.

h. Present and potential future uses of groundwater and surface water that may be affected by the contaminated material.

Field investigation may begin only after the plan has been approved. This office must be notified 48 hours in advance of sampling. After completion of the investigation, a report outlining the findings from the site assessment investigation and the proposals for site mitigation and remedial action must be submittted to this office for approval. Remedial actions must include the following as applicable:

1. Free undissolved product must be removed from groundwater.

2. Proposed method of dissulved product removal must be approved by the appropriate Regional Water Quality Control Board and must be included in the reports submitted to this Agency.

3. Demonstrate to the satisfaction of this office that the contaminated soil, if left in place, would not present a potential public health or environmental hazard. This risk assessment evaluates the potential for movement of contaminants into adjoining soils or groundwater and the associated public health or environmental effects.

4. Reduce contamination to acceptable levels. A proposal describing the treatment process must be submitted to this office for approval prior to initiation of such process. In addition, permits must be obtained from all appropriate regulatory agencies.

5. Monitoring of contaminant fate and movement in soil and groundwater. Monitoring may include periodic sampling of soil and periodic sampling of properly placed wells with annual reevaluation of well locations. A report describing the proposed investigations must be submitted to this office for review.

6. Remove the contaminated soil. The contaminated soil should be removed to a nondetectable level or to natural background. If this cannot be achieved, options three (3), four (4), and five (5) must be employed.

If any material to be removed is hazardous waste, as defined in the California Health and Safety Code, Chapter 6.5 or as identified in the California Administrative Code, Title 22, Division 4, Chapter 30, then the use of a registered hazardous waste hauler is required and a phototcopy of every manifest signed by the receiving facility must be forwarded to this office for verification of proper disposal. Section 25298(c)(4) of the California Health and Safety Code states that no person shall close an underground storage tank unless the person demonstrates to

the satisfaction of the local agency that no significant soil contamination has occurred. Violation of this requirement is subject to a civil penalty of Five Thousand Dollars ($5,000.00) per day.

If you have any questions regarding this matter, please contact me at (714) 834-6667.

Very truly yours,

Patricia Henshaw

RECEIVED Nov. 13, 1986

LABORATORY NO. 14097

Sample taken on Nov. 12 1986

SAMPLE

Soil from Nutrilite/Beach Blvd.

INVESTIGATION

As required by the Orange County Health Care Agency (EPA 8015, 8020)

RESULTS

Parameter	Milligrams per Kilogram
Total Petroleum Hydrocarbons	20.
Benzene	<0.01
Toluene	<0.01
Xylene	0.08
Ethylbenzene	<0.01
Dichloroebenzene	0.13

Total Petroleum Hydrocarbons (Modified EPA 8015): The petroleum hydrocarbons analysis for this sample was analyzed by Headspace (EPA 5020)/ GC-FID (Modified EPA 8015) using the procedure listed in the revised analytical method (11/5/85), Attachment 2. The limit of detection is 2 mg/kg.

BTXE Analysis (Modified EPA 8020): The BTXE content in soils is determined using methanol extraction followed by the Purge & Trap (EPA 5030)/Photoionization Detector (EPA 8020) Method. The method detection limits are 0.01 mg/kg for each species. However, high levels of any one of the species may require a higher detection limit in the others because of sample dilution. All results are blank corrected.

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar products. As a mutual protection to clients, the public and these Laboratories, this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from these Laboratories.

Laboratory No. 14097
Domino Equipment Co.

Soils were sampled and sealed according to the Orange County Health Care Agency on Noveber 13, 1986. The soils were received by Truesdail ppersonnel on the same date, chilled and sealed. The soils were frozen util November 14, 1986, at which time they were prepared for analysis while still partially frozen to minimize volatilization.

Truesdail Laboratories is a State of California DOHS hazardous waste certified laboratory (Certificate #147).

Dear Mr. Lodrigueza:

Access Business Group LLC, Nutrilite (Nutrilite) is please to submit the completed Site Assessment Report for Nutrilite's manufacturing facility located at 5600 Beach Boulevard in Buena Park, California. Also included in this transmittal is the letter report completed by Sharp Environmental Services (SET). These reports describe the soil sampling activities completed at the site on January 2nd, 2006.

This letter is our certification that the soil sampling activities were implemented in accordance with the Remedial Action Supervision Agreement and the Site Assessment and Work Plan.

As always, Access Business Group, Home of NUTRILITE products is committed to working with the OCHCA to ensure compliance. If there are any questions concerning this matter, please contact me at (951) 928-6837.

Sincerely,

Ignacio Verduzco

1. INTRODUCTION

1.1 Terms of Reference

This Site Assessment Report (Report) presents the results of the activities undertaken by Access Business Group LLC, Nutrilite (Nutrilite) in response to the A-300 acidic cleaner spill that occurred in Building 10 of Nutrilite's manufacturing facility located at 5600 Beach Boulevard in Buena Park California. Activities were performed under the guidance of Nutrilite's Site Assessment and Work Plan (SAP) submitted to the Orange County Health Care Agency (OCHCA) on December 28, 2005. The Remedial Action Supervision Agreement form (request for voluntary cleanup oversight) was signed and submitted to OCHCA on December 28, 2005.

Soil samples were collected at four locations at a distance of approximately two to three feet from the floor drain in Chemical Storage Room #1, Room 10-009 (See Fig. 3-4). An additional sample was collected from an area located directly beneath the floor drain. This sample was analyzed to determine the depth of a potential release from the drain piping while the four perimeter samples were analyzed to determine the extent of the potential release.

1.2 Objective

The objective of this Report is to evaluate the analytical results obtained from the subsurface soil samples collected from Room 10-009 and determine the extent of the A-300 acidic cleaner release.

The analytical results from this work are evaluated against accepted pH values for California soils.

1.3 Report Organization

This report is organized into five sections.

- Section 2 provides background information on the following subjects:
  - Site history;
  - Regional hydrogeology;
- Section 3 summarizes the sampling and analytical methods to be used to evaluate the potential impacts to the soil in Room 10-009.

RECEIVED HCA/RH
MAR 13 2006
ENVIRONMENTAL HLTH

- Section 4 provides the analytical results for the sampling data and evaluates these results.

- Section 5 provides the summary and conclusions.

2. BACKGROUND

2.1 Site History

The Nutrilite facility is operated by Access Business Group, a division of Alticor Inc. The site is located at 5600 Beach Boulevard in Buena Park, Californian (See Fig. 3-1). The facility manufactures food supplements and food bars. Due to the nature of the products manufactured it is imperative that this facility maintain current Good Manufacturing Practices (CGMP) that complies with various regulatory agency requirements. Cleaning and Sanitizing is a primary component of cGMP's which required the use of A-300, the product released into Room 10-009 in Building 10.

The Nutrilite complex consists of a number of buildings. Building 10 is used for the compounding, granulation, compression, and coating of tablets. Other buildings on the site include offices, maintenance, food bar and R&D facilities. The sanitary drains are serviced by the Orange County POTW and the potable water is provided by the Orange County Water District.

2.2 Regional Hydrogeology

The Nutrilite facility is located within the La Habra Groundwater Sub-basin in the Lower Santa Ana watershed of the Lower Santa Ana Groundwater Basin. Based on boring logs from geotechnical studies conducted in 1986 by Soil and Testing Engineers Inc. for proposed expansion of the Nutrilite facility, groundwater was not encountered at depths of 35 feet below ground surface. Therefore, groundwater is not expected to be encountered during the sampling activities.

3. PROCEDURES FOR SOIL SAMPLING AND ANALYSIS

3.1 General

The following sections contain descriptions of the standard operating procedures for the soil sampling activities. These procedures document the protocols used by field personnel to collect soil samples and to obtain valid and reliable data. These procedures in combination with those specified in the SAP provide the guidelines for completing the sampling and analysis.

Field personnel followed these procedures, unless field conditions required deviations from the protocols described below. In those cases, field personnel documented the alternate procedures employed and the reasons for the deviations. The laboratory staff followed the procedures established in the SAP.

3.2 Health and Safety

Prior to the start of field activities, a Site-Specific Health and Safety Plan (HASP) was reviewed by field personnel. The HASP was also reviewed with subcontractors during a tailgate health and safety meeting prior to field activities. The HASP contains information pertaining to site conditions, potential hazards, hazard control, monitoring procedures, personal protective equipment, emergency procedures, and hospital location.

All activities including demolition and removal of the 8' x 8' x 6" concrete slab, collection and testing of soil samples for the presence of nitric acid (pH test), and removal of contaminated soil, if any, was performed in Level C personal protective equipment as per the Health and Safety Plan.

Air monitoring for the presence of NO and NO_2 was performed in the contaminated area during all field activities as per the Health and Safety Plan.

3.3 Concrete Saw Cutting and Removal

Under the direction of Nutrilite, Ecology Control Industries (ECI) saw cut and removed an 8'x 8'x 6" concrete section in Room 10-009 to expose the subsurface soil for sample collection. The removed concrete was disposed as non-hazardous waste in accordance with federal, state, and local regulations.

3.4 Sampling Activities

3.4.1 Sampling Locations

Soil sampling was conducted to assess the potential impact, if any, to the subsurface soils around the perimeter of the floor drain and directly under the floor drain from the release of the A-300 acidic cleaner that occurred in Room 10-009 of Bldg. 10. The sample locations are shown in Figure 3-4 and the sampling depths are presented in Table 4-1. Note that these locations and depths are approximate. The soil sample locations were selected as follows:

- Four (4) sample locations around the perimeter of the floor drain. Sample location Nos. NE (northeast), NW (northwest), SE (southeast), and SW (southwest) at depths of 0.5 ft, 1 ft, 2 ft, and 3 ft.

- One (1) sample location (Sample I.D. Drain 13") under the floor drain. One sample located approximately 13" directly under the floor drain was collected.

Since the floor drain in Room 10-009 is serviced by the Orange County POTW, it is expected that the release of A-300 acidic cleaner would be discharged to the POTW. Also, the contaminated area is covered with concrete so there is no migration of water that would push the release into the soil. Therefore, the number of proposed sampling locations provided an adequate distribution to assess the extent of the release to the soil.

3.4.2 Soil Sampling

To comply with the oversight clean up agreement, Nutrilite notified Mr. Luis Lodrigueza of the OCHCA 48 hours in advance prior to commencing any soil sampling activities. Mr. Lodrigueza was not onsite during the sampling activities as Monday, January 2nd, 2006 was an OCHA Holiday.

Soil samples were collected using a hand auger. Soil cores were recovered by auger as it was advanced by manually turning the sampling auger. Soil samples were taken at 0.5, 1, 2, and 3 feet below the concrete floor. An additional sample was collected at approximately 13-inches directly under the floor drain. Soil recovered by the auger was removed and placed in pre-cleaned 4-ounce glass jars supplied by the laboratory. Samples were delivered to Associated Laboratories, a State-certified laboratory for analysis.

All soil samples were collected by Mr. Jeff Sharp (Registered Geologist) of Sharp Environmental Technologies. Samples collected at a depth of 0-0.5 feet around the perimeter of the floor drain and the sample collected 13" directly under the floor drain were field tested for pH to determine the extent of sampling required to define the release. The field results of the soil sampling activities are provided in Table 4-3 and the field log is contained in Appendix C. The Site Assessment Report conducted by Mr. Jeff Sharp is contained in Appendix D.

3.5 Sample Handling

Soil samples were preserved on ice prior to analysis in the laboratory. Once a sample was collected, it remained in the possession of the field personnel until it was transported to the laboratory (See Chain of Custody in Appendix A). Samples were shipped in accordance with standard sample handling and chain of custody procedures specified in Section 3 of the SAP.

3.6 Analytical Methods

The laboratory methods for evaluating the samples collected were chosen based on the material involved in the release. The laboratory analysis was conducted in accordance with standard US EPA methods (SW-846 Method 9045). The field analysis was chosen based on the best practical field method.

The soil samples were analyzed for pH, the single most significant characteristic of the A-300 acidic cleaner.

The lists of analysis are included in Table 4-1. The full analyte list was performed on the shallow (i.e., 0-0.5 ft) sampling depth, and the remaining samples were archived for possible future testing.

4. SUMMARY AND EVALUATION OF ANALYTICAL RESULTS

4.1 General

The analytical results are provided in Appendix B and are summarized in Table 4-2. The results for soil are compared to accepted pH values for California soils.

4.2 Analytical Results

The analytical results of the soil sampling activities are listed in Table 4-2. The soil samples were taken at various depths ranging from 0.5 foot to 3 feet below the surface as described in Section 3 of this report. The samples taken at the 1, 2, and 3 foot mark around the perimeter of the floor drain were held for analysis pending the results of the shallower samples. The analytical laboratory reports are contained in Appendix B and the chain-of-custody forms are contained in Appendix A.

The analytical results of the four perimeter samples (NW, NE, SW, and SE) collected at the 0-0.5 foot mark showed pH values ranging from 7.5 to 7.83. Field measurements taken at the same sampling locations showed pH values ranging from 6.03 to 6.72.

5. SUMMARY AND CONCLUSIONS

The goal for this project site is to determine the extent of the release of the A-300 acidic cleaner in accordance with the voluntary clean up oversight agreement and the Site Assessment and Work Plan.

Based on a review of both the field and analytical results of the soil samples collected from Chemical Storage Room 1 (Room 10-009), it has been determined that the A-300 did not impact the soil or groundwater beneath the concrete slab as the pH values were found to be within acceptable pH values for California soils. Therefore, no further investigation is required.

RE: Site Assessment Report for Confirmation Soil Sampling Activities Conducted for Acid Spill at Nutrilite Property located at 5600 Beach Boulevard, Buena Park, California

Dear Dr. Ignacio Verduzco:

This letter report discusses the site investigation soil sampling activities completed at the Nutrilite property located in Buena Park, California conducted by Sharp Environmental Technologies, Inc. (SET) for Nutrilite. This work was performed to address spilled acid in Chemical Storage Room #1. ***Figure 1*** presents a Site Vicinity Map of the subject property.

Background

The property is located in the northeast portion of Buena Park, California. The site is located northwest of the intersection of Interstate 5 and Highway 91. The old Atchison Topeka and Santa Fe railroad line is located along the northern side of the property. The property is located above sea level with an elevation at the Property of approximately 80 feet above mean sea level (AMSL). See ***Figure 2*** for the layout of the Chemical Storage Room #1.

Field Activities

Ecology Control Industries (ECI) had a square of concrete slab approximately 8' x 8' cut with the cut concrete removed for access to subsurface soils. A layer of visqueen was present under the concrete floor slab. The soil beneath the visqueen consisted of a brown, moist, medium dense silty sand. No discoloration or odor was observed in the subsurface soil exposed beneath the visqueen.

On January 2, 2006 SET personnel measured soil pH following the standard test method designated ASTM G51-95 (reapproved 2000) with the aid of a rugged glass electrode. Following this ASTM standard, SET provided field pH results to ECI and Nutrilite personnel to assist with the characterization of subsurface soil. Field results indicated pH units measurements to range from 6.03 to 7.13. Refer to ***Appendix A*** for a copy of the ASTM standard for field measurements of pH. ***Figure 2*** presents a site plan of the Chemical Storage Room #1.

On January 2, 2006 ECI advanced four soil borings (NW, NE, SW and SE) utilizing a hand auger in the areas indicated on ***Figure 2*** to investigate subsurface conditions. All of the four borings were advanced vertically. Soil samples were collected at 0-0.5', 1', 2', and 3' in the four borings. Additionally, one grab soil sample was collected near the drain line with the sample labeled Drain 13".

All sampling equipment was thoroughly decontaminated between each sampling event. The decontamination process included brushing any foreign material from the equipment followed by scrubbing the equipment in an Alconox soap solution. The sampling equipment was then double rinsed with tap water. Soil samples were collected in 4 oz. glass jars. Soil samples collected in the glass jars were sealed with Teflon® lined plastic lids. The samples were labeled and stored on-site in an insulated chest at 4^0 C with ice pending transport to the laboratory. SET followed proper chain-of-custody procedures to ensure the integrity of all samples being submitted for testing.

Methods of Analysis

Soil samples were collected, maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846), Third Edition, Update #4A, May 1998. These methods, as prescribed by the Environmental Protection Agency (EPA), provide test procedures that establish whether the sample is a hazardous waste within the definition of the Resource Conservation and Recovery Act (RCRA).

Associated Laboratories analyzed 5 of the 17 soil samples collected during site investigation activities performed on January 2, 2006 for pH by EPA Method SW-9045.

Analytical Results

Laboratory analytical results indicated pH concentrations from all soil samples collected from the subsurface soil in Chemical Storage Room #1 ranged from 6.22 to 7.83. ***Table 1*** presents a summary of soil sample laboratory pH results.

Refer to ***Appendix B*** for the Laboratory and Quality Assurance/Quality Control (QA/QC) Reports and Chain-of-Custody Records.

Conclusions and Recommendations

The following conclusions regarding the site investigation work performed in the Chemical Storage Room #1 are based upon the findings presented herein and are subject to the limitations presented below.

- Five soil samples analyzed from the subsurface soil in the Chemical Storage Room #1 indicated pH concentrations ranging from 6.22 to 7.83.

Based on our field observations and laboratory analytical results as presented in this report, SET recommends that no further investigation is required.

Limitations

SET performs professional services using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar localities. The findings are based primarily upon analytical results provided by an independent laboratory. Interpretations of the subsurface conditions at the Property, for the purpose of this investigation, are made from a limited number of available sample points. Subsurface conditions may differ from one location to another location.

SET appreciates the opportunity to provide environmental management services for Nutrilite. Should you need additional services or have any questions regarding these activities for this Property, please contact us at (310) 505-3675.

Sincerely,
Sharp Environmental Technologies, Inc.

Jeffrey Sharp; P.G. #6777, C.E.G. #2160
Senior Geologist

STANDARD TEST METHOD FOR MEASURING pH OF SOIL FOR USE IN CORROSION TESTING

Designation: G 51 – 95 (Reapproved 2000)

Standard Test Method for Measuring pH of Soil for Use in Corrosion Testing[1]

This standard is issued under the fixed designation G 51; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This test method covers a procedure for determining the pH of a soil in corrosion testing. The principle use of the test is to supplement soil resistivity measurements and thereby identify conditions under which the corrosion of metals in soil may be accentuated (see G 57 – 78 (1984)).

1.2 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

2.1 *ASTM Standards:*

E 177 Practice for Use of the Terms Precision and Bias in ASTM Test Methods[2]

E 691 Practice for Conducting an Interlaboratory Study to Determine the Precision of a Test Method[2]

G 57 Method for Field Measurement of Soil Resistivity Using the Wenner Four-Electrode Method[3]

3. Significance and Use

3.1 Information on pH of soil is used as an aid in evaluating the corrosivity of a soil environment. Some metals are more sensitive to the pH of their environment than others, and information on the stability of a metal as a function of pH and potential is available in the literature.[4]

4. Apparatus

4.1 *pH Meters*—A portable, battery-powered pH meter is necessary for field measurements. Most instruments can also function as a high-impedance voltmeter. An LCD display is preferred for its readability in a bright, outdoor environment.

4.2 *Calomel and Glass Electrodes*:

4.2.1 Use a saturated calomel reference electrode or its equivalent in the pH determination. A few crystals of solid potassium chloride should always be present within the chamber surrounding the calomel to assure that the solution is saturated under the conditions of use. The design of the electrode must permit the formation of a fresh liquid junction between the solution of potassium chloride and the buffer or test soil for each test and allow traces of soil to be readily removed by washing.

4.2.2 A glass electrode of rugged construction is required. The performance of the glass electrode is satisfactory if it furnishes the correct pH value (±0.1 pH unit) for standard buffered solutions.

4.2.3 A combination electrode consisting of a saturated calomel reference electrode and a glass electrode (4.2.1 and 4.2.2) combined as a single electrode is acceptable. However, the requirements outlined above are equally applicable to the electrodes used in this combination unit.

4.3 *Subsurface Probe*—When pH measurements below the surface of the soil are required, it is necessary to use a probe of suitable length which will allow measurements to be made at the depth of interest. This probe consists of a glass electrode or a combination electrode in a rubber housing at the end of a plastic tube. One type of probe is illustrated in Fig. 1.

4.4 *Soil Thermometer*—Some pH electrodes have temperature compensation built in as part of the pH electrode, but most do not (see manufacturers' specifications). A thermometer of rugged construction is required for soil use, and a stainless steel sheathed thermometer is preferred. Metal sheathed thermometers come in different lengths, and a length appropriate for the depth of interest should be chosen.

5. Reagents and Materials

5.1 During the calibration procedure for the pH meter, standard buffered solutions of known pH are necessary. These solutions, or tablets to make up these solutions, can be purchased from chemical supply companies or pH equipment manufacturers.

6. Sampling

6.1 By the nature of the measurement, pH is determined for a small volume of soil at each reading, and it is important that at least three measurements at different locations be made and a simple average calculated. The regions of interest, surface, subsurface, or both, where applicable, must be sampled.

7. Calibration and Standardization

7.1 *Test for Linearity*—Prior to field use, or periodically when used extensively in the field, test the apparatus for

[1] This test method is under the jurisdiction of ASTM Committee G-1 on Corrosion of Metals, and is the direct responsibility of Subcommittee G01.10 on Corrosion in Soils.

Current edition approved Jan. 15, 1995. Published March 1995. Originally published as G 51 – 77. Last previous edition G 51 – 92.

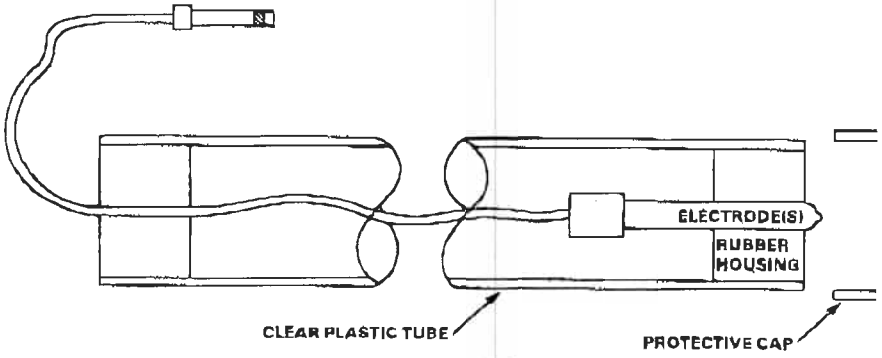

FIG. 1 Subsurface probe

linearity of response. This procedure is as follows:

7.1.1 Turn on the instrument, allow to warm up thoroughly, and bring to electrical balance in accordance with the manufacturer's instructions. Before use, clean and rinse the glass and calomel electrodes in distilled water.[5]

7.1.2 At least two standard buffered pH solutions that span the soil pH to be measured are required. From practical experience standard solutions of pH 4, 7, and 8 are recommended. For the test, the temperature of these solutions shall not differ from each other by more than 5°C. A laboratory thermometer can be used for these measurements.

7.1.3 Adjust the temperature compensating dial on the pH meter to the standard solution temperature.

7.1.4 Immerse the electrodes in a small volume of the first known standard solution. Now adjust the pH meter to read this known pH.

7.1.5 Remove the electrodes from the first standard solution, and rinse in distilled water. Immerse the electrodes in the second known standard solution and read the pH value. Judge the system to be operating satisfactorily if the reading obtained for the second standard agrees within ±0.1 unit of the assigned pH.

7.2 *Calibration of pH Meter*—Calibrate the pH meter immediately before use. If a series of measurements are to be made, repeat the calibration procedure at intervals of about 30 min. Perform the pH meter calibration as follows:

7.2.1 Use a standard pH solution in the range of the pH of the soil to be tested, if such information is known beforehand. Otherwise, begin with a standard solution having a pH of 7. Stabilize the temperature of the solution so that it matches the temperature of the soil to within 10°C.

7.2.2 Immerse the electrodes in the known standard solution and calibrate the meter in accordance with the manufacturer's instructions.

8. Procedure

8.1 *Soil Preparation for pH Determination*:

8.1.1 Ideally the pH measurement should be made in the field with the glass electrode contacting the soil at the specific depth of interest. If the surface soil pH is desired, then the soil can be broken up if compacted so as to accept the electrodes. If a subsurface pH is desired, then a boring or an excavation must be done so that the electrode can be placed in the soil at the desired depth. The subsurface probe (Fig. 1) is ideal for use with a boring tool such as hand auger. After boring through the soil to the depth of interest, carefully lower the probe into the cavity without further preparation of the soil.

8.1.2 Soil samples can be brought to the surface with a boring tool or a post-hole digger, and the measurement made in the field on the soil thus obtained. This technique is less desirable than the probe method described in this section.

8.1.3 The least desirable pH measurement of soil is that which is based on a soil sample transported to a laboratory for evaluation. However, if this must be done, then make the pH measurement as quickly as possible after the soil is taken from the field. Place the sample in a clean, airtight, glass container or plastic bag so that the soil is not in contact with any metal. If the pH measurement is not made within 24 h from the time the soil sample is taken, then it is recommended that the soil sample be packed in dry ice to retard any change in pH due to chemical or biological reactions. Make the pH measurement on the soil at room temperature and as received.

8.1.3.1 The addition of water to the soil is not recommended for any case because some soils are so poorly buffered that added moisture will change their pH. However, if a soil is extremely dry with a resistivity exceeding $10^6\Omega$-cm, a condition not normally encountered, then the pH measurement cannot and should not be made. This situation will manifest itself with a random drifting of the pH meter reading.

8.1.3.2 If the soil is frozen, it must be thawed prior to making the measurement. Frozen soil manifests itself by random drifting of the pH meter reading and is verified by the soil temperature measurement.

8.2 *Determination of pH of Soil*:

8.2.1 Complete the meter calibration procedure (7.2). The standard solution temperature must match the temperature of the soil within 10°C. Soil temperature can be determined by inserting a metal sheathed thermometer into the soil to the depth of interest.

8.2.2 Clean the electrode surface by washing with distilled water.

8.2.3 Press the contact area of the glass electrode or combination electrode, as the case may be, against undisturbed

[5] Before use, condition new glass electrodes and those that have been stored dry in accordance with the manufacturer's recommendations.

soil at the location of interest. This step is important, since poor soil contact or electrode movement can affect stability of the measurement.

8.2.4 The reference electrode should be placed in contact with the soil near the glass electrode (this step is not required when using a combination-type electrode). An electrode separation of about 30 cm (1 ft) is suggested for surface measurements. For subsurface readings, the reference electrode may be placed on the surface about 30 cm from the bore hole entry.

8.2.5 With the electrode(s) in place, set the meter to read pH, allowing 1 or 2 min. for equilibrium to be established, then take the meter reading.

8.2.6 After approximately one minute, repeat the meter reading. In general, the values will agree within 0.2 pH units. If the range of values is as large as 0.4, then repeat 8.2.3. If the problem persists, check your equipment to verify that it is operating properly, and check your measurement technique as described in Procedure, Section 8, in this test method. Where a soil is extremely dry, it may not be possible to make a pH measurement as stated in 8.1.3.1. Where the soil is frozen, it must be thawed as indicated in 8.1.3.2. Repeat Calibration of pH Meter (7.2) if equipment malfunction is suspected, which may cause erratic pH readings. Finally, if erratic readings persist, it may be necessary to repeat the measurement at a new location in the vicinity of interest.

9. Precision and Bias

9.1 *Interlaboratory Test Program*—An interlaboratory round robin was run during the May 1993 ASTM G1 meeting in Atlanta, GA, in which the pH of two soils, randomly selected from the grounds of the hotel, was measured with equipment brought to the meeting by each of the nine participants. Except for the use of only two materials, Practice E 691 was followed for the design and analysis of the data. Details of the design and analysis of the data are given in the research report.[6]

9.2 *Test Result*—The precision information given below in units of pH is for the comparision of two test results, each of which is an average of three determinations.

9.3 *Precision*:

	Material A	Material B
Average Test Value	4.53	4.20
95 % repeatability limit (within lab)	0.27	0.16
95 % reproducibility limit (between labs)	0.52	0.22

The above terms (repeatability limit and reproducibility limit) are used as specified in Practice E 177. The respective standard deviation among test results may be obtained by dividing the above limit values by 2.8.

9.4 *Bias*—The procedure in this test method for measuring pH of soil has no bias because the value of pH is defined only in terms of this test method.

I have read the remedial action agreement conditions listed on page 2 of this application. As provided in Section 101480(b), Article 5, Chapter 4, Division 101 of the California Health and Safety Code, I request that Orange County Health Care Agency, Environmental Health provide remedial action supervision at the site named in Section A above. Where not the responsible party, I have been authorized to act on behalf of the responsible party. I understand that charges payable by the responsible party or the authorized representative will be incurred for the time spent by Orange County Health Care Agency's staff for cleanup oversight activities.

Address 5600 BEACH BLVD. (Street) Suite BUENA PARK (City) 90622 (Zip Code)

Site Information :

- Is this site any of the following: listed on the Department of Toxic Substances Control's (DTSC) Calsites list; the subject of a cleanup order or enforceable agreement issued by DTSC; the subject of a remedial action initiated by DTSC; the subject of a corrective action order issued by DTSC; or a facility subject to DTSC hazardous waste treatment facility tiered permitting requirements? yes ☐ no [X] unknown ☐
- Is this site listed on a Regional Water Quality Control Board's (RWQCB) Leaking Underground Storage Tank Information System (LUSTIS) or Spills, Leaks, Investigation and Cleanup (SLIC) list or the subject of a cleanup and abatement order issued by a RWQCB? yes ☐ no [X] unknown ☐
- What is the property's current land use zoning designation? MANUFACTURING

Agreement Conditions:

- The issuance of a remedial action certification of completion is dependent on adequate completion of acceptable site assessment and remedial activities and attainment of cleanup goals established by Orange County Health Care Agency, Environmental Health (OCHCA) or the appropriate RWQCB.
- Site testing, monitoring and analysis will be required, as necessary, to properly determine the nature and extent of the release. A site assessment plan that shows proposed soil and water sampling and analyses should be submitted to OCHCA for concurrence before implementation. Any remedial action plan should be approved by OCHCA before implementation and work performed must be shown to have been effective in mitigating the actual or potential adverse effects of the release. **OCHCA must be notified at least 48 hours in advance of any site verification of mitigation sampling activity.** Where a remedial action has not been effective, implementation of an alternate effective remedial action is expected.
- Remedial goals will be based on risk assessment considerations that reflect site specific characteristics and the property's current land use zoning designation. If a land use change is planned or foreseen, OCHCA should be advised.
- OCHCA may, after giving adequate notice, withdraw in whole or part from the supervision of the remedial action should it determine: the responsible party is not in compliance with the remedial action agreement; available staff resources, technical expertise or technical capabilities are not available to adequately supervise the remedial action; the release of the waste that is the subject of the remedial action is of a sufficiently complex nature or may present such a significant potential hazard to human health or the environment that it should be referred to DTSC or a RWQCB; requested site assessment or remedial action plans have not been received in a timely manner; or implementation of approved plans has not occurred in a timely manner.
- Should OCHCA withdraw from the case, in whole or part, OCHCA may refer the case to DTSC or the RWQCB.
- OCHCA may discuss this case with staff at DTSC or the RWQCB at any time in the review process.
- An hourly service fee of $127.00, established per resolution of the Orange County Board of Supervisors for work performed by direct oversight staff, will be charged. Billings are sent out quarterly and are due within 30 days of receipt of the invoice. A late payment fee of 25% is applicable.
- OCHCA reserves the right to send copies of all correspondence to the property owner and others as appropriate.
- The contact person named in Section C, page 1 will be the point of contact for the responsible party unless OCHCA is otherwise advised.
- Pursuant to California law, all information in the site's cleanup file may be public record subject to disclosure to any member of the public who requests it. If it is necessary to include confidential information in your communications with the County, the County recommends that you clearly and prominently mark the information you believe falls into this category. The County will attempt to notify you if disclosure of such information is requested, in order to give you an opportunity to seek a court order prohibiting disclosure of such information. Due to the short statutory time period for the County's compliance with requests for public records, the County will be able to give you only a short period of time in which to seek a court order before the County will be required to disclose the requested information. Further, it is your responsibility to assert that information you believe is confidential should not be disclosed; the County will not make such a claim for you, but will obey a valid court order obtained by you prohibiting disclosure of such information.

I have read the remedial action agreement conditions listed on page 2 of this application. As provided in Section 101480(b), Article 5, Chapter 4, Division 101 of the California Health and Safety Code, I request that Orange County Health Care Agency, Environmental Health provide remedial action supervision at the site named in Section A above. Where not the responsible party, I have been authorized to act on behalf of the responsible party. I understand that charges payable by the responsible party or the authorized representative will be incurred for the time spent by Orange County Health Care Agency's staff for cleanup oversight activities.

Received 12-28-2005 11:19am From- To-ENV HEALTH FIRST FLO Page 002

Site Information :

- Is this site any of the following: listed on the Department of Toxic Substances Control's (DTSC) Calsites list; the subject of a cleanup order or enforceable agreement issued by DTSC; the subject of a remedial action initiated by DTSC; the subject of a corrective action order issued by DTSC; or a facility subject to DTSC hazardous waste treatment facility tiered permitting requirements? yes ☐ no ☒ unknown ☐
- Is this site listed on a Regional Water Quality Control Board's (RWQCB) Leaking Underground Storage Tank Information System (LUSTIS) or Spills, Leaks, Investigation and Cleanup (SLIC) list or the subject of a cleanup and abatement order issued by a RWQCB? yes ☐ no ☒ unknown ☐
- What is the property's current land use zoning designation? MANUFACTURING

Agreement Conditions:

- The issuance of a remedial action certification of completion is dependent on adequate completion of acceptable site assessment and remedial activities and attainment of cleanup goals established by Orange County Health Care Agency, Environmental Health (OCHCA) or the appropriate RWQCB.
- Site testing, monitoring and analysis will be required, as necessary, to properly determine the nature and extent of the release. A site assessment plan that shows proposed soil and water sampling and analyses should be submitted to OCHCA for concurrence before implementation. Any remedial action plan should be approved by OCHCA before implementation and work performed must be shown to have been effective in mitigating the actual or potential adverse effects of the release. **OCHCA must be notified at least 48 hours in advance of any site verification of mitigation sampling activity.** Where a remedial action has not been effective, implementation of an alternate effective remedial action is expected.
- Remedial goals will be based on risk assessment considerations that reflect site specific characteristics and the property's current land use zoning designation. If a land use change is planned or foreseen, OCHCA should be advised.
- OCHCA may, after giving adequate notice, withdraw in whole or part from the supervision of the remedial action should it determine: the responsible party is not in compliance with the remedial action agreement; available staff resources, technical expertise or technical capabilities are not available to adequately supervise the remedial action; the release of the waste that is the subject of the remedial action is of a sufficiently complex nature or may present such a significant potential hazard to human health or the environment that it should be referred to DTSC or a RWQCB; requested site assessment or remedial action plans have not been received in a timely manner; or implementation of approved plans has not occurred in a timely manner.
- Should OCHCA withdraw from the case, in whole or part, OCHCA may refer the case to DTSC or the RWQCB.
- OCHCA may discuss this case with staff at DTSC or the RWQCB at any time in the review process.
- An hourly service fee of $127.00, established per resolution of the Orange County Board of Supervisors for work performed by direct oversight staff, will be charged. Billings are sent out quarterly and are due within 30 days of receipt of the invoice. A late payment fee of 25% is applicable.
- OCHCA reserves the right to send copies of all correspondence to the property owner and others as appropriate.
- The contact person named in Section C, page 1 will be the point of contact for the responsible party unless OCHCA is otherwise advised.
- Pursuant to California law, all information in the site's cleanup file may be public record subject to disclosure to any member of the public who requests it. If it is necessary to include confidential information in your communications with the County, the County recommends that you clearly and prominently mark the information you believe falls into this category. The County will attempt to notify you if disclosure of such information is requested, in order to give you an opportunity to seek a court order prohibiting disclosure of such information. Due to the short statutory time period for the County's compliance with requests for public records, the County will be able to give you only a short period of time in which to seek a court order before the County will be required to disclose the requested information. Further, it is your responsibility to assert that information you believe is confidential should not be disclosed; the County will not make such a claim for you, but will obey a valid court order obtained by you prohibiting disclosure of such information.

Subject: **Case Closure**

Re: Access Business Group LLC
Nutrilite Division Site
5600 Beach Boulevard
Buena Park, CA 90621
OCHCA Case #05IC023

Dear Mr. Difilippo:

This letter confirms the completion of remedial investigation at the above-referenced site. With the provision that the information provided to this Agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

This confirmation of completion is limited in scope. It is limited to site conditions made known to this Agency under the above-referenced case number. It is based on an evaluation of the health threat presented by the inhalation, ingestion, or dermal absorption of the residual contaminant.

The spill of the acid cleaner A-300 and its potential to cause groundwater degradation were discussed with Kamron Saremi of the Santa Ana Regional Water Quality Control Board (SARWQCB). SARWQCB staff concurred that the results of the sampling conducted at the spill location do not indicate any impact to the subsurface that could pose a threat to the beneficial use of groundwater within the Orange County Management Zone, and that no further action is required for the site at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified

conditions at the site that cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health. It is the property owner's responsibility to notify this Agency of any changes in future contamination findings.

If you have any questions regarding this matter, please contact Luis Lodrigueza at (714) 433-6253.

Sincerely,

Elisabeth J. Gonzalez

Closure Rationale

OCHCA Case No.: **05IC023**

March 23, 2006

D.B.A.: **Nutrilite Facility**
5600 Beach Boulevard
Buena Park, CA 90621

Responsible Party: Joseph Difilippo
Access Business Group, LLC

Current Land Use: Manufacturing
Current Adjacent Land Use: Manufacturing
Future Land Use: Manufacturing

Soil Type: Medium-fine grained sand

Depth to Groundwater: 44' bg, measured

Introduction. This facility, operated by Access Business Group (ABG), a division of Alticor Inc., manufactures food supplements and food bars. The nature of the products manufactured here requires strict maintenance of current 'Good Manufacturing Practices' (GMP) in compliance with various regulatory agency requirements. Cleaning and Sanitizing, a primary component of the GMP, requires the use of A-300, an acid cleaner. It was a spillage of this A-300 cleaner that Nutrilite personnel discovered on December 20, 2005 in the chemical storage room (#10-009) within Building 10 of the facility, apparently from an accidental puncturing of one of its container drums during handling. Following cleanup of the A-300 that had pooled around the floor drain in the room, Nutrilite signed a voluntary cleanup agreement with this Agency, as recommended by the OCHCA-EH Compliance Section. The objective was to determine whether the subsurface had been adversely affected by the spill and, if so, to conduct any required remedial action to mitigate the contamination.

Remedial Investigation. Upon Agency approval of its proposal to sample the soil beneath the concrete floor in the immediate vicinity of the drain, ABG contracted Sharp Environmental Technologies, Inc. (SET) to proceed with the investigation. On January 2, 2006, SET's subcontractor saw-cut approximately 8' by 8' of the concrete floor in Room 10-009 to access the underlying soil. After removing the visqueen sheet directly underneath the concrete slab, SET advanced one shallow hand auger boring in each quadrant (NW, NE, SW and SE) 2½ to 3½ ft from the floor drain, from which SET collected soil samples at depths of 0.5, 1, 2 and 3 ft below grade (bg). In addition, SET advanced one other boring directly under the floor drain and collected a soil sample at a depth of 13 inches. All 0.5-ft samples were sealed and submitted to a State-certified laboratory for pH analysis by EPA Method 9045; the deeper samples were held for future analysis, depending on the results of the initial tests.

Analytical results showed the samples to have a pH range from 6.22 to 7.83 units, all of which fall within the recognized range of pH in California soils[1]. A pH range of 6.6-7.3 is generally considered neutral; a pH range of 6.1-6.5 is slightly acid and a pH range of 6.4-7.8 is mildly alkaline[2]. None of the pH values in the soil samples falls within the range that would classify it as hazardous, i.e., lesser or equal to 2 and greater than or equal to 12.5. Based on the results of the initial test, SET no longer requested analysis of the deeper samples.

Table I – Nature & Degree of Site Contamination

Sample ID	PH in subsurface soil	Cleanup Goal
NW 0-0.5' bg*	7.68	pH range 5.0-8.5
NE 0-0.5' bg	7.83	
SW 0-0.5' bg	7.5	
SE 0-0.5' bg	7.77	
Drain 13" bg	6.22	

*Below grade

[1]Soils, Hydrology and Water Quality Technical Appendix (Appendix D), CA State Water Resources Control Board, General Waste Discharge Requirements for Biosolids Land Application, Draft Statewide Program EIR, June 28, 1999.

[2] The Soil Chemistry of Hazardous Materials, J. Dragun, The Hazardous Materials Control Research Institute, 1988.

Conclusion and Recommendation. The pH of the soil samples collected directly beneath the A-300 spill area—within the 'slightly acidic to moderately alkaline' range—clearly shows that the subsurface was not adversely affected by the acid spill. In the absence of any threat to human health, safety or water quality, it is recommended that no further action be required for the site and that this case be closed.

Kamron Saremi of the Santa Ana Regional Water Quality Control Board was contacted regarding this and he concurred with no further action and case closure.

Joseph Difilippo
Access Business Group LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **Request for Remedial Action Supervision**

Re: Access Business Group LLC
Nutrilite Division Site
5600 Beach Boulevard
Buena Park, CA 90621
OCHCA Case #05IC023

Dear Mr. Difilippo:

Orange County Health Care Agency, Environmental Health has received your request that it provide remedial action supervision at the above referenced site as provided in the California Health and Safety Code (H&SC), Division 101, Chapter 4, Article 5, Section 101480 (b). This Agency agrees to provide remedial oversight under the agreement conditions specified on page 2 of the submitted "Request for Remedial Action Supervision".

Where a preliminary site assessment has not already been submitted, please submit a site assessment work plan for review and concurrence by HCA staff prior to implementation. This review will help ensure the planned site assessment work includes required information. The site assessment work plan should be designed to accomplish the identification of the lateral and vertical extent of soil contamination and the concentration of contaminants. The plan should include:

1. A site history that will serve as rationale for the selection of the locations of soil samples and soil borings and laboratory methods.
2. The proposed number and locations of soil samples and soil borings, and sampling methodology.
3. The proposed laboratory analysis and method.

After completion of site assessment, a report that outlines the findings of the site assessment and presents a proposed remedial action plan should be submitted to HCA staff for review and concurrence. A health and safety plan will be required where site remedial activities may pose a threat to public health. After the

remedial action plan has been fully implemented, remediation completion will be determined by site sampling overseen by HCA staff.

Upon the satisfactory completion of site assessment and necessary soil remediation, this Agency will issue a letter of completion. Where the site assessment reveals a possible threat to groundwater resources, the appropriate Regional Water Quality Control Board (RWQCB) will be so notified. When the RWQCB requires soil remedial action you will be requested to submit remedial action plans to both Agencies for review and concurrence.

All required permits must be obtained prior to beginning exploratory borings and construction of wells. All borings and abandoned wells must be properly sealed. Wells should be secured to prevent unauthorized access. For further information regarding required well permits and well abandonment, call (714) 667-3750. Drilling procedures, well design and construction must be accomplished in a manner that prevents the spread of contamination. Design and procedures should be developed by a registered professional (R.G., C.E.G., R.C.E., C.H.G., or equivalent) with expertise in subsurface investigations. Reports that include logs of soil borings or any findings or conclusions relating to subsurface information must be signed by a properly registered professional (R.G., C.E.G., C.H.G., or equivalent).

If any material removed from the site is a hazardous waste, send photocopies of the manifests, signed by the receiving facility, used to transport the material as verification of its proper transportation and disposal or treatment. Contaminated soil not meeting hazardous waste criteria should not be removed off site to other than a Class I hazardous waste landfill or permitted hazardous waste treatment facility without verification by this Agency and approval of the appropriate Regional Water Quality Control Board.

Be advised that an owner of non-residential real property who knows, or has reasonable cause to believe, that any release of a hazardous substance has come to be located on or beneath that real property shall, prior to sale, lease, or rental of the real property, give written notice of that condition to each buyer, lessee, or renter of the real property (H&SC, Division 20, Chapter 6.8, Section 25359.7[a]). Also any lessee or renter of real property who knows or has reasonable cause to believe that any release of a hazardous substance has come or will come to be located on or beneath that real property shall, following its discovery, give written notice of that condition to the owner of the real property or the lessor (H&SC 25359.7[b]).

If you have any questions regarding this matter, please contact the undersigned at (714) 433-6253.

Sincerely,

Luis Rodriguez
Hazardous Waste Specialist

SITE ASSESSMENT WORK PLAN
BUILDING 10
NUTRILITE BUENA PARK FACILITY

We plan on breaking concrete and doing the soil samples on Monday, Jan. 2.
Kevin McBennett
(714) 412-6242

Prepared by: Eric Van Dellen

For

Joe Difillippo
Nutrilite Division, Access Business Gr
5600 Beach Boulevard
Buena Park, CA 90622-5940
714-562-6200

December 22. 2005

ACCESS BUSINESS GROUP

1. Introduction

1.1 Terms of Reference

This work plan presents the Site Assessment and Work Plan (SAP) for the activities related to the investigation of the release of A-300 acidic cleaner located in Building 10 of the Nutrilite division of Access Business Group manufacturing facility. This facility is located at 5600 Beach Boulevard in Buena Park California. This Sampling and Analysis Work Plan was prepared by Eric Van Dellen of the Access Business Group, a subsidiary of Alticor Inc.

1.2 The objective of this SAP is to investigate the impact of a release of A-300 acidic cleaner (MSDS is attached) in room 10-009 of Building 10 on December 20, 2005. Drawings of the building and the room are attached. The A-300 entered a floor drain and pooled on the floor of the room. A picture of the clean-up in progress is attached. This plan presents the proposed sampling and analysis of the subsurface soil located in the proximity of the floor drain. The results of this work plan will provide the dimensions of the soil that will be removed from the site and ensure that all the contaminated soil, if any, is removed or neutralized to remove the hazard.

1.3 The remainder of the SAP is organized into three sections. Section 2 provides background on the site and activities conducted at the site. Section 3 presents the sampling strategy with locations, procedures and analytical methods to be used to evaluate the soil conditions in the vicinity of the drain. Section 4 presents recommendations for soil removal based on the sampling results.

2. BACKGROUND

2.1 Site Description

The Nutrilite facility is operated by Access Business Group, a division of Alticor Inc. The site is located at 5600 Beach Boulevard in Buena Park, Californian. The facility manufactures food supplements and food bars. The Nutrilite complex consists of a number of buildings. Building 10 is used for the compounding, granulation, compression, and coating of tablets. Other buildings on the site include offices, maintenance, food bar and R&D facilities. A drawing of the site is attached. The sanitary drains are serviced by the Orange County POTW and the potable water is provided by the municipal system. Groundwater at the site is encountered at approximately 44 feet below grade.

Due to the nature of the products manufactured it is imperative that this facility maintain current Good Manufacturing Practices (CGMP) that complies with various regulatory agency requirements. Cleaning and Sanitizing is a primary component of cGMP's which required the use of A-300, the product released into room 10-009 in Building 10.

An incident report can be provided that details the facts involved in the actual release of the A-300.

2.2 Site History

A review of various dated aerial photographs, city directories and building permit records have indicated that the portion of the site located on the south side of the AT&SF railroad tracks was originally occupied by Nutrilite Products Inc., a manufacturer of food supplements, in 1949. Prior to occupancy of the site by Nutrilite Inc, the property appeared to be undeveloped with the exception of a few residential structures that were located along Emery Street. The manufacturing complex has grown to cover the entire site with office, manufacturing, and R&D facilities.

The following Agencies were contacted: US EPA; California Regional Water Quality Control Board Underground Storage Tank File Review; Site Clean-up and Landfill Sections; Orange County health Car Agency Environmental Section and Haz Mat Section; Orange County Fire Authority.

The US EPA reported that they do not maintain any records for the subject site address as potential hazardous substance sites under CERCLIS and Superfund.

The State Regional Water Quality Control Board reported no records for the site address.

Information from the Orange County Environmental Health Care Agency indicated that there was a minor release of gasoline detected from field tests during the removal of a gasoline UST on 11/18/1986. A letter dated 6/26/1987 form the Orange County Health Care Agency to Nutrilite states that the remediation of soil contamination was completed relative to the UST release and the site closed.

No releases or spills were reported to the Orange County Fire Authority prior to the event of 12/20/2005.

3. OPPERATING PROCEDURES FOR SOIL SAMPLING

3.1 The following sections contain standard operating procedures for soil sampling activities. These procedures are intended to provide field personnel with protocols to collect soil samples and obtain valid and reliable data.

Field personnel shall follow this procedure unless field conditions require deviations from the protocols described below. In those cases where deviations from the SAP are required, field personnel shall document the alternate procedures employed and the reasons for the deviations.

3.2 Health and Safety

Prior to the start of field activities, a site specific, health evaluation of the site shall be conducted by a qualified Industrial Hygienist. This evaluation shall include sampling for relevant compounds that may be present as a result of the release. Based on the results of this evaluation a site specific Health and Safety Plan shall be developed for the site that contains information pertaining to the site conditions, potential hazards, hazard control, monitoring procedures, personal protective equipment, emergency procedures, and hospital location. This Health and Safety Plan shall be reviewed and signed by field personnel and contractors. The Health and Safety Plan shall be available on site for field personnel in the event of a potentially hazardous situation.

3.3 Sampling Activities

Soil sampling will be conducted to assess the condition of the subsurface soil within and around the area impacted by the A-300 release. A four foot square section of the floor, centered on the drain will be removed. The approach taken for sampling is to start with four sample locations approximately two feet from the floor drain in room 10-009 (see attached drawing). The exact locations of the samples may need to be moved based on the location of the pipe servicing the floor drain. An additional sample directly under the floor drain should also be taken. This sample will determine the depth of a potential release from the drain piping and the four perimeter samples can determine the extent of the potential release.

Additional sample locations can used based on the field test results from the initial four perimeter samples. The locations of these samples can be determined by field personnel at the time the sampling is being conducted and recorded in the field notes.

Soil samples will be retrieved using a hand auger. Soil cores are recovered by auger as it is advanced by manually turning the sampling auger. Hand sampling is required to the limited space available in the room and the likely hood that any contamination would be limited to the near the surface due to the short time and limited amount of material involved. Also the site is covered with concrete so there is no migration of water that would push the release into the soil.

Given that this location is in the middle of a manufacturing complex there may be underground obstructions encountered at the sampling locations. Every effort will be made to avoid these obstructions but in the event that an obstruction is

encountered the field personnel will use their best professional judgment and move the sampling location away from the obstruction. Should this occur, it will be noted and the new location recorded in the field notes.

Samples will be taken at 0, 1, 2 and 3 feet below the concrete floor. Field samples will be taken at 0, 1, 2 and 3 feet to determine the extent of sampling required to define the release. A positive result from any field sample would require field personnel to move out from the drain an additional two feet and auger another sample. The sampling protocol would be repeated until a negative test result is obtained from the field sample test.

The same approach should be taken to define the depth of the release. If the three foot field sample is positive then additional samples should be taken and tested at one foot intervals until a negative field test is obtained. All of this work will be documented in the field notes.

Due to the nature of this release it is not probable that groundwater would be involved. No groundwater monitoring wells/probes are anticipated. Should this become necessary an addendum to this Work Plan will be submitted.

3.4 Sample Handling

Soil samples will be preserved on ice prior to analysis in the laboratory. Once a sample is collected it will remain in the possession of the field personnel until it is transported to the laboratory. Samples will be delivered to the laboratory within 48 hours of collection by either courier or over night shipping service. The samples will be transported to the laboratory under standard chain-of-custody procedures.

Chain-of-custody records will be maintained for each sample collected to provide an accurate written record of the possession and hold of samples from the time of collection through data analysis and reporting. The following information will be specified for each sample on the chain-of custody form: sample identification, sample date, sample time, sample location and depth, analysis to be performed, and special instructions if any.

The sampler and any other intermediate handlers of the samples shall sign the form and record the date and time at which the samples changed possession. The completed chain-of-custody form will be sealed inside the sampling container. Upon receipt of samples by the laboratory, the laboratory will be responsible for maintaining internal chain-of-custody of the samples.

3.5 Equipment Decontamination of sampling equipment shall be performed to reduce the potential for cross contamination between monitoring points. Non-dedicated sampling equipment will be decontaminated before and after samples are collected. Decontamination will consist of a detergent and water wash, potable water rinse, and distilled water rinse. Decontamination of personal protective equipment is addressed in the Health and Safety Plan.

3.6 Analytical Methods

The laboratory methods for evaluating the samples collected have been chosen based the material involved in the release. The laboratory analysis will be conducted in accordance with standard US EPA methods. The field analysis will be chosen based on the best practical field method.

The soil samples will be analyzed for pH, the single most significant characteristic of A-300.

SPECIFIC AREA SAFETY

Area Location (Description):
Cleaning chemical solution storage room

Work Description:

- Enclose the area and install an air exhaust blower to the exterior of the building.
- Saw cut & removal of 8'x8'x6" concrete slab, concrete to be stored in an open top trash bin, lab tested and properly disposed.
- Soil to be sampled and pH tested
- Contaminated soil to be removed, sorted as hazardous waste and properly disposed

Monitoring Equipment:
Gas detectors, NO and NO_2 to be monitored in affected area

Chemical Hazards Present:
Potential nitric acid residue in soil

Physical Hazards Present:
none

Planned Level of Protection:
Modified level "C"

Personnel Protective Equipment Level "C":

Feet:	Steel Toe Work Boots
Clothing:	Tyvek Coveralls or Equivalent
Respiratory:	none
Eyes:	Face shield
Hands:	Rubber Work Gloves or equivalent acid resistant
Head:	Hard Hat
Ears:	Hearing Protection and 2-Way Radio Communications (as appropriate)

Comments: Will elevate to modified level "B" if NO and NO2 gases are detected

Additional Monitoring Equipment Required:
Oxygen

Comments:

I have read the remedial action agreement conditions listed on page 2 of this application. As provided in Section 101480(b), Article 5, Chapter 4, Division 101 of the California Health and Safety Code, I request that Orange County Health Care Agency, Environmental Health provide remedial action supervision at the site named in Section A above. Where not the responsible party, I have been authorized to act on behalf of the responsible party. I understand that charges payable by the responsible party or the authorized representative will be incurred for the time spent by Orange County Health Care Agency's staff for cleanup oversight activities.

Received 12-28-2005 11:17am From- To-ENV HEALTH FIRST FLO Page 002

Site Information :

- Is this site any of the following: listed on the Department of Toxic Substances Control's (DTSC) Calsites list; the subject of a cleanup order or enforceable agreement issued by DTSC; the subject of a remedial action initiated by DTSC; the subject of a corrective action order issued by DTSC; or a facility subject to DTSC hazardous waste treatment facility tiered permitting requirements? yes ☐ no [X] unknown ☐
- Is this site listed on a Regional Water Quality Control Board's (RWQCB) Leaking Underground Storage Tank Information System (LUSTIS) or Spills, Leaks, Investigation and Cleanup (SLIC) list or the subject of a cleanup and abatement order issued by a RWQCB? yes ☐ no [X] unknown ☐
- What is the property's current land use zoning designation? MANUFACTURING

Agreement Conditions:

- The issuance of a remedial action certification of completion is dependent on adequate completion of acceptable site assessment and remedial activities and attainment of cleanup goals established by Orange County Health Care Agency, Environmental Health (OCHCA) or the appropriate RWQCB.
- Site testing, monitoring and analysis will be required, as necessary, to properly determine the nature and extent of the release. A site assessment plan that shows proposed soil and water sampling and analyses should be submitted to OCHCA for concurrence before implementation. Any remedial action plan should be approved by OCHCA before implementation and work performed must be shown to have been effective in mitigating the actual or potential adverse effects of the release. **OCHCA must be notified at least 48 hours in advance of any site verification of mitigation sampling activity.** Where a remedial action has not been effective, implementation of an alternate effective remedial action is expected.
- Remedial goals will be based on risk assessment considerations that reflect site specific characteristics and the property's current land use zoning designation. If a land use change is planned or foreseen, OCHCA should be advised.
- OCHCA may, after giving adequate notice, withdraw in whole or part from the supervision of the remedial action should it determine: the responsible party is not in compliance with the remedial action agreement; available staff resources, technical expertise or technical capabilities are not available to adequately supervise the remedial action; the release of the waste that is the subject of the remedial action is of a sufficiently complex nature or may present such a significant potential hazard to human health or the environment that it should be referred to DTSC or a RWQCB; requested site assessment or remedial action plans have not been received in a timely manner; or implementation of approved plans has not occurred in a timely manner.
- Should OCHCA withdraw from the case, in whole or part, OCHCA may refer the case to DTSC or the RWQCB.
- OCHCA may discuss this case with staff at DTSC or the RWQCB at any time in the review process.
- An hourly service fee of $127.00, established per resolution of the Orange County Board of Supervisors for work performed by direct oversight staff, will be charged. Billings are sent out quarterly and are due within 30 days of receipt of the invoice. A late payment fee of 25% is applicable.
- OCHCA reserves the right to send copies of all correspondence to the property owner and others as appropriate.
- The contact person named in Section C, page 1 will be the point of contact for the responsible party unless OCHCA is otherwise advised.
- Pursuant to California law, all information in the site's cleanup file may be public record subject to disclosure to any member of the public who requests it. If it is necessary to include confidential information in your communications with the County, the County recommends that you clearly and prominently mark the information you believe falls into this category. The County will attempt to notify you if disclosure of such information is requested, in order to give you an opportunity to seek a court order prohibiting disclosure of such information. Due to the short statutory time period for the County's compliance with requests for public records, the County will be able to give you only a short period of time in which to seek a court order before the County will be required to disclose the requested information. Further, it is your responsibility to assert that information you believe is confidential should not be disclosed; the County will not make such a claim for you, but will obey a valid court order obtained by you prohibiting disclosure of such information.

Subject: Re: Buena Park Spill Site Cleanup

Luis,

I have the signed form. Is there a number I can fax it to you? We're still in the process of securing a contractor to do this work, but it looks like it may happen the end of this week.

We have a finalized sampling plan that includes a Health & Safety Plan, but unfortunately UPS has lost it, thus our delay. Tracking indicates it was delivered to their Cerritos office last Friday (coming from corporate headquarters in Michigan), but now they can't find it, so we're going to have another one overnighted today. We should have it by sometime tomorrow.

Subject Buena Park Spill Site Cleanup

Kevin,

Did you get the email (with the attached 'Remedial Action Supervision Agreement' form) I sent you last Friday?

If so, and if you have filled out the form, please return same to me ASAP so that a case file can be opened and your proposal for site investigation reviewed.

Lodrigueza, Luis

From: Lodrigueza, Luis
Sent: Wednesday, December 21, 2005 9:56 AM
To: 'joe.difilippo@nutrilite.com'
Cc: Bish, Katherine; Diekmann, Bill
Subject: Voluntary Cleanup @ 5600 Beach Blvd., Buena Park

Mr. Filippo:

I was contacted by this Agency's Compliance Unit and told that you are willing to get into a voluntary cleanup agreement for the nitric acid release at the subject site.

Please fill in the attached Agreement form and return to me ASAP, together with a work plan for assessing the extent of impact and conducting remedial action to address the contamination. Make sure you include a Health & Safety Plan. I understand that any site assessment/remediation work is to be undertaken by personnel at Level 'A' or 'B' PPE.

I will have to be personally on site when remedial excavation has been completed to witness the collection of verification samples--to document successful remedial action completion. I will need at least 48 hours advance notification for this final sampling.

Please send email or call me (714) 433-6253) for questions. Also, you should continue to coordinate with Steve Sharp/Katherine Bish.

Luis,

I have the signed form. Is there a number I can fax it to you? We're still in the process of securing a contractor to do this work, but it looks like it may happen the end of this week.

We have a finalized sampling plan that includes a Health & Safety Plan, but unfortunately UPS has lost it, thus our delay. Tracking indicates it was delivered to their Cerritos office last Friday (coming from corporate headquarters in Michigan), but now they can't find it, so we're going to have another one overnighted today. We should have it by sometime tomorrow.

Kevin,

Did you get the email (with the attached 'Remedial Action Supervision Agreement' form) I sent you last Friday?

If so, and if you have filled out the form, please return same to me ASAP so that a case file can be opened and your proposal for site investigation reviewed.

Subject: FW: Site Assessment and Work Plan

Just a heads up-I explained to Kevin of Nutrilite that for us to get involved with a work plan or oversee the cleanup-he would need to sign a voluntary site cleanup with this Agency. I told him the benefit would be that we could sign off that where the spill occurred is clean. But without a signed contract and no fees being paid we can not provide this service. I told him that to oversee soil contamination is not part of my function, but only to oversee remediation that is during a spill situation (immediate abatement), not soil.

I told him that Luis sent an electronic copy of the contract to his manager and have not received it back or any verbal information back.

Hi Katherine,

I should have the complete sampling plan in Buena Park by today. Attached is the preliminary plan. We're trying to get this work done next week, hopefully by Wednesday. I'll let you know so you can be present.

Kevin
attached is a workplan for the soil testing and removal, please use it for your initial discussions with the remediation contractor. A more complete plan should arrive today by Fedexp in BP (I hope).

please let the contractor know that we want them to remove the chemical drums & pallets from the room (except the large tank), demo a 8' x 8' section around the drain, test the soil and remove contamination, remove the drain pipes and plug the end of the sewer pipes.

I'll be in LKV part of the day, call me if you have any questions

Subject Site Assessment and Work Plan

Guys,

Attached is my first draft of the work plan. I have more detailed info for the background and analytical methods but it will take additional time to research them. I can get that done on Thursday. please review the attached plan and get me your comments.....Rick

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**Yes**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**

Aboveground Petroleum Storage

Does your facility own or operate aboveground petroleum storage tanks or containers AND: * have a total aboveground petroleum storage capacity of 1,320 gallons or more, OR * have one or more petroleum tanks in an underground area?	**No**

Regulated Substances

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

Nutrilite Buena Park Facility Site Emergency Plan

Submitted by:
Nutrilite Division
Protection Services Department
5600 Beach Boulevard
PO Box 5940
Buena Park, CA 90622-5940
(714) 562-6300

Date of Release: December 2015 v. 3.0

FORWARD

The following plan is the official Site Emergency Plan for Amway, Nutrilite Division, Buena Park Facility, and is approved and current for one year unless otherwise appropriately revised prior to the end of this period. The plan identifies the emergency planning, organization, and response policies and procedures. This plan addresses how the Buena Park Facility will respond to an emergency, disaster or extraordinary event, from preparation to response and through short term recovery.

Amway recognizes the importance of emergency preparedness for the safety of its employees and visitors and has based this Site Emergency Plan on the functions and principles of the Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS). Both of these management systems are built upon the principles and concepts of the Incident Command System (ICS).

The provisions of this plan shall be carried out whenever the site Emergency Manager (identified later in this plan) or his/her alternate, determines an imminent or actual emergency situation exists.

ADMINISTRATIVE

Plan Format

This Site Emergency Plan is formatted into four sections; Administrative, Concept of Operations, Emergency Response Procedures, and Appendices. Each section contains information that outlines the basic components of critical areas in emergency management.

- **Administrative Section** includes the plan purpose, scope and legal requirements of emergency planning for businesses
- **Concept of Operations Section** outlines how emergency management personnel from the Buena Park Facility will respond during an emergency and includes Action Checklists for the ICS positions of the emergency organization
- **Emergency Response Guidelines** are checklists for general response to specific hazards that could occur at this site
- **Appendices** contain supplemental emergency and supporting documentation

Purpose of Plan

The primary objective of pre-disaster planning is to protect and promote the safety of employees and visitors who may be at this facility during an emergency situation. The secondary objective is to manage the impact on the facility, and prepare to resume normal operations as soon as possible.

Nutrilite's Director, Nutrilite / GAO / International Engineering is responsible for emergency response operations and will commit all available resources to:

- **Prevent loss of life**
- **Minimize injury to persons**
- **Minimize damage to the environment**
- **Minimize damage to buildings and property**
- **Restore the operational condition of the facility**

This plan is designed to provide emergency management personnel with a resource for protecting employees, visitors and the facility, as well as to describe the responsibilities for a wide range of emergency situations that may occur. It will also provide emergency management personnel with the insight to coordinate emergency response tasks with local first responders.

If properly implemented, this plan will reduce or prevent personal injuries and disaster related losses at the Nutrilite Buena Park Facility. This plan cannot foresee all possible circumstances of an emergency and recognizes that emergency management personnel will need to assess the circumstances of any emergency and make decisions based on the current situation.

Scope of Plan

The Site Emergency Plan provides procedural guidelines for the overall management of an emergency incident involving the Buena Park Facility. Additional "department specific" procedures are documented and maintained as required at the departmental level and are not contained in this plan.

On February 28, 2003, President George W. Bush issued Homeland Security Presidential Directive 5 (HSPD-5) which directed the Secretary of Homeland Security to develop and administer a National Incident Management System (NIMS). This plan has been authored to meet the recommendations of the NIMS as well as California's Standardized Emergency Management System (SEMS). According to this guidance, completion of this plan provides a functional integrated contingency plan that meets the following requirements for emergency response planning as required for the Buena Park facility.

Federal:

1. **OSHA's Emergency Action Plan Regulation - 29 CFR 1910.38**
   1910.38(a)
   An employer must have an emergency action plan whenever an OSHA standard in this part requires one. The requirements in this section apply to each such emergency action plan.

   1910.38(b)
   An emergency action plan must be in writing, kept in the workplace, and available to employees for review.

   1910.38(c)
   An emergency action plan must include at a minimum:

   - Procedures for reporting a fire or other emergency
   - Procedures for emergency evacuation, including type of evacuation and exit route assignments
   - Procedures to be followed by employees who remain to operate critical plant operations before they evacuate
   - Procedures to account for all employees after evacuation
   - Procedures to be followed by employees performing rescue or medical duties
   - The name or job title of every employee who may be contacted by employees who need more information
   - Employee alarm system
   - Training

2. **Labor Code, Section 6400** - Mandates that every employer furnish a place of employment which is safe and healthful for the employees therein.

State:

1. **California Code of Regulations' Emergency Action Plan – 8 CCE, Section 3220**
   The emergency action plan shall be in writing and shall cover those designated actions employers and employees must take to ensure employee safety from fire and other emergencies. The following elements, at a minimum, shall be included in the plan:

- Emergency escape procedures and emergency escape route assignments
- Procedures to be followed by employees who remain to operate critical plant operations before they evacuate
- Procedures to account for all employees after emergency evacuation has been completed
- Rescue and medical duties for those employees who are to perform them
- The preferred means of reporting fires and other emergencies
- Names or regular job titles of persons or departments who can be contacted for further information or explanation of duties under the plan
- Alarm System
- Evacuation - The employer shall establish in the emergency action plan the types of evacuation to be used in emergency circumstances
- Training - The employer shall designate and train a sufficient number of persons to assist in the safe and orderly emergency evacuation of employees. The employer shall advise each employee of his/her responsibility under the plan:
    - Initially when the plan is developed
    - Whenever the employee's responsibilities or designated actions under the plan change
    - Whenever the plan is changed
- The employer shall review with each employee upon initial assignment those parts of the plan which the employee must know to protect the employee in the event of an emergency
- The written plan shall be kept at the workplace and made available for employee review

Site Vulnerabilities

As part of an ongoing effort to assess potential site vulnerabilities at this site, a vulnerability analysis was conducted and the following is a partial list of hazards identified during the analysis:

- **Earthquake** – The facility is situated near the Newport-Inglewood fault. The closest known active fault considered capable of producing strong seismic shaking at this site is the Whittier segment of the Elsinore-Whittier Fault zone, which is located approximately 6 miles northeast of the site.

- **Aircraft Crash** - There is a possibility of an accident from a small aircraft crash due to the proximity of this site to the Fullerton Municipal Airport. Since 1986, no fewer than 28 planes have crashed at or near the airport, killing a total of 11 people. Most recently, four were injured on September 27, 2004 when a 1986 replica of a Ford Tri-Motor airplane crashed during an airport day demonstration.

- **Train Derailment** – There is a possibility of an accident involving a train derailment and/or chemical spill occurring on the Burlington Northern Santa Fe railroad tracks that run between the North and South complexes of this site. Metrolink, commercial tanker trains, and a high speed train (scheduled for the future) regularly utilize these tracks.

- **Flood** - A potential flood hazard exists if the Bear Creek flood channel, located adjacent to the South Complex parking area, should become blocked or exceed its capacity and overflow its banks.

- **Fire/Chemical Spill** - There is also a possibility of an exposure to harm from industrial occurrences such as chemical spills and fire.

Additional potential risks (i.e. Bomb Threats, Weapons/Violence, and Utility Emergencies) have been identified and are addressed in the Emergency Incident Guidelines contained within this plan.

Lines of Succession

Under normal circumstances, the Vice President of Nutrilite Manufacturing would be in charge of making major decisions affecting Nutrilite's Buena Park Facility. Immediately following an emergency or disaster, the Vice President may be displaced, incapacitated, or unavailable for other reasons, however, the site's responsibilities and functions must continue without interruption regardless of the availability of any individual.

Listed below (identified by title) are the successors to the Vice President, during an emergency event. The individual who is appointed as the successor shall have the same powers and authority of the person they are succeeding, and will serve until that person is again able to serve or is replaced permanently.

- West Coast Product Manufacturing Director
- Nutrilite Engineering Manager
- Protection Services Manager

Plan Revisions and Maintenance

- This plan will be reviewed and updated annually. Recommended changes to this plan will be approved by the Nutrilite/GAO/International Engineering Director. All approved changes shall be made available to appropriate personnel.

Review/ Change No.	Date Entered	Description of Change	By
1	6-3-14	Update Completed	R. Sutter
2	9-21-14	Annual Update Completed	R. Sutter
3	12-15-15	Annual Update Completed	R. Sutter

Distribution

This plan will be made available to all emergency operations personnel, as well as any employee, accessible through the Amway intranet as well as various SharePoint sites throughout the organization. Copies will also be provided to the local law enforcement and fire service agencies.

Training and Exercises

Emergency planning, training, and exercises are an important part of ensuring a safe working environment for Nutrilite employees and to minimize the impact of emergencies on the company's ability to provide its customers with our products. All employees will be trained and exercised on the concepts of this plan, and its response procedures, in order to effectively prepare for maximum safety, efficiency and communication in the event of an emergency.

Annual planning, training and exercises will be conducted for emergency management personnel in order to learn the proper courses of action during an emergency incident. Training and emergency drills for employees will be conducted periodically and will include but not limited to:

- Providing new employees with a copy of the Employee Emergency Action Plan (Appendix B)
- Training employees on the contents and operations of the Site Emergency Plan will be administered by Protection Services Department
- Emergency drills will be conducted at least twice a year on every shift
- Manual Fire Extinguisher Training will be conducted by the EH&S Department for designated employees in all operational areas

The Protection Services and EH&S Departments will maintain all training records.

Response Critique

The Buena Park Site Emergency Plan will be exercised and evaluated, as determined by the Protection Services Department. Any recommended changes to this plan will be approved by the Nutrilite/GAO/International Engineering Director and the plan will be revised accordingly.

Following an actual incident that involves the activation of the Buena Park Site Emergency Plan, members of the Emergency Management Team will convene and evaluate the emergency response actions. Any recommended changes to this plan will be approved the Nutrilite/GAO/International Engineering Director and the plan will be revised accordingly.

Americans with Disabilities Act

Nutrilite must ensure that disaster planning, response, and recovery takes into consideration employees and guests protected by the Americans with Disabilities Act. For people with disabilities, the problems of evacuating a building during an emergency are a major concern. Many people with mobility impairments cannot use stairs and people with hearing and vision impairments may not receive emergency notification and directions unless they are provided in both audible and visual forms. In addition, people with learning, emotional or cognitive disabilities may need to have safety and emergency procedures taught in a language or terms they understand. Because the Buena Park site may, at one time or another, have employees, visitors/distributers or contractors who

need evacuation assistance, the Emergency Management Team at this site will make every effort, in an emergency, to deal with the needs of individuals with disabilities. In the initial hours of a disaster there may be a shortage of resources and priorities will be on lifesaving operations. The care and sheltering of individuals with disabilities may take additional time to provide (Refer pg. 60 for additional information).

Concepts of Operations

Four Phases of Emergency Management

There are four phases of emergency management described by the Department of Homeland Security, Federal Emergency Management Agency (FEMA), and the California Emergency Management Agency (Cal EMA):

- **Phase I – Mitigation/Prevention** addresses what can be done to reduce exposure to risks and hazards and lessen the potential impact of an emergency situation. Mitigation efforts can occur both before and after emergencies or disasters.
- **Phase II – Preparedness** focuses on the roles and responsibilities of the emergency response teams and the actions, exercises and supplies needed for various emergency scenarios. These activities develop readiness and response capabilities.
- **Phase III – Response** presents detailed procedures for implementing appropriate actions for most types of emergencies that may be encountered. In this phase, mobilization of resources needed to address the emergency at hand. Emphasis is placed on minimizing the effects of the emergency or disaster.
- **Phase IV – Recovery** focuses on general strategies to follow after the emergency and restoring affected areas to pre-emergency conditions in order to return to the normal working environment as quickly as possible. Recovery activities may be both short-term and long-term; ranging from restoration of essential utilities such as water and power, to mitigation measures designed to prevent future occurrences of a specific threat.

Emergency Management Systems

Incident Command System (ICS)

Developed in the 1970's by Southern California Fire Protection Agencies, this system was designed to coordinate multi-jurisdictional response. The features of ICS are common terminology and the division of response activities into five functional units that essentially eliminate the possibility of the duplication of efforts. ICS became the model for the state's standardized system.

Standardized Emergency Management System (SEMS)

The SEMS was developed as a result of the lack of agency and multi-jurisdictional coordination during the East Bay Hills Fires in Oakland in 1991. SEMS is used throughout California to manage and coordinate any emergency response involving more than one agency or jurisdiction. The primary components of SEMS are the Incident Command System, Multi-Inter-Agency Coordination, the Master Mutual Aid System and Operational Areas.

National Incident Management System (NIMS)

After the national tragedy on September 11, 2001, NIMS was developed to address incidents of national significance. The NIMS is the nation's first standardized management approach that unifies federal, state and local government resources for incident response. Implementation of a common language, organizational structure and

procedures facilitates the flow of communication and coordination among all responding agencies to improve tracking, deployment, utilization, and demobilization of needed mutual aid resources. Federal funding for emergency preparedness, response, and recovery grants is attached to the use of NIMS.

Mutual Aid

Private businesses are not traditional response organizations and more typically are recipients of first responder services provided by fire and rescue, emergency medical and law enforcement agencies. Individual business participation in local government's emergency preparedness programs is essential to ensure that first responder services are delivered to businesses in a timely and effective manner. In case of an emergency that is beyond the capabilities of the business to handle, it is recommended management personnel coordinate with local emergency response agencies. This may include having a member or members act as liaison with the responding agencies.

Unified Command

The control of and response to emergencies is the sole responsibility of the site emergency teams until professional first responders arrive. Once they are on scene, incident command transitions to a Unified Command, wherein representatives from each of the agencies present work together to coordinate resources and give direction. The businesses Emergency Manager/Incident Commander will begin to work closely with the professional Incident Commander to plan and carry out response activities. Other employees may be asked to participate as well, depending upon the incident at hand and the available staffing of emergency responders. All employees should be prepared to participate if necessary.

Levels of Emergencies

Emergencies are often described in terms of the following three levels:

Level 1 - Site Emergencies
A situation in which the scope is limited to business settings and business-based personnel and no outside assistance is needed.

Level 2 – City Wide Emergencies
A situation where the scope of the emergency necessitates assistance from City or County emergency response agencies. These events require help from outside resources, but do not reach the scope and gravity of County emergencies requiring regional support.

Level 3 – County Wide Emergencies
These include large-scale events where coordination of services from local and regional response agencies is warranted. In many of these situations the businesses' role is to implement protocols until appropriate community agencies (e.g., police, fire and rescue) respond and assume responsibility. **Businesses must be prepared to rely on their own resources until help arrives.**

General Response Procedures

When an emergency situation occurs, Nutrilite management must quickly determine what initial response actions are required. This is done by identifying the type of emergency; identifying the level of emergency; and determining the immediate actions that are required. Response to an emergency situation/disaster affecting the Buena Park facility is a cooperative effort between onsite Departments, Business Units and professional first responders (Police and Fire Departments).

This plan will be activated under conditions where support and involvement from resources outside of the facility are necessary to ensure the safety and security of the employees, visitors and contractors. The site Emergency Manager, or his/her designee, has the responsibility and authority to activate this emergency plan. (Refer Site Emergency Plan Activation Flowchart on pg. 63 for additional)

Each Department, within the facility, has an Area Warden responsible for carrying out emergency procedures in their particular work unit. Area Wardens oversee implementation of protective actions in each department or building. Area Wardens will take immediate pre-planned action as detailed in the General Emergency Action Guidelines and the hazard-specific attachments contained in this document (see Guidelines A-I) or as outlined in departmental procedures.

Incident Command Post

The Incident Command Post (ICP) is a designated field location that the Incident Commander will use to oversee all of the incident operations and coordinate and direct the units involved in the emergency response. The ICP should be set up a safe distance from the emergency site and be identified with a sign, so that it is visible to employees and incoming emergency responders. If the Incident Commander activates the Management Section positions, those staff members will work alongside the Incident Commander from the ICP. The ICP location will be selected based on the type and size of the incident that has occurred.

Emergency Operations Center

An Emergency Operations Center (EOC) is typically used to coordinate large scale events or emergencies that will last for extended periods and may require assistance from outside emergency response agencies.

An EOC is a facility used to be the central point of coordination, policy direction, organization and support for the emergency or disaster. The EOCs primary function is to support the emergency response operations that are occurring at the scene of the emergency. Information gathered from individuals working at the incident will provide an overall view of what has occurred, what is taking place, and what needs to be done. The EOC is also where resource allocations can be prioritized, tracked and coordinated with the outside assisting agencies. Within the EOC, the overarching objectives for the emergency response should be developed to achieve the overall goals of life safety, and protection of property and the environment. The EOC location must have sufficient work

space for the EOC personnel to communicate with representatives from the field operations and coordinate the emergency incident.

The West Coast Product Manufacturing Director is designated as the EOC Manager responsible for activating the EOC, implementing emergency procedures, and supporting/coordinating response activities from the Buena Park site.

EOC Location: CR – Bone Health, Bldg. 5-A Phone: (714) 562-4123
Other capabilities: fax, radio equipment, videoconferencing, satellite television, data line, and adequate amount of space, and restroom facilities are close by

Alternate Location: Buena Park Protection Services Office
Phone: (714) 562-6300

Off-site Location: CA Regional Service Center, IBO Conference Room
Phone: (714) 562-6397

Emergency Management Team

During the response to an emergency incident, members of the facility's Emergency Management Team (EMT) will meet at the designated Incident Command Post to coordinate actions. The EMT will consist of identified personnel representing major components of ICS; Management, Operations, Planning/Intelligence and Logistics. For the Buena Park Facility, the Emergency Management Team may consist of the following personnel:

- California Engineering Manager
- Protection Services Supervisor
- Facilities Maintenance Supervisor
- Environmental Health and Safety Supervisor

Situation and Assumptions

This site is Amway's Nutrilite Division, Buena Park facility. This Research and Development and Manufacturing facility is primarily involved in the development and production of mineral and vitamin supplements and providing visitor tours of the facility. On a typical day, employees, distributors and visitors are on-site for development and manufacturing of products, as well as providing tours of the facility.

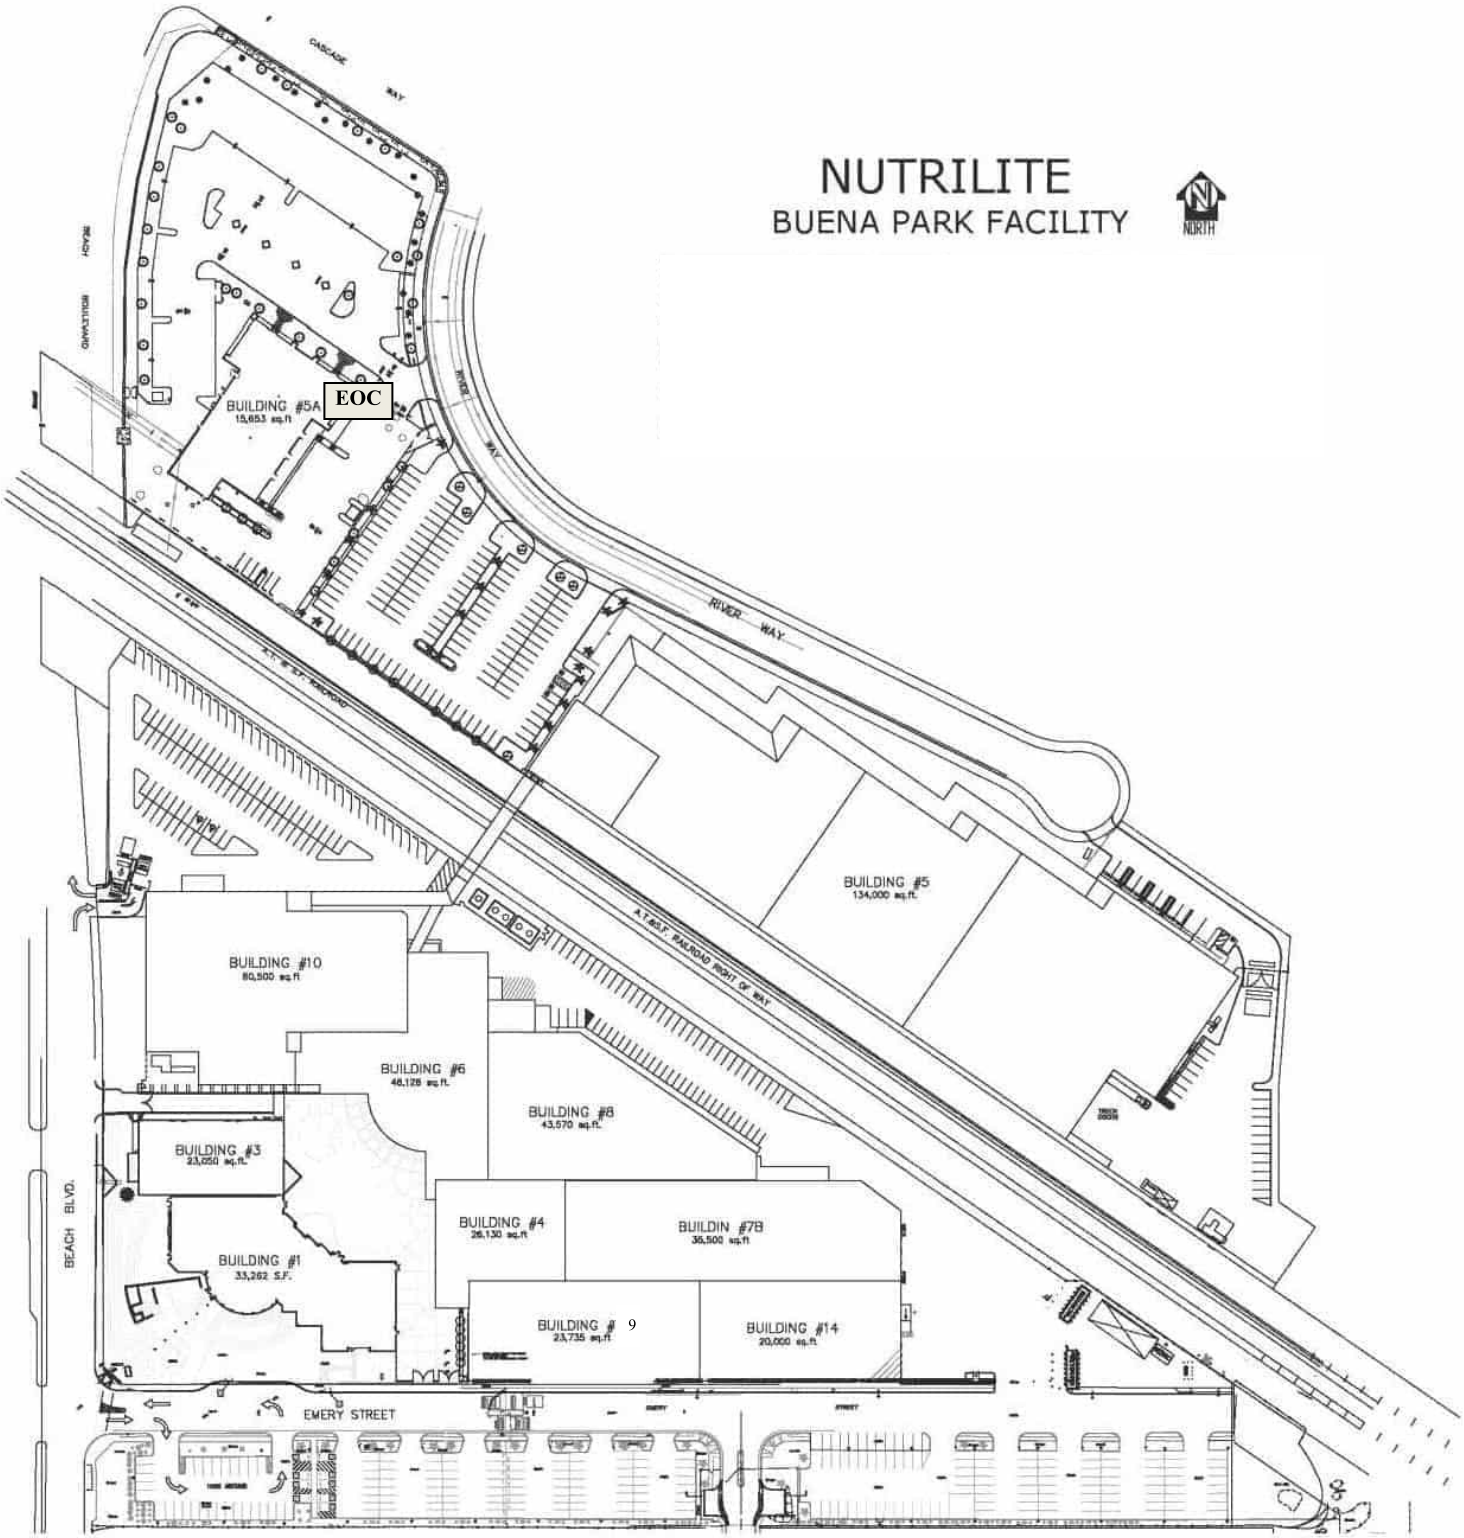
Business & Mailing Address: 5600 Beach Boulevard
PO Box 5940
Buena Park, CA 90622-5940

Telephone Number: (714) 562-6200
Fax Number: (714) 736-7612

Lot Size: 22 acres
Hours of Operation: Seven (7) days per week

- 24 hours per day (3 shifts)
- Miscellaneous shifts Friday - Sunday

Average Occupancy: Employees per shift



- 700 – First Shift
- 200 – Second Shift
- 100 – Weekend Shift
- 100 Guests and Visitors

In most instances, employees and/or local fire and law enforcement agencies will handle the majority of the emergencies on site. During an emergency, centralized direction and control (SEMS/ICS) is the most effective approach to management of emergency operations. Nutrilite management and employees will coordinate with local emergency response agencies in the event they are called to respond to an emergency at this facility.

Communications

The Incident Commander is responsible for implementing protective actions recommended by local or state authorities and for communicating/disseminating accurate information to the Emergency Management Team and/or emergency response personnel. Upon notification of an emergency situation, the Incident Commander will notify the pre-designated personnel to respond to their area of assignment, or make assignments as necessary. The methods of communication that will be used are verbal notification, intercom, two-way radios, mass notification, email, telephones, or runners. **Notifications will be given in plain language. Code words shall not be used.**

Emergency Management Organization

Incident Command System

In order for all public service sectors to use the same terminology, the emergency response and management organization is arranged by functional responsibility. These responsibilities are grouped according to the Incident Command System (ICS) format to show the various duties and reporting relationships in each different ICS section.

The functions are divided into five sections: Management, Operations, Logistics, Planning/Intelligence, and Finance/Administration.

The personnel within the sections report to a Section Chief, which facilitates efficient response and establishes a single point of contact for each task. The following pages will provide descriptions and duties of each function within each of the ICS sections.

Incident Command System Functions

ICS is the standardized management tool for command, control, and coordination of the response to an emergency. ICS provides a means to coordinate the efforts of individual agencies as they work toward the common goal of stabilizing the incident and protecting life, property, and the environment. ICS uses principles that have been proven to improve efficiency and effectiveness and applies those principles to emergency response for any type of situation.

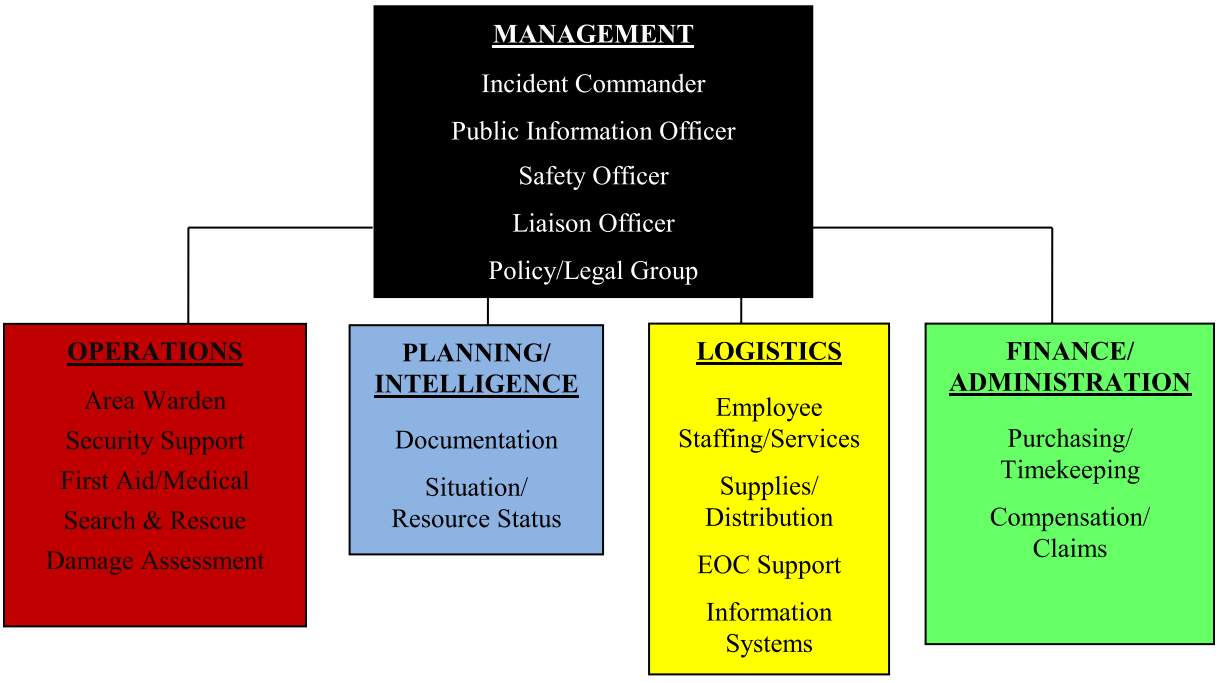
The five major components or *Sections* of ICS; Management, Operations, Planning/Intelligence, Logistics, and Finance/Administration, are the foundation upon which the ICS organization develops. (Colored codes will be utilized to identify the major components throughout this plan.)

Management: Provides overall emergency policy and coordination. The Incident Commander is assisted in carrying out this function by a Management Team which consists of a Public Information Officer, Safety Officer, and Liaison Officer.

Operations: Directs all tactical operations of an incident including implementation of response activities according to the emergency procedures including care of employees, first aid, crisis intervention, search and rescue, site security, traffic control, damage assessment, and evacuations. The Operations section is responsible for consulting with Planning/Intelligence to develop the Incident Action Plan and coordinating the response in accordance with that approved Plan.

Planning/Intelligence: Collects, evaluates and disseminates information needed to measure the size, scope and seriousness of an incident and to plan an appropriate response. Also documents information about the emergency response and plans for recovery operations. Planning coordinates with the Operations Section in the development of Incident Action Plans.

Logistics: Supports emergency operations by acquiring and providing needed personnel, equipment, facilities, resources and services required for the response including coordinating personnel; assembling and deploying volunteers; and facilitating communications among emergency responders.



Finance/Administration: Oversees all financial activities including purchasing of necessary materials, tracking incident costs, arranging contracts for services, timekeeping for emergency responders, submitting documentation to FEMA for reimbursement (if applicable) and recovering records following an emergency.

Within the ICS, an emergency response organization, consisting of these five components or *Sections,* can be activated depending on the needs established. These sections may be applied during a routine emergency, when preparing for a major non-emergency event, or when managing a response to a major disaster. **In small-scale incidents, all of the components may be managed by one person, the Incident Commander.** Large-scale incidents usually require that each component, or section, is set up separately. Each of the primary ICS Sections may also be divided into smaller *Branches,* as needed, and customized for the needs that occur in a particular environment.

At the Buena Park site, the California Engineering Manager, or his designee, assumes the Incident Commander responsibilities and activates the other positions as needed. *Management and employees may be assigned to perform more than one role, depending on the number of personnel available to respond.*

Description of ICS Positions

The following is an example of a typical ICS organizational chart that could be implemented at any Nutrilite facility. Each of the five ICS Sections has specific functions that may need to be conducted during the course of an emergency incident. Although not required, each functional position could also have a person or a team tasked with carrying out the responsibilities associated with that position.

The ICS Sections and their affiliate functional positions are outlined as follows:

The Management Section consists of the following components:

Incident Commander (I/C): The person in charge at the incident and responsible for the overall response to the emergency. The IC may conduct all of the functions of the sections, or activate positions and units as the incident grows, and de-activate them as the incident stabilizes.

Note: In an EOC environment, the IC is the EOC Manager. The EOC Manager ensures that all required functions within the EOC are activated, staffed, and operating effectively; conducts periodic planning meetings with the EOC Section Chiefs; and briefs Legal Advisor and Amway Management Team during Policy Group meetings. The EOC Manager also coordinates all facility Disaster Recovery activities during the short and mid-term phases.

Public Information Officer: Directs the Internal Communications Unit in coordinating internal communication messages and the dissemination of messages to employees via any and all viable means. Handles all media inquiries, writes press releases; ensures that all internal (employee) messages are consistent with external (media) messages and coordinates the release of information to the media through the Incident Commander.

Safety Officer: Monitors safety conditions and develops measures for ensuring the safety of all assigned staff.

Liaison Officer: Coordinates assistance and contact for public agencies responding to the incident.

Policy Group: In addition to the ICS functions is the important decision-making role of the Policy Group. This group includes Nutrilite's Legal Advisor and executive managers from Amway. The EOC Manager will advise members of the Policy Group as to the extent of the emergency on the site. The EOC Manager will recommend to the Policy Group the need for establishment of goals and objectives to operate the facility for the recovery period.

The Operations Section consists of the following components:

Operations Chief: Coordinates tactical response of all operations; receives structural damage reports from teams in the field; oversees structural and non-structural facilities functions, including damage assessment, support and restoration activities; provides periodic briefings to the EOC Manager.

Area Warden Branch: Ensures all employees and visitors are safely evacuated from the facility and accounted for at the evacuation sites. Establishes and sets-up shelter facilities for employees and visitors required to stay at the site.

Search and Rescue Branch: Coordinates search of every room and warehouse for victims that are trapped or injured and ensures evacuation from the building to a triage or safe location.

Security/Traffic Control Branch: Conducts all security related activities and provides traffic control, as needed.

First Aid/Medical Branch: Establishes a medical triage area and provides/oversees care given to the injured.

Damage Assessment Branch: Performs initial assessment of damage to buildings and structures looking for structural damage, and shuts down utility systems if necessary.

The Planning/Intelligence Section consists of the following components:

Planning/Intelligence Chief: Responsible for the collection, evaluation, documentation, and use of information related to incident; oversees the planning for all disaster-related personnel activities; provides current and projected situation status reports; and provides periodic briefings to the EOC Manager.

Documentation/Resource Branch - Tracks time, events, resources, and damage and casualty information. Assists the EOC in establishing and maintaining records, journals, and/or special reports; and maintains all official EOC records. Collects, processes, and disseminates information related to the status of the incident and the resources assigned to it. Prepares situation status reports for use within the EOC and develops and maintains general information displays and maps. Identifies issues to be addressed based on the probable situation in 36 to 72 hours and prepares special reports and briefings for the EOC Manager to use in strategy sessions.

The Logistics Section consists of the following components:

Logistics Section Chief: Oversees EOC logistics functions, including emergency procurement and contract processes; provides vendor coordination and EOC support for the incident.

Staffing/Services Branch: Coordinates the support/assignment of employees and volunteers to fill positions as needed and requested by the Incident Commander. Determines the need for and scope of employee assistance following the incident and provides support to employees and their families as needed. Employee assistance may include providing counseling; establishing community links for special childcare, elderly care, or shelter provisions; and/or arranging travel accommodations for employees reporting to remote locations.

Supplies/Distribution Branch: Acquires and distributes the necessary resources, supplies, equipment and materials for the response to the emergency.

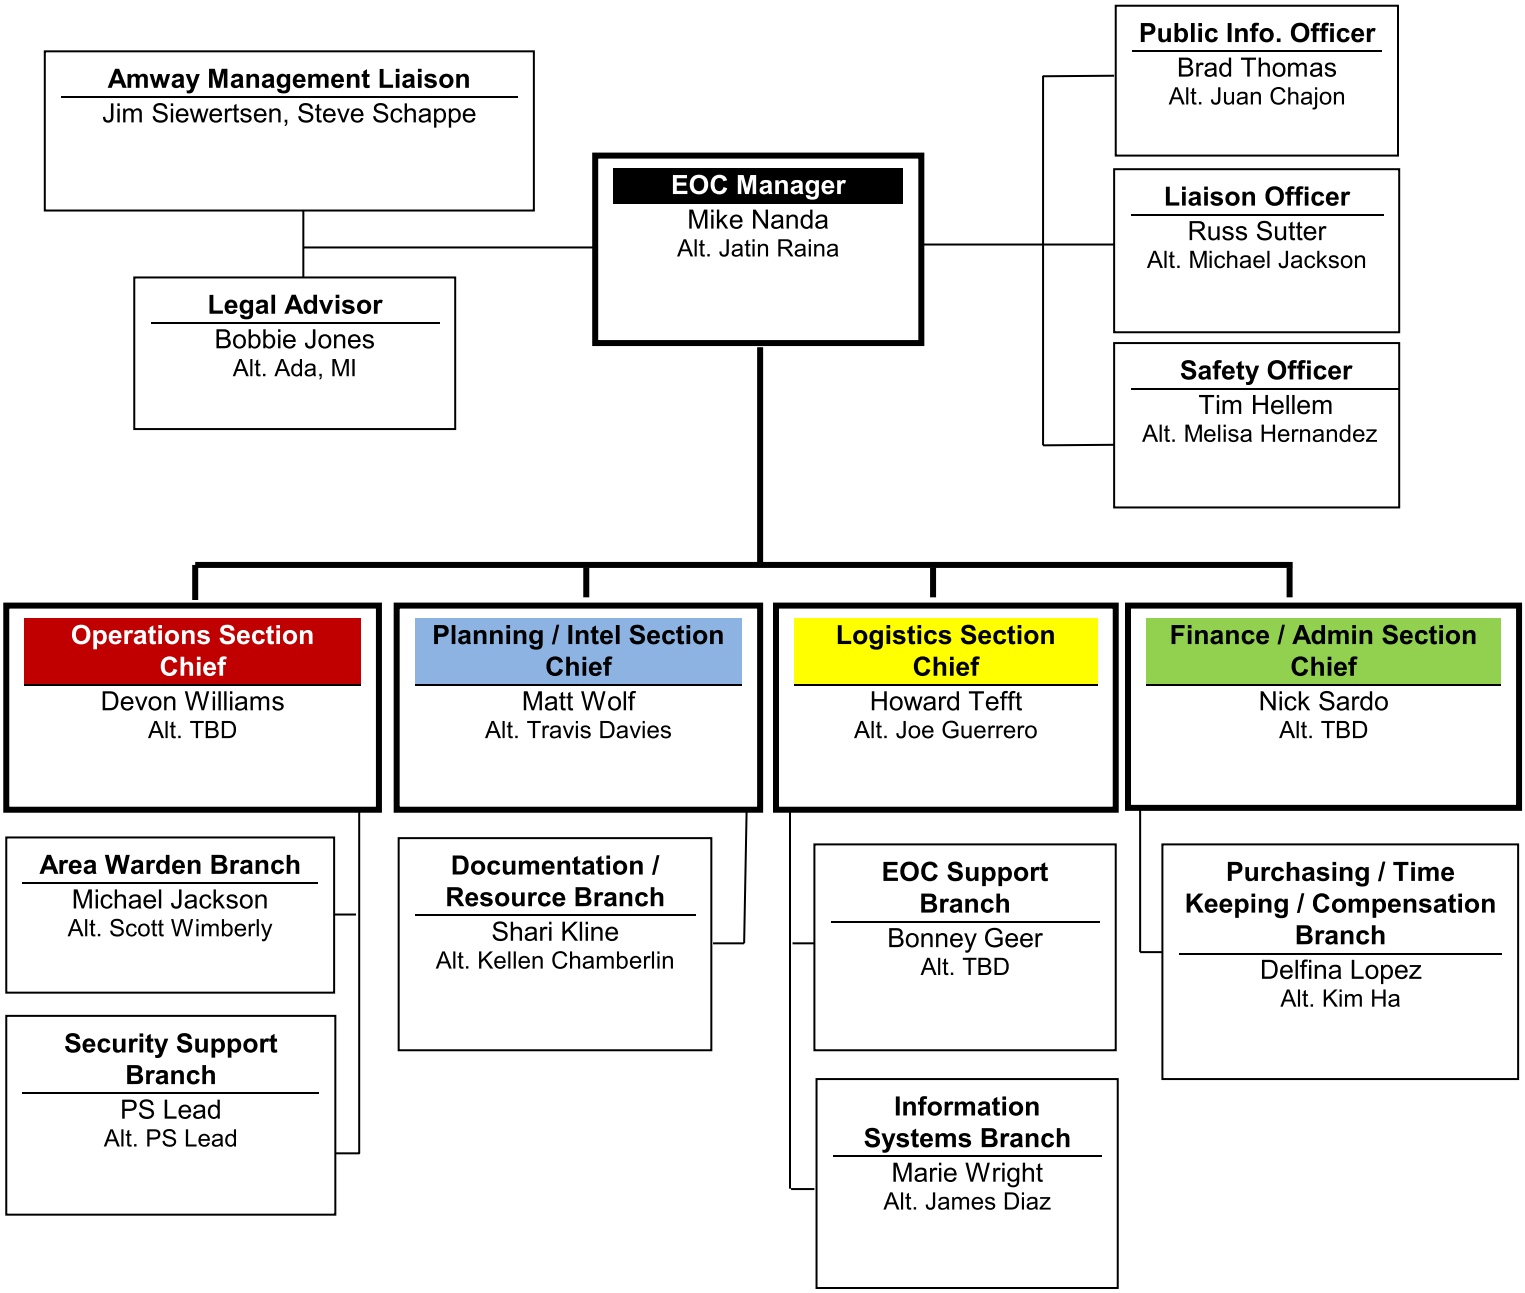
EOC Support Branch: Establishes shelter at the EOC and supports EOC operations as needed (clerical support, mail and/or messenger service, supplies, etc.).

Information Systems Branch: Determines if and when the facility IT Disaster Recovery Plan will be invoked and oversees all systems recovery activities.

The Finance/Administration Section consists of the following components:

Finance/Administration Chief: Oversees all disaster-related financial activities. Develops short- and long-term financial strategies, as appropriate, and provides periodic briefings to the EOC Manager.

Purchasing/Timekeeping Branch: Conducts financial arranges for purchases of needed equipment, supplies and materials with vendors or pre-designated contractors. Reports on the availability of emergency funds and obtains and provides emergency funds for disaster-related purchases. Also maintains a log of all disaster-related expenditures, including financial expenditures, timekeeping, and other necessary documentation. Prepares disaster-related expense reports, ensures that emergency procurements and contracts are appropriately identified and provides estimate of damage costs.



Compensation/Claims Branch: Processes workers compensation claims and claims for damages related to the emergency response.

EOC Functional Positions

The following chart identifies current management and employees assigned to the functional positions of the EOC structure. This chart should be updated whenever changes are made.

EOC Functional Positions		
Position/Branch	**Employee**	**Alternate**
MANAGEMENT SECTION		
EOC Manager	Mike Nanda	Jatin Raina
Public Information Officer	Brad Thomas	Juan Chajon
Safety Officer	Tim Hellem	Melisa Hernandez
Liaison	Russ Sutter	Michael Jackson
Legal Advisor	Bobbie Jones	Ada, MI
Amway Management	Jim Siewertsen	Steve Schappe
OPERATIONS SECTION		
Operations Chief	Devon Williams	TBD
Security Support	PS Lead	PS Lead
Area Warden	Michael Jackson	Scott Wimberly
PLANNING/INTELLIGENCE SECTION		
Planning/Intelligence Chief	Matt Wolf	Travis Davies
Documentation/Resource	Shari Kline	Kellen Chamberlin
LOGISTICS SECTION		
Logistics Chief	Howard Tefft	Joseph Guerrero
EOC Support	Bonney Geer	TBD
Information Systems	Marie Wright	James Diaz
FINANCE/ADMINISTRATION SECTION		
Finance/Admin. Chief	Nicholas Sardo	TBD
Purchasing/Time Keeping/Compensation	Delfina Lopez	Kim Ha

Emergency Response Organizational Chart

Incident Action Checklists for EOC

The following pages are Incident Action Checklists for each EOC position identified in Nutrilite's emergency organization that may be activated at the time of an emergency incident. Managers and employees who have been pre-assigned a role in an emergency should familiarize themselves with the specific checklist for their pre-assigned position.

MANAGEMENT SECTION

EOC MANAGER

Primary Responsibilities

- ❑ Overall management of the response to the incident
- ❑ Assess the severity of the incident
- ❑ Make notification to professional/outside emergency responders of the incident
- ❑ Establish the Incident Command Post
- ❑ Set up check-in procedures at the EOC
- ❑ Activate ICS organization positions as necessary
- ❑ Establish objectives for the incident action plan
- ❑ Ensure the safety of employees, visitors and contractors
- ❑ Deactivate ICS positions as needed

Start-up Actions

- ❑ Put on personal safety equipment
- ❑ Assess nature and scope of emergency/disaster
- ❑ Determine level of threat to people and facilities
- ❑ Implement Site Emergency Plan appropriate to the situation
- ❑ Meet with activated Management Staff and Branch Leaders
- ❑ Assign an alternate EOC Manger

Operational Duties

- ❑ Monitor overall response activities by staying in communication with assigned staff in ICS positions
- ❑ Work with assigned staff to write overall response objectives and revise as needed
- ❑ Ensure documentation of all incoming messages, all actions taken, all decisions made (and the justification for them), and requests
- ❑ Approve media releases for Public Information Officer (PIO) to release information to the appropriate agencies
- ❑ Supervise all Section activities, schedule breaks and re-assign staff, as needed
- ❑ Remember shift changes and establish a process for briefing incoming staff

Deactivation

- ❑ Terminate all response activities after determining the incident has been resolved
- ❑ Ensure that all pending actions will be completed after deactivation
- ❑ Initiate recovery operations
- ❑ Direct the return of all equipment and reusable supplies to Logistics
- ❑ Close logs. Direct all logs, reports, and response-related documentation be completed and submitted to the Documentation Unit.
- ❑ Check-out at EOC and leave contact information in case you need to be reached

MANAGEMENT SECTION

PUBLIC INFORMATION OFFICER

Primary Tasks
- ❑ Liaison between the facility, the media and the public
- ❑ Obtain information about the incident to write press releases
- ❑ Get press releases approved by the EOC Manager
- ❑ Deliver press releases to media and public

Start-Up Actions
- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Meet with EOC Manager, Management Staff and Branch Leaders
- ❑ Designate a media reception area
- ❑ Advise on-site media of time of first press release or press conference

Operational Duties
- ❑ Keep updated on response activities
- ❑ Schedule regular press conferences, if appropriate
- ❑ Get approval of EOC Manager for all press releases/statements
- ❑ Remind staff/volunteers to refer all questions from the public or the media to the PIO
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being made
- ❑ Arrange for the translation of announcements and response-related information
- ❑ Monitor news broadcasts and correct any misinformation as soon as possible
- ❑ Make sure that the EOC Manager is aware of all media-related incidents
- ❑ Supervise activities, schedule breaks and re-assign staff, as needed
- ❑ Remember shift changes and establish a process for briefing incoming staff

Deactivation
- ❑ Release PIO staff and volunteers when directed by EOC Manager
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Close logs. Direct all logs, reports, and response-related documentation be completed and submitted to the Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

Guidelines for Speaking to the Media

When speaking to the media about campus emergencies, it is extremely important to adhere to the following guidelines:
- READ all press statements
- Re-state the nature of the incident; its cause and time of origin
- Describe the size and scope of the incident
- Report on the *current* situation
- Speak about the resources being utilized in response activities
- Reassure the public that everything possible is being done
- DO NOT release any names

- When answering questions be truthful; but consider the emotional impact the information could have upon listeners
- Avoid speculation; do not talk “off the record”
- Do not use the phrase “no comment”
- Set up press times for updates
- Control media location

MANAGEMENT SECTION

SAFETY OFFICER

Primary Tasks

- ❑ Monitor all response operations to ensure the safety of employees, visitors and others on site
- ❑ Stop any response activity that would create an unsafe situation or put anyone at risk

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Meet with EOC Manager, Management Staff and Branch Leaders

Operational Duties

- ❑ Maintain incident records and track response activities
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Monitor emergency response activities for safe practices
- ❑ Identify and mitigate on-site hazards and unsafe situations whenever possible
- ❑ Stop or modify any unsafe activities/operations
- ❑ Ensure that site response units are using appropriate safety equipment
- ❑ Anticipate situation/problems before they occur
- ❑ Consider probable situation changes (aftershocks, etc.) and how they will affect response activities
- ❑ Work with Maintenance/Fire/Site Security Team Leaders to determine if buildings are safe to search
- ❑ Supervise activities, schedule breaks and re-assign staff, as needed
- ❑ Remember shift changes and establish a process for briefing incoming staff

Deactivation

- ❑ Close logs. Direct all logs, reports, and response-related documentation be completed and submitted to the Documentation Unit
- ❑ Release Safety staff and volunteers when directed by EOC Manager
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Check-out at EOC and leave contact information in case you need to be reached

MANAGEMENT SECTION

LIAISON OFFICER

Primary Tasks

- ❑ Meet with response agencies and organizations such as law enforcement, fire services, the American Red Cross, etc. on behalf of the EOC Manager
- ❑ Maintain the check-in log for all staff and volunteers responding to the incident

Start-Up Actions

- ❑ If already initiated, take over check-in/check-out procedures. If not, implement these procedures
- ❑ Put on personal safety equipment
- ❑ Meet with the EOC Manager, Management Staff and Branch Leaders for initial briefing

Operational Duties

- ❑ Brief agency representatives on the status of the situation, response priorities, and the incident action plan
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Ensure the coordination of efforts by keeping the EOC Manager informed of agency action plans
- ❑ Provide periodic updates to agency representatives as necessary
- ❑ Supervise activities, schedule breaks and re-assign staff, as needed
- ❑ Remember shift changes and establish a process for briefing incoming staff

Deactivation

- ❑ Release Liaison staff and volunteers when directed by the EOC Manager
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Close logs. Direct all logs, reports, and response-related documentation be completed and submitted to the Documentation Unit
- ❑ Complete Check-in/Check-out Log and provide to Documentation Team. Make sure to leave contact information in case you need to be reached

OPERATIONS SECTION

OPERATIONS CHIEF

Primary Responsibilities

- ❑ Exercise overall responsibility for the coordination of branch activities within the section
- ❑ Ensure operational objectives and assignments are carried out effectively
- ❑ Establish the appropriate level of branch organization within the section and make changes as required
- ❑ Report to the EOC Manager on all matters pertaining to section activities

Start-Up Actions

- ❑ Check-in at the EOC
- ❑ Put on personal safety equipment
- ❑ Meet with the EOC Manager and Management Staff for initial briefing
- ❑ Determine if other section staff are at the EOC
- ❑ Ensure that the Operations Section is set up properly and that appropriate personnel, equipment and supplies, to include maps and status boards are in place
- ❑ Obtain briefing on on-site and on external communications capabilities and restrictions
- ❑ Meet with Planning/Intelligence Section Chief and review any major incident reports
- ❑ Review responsibilities of all branches in section
- ❑ Make a list of key issues currently facing your Section
- ❑ Adopt a proactive attitude. Think ahead and anticipate situations and problems before they occur.

Operational Duties

- ❑ Ensure that section logs and files are maintained
- ❑ Anticipate potential situation changes and develop backup planning
- ❑ Keep up to date on situation and resources associated with your Section. Maintain current status at all times.
- ❑ Provide situation and resources information to the Planning / Intelligence Section on a periodic basis or as requested
- ❑ Conduct periodic briefings with staff
- ❑ Attend and participate in EOC Manager's briefing and planning meetings
- ❑ Hold briefing and planning meetings with your Branch Coordinators
- ❑ Ensure all resource needs for your Section are coordinated through the Logistics Section
- ❑ Ensure that intelligence information gathered by Operations is made available to the Planning / Intelligence Section
- ❑ Ensure all fiscal and administrative requirements are coordinated through the Finance /Administration Section
- ❑ Continuously share status information with other sections as appropriate
- ❑ Remember shift changes and establish a process for briefing incoming staff

Deactivation

- ❑ Authorize deactivation of organizational elements within the Section when no longer required
- ❑ Close logs. Direct all logs, reports, and response-related documentation be completed and submitted to the Documentation Unit
- ❑ Ensure any open actions are assigned to the appropriate agency or element for follow-up support
- ❑ Release Branch Coordinators when directed by EOC Manager
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Check-out at EOC and leave contact information in case you need to be reached

OPERATIONS SECTION

AREA WARDEN BRANCH

Primary Responsibilities

- ❑ Ensure that emergency information is distributed to all personnel
- ❑ Ensure that all employees and visitors have taken the appropriate protective actions (evacuation or protective sheltering) for the emergency incident
- ❑ Oversee the care and needs of employees and visitors in the evacuation Area
- ❑ Ensure that all employees, guests, and contractors (as applicable) have been accounted for by roll call and report any people unaccounted for to the EOC Manager
- ❑ Establish a shelter for employees and visitors required to stay at the facility site
- ❑ Medical triage areas for injured people may be established by the First Aid/Medical Branch. If necessary, ensure that injured people are directed to these areas as appropriate. Notify the First Aid/Medical Branch Leader of any injuries.

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Attend a briefing with the EOC
- ❑ Put on personal safety equipment
- ❑ Locate all needed supplies
- ❑ Assess available personnel, make appropriate assignments and provide a briefing
- ❑ If designated evacuation/shelter site is destroyed or inaccessible, consult with EOC Manager to determine alternate location(s)
- ❑ Initiate shelter set-up or, *if evacuating*:
    - ❑ Confirm that evacuation area and routes to it are safe
    - ❑ Count/observe evacuations (make sure all exit)

Operational Duties

- ❑ Ensure initial record of all employees and visitors in shelter/evacuation area is made and that it is updated regularly during the incident
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Assist Security personnel in controlling the movement of people and vehicles
- ❑ Monitor safety/wellbeing of employees and visitors in shelter or evacuation area
- ❑ Interface directly with all persons to ensure proper communication, noting that the company will do what is necessary to ensure their safety and well-being.
- ❑ Manage and staff the shelter in accordance with Shelter Procedures
- ❑ Oversee the procurement and distribution of food and water
- ❑ Direct set-up of sanitary facilities when necessary
- ❑ Supervise team activities, schedule breaks and re-assign staff, as needed
- ❑ Remember shift changes and establish a process for briefing incoming staff

Deactivation

- ❑ Assist with recovery operations as required ensuring a smooth and timely return to normal operations
- ❑ Close shelter per direction of EOC Manager, release staff and volunteers

- ❑ Collect all logs, documentation and paperwork and provide to Documentation Unit
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Ensure that all team members have checked-out at the EOC
- ❑ Check-out at the EOC and leave contact information in case you need to be reached

OPERATIONS SECTION

SECURITY/TRAFFIC CONTROL BRANCH

Primary Responsibilities

- ❑ Maintain law and order, the protection of life and facility property
- ❑ Ensure adherence to Nutrilite's policies
- ❑ Manage employee safety operations
- ❑ Coordinate the provision of security for facility based and related activities as part of the emergency response
- ❑ Coordinate disaster related traffic control issues to include checkpoints, priority routing of emergency vehicles, traffic control and roadway closures

Start-Up Actions

- ❑ Check-in at the EOC
- ❑ Attend a briefing with the EOC Manager
- ❑ Put on personal safety equipment
- ❑ Set-up Branch work area to include maps and status boards if appropriate
- ❑ Brief and assign security staff as operationally required

Operational Duties

- ❑ Ensure security personnel log on and off each assignment or response
- ❑ Ensure accurate and detailed records are maintained on all security and traffic control operations
- ❑ Consider 12-hour assignments
- ❑ In consultation with the EOC Manager, establish priorities for emergency response and assignments
- ❑ Thoroughly brief all supporting personnel
- ❑ Determine special security needs or problems at the facility
- ❑ Receive and evaluate status reports from field personnel and determine appropriate security response
- ❑ Provide recommendations for traffic control procedures
- ❑ Based upon field reports and requests, ensure that hazardous areas are appropriately marked and barricaded to prevent entry
- ❑ Depending on the nature of the incident or secondary hazards, ensure appropriate safety precautions are taken
- ❑ Periodically brief and update the EOC Manager
- ❑ If established, provide security and crowd control services at shelter locations
- ❑ Establish the primary checkpoint and I.D. procedure for those entering the property/facility
- ❑ Perform additional security or traffic related duties as assigned by the EOC Manager
- ❑ Remember shift changes and establish a process for briefing incoming staff

Deactivation

- ❑ Obtain authorization from the EOC Manager to return to normal security operations
- ❑ As appropriate close down staging areas and field command posts
- ❑ Release employees and volunteer staff when no longer required

- ❑ Collect all logs, documentation and paperwork and provide to Documentation Unit
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Ensure that all team members have checked-out at the EOC
- ❑ Check-out at the EOC and leave contact information in case you need to be reached

OPERATIONS SECTION

SEARCH AND RESCUE BRANCH**

Primary Responsibilities

- ❑ Conduct visual search of every room, office, storage area, auditorium, bathroom, outdoor area, etc. for trapped or injured victims
- ❑ Evacuate trapped or injured victims from their location to a safe place
- ❑ Cordon off buildings or locations that are unsafe to enter
- ❑ Mark buildings that have been searched with a sign or caution tape
- ❑ Ensure that Search and Rescue is conducted with a *two-person team*

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Meet with EOC Manager for briefing and assignments
- ❑ Gather and inspect all equipment and supplies
- ❑ Check flashlight and radio batteries; perform radio check
- ❑ Make sure you and your partner have site maps

Operational Duties

- ❑ Report all gas leaks, fires, and structural damage
- ❑ Inspect the exterior of each building for structural integrity *before* entering
- ❑ Identify unsafe areas with caution tape *(**DO NOT** enter unsafe buildings)*
- ❑ Search ***ONLY*** structurally sound buildings
- ❑ Search assigned areas using established search protocols
- ❑ As searched rooms have been cleared, call in report
- ❑ Perform emergency first aid on severely injured victims first
- ❑ Rescue lightly trapped victims afterward
- ❑ Transport injured victims to triage area
- ❑ Provide any medical treatment given for injured victims to Medical Unit
- ❑ Provide EOC Manager with regular updates on numbers and condition of victims *(Use proper protocol, i.e., no names are broadcast over the radio.)*
- ❑ Note damage on your team map and relay information to the EOC Manager
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled

Deactivation

- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Complete/close-out all logs, paperwork and other documents and turn them over to the Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

OPERATIONS SECTION

FIRST AID/MEDICAL BRANCH**

Primary Responsibilities

- ❑ Establish a medical triage area with CPR/first aid trained staff or volunteers
- ❑ Provide care and oversee status of injured people
- ❑ Request advanced medical care when necessary
- ❑ Provide personal protective equipment (latex gloves, bandages, etc.) when needed
- ❑ Document any and all care given to injured and pass information on to professional medical responders

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Attend a briefing with the EOC Manager
- ❑ Gather all supplies and personal safety equipment and transport to site of medical triage area
- ❑ Set-up medical triage area away from public view. Area should be accessible to emergency vehicles
- ❑ Set-up morgue *(if needed and if long response time from Coroner)*
- ❑ Assess need to set-up intervention/counseling area with Crisis Intervention Unit

Operational Duties

- ❑ Maintain accurate treatment records
- ❑ Monitor/assess patients at regular intervals
- ❑ Report deaths immediately to EOC Manager *(by runner, NOT over the radio)*
- ❑ When transportation becomes available, facilitate patient evacuation and note status

If sufficient staffing for Medical Team - Set Up Treatment Areas "Immediate" and "Delayed"

- ❑ Have team members check-in at the EOC
- ❑ Assign one team member to do intake:
  - ❑ Greet injured employees, reassess and/or confirm triage category
  - ❑ Direct victim or transport of victim to appropriate treatment area.
- ❑ Assign one team member to conduct "head to toe" assessment
- ❑ Provide appropriate first aid
- ❑ Fill out Medical Treatment Form. If triage category changes, attach any previous tags to current tag
- ❑ Monitor condition of "delayed" victims and watch for any changes in condition
- ❑ Maintain Medical Treatment Forms for all victims

Deactivation

- ❑ Oversee the closing of the first aid station
- ❑ Direct the proper disposal of hazardous waste
- ❑ Release Medical Team per direction of the EOC Manager
- ❑ Ensure close-out of all logs and other paperwork and turn them over to Documentation Unit

- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Ensure that all team members have checked-out at the EOC
- ❑ Check-out at the EOC and leave contact information in case you need to be reached

OPERATIONS SECTION

DAMAGE ASSESSMENT/UTILITIES BRANCH**

Primary Responsibilities

- ❑ Perform initial assessment of buildings and structures looking for structural damage
- ❑ Check gas meters, electrical outlets and wires, water pipes, filters, systems for damage
- ❑ Turn off utility if damaged and poses a hazard
- ❑ Cordon off the areas of hazard with caution tape
- ❑ This position could be assigned in conjunction with the Fire Suppression/Hazmat Unit

Start-Up Actions

- ❑ Check-in at the EOC
- ❑ Put on personal safety equipment
- ❑ Attend a briefing with the EOC Manager
- ❑ Locate all needed supplies
- ❑ Assess available personnel, make appropriate assignments and provide a briefing
- ❑ Utilize a Damage Assessment Checklist to survey buildings
- ❑ Survey on-campus hazards and prioritize team response
- ❑ Work with Damage Assessment Unit and Safety Officer to determine if buildings are safe to begin search
- ❑ Coordinate with Search and Rescue Unit and Fire Suppression/Utilities Unit
- ❑ Make sure you have a facility site map

Operational Duties

- ❑ Check gas meter and shut it off **ONLY IF IT IS LEAKING**
- ❑ Secure facility water system
- ❑ Survey buildings for potential hazards and post warnings with signs and caution tape
- ❑ If possible, determine damage levels and inform EOC Manager if buildings are not safe to enter for a search
- ❑ Provide clear routes for campus access for emergency response vehicles
- ❑ Maintain security for campus and ensure facility is inaccessible to public
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled

Deactivation

- ❑ Release staff and volunteers per direction of EOC Manager
- ❑ Ensure close-out of all logs and other paperwork and turn them over to Documentation Unit
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Ensure that all team members have checked-out at the EOC
- ❑ Check-out at the EOC and leave contact information in case you need to be reached

** If Required

PLANNING/INTELLIGENCE SECTION

PLANNING/INTELLIGENCE CHIEF

Primary Responsibilities

- ❑ Oversees Situation Analysis, Documentation, and the Incident Action Plan
- ❑ Establishes special information collection activities as necessary, e.g., weather, environmental, toxics, etc.
- ❑ Provides periodic predictions on incident potential, reports significant changes in incident status and assembles information on alternative strategies
- ❑ Establish the appropriate level of branch organization within the section and make changes as required
- ❑ Compiles and displays incident status information
- ❑ Report to the EOC Manager on all matters pertaining to section activities

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Meet with EOC Manager for a briefing
- ❑ Check communications equipment to monitor verbal communications orders
- ❑ Gather all supplies and set up work area
- ❑ Set up section workstation, including maps and status boards
- ❑ Clarify any issues you may have regarding your assignment, and what others in the organization do
- ❑ Open and maintain accurate and detailed section logs
- ❑ Activate organizational elements and their coordinators as needed
- ❑ Make a list of key issues facing your section and establish action items to be accomplished within the next operational period

Operational Duties

- ❑ Ensure that section logs and files are maintained
- ❑ Periodically meet with other Section Chiefs and exchange situation information
- ❑ Based on the situation as known or forecast, determine likely future information and personnel support needs
- ❑ Maintain current status at all times. The following information should be collected and displayed:
    - Status of incident (out of control, contained, controlled)
    - Special hazards
    - Status of critical facilities (structural collapse, utilities)
    - Number of persons injured, fatalities
    - Property damage (estimated dollar loss)
    - Outside agencies/mutual aid (called, arriving, in-place)
    - Road conditions
    - Weather conditions (present and pending)
    - Shelters activated or needed
- ❑ Conduct periodic briefings with section staff, particularly as regards priorities.
- ❑ Attend EOC Manager's debriefing and planning meetings

- ❑ Upon approval of the Incident Action Plan, disseminate to all sections and PIO
- ❑ Share status information with other sections as appropriate.
- ❑ Brief your relief at shift change time.

Deactivation

- ❑ Authorize deactivation of section staff when no longer required
- ❑ Ensure all open actions are handled by section or transferred to other elements
- ❑ Close out all logs and pending messages, and retain for future reference
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Check-out at EOC and leave contact information in case you need to be reached

PLANNING/INTELLIGENCE SECTION

DOCUMENTATION / RESOURCE BRANCH

Primary Responsibilities

- ❑ Maintain a log of all emergency developments and response actions
- ❑ Collect, organize and analyze information about the emergency
- ❑ Provide current situation analysis by visual displays for EOC Manager and Management Staff
- ❑ Give periodic updates of the emergency situation to the Intelligence Chief

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Meet with EOC Manager for a briefing
- ❑ Check communications equipment to monitor verbal communications orders
- ❑ Gather all supplies and set up work area

Operational Duties

- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Dispatch runners to relay messages to EOC Manager, Management Staff, Branch Leaders, as needed
- ❑ Ensure all radio and verbal communications are recorded
- ❑ Refer all media requests to the PIO
- ❑ File all reports as they are turned in. *Although a permanent log may be typed up at a later date; all original notes and records MUST be kept—they are legal documents.*
- ❑ Record appropriate response-related information on site map (and keep it current)
- ❑ Facilitate the updating of the site map throughout the response
- ❑ Assess and analyze situation-relevant information
- ❑ Anticipate situations and potential problems and develop contingency plans
- ❑ Keep Intelligence Chief informed by relaying information gathered from field units
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled

Deactivation

- ❑ Close out all logs and pending messages, and retain for future reference
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Check-out at EOC and leave contact information in case you need to be reached

LOGISTICS SECTION

LOGISTICS CHIEF

Primary Responsibilities
- ❑ Ensures the logistics functions that support the response are carried out
- ❑ Provide logistical support to all other sections
- ❑ Report to the EOC Manager on all matters pertaining to section activities

Start-Up Actions
- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Meet with the EOC Manager for a briefing
- ❑ Gather all supplies and set up work area
- ❑ Open and maintain accurate and detailed Section logs
- ❑ Check communications equipment to monitor verbal communications orders
- ❑ Activate organizational elements as needed and designate coordinators
- ❑ Make a list of key issues and establish action items to be accomplished

Operational Duties
- ❑ Periodically meet with the other Section Chiefs and obtain updated information on the incident, resource needs of other Sections
- ❑ Ensure section logs and files are maintained
- ❑ Anticipate potential situation changes and plan accordingly
- ❑ Maintain current section status at all times
- ❑ Maintain current displays associated with your section
- ❑ Hold briefing and planning meetings with your section
- ❑ Ensure that orders for additional resources necessary to meet known or expected demands have been coordinated
- ❑ As required, provide situation and resource information to the Planning/Intelligence Section
- ❑ Brief EOC Manager on major problem areas that now need or will require solutions
- ❑ Share status information with other sections as appropriate
- ❑ Brief your staff relief at shift change time.

Deactivation
- ❑ Release subordinate staff when no longer required
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Complete/close-out all logs, paperwork and documentation and turn them over to Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

LOGISTICS SECTION

EMPLOYEE STAFFING / SERVICES BRANCH

Primary Responsibilities

- ❑ Track assigned staff to the emergency and re-assign when Branch is de-activated
- ❑ Assess skills of employees/volunteers and assign as requested
  - Assignments are based on experience and training, not by daily job assignment
- ❑ Assess the immediate crisis intervention required by employees and visitors involved
- ❑ Consider the long-term mental health support needs of employees
- ❑ Provide counseling/crisis intervention by contracting with licensed provider

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Meet with the EOC Manager for a briefing
- ❑ Put on personal safety equipment
- ❑ Gather necessary supplies and set up work station
- ❑ Establish a quiet location to conduct crisis intervention/counseling
- ❑ Gather all supplies and transport to intervention/counseling site

Operational Duties

- ❑ Survey skills and experience of employees/volunteers to make assignments
- ❑ Track assigned staff and notify EOC Manager when staff is available for re-assignment
- ❑ Issue needed equipment and supplies to personnel being assigned
- ❑ Coordinate with the Timekeeping Unit for accurate records of personnel
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Set-up facility intervention/counseling site
- ❑ Provide for and monitor wellbeing of employees and visitors
- ❑ Maintain log of all assistance given and nature of that assistance
- ❑ Communicate need for outside assistance to the EOC Manager
- ❑ Coordinate/cooperate with outside agency crisis intervention teams

Deactivation

- ❑ Receive and store all returned equipment and unused supplies
- ❑ Complete inventory of equipment and supplies and provide list of materials that need to be replaced
- ❑ Complete/close-out all logs and turn them over to Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

LOGISTICS SECTION

SUPPLIES/DISTRIBUTION BRANCH

Primary Responsibilities
- ❑ Acquire supplies, equipment and materials as requested and distribute
- ❑ Obtain necessary food, water, sanitary items for immediate use
- ❑ Request purchases of supplies as needed to the Purchasing Unit

Start-Up Actions
- ❑ Check-in at EOC
- ❑ Meet with the EOC Manager for a briefing
- ❑ Put on personal safety equipment
- ❑ Gather all necessary supplies and equipment

Operational Duties
- ❑ Distribute supplies and equipment as requested
- ❑ Track all supplies, equipment, materials, sundry items that are distributed
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Make requests for purchases of supplies as needed to the Purchasing Unit
- ❑ Stay in contact with EOC Manager

Deactivation
- ❑ Receive and store all returned equipment and unused supplies
- ❑ Complete inventory of equipment and supplies and provide list of materials that need to be replaced
- ❑ Complete/close-out all logs and turn them over to Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

LOGISTICS SECTION

EOC SUPPORT BRANCH

Primary Responsibilities

- ❑ Ensure the EOC fits the accommodations necessary to conduct the operations
- ❑ Assess the severity of the incident

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Meet with the EOC Manager for a briefing
- ❑ Put on personal safety equipment
- ❑ Gather necessary supplies and equipment

Operational Duties

- ❑ Assess the EOC for listed accommodations as needed
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Secure and restore EOC when no longer needed for the incident
- ❑ Stay in contact with EOC Manager

Deactivation

- ❑ Receive and store all returned equipment and unused supplies
- ❑ Complete inventory of equipment and supplies and provide list of materials that need to be replaced
- ❑ Complete/close-out all logs and turn them over to Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

LOGISTICS SECTION

INFORMATION SYSTEMS BRANCH

Primary Responsibilities

- ❑ Responsible for checking and restoring the facility information, telephone and computer infrastructure
- ❑ Ensure that qualified specialists are available in the areas required by the particular incident or emergency

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Put on personal safety equipment
- ❑ Meet with the EOC Manager for a briefing
- ❑ Gather all supplies and set up work area

Operational Duties

- ❑ Ensure that the EOC is set up properly and that appropriate personnel, equipment, and supplies are in place
- ❑ Ensure that technicians begin an assessment of the and telecommunications and data networks
- ❑ Furnish telecommunications and data services necessary to the ICP and/or the EOC to cope with the emergency/disaster
- ❑ Establish and maintain activity log and other necessary files

Deactivation

- ❑ Release subordinate staff when no longer required
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Complete/close-out all logs, paperwork and documentation and turn them over to Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

FINANCE/ADMINISTRATION SECTION

FINANCE/ADMINISTRATION CHIEF

Primary Responsibilities

- ❑ Ensure operational objectives and assignments are carried out effectively
- ❑ Establish the appropriate level of branch organization within the section and make changes as required
- ❑ Responsible for managing all financial aspects of an incident to include:
  - Financial and cost analysis
  - Tracking and recording of personnel time
  - Processing worker's compensation claims
  - Handling travel and expense claims
  - Maintenance of all financial records of the emergency
- ❑ Ensuring all obligation documents initiated at the incident are properly prepared and completed
- ❑ Briefing administrative personnel on all incident related financial issues needing attention or follow-up
- ❑ Report to the EOC Manager on all matters pertaining to section activities

Note: Not all incidents will require activation of this section

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Meet with EOC Manager for a briefing
- ❑ Put on personal safety equipment
- ❑ Set-up section work station, including maps and status boards
- ❑ Open and maintain accurate and detailed section logs
- ❑ Determine appropriate purchasing limits to delegate to Logistics Section
- ❑ Meet with Operations and Logistics Section Chiefs and determine financial and administrative support needs
- ❑ Activate organizational elements and staff as needed.

Operational Duties

- ❑ Ensure that section logs and files of all activities are maintained accurately
- ❑ Anticipate potential situation changes and develop contingency plans
- ❑ Maintain current status at all times
- ❑ Maintain current displays associated with your section and ensure that such displays and/or information reports are clear and understandable
- ❑ Provide situation and resource information to the Planning/Intelligence Section on a periodic basis
- ❑ Participate in the EOC Manager's debriefing planning meetings
- ❑ In coordination with the Planning and Logistics Sections, collect and develop cost estimates of damage to facilities. (Ensure both written and photographic documentation of damages is obtained)
- ❑ In the event of an evacuation, take necessary organizational actions to ensure the security of records and facility funds

- ❑ Ensure utilization of private vendor or contractor services requires maintaining accurate records of equipment use and personnel time
- ❑ Provide the EOC Manager with updates on cost related information as requested
- ❑ Ensure that all time and cost expenditure records are kept current
- ❑ Brief your relief at shift change time

Deactivation

- ❑ Authorize deactivation of organizational elements when no longer required
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Complete/close-out all logs and turn them over to Documentation Unit
- ❑ Check-out at EOC and leave contact information in case you need to be reached

FINANCE/ADMINISTRATION SECTION

PURCHASING/TIME KEEPING BRANCH

Primary Responsibilities

- ❑ Arrange for purchases of necessary equipment, supplies and materials
- ❑ Utilize pre-designated vendor contracts for purchases
- ❑ Seek vendors for materials or services that are not pre-designated
- ❑ Track all expenditures related to the incident
- ❑ Maintain a log of all personnel hours working at the emergency
- ❑ Track all equipment hours related to the incident
- ❑ Set up a timekeeping system to ensure accurate records of the incident

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Meet with the EOC Manager for a briefing
- ❑ Put on personal safety equipment
- ❑ Gather all supplies and equipment as needed
- ❑ Check-in at EOC
- ❑ Meet with the Documentation Unit for a briefing
- ❑ Put on personal safety equipment
- ❑ Gather all supplies and equipment as needed

Operational Duties

- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled on the Position Activity Log
- ❑ Get approval from the EOC Manager for purchases requested
- ❑ Process purchase requests from Logistics
- ❑ Utilize pre-designated vendor contracts for purchases
- ❑ Seek vendors for materials or services that are not pre-designated
- ❑ Track all purchases and item requests
- ❑ Track employee and volunteer hours
- ❑ Track response-related purchases
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled

Deactivation

- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Add Unit's completed logs, paperwork and other documentation to final information submitted from Documentation Unit and turn them over to the EOC Manager
- ❑ Check-out at EOC and leave contact information in case you need to be reached
- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Add Unit's completed logs, paperwork and other documentation to final information submitted from Documentation Team and turn them over to the EOC Manager
- ❑ Check-out at EOC and leave contact information in case you need to be reached

FINANCE/ADMINISTRATION SECTION

COMPENSATION/CLAIMS BRANCH

Primary Responsibilities

- ❑ Process workers compensation claims for injured employees
- ❑ Receive claims for damages related to the emergency response
- ❑ Maintain accurate records of all claims related to the emergency response

Start-Up Actions

- ❑ Check-in at EOC
- ❑ Meet with the EOC Manager for a briefing
- ❑ Put on personal safety equipment
- ❑ Gather all supplies and equipment as necessary

Operational Duties

- ❑ Track staff and volunteer hours
- ❑ Track response-related purchases
- ❑ Document all incoming messages, all actions taken, all decisions made (and the justification for them), and requests being filled
- ❑ Process purchase requests from Logistics Section Chief

Deactivation

- ❑ Return all equipment and reusable supplies to Logistics
- ❑ Add completed logs, paperwork and other documentation to final information submitted from Documentation Unit and turn them over to the EOC Manager
- ❑ Check-out at EOC and leave contact information in case you need to be reached

Recovery Planning

The goal of recovery is to "return to normalcy" and restore the infrastructure of the facility as quickly as possible.

The priority focus should be on the employees and the physical business site, and to take as much time as needed for recovery. Recovery is something that may take an extended period of time and should be anticipated and planned for.

One of the major goals of recovery is to provide for Continuity of Operations. Support for employees may require a caring and supportive environment. Financial recovery and protection of the assets are also crucial to the overall restoration of the Nutrilite facilities and resumption to normal activities.

Management can be trained to deal with the emotional impact of the crisis, as well as to initially assess the emotional needs of the employees. One of the major goals of recovery is to provide a caring and supportive business environment. Financial recovery and protection of the businesses' assets are also crucial to the overall restoration of the educational process.

Recovery Quick Action Checklist:

- ❑ Strive to return to normal business as quickly as possible
- ❑ Assemble the Incident Management Team, as needed
- ❑ Restore the physical site
- ❑ Restore communications systems
- ❑ Institute data recovery procedures
- ❑ Make arrangements for alternative housing for offices, if necessary
- ❑ Monitor how employees are dealing with the emotional impact of the crisis
- ❑ Identify what follow up interventions are available to employees
- ❑ Conduct debriefings with employees in conjunction with first responders
- ❑ Complete after action reports
- ❑ Allocate appropriate time for recovery
- ❑ Capture "lessons learned" and incorporate them into SEP revisions and trainings
- ❑ Complete all paperwork and reports for financial aid for disaster relief, if available
- ❑ Plan how anniversaries of events will be commemorated
- ❑ Work with local or state emergency services to maximize your cost-recovery efforts

Plan for recovery in the preparedness phase. Determine the roles and responsibilities of management and others who will assist in recovery during the planning phase. Seek out counseling services so as to train management staff to assess the emotional needs of employees, as well as their peers, to determine intervention needs. Experience shows that after a crisis, many unsolicited offers of assistance from outside the business community are made. During planning, you may want to review the credentials of service providers and certify those that will be used during recovery.

Also, during the preparedness phase, local vendors who can assist in various recovery efforts should be identified. Items and services, such as debris removal, carpet repair and replacement, cleaning services, computer data recovery, fire restoration, structural engineers, tree damage/repair/removal, etc. should be arranged for in advance of an emergency situation.

Assemble a Crisis Intervention Team (if needed). Service providers in the community may want to assist after a crisis. With prior planning, those with appropriate skills and certifications may be tapped to assist in recovery. This will help employees coordinate activities of the community service providers and see that procedures and intervention goals are followed.

Return to the "normal operations" as quickly as possible. Experts agree that the first order of business following a crisis is to return the organization to normal operations as quickly as possible. Nutrilite realizes that it may need to get involved in helping employees and their families cope with separations from one another with the reopening of the Nutrilite facility after a crisis.

Provide assessment of emotional needs of employees and their families. Nutrilite realizes that appropriate group intervention may be beneficial to employees and their families experiencing severe reactions to the crisis event. Nutrilite will assess the emotional needs of all affected employees to attempt to best determine those who need intervention by a counselor, social worker, psychologist or other mental health professional. Nutrilite will arrange, as needed and whenever possible, the appropriate interventions through the Employee Assistance Program.

Provide information on the incident to the appropriate person(s). Follow the chain of command when providing information about an incident. All information is to be disseminated through the facility's PIO position. It is important to have a single message being sent out to employees, management, the community and the media. Be clear about what steps have been taken to attend to safety. Let families and other community members know what support services Nutrilite is providing or what other community resources are available. It may also be necessary to translate letters and other forms of communication into languages other than English depending on the composition of the employees at the affected site. Be sure to consider cultural difference when preparing these materials.

Focus on the building, as well as people, during recovery. Following a crisis, buildings and their grounds may need repairing, renovation or repainting/re-landscaping. Conduct safety audits and determine the parts of the building that can be used and plan for repairing those that are damaged.

Take as much time as needed for recovery. An individual recovers from a crisis at his or her own pace. Recovery is not linear. After a crisis, healing is a process filled with ups and downs. Depending on the traumatic event and the individual, recovery may take months or even years.

Remember anniversaries of crises. Many occasions will remind employees and families about crises. The anniversary of a crisis will stimulate memories and feelings about the incident. In addition, other occasions may remind the business community about the crises, including holidays, returning to work after vacations and other breaks, as well as events or occasions that seemingly have little connection to the incident. This underscores the notion that recovery may take a longer time than anticipated.

Management needs to be sensitive to their own as well as the employee's reactions in such situations and provide support when necessary.

Recovery may seem like an end, but it is also a beginning. Nutrilite's management must close the loop on the circle. A critical step in crisis planning is to evaluate each incident. What worked? What didn't work? How could you improve operations? Nutrilite's management is committed to take what is learned and start at the beginning. Nutrilite management will update and strengthen the plan so that in future crises, response and recovery will be enhanced.

Emergency Response Guidelines

Population Protection

Emergency Response Guidelines

The following Emergency Response Guidelines are designed for all employees to follow in the event they need to take immediate steps to protect themselves and others during an emergency incident. **All employees should familiarize themselves with these procedures and be trained in what to do when any of these common emergency actions are implemented.**

SHELTER-IN-PLACE

SHELTER-IN-PLACE is a short-term measure implemented when there is a need to isolate employees and visitors from the outdoor environment to prevent exposure to airborne contaminants or other potentially harmful occurrences. The procedure may include closing and sealing doors, windows and vents; shutting down the building heating, ventilation and air conditioning (HVAC) systems (if required) to prevent exposure to the outside air. Shelter-in-place is considered appropriate for, but is not limited to, the following types of emergencies:

- External Gas Leaks
- External Hazardous Material Spills
- External Chemical Release
- External Incidents (Violence, Civil Unrest, Police Activity, etc.)

ANNOUNCEMENT:

The following is an example of an announcement that could be made in person or SendWordNow, the Public Address system, and/or text messaging:

Example: "Attention please. We have a hazard in the community and are instituting SHELTER-IN-PLACE procedures. All employees and visitors should remain inside with windows and doors securely closed … (and HVAC turned off.) Those who are outside should immediately move to the protection of an inside room. Do not go outdoors until you receive further instructions."

ACTIONS:

- ❑ All employees and visitors should immediately clear all exposed hallways and assist those needing special assistance
- ❑ All personnel should remain inside buildings and offices until further instructions are received
- ❑ If necessary, secure individual rooms/offices:
  a) Close all doors and windows
  b) Seal gaps under doors and windows with wet towels or duct tape
  c) Shut down the room HVAC system
  d) Seal vents with aluminum foil or plastic wrap
- ❑ Area Wardens should convey reassurance that the situation is under control
- ❑ Remain inside until further instructions are provided by management

LOCKDOWN

LOCKDOWN is used to prevent intruders from entering occupied areas of the facility, or when it is necessary to isolate employees and visitors from danger on the property or from within a building. During a Lockdown, all interior and exterior doors are locked, and all personnel are to remain in their offices or designated areas at all times. Area Wardens are responsible for accounting for personnel and ensuring that no one leaves their safe area. A Lockdown is not normally preceded with any warning. Lockdown is considered appropriate for, but is not limited to, the following types of emergencies:

- Gunfire
- Police/criminal activities in immediate area
- Extreme violence inside/outside the facility

LOCKDOWN differs from **SHELTER-IN-PLACE** because it does not involve shutting down the HVAC systems and does not allow for the free movement of employees and guests within their work areas/buildings.

ANNOUNCEMENT:

The following is an example of an announcement that could be made in person or via SendWordNow, the Public Address system, and/or text messaging:

> **Example:** "Attention please. We have an emergency situation and need to implement LOCKDOWN procedures. All personnel are to proceed to the nearest securable location, lock the doors and stay inside until further notice. Do not open the door until notified by a manager or law enforcement."

ACTIONS:

- ❑ All personnel should immediately proceed to the nearest office or secured area, lock the doors and remain inside until further instructions are provided
- ❑ If the danger is imminent, turn off all lights, move away from the windows and get down on the floor
- ❑ **Do Not Open the Door** for anyone…use common sense
- ❑ Remain in the office or secured area until further instructions are provided by management or law enforcement

DROP, COVER AND HOLD ON

DROP, COVER AND HOLD ON is the action taken during an earthquake to protect personnel from flying and falling debris. It is an appropriate action for:

- Earthquake
- Explosion

ANNOUNCEMENT:

The following is an example announcement that would be made over the Public Address system and/or by Area Wardens in their work areas:

> **Example:** "Attention please. For your protection, follow DROP, COVER AND HOLD ON procedures. Get under a table or desk, away from windows, storage racks and anything that could fall and injure you. Hold that position until you receive further instructions."

ACTIONS:

Inside

- ❑ Move away from windows, storage racks or anything that could fall and injure you
- ❑ Drop to the floor and seek shelter under desks or tables, if possible. Place head between knees, hold on to a table leg with one hand and cover the back of the neck with the other arm.
- ❑ Remain in place until the occurrence stops. When over, evacuate the building**, if it is determined to be unsafe to remain inside,** and proceed to the designated Evacuation Area. **Do not run**. Do not re-enter building until declared safe.

Outside

- ❑ Move away from buildings, trees, overhanging wires and DROP, COVER and HOLD ON (if anything is nearby to hold onto).
- ❑ Remain in place until the occurrence stops. When quake is over, proceed to the nearest designated Evacuation Area.

EVACUATION

EVACUATION is implemented when conditions make it unsafe to remain in the building. This action provides for the orderly movement of employees and visitors along prescribed routes from the inside of buildings to designated Evacuation Areas. Evacuation is considered appropriate for, but is not limited to, the following types of emergencies:

- Fire
- Explosion or threat of explosion (**including ***dust clouds***)
- Bomb threat
- Post-earthquake
- Chemical accident

ANNOUNCEMENT:

- Fire Alarm – Slow Whoop Audible Alarm

Provided time is available, the following is an example of an announcement made via SendWordNow, the Public Address system, and/or text messaging:

Example:	"Attention please. We need to institute an EVACUATION of all buildings. All personnel and visitors should proceed to the nearest designated Evacuation Area.

ACTIONS:

- ❑ Area Wardens should instruct all personnel and visitors to follow the Evacuation Route maps, which are posted throughout the facility, to the nearest Evacuation Area
- ❑ All personnel will be accounted for at the evacuation areas by roll call. Area Wardens are responsible for accounting for the whereabouts of their department personnel and for reporting this information to the Area Warden Coordinator or IC.
- ❑ Remain in the Evacuation Area until further instructions are given

Nutrilite's overarching goal for the response to an emergency incident is life safety. Any decision to conduct an Evacuation, Drop Cover and Hold, Shelter-In-Place, or Lockdown will be made based upon the needs dictated by the emergency incident. Notifications may be made via email, Public Address System, and/or voice mail broadcast. Effective protection of employees and guests will be the primary task.

ASSISTING THOSE WITH DISABILITIES DURING AN EVACUATION

The needs and preferences of non-ambulatory individuals will vary. Those at ground floor locations may be able to exit without help. Others may have minimal ability to move, and lifting may be dangerous. Some non-ambulatory people also have respiratory complications. Remove them from smoke and vapors immediately.

To alert visually-impaired individuals

- ❑ Verbally announce the type of emergency
- ❑ Offer your arm for guidance
- ❑ Tell person where you are going, obstacles you encounter
- ❑ When you reach safety, ask if further help is needed

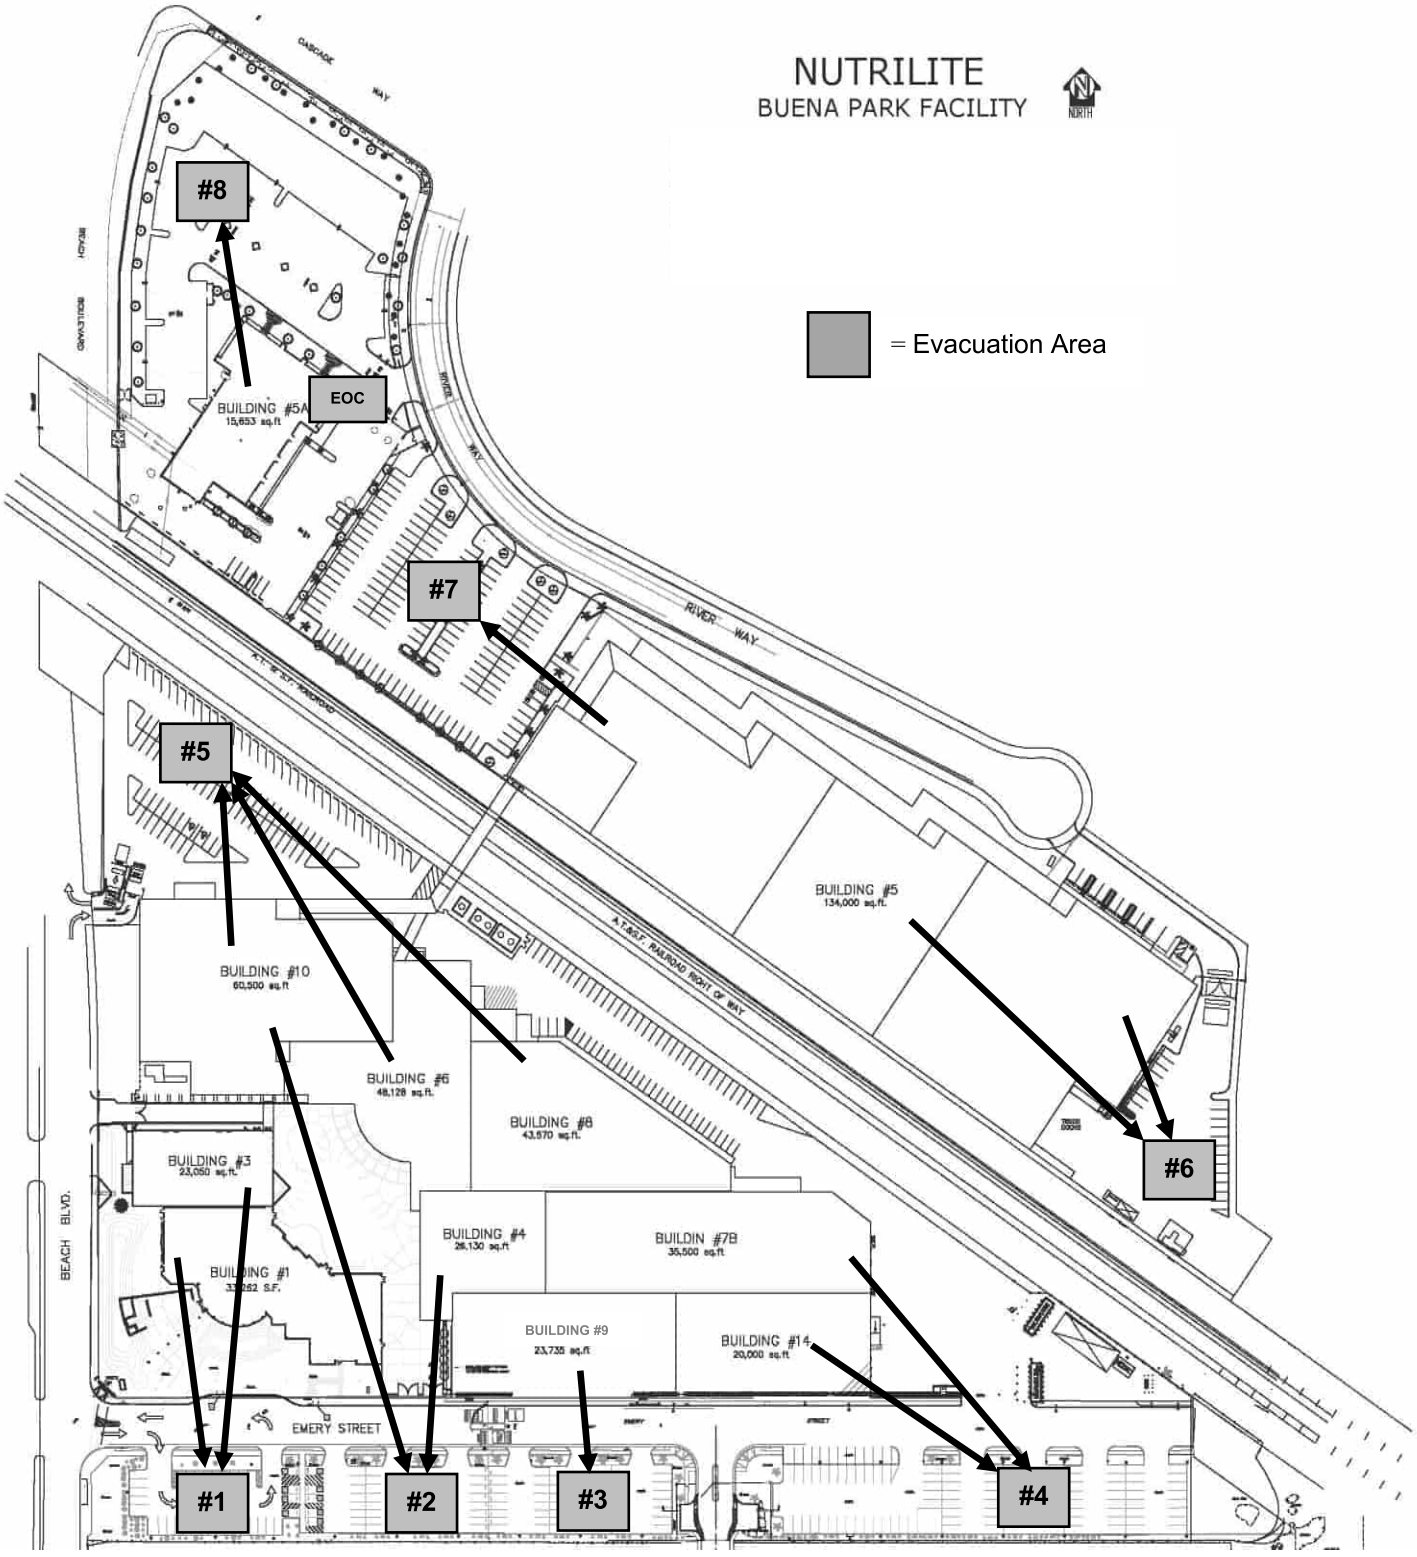
To alert individuals with hearing limitations

- ❑ Turn lights on/off to gain person's attention -OR-
- ❑ Indicate directions with gestures –OR-
- ❑ Write a note with evacuation directions

To evacuate individuals using crutches, canes or walkers

- ❑ Evacuate these individuals as injured persons
- ❑ Assist and accompany to the Evacuation Area, if possible -OR-
- ❑ Use a sturdy chair (or one with wheels) to move the person -OR-
- ❑ Help carry the individual to safety

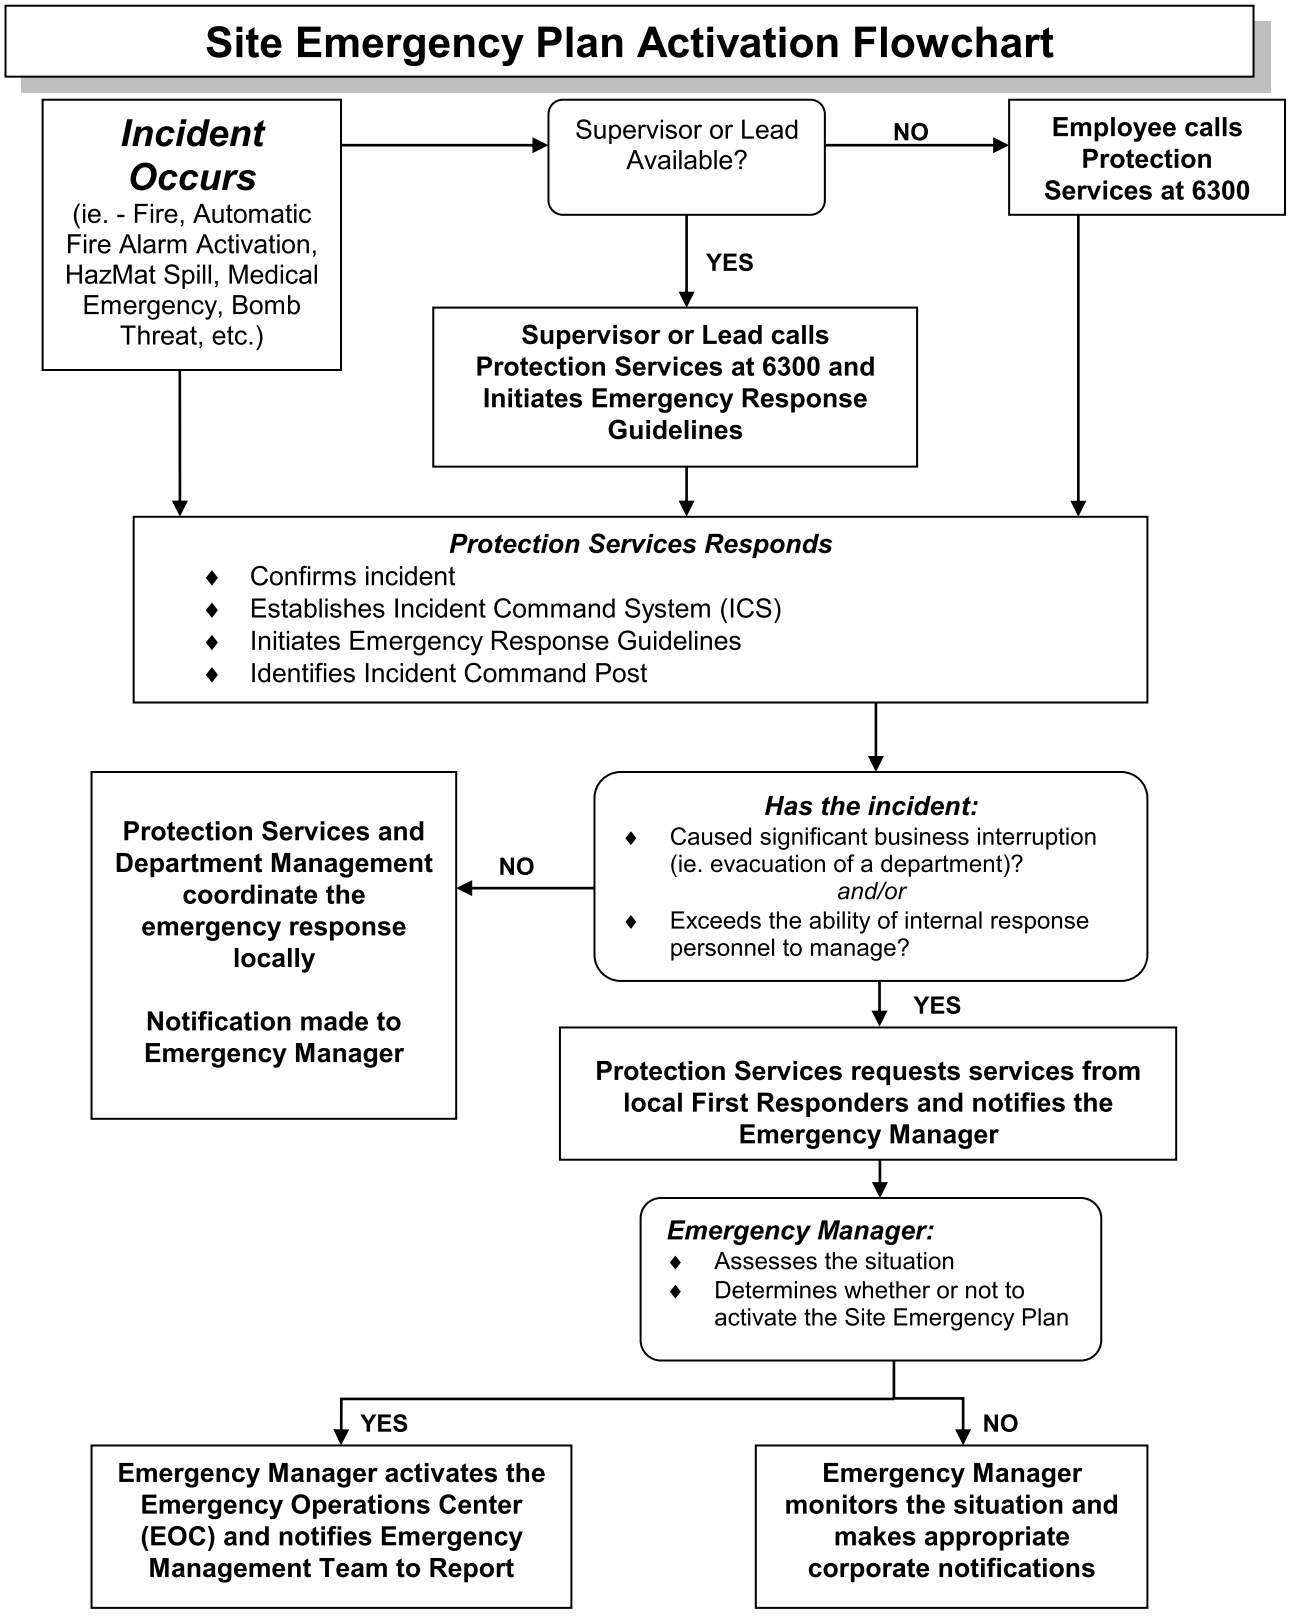
To evacuate individuals using wheelchairs



- ❑ Give priority assistance to wheelchair users with electrical respirators
- ❑ Most wheelchairs are too heavy to take downstairs; consult with the person to determine the best carry options
- ❑ Reunite person with the wheelchair as soon as it is safe to do so

Emergency Evacuation Warning System

FIRE/EVACUATION - WARNING	FIRE/EVACUATION - ALL CLEAR
• Audible Alarm - Slow Whoop • Visual Alarm – Strobe Light	• Verbal Notification from Security Officers, Area Wardens or Department Management



In the event of an emergency situation requiring a full-site Evacuation, all personnel should follow the evacuation route and evacuation area maps posted throughout the facility and report immediately to the designated outside Evacuation area. All personnel will be accounted for at the evacuation areas by roll call. Area Wardens are responsible for accounting for the whereabouts of their department personnel and for reporting this information to the Incident Commander and/or the Area Warden Coordinator.

Emergency Evacuation Areas

Site Emergency Plan Activation Flowchart

The following chart is an example of initial actions that should be followed for incidents occurring at Nutrilite's Buena Park facility.

Curtailment of Operations and Recall Guidelines

These guidelines are to be used in any emergency that may require the curtailment of operations. These emergencies may include, but are not limited to, extended power outages, fire or explosion, threat of explosion (***dust clouds***) flooding, or significant acts of violence.

If there are circumstances requiring the curtailment of site operations, the following procedures will be followed:

- **During Business Hours**: The Emergency Manager will assemble the appropriate Emergency Management Team (EMT) in the Emergency Operations Center (EOC) or other designated conference room as appropriate. The particular circumstances and potential effects on Nutrilite operations will be discussed. Based upon consensus of the EMT, continuation/curtailment of normal business operations will be determined.
- **During Second and Third Shifts**: The Emergency Manager and/or designate will contact the appropriate EMT members to discuss the impact of the particular circumstances on normal business operations. The EMT will arrive at consensus, via telephone, or will meet together at the EOC for further updates and discussion, as to continuation/curtailment of normal business operations.

Any EMT member may also initiate this guideline by contacting the Emergency Manager via Protection Services at 714-562-6300.

Curtailment Procedures

If the decision is made to partially or fully curtail normal business operations, the following procedure will be followed:

- The EMT will be notified of the plan to proceed with limiting normal business operations.
- **During Business Hours:** Notification of limiting normal business operations will be sent to Nutrilite management via email
- **During Second and Third Shifts:** Notification of limiting normal business operations will be made by issuing a notice via email. Departmental call lists may also be activated at the discretion of the EMT
- Certain Departments necessary for support of basic corporate functions may not, at the discretion of the EMT, curtail operations. Examples would be Protection Services, Computer Room/IT and Maintenance functions.
- The Logistics Section Chief shall issue instructions and procedures to be followed regarding attendance issues associated with the curtailment of operations.

The EMT will continue to meet to evaluate the situation and the effects on normal business operations to determine a return to work date/time if this could not be established during the curtailment process.

Return to Normal Operations Procedures

- The Emergency Manager and/or designate will contact the EMT of the return to normal operations information
- The Logistics Section Chief will activate the emergency call lists. Department management may contact key employees within their area to notify them to report to support start-up operations, where appropriate
- Following the return to normal operations, the Logistics Section Chief shall provide Department Management with instructions and procedures to be followed regarding attendance issues associated with the curtailment of operations, if it was not addressed at the onset
- If requested, Department Management shall collect and provide cost information related to curtailment of operations

Emergency Incident Guidelines

This section provides a list of functions that should be performed during an emergency incident at the Buena Park facility.

Guideline A – AIRCRAFT CRASH / TRAIN DERAILMENT

Emergency response will depend on the size of the aircraft, nature of the crash and proximity to the facility. The most likely action would be an immediate **Evacuation** of the facility. If it is safe to remain inside the buildings, all employees and visitors should **Shelter-in-Place**. The crash may also result in an explosion, chemical spill or utility interruption.

AIRCRAFT CRASH / TRAIN DERAILMENT INTO THE FACILITY

Protection Services

- ❑ Notify Police and Fire Department (call 9-1-1)
- ❑ Ensure **Evacuation** procedures are initiated
- ❑ Initiate Incident Command System and identify Command Post
- ❑ Notify Emergency Manager
- ❑ Obtain account for all building occupants and determine extent of injuries, numbers injured, etc.
- ❑ Initiate search and rescue of injured occupants from building and begin first aid treatment
- ❑ If the crash results in a fuel spill on the property, isolate contaminated victims
- ❑ Secure area to prevent unauthorized access from the public or media
- ❑ Do not allow re-entry to any buildings until the authorities provide clearance

Emergency Manager

- ❑ Consider activating Site Emergency Plan and Emergency Management Team
- ❑ Establish liaison with authorities
- ❑ Consider implementing **Curtailment of Operations** procedures

Area Wardens

- ❑ Notify Protection Services
- ❑ Move employees and visitors away from immediate vicinity of the crash
- ❑ **Evacuate** employees and visitors from the building using primary and/or alternate routes to a safe evacuation area - away from the crash scene
- ❑ Take roster and emergency supplies
- ❑ Take attendance and maintain control of employees and visitors
- ❑ Report missing employees and visitors to Protection Services/ Incident Commander
- ❑ Initiate first aid for any injured employees and visitors
- ❑ Await further instructions from I/C
- ❑ Track employees and visitors who depart the evacuation area

AIRCRAFT CRASH / TRAIN DERAILMENT NEARBY THE FACILITY

Protection Services

- ❑ Notify Police and Fire Department (call 9-1-1)
- ❑ Implement **Shelter-in-Place** procedures, as necessary
- ❑ Initiate Incident Command System and identify Command Post
- ❑ Notify Emergency Manager
- ❑ Ensure that employees and visitors remain a safe distance from the crash site
- ❑ Authorities will secure the area to prevent unauthorized access

Emergency Manager

- ❑ Consider activating Site Emergency Plan, Emergency Management Team and Emergency Operations Center
- ❑ Establish liaison with authorities
- ❑ If directed by authorities to close the facility, implement **Curtailment of Operations** procedures

Area Wardens

- ❑ Notify Protection Services
- ❑ Initiate **Shelter-in-Place** procedures
- ❑ Take attendance and maintain control of employees and visitors
- ❑ Report missing employees and visitors to Protection Services/ Incident Commander
- ❑ Await further instructions from I/C

Guideline B – BOMB THREAT

Notification of a bomb threat against this site may be received by telephone, email, mail, or message at any time. Telephone threats may be received at the onsite warning point, administrative offices, or threats may also be directed to the home telephones of employees and/or management members. When a bomb threat is received, Protection Services will be notified at ext. 6300.

The receipt of an oral or written threat of a bomb or the discovery of a suspicious device or note does not necessarily constitute an immediate evacuation. Nutrilite's Emergency Management Team is primarily responsible for assessing the threat. **Unless an actual device is located, the decision to evacuate will rest with Nutrilite's Emergency Manager, *not* emergency responders.**

Protection Services

- ❑ Immediately evaluate as to whether or not a valid threat has been received
- ❑ Utilize the Bomb Threat Call Checklist (Appendix A) to obtain as many details as possible
- ❑ If threat is a written note, place in envelope to preserve any fingerprints
- ❑ If written on door, wall, etc. cordon off area for evidence
- ❑ If suspicious device or package is found, **DO NOT TOUCH THE ITEM**, and clear immediate area
- ❑ Notify Emergency Manager
- ❑ Notify Area Wardens
- ❑ If warranted, notify Police Department (call 9-1-1)
- ❑ If warranted, initiate Incident Command System and identify Command Post
- ❑ If warranted, implement **Shelter-in-Place or Evacuation** procedures
- ❑ If warranted conduct search of suspected areas for suspicious device(s)

Emergency Manager

- ❑ Assess the situation and determine credibility of threat
- ❑ If warranted, contact the Police Department
- ❑ If warranted, consider activating Site Emergency Plan and Emergency Management Team
- ❑ Establish liaison with authorities
- ❑ Determine the necessity of searching the site
- ❑ If warranted, implement **Curtailment of Operations** procedures

Area Wardens

- ❑ Notify Protection Services
- ❑ If suspicious device or package is discovered, **DO NOT TOUCH THE ITEM**, and clear immediate area
- ❑ Brief persons within work areas
- ❑ If directed, initiate **Shelter-in-Place or Evacuation** procedures
- ❑ Take attendance and maintain control of employees and visitors
- ❑ Report missing employees and visitors to Protection Services/ Incident Commander
- ❑ Await further instructions from I/C

Guideline C – EARTHQUAKE

Earthquakes strike without warning. The effect of an earthquake varies depending on the size, duration, and location of the quake. Damage within a building depends on the type of design, architecture and structure of the building. **It is imperative to quickly move away from windows, free-standing partitions and shelves and Drop, Cover under and Hold on to a sturdy desk or table.** All other actions must wait until the shaking stops.

Protection Services

- ❑ After shaking has stopped, initiate **Evacuation** procedures, if warranted
- ❑ If earthquake is mild or moderate, direct Area Wardens to inspect and assess their work areas
- ❑ Initiate Incident Command System and identify Command Post
- ❑ Notify Emergency Manager
- ❑ Obtain account for all building occupants and determine extent of injuries, numbers injured, structure damage, etc.
- ❑ Initiate search and rescue of injured occupants from building and begin first aid treatment
- ❑ If evacuated, do not allow re-entry to any buildings until provided clearance
- ❑ Notify Fire Department of suspected breaks in utility lines or pipes

Emergency Manager

- ❑ Determine extent of injury and/or damage
- ❑ Ensure Evacuation procedures initiated, if warranted
- ❑ Consider activating Site Emergency Plan and Emergency Management Team
- ❑ Ensure that vital operations and services are continued as long as possible and make provisions for safeguarding vital records, facilities, equipment, and resources
- ❑ Consider shutting down non-essential systems
- ❑ If evacuation occurs, consider implementing **Curtailment of Operations** procedures

Area Wardens

- ❑ Give **DROP, COVER and HOLD ON** command. Instruct employees and visitors to move away from windows, shelving and heavy suspended light fixtures. Get under table or other sturdy furniture.
- ❑ Initiate first aid for any injured employees and visitors
- ❑ Make a visual check of work area for any damage; structural damage or cracks in walls, broken windows, fallen lights, shelving, etc.
- ❑ Notify Protection Services of status
- ❑ If building is heavily damaged, initiate **Evacuation** procedures
- ❑ Take roster and emergency supplies
- ❑ Utilize primary and/or alternate routes to a safe evacuation area - keep a safe distance from any downed power lines or damaged buildings.
- ❑ Stay alert for aftershocks. Implement Drop, Cover and Hold On procedures for all aftershocks.
- ❑ Take attendance and maintain control of employees and visitors
- ❑ Report missing employees and visitors to Protection Services/ Incident Commander

- ❑ Do NOT re-enter buildings until it is determined to be safe
- ❑ Track employees and visitors who depart the evacuation area
- ❑ Await further instructions from I/C

Guideline D – FIRE / EXPLOSION

The Nutrilite Botanical Concentrates Plant is protected by an alarm system that includes smoke detectors, sensors, pull boxes, horns, strobe lights, fire extinguishers, hose stations and sprinkler systems. Open flames, smoke, excessive heat radiating from an adjoining wall, ceiling, or floor, or a sudden loud noise and release of energy from expanding gas or mixture of chemicals may activate the system. When activated, the warning signal consists of intermittent horn blast and strobe lights. Small or isolated fires should be extinguished if safely possible.

The first person spotting a fire / explosion or dust cloud (potential for explosion) should activate the alarm system and contact the Protection Services at Ext. 6300

Protection Services

- ❑ Initiate **Evacuation** procedures
- ❑ Notify Fire Department – (call 9-1-1)
- ❑ Initiate Incident Command System and identify Command Post
- ❑ Notify Emergency Manager
- ❑ Determine the extent of the fire or explosion
- ❑ Obtain account for all building occupants and determine extent of injuries, numbers injured, structure damage, etc.
- ❑ Initiate search and rescue of injured occupants from building and begin first aid treatment
- ❑ Pass on information regarding accountability of employees and visitors, on injuries and location of fire to fire personnel
- ❑ Direct fire personnel to the fire scene
- ❑ If evacuated, do not allow re-entry to any buildings until provided clearance

Emergency Manager

- ❑ Ensure **Evacuation** procedures initiated
- ❑ Determine extent of injury and/or damage
- ❑ Consider activating Site Emergency Plan and Emergency Management Team
- ❑ Establish liaison with fire personnel
- ❑ Ensure that vital operations and services are continued as long as possible and make provisions for safeguarding vital records, facilities, equipment, and resources
- ❑ Consider shutting down non-essential systems
- ❑ Determine with Fire personnel if building is safe for use
- ❑ Consider implementing **Curtailment of Operations** procedures

Area Wardens

- ❑ Activate fire alarm
- ❑ Initiate **Evacuation** procedures
- ❑ Take roster and emergency supplies
- ❑ If explosion occurred, make a visual check of buildings for damage; structural damage or cracks in walls, broken windows, fallen lights, etc., and hazardous materials
- ❑ Take attendance and maintain control of employees and visitors
- ❑ Notify Protection Services of status

- ❑ Report missing employees and visitors to Protection Services/ Incident Commander
- ❑ Initiate first aid for any injured employees and visitors
- ❑ Do NOT re-enter buildings until it is determined to be safe
- ❑ Report any suspicious information about the fire to the I/C
- ❑ Track employees and visitors who depart the evacuation area
- ❑ Await further instructions from I/C

Guideline E – FLOOD

The Buena Park facility is susceptible to flooding from the Brea Creek, as well as runoff flooding (flash flooding) during periods of extreme downpour due to overloaded storm sewers.

Notification of a flood watch or warning may be received by commercial radio and television, telephone, emergency personnel, or the National Weather Service. A *flood watch* implies that flood conditions are a real possibility but are not imminent. A *flood warning* implies that a flood is imminent or in progress and that immediate precautions should be taken. If flood warning is issued, personnel will follow the local evacuation instructions issued by local government officials.

FLOOD WARNING

Protection Services

- ❑ Initiate Incident Command System and identify Command Post
- ❑ Monitor weather and flood conditions and report to Emergency Manager
- ❑ Ensure that flood information is distributed to the Area Wardens
- ❑ Utilize cameras on key areas to be monitored
- ❑ Provide barricades to flooded areas and reroute traffic as appropriate
- ❑ Initiate **Evacuation** procedures upon direction of Emergency Manager

Emergency Manager

- ❑ Consider activating Site Emergency Plan and Emergency Management Team
- ❑ Consider activating Flood Response Plan (Appendix E)
- ❑ Consider initiating precautionary **Evacuation** and **Curtailment of Operations** procedures
- ❑ Ensure that all personnel are notified when a precautionary evacuation has been initiated.
- ❑ Ensure that all vital equipment and resources are removed from the site or elevated to protect them from flood waters
- ❑ Direct hazardous waste to be removed from the complex or relocated as necessary to prevent contamination of flood waters
- ❑ Ensure that all centrally managed computers, computer records, and communication systems are protected from the effects of the flood
- ❑ Coordinate the removal from the site, elevation, or protection of all critical equipment and resources that might be damaged by flood waters

Area Wardens

- ❑ Keep employees and visitors appraised of the situation as information is received from Protection Services
- ❑ Initiate **Evacuation** procedures when directed by Protection Services
- ❑ Ensure that all persons have taken the appropriate action
- ❑ Take roster and emergency supplies
- ❑ Take attendance and maintain control of employees and visitors at the evacuation site
- ❑ Report missing employees and visitors to Protection Services/ Incident Commander
- ❑ Await further instructions from I/C

Guideline F – HAZARDOUS MATERIALS RELEASE

Every employee is responsible for understanding and responding to the reporting and evacuation procedures for hazardous materials incidences. **Except as permitted by regulation, employees will not be involved in the mitigation of hazardous materials releases requiring emergency response.** Release of hazardous materials requiring emergency response support from off-site agencies shall be conducted by the Orange County Fire Authority.

Onsite Hazardous Materials Release - Upon encountering a non-incidental hazardous leak, spill or vapor release (as defined by the Too MUCH Spilled Posters – Appendix C and posted in work areas), the employee should immediately contact their supervisor who will call Protection Services at 6300. If the supervisor or lead is not available, then the employee should immediately call Protection Services at 6300.

Offsite Hazardous Materials Release - Notification of a hazardous materials release occurring off-site, that may affect the Buena Park facility, may be received either by telephone, emergency personnel going door-to-door, and/or by Protection Services. On-site personnel and visitors will be notified and receive instructions to initiate **Shelter-in-Place** procedures.

Protection Services

- ❑ Determine severity/type of Hazardous Materials Release
- ❑ Initiate **Evacuation and/or Shelter-in-Place** procedures, if warranted
- ❑ Notify Fire Department – (call 9-1-1), if warranted
- ❑ Initiate Incident Command System and identify Command Post
- ❑ Notify Emergency Manager
- ❑ Obtain account for all building occupants and determine extent of injuries, numbers injured, structure damage, etc.
- ❑ Isolate anyone who is contaminated until emergency personnel can carry out decontamination procedures
- ❑ Pass on information regarding accountability of employees and visitors, injuries to fire personnel
- ❑ Direct fire personnel to the scene
- ❑ If evacuated, do not allow re-entry to any buildings until provided clearance

Emergency Manager

- ❑ Ensure **Evacuation and/or Shelter-in-Place** procedures have been initiated
- ❑ Determine extent of injury and/or damage
- ❑ Consider activating Site Emergency Plan, Emergency Management Team and Emergency Operations Center
- ❑ If there is a threat of airborne toxicity, consider shutting-off ventilation system in affected area
- ❑ Establish liaison with fire personnel
- ❑ Ensure notification in the event of an incident onsite that may affect surrounding areas
- ❑ Ensure that status updates and exposure estimates and projections are provided to offsite authorities on a regular basis

- ❑ Ensure that vital operations and services are continued as long as possible and make provisions for safeguarding vital records, facilities, equipment, and resources
- ❑ Consider shutting down non-essential systems
- ❑ Implement procedures for the cleanup of contaminated material, as required
- ❑ Consider implementing **Curtailment of Operations** procedures
- ❑ Determine with Fire personnel when building/site is safe for use

Area Wardens

- ❑ Notify Protection Services of severity/type of Hazardous Materials Release
- ❑ Initiate **Evacuation and/or Shelter-in-Place** procedures, if warranted
- ❑ Take attendance and maintain control of employees and visitors
- ❑ Initiate first aid for any injured employees and visitors
- ❑ Report missing/injured employees and visitors to Protection Services/ Incident Commander
- ❑ Do NOT re-enter buildings until it is determined to be safe
- ❑ Track employees and visitors who depart the evacuation area
- ❑ Await further instructions from I/C

Guideline G – MEDICAL EMERGENCY

SERIOUS MEDICAL EMERGENCY

DO NOT MOVE VICTIM UNLESS ABSOLUTELY NECESSARY!!! Immediately call Protection Services at ext. 6300. Give your name; describe the nature of the medial problem and the location of the victim.

Protection Services

- ❑ Notify Fire Department (call 9-1-1)
- ❑ Initiate Incident Command System and identify Command Post
- ❑ Notify Emergency Manager
- ❑ Provide escort for fire/ambulance personnel to the scene

Emergency Manager

- ❑ Establish liaison with authorities
- ❑ Consider remaining operational or implementing **Curtailment of Operations** procedures
- ❑ If operations curtailed, activate Site Emergency Plan and notify Emergency Management Team

Area Wardens

- ❑ Notify Protection Services
- ❑ Provide immediate aid to victim until arrival of emergency personnel
- ❑ Maintain control of employees and visitors
- ❑ Await further instructions from I/C

MINOR MEDICAL EMERGENCY

Provide First Aid. Use the first aid materials that are available in the nearest Department Office. After treatment, the victim's supervisor will be notified as well as Medical Services.

Guideline H – UTILITY EMERGENCY

Utility situations of an isolated nature (for example: power outage or water main break affecting one building or unit) that can be resolved quickly and safely may only require a partial evacuation or temporary shutdown of operations. If the situation cannot be resolved within a reasonable amount of time, operations may be curtailed as necessary.

Protection Services

- ❑ Determine the extent of the utility emergency and contact maintenance
- ❑ Notify Emergency Manager
- ❑ Notify Area Wardens
- ❑ If warranted, notify the appropriate utility company
- ❑ If warranted, initiate Incident Command System and identify Command Post
- ❑ If warranted, coordinate a fire watch for all areas which may be affected by a fire suppression impairment
- ❑ If directed by Emergency Manager, implement **Shelter-in-Place and/or Evacuation** procedures

Emergency Manager

- ❑ Determine type/extent of utility emergency
- ❑ If warranted, ensure notification of appropriate utility company
- ❑ If warranted, consider activating Site Emergency Plan, Emergency Management Team and Emergency Operations Center
- ❑ If warranted, implement **Shelter-in-Place and/or Evacuation** procedures
- ❑ If warranted, implement **Curtailment of Operations** procedures

Area Wardens

- ❑ Notify Protection Services of utility emergency
- ❑ If warranted, initiate **Shelter-in-Place or Evacuation** procedures
- ❑ Take attendance and maintain control of employees and visitors
- ❑ Await further instructions from I/C

Guideline I – WEAPONS / VIOLENCE

.

The type of protective actions taken will depend upon several factors, including the size, type, and location of the incident, the types of weapon(s) being used, the number of individuals involved, as well as the level of property destruction taking place. A deadly or dangerous weapon as defined by state and federal law includes, but is not limited to a gun, knife, metal knuckles, straight razor, noxious or irritating or poisonous gas, poison, other items used with the intent to harm, threaten or harass someone.

Protection Services

- ❑ Determine the nature of the weapons/violence emergency
- ❑ If warranted, ensure initiation of **Lockdown** procedures
- ❑ Notify Police Department (call 9-1-1)
- ❑ Notify Emergency Manager
- ❑ Initiate Incident Command System and identify Command Post
- ❑ Assess situation regarding location of person with weapon and potential for injuries
- ❑ If injuries are involved, notify Fire Department(call 9-1-1)
- ❑ Ensure protection and preservation of the crime scene and any related evidence
- ❑ Meet with law enforcement upon arrival and provide escort/directions to the scene
- ❑ Provide maps, blueprints, and other schematics of the site if requested

Emergency Manager

- ❑ Determine nature of the emergency
- ❑ If warranted, ensure implementation of **Lockdown** procedures
- ❑ Consider activating Site Emergency Plan, Emergency Management Team and Emergency Operations Center
- ❑ If warranted, implement **Curtailment of Operations** procedures
- ❑ Consider arranging for counseling services, critical incident stress debriefings

Area Wardens

- ❑ Stay calm and avoid confrontation if possible
- ❑ Obtain good description of individual and the type of weapon involved
- ❑ Notify Protection Services as soon as possible
- ❑ If warranted, initiate **Lockdown** procedures
- ❑ Take attendance and report missing employees and visitors to Protection Services
- ❑ Remain in Lockdown mode until law enforcement or Protection Services orders an evacuation or gives an all clear

Appendix

Appendix A – BOMB THREAT CALL CHECKLIST

EXACT WORDING OF THE INITIAL THREAT:

_____

_____

Time of Call_____ Length of call_____Sex of caller_____ Age_____

QUESTIONS TO ASK:

1. **When is bomb going to explode?** _____
2. **Where is it right now?** _____
3. **What does it look like?** _____
4. **What kind of bomb is it?** _____
5. **What will cause it to explode?** _____
6. **Did you place the bomb?** _____
7. **Why?** _____
8. **What is your address?**_____
9. **What is your name?** _____

CALLER'S VOICE:

_____Calm	_____Laughing	_____Lisp	_____Disguised
_____Angry	_____Crying	_____Raspy	_____Accent
_____Excited	_____Normal	_____Deep	_____Familiar
_____Slow	_____Distinct	_____Ragged	If voice is familiar, who
_____Rapid	_____Slurred	_____Clearing throat	did it sound like?_____
_____Soft	_____Nasal	_____Deep breathing	_____
_____Loud	_____Stutter	_____Cracking voice	_____

BACKGROUND SOUNDS:

_____Street noises	_____House noises	_____Factory machinery	_____Local
_____Restaurant	_____Motor	_____Animal noises	_____Long distance
_____Voices	_____Office machinery	_____Clear	_____Booth
_____PA system	_____Airplanes	_____Static	Other_____
_____Music	_____Trains		_____
			_____

THREAT LANGUAGE:

_____Well spoken	_____Foul	_____Incoherent	_____Message read
_____Poor	_____Irrational	_____Taped	by threat maker

REMARKS:_____

_____

Report call immediately to: *(fill in before distributing form)*_____ **Telephone #:** _____

Fill out completely, immediately after bomb threat. Date___/___/___. Telephone #: _____

Name of person who received call:_____**Position:** _____

Forward completed form to the Protection Services Department, ext. 6300

Appendix B – EMPLOYEE EMERGENCY ACTION PLAN

Nutrilite's Employee Emergency Action Plan

This Emergency Action Plan outlines an employee's responsibility under the Site Emergency Plan. If you have any questions, contact your Department Management. To view a copy of the Site Emergency Plan, contact Protection Services at ext.6300

 **If you discover a fire:**	• Pull the nearest fire alarm and/or call Protection Services at 6300. Provide your name and location of the fire • Notify other personnel in the immediate area • Use the fire extinguisher only if you have been trained to do so, your escape route is not blocked and the fire is small • Evacuate the area if the fire is not controlled quickly
 **If the Fire alarm sounds**	• Shut down equipment according to emergency procedures, if safe to do so • Evacuate the immediate area and proceed to the designated evacuation area • Remain in the assembly area until instructed by management
 **Evacuation**	• Evacuate the immediate area and proceed to the designated evacuation area • Remain in the assembly area until instructed by management • Do not re-enter building until determined safe

 **Medical Emergency**	• **Serious Medical Emergency**
	  ○ Call Security Services at 6300. Give name, nature of medical emergency and victim's location
	  ○ DO NOT MOVE VICTIM UNLESS ABSOLUTELY NECESSARY
	  ○ Provide immediate aid until arrival of emergency personnel
	• **Minor Medical Emergency**
	  ○ Provide First Aid, if trained, utilizing available first aid materials
	  ○ Notify victim's supervisor

 **Earthquake**	• **Drop, Cover and Hold On** under a sturdy desk, table or bench and hold the position until the ground stops shaking and it is safe to move • Stay away from windows, mirrors, cabinets, shelving and overhead heavy lighting fixtures, which could fall • Do not run or panic. Stay indoors, if safe to do so • Notify Floor Warden of any ill, injured or missing personnel • If evacuating building, be alert and prepared for aftershocks
 **Hazardous Materials Release**	• Notify Protection Services at 6300 immediately. Provide name, location and type of spill, including estimated quantity, and details of any injuries. • Shut down energized electrical equipment if possibility of fire or explosion • Evacuate the immediate area • Do not enter any area where you could be exposed to toxic chemicals or the fumes they emit • Do not attempt to clean up and/or control any spill unless properly trained to do so
 **Power Outage**	• Determine scope of outage and notify the area Supervisor and/or Protection Services at 6300 • Shut down any electrical equipment, according to emergency procedures, to prevent surge damage when power restored • Await direction from departmental management
 **Bomb Threat**	• Notify Protection Services at 6300 immediately and explain the situation • If suspicious device/package located, DO NOT TOUCH THE ITEM, evacuate the immediate area • Be prepared to fill out the Bomb Threat Report Form (located in Site Emergency plan)
 **Violence**	• Stay calm and avoid confrontation, if possible • Obtain a good description of individual(s) and weapon(s) involved • Notify Protection Services at 6300 • Follow Management/Floor Warden's directives if Lockdown procedures are initiated

Appendix C – HAZARDOUS MATERIALS RELEASE

The Protection Services Department is responsible for implementation of the Corporate Emergency Response for Hazardous Materials Releases. This includes receiving the initial spill report notification; performing initial spill assessment; securing the spill area from unauthorized or untrained personnel; and notification of off-site emergency response agencies, if necessary.

Manufacturing Divisions are responsible for ensuring that all non-incidental chemical releases are reported to Protection Services and effecting a safe and thorough evacuation of employees from the spill area, if such evacuation is ordered; and determining presence of all their evacuated employees at the evacuation area via roll-call once evacuation is complete.

The EH&S Department is responsible for Awareness Level training for all employees and Operations Level training for a select group of employees from each manufacturing division. EH&S is responsible for maintaining training records and documentation. The EH&S Department will also be notified of all release/spill incidents.

~~Response guidelines for the uncontrolled, non-incidental release of hazardous materials are specified in the Hazardous Materials Awareness Level Training video, which is shown to operations employees annually~~. ~~Response guidelines are as follows:~~

Description of stored chemicals and materials: Nutrilite stores various drums of corrosive materials in the following locations:

- Building 5 (Packaging)
  - outside of the maintenance fence (typically 2 55 gallon drums)
- Building 10 (SDM)
  - 1st floor and 2nd floor wash areas (usually 1-2 drums)
  - chemical storage room on other side of tote washing (typically 2-4 drums)
  - Behind bld. 10 in fenced in area near parking lot (four 200 gallon bulk tanks)
- Building 9 (Granulation)
  - 2nd floor CIP room (2 drums)
- Building 14 (Granulation/R&D Warehouse)
  - Depending on business needs 2-6 drums
- Chemical Storage Sheds behind bld. 14
  - Combination of waste and new corrosives (usually 2-6 drums)
  - 1 waste drum of IPA in the Chemical Storage Shed (#2) behind building 14
  - Motor oil 55 gallon drums (typically 1 waste drum and one new drum)
- Building 14 (R&D)
  - 1 drum of IPA stored in the walk-in freezer

Procedures to Prevent Adverse Impacts on the Environment/Sewers/Soil:
To lessen the likelihood of a pollution event related to spills, Nutrilite employees the following control methods:

- Drums of chemicals stored in drum holders (secondary containment) which will hold /contain spills and leaks (these are referred to as *cupcake holders*);
- Bulk tanks are enclosed in secondary containment area;

- Storage sheds have secondary containment;
- Numerous spill kits are kept near points of use and storage;
- Spill kits are inspected monthly by Protection Services to ensure adequate supplies are on hand in the event of a spill;

Spill response guidelines are as follows:

1. Be prepared to provide the following information to Protection Services:
    - Are there any injuries; are any employees hurt
    - Is there a fire
    - Location of spill; building number, department, floor
    - Chemical or product name of the material involved, or "R" number
    - Description of spill condition and estimated quantity of materials involved
    - Any apparent hazards in the area of the release; e.g. ignition sources, etc.
    - Assessment of whether the spill has entered, or is likely to enter, the storm or sanitary sewer and cannot be contained

2. If this spill is considered an emergency according to the TOO Much Spilled Guidelines (see page 84), Protection Services will secure the area and contact the Orange County Fire Authority. If a Chemical Spill incident occurs on-site, local response agencies will be notified by telephone:
    - Local Fire Emergency Response Personnel: 9-1-1
    - The County of Orange Hazardous Materials Management Division: (800) 698-6942 or (714) 538-3501
    - Department of Environmental Health (CUPA): 714-433-6406
    - If the spill enters the sanitary sewer (not storm sewer), also call Orange County Sanitation District at (714) 962-2411. They will want the following information during the call:
        - Date and time of incident
        - Duration of incident
        - Flow rate or volume of spill
        - Entry point into the sanitary sewer
        - Preventive action taken
        - Cause of the spill
        - Constituents (i.e. chemicals) of concern

      NOTE: A written notification to OCSD is due within 5 days of the incident and must contain the above information.

3. If conditions warrant, precautionary protective actions, including Shelter-in-Place and/or Evacuation may be initiated. Protective actions shall be implemented in the following methods: by Protection Services based upon reported information or alarm condition; by request to Protection Services or local management; or by the Orange County Fire Authority.
    - Protective Shelter-in-Place generally involves staying indoors, shutting all doors and windows, and shutting off the ventilation system(s).

- If a precautionary Evacuation is warranted, personnel should report to the designated Evacuation Areas. Evacuation routes have been pre-determined for all buildings and facilities located at Buena Park. The emergency evacuation routes and outside evacuation areas are indicated on emergency displays posted within the work locations in each building. Area Wardens will check their work areas to ensure that all persons have taken the appropriate action and will account for their personnel at the evacuation area and report this information to the Incident Commander. Personnel should remain at the evacuation area for further instructions.

4. Nutrilite's Emergency Manager may elect to activate the EOC based upon the severity of the emergency event. Full or partial activation of the EOC can be initiated by the Emergency Manager or their Designee.

5. If the release is determined to be an incidental release, the Operations Level trained employees may offer clean-up services to the department, or the department may elect to complete the cleanup with their own personnel. The affected Department Supervisor will notify the EH&S Department of the incidental release and cleanup.

6. In the event of an emergency response, Protection Services will notify the EH&S Department of the spill/release. The EH&S Department will activate departmental reporting procedures to determine the need to report the release to local and state government authorities and will contact the appropriate corporate executive management.

7. Personnel will be recalled by the all-clear notification procedure or by the Population Protection and Recall Guidelines when conditions permit.

ACCESS BUSINESS GROUP NUTRILITE

Nutrilite
Spill Response Guidelines

For any spill or release:

1. Employee leaves the area and contacts Supervisor or Department Management.
2. Management requests the Departmental Spill Clean-up Crew to report to the area to evaluate the spill based upon guidelines.

Too

M **More than 1** chemical/gas has spilled/released simultaneously and are mixing/reacting?

U **Unknown** chemical/gas has spilled/released?

C **Can't contain** the spill/gas within the building using department & operating containment controls?

H **Hazardous** chemical/gas has spilled/released?

The hazardous chemicals in my department include Hazard Codes of:

A: Acids	E: Explosives		**3** in the Hazard Code >5 gallons or >50 lbs.
B: Bases	F: Flammables	*and*	
D: Dust Explosives	C: Combustibles		**2** in the Hazard Code >50 gallons or >500 lbs.
O: Oxidizers	I: Ignitables		

Spilled/Released?

If no Clean-up Crew is available or if the release meets the criteria of these guidelines, contact Security or the EH&S Department:

	Buena Park	Lakeview
Security	**6300**	**6536**
EH&S	**7944**	**6832**

Date of Issue: Jan. 1, 2005

Appendix D – POST EARTHQUAKE ASSESSMENT

NUTRILITE
Exclusively from Amway

Date: _____

POST-EARTHQUAKE SAFETY ASSESSMENT

The purpose of this assessment is to determine the safety of a building main systems: structure, utilities, fire/life safety systems, room comfort, lighting, storage vessels, area access and egress, walk surfaces, and general air quality in order to ensure a safe environment for employees to reenter the building post-earthquake. This evaluation does not address the overall functionality level of the building and its related manufacturing equipment and systems.

**USE: H=Heavy, M=Moderate, L=Light, N=None Apparent

IDENTIFY DAMAGE AND INJURIES	SPRINKLER	FIRE OUT	SMOKE	ALARMS	GAS LEAK	CHEMICAL	ELECTRICAL	COLLAPSED	DOORS	FLOOR	WALL	CEILING	ROOF	WINDOWS	LIGHTING	WATER LEAK	SPRINKLER	TRAPPED	INJURED	CENTRAL PLANT	HVAC	RESTROOMS
TIME	BUILDING/FLOOR	FIRES				HAZARDS			STRUCTURAL DAMAGE**								PEOPLE			UTILITIES		

Notes: _____

NOTE: At any point during the assessment, if a structure/building is determined to be unsafe, no further inspection will be conducted and the assessment will continue with the next structure. Red highlighted topics may automatically determine the building to be an uninhabitable structure.

- **Fires**
  - Check for fire/extinguished fire
  - Check for smoke
  - Check for activated strobes or audible alarms
- **Hazards**
  - Determine if there are any gas leaks
  - Determine if there are any exposed/live electrical wiring
  - Determine if there are any chemical spills
- **Structural Damage**
  - Determine if building has collapsed
  - Inspect access doors and windows for any damage
  - Inspect floors for safe walkable surfaces free of any protrusions, slips, trips and falls
  - Inspect ceiling tiles, HVAC fixtures, fire sprinklers, lighting fixtures and any other overhead items for defects
  - Inspect walls for large cracks (wide enough to insert finger)
  - Inspect for roof membrane/flashing and/or roof tower damage
- **People**
  - Check structure for injured, trapped and/or deceased people
- **Utilities**
  - Determine if the Central Plant is operational
  - Determine if HVAC system is operational
  - Determine if urinal and toilets are operational
- **Miscellaneous**
  - Determine if the electrical panel panels, transformers and switch gear in place
  - Check elevators for normal operations
  - Inspect and check water storage systems
  - Inspect hot water heaters, chill water units, water treatment systems
  - Inspect overhead cranes and hoists for proper operations
  - Determine if potable water still being feed to the building
  - Determine if surrounding roadways are accessible

Appendix E – FLOOD RESPONSE PLAN

California is the nation's most populous state with 38.5 million residents who both live and have built a massive economy in an arid desert. State's dams, canals, and infrastructures have never been tested by any prolonged flood event in recent history. The fact is, California is on record for having staggering wet periods with above average rainfall that can deliver devastating floods without notice. Currently, the National Weather Service's Climate Prediction Center, along with numerous other experts, have predicted that California has a 95 percent chance of experiencing a devastating El Nino event in 2016 and it may be one of the most fiercest El Nino events ever recorded in Southern California. The Southern California storm season generally begins in late October and continues through the end of April.

Nutrilite, located at 5600 Beach Boulevard, Buena Park, CA, is located directly within Flood Zone 06059C0038J and is managed by the Orange County Flood Control. The south perimeter of the campus is bordered by the Brea Creek flood channel which runs approximately 200 yards, east to west, along the south border before crossing Beach Boulevard. Most of the surrounding streets parallel Beach Boulevard and intersect the adjacent railroad system tend to flood during periods of significant rain fall and create traffic flow issues in and around the campus. The most significant risk for a potential flood is to the South Complex due to the proximately to the channel and the potential the channel has to deliver a large amount of water in a short time period. The South Complex further has a number of perimeter doors that are approximately 24 to 36 inches above the channel and potentially could be breached by water allowing water to enter the interior areas of the complex. Upon our recent inspection, only one storm drain was located in or around the South Complex. Water will naturally flow to the lowest points and the South Complex has been graded in order to flow back out onto Beach Boulevard.

PURPOSE: The purpose of this plan is to identify procedures in accordance with the existing Site Emergency Plan and to prepare for a potential flood event. This plan will also define actions to be taken prior to any flood event to best protect the physical buildings, protect manufacturing, and to reduce potential down time to the plant. It further prioritizes those actions to be taken and to who has the responsibility for them in the event of an event.

FLOOD WATCH: A "flood watch" is defined as any warning issued by either local officials or services indicating that there is a strong likelihood for a flood event in the area to take place. In the event of a flood watch, Facilities and Protection Services will be responsible to monitor the perimeter to include doorways, parking lots, and the adjacent Break Creek channel. Special attention should be placed on the channel and the South Complex perimeter and doorways. Monitoring also includes watching for local weather updates and news reports specific to the flood watch. The Site Emergency Manger will be advised of the issued flood watch and any current conditions. Updates will provided every hour or until the warning is downgraded. The Site Emergency Manger will provide directions and follow the existing site emergency plan to include authorizing the implementation of flood supplies, staging of flood supplies, or any other actions required in support of the business operations. The Site Emergency Manger may further activate the Emergency Operations Center. If at any point the Brea Creek flood channel reaches a height of less than one foot from breaching, Protection Services and Facilities will update the Site Emergency Manger as well as issue a Send Word Now alert to Nutrilite Leadership and immediately begin deploying emergency barriers.

FLOOD WARNING: A "flood warning" is issued by local officials or services and indicates a flood event is imminent somewhere in the general vicinity. In the event of a flood warning, both Facilities and Protection Services will monitor perimeter areas, both exterior and interior doorways, roof tops, parking lots, and the Brea Creek flood channel. They will continue to monitor the local weather and news reports and conduct patrols in and around the grounds. Special attention should be given to the Break Creek flood channel, perimeter interior and exterior doorways, building roof tops, and the chiller plant. The Site Emergency Manger will be advised of the warning as well as current site conditions. Updates will be communicated every thirty minutes or until the event has ended. The Site Emergency Manger will activate the Emergency Operations Center (EOC) and prepare the site for potential business disruptions. Protection Services will issue Nutrilite leadership Send Word Now alerts with updated information as needed. Facilities, Protection Services, and Custodial will begin to deploy flood barriers to "high priority" locations along the South Complex to include doorways 36 or less inches above the Brea Creek channel (building 10, 9, 8, 6, 4, 3, and 1).

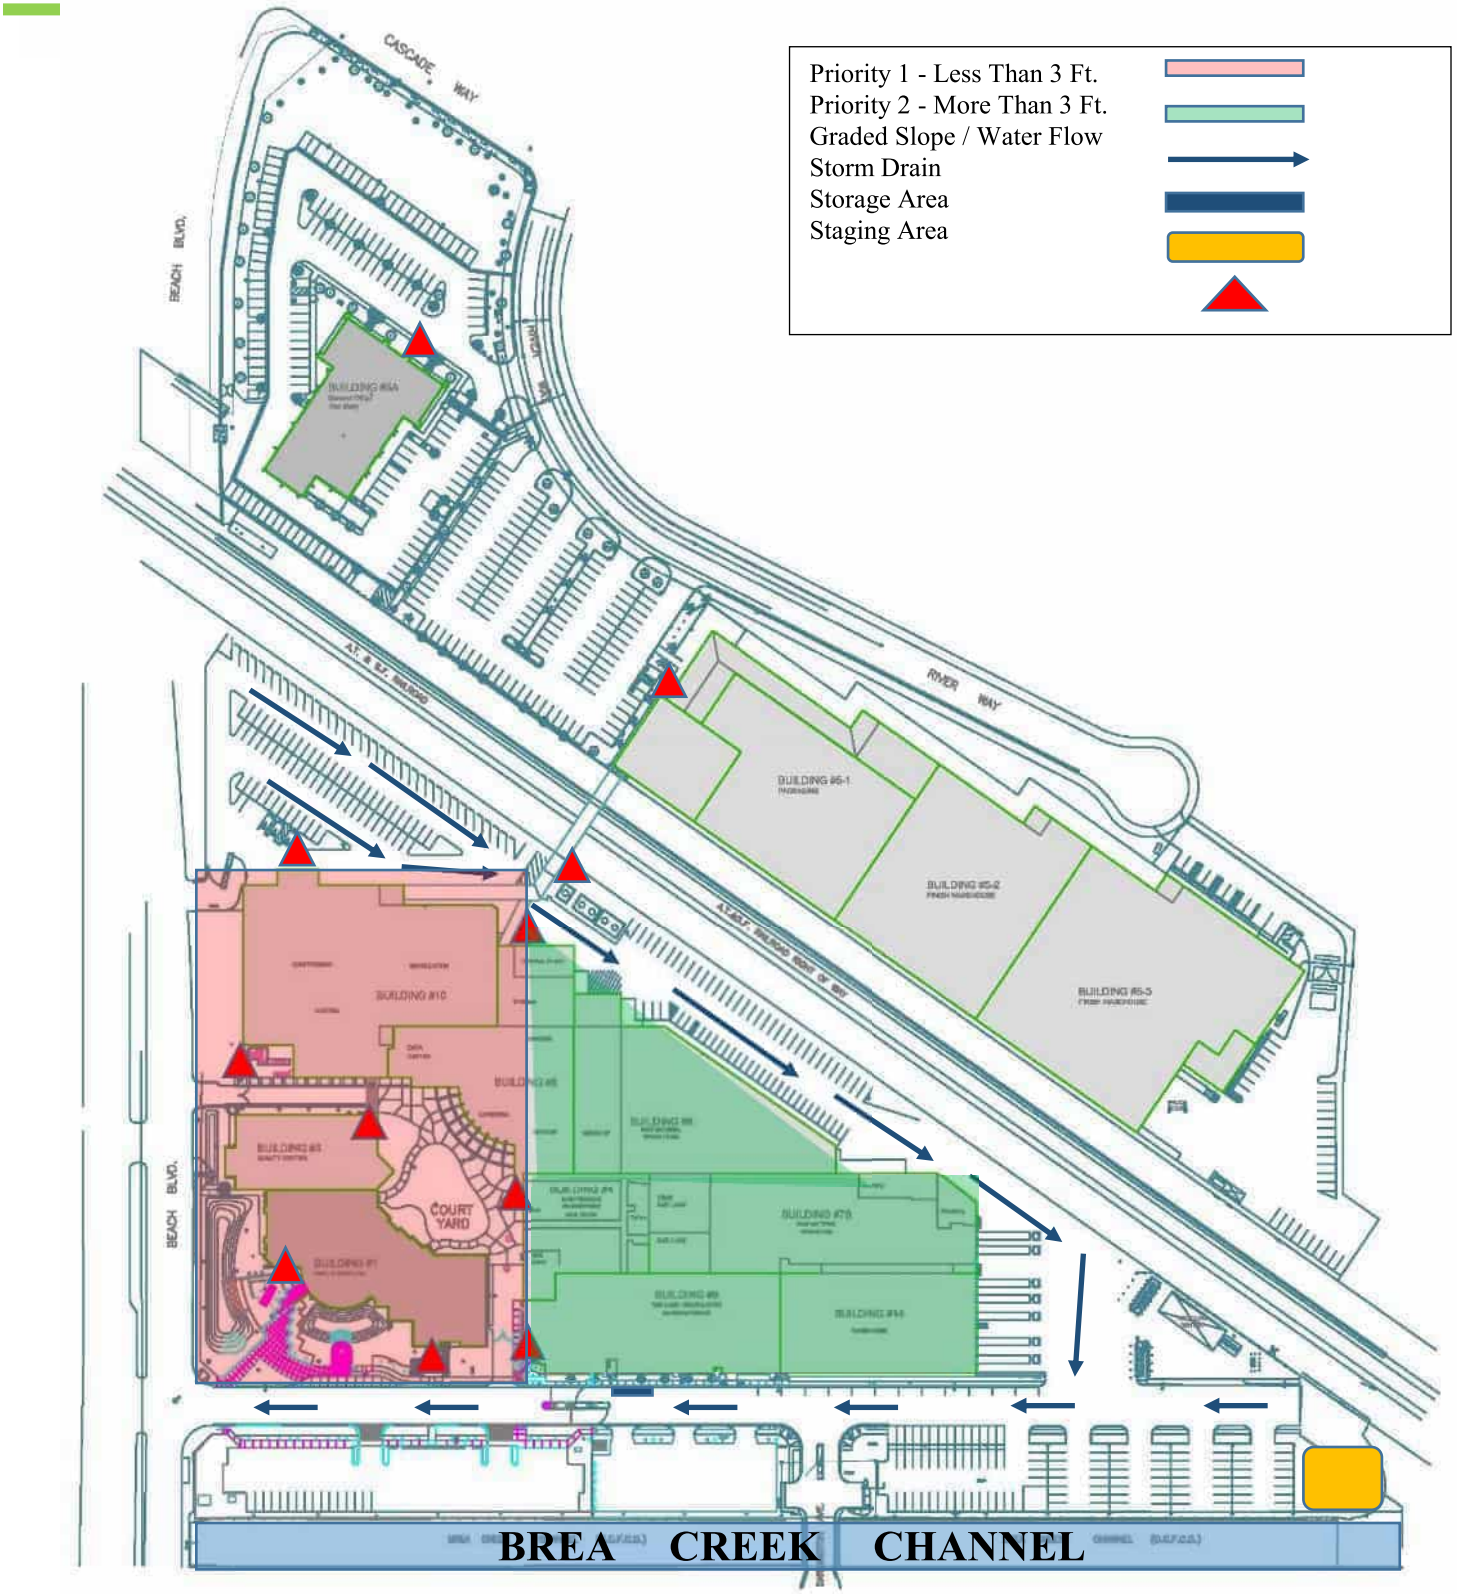
PREVENTATIVE MAINTENANCE: Protection Services, Custodial and Facilities are tasked with conducting frequent checks of inventory and developing preventative maintenance patrols to ensure all required equipment is in general

working order, that supplies are on hand, and the campus is prepared to respond to a flood event. Facilities will be responsible for the maintenance of pumps, drains, and mechanical equipment as well to ensure a supply of wet vacs, carpet fans, and dehumidifiers are maintained in Nutrilite inventory. Protection Services is responsible to ensure flood supplies are on site, staging locations are set up and monthly inspections are completed for all required equipment. In addition, Protection Services will conduct monthly inspection of the Brea Creek channel and work with OC Flood Control on maintenance issues as needed. Custodial is responsible to ensure mops, towels, water extraction and absorbent equipment is available. Facilities will further be responsible to ensure an emergency "water removal" or "water damage" vendor is readily available.

PROTECTION PRIORITIES:
SOUTH COMPLEX – Building 10, 8, 6, 4, 3 , 1, 9

- Manufacturing Areas
- IT, Security, Cooling Tower, Electrical Closets
- NCOH Lobby, Building 9 Lobby

CLEAN UP:



- Business Resumption Plan (24 - 48 Hours)
- Removal of remaining water, mud, and debris
- Test water quality for pathogens
- Salvageable materials and equipment - inventory damages
- Remove deployed flood equipment
- Cleaning and drying of essential equipment
- Dehumidify/dry all wet areas.
- Preserve equipment and materials
- Salvageable supplies and business equipment
- Conduct safety walkthrough

Storm Operations Center: The OC Public Works/Storm Operations Center is activated when heavy to extreme rainfall is predicted or occurs and/or when storm run-off conditions are such that there is a probability of flood damage. The Operations Center will monitor the emergency storm situation on a 24-hour basis. Flood control channels will be patrolled and if needed, emergency equipment and personnel will be deployed to reinforce the levees.

- 714.955.0200
- 714.955.0378 fax

Emergency Operations Center: If conditions worsen and progress into Local Emergency conditions, in addition to the Storm Operations Center, the County's Emergency Operations Center will also be activated. News media will be notified of the Local Emergency declaration. In such case, you can contact both the Storm Operations Center and the Emergency Operations Center.

- 714.628.7054
- 714.628.7008 24-hour emergency dispatch
- 714.628.7154 fax

THE ITEMS NOTED BELOW WERE OBSERVED DURING COURSE OF THE SITE VISIT. ANY VIOLATIONS OBSERVED MUST BE CORRECTED

OPENING COMMENTS

INSPECTOR COMMENTS
On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Melisa Hernandez, EHS manager. Inspection was conducted with Michael Palazzola of OCHCA.

Walked throughout the facility. Observed hazardous waste storage areas.

Facility manufactures a variety of different vitamins, this is the production side of the facility. Most of the waste the facility generates is from the Quality assurance labs and off spec material.

Containers were closed and properly labeled. There was one 55 gallon drum of hazardous waste that was not closed properly, the funnel was in the bung of the drum and the funnel did not close to prevent a release.
The hazardous waste accumulation area had adequate aisle space. Empty drums were properly labeled as empty.

The following documents were available and reviewed: manifests, biennial report, emergency contingency plan, documented annual employee training, and written inspection schedule and log.

The dumpster/enclosure was observed, no signs of dumping.

Based upon their 2016 manifests, this facility is no longer a RCRA LQG, they are now a SQG.

Ownership and employee count were confirmed, facility has 750 employees.

VIOLATIONS OBSERVED

I145 - All hazardous waste containers were closed when not in active use Failure to properly close hazardous waste containers when not in active use. 22 CCR 15 66265.173
-Used oil drum had a funnel in the bung and was not closed to prevent a release while not actively adding or removing waste.

-Maintain drum to be closed to prevent a release while not actively adding or removing waste, please correct this violation within 30 days.

HAZARDOUS WASTE GENERATOR INSPECTION REPORT

FACILITY NAME: NUTRILITE-ACCESS BUSINESS GROUP	FACILITY ADDRESS: 5600 BEACH BLVD, BUENA PARK, CA 90621
MAILING ADDRESS: 5600 BEACH BLVD, BUENA PARK CA 90622	CERS ID: 10512649 EPA ID: CAR000168666
C/O - OWNER: ACCESS BUSINESS GROUP LLC	INSPECTOR: KYLE FENNESSY
FACILITY ID: FA0024067 / RELATED ID: PR0029531 / SERVICE: A01 - ROUTINE INSPECTION	INSPECTION DATE: 11/6/2018
PROGRAM DESCRIPTION: 5117 - HAZARDOUS WASTE GENERATOR 501+ EMPLOYEE	REINSPECTION DATE: NEXT ROUTINE

Consent to enter, inspect, and take photos of the facility was given by: Melisa Carlos, EHS Analyst

The following items have been inspected. If there were violations, this document constitutes a Summary of Violations and Notice to Comply and the Violation Degree column is marked Minor, Class I, or Class II. A violation that is corrected at the time of inspection is marked COS. Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

IN = IN COMPLIANCE OUT = OUT OF COMPLIANCE NA = NOT APPLICABLE UD = UNDETERMINED COS = CORRECTED ON SITE

Violation Status	Viol No.	Summary	Violation Degree
☐ ■ ☐ ☐ ☐ ☐	I026	Maintains adequate aisle space Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Department that aisle space is not needed for any of these purposes. 22 CCR 12 66262.34(a)(4); 22 CCR 15 66265.35	CUPA - MINOR VIOLATION COMPLY BY: 12/6/2018

Inspector Comments:

OBSERVATION: The hazardous waste storage area located in the outdoor storage container did not have adequate aisle space allowing for unobstructed movement. Approximately 4-5 pallets of drums were observed to be stored without proper aisle space, and were difficult to reach and read labels. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that adequate aisle space has been provided within 30 days.

Overall Inspection Comments:

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Melisa Carlos, EHS Analyst.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Manifests were available and reviewed.

Employees are reported to be trained.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

HAZARDOUS WASTE GENERATOR INSPECTION REPORT

Facility Name	SITE ADDRESS	CERS ID	INSPECTION DATE
NUTRILITE-ACCESS BUSINESS GROUP	5600 BEACH BLVD, BUENA PARK, CA 90621	10512649	11/06/2018

Please note that a SB-14 Hazardous Waste Source Reduction Report will be required to be completed for the year 2019 if the facility passes the Large Quantity Hazardous Waste Generator threshold for the year 2018.

ATTENTION: There is 1 item marked above in violation. To verify compliance, a reinspection may occur at any time after the indicated correction date for each violation. Non-compliance could result in reinspection fees, permit revocation, and/or administrative, civil, or criminal penalties. Any time granted for correction of the violation(s) does not preclude enforcement action by the Orange County Environmental Health Division or any other agencies.

Signing for the receipt of the above report is not an admission of the facts of the violations set forth herein.

ADDITIONAL FEES:
Uncorrected violations may lead to follow-up actions, which may incur additional fees. The purpose of these fees is to shift costs away from compliant operators and impose fees on those facilities that fail to readily comply with the applicable laws and regulations. The amount of the fee is to cover all of the cost associated with the service. For the most current fees, please refer to http://ochealthinfo.com/eh/home/fees or call (714) 433-6000.

Consent to enter, inspect, and take photos of the facility was given by: None on File

OPENING COMMENTS

In office for off-site re-inspection following a routine inspection. Facility has provided a complete materials inventory to the agency via email. Although some materials listed are considered hazardous at high concentrations, the materials that are used for supplements are regulated under the FDA. Since they are regulated under the FDA, they are not required to be regulated by Environmental Health. Non-supplement hazardous materials were added to the chemical inventory on CERS. Facility has uploaded an updated site map and emergency response contingency plan. Map and plans are accurate and were accepted by the regulator. Violations I632, I169, I736 have been corrected.

FACILITY ID FA0024067	RELATED ID PR0029531	SERVICE: A01 - ROUTINE INSPECTION	INSPECTION DATE 10/29/2019
PROGRAM DESCRIPTION 5217 - RCRA HW LQG 501+ EMPLOYEES			REINSPECTION DATE: NEXT ROUTINE

Consent to enter, inspect, and take photos of the facility was given by: Melisa Carlos, EHS Analyst

OPENING COMMENTS

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Melisa Carlos, EHS Analyst.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Waste observed on site:
- Sodium Hydroxide
- Aerosol waste
- Waste oil
- Zinc Copper waste
- Cellulose
- Collagen
- Ethyl waste
- Lab waste
- Alcohol waste
- Methyl Hex waste

Manifests were available and reviewed. Waste hauled approximately every month. Manifests for 2018 and 2019 indicate facility is a RCRA Large Quantity Generator.

Employees are trained. Training records include employee name, title, and frequency of training. Records are incomplete and do not include job descriptions.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

Facility is required to complete a Biennial Report. The report is due March 1, 2020.

SB14 documentation not available for review. Missing documents include source reduction, hazardous waste management performance, and summary progress reports.

VIOLATIONS OBSERVED

I023 - Met all requirements for hazardous waste satellite accumulation Failure to meet the following conditions of satellite accumulation regulations: • Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator • Total time hzardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accumulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. • The generator complies with sections 66265.171, 66264.172, and 66265.173(a). • The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information • Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area • 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated 22 CCR 12 66262.34(e)
OBSERVATION: Observed one 55gal drum of waste aerosol cans with accumulation start date of 10/23/18. Satellite waste cannot accumulate on site for greater than 365 days. CORRECTIVE ACTIONS: Have aerosol waste disposed of using a hazardous waste hauler immediately and provide manifests to the agency.

RCRA LQG INSPECTION REPORT

Facility Name	Site Address	CERS ID	INSPECTION DATE
NUTRILITE-ACCESS BUSINESS GI	5600 BEACH BLVD, BUENA PARK, CA 90621	10512649	10/29/2019

I047 - Prepared a summary progress report and submitted it to the DTSC every four years Failure of a large quantity generator to prepare a summary progress report every four years, using DTSC's Form # 1262 (3/99) titled "Summary Progress Report". 22 CCR 31 67100.9
OBSERVATION: Facility failed to submit a summary progress report (SB14) to DTSC and failed to keep a copy on site for review. Facility must submit report for the years 2015-2018 and must keep a copy on site at the generating facility. CORRECTIVE ACTIONS: Create and submit a summary progress report to the DTSC, including a source reduction plan and hazardous waste management performance report. Keep copies of the reports on site for review. Send documents to the agency within 30 days.

VIOLATIONS OBSERVED

I126 - Trained facility personnel annually and maintained required documentation until closure Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a writted description fo the type and amount of both introductory and continuing training that will be given to each person filling a position. 22 CCR 12 66262.34(a)(4); 22 CCR 15 66265.16
OBSERVATION: Hazardous waste training records do not include job descriptions for all employees listed. Training records are to include employee name, job title, job description, and training frequency. CORRECTIVE ACTIONS: Provide list of job descriptions and the training matrix to the agency within 30 days. Keep job descriptions with training records on site.

I562 - Labeled all containers or portable tanks containing hazardous waste Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. 22 CCR 12 66262.34(f)
Observed one 55gallon drum of corrosive waste with hazardous properties mislabeled as "Flammable" stored next to waste labeled as corrosive. Flammable and corrosive wastes are to be stored in separate areas in order to prevent a fire hazard. EHS analyst confirmed waste is corrosive and corrected label during inspection. Violation corrected on site.

OPENING COMMENTS

In office for off site re-inspection following a routine hazardous waste inspection. Facility has provided Source Reduction Report (SB14) document to the agency via email. SB14 document reports plans to reduce waste from three waste streams: solvent lab waste, aerosols, saniwise six. SB14 document includes appropriate information and elements from the required summary progress report, hazardous waste management performance report, and source reduction review. Report indicates waste streams have been reduced from past levels and plans are in place to further reduce waste generation. SB14 document reviewed and accepted by regulator. Violation I047 corrected.

☐ ■ ☐ ☐ ☐ ☐	I126	Trained facility personnel annually and maintained required documentation until closure Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a writted description fo the type and amount of both introductory and continuing training that will be given to each person filling a position. 22 CCR 12 66262.34(a)(4); 22 CCR 15 66265.16	**CUPA - CLASS II VIOLATION** **COMPLY BY: 12/03/20**

Inspector Comments:

Training records are missing the following elements: employee job and job description. Facility must provide the missing elements to the agency within 30 days. Violation will start at Class II since violation is recalcitrant.

Violation Status	Viol No.	Summary	Violation Degree
☐ ■ ☐ ☐ ☐ ☐	I206	Prepared a Biennial Report, submitted to DTSC, and kept for 3 years Failure of a large quantity RCRA generator to prepare the Biennial report (Form 8700), and submit to DTSC by March 1st on even numbered years ; and maintain it onsite for three years. 22 CCR 15 66262.40(b), 66262.41	**CUPA - CLASS II VIOLATION** **COMPLY BY: 12/03/20**

Inspector Comments:

Biennial report for previous years is not on site and available for review. Biennial report was due 03/01/20 and must be completed since site had been a RCRA LQG in previous years. Send biennial report to the agency within 30 days.

RCRA LQG INSPECTION REPORT

Facility Name	Site Address	CERS ID	INSPECTION DATE
NUTRILITE-ACCESS BUSINESS GI	5600 BEACH BLVD, BUENA PARK, CA 90621	10512649	11/03/2020

Overall Inspection Comments:

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by manager Melisa Carlos.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Waste observed on site:
- Lab waste (methanol, mixed corrosive waste) - Several 1 gallon glass bottles in lab area, 55gal drum in storage
- Absorbent waste - 55gal
- Used oils - 55gal
- Aerosol waste - 55gal
- Acid cleaner - 10gal
- Hand sanitizer - 25gal
- Waste sulfates - 55gal
- Methanol waste - 30gal

Manifests were available and reviewed. Waste hauled approximately every two weeks. Facility is a non-RCRA large quantity generator. Facility has not generated enough RCRA waste within the last 12 months to be a RCRA LQG, will change program of site to status: non_RCRA 500+ employees.

Training records were available for review. Facility must include a list of job titles and descriptions with training records.

Emergency plan is posted in safety office.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

Facility must enter correct EPA ID Number into CERS.

ATTENTION: There are 2 items marked above in violation. To verify compliance, a reinspection may occur at any time after the indicated correction date for each violation. Non-compliance could result in reinspection fees, permit revocation, and/or administrative, civil, or criminal penalties. Any time granted for correction of the violation(s) does not preclude enforcement action by the Orange County Environmental Health Division or any other agencies.

SIGNATURE(S) OF ACKNOWLEDGEMENT

OPENING COMMENTS

In office for off site re-inspection following a routine hazardous waste inspection. Facility has provided training records via email for all employees that handle hazardous waste. Training records include training date, job title, and a job description page was included in the facility's email. Training records reviewed and accepted by regulator. Violation I126 corrected.

Biennial report has not been received by the county. Violation I206 remains uncorrected.

The following items have been inspected. If there were violations, this document constitutes a Summary of Violations and Notice to Comply and the Violation Degree column is marked Minor, Class I, or Class II. A violation that is corrected at the time of inspection is marked COS. Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

Overall Inspection Comments:

On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by manager Melisa Carlos.

Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled.

Waste observed on site:
- Absorbent waste = 55gal
- Aerosol waste = 110gal solid
- Used oil = 60gal
- Waste cosmetics = 220gal
- Sodium Hydroxide = 30gal
- Waste cleaner = 5gal
- Antifreeze = 5gal
- Waste vortex = 55gal
- Solvent Lab waste = 110gal
- Waste hydraulic oil = 55gal

Manifests were available and reviewed. Waste hauled approximately every two weeks. Facility is a large quantity generator of CA waste.

Employees are reported to be trained. Training records include all required elements.

SB14 and biennial report available for review.

Emergency plan is posted in offices and waste storage areas.

No hazardous waste or universal waste observed in the dumpster/enclosure area.

No violations were noted. Orange County Environmental Health greatly appreciates your efforts to comply with all health, safety, and environmental laws and regulations applicable to your facility.

Inspector Comments:

OBSERVATION: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Missing materials: EcoStar, Q Purple, XY bleach, Waste cosmetics. Incorrect amounts: Argon, helium, Quorom Clear, Quorom Pink. CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities within 30 days.

Overall Inspection Comments:

On site for routine hazardous materials and business emergency plan inspection. The inspection was conducted with manager Melisa Carlos.

Observed the facility and inspected hazardous materials storage. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure:

- **AC55 Red = 55gal**
- **Argon Gas = 1500cuft**
- **Conquest cleaner = 385gal**
- **Formula 815 = 110gal**
- **Freon = 1000cuft**
- **Helium = 1500cuft**
- **Lead acid batteries = 500gal**
- **Propane = 300gal**
- **Nitrogen = 2000cuft**
- **Quorom Clear = 495gal**
- **Quorom Pink = 660gal**
- **Vortexx = 110gal**
- **Waste flammables = 110gal**

The following are not listed on the CERS inventory:

- **EcoStar =60gal**
- **Q Purple = 165gal**

Subject: Soil and Ground Water
Contamination Study
(CECC Project No. 86-42209-01)

Dear Mr. Donovan:

This report presents the results of our soil and ground water contamination study for your facility. This work was conducted in accordance with our proposal dated 2 December 1986, authorized by you on December 11, 1986.

Background Information

Nutrilite Products, Inc. was directed to develop and submit a site assessment plan to the Orange County Health Care Agency (County) relative to gasoline contaminated soil, as indicated in a County letter dated November 18, 1986. Our site assessment plan was submitted on behalf of you to the County on December 18, 1986. The County approved our plan on January 8, 1987 with some modifications. We submitted an addendum to our original assessment plan to the County on January 13, 1987.

Field Exploration

We conducted exploratory drilling at the referenced facility on January 13 and 14 and February 16, 1987. For locations of the facility and our borings, you should refer to Figures 1 and 2 (following text). Five 8-inch diameter hollow-stem auger holes were drilled to depths of 55 feet around the tank cavity.

The drilling operation was performed under the supervision of a Certified Engineering Geologist from our office. Borings B-1 through B-4 were continuously logged by a staff geologist at the time of drilling. Soil samples were collected at 5-foot intervals in each boring. Two ground water samples were extracted from boring B-4. Initial on-site screening of the soil samples was conducted using a Photovac Model Tip II photoionization detector. All samples collected were immediately sealed and

A Wholly Owned Subsidiary of
The Converse Professional Group

placed in an ice chest for shipment to a state certified laboratory. A sample chain of custody record was established and maintained throughout the program. A copy of this record is attached in Appendix B. We drilled boring B-5 on February 16, 1987 to obtain a second set of ground water samples for re-analysis. Boring B-5 was not logged during the drilling operation.

Drill spoils were placed immediately into Dot 17H steel drums, which were properly labelled. These drums are presently being stored at the facility. The borings were backfilled with a sand/cement slurry to minimize downward migration of contaminants that might be present.

Subsurface Conditions

In general, the subject site is underlain by older alluvial deposits associated with southwest draining Coyote Creek. The subsoils encountered included interlayered silty clay, silty sand, sandy silt and sand. A generally medium to course-grained sand was encountered below 40-45 foot depths in our borings (see Appendix A for more detailed descriptions of subsurface conditions).

Ground water was encountered in the borings at about a depth of 44 feet below the ground surface. Whether this first water-bearing zone is in hydraulic continuity with a deeper aquifer could not be ascertained based on available data. This preliminary information together with more regional conditions indicate that the ground-water flow direction is probably to the southwest.

Chemical Tests

A photoionization detector was used during the drilling and sampling program to check for volatile organics as soil was extracted from the boreholes. The highest readings in boring B-1 were obtained at the 5-, 10-, and 40-foot depths, and in borings B-2 and B-3 at the 40-foot depths. The highest readings on the photovac from B-4 were obtained at the 10- and 40-foot depths.

where is the grH2O gradient

Samples from depth intervals in borings where no, or low levels of, volatile organics were detected were composited into 6 samples - two from borings B-2 and B-3 and one each from borings B-1 and B-4 (see Appendix B).

With regard to the soil samples analyzed, no hydrocarbon contamination was detected in the samples tested. Benzene, toluene, ethylbenzene, xylenes, and total fuel hydrocarbons were analyzed in the laboratory for each prepared soil sample, except for the 40-foot depth sample immediately above the water table in each of 4 borings. This method used gas chromatography/flame ionization detection in accordance with EPA Method 8015 (modified). The 40-foot depth samples were analyzed for purgeable aromatics using gas chromatography/photoionization in accordance with EPA Method 8020.

Ground-water samples were extracted from boring B-4 at the time of drilling using a stainless steel bailer. The ground-water sample was analyzed to detect the presence of purgeable halocarbons and purgeable aromatics in accordance with EPA Methods 601/602. The laboratory test revealed benzene at a concentration of 4.8 ug/L (equivalent to parts per billion) and above the State action level for drinking water of 0.70 ug/L. Toluene was detected at 2.6 ug/L, and ortho and para xylene were detected at 0.93 ug/L, compared to State action levels of 100 ug/L and 620 ug/L, respectively (see Appendix B). To establish the validity of the apparent benzene concentration in the ground water, an additional boring (B-5) was drilled on 16 February 1987. A ground-water sample obtained from boring B-5 was submitted to the laboratory.

This latter ground-water sample analyzed in accordance with EPA 602 revealed benzene at a concentration of 0.67 ug/L - below the State action level (see Appendix B).

Soil Disposal

We believe, based on our test results, that the excavated drill spoils contained in the on-site Dot 17H drums are not contaminated. It is our opinion that these soils may be used in the tank cavity backfill, provided that the material is properly compacted.

We understand that the stockpiled soil in close proximity to the existing cavity was contaminated at the time of tank removal. This soil needs to be treated or properly disposed of. If this soil is to be used in the backfill, on-site treatment and/or chemical testing would be required prior to placement in the cavity.

Conclusions

Subsoils around the tank cavity at a distance of about 5-10 feet beyond the excavation do not appear to be contaminated based on our study. Remnant hydrocarbon constituents were noted in ground water at a depth of about 44 feet; but, the reported concentrations were below State action levels.

After you have a chance to review this report, we would be available to answer any questions you may have.

Respectfully submitted,

KEY TO SOIL SYMBOLS AND TERMS

TERMS USED IN THIS REPORT FOR DESCRIBING SOILS ACCORDING TO THEIR TEXTURE OR GRAIN SIZE DISTRIBUTIONS ARE GENERALLY IN ACCORDANCE WITH THE UNIFIED SOIL CLASSIFICATION SYSTEM.

MAJOR DIVISIONS			GROUP SYMBOLS	TYPICAL NAMES
Coarse-grained soils (More than half of material is larger than No. 200 sieve size)	Gravels (More than half of coarse fraction is larger than No. 4 sieve size)	Clean gravels (Little or no fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines
			GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with fines (Appreciable amount of fines)	GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction is smaller than No. 4 sieve size)	Clean sands (Little or no fines)	SW	Well-graded sands, gravelly sands, little or no fines
			SP	Poorly-graded sands, gravelly sands, little or no fines
		Sands with fines (Appreciable amount of fines)	SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, sand-clay mixtures
Fine-grained soils (More than half of material is smaller than No. 200 sieve)	Silts and clays (Liquid limit less than 50)		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands, or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silty clays of low plasticity
	Silts and clays (Liquid limit greater than 50)		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
			CH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity, organic silts
	Highly organic soils		Pt	Peat and other highly organic soils

TERMS DESCRIBING CONDITION, CONSISTENCY AND HARDNESS

COARSE GRAINED SOILS (major portion retained on No. 200 sieve): Includes (1) clean gravels, (2) silty or clayey gravels, and (3) silty, clayey or gravelly sands. Consistency is rated according to relative density, as determined by laboratory tests.

Descriptive Term	Relative Density
Very loose	0 to 15%
Loose	15 to 40%
Medium dense	40 to 70%
Dense	70 to 85%
Very dense	85 to 100%

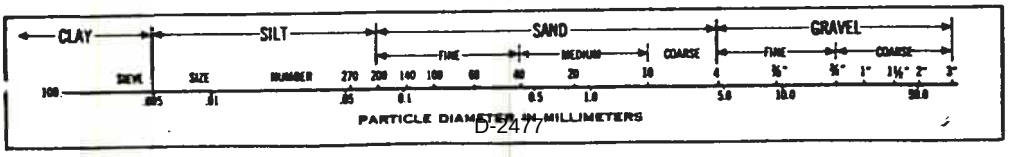
FINE GRAINED SOILS (major portion passing No. 200 sieve): Includes (1) inorganic and organic silts and clays, (2) gravelly, sandy or silty clays, and (3) clayey silts. Consistency is rated according to shearing strength, as indicated by penetrometer readings or by direct shear tests.

Descriptive Term	Shear Strength (ksf)
Very soft	less than 0.25
Soft	0.25 to 0.50
Firm	0.50 to 1.00
Stiff	1.00 to 2.00
Very stiff	2.00 to 4.00
Hard	4.00 and higher

ROCK: Includes gravels, cobbles, rock, caliche and bedrock materials. Hardness is related to field identification procedures described below.

Descriptive Term	Field Identification Test
Soft	Can be dug by hand and crushed by fingers
Moderately hard	Friable, can be gouged deeply with knife and will crumble readily under light hammer blows
Hard	Knife scratch leaves dust trace, will withstand a few hammer blows before breaking
Very hard	Scratched with knife with difficulty, difficult to break with hammer blows

SOIL MOISTURE



From low to high the soil moisture is indicated by:

Dry
Slightly moist
Moist
Very moist
Wet

SIZE PROPORTIONS

Designation	Percent by Weight
Trace	0 to 10
Little	10 to 20
Some	20 to 35
And	35 to 50

APPENDIX B

CHEMICAL ANALYSES

Analytical Technologies, Inc. Corporate Offices: 5550 Morehouse Drive San Diego, CA 92121 (619) 458-9141

ATI I.D. 01609

February 6, 1987

Converse Environmental Consultants
3185-D Airway Avenue
Costa Mesa, California 92626

Attention : Henry Ames
Project : Nutrilite 86-42209-01

On Febraury 15, 1987, Analytical Technologies, Inc. received thirty-one (31) soil samples and one (1) water sample for analysis. Twenty-three (23) of the soil samples were composited into six (6) composite samples. The six (6) composited samples and four of the discrete soil samples were analyzed for fuel hydrocarbons, and benzene, ethylbenzene, toluene, and xylenes. The remaining four (4) discrete soil samples were analyzed for the purgeable aromatic compounds. The water sample was analyzed for the purgeable aromatics and halocarbons.

The fuel hydrocarbons and benzene, toluene, ethylbenzene, and xylenes were analyzed using gas chromatography/flame ionization detection in accordance with EPA method 8015 (modified for fuel analysis).

The purgeable halocarbons were analyzed using gas chromatography/hall detection in accordance with EPA method 601. The purgeable aromatics were analyzed using gas chromatography/photoionization detection in accordance with EPA

method 602 for the water sample, and EPA method 8020 for the soil samples. The sample results have been corrected for the constituents found in the reagent blank.

The results of these analyses and the quality control data are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

Note: The samples from this project will be disposed of thirty (30) days from the date of this report. If an extended storage period is required, please contact our sample control department before the scheduled disposal date.

Project : Nutrilite
Project No. : 86-42209-01

Attention : Dale Brandon

On February 17, 1987, Analytical Technologies, Inc. received one (1) water sample for analyses. The sample was analyzed for purgeable aromatic compounds.

The purgeable aromatics were analyzed using gas chromatography/ photoionization detection in accordance with EPA method 602. The sample results have been corrected for constituents found in the reagent blank.

The results of these analyses and the surrogate percent recoveries are enclosed.

Patricia A. Schroder
GC Supervisor

Richard M. Amano
Laboratory Manager

COMMENTS

COMMENTS:

COMPLETE AND ATTACH A CLEANUP TRACKING REPORT IF ANY CLEANUP WORK OR PLANNING HAS STARTED

HSC 05 (10/85)

INSTRUCTIONS

1. GENERAL

In box titled "EMERGENCY", indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

In space provided, enter state tank ID number if known. State ID numbers have been assigned to all tanks that are on file with the State Water Resources Control Board. Enter today's date in the box titled "Report Date". Enter local and Regional Water Quality Control Board case numbers if known. Enter the US EPA facility number if applicable.

2. REPORTED BY

Enter your name, telephone number and address. Indicate which party you represent, and provide company or agency name.

3. RESPONSIBLE PARTY

Enter the name, telephone number, contact person, and address of the party responsible for the leak, or mark unknown. For tank leaks, the responsible party would normally be the tank owner.

4. SITE LOCATION

Enter information regarding the tank facility and surrounding area. If a known tank or facility is not involved, enter general location of the contamination site as best possible; i.e., street, city, county, zip, cross street, and type of area.

5. IMPLEMENTING AGENCIES

Enter names of the local agency, Regional Board and/or Toxic Substances Control Division (TSCD) regional office involved and a contact person and telephone number for each.

6. SUBSTANCES INVOLVED

Enter the CAS number(s) (if known), name(s), and quantities lost of all hazardous substances involved. Attach an extra sheet if more than two substances are involved. Be as specific as possible.

7. DISCOVERY/ABATEMENT

Provide information regarding the discovery and abatement of the discharge. More than one box may be checked in the sections titled "How Discovered" and "Method Used To Stop Discharge" if appropriate.

8. SOURCE/CAUSE

Indicate source(s) of discharge. Provide details on tank age; capacity and material if a tank is involved. Check box(es) indicating cause of discharge. More than one box may be checked if appropriate.

9. RESOURCES AFFECTED/AT RISK

In section titled "RESOURCES AFFECTED" indicate whether any of the resources listed have been affected ("YES"), will not be affected ("NO"), or may be affected ("THREATENED") by the release. Check "UNKNOWN" if unsure of the status of a resource. Specify any unlisted resources which are, or may be, involved under "OTHER". The same instructions apply to the section titled "WATER SUPPLIES AFFECTED." Give the number of water wells affected or threatened, if known. Provide the name of the groundwater basin underlying the site, if known, in the space provided.

10. COMMENTS

Use this space to elaborate on any aspects of the incident. Comments on cleanup work or planning or related investigations should be reported on a separate Cleanup Tracking Report.

11. SIGNATURE

Sign the form in the space provided.

DISTRIBUTION

Hand deliver or mail copies of the form as follows:

Subject: Remedial Action at 5600 Beach Blvd., Buena Park, CA.

Dear Mr. Donovan:

This is in response to your request for a confirmation of the completion of this remediation project. With the provision that the results obtained during the site investigation were accurate and representative of existing conditions, it is the position of this office that remediation of soil contamination has been completed.

It should be pointed out that this letter does not relieve you of any responsibilities mandated under the California Health and Safety Code if additional or previously unidentified contamination is discovered at the subject site.

If you have any questions regarding this matter, please contact Patricia Henshaw at (714) 834-6667.

Very truly yours,

(CECC Project No. 86-42209-01)

Dear Ms. Henshaw:

Please find attached a copy of our 14 April 1987 Soil and Ground Water Contamination Study conducted at the referenced site. This is in response to your 18 November 1986 letter and was performed in accordance with our 18 December 1986 Assessment Plan and 13 January 1987 addendum letter.

If you have any questions, please call me or Dale Brandon at (714) 545-3210.

Sincerely,

CONVERSE ENVIRONMENTAL CONSULTANTS CALIFORNIA

Subject: Response to County Review of
Site Characterization Plan for
Nutrilite Products, Inc.
5600 Beach Blvd., Buena Park, Ca
(CECC Project No. 86-42209-01)

Dear Ms. Henshaw:

As discussed with you on 13 January 1987, this letter is in response to your 8 January 1987 review of our 18 December 1986 Assessment Plan for the referenced site. This letter should be considered an addendum to our 18 December 1986 plan. Your comments are provided herein for reference. Our responses are also provided below.

Comment

1. Samples may be composited from ~~one~~ a boring only if the on-site photoionization detector indicates no contamination. Samples from the capillary zone should be analyzed separately, whether or not the on-site photoionization detector indicates contamination.

Response

1. If significant levels of organics are present in soil samples at the time of sampling, as indicated by the photoionization detector, these samples will be analyzed discretely. Otherwise, samples from borings where the photoionization detector does not indicate significant levels of contamination will be composited for analysis as previously proposed. We will attempt to obtain soil samples from the capillary zone in as many borings as possible.

Comment

2. Samples must be analyzed by modified EPA 8015 (total petroleum hydrocarbons) and EPA 8020 (benzene, toluene, xylene and ethyl benzene).

A Wholly Owned Subsidiary of
The Converse Professional Group

Response

2. As discussed, soil samples are to be analyzed using EPA Method 8015 (modified). Benzene, toluene, xylene and ethyl benzene fractions in soils are recorded using this analysis and will be reported in addition to the total hydrocarbon as requested. We also plan to test one (1) soil sample obtained from the capillary zone, or immediately above the water table, in accordance with EPA 8020 as requested. We understand that if significant contamination is indicated based on the test results, additional sampling and testing may be required.

We trust that this proposed program will comply with Orange County Health Care Agency's concern with documentation of contamination conditions existing at the Nutrilite Products, Inc. facility at this time. If you have any questions or comments relative to this letter, please feel free to contact the undersigned at (714) 261-7246.

Respectfully submitted,

Attention: Mr. Mark Bryant

Subject: Site Assessment Plan for site subsurface investigation
Dated: December 18, 1986 Submitted By: Converse Environmental
for Nutrilite Products, Inc.

Dear Mr. Bryant:

Please be advised that this office has reviewed the above referenced sampling plan. We have found the plan to be adequate to initiate the investigation of the extent of contamination at this site, provided the following considerations are addressed:

1. Samples may be composited from ~~one~~ a boring, only if the on-site photoionization detector indicates no contamination. Samples from the capillary zone should be analyzed separately, whether or not the on-site photoionization detector indicates contamination.
2. Samples must be analyzed by modified EPA 8015 (total petroleum hydrocarbons) and EPA 8020 (benzene, toluene, xylene and ethyl benzene).

It should be noted that additional sampling may be necessary should the results of the sampling effort not adequately define the extent of contamination.

If you have any questions, please contact me at (714) 834-6667.

Very truly yours,

Patricia Henshaw

Subject: Site Characterization for
Nutrilite Products, Inc.
5600 Beach Boulevard
Buena Park, California
(CECC Project No. 86-42209-01)

Dear Ms. Henshaw:

Converse Environmental Consultants California (CECC) on behalf of Nutrilite Products, Inc., submits the following site assessment plan to identify the extent of soil and ground water contamination at the referenced site (see Figure 1). This program will also provide data on the ground water gradient and document soil conditions near the underground tank that was previously in use as requested in your 18 November 1986 letter submitted to Nutrilite Products, Inc.

In accordance with County requirements, we will utilize those methods required to establish the chemical nature of the soil contamination, the vertical and horizontal extent of the plume resulting from the tank leakage, quantitative data regarding contamination concentration, and whether ground water has been affected. Additionally, reference material on local geologic and hydrogeologic data will be incorporated into the site assessment plan, if available. We propose initially to auger 4 soil borings on the subject property to determine plume geometry, depth to ground water, the ground water gradient, the soil profile, and chemical characteristics of the contaminant both qualitatively and quantitatively (see Figure 2 attached).

The soil borings will be augered to depths of 40 feet, and soil samples will be collected at 5-foot intervals. These samples will then be analyzed for the presence of the contaminant. Indications are that we will encounter ground water within 40 feet of the surface. If shallow ground water is encountered, the borings will end in this zone and ground water samples will be collected. Samples of the soil and ground water will then be analyzed for the presence of the contaminant. The borings will be backfilled

A Wholly Owned Subsidiary of
The Converse Professional Group

with a cement grout slurry to prevent downward migration of contaminants that might be present. Drill spoils will be stored on site in Dot approved steel drums until a decision on the mode of disposal is reached based on the laboratory results.

From the analytical data already obtained during excavation of the tank, it appears likely that the soil contaminant is a gasoline fuel. CECC proposes that soil samples collected in each boring be composited into two sets from each boring. Thus, there will be 8 total soil samples to be analyzed plus one ground water sample. If significant levels of contamination are found in a particular composited sample, additional analyses could be performed on individual samples comprising the composite. These individual samples are retained in the laboratory until they are no longer required. It is recommended that the presence of purgeable halocarbons and non-halogenated organics be determined in accordance with EPA Method 601/602, and EPA Method 418.1 for total hydrocarbons. No → 8015 / 8020 use

Initial on-site screening of the samples will be conducted using a Photovac Model TIP II photoionization detector. This instrument is capable of detecting a wide range of organics at the part per million level. All borings will be logged, the soil samples will be immediately sealed and placed in an ice chest, and a sample custody record established. Samples will then be transported to a state certified laboratory for testing.

On receipt of the laboratory results, interpretation of the data will be made and a report prepared for Nutrilite Products, Inc. for submittal to the Health Care Agency. This report will form the basis for a more definitive site investigation, if required, or the basis for the site remedial action program. We will ultimately have to characterize the nature and source of the contamination. An estimate of the volume of released contaminant will be needed to assist in the formulation of the remedial action program. Potential impacts on ground water uses, if any, will also be addressed.

We trust that this proposed program will comply with Orange County Health Care Agency's concern with documentation of contamination conditions existing at the Nutrilite Products facility at this time. If you have any questions or comments relative to this plan, please feel free to contact the undersigned at (714) 261-7246.

Nutrilite Products, Inc.
5600 Beach Boulevard
P.O. Box 5940
Buena Park, California 90622-5940

Attention: Mr. Kenneth Johnson, Sr.

Subject: Soil Contamination at 5600 Beach Blvd., Buena Park, CA.

Dear Mr. Johnson:

Based on inspections and field tests conducted on October 23, 1986, it has been determined that gasoline contaminated soil is present at the subject location.

This Agency, which is authorized to enforce both the State Hazardous Waste and Underground Tank Laws and Regulations, (Chapters 6.5 and 6.7 of the California Health and Safety Code and Titles 22 and 23 of the California Administrative Code) directs Nutrilite Products, Inc., to develop and submit a site assessment plan to this office within thirty (30) days of receipt of this latter. The plan must include the proposed methods to obtain the following information:

a. Identification of the nature, source, and estimated volume of released contaminants.

b. Identification of the lateral and vertical extent of soil and groundwater contamination and the concentration of contaminants.

c. Proposed number and location of samples and borings.

d. Proposed laboratory analyses and methods.

e. Depth to groundwater and groundwater gradient.

f. Description of the soil profile.

g. Hydrogeological setting.

h. Present and potential future uses of groundwater and surface water that may be affected by the contaminated material.

Field investigation may begin only after the plan has been approved. This office must be notified 48 hours in advance of sampling. After completion of the investigation, a report outlining the findings from the site assessment investigation and the proposals for site mitigation and remedial action must be submittted to this office for approval. Remedial actions must include the following as applicable:

1. Free undissolved product must be removed from groundwater.

2. Proposed method of dissulved product removal must be approved by the appropriate Regional Water Quality Control Board and must be included in the reports submitted to this Agency.

3. Demonstrate to the satisfaction of this office that the contaminated soil, if left in place, would not present a potential public health or environmental hazard. This risk assessment evaluates the potential for movement of contaminants into adjoining soils or groundwater and the associated public health or environmental effects.

4. Reduce contamination to acceptable levels. A proposal describing the treatment process must be submitted to this office for approval prior to initiation of such process. In addition, permits must be obtained from all appropriate regulatory agencies.

5. Monitoring of contaminant fate and movement in soil and groundwater. Monitoring may include periodic sampling of soil and periodic sampling of properly placed wells with annual reevaluation of well locations. A report describing the proposed investigations must be submitted to this office for review.

6. Remove the contaminated soil. The contaminated soil should be removed to a nondetectable level or to natural background. If this cannot be achieved, options three (3), four (4), and five (5) must be employed.

If any material to be removed is hazardous waste, as defined in the California Health and Safety Code, Chapter 6.5 or as identified in the California Administrative Code, Title 22, Division 4, Chapter 30, then the use of a registered hazardous waste hauler is required and a phototcopy of every manifest signed by the receiving facility must be forwarded to this office for verification of proper disposal. Section 25298(c)(4) of the California Health and Safety Code states that no person shall close an underground storage tank unless the person demonstrates to

the satisfaction of the local agency that no significant soil contamination has occurred. Violation of this requirement is subject to a civil penalty of Five Thousand Dollars ($5,000.00) per day.

If you have any questions regarding this matter, please contact me at (714) 834-6667.

Very truly yours,

Patricia Henshaw

DATE Dec. 2, 1986

RECEIVED Nov. 13, 1986

LABORATORY NO. 14097

Sample taken on Nov. 12 1986

SAMPLE

Soil from Nutrilite/Beach Blvd.

INVESTIGATION

As required by the Orange County Health Care Agency (EPA 8015, 8020)

RESULTS

Parameter	Milligrams per Kilogram
Total Petroleum Hydrocarbons	20.
Benzene	<0.01
Toluene	<0.01
Xylene	0.08
Ethylbenzene	<0.01
Dichloroebenzene	0.13

Total Petroleum Hydrocarbons (Modified EPA 8015): The petroleum hydrocarbons analysis for this sample was analyzed by Headspace (EPA 5020)/ GC-FID (Modified EPA 8015) using the procedure listed in the revised analytical method (11/5/85), Attachment 2. The limit of detection is 2 mg/kg.

BTXE Analysis (Modified EPA 8020): The BTXE content in soils is determined using methanol extraction followed by the Purge & Trap (EPA 5030)/Photoionization Detector (EPA 8020) Method. The method detection limits are 0.01 mg/kg for each species. However, high levels of any one of the species may require a higher detection limit in the others because of sample dilution. All results are blank corrected.

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar products. As a mutual protection to clients, the public and these Laboratories, this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from these Laboratories.

Laboratory No. 14097
Domino Equipment Co.

Soils were sampled and sealed according to the Orange County Health Care Agency on Noveber 13, 1986. The soils were received by Truesdail ppersonnel on the same date, chilled and sealed. The soils were frozen util November 14, 1986, at which time they were prepared for analysis while still partially frozen to minimize volatilization.

Truesdail Laboratories is a State of California DOHS hazardous waste certified laboratory (Certificate #147).

Dear Mr. Lodrigueza:

Access Business Group LLC, Nutrilite (Nutrilite) is please to submit the completed Site Assessment Report for Nutrilite's manufacturing facility located at 5600 Beach Boulevard in Buena Park, California. Also included in this transmittal is the letter report completed by Sharp Environmental Services (SET). These reports describe the soil sampling activities completed at the site on January 2nd, 2006.

This letter is our certification that the soil sampling activities were implemented in accordance with the Remedial Action Supervision Agreement and the Site Assessment and Work Plan.

As always, Access Business Group, Home of NUTRILITE products is committed to working with the OCHCA to ensure compliance. If there are any questions concerning this matter, please contact me at (951) 928-6837.

Sincerely,

Ignacio Verduzco

1. INTRODUCTION

1.1 Terms of Reference

This Site Assessment Report (Report) presents the results of the activities undertaken by Access Business Group LLC, Nutrilite (Nutrilite) in response to the A-300 acidic cleaner spill that occurred in Building 10 of Nutrilite's manufacturing facility located at 5600 Beach Boulevard in Buena Park California. Activities were performed under the guidance of Nutrilite's Site Assessment and Work Plan (SAP) submitted to the Orange County Health Care Agency (OCHCA) on December 28, 2005. The Remedial Action Supervision Agreement form (request for voluntary cleanup oversight) was signed and submitted to OCHCA on December 28, 2005.

Soil samples were collected at four locations at a distance of approximately two to three feet from the floor drain in Chemical Storage Room #1, Room 10-009 (See Fig. 3-4). An additional sample was collected from an area located directly beneath the floor drain. This sample was analyzed to determine the depth of a potential release from the drain piping while the four perimeter samples were analyzed to determine the extent of the potential release.

1.2 Objective

The objective of this Report is to evaluate the analytical results obtained from the subsurface soil samples collected from Room 10-009 and determine the extent of the A-300 acidic cleaner release.

The analytical results from this work are evaluated against accepted pH values for California soils.

1.3 Report Organization

This report is organized into five sections.

- Section 2 provides background information on the following subjects:
  - Site history;
  - Regional hydrogeology;
- Section 3 summarizes the sampling and analytical methods to be used to evaluate the potential impacts to the soil in Room 10-009.

RECEIVED HCA/RH
MAR 13 2006
ENVIRONMENTAL HLTH

- Section 4 provides the analytical results for the sampling data and evaluates these results.

- Section 5 provides the summary and conclusions.

2. BACKGROUND

2.1 Site History

The Nutrilite facility is operated by Access Business Group, a division of Alticor Inc. The site is located at 5600 Beach Boulevard in Buena Park, Californian (See Fig. 3-1). The facility manufactures food supplements and food bars. Due to the nature of the products manufactured it is imperative that this facility maintain current Good Manufacturing Practices (CGMP) that complies with various regulatory agency requirements. Cleaning and Sanitizing is a primary component of cGMP's which required the use of A-300, the product released into Room 10-009 in Building 10.

The Nutrilite complex consists of a number of buildings. Building 10 is used for the compounding, granulation, compression, and coating of tablets. Other buildings on the site include offices, maintenance, food bar and R&D facilities. The sanitary drains are serviced by the Orange County POTW and the potable water is provided by the Orange County Water District.

2.2 Regional Hydrogeology

The Nutrilite facility is located within the La Habra Groundwater Sub-basin in the Lower Santa Ana watershed of the Lower Santa Ana Groundwater Basin. Based on boring logs from geotechnical studies conducted in 1986 by Soil and Testing Engineers Inc. for proposed expansion of the Nutrilite facility, groundwater was not encountered at depths of 35 feet below ground surface. Therefore, groundwater is not expected to be encountered during the sampling activities.

3. PROCEDURES FOR SOIL SAMPLING AND ANALYSIS

3.1 General

The following sections contain descriptions of the standard operating procedures for the soil sampling activities. These procedures document the protocols used by field personnel to collect soil samples and to obtain valid and reliable data. These procedures in combination with those specified in the SAP provide the guidelines for completing the sampling and analysis.

Field personnel followed these procedures, unless field conditions required deviations from the protocols described below. In those cases, field personnel documented the alternate procedures employed and the reasons for the deviations. The laboratory staff followed the procedures established in the SAP.

3.2 Health and Safety

Prior to the start of field activities, a Site-Specific Health and Safety Plan (HASP) was reviewed by field personnel. The HASP was also reviewed with subcontractors during a tailgate health and safety meeting prior to field activities. The HASP contains information pertaining to site conditions, potential hazards, hazard control, monitoring procedures, personal protective equipment, emergency procedures, and hospital location.

All activities including demolition and removal of the 8' x 8' x 6" concrete slab, collection and testing of soil samples for the presence of nitric acid (pH test), and removal of contaminated soil, if any, was performed in Level C personal protective equipment as per the Health and Safety Plan.

Air monitoring for the presence of NO and NO_2 was performed in the contaminated area during all field activities as per the Health and Safety Plan.

3.3 Concrete Saw Cutting and Removal

Under the direction of Nutrilite, Ecology Control Industries (ECI) saw cut and removed an 8'x 8'x 6" concrete section in Room 10-009 to expose the subsurface soil for sample collection. The removed concrete was disposed as non-hazardous waste in accordance with federal, state, and local regulations.

3.4 Sampling Activities

3.4.1 Sampling Locations

Soil sampling was conducted to assess the potential impact, if any, to the subsurface soils around the perimeter of the floor drain and directly under the floor drain from the release of the A-300 acidic cleaner that occurred in Room 10-009 of Bldg. 10. The sample locations are shown in Figure 3-4 and the sampling depths are presented in Table 4-1. Note that these locations and depths are approximate. The soil sample locations were selected as follows:

- Four (4) sample locations around the perimeter of the floor drain. Sample location Nos. NE (northeast), NW (northwest), SE (southeast), and SW (southwest) at depths of 0.5 ft, 1 ft, 2 ft, and 3 ft.

- One (1) sample location (Sample I.D. Drain 13") under the floor drain. One sample located approximately 13" directly under the floor drain was collected.

Since the floor drain in Room 10-009 is serviced by the Orange County POTW, it is expected that the release of A-300 acidic cleaner would be discharged to the POTW. Also, the contaminated area is covered with concrete so there is no migration of water that would push the release into the soil. Therefore, the number of proposed sampling locations provided an adequate distribution to assess the extent of the release to the soil.

3.4.2 Soil Sampling

To comply with the oversight clean up agreement, Nutrilite notified Mr. Luis Lodrigueza of the OCHCA 48 hours in advance prior to commencing any soil sampling activities. Mr. Lodrigueza was not onsite during the sampling activities as Monday, January 2nd, 2006 was an OCHA Holiday.

Soil samples were collected using a hand auger. Soil cores were recovered by auger as it was advanced by manually turning the sampling auger. Soil samples were taken at 0.5, 1, 2, and 3 feet below the concrete floor. An additional sample was collected at approximately 13-inches directly under the floor drain. Soil recovered by the auger was removed and placed in pre-cleaned 4-ounce glass jars supplied by the laboratory. Samples were delivered to Associated Laboratories, a State-certified laboratory for analysis.

All soil samples were collected by Mr. Jeff Sharp (Registered Geologist) of Sharp Environmental Technologies. Samples collected at a depth of 0-0.5 feet around the perimeter of the floor drain and the sample collected 13" directly under the floor drain were field tested for pH to determine the extent of sampling required to define the release. The field results of the soil sampling activities are provided in Table 4-3 and the field log is contained in Appendix C. The Site Assessment Report conducted by Mr. Jeff Sharp is contained in Appendix D.

3.5 Sample Handling

Soil samples were preserved on ice prior to analysis in the laboratory. Once a sample was collected, it remained in the possession of the field personnel until it was transported to the laboratory (See Chain of Custody in Appendix A). Samples were shipped in accordance with standard sample handling and chain of custody procedures specified in Section 3 of the SAP.

3.6 Analytical Methods

The laboratory methods for evaluating the samples collected were chosen based on the material involved in the release. The laboratory analysis was conducted in accordance with standard US EPA methods (SW-846 Method 9045). The field analysis was chosen based on the best practical field method.

The soil samples were analyzed for pH, the single most significant characteristic of the A-300 acidic cleaner.

The lists of analysis are included in Table 4-1. The full analyte list was performed on the shallow (i.e., 0-0.5 ft) sampling depth, and the remaining samples were archived for possible future testing.

4. SUMMARY AND EVALUATION OF ANALYTICAL RESULTS

4.1 General

The analytical results are provided in Appendix B and are summarized in Table 4-2. The results for soil are compared to accepted pH values for California soils.

4.2 Analytical Results

The analytical results of the soil sampling activities are listed in Table 4-2. The soil samples were taken at various depths ranging from 0.5 foot to 3 feet below the surface as described in Section 3 of this report. The samples taken at the 1, 2, and 3 foot mark around the perimeter of the floor drain were held for analysis pending the results of the shallower samples. The analytical laboratory reports are contained in Appendix B and the chain-of-custody forms are contained in Appendix A.

The analytical results of the four perimeter samples (NW, NE, SW, and SE) collected at the 0-0.5 foot mark showed pH values ranging from 7.5 to 7.83. Field measurements taken at the same sampling locations showed pH values ranging from 6.03 to 6.72.

5. SUMMARY AND CONCLUSIONS

The goal for this project site is to determine the extent of the release of the A-300 acidic cleaner in accordance with the voluntary clean up oversight agreement and the Site Assessment and Work Plan.

Based on a review of both the field and analytical results of the soil samples collected from Chemical Storage Room 1 (Room 10-009), it has been determined that the A-300 did not impact the soil or groundwater beneath the concrete slab as the pH values were found to be within acceptable pH values for California soils. Therefore, no further investigation is required.

Attn: Dr. Ignacio Verduzco

RE: Site Assessment Report for Confirmation Soil Sampling Activities Conducted for Acid Spill at Nutrilite Property located at 5600 Beach Boulevard, Buena Park, California

Dear Dr. Ignacio Verduzco:

This letter report discusses the site investigation soil sampling activities completed at the Nutrilite property located in Buena Park, California conducted by Sharp Environmental Technologies, Inc. (SET) for Nutrilite. This work was performed to address spilled acid in Chemical Storage Room #1. ***Figure 1*** presents a Site Vicinity Map of the subject property.

Background

The property is located in the northeast portion of Buena Park, California. The site is located northwest of the intersection of Interstate 5 and Highway 91. The old Atchison Topeka and Santa Fe railroad line is located along the northern side of the property. The property is located above sea level with an elevation at the Property of approximately 80 feet above mean sea level (AMSL). See ***Figure 2*** for the layout of the Chemical Storage Room #1.

Field Activities

Ecology Control Industries (ECI) had a square of concrete slab approximately 8' x 8' cut with the cut concrete removed for access to subsurface soils. A layer of visqueen was present under the concrete floor slab. The soil beneath the visqueen consisted of a brown, moist, medium dense silty sand. No discoloration or odor was observed in the subsurface soil exposed beneath the visqueen.

On January 2, 2006 SET personnel measured soil pH following the standard test method designated ASTM G51-95 (reapproved 2000) with the aid of a rugged glass electrode. Following this ASTM standard, SET provided field pH results to ECI and Nutrilite personnel to assist with the characterization of subsurface soil. Field results indicated pH units measurements to range from 6.03 to 7.13. Refer to ***Appendix A*** for a copy of the ASTM standard for field measurements of pH. ***Figure 2*** presents a site plan of the Chemical Storage Room #1.

On January 2, 2006 ECI advanced four soil borings (NW, NE, SW and SE) utilizing a hand auger in the areas indicated on ***Figure 2*** to investigate subsurface conditions. All of the four borings were advanced vertically. Soil samples were collected at 0-0.5', 1', 2', and 3' in the four borings. Additionally, one grab soil sample was collected near the drain line with the sample labeled Drain 13".

All sampling equipment was thoroughly decontaminated between each sampling event. The decontamination process included brushing any foreign material from the equipment followed by scrubbing the equipment in an Alconox soap solution. The sampling equipment was then double rinsed with tap water. Soil samples were collected in 4 oz. glass jars. Soil samples collected in the glass jars were sealed with Teflon® lined plastic lids. The samples were labeled and stored on-site in an insulated chest at 4^0 C with ice pending transport to the laboratory. SET followed proper chain-of-custody procedures to ensure the integrity of all samples being submitted for testing.

Methods of Analysis

Soil samples were collected, maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846), Third Edition, Update #4A, May 1998. These methods, as prescribed by the Environmental Protection Agency (EPA), provide test procedures that establish whether the sample is a hazardous waste within the definition of the Resource Conservation and Recovery Act (RCRA).

Associated Laboratories analyzed 5 of the 17 soil samples collected during site investigation activities performed on January 2, 2006 for pH by EPA Method SW-9045.

Analytical Results

Laboratory analytical results indicated pH concentrations from all soil samples collected from the subsurface soil in Chemical Storage Room #1 ranged from 6.22 to 7.83. ***Table 1*** presents a summary of soil sample laboratory pH results.

Refer to ***Appendix B*** for the Laboratory and Quality Assurance/Quality Control (QA/QC) Reports and Chain-of-Custody Records.

Conclusions and Recommendations

The following conclusions regarding the site investigation work performed in the Chemical Storage Room #1 are based upon the findings presented herein and are subject to the limitations presented below.

- Five soil samples analyzed from the subsurface soil in the Chemical Storage Room #1 indicated pH concentrations ranging from 6.22 to 7.83.

Based on our field observations and laboratory analytical results as presented in this report, SET recommends that no further investigation is required.

Limitations

SET performs professional services using that degree of care and skill ordinarily exercised by environmental consultants practicing in this or similar localities. The findings are based primarily upon analytical results provided by an independent laboratory. Interpretations of the subsurface conditions at the Property, for the purpose of this investigation, are made from a limited number of available sample points. Subsurface conditions may differ from one location to another location.

SET appreciates the opportunity to provide environmental management services for Nutrilite. Should you need additional services or have any questions regarding these activities for this Property, please contact us at (310) 505-3675.

Sincerely,
Sharp Environmental Technologies, Inc.

Jeffrey Sharp; P.G. #6777, C.E.G. #2160
Senior Geologist

STANDARD TEST METHOD FOR MEASURING pH OF SOIL FOR USE IN CORROSION TESTING

Designation: G 51 – 95 (Reapproved 2000)

Standard Test Method for Measuring pH of Soil for Use in Corrosion Testing[1]

This standard is issued under the fixed designation G 51; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This test method covers a procedure for determining the pH of a soil in corrosion testing. The principle use of the test is to supplement soil resistivity measurements and thereby identify conditions under which the corrosion of metals in soil may be accentuated (see G 57 – 78 (1984)).

1.2 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

2.1 *ASTM Standards:*

E 177 Practice for Use of the Terms Precision and Bias in ASTM Test Methods[2]

E 691 Practice for Conducting an Interlaboratory Study to Determine the Precision of a Test Method[2]

G 57 Method for Field Measurement of Soil Resistivity Using the Wenner Four-Electrode Method[3]

3. Significance and Use

3.1 Information on pH of soil is used as an aid in evaluating the corrosivity of a soil environment. Some metals are more sensitive to the pH of their environment than others, and information on the stability of a metal as a function of pH and potential is available in the literature.[4]

4. Apparatus

4.1 *pH Meters*—A portable, battery-powered pH meter is necessary for field measurements. Most instruments can also function as a high-impedance voltmeter. An LCD display is preferred for its readability in a bright, outdoor environment.

4.2 *Calomel and Glass Electrodes*:

4.2.1 Use a saturated calomel reference electrode or its equivalent in the pH determination. A few crystals of solid potassium chloride should always be present within the chamber surrounding the calomel to assure that the solution is saturated under the conditions of use. The design of the electrode must permit the formation of a fresh liquid junction between the solution of potassium chloride and the buffer or test soil for each test and allow traces of soil to be readily removed by washing.

4.2.2 A glass electrode of rugged construction is required. The performance of the glass electrode is satisfactory if it furnishes the correct pH value (±0.1 pH unit) for standard buffered solutions.

4.2.3 A combination electrode consisting of a saturated calomel reference electrode and a glass electrode (4.2.1 and 4.2.2) combined as a single electrode is acceptable. However, the requirements outlined above are equally applicable to the electrodes used in this combination unit.

4.3 *Subsurface Probe*—When pH measurements below the surface of the soil are required, it is necessary to use a probe of suitable length which will allow measurements to be made at the depth of interest. This probe consists of a glass electrode or a combination electrode in a rubber housing at the end of a plastic tube. One type of probe is illustrated in Fig. 1.

4.4 *Soil Thermometer*—Some pH electrodes have temperature compensation built in as part of the pH electrode, but most do not (see manufacturers' specifications). A thermometer of rugged construction is required for soil use, and a stainless steel sheathed thermometer is preferred. Metal sheathed thermometers come in different lengths, and a length appropriate for the depth of interest should be chosen.

5. Reagents and Materials

5.1 During the calibration procedure for the pH meter, standard buffered solutions of known pH are necessary. These solutions, or tablets to make up these solutions, can be purchased from chemical supply companies or pH equipment manufacturers.

6. Sampling

6.1 By the nature of the measurement, pH is determined for a small volume of soil at each reading, and it is important that at least three measurements at different locations be made and a simple average calculated. The regions of interest, surface, subsurface, or both, where applicable, must be sampled.

7. Calibration and Standardization

7.1 *Test for Linearity*—Prior to field use, or periodically when used extensively in the field, test the apparatus for

[1] This test method is under the jurisdiction of ASTM Committee G-1 on Corrosion of Metals, and is the direct responsibility of Subcommittee G01.10 on Corrosion in Soils.

Current edition approved Jan. 15, 1995. Published March 1995. Originally published as G 51 – 77. Last previous edition G 51 – 92.

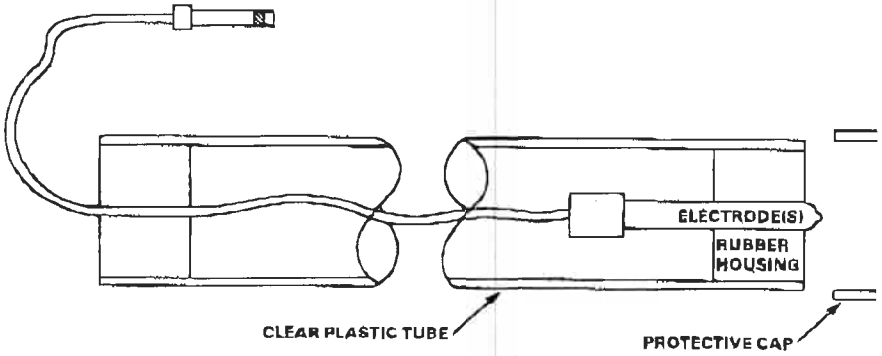

FIG. 1 Subsurface probe

linearity of response. This procedure is as follows:

7.1.1 Turn on the instrument, allow to warm up thoroughly, and bring to electrical balance in accordance with the manufacturer's instructions. Before use, clean and rinse the glass and calomel electrodes in distilled water.[5]

7.1.2 At least two standard buffered pH solutions that span the soil pH to be measured are required. From practical experience standard solutions of pH 4, 7, and 8 are recommended. For the test, the temperature of these solutions shall not differ from each other by more than 5°C. A laboratory thermometer can be used for these measurements.

7.1.3 Adjust the temperature compensating dial on the pH meter to the standard solution temperature.

7.1.4 Immerse the electrodes in a small volume of the first known standard solution. Now adjust the pH meter to read this known pH.

7.1.5 Remove the electrodes from the first standard solution, and rinse in distilled water. Immerse the electrodes in the second known standard solution and read the pH value. Judge the system to be operating satisfactorily if the reading obtained for the second standard agrees within ±0.1 unit of the assigned pH.

7.2 *Calibration of pH Meter*—Calibrate the pH meter immediately before use. If a series of measurements are to be made, repeat the calibration procedure at intervals of about 30 min. Perform the pH meter calibration as follows:

7.2.1 Use a standard pH solution in the range of the pH of the soil to be tested, if such information is known beforehand. Otherwise, begin with a standard solution having a pH of 7. Stabilize the temperature of the solution so that it matches the temperature of the soil to within 10°C.

7.2.2 Immerse the electrodes in the known standard solution and calibrate the meter in accordance with the manufacturer's instructions.

8. Procedure

8.1 *Soil Preparation for pH Determination*:

8.1.1 Ideally the pH measurement should be made in the field with the glass electrode contacting the soil at the specific depth of interest. If the surface soil pH is desired, then the soil can be broken up if compacted so as to accept the electrodes. If a subsurface pH is desired, then a boring or an excavation must be done so that the electrode can be placed in the soil at the desired depth. The subsurface probe (Fig. 1) is ideal for use with a boring tool such as hand auger. After boring through the soil to the depth of interest, carefully lower the probe into the cavity without further preparation of the soil.

8.1.2 Soil samples can be brought to the surface with a boring tool or a post-hole digger, and the measurement made in the field on the soil thus obtained. This technique is less desirable than the probe method described in this section.

8.1.3 The least desirable pH measurement of soil is that which is based on a soil sample transported to a laboratory for evaluation. However, if this must be done, then make the pH measurement as quickly as possible after the soil is taken from the field. Place the sample in a clean, airtight, glass container or plastic bag so that the soil is not in contact with any metal. If the pH measurement is not made within 24 h from the time the soil sample is taken, then it is recommended that the soil sample be packed in dry ice to retard any change in pH due to chemical or biological reactions. Make the pH measurement on the soil at room temperature and as received.

8.1.3.1 The addition of water to the soil is not recommended for any case because some soils are so poorly buffered that added moisture will change their pH. However, if a soil is extremely dry with a resistivity exceeding $10^6\Omega$-cm, a condition not normally encountered, then the pH measurement cannot and should not be made. This situation will manifest itself with a random drifting of the pH meter reading.

8.1.3.2 If the soil is frozen, it must be thawed prior to making the measurement. Frozen soil manifests itself by random drifting of the pH meter reading and is verified by the soil temperature measurement.

8.2 *Determination of pH of Soil*:

8.2.1 Complete the meter calibration procedure (7.2). The standard solution temperature must match the temperature of the soil within 10°C. Soil temperature can be determined by inserting a metal sheathed thermometer into the soil to the depth of interest.

8.2.2 Clean the electrode surface by washing with distilled water.

8.2.3 Press the contact area of the glass electrode or combination electrode, as the case may be, against undisturbed

[5] Before use, condition new glass electrodes and those that have been stored dry in accordance with the manufacturer's recommendations.

soil at the location of interest. This step is important, since poor soil contact or electrode movement can affect stability of the measurement.

8.2.4 The reference electrode should be placed in contact with the soil near the glass electrode (this step is not required when using a combination-type electrode). An electrode separation of about 30 cm (1 ft) is suggested for surface measurements. For subsurface readings, the reference electrode may be placed on the surface about 30 cm from the bore hole entry.

8.2.5 With the electrode(s) in place, set the meter to read pH, allowing 1 or 2 min. for equilibrium to be established, then take the meter reading.

8.2.6 After approximately one minute, repeat the meter reading. In general, the values will agree within 0.2 pH units. If the range of values is as large as 0.4, then repeat 8.2.3. If the problem persists, check your equipment to verify that it is operating properly, and check your measurement technique as described in Procedure, Section 8, in this test method. Where a soil is extremely dry, it may not be possible to make a pH measurement as stated in 8.1.3.1. Where the soil is frozen, it must be thawed as indicated in 8.1.3.2. Repeat Calibration of pH Meter (7.2) if equipment malfunction is suspected, which may cause erratic pH readings. Finally, if erratic readings persist, it may be necessary to repeat the measurement at a new location in the vicinity of interest.

9. Precision and Bias

9.1 *Interlaboratory Test Program*—An interlaboratory round robin was run during the May 1993 ASTM G1 meeting in Atlanta, GA, in which the pH of two soils, randomly selected from the grounds of the hotel, was measured with equipment brought to the meeting by each of the nine participants. Except for the use of only two materials, Practice E 691 was followed for the design and analysis of the data. Details of the design and analysis of the data are given in the research report.[6]

9.2 *Test Result*—The precision information given below in units of pH is for the comparision of two test results, each of which is an average of three determinations.

9.3 *Precision*:

	Material A	Material B
Average Test Value	4.53	4.20
95 % repeatability limit (within lab)	0.27	0.16
95 % reproducibility limit (between labs)	0.52	0.22

The above terms (repeatability limit and reproducibility limit) are used as specified in Practice E 177. The respective standard deviation among test results may be obtained by dividing the above limit values by 2.8.

9.4 *Bias*—The procedure in this test method for measuring pH of soil has no bias because the value of pH is defined only in terms of this test method.

I have read the remedial action agreement conditions listed on page 2 of this application. As provided in Section 101480(b), Article 5, Chapter 4, Division 101 of the California Health and Safety Code, I request that Orange County Health Care Agency, Environmental Health provide remedial action supervision at the site named in Section A above. Where not the responsible party, I have been authorized to act on behalf of the responsible party. I understand that charges payable by the responsible party or the authorized representative will be incurred for the time spent by Orange County Health Care Agency's staff for cleanup oversight activities.

Address 5600 BEACH BLVD. (Street) Suite BUENA PARK (City) 90622 (Zip Code)

Site Information :

- Is this site any of the following: listed on the Department of Toxic Substances Control's (DTSC) Calsites list; the subject of a cleanup order or enforceable agreement issued by DTSC; the subject of a remedial action initiated by DTSC; the subject of a corrective action order issued by DTSC; or a facility subject to DTSC hazardous waste treatment facility tiered permitting requirements? yes ☐ no [X] unknown ☐
- Is this site listed on a Regional Water Quality Control Board's (RWQCB) Leaking Underground Storage Tank Information System (LUSTIS) or Spills, Leaks, Investigation and Cleanup (SLIC) list or the subject of a cleanup and abatement order issued by a RWQCB? yes ☐ no [X] unknown ☐
- What is the property's current land use zoning designation? MANUFACTURING

Agreement Conditions:

- The issuance of a remedial action certification of completion is dependent on adequate completion of acceptable site assessment and remedial activities and attainment of cleanup goals established by Orange County Health Care Agency, Environmental Health (OCHCA) or the appropriate RWQCB.
- Site testing, monitoring and analysis will be required, as necessary, to properly determine the nature and extent of the release. A site assessment plan that shows proposed soil and water sampling and analyses should be submitted to OCHCA for concurrence before implementation. Any remedial action plan should be approved by OCHCA before implementation and work performed must be shown to have been effective in mitigating the actual or potential adverse effects of the release. **OCHCA must be notified at least 48 hours in advance of any site verification of mitigation sampling activity.** Where a remedial action has not been effective, implementation of an alternate effective remedial action is expected.
- Remedial goals will be based on risk assessment considerations that reflect site specific characteristics and the property's current land use zoning designation. If a land use change is planned or foreseen, OCHCA should be advised.
- OCHCA may, after giving adequate notice, withdraw in whole or part from the supervision of the remedial action should it determine: the responsible party is not in compliance with the remedial action agreement; available staff resources, technical expertise or technical capabilities are not available to adequately supervise the remedial action; the release of the waste that is the subject of the remedial action is of a sufficiently complex nature or may present such a significant potential hazard to human health or the environment that it should be referred to DTSC or a RWQCB; requested site assessment or remedial action plans have not been received in a timely manner; or implementation of approved plans has not occurred in a timely manner.
- Should OCHCA withdraw from the case, in whole or part, OCHCA may refer the case to DTSC or the RWQCB.
- OCHCA may discuss this case with staff at DTSC or the RWQCB at any time in the review process.
- An hourly service fee of $127.00, established per resolution of the Orange County Board of Supervisors for work performed by direct oversight staff, will be charged. Billings are sent out quarterly and are due within 30 days of receipt of the invoice. A late payment fee of 25% is applicable.
- OCHCA reserves the right to send copies of all correspondence to the property owner and others as appropriate.
- The contact person named in Section C, page 1 will be the point of contact for the responsible party unless OCHCA is otherwise advised.
- Pursuant to California law, all information in the site's cleanup file may be public record subject to disclosure to any member of the public who requests it. If it is necessary to include confidential information in your communications with the County, the County recommends that you clearly and prominently mark the information you believe falls into this category. The County will attempt to notify you if disclosure of such information is requested, in order to give you an opportunity to seek a court order prohibiting disclosure of such information. Due to the short statutory time period for the County's compliance with requests for public records, the County will be able to give you only a short period of time in which to seek a court order before the County will be required to disclose the requested information. Further, it is your responsibility to assert that information you believe is confidential should not be disclosed; the County will not make such a claim for you, but will obey a valid court order obtained by you prohibiting disclosure of such information.

I have read the remedial action agreement conditions listed on page 2 of this application. As provided in Section 101480(b), Article 5, Chapter 4, Division 101 of the California Health and Safety Code, I request that Orange County Health Care Agency, Environmental Health provide remedial action supervision at the site named in Section A above. Where not the responsible party, I have been authorized to act on behalf of the responsible party. I understand that charges payable by the responsible party or the authorized representative will be incurred for the time spent by Orange County Health Care Agency's staff for cleanup oversight activities.

Received 12-28-2005 11:19am From- To-ENV HEALTH FIRST FLO Page 002

Site Information :

- Is this site any of the following: listed on the Department of Toxic Substances Control's (DTSC) Calsites list; the subject of a cleanup order or enforceable agreement issued by DTSC; the subject of a remedial action initiated by DTSC; the subject of a corrective action order issued by DTSC; or a facility subject to DTSC hazardous waste treatment facility tiered permitting requirements? yes ☐ no [X] unknown ☐
- Is this site listed on a Regional Water Quality Control Board's (RWQCB) Leaking Underground Storage Tank Information System (LUSTIS) or Spills, Leaks, Investigation and Cleanup (SLIC) list or the subject of a cleanup and abatement order issued by a RWQCB? yes ☐ no [X] unknown ☐
- What is the property's current land use zoning designation? MANUFACTURING

Agreement Conditions:

- The issuance of a remedial action certification of completion is dependent on adequate completion of acceptable site assessment and remedial activities and attainment of cleanup goals established by Orange County Health Care Agency, Environmental Health (OCHCA) or the appropriate RWQCB.
- Site testing, monitoring and analysis will be required, as necessary, to properly determine the nature and extent of the release. A site assessment plan that shows proposed soil and water sampling and analyses should be submitted to OCHCA for concurrence before implementation. Any remedial action plan should be approved by OCHCA before implementation and work performed must be shown to have been effective in mitigating the actual or potential adverse effects of the release. **OCHCA must be notified at least 48 hours in advance of any site verification of mitigation sampling activity.** Where a remedial action has not been effective, implementation of an alternate effective remedial action is expected.
- Remedial goals will be based on risk assessment considerations that reflect site specific characteristics and the property's current land use zoning designation. If a land use change is planned or foreseen, OCHCA should be advised.
- OCHCA may, after giving adequate notice, withdraw in whole or part from the supervision of the remedial action should it determine: the responsible party is not in compliance with the remedial action agreement; available staff resources, technical expertise or technical capabilities are not available to adequately supervise the remedial action; the release of the waste that is the subject of the remedial action is of a sufficiently complex nature or may present such a significant potential hazard to human health or the environment that it should be referred to DTSC or a RWQCB; requested site assessment or remedial action plans have not been received in a timely manner; or implementation of approved plans has not occurred in a timely manner.
- Should OCHCA withdraw from the case, in whole or part, OCHCA may refer the case to DTSC or the RWQCB.
- OCHCA may discuss this case with staff at DTSC or the RWQCB at any time in the review process.
- An hourly service fee of $127.00, established per resolution of the Orange County Board of Supervisors for work performed by direct oversight staff, will be charged. Billings are sent out quarterly and are due within 30 days of receipt of the invoice. A late payment fee of 25% is applicable.
- OCHCA reserves the right to send copies of all correspondence to the property owner and others as appropriate.
- The contact person named in Section C, page 1 will be the point of contact for the responsible party unless OCHCA is otherwise advised.
- Pursuant to California law, all information in the site's cleanup file may be public record subject to disclosure to any member of the public who requests it. If it is necessary to include confidential information in your communications with the County, the County recommends that you clearly and prominently mark the information you believe falls into this category. The County will attempt to notify you if disclosure of such information is requested, in order to give you an opportunity to seek a court order prohibiting disclosure of such information. Due to the short statutory time period for the County's compliance with requests for public records, the County will be able to give you only a short period of time in which to seek a court order before the County will be required to disclose the requested information. Further, it is your responsibility to assert that information you believe is confidential should not be disclosed; the County will not make such a claim for you, but will obey a valid court order obtained by you prohibiting disclosure of such information.

Subject: **Case Closure**

Re: Access Business Group LLC
Nutrilite Division Site
5600 Beach Boulevard
Buena Park, CA 90621
OCHCA Case #05IC023

Dear Mr. Difilippo:

This letter confirms the completion of remedial investigation at the above-referenced site. With the provision that the information provided to this Agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

This confirmation of completion is limited in scope. It is limited to site conditions made known to this Agency under the above-referenced case number. It is based on an evaluation of the health threat presented by the inhalation, ingestion, or dermal absorption of the residual contaminant.

The spill of the acid cleaner A-300 and its potential to cause groundwater degradation were discussed with Kamron Saremi of the Santa Ana Regional Water Quality Control Board (SARWQCB). SARWQCB staff concurred that the results of the sampling conducted at the spill location do not indicate any impact to the subsurface that could pose a threat to the beneficial use of groundwater within the Orange County Management Zone, and that no further action is required for the site at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified

conditions at the site that cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health. It is the property owner's responsibility to notify this Agency of any changes in future contamination findings.

If you have any questions regarding this matter, please contact Luis Lodrigueza at (714) 433-6253.

Sincerely,

Elisabeth J. Gonzalez

Closure Rationale

OCHCA Case No.: **05IC023**

March 23, 2006

D.B.A.: **Nutrilite Facility**
5600 Beach Boulevard
Buena Park, CA 90621

Responsible Party: Joseph Difilippo
Access Business Group, LLC

Current Land Use: Manufacturing
Current Adjacent Land Use: Manufacturing
Future Land Use: Manufacturing

Soil Type: Medium-fine grained sand

Depth to Groundwater: 44' bg, measured

Introduction. This facility, operated by Access Business Group (ABG), a division of Alticor Inc., manufactures food supplements and food bars. The nature of the products manufactured here requires strict maintenance of current 'Good Manufacturing Practices' (GMP) in compliance with various regulatory agency requirements. Cleaning and Sanitizing, a primary component of the GMP, requires the use of A-300, an acid cleaner. It was a spillage of this A-300 cleaner that Nutrilite personnel discovered on December 20, 2005 in the chemical storage room (#10-009) within Building 10 of the facility, apparently from an accidental puncturing of one of its container drums during handling. Following cleanup of the A-300 that had pooled around the floor drain in the room, Nutrilite signed a voluntary cleanup agreement with this Agency, as recommended by the OCHCA-EH Compliance Section. The objective was to determine whether the subsurface had been adversely affected by the spill and, if so, to conduct any required remedial action to mitigate the contamination.

Remedial Investigation. Upon Agency approval of its proposal to sample the soil beneath the concrete floor in the immediate vicinity of the drain, ABG contracted Sharp Environmental Technologies, Inc. (SET) to proceed with the investigation. On January 2, 2006, SET's subcontractor saw-cut approximately 8' by 8' of the concrete floor in Room 10-009 to access the underlying soil. After removing the visqueen sheet directly underneath the concrete slab, SET advanced one shallow hand auger boring in each quadrant (NW, NE, SW and SE) 2½ to 3½ ft from the floor drain, from which SET collected soil samples at depths of 0.5, 1, 2 and 3 ft below grade (bg). In addition, SET advanced one other boring directly under the floor drain and collected a soil sample at a depth of 13 inches. All 0.5-ft samples were sealed and submitted to a State-certified laboratory for pH analysis by EPA Method 9045; the deeper samples were held for future analysis, depending on the results of the initial tests.

Analytical results showed the samples to have a pH range from 6.22 to 7.83 units, all of which fall within the recognized range of pH in California soils[1]. A pH range of 6.6-7.3 is generally considered neutral; a pH range of 6.1-6.5 is slightly acid and a pH range of 6.4-7.8 is mildly alkaline[2]. None of the pH values in the soil samples falls within the range that would classify it as hazardous, i.e., lesser or equal to 2 and greater than or equal to 12.5. Based on the results of the initial test, SET no longer requested analysis of the deeper samples.

Table I – Nature & Degree of Site Contamination

Sample ID	PH in subsurface soil	Cleanup Goal
NW 0-0.5' bg*	7.68	pH range 5.0-8.5
NE 0-0.5' bg	7.83	
SW 0-0.5' bg	7.5	
SE 0-0.5' bg	7.77	
Drain 13" bg	6.22	

*Below grade

[1]Soils, Hydrology and Water Quality Technical Appendix (Appendix D), CA State Water Resources Control Board, General Waste Discharge Requirements for Biosolids Land Application, Draft Statewide Program EIR, June 28, 1999.

[2] The Soil Chemistry of Hazardous Materials, J. Dragun, The Hazardous Materials Control Research Institute, 1988.

Conclusion and Recommendation. The pH of the soil samples collected directly beneath the A-300 spill area—within the 'slightly acidic to moderately alkaline' range—clearly shows that the subsurface was not adversely affected by the acid spill. In the absence of any threat to human health, safety or water quality, it is recommended that no further action be required for the site and that this case be closed.

Kamron Saremi of the Santa Ana Regional Water Quality Control Board was contacted regarding this and he concurred with no further action and case closure.

Joseph Difilippo
Access Business Group LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **Request for Remedial Action Supervision**

Re: Access Business Group LLC
Nutrilite Division Site
5600 Beach Boulevard
Buena Park, CA 90621
OCHCA Case #05IC023

Dear Mr. Difilippo:

Orange County Health Care Agency, Environmental Health has received your request that it provide remedial action supervision at the above referenced site as provided in the California Health and Safety Code (H&SC), Division 101, Chapter 4, Article 5, Section 101480 (b). This Agency agrees to provide remedial oversight under the agreement conditions specified on page 2 of the submitted "Request for Remedial Action Supervision".

Where a preliminary site assessment has not already been submitted, please submit a site assessment work plan for review and concurrence by HCA staff prior to implementation. This review will help ensure the planned site assessment work includes required information. The site assessment work plan should be designed to accomplish the identification of the lateral and vertical extent of soil contamination and the concentration of contaminants. The plan should include:

1. A site history that will serve as rationale for the selection of the locations of soil samples and soil borings and laboratory methods.
2. The proposed number and locations of soil samples and soil borings, and sampling methodology.
3. The proposed laboratory analysis and method.

After completion of site assessment, a report that outlines the findings of the site assessment and presents a proposed remedial action plan should be submitted to HCA staff for review and concurrence. A health and safety plan will be required where site remedial activities may pose a threat to public health. After the

remedial action plan has been fully implemented, remediation completion will be determined by site sampling overseen by HCA staff.

Upon the satisfactory completion of site assessment and necessary soil remediation, this Agency will issue a letter of completion. Where the site assessment reveals a possible threat to groundwater resources, the appropriate Regional Water Quality Control Board (RWQCB) will be so notified. When the RWQCB requires soil remedial action you will be requested to submit remedial action plans to both Agencies for review and concurrence.

All required permits must be obtained prior to beginning exploratory borings and construction of wells. All borings and abandoned wells must be properly sealed. Wells should be secured to prevent unauthorized access. For further information regarding required well permits and well abandonment, call (714) 667-3750. Drilling procedures, well design and construction must be accomplished in a manner that prevents the spread of contamination. Design and procedures should be developed by a registered professional (R.G., C.E.G., R.C.E., C.H.G., or equivalent) with expertise in subsurface investigations. Reports that include logs of soil borings or any findings or conclusions relating to subsurface information must be signed by a properly registered professional (R.G., C.E.G., C.H.G., or equivalent).

If any material removed from the site is a hazardous waste, send photocopies of the manifests, signed by the receiving facility, used to transport the material as verification of its proper transportation and disposal or treatment. Contaminated soil not meeting hazardous waste criteria should not be removed off site to other than a Class I hazardous waste landfill or permitted hazardous waste treatment facility without verification by this Agency and approval of the appropriate Regional Water Quality Control Board.

Be advised that an owner of non-residential real property who knows, or has reasonable cause to believe, that any release of a hazardous substance has come to be located on or beneath that real property shall, prior to sale, lease, or rental of the real property, give written notice of that condition to each buyer, lessee, or renter of the real property (H&SC, Division 20, Chapter 6.8, Section 25359.7[a]). Also any lessee or renter of real property who knows or has reasonable cause to believe that any release of a hazardous substance has come or will come to be located on or beneath that real property shall, following its discovery, give written notice of that condition to the owner of the real property or the lessor (H&SC 25359.7[b]).

If you have any questions regarding this matter, please contact the undersigned at (714) 433-6253.

Sincerely,

Luis Rodriguez
Hazardous Waste Specialist
Hazardous Materials Mitigation Section
Environmental Health Division

SITE ASSESSMENT WORK PLAN
BUILDING 10
NUTRILITE BUENA PARK FACILITY

We plan on breaking concrete and doing the soil samples on Monday, Jan. 2.
Kevin McBennett
(714) 412-6242

Prepared by: Eric Van Dellen

For

Joe Difillippo
Nutrilite Division, Access Business Gr
5600 Beach Boulevard
Buena Park, CA 90622-5940
714-562-6200

December 22. 2005

ACCESS BUSINESS GROUP

1. Introduction

1.1 Terms of Reference

This work plan presents the Site Assessment and Work Plan (SAP) for the activities related to the investigation of the release of A-300 acidic cleaner located in Building 10 of the Nutrilite division of Access Business Group manufacturing facility. This facility is located at 5600 Beach Boulevard in Buena Park California. This Sampling and Analysis Work Plan was prepared by Eric Van Dellen of the Access Business Group, a subsidiary of Alticor Inc.

1.2 The objective of this SAP is to investigate the impact of a release of A-300 acidic cleaner (MSDS is attached) in room 10-009 of Building 10 on December 20, 2005. Drawings of the building and the room are attached. The A-300 entered a floor drain and pooled on the floor of the room. A picture of the clean-up in progress is attached. This plan presents the proposed sampling and analysis of the subsurface soil located in the proximity of the floor drain. The results of this work plan will provide the dimensions of the soil that will be removed from the site and ensure that all the contaminated soil, if any, is removed or neutralized to remove the hazard.

1.3 The remainder of the SAP is organized into three sections. Section 2 provides background on the site and activities conducted at the site. Section 3 presents the sampling strategy with locations, procedures and analytical methods to be used to evaluate the soil conditions in the vicinity of the drain. Section 4 presents recommendations for soil removal based on the sampling results.

2. BACKGROUND

2.1 Site Description

The Nutrilite facility is operated by Access Business Group, a division of Alticor Inc. The site is located at 5600 Beach Boulevard in Buena Park, Californian. The facility manufactures food supplements and food bars. The Nutrilite complex consists of a number of buildings. Building 10 is used for the compounding, granulation, compression, and coating of tablets. Other buildings on the site include offices, maintenance, food bar and R&D facilities. A drawing of the site is attached. The sanitary drains are serviced by the Orange County POTW and the potable water is provided by the municipal system. Groundwater at the site is encountered at approximately 44 feet below grade.

Due to the nature of the products manufactured it is imperative that this facility maintain current Good Manufacturing Practices (CGMP) that complies with various regulatory agency requirements. Cleaning and Sanitizing is a primary component of cGMP's which required the use of A-300, the product released into room 10-009 in Building 10.

An incident report can be provided that details the facts involved in the actual release of the A-300.

2.2 Site History

A review of various dated aerial photographs, city directories and building permit records have indicated that the portion of the site located on the south side of the AT&SF railroad tracks was originally occupied by Nutrilite Products Inc., a manufacturer of food supplements, in 1949. Prior to occupancy of the site by Nutrilite Inc, the property appeared to be undeveloped with the exception of a few residential structures that were located along Emery Street. The manufacturing complex has grown to cover the entire site with office, manufacturing, and R&D facilities.

The following Agencies were contacted: US EPA; California Regional Water Quality Control Board Underground Storage Tank File Review; Site Clean-up and Landfill Sections; Orange County health Car Agency Environmental Section and Haz Mat Section; Orange County Fire Authority.

The US EPA reported that they do not maintain any records for the subject site address as potential hazardous substance sites under CERCLIS and Superfund.

The State Regional Water Quality Control Board reported no records for the site address.

Information from the Orange County Environmental Health Care Agency indicated that there was a minor release of gasoline detected from field tests during the removal of a gasoline UST on 11/18/1986. A letter dated 6/26/1987 form the Orange County Health Care Agency to Nutrilite states that the remediation of soil contamination was completed relative to the UST release and the site closed.

No releases or spills were reported to the Orange County Fire Authority prior to the event of 12/20/2005.

3. OPPERATING PROCEDURES FOR SOIL SAMPLING

3.1 The following sections contain standard operating procedures for soil sampling activities. These procedures are intended to provide field personnel with protocols to collect soil samples and obtain valid and reliable data.

Field personnel shall follow this procedure unless field conditions require deviations from the protocols described below. In those cases where deviations from the SAP are required, field personnel shall document the alternate procedures employed and the reasons for the deviations.

3.2 Health and Safety

Prior to the start of field activities, a site specific, health evaluation of the site shall be conducted by a qualified Industrial Hygienist. This evaluation shall include sampling for relevant compounds that may be present as a result of the release. Based on the results of this evaluation a site specific Health and Safety Plan shall be developed for the site that contains information pertaining to the site conditions, potential hazards, hazard control, monitoring procedures, personal protective equipment, emergency procedures, and hospital location. This Health and Safety Plan shall be reviewed and signed by field personnel and contractors. The Health and Safety Plan shall be available on site for field personnel in the event of a potentially hazardous situation.

3.3 Sampling Activities

Soil sampling will be conducted to assess the condition of the subsurface soil within and around the area impacted by the A-300 release. A four foot square section of the floor, centered on the drain will be removed. The approach taken for sampling is to start with four sample locations approximately two feet from the floor drain in room 10-009 (see attached drawing). The exact locations of the samples may need to be moved based on the location of the pipe servicing the floor drain. An additional sample directly under the floor drain should also be taken. This sample will determine the depth of a potential release from the drain piping and the four perimeter samples can determine the extent of the potential release.

Additional sample locations can used based on the field test results from the initial four perimeter samples. The locations of these samples can be determined by field personnel at the time the sampling is being conducted and recorded in the field notes.

Soil samples will be retrieved using a hand auger. Soil cores are recovered by auger as it is advanced by manually turning the sampling auger. Hand sampling is required to the limited space available in the room and the likely hood that any contamination would be limited to the near the surface due to the short time and limited amount of material involved. Also the site is covered with concrete so there is no migration of water that would push the release into the soil.

Given that this location is in the middle of a manufacturing complex there may be underground obstructions encountered at the sampling locations. Every effort will be made to avoid these obstructions but in the event that an obstruction is

encountered the field personnel will use their best professional judgment and move the sampling location away from the obstruction. Should this occur, it will be noted and the new location recorded in the field notes.

Samples will be taken at 0, 1, 2 and 3 feet below the concrete floor. Field samples will be taken at 0, 1, 2 and 3 feet to determine the extent of sampling required to define the release. A positive result from any field sample would require field personnel to move out from the drain an additional two feet and auger another sample. The sampling protocol would be repeated until a negative test result is obtained from the field sample test.

The same approach should be taken to define the depth of the release. If the three foot field sample is positive then additional samples should be taken and tested at one foot intervals until a negative field test is obtained. All of this work will be documented in the field notes.

Due to the nature of this release it is not probable that groundwater would be involved. No groundwater monitoring wells/probes are anticipated. Should this become necessary an addendum to this Work Plan will be submitted.

3.4 Sample Handling

Soil samples will be preserved on ice prior to analysis in the laboratory. Once a sample is collected it will remain in the possession of the field personnel until it is transported to the laboratory. Samples will be delivered to the laboratory within 48 hours of collection by either courier or over night shipping service. The samples will be transported to the laboratory under standard chain-of-custody procedures.

Chain-of-custody records will be maintained for each sample collected to provide an accurate written record of the possession and hold of samples from the time of collection through data analysis and reporting. The following information will be specified for each sample on the chain-of custody form: sample identification, sample date, sample time, sample location and depth, analysis to be performed, and special instructions if any.

The sampler and any other intermediate handlers of the samples shall sign the form and record the date and time at which the samples changed possession. The completed chain-of-custody form will be sealed inside the sampling container. Upon receipt of samples by the laboratory, the laboratory will be responsible for maintaining internal chain-of-custody of the samples.

3.5 Equipment Decontamination of sampling equipment shall be performed to reduce the potential for cross contamination between monitoring points. Non-dedicated sampling equipment will be decontaminated before and after samples are collected. Decontamination will consist of a detergent and water wash, potable water rinse, and distilled water rinse. Decontamination of personal protective equipment is addressed in the Health and Safety Plan.

3.6 Analytical Methods

The laboratory methods for evaluating the samples collected have been chosen based the material involved in the release. The laboratory analysis will be conducted in accordance with standard US EPA methods. The field analysis will be chosen based on the best practical field method.

The soil samples will be analyzed for pH, the single most significant characteristic of A-300.

SPECIFIC AREA SAFETY

Area Location (Description):
Cleaning chemical solution storage room

Work Description:

- Enclose the area and install an air exhaust blower to the exterior of the building.
- Saw cut & removal of 8'x8'x6" concrete slab, concrete to be stored in an open top trash bin, lab tested and properly disposed.
- Soil to be sampled and pH tested
- Contaminated soil to be removed, sorted as hazardous waste and properly disposed

Monitoring Equipment:
Gas detectors, NO and NO_2 to be monitored in affected area

Chemical Hazards Present:
Potential nitric acid residue in soil

Physical Hazards Present:
none

Planned Level of Protection:
Modified level "C"

Personnel Protective Equipment Level "C":

Feet:	Steel Toe Work Boots
Clothing:	Tyvek Coveralls or Equivalent
Respiratory:	none
Eyes:	Face shield
Hands:	Rubber Work Gloves or equivalent acid resistant
Head:	Hard Hat
Ears:	Hearing Protection and 2-Way Radio Communications (as appropriate)

Comments: Will elevate to modified level "B" if NO and NO2 gases are detected

Additional Monitoring Equipment Required:
Oxygen

Comments:

I have read the remedial action agreement conditions listed on page 2 of this application. As provided in Section 101480(b), Article 5, Chapter 4, Division 101 of the California Health and Safety Code, I request that Orange County Health Care Agency, Environmental Health provide remedial action supervision at the site named in Section A above. Where not the responsible party, I have been authorized to act on behalf of the responsible party. I understand that charges payable by the responsible party or the authorized representative will be incurred for the time spent by Orange County Health Care Agency's staff for cleanup oversight activities.

Received 12-28-2005 11:17am From- To-ENV HEALTH FIRST FLO Page 002

Site Information :

- Is this site any of the following: listed on the Department of Toxic Substances Control's (DTSC) Calsites list; the subject of a cleanup order or enforceable agreement issued by DTSC; the subject of a remedial action initiated by DTSC; the subject of a corrective action order issued by DTSC; or a facility subject to DTSC hazardous waste treatment facility tiered permitting requirements? yes ☐ no [X] unknown ☐
- Is this site listed on a Regional Water Quality Control Board's (RWQCB) Leaking Underground Storage Tank Information System (LUSTIS) or Spills, Leaks, Investigation and Cleanup (SLIC) list or the subject of a cleanup and abatement order issued by a RWQCB? yes ☐ no [X] unknown ☐
- What is the property's current land use zoning designation? MANUFACTURING

Agreement Conditions:

- The issuance of a remedial action certification of completion is dependent on adequate completion of acceptable site assessment and remedial activities and attainment of cleanup goals established by Orange County Health Care Agency, Environmental Health (OCHCA) or the appropriate RWQCB.
- Site testing, monitoring and analysis will be required, as necessary, to properly determine the nature and extent of the release. A site assessment plan that shows proposed soil and water sampling and analyses should be submitted to OCHCA for concurrence before implementation. Any remedial action plan should be approved by OCHCA before implementation and work performed must be shown to have been effective in mitigating the actual or potential adverse effects of the release. **OCHCA must be notified at least 48 hours in advance of any site verification of mitigation sampling activity.** Where a remedial action has not been effective, implementation of an alternate effective remedial action is expected.
- Remedial goals will be based on risk assessment considerations that reflect site specific characteristics and the property's current land use zoning designation. If a land use change is planned or foreseen, OCHCA should be advised.
- OCHCA may, after giving adequate notice, withdraw in whole or part from the supervision of the remedial action should it determine: the responsible party is not in compliance with the remedial action agreement; available staff resources, technical expertise or technical capabilities are not available to adequately supervise the remedial action; the release of the waste that is the subject of the remedial action is of a sufficiently complex nature or may present such a significant potential hazard to human health or the environment that it should be referred to DTSC or a RWQCB; requested site assessment or remedial action plans have not been received in a timely manner; or implementation of approved plans has not occurred in a timely manner.
- Should OCHCA withdraw from the case, in whole or part, OCHCA may refer the case to DTSC or the RWQCB.
- OCHCA may discuss this case with staff at DTSC or the RWQCB at any time in the review process.
- An hourly service fee of $127.00, established per resolution of the Orange County Board of Supervisors for work performed by direct oversight staff, will be charged. Billings are sent out quarterly and are due within 30 days of receipt of the invoice. A late payment fee of 25% is applicable.
- OCHCA reserves the right to send copies of all correspondence to the property owner and others as appropriate.
- The contact person named in Section C, page 1 will be the point of contact for the responsible party unless OCHCA is otherwise advised.
- Pursuant to California law, all information in the site's cleanup file may be public record subject to disclosure to any member of the public who requests it. If it is necessary to include confidential information in your communications with the County, the County recommends that you clearly and prominently mark the information you believe falls into this category. The County will attempt to notify you if disclosure of such information is requested, in order to give you an opportunity to seek a court order prohibiting disclosure of such information. Due to the short statutory time period for the County's compliance with requests for public records, the County will be able to give you only a short period of time in which to seek a court order before the County will be required to disclose the requested information. Further, it is your responsibility to assert that information you believe is confidential should not be disclosed; the County will not make such a claim for you, but will obey a valid court order obtained by you prohibiting disclosure of such information.

Subject: Re: Buena Park Spill Site Cleanup

Luis,

I have the signed form. Is there a number I can fax it to you? We're still in the process of securing a contractor to do this work, but it looks like it may happen the end of this week.

We have a finalized sampling plan that includes a Health & Safety Plan, but unfortunately UPS has lost it, thus our delay. Tracking indicates it was delivered to their Cerritos office last Friday (coming from corporate headquarters in Michigan), but now they can't find it, so we're going to have another one overnighted today. We should have it by sometime tomorrow.

Subject Buena Park Spill Site Cleanup

Kevin,

Did you get the email (with the attached 'Remedial Action Supervision Agreement' form) I sent you last Friday?

If so, and if you have filled out the form, please return same to me ASAP so that a case file can be opened and your proposal for site investigation reviewed.

Lodrigueza, Luis

From: Lodrigueza, Luis
Sent: Wednesday, December 21, 2005 9:56 AM
To: 'joe.difilippo@nutrilite.com'
Cc: Bish, Katherine; Diekmann, Bill
Subject: Voluntary Cleanup @ 5600 Beach Blvd., Buena Park

Mr. Filippo:

I was contacted by this Agency's Compliance Unit and told that you are willing to get into a voluntary cleanup agreement for the nitric acid release at the subject site.

Please fill in the attached Agreement form and return to me ASAP, together with a work plan for assessing the extent of impact and conducting remedial action to address the contamination. Make sure you include a Health & Safety Plan. I understand that any site assessment/remediation work is to be undertaken by personnel at Level 'A' or 'B' PPE.

I will have to be personally on site when remedial excavation has been completed to witness the collection of verification samples--to document successful remedial action completion. I will need at least 48 hours advance notification for this final sampling.

Please send email or call me (714) 433-6253) for questions. Also, you should continue to coordinate with Steve Sharp/Katherine Bish.

Luis,

I have the signed form. Is there a number I can fax it to you? We're still in the process of securing a contractor to do this work, but it looks like it may happen the end of this week.

We have a finalized sampling plan that includes a Health & Safety Plan, but unfortunately UPS has lost it, thus our delay. Tracking indicates it was delivered to their Cerritos office last Friday (coming from corporate headquarters in Michigan), but now they can't find it, so we're going to have another one overnighted today. We should have it by sometime tomorrow.

Kevin,

Did you get the email (with the attached 'Remedial Action Supervision Agreement' form) I sent you last Friday?

If so, and if you have filled out the form, please return same to me ASAP so that a case file can be opened and your proposal for site investigation reviewed.

Subject: FW: Site Assessment and Work Plan

Just a heads up-I explained to Kevin of Nutrilite that for us to get involved with a work plan or oversee the cleanup-he would need to sign a voluntary site cleanup with this Agency. I told him the benefit would be that we could sign off that where the spill occurred is clean. But without a signed contract and no fees being paid we can not provide this service. I told him that to oversee soil contamination is not part of my function, but only to oversee remediation that is during a spill situation (immediate abatement), not soil.

I told him that Luis sent an electronic copy of the contract to his manager and have not received it back or any verbal information back.

Hi Katherine,

I should have the complete sampling plan in Buena Park by today. Attached is the preliminary plan. We're trying to get this work done next week, hopefully by Wednesday. I'll let you know so you can be present.

Kevin
attached is a workplan for the soil testing and removal, please use it for your initial discussions with the remediation contractor. A more complete plan should arrive today by Fedexp in BP (I hope).

please let the contractor know that we want them to remove the chemical drums & pallets from the room (except the large tank), demo a 8' x 8' section around the drain, test the soil and remove contamination, remove the drain pipes and plug the end of the sewer pipes.

I'll be in LKV part of the day, call me if you have any questions

Subject Site Assessment and Work Plan

Guys,

Attached is my first draft of the work plan. I have more detailed info for the background and analytical methods but it will take additional time to research them. I can get that done on Thursday. please review the attached plan and get me your comments.....Rick

City of Buena Park Permit Declarations

LICENSED CONTRACTORS DECLARATION

☐ I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section7000 of Division 3 of the Business and Professions Code) and my License is in full force and effect. License Class_____ License No. _____

Date_____ Contractor _____

OWNER - BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reasons [Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the Contractors License Law (Chapter 9) (commencing with Section 7000 of Division 3 of the Business and Professions Code), or that he or she is exempt therefro·n and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant to a civil penalty of not more than five hundred dollars ($500)].

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044. Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, or who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If however, the building or improvement is sold within one year of completion, the owner builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044 Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such contracts with a contractor(s) license pursuant to the Contractors License Law.).

☐ I am exempt under Sec._____ B & P.C. for this reason _____

Date 11/8/06 Owner's Signature _____

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ C)

Lender's Name_____ Lender's Address _____

Signature of Applicant or Agent_____ Date_____

HAZARDOUS MATERIAL DECLARATION

Will the applicant or future building occupant handle a hazardous material or a mixture containing a hazardous material equal to or greater than the amounts specified on the Hazardous Materials Guide? ☐ YES ☐ NO

Will the proposed building be within 1000 feet of the outer boundary of the school? ☐ YES ☐ NO

If "YES" to any of the above, you must obtain proper permits from South Coast Air Quality Management District (SCAQMD). If air permits are NOT required, provide a written statement from air quality agency.

If "YES" to any of the above, contact SCAQMD.

Owner or Authorized Agent X _____

NOTE: OWNER WILL BE RESPONSIBLE FOR THE LEGAL AND ACTUAL PHYSICAL SETBACKS FROM PROPERTY LINE AS REQUIRED BY ORDINANCE OF THE CITY OF BUENA PARK. Building Permits are subject to expiration if work is not commenced within 180 days after the date of issuance or if work is suspended for 180 days.

I DO HEREBY AGREE that all work in connection with this Building and Safety Department Permit shall comply with all the laws and requirements of the City of Buena Park, Hereinafter called City, and hereby certify that in performance of said work I shall not violate any law of the State of California, including provisions for Workman's Compensation Insurance, licenses and other regulations of the State. I agree to hold the City harmless from any and all liability for personal property damage caused by any work done by me, my employees, agents or representatives on the premises. I agree that the permit shall not make the City subject to any claim for liability arising from any work done thereunder and I agree to pay the amount of such claim against the City. (I certify that I have read this application and that the information given is correct. I agree to comply with all State laws and City ordinances relating to building construction and authorize a representative of the City of Buena Park, of Building and Safety Division to enter upon the property for which I have applied for the purpose of making inspection.)

JOB FINALIZED YES PERMIT# B11-0649 DATE 12/29/11 BY CMC

B-1000 (Rev. 1/28/09)

NOTICE TO PROPERTY OWNER

Dear Property Owner:

An application for a building permit has been submitted in your name listing yourself as the builder of the property improvements specified _____.

W providing you with an Owner-Builder Acknowledgment and Information Verification Form to make you aware of your responsibilities and possible risk y may incur by having this permit issued in your name as the Owner-Builder.

We will not issue a building permit until you have read, initialized your understanding of each provision, signed, and returned this form to us at City of Buena Pa 6650 Beach Blvd. An agent of the owner cannot execute this notice unless you, the property owner, obtain the prior approval of the permitting authority.

OWNER'S ACKNOWLEDGMENT AND VERIFICATION OF INFORMATION

DIRECTIONS: Read and initial each statement below to signify you understand or verify this information.

TG 1. I understand a frequent practice of unlicensed persons is to have the property owner obtain an "Owner-Builder" building permit that erroneously impl that the property owner is providing his or her own labor and material personally. I, as the Owner-Builder, may be held liable and subject to serious financial r for any injuries sustained by an unlicensed person and his or her employees while working on my property. My homeowner's insurance may not provide covera for those injuries. I am willfully acting as an Owner-Builder and am aware of the limits of my insurance coverage for injuries to workers on my property.

TG 2. I understand building permits are not required to be signed by property owners unless they are *responsible* for the construction and are not hiring licensed Contractor to assume this responsibility.

TG 3. I understand as an "Owner-Builder" I am the responsible party of record on the permit. I understand that I may protect myself from potential financ risk by hiring a licensed Contractor and having the permit filed in his or her name instead of my own.

TG 4. I understand Contractors are required by law to be licensed and bonded in California and to list their license numbers on permits and contracts.

TG 5. I understand if I employ or otherwise engage any persons, other than California licensed Contractors, and the total value of my construction is at le five hundred dollars ($500), including labor and materials, I may be considered an "employer" under state and federal law.

TG 6. I understand if I am considered an "employer" under state and federal law, I must register with the state and federal government, withhold payroll tax provide workers' compensation disability insurance, and contribute to unemployment compensation for each "employee." I also understand my failure to abide these laws may subject me to serious financial risk.

T 7. I understand under California Contractors' State License Law, an Owner-Builder who builds single-family residential structures cannot legally build th with the intent to offer them for sale, unless *all* work is performed by licensed subcontractors and the number of structures does not exceed four within a calendar year, or all of the work is performed under contract with a licensed general building Contractor.

TG 8. I understand as an Owner-Builder if I sell the property for which this permit is issued, I may be held liable for any financial or personal injuries sustair by any subsequent owner(s) that result from any latent construction defects in the workmanship or materials.

TG 9. I understand that I may obtain more information regarding my obligations as an "employer" from the Internal Revenue Service, the United States Sn Business Administration, the California Department of Benefit Payments, and the California Division of Industrial Accidents. I also understand I may contact California Contractors' State License Board (CSLB) at 1-800-321-CSLB (2752) or www.cslb.ca.gov for more information about licensed contractors.

TG 10. I am aware of and consent to an Owner-Builder building permit applied for in my name, and understanding that I am the party legally and financi responsible for proposed construction activity at the following address:_____.

TG 11. I agree that, as the party legally and financially responsible for this proposed construction activity, I will abide by all applicable laws and requireme that govern Owner-Builders as well as employers.

TG 12. I agree to notify the issuer of this form immediately of any additions, deletions, or changes to any of the information I have provided on this form.

Licensed contractors are regulated by laws designated to protect the public. If you contract with someone who does not have a license, the Contractors' S License Board may be unable to assist you with any financial loss you may sustain as a result of a complaint. Your only remedy against unlicensed Contrac may be in civil court. It is also important for you to understand that if an unlicensed Contractor or employee of that individual or firm is injured while working your property, you may be held liable for damages. If you obtain a permit as Owner-Builder and wish to hire Contractors, you will be responsible for verif whether or not those Contractors are properly licensed and the status of their workers' compensation insurance coverage.

Before a building permit can be issued, this form must be completed and signed by the property owner and returned to the agency responsible for issuing permit.

N A copy of the property owner's driver's license, form notarization, or other verification acceptable to the agency is required to be presented when the pe is ed to verify the property owner's signature.

LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. License Class B C-10 License No. 409077

Date 12/4/13 Contractor Signature _____

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable items(s) (Section 7031.5, Business and Professions Code: Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500)

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do (_) all of or (_) portions of the work, and the structure is not intende or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sol within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to th Contractors' State License Law.)

☐ I, am exempt from licensure under the Contractors' State License Law for the following reasons: _____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of th improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application i submitted or at the following Web Site: http://www.leginfo.ca.gov/calaw.html.

City of Buena Park Permit Declarations

LICENSED CONTRACTORS DECLARATION

☐ I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000 of Division 3 of the Business and Professions Code) and my License is in full force and effect. License Class_____License No. _____

Date_____Contractor _____

OWNER - BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reasons [Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the Contractors License Law (Chapter 9) (commencing with Section 7000 of Division 3 of the Business and Professions Code), or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant to a civil penalty of not more than five hundred dollars ($500)].

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044. Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, or who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If however, the building or improvement is sold within one year of completion, the owner builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044 Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such contracts with a contractor(s) license pursuant to the Contractors License Law.).

☐ I am exempt under Sec._____, B & P.C. for this reason _____

Date_____Owner's Signature _____

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Cic C)

City of Buena Park Permit Declarations

LICENSED CONTRACTORS DECLARATION

☐ I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000 of Division 3 of the Business and Professions Code) and my License is in full force and effect. License Class_____License No. _____

Date_____Contractor _____

OWNER - BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reasons [Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the Contractors License Law (Chapter 9) (commencing with Section 7000 of Division 3 of the Business and Professions Code), or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant to a civil penalty of not more than five hundred dollars ($500)].

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044. Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, or who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If however, the building or improvement is sold within one year of completion, the owner builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044 Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such contracts with a contractor(s) license pursuant to the Contractors License Law.).

☐ I am exempt under Sec._____, B & P.C. for this reason _____

Date_____Owner's Signature _____

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Cic C)

Lender's Name_____ Lender's Address _____

Signature of Applicant or Agent_____Date_____

HAZARDOUS MATERIAL DECLARATION

Will the applicant or future building occupant handle a hazardous material or a mixture containing a hazardous material equal to or greater than the amounts specified on the Hazardous Materials Guide? ☐ YES ☐ NO

Will the proposed building be within 1000 feet of the outer boundary of the school? ☐ YES ☐ NO

If "YES" to any of the above, you must obtain proper permits from South Coast Air Quality Management District (SCAQMD). If air permits are NOT required, provide a written statement from air quality agency.

If "YES" to any of the above, contact SCAQMD

Owner or Authorized Agent X _____

NOTE: OWNER WILL BE RESPONSIBLE FOR THE LEGAL AND ACTUAL PHYSICAL SETBACKS FROM PROPERTY LINE AS REQUIRED BY ORDINANCE OF THE CITY OF BUENA PARK. Building Permits are subject to expiration if work is not commenced within 180 days after the date of issuance or if work is suspended for 180 days.

I DO HEREBY AGREE that all work in connection with this Building and Safety Department Permit shall comply with all the laws and requirements of the City of Buena Park, Hereinafter called City, and hereby certify that in performance of said work I shall not violate any law of the State of California, including provisions for Workman's Compensation Insurance, licenses and other regulations of the State. I agree to hold the City harmless from any and all liability for personal property damage caused by any work done by me, my employees, agents or representatives on the premises. I agree that the permit shall not make the City subject to any claim for liability arising from any work done thereunder and I agree to pay the amount of such claim against the City. (I certify that I have read this application and that the information given is correct. I agree to comply with all State laws and City ordinances relating to building construction and authorize a representative of the City of Buena Park, of Building and Safety Division to enter upon the property for which I have applied for the purpose of making inspection.)

CERTIFICATION OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

This section need not be completed if the permit is for one hundred dollars ($100) or less. I certify that in the performance of the work for which this permit is issued. I shall not employ any person in any manner so as to become subject to the workers' compensation laws of the State of California, and agree that if I should become subject to the workers' Compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date:_____ Applicant Signature: _____

NOTICE TO APPLICANT: If after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

WARNING: Failure to secure worker's compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars ($100,000), in addition to the cost of compensation, damages as provided for in section 3706 of the Labor Code, interest and attorney's fees.

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

DATE 4-30-09 BY CaC

FORM B-1000 (REV. 4/07)

NOTICE TO PROPERTY OWNER

Dear Property Owner:

An application for a building permit has been submitted in your name listing yourself as the builder of the property improvements specified 5600 Beach Blvd.

We are providing you with an Owner-Builder Acknowledgment and Information Verification Form to make you aware of your responsibilities and possible risk yc may incur by having this permit issued in your name as the Owner-Builder.

We will not issue a building permit until you have read, initialized your understanding of each provision, signed, and returned this form to us at City of Buena Par 6650 Beach Blvd. An agent of the owner cannot execute this notice unless you, the property owner, obtain the prior approval of the permitting authority.

OWNER'S ACKNOWLEDGMENT AND VERIFICATION OF INFORMATION

DIRECTIONS: Read and initial each statement below to signify you understand or verify this information.

SL 1. I understand a frequent practice of unlicensed persons is to have the property owner obtain an "Owner-Builder" building permit that erroneously implie that the property owner is providing his or her own labor and material personally. I, as the Owner-Builder, may be held liable and subject to serious financial ris for any injuries sustained by an unlicensed person and his or her employees while working on my property. My homeowner's insurance may not provide coverag for those injuries. I am willfully acting as an Owner-Builder and am aware of the limits of my insurance coverage for injuries to workers on my property.

SL 2. I understand building permits are not required to be signed by property owners unless they are *responsible* for the construction and are not hiring licensed Contractor to assume this responsibility.

SL 3. I understand as an "Owner-Builder" I am the responsible party of record on the permit. I understand that I may protect myself from potential financi risk by hiring a licensed Contractor and having the permit filed in his or her name instead of my own.

SL 4. I understand Contractors are required by law to be licensed and bonded in California and to list their license numbers on permits and contracts.

SL 5. I understand if I employ or otherwise engage any persons, other than California licensed Contractors, and the total value of my construction is at lea five hundred dollars ($500), including labor and materials, I may be considered an "employer" under state and federal law.

SL 6. I understand if I am considered an "employer" under state and federal law, I must register with the state and federal government, withhold payroll taxe provide workers' compensation disability insurance, and contribute to unemployment compensation for each "employee." I also understand my failure to abide t laws may subject me to serious financial risk.

SL 7. I understand under California Contractors' State License Law, an Owner-Builder who builds single-family residential structures cannot legally build the with the intent to offer them for sale, unless *all* work is performed by licensed subcontractors and the number of structures does not exceed four within a calendar year, or all of the work is performed under contract with a licensed general building Contractor.

SL 8. I understand as an Owner-Builder if I sell the property for which this permit is issued, I may be held liable for any financial or personal injuries sustain by any subsequent owner(s) that result from any latent construction defects in the workmanship or materials.

SL 9. I understand that I may obtain more information regarding my obligations as an "employer" from the Internal Revenue Service, the United States Sm Business Administration, the California Department of Benefit Payments, and the California Division of Industrial Accidents. I also understand I may contact t California Contractors' State License Board (CSLB) at 1-800-321-CSLB (2752) or www.cslb.ca.gov for more information about licensed contractors.

SL 10. I am aware of and consent to an Owner-Builder building permit applied for in my name, and understanding that I am the party legally and financia responsible for proposed construction activity at the following address: 5600 Beach Blvd.

SL 11. I agree that, as the party legally and financially responsible for this proposed construction activity, I will abide by all applicable laws and requiremer that govern Owner-Builders as well as employers.

SL 12. I agree to notify the issuer of this form immediately of any additions, deletions, or changes to any of the information I have provided on this form.

Licensed contractors are regulated by laws designated to protect the public. If you contract with someone who does not have a license, the Contractors' Sta License Board may be unable to assist you with any financial loss you may sustain as a result of a complaint. Your only remedy against unlicensed Contracto may be in civil court. It is also important for you to understand that if an unlicensed Contractor or employee of that individual or firm is injured while working your property, you may be held liable for damages. If you obtain a permit as Owner-Builder and wish to hire Contractors, you will be responsible for verifyi whether or not those Contractors are properly licensed and the status of their workers' compensation insurance coverage.

Before a building permit can be issued, this form must be completed and signed by the property owner and returned to the agency responsible for issuing t permit.

Note: A copy of the property owner's driver's license, form notarization, or other verification acceptable to the agency is required to be presented when the perr is issued to verify the property owner's signature.

Signature of property owner Salinge / Nutrilite Date: 1-22-09

1 INTRODUCTION

1.1 SWPPP Overview

This Storm Water Pollution Prevention Plan (SWPPP) is prepared for Nutrilite, located at 5600 Beach Boulevard in the city of Buena Park, Orange County. The purpose of this SWPPP is to:

- Identify potential sources of contaminants that may impact storm water, and eliminate or control them effectively;
- Eliminate non-storm water discharges (e.g., unpermitted process wastewater and non-contact cooling water), if applicable;
- Implement a storm water monitoring program;
- Implement Best Management Practices (BMPs) to identify, reduce, eliminate, and prevent the pollution of storm water;
- Provide for emergency cleanup of spills or discharges that could impact storm water; and
- Prevent surface water quality, ground water quality, and sediment management standard violations.

This SWPPP was developed in accordance with California's General Permit for Storm Water Discharges Associated with Industrial Activities, adopted on April 1, 2014, with an effective date of July 1, 2015.

The SWPPP is available on-site to all employees during all hours of operation, and will be made available upon request by a State or Municipal inspector. The SWPPP is effective as of July 1, 2015.

1.1.1 Permit Registration Documents

The company registered for coverage by certifying and submitting the required Permit Registration Documents (PRDs) via SMARTS (http://smarts.waterboards.ca.gov), which include:

- A completed Notice of Intent (NOI) and signed certification statement;
- A copy of a current Site Map from the SWPPP
- A copy of this SWPPP, and
- Payment of the Annual Fee

1.1.2 Other Requirements and Existing Facility Plans

In addition to this SWPPP, there are several other regulatory agencies, regulations, and written plans in place at the facility that pertain directly or indirectly to the goal of preventing storm water pollution. Where appropriate these other requirements are included in this plan, and are otherwise incorporated herein by reference.

1.2 Facility Information

Nutrilite grows, harvests, and processes plants for the manufacturing of vitamins. The facility covers approximately 20 acres, and is located in Buena Park, within the Santa Ana Region (8) of the Water Quality Control Board. The facility is 0.8 miles north of the 5 Freeway and 0.8 miles north and west of the Fullerton Municipal Airport.

Standard Industrial Classification (SIC) Code(s): 2099

Waste Discharger Identification (WDID) Number: 8 30I024716

Estimated area of industrial activity at site exposed to storm water: 20 acres

Discharge to surface waters? ☒ Yes ☐ No

Discharge into a municipal storm water conveyance system? ☐ Yes ☒ No

Discharge 303(d)-listed waters? ☒ Yes ☐ No

Discharge HUC-10-listed watershed? ☒ Yes ☐ No

1.3 Scheduled Operating Hours

24/7

1.4 Contact Information/Responsible Parties

Facility Operator(s):

Name: Nutrilite
Address: 5600 Beach Boulevard
City, State, Zip: Buena Park, CA 90621
Telephone Number: (714) 562-4120

Facility Owner(s):

Name: Nutrilite
Address: 5600 Beach Boulevard
City, State, Zip: Buena Park, CA 90621
Telephone Number: (714) 562-4120

SWPPP Contact:

Name: Ashish Jain
Telephone number: (848) 459-8088

1.5 Storm Water Pollution Prevention Team

Staff Names and/or Title	Individual Responsibilities
Ashish Jain	Oversees permit requirements, including housekeeping, observations and record keeping, run-off sampling and other permit requirements that may arise in day-to-day permit management.
Melissa Hernandez	Ensures the SWPPP is being properly implemented by periodically reviewing employee performance and conducting inspections.

Ashish Jain is the Lead SWPPP Administrator, and will have primary responsibility for implementing the SWPPP. The Lead SWPPP Administrator will coordinate with other members of the Pollution Prevention Team as needed.

The Pollution Prevention Team shall hold regular meetings at least annually to review the overall operation and effectiveness of the BMPs, establish responsibilities for inspections, operation and maintenance, and availability for emergency situations. All members of the Pollution Prevention Team shall be trained in the operation, maintenance and inspection of BMPs, and reporting procedures.

1.6 Site Maps

The following site maps identify various details about the facility, including:

Figure 1: Area Map
Shows the general location of the facility and a 1-mile radius.

Figure 2: Facility Boundary and Storm Water Drainage Areas
Depicts:

- The facility's boundaries;
- Storm water drainage areas within the facility boundary;
- Locations of storm water collection and conveyance systems, associated discharge locations, and direction of flow;
- Portions of any drainage area impacted by discharges from surrounding areas;
- Areas of soil erosion;
- Location(s) of nearby water bodies (such as rivers, lakes, wetlands, etc.) or municipal storm drain inlets that may receive the facility's industrial storm water discharges; and,
- Authorized NSWDs.

Figure 3: Structural Control Measures
Shows locations and descriptions of structural control measures that affect storm water discharges, non-storm water discharges, and run-on from off-site locations (if applicable)

Figure 4: Industrial Activity Subject to the General Permit
Identifies areas of industrial activity subject to the General Permit, including:

- Industrial storage areas and storage tanks;
- Shipping and receiving areas;
- Fueling areas;
- Vehicle and equipment storage/maintenance areas;
- Material handling and processing areas;
- Waste treatment and disposal areas;
- Dust or particulate generating areas;
- Cleaning and material reuse areas; and,
- Other areas of industrial activity that may have potential pollutant sources.

Figure 1: Area Map

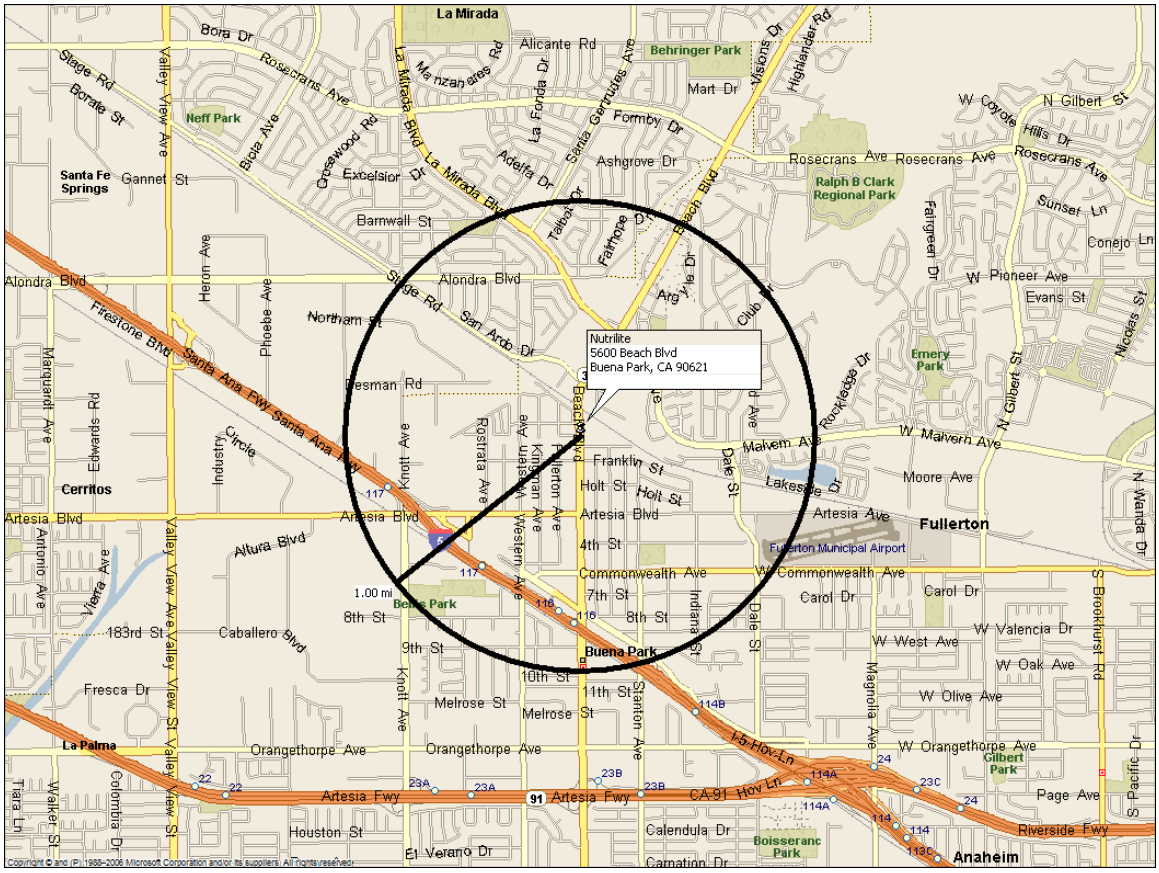

Figure 1, above, shows the general location of the facility and a 1-mile radius.

2 FACILITY ASSESSMENT

2.1 Facility Description

Nutrilite is located at 5600 Beach Boulevard, in the city of Buena Park, Orange County, and is within the Santa Ana Region (8) of the Water Quality Control Board.

The facility is bordered on the northwest by River Way, which turns into Cascade Way along the western end of the northern perimeter. Dr. Sam Way runs along the southern perimeter of the site, and Darlington Avenue runs parallel and south of Dr. Sam Way. Beach Boulevard runs along our western perimeter. The southern and northern buildings are bisected by railroad tracks. The site is 95% impervious, with roughly 60% of the impervious area consisting of buildings or covered areas. The remaining 5% of the site is comprised of landscaped areas that do not impact storm water.

Storm water at the facility flows to seven discharge points, (see Figure 2: Facility Boundary and Storm Water Drainage Areas, on Page 6, above). Storm water from the facility discharges directly into Brea Creek, which flows into Coyote Creek, to the San Gabriel River, then to Pacific Ocean, which is approximately 11.5 miles to the south. Coyote Creek is listed on the 303(d) list of impaired waters, but none of listed pollutants are associated with industrial activities or storm water from the facility.
Additionally, the facility is located within a watershed (HUC-10) that is impaired with the following pollutants: Ammonia, Cyanide, Diazinon, Dioxin, Dissolved Oxygen, Eutrophic, Coliform Bacteria, Indicator Bacteria, Copper, lead, Nickel, Selenium, Dissolved Copper, Algae, Polychlorinated Biphenyls (PCBs), Chlordane, and pH. None of the HUC-10 pollutants are associated with industrial activity at the facility other than pH, which is being sampled and tested already as part of the required basic parameters in the Industrial General Permit.

The table below identifies sources of pollutants and categorizes each per Section X.G.1, Description of Potential Pollutant Sources, in the Storm Water General Permit:

Table 1: Description of Potential Pollutant Sources

Pollutant Source	SWPPP Section	Categories	Potential Pollutants		
			pH	TSS	O&G
Indoor Production	2.2.2	Material Handling & Storage		X	X
Indoor Storage	2.2.2	Material Handling & Storage		X	X
Loading/Unloading	2.2.2	Material Handling & Storage		X	X
Hazardous Materials Storage	2.2.2	Material Handling & Storage		X	X
Facility Support Equipment	2.2.2	Material Handling & Storage		X	X
Operational Equipment	2.2.2	Material Handling & Storage		X	X
Dust Collection Systems	2.2.3	Dust or Particulate Generating Processes			
Solid Waste Management	2.2.4	On-Site Waste Storage		X	X
Chillers	2.3	Non-Storm Water Discharges			X
Air Compressors	2.3	Non-Storm Water Discharges			X
Cooling Tower	2.3	Non-Storm Water Discharges			

2.2 Industrial Activities and Potential Pollutant Sources

The following subsections identify and briefly describe the various industrial activities at the facility that have potential to impact storm water run-off, and the pollutants associated with each activity.

2.2.1 Outdoor Industrial Processes

There are no outdoor industrial processes that are exposed to storm water.

2.2.2 Material Handling and Storage Areas

Indoor Production:
Industrial activity is performed in the buildings on the northern and southern portions of the site. The southern portion of the site is houses the building for granulation and Research/ Development (R&D), which can be found in the large building along the southern perimeter. A maintenance shop is located off the northwest corner of the southern building. Packaging, blending, compression, and coating activities are conducted within the building near the west side. The western end of the building on the northern portion of the site is used for packaging.

The potential pollutants from indoor production areas are Total Suspended Solids (TSS) and Oil & Grease (O&G).

Indoor Storage:
Raw materials are stored in the building just north of the R&D building in the south, and finished products are kept in the eastern end of the building on the northern portion of the site. Miscellaneous items are stored in the trailers in the Waste Accumulation Areas.

The potential pollutants from indoor storage areas are TSS and O&G.

Loading/Unloading:
Raw materials are unloaded at the loading docks along the east side of the R&D and Indoor Storage buildings on the southern portion of the site. As needed, trailers may also be staged in the docks. Finished products are loaded for shipment at the loading docks to the warehouse building on the northern portion of the site, and additional trailers may be staged along the eastern perimeter of the site, just north of the Waste Accumulation Area found nearby.

The potential pollutants from loading and unloading areas are TSS and O&G.

Hazardous Materials/Waste Fluids:
Hazardous Materials/Waste Fluids are primarily stored in the covered area near the southeastern corner of the site. They are also contained in the two smaller sheds located in the designated areas on the northern and southern portions of the site, respectively.

The potential pollutants from hazardous materials areas are TSS and O&G.

Facility Support Equipment:
The Facility Equipment includes equipment in the chemical dispensing area, a chiller, boiler, emergency generator, and water treatment system. The chemical dispensing area is located in the covered area under the walkway that connects the two portions of the site, and the cooling tower is situated by the railroad tracks with the boiler located above it. The compressors and water treatment system are also located along the northern perimeter of the blending building.

The potential pollutants from facility support equipment are TSS and O&G.

Operational Equipment:
Operational Equipment includes forklifts and other machinery and equipment used throughout the facility.

The potential pollutants from operational equipment are TSS and O&G.

The table below identifies the industrial materials handled at the facility that are exposed, or have potential for exposure, to precipitation or runoff, and which could subsequently result in storm water pollution.

Table 2: Material Handling and Storage Areas

Industrial Materials	Location	Typical Quantity	Frequency
Detergent	Indoor Production	2,000 gallons	Varies
Acid Cleaner	Indoor Production	2,000 gallons	Varies
Mineral Oil	Indoor Production	1,375 gallons	Varies
Fish Oil	Indoor Production	1,100 gallons	Varies
Powders (Plant Based)	Indoor Production	1 million lbs.	Per year

2.2.3 Dust or Particulate Generating Processes

Dust Collection Systems:
Dust collection systems are located along the north side and southwest corner of the blending building.

The potential pollutants from the dust collection systems are TSS, O&G, and COD.

2.2.4 On-Site Waste Treatment, Storage, or Disposal

Dumpster/Roll-off
Roll-offs, compactors, and dumpsters are located in the Waste Accumulation Areas, located along the east side of the site. Pallets and racks are also stored in these areas. Two solid waste and recycling dumpsters are located in the northwest corner by the employee parking lot.

The potential pollutants from the dumpsters and roll-offs are TSS, O&G, and COD.

2.2.5 Vehicle and Equipment Fueling, Maintenance, Cleaning

There is no vehicle or equipment fueling, maintenance, or cleaning at the facility.

2.3 Non-Storm Water Discharges

Non-Storm Water Discharges (NSWD) are discharges that do not originate from precipitation events. NSWD include, but are not limited to, discharges of process water, air conditioner condensate, non-contact cooling water, vehicle wash water, sanitary wastes, concrete washout water, paint wash water, irrigation water, or pipe testing water.

NSWD that do not meet the criteria for "authorized" NSWD are "unauthorized," and BMPs are required to eliminate them from the facility's discharge.

The table, below, identifies all known NSWD at the facility:

Table 3: Non-Storm Water Discharges

Source	Quantity	Frequency	Characteristics	Authorized? (Y/N)
Condensate from refrigeration, air conditioning, air compressors	1-10 gallons	daily	Clear	Y
Incidental windblown mist from cooling towers	varies	daily	Clear	Y
Process wastewater	Minimal	infrequent	Clear	N
Non-contact cooling water	Minimal	infrequent	Clear	N
Sanitary waste	Minimal	infrequent	Clear	N

The authorized NSWD identified in the table, above, are managed by the BMPs described in Section 3 of this SWPPP. These BMPs are designed to:

- Reduce or prevent the contact of authorized NSWDs with materials or equipment that are potential sources of pollutants;
- Reduce, to the extent practicable, the flow or volume of authorized NSWDs;
- Ensure that authorized NSWDs do not contain quantities of pollutants that cause or contribute to an exceedance of a water quality standards; and,
- Reduce or prevent discharges of pollutants in authorized NSWDs in a manner that reflects best industry practice considering technological availability and economic practicability and achievability.

Monthly visual observations will be conducted for NSWDs, as described in Section 4.2.1, Monthly Visual Observations, below.

2.4 Areas Where Spills and Leaks are Likely to Occur

This section describes any potential sources of pollutants that could result from a spill, leak, or release, as well as previous spills or leaks that are known to have occurred that pose an on-going risk of exposure to storm water.

Table 4: Areas Where Spills and Leaks are Likely to Occur

Location	Affected Discharge Point
Indoor Storage	DP#2, DP#3
Loading/Unloading	DP#2, DP#3
Hazardous Materials Storage	DP#2, DP#3
Facility Support Equipment	DP#1
Operational Equipment	DP#1, DP#2, DP#3, DP#4, DP#5
Dust Collection Systems	DP#1

2.5 Previous Spills or Leaks to Storm Water System

There have been no spills or leaks that have occurred in the last five years that resulted in an off-site discharge or potential off-site discharge.

2.6 Erodible Surfaces

Not Applicable. All surfaces exposed to storm water at the facility are impervious (paved or covered by buildings); there are no erodible surfaces.

2.7 Drainage Areas with No Exposure

The parking lot areas on the south and southwest sides of the facility are not exposed to industrial activity. These areas drain to DP#1, DP#4, DP#5, DP#6, and DP#7, as depicted in Figure 2, above.

3 BEST MANAGEMENT PRACTICES

3.1 Minimum BMPs

The following minimum BMPs are intended to address the potential sources of storm water pollution presented in Section 2 Facility Assessment, in order to reduce or prevent pollutants in the facility's industrial storm water discharges.

3.1.1 Good Housekeeping

Ongoing housekeeping measures are particularly important to prevent storm water pollution. Housekeeping-related activities are continuous, with regularly scheduled maintenance of outdoor areas conducted.
The following minimum housekeeping activities are required by the General Permit, and are implemented at the facility:

- Regularly observe outdoor areas, including storm water discharge locations, drainage areas, conveyance systems, waste handling/disposal areas, and perimeter areas impacted by off-facility materials or storm water run-on, to determine housekeeping needs. Any identified debris, waste, spills, tracked materials, or leaked materials shall be cleaned and disposed of properly;
- Minimize or prevent material tracking;
- Minimize dust generated from industrial materials or activities
- Ensure that all facility areas impacted by rinse/wash waters are cleaned as soon as possible;
- Cover all stored industrial materials that can be readily mobilized by contact with storm water;
- Contain all stored non-solid industrial materials or wastes (e.g., particulates, powders, shredded paper, etc.) that can be transported or dispersed via by the wind or contact with storm water;
- Prevent disposal of any rinse/wash waters or industrial materials into the storm water conveyance system;
- Minimize storm water discharges from non-industrial areas (e.g., storm water flows from employee parking area) that contact industrial areas of the facility; and
- Minimize authorized NSWDs from non-industrial areas (e.g., potable water, fire hydrant testing, etc.) that contact industrial areas of the facility.

The following additional housekeeping activities are also implemented:

- The facility maintains excellent housekeeping procedures. Housekeeping is performed in all areas of our facility on a regular basis, and there is a designated department dedicated to keeping the site clean;

- Every year in September, a more in depth cleaning is performed to get ready for the wet season (materials in storage are moved around so cleaning can be performed to the ground underneath, equipment is cleaned, etc.).
- Dust collection systems are inspected monthly to prevent the escape of dust from the system. Accumulated dust at the base of the system is immediately removed;
- Spills and leaks of solid and liquid materials are promptly contained and cleaned up;
- All leaking connections, pipes, hoses, valves, etc. which can contaminate storm water are promptly repaired or replaced;
- Dumpster and roll-off lids are closed when not in use or when rainfall is expected to occur;
- Storage containers used for liquids are either steel or plastic drums, in good condition, rigid and durable, corrosion resistant to the weather and fluid content, non-absorbent, water tight, rodent-proof, and equipped with a close fitting cover;

The following potential pollutants are addressed by these housekeeping BMPs:

- TSS
- O&G

3.1.2 Preventive Maintenance

The Maintenance Manager maintains a preventive maintenance schedule for facility equipment, including forklifts, the water treatment system, dust collectors, and other operational equipment used throughout the facility. Storm drainage areas are inspected at least once per month, and when storm water samples are taken.

Based on observations made during monthly inspections, the following preventive maintenance activities may be undertaken:

- Catch basin filters installed in the loading docks are inspected frequently and changed when needed.
- Outdoor Equipment or vehicles that are leaking will be taken out of service, or other steps will be taken to prevent leaks from spilling on the ground until they are repaired.
- Spills and leaks will be cleaned up immediately (e.g., using absorbents, vacuuming, etc.) to prevent contamination of storm water runoff.

The following potential pollutants are addressed by these preventive maintenance BMPs:

- TSS
- O&G

3.1.3 Spill Prevention and Emergency Cleanup Plan

Spills are most likely to occur in the areas identified Section 2.2 Industrial Activities and Potential Pollutants, above. The locations and design of the equipment in these areas, along with the housekeeping and preventative maintenance measures described in Sections 3.1.1 and 3.1.2, respectively, above, are integral to spill prevention and prevention of storm water contamination.

The following additional spill prevention BMPS are in place:

- Drains located in the loading docks are equipped with filters to capture solids and other potential pollutants prior to discharge.
- Floor drains in the indoor production areas discharge directly to the sanitary sewer.
- Hazardous Materials/Waste Fluids are enclosed inside a building or located under cover and secondarily contained with containment pallets.
- The chemical dispensing area is secondarily contained within a bermed region and located under cover.
- The water treatment system, cooling tower, and boiler blow-down discharge to the clarifier and sanitation.
- The facility maintains a supply of absorbents and spill cleanup materials.
- Equipment is inspected prior to use. Leaking or malfunctioning equipment is removed from service and repaired

In the event of a spill, immediately stop, contain, and clean up the spill. If the spill has reached or may reach a sanitary or a storm sewer, ground water, or surface water notify the Regional Water Quality Control Board and/or the sanitation district immediately. Notification must comply with state and federal spill reporting requirements. During clean up, do not flush absorbent materials or other spill cleanup materials to a storm drain. Collect the contaminated absorbent material as a solid and place in appropriate disposal containers.

The following potential pollutants are addressed by these spill prevention BMPs:

- TSS
- O&G

3.1.4 Material Handling and Waste Management

To protect contamination of storm water from these materials and pollutants, the following BMPS for the handling and storage of liquid materials and hazardous waste are followed:

- Prevent or minimize handling of industrial materials or wastes that can be readily mobilized by contact with storm water during a storm event;
- Drums and containers of non-solid materials (e.g. liquids, particulates, powders, shredded paper, etc.) and hazardous waste are stored indoors whenever possible.
- Drums and totes/portable tanks containing liquids and non-solid materials are placed inside containment berms or onto containment trays.
- Waste disposal containers and material storage containers that contain industrial materials are kept closed when not in use;
- Run-on and storm water generated from within the facility is diverted away from all stockpiled materials;
- Spills of industrial materials or wastes that occur during handling are promptly cleaned up; and
- Drums and accumulation berms or trays are inspected regularly to ensure that containers are not leaking and that no liquids have accumulated.
- Containers of solid materials are placed on raised pallets, or kept indoors, to prevent run-on from contacting the containers.

The following potential pollutants are addressed by these material handling BMPs:

- TSS
- O&G

3.1.5 Erosion and Sediment Control BMPs

Erosion and Sediment Control BMPs include preserving natural vegetation, seeding, mulching and matting, plastic covering, filter fences, and sediment traps and ponds, and are intended to prevent erosion and sedimentation that could negatively impact the facility's storm water discharge.

BMPs for erosion and sediment control are not required at this facility, as there are no erodible surfaces.

3.1.6 Employee Training

Proper training can reduce the potential for storm water pollution by improving the handling and storage of potential pollutants and general housekeeping efforts. Awareness, and the ability to identify, manage, and control potential sources of storm water pollution, is critical to implementing and sustaining a SWPPP.

SWPPP training will be conducted for all employees to ensure that they are familiar with this plan, potential sources of pollutants, points of discharge, and material handling procedures that have been adopted within this plan to minimize the potential for pollution of storm water from the facility.

Training for all new employees will be included as part of their orientation training upon initial hire. Annual refresher training will be provided to all employees, and will include at a minimum:

- An overview of the storm water pollution prevention program
- Awareness and actions that employees can take to help the company comply with the provisions of SWPPP
- Spill prevention and reporting procedures
- Good housekeeping
- Requirements for inspecting and maintaining the storm drainage system
- An overview of the sampling, monitoring, and reporting requirements.

Training will be conducted at least once per year, and may be conducted during regularly scheduled employee meetings or during a specially scheduled session. A sign-in sheet will be used to record the date, time, and employees in attendance at each session.

3.1.7 Quality Assurance and Recordkeeping

The following quality assurance and recordkeeping actions are required by the General Permit, and are implemented as indicated for each:

- Develop and implement management procedures to ensure that appropriate staff implements all elements of the SWPPP, including the Monitoring Implementation Plan.

  Appropriate staff and their responsibilities for storm water pollution prevention are described in detail in the following sections:

  - Section 1.4, Contact Information/Responsible Parties
  - Section 1.5, Storm Water Pollution Prevention Team
  - Section 3.1.2, Preventive Maintenance
  - Section 4.2, Visual Observation Procedures
  - Section 4.3, Sample Collection and Handling
  - Section 5, Annual Comprehensive Facility Compliance Evaluation
  - Section 6, Reporting and Recordkeeping

- Develop a method of tracking and recording the implementation of BMPs identified in the SWPPP.

  Section 4, Monitoring Implementation Plan, describes the sampling, visual observations, and record procedures that ensure that BMPs are in place, effective, and well maintained.

- Maintain the BMP implementation records, training records, and records related to any spills and clean-up related response activities for a minimum of five (5) years.

  Section 6, Reporting and Recordkeeping, describes the records that are kept to ensure compliance with the General Permit and this SWPPP.

3.2 Advanced BMPs

Advanced BMPs are required when the minimum BMPs described in Section 3.1 Minimum BMPs, above, do not adequately reduce or prevent pollutants in storm water discharges. There are no additional advanced BMPs in place or needed at this facility at this time.

3.3 BMP Summary Table

Table 5: BMP Summary Table

Implemented BMPs	Targeted Industrial Pollutants	Associated Pollutant Sources	Industrial Activity Location	BMP Implementation Schedule			Assigned Responsibility	Maintenance Procedures	Equipment & Tools Needed
				Frequency	Time of Day	Conditions			
Spill prevention training	TSS, O&G	Transfer and dispensing of materials, production equipment, vehicles and operational equipment	Indoor Production, Loading and Unloading, Storage Areas	Annual	-	N/A	Ashish Jain	-	-
Catch Basin Filters	TSS, O&G	Handling materials in the loading dock areas	Loading Docks	As needed	-	All	Maintenance Manager	Inspect inventory and replace as needed	Filters
Inspections	TSS, O&G	Production areas, hazardous materials storage, process equipment, storm drains	Indoor Production, Loading and Unloading, Storage Areas	Daily	Varies	N/A	Ashish Jain	-	Visual
Absorbents/ Spill Kits	TSS, O&G	Production areas, hazardous materials storage, process equipment	Indoor Production, Loading and Unloading, Storage Areas, water treatment	As Needed	N/A	Spills	Maintenance Manager	Inspect inventory regularly and replenish as necessary	Absorbents, socks, mats, towels
Housekeeping	TSS, O&G	All Production and Storage Areas	Indoor/Outdoor Areas	Daily	Varies	All	Maintenance Manager	-	Brooms, rags, dust pans
Dumpster and Roll-Off Lids Closed	TSS, O&G	Solid Waste, Recyclable Materials	SE Corner of site	As Needed	-	Rain Events	Maintenance Manager	Close lids and ensure that all waste materials are	Dumpster lids

4 MONITORING IMPLEMENTATION PLAN

This section describes the facility's Monitoring Implementation Plan, in compliance with the requirements of Section XI, Monitoring, of the General Permit.

4.1 Sampling and Monitoring Overview

Samples will be collected by the following person(s):

Primary Sampler: Ashish Jain
Alternate: Melissa Hernandez

4.1.1 Qualifying Storm Events

A Qualifying Storm Event (QSE) is a precipitation event that:

- Produces a discharge for at least one drainage area; and,
- Is preceded by 48 hours with no discharge from any drainage area.

4.1.2 Sampling Schedule

Samples collection from each discharge location is required during scheduled facility operating hours, and must be collected within four (4) hours of:

- The start of the discharge; or,
- The start of facility operations if the QSE occurs within the previous 12-hour period (e.g., for storms with discharges that begin during the night for facilities with day-time operating hours).

Sample collection and visual observations are not required under the following conditions:

- During dangerous weather conditions such as flooding or electrical storms; or,
- Outside of scheduled facility operating hours, (although this does not mean that collecting samples or conducting visual observations is precluded outside of scheduled facility operating hours.

In the event that samples are not collected, or visual observations are not conducted due to these exceptions, an explanation must be included in the Annual Report.

4.1.3 Discharge Locations

The table, below, identifies all points of discharge to surface water, storm sewers, or ground water infiltration locations, (such as dry wells or detention ponds).

Table 6: Discharge Locations

Discharge ID	Common Description	Discharge Type	Comments
DP#1	N Driveway on Beach Blvd	Surface Flow	Discharge to curbside municipal storm drains
DP#2	Loading Dock, E end of Building on N side of RR Tracks	Catch Basin	Discharge directly into Brea Creak by underground pipe
DP#3	Loading Dock, E end of Building on S side of RR Tracks	Catch Basin	Discharge directly into Brea Creak by underground pipe
DP#4	S Parking Lot Drain, East End, N side of lot	Catch Basin	Discharge directly into Brea Creak by underground pipe
DP#5	S Parking Lot Drain, East End, S side of lot	Catch Basin	Discharge directly into Brea Creak by underground pipe
DP#6	S Parking Lot Drain, West End, N side of lot	Catch Basin	Discharge directly into Brea Creak by underground pipe
DP#7	S Parking Lot Drain, West End, S side of lot	Catch Basin	Discharge directly into Brea Creak by underground pipe

4.1.4 Alternative Discharge Locations

Alternative Discharge Locations are those discharge points that are:

- Affected by storm water run-on from surrounding areas that cannot be controlled; and/or,
- Difficult to observe or sample (e.g. submerged discharge outlets, dangerous discharge location accessibility).

There are no Alternative Discharge Locations at this facility

4.1.5 Exceptions for Sample Collection and Visual Observations

Drainage areas with no exposure to industrial activities and materials (per the definitions in Section XVII of the General Permit) do not require sampling.

DP#1, DP#4, DP#5, DP#6, and DP#7 are not exposed to industrial activities, and therefore do not require sampling.

Sample collection and visual observations are not required under the following conditions:

- During dangerous weather conditions such as flooding or electrical storms; or,
- Outside of scheduled facility operating hours, (although sampling or conducting visual observations is not precluded outside of scheduled facility operating hours).

In the event that samples are not collected, or visual observations are not conducted due to these exceptions, an explanation must be included in the Annual Report.

4.1.6 Representative Sample Reduction

When storm water characteristics from several discharge points are substantially identical, a single representative discharge point may be sampled in lieu of sampling all identical outfalls. To qualify for reduced sampling, the facility must submit and certify the revisions to the Monitoring Implementation Plan via SMARTS, including the Representative Sampling Reduction justification. Upon submittal of the Representative Sampling Reduction justification, the number of sampling locations may be reduced.

The Regional Water Board may reject the Representative Sampling Reduction justification and/or request additional supporting documentation, in which case sampling must be resumed at each separate discharge point until the Regional Water Board approves the Representative Sampling Reduction justification.

To qualify for this exception, the following must be described in the SWPPP, and certified and submitted via SMARTS:

- Identification and description of each drainage area and corresponding discharge location(s);
- A description of the industrial activities that occur throughout the drainage area;
- A description of the BMPs implemented in the drainage area;
- A rationale that demonstrates that the industrial activities and physical characteristics of the drainage area(s) are substantially similar;
- An identification of the discharge location(s) selected for representative sampling, and rationale demonstrating that the selected location(s) to be sampled are representative of the discharge from the entire drainage area.

The facility will sample from all discharge points listed, and does not take advantage of this exception.

4.1.7 Qualified Combined Samples

Similar to the exception allowing Representative Sample Reduction, the General Permit also allows a discharger to authorize the analytical laboratory to combine samples from multiple discharge points into a single sample for analysis. To qualify for this exception, the facility must submit and certify revisions to the Monitoring Implementation Plan via SMARTS, including the Qualified Combined Sample justification. Upon submittal of the Qualified Combined Sample justification, the analytical laboratory may be authorized to combine multiple samples.

The Regional Water Board may reject the Qualified Combined Sample justification and/or request additional supporting documentation, in which case sampling must be resumed at each separate discharge point until the Regional Water Board approves the Qualified Combined Sample justification.

To qualify for this exception, the following must be described in the SWPPP, and certified and submitted via SMARTS:

- The general industrial activities conducted in the drainage area of each identical discharge point
- The BMPs in place in the drainage area of each discharge point
- The exposed materials located in the drainage area that are likely to be significant contributors of pollutants.
- The pervious and impervious surfaces in the drainage area that could affect the percolation of storm water runoff into the ground (e.g.: asphalt, crushed rock, grass, etc.)
- The reason(s) that discharges from each point are substantially identical.

The facility does not take advantage of this exception.

4.1.8 Sampling Locations

Sampling is required at each distinct point of discharge where storm water associated with industrial activity is discharged off-site. When storm water characteristics from several discharge points are substantially identical, a single representative discharge point may be sampled in lieu of sampling all identical outfalls, as described in Section 4.1.6 Representative Sample Reduction, above. Discharges to the ground (where storm water infiltrates into the soil and does not leave the site) and sewer are not subject to sampling.

Table 7: Sampling Locations, on the following page, identifies the locations selected for sampling based on requirements of the General Permit, and applicable exclusions described in this Plan.

Table 7: Sampling Locations

Discharge ID	Common Description	Discharge Type	Comments
DP#2	Loading Dock, E end of Building on N side of RR Tracks	Catch Basin	Discharge directly into Brea Creak by underground pipe
DP#3	Loading Dock, E end of Building on S side of RR Tracks	Catch Basin	Discharge directly into Brea Creak by underground pipe

4.2 Visual Observation Procedures

Visual observations will be made by the following person(s):

Primary Sampler: Ashish Jain
Alternate: Melissa Hernandez

4.2.1 Monthly Visual Observations

At least once per calendar month, visual observations of each drainage area are conducted by trained team members during daylight hours of scheduled facility operating hours, and on days without precipitation. Observations will include:

- Outdoor industrial activities, equipment, and storage areas. Note observations of:
  - Spills or leaks; and
  - Uncontrolled pollutant sources
- BMPs, to identify and record:
  - That BMPs are properly implemented;
  - BMPs that need maintenance to operate effectively;
  - Any BMPs that have failed; or
  - Any BMPs that could fail to operate as intended.
- NSWDs: Observe each drainage area for the presence or indications of prior, current, or potential unauthorized NSWDs and their sources. Record observations including:
  - Presence or evidence of any NSWD (authorized or unauthorized);
  - Pollutant characteristics (floating and suspended material, sheen, discoloration, turbidity, odor, etc.); and
  - Source of discharge.

Observations will be documented on the *Visual Observation Log* (see Appendix A SWPPP Forms), and will be supplemented with a site specific BMP inspection checklist.

Photographs used to document observations will be referenced on the *Visual Observation Log* and maintained with the Monitoring Records.

The Annual Report must include an explanation for any uncompleted monthly visual observations

4.2.2 Sampling Event Visual Observations

Visual observations will be conducted at the same time sampling occurs at each discharge location, and where each sample is taken. If volume-based or flow-based treatment BMPs are in place, visual observations of any bypass that occurs must be conducted.

Visual observations while sampling must include:

- The presence or absence of floating and suspended materials
- Oil and grease
- Discolorations
- Turbidity
- Odors
- Trash/debris, and
- Source(s) of any discharged pollutants.

In the event that a discharge location is not visually observed during a sampling event, the sampling log must note which discharge locations were not observed during sampling, or indicate that there was no discharge from the discharge location.

The Annual Report must include an explanation for any uncompleted sampling event visual observations.

4.2.3 Visual Observation Records and Response Actions

Visual observation logs will include the date, approximate time, locations observed, presence and probable source of any observed pollutants, name of person(s) that conducted the observations, and any response actions and/or additional SWPPP revisions necessary in response to the visual observations.

Corrective action to revise the BMPs as necessary must be taken when the visual observations indicate pollutant sources have not been adequately addressed in the SWPPP.

4.3 Sample Collection and Handling

Samples will be collected at the sampling locations identified in Section 4.1.8, Sampling Locations. The following subsections provide specific details for sample handling, analytical parameters, and other details required to ensure that proper representative samples are taken.

To maintain sample integrity and prevent cross-contamination, sample collection must follow the protocols below.

- Collect samples only in containers provided by the analytical laboratory;
- Wear clean, powder-free nitrile gloves;
- Change gloves whenever something not known to be clean has been touched;
- Change gloves between sampling points;
- Decontaminate all equipment (e.g. bucket, tubing) prior to sample collection using a trisodium phosphate water wash, distilled water rinse, and final rinse with distilled water. (Dispose of wash and rinse water appropriately, i.e., do not discharge to storm drain or receiving water). Do not decontaminate laboratory provided sample containers;
- Do not smoke during sampling events;
- Never sample near a running vehicle;
- Do not park vehicles in the immediate sample collection area (even non-running vehicles);
- Do not eat or drink during sample collection; and
- Do not breathe, sneeze, or cough in the direction of an open sample container.

4.3.1 Preparation

The table below describes the minimum sample containers that should be on hand prior to a sampling event.

Table 8: Sampling Containers

Parameter	Bottle Type	Minimum Volume	Maximum Holding Time	Preservation
Oil & Grease	1 liter glass	750 ml	28 days	Nitric acid, refrigerate
Total Suspended Solids	500 ml wide-mouth poly	100 ml	7 days	Refrigerate/ cooler

Sampling supplies should include the following:

- Powder-free nitrile gloves
- Sample collection equipment
- Coolers
- Identification labels
- Re-sealable storage bags
- Paper towels
- Personal rain gear
- Ice
- Sampling Log Sheets
- Chain of Custody (CoC) forms

If any instruments are used to measure pH, temperature, or other parameters, the equipment must be properly calibrated before use. Calibrate instruments in accordance with the equipment's operation and use manual(s), which are incorporated herein by reference.

4.3.2 Parameters and Constituents for Laboratory Analysis

This section identifies the minimum parameters and constituents that will be sampled, as well as any additional parameters based on:

- Industrial pollutants identified in Section 2, Facility Assessment;
- The facility's Standard Industrial Classification (SIC) code(s);
- Industrial parameters related to receiving waters with 303(d) listed impairments or approved TMDLs.
- Required by the Regional Water Board, and added to SMARTS; and
- Specific requirements in Subchapter N of the General Permit. If the discharge is subject to ELGs, the Dischargers shall contact the Regional Water Board to determine appropriate analytical methods for parameters not listed in Table 10: Numeric Action Levels, below.

Table 9: Parameters and Constituents for Sampling

Parameters and Constituents	Basis for Selection
pH	Minimum required constituent, HUC-10
Oil and grease	Minimum required constituent
Total Suspended Solids	Minimum required constituent

4.3.3 Sampling Frequency Reduction Certification

Dischargers are eligible to reduce the number of QSEs sampled each reporting year as follows:

- Results from four (4) consecutive QSEs that were sampled (QSEs may be from different reporting years) did not exceed any NALs, and
- The facility is in full compliance with the requirements of the General Permit and has updated, certified and submitted via SMARTS all documents, data, and reports required by the General Permit during the time period in which samples were collected.

To qualify for a reduction in sampling frequency, the facility must certify via SMARTS that it meets these conditions. Upon certification, one (1) sample must be collected and analyzed samples from a QSE within the first half of each reporting year (July 1 to December 31), and within the second half of each reporting year (January 1 to June 30). All other monitoring, sampling, and reporting requirements remain in effect.

The Regional Water Board may notify a Discharger that it may not reduce the number of QSEs sampled each reporting year if:

- The Sampling Frequency Reduction certification has been rejected,
- Additional supporting documentation must be submitted, or
- The facility is subject to an enforcement action.

Sampling Frequency Reduction certification is lost if an NAL exceedance occurs.

4.3.4 Sampling Procedures

It is important that grab samples be taken properly. In general, the following should be observed when taking samples:

- Wear disposable powder-free latex gloves
- Allow storm water to flow directly into the sample bottle, rather than transferring it from another collection vessel
- Ensure that any preservative placed in the bottle by the laboratory (e.g. acid) is not lost prior to or during sampling.
- Never allow the bottle to overflow during sampling, particularly if it contains a preservative
- Keeps hands away from the sample bottle's opening to prevent contaminating the sample
- Hold the sample bottle facing upstream
- Take the sample directly from the discharge inlet/outlet

- As soon as the sample is taken, cap the bottle and label it.

Samples should be collected as the storm water falls from a pipe or from a running, turbulent stream of flow when possible so the source will be well mixed. When using a sample bottle, the bottle should be plunged below the surface in a sweeping arc and then brought upwards through the water surface again, so the water surface is broken twice by the mouth of the bottle.

pH Methods (check the appropriate box):

☒ The facility is not subject to Subchapter N ELGs mandating pH analysis related to acidic or alkaline sources and have never entered Level 1 status for pH, and may screen for pH using wide range litmus pH paper or other equivalent pH test kits. The pH screen shall be performed as soon as practicable, but no later than 15 minutes after the sample is collected.

☐ The facility is subject to Subchapter N ELGs mandating pH analysis related to acidic or alkaline sources, and may not screen for pH using wide range litmus pH paper or other equivalent pH test kits. Samples must be analyzed for pH using methods in accordance with 40 CFR 136 for testing storm water, or with a calibrated portable instrument for pH.

☐ The facility is in Level 1 status for pH, and must analyze for pH using methods in accordance with 40 CFR 136 for testing storm water, or with a calibrated portable instrument for pH.

Oil and Grease:
Oil and grease generally float on water so sampling it requires special attention. Oil and grease samples must be collected directly into the sample bottles supplied by the lab because oil and grease tends to stick to the sides of containers. Do not rinse the sampling bottles beforehand or pour the sample from another container. Do not fill the bottle completely and do not pour out some of the sample if the bottle is overfilled by mistake. If the bottle is overfilled, use a new bottle instead to collect the sample. There should be plenty of extra bottles on hand in order to ensure that a good sample is taken.

Total Suspended Solids:
Sample where the water has a moderate flow and, if possible, some turbulence, so that the storm water discharge will be well mixed and the sample will be representative. Sampling in still water should be avoided. The sample bottle should be placed so that the storm water flows directly into the bottle. Immediately place a lid on the bottle, label it, record the sampling information on the sampling log, and place it into a cooler with ice.

4.3.5 Sample Handling and Transport to Lab

The following sample handling procedures will be followed:

- Samples should be delivered to the laboratory as soon as possible on the day the samples are taken, or within 48 hours.

- Each sample should be labeled with waterproof ink to prevent ice or water from smearing the labels, and placed into plastic bags in a transportable cooler and covered in ice to keep each bottle cool. The label shall identify the date and time of sample collection, the person taking the sample, and the sample collection location or discharge point. The label should also identify any sample containers that have been preserved.
- A chain-of-custody form (provided by the lab) should be completed before delivering the samples to the lab.
- If Qualified Combined Samples are taken, the appropriate samples should be clearly identified so that the laboratory combines the correct samples.
- To prevent contamination, do not touch inside of sample container or cap or put anything into the sample containers before collecting storm water samples.
- Do not overfill sample containers. Overfilling can result in a loss of preservative and change the analytical results.
- Tightly screw on the cap of each sample container without stripping the threads of the cap.

For automatic sampling devices:

- Use only sample containers provided by the laboratory to collect and store grab samples. Use of any other type of containers may contaminate samples.
- If an automatic sampler is used, and it is not compatible with bottles provided by the laboratory, the sample container included with the automatic sampler should be sent to the laboratory for analysis.
- If automatic sampling device is used, it may only be used for sample parameters that the device is designed for. For pH, automatic sampling devices must read pH within 15 minutes of sample collection.
- An automatic sampling device for Oil and Grease, unless the automatic sampling device is specifically designed to sample for Oil and Grease.

4.3.6 Sampling Documentation

For each sample taken, the following information will be recorded using waterproof ink:

- The date, exact place, method, and time of sampling or measurement
- The individual who performed the sampling or measurement
- A unique identification number for each sample
- If duplicate samples are taken, they should be identified consistent with the numbering system for other samples to prevent the laboratory from identifying duplicate samples. Duplicate samples will be identified in the Sampling Log.

- If an error is made on a document, sampling personnel will make corrections by lining through the error and entering the correct information. The erroneous information will not be obliterated. All corrections will be initialed and dated.

An example Sampling Log is included in Appendix A. A chain-of-custody form shall accompany the samples when submitted to the lab. The chain-of-custody, along with the laboratory's report and the Sampling Log, will be kept in the facility's records to satisfy recordkeeping requirements.

4.4 Exceedance Response Actions (ERAs)

Laboratory sampling results must be compared to the two types of NAL values in Table 10: Numeric Action Levels, below, to determine whether either type of NAL has been exceeded for any parameter. The two types of NAL exceedances are:

1. **Annual NAL exceedance:** Determine by calculating the average concentration for each parameter for the entire facility for the reporting year, using the results of all of that year's sampling and analytical results. Compare the average concentration for each parameter to the corresponding annual NAL values in Table 10: Numeric Action Levels.

   An annual NAL exceedance occurs when the average of all the analytical results for a parameter from samples taken within a reporting year exceeds the annual NAL value for that parameter listed in Table 10; and,

2. **Instantaneous maximum NAL exceedance:** Compare all sampling and analytical results from each distinct sample (individual or combined) to the corresponding instantaneous maximum NAL values in Table 10: Numeric Action Levels. An instantaneous maximum NAL exceedance occurs when two (2) or more analytical results from samples taken for any single parameter within a reporting year exceed the instantaneous maximum NAL value for TSS and O&G, or are outside of the instantaneous maximum NAL range for pH.

Table 10: Numeric Action Levels

PARAMETER	TEST METHOD	REPORTING UNITS	ANNUAL NAL	INSTANTANEOUS MAXIMUM NAL
pH*	See Section XI.C.2	pH units	N/A	Less than 6.0 Greater than 9.0
Suspended Solids (TSS)*, Total	SM 2540-D	mg/L	100	400
Oil & Grease (O&G)*, Total	EPA 1664A	mg/L	15	25

4.4.1 Level One Status

A Discharger's baseline status for any given parameter changes to Level 1 if sampling results indicate an NAL exceedance for that same parameter. Level 1 status begins on July 1 following the reporting year during which the exceedance(s) occurred. Level 1 status triggers the requirements in the following subsections.

4.4.1.1 LEVEL 1 ERA EVALUATION

By October 1 following commencement of Level 1 status:

- Complete an evaluation, with the assistance of a QISP, of the industrial pollutant sources at the facility that are or may be related to the NAL exceedance(s); and,
- Identify in the evaluation the corresponding BMPs in the SWPPP and any additional BMPs and SWPPP revisions necessary to prevent future NAL exceedances. Although the evaluation may focus on the drainage areas where the NAL exceedance(s) occurred, all drainage areas shall be evaluated.

4.4.1.2 LEVEL 1 ERA REPORT

Based upon the Level 1 ERA Evaluation, as soon as practicable but no later than January 1 following commencement of Level 1 status:

1. Revise the SWPPP as necessary and implement any additional BMPs identified in the evaluation;
2. Certify and submit via SMARTS a Level 1 ERA Report prepared by a QISP that includes the following:
    - A summary of the Level 1 ERA Evaluation; and,
    - A detailed description of the SWPPP revisions and any additional BMPs for each parameter that exceeded an NAL.
3. Certify and submit via SMARTS the QISP's identification number, name, and contact information (telephone number, e-mail address).

A Discharger's Level 1 status for a parameter returns to baseline status once a Level 1 ERA report has been completed, all identified additional BMPs have been implemented, and results from four (4) consecutive QSEs that were sampled subsequent to BMP implementation indicate no additional NAL exceedances for that parameter.

Sampling results obtained for any parameter(s) being addressed by an additional BMP identified in the Level 1 ERA Evaluation or October 1, whichever comes first, are not included in the calculations of annual average or instantaneous NAL exceedances in SMARTS.

4.4.2 Level Two Status

A Discharger's Level 1 status for any given parameter changes to Level 2 if sampling results indicate an NAL exceedance for that same parameter while the Discharger is in Level 1. Level 2 status commences on July 1 following the reporting year during which the NAL exceedance(s) occurred. Level 2 status triggers the requirements in the following subsections.

4.4.2.1 LEVEL 2 ERA ACTION PLAN

By October 1 following commencement of Level 1 status:

1. Dischargers with Level 2 status must certify and submit via SMARTS a Level 2 ERA Action Plan prepared by a QISP that addresses each new Level 2 NAL exceedance by January 1 following the reporting year during which the NAL exceedance(s) occurred.

   For each new Level 2 NAL exceedance, the Level 2 Action Plan will identify which of the demonstrations in subsection D.2.a through c the Discharger has selected to perform.

   A new Level 2 NAL exceedance is any Level 2 NAL exceedance for 1) a new parameter in any drainage area, or 2) the same parameter that is being addressed in an existing Level 2 ERA Action Plan in a different drainage area.
2. The Discharger shall certify and submit via SMARTS the QISP's identification number, name, and contact information (telephone number, e-mail address) if this information has changed since previous certifications.
3. The Level 2 ERA Action Plan shall at a minimum address the drainage areas with corresponding Level 2 NAL exceedances.
4. All elements of the Level 2 ERA Action Plan shall be implemented as soon as practicable and completed no later than 1 year after submitting the Level 2 ERA Action Plan.
5. The Level 2 ERA Action Plan shall include a schedule and a detailed description of the tasks required to complete the Discharger's selected demonstration(s) as described below in Section D.2.a through c.

4.4.2.2 LEVEL 2 ERA TECHNICAL REPORT

On January 1 of the reporting year following the submittal of the Level 2 ERA Action Plan, a Discharger with Level 2 status must certify and submit a Level 2 ERA Technical Report prepared by a QISP that includes one or more of the following demonstrations:

1. **Industrial Activity BMPs Demonstration:** This demonstration must include the following, as applicable:
   a) A description of the industrial pollutant sources and corresponding industrial pollutants that are or may be related to the NAL exceedance(s);

b) An evaluation of all pollutant sources associated with industrial activity that are or may be related to the NAL exceedance(s);

c) Where all of the implemented BMPs, including additional BMPs identified in the Level 2 ERA Action Plan, achieve compliance with the effluent limitations of the General Permit and are expected to eliminate future NAL exceedance(s), provide a description and analysis of all implemented BMPs;

d) In cases where all of the implemented BMPs, including additional BMPs identified in the Level 2 ERA Action Plan, achieve compliance with the effluent limitations of the General Permit but are not expected to eliminate future NAL exceedance(s), provide, in addition to a description and analysis of all implemented BMPs:

   i. An evaluation of any additional BMPs that would reduce or prevent NAL exceedances;

   ii. Estimated costs of the additional BMPs evaluated; and,

   iii. An analysis describing the basis for the selection of BMPs implemented in lieu of the additional BMPs evaluated but not implemented.

e) The description and analysis of BMPs required above must specifically address the drainage areas where the NAL exceedance(s) responsible for the Level 2 status occurred, although any additional Level 2 ERA Action Plan BMPs may be implemented for all drainage areas; and,

f) If an alternative design storm standard for treatment control BMPs will achieve compliance with the effluent limitations of the General Permit, provide an analysis describing the basis for the selection of the alternative design storm standard.

2. Non-Industrial Pollutant Source Demonstration: Includes:

a) A statement that the Discharger has determined that the exceedance of the NAL is attributable solely to the presence of non-industrial pollutant sources. (The pollutant may also be present due to industrial activities, in which case the Discharger must demonstrate that the pollutant contribution from the industrial activities by itself does not result in an NAL exceedance.) The sources must be identified as either run-on from adjacent properties, aerial deposition from man-made sources, or as generated by on-site non-industrial sources;

b) A statement that the Discharger has identified and evaluated all potential pollutant sources that may have commingled with storm water associated with the Discharger's industrial activity and may be contributing to the NAL exceedance;

c) A description of any on-site industrial pollutant sources and corresponding industrial pollutants that are contributing to the NAL exceedance;

d) An assessment of the relative contributions of the pollutant from:

   i. Storm water run-on to the facility from adjacent properties or non-industrial portions of the Discharger's property or from aerial deposition and

   ii. The storm water associated with the Discharger's industrial activity;

e) A summary of all existing BMPs for that parameter; and,

f) An evaluation of all on-site/off-site analytical monitoring data demonstrating that the NAL exceedances are caused by pollutants in storm water run-on to the facility from adjacent properties or non-industrial portions of the Discharger's property or from aerial deposition.

3. Natural Background Pollutant Source Demonstration: This demonstration must include:

a) A statement that the Discharger has determined that the NAL exceedance is attributable solely to the presence of the pollutant in the natural background that has not been disturbed by industrial activities. (The pollutant may also be present due to industrial activities, in which case the Discharger must demonstrate that the pollutant contribution from the industrial activities by itself does not result in an NAL exceedance);

b) A summary of all data previously collected by the Discharger, or other identified data collectors, that describes the levels of natural background pollutants in the storm water discharge;

c) A summary of any research and published literature that relates the pollutants evaluated at the facility as part of the Natural Background Source Demonstration;

d) Map showing the reference site location in relation to facility along with available land cover information;

e) Reference site and test site elevation;

f) Available geology and soil information for reference and test sites;

g) Photographs showing site vegetation;

h) Site reconnaissance survey data regarding presence of roads, outfalls, or other human-made structures; and,

i) Records from relevant state or federal agencies indicating no known mining, forestry, or other human activities upstream of the proposed reference site.

4.4.2.3 LEVEL 2 ERA TECHNICAL REPORT SUBMITTAL

The Level 2 ERA Technical Report must be certified and submitted via SMARTS.

The State Water Board and Regional Boards (Water Boards) may review the Level 2 ERA Technical Report. Upon review of a Level 2 ERA Technical Report, the Water Boards may reject the Level 2 ERA Technical Report and direct the Discharger to take further action(s) to comply with this General Permit.

Once a Level 2 ERA Technical Report has been submitted, the report only requires an annual update, based on:

- Additional NAL exceedances of the same parameter and same drainage area (if the original Level 2 ERA Technical Report contained an Industrial Activity BMP Demonstration and the implemented BMPs were expected to eliminate future NAL exceedances),
- Facility operational changes
- Pollutant source(s) changes, and/or
- Information that becomes available via compliance activities (monthly visual observations, sampling results, annual evaluation, etc.).

The Level 2 ERA Technical Report must be prepared by a QISP, and certified and submitted via SMARTS by the Discharger with each Annual Report. If there are no changes prompting an update of the Level 2 ERA Technical Report, as described above, a certification that there have been no changes warranting re-submittal of the Level 2 ERA Technical Report will be included in the Annual Report.

It is not precluded to submit a Level 2 ERA Action Plan or ERA Technical Report prior to entering Level 2 status, if information is available to adequately prepare the report and perform the required demonstrations. A Discharger who chooses to submit a Level 2 ERA Action Plan or ERA Technical Report prior to entering Level 2 status is automatically be placed in Level 2 in accordance to the Level 2 ERA schedule.

4.4.2.4 ELIGIBILITY FOR RETURNING TO BASELINE STATUS

Dischargers with Level 2 status who submit an Industrial Activity BMPs Demonstration and have implemented BMPs to prevent future NAL exceedance(s) for the Level 2 parameter(s) returns to baseline status for that parameter once results from four (4) subsequent consecutive QSEs sampled indicate no additional NAL exceedance(s) for that parameter(s).

If future NAL exceedances occur for the same parameter(s), the Baseline status will return to Level 2 status on July 1 in the subsequent reporting year during which the NAL exceedance(s) occurred.

Dischargers are ineligible to return to baseline status if they submit any of the following:

- An industrial activity BMP demonstration in accordance with subsection 4.4.2.2, Level 2 ERA Technical Report, paragraph (d), above;
- An non-industrial pollutant source demonstration; or,
- A natural background pollutant source demonstration.

4.4.2.5 LEVEL 2 ERA IMPLEMENTATION EXTENSION

If additional time is needed to submit the Level 2 ERA Technical Report, an extension is automatically granted one time extension for up to six (6) months upon submitting the following items into SMARTS, as applicable:

- Reasons for the time extension;
- A revised Level 2 ERA Action Plan, including a schedule and a detailed description of the necessary tasks still to be performed to complete the Level 2 ERA Technical Report; and
- A description of any additional temporary BMPs that will be implemented while permanent BMPs are being constructed.

The Regional Water Boards will review Level 2 ERA Implementation Extensions for completeness and adequacy. Requests for extensions that total more than six (6) months are not granted unless approved in writing by the Water Boards. The Water Boards may:

1) Reject or revise the time allowed to complete Level 2 ERA Implementation Extensions,
2) Identify additional tasks necessary to complete the Level 2 ERA Technical Report, and/or
3) Require the Discharger to implement additional temporary BMPs.

5 ANNUAL COMPREHENSIVE FACILITY COMPLIANCE EVALUATION

The facility will conduct one comprehensive Annual Evaluation for each reporting year (July 1 to June 30). If the Discharger conducts an Annual Evaluation fewer than eight (8) months, or more than sixteen (16) months, after it conducts the previous Annual Evaluation, it will document the justification for doing so.

Based on observations made during the Annual Evaluation, the SWPPP will be revised as needed, and revisions implemented within 90 days of the Annual Evaluation.

At a minimum, Annual Evaluations shall consist of:

1) A review of all sampling, visual observation, and inspection records conducted during the previous reporting year;
2) An inspection of all areas of industrial activity and associated potential pollutant sources for evidence of, or the potential for, pollutants entering the storm water conveyance system;
3) An inspection of all drainage areas previously identified as having no exposure to industrial activities and materials;
4) An inspection of equipment needed to implement the BMPs;
5) An inspection of any BMPs;
6) A review and effectiveness assessment of all BMPs for each area of industrial activity and associated potential pollutant sources to determine if the BMPs are properly designed, implemented, and are effective in reducing and preventing pollutants in industrial storm water discharges and authorized NSWDs; and,
7) An assessment of any other factors needed to comply with the requirements in Section 6.2, Annual Reports.

6 REPORTING AND RECORDKEEPING

6.1 Sampling Analysis Reporting

Sampling and analytical results for all individual or Qualified Combined Samples must be submitted via SMARTS within 30 days of obtaining the results for each sampling event.

When an analytical result from samples taken is reported by the laboratory as a "non-detect," or less than the method detection limit, the method detection limit should be entered; a value of "zero" is not acceptable.

Sample results reported by the laboratory as below the minimum level (often referred to as the reporting limit) but above the method detection limit must be provided in the data submitted via SMARTS. Reported analytical results will be averaged automatically by SMARTS. SMARTS will assign a value of zero (0) for all results less than the minimum level as reported by the laboratory.

6.2 Annual Reports

An Annual Report must be certified and submitted via SMARTS no later than July 15th following each reporting year using the standardized format and checklists in SMARTS. The following information must be included in the Annual Report:

1. A Compliance Checklist indicating whether a facility complies with the General Permit, and has addressed all applicable requirements;
2. An explanation for any non-compliance of requirements within the reporting year, as indicated in the Compliance Checklist;
3. An identification, including page numbers and/or sections, of all revisions made to the SWPPP within the reporting year; and,
4. The date(s) of the Annual Evaluation.

6.3 Conditional Exclusion - No Exposure Certification (NEC)

6.3.1 Eligibility

Facilities whose storm water discharges are composed entirely of storm water that has not been exposed to industrial activity are not industrial storm water dischargers, and are conditionally excluded from complying with the SWPPP and monitoring requirements of the General Permit if all of the following conditions are met:

1. There is no exposure of Industrial Materials and Activities to rain, snow, snowmelt, and/or runoff;
2. All unauthorized NSWDs have been eliminated and all authorized NSWDs meet the conditions of Section 2.3, Non-Storm Water Discharges;

3. The facility has certified and submitted via SMARTS Permit Registration Documents for NEC coverage; and,
4. The Discharger has satisfied all other requirements Section XVII of the General Permit

6.3.2 NEC Specific Definitions

No Exposure: All Industrial Materials and Activities are protected by a Storm-Resistant Shelter to prevent all exposure to rain, snow, snowmelt, and/or runoff.

***Industrial Materials and Activities*:** Includes, but is not limited to, industrial material handling activities or equipment, machinery, raw materials, intermediate products, by-products, final products, and waste products.

Material Handling Activities: Includes the storage, loading and unloading, transportation, or conveyance of any industrial raw material, intermediate product, final product, or waste product.

Sealed: banded or otherwise secured, and without operational taps or valves.

Storm-Resistant Shelters: Includes completely roofed and walled buildings or structures. Also includes structures with only a top cover supported by permanent supports but with no side coverings, provided material within the structure is not subject to wind dispersion (sawdust, powders, etc.), or track-out, and there is no storm water discharged from within the structure that comes into contact with any materials.

6.3.3 NEC Qualifications

To qualify for an NEC, a facility must:

1. Except as provided in subsection 6.3.4, NEC Industrial Materials and Activities – Storm-Resistant Shelter Not Required, below, provide a Storm-Resistant Shelter to protect Industrial Materials and Activities from exposure to rain, snow, snowmelt, run-on, and runoff;
2. Inspect and evaluate the facility annually to determine that storm water exposed to industrial materials or equipment has not and will not be discharged to waters of the United States. Evaluation records must be maintained for five (5) years, in accordance with Section 6.4, Record Retention, below;
3. Register for NEC coverage by certifying that there are no discharges of storm water contaminated by exposure to Industrial Materials and Activities from areas of the facility subject to the General Permit, and certify that all unauthorized NSWDs have been eliminated and all authorized NSWDs meet the conditions of Section 2.3, Non-Storm Water Discharges (Authorized NSWDs). NEC coverage and annual renewal requires payment of an annual fee; and,
4. Submit PRDs for NEC coverage.

6.3.4 NEC Industrial Materials and Activities - Storm-Resistant Shelter Not Required

To qualify for NEC coverage, a Storm-Resistant Shelter is not required for the following:

1. Drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated, do not contain residual industrial materials on the outside surfaces, and do not leak;
2. Adequately maintained vehicles used in material handling;
3. Final products, other than products that would be mobilized in storm water discharge (e.g., rock salt);
4. Any Industrial Materials and Activities that are protected by a temporary shelter for a period of no more than ninety (90) days due to facility construction or remodeling; and,
5. Any Industrial Materials and Activities that are protected within a secondary containment structure that will not discharge storm water to waters of the United States.

6.4 Record Retention

The following documents must be maintained onsite for a minimum of five years:

- A copy of the General Storm Water Permit.
- Records of all sampling information, including the date, exact location, and time of sampling or measurement, the date analyses were performed, the person that performed the analyses, the analytical techniques or methods used, and the analytical results.
- Visual observation records, to include the date, approximate time, locations observed, presence and probable source of any observed pollutants, name of person(s) that conducted the observations, and any response actions and/or additional SWPPP revisions necessary in response to the visual observations.
- Equipment calibration records.
- BMP implementation records and maintenance records.
- For volume-based BMPs, calculations of the volume of runoff produced from an 85th percentile 24-hour storm event, as determined from local, historical rainfall records
- For flow-based BMPs, calculations of the flow needing treatment
- Training records
- Records related to any spills and clean-up related response activities
- NEC annual inspection and evaluation records

Our Environmental Lien and AUL report provides a summary of recorded information on a specific property from the time the current owner purchased the property, to present time. The report is intended to assist in the search for environmental liens filed in land title records. The report will verify property ownership and provide information on recorded environmental liens and/or Activity and Use Limitations that have been recorded from the time the current owner purchased the property, forward. This report complies with ASTM 1527-21 standards when used in conjunction with a review of the owner's most recent insurance title policy. Environmental Liens and Activity Use Limitations may exist in the insurance title policy that do not appear within this report.

Our professional network of trained researchers follow established industry protocols and use client-supplied property information to complete this Environmental Lien and AUL report. The research is conducted at all appropriate government offices based on the location of the subject property. This would include City, County, State, Federal and Tribal offices as needed. The report includes:

- Current deed information (i.e. grantor, grantee, recording dates)
- Legal Description
- Environmental Lien information
- Activity and Use Limitation information
- Any Environmental Liens and/or documents referencing AULs that are listed within our summary report

DISCLAIMER

MAP INFORMATION

The soil surveys that comprise your AO were mapped at` 1:24,000.

Warning: Soil Map may not be valid at this scale.

nlargement of maps beyond the scale of mapping can cause` misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers eual-area conic projection, should be used if more` accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Orange County and Part of Riverside County, California
Survey Area Data: Version 17, Aug 30, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 14, 2022Apr` 23, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
140	Chino silty clay loam, drained	18.2	100.0%
Totals for Area of Interest		**18.2**	**100.0%**

Orange County and Part of Riverside County, California

140—Chino silty clay loam, drained

Map Unit Setting

National map unit symbol: hcmj
Elevation: 30 to 750 feet
Mean annual precipitation: 12 to 16 inches
Mean annual air temperature: 63 to 65 degrees F
Frost-free period: 320 to 365 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Chino and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Chino

Setting

Landform: Alluvial fans
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from sedimentary rock

Typical profile

A - 0 to 24 inches: silty clay loam
C1 - 24 to 37 inches: silty clay loam
C2 - 37 to 60 inches: silty clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)
Sodium adsorption ratio, maximum: 5.0
Available water supply, 0 to 60 inches: High (about 11.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w

Hydrologic Soil Group: C
Ecological site: R019XG911CA - Loamy Fan
Hydric soil rating: No

Minor Components

Bolsa, silty clay loam
Percent of map unit: 10 percent
Landform: Alluvial fans
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Omni, clay
Percent of map unit: 5 percent
Landform: Flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Mocho, loam
Percent of map unit: 3 percent
Landform: Alluvial fans
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Sorrento, clay loam
Percent of map unit: 2 percent
Landform: Fan remnants
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

City of
BUENA PARK
Water Department

2024 Annual Water Quality Report

The City's water meets or exceeds all State and Federal water quality regulations.

WATER QUALITY is our top priority!

DATA FOR 2023

Your 2024 Water Quality Report

Since 1990, the Buena Park Water Department has been providing an annual Water Quality Report to their customers. **This year's report covers calendar year 2023 drinking water quality testing and reporting.** Your City of Buena Park Water Department (City) vigilantly safeguards its water supply and, as in years past, the water delivered to your home meets the quality standards required by federal and state regulatory agencies. The U.S. Environmental Protection Agency (USEPA) and the State Water Resources Control Board, Division of Drinking Water (DDW) are the agencies responsible for establishing and enforcing drinking water quality standards.

In some cases, the City goes beyond what is required by testing for unregulated chemicals that may have known health risks but do not have drinking water standards. For example, the Orange County Water District (OCWD), which manages the groundwater basin, and the Metropolitan Water District of Southern California (MWDSC), which supplies treated imported surface water to the City, test for unregulated chemicals in our water supply. Some of our data, though representative, are more than one year old. Unregulated chemical monitoring helps USEPA and DDW determine where certain chemicals occur and whether new standards need to be established for those chemicals to protect public health.

Through drinking water quality testing programs carried out by OCWD for groundwater, MWDSC for treated surface water and the City for the water distribution system, your drinking water is constantly monitored from source to tap for regulated and unregulated constituents.

The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.

D-2882

Constant Monitoring Ensures Continued Excellence

Sources of Supply

Whitsett Intake Pumping Plant on the Colorado River.

Orange County's water supplies are a blend of groundwater managed by OCWD and water imported from Northern California and the Colorado River by the Municipal Water District of Orange County (MWDOC) via MWDSC. Groundwater comes from a natural underground aquifer that is replenished with water from the Santa Ana River, local rainfall and imported water. The groundwater basin is 350 square miles and lies beneath north and central Orange County from Irvine to the Los Angeles County border and from Yorba Linda to the Pacific Ocean. More than 20 cities and retail water districts draw from the basin to provide water to homes and businesses.

Orange County's Water Future

For years, Orange County has enjoyed an abundant, seemingly endless supply of high-quality water. However, as water demand continues to increase statewide, we must be even more conscientious about our water supply and maximize the efficient use of this precious natural resource.

OCWD and MWDOC work cooperatively to evaluate new and innovative water management and supply development programs, including water reuse and recycling, wetlands expansion, recharge facility construction, ocean and brackish water desalination, surface storage and water use efficiency programs. These efforts are helping to enhance long-term county-wide water reliability and water quality.

A healthy water future for Orange County rests on finding and developing new water supplies, as well as protecting and improving the quality of the water that we have today. Your local and regional water agencies are committed to making the necessary investments today in new water management projects to ensure an abundant and high-quality water supply for our future.

Basic Information About Drinking Water Contaminants

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of land or through the layers of the ground it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animal and human activity.

Contaminants that may be present in source water include:

- **Inorganic contaminants**, such as salts and metals, which can be naturally occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining and farming.
- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- **Radioactive contaminants**, which can be naturally occurring or be the result of oil and gas production or mining activities.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gasoline stations, urban stormwater runoff, agricultural application and septic systems.

In order to ensure that tap water is safe to drink, USEPA and the DDW prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that must provide the same protection for public health. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

Immunocompromised People and Their Water

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised people, such as those with cancer who are undergoing chemotherapy, persons who have had organ transplants, people with HIV/AIDS or other immune system disorders, some elderly persons and infants can be particularly at risk to infection. These people should seek advice about drinking water from their health care providers.

Cryptosporidium

Cryptosporidium is a microscopic organism that, when ingested, can cause diarrhea, fever, and other gastrointestinal symptoms. The organism comes from animal and/or human wastes and may be in surface water. MWDSC tested their source water and treated surface water for *Cryptosporidium* in 2023 but did not detect it. If it ever is detected, *Cryptosporidium* is eliminated by an effective treatment combination including sedimentation, filtration and disinfection.

The USEPA and the federal Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from USEPA's Safe Drinking Water Hotline at (800) 426-4791 or online at www.epa.gov/safewater.

We Invite You to Learn More About Your Water's Quality

For information about this report, or your water quality in general, please contact Mark Stephenson at (714) 562-3655.

The Buena Park City Council meets the Second and Fourth Tuesday of each month at the City Council Chambers in the City of Buena Park.

Please feel free to participate in these meetings.

For more information about the health effects of the listed contaminants in the following tables, call the USEPA hotline at (800) 426-4791.

To Safeguard Against Issues that May Affect Your Health

We Comply with All State & Federal Water Quality Regulations

Disinfectants and Disinfection Byproducts

Disinfection of drinking water was one of the major public health advances in the 20th century. Disinfection was a major factor in reducing waterborne disease epidemics caused by pathogenic bacteria and viruses, and it remains an essential part of drinking water treatment today.

Chlorine disinfection has almost completely eliminated from our lives the risks of microbial waterborne diseases. Chlorine is added to your drinking water at the source of supply (groundwater well or surface water treatment plant). Enough chlorine is added so that it does not completely dissipate through the distribution system pipes. This "residual" chlorine helps to prevent the growth of bacteria in the pipes that carry drinking water from the source into your home.

However, chlorine can react with naturally-occurring materials in the water to form unintended chemical byproducts, called disinfection byproducts (DBPs), which may pose health risks. A major challenge is how to balance the risks from microbial pathogens and DBPs. It is important to provide protection from these microbial pathogens while simultaneously ensuring decreasing health risks from disinfection byproducts. The Safe Drinking Water Act requires the USEPA to develop rules to achieve these goals.

Trihalomethanes (THMs) and Haloacetic Acids

Chart Legend

What are Water Quality Standards?

Drinking water standards established by USEPA and DDW set limits for substances that may affect consumer health or aesthetic qualities of drinking water. The charts in this report show the following types of water quality standards:

- **Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible.
- **Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- **Secondary MCLs:** Set to protect the odor, taste, and appearance of drinking water.
- **Primary Drinking Water Standard:** MCLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.
- **Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

What is a Water Quality Goal?

In addition to mandatory water quality standards, USEPA and DDW have set voluntary water quality goals for some contaminants. Water quality goals are often set at such low levels that they are not achievable in practice and are not directly measurable. Nevertheless, these goals provide useful guideposts and direction for water management practices. The charts in this report include three types of water quality goals:

- **Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by USEPA.
- **Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

How are Contaminants Measured?

Water is sampled and tested throughout the year. Contaminants are measured in:

- parts per million (ppm) or milligrams per liter (mg/L)
- parts per billion (ppb) or micrograms per liter (µg/L)
- parts per trillion (ppt) or nanograms per liter (ng/L)

2023 City of Buena Park Drinking Water Quality
Local Groundwater and Metropolitan Water District Treated Surface Water

Chemical	MCL	PHG (MCLG)	Average Groundwater Amount	Average Imported MWD Amount	Range of Detections	MCL Violation?	Typical Source of Contaminant
Radiologicals – Tested in 2023							
Combined Radium (pCi/L)	5	(0)	ND	ND	ND – 1.2	No	Erosion of Natural Deposits
Gross Alpha Particle Activity (pCi/L)	15	(0)	ND	ND	ND – 5	No	Erosion of Natural Deposits
Gross Beta Particle Activity (pCi/L)	50	(0)	NR	ND	ND – 6	No	Decay of Natural and Man-made Deposits
Uranium (pCi/L)	20	0.43	3.7	1	ND – 6.6	No	Erosion of Natural Deposits
Organic Chemicals – Tested in 2023							
1,1-Dichloroethene (ppb)	6	10	ND	ND	ND – 0.7	No	Discharge From Industrial Chemical Factories
Inorganic Chemicals – Tested in 2023							
Aluminum (ppm)	1	0.6	ND	0.105	ND – 0.07	No	Treatment Process Residue, Natural Deposits
Arsenic (ppb)	10	0.004	2.8	ND	ND – 6.1	No	Erosion of Natural Deposits
Bromate (ppb)	10	0.1	NR	ND	ND – 6.3	No	Byproduct of Drinking Water Ozonation
Fluoride (ppm) naturally-occurring	2	1	0.52	NR	0.4 – 0.89	No	Erosion of Natural Deposits
Fluoride (ppm) treatment-related	2	1	NR	0.7	0.6 – 0.8	No	Water Additive for Dental Health
Nitrate as N (ppm)	10	10	0.86	0.7	ND – 2.1	No	Agriculture Runoff and Sewage
Nitrate + Nitrite as N (ppm)	10	10	0.86	0.7	ND – 2.1	No	Agriculture Runoff and Sewage
Perchlorate (ppb)	6	1	ND	ND	ND – 2.5	No	Industrial Waste Discharge
Secondary Standards* – Tested in 2023							
Aluminum (ppb)	200*	600	ND	105	ND – 70	No	Treatment Process Residue, Natural Deposits
Chloride (ppm)	500*	n/a	37	66	22 – 91	No	Runoff or Leaching from Natural Deposits
Color (color units)	15*	n/a	ND	2	ND – 5	No	Runoff or Leaching from Natural Deposits
Manganese (ppb)	50*	n/a	ND	ND	ND – 35	No	Runoff or Leaching from Natural Deposits
Odor (threshold odor number)	3*	n/a	ND	2	ND – 2	No	Naturally-occurring Organic Materials
Specific Conductance (µmho/cm)	1,600*	n/a	622	642	424 – 859	No	Substances that Form Ions in Water
Sulfate (ppm)	500*	n/a	82	122	59 – 175	No	Runoff or Leaching from Natural Deposits
Total Dissolved Solids (ppm)	1,000*	n/a	379	394	253 – 534	No	Runoff or Leaching from Natural Deposits
Turbidity (NTU)	5*	n/a	0.1	ND	ND – 0.2	No	Runoff or Leaching from Natural Deposits
Unregulated Chemicals – Tested in 2023							
Alkalinity, total as $CaCO_3$ (ppm)	Not Regulated	n/a	182	84	66 – 187	n/a	Runoff or Leaching from Natural Deposits
Boron (ppm)	NL = 1	n/a	ND	0.13	ND – 0.23	n/a	Runoff or Leaching from Natural Deposits
Calcium (ppm)	Not Regulated	n/a	60	38	12 – 91	n/a	Runoff or Leaching from Natural Deposits
Hardness, total as $CaCO_3$ (ppm)	Not Regulated	n/a	204	160	44 – 306	n/a	Runoff or Leaching from Natural Deposits
Hardness, total (grains/gal)	Not Regulated	n/a	12	9.4	2.6 – 18	n/a	Runoff or Leaching from Natural Deposits
Hexavalent Chromium (ppb)	Not Regulated	0.02	0.61	ND	ND – 1.6	n/a	Erosion of Natural Deposits
Magnesium (ppm)	Not Regulated	n/a	13	15	3.4 – 21	n/a	Runoff or Leaching from Natural Deposits
Perfluoro Hexane Sulfonic Acid (ppt)	NL = 3	n/a	ND	ND	ND – 3.6	n/a	Industrial Discharge
Perfluoro Octane Sulfonic Acid (ppt)	NL = 6.5	n/a	ND	ND	ND – 5.8	n/a	Industrial Discharge
pH (pH units)	Not Regulated	n/a	7.9	8.5	7.5 – 8.5	n/a	Hydrogen Ion Concentration
Potassium (ppm)	Not Regulated	n/a	2.7	3.4	2 – 4.3	n/a	Runoff or Leaching from Natural Deposits
Sodium (ppm)	Not Regulated	n/a	57	69	39 – 132	n/a	Runoff or Leaching from Natural Deposits
Total Organic Carbon (ppm)	TT	n/a	ND	2.4	ND – 3	n/a	Various Natural and Man-made Sources
Vanadium, Total (ppb)	NL = 50	n/a	1.5	3.1	ND – 4.4	n/a	Erosion of Natural Deposits; Industrial Discharge

ppb = parts-per-billion; **ppm** = parts-per-million; ppt = parts per trillion; **pCi/L** = picoCuries per liter; **NTU** = nephelometric turbidity units; **µmho/cm** = micromhos per centimeter; **NR** = not required to be tested; **ND** = not detected; < = average is less than the detection limit for reporting purposes; **MCL** = Maximum Contaminant Level; **(MCLG)** = federal MCL Goal; **PHG** = California Public Health Goal; **NL** = Notification Level; **n/a** = not applicable; **TT** = treatment technique *Contaminant is regulated by a secondary standard.

Turbidity – combined filter effluent Metropolitan Water District Diemer Filtration Plant	Treatment Technique	Turbidity Measurements	TT Violation?	Typical Source of Contaminant
1) Highest single turbidity measurement (NTU)	0.3	0.08	No	Soil Runoff
2) Percentage of samples less than or equal to 0.3 NTU	95%	100%	No	Soil Runoff

Turbidity is a measure of the cloudiness of the water, an indication of particulate matter, some of which might include harmful microorganisms.
Low turbidity in Metropolitan's treated water is a good indicator of effective filtration. Filtration is called a "treatment technique" (TT).
A treatment technique is a required process intended to reduce the level of contaminants in drinking water that are difficult and sometimes impossible to measure directly.

Unregulated Chemicals Requiring Monitoring

Chemical	Notification Level	PHG	Average Groundwater	Average Imported MWD Water	Range of Detections	Most Recent Sampling Date
Bromide (ppm)	n/a	n/a	0.12	NR	0.083 – 0.131	2019
Lithium (ppb)	n/a	n/a	ND	15	ND – 37	2023
Manganese (ppb)**	SMCL = 50	n/a	24	10	3.7 – 45	2019
Perfluoro hexane Sulfonic Acid (ppt)	3	n/a	ND	ND	ND – 3.9	2023
Perfluoro Octane Sulfonic Acid (ppt)	6.5	n/a	ND	ND	ND – 6.8	2023
Total Organic Carbon (Unfiltered)(ppm)	n/a	n/a	0.15	NR	0.14 – 0.18	2019

SMCL = secondary MCL **Manganese was included as part of the unregulated constituents requiring monitoring.

(HAAs) are the most common and most studied DBPs found in drinking water treated with chlorine. In 1979, the USEPA set the maximum amount of total THMs allowed in drinking water at 100 parts per billion as an annual running average. Effective in January 2002, the Stage 1 Disinfectants / Disinfection Byproducts Rule lowered the total THM maximum annual average level to 80 parts per billion and added HAAs to the list of regulated chemicals in drinking water. Your drinking water complies with the Stage 1 Disinfectants / Disinfection Byproducts Rule.

Stage 2 of the regulation was finalized by USEPA in 2006, which further controls allowable levels of DBPs in drinking water without compromising disinfection itself. A required distribution system evaluation was completed in 2008 and a Stage 2 monitoring plan has been approved by DDW. Full Stage 2 compliance began in 2012.

Arsenic

While your drinking water meets the federal and state standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The U.S. Environmental Protection Agency continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

About Lead in Tap Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at (800) 426-4791 or you may visit them online at: www.epa.gov/safewater/lead.

Drinking Water Fluoridation

Fluoride has been added to U.S. drinking water supplies since 1945. Of the 50 largest cities in the U.S., 43 fluoridate their drinking water.

In December 2007, MWDSC joined a majority of the nation's public water suppliers in adding fluoride to drinking water in order to prevent tooth decay. MWDSC was in compliance with all provisions of the State's fluoridation system requirements.

Our local water is not supplemented with fluoride. Fluoride levels in drinking water are limited under California state regulations at a maximum dosage of 2 parts per million.

Additional information about the fluoridation of drinking water is available on these websites:

U.S. Centers for Disease Control and Prevention
www.cdc.gov/fluoridation/

State Water Resources Control Board, Division of Drinking Water
www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.html

For more information about MWDSC's fluoridation program, please contact Edgar G. Dymally at edymally@mwdh2o.com or call him at (213) 217-5709.

Source Water Assessments

Imported (MWDSC) Water Assessment

Every five years, MWDSC is required by DDW to examine possible sources of drinking water contamination in its State Water Project and Colorado River source waters.

The most recent surveys for MWDSC's source waters are the Colorado River Watershed Sanitary Survey – 2020 Update, and the State Water Project Watershed Sanitary Survey – 2021 Update.

Water from the Colorado River is considered to be most vulnerable to contamination from recreation, urban/stormwater runoff, increasing urbanization in the watershed, and wastewater. Water supplies from Northern California's State Water Project are most vulnerable to contamination from urban/stormwater runoff, wildlife, agriculture, recreation, and wastewater.

USEPA also requires MWDSC to complete one Source Water Assessment (SWA) that utilizes information collected in the watershed sanitary surveys. MWDSC completed its SWA in December 2002. The SWA is used to evaluate the vulnerability of water sources to contamination and helps determine whether more protective measures are needed.

A copy of the most recent summary of either Watershed Sanitary Survey or the SWA can be obtained by calling MWDSC at (800) CALL-MWD (225-5693).

Groundwater Assessment

An assessment of the drinking water sources for the City was completed in December 2002. The groundwater sources are considered most vulnerable to the following activities not associated with detected contaminants: body shops, chemical/petroleum processing/storage, electrical/electronic manufacturing, gas stations, historic gas stations, known contaminant plumes, machine shops, metal plating/finishing/fabricating, photo processing/printing, repair shops, sewer collection systems, wastewater treatment and disposal facilities.

A copy of the complete assessment is available at State Water Resources Control Board, Division of Drinking Water, 2 MacArthur Place, Suite 150, Santa Ana, CA 92707. You may request a summary of the assessment by contacting the City at (714) 562-3655.

2023 City of Buena Park Distribution System Water Quality

Disinfection Byproducts	MCL (MRDL/MRDLG)	Average Amount	Range of Detections	MCL Violation?	Typical Source of Contaminant
Total Trihalomethanes (ppb)	80	38	ND – 70	No	Byproducts of Chlorine Disinfection
Haloacetic Acids (ppb)	60	13	ND – 26	No	Byproducts of Chlorine Disinfection
Chlorine Residual (ppm)	(4 / 4)	0.89	ND – 2.7	No	Disinfectant Added for Treatment
Aesthetic Quality					
Color (color units)	15*	52	ND – 150	n/a	Erosion of Natural Deposits
Odor (threshold odor number)	3*	1	1	n/a	Erosion of Natural Deposits
Turbidity (NTU)	5*	3.4	ND – 15	n/a	Erosion of Natural Deposits

Eight locations in the distribution system are tested quarterly for total trihalomethanes and haloacetic acids; twenty locations are tested monthly for color, odor and turbidity.

MRDL = Maximum Residual Disinfectant Level; **MRDLG** = Maximum Residual Disinfectant Level Goal; **n/a** = not applicable

*Contaminant is regulated by a secondary standard to maintain aesthetic qualities (taste, odor, color).

Lead and Copper Action Levels at Residential Taps

	Action Level (AL)	Health Goal	90th Percentile Value	Sites Exceeding AL / Number of Sites	AL Violation?	Typical Source of Contaminant
Lead (ppb)	15	0.2	ND	0 / 30	No	Corrosion of Household Plumbing
Copper (ppm)	1.3	0.3	0.17	0 / 30	No	Corrosion of Household Plumbing

Every three years, at least 30 residences are tested for lead and copper at-the-tap. The most recent set of samples was collected in 2021.
Lead was detected in one home; none of which exceeded the regulatory action level. Copper was detected in fourteen homes, none of which exceeded the action level.
A regulatory action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Unregulated Chemicals Requiring Monitoring in the Distribution System

Chemical	Notification Level	PHG	Average Amount	Range of Detections	Most Recent Sampling Date
Bromochloroacetic Acid (ppb)	n/a	n/a	1.9	ND – 5.6	2019
Bromodichloroacetic Acid (ppb)	n/a	n/a	0.64	ND – 2.4	2019
Chlorodibromoacetic Acid (ppb)	n/a	n/a	0.49	ND – 1.4	2019
Dibromoacetic Acid (ppb)	n/a	n/a	1.9	0.4 – 4.4	2019
Dichloroacetic Acid (ppb)	n/a	MCLG = 0	1.7	ND – 5.9	2019
Monobromoacetic Acid (ppb)	n/a	n/a	ND	ND – 0.5	2019
Trichloroacetic Acid (ppb)	n/a	MCLG = 20	ND	ND – 2	2019

Quality Water is Our Priority – Depend on Us

Turn the tap and the water flows, as if by magic. Or so it seems. The reality is considerably different, however. Delivering high-quality drinking water to our customers is a scientific and engineering feat that requires considerable effort and talent to ensure the water is always there, always safe to drink.

Because tap water is highly regulated by state and federal laws, water treatment and distribution operators must be licensed and are required to complete on-the-job training and technical education before becoming a state certified operator.

Our licensed water professionals have an understanding of a wide range of subjects, including mathematics, biology, chemistry, physics, and engineering. Some of the tasks they complete on a regular basis include:

- Operating and maintaining equipment to purify and clarify water;
- Monitoring and inspecting machinery, meters, gauges, and operating conditions;
- Conducting tests and inspections on water and evaluating the results;
- Documenting and reporting test results and system operations to regulatory agencies; and
- Serving our community through customer support, education, and outreach.

So, the next time you turn on your faucet, think of the skilled professionals who stand behind every drop.

Violations

Violation Date: 11/15/2014
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Orange County Environmental Health
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Notes:

Returned to compliance on 01/14/2015. Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. Please verify that all owner information that is prepopulated on the E-Submit Portal is still [Truncated]

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 10/29/2019
Violation Source: CERS
Violation Program: HWLQG
Violation Division: Orange County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 10/29/2019. Observed one 55gallon drum of corrosive waste with hazardous properties mislabeled as "Flammable" stored

next to waste labeled as corrosive. Flammable and corrosive wastes are to be stored in separate areas in order to prevent a fire hazard. EHS analyst confirmed waste is corrosive and corrected label during inspection. Violation corrected on site.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 10/29/2019 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Orange County Environmental Health
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Returned to compliance on 12/23/2019. OBSERVATION: Observed one 55gal drum of waste aerosol cans with accumulation start date of 10/23/18. Satellite waste cannot accumulate on site for greater than 365 days. CORRECTIVE ACTIONS: Have aerosol waste disposed of using a hazardous waste hauler immediately and provide manifests to the agency.

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations,
• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator
• Total time hzardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accumulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.
• The generator complies with sections 66265.171, 66264.172, and 66265.173(a).
• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information
• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area
• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 03/05/2019. OBSERVATION: The business failed to establish and electronically submit adequate emergency response procedures for a release or threatened release of a hazardous material. CUPA Agency's phone number is inaccurate in Site Emergency Plan Document. CORRECTIVE ACTION: Change Agency's phone number in the Site Emergency Plan to 714-433-6000 and provide documentation within 30 days.

Violation Description:

Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Training records are to include employee name, job title, job description, and training frequency. CORRECTIVE ACTIONS: Provide list of job descriptions and the training matrix to the agency within 30 days. Keep job descriptions with training records on site.

Violation Description:

Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of

the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violations

Violation Date:	11/18/2021	***Violation Source:***	CERS
Violation Program:	HW	***Violation Division:***	Orange County Environmental Health
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)		
Violation Notes:			

Returned to compliance on 12/21/2021. OBSERVATION: 55gal drum of MEK Ink waste located in the shop was observed with an accumulation start date of 03/24/20. All waste is to be disposed of within 180 days of generation. CORRECTIVE ACTION: Dispose of waste ink and submit a copy of the manifest/receipt to the CUPA within 30 days.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
(1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 11/06/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Orange County Environmental Health
Citation: 40 CFR 1 265.35 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.35
Violation Notes:

Returned to compliance on 03/12/2019. OBSERVATION: The hazardous waste storage area located in the outdoor storage container did not have adequate aisle space allowing for unobstructed movement. Approximately 4-5 pallets of drums were observed to be stored without proper aisle space, and were difficult to reach and read labels. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that adequate aisle space has been provided within 30 days.

Violation Description:

Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

Violations

Nutrilite-Access Group 5609 River Way Buena Park CA 90621 FA0046203 On site to conduct a new facility inspection with regards to the Hazardous Materials Business Emergency Program. Consent to inspect and take photos of the facility was provided by Melisa Hernandez. This facility and the facility connected by a bridge over the rail road tracks are managed and operated by the same business Nutrilite-Access Group. However due to the different addresses and the separation of the two facilities, this site must submit a separate Hazardous Materials Business Emergency Plan that is specific to the facility located at 5609 River Way. As per the facility contact, the chemical inventory of Hazardous Materials is over 600. This is mostly raw ingredients for the products they make. This facility is responsible for identifying all hazardous materials and hazardous wastes, which are above the disclosure thresholds. Reporting thresholds for hazardous substances stored at the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

GeoTracker Search - Cleanup Action Report (as of September 25, 2024)

Action Type: DUAL PHASE EXTRACTION
Begin Date: 12/22/2014
End Date: 10/7/2016
Phase: Soil Vapor, Water
Contaminant Mass Removed: 13,877 Pounds
Description: A fixed-base dual-phase extraction (DPE) system was installed at the site with groundwater extraction portion of the system starting in December 2014 while the soil vapor extraction (SVE) portion was initiated in January 2015. The SVE system operated under SCAQMD Permit #573474 while extracted groundwater was treated and discharged to the sanitary sewer (OCSD Permit #53-206). Wells MW-1, MW-4, and MW-8 were used for soil and groundwater extraction. From December 2014 through October 2016, the DPE system removed an estimated cumulative total of 13,877 lbs. of hydrocarbons from soil vapor (based on analytical data) and approximately 67,680 gallons of groundwater.

Action Type: DUAL PHASE EXTRACTION
Begin Date: 11/2/2011
End Date: 11/3/2011
Phase: Soil Vapor, Water
Contaminant Mass Removed: 24 Pounds
Description: In November 2011, a 2-day dual-phase extraction (DPE) pilot test was conducted at the site using wells MW-1 and MW-6 as extraction points. An estimated total of 24 lbs. of hydrocarbons (based on PID readings) and approximately 471 gallons of groundwater were removed during the test.

Action Type: FREE PRODUCT REMOVAL
Begin Date: 12/28/2007
End Date: 6/28/2011
Phase: Liquid Waste
Contaminant Mass Removed: 56 Gallons
Description: Free product (FP) was detected in wells MW-1 (2007) and MW-6 (2010). Approximately 43.73 gallons of FP was removed from well MW-1 and approximately 12.25 gallons of FP was removed from well MW-6. A cumulative total of approximately 56 gallons of FP was recovered from the two wells using passive skimmers from December 2007 to June 2011. FP has not been detected in the site wells since 2nd quarter 2011.

Doc Link: https://geotracker.waterboards.ca.gov/view_documents_all?global_id=T0605978422&doc_id=5914269
Title Description Comments:

Rebound Test and Closure Report - The case closure request report was denied previously as groundwater flow direction at the site was incorrectly reported as southeast in place of southwest. The error was corrected and the revised report is re-uploaded to Geotracker. The report is now accepted in Geotracker but refer to the Agency letter dated 01/19/2017 that explains other reasons for case closure denial at this time.

CASE FILE REVIEW

Action Type: Cleanup Action
Action: Dual Phase Extraction
Action Date: 12/22/2014
Received Issue Date:
Doc Link:

Title Description Comments:

A fixed-base dual-phase extraction (DPE) system was installed at the site with groundwater extraction portion of the system starting in December 2014 while the soil vapor extraction (SVE) portion was initiated in January 2015. The SVE system operated under SCAQMD Permit #573474 while extracted groundwater was treated and discharged to the sanitary sewer (OCSD Permit #53-206). Wells MW-1, MW-4, and MW-8 were used for soil and groundwater extraction. From December 2014 through October 2016, the DPE system removed an estimated cumulative total of 13,877 lbs. of hydrocarbons from soil vapor (based on analytical data) and approximately 67,680 gallons of groundwater.

Title Description Comments:

Free product (FP) was detected in wells MW-1 (2007) and MW-6 (2010). Approximately 43.73 gallons of FP was removed from well MW-1 and approximately 12.25 gallons of FP was removed from well MW-6. A cumulative total of approximately 56 gallons of FP was recovered from the two wells using passive skimmers from December 2007 to June 2011. FP has not been detected in the site wells since 2nd quarter 2011.

Citation:	23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)		
Violation Notes:			

Returned to compliance on 08/19/2021. Facility has not maintained an accurate plot plan map on site and in the California Environmental Reporting System (CERS). Please correct the the UDC sensors indicated on the map to VR-001 and re-submit within 30 days.

Violation Description:

Failure to submit or maintain a current facility plot plan.

Violations

Violation Date: 04/10/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Orange County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 04/10/2019. Observed 55gal drum of waste fuel and water with an incomplete and damaged label. Provided employee with new label which was marked with all required elements and attached to drum. Violation corrected on site.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 04/28/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Orange County Environmental Health
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 04/29/2016. OBSERVATION: The waste gasoline contaminated waters drum was missing the Hazardous Waste label. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. The Manager immediately labeled these containers. Ensure that all hazardous waste containers are marked with all the required information. This violation was abated today.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 04/30/2015 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Orange County Environmental Health
Citation: 23 CCR 16 2637 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2637
Violation Notes:

Returned to compliance on 05/13/2015. The SB 989 testing was last conducted on 2-21-12 and was due by 2-21-15. AP Compliance testing conducted the SB 989 testing today. This is proof of compliance and therefore this violation is abated. Ensure the results are forwarded to this agency with-in 30 days.

Violation Description:

Failure to comply with one or more of the following: conduct secondary containment testing, within six months of installation and every 36 months thereafter, conducted in accordance with proper practices, protocols, or test methods.

Violations

Violation Date: 05/18/2018 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Orange County Environmental Health
Citation: 23 CCR 16 2715(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(i)
Violation Notes:

Returned to compliance on 07/02/2018. To date a completed Monitoring System Certification has not been submitted to this agency. Provide a completed Monitoring System Certification that includes all required components (monitoring system certification, spill bucket testing report form and plot plan) to this agency immediately.

Violation Description:

Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violations

Violation Date: 04/11/2018 ***Violation Source:*** CERS

Citation: HSC 6.7 25284, 25286 - California Health and Safety Code, Chapter 6.7, Section(s) 25284, 25286
Violation Notes:

Returned to compliance on 11/12/2018. Monitoring plan does not accurately reflect components on site. Review comments in CERS and make needed corrections and resubmit within 30 days.

Violation Description:

Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.

Violations

Violation Date: 04/14/2022 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Orange County Environmental Health
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Notes:

Returned to compliance on 04/28/2022. OBSERVATION: 87 South UST: Line leak detector failed to meet one or more of the following requirements: Monitor at least hourly; Capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g.; Restricting or shutting off the flow of product through the piping when a leak is detected. CORRECTIVE ACTION: Repair or replace line leak detector on 87 South UST so that is it is capable of monitoring at least hourly, detecting a release of 3.0 gallons per hour at 10 p.s.i.g., and restricting or shutting off the flow of product through the piping when a leak is detected.

Violation Description:

Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping when a leak is detected.

Violation Program: UST ***Violation Division:*** Orange County Environmental Health
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Notes:

Returned to compliance on 05/04/2022. OBSERVATION: The designated operator failed to document all the alarms from the attached alarm history on the January 2022 designated operator monthly inspection report(s) and failed to check that they were responded to appropriately. The missing alarm occurred on 12/24/2021. During the monthly inspection, the designated operator shall review the alarm history for the previous month, check that each alarm was documented and responded to appropriately, and attach a copy of the alarm history with documentation taken in response to any alarms to the monthly report. CORRECTIVE ACTION: Ensure that designated operators performing monthly inspections at this facility are including all of the required information on the reports. Submit a revised DO monthly report and address the alarm in the report. Send this agency a copy in order to abate this violation.

Violation Description:

For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements:
Be performed by an ICC certified DO.
Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy.
Inspect for the presence of liquid/debris in spill containers.
Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly.
Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit.
Check that all testing and maintenance has been completed and documented.
Verify that all facility employees have been trained in accordance with 23 CCR 2715(c).
For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

On site to conduct a routine Hazardous Materials Disclosure and Business Emergency Plan inspection. Consent was provided to enter and conduct inspection activities by store manager. The HMBEP has been submitted into the CERS Database on 1/7/2022. The 2022 HazMat Inventory and Emergency Plan was accepted. The following were verified: - Chemical Disclosure at the facility; - Contingency plan/BEP; - Training program; and, - Facility Map. Please note that if the facility decides to discontinue any of the above chemicals, proper disposal or removal of chemicals is required and maintenance of disposal records will be verified. Within 30 days of removal, contact this agency to verify that the hazardous material is no longer stored on site and remove it from the facility's listed disclosable chemicals.; Note: data in [EVAL Notes] field for some records is truncated from the source.

On site to witness Annual Monitoring System Certification, Spill Bucket testing, and conduct a routine UST inspection. Met with Manager Sam Hasouneh of Mobil and Chris Sharnus of ShanCor. C. Shancor conducted the tank testing, monitor system certification, and spill bucket testing. ICC, Vaporless, and Veeder-Root certifications were observed and verified. All USTs are single-walled with single-walled piping and monitored by a TLS-350. TANKS: - 87 (10,000 gal) - 89 (10,000 gal) - 91 (10,000 gal) - Diesel (5,000 gal) PIPING sump has a VR-208 and UDC sensors are VR-001 (stand-alone): Line leak detectors are WPLLD. The Line Leak detector on the 87 south (W 1) was found in alarm. The sensor was tested and it failed. Please resolve this issue immediately. After reviewing documentation, the issue with the line leak detector began when the dispensers were upgraded and the two 87 USTs were manifolded at the dispenser. Notify this agency within 48 hours of retesting [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

This is an in-office inspection report. A review of the E Submit Portal submittal of the Monitoring Plan indicated the facility states it is conducting a 0.2 gph Monthly line leak test to monitor the single walled pressurized piping. Part of this requirement is to keep a copy of the test records or print outs from the Veeder Root Monitoring Panel. No record of the line tests were available for review during the routine inspection conducted on 4-30-15 (see violation). Ensure a copy of the Monthly 0.2 gph line leak test records are available on site and provide a copy of the records from when you began the monthly 0.2 line test to this agency with-in 30 days. Our records indicate the last passing annual 0.1 gph line test was conducted on 5-1-13. It is required to provide notification to this agency with-in 30 days of a change to the monitoring plan. Please provide the date when you changed the monitoring method for the single walled pressurized piping. A [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

INSPECTOR COMMENTS On site for routine UST inspection. The facility has four, single-walled tanks (87/89/91/Diesel) monitored by a Veeder Root TLS-350 system. The monitor is operational for audible and visual alarms. Positive shutdown and fail-safe programming were verified. The in-tank probes are used for overfill prevention (M# opw-ofpv). CSLD results were available and reviewed. The following sensors are installed at this location: turbine sumps (M#208) and UDCs (M#107). Mechanical line leak detectors are installed in all turbines. The following documents are available for review: Permit to operate, monitoring plan, leak response plan, test reports, DO monthly reports, and DO annual employee training records. Secondary containment testing was last conducted on 04/30/2015. It must be conducted every 36 months. Certification of Financial Responsibility documents are dated 3/01/17. They must be submitted annually. Facility has submitted UST [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

On site to conduct a follow-up UST inspection. I met with the Manager Cyril Wallace. I provided Mr. Wallace a copy of the routine UST inspection report which we reviewed and he signed a copy for our records. Mr Wallace provided a copy of the recent Designated Operator Record for Employee Training, therefore violation I651 is abated today. We discussed the CSLD 0.2 tank testing and the monitoring of the single walled piping. The facility records for the 0.2 gph CSLD tank testing were available for review for each month's tests. Mr. Wallace stated that this agency told him they did not need to conduct a 0.1 line test annually. Our records indicate the last line test was conducted on 5/1/13. The report history of this facility clearly indicates the testing requirements and the owner's understanding of the testing requirement.; Note: data in [EVAL Notes] field for some records is truncated from the source.

On site to conduct a routine Underground Storage Tank (UST) inspection and witness the annual monitoring system certification and spill bucket testing. Met with David Simon service technician with ShanCor Testing. The facility has four single walled USTs (87, 89, 91, Diesel). The system is monitored by a Veeder Root TLS-350. The monitor is operational for audible and visual alarms and display reads "all functions normal." The turbine sumps are monitored by VR-208, UDCs #1-8 with VR-001 (stand alone). Sensors were observed at the lowest point. Sensor out and fail-safe were verified and passed. All sensors were tested in water and verified to be operational. ATGs are used for monitoring the SW USTs. Monthly CSLD report is located in the UST binder. The site has single-walled piping with mechanical line leak detectors. Flappers are used for overfill prevention. Testing was conducted by Dave Simon with ShanCor. Technician certifications (VR, ICC and VMI) were verified. Please submit; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Rejected portal submittal is conditionally accepted prior to CERS transfer: This submittal is being conditionally approved in order to facilitate transfer of data to California Electronic Reporting System (CERS) database. Do not make any additional submittals to the eSubmit portal. All future submittals must be made to the CERS database. _____ Declined for corrections: The Tank pages indicate the use of the ATG and Ball Float for Overfill protection. The facility doesn't have an outside Enunciator but does have flapper valves installed in the drop tubes. You must change the overfill protection to Flapper valve and remove the ATG indication. Also the site does have sensor in the UDC's that shutdown the dispenser. Please update he Monitoring Plan to reflect the use of the sensors.; Note: data in [EVAL Notes] field for some records is truncated from the source.

GeoTracker Search - Cleanup Action Report (as of September 25, 2024)

Action Type: FREE PRODUCT REMOVAL
Begin Date: 1/9/2021
End Date: 3/8/2021
Phase: Liquid Waste
Contaminant Mass Removed: 10 Gallons
Description: Free product removal from RMC6

Action Type: DUAL PHASE EXTRACTION
Begin Date: 4/10/2018
End Date: 4/13/2018
Phase: Soil Vapor, Soil Vapor
Contaminant Mass Removed: 74 Pounds
Description: SVE HIT Event conducted using RMC 6 and EW 4. 2QT2018 GWM Report states the amount of water removed from the DPE HIT event will be provided in the 3QT2018 report.

Action Type: FREE PRODUCT REMOVAL
Begin Date: 3/22/2018
End Date: 3/22/2018
Phase: Other (See Description)
Contaminant Mass Removed: 0 Gallons
Description: Free product bailed out of RMC 6 and EW 4

Action Type: OTHER (USE DESCRIPTION FIELD)
Begin Date: 6/13/2011
End Date: 6/17/2011
Phase: Water, Other (See Description)
Contaminant Mass Removed: 1,050 Gallons
Description:

Action Type: OTHER (USE DESCRIPTION FIELD)
Begin Date: 3/14/2011
End Date: 3/18/2011
Phase: Water, Other (See Description)
Contaminant Mass Removed: 2,550 Gallons
Description: DUAL-PHASE EXTRACTION

Action Type: OTHER (USE DESCRIPTION FIELD)
Begin Date: 10/11/2010
End Date: 10/15/2010
Phase: Water, Other (See Description)
Contaminant Mass Removed: 1,124 Gallons
Description: DUAL-PHASE EXTRACTION

Action Type: OTHER (USE DESCRIPTION FIELD)
Begin Date: 8/23/2010
End Date: 8/27/2010
Phase: Water, Other (See Description)
Contaminant Mass Removed: 471 Gallons
Description: DUAL-PHASE EXTRACTION

Action Type: OTHER (USE DESCRIPTION FIELD)
Begin Date: 6/18/2001
End Date: 6/24/2001
Phase: Water, Other (See Description)
Contaminant Mass Removed: 7,900 Gallons
Description: DUAL-PHASE EXTRACTION

Action Type: OTHER (USE DESCRIPTION FIELD)
Begin Date: 6/1/1998
End Date: 12/31/1998
Phase: Other (See Description), Water
Contaminant Mass Removed: 9 Pounds
Description: DUAL-PHASE EXTRACTION

Action Type: FREE PRODUCT REMOVAL
Begin Date: 6/1/1994
End Date: 3/15/1999
Phase: Liquid Waste
Contaminant Mass Removed: 90 Gallons

Doc Link: https://geotracker.waterboards.ca.gov/view_documents_all?global_id=T0605901610&doc_id=5943816
Title Description Comments:

Revised Interim Remedial Action Plan and Work Plan for Three Off-Site Groundwater Monitoring Wells - The report was submitted with two scopes of work: 1) Revised IRAP and 2) Workplan for additional assessment. The workplan for off-site monitoring wells is acceptable to the Agency. The proposed IRAP is not acceptable to the Agency and needs to be re-submitted for review. See OCHCA letter dated 09/21/2017 for details.

Chemicals of Concern (COCs) in soil identified during February 2002 sampling included trichloroethene (TCE), PCE, cis¬1,2-DCE, DCE, acetone, 2-Butanone (MEK), benzene, toluene, ethylbenzene, xylenes (BTEX), total petroleum hydrocarbons as diesel (TPHd), waste oil, barium, copper lead, molybdenum, selenium, vanadium, and zinc. Although other hydrocarbons, mineral solvents and metals were present in low concentrations in the soil column, initial groundwater results showed concentrations to be at or below EPA Region 9 tap water maximum levels (PRGs) and state Maximum Contaminant Levels (MCLs). Four groundwater monitoring wells were installed and sampled during the April 2002 assessment. Cis-1,2-DCE was detected in two wells at concentrations of 73 pg/L (MW01) and 5.8 pg/L (MW02). PCE was detected in MWO4 at a concentration of 5.9 pg/L. The groundwater flow direction ranged from eastward to east-northeastward at a gradient ranging from approximately 0.0003 ft/ft to approximately 0.0005 feet per foot (ft/ft). Low concentrations of Cis-1,2-DCE (5.1 to 95 ug/l in MW-02 and MW-01 respectively) and PCE (5.8 to 11 ug/l in MW-04, the down gradient well) have been consistently found in three wells over two years of monitoring without a significant change in concentrations. The presence of degradation product of PCE, cis 1,2 DCE, indicates a continued biologic breakdown of PCE, which is already at concentrations just above State Maximum Contaminant Levels (MCL) for drinking water. Clearly the site is stabilized in relation to the growth of a contaminant plume and entering a stage of reduction in size and concentration. The plume does not appear to extend offsite in concentrations above MCLs.

GeoTracker Search - Cleanup Action Report (as of September 25, 2024)

Action Type: EXCAVATION
Begin Date:
End Date:
Phase: Soil

Contaminant Mass Removed:
Description: Removal of Clarifier and Limited Subsurface Investigation The clarifier was removed as a closure procedure required by public works. The objective of the limited investigation was to evaluate the potential presence of hazardous constituents in soil vapor, soil, and groundwater at the site. The scope of work included: (1) the removal of the clarifier, (2) installation of eight soil vapor probes, and (3) installation of two soil borings and one hydropunch soil boring.

DDT
METALS
PETROLEUM

Site History:

The subject site comprises about 14.5 acres of level ground located just east of the 5 freeway on the north side of Artesia Boulevard, in Buena Park, California.
The site was reportedly used as agricultural land up to about 1964, then developed as a Nabisco factory which operated until about 2004 and was demolished in about 2006.
An abandoned oil well is present at the site. California Division of Oil, Gas, and Geothermal Resources (DOGGR) records indicate the well was drilled and abandoned in 1955. The well was re-abandoned under supervision of DOGGR in 2008.
Phase I investigations found that a nearby gas station, Unocal #5599, located across Artesia Boulevard, was the site of a UST leak and cleanup effort. The Phase II investigation took soil gas samples along the boundary with Artesia Boulevard and found no detectable gasoline components.

The Phase II environmental investigation of the site included soil matrix and has detected.

ï¿½ 4,4-DDT at concentrations up to 0.024 mg/Kg, and its daughter products 4,4-DDD at up to 0.26 mg/kg and 4,4-DDE at up to 0.36 mg/Kg, all below the residential RSLs of 1.7 mg/Kg, 2.0 mg/Kg, and 1.4 mg/Kg respectively.
ï¿½ Arsenic at concentrations up to 5.22 mg/Kg; ï¿½ Lead at concentrations up to 32.9 mg/Kg,
ï¿½ Total Petroleum Hydrocarbons (TPH) near the former oil well, and in the stockpile onsite. TPH as Diesel (TPH-d) was found at concentrations up to 450 mg/Kg, and TPH as motor oil (TPH-o) up to 1400 mg/Kg. The TPH was present in most of these samples. TPH as gasoline (TPH-g) was found in the stockpile at up to 0.77 mg/Kg.
ï¿½ Soil vapor sampling for Volatile Organic Compounds (VOCs) was performed in nine locations onsite, and found benzene, toluene, ethylbenzene, xylenes, and 1,2,4-trimethylbenzene at concentrations that appear to be low.

Due to the historical use of the Site, soil has been impacted by volatile organic compounds (VOCs). To address these impacts, the Site owner, City Ventures, entered into a Voluntary Cleanup Agreement (VCA) with DTSC.

The Final Removal Action Work Plan approved by DTSC recommended on site burial of the crushed concrete and asphalt in excavations created for residential development. A land use covenant was placed on the property on July 19, 2016. Currently Residential Development is under construction. Vapor barriers will be placed beneath all the residential buildings.

Status: CERTIFIED O&M - LAND USE RESTRICTIONS ONLY - LAND USE RESTRICTIONS
Program Type: VOLUNTARY CLEANUP

Site History:

This facility is also known as Parker Chemical and Hooker Chemical.

The facility produced chemical specialty products for metal treating, metal drawing lubricant, and rust resisting compounds.

The facility received an ISD on 12/23/81. An ownership change took place on 10/19/83 and revised Part A application was submitted.

During 1983 and 1984 the facility pursued a Part B permit. DTSC produced a draft permit and it was public noticed on 6/1/84. However, Part B permit was never issued for this facility and facility went to closure on 9/20/88. The closure notification letter of 9/20/88 stated that after further evaluation of their operation and regulation amendments, it was concluded that facility should be regulated as Generator not TSDF.

The facility went through closure during 1988-1989 and was verified closed on 7/6/92.

There were no corrective action related documents in the file.

APN: 070-045-27
Past Use that Caused Contam: DRY CLEANING
Potential Media Affected: SOIL
Potential Contamin of Concern:

TETRACHLOROETHYLENE (PCE)
TRICHLOROETHYLENE (TCE)

Site History:

The Site currently remains as a 5-unit strip mall, and the unit formerly used as a dry cleaning facility is vacant. The Site is approximately 0.79 acre and is bounded by an apartment complex with a parking lot to the east, a food and liquor store on the west, a nursery school with daycare facilities to the north, and additional commercial properties to the south. A total of 20 cubic yards of solvent-contaminated soil was excavated from the former dry cleaning machine location and transported to the Waste Management disposal facility in Kettleman City, California. An initial follow-up assessment of the former dry cleaner location showed the presence of elevated concentrations of residual PCE in soil. Additional investigation showed the presence of elevated concentrations of VOCs, primarily PCE in soil, soil gas and groundwater. Elevated PCE concentrations (above the USEPA Regional Screening Levels of 2008) are still present in shallow soil beneath the former dry cleaner and adjoining liquor/convenient store, posing potentially significant human health risks via inhalation and acting as a significant potential source of further groundwater quality degradation.

A soil vapor extraction (SVE) system was set up, and SVE wells were installed. However, the SVE system was never turned on. The Field activities for site investigation were completed in May 2014. On the basis of risk assessment to public health and environment posed by the residual contamination remains at the site, RP signed Land Use Covenant (LUC) with DTSC on June 30, 2014. Cost recovery activity started in August 2014.

DTSC certified the Site on June 4, 2018.

Census Tract:	6059110603	**Project Manager:**	JOSEPH CULLY
Site Type:	STATE RESPONSE OR NPL	**County:**	ORANGE
Address Description:	6522 STANTON AVENUE	**Latitude:**	33.8656429
Office:	CLEANUP CYPRESS	**Longitude:**	-117.993347
Special Program:		**Acres:**	0.79 ACRES
Funding:	RESPONSIBLE PARTY	**Supervisor:**	NICHOLAS TA

Cleanup Status: CERTIFIED O&M - LAND USE RESTRICTIONS ONLY AS OF 7/25/2018
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District:
Past Use that Caused Contam: DRY CLEANING

Potential Media Affected: SOIL
Potential Contamin of Concern:

TETRACHLOROETHYLENE (PCE)
TRICHLOROETHYLENE (TCE)

Site History:

The Site currently remains as a 5-unit strip mall, and the unit formerly used as a dry cleaning facility is vacant. The Site is approximately 0.79 acre and is bounded by an apartment complex with a parking lot to the east, a food and liquor store on the west, a nursery school with daycare facilities to the north, and additional commercial properties to the south. A total of 20 cubic yards of solvent-contaminated soil was excavated from the former dry cleaning machine location and transported to the Waste Management disposal facility in Kettleman City, California. An initial follow-up assessment of the former dry cleaner location showed the presence of elevated concentrations of residual PCE in soil. Additional investigation showed the presence of elevated concentrations of VOCs, primarily PCE in soil, soil gas and groundwater. Elevated PCE concentrations (above the USEPA Regional Screening Levels of 2008) are still present in shallow soil beneath the former dry cleaner and adjoining liquor/convenient store, posing potentially significant human health risks via inhalation and acting as a significant potential source of further groundwater quality degradation.

A soil vapor extraction (SVE) system was set up, and SVE wells were installed. However, the SVE system was never turned on. The Field activities for site investigation were completed in May 2014. On the basis of risk assessment to public health and environment posed by the residual contamination remains at the site, RP signed Land Use Covenant (LUC) with DTSC on June 30, 2014. Cost recovery activity started in August 2014.

DTSC certified the Site on June 4, 2018.

Status: CERTIFIED O&M - LAND USE RESTRICTIONS ONLY - LAND USE RESTRICTIONS
Program Type: STATE RESPONSE
CalEnviroScreen Score: 90-95%

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

The U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL) includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program, based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. This data includes NPL sites represented as polygons, where available, that can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. As site investigation and remediation progress, OUs may be added, modified or refined. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Sep 25, 2024

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the U.S. Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Sep 25, 2024

Deleted NPL: DELETED NPL

Sites deleted from the U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL). The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Sep 25, 2024

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the EPA's Facility Registry Service map tool.

Government Publication Date: Oct 24, 2024

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Oct 24, 2024

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Oct 21, 2024

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Oct 21, 2024

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Oct 21, 2024

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Oct 21, 2024

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Oct 21, 2024

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Oct 21, 2024

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Oct 21, 2024

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made availabe by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Nov 20, 2024

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Nov 20, 2024

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

These boundaries of Institutional Control areas at sites on the U.S. Environmental Protection Agency's (EPA) National Priorities List (NPL), or as Proposed or Deleted, are sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). The EPA's NPL includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes.

Government Publication Date: Sep 25, 2024

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Oct 15, 2024

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Feb 7, 2024

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: Jan 9, 2024

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Jan 9, 2024

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

This list of petroleum refineries is sourced from the U.S. Energy Information Administration (EIA), Refinery Capacity Report. The listing includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year. The geographic area the report covers is the 50 States, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, and other U.S. possessions. Per the EIA, the facility location data represents the approximate location based on research of publicly available information from sources such as Federal agencies, company websites, and satellite images on public websites.

Government Publication Date: Oct 31, 2024

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from Oak Ridge National Laboratory hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Oct 31, 2024

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Oct 24, 2024

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Oct 24, 2024

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database serves a purpose similar to that of the federal NPL, functioning as a state-level counterpart for prioritizing cleanup efforts at hazardous substance release sites.

Government Publication Date: Sep 25, 2024

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database serves a purpose similar to that of the federal Superfund Enterprise Management System (SEMS), functioning as a state-level counterpart for tracking potential hazardous substance release sites.

Government Publication Date: Sep 25, 2024

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Sep 25, 2024

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Oct 26, 2024

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Waste Management Unit Database: WMUD

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

Government Publication Date: Jan 1, 2000

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Sep 25, 2024

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers: C&D DEBRIS RECY

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers: RECYCLING

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 2, 2025

Listing of Certified Processors: PROCESSORS

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 2, 2025

Listing of Certified Dropoff, Collection, and Community Service Programs: CONTAINER RECY

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 2, 2025

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Sep 25, 2024

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Sep 25, 2024

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Jan 15, 2025

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Nov 17, 2024

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

This listing includes Proposed Closure of Underground Storage Tank (UST) Cases which are being considered for closure by either the State Water Resources Control Board at a Future Board Meeting or the Executive Director that have been posted for a 60-day public comment period, and Closure of UST Cases with Closure Denials and Approved Orders. The lists are provided by the California Water Boards.

Government Publication Date: Oct 26, 2024

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System: UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks: AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Nov 14, 2024

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Nov 14, 2024

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 28, 2024

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Oct 28, 2024

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Sep 25, 2024

CALSITES Database: CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Jan 15, 2025

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Sep 25, 2024

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Sep 25, 2024

Delisted Cleanup Program Sites: DELISTED CLEANUP

A list of Cleanup Program sites which were once included - and have since been removed from - the list of Cleanup Program Sites in GeoTracker. GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Government Publication Date: Jan 15, 2025

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Oct 28, 2024

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 7, 2024

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 7, 2024

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 7, 2024

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: May 7, 2024

County

Los Angeles County - Site Mitigation List: SML LA

A Site Mitigation List in the County of Los Angeles. The list is made available by Los Angeles County Fire Department. Site mitigation is handled by the Site Mitigation Unit (SMU) which facilitates completion of site clean-up projects of contaminated sites in an expeditious manner in all cities of the Los Angeles County except El Segundo, Glendale, Long Beach, Santa Fe Springs, and Vernon.

Government Publication Date: Jul 11, 2023

Los Angeles County - Solid Waste Sites: SWF LA COUNTY

List of permitted solid waste facilities, closed landfills, historical dumpsites and other solid waste sites in Los Angeles County, made available by the Department of Public Works in Los Angeles County.

Government Publication Date: Sep 11, 2024

Los Angeles County - CUPA Program Records: CUPA LA COUNTY

A list of inspection and enforcement records for active and inactive CUPA Program facilities, made available by the Health Hazardous Materials Division (HHMD) of the County of Los Angeles Fire Department. Includes Hazardous Materials Business Plan (HMBP), California Accidental Release Prevention Plan (CalARP), Hazardous Waste Generator (HWG), and the Aboveground Petroleum Storage Act Programs (APSA). Inactive programs include facilities that are out of business or no longer regulated by the HHMD.

Government Publication Date: Mar 25, 2020

Los Angeles County - HMS List: HMS LA

List of sites in the Los Angeles County Department of Public Works Hazardous Materials System (HMS) Database which have or have had permits for Industrial Waste, Underground Storage Tanks, or Stormwater in the county of Los Angeles.

Government Publication Date: Jan 16, 2024

Los Angeles County - San Gabriel Valley Areas of Concern: AOCONCERN

The San Gabriel Valley Superfund sites include multiple areas of contaminated groundwater in the 170-square-mile San Gabriel Valley. The contaminated areas underlie significant portions of the cities of Alhambra, Arcadia, Azusa, Baldwin Park, Industry, Irwindale, El Monte, La Puente, Monrovia, Rosemead, South El Monte, and West Covina. The groundwater contamination was first detected in 1979. Following this discovery, the California Department of Health Services (CDHS) initiated a well sampling program to assess the extent of contamination. By 1984, when EPA added four areas of contamination to the National Priorities List (NPL), 59 wells were known to be contaminated with high levels of volatile organic compounds (VOCs). These data, made available by the Region 9 Environmental Protection Agency (EPA) office, include operable units for the 4 NPL sites, as well as deep and shallow plumes.

Government Publication Date: Aug 26, 2015

Los Angeles County - Santa Fe Springs Underground Storage Tank: UST SANTAFESP

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Fe Springs. This list is made available by Santa Fe Springs Department of Fire-Rescue.

Government Publication Date: Feb 11, 2022

Los Angeles County - Long Beach UST List: UST LONGB

List of registered Underground Storage Tanks (USTs) in the City of Long Beach, Los Angeles County, made available by the Long Beach Certified Unified Program Agency (CUPA). The Long Beach CUPA operates under oversight shared by the Long Beach Fire Department and Health Department.

Government Publication Date: Jul 9, 2018

Los Angeles County - Burbank City CUPA List: CUPA BURBANK

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Burbank. This list is made available by the City of Burbank Fire Department.

Government Publication Date: Aug 21, 2019

Los Angeles County - El Segundo City Underground Storage Tanks List: UST ELSEGUNDO

List of registered Underground Storage Tanks (USTs) in the City of El Segundo of Los Angeles County, made available by El Segundo City Fire Department.

Government Publication Date: Jan 17, 2017

Los Angeles County - Santa Monica City Underground Storage Tank List: UST SANTA MONICA

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Monica made available by Santa Monica Fire Prevention Division.

Government Publication Date: Dec 3, 2020

Los Angeles County - Santa Monica City Aboveground Storage Tank List: AST SANTAMON

List of registered Aboveground Storage Tanks (ASTs) made available by the Santa Monica Fire Department in the City of Santa Monica of Los Angeles County, California.

Government Publication Date: Jan 20, 2023

Los Angeles County - Santa Monica City CUPA Facilities List: CUPA SANTAMON

The Santa Monica Fire Department's office maintains a list of CUPA Facilities located in Santa Monica city.

Government Publication Date: Jan 14, 2022

Los Angeles County - Torrance City Underground Storage Tanks: UST TORRANCE

A list of registered Underground Storage Tank (UST) sites in Torrance City of Los Angeles County. This list is made available by Torrance City Office of Clerk.

Government Publication Date: Apr 20, 2022

Los Angeles County - Vernon City UST List: UST VERNON

A list of Underground Storage Tanks (UST) in Vernon City provided by the Vernon City Fire Department.

Government Publication Date: Aug 25, 2022

Los Angeles County - Vernon City CUPA List: CUPA VERNON

The Vernon City Fire Department's office maintains a list of CUPA Facilities located in Vernon city.

Government Publication Date: Aug 25, 2022

Los Angeles County - City of Los Angeles UST List: UST LA CITY

A list of active and inactive underground storage tank facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Oct 3, 2024

Los Angeles County - City of Los Angeles AST List: AST LA CITY

A list of active and inactive above ground petroleum storage tanks made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Los Angeles County - City of Los Angeles Hazardous Materials Facilities: HAZMAT LA CITY

A list of active and inactive hazardous materials facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Orange County - Industrial Cleanup Program Cases Listing: ICP ORANGE

Orange County Health Care Agency's Environmental Health Division has an Industrial Cleanup (IC) program which oversees the voluntary cleanup of contaminated property. This is a list of cases (by city) which the IC program has overseen in the past, or is currently overseeing.

Government Publication Date: May 15, 2023

Orange County - LOP Lead Cases List: LOP ORANGE

The Local Oversight Program of the County of Orange provides regulatory cleanup oversight for cleanup of leaking underground storage tanks (USTs). This dataset is provided by the Orange County Health Care Agency.

Government Publication Date: May 15, 2023

Orange County - Non-Petroleum Underground Storage Tank Cases: NPUT ORANGE

This list of open and closed non-petroleum underground storage tank cases is maintained by the Orange County Health Care Agency.

Government Publication Date: Sep 13, 2024

Orange County - Underground Storage Tanks Listing: UST ORANGE

A list of registered Underground Storage Tank (UST) sites in Orange County. This list is made available by Orange County Health Care Agency (OCHCA), Environmental Health Division which oversees the underground storage tank inspection program in most of the cities of Orange County, with the exception of Anaheim, Fullerton, and Orange.

Government Publication Date: May 15, 2023

Orange County - Aboveground Petroleum Storage Tank Listing: AST ORANGE

A list of Aboveground Petroleum Storage Tank (APST) facilities inspected by Orange County Certified Unified Program Agency (CUPA) Under the Aboveground Petroleum Storage Act (APSA). This list is made available by the Environmental Health Division of Orange County Health Care Agency.

Government Publication Date: May 15, 2023

Orange County - Anaheim City UST Cleanup Cases: UST CLP ANAHEIM

A list of UST Cleanup Cases in the City of Anaheim in Orange County. As part of its Groundwater Protection Program, the City of Anaheim managed the UST Cleanup Oversight Program from April 1991 to June 2014. This list is published by the City of Anaheim Underground Storage Tank Cleanup Program.

Government Publication Date: May 26, 2015

Orange County - Anaheim City UST List: UST ANAHEIM

A list of Underground Storage Tanks in Anaheim City, Orange County. This list is made available by Anaheim Fire & Rescue Department.

Government Publication Date: Oct 9, 2024

Orange County - Anaheim City AST List: AST ANAHEIM

List of Aboveground Storage Tanks (ASTs) in Anaheim City, Orange County made available by Anaheim Fire & Rescue.

Government Publication Date: Oct 9, 2024

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. Includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures by DSSTox. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time.

Government Publication Date: Aug 5, 2024

On-Scene Coordinator Response Sites: OSC RESPONSE

This list of On-Scene Coordinator (OSC) Response Sites is provided by the U.S. Environmental Protection Agency (EPA). OSCs are the federal officials responsible for monitoring or directing responses to all oil spills and hazardous substance releases reported to the federal government. OSCs coordinate all federal efforts with, and provide support and information to local, state, and regional response communities. An OSC is an agent of either EPA or the U.S. Coast Guard (USCG), depending on where the incident occurs. EPA's OSCs have primary responsibility for spills and releases to inland areas and waters. USCG OSCs have responsibility for coastal waters and the Great Lakes. In general, an OSC has the following key responsibilities during and after a response: Assessment, Monitoring, Response Assistance, and Evaluation.

Government Publication Date: Apr 4, 2024

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Aug 1, 2024

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Dec 17, 2024

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

This list of federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS) is made available by the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools data. The EPA outlines that these data are gathered from several federal entities, such as the federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration (NASA), Department of Transportation (DOT), and Department of Energy (DOE). The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2024. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Oct 24, 2024

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the PFAS Project Lab, part of the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map by the PFAS-REACH team, credited to PFAS Project Lab, Silent Spring Institute, and PFAS Exchange. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: Jun 27, 2024

National Response Center PFAS Spills: PFAS ERNS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Dec 9, 2024

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Dec 16, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFAS Water Quality Portal Sampling Data: PFAS WATER

This Per- and Poly-Fluoroalkyl Substances (PFAS) Environmental Media Sampling Data is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The Water Quality Portal (WQP), as a cooperative service sponsored by the United States Geological Survey, the EPA, and the National Water Quality Monitoring Council, is part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations, and individuals submit project details and sampling results to this public repository. Limitations: EPA did not carry out the sampling or testing of a majority of the data in the WQP PFAS dataset. EPA can only speak to the accuracy and completeness of the data from projects like the National Aquatic Resource Surveys for which EPA is the data owner/organization. Data may exist within the file on Quality Assurance Project Plans (QAPPs) and the approving agency of the QAPP, if a QAPP is entered.

Government Publication Date: Jul 22, 2024

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Dec 15, 2024

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Dec 16, 2024

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: May 29, 2024

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Nov 30, 2023

Toxic Substances Control Act: TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Government Publication Date: May 12, 2022

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Nov 20, 2024

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Government Publication Date: Apr 13, 2024

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 5, 2024

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 5, 2024

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: May 6, 2024

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Feb 5, 2024

Surface Mining Control and Reclamation Act Sites: SMCRA

This inventory of land and water impacted by past mining (primarily legacy coal mining operations) is maintained by the U.S. Department of the Interior's Office of Surface Mining Reclamation and Enforcement (OSMRE), as it provides information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) Problems, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into e-AMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: May 20, 2024

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 12, 2023

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Aug 29, 2024

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Cases filed since 2010 limited to the following: Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS); and applicable ENRD's Environmental Defense Section (EDS) CERCLA Cases with "Consent" in History Note. CMS may not reflect the latest developments in a case, nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Jun 26, 2024

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Feb 29, 2024

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: May 23, 2024

Power Plants: POWER PLANTS

This list of power plants is provided by the U.S. Energy Information Administration (EIA). The listing includes operable electric generating plants in the United States by energy source, originating from the EIA-860, Annual Electric Generator Report; EIA-860M, Monthly Update to the Annual Electric Generator Report; and EIA-923, Power Plant Operations Report. It includes all operable plants by energy source with a combined nameplate capacity of 1 megawatt or more that are operating, are on standby, or out of service for short- or long-term.

Government Publication Date: Apr 15, 2024

State

PFAS Sampling Locations: PFAS SAMPLING

This data is sourced from the State Water Board's GeoTracker Per- and Polyfluoroalkyl Substances (PFAS) Map tool which contains individual sampling points (i.e., soil boring, groundwater monitoring well, drinking water well for municipal drinking water systems, etc.) or a site location with PFAS analytical data. Includes analytical results that are finalized and submitted electronically by the Responsible Parties via GeoTracker's Electronic Submittal of Information Portal, and after it's accepted by a Regional Water Quality Control Board.

Government Publication Date: Dec 6, 2024

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Dec 20, 2021

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 31, 2022

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Jan 31, 2022

PFAS GeoTracker Cleanup Sites: PFAS GT CLEANUPS

A list of applicable cleanup sites from the State Water Resources Control Board's (SWRCB) GeoTracker data management system where one or more of the potential contaminants of concern are identified in the PFAS Structure List and/or PFAS Chemicals Without Explicit Structure List made available by the United States Environmental Protection Agency (US EPA).

Government Publication Date: Jul 4, 2024

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Dec 1, 2024

PFAS Investigations: PFAS INVEST

This list of potential Per- and Polyfluoroalkyl Substance (PFAS) sites is compiled from the California State Water Resources Control Board's (SWRCB) PFAS Investigations Map tool. The SWRCB issued investigative orders, per California Water Code (CWC) Section 13267 and/or 13383, to these sites. Orders were also issued to the public water systems to sample wells in the vicinity of these locations. Military facilities have been identified by the Department of Defense (DOD) as part of their efforts to investigate PFAS per the Defense Environmental Restoration Program (DERP) under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The data includes locations for Airports, Chrome Plating Facilities, Landfills, Publicly Owned Treatment Works, Refineries and Bulk Terminals, DOD Facilities, and Monitored Drinking Water Wells being investigated for potential PFAS.

Government Publication Date: Jan 23, 2024

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Mar 15, 2023

Toxic Pit Cleanup Act Sites: TOXIC PITS

The Toxic Pits Cleanup Act (TPCA) list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. This list was maintained by the State Water Resources Control Board (SWRCB), is not longer maintained, and updates are not planned.

Government Publication Date: Jul 1, 1995

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked by the California Department of Toxic Substance Control's (DTSC) EnviroStor data management system.

Government Publication Date: Nov 23, 2023

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Sep 25, 2024

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This listing has been made available by the California Governor's Office of Emergency Services (Cal OES).

Government Publication Date: Oct 21, 2024

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Handlers from Hazardous Waste Manifest Data: HAZNET

A list of handlers not otherwise classified as Treatment, Storage, Disposal facilities (TSDF) or generators from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Oct 24, 2016

Generators from Hazardous Waste Manifest Data: HAZ GEN

List of handlers listed as having generated waste from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

TSDF from Hazardous Waste Manifest Data: HAZ TSD

List of Treatment, Storage, and Disposal Facilities (TSDFs) from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters: HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Jan 2, 2025

Registered Waste Tire Haulers: WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 28, 2024

California Medical Waste Management Program Facility List: MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Sep 5, 2024

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Dec 6, 2021

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 28, 2024

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Sep 25, 2024

Mines Listing: MINE

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Oct 3, 2024

Recorded Environmental Cleanup Liens: LIEN

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Dec 18, 2023

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Sep 25, 2024

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program.

Government Publication Date: Dec 31, 2021

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

Los Angeles County - Santa Monica City Hazardous Materials Facilities: HAZMAT SANTAMON

A list of Hazardous Materials Facilities in the City of Santa Monica, Los Angeles county. This list is made available by Santa Monica Fire Prevention Division which has been designated as the CUPA for the City.

Government Publication Date: Dec 17, 2021

Los Angeles County - Santa Monica City Hazardous Waste Facilities: HAZ WST SANTAMON

A list of Hazardous Waste Facilities in Los Angeles County, City of Santa Monica. This list is made available by Santa Monica Fire Prevention Division.

Government Publication Date: Jan 20, 2023

Orange County - Hazardous Waste Facilities: HW ORANGE

A list of Hazardous Waste Facilities in Orange County. This list is made available by Orange County Environmental Health Department.

Government Publication Date: May 15, 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1134 - Urban land-Thums-Pierview complex, 0 to 5 percent slopes

Component: Urban land (45%)
Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Component: Thums (25%)
The Thums component makes up 25 percent of the map unit. Slopes are 0 to 5 percent. This component is on alluvial plains, fan remnants. The parent material consists of discontinuous human-transported material over old alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 5 within 30 inches of the soil surface.

Component: Pierview (15%)
The Pierview component makes up 15 percent of the map unit. Slopes are 0 to 5 percent. This component is on alluvial plains, fan remnants. The parent material consists of discontinuous human-transported material over old alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Xerorthents (5%)
Generated brief soil descriptions are created for major soil components. The Xerorthents soil is a minor component.

Soil Information

Component: Oxyaquic Haploxerolls (5%)
Generated brief soil descriptions are created for major soil components. The Oxyaquic Haploxerolls soil is a minor component.

Component: Azuvina (5%)
Generated brief soil descriptions are created for major soil components. The Azuvina soil is a minor component.

Map Unit 1134LA (0.92%)

Map Unit Name:	Urban land-Thums-Pierview complex, 0 to 5 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

horizon C2(94cm to 152cm)	Silty clay loam

Soil Information

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 140 - Chino silty clay loam, drained

Component: Chino (80%)
The Chino component makes up 80 percent of the map unit. Slopes are 0 to 2 percent. This component is on alluvial plains, alluvial fans. The parent material consists of alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 3 within 30 inches of the soil surface.

Component: Bolsa (10%)

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 164 - Metz loamy sand, moderately fine substratum

Component: Metz (75%)
The Metz component makes up 75 percent of the map unit. Slopes are 0 to 2 percent. This component is on alluvial fans, coastal plains. The parent material consists of mixed alluvium derived from igneous, metamorphic and sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat excessively drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R019XD035CA Sandy (1975) ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent.

Component: Metz (10%)
Generated brief soil descriptions are created for major soil components. The Metz soil is a minor component.

Component: Hueneme (5%)
Generated brief soil descriptions are created for major soil components. The Hueneme soil is a minor component.

Component: San Emigdio (5%)

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *ORANGE* County: **3**
Federal EPA Radon Zone for *LOS ANGELES* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *ORANGE* County

No Measures/Homes:	31
Geometric Mean:	0.5
Arithmetic Mean:	0.7
Median:	0.6
Standard Deviation:	0.7
Maximum:	2.2
% >4 pCi/L:	0
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Federal Area Radon Information for *LOS ANGELES* County

No Measures/Homes:	69
Geometric Mean:	0.4
Arithmetic Mean:	0.7
Median:	0.5
Standard Deviation:	1
Maximum:	5.6
% >4 pCi/L:	1
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

This list of drinking water violations and enforcement actions is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database, as part of the national download of Safe Drinking Water Act (SDWA) data. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program, including monitoring, enforcement, and violation data related to requirements established by the SWDA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

This national download of Safe Drinking Water Act (SDWA) data is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program related to requirements established by the Safe Drinking Water Act (SDWA). Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP

is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

State Sources

Oil and Gas Wells **OGW**

The California Department of Conservation, Geologic Energy Management Division (CalGEM) provides this oil and gas wells dataset. CalGEM makes no warranties, whether expressed or implied, and the data is for informational purposes.

Periodic Groundwater Level Measurement Locations **MONITOR WELLS**

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

Well Completion Reports **WATER WELLS**

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

APPENDIX D: QUALIFICATIONS

PARTNER

Margaret R. Thomas
Project Assessor

Education

Bachelor of Arts, Political Science, University of California, Irvine, CA
Diploma, Executive Assistant Business Program, Heald Business College, Hayward, CA

Registrations

California EPA Registered Environmental Assessor I – 07364
California OSHA Certified Site Surveillance Technician No. 97-2116

Training

40-Hour OSHA HAZWOPER Training
EPA-Certified AHERA Asbestos Building Inspector
EPA-Certified AHERA Contractor/Supervisor/Competent Person

Highlights

15 + years of experience in the environmental due diligence industry:

- Phase I Environmental Site Assessments
- Phase II Environmental Site Assessments
- Property Condition Assessments
- Asbestos Surveys
- Transaction Screen Assessments
- Environmental Desktop Reviews and Reports
- UST Removal
- Regulatory Work Plan Preparation for remediation of hazardous materials
- Business Development / Client Relations

Experience Summary

Ms. Thomas is a Project Assessor at Partner Engineering and Science, Inc. (Partner) and is located out of the Torrance, California office. She is responsible for conducting Phase I Environmental Site Assessments (ESA) including site reconnaissance, regulatory file review, historical research, interpretation of data and maps, and technical writing. Ms. Thomas has broad project experience from small privately owned properties to large portfolios of industrial sites in both the private and public sectors. This experience includes properties with impact to soil and groundwater from petroleum and solvent releases and required extensive regulatory file review. Ms. Thomas has received training in risk management and liability as it pertains to environmentally impacted properties.

Project Experience

Initial Site Assessment for Freeway Expansion, Los Angeles County, California. Performed an *Initial Site Assessment* for California Department of Transportation (Caltrans) for the Interstate 5 Freeway expansion project in Burbank, Glendale and Los Angeles, which included 10 miles of assessment area and many properties with hazardous materials, USTs and groundwater contamination issues.

Initial Study and Biological Survey, Madera, California. City of Madera, California: Performed an *Initial Study* for the City of Madera Wastewater Treatment Plant expansion project, which included a Biological Survey

and assessment for hazardous materials.

Phase I Environmental Site Assessment and Underground Storage Tank Removal, Beverly Hills, California. Project Manager for the removal of an old waste oil underground storage tank that was identified through due diligence research, which was subsequently removed and received case closure from the Los Angeles County Environmental Programs Division.

Phase II Environmental Site Assessment and Work Plan for Remedial Action, Garden Grove, California. Project Manager for site characterization of a former dry cleaner that included a soil gas survey, soil sampling and the installation of five groundwater monitoring wells. Ms. Thomas conducted the initial Phase II ESA, which identified soil and groundwater impact. Preparation of a Work Plan for site characterization was approved by the Santa Ana Regional Water Quality Control Board and implemented.

Phase II Environmental Site Assessment, Inglewood, California. Project Manager of a *Phase II ESA* on a former gas station property that was redeveloped in the early 1980s into a coin operated laundry mat. The client was a prospective buyer of the property. Limited information pertaining to the former gas station was identified at the local regulatory agencies; therefore, a Phase II scope of work was designed and implemented to best identify the former UST and piping locations. Significantly contaminated soil was identified.

Phase I Environmental Site Assessment, Downtown Los Angeles, California. Performed a *Phase I ESA* for the Los Angeles County Metropolitan Transportation Authority (MTA) for its Division One Bus Depot Expansion project on a site in downtown Los Angeles that was a former Texaco Super Truck Service Depot with former fueling, carwash and automotive services. Ms. Thomas has performed several Phase I ESA projects for the Los Angeles County MTA.

PARTNER

Caroline A. Ziegler, PG
Senior Project Manager

Education
MS, Geology, Texas A&M University, College Station, TX
BA, Geology, Trinity University, San Antonio, TX

Registrations
Professional Geologist: California, 2005, No. 7825
Professional Geoscientist, 2023, No. 15460

Training
29 CFR 1910.120 40-hour HAZWOPER, Hazard Communication, Safety Awareness, Project Delivery, Asbestos Awareness, and other project management related courses.

Highlights
35+ years of experience in environmental consulting and regulatory compliance
35+ years performing site inspections for determination of environmental regulatory compliance, site investigations in advance of environmental cleanups, sampling and analysis of contaminated soil and groundwater to determine impacts to human health and the environment, development of remedial action plans for site cleanups, negotiating cleanup requirements with federal, state and local environmental regulatory agencies, preparing reports that meet project specific documentation requirements, conducting Phase I and II Environmental Site Assessments
35+ years with commercial, industrial, residential and military sites

Experience Summary
Ms. Ziegler is a Senior Project Manager at the Partner Engineering and Science, Inc. (Partner) Dallas, Texas office currently managing Phase I and Phase II Environmental Site Assessments for various client types including financial institutions, real estate investors, developers, lenders, etc. She initially was an individual contributor in preparation of documentation on multiple Site Mitigation projects for Partner, including subsurface investigations and remediation, that involve regulatory agency requirements for approval.

Ms. Ziegler is an environmental professional experienced with managing projects for commercial, industrial, municipal and federal clients, including U.S. Environmental Protection Agency (USEPA) and U.S. Department of Defense. Ms. Ziegler has, during her career, served as an environmental compliance consultant, both for a large environmental consulting firm and as an independent. She has demonstrated her ability to define and map environmental project scopes, specifications, timelines, resources, and budgets. She has a keen ability to gain stakeholders acceptance from proposal stage through project closeout. Ms. Ziegler maintains her Professional Geologist license from the State of California and is working toward obtaining the same licensure in Texas.

Over the span of her career, Ms. Ziegler has managed the oversight of large, complex environmental remedial action projects for industrial clients and federal entities. Her areas of expertise include project management, soil and groundwater site investigations, remedial action oversight and environmental regulatory compliance under CERCLA, RCRA, and California state agencies, including the State Water Resources Control Board (SWRCB) and Department of Toxic Substances Control (DTSC). She was the leading

senior project manager of the Western Region for conducting five-year reviews at sites undergoing remedial actions that included operations and maintenance of groundwater treatment systems, soil vapor extraction, landfill gas and leachate collection, and soil removal and disposal.

Project Experience

Phase I Environmental Site Assessments. Project Manager, Senior Reviewer, and Assessor for numerous Phase I ESAs both nationally, and internationally, for various facility types including coal-fired power plants, manufacturing, industrial, commercial, and multi-family residential. Client types have included investors, developers, financial institutions, individuals, and real estate professionals.

Phase II Environmental Site Assessments. Project Manager and Senior Reviewer for multiple complicated subsurface investigations mostly focused throughout Southern California. The projects have involved coordinating geophysical, drilling and laboratory subcontractors, field staff, and permitting. Some of these investigations have required coordination with regulatory agencies including the California Regional Water Quality Control Board and the Department of Toxic Substance Control, as well as local agencies for permitting and other regulatory compliance requirements. These investigations have included soil, soil gas, groundwater, and indoor air sampling depending on the environmental issues identified.

Fannie Mae Multi-Scope Portfolio. Project Manager and Senior Reviewer for Phase I ESAs, PCAs and PMLs of transactions for multifamily apartment complexes throughout Southern California. The project involved coordinating three different scopes of specially qualified assessors to conduct site visits and prepare agency compliant reports.

Freddie Mac Multi-Scope Portfolio. Project Manager and Senior Reviewer for Phase I ESAs and PCAs of transactions for multifamily apartment complexes in Massachusetts. The project involved conversion of existing site documentation and development into agency compliant reports that included radon sampling and preparation of an aboveground storage tank (AST) Operations and Maintenance (O&M) Plan.

Alicia Towne Center, Mission Viejo, California. Ms. Ziegler prepared a site characterization workplan in response to a pending Voluntary Cleanup Agreement (VCA) with DTSC's Brownfields Restoration and School Evaluation Branch. Previous investigations have shown that the property has elevated concentrations of tetrachloroethene (PCE) and related compounds in soil and soil gas resulting from operations of former dry cleaners. The workplan proposes further investigation of chlorinated volatile organic constituents in the soil and soil gas to delineate the lateral and vertical extent and be prepared to propose remedial alternatives if necessary.

Allmark Plaza, Rancho Cucamonga, California. Ms. Ziegler prepared a revised Removal Action Workplan based on comments received from the DTSC's Brownfields Restoration and School Evaluation Branch. The workplan presents a scope of work to remove concentrations of tetrachloroethene (PCE) and related compounds identified in soil and soil gas on the property that resulted from operations of a former dry cleaner. The removal action workplan proposes installation of a soil vapor extraction (SVE) system.

Former Industrial Facilities, Los Angeles, California. Ms. Ziegler prepared both a soil management plan (SMP) and a soil excavation work plan. The purpose of the SMP is to outline protocol for ensuring the proper handling and/or disposal of impacted soil that may be encountered during future grading and/or other redevelopment activities. Specifically, the SMP includes a brief summary of the site history and potential

chemicals of concern (COCs) and provides guidance for the following: identifying suspected impacted soil; managing and stockpiling graded soil (e.g., dust control, stockpile maintenance); collecting and analyzing samples from stockpiled soil as necessary to establish waste classification; establishing specific threshold levels to evaluate whether excavated soil is suitable for reuse on-site; and handling and/or disposing of soil with confirmed impacts. The focused Arsenic Remedial Excavation Work Plan (Work Plan) was prepared as required by the Los Angeles County Fire Department's Site Mitigation Unit to remediate soils containing elevated concentrations of arsenic on the property.

Publications

"*Assessment of Human Exposure to Naturally Occurring (Unprocessed) Asbestos at the Clear Creek Management Area, California*." Suer, Lynn; Den, Arnold; Lane, Jackie; Stralka, Daniel; Brass, Brian; Moore, Timothy; Ross, Steve; Ziegler, Caroline; and Braun, Richard. Presented by USEPA at the GSA Cordilleran Section 101st Annual Meeting, April 2005.

PARTNER

Misty Ponce, PE
Principal

Education

M.S. Civil-Environmental Engineering, California State University, Fullerton
B.S. Environmental Engineering, University of California, Riverside
Coursework in Legal and Regulatory Framework for Environmental Management, University of California Irvine
Coursework in Mold Inspection

Registrations

Professional Engineer (PE), Colorado
Engineer-In Training (EIT), California
State of California Registered Environmental Assessor (program canceled in July 2012)
LEED Green Associate (GA) Accredited Professional, United States Green Building Council (lapsed)

Training

OSHA 40-hour HAZWOPER, Operations Level Health and Safety Training
OSHA 10-hour Construction Safety Training
AHERA Certified Building Inspector for Asbestos
Trained/Certified – Hazardous Waste in California, US Department of Transportation Hazardous Materials Transportation, and USEPA Hazardous/Toxic Waste management (LION)

Highlights

Over 20 years in the environmental and engineering consulting industry with institutional and private clients
Environmental Engineer
Extensive knowledge of real estate due diligence
Phase I and Phase II Environmental Site Assessments
Site Mitigation and Remediation

Experience Summary

Ms. Ponce is an environmental engineer with more than 20 years of experience in the environmental and engineering services industries. As a Principal and National Client Manager working within Partner's Investment Advisory Group, Ms. Ponce strives to provide the expected high level of client service for the Equity Asset Management industry. She is responsible for ensuring consistency, quality, and on-time delivery of due diligence and engineering services provided by Partner. Current day-to-day responsibilities include project oversight, staff supervision, report review, and client management.

Ms. Ponce has significant experience in the field of environmental due diligence, site assessment, remediation, and regulatory compliance. Ms. Ponce provides environmental support to clients nationwide during the acquisition, disposition, development, and on-going management and operation of commercial, industrial, and multifamily residential properties.

Ms. Ponce has considerable experience in Phase I and Phase II Environmental Site Assessments (ESAs) of commercial, agricultural, and industrial properties and projects involving water quality, soil quality, and regulatory compliance including hazardous and solid waste site characterization and remediation;

remediation system design installation, and operation; tank removals; asbestos surveys; lead-based paint surveys; radon studies; mold assessments; lead-in water sampling and analysis; and technical reporting.

Ms. Ponce has been involved with feasibility and treatability studies associated with several remediation projects including soil and groundwater treatment systems, UST/LUST closures, and management of construction soils generated during redevelopment of agricultural and industrial properties. Other equity and finance level services managed and directed by Ms. Ponce include management of Property Condition Assessments, ALTA Land Surveys, zoning reports, Seismic Risk Assessments (PML), Construction Risk Management, construction monitoring services, and construction document cost review analysis.

Real estate investors, financial institutions, insurance lenders, property managers, developers, and brokers have come to rely on her advice and judgment to help them with their real estate business decisions. Ms. Ponce is a dedicated professional who takes pride and pleasure in meeting her client's needs and spearheading and assembling the team with the expertise to handle any issue that may come up during the real estate transaction.

Project Experience

Ms. Ponce has conducted, managed, and directed thousands of ESAs, industrial hygiene, and engineering assessments throughout her career, nationally, and globally. The following select projects and client base provide a glimpse of her consulting experience and due diligence background:

Ford Leasing Development Company / Sunset Ford, Westminster, California. Conducted a Phase I and II ESA and remedial activities at a closing automobile dealership with 41 service bays containing active, decommissioned, or removed in-ground hydraulic vehicle lifts. The Phase II ESA identified petroleum hydrocarbon and VOC impacts in soil and groundwater in the immediate vicinity of the lifts. Based on the identified impacts, managed the removal of all lifts and contaminated soil under regulatory oversight and conducted a comprehensive site investigation, including well installation and soil, groundwater, and soil vapor sampling. Prepared and submitted final reports to the client and regulatory agencies and obtained regulatory site closure.

UBS Realty Investors, LLC, Vernon, California. Conducted a Phase I and Phase II ESA, hazardous materials building survey, and oversight of remedial actions on an approximately 6-acre industrial property in preparation of acquisition and redevelopment. The property was more recently used for large quantity storage and distribution of motor oil and lubricants. The facility was previously involved with blending and bottling motor oil products including a historical cooperage with drum and container cleaning as part of those operations. The business had occupied the subject property since 1936 with consistent operations throughout its history and only minor modifications to the original design, with tanks farms, rail operations, and USTs. The Phase I ESA included site reconnaissance, property inspection, site history review, database search, and final report preparation with recommendations for additional assessment. The Phase II subsurface investigation scope included a geophysical survey, the advancement of 43 soil borings, 24 soil vapor borings identifying petroleum hydrocarbon and VOC impacts across the site. Based on the identified impacts, provided oversight of the cleanup with the property obtaining regulatory site closure and being redeveloped.

Confidential Private Equity Firm, Twenty-nine Sites in Nine States. Provided project oversight and supervision of Property Condition Assessments (PCAs), Mechanical, Electrical, Plumbing & Fires Life Safety (MEPFLS) assessments, Energy Surveys, and equipment inventory at active/operating cold storage facilities.

USDA Forest Service, Mountain Center, California. Prepared a Soil Excavation and Groundwater Well Installation Workplan to assess a release that was discovered during the removal of two 1,000-gallon USTs. Elevated contaminant concentrations were detected in confirmation soil samples collected at that time. Installed one groundwater monitoring well into fractured bedrock and later abandoned the well due to planned excavation activities in the area. A groundwater sample collected prior to well abandonment contained elevated contaminant concentrations. Prepared a Site Investigation Summary Report summarizing site activities and investigations to date. Prepared a Groundwater Assessment Workplan to assess the extent of contaminant concentrations in groundwater. Site assessment work is pending.

American Golf Corporation, Eighteen Sites in Southern California. Managed underground storage tank removal and closure activities. Work included performing initial confirmation soil sampling and analysis and subsequent monitoring and soil and/or groundwater testing in association with the removal of the underground storage tanks, associated dispensers, and piping at sixteen sites located throughout Southern California. Prepared soil and/or groundwater investigation workplans as needed to address contamination issues at several of the sites and closure reports for the various State and local authorities. To date, regulatory closure has been obtained at most of the facilities. Currently managing ongoing monitoring and/or remediation is occurring at several of the facilities.

G.E. Capital, Tijuana, Mexico. Managed and conducted more than 30 Phase I and Phase II ESAs for active and proposed industrial developments within various areas of Tijuana, Mexico. Work included site reconnaissance, site history review, and final report preparation.

Signature Flight Support, Unites States, Canada, Europe. Provided due diligence support in connection with the acquisition of Landmark Aviation's 195 global locations including FBOs, MROs, and its charter management division. Managed the portfolio conducting Phase I and Phase II report peer views, Phase I ESAs, and PCAs.
