Subject: Phase I Environmental Site Assessment
Amway South Campus
5600 Beach Boulevard
Buena Park, California 90621
Partner Project No. 25-482602.1

Dear Ms. Lozano:

Partner Engineering and Science, Inc. (Partner) is pleased to provide this Phase I Environmental Site Assessment (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and Client Agreement.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate your trust in Partner and the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (818) 337-1203.

Sincerely,

DRAFT

Misty Ponce
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Practice E1527-21, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Shopff Advisors, LP c/o 5600 Beach Blvd BP Owner, LLC for the property located at 5600 Beach Boulevard in Buena Park, Orange County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Shopff Advisors, LP c/o 5600 Beach Blvd BP Owner, LLC with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the northeast intersection of Beach Boulevard and Dr Sam Way within a residential, commercial, and industrial area of Orange County. Please refer to the table below for a further description of the subject property:

Subject Property Data	
Address:	5600 Beach Boulevard, Buena Park, California 90621
Additional Current Addresses:	None Identified
Historical Addresses:	None Identified
Property Use:	Industrial (Vitamin Manufacturing)
Land Acreage (Ac):	15.86
Number of Buildings:	Nine
Number of Floors:	One, Two, and Three
Gross Building Area (SF):	370,031 SF (provided)
Net Rentable Area (SF):	370,031 SF (provided)
Date of Construction:	1979 to 2012
Parcel Number:	066-163-26 (parking lot); 066-164-24 (parking lot); 066-572-08 (main parcel)
Type of Construction:	Concrete tilt-up/steel frame/concrete slab
Current Tenants:	Amway Nutrilite for vitamin manufacturing use
Site Assessment Performed By:	Margaret Thomas of Partner
Site Assessment Conducted On:	January 29, 2025
Regulatory Radius Report Date:	January 28, 2025
Lien Search Date:	January 5, 2024 (conducted during Partner's prior February 23, 2024 Phase I ESA)
Report Date:	February 10, 2025
FOIAs Date:	February 2024; February 2025

The subject property is currently occupied by Amway Nutrilite for vitamin manufacturing use. The subject property is currently occupied by Amway Nutrilite for the manufacture of vitamin supplements (granulated herbal extracts with nutritional values and dietary supplements in the forms of tablets and capsules). The facility uses organically grown, plant-based ingredients that include beta carotene, citrus, soy lecithin, lemon oil, sugars, herbal extracts, and others. Manufacturing activities consist of blending raw materials and compressing them into dry tablets. The facility includes R&D laboratories, educational centers, offices, training centers, granulation and manufacturing rooms, warehouses, several washrooms, equipment rooms, a cafeteria, and other. Manufacturing equipment is either washed in-place or removed to a dedicated

washroom. Wash waters generated are discharged via floor drains in equipment and washrooms, which discharge directly to the sanitary sewer. In addition to the current structures, the subject property is improved with asphalt-paved parking areas and driveways, landscaping and grass areas, internal sidewalks, truck docks, solar panel canopies, drainage features, exterior storage sheds, concrete equipment pads, and perimeter fencing.

According to available historical sources, the subject property was formerly undeveloped as early as 1896 to 1901; developed with several single-family residences on the south side of the subject property from as early as 1928 to circa 1987; and developed with the Nutrilite Products facility in 1952 on the north side of the property with subsequent expansion of the facility. Tenants on the subject property have included private residents (circa 1928 to 1987) and Amway/Nutrilite Products Inc. (circa 1952 to present).

The adjoining properties are tabulated below:

Adjoining Properties	
North:	Railroad tracks beyond which are the former Amway Nutrilite North Campus buildings used for warehouse and office space (5530 Beach Boulevard and 5609 River Way)
Northeast:	Railroad tracks beyond which are multi-family residences
East:	Multi-family residences
Southeast:	Brea Creek Channel beyond which are single-family homes
South:	Brea Creek Channel beyond which are single-family homes and a commercial building (5730 Beach Blvd)
Southwest:	Beach Boulevard beyond which is a multi-tenant commercial building (Buena Park Center at 5731 Beach Blvd)
West:	Beach Boulevard beyond which are single-family homes, a Montessori Preschool (5621 Beach Blvd), and two office buildings (5661 and 5681 Beach Blvd)
Northwest:	Beach Boulevard beyond which is a railroad R/W

According to a previous subsurface investigation conducted on a nearby property, the physical setting features of the subject property identify the terrain as sloping to the northwest with depth to groundwater in the vicinity of the subject property at approximately 10 to 20 feet below ground surface (bgs) and groundwater flow inferred to be toward the northwest.

Findings and Opinions

Recognized Environmental Condition

A recognized environmental condition (REC) refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- Partner did not identify RECs during the course of this assessment.

Controlled Recognized Environmental Condition

A controlled recognized environmental condition (CREC) refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).

- Partner did not identify CRECs during the course of this assessment.

Historical Recognized Environmental Condition

A historical recognized environmental condition (HREC) refers to a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Based on regulatory records reviewed, the subject property was previously equipped with three underground storage tanks (USTs) containing alcohol (or denatured alcohol) and gasoline. The USTs are reported as one 550-gallon gasoline tank and two 5,000-gallon alcohol USTs. The alcohol USTs were reportedly installed in 1966, and no date was identified for the age of the gasoline tank. The USTs were reportedly removed in 1986; however, reviewed documents only depicted one gasoline and one alcohol tank as being removed in 1986; however, it is assumed both alcohol tanks were removed. Upon removal of the gasoline tank, soil impacts were discovered around the gasoline UST only. No significant impacts were reported around the alcohol tank(s). The USTs were located near the center of the subject property. The gasoline impacted soil was sampled, excavated for aeration, verification samples after soil was removed for aeration, and determined not to be significant. The release case was granted case closure from the Orange County Health Care Agency (OCHCA) on June 26, 1987. No active USTs are located at the subject property. Based on the regulatory status and minor impacts identified, the historical USTs are not expected to represent a significant environmental concern and are considered an HREC in connection with the subject property.
- Based on reviewed information, a release case (Case No. 05IC023, Access Business Group Nutrilite Division) was reported in 2006, which involved an interior surface spill of an acid-based cleaner. The release case received regulatory case closure from the OCHCA on April 3, 2006. According to the Closure Rationale dated March 23, 2006, the facility used A-300 acid cleaner. It was a spillage of this A-300 cleaner that Nutrilite personnel discovered on December 20, 2005 in the chemical storage room (#10-009) within Building 10 of the facility, apparently from an accidental puncturing of one of its container drums during handling. Following cleanup of the A-300 that had pooled around the floor drain in the room, Nutrilite signed a voluntary cleanup agreement with this Agency, as recommended by the OCHCA-EH Compliance Section. The objective was to determine whether the subsurface had been adversely affected by the spill and, if so, to conduct any required remedial action to mitigate the contamination. Soil samples were collected beneath the concrete slab floor in this area and tested for pH. Analytical results showed the samples to have a pH range from 6.22 to 7.83 units, all of which fell within the recognized range of pH in California soils. The sampling results clearly showed that the subsurface was not adversely affected by the acid spill. The case was subsequently closed by the County on the date mentioned above. No other release cases were identified for the subject property. Based on the regulatory status and lack of impacts identified, this release case is not expected to represent a significant environmental concern and is considered an HREC in connection with the subject property.

Business Environmental Risk

A Business Environmental Risk (BER) is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing materials (ACM) are present. Readily visible suspect ACMs were observed in good condition and

do not appear to pose a health and safety concern to the occupants of the subject property at this time. According to the United States Environmental Protection Agency (EPA) guidelines, suspect materials that are intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to disturbance of the building materials within the buildings, an ACM survey is recommended.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of 5600 Beach Boulevard in Buena Park, Orange County, California (the “subject property”). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs or CRECs; however, HRECs and BERs were identified in connection with the subject property. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

APPENDICES

Appendix A: Site Photographs
Appendix B: Historical/Regulatory Documentation
Appendix C: Regulatory Database Report
Appendix D: Qualifications

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E1527-21 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 5600 Beach Boulevard in Buena Park, Orange County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-21) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E1527-21 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with and to the extent necessary to achieve the goal of the requirements set forth in the ASTM Standard E1527-21. This assessment included: 1) a property and adjoining site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments to obtain readily ascertainable information to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched readily available information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-21, AULs include both legal (that is, institutional) and physical (that is, engineering) controls that may include legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, or surface water on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the compliance and safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Shopff Advisors, LP c/o 5600 Beach Blvd BP Owner, LLC (herein referred to as Client) engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Client. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed. A copy of Partner's standard Terms and Conditions can be found at http://www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all the limitations inherent in these methodologies that are referred to in ASTM Practice E1527-21.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical and regulatory sources, this data gap is not expected to alter the findings of this assessment.
- This Phase I ESA is not meant to be a regulatory audit or comprehensive review of the subject property's manufacturing activities, processes, systems, and permit records to assess compliance with specific regulatory requirements or standards.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 5600 Beach Boulevard in Buena Park, California is located on the northeast intersection of Beach Boulevard and Dr Sam Way. According to the Orange County Assessor, the subject property is legally described as P.M. 278-34 Par. 1 and Aband Street (APN #066-163-26); P.M. 278-34 Par. 2 and Aband Street (APN #066-164-24); and P.M. 235-16 Par. 3 and Aband Street (APN #066-572-08). ownership is currently vested in Alticor, Inc. since 2011.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Amway Nutrilite for vitamin manufacturing use. The subject property is currently occupied by Amway Nutrilite for the manufacture of vitamin supplements (granulated herbal extracts with nutritional values and dietary supplements in the forms of tablets and capsules). The facility uses organically grown, plant-based ingredients that include beta carotene, citrus, soy lecithin, lemon oil, sugars, herbal extracts, and others. Manufacturing activities consist of blending raw materials and compressing them into dry tablets. The facility includes R&D laboratories, educational centers, offices, training centers, granulation and manufacturing rooms, warehouses, several washrooms, equipment rooms, a cafeteria, and other. Manufacturing equipment is either washed in-place or removed to a dedicated washroom. Wash waters generated are discharged via floor drains in equipment and washrooms, which discharge directly to the sanitary sewer. In addition to the current structures, the subject property is improved with asphalt-paved parking areas and driveways, landscaping and grass areas, internal sidewalks, truck docks, drainage features, exterior storage sheds, concrete equipment pads, and perimeter fencing.

The subject property is zoned ML for Light Industrial use by the City of Buena Park.

The subject property is identified on various regulatory databases including Historical Underground Storage Tank (UST), State Leaking Storage Tank Site (LUST), State Spills, Federal RCRA-SQG and LQG Generator Site, air emissions, hazardous waste generator, and chemical storage facility, as further discussed in Section 4.2.

2.3 Current Use of Adjoining Properties

The subject property is located within a residential, commercial, and industrial area of Orange County. During the vicinity reconnaissance, Partner observed the land uses on adjoining properties as defined in ASTM Practice E1527-21 as any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them. The adjoining properties are tabulated below:

Adjoining Properties	
North:	Railroad tracks beyond which are the former Amway Nutrilite North Campus buildings used for warehouse and office space (5530 Beach Boulevard and 5609 River Way)
Northeast:	Railroad tracks beyond which are multi-family residences
East:	Multi-family residences
Southeast:	Brea Creek Channel beyond which are single-family homes
South:	Brea Creek Channel beyond which are single-family homes and a commercial building (5730 Beach Blvd)

Southwest:	Beach Boulevard beyond which is a multi-tenant commercial building (Buena Park Center at 5731 Beach Blvd)
West:	Beach Boulevard beyond which are single-family homes, a Montessori Preschool (5621 Beach Blvd), and two office buildings (5661 and 5681 Beach Blvd)
Northwest:	Beach Boulevard beyond which is a railroad R/W

The adjoining properties are identified as a Federal RCRA-LQG Generator Site, Federal RCRA-SQG Generator and hazardous waste manifest site in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The 2022 United States Geological Survey (USGS) La Habra, California Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 78 to 80 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently towards the west.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

While under natural and undisturbed conditions shallow groundwater flow most frequently follows the topography of the land surface, natural or man-made features can affect flow direction, and the presumed flow may not match the actual flow directions at the subject property and vicinity. A previous subsurface investigation conducted on a nearby property suggests the direction of groundwater flow in the vicinity of the subject property is inferred to be toward the northwest.

According to a previous subsurface investigation conducted on a nearby property, the depth to groundwater in the vicinity of the subject property is inferred to be approximately 10 to 20 feet bgs.

The nearest surface water in the vicinity of the subject property is the Brea Creek located adjoining to the south of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the City of Buena Park serves the subject property vicinity. According to the 2024 Annual Water Quality Report, Orange County's water supplies are a blend of groundwater managed by Orange County Water District (OCWD) and water imported from Northern California and the Colorado River by the Municipal Water District of Orange County (MWDOC) via MWDSC. Groundwater comes from a natural underground aquifer that is replenished with water from the Santa Ana River, local rainfall and imported water. The ground water basin is 350 square miles and lies beneath north and central Orange County from Irvine to the Los Angeles County border and from Yorba Linda to the Pacific Ocean.

2.4.3 Geology/Soils

The subject property is located on the northwestern margin of the Coastal Plain of Orange County. The subject property lies at the southern base of the West Coyote Hills along the boundary of the Coyote Hills and Downey Plain. The subject property area is underlain by recent alluvium derived from erosion of the Coyote Hills and deposited by Coyote Creek and tributaries of Brea Creek. Recent and Upper Pleistocene alluvial deposits of the Lakewood and San Pedro Formations underlie the subject property area and consist of silt, sand, and clays.

Additionally, a Soil and Ground Water Contamination Study was conducted at the subject property dated April 14, 1987, for the investigation of a prior gasoline release to the subsurface. The Study included five borings to a depth of 55 feet bgs. The Study reported that the subject property is underlain by older alluvial

deposits associated with southwest draining Coyote Creek. The subsoils encountered included interlayered silty clay, silty sand, sandy silt and sand. A generally medium to course-grained sand was encountered below 40–45-foot depths in the borings. Ground water was encountered in the borings at about a depth of 44 feet bgs. Whether this first water-bearing zone is in hydraulic continuity with a deeper aquifer could not be ascertained based on available data. This preliminary information together with more regional conditions indicate that the ground-water flow direction is probably to the southwest.

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Chino silty clay loam, drained (#140). The landform is described as alluvial fans, and the parent material is described as alluvium derived from sedimentary rock. In a typical profile, silty clay loam is encountered from 0 to 60 inches bgs.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06059C0038J, dated December 3, 2009, the subject property is mapped in Zone AO defined as areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1 to 3 feet and Zone X (shaded) defined as moderate risk areas within the 0.2-percent-annual-chance flood hazard.

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Years	**Resource**	**Description/Use**
1896 to 1901	Topographic Maps	Unimproved Land
1928 to 1987	Aerial Photographs, Topographic Maps	Single-Family Residential on south side of property
1952 to Present	Aerial Photographs, City Directories, Topographic Maps, Regulatory Records	Amway/Nutrilite Products Facility

Tenants on the subject property have included private residents (circa 1928 to 1987) and Amway/Nutrilite Products Inc. (circa 1952 to present).

No significant environmental concerns were identified in association with the current or former use of the subject property.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Risk Information Services (ERIS) on January 8, 2024. The inferred uses of the subject property and adjoining properties as interpreted from the aerial photographs in Appendix B are tabulated below:

Date:	***1928***	***Scale:***	***1"=500'***
Subject Property:	Appears to be primarily undeveloped land with approximately four small residences or mobile homes and two or three sheds or garages apparent near the southeast side of the property		
North:	Appears to be the existing railroad R/W beyond which is undeveloped land that may be agricultural or fallow land including a possible rail station		
Northeast:	Appears to be the existing railroad R/W beyond which is undeveloped land that may be agricultural or fallow land		
East:	Appears to be the existing railroad R/W beyond which is undeveloped land that may be agricultural or fallow land		
Southeast:	Appears to be undeveloped land		
South:	Brea Creek channel is apparent beyond which is undeveloped land followed by residences		
Southwest:	Beach Boulevard is apparent beyond which is undeveloped followed by residences		
West:	Beach Boulevard is apparent beyond which is undeveloped land and a residence		
Northwest:	Beach Boulevard and railroad R/W with open land beyond		

Date:	1938	Scale:	1"=500'
Subject Property:	Appears to be undeveloped land on the north side and residential on the south side with approximately four residences apparent accessed from a long driveway off Beach Blvd		
North:	Appears to be the existing railroad R/W beyond which is farmland and what appears to be livestock pens including several structures that may be barns, storage buildings, or possible rail station and open agricultural land		
Northeast:	No significant changes visible		
East:	No significant changes visible		
Southeast:	No significant changes visible		
South:	Brea Creek channel is apparent beyond which are residences and vacant land (possible agricultural)		
Southwest:	Beach Boulevard is apparent beyond which is residential land		
West:	Beach Boulevard is apparent beyond which is a residence surrounded by vacant land that has been cleared or mowed		
Northwest:	No significant changes visible		

Date:	1947	Scale:	1"=500'
Subject Property:	No significant changes apparent with the exception of additional residences on the south side of the property		
North:	No significant changes visible		
Northeast:	No significant changes visible		
East:	No significant changes visible		
Southeast:	No significant changes visible		
South:	No significant changes visible		
Southwest:	No significant changes visible		
West:	No significant changes visible with the exception of additional residences		
Northwest:	No significant changes visible		

Date:	1953	Scale:	1"=500'
Subject Property:	The north side of the property appears to be developed with three or four early Nutrilite buildings with the south side of the property developed with multiple residences		
North:	No significant changes visible with the exception of the livestock pens are no longer visible		
Northeast:	No significant changes visible with the exception of the area has been plowed		
East:	The area includes the Brea Creek and vacant land		
Southeast:	New single-family homes are apparent in this area		
South:	Multiple single-family homes are apparent across the Brea Creek channel		
Southwest:	A small commercial building is apparent across Beach Blvd		
West:	The area appears to be primarily residential across Beach Blvd		
Northwest:	No significant changes visible		

Date:	1963, 1972	Scale:	1"=500'
Subject Property:	No significant changes visible with the exception of the expansion of the Nutrilite facility on the north side of the property. Several homes are still present on the south side of the property		
North:	The area appears to be farmland with associated structures		
Northeast:	No significant changes visible		
East:	No significant changes visible		
Southeast:	No significant changes visible		
South:	No significant changes visible with the exception of a small commercial building visible in 1972 along Beach Blvd		
Southwest:	No significant changes visible		
West:	No significant changes visible		
Northwest:	No significant changes visible with the exception of a new industrial building further northwest		

Date:	1981, 1987	Scale:	1"=500'
Subject Property:	No significant changes visible		
North:	The area has been razed followed by multi-family residences		
Northeast:	A large tract of new multi-family residences are apparent		
East:	No significant changes visible		
Southeast:	No significant changes visible		
South:	No significant changes visible with the exception of a commercial building apparent along Beach Blvd		
Southwest:	An office building is apparent		
West:	No significant changes visible		
Northwest:	No significant changes visible		

Date:	1994	Scale:	1"=500'
Subject Property:	No significant changes visible with the exception of the residences have been replaced by parking lots on the south side of the property		
North:	A new Nutrilite building is apparent with bridge across the railroad R/W connecting the buildings		
Northeast:	No significant changes visible		
East:	No significant changes visible		
Southeast:	No significant changes visible		
South:	No significant changes visible		
Southwest:	No significant changes visible		
West:	No significant changes visible		
Northwest:	No significant changes visible		

Date:	2005	Scale:	1"=500'
Subject Property:	The Nutrilite facility appears to be redeveloped with a new building at the southwest corner of the property		
North:	No significant changes visible		
Northeast:	No significant changes visible		
East:	No significant changes visible		
Southeast:	No significant changes visible		
South:	No significant changes visible		
Southwest:	No significant changes visible		
West:	No significant changes visible with the exception of some commercial developed along Beach Blvd is apparent		

Date:	2014, 2016, 2018, 2020, 2022	Scale:	1"=500'
Subject Property:	Appears to be developed with the existing configuration of buildings and parking		
North:	Both Nutrilite buildings (office building and warehouse building) are apparent with bridge		
Northeast:	No significant changes visible		
East:	No significant changes visible		
Southeast:	No significant changes visible		
South:	No significant changes visible		
Southwest:	No significant changes visible		
West:	No significant changes visible		
Northwest:	No significant changes visible		

Copies of reviewed aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner requested the collection of Fire insurance maps (FIMS) from ERIS; however, on January 7, 2024. FIM coverage was not available for the subject property.

A copy of the no coverage letter is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from ERIS on January 12, 2024 for past names and businesses that were listed for the subject property and adjoining properties. The findings are tabulated below:

City Directory Search for 5600 Beach Blvd (Subject Property)	
Year(s)	**Occupant Listed**
1955	Nutrilite Prods Inc
1958	Nutrilite Prods Inc
1964	Nutrilite Prods Inc, Amer Continentl Labs
1970	Amcon Industries Inc, Nutrilite Products Inc
1975	Amcon Industries Inc, Nutrilite Products Inc
1981	Nutrilite Prod Inc

1986	Nutrilite Prod Inc
1991	Mccormick Constr, Nutrilite Prod Inc
1996	Cal Air Cond, Nutrilite Products, Amcon Industries
2001	Cal Air Cond, Nutrilite Division of Amway
2003	Cal Air Conditioning, Nutrilite Products Inc
2008	Access Business Group, Nutrituion Science & Services, Nutrilite Products Inc
2016	Sunrise Remodelers, Nutrilite Products Inc
2020	Nutrilite Products Inc
2022	Nutrilite Products Inc

Based on the city directory review, no environmentally sensitive listings were identified for the subject property address.

Based on the city directory review, no environmentally sensitive listings were identified for the adjoining property addresses.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from ERIS on January 7, 2024. The following inferred uses of the subject property and adjoining properties interpreted from topographic maps in Appendix B and are tabulated below:

Date:	1896 to 1901
Subject Property:	Depicted as undeveloped
North:	Railroad tracks R/W is depicted beyond which is undeveloped. A possible rail station named Northam is depicted
Northeast:	Railroad tracks R/W is depicted beyond which is undeveloped
East:	Railroad tracks R/W is depicted beyond which is undeveloped
Southeast:	A creek channel is depicted beyond which is undeveloped land
South:	A creek channel is depicted beyond which is undeveloped land
Southwest:	Beach Boulevard is depicted beyond which is undeveloped land
West:	Beach Boulevard is depicted beyond which is undeveloped land depicted as marshland
Northwest:	Beach Boulevard and railroad R/W beyond which is undeveloped

Date:	1935, 1942
Subject Property:	Depicted as vacant on the north side and residential on the south side with several small residences depicted along a road
North:	AT&SF Railroad R/W is depicted beyond which is vacant with two structures depicted
Northeast:	Depicted as undeveloped land
East:	Railroad R/W and creek channel are depicted
Southeast:	Depicted as undeveloped land beyond the creek channel
South:	Residential land use is depicted
Southwest:	Beach Boulevard is depicted beyond which is residential streets and vacant parcels
West:	Beach Boulevard is depicted beyond which are several small structures
Northwest:	No significant changes depicted

Date:	1950, 1952
Subject Property:	Depicted as developed with Nutrilite buildings on the north side and several residences along the south side
North:	No significant changes depicted with the exception of three warehouse type buildings are depicted along the railroad tracks
Northeast:	No significant changes depicted
East:	No significant changes depicted
Southeast:	Depicted as developed with a large tract of single-family homes
South:	Creek channel beyond which are multiple residences
Southwest:	No significant changes depicted
West:	No significant changes depicted with the exception of additional residential structures
Northwest:	No significant changes depicted

Date:	1964, 1972, 1981
Subject Property:	Nine Nutrilite buildings are depicted with the south side shaded to depict general urban development. By 1981, several additional small Nutrilite buildings are depicted
North:	No significant changes depicted
Northeast:	No significant changes depicted
East:	No significant changes depicted
Southeast:	Shaded to depict urban development
South:	Shaded to depict urban development
Southwest:	Shaded to depict urban development
West:	Shaded to depict urban development
Northwest:	No significant changes depicted with the exception of an industrial building is depicted further northwest

Date:	2015, 2018, 2022
Subject Property:	Shaded to depict urban development
North:	Shaded to depict urban development
Northeast:	Shaded to depict urban development
East:	Shaded to depict urban development
Southeast:	Shaded to depict urban development
South:	Shaded to depict urban development
Southwest:	Shaded to depict urban development
West:	Shaded to depict urban development
Northwest:	Shaded to depict urban development

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

State Department

Regulatory Agency Data	
Name of Agency:	California Environmental Protection Agency (Cal EPA) California Department of Toxic Substances Control (DTSC)
Point of Contact:	http://www.envirostor.dtsc.ca.gov/public/ http://hwts.dtsc.ca.gov/report_search.cfm?id=5 https://siteportal.calepa.ca.gov
Agency Address:	N/A
Agency Phone Number:	(800) 728-6942
Date of Contact:	February 2024; February 2025
Method of Communication:	Online Research

Summary of Communication:

The EnviroStor database is the DTSC's data management system for tracking cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known contamination or sites where there may be reasons to investigate further. The subject property is not identified on the EnviroStor database.

The DTSC Hazardous Waste Tracking System (HWTS) was researched for hazardous waste manifest and ID Number information. DTSC relies on HWTS for issuing and tracking ID numbers, registering transporters, and providing information to analyze hazardous waste activities for policy purposes and enforcement. The system generates reports from 1993 to the present on hazardous waste shipments for generators, transporters, and treatment, storage and disposal facilities (TSDFs).

Nutrilite Products Inc. is identified on the HWTS database as having been issued 10 EPA ID Numbers dating back to 1985 with EPA ID CAR000168666 reported as active for Nutrilite Division Access Business Group LLC. All other EPA IDs are inactive. Various waste codes are listed for hazardous waste generated at the subject property including laboratory waste chemicals, oil/water separation sludge, alkaline solutions, waste oil and mixed oil, pesticide production waste, asbestos-containing waste, unspecified solvent mixture, oxygenated solvents, halogenated solvents, latex waste, polymeric resin waste, other organic solids, detergent and soap, liquids with metals, and others. According to the HWTS database, for the past four years, 29 waste manifests were generated in 2024 for a total of 12.16 tons of waste; 42 waste manifests were generated in 2023 for a total of 45.70 tons of waste; 34 waste manifests were generated in 2022 for a total of 36.49 tons of waste; and 15 waste manifests were generated in in 2021 for a total of 23.81 tons of waste, which indicates a large quantity of waste is typically generated at the subject property. The facility maintains a central 90-day hazardous waste storage area at the southeast corner of the subject property, which includes two or more mobile waste trailers (segregated by waste type) which have internal secondary containment and are locked for security. Partner did not observe apparent concerns at the hazardous waste storage area.

Partner reviewed the CalEPA Regulated Site Portal and the California Environmental Reporting System (CERS) database for chemical reporting information, compliance and other regulatory information for the subject property. The subject property is identified on the CERS database as a regulated site for chemical storage, hazardous waste and RCRA LQG under the name Nutrilite-Access Business Group, which is under the regulatory oversight of the Orange County Health Care Agency, Environmental

Health Division (CUPA). Twenty-four (24) different chemicals are reported as of April 11, 2024, as inventory at the subject property, which include various compressed gases (argon, helium, nitrogen, oxygen, propane), 2-propanol, AC-55-5 Red, Conquest, Con-Syn cleaner, Dichlorodifluoromethane, EcoStar, Freon R-22, High Foam Degreaser, lead-acid batteries, Quorom Clear, Quorum Pink HF, Quorum Purple, Sulfonic Acids, Vortexx, waste cosmetics, waste flammables, XY Bleach, and others. No outstanding CUPA violations are reported at this time.

Health Department

Regulatory Agency Data	
Name of Agency:	Orange County Health Care Agency (OCHCA), Environmental Health Division
Point of Contact:	https://www.ochealthinfo.com/services-programs/environment-food-safety/contact-complaints-faqs/public-records; https://orangecounty.nextrequest.com/requests/new?dept_id=3368
Agency Address:	Environmental Health Division: 1241 E. Dyer Rd., Suite 120, Santa Ana, CA 92705
Agency Phone Number:	(714) 433-6015
Date of Contact:	February 2024; February 2025
Method of Communication:	Online Request Form

Summary of Communication:

Partner received regulatory file information from the OCHCA which included CERS submittal forms, a Site Emergency Plan, routine inspection reports, a site assessment report for a prior surface spill (case closed), and closure documentation relating to a prior gasoline release (case closed). The release cases were overseen by Orange County LOP (Lead) and include the following:

1. Based on historical records received, which are also posted to the GeoTracker database, the subject property was previously equipped with three USTs containing alcohol and gasoline. The USTs are reported as one 550-gallon gasoline tank and two 5,000-gallon alcohol USTs. The USTs appear to have been removed in 1986; however, reviewed documents only depicted one gasoline and one alcohol tank as being removed in 1986. Upon removal of the gasoline tank, soil impacts were discovered around the gasoline UST only. No significant impacts are reported around the alcohol tank(s). The USTs were located near the center of the subject property. The gasoline impacted soil was sampled, excavated for aeration, verification samples after soil was removed for aeration, and determined not to be significant. The release case was granted case closure from the OCHCA on June 26, 1987.

2. A release case (Case No. 05IC023) is reported in 2006, which involved a surface spill of an acid-based cleaner. The release case received regulatory case closure from the OCHCA on April 3, 2006. According to the Closure Rationale dated March 23, 2006, the facility used A-300 acid cleaner. It was a spillage of this A-300 cleaner that Nutrilite personnel discovered on December 20, 2005 in the chemical storage room (#10-009) within Building 10 of the facility, apparently from an accidental puncturing of one of its container drums during handling. Following cleanup of the A-300 that had pooled around the floor drain in the room, Nutrilite signed a voluntary cleanup agreement with this Agency, as recommended by the OCHCA-EH Compliance Section. The objective was to determine whether the subsurface had been adversely affected by the spill and, if so, to conduct any required remedial action to mitigate the contamination. Soil samples were collected beneath the concrete slab floor in this area and tested for pH. Analytical results showed the samples to have a pH range from 6.22 to 7.83 units, all of which fell within the recognized range of pH in California soils. The sampling results clearly

showed that the subsurface was not adversely affected by the acid spill. The case was subsequently closed by the County on the date mentioned above.

No other significant regulatory information was received from this agency. No active USTs or other release cases were identified. Based on the regulatory status and minor impacts identified, these two release cases are not expected to represent a significant environmental concern and are considered an HREC in connection with the subject property.

Fire Department

Regulatory Agency Data	
Name of Agency:	City of Buena Park Fire Department / Orange County Fire Authority (OCFA)
Point of Contact:	https://www.buenapark.com/city_departments/fire_services.php
Agency Address:	6650 Beach Boulevard, Buena Park, CA 90622
Agency Phone Number:	(714) 573-6000 (OCFA)
Date of Contact:	February 2024; February 2025
Method of Communication:	Online Research

Summary of Communication:

The City of Buena Park's Fire Services are contracted through an agreement with the Orange County Fire Authority (OCFA). The OCFA maintains hazardous materials inventory information in case of an emergency and is not a CUPA agency for the management and permitting of hazardous substances or management of hazardous waste. See Section 4.1.1 above for a discussion of hazardous materials inventory.

Building Department

Regulatory Agency Data	
Name of Agency:	City of Buena Park Community and Economic Development / Building Division
Point of Contact:	Cindy Beltran, Permit Technician
Agency Address:	6650 Beach Boulevard, Buena Park, CA 90621
Agency Phone Number:	(714) 562-3636
Date of Contact:	January 23, 2024
Method of Communication:	Email

Summary of Communication:

Partner received 155 pages of building permits from the City of Buena Park dating back to 1950 for Nutrilite. The earliest permits dated in the 1950s were issued for general offices, warehouse and shop building (1950), maintenance shop (1951), Dehydrator (1951), tank support (1951), alterations to production room, acid storage, covered passageway, a 6,000 SF Mfg building (1955), guest reception roof, acid storage tank (1958), labs (1950, 1958), four shacks (1958), warehouse (1958), and others. See Appendix B for copies of the building permits.

Planning Department

Regulatory Agency Data	
Name of Agency:	City of Buena Park Planning Department
Point of Contact:	https://maps.buenapark.com/portal/apps/webappviewer/index.html?id=d12a39506ce5463ea50547e78bd06e5c
Agency Address:	6650 Beach Boulevard, Buena Park, CA 90621
Agency Phone Number:	(714) 562-3611
Date of Contact:	February 2024; February 2025
Method of Communication:	Online Research
Summary of Communication: According to reviewed online documents, the subject property is zoned ML for Light Industrial use by the City of Buena Park.	

Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Department of Conservation (DOC), Geologic Energy Management Division (CalGEM)
Point of Contact:	https://maps.conservation.ca.gov/doggr/wellfinder/#close
Agency Address:	715 P Street, MS 1804, Sacramento, CA 95814
Agency Phone Number:	(916) 322-1080
Date of Contact:	February 2024; February 2025
Method of Communication:	Online Research
Summary of Communication: According to the DOC CalGEM database, no oil or gas wells are located on or adjacent to the subject property, and the subject property is not mapped within the boundary of a designated oil field.	

Assessor's Office

Regulatory Agency Data	
Name of Agency:	Orange County Assessor's Office (OCA)
Point of Contact:	https://www.ocgis.com/ocpw/LandRecords/ https://www.ocgov.com/business/taxes-assessments
Agency Address:	500 S Main St 2nd floor, Orange, CA 92868
Agency Phone Number:	(714) 967-0852
Date of Contact:	February 2024
Method of Communication:	Online Research
Summary of Communication: According to records reviewed, the subject property is identified by Assessor Parcel Numbers (APN) 066-163-26, 066-164-24, and 066-572-08 (5600 Beach Boulevard). The OCA website does not readily provide information pertaining to ownership or building details. The total acreage of the three parcels is reported as 13.471 acres. According to other reviewed information, the current owner of the subject property is Alticor, Inc., as of 2011.	

Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (AQMD)
Point of Contact:	http://www3.aqmd.gov/webappl/fim/prog/search.aspx
Agency Address:	21865 Copley Drive, Diamond Bar, CA 91765
Agency Phone Number:	(909) 396-2000
Date of Contact:	February 2024; February 2025
Method of Communication:	Online Facility Information Detail (FIND) database

Summary of Communication:

The subject property maintains multiple active air emissions permits for its operations dating back to 1980 listed under the name Access Business Group LLC, Nutrilite. According to the SCAQMD FIND database, permits have been issued for equipment including: ovens, scrubbers, pharmaceuticals blending, pharmaceuticals drying, dry filter, pharmaceuticals treating, baghouses, feed and food miscellaneous blending, natural gas boilers, low NOX burners, ICE diesel-powered emergency generator, alcohols blending, weigh station, pharmaceuticals mfg-tableting, coating, vita, herbs, pharmaceuticals packaging, pharmaceuticals rolling, dust collector cartridge type, tablet coating pan, and Rule 1415 Plan Notifications. No open notices of violation or notices to comply are reported at this time.

Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	State Water Resources Control Board, GeoTracker Database
Point of Contact:	http://geotracker.waterboards.ca.gov/default.asp
Agency Address:	1001 I Street Sacramento, CA 95814
Agency Phone Number:	(916) 341-5791
Date of Contact:	February 2024; February 2025
Method of Communication:	Online Research

Summary of Communication:

GeoTracker is the State Water Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. GeoTracker contains records for sites that require cleanup, such as Leaking Underground Storage Tank (LUST) Sites, Department of Defense Sites, and Cleanup Program Sites. GeoTracker also contains records for various unregulated projects as well as permitted facilities, including irrigated lands, oil and gas production, operating permitted USTs, and land disposal sites. GeoTracker portals retrieve records and view integrated data sets from multiple State Water Board programs and other agencies.

Two closed release cases are reported on the GeoTracker database for the subject property, which are discussed in Section 4.1.2 above.

Other Agency

Regulatory Agency Data	
Name of Agency:	Orange County Sanitation District (OCSan)
Point of Contact:	https://www.ocsan.gov/
Agency Address:	10844 Ellis Ave, Fountain Valley, CA 92708
Agency Phone Number:	(714) 962-2411
Date of Contact:	February 2024
Method of Communication:	Online Request Form

Summary of Communication:

Partner received 935 pages of information from this agency pertaining to the subject property's industrial waste discharge permit. The subject property is a large facility with multiple buildings producing Nutrilite-branded supplements. Nutrilite is categorized under Pharmaceuticals Subpart D, which covers mixing, compounding and formulation. Only Building 10 manufacturing operations are reportedly regulated under the permit. The other buildings house unregulated ancillary operations. Buildings 1 and 3 discharge downstream of the sampling manhole, and Buildings 4, 5, 7B, 9, 10 and 14 discharge to a four-stage inground grease interceptor to a separate lateral. Building 10 involves manufacturing of vitamins and nutritional supplements by blending food grade ingredients. Products include tablets, two-piece capsules and soft-shell gelatin capsules. In Building 10 there are 11 weigh rooms and 7 blending areas which mix between 5 to 30 ingredients for one vitamin type. Eighteen (18) presses produced tablets. Gel capsules are produced in the gel room and subsequently coated by sprayers inside washing machines. Product names are etched into the tablets and capsules with a laser. Wastewater is generated by cleaning and rinsing equipment between changeovers in production and general equipment. Manufacturing equipment is either washed in-place or removed to a dedicated washroom. Equipment is cleaned using hot water and diluted detergents to remove residual powder. Wash waters generated are discharged via floor drains in equipment and washrooms, which discharge directly to the sanitary sewer. No pretreatment system is present- all wastewater discharges directly to the sanitary sewer system. Partner did not observe a clarifier at the subject property. Of note, no wastewater discharge violations have been reported for the subject property.

Copies of pertinent documents are included in Appendix B of this report.

4.2 Mapped Database Records Search

The regulatory database report provided by ERIS documents the listing of sites identified on federal, state, county, city, and tribal (when applicable) standard source environmental databases within the approximate minimum search distance (AMSD) specified by ASTM Practice E1527-21. The data from these sources are updated as these data are released and integrated into one database. The information contained in this report was compiled from publicly available sources.

The environmental database information is used to identify environmental concerns in connection with the subject property. The listings also serve to identify the known indications of the storage, use, generation, disposal, or release of hazardous substance at the subject property and the potential for contaminants to migrate onto the subject property from off-site sources in groundwater or soil in the form of liquids or vapor.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

The following table lists the sites as categorized by the regulatory database within the prescribed AMSD. The locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Database Report Data				
Database	AMSD Radius (mile)	Listings Identified		
		Subject Property	Adjoining Properties	Surrounding Area Sites of Concern
Federal NPL	1.00	N	N	N
Delisted NPL Site	0.50	N	N	N
Federal SEMS Site	0.50	N	N	N
Federal SEMS-ARCHIVE	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, VSQG, CESQG)	Subject and Adjoining	**Y**	**Y**	N
Federal IC/EC Registries	Subject Property	N	N	N
Federal ERNS Site	Subject Property	N	N	N
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site (LUST/LPST)	0.50	**Y**	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	Subject and Adjoining	**Y**	N	N
State/Tribal IC/EC Registries	Subject and Adjoining	N	N	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.25	**Y**	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N

Emissions	Varies	**Y**	N	N
Other Databases	Varies	**Y**	N	N

4.2.2 Subject Property Listings

The subject property is identified in the regulatory database report, as discussed below:

Subject Property Database Listing	
Database:	CERS Haz
Site Name:	Nutrilite-Access Business Group
Address:	5600 Beach Blvd
Substance Involved:	Various
Years of Operation:	1950s to Present
Status:	Active
Discussion:	The subject property is identified on the CERS database as a regulated site for chemical storage and hazardous waste under the regulatory oversight of the Orange County Health Care Agency, Environmental Health Division (CUPA). Twenty-four (24) different chemicals are reported as inventory at the subject property associated with the manufacture of vitamin supplements, which are reported as compressed gases, 2-propanol, AC-55-5 Red, Conquest, Con-Syn cleaner, Dichlorodifluoromethane, EcoStar, Freon R-22, High Foam Degreaser, lead-acid batteries, Quorom Clear, Quorum Pink HF, Quorum Purple, Sulfonic Acids, Vortexx, waste cosmetics, waste flammables, XY Bleach, and others. No outstanding CUPA violations are reported at this time.

Subject Property Database Listing	
Database:	Cleanup Sites, CHMIRS
Site Name:	Access Business Group Nutrilite Division
Address	5600 Beach Blvd
Date of Release:	2006
Substance Released:	Corrosive Liquid
Media Impacted:	None
Date of Closure:	2006
Responsible Party:	Access Business Group - Nutrilite Division
Substance Involved:	Acidic cleaner
Years of Operation:	1950s to Present
Status:	Closed
Discussion:	A release case (Case No. 05IC023) is reported in 2006, which involved a surface spill of an acid-based cleaner. The release case received regulatory case closure from the OCHCA on April 3, 2006. According to the Closure Rationale dated March 23, 2006, the facility used A-300 acid cleaner. It was a spillage of this A-300 cleaner that Nutrilite personnel discovered on December 20, 2005 in the chemical storage room (#10-009) within Building 10 of the facility, apparently from an accidental puncturing of one of its container drums during handling. Following cleanup of the A-300 that had pooled around the floor drain in the room, Nutrilite signed a voluntary cleanup agreement with this Agency, as recommended by the OCHCA-EH Compliance Section. The objective was to determine whether the subsurface had been adversely affected by the spill and, if so, to conduct any required remedial action to mitigate the contamination. Soil samples were collected beneath the concrete slab floor in this area and tested for pH. Analytical results showed the samples to have a pH range from 6.22 to 7 .83 units, all of which fell within the recognized range of pH in California soils. The sampling results clearly showed that the subsurface was not adversely affected by the acid spill. The case was

	subsequently closed by the County on the date mentioned above. No active USTs or other release cases were identified for the subject property. Based on the regulatory status, this incident is not expected to represent a significant environmental concern.

Subject Property Database Listing	
Database:	Emissions
Site Name:	Nutrilite Products Inc., Amway Corp, Access Business Group
Address	5600 Beach Blvd
Substance Involved:	Various
Years of Operation:	1950s to Present
Status:	Active
Discussion:	The subject property maintains multiple active air emissions permits for its operations dating back to 1980. According to the SCAQMD FIND database, permits have been issued for equipment including: ovens, scrubbers, pharmaceuticals blending, pharmaceuticals drying, dry filter, pharmaceuticals treating, baghouses, feed and food misc. blending, natural gas boilers, low NOX burners, ICE diesel-powered emergency generator, alcohols blending, weigh station, pharmaceuticals mfg-tableting, coating, vita, herbs, pharmaceuticals packaging, pharmaceuticals rolling, dust collector cartridge type, tablet coating pan, and Rule 1415 Plan Notifications. No open notices of violation or notices to comply are reported at this time.

Subject Property Database Listing	
Database:	Haz Gen, HazNet, Historical Manifest, RCRA SQG, RCRA LQG
Site Name:	Nutrilite Products, Inc.
Address	5600 Beach Blvd
Substance Involved:	Various
Years of Operation:	1950s to Present
Status:	Active
Discussion:	Nutrilite Products Inc. is identified on the HWTS database as having been issued 10 EPA ID Numbers dating back to 1985 with EPA ID CAR000168666 reported as active for Nutrilite Division Access Business Group LLC. All other EPA IDs are inactive. Various waste codes are listed for hazardous waste generated at the subject property including laboratory waste chemicals, oil/water separation sludge, alkaline solutions, waste oil and mixed oil, pesticide production waste, asbestos-containing waste, unspecified solvent mixture, oxygenated solvents, halogenated solvents, latex waste, polymeric resin waste, other organic solids, detergent and soap, liquids with metals, and others. According to the HWTS database, for the past four years, 29 waste manifests were generated in 2024 for a total of 12.16 tons of waste; 42 waste manifests were generated in 2023 for a total of 45.70 tons of waste; 34 waste manifests were generated in 2022 for a total of 36.49 tons of waste; and 15 waste manifests were generated in in 2021 for a total of 23.81 tons of waste, which indicates a large quantity of waste is typically generated at the subject property. The facility maintains a central 90-day hazardous waste storage area at the southeast corner of the subject property, which includes two or more mobile waste trailers (segregated by waste type) which have internal secondary containment and are locked for security. Partner did not observe apparent concerns at the hazardous waste storage area.

Subject Property Database Listing	
Database:	Historical Tank, LUST, LOP Orange County
Site Name:	Nutrilite Products Inc., Access Business Group-Nutrilite Division
Address	5600 Beach Blvd
Date of Release:	1986
Substance Released:	Gasoline
Media Impacted:	Soil, groundwater
Date of Closure:	June 30, 1987
Responsible Party:	Nutrilite
Substance Involved:	Gasoline
Years of Operation:	1950s to Present
Status:	Closed
Discussion:	Based on reviewed information, which is posted to the GeoTracker database, the subject property was previously equipped with three USTs containing alcohol or denatured alcohol and gasoline. The USTs are reported as one 550-gallon gasoline tank and two 5,000-gallon alcohol USTs. The alcohol USTs were reportedly installed in 1966. The USTs appear to have been removed in 1986; however, reviewed documents only depicted one gasoline and one alcohol tank as being removed in 1986. Upon removal of the gasoline tank, soil impacts were discovered around the gasoline UST only. No significant impacts are reported around the alcohol tank(s). The USTs were located near the center of the subject property. The gasoline impacted soil was sampled, excavated for aeration, verification samples after soil was removed for aeration, and determined not to be significant. The release case was granted case closure from the OCHCA on June 26, 1987. Based on the type of release (petroleum hydrocarbons), limited impacts identified and regulatory status, this release case is considered a HREC in connection with the subject property.

4.2.3 Adjoining Property Listings

The adjoining properties are identified in the regulatory database report, as discussed below:

Adjoining Property Database Listing	
Property Name:	Nutrilite-Access Business Group
Address:	5609 River Way
Direction:	North
Hydrological Gradient:	Cross-Gradient
Database Listing:	CERS Haz, HW Orange County, RCRA LQG, RCRA SQG
Substance Involved:	Not Reported
Years of Operation:	Not Reported
Status:	Active
Discussion:	This building is identified at the former Nutrilite North Campus and is used for warehouse, shipping and packaging operations (Building #5). No manufacturing operations are reportedly conducted at the North Campus. This facility is listed on the CERS database as a chemical storage facility and hazardous waste generator under the regulatory oversight of the OCHCA. Chemicals reported at this facility include various compressed gases, 2-propanol, Dry San Duo, Foam Nox, Freon R-22, Gold Gas

	Stain Mix 3, lead-acid batteries, MEK Ink Cartridge, Quorum Clear, Quorum Pink HF, Quorum Purple, and Risil Mat. One open violation is reported for a missing label on a 55-gallon drum. No past or present USTs or release cases are reported at this location. Based on the regulatory status, this Nutrilite building is not expected to represent a significant environmental concern.

Adjoining Property Database Listing	
Property Name:	My Home Dental Group
Address:	5661 Beach Blvd, Suite 100
Direction:	West
Hydrological Gradient:	Cross-Gradient, Down-Gradient
Database Listing:	HazNet
Substance Involved:	Not Reported
Years of Operation:	2016
Status:	Inactive
Discussion:	This adjoining tenant is identified as having been issued an EPA ID Number (CAL000416633) for its dental operations in 2016. The status is inactive as of 2017. No waste codes or other pertinent information is provided. Based on the nature of the listing and lack of reported releases or other environmental concerns at this location, it is not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not considered an environmental concern at this time.

4.2.4 Surrounding Area Listings of Concern to Subject Property

No sites of concern are identified in the regulatory database report.

Based on the findings, vapor migration is not considered an environmental concern at this time.

4.2.5 Unplottable Listings

No unplottable listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM Practice E1527-21, Partner requested the following site information from Jones Lang LaSalle Brokerage, Inc. (User of this report).

User Responsibilities		
Item	**Provided By User**	**Not Provided By User**
AAI User Questionnaire		**X**
Title Records, Environmental Liens, and AULs	**X**	
Specialized Knowledge		**X**
Actual Knowledge		**X**
Valuation Reduction for Environmental Issues		**X**
Identification of Key Site Manager	**X**	
Reason for Performing Phase I ESA	**X**	
Prior Environmental Reports		**X**
Other		**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property since 2011, identified as Alticor Inc., was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User.

5.1.3 Interview with Key Site Manager

Mr. Keyur Ajmera, key site manager, indicated that he had no information pertaining to pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or notices from a governmental entity regarding possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

The key site manager further stated that there are no USTs, ASTs, clarifiers, or groundwater monitoring wells on the subject property to the best of his knowledge. Mr. Keyur was not aware of any environmental concerns associated with the subject property at the time of the assessment. Mr. Keyur stated that site operations have not changed significantly since Partner's prior Phase I ESA dated February 23, 2024. It is understood that the existing facility will cease operations by 2026.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators, and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

At the request of the user, Partner contracted AFX Research LLC to perform an environmental lien and AUL search for the subject property. No environmental liens or AULs were identified for the subject property.

Copies of pertinent pages are included in Appendix B of this report.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or reasonably ascertainable within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase I ESA, Amway South Campus, 5600 Beach Boulevard, Buena Park, California 90621, prepared by Partner dated February 23, 2024

Partner prepared this report on behalf of Jones Lang LaSalle Brokerage, Inc. The assessment was performed in accordance with ASTM Standard E1527-21. The assessment consisted of a site reconnaissance, interviews with knowledgeable personnel, review of historical information, and a review of

federal, state and local regulatory databases. Pertinent information contained in this report is summarized below:

- The subject property was occupied by Amway Nutrilite for the manufacture of vitamin supplements (granulated herbal extracts with nutritional values and dietary supplements in the forms of tablets and capsules), which is similar to current site operations.

- Partner identified two HRECs, which are the same HRECs identified in this currently report.

- Partner identified one BER for the potential presence of asbestos-containing materials (ACM), which is similar to those reported in this report. According to the United States EPA guidelines, suspect materials that are intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to disturbance of the building materials within the buildings, an ACM survey is recommended.

- Partner did not identify RECs or CRECs during the course of the assessment.

A copy of Partner's prior report is not included in Appendix B of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Margaret Thomas
Site Assessment Conducted On:	January 29, 2025

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for the Subject Property			
Name	**Title/Role**	**Contact Number**	**Site Walk* Yes/No**
Mr. Keyur Ajmera	Engineering Manager	(714) 562-7813	Yes
* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property			

No significant environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters, trash compactors and various bins located on the exterior north and east sides of the property. An independent solid waste disposal contractor, Park Disposal/EDCO, removes solid waste from the subject property. Solid waste generated at the subject property includes household-type trash and recycled materials. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Buena Park / Orange County Sanitation District services the subject property vicinity. No wastewater treatment facilities were observed or reported on the subject property. No septic systems were observed or reported on the subject property.

6.1.3 Stormwater and Surface Water Drainage

Stormwater is removed from the subject property primarily by sheet flow action across the paved surfaces towards stormwater drains located on the subject property and in the public right of way. According to the site's Storm Water Pollution Prevention Plan (SWPPP), storm water at the Nutrilite facility flows to seven discharge points, which discharges directly into the adjoining Brea Creek, which then flows into Coyote Creek, to the San Gabriel River, then to the Pacific Ocean, which is approximately 11.5 miles to the south. Coyote Creek is listed on the California 303(d) list of impaired waters, but none of listed pollutants are associated with industrial activities or storm water from the subject property facility. Additionally, the subject property facility is located within a watershed (HUC-10) that is impaired with the following pollutants: Ammonia, Cyanide, Diazinon, Dioxin, Dissolved Oxygen, Eutrophic, Coliform Bacteria, Indicator Bacteria, Copper, lead, Nickel, Selenium, Dissolved Copper, Algae, Polychlorinated Biphenyls (PCBs), Chlordane, and pH. None of the HUC-10 pollutants are associated with industrial activity at the facility other than pH, which is being sampled and tested already as part of the required basic parameters in the Industrial General Permit. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Southern California Edison (SCE) and Southern California Gas Company. The mechanical system is comprised of centralized cooling towers, boilers, chillers, air handling units and packaged, heating, and ventilating and air-conditioning (HVAC) units.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

Partner observed at least two patched boring locations and spray-paint markings on the north side of the property identified as *BH 04 15-feet* and another at *10-feet* that may be associated with a Geotechnical survey or other assessment. The key site manager was not aware of the purpose of the borings.

No other general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Hazardous substances and/or petroleum products were observed on the subject property during the site reconnaissance. Refer to Section 4.1 for regulatory information on hazardous substances used/stored at the subject property and Appendix B for CERS submittal that includes an inventory of hazardous substances at the subject property. Due to the large number of hazardous substances used/stored at the subject property, they are not tabulated into the body of this report. No apparent environmental concerns were observed or reported during the site reconnaissance regarding the use/storage of hazardous substances, and no apparent CUPA violations are reported at this time. Based on the nature of the manufactured items (vitamins) and well-maintained and regulated facility that utilizes Best Management Practices (BMPs), the use/storage of hazardous substances does not appear to represent a significant environmental concern.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance with the exception of a diesel-powered emergency generator that has an internal diesel tank with a capacity of 275 gallons and manufactured in 1997. The generator is located on the exterior west side of the property adjacent to Building 10. No environmental concerns were observed in connection with the emergency generator.

6.2.3 Evidence of Releases

No spills, stains, or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "Non-PCB;" 2) 50 ppm-500 ppm – "PCB-Contaminated;" and, 3) Greater than 500 ppm – "PCB-Containing." The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

Type of Equipment	**Number**	**PCB Containing**	**Concern**
Pad-Mounted Transformers	Several	Not Likely	No
Pole-Mounted Transformers	No		No
Hydraulic Elevators	7	Not Likely	No
Hoists or Lifts	No		No
Dock Levelers	No		No
Balers	No		No

pad-mounted transformers were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Based on the good condition of the equipment, the transformers are not considered an environmental concern.

The subject property is equipped with seven hydraulic elevators. The hydraulic fluid contained within elevator systems can potentially contain polychlorinated biphenyls (PCBs). The equipment rooms for the elevators were observed during Partner's site reconnaissance, and no leaks or deficiencies were observed or reported. The elevators are reportedly regularly maintained under a service contract. Based on the regular maintenance of the equipment, visual observations, and the low mobility of hydraulic fluid as a contaminant, the elevators are not considered a significant environmental concern.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance with the exception of one inground grease interceptor installed in circa 2012 that is not connected to the main manufacturing operations and is not considered a significant environmental concern.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds, or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

Partner evaluated the current subject property use during the site reconnaissance for potential environmental hazards, including Per- and Polyfluoroalkyl Substances (PFAS) impacts to the subject property. Based on the site observations and review of historical information, likely PFAS impacts to the

subject property based on current use were not identified. Based on this information, PFAS are not considered an environmental concern at this time.

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed between 1979 and 2012. Partner has conducted a limited, visual evaluation of accessible areas for the presence of suspect ACM at the subject property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACM:

Suspect ACMs			
Suspect ACM	**Location**	**Friable Yes/No**	**Physical Condition**
Drywall Systems	Throughout Building Interior	No	Good
Flooring Materials/Tiles/Linoleum	Throughout Building Interior	No	Good
Flooring Mastics	Throughout Building Interior	No	Good
Acoustical Ceiling Materials/Tiles	Throughout Building Interior	No	Good
Mechanical Conduit/Systems	Throughout Building Exterior, Throughout Building Interior	No	Good
Roofing Materials	Throughout Building Exterior	No	Good

Based on this building's date of construction, prior to disturbance, Partner recommends a comprehensive asbestos survey of the property be completed to determine the presence, condition, friability and likely future condition of suspect or confirmed ACM. All suspect materials must be handled as ACM according to local, state and federal regulations until the results of sampling and analysis indicate the material is a non-ACM.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm2 (or 5,000 µg/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X," to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint

should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

It is unlikely that LBP is present in buildings constructed after 1977. Therefore, due to the age of the subject property buildings, it is unlikely that LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered an environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the City of Buena Park serves the subject property vicinity. According to the 2024 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this assessment should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.3.6 Wetlands

The subject property does not appear to be a designated wetland area based on information obtained from the United States Fish and Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No settling ponds, lagoons, surface

impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

6.4 Adjoining Property Reconnaissance

The adjoining property reconnaissance consisted of observing the adjoining properties from the subject property premises.

6.4.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.2 ASTs/USTs for Hazardous Substances or Petroleum Products

No ASTs or USTs for hazardous substances/petroleum products were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.3 Evidence of Releases

No evidence of a release was observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.4 PCBs

No PCB containing materials were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.5 Strong, Pungent, or Noxious Odors

No strong, pungent, or noxious odors were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.6 Pools of Liquid

No pools of liquid were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.7 Drains, Sumps, and Clarifiers

No drains, sumps, or clarifiers were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.8 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.9 Stressed Vegetation

No stressed vegetation was observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.10 Additional Potential Environmental Hazards

Partner evaluated the current adjoining property uses during the site reconnaissance for potential environmental hazards, including PFAS impacts to the subject property. Based on observations made from the subject property borders and/or information provided in the regulatory database, likely emerging contaminants or PFAS impacts to the subject property from current adjoining property uses were not identified. Based on this information, PFAS are not considered an environmental concern.

No additional environmental hazards were observed on adjoining properties during the limited adjoining property reconnaissance.

7.0 VAPOR ENCROACHMENT CONDITIONS

Partner conducted a limited non-intrusive vapor screening on the subject property to identify, to the extent feasible, the potential for vapor encroachment conditions (VECs) in connection with the subject property. This included consideration of chemicals of concern (COC) that may migrate as vapors into the subsurface of the subject property as a result of contaminated soil and groundwater on or near the property.

This screening utilized readily available data sources previously discussed in this Phase I ESA that includes:

- the physical setting of the subject property (Section 2.4),
- standard historical sources for the subject property, adjoining, and surrounding area (Section 3.0),
- known or potentially contaminated sites as identified from information from regulatory agencies and sites on Federal, State, tribal and local databases (Section 4.0), and
- information from the site reconnaissance (Section 6.0) of the subject property and observations of the surrounding properties.

The results of our data collection, reconnaissance, and analysis are tabulated below:

Potential for Vapor Encroachment to Impact the Subject Property	
Area of Concern	***Likely or Known VEC to Subject Property***
Subject Property Existing Operations or Conditions (Sections 2.0 and 6.0)	None identified that impact the subject property.
Historical Uses of the Subject Property (Section 3.0)	None identified that impact the subject property.
Adjoining Property Operations or Existing Conditions (Sections 2.3 and 6.4)	None identified that impact the subject property.
Historical Uses of Adjoining Properties or Nearby Properties (Section 3.0)	None identified that impact the subject property.
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in the AMSD (Section 4.0)	None identified that impact the subject property.

Based on the findings of the limited non-intrusive vapor screening, vapor intrusion is unlikely to be an issue of concern in connection with the existing structures on the subject property. As such, no further assessment is recommended.

8.0 FINDINGS AND CONCLUSIONS

Findings and Opinions

Recognized Environmental Condition

A recognized environmental condition (REC) refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- Partner did not identify RECs during the course of this assessment.

Controlled Recognized Environmental Condition

A controlled recognized environmental condition (CREC) refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).

- Partner did not identify CRECs during the course of this assessment.

Historical Recognized Environmental Condition

A historical recognized environmental condition (HREC) refers to a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Based on regulatory records reviewed, the subject property was previously equipped with three USTs containing alcohol (or denatured alcohol) and gasoline. The USTs are reported as one 550-gallon gasoline tank and two 5,000-gallon alcohol USTs. The alcohol USTs were reportedly installed in 1966, and no date was identified for the age of the gasoline tank. The USTs were reportedly removed in 1986; however, reviewed documents only depicted one gasoline and one alcohol tank as being removed in 1986; however, it is assumed both alcohol tanks were removed. Upon removal of the gasoline tank, soil impacts were discovered around the gasoline UST only. No significant impacts were reported around the alcohol tank(s). The USTs were located near the center of the subject property. The gasoline impacted soil was sampled, excavated for aeration, verification samples after soil was removed for aeration, and determined not to be significant. The release case was granted case closure from the OCHCA on June 26, 1987. No active USTs are located at the subject property. Based on the regulatory status and minor impacts identified, the historical USTs are not expected to represent a significant environmental concern and are considered an HREC in connection with the subject property.

- Based on reviewed information, a release case (Case No. 05IC023, Access Business Group Nutrilite Division) was reported in 2006, which involved an interior surface spill of an acid-based cleaner. The release case received regulatory case closure from the OCHCA on April 3, 2006. According to the Closure Rationale dated March 23, 2006, the facility used A-300 acid cleaner. It was a spillage of this A-300 cleaner that Nutrilite personnel discovered on December 20, 2005 in the chemical storage room (#10-009) within Building 10 of the facility, apparently from an accidental puncturing of one of its container drums during handling. Following cleanup of the A-300 that had

pooled around the floor drain in the room, Nutrilite signed a voluntary cleanup agreement with this Agency, as recommended by the OCHCA-EH Compliance Section. The objective was to determine whether the subsurface had been adversely affected by the spill and, if so, to conduct any required remedial action to mitigate the contamination. Soil samples were collected beneath the concrete slab floor in this area and tested for pH. Analytical results showed the samples to have a pH range from 6.22 to 7.83 units, all of which fell within the recognized range of pH in California soils. The sampling results clearly showed that the subsurface was not adversely affected by the acid spill. The case was subsequently closed by the County on the date mentioned above. No other release cases were identified for the subject property. Based on the regulatory status and lack of impacts identified, this release case is not expected to represent a significant environmental concern and is considered an HREC in connection with the subject property.

Business Environmental Risk

A Business Environmental Risk (BER) is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing materials (ACM) are present. Readily visible suspect ACMs were observed in good condition and do not appear to pose a health and safety concern to the occupants of the subject property at this time. According to the United States EPA guidelines, suspect materials that are intact and in good condition can, in general, be managed safely in-place under an O&M Program until removal is dictated by renovation, demolition, or deteriorating material condition. Prior to disturbance of the building materials within the buildings, an ACM survey is recommended.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of 5600 Beach Boulevard in Buena Park, Orange County, California (the “subject property”). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs or CRECs; however, HRECs and BERs were identified in connection with the subject property. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 5600 Beach Boulevard in Buena Park, Orange County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

RE: CITY DIRECTORY RESEARCH
5600 Beach Boulevard
BUENA PARK,CA 90621

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
5525-5750 of Beach Blvd
5525-5575 of Cajon Ave
ALL of Dr Sam Way
7750-8010 of Franklin St
ALL of River Way
Search Notes:
Beach Blvd is also known as 5525-5750 Grand Ave in BUENA PARK.

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

Subject:	[OC San] Public Records Request :: P003235-012324

CAUTION: This message originated from outside the Partner organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

This is confirmation that your Public Records Act Request has been received by the Orange County Sanitation District (OC San) on 1/23/2024 and given the reference number P003235-012324 for tracking purposes.

You will be contacted within 10 days regarding the availability of the record(s) requested. We will notify you if more time is needed to make a determination or for clarification of your request.

You can monitor the progress of your request through the OC San Public Portal by logging in under "My Account". Communication regarding your request will be done through the Public Portal. If you are adding additional documents to an open request, please use 'Track by Reference Number' to locate your request and add information.

If you need to contact us for any reason, log in to the Public Portal and select the "New Message" button located within your request.

Sincerely,

Orange County Sanitation District
Tina Knapp, MMC
Assistant Clerk of the Board
(714) 593-7190 / www.ocsan.gov

SUBJECT: Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This is a notification that Permit No **1-531435** (previously listed as Permit No. **53-1-435**) issued to Access Business Group, LLC will expire on **May 31, 2017**. Please complete and return the enclosed Permit Renewal Application Form to the Orange County Sanitation District (OCSD) by **March 31, 2017**. OCSD's Financial Management Division will generate an invoice for the permit fee and it will be mailed to your Accounts Payable Department under a separate cover. **The permit fee is due at the time the permit renewal application is submitted, but should be submitted with the invoice, not the application. Only a photocopy of the check must accompany the Permit Renewal Application. OCSD will not process the Permit Renewal Application without proof of payment.**

As part of the permit renewal process, OCSD's staff will conduct a comprehensive evaluation of your manufacturing process, operational control practices, and pretreatment system in order to assess factors and variabilities affecting your facility's ability to meet longterm compliance. This is in response to the pretreatment program audit findings of the Environmental Protection Agency(EPA), which required OCSD to conduct, during permit renewal, a more in-depth technical review of parameters affecting compliance. **Within a few days, you will be contacted by OCSD's staff to set-up an appointment for this evaluation. Depending on the number of operations at your facility, please allot about two to four hours for this visit.**

Failure to submit the permit application and payment for the permit fee by the due date may delay the issuance of Access Business Group, LLC's permit prior to the expiration date. **Please be reminded that discharging to OCSD's sewer system without a valid permit is prohibited and may result in physical termination of sewer service and imposition of civil penalties.**

If your company intends to stop discharging industrial wastewater to OCSD's sewer system, please complete and return the enclosed Request to Close Account Form to OCSD by **March 31, 2017**, to officially close your account and terminate the sewer service at Access Business Group, LLC.

If you have any questions, please call Martin Holl at 714-593-7432.

Roya Sohanaki
Resource Protection Division Manager

*If this due date falls on a holiday or weekend, the due date is adjusted to the following business day

COURTESY REMINDER

March 14, 2017

James Siewertsen, VP-NUTRILITE OPERATIONS
Access Business Group, LLC
5600 Beach Blvd
Buena Park, CA 90621

SUBJECT: Courtesy Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This letter is a courtesy reminder to Access Business Group, LLC that the completed Permit Renewal Application is due to the Orange County Sanitation District (OCSD) by **March 31, 2017***, as required in OCSD's *Reminder to Submit an Application for Renewal of a Wastewater Discharge Permit*, which was issued to your facility and dated on or about **March 1, 2017**. Please be advised that **Permit No. 1-531435** (previously listed as Permit No. **53-1-435**) will expire on **May 31, 2017,** unless the permit is renewed.

Failure to submit the permit application by the due date may delay the issuance of Access Business Group, LLC's permit prior to its expiration date. Please be reminded that discharge without a valid and current permit is prohibited by the OCSD's Wastewater Discharge Regulations.

If your facility intends to stop discharging industrial wastewater to the OCSD's sewer system, please complete and return the Request to Close Account Form to the District by **March 31, 2017**, to officially close your account and terminate the sewer service at Access Business Group, LLC.

Please disregard this reminder if the Permit Renewal Application has been submitted. If you have any questions, please call Martin Holl at 714-593-7432.

Roya Sohanaki
Resource Protection Division Manager

MAY EXP / JUNE Effective.

ORANGE COUNTY SANITATION DISTRICT
RENEWAL APPLICATION FOR
CLASS I WASTEWATER DISCHARGE PERMIT

Engineer : Jason Daniel

Instructions Version 5.0 or greater of Acrobat, Acrobat Approval, or Acrobat Reader must be used or else a blank form will be the result. Click on "Help, About" to confirm your version. Acrobat Reader is in the \instal directory on this CD. From the Main Menu, please click on "using this program", then "using the permit renewal application writer", and read "no save capability" prior to using this form.

For the Orange County Sanitation District (District) to process and issue a Class I Wastewater Discharge Permit, the applicant must comply with all of the following:

- The Permit Renewal Application Form must be filled out completely. The District **will not** process incomplete submittals, and your application will be returned if there is any missing information. **Do not leave blanks. Please write "N/A" if the information being requested does not apply.**
- The Permit Renewal Application must be signed by the Responsible Officer or Designated Signatory, as defined on pages 6 and 7. The District will return your permit application if it is not signed by the proper company official.
- The permit fee must be remitted at the time the permit renewal application is submitted. Your remittance must be sent directly to the District's Accounting Department; **and, a photocopy of the check must be submitted with the Permit Renewal Application** to the Source Control Division. An application received without this documentation will be returned.

Please refer to Section A of the information brochure for detailed instructions for completing this Application Form.

B Mailing Address: 5600 Beach Blvd (Street) | Buena Park (City) | CA (State) | 90621 (Zip Code)

C Sewer Service Address: 5600 Beach Blvd (Street) | Buena Park (City) | CA (State) | 90621 (Zip Code)

D Phone Number (714) 562-1830 Fax Number (714) 736-7610

E Company Website (if any): http:// www.nutrilite.com

F Is your business a ○ corporation? ○ partnership? ○ sole proprietorship? ◉ Limited Liability Corporation?

List all Principals/Owners/Major Shareholders of the business. This must include the Responsible Officer or equivalent.

Name and Title	Address
Steve Van Andel, Co-CEO & Chariman	7575 Fulton Street East, Ada, MI 49355
Doug Devos, Co-CEO & Chairman	7575 Fulton Street East, Ada, MI 49355

For corporations only: Year of Incorporation | State of Incorporation | Corporate Identification Number

G Are you the ◉ landowner? or ○ lessee? If a lessee, include the name, address, and telephone number of the property owner and/or the manager of the property: Check one: ○ Owner ○ Manager

Name | Address | Phone

RECEIVED 2011 APR -3 AM 9:53 OCSD MAIL ROOM

Manufacturing Process Information

H Description of all manufacturing processes and/or service activities on the premises, wet or dry. Please identify and describe the processes which generate wastewater in more detail. (Use additional sheets if necessary.)

Please see attachment C.

I Description and average quantity of raw materials used or handled: (Use additional sheets if necessary.)

The facility uses organically grown, plant based ingredients that include beta carotene, citrus, soy lecithin, lemon oil, gingko biloba, maltodextrose, sugars, herbal extracts etc.

J Description of products manufactured or produced as a result of services performed: (Use additional sheets if necessary.)

Products produced at the facility include:

Granulated Herbal Extracts with nutritional values (various)

Dietary Supplements in the forms of tablets and capsules (various)

K Average Daily Production: 25000 - 50000 bottles/day

L North American Industry Classification System (NAICS) Code (this code replaced the discontinued SIC Code):

Primary NAICS Code: 311999 Secondary NAICS Code(s): 311999

Operations Information

M Operating Schedule:

Number of shifts per work day: 2 Number of work days per week: 4 Number of production days per year: 220

	1st	2nd	3rd	Total
Average number of employees per shift:	340	145		485
Production hours per shift:	12	12		24
Discharge hours per shift:	12	12		24

N When did you start operating at this facility? Month: July Year: 1952

O For Industries involved in Surface/Metal Finishing (plating, anodizing, phosphating, etching, PCB manufacturing, etc.):
Do you own more than 50% (area basis) of the materials undergoing production? ◉ N/A ○ Yes ○ No

P Have you made **any** additions or modifications to the manufacturing process during the past two years? ○ Yes ◉ No
If the answer is "Yes", you must submit updated Manufacturing Process Layout, Manufacturing Process Flow Diagram, and Spill Containment Drawings and Information with this application.
Please describe briefly the process changes during the last permit period:

Information on Treatment of Industrial Waste/Wastewater

Q Is any form of waste/wastewater treatment practiced at this facility? ○ Yes ◉ No

If the answer is "Yes", provide the following information by checking the appropriate boxes:

- Mode of Operation: ○ Continuous ○ Batch ○ Both
- Pretreatment Units Used:

☐ Hydroxide Precipitation
☐ Hexavalent Chrome Reduction
☐ Cyanide Destruction
☐ Equalization
☐ pH Adjustment
☐ Electrowinning/Plate-out Units
☐ Filter Press
☐ Final Polishing Filter
☐ Spent Chemical Treatment Unit
☐ Below-ground Clarifier
☐ Ion Exchange
☐ Other
☐ Cross-Flow Filtration (e.g., Memtek)
☐ Sorption Filter (e.g., Lancy)
☐ Aluminum Chip
☐ Ozone Treatment Reactor
☐ Clarifier/Lamella Settling

R How are spent chemicals handled? Specify the method for "Other."

☑ Wastehauled offsite ☐ Batch treated onsite ☐ Discharged to sewer without treatment
☐ Other

S Wastewater Operator/Maintenance Information:
Number of wastewater pretreatment operators at your facility: 1st shift ____ 2nd shift ____ 3rd shift ____

Operator Name	Qualification (Please check)						
	None	Wastewater Treatment Operator with CWEA Certification			AA Science with min 2 semesters in Chemistry	BS Chemical or Environmental Engineering	BS in other Engineering or Science
		Grade I	Grade 2	Grade 3/4			
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐

Is there an Operation and Maintenance Manual or procedures for the entire wastewater treatment system? ○ Yes ○ No

Information for Determining Volume of Wastewater Discharge and User Charges

T Assessor Parcel Number(s) as shown on property tax bill: 066-572-08

If a Lessee, please indicate:

(a) percentage of property tax bill paid to landowner: _____ %

(b) percentage of water bill paid to landowner: _____ %

(c) square footage of leased space: _____ Sq. Foot

(d) whether your facility is a part of a commercial/industrial complex: ○ Yes ○ No

V Water Supplier: City of Buena Park

Water Account Number(s): See Attachment E

Other Sources of Water Supply: ☐ onsite wells ☐ groundwater remediation ☐ others _____

W Water Measurement Information:

List all water meters at your facility. **Complete Attachment A in accordance with instructions.**

From the incoming meter(s) identified on Attachment A, check which following water measurement strategy is used:

◉ City water meter(s) only ○ Process meter(s) only ○ Shop meter(s) only ○ Both city meter and process meters

The meter(s) checked above measure:

◉ Only the incoming water going to the applicant's facility.
○ The incoming water to the applicant's facility and for other companies adjacent.

Does your facility use an effluent meter to measure the industrial wastewater discharge? ○ Yes ◉ No

If so, does the effluent meter measure only the industrial wastewater discharged to the sewer from the facility (excluding sanitary, boiler blowdown, cooling tower bleed off, and R.O. reject)? ○ Yes ○ No

If your facility uses a final effluent meter, skip to Line Y

X In order to determine mass emission rates and user charges, the actual volume of water discharged to the sewer must be calculated. **For facilities that do not have effluent meters,** this is done by determining the volume of incoming water, as indicated by the city water meter, and then applying appropriate deductions for water losses. If losses cannot be quantified, the District will apply water losses equivalent to 5% of the incoming water. It is to your advantage to determine and quantify these losses if your facility has water losses more than 5%. Please check the appropriate box below:

○ Apply 5% loss ◉ Use calculated loss

If calculated loss is indicated, determine all applicable losses using the worksheet provided in Attachment B and summarize results in the table below. The worksheet and supporting documentation must be submitted for these losses to be applied.

Item	Average Daily Water Losses	Gal/day	Loss is applicable to	
			City Meter(s)	Process Meter
I	Landscape / Irrigation losses	13,600	☐	☐
II	Boiler losses for steam condensate not returned to boiler	7,000	☐	☐
III	Cooling tower water evaporation	14,500	☐	☐
IV	Product losses		☐	☐
V	Other losses		☐	☐
			☐	☐
	Total Losses	**35,100**	**Check the above if applicable.**	

Certification for Accuracy of Information

I have personally examined and am familiar with the information submitted in this application and required attachments, and I hereby certify under penalty of law that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I also authorize the District to verify all information provided, including the water account/usage information from the water supplier, facility lease contracts, and other pertinent information.

I certify that upon issuance of the permit, that this firm's operation and its resultant wastewater discharge will achieve consistent compliance with the District's Ordinance and applicable Federal wastewater discharge requirements. If the wastewater discharge does not meet all the applicable regulations, the company will modify manufacturing equipment, limit production, limit industrial waste discharge, install wastewater pretreatment equipment, or do whatever is legally necessary to meet discharge requirements.

Y Responsible Officer/Designated Signatory (as specified on pages 6 and 7):

Name: Tim Hellem

Signature: 

Title: Supervisor, EH&S

Date: 03/30/2017

Email: Tim.Hellem@amway.com

Z Name of the person to contact concerning information provided in this application: ☐ Same as above

Name: Ashish Jain, CSP, CHMM

Address: 5600 Beach Blvd

Title: Senior EH&S Analyst

Phone: 714-562-4120

Email: Ashish.Jain1@amway.com

THIS IS MANDATORY.
Complete and return this form.

Certification of Responsible Officer

I, the undersigned, do hereby certify that I meet the definition of a Responsible Officer, as outlined below:

A responsible officer is defined as found in 40 CFR 403.12 (l)(1)(i):

1. For a Corporation:
   a. A President, Secretary, Treasurer or Vice President in charge of a principle business function or any other person who performs similar policy or decision making functions for the corporation, or
   b. The manager of one or more manufacturing, production, or operating facilities provided the manager is authorized to assure long term environmental compliance with environmental laws and regulations, and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. For partnership or sole proprietorship; a general partner or proprietor, respectively.
3. For a public agency; a general manager, department manager, or a supervisor of a public agency who performs policy or decision making functions for the public agency.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates.

Name of Responsible Officer: Audra J. Davies
(Please Print or Type)

Signature:  Date: 03/30/2017

Title: Site Leader Buena Park Operations / VP - R&D E-mail address: audra_davies@amway.com

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

NOTE: All correspondence regarding permit, enforcement, and self-monitoring issues (e.g., Self-Monitoring Forms and Reminder Letters, Notices of Violations, Permit Application, etc.) shall be sent to the Responsible Officer or to the Designated Signatory if properly authorized. If there is a change in the Responsible Officer or Designated Signatory in the future, the Districts must be notified in writing and the appropriate form must be submitted.

THIS IS OPTIONAL.
Submit this form only if the Responsible Officer wants to designate a Signatory.

Option to Designate Signatory

This is to authorize the individual whose name and title appear below,

Tim Hellem
Designated Signatory's Name

Supervisor, EH&S
Title

to be the designated individual responsible for wastewater discharges who can be served with notices, and who is the Designated Signatory on my behalf for purposes of signing all reports. This individual has the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that if, in the future, this information is no longer correct, the District will be notified in writing to terminate designation of the above-named individual and to establish a new signatory.

Name of Responsible Officer: Audra J. Davies

Signature:

Title: Site Leader Buena Park Operations / VP - R&D Date: 03/30/2017

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

A designated signatory is defined as found in 40 CFR 403.12 (l)(3)(ii):

1. An individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company, and;

2. Written authorization is submitted to the Source Control Permit Supervisor at the Orange County Sanitation Districts, and;

3. Written authorization must be submitted by a responsible corporate officer such as a President, Secretary, Treasurer, or Vice-President of the corporation in charge of a principal business function or any other person who performs similar decision-making functions for the corporation.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that it is my responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues.

Name of Designated Signatory: Tim Hellem

Signature: Date: 03/30/2017

Title: Supervisor, EH&S E-mail address: Tim.Hellem@amway.com

All correspondence regarding all permit and enforcement issues shall be sent to the Designated Signatory. It is the Designated Signatory's responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues. The Responsible Officer remains legally responsible for all wastewater discharge to the sewer from this facility and for ensuring that he is duly informed by the Designated Signatory.

INSTRUCTIONS

STEP 1. Please identify for each *Onsite Water Meter* at your facility.

- **Meter type** - Use the following descriptions to characterize your meter type(s).
  The **City Meter** is typically found outside at all buildings. This meter type, maintained by the water purveyor (city or local agency), is used to measure incoming water for potable, sanitary, landscaping, and industrial uses. The readings from these meters are used to determine the charges on the monthly or bi-monthly water bills. The **Process Meter** is located downstream of all drinking, sanitary, and landscaping uses. Process meters are typically installed to determine water usage to specific industrial processes. The **Effluent Meter** records the actual volume of wastewater discharged by the facility and is typically located at the discharge point near the designated sample point. The O.C. Sanitation District may require an effluent meter to determine daily flows for compliance verification, and/or to establish accurate sewerage service charges. The **Shop Meter** is often found in a multi-occupancy industrial strip that does not have individual city meters for each suite. Landlords who do not want to pay the water bill for a significant water user often install a meter on the outside of the shop. It is distinguished from the process meter in that it also meters the potable and sanitary flow, like a city meter. The water purveyor does not bill the user directly for water usage metered by a shop meter. The landlord will frequently bill the renter directly, based upon the shop meter volumes.

- **Digits/Fixed Zeros/Tenths** - Use the Digits, Fixed Zeros, and Tenths columns to record the current meter reading. Include the beginning digits, even if they are zero, as well as, the fixed zeros, or tenths designated by the arrow sweep. **Please visually read each meter. Do not provide values or volumes from the water bills.**
  Use the following the guidelines for Fixed Zeros and Tenths to provide assistance with reading and recording the information for several common meter variations. **Fixed Zeros** - On many water meter models the sweeping arrow records numerical units that are designated by the fixed zeros on the totalizer read-out. Use the three shaded columns designated Fixed Zeros to indicate that the meter's arrow sweep records single (0 - 9) digit, double (10 - 90) digit, or triple (100 - 900) digit values. **Tenths** - On many water meter models the dial numbers (selected by the arrow sweep), or the last digit of a totalizer read-out designates tenths of a gallon. Use the tenths column (implied by the decimal point) to indicate the meter records tenths of a gallon.

- **Units/Multiplier** - Indicate the meter units, Cubic Feet (Cu. Ft.) or Gallons. If applicable, indicate the multiplier factor (x 10 or x 100). **Do not confuse this with the typical billing unit (100 CF) on the monthly water bill.**
  Units - Most water meters register the volume of water in either cubic feet or gallons. Please indicate if your meter uses a different unit of measurement such as barrels, cubic meters, or acre feet. **Multiplier** - Occasionally the meter dial will indicate that a multiplier (X 10 or X 100) must be applied to the totalizer reading (this feature is more common on electronic flow instruments). Please indicate different multiplier factors as applicable.

- **Location** - Briefly describe the location of each meter.
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc., will all help our field staff verify the information by establishing vital reference points.

STEP 2. Attach a copy of the latest water bill for each city meter identified.

Include the beginning digits, even if they are zero, as well as, the fixed zeros, or tenths designated by the arrow sweep. **Please visually read each meter. Do not provide values or volumes from the water bills.**
  Use the following the guidelines for Fixed Zeros and Tenths to provide assistance with reading and recording the information for several common meter variations. **Fixed Zeros** - On many water meter models the sweeping arrow records numerical units that are designated by the fixed zeros on the totalizer read-out. Use the three shaded columns designated Fixed Zeros to indicate that the meter's arrow sweep records single (0 - 9) digit, double (10 - 90) digit, or triple (100 - 900) digit values. **Tenths** - On many water meter models the dial numbers (selected by the arrow sweep), or the last digit of a totalizer read-out designates tenths of a gallon. Use the tenths column (implied by the decimal point) to indicate the meter records tenths of a gallon.

- **Units/Multiplier** - Indicate the meter units, Cubic Feet (Cu. Ft.) or Gallons. If applicable, indicate the multiplier factor (x 10 or x 100). **Do not confuse this with the typical billing unit (100 CF) on the monthly water bill.**
  Units - Most water meters register the volume of water in either cubic feet or gallons. Please indicate if your meter uses a different unit of measurement such as barrels, cubic meters, or acre feet. **Multiplier** - Occasionally the meter dial will indicate that a multiplier (X 10 or X 100) must be applied to the totalizer reading (this feature is more common on electronic flow instruments). Please indicate different multiplier factors as applicable.

- **Location** - Briefly describe the location of each meter.
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc., will all help our field staff verify the information by establishing vital reference points.

STEP 2. Attach a copy of the latest water bill for each city meter identified.

(This form must be completed manually)

ATTACHMENT B

ITEMIZED CALCULATION OF WATER LOSSES

Losses refer to the incoming water used that does not go to the sewer. This includes water used for landscaping/irrigation, water evaporated from cooling towers, water evaporated from boilers in which condensate is not returned to the boiler, water evaporated from heated tanks or processes, wash water going to the storm drain, water actually added to your product, or any other processes where water does not go to the sewer. Calculate the losses as shown below:

I. LANDSCAPE/IRRIGATION LOSSES

Square Footage of Landscaped Area (ft^2)	x	Loss Factor 25 gal/sq. ft./yr.	÷	Number of Days per Year	=	Landscape Losses gal/day
	x	25	÷	365	=	

II. BOILER LOSSES FROM STEAM CONDENSATE NOT RETURNED TO BOILER

Boiler Horsepower based on 80% of boiler rating	x	Loss Factor 3.6 gal/hr/hp	x	No. of Operating hours/day	=	Boiler Losses gal/day
	x	3.6	x		=	

III. WATER EVAPORATION LOSSES FROM COOLING TOWERS

Tonnage hundred design tons	x	Loss Factor 2.5 gal/min/100 design tons	x	Number of Operating hours/day	x	Conversion Factor 60 min/hr	=	Cooling Tower Losses gal/day
	x	2.5	x		x	60	=	

Please see next page.

Attachment B.

Domestic Wastewater Estimation

i) Restrooms:

Restrooms at the facility are rated at 1.6 gpf. It is assumed a person flushes 5 times a day (USGS, 2014).
Therefore, the daily domestic wastewater flow per person is:

$$1.6\ \frac{\text{gals}}{\text{flush}} \times 5\ \frac{\text{flushs}}{\text{day}} = 8\ \frac{\text{gal}}{\text{day}} \text{ per person}$$

This rate is multiplied by number of people in each applicable building.

ii) Kitchen use and handwashing:

Include an additional 2 gals/day per person.

$$8\ \frac{\text{gals}}{\text{day}} + 2\ \frac{\text{gal}}{\text{day}} = 10\ \frac{\text{gals}}{\text{day}} \text{ per person}$$

This rate is multiplied by number of people in each applicable building.

iii) Gym:

Shower water use at 2.5 gpm/person (USGS, 2014). Estimate 50 people use gym every 24 hours but only 50% use showers.

$$25\ \frac{\text{people}}{\text{day}} \times 2.5\ \frac{\text{gal}}{\text{min}} \times 10\ \frac{\text{min}}{\text{shower}} = 625\ \frac{\text{gal}}{\text{day}}$$

Boilers:

Steam generated by boilers

i) 2 Bryan Boilers, Model #RV800-S-150-FDG-LX, 191 hp each, maximum 8 MMBTU/hr

Steam generated by a boiler = boiler hp x 34.5 $\frac{lb}{hr}$

= 191 hp x 34.5 $\frac{lb}{hr}$ x 2 boilers

= 13,179 $\frac{lb}{hr}$ (boiler specs state 13,196 lbs/hr)

Convert mass flowrate to volumetric flowrate = steam mass flow x density

= 13,179 $\frac{lb}{hr}$ x $\frac{1}{8.34}\frac{gal}{lb}$ x $\frac{1}{60}\frac{hr}{min}$

GPM = 26 $\frac{gal}{min}$

or = 26 $\frac{gal}{min}$ x 60 $\frac{min}{hr}$ x 24 $\frac{hrs}{day}$

GPD = 37,925 $\frac{gal}{day}$ steam generated by both boilers

Evaporation Rate = # of boilers x boiler hp x 0.069 $\frac{gal}{min}$

= 2 boilers x 191 hp x 0.069 $\frac{gal}{min}$

= 26 $\frac{lb}{hr}$

= 26 $\frac{lb}{hr}$ x $\frac{1}{8.34}\frac{gal}{lb}$ x 24 $\frac{hrs}{day}$

= 633 $\frac{gal}{day}$

There are 5 outdoor EVAPCO cooling towers that service the 3 chiller units located indoors. The cooling towers/chiller system operates 7/24/350.

Inlet water flow to all cooling towers = 199,000 gal over 8 days

or $24{,}875 \frac{\text{gal}}{\text{day}}$

or $24{,}875 \frac{\text{gal}}{\text{day}} \times \frac{\text{day}}{24 \text{ hrs}} \times \frac{\text{hr}}{60 \text{ min}}$

$= 17.3 \frac{\text{gal}}{\text{min}}$

Cooling towers evaporation:	400 tons*	x	0.03 $\frac{\text{gal}}{\text{min}}$	x	60 $\frac{\text{min}}{\text{hr}}$	x	24 $\frac{\text{hrs}}{\text{day}}$	=	14,400 $\frac{\text{gal}}{\text{day}}$

*400 tons ave capacity given by Levonne Moore.

Cooling towers 20% blowdown to POTW:	24,875 $\frac{\text{gal}}{\text{day}}$	x	0.2 % BD	=	4,975 $\frac{\text{gal}}{\text{day}}$

Makeup water:

Makeup Water	=	Evaporation Rate	+	Blowdown Rate			
Makeup Water	=	14,400 $\frac{\text{gal}}{\text{day}}$	+	4,975 $\frac{\text{gal}}{\text{day}}$	=	19,375 $\frac{\text{gal}}{\text{day}}$

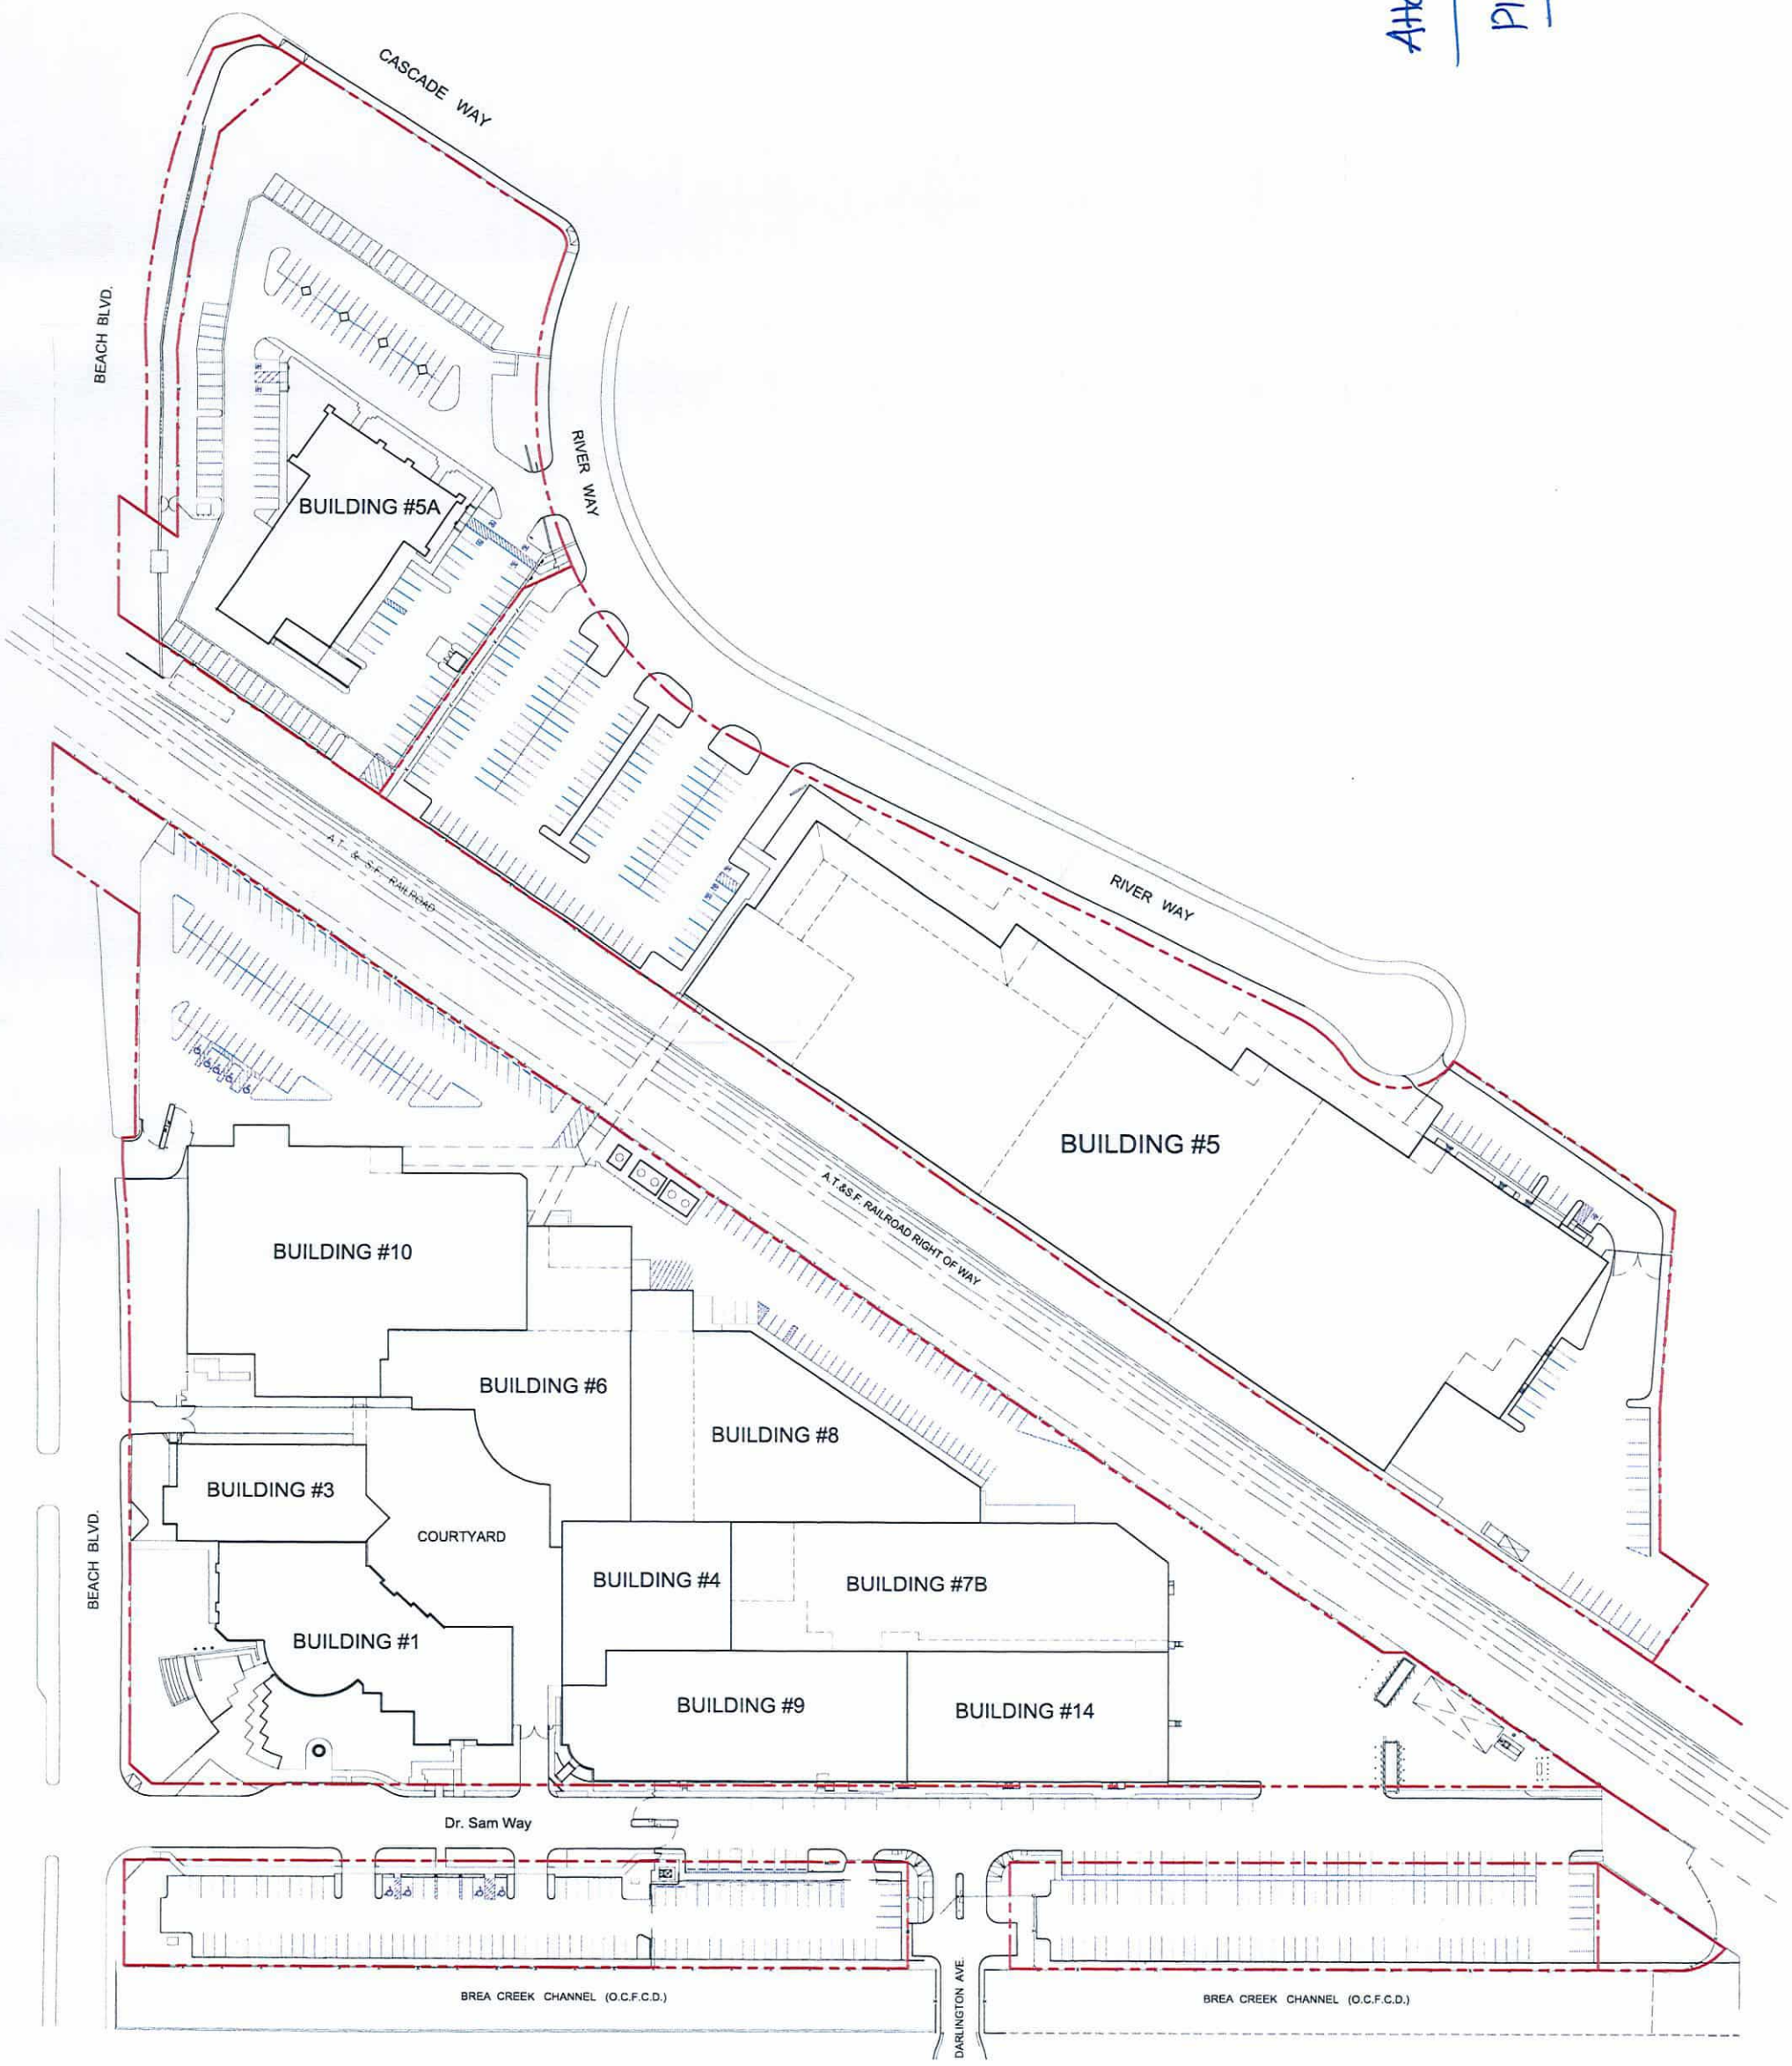
Attachment C

The facility is divided into the South Campus (5600 Beach Blvd.) and the North Campus (5609 River Way). A site plan of the facility is presented as Figure 1.



The South Campus: Raw materials are stored in buildings B8 and B14. Building B1 contains the Nutrilite Health Institute and also includes administrative offices. Building B3 is used for QA/QC. Building B4 includes the maintenance shop, a gymnasium and administrative offices. The Cafeteria, R&D support staff and the EH&S department are located in building B6. The receiving department, forklift battery charging activities, and a pilot plant are located in building B7. Raw materials are delivered at the facility in both powdered and liquid forms, and manufactured/ processed in buildings B6, B9 and B10 to form tablets.

The North Campus: Building B5A is used for administrative purposes. Building B5-1 is used for packaging finished product and warehousing. Buildings B5-2 and B5-3 are used for warehousing finished product, and building B5-3 also contains the shipping department.

This permit application is for the South Complex. Manufacturing activities consist of blending raw materials (building B6) and compressing them into dry tablets, coating of tablets, and encapsulating fish oils into soft gel capsules (building B10). Building B9 houses the R&D laboratory and the granulation process. The granulation process facilitates powder particles to adhere to each other in the formation of tablets. Equipment and rooms used in manufacturing are cleaned with hot water and diluted detergents (A222, A300, A335, A781Q and Sani-Wise 6) to remove residual powder and when changing product type. Equipment is either washed in place or removed to a dedicated wash room. Wash waters generated are discharged via floor drains in equipment and wash rooms. Facility floor drains discharge directly to the sanitary sewer. Copies of the MSDS of the above referenced detergents are provided in Attachment D.

2. Ingredient Information

Chemical Name	CAS	Wt. %	PEL Unit	TLV Unit	Source*
Potassium Hydroxide	1310-58-3	9.44%	2mg/m3	2mg/m3	B
Sodium Hypochlorite	7681-52-9	32.4%	N/E	N/E	B

*Source codes: A-Reportable under SARA Title III, section 313
B-Defined by OSHA as hazardous or toxic

3. Physical Data

Boiling Point(° F): 212
Vapor Pressure(mm Hg): N/A
Vapor Density(air=1): N/A
Solubility in Water: Soluble
Specific Gravity(water = 1): 1.163
Percent Volatile: 78
Evaporation Rate (water = 1): 1
pH: 12.8
Color: Straw
Odor: Chlorine/Surfactant

4. Fire and Explosion Hazard

Flash Point (° F): None **Method:** TCC
Flammable Limits (%): UEL: N/A **LEL:** N/A
Extinguishing Media: Water, foam, Co2, dry chemical
Special Firefighting Procedures: None
Unusual Fire and Explosion Hazards: None
Hazard Ratings: Health: 2 **Fire:** 0 **Reactivity:** 0

5. Health Hazard Data

Probable Routes of Exposure: Eye/Skin Contact
Effects of Overexposure, Acute and Chronic: Repeated or prolonged exposure may cause extreme eye/skin irritation. Ingestion is harmful and may be fatal.
Emergency and First Aid Procedures:

Eye contact: Remove contact lenses if worn. Flush eyes with clean water for 15 minutes. Get medical attention.
Skin contact: Wash with water. If irritation occurs, get medical attention.
Ingestion: Do not induce vomiting. Get immediate medical attention.
Inhalation: Remove to fresh air. Consult a physician.

6. Reactivity Data

Stability: Stable
Incompatibility - Conditions to avoid: High temperature
Materials to avoid: Acids, ammonia or ammoniated products.
Hazardous polymerization: Will not occur
Hazardous Decomposition Products: Carbon dioxide, carbon monoxide, chlorine.

7. Spill/Leak Control Procedures

Release or Spill Procedure: Contain spill. Mop up or absorb onto absorbent material and collect for disposal.
Waste Disposal Method: Dispose of in accordance with all local, State and Federal Regulations.

8. Personal Protection Information

Specific Respiratory Equipment: None required
Ventilation: Use with adequate ventilation.
Personal Protective Equipment: Rubber or neoprene gloves recommended if contact is likely. Safety goggles recommended if splashing is likely.

9. Special Precautions

Handling and Storage: Avoid contact with skin. Rinse empty containers before discarding. Do not reuse empty containers. Keep containers closed when not in use.

Keep Out of Reach of Children

10. Shipping Information

Proper Shipping Name: Corrosive Liquids, N.O.S. Contains Potassium Hydroxide and Sodium Hypochlorite.
Hazard Class: 8
ID Number: UN1760
Packaging Group: II
Shipping Label: Corrosive

For Emergency Information, Call:

1-800-535-5053 (available 24 hours/day)

*Source codes: A-Reportable under SARA Title III, section 313
B-Defined by OSHA as hazardous or toxic

3. Physical Data

Boiling Point(° F): 212
Vapor Pressure(mm Hg): N/A
Vapor Density(air=1): N/A
Solubility in Water: Soluble
Specific Gravity(water = 1): 0.989
Percent Volatile: 90.00
Evaporation Rate (water = 1): 1
pH: 7.2
Color: Red
Odor: Odorless

4. Fire and Explosion Hazard

Flash Point (° F): none **Method:** TCC
Flammable Limits (° F): UEL: N/A **LEL:** N/A
Extinguishing Media: Water, Foam, CO_2, Dry Chemical
Special Firefighting Procedures: None
Unusual Fire and Explosion Hazards: None
Hazard Ratings: Health: 3 **Fire:** 0 **Reactivity:** 0

5. Health Hazard Data

Probable Routes of Exposure: Skin/Eye contact
Effects of Overexposure, Acute and Chronic: Eye/skin contact may be irritating. Ingestion may be harmful. Repeated or prolonged contact may cause irritation or dermatitis
Emergency and First Aid Procedures:

Eye contact: Remove contact lenses if worn. Flush eyes with clean water for 15 minutes. Get medical attention.
Skin contact: Wash with water. If irritation occurs, get medical attention.
Ingestion: Do not induce vomiting. Get immediate medical attention.
Inhalation: Remove to fresh air. Consult a physician.

6. Reactivity Data

Stability: Stable
Incompatibility - Conditions to avoid: none
Materials to avoid: none
Hazardous polymerization: will not occur
Hazardous Decomposition Products: none known

7. Spill/Leak Control Procedures

Release or Spill Procedure: Contain spill. Mop up or absorb onto absorbent material and collect for disposal.
Waste Disposal Method: Dispose of in accordance with Local, State and Federal regulations.

8. Personal Protection Information

Specific Respiratory Equipment: none required
Ventilation: No special ventilation required.
Personal Protective Equipment: Rubber or neoprene gloves should be worn. Safety glasses or goggles recommended if splashing is likely.

9. Special Precautions

Handling and Storage: Avoid contact with skin. Rinse empty containers before discarding. Do not reuse empty containers. Keep containers closed when not in use.

Keep Out of Reach of Children

10. Shipping Information

Proper Shipping Name: Disinfectant Corrosive Liquid, N.O.S. (Quaternary Ammonium Compounds), 8, UN 1903, PG II
Hazard Class: 8 Corrosive
ID Number: UN1903
Packaging Group: II
Shipping Label: Corrosive

For Emergency Information, Call:

1-800-535-5053 (available 24 hours/day)

All statements, information, and data given are believed to be accurate and reliable as of the date of this Material Safety Data Sheet, but are presented without guaranty, warranty or responsibility of any kind, expressed or implied on our part. It is not intended to be all-inclusive and the manner and conditions of use and handling may involve other additional considerations. Information regarding the proper course of treatment in the event of an accident or misuse of this product is properly the domain of the attending physician.

Buena Park, CA 90621

SUBJECT: Issuance of Class I Industrial Wastewater Discharge Permit No. 1-531435

Enclosed is the renewed Industrial Wastewater Discharge Permit No. 1-531435 issued by the Orange County Sanitation District (OCSD) to Access Business Group, LLC (Access Business Group) for the facility located at 5600 Beach Blvd in Buena Park. Access Business Group is required to comply with the permit limits and conditions set forth in this permit at all times. Please see:

- Part 2 of the permit for self-monitoring requirements for pharmaceutical categorical constituents, including: acetone (ASTM Methods D3695/D4763 or EPA Method 524.2), methylene chloride (EPA Methods 502.2/524.2), as well as n-amyl acetate, ethyl acetate, and isopropyl acetate (EPA Method 1666 or ASTM Method D3695).
- Part 4 of the permit for reporting requirements concerning the Slug Discharge Control Plan. Access Business Group is required to develop and implement an accidental discharge/slug control plan (Slug Discharge Control Plan), or utilize an existing equivalent response plan, which is in accordance with the requirements of this permit and OCSD's Wastewater Discharge Regulations (Ordinance OCSD-48). Alternatively, permittee can certify that the facility does not have a potential or need to discharge to the sewer during non-routine events using Form A. To certify an existing plan as an equivalent plan, please submit the attached Form B: Certification of Equivalent Slug Control Plan (green sheet). To develop an OCSD approved Slug Control Plan, submit and complete the plan and Form C: Certification of Slug Control Plan (yellow sheet). In addition, please update the Government Agency Notification List in Access Business Group's existing plan (Form B option) to include OCSD's Control Center phone number & the notification list's posted location and/or complete the attached Form D (purple sheet). One of the above options must be completed by **August 1st, 2017**. Please see the attached Slug Control Plan packet for guidance.

In accordance with Section 302.4 of the OCSD's *Wastewater Discharge Regulations* (Ordinance No. OCSD-48), OCSD has revised the permit flowbase to 44,000 gallons per day, as well as recalculated daily maximum and loading limits based on contributing dilution flow. This change results in a reduction of the permitted limits, effective August 1, 2017. Please see Parts 1A and 1B of the permit for the new limits.

If there are any discrepancies with the information described on the permit, please notify OCSD in writing. Access Business Group is also required to notify OCSD in writing of any changes relating to company information, manufacturing processes, pretreatment modification, waste/wastewater quantity, sampling point location, piping modification, or any other relevant information. Failure to do so is in violation of your permit.

If you have any questions, please contact the undersigned at (714) 593-7013.

INDUSTRIAL WASTEWATER DISCHARGE CLASS I PERMIT

Permit No: 1-531435

FOR DISCHARGE OF WASTEWATER ISSUED BY ORANGE COUNTY SANITATION DISTRICT

In accordance with the provisions of the Wastewater Discharge Regulations of Orange County Sanitation District, herein referred to as "OCSD",

Access Business Group, LLC
5600 Beach Blvd.
Buena Park, CA 90621

hereinafter referred to as "Permittee", is hereby authorized to discharge industrial wastewater from the above identified facility into OCSD's sewer system in accordance with the conditions set forth in this permit. Such conditions are as specified in the following parts of this permit:

Part 1 - Effluent Limits and Flow Basis
Part 2 - Monitoring, Notification, and Reporting Requirements
Part 3 - Standard Conditions
Part 4 - Special Conditions

Compliance with this permit does not relieve the Permittee of its obligation to comply with OCSD's current Wastewater Discharge Regulations, any applicable pretreatment regulations, standards or requirements under local, State, and Federal laws, including any such regulations, standards, requirements or laws that may become effective during the term of this permit. Non-compliance with any term or condition of this permit constitutes a violation of the current Wastewater Discharge Regulations.

This permit shall become effective on June 01, 2017 and shall expire on May 31, 2019.

By: Roya Sohanaki

(714) 962-2411

PART 1A. EFFLUENT LIMITS AND FLOW BASIS

During the period from June 01, 2017 to July 31, 2017, Permittee is authorized to discharge industrial wastewater into the sewer system tributary to OCSD's sewerage facilities. The effluent discharge shall not exceed either the following concentration limits in mg/L or the mass emission rate limits in lbs/day. If your mass emission rate is based on flow, then your flow base is presumed to be 5000 gallons per day (gpd) of wastewater flow at the sampling point.

Company Name: Access Business Group, LLC			**Permit No.:** 1-531435
Sewer Address: 5600 Beach Blvd. Buena Park, CA 90621	**Flow Base:**	5000 GPD	**Effective Date:** 6/1/2017
	WWAR Percent Loss:	0 %	**Expiration Date:** 7/31/2017
	WWAR Fixed Loss:	0 GPD	
Category: Pharmaceutical Manufacturing	**Subcategory:** 40 CFR § 439.47 PSNS		**Subpart:** D: Mixing/Compounding and Formulation

DISCHARGE LIMITS

SAMPLING POINT LOCATION: The above effluent limits apply at the sampling point located between the entrance doors to Bldg 3 and 10. The sample point is a manhole and represents all industrial wastewater discharge from the facility.

§ Combined waste stream formula

Cyanide limits apply at the sampling point after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the sample must be taken at the end of the cyanide process before dilution with other process streams. In the absence of cyanide process, the limits apply at the sampling point location described above (end of pipe).

PART 1B. EFFLUENT LIMITS AND FLOW BASIS

During the period from August 01, 2017 to May 31, 2019, Permittee is authorized to discharge industrial wastewater into the sewer system tributary to OCSD's sewerage facilities. The effluent discharge shall not exceed either the following concentration limits in mg/L or the mass emission rate limits in lbs/day. If your mass emission rate is based on flow, then your flow base is presumed to be 44000 gallons per day (gpd) of wastewater flow at the sampling point.

SAMPLING POINT LOCATION: The above effluent limits apply at the sampling point located between the entrance doors to Bldg 3 and 10. The sample point is a manhole and represents all industrial wastewater discharge from the facility.

§ Combined waste stream formula

Cyanide limits apply at the sampling point after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the sample must be taken at the end of the cyanide process before dilution with other process streams. In the absence of cyanide process, the limits apply at the sampling point location described above (end of pipe).

PART 2. SELF-MONITORING, NOTIFICATION AND REPORTING REQUIREMENTS

I. SELF-MONITORING REQUIREMENTS

Permittee shall conduct monitoring of its own wastewater effluent for the purpose of determining the status of compliance/non-compliance and user charges. Based on the results, Permittee shall make the necessary adjustments/corrections to bring the wastewater discharge into immediate compliance with its permitted limits. The specific requirements are as follows:

A. Monitoring/Sampling Requirements

From the effective date of the permit and until the permit is terminated or revised, Permittee shall monitor its wastewater discharge for the following parameters at the indicated frequency

Parameters	Measurement Frequency	Sample Type [2]	Procedure [3]
Organics[4] :			
Acetone	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Ethyl acetate	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Isopropyl acetate	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
methylene chloride	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
n-amyl acetate	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed

[1] **NOTE: To the extent that special conditions in Part 4 of this permit require more extensive self monitoring, the special conditions shall apply.**

[2] Sample type is either composite or grab as defined in current Wastewater Discharge Regulations under Section 102.
[3] Flow should be measured concurrently with composite sampling. pH should be measured with all sampling.
[4] See Attachment A Section 3c for a list of Total Toxic Organic constituents, if applicable.

B. Representative Sampling and Laboratory Analyses

Samples and measurements taken as required herein shall be representative of the volume and nature of the regulated industrial discharge during hours of production. All samples shall be taken at the sampling point location as designated in this permit. All equipment used for sampling and analysis must be routinely calibrated, inspected, and maintained to ensure its accuracy. All sampling and laboratory analyses shall be conducted in accordance with Attachment A.

C. **Frequency, Sampling Schedule and Due Dates for Submission of Reports**

Sampling of wastewater effluent and reporting of results shall be done in accordance with the schedule shown below. Sampling may be performed any day within the specified date range as designated in this permit. If sampling cannot be conducted within the specified date for any valid reason, OCSD must be notified in advance and in writing, of the reason(s) for the inability to sample and the new proposed sampling date.

1. **Quarterly and Semi-Annual Frequency Deadlines**

None	-	

2. **Monthly, Weekly, and Daily Frequency Deadlines**

a. Samples must be collected in accordance with the requirements specified in Part 2 Section A, as applicable.

b. Depending on the self-monitoring frequency, sampling must be conducted in the following manner, as applicable:

(i) **Monthly Self-Monitoring**
A sample of the wastewater effluent shall be collected and analyzed a minimum of one (1) sampling day per month. The sampling day shall be rotated to the successively different plant operational day during each month of monitoring.

(i) **Weekly Self-Monitoring**
A sample of the wastewater effluent shall be collected and analyzed a minimum of four (4) sampling days per month (once a week). The sampling day shall be rotated to the successively different plant operational day during each week of monitoring.

(i) **Daily Self-Monitoring**
A sample of the wastewater effluent shall be collected and analyzed each day of discharge each month.

c. Reporting of monthly, weekly, and daily self-monitoring results must be done on a monthly basis. Self-monitoring reports must be submitted by the twentieth (20th) day of the month following sampling.

D. Requirements for Reporting Results

1. **Self-Monitoring Reports**

Permittee shall submit a Self-Monitoring Report (SMR) on the date(s) specified above. Monitoring results shall be summarized and reported on an OCSD SMR form. OCSD will not accept formats other than what is shown in the SMR form; therefore, forms provided by OCSD or replicates must be used for reporting of results. Failure to receive the SMR forms does not relieve Permittee from the obligation to perform the self-monitoring and submit the report on the required date. The SMR form shall be completely filled-out, with copies of all laboratory results attached. The report shall indicate the concentration of all pollutants in the effluent for which sampling and analyses were performed, including water meter readings required for flow measurement.

If sampling performed by the permittee indicates a violation, the permittee shall notify the Resource Protection Division within 24 hours of becoming aware of the violation. The reporting may be accomplished by a telephone call, fax transmission, e-mail, or a personal visit to the Resource Protection Division. The violation reporting shall contain the date and time of the wastewater sample, the discharge flow for the sample, a possible explanation for the violation(s), and the date scheduled for the resample.

2. **Signatory Requirements**

Prior to submittal of the SMR to OCSD, the results shall be verified and signed under penalty of perjury, by an authorized company official as defined in 40 CFR 403.

E. Additional Monitoring Requirements in Response to Non-compliance

1. **Resampling**

   Upon submission of the SMR to OCSD by the required due date, OCSD will process the results for mass emission rate calculations, review the concentration results, and notify Permittee of the results. If the results indicate that a violation of the applicable concentration and/or mass discharge limits has occurred, a Notice of Violation will be issued and Permittee must repeat the sampling and pollutant analyses of the required parameters, and submit the results of the repeat analysis to OCSD within 30 days after becoming aware of the violation.

2. **Reporting**

   a. The monitoring results shall be submitted as specified in E.1.

   b. The requirements for reporting results, as described in D.1 and D.2, shall be followed for the additional monitoring requirements in response to non-compliance.

F. Requirements for Reporting Results of Voluntary Self-Monitoring

1. Any voluntary self-monitoring sample of the effluent obtained during a 24-hour period from the representative sampling point location identified in Part 1 of this permit, that is collected and analyzed in accordance with the guidelines shown in Attachment A, constitutes a valid sample. Results of the analysis for all valid samples shall be reported to OCSD, regardless of the outcome.

2. Self-monitoring results for all valid samples must be submitted using an official numbered Voluntary Self-Monitoring Report (VSMR) Form and received by OCSD within 30 days from the day the sampling event was concluded. Permittee shall obtain the official VSMR Form from OCSD, with a unique tracking/identification number for each day of self-monitoring.

3. OCSD will not consider VSMR Forms received after 30 days from the day the sampling event was concluded. Exceptions to the 30-day submittal policy due to extenuating circumstances or special situations shall be authorized by the OCSD's General Manager or his/her designee.

4. Upon submission of the completed VSMR Form to OCSD by the required 30-day due date, OCSD will evaluate the sample results to determine compliance. If the results indicate that a violation of the applicable discharge limits has occurred, a notice of violation may be issued requiring Permittee to implement corrective measures.

II. NOTIFICATION REQUIREMENTS

A. Permittee shall comply with the notification requirements set forth in the current Wastewater Discharge Regulations:

1. Notification of Spill and Slug Loading

a. In the event Permittee is unable to comply with any permit condition due to a breakdown of equipment, accidents, or human error, or Permittee has reasonable opportunity to know that his discharge will exceed the discharge provisions of the user's permit, Permittee shall immediately notify OCSD by telephone. If the material discharged to the sewer has the potential to cause or result in a fire or explosion hazard, Permittee shall immediately notify the local fire department and OCSD.

b. Confirmation of this notification shall be made in writing no later than five (5) working days from the date of the incident. The written notification shall state the date of the incident, the reasons for the discharge or spill, what steps were taken to immediately correct the problem, and what steps are being taken to prevent the problem from recurring.

c. Such notification shall not relieve the user of any expense, loss, damage or other liability which may be incurred as a result of damage or loss to OCSD or any other damage or loss to person or property; nor shall such notification relieve the user of any fees or other liability which may be imposed by a OCSD's Ordinance or other applicable law.

2. Notification of Bypass

a. Bypass of industrial wastewater to the sewer system is prohibited. OCSD may take enforcement action against the user, unless:

(i) Bypass was unavoidable because it was done to prevent loss of life, personal injury, or severe property damage;

(ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, elective slow-down or shut-down of production units or maintenance during periods of production downtime. This condition is not satisfied if adequate backup equipment could have been feasibly installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventative maintenance; and,

(iii) Permittee submitted notices as required under 2.b.

b. If Permittee knows in advance of the need for a bypass, it shall submit a written request to allow the bypass to OCSD, if possible, at least ten (10) days before the date of the bypass.

c. OCSD may approve an anticipated bypass at its sole discretion after considering its adverse effects, and OCSD determines that the conditions listed in 2.a.(i-iii) are met.

d. Permittee shall provide telephone notification to OCSD of an unanticipated bypass that exceeds its permitted discharge limits within four hours from the time Permittee becomes aware of the bypass. A written report shall also be provided within five (5) days of the time Permittee becomes aware or could reasonably have been aware of the bypass. The report shall contain a description of the bypass and its cause; the duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the bypass. Failure to submit oral notice or written report may be grounds for permit revocation.

B. Notification regarding Planned Changes

Permittee shall notify OCSD 90 days in advance prior to any facility expansion, production increase, or process modifications which may result in new or substantially increased discharges or a change in the nature of the discharge. Permittee shall notify OCDS in writing of the proposed expansion and shall submit any information requested by OCSD for evaluation of the effect of such expansion on the Permittee's discharge to the sewer system.

II. OTHER REPORTING REQUIREMENTS

A. Slug Discharge Control Plan

Permittee shall develop, maintain and implement in accordance with 40 CFR 403.8(f)(2)(v) a Slug Control Plan to respond to spills, emergency bypass and any accidental discharges that may result in a violation of any permit limits or conditions, or may significantly exceed the normal flow to the sewer system or pollutant loading. The plan shall contain detailed procedures to be followed by permittee in responding to a slug discharge at the Permittee's facility. The procedures shall include provisions to eliminate endangerment of human health and safety by containment and clean up of the slug discharge, and prevent any violation of Permittee's discharge limits and OCSD's Wastewater Discharge Regulations (Ordinances). The Plan shall also provide procedures and facilitate immediate notification to OCSD of a slug discharge event.

Permittee shall review and update the Slug Control Plan every two years.

The Slug Discharge Control Plan, at a minimum, must contain the following:

1. Description of the permittee's sewer discharge practices including non-routine batch discharges.
2. Description of stored chemicals including type and characteristic, volume, and chemical hazard classification.
3. Procedures to prevent slug discharges to the sewer system.
4. Description of equipment for responding to slug discharges.
5. Procedures for inspection and maintenance of the chemical storage areas to assure proper daily handling.
6. A copy of an operation log sheet recording the maintenance performed, volume of spill, and corrective measures taken.
7. Procedures for proper training of key personnel for handling slug discharges.
8. Emergency telephone numbers for promptly reporting slug discharges to the appropriate governmental agencies.

B. Waste Minimization Requirement

Upon request by OCSD, Permittee shall provide waste minimization plans to conserve water, investigate product substitution, provide inventory control, implement employee education, and other steps as necessary to minimize waste produced.

C. Water and Tax Bill Submittal

Permittee shall submit to OCSD, copies of Water and Tax Bills within 30 days of receipt of such bills.

D. Changes in Company Information

Permittee shall immediately inform OCSD of any changes or inaccuracies in the following company information which is currently on file:

COMPANY NAME: Access Business Group, LLC	**PHONE:** 714-562-1830 **FAX:** 714-736-7610	**LOCAL SEWERING AGENCY:** City of Buena Park
MAILING ADDRESS: 5600 Beach Blvd Buena Park, CA 90621	**RESPONSIBLE OFFICER:** Audra Davies Site Leader Buena Park Oper. / VP-R&D	**NO. OF EMPLOYEES:** 485 **WORK DAYS/YEAR:** 220
SERVICE ADDRESS: 5600 Beach Blvd. Buena Park, CA 90621	**AUTHORIZED REPRESENTATIVE / DESIGNATED SIGNATORY:** Tim Hellem Supervisor. EH&S	**N.A.I.C.S NUMBER:** 325412
SERVICE AREA:	**REVENUE AREA:** 53	

E. Falsifying Information

Knowingly making any false statement on any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate is a crime and may result in the imposition of criminal sanctions and/or civil penalties.

PART 3. STANDARD CONDITIONS

I. PROHIBITIONS, LIMITS AND REQUIREMENTS

Permittee is required to comply with the prohibitions and limits on discharges set forth in Article 2 of the current Wastewater Discharge Regulations:

A. Prohibited Discharges
B. Prohibition on Dilution
C. Prohibition on Surface Runoff and Groundwater
D. Prohibition on Unpolluted Water
E. Prohibition on the Use of Grinders
F. Prohibition on Point of Discharge
G. Prohibition on Medical Waste
H. Prohibition on Disposal of Spent Solutions and Sludges

II. CIVIL PENALTIES

All users of OCSD's system and facilities are subject to enforcement actions administratively or judicially by OCSD, U.S. EPA, State of California Regional Water Quality Control Board, or the County of Orange District Attorney.

Any person who violates any provision of the current Wastewater Discharge Regulations; or any permit condition, prohibition or effluent limitation; or any suspension or revocation order shall be liable civilly for a sum not to exceed $25,000.000 per violation, for each day in which such violation occurs.

A. Administrative Civil Penalties

Administrative Civil Penalties may be assessed as follows:

1.) In an amount which shall not exceed two thousand dollars ($2,000.00) for each day for failing or refusing to furnish technical or monitoring reports;

2.) In an amount which shall not exceed three thousand dollars ($3,000.00) for each day for failing or refusing to timely comply with any compliance schedules established by OCSD;

3.) In an amount which shall not exceed five thousand dollars ($5,000.00) per violation for each day of discharge in violation of any waste discharge limit, permit condition, or requirement issued, reissued, or adopted by OCSD;

4.) In any amount which does not exceed ten dollars ($10.00) per gallon for discharges in violation of any suspension, revocation, cease and desist order or other orders, or prohibition issued, or adopted by OCSD.

III. CRIMINAL PENALTIES

Any person who violates any provision of the Ordinance is guilty of a misdemeanor which upon conviction is punishable by a fine not to exceed $1,000.00 or imprisonment for not more than thirty (30) days, or both. Each violation and each day in which a violation occurs may constitute a new and separate violation.

IV. SEVERABILITY

The provisions of this permit are severable. If any provision of these permit limits and/or requirements, or the application thereof, to the Permittee is held invalid, the remainder of the permit limits and/or requirements shall remain in full force and effect.

V. OTHER CONDITIONS

A. Permittee is required to comply with all regulations and discharge limits in the current Wastewater Discharge Regulations and any attachments to this permit.

B. Except as expressly authorized by OCSD, upon the sale or transfer of ownership of the business for which this permit is issued, this permit shall be void. The permittee shall notify OCSD in writing prior to the transfer of ownership and shall give a copy of the existing permit to the new owner or operator.

C. Issued Permits are for a specific user, for a specific operation at a specific location, create no vested rights, and are non-transferable unless conditions as stated in the Ordinance are met. If transfer is allowed, a copy of the existing permit must be given to the new owner or operator. Industrial Wastewater Discharge permits, their concentration limits or their mass emission rates shall not be transferred for an operation at a different location.

D. Permittee shall maintain plant records relating to wastewater discharge and waste manifests for a minimum of three years.

PART 4. SPECIAL CONDITIONS FOR PERMIT NO. 1-531435

1. **Permittee is required to develop and implement an accidental discharge/slug control plan (Slug Discharge Control Plan), or utilize an existing equivalent response plan, which is in accordance with the requirements of this permit (Part 2 Section III.A.) and OCSD's Wastewater Discharge Regulations (Ordinance OCSD-48). Alternatively, permittee can certify that the facility does not have a potential or need to discharge to the sewer during non-routine events. The appropriate Slug Control forms must be submitted to OCSD by August 1st, 2017. Please see the attached Slug Control Plan requirements for your guidance.**

PERMIT NO. 1-531435

Access Business Group, LLC

ATTACHMENT A
PERMIT NO. 1-531435
Access Business Group, LLC

SELF-MONITORING REQUIREMENTS

1. **Sampling and Analyzing of Heavy Metals**

   a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent for heavy metals at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15-minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

   b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

   Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

   b. **Laboratory Analyses.** All wastewater samples shall be analyzed in accordance with the appropriate procedures contained in 40 CFR 136. Where 40 CFR 136 does not include sampling or analytical techniques for the pollutants in question, analyses shall be performed using the most current edition of "*Standard Methods for the Examination of Water and Wastewater*". Wastewater analysis shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon OCSD's request, Permittee shall obtain from its laboratory and furnish to OCSD, information regarding test methods and equipment used, including quality assurance/quality control (QA/QC) information. Other information deemed necessary by OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

2. **Sampling and Analyzing for Cyanides**

   a. **Sampling.** Permittee shall collect and analyze a sample of its wastewater effluent for cyanides at a frequency specified in **Part 2** of the Permit. All sampling for cyanide must be conducted by taking grab samples of the wastewater after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the samples must be taken at the end of the cyanide process before dilution with other process streams. A minimum of four grab samples shall be taken independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques in accordance with EPA requirements must be used to ensure representative sample results.

   b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed for cyanides in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

3. **Sampling and Analysis for Total Toxic Organics (TTOs)**

a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point for TTOs at a frequency specified in **Part 2** of the permit. All effluent sampling for volatile organic compounds must be conducted by taking grab samples of the wastewater effluent. A minimum of four grab samples shall be taken independently during hours of operation within a 24 hour period. Each sample shall be analyzed independently for toxic organic constituents present in the facility. The average concentration from the four grab sample results with concentrations greater than 10 µg/L shall be used to determine compliance with TTOs mass emission and/or concentration limits.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods (i.e., for Purgeable Halocarbons and Aromatics, use Methods 601 and 602, or 624). Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

c. **TTO Constituents.** The TTO limit is a summation of individual values greater than 0.01 milligrams per liter for the following organics:

NA

4. **Sampling and Analyzing of BOD and TSS**

a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent at the sample point for BOD and TSS at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15 -minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

c. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

5. **Sampling and Analyzing for Oil and Grease of Mineral or Petroleum Origin (O&G-M)**

a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point location for O&G-M at a frequency specified in **Part 2** of the permit. A minimum of four grab samples shall be taken

independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques, in accordance with EPA requirements, must be used to ensure representative results.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

IMPORTANT NOTICE

March 5, 2019

Audra Davies, Site Leader Buena Park Oper. / VP-R&D
Access Business Group, LLC
5600 Beach Blvd
Buena Park, CA 90621

SUBJECT: Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This is a notification that Permit No **1-531435** issued to Access Business Group, LLC will expire on **May 31, 2019**. Please complete and return the enclosed Permit Renewal Application Form to the Orange County Sanitation District (OCSD) by **March 31, 2019**. OCSD's Financial Management Division will generate an invoice for the permit fee and it will be mailed to your Accounts Payable Department under a separate cover. **The permit fee is due at the time the permit renewal application is submitted, but should be submitted with the invoice, not the application. Only a photocopy of the check must accompany the Permit Renewal Application. OCSD will not process the Permit Renewal Application without proof of payment.**

As part of the permit renewal process, OCSD's staff will conduct a comprehensive evaluation of your manufacturing process, operational control practices, and pretreatment system in order to assess factors and variabilities affecting your facility's ability to meet longterm compliance. This is in response to the pretreatment program audit findings of the Environmental Protection Agency(EPA), which required OCSD to conduct, during permit renewal, a more in-depth technical review of parameters affecting compliance. **Within a few days, you will be contacted by OCSD's staff to set-up an appointment for this evaluation. Depending on the number of operations at your facility, please allot about two to four hours for this visit.**

Failure to submit the permit application and payment for the permit fee by the due date may delay the issuance of Access Business Group, LLC's permit prior to the expiration date. **In addition, a permit renewal application submitted after March 31, 2019 may subject your facility to a late processing fee of $500 for an application submitted 30 days or less from the permit's expiration, or $1,000 for an application submitted 15 days or less from the permit's expiration. Please be reminded that discharging to OCSD's sewer system without a valid permit is prohibited and may result in physical termination of sewer service and imposition of civil penalties.**

If your company intends to stop discharging industrial wastewater to OCSD's sewer system, please complete and return the enclosed Request to Close Account Form to OCSD by **March 31, 2019**, to officially close your account and terminate the sewer service at Access Business Group, LLC.

If you have any questions, please call at 714-593-7452.

Roya Sohanaki
Resource Protection Division Manager

COURTESY REMINDER

March 19, 2019

Audra Davies, Site Leader Buena Park Oper. / VP-R&D
Access Business Group, LLC
5600 Beach Blvd
Buena Park, CA 90621

SUBJECT: Courtesy Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This letter is a courtesy reminder to Access Business Group, LLC that the completed Permit Renewal Application is due to the Orange County Sanitation District (OCSD) by **March 31, 2019***, as required in OCSD's *Reminder to Submit an Application for Renewal of a Wastewater Discharge Permit*, which was issued to your facility and dated on or about **March 5, 2019**. Please be advised that **Permit No. 1-531435** will expire on **May 31, 2019,** unless the permit is renewed.

Failure to submit the permit application by the due date may delay the issuance of Access Business Group, LLC's permit prior to its expiration date. **In addition, a permit renewal application submitted after March 31, 2019 may subject your facility to a late processing fee of $500 for an application submitted 30 days or less from the permit's expiration, or $1,000 for an application submitted 15 days or less from the permit's expiration.** Please be reminded that discharge without a valid and current permit is prohibited by the OCSD's Wastewater Discharge Regulations.

If your facility intends to stop discharging industrial wastewater to the OCSD's sewer system, please complete and return the Request to Close Account Form to the District by **March 31, 2019**, to officially close your account and terminate the sewer service at Access Business Group, LLC.

Please disregard this reminder if the Permit Renewal Application has been submitted. If you have any questions, please call Brian Finkelstein at 714-593-7452.

THIS IS MANDATORY.
Complete and return this form.

Certification of Responsible Officer

I, the undersigned, do hereby certify that I meet the definition of a Responsible Officer, as outlined below:

A responsible officer is defined as found in 40 CFR 403.12 (l)(1)(i):

1. For a Corporation:
   a. A President, Secretary, Treasurer or Vice President in charge of a principle business function or any other person who performs similar policy or decision making functions for the corporation, or
   b. The manager of one or more manufacturing, production, or operating facilities provided the manager is authorized to assure long term environmental compliance with environmental laws and regulations, and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. For partnership or sole proprietorship; a general partner or proprietor, respectively.
3. For a public agency; a general manager, department manager, or a supervisor of a public agency who performs policy or decision making functions for the public agency.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates.

Name of Responsible Officer: Audra J. Davies
(Please Print or Type)

Signature: [signature] Date: 03/27/19

Title: Site Leader Buena Park Operations / VP - R&D E-mail address: audra_davies@amway.com

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

NOTE: All correspondence regarding permit, enforcement, and self-monitoring issues (e.g., Self-Monitoring Forms and Reminder Letters, Notices of Violations, Permit Application, etc.) shall be sent to the Responsible Officer or to the Designated Signatory if properly authorized. If there is a change in the Responsible Officer or Designated Signatory in the future, the Districts must be notified in writing and the appropriate form must be submitted.

Certification for Accuracy of Information

I have personally examined and am familiar with the information submitted in this application and required attachments, and I hereby certify under penalty of law that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I also authorize the District to verify all information provided, including the water account/usage information from the water supplier, facility lease contracts, and other pertinent information.

I certify that upon issuance of the permit, that this firm's operation and its resultant wastewater discharge will achieve consistent compliance with the District's Ordinance and applicable Federal wastewater discharge requirements. If the wastewater discharge does not meet all the applicable regulations, the company will modify manufacturing equipment, limit production, limit industrial waste discharge, install wastewater pretreatment equipment, or do whatever is legally necessary to meet discharge requirements.

Y Responsible Officer/Designated Signatory (as specified on pages 6 and 7):

Discharge Permit Renewal Application for Permit # 1-531435

Dear Sir or Madam:

Please find the Class I wastewater discharge permit renewal application for the Buena Park facility of Access Business Group, LLC. Please note that our corporate headquarters will be forwarding the check within the next week, that said, there is no photocopy available at this time. As soon as we receive, I will scan and email to your office.

If you need additional information, please contact me at (714) 562-1830.

Sincerely,

Tim Hellem

RECEIVED

ORANGE COUNTY SANITATION DISTRICT
RENEWAL APPLICATION FOR
CLASS I WASTEWATER DISCHARGE PERMIT

Instructions Version 5.0 or greater of Acrobat, Acrobat Approval, or Acrobat Reader must be used or else a blank form will be the result. Click on "Help, About" to confirm your version. Acrobat Reader is in the \instal directory on this CD. From the Main Menu, please click on "using this program", then "using the permit renewal application writer", and read "no save capability" prior to using this form.

For the Orange County Sanitation District (District) to process and issue a Class I Wastewater Discharge Permit, the applicant must comply with all of the following:

- The Permit Renewal Application Form must be filled out completely. The District **will not** process incomplete submittals, and your application will be returned if there is any missing information. **Do not leave blanks. Please write "N/A" if the information being requested does not apply.**
- The Permit Renewal Application must be signed by the Responsible Officer or Designated Signatory, as defined on pages 6 and 7. The District will return your permit application if it is not signed by the proper company official.
- The permit fee must be remitted at the time the permit renewal application is submitted. Your remittance must be sent directly to the District's Accounting Department; **and, a photocopy of the check must be submitted with the Permit Renewal Application** to the Source Control Division. An application received without this documentation will be returned.

Please refer to Section A of the information brochure for detailed instructions for completing this Application Form.

Manufacturing Process Information

H Description of all manufacturing processes and/or service activities on the premises, wet or dry. Please identify and describe the processes which generate wastewater in more detail. (Use additional sheets if necessary.)

Please see attachment C.

I Description and average quantity of raw materials used or handled: (Use additional sheets if necessary.)

The facility uses organically grown, plant based ingredients that include beta carotene, citrus, soy lecithin, lemon oil, gingko biloba, maltodextrose, sugars, herbal extracts etc.

J Description of products manufactured or produced as a result of services performed: (Use additional sheets if necessary.)

Products produced at the facility include:

Granulated Herbal Extracts with nutritional values (various)

Dietary Supplements in the forms of tablets and capsules (various)

K Average Daily Production: 25000 - 50000 bottles/day

L North American Industry Classification System (NAICS) Code (this code replaced the discontinued SIC Code):

Primary NAICS Code: 311999 Secondary NAICS Code(s): 311999

Operations Information

M Operating Schedule:

Number of shifts per work day: 2 Number of work days per week: 4 Number of production days per year: 220

	1st:	2nd:	3rd:	Total:
Average number of employees per shift:	340	145		485
Production hours per shift:	12	12		24
Discharge hours per shift:	12	12		24

N When did you start operating at this facility? Month: July Year: 1952

O For Industries involved in Surface/Metal Finishing (plating, anodizing, phosphating, etching, PCB manufacturing, etc.):
Do you own more than 50% (area basis) of the materials undergoing production? ◉ N/A ○ Yes ○ No

P Have you made **any** additions or modifications to the manufacturing process during the past two years? ○ Yes ◉ No
If the answer is "Yes", you must submit updated Manufacturing Process Layout, Manufacturing Process Flow Diagram, and Spill Containment Drawings and Information with this application.
Please describe briefly the process changes during the last permit period:

Information on Treatment of Industrial Waste/Wastewater

Q Is any form of waste/wastewater treatment practiced at this facility? ○ Yes ◉ No

If the answer is "Yes", provide the following information by checking the appropriate boxes:

- Mode of Operation: ○ Continuous ○ Batch ○ Both
- Pretreatment Units Used:

☐ Hydroxide Precipitation
☐ Hexavalent Chrome Reduction
☐ Cyanide Destruction
☐ Equalization
☐ pH Adjustment
☐ Electrowinning/Plate-out Units
☐ Filter Press
☐ Final Polishing Filter
☐ Spent Chemical Treatment Unit
☐ Below-ground Clarifier
☐ Ion Exchange
☐ Other
☐ Cross-Flow Filtration (e.g., Memtek)
☐ Sorption Filter (e.g., Lancy)
☐ Aluminum Chip
☐ Ozone Treatment Reactor
☐ Clarifier/Lamella Settling

R How are spent chemicals handled? Specify the method for "Other."

☑ Wastehauled offsite ☐ Batch treated onsite ☐ Discharged to sewer without treatment
☐ Other

S Wastewater Operator/Maintenance Information:
Number of wastewater pretreatment operators at your facility: 1st shift ____ 2nd shift ____ 3rd shift ____

Operator Name	Qualification (Please check)						
	None	Wastewater Treatment Operator with CWEA Certification			AA Science with min 2 semesters in Chemistry	BS Chemical or Environmental Engineering	BS in other Engineering or Science
		Grade I	Grade 2	Grade 3/4			
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐

Is there an Operation and Maintenance Manual or procedures for the entire wastewater treatment system? ○ Yes ○ No

Information for Determining Volume of Wastewater Discharge and User Charges

T Assessor Parcel Number(s) as shown on property tax bill: 066-572-08

If a Lessee, please indicate:

(a) percentage of property tax bill paid to landowner: _____ %

(b) percentage of water bill paid to landowner: _____ %

(c) square footage of leased space: _____ Sq. Foot

(d) whether your facility is a part of a commercial/industrial complex: ○ Yes ○ No

V Water Supplier: City of Buena Park

Water Account Number(s): See Attachment E

Other Sources of Water Supply: ☐ onsite wells ☐ groundwater remediation ☐ others _____

W Water Measurement Information:

List all water meters at your facility. **Complete Attachment A in accordance with instructions.**

From the incoming meter(s) identified on Attachment A, check which following water measurement strategy is used:

◉ City water meter(s) only ○ Process meter(s) only ○ Shop meter(s) only ○ Both city meter and process meters

The meter(s) checked above measure:

◉ Only the incoming water going to the applicant's facility.
○ The incoming water to the applicant's facility and for other companies adjacent.

Does your facility use an effluent meter to measure the industrial wastewater discharge? ○ Yes ◉ No

If so, does the effluent meter measure only the industrial wastewater discharged to the sewer from the facility (excluding sanitary, boiler blowdown, cooling tower bleed off, and R.O. reject)? ○ Yes ○ No

If your facility uses a final effluent meter, skip to Line Y

X In order to determine mass emission rates and user charges, the actual volume of water discharged to the sewer must be calculated. **For facilities that do not have effluent meters,** this is done by determining the volume of incoming water, as indicated by the city water meter, and then applying appropriate deductions for water losses. If losses cannot be quantified, the District will apply water losses equivalent to 5% of the incoming water. It is to your advantage to determine and quantify these losses if your facility has water losses more than 5%. Please check the appropriate box below:

○ Apply 5% loss ◉ Use calculated loss

If calculated loss is indicated, determine all applicable losses using the worksheet provided in Attachment B and summarize results in the table below. The worksheet and supporting documentation must be submitted for these losses to be applied.

Item	Average Daily Water Losses	Gal/day	Loss is applicable to	
			City Meter(s)	Process Meter
I	Landscape / Irrigation losses	13,600	☐	☐
II	Boiler losses for steam condensate not returned to boiler	7,000	☐	☐
III	Cooling tower water evaporation	14,500	☐	☐
IV	Product losses		☐	☐
V	Other losses		☐	☐
			☐	☐
	Total Losses	35,100	Check the above if applicable.	

Certification for Accuracy of Information

I have personally examined and am familiar with the information submitted in this application and required attachments, and I hereby certify under penalty of law that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I also authorize the District to verify all information provided, including the water account/usage information from the water supplier, facility lease contracts, and other pertinent information.

I certify that upon issuance of the permit, that this firm's operation and its resultant wastewater discharge will achieve consistent compliance with the District's Ordinance and applicable Federal wastewater discharge requirements. If the wastewater discharge does not meet all the applicable regulations, the company will modify manufacturing equipment, limit production, limit industrial waste discharge, install wastewater pretreatment equipment, or do whatever is legally necessary to meet discharge requirements.

Y Responsible Officer/Designated Signatory (as specified on pages 6 and 7):

Name: Audra J. Davies

Signature: 

Title: Site Leader Buena Park Operations / VP - R&D

Date: 03/27/19

Email: audra_davies@amway.com

Z Name of the person to contact concerning information provided in this application: ☑ Same as above

Name: Tim Hellem

Address: 5600 Beach Blvd

Title: EHS Supervisor

Phone: 714-562-1830

Email: tim.hellem@amway.com

THIS IS MANDATORY.
Complete and return this form.

Certification of Responsible Officer

I, the undersigned, do hereby certify that I meet the definition of a Responsible Officer, as outlined below:

A responsible officer is defined as found in 40 CFR 403.12 (l)(1)(i):

1. For a Corporation:
   a. A President, Secretary, Treasurer or Vice President in charge of a principle business function or any other person who performs similar policy or decision making functions for the corporation, or
   b. The manager of one or more manufacturing, production, or operating facilities provided the manager is authorized to assure long term environmental compliance with environmental laws and regulations, and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. For partnership or sole proprietorship; a general partner or proprietor, respectively.
3. For a public agency; a general manager, department manager, or a supervisor of a public agency who performs policy or decision making functions for the public agency.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates.

Name of Responsible Officer: Audra J. Davies
(Please Print or Type)

Signature: _____ Date: 03/27/19

Title: Site Leader Buena Park Operations / VP - R&D E-mail address: audra_davies@amway.com

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

NOTE: All correspondence regarding permit, enforcement, and self-monitoring issues (e.g., Self-Monitoring Forms and Reminder Letters, Notices of Violations, Permit Application, etc.) shall be sent to the Responsible Officer or to the Designated Signatory if properly authorized. If there is a change in the Responsible Officer or Designated Signatory in the future, the Districts must be notified in writing and the appropriate form must be submitted.

THIS IS OPTIONAL.
Submit this form only if the Responsible Officer wants to designate a Signatory.

Option to Designate Signatory

This is to authorize the individual whose name and title appear below,

Tim Hellem
Designated Signatory's Name

Supervisor, EH&S
Title

to be the designated individual responsible for wastewater discharges who can be served with notices, and who is the Designated Signatory on my behalf for purposes of signing all reports. This individual has the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that if, in the future, this information is no longer correct, the District will be notified in writing to terminate designation of the above-named individual and to establish a new signatory.

Name of Responsible Officer: Audra J. Davies

Signature:

Title: Site Leader Buena Park Operations / VP - R&D Date: 03/27/19

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

A designated signatory is defined as found in 40 CFR 403.12 (l)(3)(ii):

1. An individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company, and;

2. Written authorization is submitted to the Source Control Permit Supervisor at the Orange County Sanitation Districts, and;

3. Written authorization must be submitted by a responsible corporate officer such as a President, Secretary, Treasurer, or Vice-President of the corporation in charge of a principal business function or any other person who performs similar decision-making functions for the corporation.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that it is my responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues.

Name of Designated Signatory: Tim Hellem

Signature: Date: 03/27/19

Title: Supervisor, EH&S E-mail address: Tim.Hellem@amway.com

All correspondence regarding all permit and enforcement issues shall be sent to the Designated Signatory. It is the Designated Signatory's responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues. The Responsible Officer remains legally responsible for all wastewater discharge to the sewer from this facility and for ensuring that he is duly informed by the Designated Signatory.

☐ City ☐ Process ☐ Shop ☐ Effluent	PAGE		.	☐ Cu. Ft. ☐ Gallons	☐ X 10 ☐ X 100	
☐ City ☐ Process ☐ Shop ☐ Effluent			.	☐ Cu. Ft. ☐ Gallons	☐ X 10 ☐ X 100	

INSTRUCTIONS

STEP 1. Please identify for each *Onsite Water Meter* at your facility.

- **Meter type** - Use the following descriptions to characterize your meter type(s).
  The **City Meter** is typically found outside at all buildings. This meter type, maintained by the water purveyor (city or local agency), is used to measure incoming water for potable, sanitary, landscaping, and industrial uses. The readings from these meters are used to determine the charges on the monthly or bi-monthly water bills. The **Process Meter** is located downstream of all drinking, sanitary, and landscaping uses. Process meters are typically installed to determine water usage to specific industrial processes. The **Effluent Meter** records the actual volume of wastewater discharged by the facility and is typically located at the discharge point near the designated sample point. The O.C. Sanitation District may require an effluent meter to determine daily flows for compliance verification, and/or to establish accurate sewerage service charges. The **Shop Meter** is often found in a multi-occupancy industrial strip that does not have individual city meters for each suite. Landlords who do not want to pay the water bill for a significant water user often install a meter on the outside of the shop. It is distinguished from the process meter in that it also meters the potable and sanitary flow, like a city meter. The water purveyor does not bill the user directly for water usage metered by a shop meter. The landlord will frequently bill the renter directly, based upon the shop meter volumes.

- **Digits/Fixed Zeros/Tenths** - Use the Digits, Fixed Zeros, and Tenths columns to record the current meter reading. Include the beginning digits, even if they are zero, as well as, the fixed zeros, or tenths designated by the arrow sweep. **Please visually read each meter. Do not provide values or volumes from the water bills.**
  Use the following the guidelines for Fixed Zeros and Tenths to provide assistance with reading and recording the information for several common meter variations. **Fixed Zeros** - On many water meter models the sweeping arrow records numerical units that are designated by the fixed zeros on the totalizer read-out. Use the three shaded columns designated Fixed Zeros to indicate that the meter's arrow sweep records single (0 - 9) digit, double (10 - 90) digit, or triple (100 - 900) digit values. **Tenths** - On many water meter models the dial numbers (selected by the arrow sweep), or the last digit of a totalizer read-out designates tenths of a gallon. Use the tenths column (implied by the decimal point) to indicate the meter records tenths of a gallon.

- **Units/Multiplier** - Indicate the meter units, Cubic Feet (Cu. Ft.) or Gallons. If applicable, indicate the multiplier factor (x 10 or x 100). **Do not confuse this with the typical billing unit (100 CF) on the monthly water bill.**
  Units - Most water meters register the volume of water in either cubic feet or gallons. Please indicate if your meter uses a different unit of measurement such as barrels, cubic meters, or acre feet. **Multiplier** - Occasionally the meter dial will indicate that a multiplier (X 10 or X 100) must be applied to the totalizer reading (this feature is more common on electronic flow instruments). Please indicate different multiplier factors as applicable.

- **Location** - Briefly describe the location of each meter.
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc., will all help our field staff verify the information by establishing vital reference points.

STEP 2. Attach a copy of the latest water bill for each city meter identified.

SAFETY DATA SHEET

QUORUM PINK II LF

SECTION 1. PRODUCT AND COMPANY IDENTIFICATION

Product name	:	QUORUM PINK II LF
Other means of identification	:	Not applicable
Recommended use	:	Cleaning product
Restrictions on use	:	Reserved for industrial and professional use.
Product dilution information	:	1.56 % - 7.81 %
Company	:	Ecolab Inc. 370 N. Wabasha Street St. Paul, Minnesota USA 55102 1-800-352-5326
Emergency health information	:	1-800-328-0026 (US/Canada), 1-651-222-5352 (outside US)
Issuing date	:	08/28/2015

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Product AS SOLD

Skin corrosion	:	Category 1A
Serious eye damage	:	Category 1

Product AT USE DILUTION

Skin corrosion	:	Category 1A
Serious eye damage	:	Category 1

GHS Label element

Product AS SOLD

Hazard pictograms :

Signal Word : Danger

Hazard Statements : Causes severe skin burns and eye damage.

Precautionary Statements : **Prevention:**
Wash skin thoroughly after handling. Wear protective gloves/ protective clothing/ eye protection/ face protection.
Response:
IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER or doctor/ physician. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/ physician. Wash contaminated clothing before reuse.

SAFETY DATA SHEET

QUORUM PINK II LF

Storage:
Store locked up.
Disposal:
Dispose of contents/ container to an approved waste disposal plant.

Product AS SOLD

Other hazards : None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Product AS SOLD

Pure substance/mixture : Mixture

Chemical Name	CAS-No.	Concentration (%)
diphosphoric acid, tetrapotassium salt	7320-34-5	1 - 5
dipropylene glycol methyl ether	34590-94-8	1 - 5
GLYCOLS -Glycolethers	1569-01-3	1 - 5
1-methoxy-2-propanol	107-98-2	1 - 5
Phosphate-esters	39464-70-5	1 - 5
sodium metasilicate	6834-92-0	1 - 5
potassium hydroxide	1310-58-3	0.1 - 1

Product AT USE DILUTION

No hazardous ingredients

SECTION 4. FIRST AID MEASURES

Product AS SOLD

In case of eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do.

		Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention if symptoms occur.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

In case of eye contact	:	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention if symptoms occur.

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Not flammable or combustible.
Hazardous combustion products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus
Special protective equipment for fire-fighters	:	Use personal protective equipment.

Specific extinguishing methods	:	Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

Product AT USE DILUTION

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

SECTION 7. HANDLING AND STORAGE

Product AS SOLD

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling.
Conditions for safe storage	:	Do not store near acids. Keep out of reach of children. Store in suitable labeled containers.
Storage temperature	:	-10 °C to 50 °C

Product AT USE DILUTION

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling.

SAFETY DATA SHEET

QUORUM PINK II LF

Conditions for safe storage : Keep out of reach of children. Store in suitable labeled containers.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD
Ingredients with workplace control parameters

Ingredients	CAS-No.	Form of exposure	Permissible concentration	Basis
dipropylene glycol methyl ether	34590-94-8	TWA	100 ppm	ACGIH
		STEL	150 ppm	ACGIH
		STEL	150 ppm 900 mg/m3	NIOSH REL
		TWA	100 ppm 600 mg/m3	NIOSH REL
		TWA	100 ppm 600 mg/m3	OSHA Z1
1-methoxy-2-propanol	107-98-2	TWA	50 ppm	ACGIH
		STEL	100 ppm	ACGIH
		STEL	150 ppm 540 mg/m3	NIOSH REL
		TWA	100 ppm 360 mg/m3	NIOSH REL
potassium hydroxide	1310-58-3	Ceiling	2 mg/m3	ACGIH
		Ceiling	2 mg/m3	NIOSH REL

Engineering measures : Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection : Wear eye protection/ face protection.

Hand protection : Wear the following personal protective equipment:
Standard glove type.
Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.

Skin protection : Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing

Respiratory protection : When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

Product AT USE DILUTION
Engineering measures : Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection : Wear eye protection/ face protection.

SAFETY DATA SHEET

QUORUM PINK II LF

Hand protection	:	Wear the following personal protective equipment: Standard glove type. Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.
Skin protection	:	Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing
Respiratory protection	:	When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

		Product AS SOLD	Product AT USE DILUTION
Appearance	:	liquid	liquid
Color	:	pink	light pink
Odor	:	slight	slight
pH	:	12.3, 100 %	10.0 - 11.5
Flash point	:	Not applicable	
Odor Threshold	:	No data available	
Melting point/freezing point	:	No data available	
Initial boiling point and boiling range	:	No data available	
Evaporation rate	:	No data available	
Flammability (solid, gas)	:	No data available	
Upper explosion limit	:	No data available	
Lower explosion limit	:	No data available	
Vapor pressure	:	No data available	
Relative vapor density	:	No data available	
Relative density	:	1.079	
Water solubility	:	No data available	
Solubility in other solvents	:	No data available	
Partition coefficient: n-octanol/water	:	No data available	
Autoignition temperature	:	No data available	
Thermal decomposition	:	No data available	
Viscosity, kinematic	:	No data available	
Explosive properties	:	No data available	
Oxidizing properties	:	No data available	
Molecular weight	:	No data available	
VOC	:	No data available	

SECTION 10. STABILITY AND REACTIVITY

Product AS SOLD

Chemical stability	:	Stable under normal conditions.

SAFETY DATA SHEET

QUORUM PINK II LF

Possibility of hazardous reactions	:	No dangerous reaction known under conditions of normal use.
Conditions to avoid	:	None known.
Incompatible materials	:	Acids
Hazardous decomposition products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	:	Inhalation, Eye contact, Skin contact

Potential Health Effects

Product AS SOLD

Eyes	:	Causes serious eye damage.
Skin	:	Causes severe skin burns.
Ingestion	:	Causes digestive tract burns.
Inhalation	:	May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Product AT USE DILUTION

Eyes	:	Causes serious eye damage.
Skin	:	Causes severe skin burns.
Ingestion	:	Causes digestive tract burns.
Inhalation	:	May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Experience with human exposure

Product AS SOLD

Eye contact	:	Redness, Pain, Corrosion
Skin contact	:	Redness, Pain, Corrosion
Ingestion	:	Corrosion, Abdominal pain
Inhalation	:	Respiratory irritation, Cough

Product AT USE DILUTION

Eye contact	:	Redness, Pain, Corrosion
Skin contact	:	Redness, Pain, Corrosion

SAFETY DATA SHEET

QUORUM PINK II LF

Ingestion	:	Corrosion, Abdominal pain
Inhalation	:	Respiratory irritation, Cough

Toxicity

Product AS SOLD

Acute oral toxicity	:	Acute toxicity estimate : > 5,000 mg/kg
Acute inhalation toxicity	:	No data available
Acute dermal toxicity	:	Acute toxicity estimate : > 5,000 mg/kg
Skin corrosion/irritation	:	No data available
Serious eye damage/eye irritation	:	No data available
Respiratory or skin sensitization	:	No data available
Carcinogenicity	:	No data available
Reproductive effects	:	No data available
Germ cell mutagenicity	:	No data available
Teratogenicity	:	No data available
STOT-single exposure	:	No data available
STOT-repeated exposure	:	No data available
Aspiration toxicity	:	No data available

Ingredients

Acute inhalation toxicity	:	GLYCOLS -Glycolethers 4 h LC50 Rat: > 10.21 mg/l 1-methoxy-2-propanol 4 h LC50 Rat: 27.3 mg/l

SECTION 12. ECOLOGICAL INFORMATION

Product AS SOLD
Ecotoxicity

Environmental Effects	:	This product has no known ecotoxicological effects.

Product

Toxicity to fish	:	No data available
Toxicity to daphnia and other aquatic invertebrates	:	No data available
Toxicity to algae	:	No data available

Ingredients

Toxicity to fish	:	dipropylene glycol methyl ether 96 h LC50 Fish: > 1,000 mg/l GLYCOLS -Glycolethers 96 h LC50 Fish: > 100 mg/l 1-methoxy-2-propanol

96 h LC50 Fish: > 1,000 mg/l

sodium metasilicate
96 h LC50 Fish: 210 mg/l

Ingredients

Toxicity to daphnia and other aquatic invertebrates : diphosphoric acid, tetrapotassium salt
48 h EC50 Daphnia: > 100 mg/l

Persistence and degradability

No data available

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

Product AS SOLD

Disposal methods : Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.

Disposal considerations : Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

Product AT USE DILUTION

Disposal methods : Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.

Disposal considerations : Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

SECTION 14. TRANSPORT INFORMATION

Product AS SOLD

The shipper/consignor/sender is responsible to ensure that the packaging, labeling, and markings are in compliance with the selected mode of transport.

Land transport (DOT)
Not dangerous goods

Sea transport (IMDG/IMO)
Not dangerous goods

SAFETY DATA SHEET

QUORUM PINK II LF

Product AT USE DILUTION
Not intended for transport.

SECTION 4. FIRST AID MEASURES

Product AS SOLD

In case of eye contact	:	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

In case of eye contact	:	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention if symptoms occur.

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Not flammable or combustible.
Hazardous combustion	:	Decomposition products may include the following materials:

SAFETY DATA SHEET

QUORUM PURPLE

products		Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus
Special protective equipment for fire-fighters	:	Use personal protective equipment.
Specific extinguishing methods	:	Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

SECTION 7. HANDLING AND STORAGE

Product AS SOLD

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling. Do not mix with bleach or other chlorinated products – will cause chlorine gas.
Conditions for safe storage	:	Keep away from strong bases. Keep out of reach of children. Store in suitable labeled containers.

SAFETY DATA SHEET

QUORUM PURPLE

Storage temperature : -30 °C to 50 °C

Product AT USE DILUTION

Advice on safe handling : Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling.

Conditions for safe storage : Keep away from strong bases. Keep out of reach of children. Store in suitable labeled containers.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD

Ingredients with workplace control parameters

Ingredients	CAS-No.	Form of exposure	Permissible concentration	Basis
Phosphoric acid	7664-38-2	TWA	1 mg/m3	ACGIH
		STEL	3 mg/m3	ACGIH
		TWA	1 mg/m3	NIOSH REL
		STEL	3 mg/m3	NIOSH REL
		TWA	1 mg/m3	OSHA Z1

Engineering measures : Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection : Wear eye protection/ face protection.

Hand protection : Wear the following personal protective equipment:
Standard glove type.
Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.

Skin protection : Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing

Respiratory protection : When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

Product AT USE DILUTION

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

		Product AS SOLD	Product AT USE DILUTION
Appearance	:	liquid	liquid
Color	:	clear, purple	purple
Odor	:	slight	slight
pH	:	0.5 - 1.0, 100 %	1.0 - 2.0
Flash point	:	Not applicable, Does not sustain combustion.	
Odor Threshold	:	No data available	
Melting point/freezing point	:	No data available	
Initial boiling point and boiling range	:	> 100 °C	
Evaporation rate	:	No data available	
Flammability (solid, gas)	:	No data available	
Upper explosion limit	:	No data available	
Lower explosion limit	:	No data available	
Vapor pressure	:	No data available	
Relative vapor density	:	No data available	
Relative density	:	1.19 - 1.23	
Water solubility	:	soluble	
Solubility in other solvents	:	No data available	
Partition coefficient: n-octanol/water	:	No data available	
Autoignition temperature	:	No data available	
Thermal decomposition	:	No data available	
Viscosity, kinematic	:	No data available	
Explosive properties	:	No data available	
Oxidizing properties	:	No data available	
Molecular weight	:	No data available	
VOC	:	No data available	

SECTION 10. STABILITY AND REACTIVITY

Product AS SOLD

Chemical stability	:	Stable under normal conditions.
Possibility of hazardous	:	Do not mix with bleach or other chlorinated products – will cause

SAFETY DATA SHEET

QUORUM PURPLE

reactions		chlorine gas.
Conditions to avoid	:	None known.
Incompatible materials	:	Bases Metals Organic materials
Hazardous decomposition products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	:	Inhalation, Eye contact, Skin contact

Potential Health Effects

Product AS SOLD

Eyes	:	Causes serious eye damage.
Skin	:	Causes severe skin burns.
Ingestion	:	Causes digestive tract burns.
Inhalation	:	Harmful if inhaled. May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Product AT USE DILUTION

If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention if symptoms occur.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

In case of eye contact	:	Rinse with plenty of water.
In case of skin contact	:	Rinse with plenty of water.
If swallowed	:	Rinse mouth. Get medical attention if symptoms occur.
If inhaled	:	Get medical attention if symptoms occur.

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Not flammable or combustible.
Hazardous combustion products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus
Special protective equipment for fire-fighters	:	Use personal protective equipment.
Specific extinguishing methods	:	Collect contaminated fire extinguishing water separately. This must not be discharged into drains. Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.

Environmental precautions	.	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

Product AT USE DILUTION

Personal precautions, protective equipment and emergency procedures	:	Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

SECTION 7. HANDLING AND STORAGE

Product AS SOLD

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling.
Conditions for safe storage	:	Keep out of reach of children. Store in suitable labeled containers.
Storage temperature	:	0 °C to 50 °C

Product AT USE DILUTION

Advice on safe handling	:	Wash hands thoroughly after handling.
Conditions for safe storage	:	Keep out of reach of children. Store in suitable labeled containers.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD
Ingredients with workplace control parameters

Ingredients	CAS-No.	Form of exposure	Permissible concentration	Basis
ethanol	64-17-5	TWA	1,000 ppm 1,900 mg/m3	NIOSH REL
		TWA	1,000 ppm 1,900 mg/m3	OSHA Z1

Engineering measures	:	Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection	:	Wear eye protection/ face protection.

Material ID: N7291
Hazard Code: N-R3-E3-S3

Hand protection	:	Wear the following personal protective equipment: Standard glove type. Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.
Skin protection	:	Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing
Respiratory protection	:	When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.
Hygiene measures	:	Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

Product AT USE DILUTION

Engineering measures	:	Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

Personal protective equipment

Eye protection	:	No special protective equipment required.
Hand protection	:	No special protective equipment required.
Skin protection	:	No special protective equipment required.
Respiratory protection	:	No personal respiratory protective equipment normally required.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

		Product AS SOLD	Product AT USE DILUTION
Appearance	:	liquid	liquid
Color	:	clear, colorless	colorless
Odor	:	Disinfectants	slight
pH	:	8.45 - 9.0, 100 %	6.0 - 8.0
Flash point	:	Not applicable. Does not sustain combustion.	
Odor Threshold	:	No data available	
Melting point/freezing point	:	No data available	
Initial boiling point and boiling range	:	100 °C	
Evaporation rate	:	No data available	
Flammability (solid, gas)	:	No data available	
Upper explosion limit	:	No data available	
Lower explosion limit	:	No data available	
Vapor pressure	:	No data available	
Relative vapor density	:	No data available	
Relative density	:	0.982 - 1.002	

Water solubility	:	soluble
Solubility in other solvents	:	No data available
Partition coefficient: n-octanol/water	:	No data available
Autoignition temperature	:	No data available
Thermal decomposition	:	No data available
Viscosity, kinematic	:	No data available
Explosive properties	:	No data available
Oxidizing properties	:	No data available
Molecular weight	:	No data available
VOC	:	No data available

SECTION 10. STABILITY AND REACTIVITY

Product AS SOLD

Chemical stability	:	Stable under normal conditions.
Possibility of hazardous reactions	:	No dangerous reaction known under conditions of normal use.
Conditions to avoid	:	None known.
Incompatible materials	:	None known.
Hazardous decomposition products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	:	Inhalation, Eye contact, Skin contact

Potential Health Effects

Product AS SOLD

Eyes	:	Causes serious eye damage.
Skin	:	Causes severe skin burns. Causes skin irritation.
Ingestion	:	Causes digestive tract burns.
Inhalation	:	May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Product AT USE DILUTION

Eyes	:	Causes eye irritation.
Skin	:	Health injuries are not known or expected under normal use.
Ingestion	:	Health injuries are not known or expected under normal use.

Material ID: N7291
Hazard Code: N-R3-E3-S3

Inhalation : Health injuries are not known or expected under normal use.

Chronic Exposure : Health injuries are not known or expected under normal use.

Experience with human exposure

Product AS SOLD

Eye contact : Redness, Pain, Corrosion

Skin contact : Redness, Pain, Corrosion

Ingestion : Corrosion, Abdominal pain

Inhalation : Respiratory irritation, Cough

Product AT USE DILUTION

Eye contact : Redness, Irritation

Skin contact : No symptoms known or expected.

Ingestion : No symptoms known or expected.

Inhalation : No symptoms known or expected.

Toxicity

Product AS SOLD

Product

Acute oral toxicity : Acute toxicity estimate : 1,500 mg/kg

Acute inhalation toxicity : No data available

Acute dermal toxicity : Acute toxicity estimate : > 5,000 mg/kg

Respiratory or skin sensitization : No data available

Carcinogenicity : No data available

Reproductive effects : No data available

Germ cell mutagenicity : No data available

Teratogenicity : No data available

STOT-single exposure : No data available

STOT-repeated exposure : No data available

Aspiration toxicity : No data available

Ingredients

Acute inhalation toxicity : Alkyl (C14 60%; C12 40%; C16 10%) dimethyl benzyl ammonium chloride
4 h LC50 Rat: > 0.054 mg/l

Octyl decyl dimethyl ammonium chloride
4 h LC50 Rat: 0.07 mg/l

ethanol
4 h LC50 Rat: 117 mg/l

Didecyl Dimethyl Ammonium Chloride
4 h LC50 Rat: 0.07 mg/l

Dioctyl dimethyl ammonium chloride
4 h LC50 Rat: 0.07 mg/l

SECTION 12. ECOLOGICAL INFORMATION

Product AS SOLD

Ecotoxicity

Environmental Effects : Very toxic to aquatic life. Toxic to aquatic life with long lasting effects.

Product

Toxicity to fish : No data available

Toxicity to daphnia and other aquatic invertebrates : No data available

Toxicity to algae : No data available

Ingredients

Toxicity to fish : Octyl decyl dimethyl ammonium chloride
96 h LC50 Fish: 1 mg/l

ethanol
96 h LC50 Pimephales promelas (fathead minnow): > 100 mg/l

Didecyl Dimethyl Ammonium Chloride
96 h LC50 Fish: 1 mg/l

Ingredients

Toxicity to daphnia and other aquatic invertebrates : Alkyl (C14 50%; C12 40%; C16 10%) dimethyl benzyl ammonium chloride
48 h EC50 Daphnia magna (Water flea): 0.016 mg/l

Dioctyl dimethyl ammonium chloride
48 h EC50 Daphnia: 0.1 mg/l

Persistence and degradability

Product AS SOLD

Biodegradable/Eliminated from aquatic environment

Product AT USE DILUTION

Biodegradable/Eliminated from aquatic environment

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

Material ID: N7291
Hazard Code: N-R3-E3-S3

Product AS SOLD

Disposal methods : Do not contaminate ponds, waterways or ditches with chemical or used container. Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.

Disposal considerations : Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

Product AT USE DILUTION

Disposal methods : Do not contaminate ponds, waterways or ditches with chemical or used container. Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.

Disposal considerations : Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

SECTION 14. TRANSPORT INFORMATION

Product AS SOLD

The shipper/consignor/sender is responsible to ensure that the packaging, labeling, and markings are in compliance with the selected mode of transport.

Land transport (DOT)

Not dangerous goods

Sea transport (IMDG/IMO)

UN number : 3082
Description of the goods : ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S. (n-Alkyl (50% C14, 40% C12, 10% C16) dimethyl benzyl ammonium chloride)
Class : 9
Packing group : III
Marine pollutant : no

SECTION 15. REGULATORY INFORMATION

Product AS SOLD

EPA Registration number : 1677-198

EPCRA - Emergency Planning and Community Right-to-Know

CERCLA Reportable Quantity

This material does not contain any components with a CERCLA RQ.

SARA 304 Extremely Hazardous Substances Reportable Quantity

This material does not contain any components with a section 304 EHS RQ.

SARA 311/312 Hazards : Acute Health Hazard

SARA 302 : No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

SARA 313 : This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

California Prop 65

This product does not contain any chemicals known to the State of California to cause cancer, birth, or any other reproductive defects.

The ingredients of this product are reported in the following inventories:

United States TSCA Inventory :
On TSCA Inventory

Canadian Domestic Substances List (DSL) :
All components of this product are on the Canadian DSL

Australia Inventory of Chemical Substances (AICS) :
not determined

New Zealand. Inventory of Chemical Substances :
On the inventory, or in compliance with the inventory

Japan. ENCS - Existing and New Chemical Substances Inventory :
On the inventory, or in compliance with the inventory

Japan. ISHL - Inventory of Chemical Substances (METI) :
On the inventory, or in compliance with the inventory

Korea. Korean Existing Chemicals Inventory (KECI) :
On the inventory, or in compliance with the inventory

Philippines Inventory of Chemicals and Chemical Substances (PICCS) :
On the inventory, or in compliance with the inventory

China. Inventory of Existing Chemical Substances in China (IECSC) :
On the inventory, or in compliance with the inventory

REVISED INFORMATION: Significant changes to regulatory or health information for this revision is indicated by a bar in the left-hand margin of the SDS.

The information provided in this Material Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text

Attachment B - Itemized Calculation of Water Losses

1) Restrooms:

Restrooms at the facility are rated at 1.6 gpf. It is assumed that a person flushes the toilet 5 times a day (USGS, 2014). Therefore the daily domestic wastewater flow per person is:

1.6 gpf	x	5 flushes per day	= 8 gallons per person per day	
8 gallons per day	x	345 (# of pepople in South Complex)	= 2,760 gpd (toilet flushes)	

Total Restroom Usage: 2,760 gpd

2) Kitchen Use & Handwashing:

Include an additional 2 gals/day per person

8 gallons per day	+	2 gallons per day	= 10 gallons per person

This rate is mulitiplied by the # of workers in the South Complex.

345 employees x 10 gpd = 3,450 gpd

Total Restroom Usage: 3,450 gpd

3) Gym:

Shower water use at 2.5gpm/person (USGS 2014). Estimate 50 people per 24 hours use the gym and 50% use the showers.

25 people/day x 2.5 gal/min x 10 min shower = 625 gpd

Total Restroom Usage: 625 gpd

Attachment B Continued - Itemized Calculation of Water Losses

4) Boilers:

2 Bryan Boilers, 191 HP each, max 8 MMBTU/hr

Steam Generated by Boilers = Boiler HP x 34.5 #s/hr

so:

191 HP x 34.5 #s/hr x 2 boilers = 13,179 #s/hr

convert mass flowrate to volumetric flowrate = steam mass flow x density

so:

$$13{,}179 \text{ \#s/hr} \times \frac{1 \text{ gal}}{8.34 \text{ \#s}} \times \frac{1 \text{ hr}}{60 \text{ min}} = 26 \text{ gpm}$$

or:

$$\frac{26 \text{ gallons}}{\text{min}} \times \frac{60 \text{ min}}{1 \text{ HR}} \times 24 \text{ hours per day}$$

GPD - 37,925 gal per day generated by both boilers

Evaporation Rate: = of boilers x boiler HP x 0.069 gpm

= 2 boilers x 191 hp x 0.069 gpm = 26 #s per hour

$$26 \text{ \#s per hour} \times \frac{1}{8.34} \times 24 \text{ hours/day}$$

= 633 gpd evaporated

5) Cooling Towers:

NOTE : There are 5 outdoor Evapco towers that serice 3 indoor chiller units. These operate 7 days per week, 24 hours per day, 350 days per year.

Inlet water flow to all cooling towers = **199,000 gallons per 8 days**

or **24,875 gpd**

$$24{,}875 \frac{\text{gal}}{\text{day}} \times \frac{\text{day}}{24 \text{ hours}} \times \frac{\text{hr}}{60 \text{ min}} = \textbf{17.3 gpm}$$

Cooling Towers Evaporation: $4000 \text{ tons} \times \frac{0.03 \text{ gal}}{\text{min}} \times \frac{60 \text{ min}}{\text{hr}} \times \frac{24 \text{ hours}}{\text{day}} = \textbf{14,400} \frac{\text{gpd}}{\text{day}}$

Note: 400 tons per Levonne Moore (Facilities)

Cooling towers 20% blow down to POTW: $\frac{24{,}875 \text{ gal}}{\text{day}} \times 0.2 \text{ \% BD} = \textbf{4,975} \frac{\text{gal}}{\text{day}}$

Makeup Water:

Makeup water = Evaporation Rate + Blowdown Rate

14,400 gpd + 4,975 gpd = **19,375 gpd**

Certified Mail service provides the following benefits:

- A receipt (this portion of the Certified Mail label).
- A unique identifier for your mailpiece.
- Electronic verification of delivery or attempted delivery.
- A record of delivery (including the recipient's signature) that is retained by the Postal Service™ for a specified period.

Important Reminders:

- You may purchase Certified Mail service with First-Class Mail®, First-Class Package Service®, or Priority Mail® service.
- Certified Mail service is *not* available for international mail.
- Insurance coverage is *not* available for purchase with Certified Mail service. However, the purchase of Certified Mail service does not change the insurance coverage automatically included with certain Priority Mail items.
- For an additional fee, and with a proper endorsement on the mailpiece, you may request the following services:
  - Return receipt service, which provides a record of delivery (including the recipient's signature). You can request a hardcopy return receipt or an electronic version. For a hardcopy return receipt, complete PS Form 3811, *Domestic Return Receipt*; attach PS Form 3811 to your mailpiece; for an electronic return receipt, see a retail associate for assistance. To receive a duplicate return receipt for no additional fee, present this USPS®-postmarked Certified Mail receipt to the retail associate.
  - Restricted delivery service, which provides delivery to the addressee specified by name, or to the addressee's authorized agent.
  - Adult signature service, which requires the signee to be at least 21 years of age (not available at retail).
  - Adult signature restricted delivery service, which requires the signee to be at least 21 years of age and provides delivery to the addressee specified by name, or to the addressee's authorized agent (not available at retail).
- To ensure that your Certified Mail receipt is accepted as legal proof of mailing, it should bear a USPS postmark. If you would like a postmark on this Certified Mail receipt, please present your Certified Mail item at a Post Office™ for postmarking. If you don't need a postmark on this Certified Mail receipt, detach the barcoded portion of this label, affix it to the mailpiece, apply appropriate postage, and deposit the mailpiece.

IMPORTANT: Save this receipt for your records.

Tim Hellem, EHS Supervisor
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

SUBJECT: Renewal of Class 1 Wastewater Discharge Permit No. 1-541435

Enclosed is the renewed Class 1 Wastewater Discharge Permit No. 1-541435 issued by the Orange County Sanitation District (OCSD) to Access Business Group, LLC for the facility located at 5600 Beach Boulevard in Buena Park. Access Business Group, LLC is required to comply with the permit limits and conditions set forth in this permit at all times. Please see:

- Part 2 of the permit for continuing self-monitoring requirements.

If there are any discrepancies with the information described on the permit, please notify OCSD in writing. Access Business Group, LLC is also required to notify OCSD in writing of any future changes relating to company information, manufacturing processes, pretreatment modification, wastes/wastewater quantity, sampling point location, piping modification, or any other relevant information. Failure to do so is in violation of your permit.

If you have any questions, please contact the undersigned at (714) 593-7452 or by email at bfinkelstein@ocsd.com.

Our Mission: To protect public health and the environment by providing effective wastewater collection, treatment, and recycling.

INDUSTRIAL WASTEWATER DISCHARGE
CLASS I PERMIT

Permit No: 1-531435

FOR DISCHARGE OF WASTEWATER ISSUED BY
ORANGE COUNTY SANITATION DISTRICT

In accordance with the provisions of the Wastewater Discharge Regulations of Orange County Sanitation District, herein referred to as "OCSD",

Access Business Group, LLC
5600 Beach Blvd.
Buena Park, CA 90621

hereinafter referred to as "Permittee", is hereby authorized to discharge industrial wastewater from the above identified facility into OCSD's sewer system in accordance with the conditions set forth in this permit. Such conditions are as specified in the following parts of this permit:

Part 1 - Effluent Limits and Flow Basis
Part 2 - Monitoring, Notification, and Reporting Requirements
Part 3 - Standard Conditions
Part 4 - Special Conditions

Compliance with this permit does not relieve the Permittee of its obligation to comply with OCSD's current Wastewater Discharge Regulations, any applicable pretreatment regulations, standards or requirements under local, State, and Federal laws, including any such regulations, standards, requirements or laws that may become effective during the term of this permit. Non-compliance with any term or condition of this permit constitutes a violation of the current Wastewater Discharge Regulations.

This permit shall become effective on June 01, 2019 and shall expire on May 31, 2021.

By: Roya Sohanaki

(714) 962-2411

PART 1. EFFLUENT LIMITS AND FLOW BASIS

During the period from June 01, 2019 to May 31, 2021, Permittee is authorized to discharge industrial wastewater into the sewer system tributary to OCSD's sewerage facilities. The effluent discharge shall not exceed either the following concentration limits in mg/L or the mass emission rate limits in lbs/day. If your mass emission rate is based on flow, then your flow base is presumed to be 44000 gallons per day (gpd) of wastewater flow at the sampling point.

Company Name: Access Business Group, LLC			**Permit No.:** 1-531435
Sewer Address: 5600 Beach Blvd. Buena Park, CA 90621	**Flow Base:**	44000 GPD	**Effective Date:** 6/1/2019
	WWAR Percent Loss:	0 %	
	WWAR Fixed Loss:	20000 GPD	**Expiration Date:** 5/31/2021
Category: Pharmaceutical Manufacturing	**Subcategory:** 40 CFR § 439.47 PSNS		**Subpart:** D: Mixing/Compounding and Formulation

SAMPLING POINT LOCATION: The above effluent limits apply at the sampling point located between the entrance doors to Bldg 3 and 10. The sample point is a manhole and represents all industrial wastewater discharge from the facility.

§ Combined waste stream formula

Cyanide limits apply at the sampling point after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the sample must be taken at the end of the cyanide process before dilution with other process streams. In the absence of cyanide process, the limits apply at the sampling point location described above (end of pipe).

PART 2. SELF-MONITORING, NOTIFICATION AND REPORTING REQUIREMENTS

I. SELF-MONITORING REQUIREMENTS

Permittee shall conduct monitoring of its own wastewater effluent for the purpose of determining the status of compliance/non-compliance and user charges. Based on the results, Permittee shall make the necessary adjustments/corrections to bring the wastewater discharge into immediate compliance with its permitted limits. The specific requirements are as follows:

A. Monitoring/Sampling Requirements

From the effective date of the permit and until the permit is terminated or revised, Permittee shall monitor its wastewater discharge for the following parameters at the indicated frequency

Parameters	Measurement Frequency	Sample Type [2]	Procedure [3]
Organics[4] :			
Acetone	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Ethyl Acetate	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Isopropyl Acetate	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Methylene Chloride	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
n-Amyl Acetate	Semiannually	Multi-Grab Composite	four (4) grab samples which must be individually analyzed

[1] **NOTE: To the extent that special conditions in Part 4 of this permit require more extensive self monitoring, the special conditions shall apply.**

[2] Sample type is either composite or grab as defined in current Wastewater Discharge Regulations under Section 102.
[3] Flow should be measured concurrently with composite sampling. pH should be measured with all sampling.
[4] See Attachment A Section 3c for a list of Total Toxic Organic constituents, if applicable.

B. Representative Sampling and Laboratory Analyses

Samples and measurements taken as required herein shall be representative of the volume and nature of the regulated industrial discharge during hours of production. All samples shall be taken at the sampling point location as designated in this permit. All equipment used for sampling and analysis must be routinely calibrated, inspected, and maintained to ensure its accuracy. All sampling and laboratory analyses shall be conducted in accordance with Attachment A.

C. **Frequency, Sampling Schedule and Due Dates for Submission of Reports**

Sampling of wastewater effluent and reporting of results shall be done in accordance with the schedule shown below. Sampling may be performed any day within the specified date range as designated in this permit. If sampling cannot be conducted within the specified date for any valid reason, OCSD must be notified in advance and in writing, of the reason(s) for the inability to sample and the new proposed sampling date.

2. **Monthly, Weekly, and Daily Frequency Deadlines**

a. Samples must be collected in accordance with the requirements specified in Part 2 Section A, as applicable.

b. Depending on the self-monitoring frequency, sampling must be conducted in the following manner, as applicable:

(i) **Monthly Self-Monitoring**
A sample of the wastewater effluent shall be collected and analyzed a minimum of one (1) sampling day per month. The sampling day shall be rotated to the successively different plant operational day during each month of monitoring.

(i) **Weekly Self-Monitoring**
A sample of the wastewater effluent shall be collected and analyzed a minimum of four (4) sampling days per month (once a week). The sampling day shall be rotated to the successively different plant operational day during each week of monitoring.

(i) **Daily Self-Monitoring**
A sample of the wastewater effluent shall be collected and analyzed each day of discharge each month.

c. Reporting of monthly, weekly, and daily self-monitoring results must be done on a monthly basis. Self-monitoring reports must be submitted by the twentieth (20th) day of the month following sampling.

D. Requirements for Reporting Results

1. **Self-Monitoring Reports**

Permittee shall submit a Self-Monitoring Report (SMR) on the date(s) specified above. Monitoring results shall be summarized and reported on an OCSD SMR form. OCSD will not accept formats other than what is shown in the SMR form; therefore, forms provided by OCSD or replicates must be used for reporting of results. Failure to receive the SMR forms does not relieve Permittee from the obligation to perform the self-monitoring and submit the report on the required date. The SMR form shall be completely filled-out, with copies of all laboratory results attached. The report shall indicate the concentration of all pollutants in the effluent for which sampling and analyses were performed, including water meter readings required for flow measurement.

If sampling performed by the permittee indicates a violation, the permittee shall notify the Resource Protection Division within 24 hours of becoming aware of the violation. The reporting may be accomplished by a telephone call, fax transmission, e-mail, or a personal visit to the Resource Protection Division. The violation reporting shall contain the date and time of the wastewater sample, the discharge flow for the sample, a possible explanation for the violation(s), and the date scheduled for the resample.

2. **Signatory Requirements**

Prior to submittal of the SMR to OCSD, the results shall be verified and signed under penalty of perjury, by an authorized company official as defined in 40 CFR 403.

E. Additional Monitoring Requirements in Response to Non-compliance

1. Resampling

Upon submission of the SMR to OCSD by the required due date, OCSD will process the results for mass emission rate calculations, review the concentration results, and notify Permittee of the results. If the results indicate that a violation of the applicable concentration and/or mass discharge limits has occurred, a Notice of Violation will be issued and Permittee must repeat the sampling and pollutant analyses of the required parameters, and submit the results of the repeat analysis to OCSD within 30 days after becoming aware of the violation.

2. Reporting

a. The monitoring results shall be submitted as specified in E.1.

b. The requirements for reporting results, as described in D.1 and D.2, shall be followed for the additional monitoring requirements in response to non-compliance.

F. Requirements for Reporting Results of Voluntary Self-Monitoring

1. Any voluntary self-monitoring sample of the effluent obtained during a 24-hour period from the representative sampling point location identified in Part 1 of this permit, that is collected and analyzed in accordance with the guidelines shown in Attachment A, constitutes a valid sample. Results of the analysis for all valid samples shall be reported to OCSD, regardless of the outcome.

2. Self-monitoring results for all valid samples must be submitted using an official numbered Voluntary Self-Monitoring Report (VSMR) Form and received by OCSD within 30 days from the day the sampling event was concluded. Permittee shall obtain the official VSMR Form from OCSD, with a unique tracking/identification number for each day of self-monitoring.

3. OCSD will not consider VSMR Forms received after 30 days from the day the sampling event was concluded. Exceptions to the 30-day submittal policy due to extenuating circumstances or special situations shall be authorized by the OCSD's General Manager or his/her designee.

4. Upon submission of the completed VSMR Form to OCSD by the required 30-day due date, OCSD will evaluate the sample results to determine compliance. If the results indicate that a violation of the applicable discharge limits has occurred, a notice of violation may be issued requiring Permittee to implement corrective measures.

II. NOTIFICATION REQUIREMENTS

A. Permittee shall comply with the notification requirements set forth in the current Wastewater Discharge Regulations:

1. Notification of Spill and Slug Loading

a. In the event Permittee is unable to comply with any permit condition due to a breakdown of equipment, accidents, or human error, or Permittee has reasonable opportunity to know that his discharge will exceed the discharge provisions of the user's permit, Permittee shall immediately notify OCSD by telephone. If the material discharged to the sewer has the potential to cause or result in a fire or explosion hazard, Permittee shall immediately notify the local fire department and OCSD.

b. Confirmation of this notification shall be made in writing no later than five (5) working days from the date of the incident. The written notification shall state the date of the incident, the reasons for the discharge or spill, what steps were taken to immediately correct the problem, and what steps are being taken to prevent the problem from recurring.

c. Such notification shall not relieve the user of any expense, loss, damage or other liability which may be incurred as a result of damage or loss to OCSD or any other damage or loss to person or property; nor shall such notification relieve the user of any fees or other liability which may be imposed by a OCSD's Ordinance or other applicable law.

2. Notification of Bypass

a. Bypass of industrial wastewater to the sewer system is prohibited. OCSD may take enforcement action against the user, unless:

(i) Bypass was unavoidable because it was done to prevent loss of life, personal injury, or severe property damage;

(ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, elective slow-down or shut-down of production units or maintenance during periods of production downtime. This condition is not satisfied if adequate backup equipment could have been feasibly installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventative maintenance; and,

(iii) Permittee submitted notices as required under 2.b.

b. If Permittee knows in advance of the need for a bypass, it shall submit a written request to allow the bypass to OCSD, if possible, at least ten (10) days before the date of the bypass.

c. OCSD may approve an anticipated bypass at its sole discretion after considering its adverse effects, and OCSD determines that the conditions listed in 2.a.(i-iii) are met.

d. Permittee shall provide telephone notification to OCSD of an unanticipated bypass that exceeds its permitted discharge limits within four hours from the time Permittee becomes aware of the bypass. A written report shall also be provided within five (5) days of the time Permittee becomes aware or could reasonably have been aware of the bypass. The report shall contain a description of the bypass and its cause; the duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the bypass. Failure to submit oral notice or written report may be grounds for permit revocation.

B. Notification regarding Planned Changes

Permittee shall notify OCSD 90 days in advance prior to any facility expansion, production increase, or process modifications which may result in new or substantially increased discharges or a change in the nature of the discharge. Permittee shall notify OCDS in writing of the proposed expansion and shall submit any information requested by OCSD for evaluation of the effect of such expansion on the Permittee's discharge to the sewer system.

II. OTHER REPORTING REQUIREMENTS

A. Slug Discharge Control Plan

Permittee shall develop, maintain and implement in accordance with 40 CFR 403.8(f)(2)(v) a Slug Control Plan to respond to spills, emergency bypass and any accidental discharges that may result in a violation of any permit limits or conditions, or may significantly exceed the normal flow to the sewer system or pollutant loading. The plan shall contain detailed procedures to be followed by permittee in responding to a slug discharge at the Permittee's facility. The procedures shall include provisions to eliminate endangerment of human health and safety by containment and clean up of the slug discharge, and prevent any violation of Permittee's discharge limits and OCSD's Wastewater Discharge Regulations (Ordinances). The Plan shall also provide procedures and facilitate immediate notification to OCSD of a slug discharge event.

Permittee shall review and update the Slug Control Plan every two years.

The Slug Discharge Control Plan, at a minimum, must contain the following:

1. Description of the permittee's sewer discharge practices including non-routine batch discharges.
2. Description of stored chemicals including type and characteristic, volume, and chemical hazard classification.
3. Procedures to prevent slug discharges to the sewer system.
4. Description of equipment for responding to slug discharges.
5. Procedures for inspection and maintenance of the chemical storage areas to assure proper daily handling.
6. A copy of an operation log sheet recording the maintenance performed, volume of spill, and corrective measures taken.
7. Procedures for proper training of key personnel for handling slug discharges.
8. Emergency telephone numbers for promptly reporting slug discharges to the appropriate governmental agencies.

B. Waste Minimization Requirement

Upon request by OCSD, Permittee shall provide waste minimization plans to conserve water, investigate product substitution, provide inventory control, implement employee education, and other steps as necessary to minimize waste produced.

C. Water and Tax Bill Submittal

Permittee shall submit to OCSD, copies of Water and Tax Bills within 30 days of receipt of such bills.

D. Changes in Company Information

Permittee shall immediately inform OCSD of any changes or inaccuracies in the following company information which is currently on file:

COMPANY NAME: Access Business Group, LLC	**PHONE:** 714-562-1830 **FAX:** 714-736-7610	**LOCAL SEWERING AGENCY:** City of Buena Park
MAILING ADDRESS: 5600 Beach Boulevard Buena Park, CA 90621	**RESPONSIBLE OFFICER:** Audra Davies Site Leader Buena Park Oper. / VP-R&D	**NO. OF EMPLOYEES:** 485 **WORK DAYS/YEAR:** 220
SERVICE ADDRESS: 5600 Beach Blvd. Buena Park, CA 90621	**AUTHORIZED REPRESENTATIVE / DESIGNATED SIGNATORY:** Tim Hellem Supervisor, EH&S	**N.A.I.C.S NUMBER:** 325412
SERVICE AREA: 03	**REVENUE AREA:** RA 15 None	

E. Falsifying Information

Knowingly making any false statement on any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate is a crime and may result in the imposition of criminal sanctions and/or civil penalties.

PART 3. STANDARD CONDITIONS

I. PROHIBITIONS, LIMITS AND REQUIREMENTS

Permittee is required to comply with the prohibitions and limits on discharges set forth in Article 2 of the current Wastewater Discharge Regulations:

A. Prohibited Discharges
B. Prohibition on Dilution
C. Prohibition on Surface Runoff and Groundwater
D. Prohibition on Unpolluted Water
E. Prohibition on the Use of Grinders
F. Prohibition on Point of Discharge
G. Prohibition on Medical Waste
H. Prohibition on Disposal of Spent Solutions and Sludges

II. CIVIL PENALTIES

All users of OCSD's system and facilities are subject to enforcement actions administratively or judicially by OCSD, U.S. EPA, State of California Regional Water Quality Control Board, or the County of Orange District Attorney.

Any person who violates any provision of the current Wastewater Discharge Regulations; or any permit condition, prohibition or effluent limitation; or any suspension or revocation order shall be liable civilly for a sum not to exceed $25,000.000 per violation, for each day in which such violation occurs.

A. Administrative Civil Penalties

Administrative Civil Penalties may be assessed as follows:

1.) In an amount which shall not exceed two thousand dollars ($2,000.00) for each day for failing or refusing to furnish technical or monitoring reports;

2.) In an amount which shall not exceed three thousand dollars ($3,000.00) for each day for failing or refusing to timely comply with any compliance schedules established by OCSD;

3.) In an amount which shall not exceed five thousand dollars ($5,000.00) per violation for each day of discharge in violation of any waste discharge limit, permit condition, or requirement issued, reissued, or adopted by OCSD;

4.) In any amount which does not exceed ten dollars ($10.00) per gallon for discharges in violation of any suspension, revocation, cease and desist order or other orders, or prohibition issued, or adopted by OCSD.

III. CRIMINAL PENALTIES

Any person who violates any provision of the Ordinance is guilty of a misdemeanor which upon conviction is punishable by a fine not to exceed $1,000.00 or imprisonment for not more than thirty (30) days, or both. Each violation and each day in which a violation occurs may constitute a new and separate violation.

IV. SEVERABILITY

The provisions of this permit are severable. If any provision of these permit limits and/or requirements, or the application thereof, to the Permittee is held invalid, the remainder of the permit limits and/or requirements shall remain in full force and effect.

V. OTHER CONDITIONS

A. Permittee is required to comply with all regulations and discharge limits in the current Wastewater Discharge Regulations and any attachments to this permit.

B. Except as expressly authorized by OCSD, upon the sale or transfer of ownership of the business for which this permit is issued, this permit shall be void. The permittee shall notify OCSD in writing prior to the transfer of ownership and shall give a copy of the existing permit to the new owner or operator.

C. Issued Permits are for a specific user, for a specific operation at a specific location, create no vested rights, and are non-transferable unless conditions as stated in the Ordinance are met. If transfer is allowed, a copy of the existing permit must be given to the new owner or operator. Industrial Wastewater Discharge permits, their concentration limits or their mass emission rates shall not be transferred for an operation at a different location.

D. Permittee shall maintain plant records relating to wastewater discharge and waste manifests for a minimum of three years.

PART 4. SPECIAL CONDITIONS FOR PERMIT NO. 1-531435

None.

ATTACHMENTS

PERMIT NO. 1-531435

Access Business Group, LLC

ATTACHMENT A
PERMIT NO. 1-531435
Access Business Group, LLC

SELF-MONITORING REQUIREMENTS

1. Sampling and Analyzing of Heavy Metals

a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent for heavy metals at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15-minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

b. **Laboratory Analyses.** All wastewater samples shall be analyzed in accordance with the appropriate procedures contained in 40 CFR 136. Where 40 CFR 136 does not include sampling or analytical techniques for the pollutants in question, analyses shall be performed using the most current edition of "*Standard Methods for the Examination of Water and Wastewater*". Wastewater analysis shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon OCSD's request, Permittee shall obtain from its laboratory and furnish to OCSD, information regarding test methods and equipment used, including quality assurance/quality control (QA/QC) information. Other information deemed necessary by OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

2. Sampling and Analyzing for Cyanides

a. **Sampling.** Permittee shall collect and analyze a sample of its wastewater effluent for cyanides at a frequency specified in **Part 2** of the Permit. All sampling for cyanide must be conducted by taking grab samples of the wastewater after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the samples must be taken at the end of the cyanide process before dilution with other process streams. A minimum of four grab samples shall be taken independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques in accordance with EPA requirements must be used to ensure representative sample results.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed for cyanides in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

3. **Sampling and Analysis for Total Toxic Organics (TTOs)**

a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point for TTOs at a frequency specified in **Part 2** of the permit. All effluent sampling for volatile organic compounds must be conducted by taking grab samples of the wastewater effluent. A minimum of four grab samples shall be taken independently during hours of operation within a 24 hour period. Each sample shall be analyzed independently for toxic organic constituents present in the facility. The average concentration from the four grab sample results with concentrations greater than 10 µg/L shall be used to determine compliance with TTOs mass emission and/or concentration limits.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods (i.e., for Purgeable Halocarbons and Aromatics, use Methods 601 and 602, or 624). Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

c. **TTO Constituents.** The TTO limit is a summation of individual values greater than 0.01 milligrams per liter for the following organics:

NA

4. **Sampling and Analyzing of BOD and TSS**

a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent at the sample point for BOD and TSS at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15 -minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

c. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

5. **Sampling and Analyzing for Oil and Grease of Mineral or Petroleum Origin (O&G-M)**

a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point location for O&G-M at a frequency specified in **Part 2** of the permit. A minimum of four grab samples shall be taken

independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques, in accordance with EPA requirements, must be used to ensure representative results.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

IMPORTANT NOTICE

February 16, 2021

Audra Davies, Site Leader Buena Park Oper. / VP-R&D
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

SUBJECT: Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This is a notification that Permit No **1-531435** issued to Access Business Group, LLC will expire on **May 31, 2021**. Please complete and return the enclosed Permit Renewal Application Form to the Orange County Sanitation District (OCSD) by **March 31, 2021**. OCSD's Financial Management Division will generate an invoice for the permit fee and it will be mailed to your Accounts Payable Department under a separate cover. **The permit fee is due at the time the permit renewal application is submitted, but should be submitted with the invoice, not the application. Only a photocopy of the check must accompany the Permit Renewal Application. OCSD will not process the Permit Renewal Application without proof of payment.**

As part of the permit renewal process, OCSD's staff will conduct a comprehensive evaluation of your manufacturing process, operational control practices, and pretreatment system in order to assess factors and variabilities affecting your facility's ability to meet longterm compliance. This is in response to the pretreatment program audit findings of the Environmental Protection Agency(EPA), which required OCSD to conduct, during permit renewal, a more in-depth technical review of parameters affecting compliance. **Within a few days, you will be contacted by OCSD's staff to set-up an appointment for this evaluation. Depending on the number of operations at your facility, please allot about two to four hours for this visit.**

Failure to submit the permit application and payment for the permit fee by the due date may delay the issuance of Access Business Group, LLC's permit prior to the expiration date. **In addition, a permit renewal application submitted after March 31, 2021 may subject your facility to a late processing fee of $500 for an application submitted 30 days or less from the permit's expiration, or $1,000 for an application submitted 15 days or less from the permit's expiration. Please be reminded that discharging to OCSD's sewer system without a valid permit is prohibited and may result in physical termination of sewer service and imposition of civil penalties.**

If your company intends to stop discharging industrial wastewater to OCSD's sewer system, please complete and return the enclosed Request to Close Account Form to OCSD by **March 31, 2021**, to officially close your account and terminate the sewer service at Access Business Group, LLC.

If you have any questions, please call Brian Finkelstein at 714-593-7452.

Roya Sohanaki
Engineering Manager, Resource Protection Division

COURTESY REMINDER

March 1, 2021

Audra Davies, Site Leader Buena Park Oper. / VP-R&D
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

SUBJECT: Courtesy Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This letter is a courtesy reminder to Access Business Group, LLC that the completed Permit Renewal Application is due to the Orange County Sanitation District (OCSD) by **March 31, 2021***, as required in OCSD's *Reminder to Submit an Application for Renewal of a Wastewater Discharge Permit*, which was issued to your facility and dated on or about **February 16, 2021**. Please be advised that **Permit No. 1-531435** will expire on **May 31, 2021,** unless the permit is renewed.

Failure to submit the permit application by the due date may delay the issuance of Access Business Group, LLC's permit prior to its expiration date. **In addition, a permit renewal application submitted after March 31, 2021 may subject your facility to a late processing fee of $500 for an application submitted 30 days or less from the permit's expiration, or $1,000 for an application submitted 15 days or less from the permit's expiration.** Please be reminded that discharge without a valid and current permit is prohibited by the OCSD's Wastewater Discharge Regulations.

If your facility intends to stop discharging industrial wastewater to the OCSD's sewer system, please complete and return the Request to Close Account Form to the District by **March 31, 2021**, to officially close your account and terminate the sewer service at Access Business Group, LLC.

Please disregard this reminder if the Permit Renewal Application has been submitted. If you have any questions, please call Brian Finkelstein at 714-593-7452.

Discharge Permit Renewal Application for Permit # 1-531435

Dear Sir or Madam:

Please find the Class I wastewater discharge permit renewal application for the Buena Park facility of Access Business Group, LLC. Please note that our corporate headquarters will be forwarding the check within the next week, that said, there is no photocopy available at this time. As soon as we receive, I will scan and email to your office.

If you need additional information, please contact me at (714) 600-5863.

Sincerely,

IMPORTANT NOTICE

February 16, 2021

Audra Davies, Site Leader Buena Park Oper. / VP-R&D
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

SUBJECT: Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This is a notification that Permit No **1-531435** issued to Access Business Group, LLC will expire on **May 31, 2021**. Please complete and return the enclosed Permit Renewal Application Form to the Orange County Sanitation District (OCSD) by **March 31, 2021**. OCSD's Financial Management Division will generate an invoice for the permit fee and it will be mailed to your Accounts Payable Department under a separate cover. **The permit fee is due at the time the permit renewal application is submitted, but should be submitted with the invoice, not the application. Only a photocopy of the check must accompany the Permit Renewal Application. OCSD will not process the Permit Renewal Application without proof of payment.**

As part of the permit renewal process, OCSD's staff will conduct a comprehensive evaluation of your manufacturing process, operational control practices, and pretreatment system in order to assess factors and variabilities affecting your facility's ability to meet longterm compliance. This is in response to the pretreatment program audit findings of the Environmental Protection Agency(EPA), which required OCSD to conduct, during permit renewal, a more in-depth technical review of parameters affecting compliance. **Within a few days, you will be contacted by OCSD's staff to set-up an appointment for this evaluation. Depending on the number of operations at your facility, please allot about two to four hours for this visit.**

Failure to submit the permit application and payment for the permit fee by the due date may delay the issuance of Access Business Group, LLC's permit prior to the expiration date. **In addition, a permit renewal application submitted after March 31, 2021 may subject your facility to a late processing fee of $500 for an application submitted 30 days or less from the permit's expiration, or $1,000 for an application submitted 15 days or less from the permit's expiration. Please be reminded that discharging to OCSD's sewer system without a valid permit is prohibited and may result in physical termination of sewer service and imposition of civil penalties.**

If your company intends to stop discharging industrial wastewater to OCSD's sewer system, please complete and return the enclosed Request to Close Account Form to OCSD by **March 31, 2021**, to officially close your account and terminate the sewer service at Access Business Group, LLC.

If you have any questions, please call Brian Finkelstein at 714-593-7452.

ORANGE COUNTY SANITATION DISTRICT
RENEWAL APPLICATION FOR CLASS I WASTEWATER DISCHARGE PERMIT

Instructions

For the Orange County Sanitation District (District) to process and issue a Class I Wastewater Discharge Permit, the applicant must comply with all of the following:

- The Permit Renewal Application Form must be filled out completely. The District **will not** process incomplete submittals, and your application will be returned if there is any missing information. **Do not leave blanks. Please write "N/A" if the information being requested does not apply.**
- The Permit Renewal Application must be signed by the Responsible Officer or Designated Signatory, as defined on pages 6 and 7. The District will return your permit application if it is not signed by the proper company official.
- The permit fee must be remitted at the time the permit renewal application is submitted. Your remittance must be sent directly to the District's Accounting Department; **and, a photocopy of the check must be submitted with the Permit Renewal Application** to the Source Control Division. An application received without this documentation will be returned.

Please refer to Section A of the information brochure for detailed instructions for completing this Application Form.

Ownership Information

Applicant: Access Business Group LLC (Complete Legal Company Name) | 1-531435 (Permit No.)

Mailing Address: 5600 Beach Blvd. (Street) | Buena Park (City) | CA (State) | 90621 (Zip Code)

Sewer Service Address: 5600 Beach Blvd. (Street) | Buena Park (City) | CA (State) | 90621 (Zip Code)

Phone Number (714) 562-1830 Fax Number (714) 736-7610

Company Website (if any): http:// www.nutrilite.com

Is your business a ○ corporation? ○ partnership? ○ sole proprietorship? (X) Limited Liability Corporation?

List all Principals/Owners/Major Shareholders of the business. This must include the Responsible Officer or equivalent.

Name and Title	Address
Milind Pant - Chief Executive Officer	7575 Fulton Street East, Ada, MI 49355

For corporations only: Year of Incorporation | State of Incorporation | Corporate Identification Number

Are you the (X) landowner? or ○ lessee? If a lessee, include the name, address, and telephone number of the property owner and/or the manager of the property: Check one: ○ Owner ○ Manager

Name | Address | Phone

Manufacturing Process Information

H Description of all manufacturing processes and/or service activities on the premises, wet or dry. Please identify and describe the processes which generate wastewater in more detail. (Use additional sheets if necessary.)

The facility is divided into the South Campus (5600 Beach Blvd) and the North Campus (5609 River Way). A site plan of the facility is presented as Figure 1.

South Campus:
Raw materials are stored in buildings B8 and B14;
Building B1 contains the Nutrilite Health Institute and also includes administrative offices; Building B3 is used for QA/QC;
Building B4 includes the maintenance shop and gym facilities;
Building B6 - Cafeteria and offices for EHS, R&D, Document Control;
Building B7 - Receiving department, warehouse and pilot lab; and
Raw materials (both liquid and powder) are manufactured/processed in buildings B9 (Granulation) and B10 (SDM).

North Campus:
Building B5A is used as administrative offices/space;
Building B5-1 - is used for packaging finished goods and warehousing; and
Building B5-2 & B5-3 - warehousing and shipping (shipping Dept.) of finished product.
As with past permit applications, this one will also be for the South Complex. Manufacturing activities consist of:
- Blending raw materials (B10);
- compressing them into dry tablets or capsules (B10);
- coating of tablets (B10);
- granulating dry materials (B9); and
- R&D labs (B9).

Equipment and rooms used in manufacturing of products are washed down during product change overs, with the chemicals found in Attachment F (Quorum Pink, Quorum Purple, Vortex LF, Vortex HF). Please note these chemicals are replace in kind as the cleaning materials used before are no longer manufactured. The wash down solution (water mixed with the above), enter the sanitary sewer via floor drains.

I Description and average quantity of raw materials used or handled: (Use additional sheets if necessary.)

The facility use organically grown, plant based ingredients that include beta carotene, citrus, soy lecithin, lemon oil, ginkgo bilboa, maltodetrose, sugars herbal extracts, etc.

J Description of products manufactured or produced as a result of services performed: (Use additional sheets if necessary.)

Products produced at the facility include: Granulated Herbal Extracts with nutritional values (various) and Dietary Supplements in the forms of tables and capsules (various)

K Average Daily Production: 25000 - 50000 bottles/day

L North American Industry Classification System (NAICS) Code (this code replaced the discontinued SIC Code):

Primary NAICS Code: 311999 Secondary NAICS Code(s): 311999

Operations Information

Operating Schedule:

Number of shifts per work day: 2 Number of work days per week: 4 Number of production days per year: 220

Average number of employees per shift: 1st: 340 2nd: 145 3rd: _____ Total: 485

Production hours per shift: 1st: _____ 2nd: _____ 3rd: _____ Total: 0

Discharge hours per shift: 1st: _____ 2nd: _____ 3rd: _____ Total: 0

When did you start operating at this facility? Month: July Year: 1952

For Industries involved in Surface/Metal Finishing (plating, anodizing, phosphating, etching, PCB manufacturing, etc.):
Do you own more than 50% (area basis) of the materials undergoing production? ○ N/A ○ Yes ○ No

Have you made any additions or modifications to the manufacturing process during the past two years? ○ Yes ○ No
If the answer is "Yes", you must submit updated Manufacturing Process Layout, Manufacturing Process Flow Diagram, and Spill Containment Drawings and Information with this application.
Please describe briefly the process changes during the last permit period:

Information on Treatment of Industrial Waste/Wastewater

Is any form of waste/wastewater treatment practiced at this facility? ○ Yes ⊗ No

If the answer is "Yes", provide the following information by checking the appropriate boxes:

- Mode of Operation: ○ Continuous ○ Batch ○ Both
- Pretreatment Units Used:

☐ Hydroxide Precipitation
☐ Hexavalent Chrome Reduction
☐ Cyanide Destruction
☐ Equalization
☐ pH Adjustment
☐ Electrowinning/Plate-out Units
☐ Filter Press
☐ Final Polishing Filter
☐ Spent Chemical Treatment Unit
☐ Below-ground Clarifier
☐ Ion Exchange
☐ Other _____
☐ Cross-Flow Filtration (e.g., Memtek)
☐ Sorption Filter (e.g., Lancy)
☐ Aluminum Chip
☐ Ozone Treatment Reactor
☐ Clarifier/Lamella Settling

How are spent chemicals handled? Specify the method for "Other."

☐ Wastehauled offsite ☐ Batch treated onsite ☐ Discharged to sewer without treatment

☐ Other _____

Wastewater Operator/Maintenance Information:
Number of wastewater pretreatment operators at your facility: 1st shift _____ 2nd shift _____ 3rd shift _____

Operator Name	Qualification (Please check)						
	None	Wastewater Treatment Operator with CWEA Certification			AA Science with min 2 semesters in Chemistry	BS Chemical or Environmental Engineering	BS in other Engineering or Science
		Grade I	Grade 2	Grade 3/4			
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐

Is there an Operation and Maintenance Manual or procedures for the entire wastewater treatment system? ○ Yes ○ No

Information for Determining Volume of Wastewater Discharge and User Charges

Assessor Parcel Number(s) as shown on property tax bill: 066-572-08

If a Lessee, please indicate:

(a) percentage of property tax bill paid to landowner: _____ %

(b) percentage of water bill paid to landowner: _____ %

(c) square footage of leased space: _____ Sq. Foot

(d) whether your facility is a part of a commercial/industrial complex: ○ Yes ○ No

Water Supplier: City of Buena Park

Water Account Number(s): See Attached Water Bills

Other Sources of Water Supply: ☐ onsite wells ☐ groundwater remediation ☐ others _____

Water Measurement Information:

List all water meters at your facility. **Complete Attachment A in accordance with instructions.**

From the incoming meter(s) identified on Attachment A, check which following water measurement strategy is used:

(X) City water meter(s) only ○ Process meter(s) only ○ Shop meter(s) only ○ Both city meter and process meters

The meter(s) checked above measure:

(X) Only the incoming water going to the applicant's facility.
○ The incoming water to the applicant's facility and for other companies adjacent.

Does your facility use an effluent meter to measure the industrial wastewater discharge? ○ Yes (X) No

If so, does the effluent meter measure only the industrial wastewater discharged to the sewer from the facility (excluding sanitary, boiler blowdown, cooling tower bleed off, and R.O. reject)? ○ Yes ○ No

If your facility uses a final effluent meter, skip to Line Y

In order to determine mass emission rates and user charges, the actual volume of water discharged to the sewer must be calculated. **For facilities that do not have effluent meters,** this is done by determining the volume of incoming water, as indicated by the city water meter, and then applying appropriate deductions for water losses. If losses cannot be quantified, the District will apply water losses equivalent to 5% of the incoming water. It is to your advantage to determine and quantify these losses if your facility has water losses more than 5%. Please check the appropriate box below:

○ Apply 5% loss (X) Use calculated loss

If calculated loss is indicated, determine all applicable losses using the worksheet provided in **Attachment B** and summarize results in the table below. The worksheet and supporting documentation must be submitted for these losses to be applied.

Item	Average Daily Water Losses	Gal/day	Loss is applicable to	
			City Meter(s)	Process Meter
I	Landscape / Irrigation losses	13,600	☐	☐
II	Boiler losses for steam condensate not returned to boiler	7,000	☐	☐
III	Cooling tower water evaporation	14,500	☐	☐
IV	Product losses		☐	☐
V	Other losses		☐	☐
			☐	☐
	Total Losses	35,100	Check the above if applicable.	

Certification for Accuracy of Information

I have personally examined and am familiar with the information submitted in this application and required attachments, and I hereby certify under penalty of law that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I also authorize the District to verify all information provided, including the water account/usage information from the water supplier, facility lease contracts, and other pertinent information.

I certify that upon issuance of the permit, that this firm's operation and its resultant wastewater discharge will achieve consistent compliance with the District's Ordinance and applicable Federal wastewater discharge requirements. If the wastewater discharge does not meet all the applicable regulations, the company will modify manufacturing equipment, limit production, limit industrial waste discharge, install wastewater pretreatment equipment, or do whatever is legally necessary to meet discharge requirements.

Y Responsible Officer/Designated Signatory (as specified on pages 6 and 7):

Name: Audra J. Davies

Signature: 

Title: Site Leader Buena Park Operations/ VP Nutrition

Date: 3/25/2021

Email: audra_davies@amway.com

Z Name of the person to contact concerning information provided in this application: ☐ Same as above

Name: Kelli Forbes

Address: 5600 Beach Blvd.

Title: EHS Analyst

Phone: (714) 600 - 5863

Email: kelli.forbes@amway.com

THIS IS MANDATORY.
Complete and return this form.

Certification of Responsible Officer

I, the undersigned, do hereby certify that I meet the definition of a Responsible Officer, as outlined below:

A responsible officer is defined as found in 40 CFR 403.12 (l)(1)(i):

1. For a Corporation:
   a. A President, Secretary, Treasurer or Vice President in charge of a principle business function or any other person who performs similar policy or decision making functions for the corporation, or
   b. The manager of one or more manufacturing, production, or operating facilities provided the manager is authorized to assure long term environmental compliance with environmental laws and regulations, and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. For partnership or sole proprietorship; a general partner or proprietor, respectively.
3. For a public agency; a general manager, department manager, or a supervisor of a public agency who performs policy or decision making functions for the public agency.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates.

Name of Responsible Officer: Audra J. Davies
(Please Print or Type)

Signature: [signature] Date: 3/25/2021

Title: Site Leader Buena Park Operations/ VP Nutrition E-mail address: audra_davies@amway.com

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

NOTE: All correspondence regarding permit, enforcement, and self-monitoring issues (e.g., Self-Monitoring Forms and Reminder Letters, Notices of Violations, Permit Application, etc.) shall be sent to the Responsible Officer or to the Designated Signatory if properly authorized. If there is a change in the Responsible Officer or Designated Signatory in the future, the Districts must be notified in writing and the appropriate form must be submitted.

THIS IS OPTIONAL.
Submit this form only if the Responsible Officer wants to designate a Signatory.

Option to Designate Signatory

This is to authorize the individual whose name and title appear below,

Kelli Forbes — *Designated Signatory's Name*

EHS Analyst — *Title*

to be the designated individual responsible for wastewater discharges who can be served with notices, and who is the Designated Signatory on my behalf for purposes of signing all reports. This individual has the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that if, in the future, this information is no longer correct, the District will be notified in writing to terminate designation of the above-named individual and to establish a new signatory.

Name of Responsible Officer: Audra J. Davies

Signature:

Title: Site Leader Buena Park Operations/ VP Nutrition

Date: 3/25/2021

Company Name: Access Business Group LLC (dba Nutrilite)

Permit No.: 1-531435

A designated signatory is defined as found in 40 CFR 403.12 (l)(3)(ii):

1. An individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company, and;

2. Written authorization is submitted to the Source Control Permit Supervisor at the Orange County Sanitation Districts, and;

3. Written authorization must be submitted by a responsible corporate officer such as a President, Secretary, Treasurer, or Vice-President of the corporation in charge of a principal business function or any other person who performs similar decision-making functions for the corporation.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that it is my responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues.

Name of Designated Signatory: Kelli Forbes

Signature:

Date: 3/25/2021

Title: EHS Analyst

E-mail address: kelli.forbes@amway.com

All correspondence regarding all permit and enforcement issues shall be sent to the Designated Signatory. It is the Designated Signatory's responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues. The Responsible Officer remains legally responsible for all wastewater discharge to the sewer from this facility and for ensuring that he is duly informed by the Designated Signatory.

INSTRUCTIONS

STEP 1. Please identify for each *Onsite Water Meter* at your facility.

- **Meter type** - Use the following descriptions to characterize your meter type(s).
  The **City Meter** is typically found outside at all buildings. This meter type, maintained by the water purveyor (city or local agency), is used to measure incoming water for potable, sanitary, landscaping, and industrial uses. The readings from these meters are used to determine the charges on the monthly or bi-monthly water bills. The **Process Meter** is located downstream of all drinking, sanitary, and landscaping uses. Process meters are typically installed to determine water usage to specific industrial processes. The **Effluent Meter** records the actual volume of wastewater discharged by the facility and is typically located at the discharge point near the designated sample point. The O.C. Sanitation District may require an effluent meter to determine daily flows for compliance verification, and/or to establish accurate sewerage service charges. The **Shop Meter** is often found in a multi-occupancy industrial strip that does not have individual city meters for each suite. Landlords who do not want to pay the water bill for a significant water user often install a meter on the outside of the shop. It is distinguished from the process meter in that it also meters the potable and sanitary flow, like a city meter. The water purveyor does not bill the user directly for water usage metered by a shop meter. The landlord will frequently bill the renter directly, based upon the shop meter volumes.

- **Digits/Fixed Zeros/Tenths** - Use the Digits, Fixed Zeros, and Tenths columns to record the current meter reading. Include the beginning digits, even if they are zero, as well as, the fixed zeros, or tenths designated by the arrow sweep. **Please visually read each meter. Do not provide values or volumes from the water bills.**
  Use the following the guidelines for Fixed Zeros and Tenths to provide assistance with reading and recording the information for several common meter variations. **Fixed Zeros** - On many water meter models the sweeping arrow records numerical units that are designated by the fixed zeros on the totalizer read-out. Use the three shaded columns designated Fixed Zeros to indicate that the meter's arrow sweep records single (0 - 9) digit, double (10 - 90) digit, or triple (100 - 900) digit values. **Tenths** - On many water meter models the dial numbers (selected by the arrow sweep), or the last digit of a totalizer read-out designates tenths of a gallon. Use the tenths column (implied by the decimal point) to indicate the meter records tenths of a gallon.

- **Units/Multiplier** - Indicate the meter units, Cubic Feet (Cu. Ft.) or Gallons. If applicable, indicate the multiplier factor (x 10 or x 100). **Do not confuse this with the typical billing unit (100 CF) on the monthly water bill.**
  Units - Most water meters register the volume of water in either cubic feet or gallons. Please indicate if your meter uses a different unit of measurement such as barrels, cubic meters, or acre feet. **Multiplier** - Occasionally the meter dial will indicate that a multiplier (X 10 or X 100) must be applied to the totalizer reading (this feature is more common on electronic flow instruments). Please indicate different multiplier factors as applicable.

- **Location** - Briefly describe the location of each meter.
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc., will all help our field staff verify the information by establishing vital reference points.

STEP 2. Attach a copy of the latest water bill for each city meter identified.

ATTACHMENT A

ORANGE COUNTY SANITATION DISTRICT
CLASS I WASTEWATER DISCHARGE PERMIT APPLICATION CHECKLIST

(This checklist must be submitted with the Class I Permit Application)

SUBMITTED

☒ PERMIT APPLICATION

☒ PERMIT FEE REMITTANCE ($2,530.00)
(Include a copy of the check)

The following shall be submitted with a new application, if the documents have been updated since last permit renewal, or as required in accordance with permit requirements (effluent calibration report):

☐ I. Plot Plan (Process and Pretreatment Areas)

☐ II. Manufacturing Process Layout

☐ III. Manufacturing Process Flow Diagram

☐ IV. Pollutant Source Identification
- ☐ A. Wet Process Waste/Wastewater Flow Diagram
- ☐ B. Waste/Wastewater Characterization Report (including analytical results)

☐ V. Pretreatment System Drawings
- ☐ A. Pretreatment System Location and Layout Drawings
- ☐ B. Pretreatment System Process Flow and Instrumentation Diagram

☐ VI. Effluent Meter In-Situ Hydraulic Calibration Report

☐ VII. Spill Containment Drawing and Information

☐ VIII. Toxic Organic Management Plan (TOMP) – **If required as part of a TTO waiver, an updated TOMP shall be submitted with each permit renewal**

SUBJECT: Renewal of Class 1 Wastewater Discharge Permit No. 1-531435

Enclosed is the renewed Class 1 Wastewater Discharge Permit No. 1-531435 issued by the Orange County Sanitation District (OC San) to Access Business Group, LLC (Access Business Group) for the facility located at 5600 Beach Boulevard in Buena Park. Permit No. 1-531435 is valid until May 31, 2023. Access Business Group is required to comply with the permit limits and conditions set forth in this permit at all times. Please see:

- Part 2 of the permit for continuing self-monitoring requirements.
- Part 4 of the permit for the special condition to submit updated facility plot plans to OC San no later than **July 31, 2021**.
- Part 4 of the permit for the special condition to submit updated water balance calculations to OC San no later than **July 31, 2021**.

If there are any discrepancies with the information described on the permit, please notify OC San in writing. Access Business Group is also required to notify OC San in writing of any future changes relating to company information, manufacturing processes, pretreatment modification, wastes/wastewater quantity, sampling point location, piping modification, or any other relevant information. Failure to do so is in violation of your permit.

If you have any questions, please contact the undersigned at (714) 593-7452 or by email at Bfinkelstein@ocsan.gov.

INDUSTRIAL WASTEWATER DISCHARGE CLASS I PERMIT

Permit No: 1-531435

FOR DISCHARGE OF WASTEWATER ISSUED BY ORANGE COUNTY SANITATION DISTRICT

In accordance with the provisions of the Wastewater Discharge Regulations of Orange County Sanitation District, herein referred to as "OCSD",

Access Business Group, LLC
5600 Beach Blvd.
Buena Park, CA 90621

hereinafter referred to as "Permittee", is hereby authorized to discharge industrial wastewater from the above identified facility into OCSD's sewer system in accordance with the conditions set forth in this permit. Such conditions are as specified in the following parts of this permit:

Part 1 - Effluent Limits and Flow Basis
Part 2 - Monitoring, Notification, and Reporting Requirements
Part 3 - Standard Conditions
Part 4 - Special Conditions

Compliance with this permit does not relieve the Permittee of its obligation to comply with OCSD's current Wastewater Discharge Regulations, any applicable pretreatment regulations, standards or requirements under local, State, and Federal laws, including any such regulations, standards, requirements or laws that may become effective during the term of this permit. Non-compliance with any term or condition of this permit constitutes a violation of the current Wastewater Discharge Regulations.

This permit shall become effective on June 01, 2021 and shall expire on May 31, 2023.

By: Roya Sohanaki

Roya Sohanaki, PE
Engineering Manager, Resource Protection Division

Issued on 5/28/2021

ORANGE COUNTY SANITATION DISTRICT, CALIFORNIA
10844 Ellis Avenue
Fountain Valley, CA 92708-7018
(714) 962-2411

PART 1. EFFLUENT LIMITS AND FLOW BASIS

During the period from June 01, 2021 to May 31, 2023, Permittee is authorized to discharge industrial wastewater into the sewer system tributary to OCSD's sewerage facilities. The effluent discharge shall not exceed either the following concentration limits in mg/L or the mass emission rate limits in lbs/day. If your mass emission rate is based on flow, then your flow base is presumed to be 44000 gallons per day (gpd) of wastewater flow at the sampling point.

Company Name: Access Business Group, LLC			**Permit No.:** 1-531435
Sewer Address: 5600 Beach Blvd. Buena Park, CA 90621	**Flow Base:**	44000 GPD	**Effective Date:** 6/1/2021
	WWAR Percent Loss:	0 %	
	WWAR Fixed Loss:	20000 GPD	**Expiration Date:** 5/31/2023
Category: Pharmaceutical Manufacturing	**Subcategory:** 40 CFR § 439.47 PSNS		**Subpart:** D: Mixing/Compounding and Formulation

DISCHARGE LIMITS

pH	6.0-12.0	•	•	•	•	•

SAMPLING POINT LOCATION: The above effluent limits apply at the sampling point located between the entrance doors to Bldg 3 and 10. The sample point is a manhole and represents all industrial wastewater discharge from the facility.

§ Combined waste stream formula

Cyanide limits apply at the sampling point after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the sample must be taken at the end of the cyanide process before dilution with other process streams. In the absence of cyanide process, the limits apply at the sampling point location described above (end of pipe).

PART 2. SELF-MONITORING, NOTIFICATION AND REPORTING REQUIREMENTS

I. SELF-MONITORING REQUIREMENTS

Permittee shall conduct monitoring of its own wastewater effluent for the purpose of determining the status of compliance/non-compliance and user charges. Based on the results, Permittee shall make the necessary adjustments/corrections to bring the wastewater discharge into immediate compliance with its permitted limits. The specific requirements are as follows:

A. Monitoring/Sampling Requirements

From the effective date of the permit and until the permit is terminated or revised, Permittee shall monitor its wastewater discharge for the following parameters at the indicated frequency

Parameters	Measurement Frequency	Sample Type [2]	Procedure [3]
Organics[4] :			
Acetone	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Ethyl Acetate	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Isopropyl Acetate	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Methylene Chloride	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
n-Amyl Acetate	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed

[1] **NOTE: To the extent that special conditions in Part 4 of this permit require more extensive self monitoring, the special conditions shall apply.**

[2] Sample type is either composite or grab as defined in current Wastewater Discharge Regulations under Section 102.
[3] Flow should be measured concurrently with composite sampling. pH should be measured with all sampling.
[4] See Attachment A Section 3c for a list of Total Toxic Organic constituents, if applicable.

B. Representative Sampling and Laboratory Analyses

Samples and measurements taken as required herein shall be representative of the volume and nature of the regulated industrial discharge during hours of production. All samples shall be taken at the sampling point location as designated in this permit. All equipment used for sampling and analysis must be routinely calibrated, inspected, and maintained to ensure its accuracy. All sampling and laboratory analyses shall be conducted in accordance with Attachment A.

C. **Frequency, Sampling Schedule and Due Dates for Submission of Reports**

Sampling of wastewater effluent and reporting of results shall be done in accordance with the schedule shown below. Sampling may be performed any day within the specified date range as designated in this permit. If sampling cannot be conducted within the specified date for any valid reason, OCSD must be notified in advance and in writing, of the reason(s) for the inability to sample and the new proposed sampling date.

1. **Quarterly and Semi-Annual Frequency Deadlines**

Organics	Sampling Date	Report Submission Due Date
First Quarter (Jul 2021- Sep 2021)	August 01 - August 16	August 31, 2021
Second Quarter (Oct 2021- Dec 2021)	November 01 - November 16	November 30, 2021
Third Quarter (Jan 2022- Mar 2022)	February 01 - February 16	February 28, 2022
Fourth Quarter (Apr 2022- Jun 2022)	May 01 - May 16	May 31, 2022
First Quarter (Jul 2022- Sep 2022)	August 01 - August 16	August 31, 2022
Second Quarter (Oct 2022- Dec 2022)	November 01 - November 16	November 30, 2022
Third Quarter (Jan 2023- Mar 2023)	February 01 - February 16	February 28, 2023
Fourth Quarter (Apr 2023- Jun 2023)	May 01 - May 16	May 31, 2023
First Quarter (Jul 2023- Sep 2023)	August 01 - August 16	August 31, 2023

2. **Monthly, Weekly, and Daily Frequency Deadlines**

a. Samples must be collected in accordance with the requirements specified in Part 2 Section A, as applicable.

b. Depending on the self-monitoring frequency, sampling must be conducted in the following manner, as applicable:

(i) **Monthly Self-Monitoring (if applicable)**
A sample of the wastewater effluent shall be collected and analyzed a minimum of one (1) sampling day per month. The sampling day shall be rotated to the successively different plant operational day during each month of monitoring.

(i) **Weekly Self-Monitoring (if applicable)**
A sample of the wastewater effluent shall be collected and analyzed a minimum of four (4) sampling days per month (once a week). The sampling day shall be rotated to the successively different plant operational day during each week of monitoring.

(i) **Daily Self-Monitoring (if applicable)**
A sample of the wastewater effluent shall be collected and analyzed each day of discharge each month.

c. Reporting of monthly, weekly, and daily self-monitoring results must be done on a monthly basis. Self-monitoring reports must be submitted by the twentieth (20th) day of the month following sampling.

D. Requirements for Reporting Results

1. Self-Monitoring Reports

Permittee shall submit a Self-Monitoring Report (SMR) on the date(s) specified above. Monitoring results shall be summarized and reported on an OCSD SMR form. OCSD will not accept formats other than what is shown in the SMR form; therefore, forms provided by OCSD or replicates must be used for reporting of results. Failure to receive the SMR forms does not relieve Permittee from the obligation to perform the self-monitoring and submit the report on the required date. The SMR form shall be completely filled-out, with copies of all laboratory results attached. The report shall indicate the concentration of all pollutants in the effluent for which sampling and analyses were performed, including water meter readings required for flow measurement.

If sampling performed by the permittee indicates a violation, the permittee shall notify the Resource Protection Division within 24 hours of becoming aware of the violation. The reporting may be accomplished by a telephone call, fax transmission, e-mail, or a personal visit to the Resource Protection Division. The violation reporting shall contain the date and time of the wastewater sample, the discharge flow for the sample, a possible explanation for the violation(s), and the date scheduled for the resample.

2. Signatory Requirements

Prior to submittal of the SMR to OCSD, the results shall be verified and signed under penalty of perjury, by an authorized company official as defined in 40 CFR 403.

E. Additional Monitoring Requirements in Response to Non-compliance

1. Resampling

Upon submission of the SMR to OCSD by the required due date, OCSD will process the results for mass emission rate calculations, review the concentration results, and notify Permittee of the results. If the results indicate that a violation of the applicable concentration and/or mass discharge limits has occurred, a Notice of Violation will be issued and Permittee must repeat the sampling and pollutant analyses of the required parameters, and submit the results of the repeat analysis to OCSD within 30 days after becoming aware of the violation.

2. Reporting

a. The monitoring results shall be submitted as specified in E.1.

b. The requirements for reporting results, as described in D.1 and D.2, shall be followed for the additional monitoring requirements in response to non-compliance.

F. Requirements for Reporting Results of Voluntary Self-Monitoring

1. Any voluntary self-monitoring sample of the effluent obtained during a 24-hour period from the representative sampling point location identified in Part 1 of this permit, that is collected and analyzed in accordance with the guidelines shown in Attachment A, constitutes a valid sample. Results of the analysis for all valid samples shall be reported to OCSD, regardless of the outcome.

2. Self-monitoring results for all valid samples must be submitted using an official numbered Voluntary Self-Monitoring Report (VSMR) Form and received by OCSD within 30 days from the day the sampling event was concluded. Permittee shall obtain the official VSMR Form from OCSD, with a unique tracking/identification number for each day of self-monitoring.

3. OCSD will not consider VSMR Forms received after 30 days from the day the sampling event was concluded. Exceptions to the 30-day submittal policy due to extenuating circumstances or special situations shall be authorized by the OCSD's General Manager or his/her designee.

4. Upon submission of the completed VSMR Form to OCSD by the required 30-day due date, OCSD will evaluate the sample results to determine compliance. If the results indicate that a violation of the applicable discharge limits has occurred, a notice of violation may be issued requiring Permittee to implement corrective measures.

II. NOTIFICATION REQUIREMENTS

A. Permittee shall comply with the notification requirements set forth in the current Wastewater Discharge Regulations:

1. Notification of Spill and Slug Loading

a. In the event Permittee is unable to comply with any permit condition due to a breakdown of equipment, accidents, or human error, or Permittee has reasonable opportunity to know that his discharge will exceed the discharge provisions of the user's permit, Permittee shall immediately notify OCSD by telephone. If the material discharged to the sewer has the potential to cause or result in a fire or explosion hazard, Permittee shall immediately notify the local fire department and OCSD.

b. Confirmation of this notification shall be made in writing no later than five (5) working days from the date of the incident. The written notification shall state the date of the incident, the reasons for the discharge or spill, what steps were taken to immediately correct the problem, and what steps are being taken to prevent the problem from recurring.

c. Such notification shall not relieve the user of any expense, loss, damage or other liability which may be incurred as a result of damage or loss to OCSD or any other damage or loss to person or property; nor shall such notification relieve the user of any fees or other liability which may be imposed by a OCSD's Ordinance or other applicable law.

2. Notification of Bypass

a. Bypass of industrial wastewater to the sewer system is prohibited. OCSD may take enforcement action against the user, unless:

(i) Bypass was unavoidable because it was done to prevent loss of life, personal injury, or severe property damage;

(ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, elective slow-down or shut-down of production units or maintenance during periods of production downtime. This condition is not satisfied if adequate backup equipment could have been feasibly installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventative maintenance; and,

(iii) Permittee submitted notices as required under 2.b.

b. If Permittee knows in advance of the need for a bypass, it shall submit a written request to allow the bypass to OCSD, if possible, at least ten (10) days before the date of the bypass.

c. OCSD may approve an anticipated bypass at its sole discretion after considering its adverse effects, and OCSD determines that the conditions listed in 2.a.(i-iii) are met.

d. Permittee shall provide telephone notification to OCSD of an unanticipated bypass that exceeds its permitted discharge limits within four hours from the time Permittee becomes aware of the bypass. A written report shall also be provided within five (5) days of the time Permittee becomes aware or could reasonably have been aware of the bypass. The report shall contain a description of the bypass and its cause; the duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the bypass. Failure to submit oral notice or written report may be grounds for permit revocation.

B. Notification regarding Planned Changes

Permittee shall notify OCSD 30 days in advance prior to any facility expansion, production increase, or process modifications which may result in new or substantially increased discharges, a change in the nature of the discharge, or any change that affects the permittee's potential for slug discharges. Permittee shall notify OCSD in writing of the proposed expansion and shall submit any information requested by OCSD for evaluation of the effect of such expansion on the Permittee's discharge to the sewer system.

III. OTHER REPORTING REQUIREMENTS

A. Slug Discharge Control Plan

Permittee shall develop, maintain and implement in accordance with 40 CFR 403.8(f)(2)(v) a Slug Control Plan to respond to spills, emergency bypass and any accidental discharges that may result in a violation of any permit limits or conditions, or may significantly exceed the normal flow to the sewer system or pollutant loading. The plan shall contain detailed procedures to be followed by permittee in responding to a slug discharge at the Permittee's facility. The procedures shall include provisions to eliminate endangerment of human health and safety by containment and clean up of the slug discharge, and prevent any violation of Permittee's discharge limits and OCSD's Wastewater Discharge Regulations (Ordinances). The Plan shall also provide procedures and facilitate immediate notification to OCSD of a slug discharge event.

Permittee shall review and update the Slug Control Plan every two years.

The Slug Discharge Control Plan, at a minimum, must contain the following:

1. Description of the permittee's sewer discharge practices including non-routine batch discharges.
2. Description of stored chemicals including type and characteristic, volume, and chemical hazard classification.
3. Procedures to prevent slug discharges to the sewer system.
4. Description of equipment for responding to slug discharges.
5. Procedures for inspection and maintenance of the chemical storage areas to assure proper daily handling.
6. A copy of an operation log sheet recording the maintenance performed, volume of spill, and corrective measures taken.
7. Procedures for proper training of key personnel for handling slug discharges.
8. Emergency telephone numbers for promptly reporting slug discharges to the appropriate governmental agencies.

B. Waste Minimization Requirement

Upon request by OCSD, Permittee shall provide waste minimization plans to conserve water, investigate product substitution, provide inventory control, implement employee education, and other steps as necessary to minimize waste produced.

C. Water and Tax Bill Submittal

Permittee shall submit to OCSD, copies of Water and Tax Bills within 30 days of receipt of such bills.

D. Changes in Company Information

Permittee shall immediately inform OCSD of any changes or inaccuracies in the following company information which is currently on file:

COMPANY NAME: Access Business Group, LLC	**PHONE:** 714-562-1830 **FAX:** 714-736-7610	**LOCAL SEWERING AGENCY:** City of Buena Park
MAILING ADDRESS: 5600 Beach Boulevard Buena Park, CA 90621	**RESPONSIBLE OFFICER:** Audra Davies Site Leader Buena Park Operations / VP of	**NO. OF EMPLOYEES:** 485 **WORK DAYS/YEAR:** 220
SERVICE ADDRESS: 5600 Beach Blvd. Buena Park, CA 90621	**AUTHORIZED REPRESENTATIVE / DESIGNATED SIGNATORY:** Kelli Forbes EHS Analyst	**N.A.I.C.S NUMBER:** 325412
SERVICE AREA: 03	**REVENUE AREA:** RA 15 None	

E. Falsifying Information

Knowingly making any false statement on any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate is a crime and may result in the imposition of criminal sanctions and/or civil penalties.

PART 3. STANDARD CONDITIONS

I. PROHIBITIONS, LIMITS AND REQUIREMENTS

Permittee is required to comply with the prohibitions and limits on discharges set forth in Article 2 of the current Wastewater Discharge Regulations:

A. Prohibited Discharges
B. Prohibition on Dilution
C. Prohibition on Surface Runoff and Groundwater
D. Prohibition on Unpolluted Water
E. Prohibition on the Use of Grinders
F. Prohibition on Point of Discharge
G. Prohibition on Medical Waste
H. Prohibition on Disposal of Spent Solutions and Sludges

II. CIVIL PENALTIES

All users of OCSD's system and facilities are subject to enforcement actions administratively or judicially by OCSD, U.S. EPA, State of California Regional Water Quality Control Board, or the County of Orange District Attorney.

Any person who violates any provision of the current Wastewater Discharge Regulations; or any permit condition, prohibition or effluent limitation; or any suspension or revocation order shall be liable civilly for a sum not to exceed $25,000.000 per violation, for each day in which such violation occurs.

A. Administrative Civil Penalties

Administrative Civil Penalties may be assessed as follows:

1.) In an amount which shall not exceed two thousand dollars ($2,000.00) for each day for failing or refusing to furnish technical or monitoring reports;

2.) In an amount which shall not exceed three thousand dollars ($3,000.00) for each day for failing or refusing to timely comply with any compliance schedules established by OCSD;

3.) In an amount which shall not exceed five thousand dollars ($5,000.00) per violation for each day of discharge in violation of any waste discharge limit, permit condition, or requirement issued, reissued, or adopted by OCSD;

4.) In any amount which does not exceed ten dollars ($10.00) per gallon for discharges in violation of any suspension, revocation, cease and desist order or other orders, or prohibition issued, or adopted by OCSD.

III. CRIMINAL PENALTIES

Any person who violates any provision of the Ordinance is guilty of a misdemeanor which upon conviction is punishable by a fine not to exceed $1,000.00 or imprisonment for not more than thirty (30) days, or both. Each violation and each day in which a violation occurs may constitute a new and separate violation.

IV. SEVERABILITY

The provisions of this permit are severable. If any provision of these permit limits and/or requirements, or the application thereof, to the Permittee is held invalid, the remainder of the permit limits and/or requirements shall remain in full force and effect.

V. OTHER CONDITIONS

A. Permittee is required to comply with all regulations and discharge limits in the current Wastewater Discharge Regulations and any attachments to this permit .

B. Except as expressly authorized by OCSD, upon the sale or transfer of ownership of the business for which this permit is issued, this permit shall be void. The Permittee shall notify OCSD in writing prior to the transfer of ownership and shall give a copy of the existing permit to the new owner or operator.

C. Issued permits are for a specific user, for a specific operation at a specific location, create no vested rights, and are non-transferable unless conditions as stated in the Ordinance are met. If transfer is allowed, a copy of the existing permit must be given to the new owner or operator. Industrial Wastewater Discharge permits, their concentration limits or their mass emission rates shall not be transferred for an operation at a different location.

D. Permittee shall maintain plant records relating to wastewater discharge and waste manifests for a minimum of three years.

PART 4. SPECIAL CONDITIONS FOR PERMIT NO. 1-531435

1. **The Permittee is required to provide an accurate and complete facility plot plans illustrating all sewer and city water plumbing/piping schemes throughout the facility. Any source of wastewater to the sewer from sanitary restrooms, washpads, cafeterias, cooling towers, boilers, or other operations must be documented on these drawings. Please specify where areas are spill contained and chemicals are stored. All buildings must be detailed on the drawings with appropriate labeling. The drawings must also indicate the OCSD sample point. Permitted shall submit to OCSD no later than July 31, 2021.**

2. **Water balance calculations have not been submitted since they were performed by AECOM in 2015. Water balance information is crucial for determining accurate flow volumes to OCSD's Sewerage Facilities, and for determining accurate Mass Emission Rate's and Permit Limits. Permittee shall submit updated water balance calculations to OCSD no later than July 31, 2021.**

ATTACHMENT A
PERMIT NO. 1-531435
Access Business Group, LLC

SELF-MONITORING REQUIREMENTS

(Applicable only if constituent is required to be monitored under Part 2.I.A. Monitoring/Sampling Requirements of the Permit)

1. Sampling and Analyzing of Heavy Metals

a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent for heavy metals at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15-minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

b. **Laboratory Analyses.** All wastewater samples shall be analyzed in accordance with the appropriate procedures contained in 40 CFR 136. Where 40 CFR 136 does not include sampling or analytical techniques for the pollutants in question, analyses shall be performed using the most current edition of "*Standard Methods for the Examination of Water and Wastewater*". Wastewater analysis shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon OCSD's request, Permittee shall obtain from its laboratory and furnish to OCSD, information regarding test methods and equipment used, including quality assurance/quality control (QA/QC) information. Other information deemed necessary by OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

2. Sampling and Analyzing for Cyanides

a. **Sampling.** Permittee shall collect and analyze a sample of its wastewater effluent for cyanides at a frequency specified in **Part 2** of the Permit. All sampling for cyanide must be conducted by taking grab samples of the wastewater after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the samples must be taken at the end of the cyanide process before dilution with other process streams. A minimum of four grab samples shall be taken independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques in accordance with EPA requirements must be used to ensure representative sample results.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed for cyanides in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

3. **Sampling and Analysis for Total Toxic Organics (TTOs)**

   a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point for TTOs at a frequency specified in **Part 2** of the permit. All effluent sampling for volatile organic compounds must be conducted by taking grab samples of the wastewater effluent. A minimum of four grab samples shall be taken independently during hours of operation within a 24 hour period. Each sample shall be analyzed independently for toxic organic constituents present in the facility. The average concentration from the four grab sample results with concentrations greater than 10 µg/L shall be used to determine compliance with TTOs mass emission and/or concentration limits.

   b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods (i.e., for Purgeable Halocarbons and Aromatics, use Method 624.1). Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

   c. **TTO Constituents.** The TTO limit is a summation of individual values greater than 0.01 milligrams per liter for the following organics:

      NA

4. **Sampling and Analyzing of BOD and TSS**

   a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent at the sample point for BOD and TSS at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15 -minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

   b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

      Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

   c. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

5. **Sampling and Analyzing for Oil and Grease of Mineral or Petroleum Origin (O&G-M)**

   a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point location for O&G-M at a frequency specified in **Part 2** of the permit. A minimum of four grab samples shall be taken

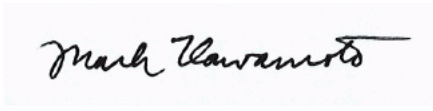
independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques, in accordance with EPA requirements, must be used to ensure representative results.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

IMPORTANT NOTICE

February 16, 2023

Mike Nanda, VP-Manufacturing
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621



SUBJECT: Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This is a notification that Permit No **1-531435** issued to Access Business Group, LLC will expire on **May 31, 2023**. Please complete and return the enclosed Permit Renewal Application Form to the Orange County Sanitation District (OC San) by **March 31, 2023***. OC San's Financial Management Division will generate an invoice for the permit fee and it will be mailed to your Accounts Payable Department under a separate cover. **The permit fee is due at the time the permit renewal application is submitted, but should be submitted with the invoice, not the application. Only a photocopy of the check must accompany the Permit Renewal Application. OC San will not process the Permit Renewal Application without proof of payment.**

As part of the permit renewal process, OC San's staff will conduct a comprehensive evaluation of your manufacturing process, operational control practices, and pretreatment system in order to assess factors and variabilities affecting your facility's ability to meet longterm compliance. This is in response to the pretreatment program audit findings of the Environmental Protection Agency (EPA), which required OC San to conduct, during permit renewal, a more in-depth technical review of parameters affecting compliance. **Within a few days, you will be contacted by OC San's staff to set-up an appointment for this evaluation. Depending on the number of operations at your facility, please allot about two to four hours for this visit.**

Failure to submit the permit application and payment for the permit fee by the due date may delay the issuance of Access Business Group, LLC's permit prior to the expiration date. **In addition, a permit renewal application submitted after March 31, 2023 may subject your facility to a late processing fee of $500 for an application submitted 30 days or less from the permit's expiration, or $1,000 for an application submitted 15 days or less from the permit's expiration. Please be reminded that discharging to OC San's sewer system without a valid permit is prohibited and may result in physical termination of sewer service and imposition of civil penalties.**

If your company intends to stop discharging industrial wastewater to OC San's sewer system, please complete and return the enclosed Request to Close Account Form to OC San by **March 31, 2023**, to officially close your account and terminate the sewer service at Access Business Group, LLC.
If you have any questions, please call Brian Finkelstein at 714-593-7452.

COURTESY REMINDER

March 2, 2023

Mike Nanda, VP-Manufacturing
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

SUBJECT: Courtesy Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **1-531435**

This letter is a courtesy reminder to Access Business Group, LLC that the completed Permit Renewal Application is due to the Orange County Sanitation District (OC San) by **March 31, 2023***, as required in OC San's *Reminder to Submit an Application for Renewal of a Wastewater Discharge Permit* which was issued to your facility and dated on or about **February 16, 2023**. Please be advised that **Permit No. 1-531435** will expire on **May 31, 2023,** unless the permit is renewed.

Failure to submit the permit application by the due date may delay the issuance of Access Business Group, LLC's permit prior to its expiration date. **In addition, a permit renewal application submitted after March 31, 2023 may subject your facility to a late processing fee of $500 for an application submitted 30 days or less from the permit's expiration, or $1,000 for an application submitted 15 days or less from the permit's expiration.** Please be reminded that discharge without a valid and current permit is prohibited by the OC San's Wastewater Discharge Regulations.

If your facility intends to stop discharging industrial wastewater to the OC San's sewer system, please complete and return the Request to Close Account Form to OC San by **March 31, 2023**, to officially close your account and terminate the sewer service at Access Business Group , LLC.

Please disregard this reminder if the Permit Renewal Application has been submitted. If you have any questions, please call Brian Finkelstein at 714-593-7452.

Mark Kawamoto, P.E.
Environmental Protection Manager, Resource Protection Division

OCSD MAIL ROOM

ORANGE COUNTY SANITATION DISTRICT APPLICATION FOR CLASS I WASTEWATER DISCHARGE PERMIT

OCSAN ORANGE COUNTY SANITATION DISTRICT

Instructions

For the Orange County Sanitation District (OCSD) to process and issue a Class I Wastewater Discharge Permit, the applicant must comply with all of the following:

- The Permit Application Form must be filled out completely. OCSD **will not** process incomplete submittals, and your application will be returned if there is any missing information. **Do not leave blanks. Please write "N/A" if the information being requested does not apply.**
- The Permit Application must be signed by the Responsible Officer or Designated Signatory, as defined on pages 6 and 7. OCSD will return your permit application if it is not signed by the proper company official.
- The permit fee must be remitted at the time the application is submitted. Your remittance must be sent directly to OCSD's Accounting Department; **and, a photocopy of the check must be submitted with the Application** to the Environmental Compliance Division. An application received without this documentation will be returned.

Please refer to Section A of the information brochure for detailed instructions for completing this Application Form.

Ownership Information — Permit No.

A Applicant: Access Business Group LLC (Complete Legal Company Name)

B Mailing Address: 5600 Beach Blvd. (Street) | Buena Park (City) | CA (State) | 90621 (Zip Code)

C Sewer Service Address: 5600 Beach Blvd. (Street) | Buena Park (City) | CA (State) | 90621 (Zip Code)

D Phone Number (714) 562-1830 Fax Number (714) 736-7610

E Company Website (if any): http:// www.nutrilite.com

F Is your business a ☐ corporation? ☐ partnership? ☐ sole proprietorship? ☐ Limited Liability Corporation?

List all Principals/Owners/Major Shareholders of the business. This must include the Responsible Officer or equivalent.

Name and Title	Address
Milind Pant - Chief Executive Officer	7575 Fulton St. East, Ada, MI 49355

For corporations only: Year of Incorporation | State of Incorporation | Corporate Identification Number

G Are you the ☒ landowner? or ☐ lessee? If a lessee, include the name, address, and telephone number of the property owner and/or the manager of the property: Check one: ☐ Owner ☐ Manager

Name | Address | Phone

OC SAN
ORANGE COUNTY SANITATION DISTRICT

ORANGE COUNTY SANITATION DISTRICT
CLASS I WASTEWATER DISCHARGE PERMIT APPLICATION CHECKLIST

(This checklist must be submitted with the Class I Permit Application)

TO BE SUBMITTED by PERMITTEE

☑ PERMIT APPLICATION AND SUPPORTING DOCUMENTATION

☑ COPY OF THE CHECK FOR PERMIT FEE REMITTANCE
Invoice for Permit Fee to be mailed separately to Permittee
Please Note: Send Permit Fee Remittance (Actual Check) to OC San Accounts Receivable

Supporting Documentation - The following shall be submitted with a new application, if the documents have been updated or facility has changed since last permit renewal, or as required in accordance with permit requirements (effluent calibration report):

☑ I. Plot Plan (Process and Pretreatment Areas)

☑ II. Manufacturing Process Layout

☑ III. Manufacturing Process Flow Diagram

☑ IV. Pollutant Source Identification
- ☐ A. Wet Process Waste/Wastewater Flow Diagram
- ☐ B. Waste/Wastewater Characterization Report (including analytical results)

☑ V. Pretreatment System Drawings
- ☐ A. Pretreatment System Location and Layout Drawings
- ☐ B. Pretreatment System Process Flow and Instrumentation Diagram

☑ VI. Effluent Meter In-Situ Hydraulic Calibration Report

☐ VII. Spill Containment Drawing and Information

☐ VIII. Toxic Organic Management Plan (TOMP) – **If required as part of a TTO waiver, an updated TOMP shall be submitted with each permit renewal**

☐ Other: _____

The items checked above are submitted with the Permit Application.

[signature] 3/22/2023
Responsible Officer or Designated Signatory Date

Permit No: 1-531435

Operations Information

M Operating Schedule

Number of shifts per work day 2 Number of work days per week 4 Number of production days per year 220

Average number of employees per shift 1st 410 2nd 99 3rd _____ Total 509

Production hours per shift 1st _____ 2nd _____ 3rd _____ Total _____

Discharge hours per shift 1st _____ 2nd _____ 3rd _____ Total _____

N When did you start operating at this facility? July (Month) 1952 (Year)

O For Industries involved in Surface/Metal Finishing (plating, anodizing, phosphating, etching, PCB manufacturing, etc.)
Do you own more than 50% (area basis) of the materials undergoing production? ☐ N/A ☐ Yes ☐ No

P Have you made **any** additions or modifications to the manufacturing process during the past two years? ☐ Yes ☐ No
If the answer is "Yes", you must submit updated Manufacturing Process Layout, Manufacturing Process Flow Diagram, and Spill Containment Drawings and Information with this application (See brochure – Section B)
Please describe briefly the process changes during the last permit period

_____

_____

Information on Treatment of Industrial Waste/Wastewater

Q Is any form of waste/wastewater treatment practiced at this facility? ☐ Yes ☒ No

If the answer is "Yes", provide the following information by checking the appropriate boxes

- Mode of Operation ☐ Continuous ☐ Batch ☐ Both
- Pretreatment Units Used

☐ Hydroxide Precipitation ☐ Filter Press ☐ Cross-Flow Filtration (e g , Memtek)
☐ Hexavalent Chrome Reduction ☐ Final Polishing Filter ☐ Sorption Filter (e g , Lancy)
☐ Cyanide Destruction ☐ Spent Chemical Treatment Unit ☐ Aluminum Chip
☐ Equalization ☐ Below-ground Clarifier ☐ Ozone Treatment Reactor
☐ pH Adjustment ☐ Ion Exchange ☐ Clarifier/Lamella Settling
☐ Electrowinning/Plate-out Units ☐ Other _____

R How are spent chemicals handled? Specify the method for "Other"

☐ Wastehauled offsite ☐ Batch treated onsite ☐ Discharged to sewer without treatment

☐ Other _____

S Wastewater Operator/Maintenance Information
Number of wastewater pretreatment operators at your facility _____ 1st shift _____ 2nd shift _____ 3rd shift

Operator Name	Qualification (Please check)						
	None	Wastewater Treatment Operator with CWEA Certification			AA Science with min 2 semesters in Chemistry	BS Chemical or Environmental Engineering	BS in other Engineering or Science
		Grade I	Grade 2	Grade 3/4			
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐

Is there an Operation and Maintenance Manual or procedures for the entire wastewater treatment system? ☐ Yes ☐ No

Manufacturing Process Information

H Description of **all** manufacturing processes and/or service activities on the premises, wet or dry Please identify and describe the processes which generate wastewater in more detail (Use additional sheets if necessary)

See Appendix C

I Description and average quantity of raw materials used or handled (Use additional sheets if necessary)

The facility uses organically grown, plant based ingredients that include beta carotene, citrus, soy lecithin, lemon oil, gingko balboa, maltodetrose, sugars, herbal extracts, etc.

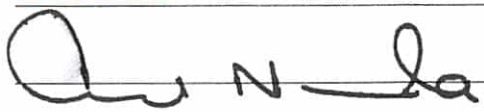
J Description of products manufactured or produced as a result of services performed (Use additional sheets if necessary)

Products produced at the facility include: Granulated herbal extracts with nutritional values (various) and dietary supplements in the forms of tablets and capsules (various).

K Average Daily Production _____

L North American Industry Classification System (NAICS) Code (this code replaced the discontinued SIC Code)

Primary NAICS Code 311999 Secondary NAICS Code(s) 31999



Certification for Accuracy of Information

I have personally examined and am familiar with the information submitted in this application and required attachments, and I hereby certify under penalty of law that the submitted information is true, accurate, and complete I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment I also authorize OCSD to verify all information provided, including the water account/usage information from the water supplier, facility lease contracts, and other pertinent information

I certify that upon issuance of the permit, that this firm's operation and its resultant wastewater discharge will achieve consistent compliance with the OCSD's Ordinance and applicable Federal wastewater discharge requirements If the wastewater discharge does not meet all the applicable regulations, the company will modify manufacturing equipment, limit production, limit industrial waste discharge, install wastewater pretreatment equipment, or do whatever is legally necessary to meet discharge requirements

Y Responsible Officer/Designated Signatory (as specified on pages 6 and 7)

Name Mike Nanda

Signature 

Title VP - Manufacturing

Date 3/28/23

E-mail mike.nanda@amway.com

Information for Determining Volume of Wastewater Discharge and User Charges

T Assessor Parcel Number(s) as shown on property tax bill 066-572-08

U If a lessee, indicate

(a) percentage of property tax bill paid to landowner _____

(b) percentage of water bill paid to landowner _____

(c) square footage of leased space _____

(d) whether your facility is a part of a commercial/industrial complex ☐ Yes ☐ No

V Water Supplier City of Buena Park

Water Account Number(s) See attached water bills

Other Sources of Water Supply ☐ onsite wells ☐ groundwater remediation ☐ others _____

W Water Measurement Information

List all water meters at your facility **Complete Attachment A in accordance with instructions.**

From the incoming meter(s) identified on Attachment A, check which following water measurement strategy is used

☒ City water meter(s) only ☐ Process meter(s) only ☐ Shop meter(s) only ☐ Both city meter and process meters

The meter(s) checked above measure

☐ Only the incoming water going to the applicant's facility
☐ The incoming water to the applicant's facility and for other companies adjacent

Does your facility use an effluent meter to measure the industrial wastewater discharge? ☐ Yes ☒ No

If so, does the effluent meter measure only the industrial wastewater discharged to the sewer from the facility (excluding sanitary, boiler blowdown, cooling tower bleed off, and R O reject)? ☐ Yes ☐ No

If your facility uses a final effluent meter, skip to Line Y

X In order to determine mass emission rates and user charges, the actual volume of water discharged to the sewer must be calculated **For facilities that do not have effluent meters,** this is done by determining the volume of incoming water, as indicated by the city water meter, and then applying appropriate deductions for water losses If losses cannot be quantified, the District will apply water losses equivalent to 5% of the incoming water It is to your advantage to determine and quantify these losses if your facility has water losses more than 5% Please check the appropriate box below

☐ Apply 5% loss ☒ Use calculated loss

If calculated loss is indicated, determine all applicable losses using the worksheet provided in **Attachment B** and summarize results in the table below The worksheet and supporting documentation must be submitted for these losses to be applied

Item	Average Daily Water Losses	Gal/day	Loss is applicable to	
			City Meter(s)	Process Meter
I	Landscape / Irrigation losses	1,952	☐	☐
II	Boiler losses for steam condensate not returned to boiler	12,600	☐	☐
III	Cooling tower water evaporation	15,840	☐	☐
IV	Product losses		☐	☐
V	Other losses		☐	☐
			☐	☐
	Total Losses	30,392	**Check the above if applicable**	

ATTACHMENT A

ONSITE WATER METER INFORMATION

REQUIRED INFORMATION. Complete the ONSITE WATER METER table for **all** water meters at your facility

Meter Type		Digits								Fixed Zeros			Tenths	Units	Multi-plier	Location
X City Shop	Process Effluent	3	5	8	8	1							.9	Cu Ft X Gallons	X 10 X 100	NE Corner of Beach & Dr. Sam

X City Shop	Process Effluent	4	1	6	7	0	0	3	7				.1	Cu Ft X Gallons	X 10 X 100	Central Plant Beach Blvd
X City Shop	Process Effluent	1	0	1	8	6	6						.2	Cu Ft X Gallons	X 10 X 100	Bldg. 5A Left meter
X City Shop	Process Effluent	5	2	9	7	1	3	0					.9	Cu Ft X Gallons	X 10 X 100	Bldg. 5A Right meter
X City Shop	Process Effluent	7	1	7	8	4	8	0					.7	Cu Ft X Gallons	X 10 X 100	Bldg. 5

INSTRUCTIONS

STEP 1. Please identify for each *Onsite Water Meter* at your facility.

- **Meter type** - Use the following descriptions to characterize your meter type(s)
  The **City Meter** is typically found outside at all buildings This meter type, maintained by the water purveyor (city or local agency), is used to measure incoming water for potable, sanitary, landscaping, and industrial uses The readings from these meters are used to determine the charges on the monthly or bi-monthly water bills The **Process Meter** is located downstream of all drinking, sanitary, and landscaping uses Process meters are typically installed to determine water usage to specific industrial processes The **Effluent Meter** records the actual volume of wastewater discharged by the facility and is typically located at the discharge point near the designated sample point The O C Sanitation District may require an effluent meter to determine daily flows for compliance verification, and/or to establish accurate sewerage service charges The **Shop Meter** is often found in a multi-occupancy industrial strip that does not have individual city meters for each suite Landlords who do not want to pay the water bill for a significant water user often install a meter on the outside of the shop It is distinguished from the process meter in that it also meters the potable and sanitary flow, like a city meter The water purveyor does not bill the user directly for water usage metered by a shop meter The landlord will frequently bill the renter directly, based upon the shop meter volumes

- **Digits/Fixed Zeros/Tenths** - Use the Digits, Fixed Zeros, and Tenths columns to record the current meter reading Include the beginning digits, even if they are zero, as well as, the fixed zeros, or tenths designated by the arrow sweep **Please visually read each meter** **Do not provide values or volumes from the water bills.**
  Use the following the guidelines for Fixed Zeros and Tenths to provide assistance with reading and recording the information for several common meter variations **Fixed Zeros** - On many water meter models the sweeping arrow records numerical units that are designated by the fixed zeros on the totalizer read-out Use the three shaded columns designated Fixed Zeros to indicate that the meter's arrow sweep records single (0 - 9) digit, double (10 - 90) digit, or triple (100 - 900) digit values **Tenths** - On many water meter models the dial numbers (selected by the arrow sweep), or the last digit of a totalizer read-out designates tenths of a gallon Use the tenths column (implied by the decimal point) to indicate the meter records tenths of a gallon

- **Units/Multiplier** - Indicate the meter units, Cubic Feet (Cu Ft) or Gallons If applicable, indicate the multiplier factor (x 10 or x 100) **Do not confuse this with the typical billing unit (100 CF) on the monthly water bill**
  Units - Most water meters register the volume of water in either cubic feet or gallons Please indicate if your meter uses a different unit of measurement such as barrels, cubic meters, or acre feet **Multiplier** - Occasionally the meter dial will indicate that a multiplier (X 10 or X 100) must be applied to the totalizer reading (this feature is more common on electronic flow instruments) Please indicate different multiplier factors as applicable

- **Location** - Briefly describe the location of each meter
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc , will all help our field staff verify the information by establishing vital reference points

STEP 2. Attach a copy of the latest water bill for each city meter identified.

ATTACHMENT A

ONSITE WATER METER INFORMATION

REQUIRED INFORMATION. Complete the ONSITE WATER METER table for **all** water meters at your facility

Meter Type		Digits								Fixed Zeros			Tenths	Units	Multi-plier	Location
X City Shop	Process Effluent	2	3	1	3	5	9	0	3				.0	Cu Ft X Gallons	X 10 X 100	Central Plant

  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc , will all help our field staff verify the information by establishing vital reference points

STEP 2. Attach a copy of the latest water bill for each city meter identified.

ATTACHMENT B

ITEMIZED CALCULATION OF WATER LOSSES

Losses refer to the incoming water used that does not go to the sewer This includes water used for landscaping/irrigation, water evaporated from cooling towers, water evaporated from boilers in which condensate is not returned to the boiler, water evaporated from heated tanks or processes, wash water going to the storm drain, water actually added to your product, or any other processes where water does not go to the sewer Include details and calculations (if applicable) of the the facility water losses below Attach additional pages if necessary

1. LANDSCAPE/IRRIGATION LOSSES

See Appendix E

2. BOILER LOSSES FROM STEAM CONDENSATE NOT RETURNED TO BOILER

3. WATER EVAPORATION LOSSES FROM COOLING TOWERS

4. WATER EVAPORATION LOSSES FROM HEATED PROCESS TANKS OR OTHER EQUIPMENT

ATTACHMENT B

ITEMIZED CALCULATION OF WATER LOSSES
(Continuation)

5. WATER LOSSES INTO PRODUCT(S)

6. OTHER LOSSES

Appendix C

Description of <u>all</u> manufacturing processes and/or service activities on the premises, wet or dry. Please identify and describe the processes which generate wastewater in more detail.

The facility is divided into the South Campus (5600 Beach Blvd) and the North Campus (5609 River Way). A site plan of the facility is presented as Figure 1.

<u>South Campus:</u>

- Raw materials stored in buildings B8 and B14.
- Building B1 contains the Nutrilite Heath Institute and includes administrative offices; Buildings B3 is used for QA/QC.
- Building B4 includes maintenance shop and gym facilities.
- Building B6 contains the cafeteria and the offices for EH&S, R&D, Document Control.
- Building B7 contains Receiving department, warehouse, and pilot lab.
- Raw materials (both liquid and powder) are manufactured / processed in buildings B9 (Granulation) and B10 (SDM).

<u>North Campus:</u>

- Building B5A is used for administrative offices/space.
- Building B5-1 is used for packaging finished goods and warehousing.
- Building B5-2 & B5-3 is used for warehousing and shipping (Shipping Dept.) of finished product.

As with past permit applications, this one will also be for the South Complex. Manufacturing activities consist of:

- Blending raw materials (B10)
- Compressing them into dry tablets or capsules (B10)
- Coating of tablets (B10)
- Granulating dry materials (B9)
- R&D Labs (B9)

Equipment and rooms used in manufacturing of products are washed down during product changeovers, with the chemicals found in Attachment D (Quorum Pink, Quorum Purple, Parasan A). The wash down solutions (water mixed with the above), enter the sanitary sewer via floor drains.

Enviro Tech Chemical Services, Inc. 500 Winmoore Way Modesto, CA 95358

SAFETY DATA SHEET

SECTION 1 - IDENTIFICATION

Product Identifier: PERASAN A **Product Code:** 35
Product Use: Antimicrobial solution.
Chemical Family: Oxidizer
Registration Number: 63838-1
Dilution Information: 0.13%-0.79% (v/v)

Enviro Tech Chemical Services, Inc.
500 Winmoore Way Modesto, CA 95358
(209) 581-9576 (7 AM to 5 PM, PST, Monday to Friday)

24 Hr. Emergency Tel.#: 800-424-9300

SECTION 2 - HAZARDS IDENTIFICATION

This chemical is a pesticide product registered by the Environmental Protection Agency and is subject to certain labeling requirements under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA). These requirements differ from the classification criteria and hazard information required for safety data sheets of non-pesticide chemicals. Please see Section 15 for FIFRA labeling information.

Classification of the Product AS SOLD:

Skin Corrosion - Category 1
Serious Eye Damage - Category 1
Oxidizing Liquids - Category 2
Corrosive to Metals - Category 1
Organic Peroxides - Type G
Acute Toxicity - Oral Category 4
Acute Toxicity - Dermal Category 5
Hazardous to the Aquatic Environment, Acute Toxicity Category 2

Classification of the Product AT USE DILUTION:
Acute Toxicity - Oral Category 5

GHS label elements for Product AS SOLD

Signal Word: DANGER

Hazard Statements:
Causes severe skin burns and eye damage
May intensify fire; oxidizer
May be corrosive to metals
Harmful if swallowed
May be harmful in contact with skin
Toxic to aquatic life

Precautionary Statements:

Prevention
Wear protective gloves/protective clothing/eye protection/face protection.
Wash hands thoroughly after handling
Keep away from heat/sparks/open flames/hot surfaces - No smoking.
Keep/Store away from clothing/combustible materials.
Do not eat, drink or smoke when using this product.
Keep only in original container.
Take any precaution to avoid mixing with combustibles.

Response
IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Call a POISON CENTER or doctor/physician if you feel unwell.
IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower. Immediately call a POISON CENTER or doctor/physician.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing. Immediately call a POISON

SAFETY DATA SHEET

CENTER or doctor/physician.
IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Immediately call a POISON CENTER or doctor/physician.
For specific treatment see Section 4 First Aid.
Wash contaminated clothing before reuse.
In case of fire: Use water for extinction.
Absorb spillage to prevent material damage.

Storage
Store locked up.
Store in a corrosive resistant container with a resistant inner liner.

Disposal
Dispose of contents/container in accordance with local regulations.

Hazards not Otherwise Classified:
No other hazards classified.

GHS label elements for Product AT USE DILUTION

Signal Word: NONE

Hazard Pictograms: NONE

Hazard Statements:
May be harmful if swallowed

Precautionary Statements:
Prevention
Wash hands thoroughly after handling
Do not eat, drink or smoke when using this product.

Response
IF SWALLOWED: Rinse mouth. Immediately call a POISON CENTER or doctor/physician.

Disposal
Dispose of contents/container in accordance with local regulations.

Hazards not Otherwise Classified:
No other hazards classified.

SECTION 3 - COMPOSITION / INFORMATION ON INGREDIENTS

Product AS SOLD

Ingredient	Synonym	CAS Number	Concentration
HYDROGEN PEROXIDE	H2O2	7722-84-1	25-27.4%
ACETIC ACID	NONE	64-19-7	3-8%
PEROXYACETIC ACID	PAA	79-21-0	5.0-5.9%

Product AT USE DILUTION

Ingredient	Synonym	CAS Number	Concentration
HYDROGEN PEROXIDE	H2O2	7722-84-1	0.03-0.22%
PEROXYACETIC ACID	PAA	79-21-0	0.008-0.050%

SECTION 4 - FIRST-AID MEASURES

Product AS SOLD:

Inhalation: Remove source of exposure or move person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/doctor. If breathing is difficult, trained personnel should administer emergency oxygen if advised to do so by the POISON CENTER/doctor. Symptoms of pulmonary edema can be delayed up to 48 hours after exposure. If direct contact during rescue breathing poses a threat to the first aid provider, "Avoid mouth-to-mouth contact by using a barrier device."
Skin Contact: Take off immediately contaminated clothing, shoes and leather goods (e.g. watchbands, belts). Rinse skin with lukewarm, gently flowing

SAFETY DATA SHEET

water/shower with a flushing duration of 30 minutes. Immediately call POISON CENTER/doctor. Wash contaminated clothing before re-use.
Eye Contact: Remove source of exposure or move person to fresh air. Rinse eyes cautiously with lukewarm, gently flowing water for several minutes, while holding the eyelids open. Remove contact lenses, if present and easy to do. Continue rinsing for 30 minutes. Take care not to rinse contaminated water into the unaffected eye or into the face. Immediately call a POISON CENTER/doctor.
Ingestion: Rinse mouth. Do NOT induce vomiting. Immediately call a POISON CENTER/doctor. If vomiting occurs naturally, lie on your side, in the recovery position.
Most Important Symptoms and Effects, both Acute and Delayed: Causes severe skin burns and eye damage, burning of the mouth, throat, and esophagus.
Indication of any Immediate Medical Attention and Special Treatment Needed: Treat symptomatically

Product AT USE DILUTION:

Inhalation: Seek medical attention if symptoms occur.
Skin Contact: Rinse with plenty of water.
Eye Contact: Rinse with plenty of water.
Ingestion: Rinse mouth. Immediately call a poison center/doctor if symptoms occur.
Most Important Symptoms and Effects, both Acute and Delayed: Irritation of the gastrointestinal tract.
Indication of any Immediate Medical Attention and Special Treatment Needed: Treat symptomatically

SECTION 5 - FIRE-FIGHTING MEASURES

Product AS SOLD:

Extinguishing Media: Use water spray, powder, foam, carbon dioxide.

Special hazards arising from the substance or mixture: Non combustible. May give off irritating or toxic fumes (or gases) in a fire.

Flammability classification (OSHA 29 CFR 1910.106) (Hazcom 2012): Non flammable

Hazardous Combustion Products: May cause fire and explosions when in contact with incompatible materials.

Special protective equipment and precautions for firefighters: In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus.

Product AT USE DILUTION:

Extinguishing Media: Material is not flammable.

Special hazards arising from the substance or mixture: No special hazards known.

Flammability classification (OSHA 29 CFR 1910.106) (Hazcom 2012): Non flammable

Hazardous Combustion Products: None known.

Special protective equipment and precautions for firefighters: In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus.

SECTION 6 - ACCIDENTAL RELEASE MEASURES

Product AS SOLD:

Personal precautions, protective equipment and emergency procedures: Ventilate area of leak or spill. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering.
Methods and materials for containment and cleaning up: SMALL SPILLS (less than 1 gallon): Neutralize with soda ash or cover with dry earth, sand or other non combustible material, place into loosely covered plastic containers for later disposal. If neutralized, material can be diluted into drain. LARGE SPILL: Restrict access to area until completion of clean up. Prevent liquid from entering sewers or waterways. Stop or reduce leak if safe to do so. Dike with inert material (sand, earth, etc.). Collect into plastic containers for disposal. Ensure adequate decontamination of tools and equipment following clean up.
Special spill response procedures: Collect spills in plastic containers only. Prevent from entering sewers, waterways, or low areas.

Product AT USE DILUTION:

Personal precautions, protective equipment and emergency procedures: Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering.
Methods and materials for containment and cleaning up: SMALL SPILLS (less than 1 gallon): Dike small spills with inert material (sand, earth, etc.). Collect in plastic containers only. Wash area and let dry. LARGE SPILL: Should be diked with sand ahead of spill. Collect in plastic containers only. Ensure adequate decontamination of tools and equipment following clean up.
Special spill response procedures: Collect spills in plastic containers only. Prevent from entering sewers, waterways, or low areas.

SECTION 7 - HANDLING AND STORAGE

Product AS SOLD:

Precautions for Safe Handling: Wear at least chemical resistant gloves and eye protection, face shield, and chemical resistant garments when handling, moving or using this product. Do not contaminate water, food, or feed by storage or disposal.
Conditions for Safe Storage: Store in a cool, dry, well ventilated place away from direct sunlight. Keep container closed when not in use.

SAFETY DATA SHEET

Incompatible Materials: Avoid strong reducing agents, soft metals, heat and bases (unless product has been diluted to less than 1000ppm, then bases may be used to gradually adjust to a pH of less then 9).

Product AT USE DILUTION:

Precautions for Safe Handling: Do not swallow or ingest. Wash hands thoroughly after handling.
Conditions for Safe Storage: Store in a cool, dry, well ventilated place away from direct sunlight. Keep container closed when not in use.
Incompatible Materials: Avoid strong reducing agents, soft metals, heat and bases.

SECTION 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

Product AS SOLD:

EXPOSURE LIMITS:			OSHA PEL	ACGIH TLV	
CHEMICAL NAME	CAS NO.	TWA	STEL/CEILING	TWA	STEL
ACETIC ACID	64-19-7	10 ppm	15 ppm/40 ppm (CalOSHA)	10 ppm	15 ppm
HYDROGEN PEROXIDE	7722-84-1	1 ppm	1 ppm/N/A (CalOSHA)	1 ppm	N/A
PERACETIC ACID	79-21-1	N/A	N/A	N/A	0.4 ppm

Ventilation and engineering measures: Forced air, local exhaust, or open air is adequate.

Respiratory Protection: In case of confined spaces or high levels encountered in the air, wear self contained breathing apparatus.

Skin Protection: Wear chemical resistant gloves and chemical resistant garments when handling, wash garments before re-use.

Eye/Face Protection: Wear chemical goggles; also wear a face shield if splashing hazard exists.

Other Protective Equipment: Eye wash facility and emergency shower should be in close proximity.

General Hygiene Conditions: Do not eat, drink or smoke when using this product. Wash thoroughly after handling. Remove and wash contaminated clothing before re-use. Handle in accordance with good industry hygiene and safety practice.

Product AT USE DILUTION:

Ventilation and engineering measures: No special equipment needed.
Respiratory Protection: No respiratory personal protective equipment (PPE) required.
Skin Protection: No personal protective equipment (PPE) required.
Eye/Face Protection: No personal protective equipment (PPE) required.
Other Protective Equipment: No special protective equipment required.
General Hygiene Conditions: Do not eat, drink or smoke when using this product. Wash hands thoroughly after handling.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Product AS SOLD:

Appearance: Clear colorless liquid
Odor: Vinegar odor
pH: 1.5-1.9 (1:10)
Melting/Freezing point: No information available
Initial boiling point and boiling range: No information available
Flash Point: >200° F / >93 ° C
Flammability (solid, gas): Non flammable
Vapor Pressure (mm Hg): 22
Specific gravity: 1.12
Solubility in Water: Complete
Auto ignition Temperature: >518° F/ >270° C
Decomposition temperature: No information available
Viscosity: 5-15 cSt at 20°C / 68°F
Volatiles (% by weight): >99
Volatile Organic Compounds (VOC's): No information available

Product AT USE DILUTION:

Appearance: Clear colorless liquid
Odor: Slight vinegar odor

SAFETY DATA SHEET

pH: 2.5-3.5

SECTION 10 - STABILITY AND REACTIVITY

Product AS SOLD:

Reactivity: Reactive with bases, metals, reducing agents and combustible materials
Chemical Stability: Stable for up to 1 year when stored under normal conditions.
Possibility of Hazardous Reactions: May react with incompatible materials
Conditions to Avoid: Incompatible materials and high temperatures
Incompatible Materials: Reactive with bases, metals, reducing agents and combustible materials
Hazardous Decomposition Products: Oxygen which supports combustion.

Product AT USE DILUTION:

Reactivity: Reactive with bases, metals, reducing agents and combustible materials
Chemical Stability: Stable for up to 8-24 hours in distilled water. Chemical stability may be drastically reduced if hard water is used.
Possibility of Hazardous Reactions: May react with incompatible materials
Conditions to Avoid: Incompatible materials and high temperatures
Incompatible Materials: Reactive with bases, metals, reducing agents and combustible materials
Hazardous Decomposition Products: None known.

SECTION 11 - TOXICOLOGICAL INFORMATION

Product AS SOLD:

Information on likely routes of exposure:

Routes of entry - inhalation: YES

Routes of entry - skin & eye: YES

Routes of entry - ingestion: YES

Routes of entry - skin absorption: NO

Potential Health Effects:

Signs and symptoms of short term (acute) exposure:

Inhalation: Inhalation of the mist may produce severe irritation of respiratory tract, characterized by coughing, choking, shortness of breath, headaches, dizziness, nausea, weakness and/or drowsiness.
Ingestion: Corrosive! Swallowing causes severe burns of mouth, throat, and stomach. Severe scarring of tissue, corrosion, permanent tissue destruction and death may result. Symptoms may include severe pain, nausea, vomiting, diarrhea, shock, hemorrhaging and/or fall in blood pressure. Damage may appear days after exposure.
Skin: Corrosive! Contact with skin causes irritation or severe burns and scarring with greater exposures.
Eye: Corrosive! Causes irritation of eyes, and with greater exposures it can cause burns that may result in permanent impairment of vision, even blindness.

Potential Chronic Health Effects:

Mutagenicity: No known mutagenic effects.

Carcinogenicity: No components are listed as carcinogens by ACGIH, IARC, OSHA, or NTP.

Reproductive effects: No known reproductive effects.

Sensitization to material: No expected to cause sensitization.

Specific target organ effects: No information available.

Medical conditions aggravated by overexposure: No information available.

Toxicological data: The calculated ATE values for this mixture are:

ATE oral = 668 mg/kg

ATE dermal = 4808 mg/kg

ATE inhalation = >20 mg/L or >20,000 ppm

Product AT USE DILUTION:

Information on likely routes of exposure:

Routes of entry - inhalation: NO

SAFETY DATA SHEET

Routes of entry - skin & eye: NO
Routes of entry - Ingestion: YES
Routes of entry - skin absorption: NO

Potential Health Effects:
Signs and symptoms of short term (acute) exposure:
Inhalation: Not a respiratory irritant.
Ingestion: May cause irritation to the digestive system.
Skin: Not a skin irritant, but may cause skin irritation on some individuals if not washed from skin. Rinse hands thoroughly if exposed.
Eye: Not an eye irritant.

Potential Chronic Health Effects:
Mutagenicity: No known mutagenic effects.
Carcinogenicity: No components are listed as carcinogens by ACGIH, IARC, OSHA, or NTP.
Reproductive effects: No known reproductive effects.
Sensitization to material: No expected to cause sensitization.
Specific target organ effects: No information available
Medical conditions aggravated by overexposure: No information available.
Toxicological data: The calculated ATE values for this mixture are:
ATE oral = 4888 mg/kg
ATE dermal = >10,000 mg/kg
ATE inhalation = >20 mg/L or >20,000 ppm

SECTION 12 - ECOLOGICAL INFORMATION

Product AS SOLD:

Ecotoxicity: May be harmful to aquatic life.
Persistence and degradability: Not expected to persist. Expected to readily biodegrade.
Bioaccumulation potential: Not expected to bio accumulate.
Mobility in soil: No information available.

Product AT USE DILUTION

Ecotoxicity: No information available.
Persistence and degradability: No information available.
Bioaccumulation potential: No information available.
Mobility in soil: No information available.

SECTION 13 - DISPOSAL CONSIDERATIONS

Product AS SOLD:

Handling for disposal: Do not contaminate water, food, or feed by storage and/or disposal. When handling refer to protective measures listed in sections 7 and 8. Empty residue from containers, rinse container well.
Method of disposal: Dispose of in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules.
RCRA: If product becomes a waste, it does meet the criteria of a hazardous waste as defined by the US EPA, because of: Corrosivity D002.

Product AT USE DILUTION:

Handling for disposal: Do not contaminate water, food, or feed by storage and/or disposal. When handling refer to protective measures listed in sections 7 and 8. Empty residue from containers, rinse container well.
Method of disposal: Dispose of in accordance with all applicable federal, state, provincial and local regulations. Contact your local, state, provincial or federal environmental agency for specific rules.

SECTION 14 - TRANSPORTATION INFORMATION

Certain shipping modes or package sizes may have exceptions from the transport regulations. The classification provided may not reflect those exceptions and may not apply to all shipping modes or package sizes.

Enviro Tech Chemical Services, Inc. 500 Winmoore Way Modesto, CA 95358

SAFETY DATA SHEET

Please note the GHS and DOT Standards are NOT identical and therefore can have varying classifications

Product AS SOLD:

US 49 CFR/DOT/IATA/IMDG Information:
UN No.: 3098
UN Proper Shipping Name: Oxidizing liquid, corrosive, n.o.s. (contains hydrogen peroxide and peroxyacetic acid mixture, stabilized)
Transportation hazard class(es): 5.1 (8)
Packing Group: II

Environmental hazards: No hazards identified.

SECTION 15 - REGULATORY INFORMATION

Product AS SOLD:

FIFRA Classification/Typical Hazard Labeling, as outlined in EPA Label Review Manual

Hazard Data

Signal Word	DANGER
Acute Toxicity, oral	Category III: Harmful if swallowed
Acute Toxicity, dermal	Category III: Harmful if absorbed through skin
Acute Toxicity, inhalation	Category II: May be fatal if inhaled
Skin irritation/corrosion	Category I: Corrosive. Causes skin burns
Serious eye damage	Category I: Corrosive, Causes irreversible eye damage
Sensitization	Not Classified (NC)
Environmental (aquatic) toxicity	This pesticide is toxic to fish and other aquatic organisms.

US Federal Information:
TSCA information: All components are listed on the TSCA inventory.
US CERCLA Reportable quantity (Hazardous substance RQ): Acetic acid has a RQ of approximately 70000 lbs. of as is chemical.
US EPCRA Reportable quantity (Extremely hazardous substance RQ): Peracetic acid has a RQ of approximately 8900 lbs. of as is chemical.
Clean Air Act Section 112(r) Threshold Quantity (TQ): Peracetic acid has a TQ of approximately 178000 lbs. of as is chemical.
SARA Title III Hazard Categories: Reactivity Hazard, Acute Health Hazard
International Information: WHMIS: Class C: Oxidizing material. Class E: Corrosive material
This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations.

SECTION 16 - OTHER INFORMATION

Product AS SOLD:

NFPA	**Health Hazards 3**	**Flammability 1**	**Stability 1**	**Special Hazards OX, COR**
HMIS	**Health Hazards 3**	**Flammability 1**	**Physical Hazard 1**	**Personal Protection C**
NFPA/HMIS Ratings Legend		Severe = 4; Serious = 3; Moderate = 2; Slight = 1; Minimal = 0 Special hazards: OX = Oxidizer; COR = Corrosive Personal Protection = C (safety glasses, gloves, protective apron)		

Product AT USE DILUTION:

NFPA	**Health Hazards 2**	**Flammability 0**	**Stability 0**	**Special Hazards NONE**
HMIS	**Health Hazards 2**	**Flammability 0**	**Physical Hazard 0**	**Personal Protection 0**

QUORUM CLEAR V

SECTION 1. PRODUCT AND COMPANY IDENTIFICATION

Product name	:	QUORUM CLEAR V
Other means of identification	:	Not applicable
Recommended use	:	Sanitizer
Restrictions on use	:	Reserved for industrial and professional use.
Product dilution information	:	0.0 % - 3.125 %
Company	:	Ecolab Inc. 370 N. Wabasha Street St. Paul, Minnesota USA 55102 1-800-352-5326
Emergency health information	:	1-800-328-0026 (US/Canada), 1-651-222-5352 (outside US)
Issuing date	:	11/21/2016

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Product AS SOLD

Acute toxicity (Oral)	:	Category 4
Skin corrosion	:	Category 1B
Serious eye damage	:	Category 1

Product AT USE DILUTION

Eye irritation	:	Category 2B

GHS label elements

Product AS SOLD

Hazard pictograms :

Signal Word : Danger

Hazard Statements : Harmful if swallowed.
Causes severe skin burns and eye damage.

Precautionary Statements : **Prevention:**
Wash skin thoroughly after handling. Do not eat, drink or smoke when using this product. Wear protective gloves/ protective clothing/ eye protection/ face protection.
Response:
IF SWALLOWED: Call a POISON CENTER/doctor if you feel unwell. Rinse mouth. IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/doctor. IF IN EYES: Rinse cautiously with water for

several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/doctor. Wash contaminated clothing before reuse.
Storage:
Store locked up.
Disposal:
Dispose of contents/ container to an approved waste disposal plant.

Product AT USE DILUTION

Signal Word : Warning

Hazard Statements : Causes eye irritation.

Precautionary Statements : **Prevention:**
Wash skin thoroughly after handling.
Response:
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/ attention.

Product AS SOLD

Other hazards : None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Product AS SOLD

Pure substance/mixture : Mixture

Chemical name	CAS-No.	Concentration (%)
Alkyl (C14 50%; C12 40%; C16 10%) dimethyl benzyl ammonium chloride	68424-85-1	3
Octyl decyl dimethyl ammonium chloride	32426-11-2	2.25
ethanol	64-17-5	1 - 5
Didecyl Dimethyl Ammonium Chloride	7173-51-5	1.35
Dioctyl dimethyl ammonium chloride	5538-94-3	0.9

Product AT USE DILUTION

Chemical name	CAS-No.	Concentration (%)
Alkyl (C14 50%; C12 40%; C16 10%) dimethyl benzyl ammonium chloride	68424-85-1	0.0938
Octyl decyl dimethyl ammonium chloride	32426-11-2	0.0703
Didecyl Dimethyl Ammonium Chloride	7173-51-5	0.0422
Dioctyl dimethyl ammonium chloride	5538-94-3	0.0281

SECTION 4. FIRST AID MEASURES

Product AS SOLD

In case of eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention immediately.

In case of skin contact : Wash off immediately with plenty of water for at least 15 minutes. Use a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.

If swallowed : Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.

If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention if symptoms occur.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

In case of eye contact	:	Rinse with plenty of water.
In case of skin contact	:	Rinse with plenty of water.
If swallowed	:	Rinse mouth. Get medical attention if symptoms occur.
If inhaled	:	Get medical attention if symptoms occur.

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Not flammable or combustible.
Hazardous combustion products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus
Special protective equipment for fire-fighters	:	Use personal protective equipment.
Specific extinguishing methods	:	Collect contaminated fire extinguishing water separately. This must not be discharged into drains. Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.

Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

Product AT USE DILUTION

Personal precautions, protective equipment and emergency procedures	:	Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

SECTION 7. HANDLING AND STORAGE

Product AS SOLD

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling.
Conditions for safe storage	:	Keep out of reach of children. Store in suitable labeled containers.
Storage temperature	:	0 °C to 50 °C

Product AT USE DILUTION

Advice on safe handling	:	Wash hands thoroughly after handling.
Conditions for safe storage	:	Keep out of reach of children. Store in suitable labeled containers.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD
Ingredients with workplace control parameters

Ingredients	CAS-No.	Form of exposure	Permissible concentration	Basis
ethanol	64-17-5	TWA	1,000 ppm 1,900 mg/m3	NIOSH REL
		TWA	1,000 ppm 1,900 mg/m3	OSHA Z1

Engineering measures	:	Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection	:	Wear eye protection/ face protection.

azard Code: N-R3-E3-S3

Hand protection	:	Wear the following personal protective equipment: Standard glove type. Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.
Skin protection	:	Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing
Respiratory protection	:	When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.
Hygiene measures	:	Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

Product AT USE DILUTION

Engineering measures	:	Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

Personal protective equipment

Eye protection	:	No special protective equipment required.
Hand protection	:	No special protective equipment required.
Skin protection	:	No special protective equipment required.
Respiratory protection	:	No personal respiratory protective equipment normally required.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

		Product AS SOLD	Product AT USE DILUTION
Appearance	:	liquid	liquid
Color	:	clear, colorless	colorless
Odor	:	Disinfectants	slight
pH	:	6.45 - 9.0, 100 %	6.0 - 8.0
Flash point	:	Not applicable. Does not sustain combustion.	
Odor Threshold	:	No data available	
Melting point/freezing point	:	No data available	
Initial boiling point and boiling range	:	100 °C	
Evaporation rate	:	No data available	
Flammability (solid, gas)	:	No data available	
Upper explosion limit	:	No data available	
Lower explosion limit	:	No data available	
Vapor pressure	:	No data available	
Relative vapor density	:	No data available	
Relative density	:	0.982 - 1.002	

Water solubility	:	soluble
Solubility in other solvents	:	No data available
Partition coefficient: n-octanol/water	:	No data available
Autoignition temperature	:	No data available
Thermal decomposition	:	No data available
Viscosity, kinematic	:	No data available
Explosive properties	:	No data available
Oxidizing properties	:	No data available
Molecular weight	:	No data available
VOC	:	No data available

SECTION 10. STABILITY AND REACTIVITY

Product AS SOLD

Chemical stability	:	Stable under normal conditions.
Possibility of hazardous reactions	:	No dangerous reaction known under conditions of normal use.
Conditions to avoid	:	None known.
Incompatible materials	:	None known.
Hazardous decomposition products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	:	Inhalation, Eye contact, Skin contact

Potential Health Effects

Product AS SOLD

Eyes	:	Causes serious eye damage.
Skin	:	Causes severe skin burns. Causes skin irritation.
Ingestion	:	Causes digestive tract burns.
Inhalation	:	May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Product AT USE DILUTION

Eyes	:	Causes eye irritation.
Skin	:	Health injuries are not known or expected under normal use.
Ingestion	:	Health injuries are not known or expected under normal use.

azard Code: N-R3-E3-S3

Inhalation	:	Health injuries are not known or expected under normal use.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Experience with human exposure

Product AS SOLD

Eye contact	:	Redness, Pain, Corrosion
Skin contact	:	Redness, Pain, Corrosion
Ingestion	:	Corrosion, Abdominal pain
Inhalation	:	Respiratory irritation, Cough

Product AT USE DILUTION

Eye contact	:	Redness, Irritation
Skin contact	:	No symptoms known or expected.
Ingestion	:	No symptoms known or expected.
Inhalation	:	No symptoms known or expected.

Toxicity

Product AS SOLD

Product

Acute oral toxicity	:	Acute toxicity estimate : 1,500 mg/kg
Acute inhalation toxicity	:	No data available
Acute dermal toxicity	:	Acute toxicity estimate : > 5,000 mg/kg
Respiratory or skin sensitization	:	No data available
Carcinogenicity	:	No data available
Reproductive effects	:	No data available
Germ cell mutagenicity	:	No data available
Teratogenicity	:	No data available
STOT-single exposure	:	No data available
STOT-repeated exposure	:	No data available
Aspiration toxicity	:	No data available

Ingredients

Acute inhalation toxicity : Alkyl (C14 50%; C12 40%; C16 10%) dimethyl benzyl ammonium chloride
4 h LC50 Rat: > 0.054 mg/l

Octyl decyl dimethyl ammonium chloride
4 h LC50 Rat: 0.07 mg/l

ethanol
4 h LC50 Rat: 117 mg/l

Didecyl Dimethyl Ammonium Chloride
4 h LC50 Rat: 0.07 mg/l

Dioctyl dimethyl ammonium chloride
4 h LC50 Rat: 0.07 mg/l

SECTION 12. ECOLOGICAL INFORMATION

Product AS SOLD

Ecotoxicity

Environmental Effects	:	Very toxic to aquatic life. Toxic to aquatic life with long lasting effects.

Product

Toxicity to fish	:	No data available
Toxicity to daphnia and other aquatic invertebrates	:	No data available
Toxicity to algae	:	No data available

Ingredients

Toxicity to fish : Octyl decyl dimethyl ammonium chloride
96 h LC50 Fish: 1 mg/l

ethanol
96 h LC50 Pimephales promelas (fathead minnow): > 100 mg/l

Didecyl Dimethyl Ammonium Chloride
96 h LC50 Fish: 1 mg/l

Ingredients

Toxicity to daphnia and other aquatic invertebrates : Alkyl (C14 50%; C12 40%; C16 10%) dimethyl benzyl ammonium chloride
48 h EC50 Daphnia magna (Water flee): 0.016 mg/l

Dioctyl dimethyl ammonium chloride
48 h EC50 Daphnia: 0.1 mg/l

Persistence and degradability

Product AS SOLD
Biodegradable/Eliminated from aquatic environment

Product AT USE DILUTION
Biodegradable/Eliminated from aquatic environment

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

azard Code: N-R3-E3-S3

Product AS SOLD

Disposal methods : Do not contaminate ponds, waterways or ditches with chemical or used container. Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.

Disposal considerations : Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

Product AT USE DILUTION

Disposal methods : Do not contaminate ponds, waterways or ditches with chemical or used container. Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.

Disposal considerations : Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

SECTION 14. TRANSPORT INFORMATION

Product AS SOLD

The shipper/consignor/sender is responsible to ensure that the packaging, labeling, and markings are in compliance with the selected mode of transport.

Land transport (DOT)

Not dangerous goods

Sea transport (IMDG/IMO)

UN number : 3082

Description of the goods : ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S. (n-Alkyl (50% C14, 40% C12, 10% C16) dimethyl benzyl ammonium chloride)

Class : 9

Packing group : III

Marine pollutant : no

SECTION 15. REGULATORY INFORMATION

Product AS SOLD

EPA Registration number : 1677-198

EPCRA - Emergency Planning and Community Right-to-Know

CERCLA Reportable Quantity

This material does not contain any components with a CERCLA RQ.

SARA 304 Extremely Hazardous Substances Reportable Quantity

This material does not contain any components with a section 304 EHS RQ.

SARA 311/312 Hazards : Acute Health Hazard

SARA 302 : No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

SARA 313 : This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

California Prop 65

This product does not contain any chemicals known to the State of California to cause cancer, birth, or any other reproductive defects.

The ingredients of this product are reported in the following inventories:

United States TSCA Inventory :
On TSCA Inventory

Canadian Domestic Substances List (DSL) :
All components of this product are on the Canadian DSL

Australia Inventory of Chemical Substances (AICS) :
not determined

New Zealand. Inventory of Chemical Substances :
On the inventory, or in compliance with the inventory

Japan. ENCS - Existing and New Chemical Substances Inventory :
On the inventory, or in compliance with the inventory

Japan. ISHL - Inventory of Chemical Substances (METI) :
On the inventory, or in compliance with the inventory

Korea. Korean Existing Chemicals Inventory (KECI) :
On the inventory, or in compliance with the inventory

Philippines Inventory of Chemicals and Chemical Substances (PICCS) :
On the inventory, or in compliance with the inventory

China. Inventory of Existing Chemical Substances in China (IECSC) :
On the inventory, or in compliance with the inventory

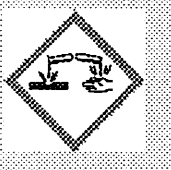
Hazard pictograms :

Signal Word : Danger



Hazard Statements : Causes severe skin burns and eye damage.

Precautionary Statements : **Prevention:**
Wash skin thoroughly after handling. Wear protective gloves/ protective clothing/ eye protection/ face protection.
Response:
IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER or doctor/ physician. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/ physician. Wash contaminated clothing before reuse.

Storage:
Store locked up.
Disposal:
Dispose of contents/ container to an approved waste disposal plant.

Other hazards : None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Product AS SOLD

Pure substance/mixture : Mixture

Chemical Name	CAS-No.	Concentration (%)
diphosphoric acid, tetrapotassium salt	7320-34-5	1 - 5
dipropylene glycol methyl ether	34590-94-8	1 - 5
GLYCOLS -Glycolethers	1569-01-3	1 - 5
1-methoxy-2-propanol	107-98-2	1 - 5
Phosphate-esters	39464-70-5	1 - 5
sodium metasilicate	6834-92-0	1 - 5
potassium hydroxide	1310-58-3	0.1 - 1

Product AT USE DILUTION

No hazardous ingredients

SECTION 4. FIRST AID MEASURES

Product AS SOLD

In case of eye contact : Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do.

		Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention if symptoms occur.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Not flammable or combustible.
Hazardous combustion products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus
Special protective equipment for fire-fighters	:	Use personal protective equipment.

Specific extinguishing methods	:	Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

SECTION 7. HANDLING AND STORAGE

Product AS SOLD

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling.
Conditions for safe storage	:	Do not store near acids. Keep out of reach of children. Store in suitable labeled containers.
Storage temperature	:	-10 °C to 50 °C

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD
Ingredients with workplace control parameters

Ingredients	CAS-No.	Form of exposure	Permissible concentration	Basis
dipropylene glycol methyl ether	34590-94-8	TWA	100 ppm	ACGIH
		STEL	150 ppm	ACGIH
		STEL	150 ppm 900 mg/m3	NIOSH REL
		TWA	100 ppm 600 mg/m3	NIOSH REL
		TWA	100 ppm 600 mg/m3	OSHA Z1
1-methoxy-2-propanol	107-98-2	TWA	50 ppm	ACGIH
		STEL	100 ppm	ACGIH
		STEL	150 ppm 540 mg/m3	NIOSH REL
		TWA	100 ppm 360 mg/m3	NIOSH REL
potassium hydroxide	1310-58-3	Ceiling	2 mg/m3	ACGIH
		Ceiling	2 mg/m3	NIOSH REL

Engineering measures : Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection : Wear eye protection/ face protection.

Hand protection : Wear the following personal protective equipment:
Standard glove type.
Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.

Skin protection : Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing

Respiratory protection : When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

		Product AS SOLD	Product AT USE DILUTION
Appearance	:	liquid	liquid
Color	:	pink	light pink
Odor	:	slight	slight
pH	:	12.3, 100 %	10.0 - 11.5
Flash point	:	Not applicable	
Odor Threshold	:	No data available	
Melting point/freezing point	:	No data available	
Initial boiling point and boiling range	:	No data available	
Evaporation rate	:	No data available	
Flammability (solid, gas)	:	No data available	
Upper explosion limit	:	No data available	
Lower explosion limit	:	No data available	
Vapor pressure	:	No data available	
Relative vapor density	:	No data available	
Relative density	:	1.079	
Water solubility	:	No data available	
Solubility in other solvents	:	No data available	
Partition coefficient: n-octanol/water	:	No data available	
Autoignition temperature	:	No data available	
Thermal decomposition	:	No data available	
Viscosity, kinematic	:	No data available	
Explosive properties	:	No data available	
Oxidizing properties	:	No data available	
Molecular weight	:	No data available	
VOC	:	No data available	

SECTION 10. STABILITY AND REACTIVITY

Product AS SOLD

Chemical stability	:	Stable under normal conditions.

Possibility of hazardous reactions	:	No dangerous reaction known under conditions of normal use.
Conditions to avoid	:	None known.
Incompatible materials	:	Acids
Hazardous decomposition products	:	Decomposition products may include the following materials: Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	:	Inhalation, Eye contact, Skin contact

Potential Health Effects

Product AS SOLD

Eyes	:	Causes serious eye damage.
Skin	:	Causes severe skin burns.
Ingestion	:	Causes digestive tract burns.
Inhalation	:	May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Product AT USE DILUTION

Eyes	:	Causes serious eye damage.
Skin	:	Causes severe skin burns.
Ingestion	:	Causes digestive tract burns.
Inhalation	:	May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Experience with human exposure

Product AS SOLD

Eye contact	:	Redness, Pain, Corrosion
Skin contact	:	Redness, Pain, Corrosion
Ingestion	:	Corrosion, Abdominal pain
Inhalation	:	Respiratory irritation, Cough

Product AT USE DILUTION

Eye contact	:	Redness, Pain, Corrosion
Skin contact	:	Redness, Pain, Corrosion

Ingestion	:	Corrosion, Abdominal pain
Inhalation	:	Respiratory irritation, Cough

Toxicity

Product AS SOLD

Acute oral toxicity	:	Acute toxicity estimate : > 5,000 mg/kg
Acute inhalation toxicity	:	No data available
Acute dermal toxicity	:	Acute toxicity estimate : > 5,000 mg/kg
Skin corrosion/irritation	:	No data available
Serious eye damage/eye irritation	:	No data available
Respiratory or skin sensitization	:	No data available
Carcinogenicity	:	No data available
Reproductive effects	:	No data available
Germ cell mutagenicity	:	No data available
Teratogenicity	:	No data available
STOT-single exposure	:	No data available
STOT-repeated exposure	:	No data available
Aspiration toxicity	:	No data available

Ingredients

Acute inhalation toxicity	:	GLYCOLS -Glycolethers 4 h LC50 Rat: > 10.21 mg/l 1-methoxy-2-propanol 4 h LC50 Rat: 27.3 mg/l

SECTION 12. ECOLOGICAL INFORMATION

Product AS SOLD
Ecotoxicity

Environmental Effects	:	This product has no known ecotoxicological effects.

Product

Toxicity to fish	:	No data available
Toxicity to daphnia and other aquatic invertebrates	:	No data available
Toxicity to algae	:	No data available

Ingredients

Toxicity to fish	:	dipropylene glycol methyl ether 96 h LC50 Fish: > 1,000 mg/l GLYCOLS -Glycolethers 96 h LC50 Fish: > 100 mg/l 1-methoxy-2-propanol

96 h LC50 Fish: > 1,000 mg/l

sodium metasilicate
96 h LC50 Fish: 210 mg/l

Ingredients

Toxicity to daphnia and other aquatic invertebrates : diphosphoric acid, tetrapotassium salt
48 h EC50 Daphnia: > 100 mg/l

Persistence and degradability

No data available

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

Product AS SOLD

Disposal methods : Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.

Disposal considerations : Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

Product AT USE DILUTION

Product AS SOLD

Hazard pictograms :

Signal Word : Danger

Hazard Statements : May be corrosive to metals.
Causes severe skin burns and eye damage.
Harmful if inhaled.

Precautionary Statements : **Prevention:**
Keep only in original container. Avoid breathing dust/ fume/ gas/ mist/ vapors/ spray. Wash skin thoroughly after handling. Use only outdoors or in a well-ventilated area. Wear protective gloves/ protective clothing/ eye protection/ face protection.
Response:
IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin

QUORUM PURPLE

with water/shower. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER or doctor/ physician. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/ physician. Wash contaminated clothing before reuse. Absorb spillage to prevent material damage.
Storage:
Store locked up. Store in corrosive resistant stainless steel container with a resistant inner liner.
Disposal:
Dispose of contents/ container to an approved waste disposal plant.

No hazardous ingredients

SECTION 4. FIRST AID MEASURES

Product AS SOLD

In case of eye contact	:	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention if symptoms occur.

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Not flammable or combustible.
Hazardous combustion	:	Decomposition products may include the following materials:

products		Carbon oxides Nitrogen oxides (NOx) Sulfur oxides Oxides of phosphorus
Special protective equipment for fire-fighters	:	Use personal protective equipment.
Specific extinguishing methods	:	Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

Conditions for safe storage : Keep away from strong bases. Keep out of reach of children. Store in suitable labeled containers.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD

Ingredients with workplace control parameters

Ingredients	CAS-No.	Form of exposure	Permissible concentration	Basis
Phosphoric acid	7664-38-2	TWA	1 mg/m3	ACGIH
		STEL	3 mg/m3	ACGIH
		TWA	1 mg/m3	NIOSH REL
		STEL	3 mg/m3	NIOSH REL
		TWA	1 mg/m3	OSHA Z1

Engineering measures : Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection : Wear eye protection/ face protection.

Hand protection : Wear the following personal protective equipment:
Standard glove type.
Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.

Skin protection : Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing

Respiratory protection : When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

SECTION 12. ECOLOGICAL INFORMATION

Product AS SOLD
Ecotoxicity

Environmental Effects	:	This product has no known ecotoxicological effects.

Product

Toxicity to fish	:	No data available
Toxicity to daphnia and other aquatic invertebrates	:	48 h EC50 Daphnia magna (Water flea): > 120 mg/l
Toxicity to algae	:	No data available

Ingredients

Toxicity to fish	:	Sodium Petroleum Sulfonate 96 h LC50 Fish: > 100 mg/l poly(oxy-1,2-ethanediyl), .alpha.-isotridecyl-.omega.-hydroxy- 96 h LC50 Fish: 0.25 mg/l

Ingredients

Toxicity to algae	:	Phosphoric acid 72 h EC50 Desmodesmus subspicatus (green algae): > 100 mg/l Sodium Xylenesulfonate 96 h EC50: 230 mg/l

Persistence and degradability

No data available

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

Product AS SOLD

Disposal methods	:	Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.
Disposal considerations	:	Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

Product AT USE DILUTION

Disposal methods	:	Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.
Disposal considerations	:	Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.

SECTION 14. TRANSPORT INFORMATION

Product AS SOLD

The shipper/consignor/sender is responsible to ensure that the packaging, labeling, and markings are in compliance with the selected mode of transport.

Land transport (DOT)

UN number	:	1805
Description of the goods	:	Phosphoric acid solution

Buena Park, CA 90621

SUBJECT: Renewal of Class 1 Wastewater Discharge Permit No. 1-531435

Enclosed is the renewed Class 1 Wastewater Discharge Permit No. 1-531435 issued by the Orange County Sanitation District (OC San) to Access Business Group, LLC (Access Business Group) for the facility located at 5600 Beach Boulevard in Buena Park. Permit No. 1-531435 is valid until May 31, 2025. Access Business Group is required to comply with the permit limits and conditions set forth in this permit at all times. Please see:

- Part 1B for new mass discharge limits and the effective date for the new limits. OC San has reviewed Access Business Group's industrial wastewater discharge flow data and concluded that the flow base, upon which the mass emission rate (MER) is determined, is greater than the facility's recent discharge of industrial wastewater. This evaluation is based on comparison of the permitted flow base to the sampling flow data over the last three years. In accordance with Section 215 of OC San's Wastewater Discharge Regulations (Ordinance), OC San has revised the permit flow base from 44,000 gallons per day to 7,000 gallons per day. This change results in a reduction of the permitted MER, effective **August 1, 2023**.
- Part 2 of the permit for continuing self-monitoring requirements.
- Part 4 of the permit for the special condition to submit a list of all products manufactured which contain pharmaceutical bearing compounds (see **Attachment 221**) on **January 15** of each year.

If there are any discrepancies with the information described on the permit, please notify OC San in writing. Access Business Group is also required to notify OC San in writing of any future changes relating to company information, manufacturing processes, pretreatment modification, wastes/wastewater quantity, sampling point location, piping modification, or any other relevant information. Failure to do so is in violation of your permit.

If you have any questions, please contact the undersigned at (714) 593-7452 or by email at Bfinkelstein@ocsan.gov.

INDUSTRIAL WASTEWATER DISCHARGE
CLASS I PERMIT

Permit No: 1-531435

FOR DISCHARGE OF WASTEWATER ISSUED BY
ORANGE COUNTY SANITATION DISTRICT

In accordance with the provisions of the Wastewater Discharge Regulations of Orange County Sanitation District, herein referred to as "OC San",

Access Business Group, LLC
5600 Beach Blvd.
Buena Park, CA 90621

hereinafter referred to as "Permittee", is hereby authorized to discharge industrial wastewater from the above identified facility into OC San's sewer system in accordance with the conditions set forth in this permit. Such conditions are as specified in the following parts of this permit:

Part 1 - Effluent Limits and Flow Basis
Part 2 - Monitoring, Notification, and Reporting Requirements
Part 3 - Standard Conditions
Part 4 - Special Conditions

Compliance with this permit does not relieve the Permittee of its obligation to comply with OC San's current Wastewater Discharge Regulations, any applicable pretreatment regulations, standards or requirements under local, State, and Federal laws, including any such regulations, standards, requirements or laws that may become effective during the term of this permit. Non-compliance with any term or condition of this permit constitutes a violation of the current Wastewater Discharge Regulations.

This permit shall become effective on June 01, 2023 and shall expire on May 31, 2025.

By

Mark Kawamoto, P.E.

PART 1A. EFFLUENT LIMITS AND FLOW BASIS

During the period from June 01, 2023 to July 31, 2023, Permittee is authorized to discharge industrial wastewater into the sewer system tributary to OC San's sewerage facilities. The effluent discharge shall not exceed either the following concentration limits in mg/L or the mass emission rate limits in lbs/day. If your mass emission rate is based on flow, then your flow base is presumed to be 44000 gallons per day (gpd) of wastewater flow at the sampling point.

Company Name: Access Business Group, LLC			**Permit No.:** 1-531435
Sewer Address: 5600 Beach Blvd. Buena Park, CA 90621	**Flow Base:**	44000 GPD	**Effective Date:** 6/1/2023
	WWAR Percent Loss:	0 %	**Expiration Date:** 7/31/2023
	WWAR Fixed Loss:	16000 GPD	
Category: Pharmaceutical Manufacturing	**Subcategory:** 40 CFR § 439.47 PSNS		**Subpart:** D: Mixing/Compounding and Formulation

DISCHARGE LIMITS

CONSTITUENT	Instantaneous Limit mg/L	Daily Max mg/L	4-Day Avg mg/L	Monthly Avg mg/L	Daily Max lbs/day	Monthly Avg lbs/day

SAMPLING POINT LOCATION: The above effluent limits apply at the sampling point located between the entrance doors to Bldg 3 and 10. The sample point is a manhole and represents all industrial wastewater discharge from the facility.

§ Combined waste stream formula

Cyanide limits apply at the sampling point after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the sample must be taken at the end of the cyanide process before dilution with other process streams. In the absence of cyanide process, the limits apply at the sampling point location described above (end of pipe).

PART 1B. EFFLUENT LIMITS AND FLOW BASIS

During the period from August 01, 2023 to May 31, 2025, Permittee is authorized to discharge industrial wastewater into the sewer system tributary to OC San's sewerage facilities. The effluent discharge shall not exceed either the following concentration limits in mg/L or the mass emission rate limits in lbs/day. If your mass emission rate is based on flow, then your flow base is presumed to be 7000 gallons per day (gpd) of wastewater flow at the sampling point.

pH	6.0-12.0	•	•	•	•	•

SAMPLING POINT LOCATION: The above effluent limits apply at the sampling point located between the entrance doors to Bldg 3 and 10. The sample point is a manhole and represents all industrial wastewater discharge from the facility.

§ Combined waste stream formula

Cyanide limits apply at the sampling point after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the sample must be taken at the end of the cyanide process before dilution with other process streams. In the absence of cyanide process, the limits apply at the sampling point location described above (end of pipe).

PART 2. SELF-MONITORING, NOTIFICATION AND REPORTING REQUIREMENTS

I. SELF-MONITORING REQUIREMENTS

Permittee shall conduct monitoring of its own wastewater effluent for the purpose of determining the status of compliance/non-compliance and user charges. Based on the results, Permittee shall make the necessary adjustments/corrections to bring the wastewater discharge into immediate compliance with its permitted limits. The specific requirements are as follows:

A. Monitoring/Sampling Requirements

From the effective date of the permit and until the permit is terminated or revised, Permittee shall monitor its wastewater discharge for the following parameters at the indicated frequency

Parameters	Measurement Frequency	Sample Type [2]	Procedure [3]
Organics[4] :			
Acetone	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Ethyl Acetate	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Isopropyl Acetate	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
Methylene Chloride	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed
n-Amyl Acetate	Quarterly	Multi-Grab Composite	four (4) grab samples which must be individually analyzed

[1] **NOTE: To the extent that special conditions in Part 4 of this permit require more extensive self monitoring, the special conditions shall apply.**

[2] Sample type is either composite or grab as defined in current Wastewater Discharge Regulations under Section 102.
[3] Flow should be measured concurrently with composite sampling. pH should be measured with all sampling.
[4] See Attachment A Section 3c for a list of Total Toxic Organic constituents, if applicable.

B. Representative Sampling and Laboratory Analyses

Samples and measurements taken as required herein shall be representative of the volume and nature of the regulated industrial discharge during hours of production. All samples shall be taken at the sampling point location as designated in this permit. All equipment used for sampling and analysis must be routinely calibrated, inspected, and maintained to ensure its accuracy. All sampling and laboratory analyses shall be conducted in accordance with Attachment A.

C. **Frequency, Sampling Schedule and Due Dates for Submission of Reports**

Sampling of wastewater effluent and reporting of results shall be done in accordance with the schedule shown below. Sampling may be performed any day within the specified date range as designated in this permit. If sampling cannot be conducted within the specified date for any valid reason, OC San must be notified in advance and in writing, of the reason(s) for the inability to sample and the new proposed sampling date.

1. **Quarterly and Semi-Annual Frequency Deadlines**

Organics	Sampling Date	Report Submission Due Date
First Quarter (Jul 2023- Sep 2023)	August 01 - August 16	August 31, 2023
Second Quarter (Oct 2023- Dec 2023)	November 01 - November 16	November 30, 2023
Third Quarter (Jan 2024- Mar 2024)	February 01 - February 16	February 29, 2024
Fourth Quarter (Apr 2024- Jun 2024)	May 01 - May 16	May 31, 2024
First Quarter (Jul 2024- Sep 2024)	August 01 - August 16	August 31, 2024
Second Quarter (Oct 2024- Dec 2024)	November 01 - November 16	November 30, 2024
Third Quarter (Jan 2025- Mar 2025)	February 01 - February 16	February 28, 2025
Fourth Quarter (Apr 2025- Jun 2025)	May 01 - May 16	May 31, 2025
First Quarter (Jul 2025- Sep 2025)	August 01 - August 16	August 31, 2025

2. **Monthly, Weekly, and Daily Frequency Deadlines**

a. Samples must be collected in accordance with the requirements specified in Part 2 Section A, as applicable.

b. Depending on the self-monitoring frequency, sampling must be conducted in the following manner, as applicable:

(i) **Monthly Self-Monitoring (if applicable)**
A sample of the wastewater effluent shall be collected and analyzed a minimum of one (1) sampling day per month. The sampling day shall be rotated to the successively different plant operational day during each month of monitoring.

(i) **Weekly Self-Monitoring (if applicable)**
A sample of the wastewater effluent shall be collected and analyzed a minimum of four (4) sampling days per month (once a week). The sampling day shall be rotated to the successively different plant operational day during each week of monitoring.

(i) **Daily Self-Monitoring (if applicable)**
A sample of the wastewater effluent shall be collected and analyzed each day of discharge each month.

c. Reporting of monthly, weekly, and daily self-monitoring results must be done on a monthly basis. Self-monitoring reports must be submitted by the twentieth (20th) day of the month following sampling.

D. Requirements for Reporting Results

1. Self-Monitoring Reports

Permittee shall submit a Self-Monitoring Report (SMR) on the date(s) specified above. Monitoring results shall be summarized and reported on an OC San SMR form. OC San will not accept formats other than what is shown in the SMR form; therefore, forms provided by OC San or replicates must be used for reporting of results. Failure to receive the SMR forms does not relieve Permittee from the obligation to perform the self-monitoring and submit the report on the required date. The SMR form shall be completely filled-out, with copies of all laboratory results attached. The report shall indicate the concentration of all pollutants in the effluent for which sampling and analyses were performed, including water meter readings required for flow measurement.

If sampling performed by the permittee indicates a violation, the permittee shall notify the Resource Protection Division within 24 hours of becoming aware of the violation. The reporting may be accomplished by a telephone call, fax transmission, e-mail, or a personal visit to the Resource Protection Division. The violation reporting shall contain the date and time of the wastewater sample, the discharge flow for the sample, a possible explanation for the violation(s), and the date scheduled for the resample.

2. Signatory Requirements

Prior to submittal of the SMR to OC San, the results shall be verified and signed under penalty of perjury, by an authorized company official as defined in 40 CFR 403.

E. Additional Monitoring Requirements in Response to Non-compliance

1. Resampling

Upon submission of the SMR to OC San by the required due date, OC San will process the results for mass emission rate calculations, review the concentration results, and notify Permittee of the results. If the results indicate that a violation of the applicable concentration and/or mass discharge limits has occurred, a Notice of Violation will be issued and Permittee must repeat the sampling and pollutant analyses of the required parameters, and submit the results of the repeat analysis to OC San within 30 days after becoming aware of the violation.

2. Reporting

a. The monitoring results shall be submitted as specified in E.1.

b. The requirements for reporting results, as described in D.1 and D.2, shall be followed for the additional monitoring requirements in response to non-compliance.

F. Requirements for Reporting Results of Voluntary Self-Monitoring

1. Any voluntary self-monitoring sample of the effluent obtained during a 24-hour period from the representative sampling point location identified in Part 1 of this permit, that is collected and analyzed in accordance with the guidelines shown in Attachment A, constitutes a valid sample. Results of the analysis for all valid samples shall be reported to OC San, regardless of the outcome.

2. Self-monitoring results for all valid samples must be submitted using an official numbered Voluntary Self-Monitoring Report (VSMR) Form and received by OC San within 30 days from the day the sampling event was concluded. Permittee shall obtain the official VSMR Form from OC San, with a unique tracking/identification number for each day of self-monitoring.

3. OC San will not consider VSMR Forms received after 30 days from the day the sampling event was concluded. Exceptions to the 30-day submittal policy due to extenuating circumstances or special situations shall be authorized by the OC San's General Manager or his/her designee.

4. Upon submission of the completed VSMR Form to OC San by the required 30-day due date, OC San will evaluate the sample results to determine compliance. If the results indicate that a violation of the applicable discharge limits has occurred, a notice of violation may be issued requiring Permittee to implement corrective measures.

II. NOTIFICATION REQUIREMENTS

A. Permittee shall comply with the notification requirements set forth in the current Wastewater Discharge Regulations:

1. Notification of Spill and Slug Loading

a. In the event Permittee is unable to comply with any permit condition due to a breakdown of equipment, accidents, or human error, or Permittee has reasonable opportunity to know that his discharge will exceed the discharge provisions of the user's permit, Permittee shall immediately notify OC San by telephone. If the material discharged to the sewer has the potential to cause or result in a fire or explosion hazard, Permittee shall immediately notify the local fire department and OC San.

b. Confirmation of this notification shall be made in writing no later than five (5) working days from the date of the incident. The written notification shall state the date of the incident, the reasons for the discharge or spill, what steps were taken to immediately correct the problem, and what steps are being taken to prevent the problem from recurring.

c. Such notification shall not relieve the user of any expense, loss, damage or other liability which may be incurred as a result of damage or loss to OC San or any other damage or loss to person or property; nor shall such notification relieve the user of any fees or other liability which may be imposed by a OC San's Ordinance or other applicable law.

2. Notification of Bypass

a. Bypass of industrial wastewater to the sewer system is prohibited. OC San may take enforcement action against the user, unless:

(i) Bypass was unavoidable because it was done to prevent loss of life, personal injury, or severe property damage;

(ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, elective slow-down or shut-down of production units or maintenance during periods of production downtime. This condition is not satisfied if adequate backup equipment could have been feasibly installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventative maintenance; and,

(iii) Permittee submitted notices as required under 2.b.

b. If Permittee knows in advance of the need for a bypass, it shall submit a written request to allow the bypass to OC San, if possible, at least ten (10) days before the date of the bypass.

c. OC San may approve an anticipated bypass at its sole discretion after considering its adverse effects, and OC San determines that the conditions listed in 2.a.(i-iii) are met.

d. Permittee shall provide telephone notification to OC San of an unanticipated bypass that exceeds its permitted discharge limits within four hours from the time Permittee becomes aware of the bypass. A written report shall also be provided within five (5) days of the time Permittee becomes aware or could reasonably have been aware of the bypass. The report shall contain a description of the bypass and its cause; the duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the bypass. Failure to submit oral notice or written report may be grounds for permit revocation.

B. Notification regarding Planned Changes

Permittee shall notify OC San 30 days in advance prior to any facility expansion, production increase, or process modifications which may result in new or substantially increased discharges, a change in the nature of the discharge, or any change that affects the permittee's potential for slug discharges. Permittee shall notify OC San in writing of the proposed expansion and shall submit any information requested by OC San for evaluation of the effect of such expansion on the Permittee's discharge to the sewer system.

III. OTHER REPORTING REQUIREMENTS

A. Slug Discharge Control Plan

Permittee shall develop, maintain and implement in accordance with 40 CFR 403.8(f)(2)(v) a Slug Control Plan to respond to spills, emergency bypass and any accidental discharges that may result in a violation of any permit limits or conditions, or may significantly exceed the normal flow to the sewer system or pollutant loading. The plan shall contain detailed procedures to be followed by permittee in responding to a slug discharge at the Permittee's facility. The procedures shall include provisions to eliminate endangerment of human health and safety by containment and clean up of the slug discharge, and prevent any violation of Permittee's discharge limits and OC San's Wastewater Discharge Regulations (Ordinances). The Plan shall also provide procedures and facilitate immediate notification to OC San of a slug discharge event.

Permittee shall review and update the Slug Control Plan every two years.

The Slug Discharge Control Plan, at a minimum, must contain the following:

1. Description of the permittee's sewer discharge practices including non-routine batch discharges.
2. Description of stored chemicals including type and characteristic, volume, and chemical hazard classification.
3. Procedures to prevent slug discharges to the sewer system.
4. Description of equipment for responding to slug discharges.
5. Procedures for inspection and maintenance of the chemical storage areas to assure proper daily handling.
6. A copy of an operation log sheet recording the maintenance performed, volume of spill, and corrective measures taken.
7. Procedures for proper training of key personnel for handling slug discharges.
8. Emergency telephone numbers for promptly reporting slug discharges to the appropriate governmental agencies.

B. Waste Minimization Requirement

Upon request by OC San, Permittee shall provide waste minimization plans to conserve water, investigate product substitution, provide inventory control, implement employee education, and other steps as necessary to minimize waste produced.

C. Water and Tax Bill Submittal

Permittee shall submit to OC San, copies of Water and Tax Bills within 30 days of receipt of such bills.

D. Changes in Company Information

Permittee shall immediately inform OC San of any changes or inaccuracies in the following company information which is currently on file:

COMPANY NAME: Access Business Group, LLC	**PHONE:** 714-562-1830 **FAX:** 714-736-7610	**LOCAL SEWERING AGENCY:** City of Buena Park
MAILING ADDRESS: 5600 Beach Blvd. Buena Park, CA 90621	**RESPONSIBLE OFFICER:** Mike Nanda VP-Manufacturing	**NO. OF EMPLOYEES:** 509 **WORK DAYS/YEAR:** 220
SERVICE ADDRESS: 5600 Beach Blvd. Buena Park, CA 90621	**AUTHORIZED REPRESENTATIVE / DESIGNATED SIGNATORY:** Mike Nanda VP-Manufacturing	**N.A.I.C.S NUMBER:** 325412
SERVICE AREA: 03	**REVENUE AREA:** RA 15 None	

E. Falsifying Information

Knowingly making any false statement on any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate is a crime and may result in the imposition of criminal sanctions and/or civil penalties.

PART 3. STANDARD CONDITIONS

I. PROHIBITIONS, LIMITS AND REQUIREMENTS

Permittee is required to comply with the prohibitions and limits on discharges set forth in Article 2 of the current Wastewater Discharge Regulations:

A. Prohibited Discharges
B. Prohibition on Dilution
C. Prohibition on Surface Runoff and Groundwater
D. Prohibition on Unpolluted Water
E. Prohibition on the Use of Grinders
F. Prohibition on Point of Discharge
G. Prohibition on Medical Waste
H. Prohibition on Disposal of Spent Solutions and Sludges

II. CIVIL PENALTIES

All users of OC San's system and facilities are subject to enforcement actions administratively or judicially by OC San, U.S. EPA, State of California Regional Water Quality Control Board, or the County of Orange District Attorney.

Any person who violates any provision of the current Wastewater Discharge Regulations; or any permit condition, prohibition or effluent limitation; or any suspension or revocation order shall be liable civilly for a sum not to exceed $25,000.000 per violation, for each day in which such violation occurs.

A. Administrative Civil Penalties

Administrative Civil Penalties may be assessed as follows:

1.) In an amount which shall not exceed two thousand dollars ($2,000.00) for each day for failing or refusing to furnish technical or monitoring reports;

2.) In an amount which shall not exceed three thousand dollars ($3,000.00) for each day for failing or refusing to timely comply with any compliance schedules established by OC San;

3.) In an amount which shall not exceed five thousand dollars ($5,000.00) per violation for each day of discharge in violation of any waste discharge limit, permit condition, or requirement issued, reissued, or adopted by OC San;

4.) In any amount which does not exceed ten dollars ($10.00) per gallon for discharges in violation of any suspension, revocation, cease and desist order or other orders, or prohibition issued, or adopted by OC San.

III. CRIMINAL PENALTIES

Any person who violates any provision of the Ordinance is guilty of a misdemeanor which upon conviction is punishable by a fine not to exceed $1,000.00 or imprisonment for not more than thirty (30) days, or both. Each violation and each day in which a violation occurs may constitute a new and separate violation.

IV. SEVERABILITY

The provisions of this permit are severable. If any provision of these permit limits and/or requirements, or the application thereof, to the Permittee is held invalid, the remainder of the permit limits and/or requirements shall remain in full force and effect.

V. OTHER CONDITIONS

A. Permittee is required to comply with all regulations and discharge limits in the current Wastewater Discharge Regulations and any attachments to this permit .

B. Except as expressly authorized by OC San, upon the sale or transfer of ownership of the business for which this permit is issued, this permit shall be void. The Permittee shall notify OC San in writing prior to the transfer of ownership and shall give a copy of the existing permit to the new owner or operator.

C. Issued permits are for a specific user, for a specific operation at a specific location, create no vested rights, and are non-transferable unless conditions as stated in the Ordinance are met. If transfer is allowed, a copy of the existing permit must be given to the new owner or operator. Industrial Wastewater Discharge permits, their concentration limits or their mass emission rates shall not be transferred for an operation at a different location.

D. Permittee shall maintain plant records relating to wastewater discharge and waste manifests for a minimum of three years.

PART 4. SPECIAL CONDITIONS FOR PERMIT NO. 1-531435

1. **Permittee shall comply with the requirements in Attachment 221 and submit Forms 221-Part 1 (Product Listing), 221-Part 2 (Product Discharge), and 221-Part 3 (Certification) annually by January 15 of each year.**

ATTACHMENT A
PERMIT NO. 1-531435
Access Business Group, LLC

SELF-MONITORING REQUIREMENTS

(Applicable only if constituent is required to be monitored under Part 2.I.A. Monitoring/Sampling Requirements of the Permit)

1. **Sampling and Analyzing of Heavy Metals**

   a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent for heavy metals at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15-minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

   b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

   Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OC San accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OC San, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

   b. **Laboratory Analyses.** All wastewater samples shall be analyzed in accordance with the appropriate procedures contained in 40 CFR 136. Where 40 CFR 136 does not include sampling or analytical techniques for the pollutants in question, analyses shall be performed using the most current edition of "*Standard Methods for the Examination of Water and Wastewater*". Wastewater analysis shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon OC San's request, Permittee shall obtain from its laboratory and furnish to OC San, information regarding test methods and equipment used, including quality assurance/quality control (QA/QC) information. Other information deemed necessary by OC San to determine the adequacy, accuracy, and precision of the results may also be required.

2. **Sampling and Analyzing for Cyanides**

   a. **Sampling.** Permittee shall collect and analyze a sample of its wastewater effluent for cyanides at a frequency specified in **Part 2** of the Permit. All sampling for cyanide must be conducted by taking grab samples of the wastewater after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the samples must be taken at the end of the cyanide process before dilution with other process streams. A minimum of four grab samples shall be taken independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques in accordance with EPA requirements must be used to ensure representative sample results.

   b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed for cyanides in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OC San request, Permittee shall obtain from their laboratory and furnish to the OC San, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OC San to determine the adequacy, accuracy, and precision of the results may also be required.

3. **Sampling and Analysis for Total Toxic Organics (TTOs)**

   a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point for TTOs at a frequency specified in **Part 2** of the permit. All effluent sampling for volatile organic compounds must be conducted by taking grab samples of the wastewater effluent. A minimum of four grab samples shall be taken independently during hours of operation within a 24 hour period. Each sample shall be analyzed independently for toxic organic constituents present in the facility. The average concentration from the four grab sample results with concentrations greater than 10 µg/L shall be used to determine compliance with TTOs mass emission and/or concentration limits.

   b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods (i.e., for Purgeable Halocarbons and Aromatics, use Method 624.1). Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OC San request, Permittee shall obtain from their laboratory and furnish to the OC San, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OC San to determine the adequacy, accuracy, and precision of the results may also be required.

   c. **TTO Constituents.** The TTO limit is a summation of individual values greater than 0.01 milligrams per liter for the following organics:

      NA

4. **Sampling and Analyzing of BOD and TSS**

   a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent at the sample point for BOD and TSS at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15-minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

   b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

      Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OC San accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OC San, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

   c. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OC San request, Permittee shall obtain from their laboratory and furnish to the OC San, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OC San to determine the adequacy, accuracy, and precision of the results may also be required.

5. **Sampling and Analyzing for Oil and Grease of Mineral or Petroleum Origin (O&G-M)**

   a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point location for O&G-M at a frequency specified in **Part 2** of the permit. A minimum of four grab samples shall be taken

independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques, in accordance with EPA requirements, must be used to ensure representative results.

b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OC San request, Permittee shall obtain from their laboratory and furnish to the OC San, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OC San to determine the adequacy, accuracy, and precision of the results may also be required.

ATTACHMENT 221 - Part 1

Instruction for completing the Pharmaceutical Based Product Listing

On an annual basis, Access Business Group, LLC will be required to submit a list of all products manufactured which contain pharmaceutical bearing compounds. Access Business Group, LLC will also certify that the list is complete and accurate. There are eight pieces of information that need to be submitted for each product that contains at least one Pharmaceutical Ingredient. Products not containing Pharmaceutical Ingredients are not required to be listed. If the document submitted does not contain all the information required, the submittal will be considered incomplete and not fulfill the permit requirements.

- **Product Name - Give all names associated with a given product. Include any Research and Development products on this list, even if not manufactured.**
- **Liquid or Solid - List if the final form of the product manufactured is a liquid or solid.**
- **Pharmaceutical Ingredients - List all pharmaceuticals that are present within each given product.**
- **Pharmaceutical Ingredient Concentration - List the concentration of each pharmaceutical as a percentage of the final product.**
- **Disposal Method (Bad Batch) - List methods of disposal for Bad Batches. Options include discharge to OC San (D) and waste-hauling (WH).**
- **Disposal Method (Equipment Cleaning) - List methods of disposal for Equipment Cleaning. This refers to the first cleaning of equipment after a batch/run is complete and the equipment needs to be cleaned, not subsequent cleaning operations beyond removing existing product that remains in packaging equipment. Options include discharge to OC San (D) and waste-hauling (WH).**
- **Disposal Method (R&D) - List methods of disposal for Research & Development Laboratories (R&D based production. Options include discharge to OC San (D) and waste-hauling (WH).**
- **Typical Batch Produced - List is the typical volume for liquids, or weight by solids that is produced during the production run. If the production size varies, then list the average. List the units applicable (i.e. liters, gallons, pounds, etc.).**

Instructions for Completing the Pharmaceutical Based Product Discharge

The Pharmaceutical Based Product Discharge Form will be submitted annually to report the discharges of pharmaceutical based products to OC San. There are three columns of information that are required. We encourage the use of this form, however, if Access Business Group, LLC has a form that is already in use that contains the following three pieces of information, it may be submitted in lieu of using this form. Failure to submit documentation which provides the following three pieces of information will result in failure to meet the permit requirements.

- **Product Name - List all products for which there was a discharge. Use the same product name that is reported in the Pharmaceutical Product Listing. If no products are discharged either through bad batches, by initial cleaning of manufacturing equipment, or research and development work, write "None Discharged" in the first product name entry.**
- **Discharge Date - List the date that the product is discharged.**
- **Discharge Volume - List the volume discharged on that date.**

SUBJECT: Renewal of Class I Industrial Wastewater Discharge Permit No. 53-1-435

Enclosed is Industrial Wastewater Discharge Permit No. 53-1-435 issued by the Orange County Sanitation District (OCSD) to Access Business Group, LLC (Access Business Group) for the facility located at 5600 Beach Boulevard in Buena Park. Access Business Group is required to comply with the permit limits and conditions set forth in this permit at all times. Please see:

- Part 2 of the permit for self-monitoring sampling requirements, schedule, and reporting.

If there are any discrepancies with the information described on the permit, please notify OCSD in writing. Access Business Group is also required to notify OCSD in writing of any changes relating to company information, manufacturing processes, pretreatment modification, wastes/wastewater quantity, sampling point location, piping modification, or any other relevant information. Failure to do so is in violation of your permit.

If you have any questions, please contact the undersigned at (714) 593-7432.

COURTESY REMINDER

March 2, 2015

JULIEN OLLIVIERRE, EHS SUPERVISOR
ACCESS BUSINESS GROUP, LLC
5600 BEACH BLVD.
BUENA PARK CA 90621

Subject: Reminder to Submit Application for Renewal of Wastewater Discharge Permit
Re: Permit No. **53-1-435**

This letter is a courtesy reminder to ACCESS BUSINESS GROUP, LLC that the completed Permit Renewal Application is due to the Orange County Sanitation District (OCSD) by **March 31, 2015***, as required in the OCSD's Notification to Apply for Renewal of Wastewater Discharge Permit dated **February 19, 2015**. Please be advised that Permit No. **53-1-435** will expire on **May 31, 2015** unless the permit is renewed.

Failure to submit the permit application by the due date may delay the issuance of ACCESS BUSINESS GROUP, LLC's permit prior to its expiration date. Please be reminded that discharge without a valid and current permit is prohibited by the OCSD's Wastewater Discharge Regulations .

If your company intends to stop discharging industrial wastewater to the OCSD's sewer system, please complete and return the Request to Close Account Form to the District by **March 31, 2015**, to officially close your account and terminate the sewer service at ACCESS BUSINESS GROUP, LLC.

Please disregard this reminder if the Permit Renewal Application has been submitted. If you have any questions, please call Martin Holl at (714) 593-7432.

IMPORTANT NOTICE

February 19, 2015

JULIEN OLLIVIERRE, EHS SUPERVISOR
ACCESS BUSINESS GROUP, LLC
5600 BEACH BLVD.
BUENA PARK CA 90621

SUBJECT: Notification to Apply for Renewal of Wastewater Discharge Permit
Re: Permit No. **53-1-435**

This is a notification that Permit No. **53-1-435** issued to ACCESS BUSINESS GROUP, LLC will expire on **May 31, 2015**. Please complete and return the enclosed Permit Renewal Application Form to the Orange County Sanitation District (OCSD) by **March 31, 2015**. The OCSD's Accounting Department will generate an invoice for the permit fee and it will be mailed to your Accounts Payable Department under a separate cover. **The permit fee is due at the time the permit renewal application is submitted.** A photocopy of the check must accompany the Permit Renewal Application. **The OCSD will not process the Permit Renewal Application without proof of payment.**

As part of the permit renewal process, the OCSD's staff will conduct a comprehensive evaluation of your manufacturing process, operational control practices, and pretreatment system in order to assess factors and variabilities affecting your facility's ability to meet long-term compliance. This is in response to the pretreatment program audit findings of the Environmental Protection Agency(EPA), which required the OCSD to conduct, during permit renewal, a more in-depth technical review of parameters affecting compliance. **Within a few days, you will be contacted by the OCSD's staff to set-up an appointment for this evaluation. Depending on the number of operations at your facility, please allot about two to four hours for this visit.**

Failure to submit the permit application and payment for the permit fee by the due date may delay the issuance of ACCESS BUSINESS GROUP, LLC's permit prior to the expiration date. **Please be reminded that discharging to the OCSD's sewer system without a valid permit is prohibited and may result in physical termination of sewer service and imposition of civil penalties.**

If your company intends to stop discharging industrial wastewater to the OCSD's sewer system, please complete and return the enclosed Request to Close Account Form to the OCSD by **March 31, 2015**, to officially close your account and terminate the sewer service at ACCESS BUSINESS GROUP, LLC.

If you have any questions, please call Martin Holl at (714) 593-7432.

INDUSTRIAL WASTEWATER DISCHARGE CLASS I PERMIT

Permit No: 53-1-435

FOR DISCHARGE OF WASTEWATER ISSUED BY ORANGE COUNTY SANITATION DISTRICT

In accordance with the provisions of the Wastewater Discharge Regulations of Orange County Sanitation District, herein referred to as "District",

ACCESS BUSINESS GROUP, LLC
5600 BEACH BLVD.
BUENA PARK, CA 90621

hereinafter referred to as "Permittee", is hereby authorized to discharge industrial wastewater from the above identified facility into the District's sewer system in accordance with the conditions set forth in this permit. Such conditions are as specified in the following parts of this permit:

Part 1 - Effluent Limits and Flow Basis
Part 2 - Monitoring, Notification, and Reporting Requirements
Part 3 - Standard Conditions
Part 4 - Special Conditions

Compliance with this permit does not relieve the Permittee of its obligation to comply with the District's current Wastewater Discharge Regulations, any applicable pretreatment regulations, standards or requirements under local, State, and Federal laws, including any such regulations, standards, requirements or laws that may become effective during the term of this permit. Non-compliance with any term or condition of this permit constitutes a violation of the current Wastewater Discharge Regulations.

This permit shall become effective on June 01, 2015 and shall expire on May 31, 2017.

James E. Colston
Environmental Compliance Manager

Issued on

May 28, 2015

ORANGE COUNTY SANITATION DISTRICT, CALIFORNIA
10844 Ellis Avenue
Fountain Valley, CA 92728-8127
(714) 962-2411

PART 1 - EFFLUENT LIMITS AND FLOW BASIS

During the period from June 01, 2015 to May 31, 2017, Permittee is authorized to discharge industrial wastewater into the sewer system tributary to the District's sewerage facilities. The effluent discharge shall not exceed either the following concentration limits in mg/L or the mass emission rate limits in lbs/day. If your mass emission rate is based on flow, then your flow base is presumed to be 5000 gallons per day (gpd) of wastewater flow at the sampling point.

Company Name: ACCESS BUSINESS GROUP, LLC			**Permit No.:** 53-1-435	
Sewer Address:	**Flow Base:** 5000 gpd		**Effective Date:**	06/01/2015
5600 BEACH BLVD. BUENA PARK, CA 90621	**WWAR Percent Loss:** **WWAR Fixed Loss:**	5	**Expiration Date:**	05/31/2017
Primary Category: PHARMACEUTICAL - PART D	**Subcategory:** 40 CFR # 439 D		**Subpart:**

SAMPLING POINT LOCATION: The above effluent limits apply at the sampling point located between the entrance doors to Bldg 3 and 10. The sample point is a manhole and represents all industrial wastewater discharge from the facility.

§ Combined waste stream formula

Cyanide limits apply at the sampling point after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the sample must be taken at the end of the cyanide process before dilution with other process streams. In the absence of cyanide process, the limits apply at the sampling point location described above (end of pipe).

PART 2 - SELF-MONITORING, NOTIFICATION AND REPORTING REQUIREMENTS

I. SELF-MONITORING REQUIREMENTS

Permittee shall conduct monitoring of its own wastewater effluent for the purpose of determining the status of compliance/non-compliance and user charges. Based on the results, Permittee shall make the necessary adjustments/corrections to bring the wastewater discharge into immediate compliance with its permitted limits. The specific requirements are as follows:

A. Monitoring/Sampling Requirements

From the effective date of the permit and until the permit is terminated or revised, Permittee shall monitor its wastewater discharge for the following parameters at the indicated frequency[1]:

Parameters	Measurement Frequency	Sample Type[2]	Procedure
Metals: None			
Cyanides: None			
Organics[4]:			
Acetone	Semi-Annual	Grab	four(4) grab samples which must be individually analyzed
Methylene Chloride	Semi-Annual	Grab	four(4) grab samples which must be individually analyzed
n-Amyl acetate	Semi-Annual	Grab	four(4) grab samples which must be individually analyzed
Ethyl acetate	Semi-Annual	Grab	four(4) grab samples which must be individually analyzed
Isopropyl acetate	Semi-Annual	Grab	four(4) grab samples which must be individually analyzed
Others: None			
Flow (gal/day)[3]			
pH[3]			

[1]**NOTE: To the extent that special conditions in Part 4 of this permit require more extensive self monitoring, the special conditions shall apply.**

[2]Sample type is either composite or grab as defined in current Wastewater Discharge Regulations under Section 102.

[3]Flow and pH should be measured concurrently with composite sampling.

[4]See Attachment A Section 3c for a list of Total Toxic Organic constituents, if applicable.

B. Representative Sampling and Laboratory Analyses

Samples and measurements taken as required herein shall be representative of the volume and nature of the regulated industrial discharge during hours of production. All samples shall be taken at the sampling point location as designated in this permit. All equipment used for sampling and analysis must be routinely calibrated, inspected, and maintained to ensure its accuracy. All sampling and laboratory analyses shall be conducted in accordance with Attachment A.

C. Frequency, Sampling Schedule and Due Dates for Submission of Reports

Sampling of wastewater effluent and reporting of results shall be done in accordance with the schedule shown below. Sampling may be performed any day within the specified date range as designated in this permit. If sampling cannot be conducted within the specified date for any valid reason, the District must be notified in advance and in writing, of the reason(s) for the inability to sample and the new proposed sampling date.

1. Quarterly and Semi-Annual Frequency Deadlines

METALS		**Sampling Date**	**Report Submission Due Date**
None			
BOD, TSS		**Sampling Date**	**Report Submission Due Date**
None			
CYANIDES		**Sampling Date**	**Report Submission Due Date**

ORGANICS		**Sampling Date**	**Report Submission Due Date**
First Half	(Jul 2015 - Dec 2015)	November 1 - November 16	November 30, 2015
Second Half	(Jan 2016 - Jun 2016)	May 1 - May 16	May 31, 2016
First Half	(Jul 2016 - Dec 2016)	November 1 - November 16	November 30, 2016
Second Half	(Jan 2017 - Jun 2017)	May 1 - May 16	May 31, 2017
OIL & GREASE		**Sampling Date**	**Report Submission Due Date**
None			

2. Monthly, Weekly, and Daily Frequency Deadlines

a. Samples must be collected in accordance with the requirements specified in Part 2 Section A, as applicable.

b. Depending on the self-monitoring frequency, sampling must be conducted in the following manner, as applicable:

(i) **Monthly Self-Monitoring**

A sample of the wastewater effluent shall be collected and analyzed a minimum of one (1) sampling day per month. The sampling day shall be rotated to the successively different plant operational day during each month of monitoring.

(ii) **Weekly Self-Monitoring**

A sample of the wastewater effluent shall be collected and analyzed a minimum of four (4) sampling days per month (once a week). The sampling day shall be rotated to the successively different plant operational day during each week of monitoring.

(iii) **Daily Self-Monitoring**

A sample of the wastewater effluent shall be collected and analyzed each day of discharge each month.

c. Reporting of monthly, weekly, and daily self-monitoring results must be done on a monthly basis. Self-monitoring reports must be submitted by the twentieth (20th) day of the month following sampling.

D. Requirements for Reporting Results

1. Self-Monitoring Reports

Permittee shall submit a Self-Monitoring Report (SMR) on the date(s) specified above. Monitoring results shall be summarized and reported on a District SMR form. The District will not accept formats other than what is shown in the SMR form; therefore, forms provided by the District or replicates must be used for reporting of results. Failure to receive the SMR forms does not relieve Permittee from the obligation to perform the self-monitoring and submit the report on the required date. The SMR form shall be completely filled-out, with copies of all laboratory results attached. The report shall indicate the concentration of all pollutants in the effluent for which sampling and analyses were performed, including water meter readings required for flow measurement.

If sampling performed by the permittee indicates a violation, the permittee shall notify the Source Control Division within 24 hours of becoming aware of the violation. The reporting may be accomplished by a telephone call, fax transmission, e-mail, or a personal visit to Source Control. The violation reporting shall contain the date and time of the wastewater sample, the discharge flow for the sample, a possible explanation for the violation(s), and the date scheduled for the resample.

2. Signatory Requirements

Prior to submittal of the SMR to the District, the results shall be verified and signed under penalty of perjury, by an authorized company official as defined in 40 CFR 403.

E. Additional Monitoring Requirements in Response to Non-compliance

1. Resampling

Upon submission of the SMR to the District by the required due date, the District will process the results for mass emission rate calculations, review the concentration results, and notify Permittee of the results. If the results indicate that a violation of the applicable concentration and/or mass discharge limits has occurred, a Notice of Violation will be issued and Permittee must repeat the sampling and pollutant analyses of the required parameters, and submit the results of the repeat analysis to the district within 30 days after becoming aware of the violation.

2. Reporting

a. The monitoring results shall be submitted as specified in E.1.

b. The requirements for reporting results, as described in D.1 and D.2, shall be followed for the additional monitoring requirements in response to non-compliance.

F. Requirements for Reporting Results of Voluntary Self-Monitoring

1. Any voluntary self-monitoring sample of the effluent obtained during a 24-hour period from the representative sampling point location identified in Part 1 of this permit, that is collected and analyzed in accordance with the guidelines shown in Attachment A, constitutes a valid sample. Results of the analysis for all valid samples shall be reported to the District, regardless of the outcome.

2. Self-monitoring results for all valid samples must be submitted using an official numbered Voluntary Self-Monitoring Report (VSMR) Form and received by the District within 30 days from the day the sampling event was concluded. Permittee shall obtain the official VSMR Form from the District, with a unique tracking/identification number for each day of self-monitoring.

3. The District will not consider VSMR Forms received after 30 days from the day the sampling event was concluded. Exceptions to the 30-day submittal policy due to extenuating circumstances or special situations shall be authorized by the District's General Manager or his/her designee.

4. Upon submission of the completed VSMR Form to the District by the required 30-day due date, the District will evaluate the sample results to determine compliance. If the results indicate that a violation of the applicable discharge limits has occurred, a notice of violation may be issued requiring Permittee to implement corrective measures.

II. NOTIFICATION REQUIREMENTS

A. Permittee shall comply with the notification requirements set forth in the current Wastewater Discharge Regulations:

1. Notification of Spill and Slug Loading

a. In the event Permittee is unable to comply with any permit condition due to a breakdown of equipment, accidents, or human error, or Permittee has reasonable opportunity to know that his discharge will exceed the discharge provisions of the user's permit, Permittee shall immediately notify the District by telephone. If the material discharged to the sewer has the potential to cause or result in a fire or explosion hazard, Permittee shall immediately notify the local fire department and the District.

b. Confirmation of this notification shall be made in writing no later than five (5) working days from the date of the incident. The written notification shall state the date of the incident, the reasons for the discharge or spill, what steps were taken to immediately correct the problem, and what steps are being taken to prevent the problem from recurring.

c. Such notification shall not relieve the user of any expense, loss, damage or other liability which may be incurred as a result of damage or loss to the District or any other damage or loss to person or property; nor shall such notification relieve the user of any fees or other liability which may be imposed by a District's Ordinance or other applicable law.

2. Notification of Bypass

a. Bypass of industrial wastewater to the sewer system is prohibited. The District may take enforcement action against the user, unless:

(i) Bypass was unavoidable because it was done to prevent loss of life, personal injury, or severe property damage;

(ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, elective slow-down or shut-down of production units or maintenance during periods of production downtime. This condition is not satisfied if adequate backup equipment could have been feasibly installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventative maintenance; and,

(iii) Permittee submitted notices as required under 2.b.

b. If Permittee knows in advance of the need for a bypass, it shall submit a written request to allow the bypass to the District, if possible, at least ten (10) days before the date of the bypass.

c. The District may approve an anticipated bypass at its sole discretion after considering its adverse effects, and the District determines that the conditions listed in 2.a.(i-iii) are met.

d. Permittee shall provide telephone notification to the District of an unanticipated bypass that exceeds its permitted discharge limits within four hours from the time Permittee becomes aware of the bypass. A written report shall also be provided within five (5) days of the time Permittee becomes aware or could reasonably have been aware of the bypass. The report shall contain a description of the bypass and its cause; the duration of the bypass, including exact dates and times, and, if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the bypass. Failure to submit oral notice or written report may be grounds for permit revocation.

B. Notification regarding Planned Changes

Permittee shall notify the District 90 days in advance prior to any facility expansion, production increase, or process modifications which may result in new or substantially increased discharges or a change in the nature of the discharge. Permittee shall notify the District in writing of the proposed expansion and shall submit any information requested by the District for evaluation of the affect of such expansion on the Permittee's discharge to the sewer system.

III. OTHER REPORTING REQUIREMENTS

A. Slug Discharge Control Plan

Permittee shall develop, maintain and implement in accordance with 40 CFR 403.8(f)(2)(v) a Slug Control Plan to respond to spills, emergency bypass and any accidental discharges that may result in a violation of any permit limits or conditions, or may significantly exceed the normal flow to the sewer system or pollutant loading. The plan shall contain detailed procedures to be followed by permittee in responding to a slug discharge at the Permittee's facility. The procedures shall include provisions to eliminate endangerment of human health and safety by containment and clean up of the slug discharge, and prevent any violation of Permittee's discharge limits and the District's Wastewater Discharge Regulations (Ordinances). The Plan shall also provide procedures and facilitate immediate notification of the District of a slug discharge event.

Permittee shall review and update the Slug Control Plan every two years.

The Slug Discharge Control Plan, at a minimum, must contain the following:

1. Description of the permittee's sewer discharge practices including non-routine batch discharges.
2. Description of stored chemicals including type and characteristic, volume, and chemical hazard classification.
3. Procedures to prevent slug discharges to the sewer system.
4. Description of equipment for responding to slug discharges.
5. Procedures for inspection and maintenance of the chemical storage areas to assure proper daily handling.
6. A copy of an operation log sheet recording the maintenance performed, volume of spill, and corrective measures taken.
7. Procedures for proper training of key personnel for handling slug discharges.
8. Emergency telephone numbers for promptly reporting slug discharges to the appropriate governmental agencies.

B. Waste Minimization Requirements

Upon request by the District, Permittee shall provide waste minimization plans to conserve water, investigate product substitution, provide inventory control, implement employee education, and other steps as necessary to minimize waste produced.

C. Water and Tax Bill Submittal

Permittee shall submit to the District, copies of Water and Tax Bills within 30 days of receipt of such bills.

D. Changes in Company Information

Permittee shall immediately inform the District of any changes or inaccuracies in the following company information which is currently on file:

<table>
<tr><td>COMPANY NAME:
ACCESS BUSINESS GROUP, LLC</td><td>PHONE: (714) 562-1830
FAX: (714) 736-7610</td><td>LOCAL SEWERING AGENCY:

</table>

E. Falsifying Information

Knowingly making any false statement on any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate is a crime and may result in the imposition of criminal sanctions and/or civil penalties.

PART 3 - STANDARD CONDITIONS

I. PROHIBITIONS, LIMITS AND REQUIREMENTS

Permittee is required to comply with the prohibitions and limits on discharges set forth in Article 2 of the current Wastewater Discharge Regulations:

A. Prohibited Discharges
B. Prohibition on Dilution
C. Prohibition on Surface Runoff and Groundwater
D. Prohibition on Unpolluted Water
E. Prohibition on the Use of Grinders
F. Prohibition on Point of Discharge
G. Prohibition on Medical Waste
H. Prohibition on Disposal of Spent Solutions and Sludges

II. CIVIL PENALTIES

All users of the District's system and facilities are subject to enforcement actions administratively or judicially by the District, U.S. EPA, State of California Regional Water Quality Control Board, or the County of Orange District Attorney.

Any person who violates any provision of the current Wastewater Discharge Regulations; or any permit condition, prohibition or effluent limitation; or any suspension or revocation order shall be liable civilly for a sum not to exceed $25,000.000 per violation, for each day in which such violation occurs.

A. Administrative Civil Penalties

Administrative Civil Penalties may be assessed as follows:

1.) In an amount which shall not exceed two thousand dollars ($2,000.00) for each day for failing or refusing to furnish technical or monitoring reports;

2.) In an amount which shall not exceed three thousand dollars ($3,000.00) for each day for failing or refusing to timely comply with any compliance schedules established by the District;

3.) In an amount which shall not exceed five thousand dollars ($5,000.00) per violation for each day of discharge in violation of any waste discharge limit, permit condition, or requirement issued, reissued, or adopted by the District;

4.) In any amount which does not exceed ten dollars ($10.00) per gallon for discharges in violation of any suspension, revocation, cease and desist order or other orders, or prohibition issued, or adopted by the District

III. CRIMINAL PENALITIES

Any person who violates any provision of the Ordinance is guilty of a misdemeanor which upon conviction is punishable by a fine not to exceed $1,000.00 or imprisonment for not more than thirty (30) days, or both. Each violation and each day in which a violation occurs may constitute a new and separate violation.

IV. SEVERABILITY

The provisions of this permit are severable. If any provision of those permit limits and/or requirements, or the application thereof, to the Permittee is held invalid, the remainder of the permit limits and/or requirements shall remain in full force and effect.

V. OTHER CONDITIONS

A. Permittee is required to comply with all regulations and discharge limits in the current Wastewater Discharge Regulations and any attachments to this permit.

B. Except as expressly authorized by the District, upon the sale or transfer of ownership of the business for which this permit is issued, this permit shall be void. The permittee shall notify the District in writing prior to the transfer of ownership and shall give a copy of the existing permit to the new owner or operator.

C. Issued Permits are for a specific user, for a specific operation at a specific location, create no vested rights, and are non-transferable unless conditions as stated in the Ordinance are met. If transfer is allowed, a copy of the existing permit must be given to the new owner or operator. Industrial Wastewater Discharge permits, their concentration limits or their mass emission rates shall not be transferred for an operation at a different location.

D. Permittee shall maintain plant records relating to wastewater discharge and waste manifests for a minimum of three years.

PART 4 - SPECIAL CONDITIONS FOR PERMIT NO. 53-1-435

None.

ATTACHMENTS

ACCESS BUSINESS GROUP, LLC

ATTACHMENT A
PERMIT NO. 53-1-435
ACCESS BUSINESS GROUP, LLC

SELF-MONITORING REQUIREMENTS

1. **Sampling and Analysis of Heavy Metals**

   a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent for heavy metals at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15-minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

   b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

   Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

   c. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136. Where 40 CFR 136 does not include sampling or analytical techniques for the pollutants in question, analyses shall be performed using the most current edition of *"Standard Methods for the Examination of Water and Wastewater"*. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including quality assurance/quality control (QA/QC) information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

2. **Sampling and Analysis for Cyanides**

   a. **Sampling.** Permittee shall collect and analyze a sample of its wastewater effluent for cyanides at a frequency specified in **Part 2** of the Permit. All sampling for cyanide must be conducted by taking grab samples of the wastewater after cyanide treatment, but prior to dilution with other streams. If there is no cyanide treatment, the samples must be taken at the end of the cyanide process before dilution with other process streams. A minimum of four grab samples shall be taken independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques in accordance with EPA requirements must be used to ensure representative sample results.

   b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed for cyanides in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

3. **Sampling and Analysis for Total Toxic Organics (TTOs)**

   a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point for TTOs at a frequency specified in **Part 2** of the permit. All effluent sampling for volatile organic compounds must be conducted by taking grab samples of the wastewater effluent. A minimum of four grab samples shall be taken independently during hours of operation within a 24 hour period. Each sample shall be analyzed independently for toxic organic constituents present in the facility. The average concentration from the four grab sample results with concentrations greater than 10 µg/L shall be used to determine compliance with TTOs mass emission and/or concentration limits.

   b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods (i.e., for Purgeable Halocarbons and Aromatics, use Methods 601 and 602, or 624). Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

4. **Sampling and Analysis of BOD and TSS**

   a. **Composite Sampling.** Permittee shall collect and analyze a 24-hour composite sample of the wastewater effluent at the sample point for BOD and TSS at a frequency specified in **Part 2** of the permit. All effluent sampling must be conducted using an automatic sampling device which is capable of collecting samples at 15-minute intervals during all hours of discharge in a 24-hour day. Flow-proportional samples are acceptable with a minimum of 96 samples collected per 24 hours of discharge. For batch dischargers, a grab sample is acceptable for a well-mixed batch; otherwise, a composite sample during the period of discharge must be obtained.

   b. **Discharge Flow.** Water meter readings shall be obtained during the start and end of composite sampling to determine the volume of water discharged during the 24 hour sampling period. Meter readings are necessary to determine the total flow needed for calculation of the daily mass emission rate for the actual wastewater discharged. Additionally, the start and stop times must be recorded. The units in which the water meter readings are expressed must be properly ascertained.

      Permittee shall measure and record daily total flow using flow measurement devices and methods that ensure an accurate measurement of the volume of monitored discharge. The use of effluent meters provides an accurate measurement of the volume discharged; however, in the absence of effluent meters, the OCSD accepts the use of incoming water meters or process meter totalizers with appropriate standard deductions such as domestic, process, and landscape losses. These deductions will be applied by the OCSD, upon processing of the self-monitoring report, to determine the volume of wastewater discharged to the sewer system. The devices shall be installed, calibrated, and maintained to ensure that the accuracy of the measurement is consistent with the accepted capability of that device.

   c. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

5. **Sampling and Analysis for Oil and Grease (O&G)**

   a. **Sampling.** Permittee shall collect and analyze samples of the wastewater effluent at the sample point location for O&G at a frequency specified in **Part 2** of the permit. A minimum of four grab samples shall be taken independently during hours of operation within a 24-hour period. The grab samples may be composited by the laboratory personnel prior to analysis. Proper sampling and preservation techniques, in accordance with EPA requirements, must be used to ensure representative results.

   b. **Laboratory Analyses.** All wastewater samples shall be collected and analyzed in accordance with the appropriate procedures contained in 40 CFR 136 using EPA Methods. Wastewater analyses shall be performed by a laboratory utilizing the approved method for performing the analyses on the required constituents. Upon the OCSD request, Permittee shall obtain from their laboratory and furnish to the OCSD, information regarding test methods and equipment used, including QA/QC information. Other information deemed necessary by the OCSD to determine the adequacy, accuracy, and precision of the results may also be required.

Permit Fact Sheet

Permit No. 53-1-435

Company: Access Business Group, LLC

Evaluated by: MH
Engineer

Checked by: RS
Engineering Supervisor

Data Entry by: MH
Clerk
Date: 5/18/2015

DESCRIPTION OF FACILITY OPERATIONS:

This is a very large facility with multiple buildings, owned by Access Business Group and producing Nutrilite-branded products sold by Amway.

On 12/1/1995, OCSD issued Class II permit 3-2-175 to Nutrilite. On 11/30/1998, the permit was terminated, apparently due to the ad valorem taxes exceeding the user charges.

Nutrilite is categorized under Pharmaceuticals – Subpart D, which covers Mixing/Compounding and Formulation. Only the manufacturing building's effluent (Bldg 10) will be regulated under this permit. The other buildings house unregulated ancillary operations. Buildings 1 and 3 discharge downstream of the sampling manhole; Buildings 4,5,7B, 9, 10, 14 discharge to a four-stage below-ground grease interceptor to a separate lateral.

Industrial and sanitary wastewater cannot be separated. For this reason, a dilution factor will be used to calculate permit limits for the five categorical constituents (acetone, ethyl acetate, isopropyl acetate, methylene chloride, and n-amyl acetate). The effluent is estimated to be 90% industrial and 10% sanitary.

1) Industrial Process Description

Buildings are divided into North and South Campus. North Campus has additional buildings but no wastewater discharge.

Bldg B1 – Nutrilite Health Institute, training center for employees and sales personnel (sanitary only)

Bldg B3 – Quality assurance / quality control lab

Bldg B4 – Maintenance shop, gymnasium, administrative offices

Bldg B5A – Packaging (sanitary only); does not discharge to either sample point; across the railroad tracks, north of complex

Bldg B6 – Cafeteria, R&D support, EHS department, blending raw material

Bldg B7 – Receiving department, forklift battery charging activities, pilot plant

Bldg B8 – Raw material storage

Bldg B9 – R&D, granulation

Bldg 10 – Manufacturing of vitamins and nutritional supplements by blending food grade ingredients. Products include tablets, two-piece capsules, and soft shell gelatin capsules. In Bldg 10, there are 11 weigh rooms and 7 blending areas which mix between 5 to 30 ingredients. Primary ingredients include beta carotene, citrus extract, glycerine, soy lecithin,

lemon oil, gingko biloba, wheat germ oil, fish oil, vegetable oil, beeswax, gelatin, berry extracts, olive oil, tea extract, and herbal extracts including rosemary, ginger, nettle, garlic, and dong quai. 18 presses produce tablets. Gel capsules are produced in the gel room and subsequently coated by sprayers inside washing machines. Product names are etched into the tablets and capsules with a laser. A separate "Xcell" area, which has all processes in one location, is used to produce the best-selling products.

Bldg B14 – Raw material storage

2) Wastewater-generating Operations

Wastewater is generated by cleaning and rinsing equipment between changeovers in production, and general equipment and building maintenance.

3) Pretreatment Description

Access Business Group has no pretreatment system.

PTS Evaluation (in relation to compliance history):

Access Business Group has had no violations. OCSD staff expects that the facility will have no difficulty with maintaining long-term compliance.

INSERT THE FOLLOWING:

1. ORACLE DATA ENTRY FORM

2. SMENU DATA

3. FLOW SUMMARY INFORMATION

FLOW BASE EVALUATION Existing Permit Flow Base: 5,000 gpd Issue at: 5,000 gpd

Justification: Process discharge is approximately estimated to be approximately 1000-2000 gpd.

Flow Measurement Evaluation: NA

Is there a discrepancy among District's sampling, self-monitoring, & Reconciliation? (see Flow Study) ☐ Yes ☒ No

What is the magnitude of the largest difference? _____ %

If yes, what are the reason(s) for the discrepancy?

- ☐ The number of meters being read varies.
  Details: _____
- ☐ One data point threw the average sampling flow off.
  Details: _____
- ☐ Company discharges less frequently than number of days worked.
  Details: _____
- ☐ Discharge configuration.
  Details: _____
- ☐ Other _____

Losses to be applied for User Charges: Existing: 5 Issue at: 5

Standard loss for city meter.

SAMPLING POINT LOCATION DESCRIPTION:

The sampling point is located between the entrance doors to Bldg 3 and 10.

The sample point is a manhole.

Deficiencies/Requirements:

Note: NA

CATEGORICAL EVALUATION

Category: Pharmaceutical Manufacturing Sub-category 439 Subpart D

The facility is a _____ Captive _____ Job shop _____ Printed Circuit Board ___x___ N/A

Date facility started operation: July 1952

Effluent Limits are: ___x___ Flow-based _____ Production-based

NAICS Title: Pharmaceutical Preparation Manufacturing NAICS Code: 325412

Rational for Category/Sub-category:

Manufacturing pharmaceuticals is subject to 40 CFR Part 439 Pharmaceutical Manufacturing, Subpart D, PSNS. Subpart D covers Mixing/Compounding and Formulation, which describes Nutrilite's activities.

SLUG CONTROL PLAN

Does Permittee have a Slug Control Plan or equivalent on site? ___x___ Yes _____ No _____ N/A

If not available or not applicable to the facility, provide reason:
If in place, specify which type:

- ☒ Specific OCSD Plan
- ☐ Equivalent Plan (Fire Dept. Business Plan, etc.)

Date last updated: 2013

Is the Slug Control Plan (or Equivalent) Notification Procedure and Information posted? _____ Yes ___x___ No

If posted, specify location: EHS Department

If not posted, action(s) taken: NA

SELF-MONITORING REQUIREMENTS FOR CSDOC CATEGORY OR SPECIAL REQUIREMENTS FOR CATEGORICALS

From the effective date of the permit and until the permit is terminated or revised, Permittee shall monitor its wastewater discharge for the following parameters at the indicated frequency:

☒ This table is not applicable. Standard Categorical requirements apply.

Parameters	Measurement Frequency	Sample Type[a]
Heavy Metals:		
Cyanides:		
Total Toxic Organics:		
Others:		
Flow (gal/day)[b]		
pH [b]		

a. Sample type is either composite or grab as defined in the District's Wastewater Discharge Regulations (Ordinance) under Section 102.
b. Flow and pH should be measured concurrent with composite sampling for heavy metals.

Rationale for the requirements: NA

SPECIAL CONDITIONS

- ☒ No Special Conditions apply
- ☐ Wastewater Discharge Permit Meter Condition(s) apply
- ☐ BAT PTS Installation Condition or Alternative Measures Option apply
- ☐ Alternative Measures Compliance Requirements Condition apply

☐ Permittee shall implement any and all steps and measures (including, but not limited to, the installation of pretreatment equipment/technology, and/or the implementation of best management practices/pollution prevention measures, waste minimization measures, and process modifications) necessary to attain long-term compliance with the permitted discharge limits. If non-compliance occurs, Permittee will be required to install a pretreatment system (equivalent to or better than Best Available Technology (BAT)) as specified in Attachment 120.

Rationale: _____

☐ Permittee shall comply with the reporting requirements for production data as specified in Attachment 150 and submit the data
☐ annually by _____
☐ no later than the following dates after each quarter: April 15, July 15, October 15, and January 15.
(NOTE: You must specify the production data required.)

Rationale: _____

☐ Permittee shall comply with the Wastewater Treatment Operator requirement as specified in Attachment 135.

Rationale: _____

☐ Permittee shall submit a Plot Plan as specified in Attachment 100, Manufacturing Process Layout as specified in Attachment 105, and Spill Containment Drawing and Information as specified in Attachment 125 by _____.

Rationale: _____

☐ Permittee shall submit an Operations and Maintenance (O&M) manual in accordance with the District's guidelines as specified in Attachment 138. The manual shall be reviewed annually and updated as necessary by Permittee. The manual shall be made available for District's review upon request.

Rationale: _____

☐ Permittee shall comply with the Wastewater Discharge Log Requirements as specified in Attachment 175 and submit the data as requested by the District.

Rationale: _____

☐ Permittee shall comply with the Wastewater Discharge Log Requirements as specified in Attachment 180, maintain the log onsite, and make it available upon the District's request.

Rationale: _____

☐ Permittee shall comply with the Wastewater Discharge Log Requirement as specified in Attachment 175 and submit the data as requested by the District.

Rationale: _____

☐ Permittee shall notify the District before discharging industrial wastewater.

Rationale: _____

☐ Permittee shall install an effluent holding tank by _____ in accordance with the guidelines specified in Attachment 145. A proposal for the effluent holding tank must be submitted by _____ for the District's review.

CATEGORICAL EVALUATION

Category: Pharmaceutical Manufacturing Sub-category 439 Subpart D

The facility is a _____ Captive _____ Job shop _____ Printed Circuit Board ___x___ N/A

Date facility started operation: July 1952

Effluent Limits are: ___x___ Flow-based _____ Production-based

NAICS Title: Pharmaceutical Preparation Manufacturing NAICS Code: 325412

Rational for Category/Sub-category:

Manufacturing pharmaceuticals is subject to 40 CFR Part 439 Pharmaceutical Manufacturing, Subpart D, PSNS. Subpart D covers Mixing/Compounding and Formulation, which describes Nutrilite's activities.

SLUG CONTROL PLAN

Does Permittee have a Slug Control Plan or equivalent on site? ___x___ Yes _____ No _____ N/A

If not available or not applicable to the facility, provide reason:
If in place, specify which type:

- ☒ Specific OCSD Plan
- ☐ Equivalent Plan (Fire Dept. Business Plan, etc.)

Date last updated: 2013

Is the Slug Control Plan (or Equivalent) Notification Procedure and Information posted? _____ Yes ___x___ No

If posted, specify location: EHS Department

If not posted, action(s) taken: NA

SELF-MONITORING REQUIREMENTS FOR CSDOC CATEGORY OR SPECIAL REQUIREMENTS FOR CATEGORICALS

From the effective date of the permit and until the permit is terminated or revised, Permittee shall monitor its wastewater discharge for the following parameters at the indicated frequency:

☒ This table is not applicable. Standard Categorical requirements apply.

Parameters	Measurement Frequency	Sample Type[a]
Heavy Metals:		
Cyanides:		
Total Toxic Organics:		
Others:		
Flow (gal/day)[b]		
pH [b]		

a. Sample type is either composite or grab as defined in the District's Wastewater Discharge Regulations (Ordinance) under Section 102.
b. Flow and pH should be measured concurrent with composite sampling for heavy metals.

Rationale for the requirements: NA

SPECIAL CONDITIONS

- ☒ No Special Conditions apply
- ☐ Wastewater Discharge Permit Meter Condition(s) apply
- ☐ BAT PTS Installation Condition or Alternative Measures Option apply
- ☐ Alternative Measures Compliance Requirements Condition apply

☐ Permittee shall implement any and all steps and measures (including, but not limited to, the installation of pretreatment equipment/technology, and/or the implementation of best management practices/pollution prevention measures, waste minimization measures, and process modifications) necessary to attain long-term compliance with the permitted discharge limits. If non-compliance occurs, Permittee will be required to install a pretreatment system (equivalent to or better than Best Available Technology (BAT)) as specified in Attachment 120.

Rationale: _____

☐ Permittee shall comply with the reporting requirements for production data as specified in Attachment 150 and submit the data
☐ annually by _____
☐ no later than the following dates after each quarter: April 15, July 15, October 15, and January 15.
(NOTE: You must specify the production data required.)

Rationale: _____

☐ Permittee shall comply with the Wastewater Treatment Operator requirement as specified in Attachment 135.

Rationale: _____

☐ Permittee shall submit a Plot Plan as specified in Attachment 100, Manufacturing Process Layout as specified in Attachment 105, and Spill Containment Drawing and Information as specified in Attachment 125 by _____.

Rationale: _____

☐ Permittee shall submit an Operations and Maintenance (O&M) manual in accordance with the District's guidelines as specified in Attachment 138. The manual shall be reviewed annually and updated as necessary by Permittee. The manual shall be made available for District's review upon request.

Rationale: _____

☐ Permittee shall comply with the Wastewater Discharge Log Requirements as specified in Attachment 175 and submit the data as requested by the District.

Rationale: _____

☐ Permittee shall comply with the Wastewater Discharge Log Requirements as specified in Attachment 180, maintain the log onsite, and make it available upon the District's request.

Rationale: _____

☐ Permittee shall comply with the Wastewater Discharge Log Requirement as specified in Attachment 175 and submit the data as requested by the District.

Rationale: _____

☐ Permittee shall notify the District before discharging industrial wastewater.

Rationale: _____

☐ Permittee shall install an effluent holding tank by _____ in accordance with the guidelines specified in Attachment 145. A proposal for the effluent holding tank must be submitted by _____ for the District's review.

NOTES

(from initial permit issue eff 6/1/2015)

5/28/2013

Updated 5/30/2013

ACCESS BUSINESS GROUP, 53-1-435

1. This is a very complex facility with multiple buildings, water meters, and discharge points. After untangling what goes where, I've decided to issue a single permit with two city water meters and a single sample point. This catches all production and QC lab wastewater. The remaining buildings do not house categorical operations, and are mainly administrative and support operations. See the PFS for details.

1a. After discussing with RS, priority is sampling the manufacturing area and using estimated dilution factor to compensate for domestic /industrial mix. Sample point will be changed to the manhole between Bldg 3 and 10. Only categorical grab samples will be collected. Meters will not be read and BOD/TSS deleted from both SMR and OCSD sampling requirements.

2. This permit does not have the normal Pharmaceutical Part D reporting attachments. TG said if all they produce is vitamins and supplements, he doesn't need the Part D reporting.

3. ~~There will be no user charge billing, at least not initially. Angela is working on identifying the amount of tax credit; apparently the 13 parcel numbers have all changed and it's not easy to figure out. A Class II was issued 12/1/1995 and cancelled in 1998 because tax credits covered user charges. I anticipate the same is true now~~. Irrelevant due to 1a.

4. It is impossible to separate industrial from domestic. There are too many points inside the buildings where they mix. TF accompanied me on all inspections and is aware of this.

ORANGE COUNTY SANITATION DISTRICT
RENEWAL APPLICATION FOR
CLASS I WASTEWATER DISCHARGE PERMIT

Instructions Version 5.0 or greater of Acrobat, Acrobat Approval, or Acrobat Reader must be used or else a blank form will be the result. Click on "Help, About" to confirm your version. Acrobat Reader is in the \instal directory on this CD. From the Main Menu, please click on "using this program", then "using the permit renewal application writer", and read "no save capability" prior to using this form.

For the Orange County Sanitation District (District) to process and issue a Class I Wastewater Discharge Permit, the applicant must comply with all of the following:

- The Permit Renewal Application Form must be filled out completely. The District **will not** process incomplete submittals, and your application will be returned if there is any missing information. **Do not leave blanks. Please write "N/A" if the information being requested does not apply.**
- The Permit Renewal Application must be signed by the Responsible Officer or Designated Signatory, as defined on pages 6 and 7. The District will return your permit application if it is not signed by the proper company official.
- The permit fee must be remitted at the time the permit renewal application is submitted. Your remittance must be sent directly to the District's Accounting Department; **and**, **a photocopy of the check must be submitted with the Permit Renewal Application** to the Source Control Division. An application received without this documentation will be returned.

Please refer to Section A of the information brochure for detailed instructions for completing this Application Form.

G Are you the ◉ landowner? or ○ lessee? If a lessee, include the name, address, and telephone number of the property owner and/or the manager of the property: Check one: ○ Owner ○ Manager

Name | Address | Phone

Manufacturing Process Information

H Description of **all** manufacturing processes and/or service activities on the premises, wet or dry. Please identify and describe the processes which generate wastewater in more detail. (Use additional sheets if necessary.)

Please see Attachment C.

I Description and average quantity of raw materials used or handled: (Use additional sheets if necessary.)

The facility uses organically grown, plant based ingredients that include beta carotene, citrus extract, glycerine, soy lecithin, lemon oil, ginkgo biloba, wheat germ oil, fish oil, vegetable oil, beeswax, gelatin, berry extracts, olive oil, tea extract, and herbal extracts.

Average quantity of raw materials used will be provided under a separate cover letter by April 3, 2015.

J Description of products manufactured or produced as a result of services performed: (Use additional sheets if necessary.)

Products produced at the facility include:
Dietary Supplements,
Multicarotene,
Teafavin,
Salmon Omega,
Bilberry, and
CLA 500.

K Average Daily Production: 25,000 - 50,000 containers/day

L North American Industry Classification System (NAICS) Code (this code replaced the discontinued SIC Code):

Primary NAICS Code: 311999 Secondary NAICS Code(s): 311999

Operations Information

M Operating Schedule:

Number of shifts per work day: 2 Number of work days per week: 5 Number of production days per year: 250

	1st:	2nd:	3rd:	Total:
Average number of employees per shift:	340	145		485
Production hours per shift:	12	12		24
Discharge hours per shift:	12	12		24

N When did you start operating at this facility? Month: July Year: 1952

O For Industries involved in Surface/Metal Finishing (plating, anodizing, phosphating, etching, PCB manufacturing, etc.):
Do you own more than 50% (area basis) of the materials undergoing production? ◉ N/A ○ Yes ○ No

P Have you made **any** additions or modifications to the manufacturing process during the past two years? ◉ Yes ○ No
If the answer is "Yes", you must submit updated Manufacturing Process Layout, Manufacturing Process Flow Diagram, and Spill Containment Drawings and Information with this application.
Please describe briefly the process changes during the last permit period:

Granulation operations were relocated from another facility to B9. Building 9 also houses the expanded R&D laboratory. Building B9 came online during the first half of 2014.

Information on Treatment of Industrial Waste/Wastewater

Q Is any form of waste/wastewater treatment practiced at this facility? ○ Yes ◉ No

If the answer is "Yes", provide the following information by checking the appropriate boxes:

- Mode of Operation: ○ Continuous ○ Batch ○ Both
- Pretreatment Units Used:

☐ Hydroxide Precipitation
☐ Hexavalent Chrome Reduction
☐ Cyanide Destruction
☐ Equalization
☐ pH Adjustment
☐ Electrowinning/Plate-out Units
☐ Filter Press
☐ Final Polishing Filter
☐ Spent Chemical Treatment Unit
☐ Below-ground Clarifier
☐ Ion Exchange
☐ Other
☐ Cross-Flow Filtration (e.g., Memtek)
☐ Sorption Filter (e.g., Lancy)
☐ Aluminum Chip
☐ Ozone Treatment Reactor
☐ Clarifier/Lamella Settling

R How are spent chemicals handled? Specify the method for "Other."

☑ Wastehauled offsite ☐ Batch treated onsite ☐ Discharged to sewer without treatment
☐ Other

S Wastewater Operator/Maintenance Information:
Number of wastewater pretreatment operators at your facility: 1st shift ____ 2nd shift ____ 3rd shift ____

Operator Name	Qualification (Please check)						
	None	Wastewater Treatment Operator with CWEA Certification			AA Science with min 2 semesters in Chemistry	BS Chemical or Environmental Engineering	BS in other Engineering or Science
		Grade I	Grade 2	Grade 3/4			
	☐	☐	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐	☐	☐

Is there an Operation and Maintenance Manual or procedures for the entire wastewater treatment system? ○ Yes ○ No

Information for Determining Volume of Wastewater Discharge and User Charges

T Assessor Parcel Number(s) as shown on property tax bill: 066-572-08

If a Lessee, please indicate:

(a) percentage of property tax bill paid to landowner: _____ %

(b) percentage of water bill paid to landowner: _____ %

(c) square footage of leased space: _____ Sq. Foot

(d) whether your facility is a part of a commercial/industrial complex: ○ Yes ○ No

V Water Supplier: City of Buena Park

Water Account Number(s): See Attachment E

Other Sources of Water Supply: ☐ onsite wells ☐ groundwater remediation ☐ others _____

W Water Measurement Information:

List all water meters at your facility. **Complete Attachment A in accordance with instructions.**

From the incoming meter(s) identified on Attachment A, check which following water measurement strategy is used:

○ City water meter(s) only ○ Process meter(s) only ○ Shop meter(s) only ◉ Both city meter and process meters

The meter(s) checked above measure:

◉ Only the incoming water going to the applicant's facility.
○ The incoming water to the applicant's facility and for other companies adjacent.

Does your facility use an effluent meter to measure the industrial wastewater discharge? ○ Yes ◉ No

If so, does the effluent meter measure only the industrial wastewater discharged to the sewer from the facility (excluding sanitary, boiler blowdown, cooling tower bleed off, and R.O. reject)? ○ Yes ○ No

If your facility uses a final effluent meter, skip to Line Y

X In order to determine mass emission rates and user charges, the actual volume of water discharged to the sewer must be calculated. **For facilities that do not have effluent meters,** this is done by determining the volume of incoming water, as indicated by the city water meter, and then applying appropriate deductions for water losses. If losses cannot be quantified, the District will apply water losses equivalent to 5% of the incoming water. It is to your advantage to determine and quantify these losses if your facility has water losses more than 5%. Please check the appropriate box below:

○ Apply 5% loss ◉ Use calculated loss

If calculated loss is indicated, determine all applicable losses using the worksheet provided in **Attachment B** and summarize results in the table below. The worksheet and supporting documentation must be submitted for these losses to be applied.

Item	Average Daily Water Losses	Gal/day	Loss is applicable to	
			City Meter(s)	Process Meter
I	Landscape / Irrigation losses	13,600	☐	☐
II	Boiler losses for steam condensate not returned to boiler	7,000	☐	☐
III	Cooling tower water evaporation	14,500	☐	☐
IV	Product losses		☐	☐
V	Other losses		☐	☐
			☐	☐
	Total Losses	35,100	**Check the above if applicable.**	

Certification for Accuracy of Information

I have personally examined and am familiar with the information submitted in this application and required attachments, and I hereby certify under penalty of law that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I also authorize the District to verify all information provided, including the water account/usage information from the water supplier, facility lease contracts, and other pertinent information.

I certify that upon issuance of the permit, that this firm's operation and its resultant wastewater discharge will achieve consistent compliance with the District's Ordinance and applicable Federal wastewater discharge requirements. If the wastewater discharge does not meet all the applicable regulations, the company will modify manufacturing equipment, limit production, limit industrial waste discharge, install wastewater pretreatment equipment, or do whatever is legally necessary to meet discharge requirements.

Y Responsible Officer/Designated Signatory (as specified on pages 6 and 7):

Name: Charles Davison

Signature: Charles Davison

Title: Manager, Global EH&S

Date: 3/26/2015

Email: chuck.davison@Amway.com

Z Name of the person to contact concerning information provided in this application: ☐ Same as above

Name: Ashish Jain, CHMM

Address: 5600 Beach Boulevard, Buena Park, CA 90621

Title: Senior EH&S Analyst

Phone: 714-562-4120

Email: ashish.jain1@Amway.com

THIS IS MANDATORY.
Complete and return this form.

Certification of Responsible Officer

I, the undersigned, do hereby certify that I meet the definition of a Responsible Officer, as outlined below:

A responsible officer is defined as found in 40 CFR 403.12 (l)(1)(i):

1. For a Corporation:
   a. A President, Secretary, Treasurer or Vice President in charge of a principle business function or any other person who performs similar policy or decision making functions for the corporation, or
   b. The manager of one or more manufacturing, production, or operating facilities provided the manager is authorized to assure long term environmental compliance with environmental laws and regulations, and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. For partnership or sole proprietorship; a general partner or proprietor, respectively.
3. For a public agency; a general manager, department manager, or a supervisor of a public agency who performs policy or decision making functions for the public agency.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates.

Name of Responsible Officer: James E. Siewertsen
(Please Print or Type)

Signature: Jan E Siewertsen Date: 3-27-15

Title: VP, Nutrilite Operations E-mail address:

Company Name: Access Business Group, LLC (dba Nutrilite) Permit No.: 53-1-435

NOTE: All correspondence regarding permit, enforcement, and self-monitoring issues (e.g., Self-Monitoring Forms and Reminder Letters, Notices of Violations, Permit Application, etc.) shall be sent to the Responsible Officer or to the Designated Signatory if properly authorized. If there is a change in the Responsible Officer or Designated Signatory in the future, the Districts must be notified in writing and the appropriate form must be submitted.

THIS IS OPTIONAL.
Submit this form only if the Responsible Officer wants to designate a Signatory.

Option to Designate Signatory

This is to authorize the individual whose name and title appear below,

Charles Davison — *Designated Signatory's Name*

Manager, Global EH&S — *Title*

to be the designated individual responsible for wastewater discharges who can be served with notices and who is the Designated Signatory on my behalf for purposes of signing all reports. This individual has the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that if, in the future, this information is no longer correct, the District will be notified in writing to terminate designation of the above-named individual and to establish a new signatory

Name of Responsible Officer: James E Siewertsen

Signature: JE S

Title: VP, Nutrilite Operations

Date: 3-27-15

Company Name: Access Business Group, LLC (dba Nutrilite)

Permit No: 53-1-435

A designated signatory is defined as found in 40 CFR 403.12 (l)(3)(ii)

1 An individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager operator of a well or well field superintendent, or a position of equivalent responsibility or having overall responsibility for environmental matters for the company, and;

2 Written authorization is submitted to the Source Control Permit Supervisor at the Orange County Sanitation Districts, and

3 Written authorization must be submitted by a responsible corporate officer such as a President, Secretary, Treasurer or Vice-President of the corporation in charge of a principal business function or any other person who performs similar decision-making functions for the corporation.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that it is my responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues

Name of Designated Signatory: Charles Davison

Signature: Charles Davison

Date: 3/26/2015

Title: Manager, Global EH&S

E-mail address: chuck davison@Amway.com

All correspondence regarding all permit and enforcement issues shall be sent to the Designated Signatory. It is the Designated Signatory's responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues. The Responsible Officer remains legally responsible for all wastewater discharge to the sewer from this facility and for ensuring that he is duly informed by the Designated Signatory.

INSTRUCTIONS

STEP 1. Please identify for each *Onsite Water Meter* at your facility.

- **Meter type** - Use the following descriptions to characterize your meter type(s).
  The **City Meter** is typically found outside at all buildings. This meter type, maintained by the water purveyor (city or local agency), is used to measure incoming water for potable, sanitary, landscaping, and industrial uses. The readings from these meters are used to determine the charges on the monthly or bi-monthly water bills. The **Process Meter** is located downstream of all drinking, sanitary, and landscaping uses. Process meters are typically installed to determine water usage to specific industrial processes. The **Effluent Meter** records the actual volume of wastewater discharged by the facility and is typically located at the discharge point near the designated sample point. The O.C. Sanitation District may require an effluent meter to determine daily flows for compliance verification, and/or to establish accurate sewerage service charges. The **Shop Meter** is often found in a multi-occupancy industrial strip that does not have individual city meters for each suite. Landlords who do not want to pay the water bill for a significant water user often install a meter on the outside of the shop. It is distinguished from the process meter in that it also meters the potable and sanitary flow, like a city meter. The water purveyor does not bill the user directly for water usage metered by a shop meter. The landlord will frequently bill the renter directly, based upon the shop meter volumes.

- **Digits/Fixed Zeros/Tenths** - Use the Digits, Fixed Zeros, and Tenths columns to record the current meter reading. Include the beginning digits, even if they are zero, as well as, the fixed zeros, or tenths designated by the arrow sweep. **Please visually read each meter. Do not provide values or volumes from the water bills.**
  Use the following the guidelines for Fixed Zeros and Tenths to provide assistance with reading and recording the information for several common meter variations. **Fixed Zeros** - On many water meter models the sweeping arrow records numerical units that are designated by the fixed zeros on the totalizer read-out. Use the three shaded columns designated Fixed Zeros to indicate that the meter's arrow sweep records single (0 - 9) digit, double (10 - 90) digit, or triple (100 - 900) digit values. **Tenths** - On many water meter models the dial numbers (selected by the arrow sweep), or the last digit of a totalizer read-out designates tenths of a gallon. Use the tenths column (implied by the decimal point) to indicate the meter records tenths of a gallon.

- **Units/Multiplier** - Indicate the meter units, Cubic Feet (Cu. Ft.) or Gallons. If applicable, indicate the multiplier factor (x 10 or x 100). **Do not confuse this with the typical billing unit (100 CF) on the monthly water bill.**
  Units - Most water meters register the volume of water in either cubic feet or gallons. Please indicate if your meter uses a different unit of measurement such as barrels, cubic meters, or acre feet. **Multiplier** - Occasionally the meter dial will indicate that a multiplier (X 10 or X 100) must be applied to the totalizer reading (this feature is more common on electronic flow instruments). Please indicate different multiplier factors as applicable.

- **Location** - Briefly describe the location of each meter.
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc., will all help our field staff verify the information by establishing vital reference points.

STEP 2. Attach a copy of the latest water bill for each city meter identified.

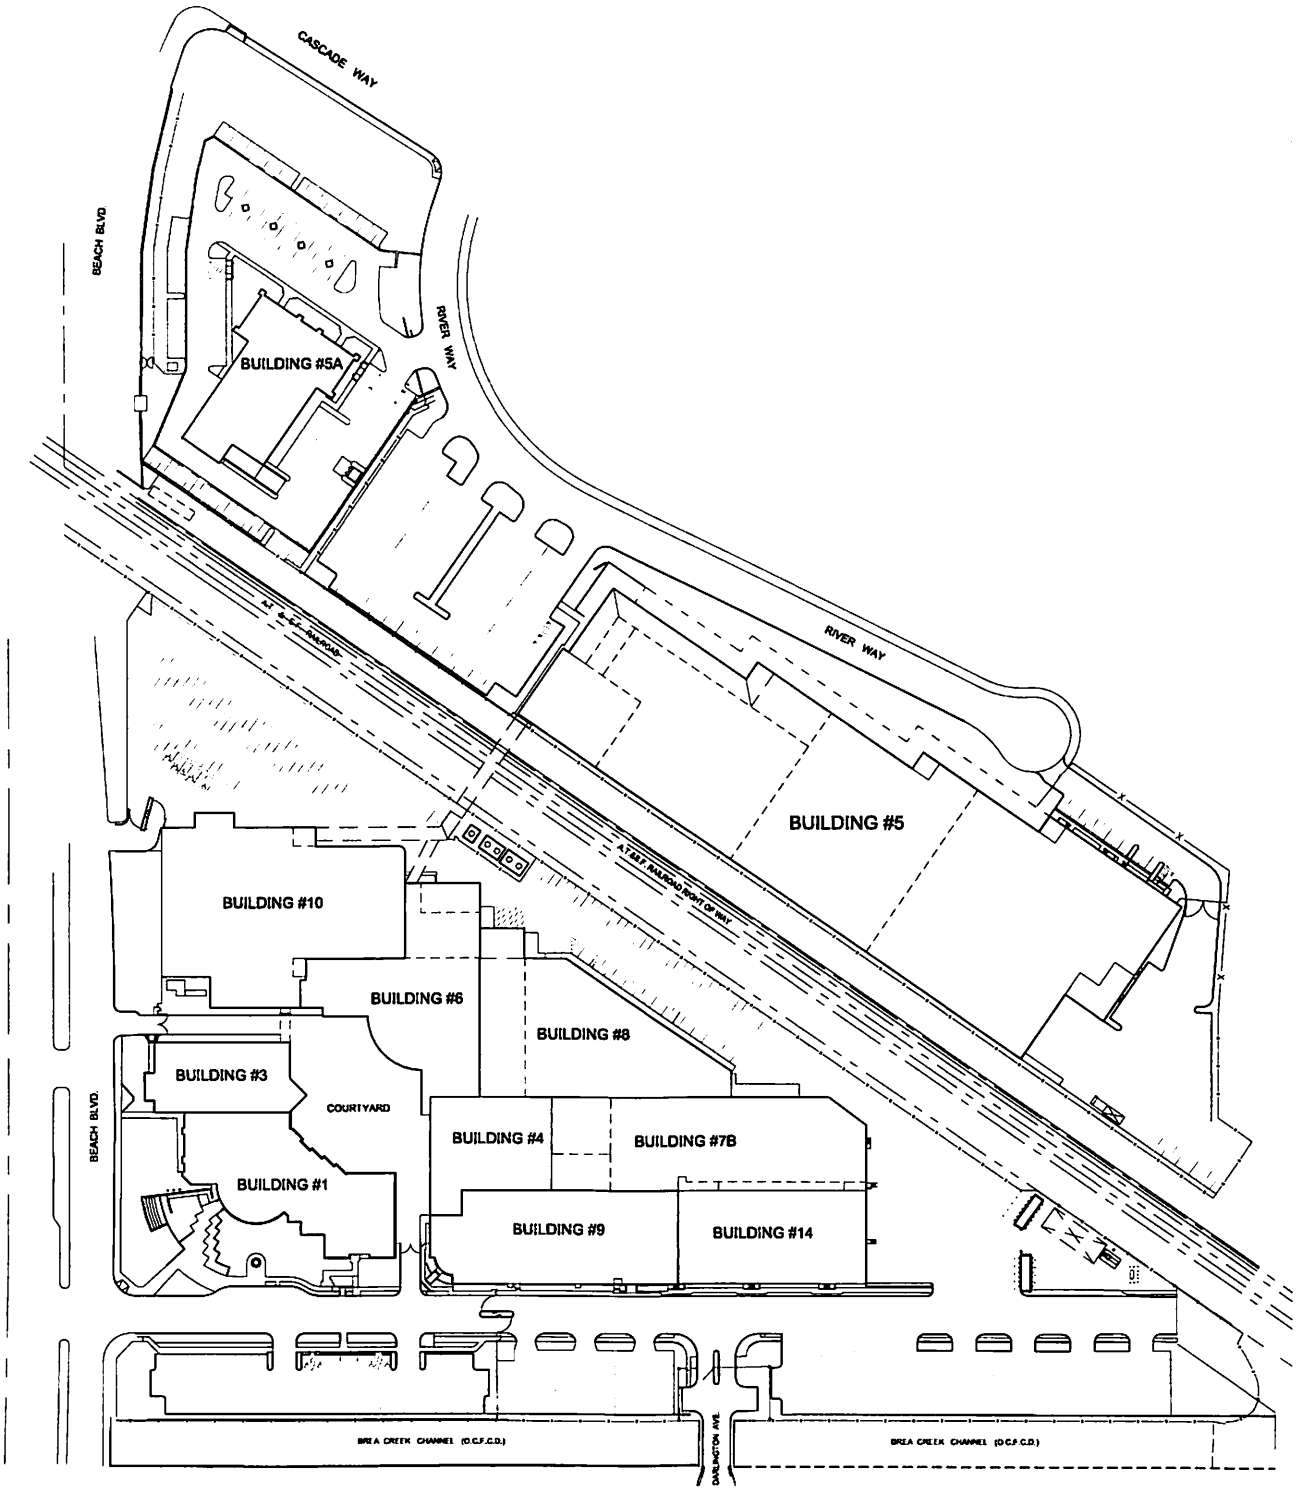
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc., will all help our field staff verify the information by establishing vital reference points.

STEP 2. Attach a copy of the latest water bill for each city meter identified.

Attachment C



The facility is divided into the South Campus (5600 Beach Blvd.) and the North Campus (5609 River Way). A site plan of the facility is presented as Figure 1.

The South Campus: Raw materials are stored in buildings B8 and B14. Building B1 contains the Nutrilite Health Institute and also includes administrative offices. Building B3 is used for QA/QC. Building B4 includes the maintenance shop, a gymnasium and administrative offices. The Cafeteria, R&D support staff and the EH&S department are located in building B6. The receiving department, forklift battery charging activities, and a pilot plant are located in building B7. Raw materials are delivered at the facility in both powdered and liquid forms, and manufactured/ processed in buildings B6, B9 and B10 to form tablets.

The North Campus: Building B5A is used for administrative purposes. Building B5-1 is used for packaging finished product and warehousing. Buildings B5-2 and B5-3 are used for warehousing finished product, and building B5-3 also contains the shipping department.

This permit application is for the South Complex. Manufacturing activities consist of blending raw materials (building B6) and compressing them into dry tablets, coating of tablets, and encapsulating fish oils into soft gel capsules (building B10). Building B9 houses the R&D laboratory and the granulation process. The granulation process facilitates powder particles to adhere to each other in the formation of tablets. Equipment and rooms used in manufacturing are cleaned with hot water and diluted detergents (A222, A300, A335, A781Q and Sani-Wise 6) to remove residual powder and when changing product type. Equipment is either washed in place or removed to a dedicated wash room. Wash waters generated are discharged via floor drains in equipment and wash rooms. Facility floor drains discharge directly to the sanitary sewer. Copies of the MSDS of the above referenced detergents are provided in Attachment D.

EMERGENCY RESPONSE NUMBER: 1-800-535-5053

1. Product Information

Product: A-222
Chemical Family: Chlorinated Alkaline Cleaner
MSDS Revision No.: 1
MSDS Revision Date: 04/2/04

2. Ingredient Information

Chemical Name	CAS	Wt. %	PEL Unit	TLV Unit	Source*
Potassium Hydroxide	1310-58-3	9.44%	2mg/m3	2mg/m3	B
Sodium Hypochlorite	7681-52-9	32.4%	N/E	N/E	B

*Source codes: A-Reportable under SARA Title III, section 313
B-Defined by OSHA as hazardous or toxic

3. Physical Data

Boiling Point(° F): 212
Vapor Pressure(mm Hg): N/A
Vapor Density(air=1): N/A
Solubility in Water: Soluble
Specific Gravity(water = 1): 1.163
Percent Volatile: 78
Evaporation Rate (water = 1): 1
pH: 12.8
Color: Straw
Odor: Chlorine/Surfactant

4. Fire and Explosion Hazard

Flash Point (° F): None **Method:** TCC
Flammable Limits (%): UEL: N/A **LEL:** N/A
Extinguishing Media: Water, foam, Co2, dry chemical
Special Firefighting Procedures: None
Unusual Fire and Explosion Hazards: None
Hazard Ratings: Health: 2 **Fire:** 0 **Reactivity:** 0

5. Health Hazard Data

Probable Routes of Exposure: Eye/Skin Contact
Effects of Overexposure, Acute and Chronic: Repeated or prolonged exposure may cause extreme eye/skin irritation. Ingestion is harmful and may be fatal.
Emergency and First Aid Procedures:

Eye contact: Remove contact lenses if worn. Flush eyes with clean water for 15 minutes. Get medical attention.

Skin contact: Wash with water. If irritation occurs, get medical attention.

Ingestion: Do not induce vomiting. Get immediate medical attention.

Inhalation: Remove to fresh air. Consult a physician.

6. Reactivity Data

Stability: Stable
Incompatibility - Conditions to avoid: High temperature
Materials to avoid: Acids, ammonia or ammoniated products.
Hazardous polymerization: Will not occur
Hazardous Decomposition Products: Carbon dioxide, carbon monoxide, chlorine.

7. Spill/Leak Control Procedures

Release or Spill Procedure: Contain spill. Mop up or absorb onto absorbent material and collect for disposal.
Waste Disposal Method: Dispose of in accordance with all local, State and Federal Regulations.

8. Personal Protection Information

Specific Respiratory Equipment: None required
Ventilation: Use with adequate ventilation.
Personal Protective Equipment: Rubber or neoprene gloves recommended if contact is likely. Safety goggles recommended if splashing is likely.

9. Special Precautions

Handling and Storage: Avoid contact with skin. Rinse empty containers before discarding. Do not reuse empty containers. Keep containers closed when not in use.

Keep Out of Reach of Children

10. Shipping Information

Proper Shipping Name: Corrosive Liquids, N.O.S. Contains Potassium Hydroxide and Sodium Hypochlorite.
Hazard Class: 8
ID Number: UN1760
Packaging Group: II
Shipping Label: Corrosive

For Emergency Information, Call:

1-800-535-5053 (available 24 hours/day)

Percent Volatile: 80
Evaporation Rate (water = 1): 1
pH: <1
Color: Water White
Odor: Acidic

4. Fire and Explosion Hazard

Flash Point (° F): N/A **Method:** TCC
Flammable Limits (%): **UEL:** N/A **LEL:** N/A
Extinguishing Media: Water, Foam, CO_2, Dry Chemical
Special Firefighting Procedures: None
Unusual Fire and Explosion Hazards: None known
Hazard Ratings: Health: 2 **Fire:** 0 **Reactivity:** 0

5. Health Hazard Data

Probable Routes of Exposure: Eye/Skin contact, Inhalation
Effects of Overexposure, Acute and Chronic: Eye/Skin contact is extremely irritating and may cause damage or burns. Inhalation of mists may cause irritation of the respiratory tract and or mucous membranes.
Emergency and First Aid Procedures:

Eye contact: Remove contact lenses if worn. Flush eyes with clean water for 15 minutes. Get immediate medical attention.

Skin contact: Wash with water. If irritation occurs, get medical attention.

Ingestion: Do not induce vomiting. Get immediate medical attention.

Inhalation: Remove to fresh air. Consult a physician.

6. Reactivity Data

Stability: Stable
Incompatibility - Conditions to avoid: None
Materials to avoid: Organic materials
Hazardous polymerization: Will not occur.
Hazardous Decomposition Products: Oxides of nitrogen.

7. Spill/Leak Control Procedures

Release or Spill Procedure: Contain spill. Mop up or absorb onto absorbent material and collect for disposal.
Waste Disposal Method: Dispose of in accordance with Local, State and Federal regulations.

8. Personal Protection Information

Specific Respiratory Equipment: None required under normal use. If adequate ventilation cannot be achieve, respiratory protection must be worn by all employees working in the area of product use.
Ventilation: Use this product in a well ventilated area.
Personal Protective Equipment: Safety gloves, goggles or face shield and a rubber apron are required when dispensing and using this product. Respirator fitted with a cartridge which will absorb nitric acid vapors may be required if adequate ventilation cannot be achieved.

9. Special Precautions

Handling and Storage: Avoid contact with skin. Rinse empty containers before discarding. Do not reuse empty containers. Keep containers closed when not in use.

Keep Out of Reach of Children

NOTES

(from initial permit issue eff 6/1/2013)

5/28/2013

Updated 5/30/2013

ACCESS BUSINESS GROUP, 53-1-435

1. This is a very complex facility with multiple buildings, water meters, and discharge points. After untangling what goes where, I've decided to issue a single permit with two city water meters and a single sample point. This catches all production and QC lab wastewater. The remaining buildings do not house categorical operations, and are mainly administrative and support operations. See the PFS for details.

1a. After discussing with RS, priority is sampling the manufacturing area and using estimated dilution factor to compensate for domestic /industrial mix. Sample point will be changed to the manhole between Bldg 3 and 10. Only categorical grab samples will be collected. Meters will not be read and BOD/TSS deleted from both SMR and OCSD sampling requirements.

2. This permit does not have the normal Pharmaceutical Part D reporting attachments. TG said if all they produce is vitamins and supplements, he doesn't need the Part D reporting.

3. ~~There will be no user charge billing, at least not initially. Angela is working on identifying the amount of tax credit; apparently the 13 parcel numbers have all changed and it's not easy to figure out. A Class II was issued 12/1/1995 and cancelled in 1998 because tax credits covered user charges. I anticipate the same is true now~~. Irrelevant due to 1a.

4. It is impossible to separate industrial from domestic. There are too many points inside the buildings where they mix. TF accompanied me on all inspections and is aware of this.

Nutrilite South Complex Water Balance (GPD)

Prepared by Tariq Ahmad (AECOM), Date 3/25/15

Nutrilite South Complex Water Balance (GPD)

THIS IS OPTIONAL.
Submit this form only if the Responsible Officer wants to designate a Signatory.

Option to Designate Signatory

This is to authorize the individual whose name and title appear below,

Tim Hellem
Designated Signatory's Name

Supervisor, EH&S
Title

to be the designated individual responsible for wastewater discharges who can be served with notices, and who is the Designated Signatory on my behalf for purposes of signing all reports. This individual has the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that if, in the future, this information is no longer correct, the District will be notified in writing to terminate designation of the above-named individual and to establish a new signatory.

Name of Responsible Officer: Audra J. Davies

Signature: [signature]

Title: Site Leader Buena Park Operations / VP - R&D

Date: 03/30/2017

Company Name: Access Business Group LLC (dba Nutrilite)

Permit No.: 1-531435

A designated signatory is defined as found in 40 CFR 403.12 (l)(3)(ii):

1. An individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company, and;

2. Written authorization is submitted to the Source Control Permit Supervisor at the Orange County Sanitation Districts, and;

3. Written authorization must be submitted by a responsible corporate officer such as a President, Secretary, Treasurer, or Vice-President of the corporation in charge of a principal business function or any other person who performs similar decision-making functions for the corporation.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that it is my responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues.

Name of Designated Signatory: Tim Hellem

Signature: [signature]

Date: 03/30/2017

Title: Supervisor, EH&S

E-mail address: Tim.Hellem@amway.com

All correspondence regarding all permit and enforcement issues shall be sent to the Designated Signatory. It is the Designated Signatory's responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues. The Responsible Officer remains legally responsible for all wastewater discharge to the sewer from this facility and for ensuring that he is duly informed by the Designated Signatory.

THIS IS MANDATORY.
Complete and return this form.

Certification of Responsible Officer

I, the undersigned, do hereby certify that I meet the definition of a Responsible Officer, as outlined below:

A responsible officer is defined as found in 40 CFR 403.12 (l)(1)(i):

1. For a Corporation:
   a. A President, Secretary, Treasurer or Vice President in charge of a principle business function or any other person who performs similar policy or decision making functions for the corporation, or
   b. The manager of one or more manufacturing, production, or operating facilities provided the manager is authorized to assure long term environmental compliance with environmental laws and regulations, and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. For partnership or sole proprietorship; a general partner or proprietor, respectively.
3. For a public agency; a general manager, department manager, or a supervisor of a public agency who performs policy or decision making functions for the public agency.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates.

Name of Responsible Officer: Audra J. Davies
(Please Print or Type)

Signature:  Date: 03/30/2017

Title: Site Leader Buena Park Operations / VP - R&D E-mail address: audra_davies@amway.com

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

NOTE: All correspondence regarding permit, enforcement, and self-monitoring issues (e.g., Self-Monitoring Forms and Reminder Letters, Notices of Violations, Permit Application, etc.) shall be sent to the Responsible Officer or to the Designated Signatory if properly authorized. If there is a change in the Responsible Officer or Designated Signatory in the future, the Districts must be notified in writing and the appropriate form must be submitted.

Electronic Signature Agreement (ESA) for Users Authorized to Sign Documents

Reference Identifier	Type	Version Date
ASC_FORM_INFM-6101ESAA	Online Reporting System Legally Binding Signature Agreement	*06/27/2016*

This Electronic Signature Agreement (ESA) is required to be completed and submitted to OCSD as a user with Responsible Official (RO) privileges or Authorized Representative (AR) / Designated Signatory (DS) privileges, which allows the user to electronically submit permitting and monitoring data to OCSD.

6101.1 Your Responsible Official (RO) or Authorized Representative (AR) / Designated Signatory (DS) User Information

User Name: TIM HELLEM

Legal Full Name: TIMOTHY RICHARD HELLEM

Job Title: EHS SUPERVISOR

Mailing Address: 5600 BEACH BLVD.

City, State, Zip: BUENA PARK, CA 90622

Email Address: TIM.HELLEM@MWAY.COM

Phone Number: 714-562-1830

6101.2 Facility Information

Responsible Officer (RO) or Authorized Representative (AR) / Designated Signatory (DS) privileges* are requested for the following facilities:

Permit No.	Facility Name	Facility Location Address
I-531435	ACCESS BUSINESS GROUP	SAME AS ABOVE

* **Note:** Requesting privileges initiates the process of acquiring authorization in the OCSD Online Reporting System. In order to be certified as a Responsible Officer (RO) for a facility or authorized as a Designated Signatory (DS), a separate Responsible Officer (RO) Certification Form and/or Designated Signatory (DS) Authorization Form must be submitted to Orange County Sanitation District (OCSD).

Submittal Reason:

☐ **NEW:** This is the first ESA submitted for this user account for the above facilities.

☑ **CHANGE:** This is an updated ESA submitted because the user's responsibility at the facility has changed.

Electronic Signature Agreement (ESA) for Users Authorized to Sign Documents

Reference Identifier	Type	Version Date
ASC_FORM_INFM-6101ESAA	Online Reporting System Legally Binding Signature Agreement	*06/27/2016*

Specify the change in responsibility: DUE TO RESTRUCTURING I WILL TAKE THIS OVER

Note: Any RO or AR/DS requesting to discontinue electronic submissions must complete the OCSD Online Reporting System Account Deactivation Request Form.

☐ **REACTIVATION:** This is a re-activation of a user account associated to the above facilities.

Notes to OCSD (optional):

6101.3 Terms and Conditions

1. DEFINITIONS: A Responsible Official (RO) is defined by 40 CFR §403.12(l)(1) and refers to an individual who has accepted responsibility for the overall operation of a facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates. An Authorized Representative (AR), also referred to as a Designated Signatory (DS), is defined by 40 CFR §403.12(l)(3) and refers to an individual who has accepted responsibility for the overall operation of a facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates, on behalf of the Responsible Officer (RO).

2. PURPOSE: This agreement creates legally binding obligations for the parties using the specified data transmission protocols and the OCSD Online Reporting System. The user, as a RO or AR/DS, agrees to (i) maintain confidentiality and protect the electronic signature from unauthorized use or compromise, and follow all procedures specified by OCSD for this purpose; and (ii) be as legally bound, obligated, and responsible by use of the RO's, AR's, or DS's electronic signature as by hand-written signature.

3. VALIDITY AND ENFORCEABILITY: By this Agreement the parties agree to follow OCSD procedures to create binding regulatory reporting documents using electronic transmission and receipt of such records, consistent with the provisions of 40 C.F.R. Part 3 (CROSS-MEDIA ELECTRONIC REPORTING Requirements, CROMERR). Acceptance and execution of this agreement by OCSD is shown by the issuance of a personal identification number (PIN) to the Certifier. Consistent with 40 C.F.R. Part 3, electronic signatures under this agreement have the same force and effect as a written signature. Written signatures will remain on file with OCSD.

Electronic Signature Agreement (ESA) for Users Authorized to Sign Documents

Reference Identifier	Type	Version Date
ASC_FORM_INFM-6101ESAA	Online Reporting System Legally Binding Signature Agreement	*06/27/2016*

4. RECEIPT: A submission is received when it is accessible by OCSD, can be fully processed and complies with OCSD' electronic transfer protocol which OCSD may modify from time to time. A submission does not satisfy any reporting requirement until it is received. For permit renewal and compliance reporting, the RO or AR/DS agrees that upon activation of the RO or AR/DS account for requested facilities, the OCSD Online Reporting System will be expecting to receive electronic transmission of reports at the interval specified in the permit. If OCSD does not receive the submissions from the RO and/or AR/DS at the expected time, the database will flag the required submissions as not received. If the RO or AR/DS chooses to discontinue using the OCSD Online Reporting System and return to using paper forms, the RO or AR/DS must complete, sign, and submit an OCSD Account Deactivation Form. If OCSD does not receive this form, it is likely that the system will continue to produce "not received" flags (indicating reporting violations).

5. VERIFICATION: Upon receipt of a submission, OCSD will process the submission to make it accessible. The RO, or AR/DS if applicable, is responsible for the content of each submission, and for reviewing the accuracy of the processed document, both in accordance with the associated certification statement, as made available by the OCSD Online Reporting System.

6. SIGNATURE: The RO and AR/DS agree that their personal identification number (PIN) will serve as their electronic signature following acceptance of this Agreement. The RO and AR/DS agree that any such electronic signature affixed to or associated with any transmitted submission verifies (1) that the RO, or AR/DS if applicable, has the requisite authority to originate the transaction; and (2) the accuracy of the content at the time of transmittal. The RO and AR/DS also agree that each submission the RO, or AR/DS if applicable, submits using their PIN constitutes their agreement with the certification statement in each transmission per 40 CFR §403.6(a)(2).

7. SECURITY: The parties must take reasonable actions to implement and maintain security procedures necessary to ensure the protection of transmissions against the risk of unauthorized access, alteration, loss or destruction including, but not limited to: protecting the secrecy of passwords and electronic signatures and only transmitting files in an acceptable protocol.

8. USE OF PIN: Each RO and AR/DS must be a person identified by the facility as someone who meets EPA's criteria of being an authorized representative. If a PIN is compromised or there is evidence of potential compromise, OCSD will suspend the PIN and affected account. In addition, OCSD will inactivate or revoke a PIN where the RO or AR/DS is no longer an authorized signatory. Each RO and AR/DS agree that OCSD may act immediately and unilaterally in any decision to suspend, inactivate, revoke, or otherwise disallow use of a PIN by any RO, or AR/DS if applicable, where OCSD staff believes that such action is necessary to ensure the authenticity, integrity or general security of transmissions or records, or where there are any actual or apparent violations of this agreement. Each RO and AR/DS also agree to immediately report to OCSD any compromise or potential compromise of a PIN.

9. INABILITY TO TRANSMIT OR FILE REPORTS ELECTRONICALLY: No party is liable for any failure to perform its obligations in connection with any Electronic Transaction or any Electronic Document, where the failure results from any act or cause beyond the party's control that prevents the party from electronically transmitting or receiving any document submissions. The RO, or AR/DS if applicable, is nonetheless required to submit records or information required by law by other means within the time period required by law, unless a written extension has been granted by OCSD.

10. CONTINUATION OF OPERATIONS: In the event that electronic submission of data is not possible via the OCSD Online Reporting System, it is the responsibility of the RO, or AR/DS if applicable, to submit paper copies in accordance with the requirements of the Permit, or written extension granted by OCSD. Failure to submit data by the date required by the Permit or extension is a violation and will be enforced according to OCSD' Enforcement Response Plan.

11. SEVERABILITY: Any provision of this Agreement which is determined to be invalid or unenforceable will be ineffective to the extent of that determination without invalidating the remaining provisions of this Agreement or affecting the validity or enforceability of the remaining provisions.

12. TERMINATION AND RENEWAL: This Agreement may be terminated by either party. Upon termination of this Agreement, the ability to submit electronic information through the OCSD Online Reporting System will also terminate. This Agreement becomes effective upon notification of approval by the OCSD to the RO or AR/DS (which may be an automated message from the OCSD Online Reporting System or by separate notification). OCSD will normally provide notification of the effective date, but if no date is provided, the effective date is the next reporting cycle following the notification. This Agreement will continue until modified by mutual consent or unless terminated with 60 days written notice by any party. This Agreement will be periodically reviewed and amended or revised by both parties as needed or when required. OCSD reserves the right to approve or disapprove this subscriber agreement. This Agreement will be terminated if the facility's Permit is also terminated.

13. GOVERNING LAW: This Agreement is governed by and interpreted in accordance with 40 CFR §3, 40 CFR §122, 40 CFR §403 et seq., and other applicable California State Law provisions.

14. AGREEMENT: I and the facilities listed in Section 6101.2 agree:

☑ To protect my account and password from compromise, not allow anyone else to use my account, and not share my password with any other person;

☑ To change my password if I believe it becomes known to any other person;

☑ To promptly report to OCSD any evidence of the loss, theft, or other compromise of my account or password within one business day;

Electronic Signature Agreement (ESA) for Users Authorized to Sign Documents

Reference Identifier	Type	Version Date
ASC_FORM_INFM-6101ESAA	Online Reporting System Legally Binding Signature Agreement	*06/27/2016*

- ☑ To notify OCSD in writing, if I terminate my employment, am reassigned or if any other change in my status causes me to cease to be an authorized signatory of any of the requested facilities listed in this Agreement. Notification should occur as soon as the change occurs.
- ☑ To review, in a timely manner, the email and onscreen acknowledgements and copies of data submissions transmitted through my account to the OCSD Online Reporting System;
- ☑ To report discrepancy between the submissions and what the OCSD Online Reporting System received;
- ☑ To acknowledge that OCSD is not responsible for managing access for users who are not authorized to sign (i.e. viewers and/or preparers); that responsibility belongs to the Responsible Officer (RO), Authorized Representative (AR), and/or Designated Signatory (DS) associated to the facility.
- ☑ That in no event will OCSD be liable to me or the facilities I represent for any special, consequential, indirect or similar damages, including any lost profits or lost data arising out of the use or inability to use the software or of any data supplied therewith even if OCSD or anyone else has been advised of the possibility of such damages, or for any claim by any other party. OCSD disclaims all warranties, expressed or implied, including but not limited to warranties of merchantability and fitness for a particular purpose, with respect to the software and the accompanying written materials;
- ☑ That these Terms and Conditions, and agreement thereof, are subject to changes by OCSD, and that these Terms and Conditions are in effect regardless of any addition or removal of facilities associated to my user account
- ☑ To not intentionally disclose my knowledge-based questions and answers.

I understand that I and the facilities I represent are as legally bound, obligated, and responsible by the electronic signature created as by a handwritten signature.

6101.4 Signature

For Responsible Officers (RO):

For the above-listed facilities, I, Tim Hellon, as the Certified Responsible Officer (RO), have the authority to enter into this Agreement under the applicable standards.

For Authorized Representatives (AR) / Designated Signatories (DS):

For the above-listed facilities, I, _____, as the Authorized Designated Signatory (DS) / Authorized Representative (AR), am authorized by the Responsible Officer (RO), whose name is _____, and who has the signatory authority under 40 CFR §403.12(l), to enter into this Agreement.

By submitting this Agreement to OCSD, I have read, understand, and accept the terms and conditions of this Agreement. I certify under penalty of law that I have personally examined and am familiar with the information submitted in this Agreement and all attachments contained in the Agreement, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.

Cafeteria unreg	1,000
Total - Billing	19,000
Total - WWAR	20,000

Flow Methodology

Billing = @08-3111-01 - S3700 - O19000

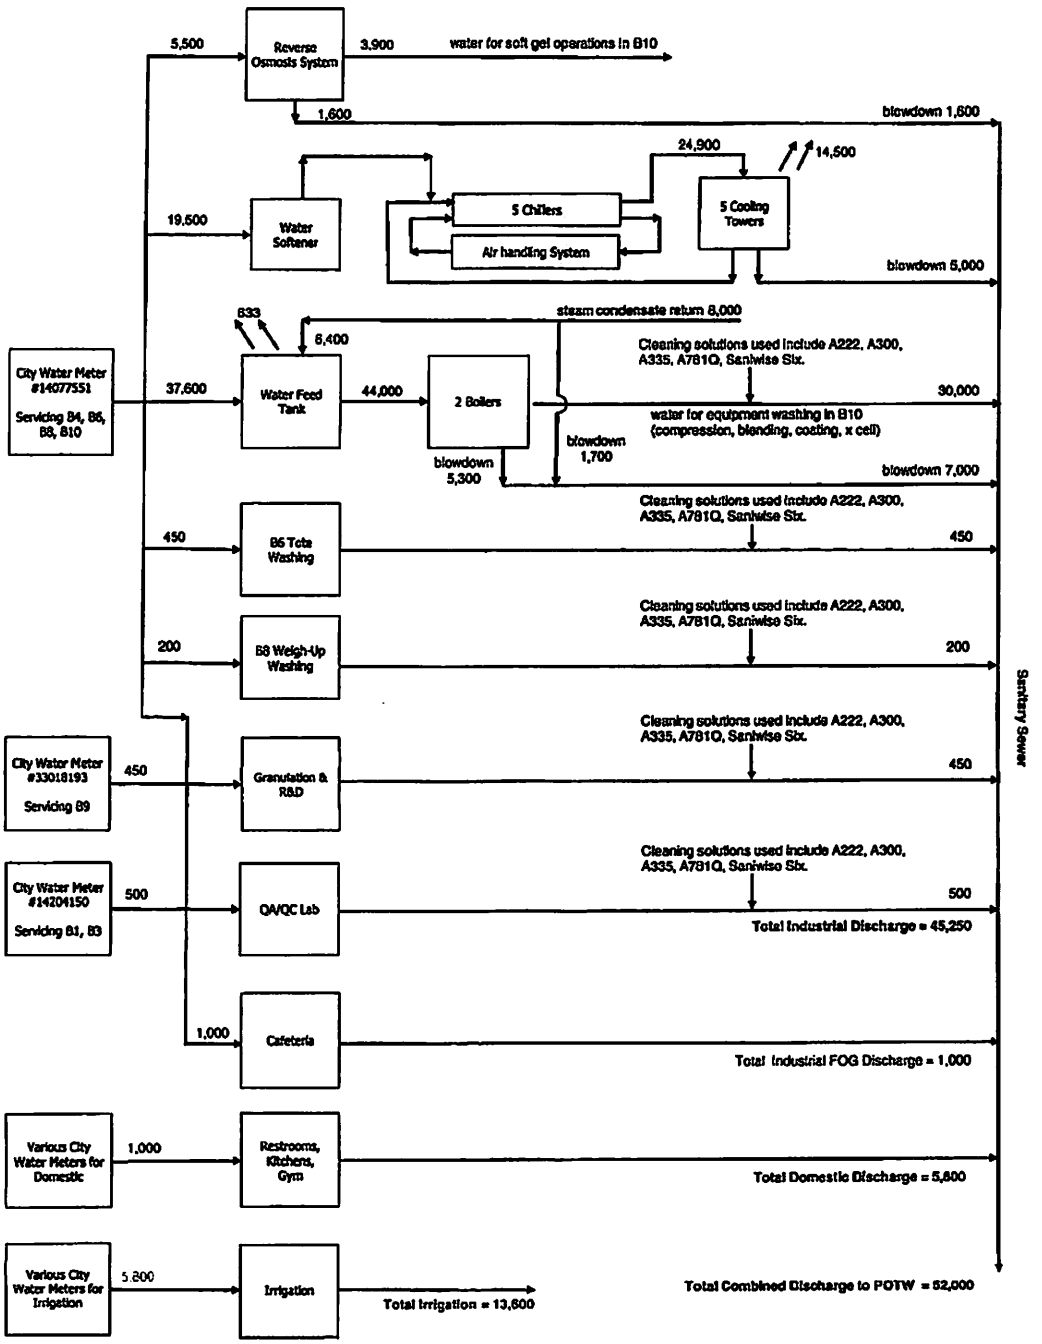
WWAR = @08-3111-01 - S3700 - O20000

Notes

1) Flow base is based on flow going to B4, B6, B8, and B10, including blowdown from boilers and cooling towers. Losses are from sanitary and soft gel operations in B10.

2) Flow estimates used in processing areas are likely less than sanitary for these meter flows which could result in a negative value in the flow methodology; therefore, these values are not included in the flow base.

3) Flow rates are from water balance provided by company through AECOM (3/25/15).



4) Sanitary flow is based on flow provided by company in tabulated table, which is less than the factored value from 25 gallons/employee.

5) Billing includes the unregulated flow from the cafeteria, while WWAR does not.

THIS IS OPTIONAL.
Submit this form only if the Responsible Officer wants to designate a Signatory.

Option to Designate Signatory

This is to authorize the individual whose name and title appear below,

Tim Hellem
Designated Signatory's Name

Supervisor, EH&S
Title

to be the designated individual responsible for wastewater discharges who can be served with notices, and who is the Designated Signatory on my behalf for purposes of signing all reports. This individual has the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that if, in the future, this information is no longer correct, the District will be notified in writing to terminate designation of the above-named individual and to establish a new signatory.

Name of Responsible Officer: Audra J. Davies

Signature: 

Title: Site Leader Buena Park Operations / VP - R&D Date: 03/27/19

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

A designated signatory is defined as found in 40 CFR 403.12 (l)(3)(ii):

1. An individual or a position having responsibility for the overall operation of the facility from which the industrial discharge originates, such as the position of plant manager, operator of a well, or well field superintendent, or a position of equivalent responsibility, or having overall responsibility for environmental matters for the company, and;

2. Written authorization is submitted to the Source Control Permit Supervisor at the Orange County Sanitation Districts, and;

3. Written authorization must be submitted by a responsible corporate officer such as a President, Secretary, Treasurer, or Vice-President of the corporation in charge of a principal business function or any other person who performs similar decision-making functions for the corporation.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for this facility from which the wastewater discharge originates. I understand that it is my responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues.

Name of Designated Signatory: Tim Hellem

Signature:  Date: 03/27/19

Title: Supervisor, EH&S E-mail address: Tim.Hellem@amway.com

All correspondence regarding all permit and enforcement issues shall be sent to the Designated Signatory. It is the Designated Signatory's responsibility to keep the Responsible Officer informed at all times regarding all permit and enforcement issues. The Responsible Officer remains legally responsible for all wastewater discharge to the sewer from this facility and for ensuring that he is duly informed by the Designated Signatory.

ATTACHMENT A

(This form must be completed manually)

ONSITE WATER METER INFORMATION

REQUIRED INFORMATION: Complete the ONSITE WATER METER table for **all** water meters at your facility.

☐ City ☐ Process ☐ Shop ☐ Effluent			.	☐ Cu. Ft. ☐ Gallons	☐ X 10 ☐ X 100	

INSTRUCTIONS

STEP 1. Please identify for each *Onsite Water Meter* at your facility.

- **Meter type** - Use the following descriptions to characterize your meter type(s).
  The **City Meter** is typically found outside at all buildings. This meter type, maintained by the water purveyor (city or local agency), is used to measure incoming water for potable, sanitary, landscaping, and industrial uses. The readings from these meters are used to determine the charges on the monthly or bi-monthly water bills. The **Process Meter** is located downstream of all drinking, sanitary, and landscaping uses. Process meters are typically installed to determine water usage to specific industrial processes. The **Effluent Meter** records the actual volume of wastewater discharged by the facility and is typically located at the discharge point near the designated sample point. The O.C. Sanitation District may require an effluent meter to determine daily flows for compliance verification, and/or to establish accurate sewerage service charges. The **Shop Meter** is often found in a multi-occupancy industrial strip that does not have individual city meters for each suite. Landlords who do not want to pay the water bill for a significant water user often install a meter on the outside of the shop. It is distinguished from the process meter in that it also meters the potable and sanitary flow, like a city meter. The water purveyor does not bill the user directly for water usage metered by a shop meter. The landlord will frequently bill the renter directly, based upon the shop meter volumes.

- **Digits/Fixed Zeros/Tenths** - Use the Digits, Fixed Zeros, and Tenths columns to record the current meter reading. Include the beginning digits, even if they are zero, as well as, the fixed zeros, or tenths designated by the arrow sweep. **Please visually read each meter. Do not provide values or volumes from the water bills.**
  Use the following the guidelines for Fixed Zeros and Tenths to provide assistance with reading and recording the information for several common meter variations. **Fixed Zeros** - On many water meter models the sweeping arrow records numerical units that are designated by the fixed zeros on the totalizer read-out. Use the three shaded columns designated Fixed Zeros to indicate that the meter's arrow sweep records single (0 - 9) digit, double (10 - 90) digit, or triple (100 - 900) digit values. **Tenths** - On many water meter models the dial numbers (selected by the arrow sweep), or the last digit of a totalizer read-out designates tenths of a gallon. Use the tenths column (implied by the decimal point) to indicate the meter records tenths of a gallon.

- **Units/Multiplier** - Indicate the meter units, Cubic Feet (Cu. Ft.) or Gallons. If applicable, indicate the multiplier factor (x 10 or x 100). **Do not confuse this with the typical billing unit (100 CF) on the monthly water bill.**
  Units - Most water meters register the volume of water in either cubic feet or gallons. Please indicate if your meter uses a different unit of measurement such as barrels, cubic meters, or acre feet. **Multiplier** - Occasionally the meter dial will indicate that a multiplier (X 10 or X 100) must be applied to the totalizer reading (this feature is more common on electronic flow instruments). Please indicate different multiplier factors as applicable.

- **Location** - Briefly describe the location of each meter.
  Descriptive terms and location references such as curbside, street vault, north side of building, inside the process area, adjacent to the driveway, on the east wall, etc., will all help our field staff verify the information by establishing vital reference points.

STEP 2. Attach a copy of the latest water bill for each city meter identified.

Certification of Responsible Officer

I, the undersigned, do hereby certify that I meet the definition of a Responsible Officer, as outlined below:

A responsible officer is defined as found in 40 CFR 403.12 (l)(1)(i):

1. For a Corporation:
   a. A President, Secretary, Treasurer or Vice President in charge of a principle business function or any other person who performs similar policy or decision making functions for the corporation, or
   b. The manager of one or more manufacturing, production, or operating facilities provided the manager is authorized to assure long term environmental compliance with environmental laws and regulations, and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
2. For partnership or sole proprietorship; a general partner or proprietor, respectively.
3. For a public agency; a general manager, department manager, or a supervisor of a public agency who performs policy or decision making functions for the public agency.

I accept the responsibility for the overall operation of the facility and/or overall responsibility for compliance with all regulatory requirements for the facility from which the wastewater discharge originates.

Name of Responsible Officer: Audra J. Davies
(Please Print or Type)

Signature: [signature] Date: 03/27/19

Title: Site Leader Buena Park Operations / VP - R&D E-mail address: audra_davies@amway.com

Company Name: Access Business Group LLC (dba Nutrilite) Permit No.: 1-531435

NOTE: All correspondence regarding permit, enforcement, and self-monitoring issues (e.g., Self-Monitoring Forms and Reminder Letters, Notices of Violations, Permit Application, etc.) shall be sent to the Responsible Officer or to the Designated Signatory if properly authorized. If there is a change in the Responsible Officer or Designated Signatory in the future, the Districts must be notified in writing and the appropriate form must be submitted.

Certification for Accuracy of Information

I have personally examined and am familiar with the information submitted in this application and required attachments, and I hereby certify under penalty of law that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. I also authorize the District to verify all information provided, including the water account/usage information from the water supplier, facility lease contracts, and other pertinent information.

I certify that upon issuance of the permit, that this firm's operation and its resultant wastewater discharge will achieve consistent compliance with the District's Ordinance and applicable Federal wastewater discharge requirements. If the wastewater discharge does not meet all the applicable regulations, the company will modify manufacturing equipment, limit production, limit industrial waste discharge, install wastewater pretreatment equipment, or do whatever is legally necessary to meet discharge requirements.

Y Responsible Officer/Designated Signatory (as specified on pages 6 and 7):

June 23, 2016

Charles Davison, MANAGER, GLOBAL EHS
Access Business Group, LLC
5600 BEACH BLVD.
BUENA PARK, CA 90621

SUBJECT: **NOTICE OF FAILURE TO SUBMIT**
Self-Monitoring Report Form(s) (**Due Date: May 31, 2016**)
Permit No. 1-531435 (previously listed as 53-1-435)

The Orange County Sanitation District (OCSD) has not received the Self-Monitoring Report due May 31, 2016 for the following constituent(s):

Monitoring ID	Due Date	Constituent(s)
104398	05/31/2016	Acetone, Ethyl acetate, Isopropyl acetate, methylene chloride, n-amyl acetate

This report must be received by OCSD no later than **July 15, 2016**, or the next business day if this is a weekend or nationally recognized holiday. Failure to submit this report will result in a processing and publishing fee in the amount of $260.00 if, at the end of the fiscal year, your company has been classified as Significantly Noncompliant (SNC) with its name published in the newspaper, pursuant to OCSD's Ordinance. To avoid SNC status, you are required to collect the Self-Monitoring samples within the specified date range, and submit the Self-Monitoring report by the due date. The report must be complete with proper signature, laboratory reports, and all required information.

Continued failure to submit required Self-Monitoring Reports will result in additional enforcement actions, which may include administrative civil penalties up to $2,000 per day of delinquency, permit suspension, or permit revocation.

If you have any questions, please call Julie Riddle at 714-593-7502.

SUBJECT: **NOTICE OF FAILURE TO SUBMIT**
Self-Monitoring Report Form(s) (**Due Date: May 31, 2020**)
Permit No. 1-531435

The Orange County Sanitation District (OCSD) has not received the Self-Monitoring Report due May 31, 2020 for the following constituent(s):

Monitoring ID	Due Date	Constituent(s)
147574	05/31/2020	Acetone, Ethyl Acetate, Isopropyl Acetate, Methylene Chloride, n-Amyl Acetate

This report must be received by OCSD no later than **July 15, 2020**. Failure to submit this report will result in a processing and publishing fee in the amount of $260.00 if, at the end of the fiscal year, your company has been classified as Significantly Noncompliant (SNC) with its name published in the newspaper, pursuant to OCSD's Ordinance. To avoid SNC status, you are required to collect the Self-Monitoring samples within the specified date range, and submit the Self-Monitoring report by the due date. The report must be complete with proper signature, laboratory reports, and all required information.

Continued failure to submit required Self-Monitoring Reports will result in additional enforcement actions, which may include administrative civil penalties up to $2,000 per day of delinquency, permit suspension, or permit revocation.

If you have any questions, please call Julie Riddle at 714-593-7502.

July 23, 2020

Tim Hellem, Supervisor, EH&S
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

SUBJECT: **SIGNIFICANT NON-COMPLIANCE (SNC) NOTICE**
Failure to Submit Self-Monitoring Report Form(s) (**Due Date: May 31, 2020**)
Permit No. 1-531435

The Orange County Sanitation District (OCSD) has not received the Self-Monitoring Report due on May 31, 2020 for the following samples and constituent(s):

Monitoring ID	Due Date	Constituent(s)
147574	05/31/2020	Acetone, Ethyl Acetate, Isopropyl Acetate, Methylene Chloride, n-Amyl Acetate

Your company may be classified as SNC for failure to submit Self-Monitoring Report(s) as required.

Please be advised that you may soon be receiving an invoice requiring payment of $165.00 for failure to properly submit the above-mentioned Self-Monitoring Report(s). Please also note that if your company is confirmed as SNC at the end of the fiscal year, and is published in the newspaper, you will also receive an invoice for a processing and publishing fee in the amount of $260.00.

Failure to pay appropriate fees and/or continued failure to submit required Self-Monitoring Report(s) will result in the OCSD taking additional enforcement actions, which may include administrative civil penalties up to $2,000 per day of delinquency, permit suspension, or permit revocation.

If you have any questions, please call Julie Riddle at 714-593-7502.

SUBJECT: **NOTICE OF FAILURE TO SUBMIT**
Self-Monitoring Report Form(s) (**Due Date: November 30, 2022**)
Permit No. 1-531435

The Orange County Sanitation District (OC San) has not received the Self-Monitoring Report, which was required to be submitted by **November 30, 2022** for the following substance(s):

Monitoring ID	Due Date	Substance(s)
170594	11/30/2022	acetone, ethyl acetate, Isopropyl acetate, methylene chloride, n-amyl acetate

This report must be received by OC San no later than **January 13, 2023**. Failure to submit the report by this date may result in a processing fee of $165.00 and a publishing fee in the amount of $485.00 if, at the end of the fiscal year, your facility has been classified as Significantly Noncompliant (SNC) and your facility name is published in the newspaper, pursuant to OC San's Ordinance. To avoid SNC status, you are required to collect the Self-Monitoring samples within the specified date range and submit the Self-Monitoring report by the due date. The report must be complete with proper signature, laboratory reports, and all required information.

Continued failure to submit required Self-Monitoring Reports may result in additional enforcement actions, which can include administrative civil penalties up to $2,000 per day of delinquency, permit suspension, or permit revocation.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than DRL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
Q4	Analyte result out of calibration range. Result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: FROG ENVIRO Project: MESS BUSINESS GROUP, LLC - WW

Date Received: 5/4/16 Sampler's Signature Present: (Yes) No

Sample temperature: _____

Sample(s) received in cooler: (Yes) No (Skip Section 2)

Shipping Information: _____

Section 2

Was the cooler packed with: ✓ Ice ___ Ice Packs ✓ Bubble Wrap ___ Styrofoam ___ Paper ___ None ___ Other _____

Cooler 1 Temperature: 1.3°C Cooler 2 Temperature: _____ Cooler 3 Temperature: _____

(Acceptance range is 0 to 6 Deg. C. or arrival on ice; For Microbiology sample ≤ 10 Deg. C or arrival on ice)

Section 3	YES	NO	N/A
Was a COC received?	✓		
Were IDs present?	✓		
Were sampling dates & times present?	✓		
Was a signature present?	✓		
Were tests clearly indicated?	✓		
Were custody seals present?		✓	
If Yes – were they intact?			✓
Were all samples sealed in plastic bags?	✓		
Did all samples arrive intact? If no, indicate below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were correct containers used for the tests required?	✓		
Was a sufficient amount of sample sent for tests indicated?	✓		
Was there headspace in VOA vials?		✓	
Were the containers labeled with correct preservatives?	✓		
Was total residual chlorine measured (Fish Bioassay samples only)? * **If the answer is no, please inform Fish Bioassay Dept. immediately.*			✓

Permit #53-1-435

Lab Request: 383932
Report Date: 11/08/2016
Date Received: 11/01/2016
Client ID: 14387

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
383932-001	Grab-001
383932-002	Grab-002
383932-003	Grab-003
383932-004	Grab-004

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Ranjit K. K. Clarke

Report Review performed by: Ranjit Clarke, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 60 days from date received.

The reports of the Enthalpy Analytical, Inc. are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than DRL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

PERMIT #93-1-4135

Client: Fea. Environmental Project: Access Business Group

Date Received: 11/1/16 Sampler's Signature Present: (Yes) No

Sample(s) received in a cooler? (Yes) How many? 1 No (skip section 2) Sample Temp (°C): _____

Sample Temp (°C) from each cooler: #1: 2.8°C #2: _____ #3: _____ #4: _____

(Acceptance range is 0 to 6°C or, for samples collected the same day as sample receipt, arrival on ice; For Microbiology sample 0 to 10°C or, for samples collected the same day as sample receipt, arrival on ice)

Shipping Information: _____

Section 2

Was the cooler packed with: ✓ Ice ____ Ice Packs ____ Bubble Wrap ____ Styrofoam ____ Paper ____ None ____ Other _____

Cooler Temp (°C): #1: 0.1°C #2: _____ #3: _____ #4: _____

Section 3	YES	NO	N/A
Was a COC received?	✓		
Were IDs present?	✓		
Were sampling dates & times present?	✓		
Was a signature present?	✓		
Were tests clearly indicated?	✓		
Were custody seals present?		✓	
If Yes – were they intact?			✓
Were all samples sealed in plastic bags?	✓		
Did all samples arrive intact? If no, indicate below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were correct containers used for the tests required?	✓		
Was a sufficient amount of sample sent for tests indicated?	✓		
Was there headspace in VOA vials?		✓	
Were the containers labeled with correct preservatives?	✓		
Was total residual chlorine measured (Fish Bioassay samples only)? * **If the answer is no, please inform Fish Bioassay department immediately.*			✓

Section 4

Explanations/Comments: _____

Section 5

Was the Project Manager notified via email of discrepancies: Yes No (N/A)

Was the email sent to: _____

Project Manager's response:

SELF-MONITORING FORM

SMR No.: S-104400
SMR Type: Standard
Access Business Group, LLC
Pharmaceutical Manufacturing
Permit No. 1-531435 (previously 53-1-435)

This form must be completely filled out and Laboratory Analysis Report must be attached.
Please check if composite sample was obtained using an automatic sampling device: ( ) Yes ( ) No

In accordance with 40 CFR 403.12, the results presented herein must be verified and signed under penalty of perjury by: (i) a responsible corporate officer; (ii) general partner or proprietor; or (iii) a representative who has responsibility for the overall operation of the permitted facility, who has been authorized by the corporate officer, general partner or proprietor to sign such reports, and such authorization has been made in writing and submitted to the District.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.[40 C.F.R. § 403.6(a)(2)(ii) (2005)]

SELF-MONITORING FORM

April 14, 2017

Tim Hellem, Supervisor. EH&S
Access Business Group, LLC
5600 Beach Blvd
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435 (previously listed as 53-1-435)

Please be reminded that Self-Monitoring must be conducted between **May 01, 2017 -- May 16, 2017** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

Finally, for permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Mila Kleinbergs
Engineer

Attn: Heather Palladeno

Comments: Access Business Group, LLC-WW
Permit #53-1-435

Lab Request: 390223
Report Date: 05/09/2017
Date Received: 05/02/2017
Client ID: 14387

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
390223-001	Grab-001
390223-002	Grab-002
390223-003	Grab-003
390223-004	Grab-004

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Diane M. Galvan

Report Review performed by: Diane Galvan, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 60 days from date received.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

Sample(s) received in a cooler? (Yes) How many? 1 No (skip section 2) Sample Temp (°C): _____

Sample Temp (°C) from each cooler: #1: 5.1 #2: _____ #3: _____ #4: _____

(Acceptance range is 0 to 6°C or, for samples collected the same day as sample receipt, arrival on ice; For Microbiology sample 0 to 10°C or, for samples collected the same day as sample receipt, arrival on ice)

Shipping Information: _____

Section 2

Was the cooler packed with: ✓ Ice ____ Ice Packs ____ Bubble Wrap ____ Styrofoam ____ Paper ____ None ____ Other _____

Cooler Temp (°C): #1: 0.3°C #2: _____ #3: _____ #4: _____

Section 3	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓

Lab Request: 396114
Report Date: 11/09/2017
Date Received: 11/03/2017
Client ID: 14387

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
396114-001	Grab-001
396114-002	Grab-002
396114-003	Grab-003
396114-004	Grab-004

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Diane M. Galvan

Report Review performed by: Diane Galvan, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 60 days from date received.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Frog Environmental Project: Access Business Group

Date Received: 11/3/17 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 3.4 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.7 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?	✓		
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Headspace: Grab 1 (1/3), Grab 4 (1/3)

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☒ Email (email sent to/on): DG 11/03/17 @ 1519

Project Manager's response:

SAMPLE RECEIVING

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

October 14, 2017

Tim Hellem, Supervisor. EH&S
Access Business Group, LLC
5600 Beach Blvd
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435 (previously listed as 53-1-435)

Please be reminded that Self-Monitoring must be conducted between **November 01, 2017 -- November 16, 2017** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Mila Kleinbergs
Engineer

Permit #53-1-435

Lab Request: 390223
Report Date: 05/09/2017
Date Received: 05/02/2017
Client ID: 14387

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
390223-001	Grab-001
390223-002	Grab-002
390223-003	Grab-003
390223-004	Grab-004

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Diane M. Galvan

Report Review performed by: Diane Galvan, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 60 days from date received.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: FROG ENVIRO Project: _____

Date Received: 5/02/17 Sampler's Name Present: (Yes) No

Sample(s) received in a cooler? (Yes) How many? 1 No (skip section 2) Sample Temp (°C): _____

Sample Temp (°C) from each cooler: #1: 5.1 #2: _____ #3: _____ #4: _____

(Acceptance range is 0 to 6°C or, for samples collected the same day as sample receipt, arrival on ice; For Microbiology sample 0 to 10°C or, for samples collected the same day as sample receipt, arrival on ice)

Shipping Information: _____

Section 2

Was the cooler packed with: ✓ Ice ____ Ice Packs ____ Bubble Wrap ____ Styrofoam

____ Paper ____ None ____ Other _____

Cooler Temp (°C): #1: 0.3° C #2: _____ #3: _____ #4: _____

Section 3	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 4

Explanations/Comments: _____

Section 5

For discrepancies, how was the Project Manager notified? Verbal PM Initials _____ Date/Time _____

Lab Request: 407916
Report Date: 11/05/2018
Date Received: 10/29/2018
Client ID: 14387

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
407916-001	Grab-001
407916-002	Grab-002
407916-003	Grab-003
407916-004	Grab-004

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Diane M. Galvan

Report Review performed by: Diane Galvan, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 60 days from date received.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Frog Environmental

Project: Access Business Group

Date Received: 10/29/18

Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2)

Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.9 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

April 14, 2019

Tim Hellem, Supervisor. EH&S
Access Business Group, LLC
5600 Beach Blvd
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435 (previously listed as 53-1-435)

Please be reminded that Self-Monitoring must be conducted between **May 01, 2019 -- May 16, 2019** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Mila Kleinbergs
Senior Engineer

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

SMR No.: S-126408
SMR Type: Standard
Access Business Group, LLC
Pharmaceutical Manufacturing
Permit No. 1-531435 (previously 53-1-435)

This form must be completely filled out and Laboratory Analysis Report and Chain of Custody must be attached.

Please check if composite sample was obtained using an automatic sampling device: ( ) Yes ( ) No

In accordance with 40 CFR 403.12, the results presented herein must be verified and signed under penalty of perjury by: (i) a responsible corporate officer; (ii) general partner or proprietor; or (iii) a representative who has responsibility for the overall operation of the permitted facility, who has been authorized by the corporate officer, general partner or proprietor to sign such reports, and such authorization has been made in writing and submitted to the District.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.[40 C.F.R. § 403.6(a)(2)(ii) (2005)]

5600 Beach Blvd, Buena Park, CA 90621

Lab Request: 414850
Report Date: 05/09/2019
Date Received: 05/01/2019
Client ID: 14387

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
414850-001	Grab-001
414850-002	Grab-002
414850-003	Grab-003
414850-004	Grab-004

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Diane M. Galvan

Report Review performed by: Diane Galvan, Project Manager

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 45 days from date received.

The reports of the Enthalpy Analytical, Inc. are confidential property of our clients and may not be reproduced or used for publication in part or in full without our written permission. This is for the mutual protection of the public, our clients, and ourselves.

Data Qualifiers and Definitions

Qualifiers

A	See Report Comments.
B	Analyte was present in an associated method blank.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than RDL.
BQ1	No valid test replicates. Sample Toxicity is possible. Best result was reported.
BQ2	No valid test replicates.
BQ3	No valid test replicates. Final DO is less than 1.0 mg/L. Result may be greater.
BQ4	Minor Dissolved Oxygen loss was observed in the blank water check, however, the LCS was within criteria, validating the batch.
BQ5	Minor Dissolved Oxygen loss was observed in the blank water check.
C	Possible laboratory contamination.
D	RPD was not within control limits. The sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied.
D2	Reporting limit is elevated due to sample matrix. Target analyte was not detected above the elevated reporting limit.
D3	Insufficient sample was supplied for TCLP. Client was notified. TCLP was performed per the Client's instructions.
DW	Sample result is calculated on a dry weigh basis.
E	Concentration is estimated because it exceeds the quantification limits of the method.
I	The sample was read outside of the method required incubation period.
IR	Inconclusive Result. Legionella is present, however, there is possible non-specific agglutination preventing specific identification.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
L2	LCS did not meet recovery criteria, however, the MS and/or MSD met LCS recovery criteria, validating the batch.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
M2	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits. The associated LCS and/or LCSD was not within control limits. Sample result is estimated.
N1	Sample chromatography does not match the specified TPH standard pattern.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of sample storage refrigerator was out of acceptance limits.
P2	The sample was preserved within 24 hours of collection in accordance with EPA 218.6.
P3	Per Client request, sample was composited for volatile analysis. Sample compositing for volatile analysis is not recommended due to potential loss of target analytes. Results may be biased low.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated.
Q2	Analyte calibration was not verified and the result was estimated.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated.
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
S2	The surrogate was diluted out due to the presence of high concentrations of target and/or non-target compounds. Surrogate recoveries in the associated batch QC met recovery criteria.
S3	Internal Standard did not meet recovery limits. Analyte concentration is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request.
T4	Sample was analyzed out of hold time per client's request.
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.
T7	Sample was analyzed past hold time due to insufficient time remaining at time of receipt.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
NR	Not Reported. See Report Comments.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Frog Environmental

Project: Access Business Group LLC-WW

Date Received: 5/1/19

Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2)

Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.2 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 5/1/19

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

October 14, 2019

Tim Hellem, Supervisor, EH&S
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **November 01, 2019 -- November 16, 2019** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Mila Kleinbergs

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Frog Environmental Project: Access Business Group

Date Received: 11/4/19 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): ____

Sample Temp (°C), One from each cooler: #1: 1.2 #2: ____ #3: ____ #4: ____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: ____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other ____

Cooler Temp (°C): #1: 0.2 #2: ____ #3: ____ #4: ____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?		✓	
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: ____ Date/Time ____

☐ Email (email sent to/on): ____ / ____

Project Manager's response:

Completed By: ____ Date: 11/4/19

SELF-MONITORING FORM

April 14, 2020

Tim Hellem, Supervisor, EH&S
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **May 01, 2020 -- May 16, 2020** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Mila Kleinbergs
Senior Engineer

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Frog Environ. Project: _____

Date Received: 5/7/20 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 8.4 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 0.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?		✓	
Are custody seals present?			✓
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?		✓	
Is there headspace in the VOA vials greater than 5-6 mm in diameter?	✓		
Was a sufficient amount of sample submitted for the requested tests?			

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____ ☐ Email (email sent to/on): _____/_____

Project Manager's response:

Completed By: _____ Date: 5/7/20

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

October 14, 2020

Tim Hellem, Supervisor, EH&S
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **November 01, 2020 -- November 16, 2020** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Mila Kleinbergs

Frog Environmental 24426 S. Main Street #701 Carson CA, 90745	Project Manager: David Pingatore Project: Industrial Wastewater Sampling Project Number: Nutrilite	Reported: 11/30/20 13:35

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration, detected but not quantified (DNQ).
R-04	The Reporting Limits for this analysis are elevated due to sample foaming.
R-06	The Reporting Limits for this analysis have been raised to account for matrix interference.
U	Analyte included in analysis, but not detected at or above MDL.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
MDL	Method detection limit
Rec	Recovery
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

✓20K1733 Q

Hi all,

I should have noted on the COC, but the 624 analysis for Nutriilte (Frog Env. WW client) should only report the following compounds:

Acetone
Ethyl Acetate
Isopropyl Acetate
Methylene Chloride
n-Amyl Acetate

Thank you,
Billy Linker

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

April 14, 2021

Tim Hellem, Supervisor, EH&S
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **May 01, 2021 -- May 16, 2021** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
R-04	The Reporting Limits for this analysis are elevated due to sample foaming.
U	Analyte included in analysis, but not detected at or above MDL.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
MDL	Method detection limit
Rec	Recovery
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration, detected but not quantified (DNQ).
R-04	The Reporting Limits for this analysis are elevated due to sample foaming.
U	Analyte included in analysis, but not detected at or above MDL.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
MDL	Method detection limit
Rec	Recovery
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

SELF-MONITORING FORM

July 14, 2021

Kelli Forbes, EHS Analyst
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **August 01, 2021 -- August 16, 2021** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Mila Kleinbergs at 714-593-7408.

Carson CA, 90745	Project Number:	Nutrtilite -Buena Park	11/16/21 10:30

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration, detected but not quantified (DNQ).
R-04	The Reporting Limits for this analysis are elevated due to sample foaming.
U	Analyte included in analysis, but not detected at or above MDL.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
MDL	Method detection limit
Rec	Recovery
RPD	Relative Percent Difference

Non-accredited analytes are reported only when ELAP accreditation for a requested analyte is not available. For a list of accredited analytes, view our certificates at the Company link on our website at www.alpha-labs.com or contact your Project Manager directly.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

SELF-MONITORING FORM

October 14, 2021

Kelli Forbes, EHS Analyst
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **November 01, 2021 -- November 16, 2021** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Jason Daniel at 714-593-7013.

24426 S. Main Street #701	Project: Industrial Wastewater Sampling	Reported:
Carson CA, 90745	Project Number: Nutrilite - Buena Park	02/28/22 15:46

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration, detected but not quantified (DNQ).
B-04	The Reporting Limits for this analyte are elevated due to sample dilution.
U	Analyte included in analysis, but not detected at or above MDL.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
MDL	Method detection limit
Rec	Recovery
RPD	Relative Percent Difference

Non-accredited analytes are reported only when ELAP accreditation for a requested analyte is not available. For a list of accredited analytes, view our certificates at the Company link on our website at www.alpha-labs.com or contact your Project Manager directly.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

J	Detected but below the Reporting Limit; therefore, result is an estimated concentration, detected but not quantified (DNQ).
R-04	The Reporting Limits for this analysis are elevated due to sample foaming.
U	Analyte included in analysis, but not detected at or above MDL.
ND	Analyte NOT DETECTED at or above the reporting limit
dry	Sample results reported on a dry weight basis
MDL	Method detection limit
Rec	Recovery
RPD	Relative Percent Difference

Non-accredited analytes are reported only when ELAP accreditation for a requested analyte is not available. For a list of accredited analytes, view our certificates at the Company link on our website at www.alpha-labs.com or contact your Project Manager directly.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Dear Kelli Ann Forbes-Capone :

Enclosed are the results of analyses for samples received 8/15/2022 with the Chain-of-Custody document. The samples were received in good condition, at 12.9 °C and on ice. All analysis met the method criteria except as noted in the case narrative or in the report with data qualifiers.

Notes and Definitions

Item	Definition
M-05	Due to the nature of matrix interferences, sample was diluted prior to analysis. The MDL and MRL were raised due to the dilution.
%REC	Percent Recovery
Dil	Dilution
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ)
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
RPD	Relative Percent Difference
Source	Sample that was matrix spiked or duplicated.

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

October 14, 2022

Kelli Forbes, EHS Analyst
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **November 01, 2022 -- November 16, 2022** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Kiranpreet Kaur at 714-593-7213.

Dear Kelli Ann Forbes-Capone :

Enclosed are the results of analyses for samples received 11/7/2022 with the Chain-of-Custody document. The samples were received in good condition, at 2.4 °C and on ice. All analysis met the method criteria except as noted in the case narrative or in the report with data qualifiers.

Re: SMR Permit #: 1-531435

Dear Sir or Madam,

Attached is a copy of the SMR and supporting lab analysis / report for Amway's Buena Park facilities located at 5600 Beach Boulevard. The report is being submitted without a signature due to Kelli Forbes-Capone being out of office on temporary leave. I am working with the facility to have a Responsible Officer sign the necessary reports. Once the Responsible Officer is able to add their signature, I will resubmit the appropriate documents.

If you have any questions, please don't hesitate to reach out.

Thank you,

Ben Preston

Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **November 01, 2022 -- November 16, 2022** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Kiranpreet Kaur at 714-593-7213.

Notes and Definitions

Item	Definition
M-05	Due to the nature of matrix interferences, sample was diluted prior to analysis. The MDL and MRL were raised due to the dilution.
%REC	Percent Recovery
Dil	Dilution
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ)
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
RPD	Relative Percent Difference

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

Analyses Accreditation Summary

Notes and Definitions

Item	Definition
M-05	Due to the nature of matrix interferences, sample was diluted prior to analysis. The MDL and MRL were raised due to the dilution.
%REC	Percent Recovery
Dil	Dilution
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ)
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
RPD	Relative Percent Difference

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

Analyses Accreditation Summary

Analyte	CAS #	Not By NELAP	ANAB ISO 17025
EPA 1666A in Water			
Ethyl acetate	141-78-6	✓	
Isopropyl acetate	108-21-4	✓

Re: SMR Permit #: 1-531435

Dear Sir or Madam,

Attached is a copy of the SMR and supporting lab analysis / report for Amway's Buena Park facilities located at 5600 Beach Boulevard for November 2022. This report is being re-submitted with my signature as I am now the Designate Signatory while Kelli Forbes-Capone is out on leave.

I have also submitted the necessary paperwork with the appropriate signatures for the site's Responsible Officer and Designate Signatory.

If you have any questions, please don't hesitate to reach out.

Thank you,

Ben Preston

FINAL REPORT

Notes and Definitions

Item	Definition
M-05	Due to the nature of matrix interferences, sample was diluted prior to analysis. The MDL and MRL were raised due to the dilution.
%REC	Percent Recovery
Dil	Dilution
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ)
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
RPD	Relative Percent Difference

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

Analyses Accreditation Summary

Re: SMR Permit #: 1-531435

Dear Sir or Madam,

Attached is a copy of the SMR and supporting lab analysis / report for Amway's Buena Park facilities located at 5600 Beach Boulevard. The report is being submitted late due to a scheduling error on behalf of the laboratory we use to collect the samples and analyze. This was communicated to Brian Finkelstein by Kelli Forbes-Capone on February 23, 2023.

If you have any questions, please don't hesitate to reach out.

Thank you,

Ben Preston

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

January 14, 2023

Kelli Forbes, EHS Analyst
Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **February 01, 2023 -- February 16, 2023** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Kiranpreet Kaur at 714-593-7213.

ORANGE COUNTY SANITATION DISTRICT
SELF-MONITORING FORM

July 14, 2023

Mike Nanda, VP-Manufacturing
Access Business Group, LLC
5600 Beach Blvd.
Buena Park, CA 90621

Subject: **REMINDER TO CONDUCT SELF-MONITORING**
Permit No. 1-531435

Please be reminded that Self-Monitoring must be conducted between **August 01, 2023 -- August 16, 2023** in accordance with your company's permit requirements. Self-Monitoring must be conducted during a production day in accordance with the guidelines detailed in your company's permit.

It is your responsibility to comply with the requirements set forth in your company's permit. Failure to comply with all the directives, conditions, and requirements of the permit may result in enforcement action against your company.

If your company's permit shows a self-monitoring requirement for total toxic organics (TTOs) and your company has received a waiver from this self-monitoring, you are now required to submit a signed TTOs SMR form to us to comply with the TTO waiver requirements of the U.S. Environmental Protection Agency. Please indicate in the "Sample Comments" that you have received a TTOs self-monitoring waiver from us.

For permittees that have monthly as well as quarterly and/or semi-annual self-monitoring requirements, the forms may list more than the SMR constituents required for the monthly self-monitoring. We ask that you adhere to your permit's self-monitoring requirements and sample only for the constituent(s) required on a monthly basis, except when the quarterly and semi-annual self-monitoring are also required in the same month, in which case all constituents listed on the form must be analyzed for as specified in your permit.

Finally, for those who are required to submit meter readings, a list of the meter readings submitted within the last year is attached to the SMR form for your reference and comparison to current readings.

Thank you for your patience and cooperation. If you have any questions, please contact Kiranpreet Kaur at 714-593-7213.

Notes and Definitions

Item	Definition
%REC	Percent Recovery
Dil	Dilution
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ)
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
RPD	Relative Percent Difference
Source	Sample that was matrix spiked or duplicated.

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

Analyses Accreditation Summary

Analyte	CAS #	Not By NELAP	ANAB ISO 17025
EPA 1666A in Water			
Ethyl acetate	141-78-6	✓	
Isopropyl acetate	108-21-4	✓	
n-Amyl acetate	628-63-7	✓

Dear Kelli Ann Forbes-Capone :

Enclosed are the results of analyses for samples received 11/6/2023 with the Chain-of-Custody document. The samples were received in good condition, at 5.6 °C and on ice. All analysis met the method criteria except as noted in the case narrative or in the report with data qualifiers.

Notes and Definitions

Item	Definition
M-05	Due to the nature of matrix interferences, sample was diluted prior to analysis. The MDL and MRL were raised due to the dilution.
O-20	As per vial label, this sample was received with HCl preservation, however sample pH was found to be >2 after VOC analysis possibly due to matrix effect or loss of acid during sampling.
%REC	Percent Recovery
Dil	*Dilution*
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ)
ND	*NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.*
RPD	*Relative Percent Difference*

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

Analyses Accreditation Summary

Analyte	CAS #	Not By NELAP	ANAB ISO 17025
EPA 1666A in Water

Re: SMR for Permit 1-531435

Dear Sir or Madam:

Attached is a copy of the above report. It was noted that the sample date occurred two days earlier than our permitted range. I spoke to someone at your office about this and they agreed to allow submittal despite this. Thanks for your understanding; I have corrected this issue with our vendor.

Best regards,

Tim Hellem

Data Qualifiers and Definitions

Qualifiers

B	Analyte was present in an associated method blank. Associated sample data is qualified.
B1	Analyte was present in a sample and associated method blank greater than MDL but less than DRL. Associated sample data is qualified.
BQ1	No valid test replicates. Best result was reported with qualifier. Sample toxicity possible.
BQ2	No valid test replicates.
BQ3	Final DO is less than 1.0 mg/L. Result may be greater and is reported with qualifier.
C	Laboratory contamination.
D	RPD was not within control limits, the sample data was reported without further clarification.
D1	Lesser amount of sample was used due to insufficient amount of sample supplied
DW	Sample result is calculated on a dry weigh basis
I	The sample was read outside of the method required incubation period.
J	Reported value is estimated
L	The laboratory control sample (LCS) or laboratory control sample duplicate (LCSD) was out of control limits. Associated sample data was reported with qualifier.
M	The matrix spike (MS) or matrix spike duplicate (MSD) was not within control limits due to matrix interference. The associated LCS and/or LCSD was within control limits and the sample data was reported without further clarification.
M1	The matrix spike (MS) or matrix spike duplicate (MSD) is not within control limits due to matrix interference.
NC	The analyte concentration in the sample exceeded the spike level by a factor of four or greater, spike recovery and limits do not apply.
P	Sample was received without proper preservation according to EPA guidelines.
P1	Temperature of refrigerator was out of acceptance limits due to technical difficulty.
Q1	Analyte Calibration Verification exceeds criteria. The result is estimated and reported with qualifier.
Q2	Analyte calibration was not verified and the result was estimated and reported with qualifier.
Q3	Analyte initial calibration was not available or exceeds criteria. The result was estimated and reported with qualifier.
Q4	Analyte result out of calibration range. Result was estimated and reported with qualifier
S	The surrogate recovery was out of control limits due to matrix interference. The associated method blank surrogate recovery was within control limits and the sample data was reported without further clarification.
S1	The associated surrogate recovery was out of control limits; result is estimated.
T	Sample was extracted/analyzed past the holding time.
T1	Reanalysis was reported past hold time due to failing replicates in the original analysis (BOD only).
T2	Sample was analyzed ASAP but received and analyzed past the 15 minute holding time.
T3	Sample received and analyzed out of hold time per client's request
T4	Sample was analyzed out of hold time per client's request
T5	Reanalysis was reported past hold time. The original analysis was within hold time, but not reportable.
T6	Hold time is indeterminable due to unspecified sampling time.

Definitions

DF	Dilution Factor
MDL	Method Detection Limit. Result is reported ND when it is less than or equal to MDL.
ND	Analyte was not detected or was less than the detection limit.
RDL	Reporting Detection Limit
TIC	Tentatively Identified Compounds

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Frog Environmental — Project: Permit #53-1-435

Date Received: 11/9/15 — Sampler's Signature Present: (Yes) No

Sample temperature: 5°C

Sample(s) received in cooler: (Yes) No (Skip Section 2)

Shipping Information: _____

Section 2

Was the cooler packed with: ✓ Ice ___ Ice Packs ___ Bubble Wrap ___ Styrofoam ___ Paper ___ None ___ Other _____

Cooler 1 Temperature: 1°C Cooler 2 Temperature: _____ Cooler 3 Temperature: _____

(Acceptance range is 0 to 6 Deg. C. or arrival on ice; For Microbiology sample ≤ 10 Deg. C or arrival on ice)

Section 3	YES	NO	N/A
Was a COC received?	✓		
Were IDs present?	✓		
Were sampling dates & times present?	✓		
Was a signature present?	✓		
Were tests clearly indicated?	✓		
Were custody seals present?		✓	
If Yes – were they intact?			✓
Were all samples sealed in plastic bags?	✓		
Did all samples arrive intact? If no, indicate below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were correct containers used for the tests required?	✓		
Was a sufficient amount of sample sent for tests indicated?	✓		
Was there headspace in VOA vials?		✓	
Were the containers labeled with correct preservatives?	✓		
Was total residual chlorine measured (Fish Bioassay samples only)? * **If the answer is no, please inform Fish Bioassay Dept. immediately.*			✓

Section 4

Explanations/Comments

Section 5

Was the Project Manager notified via email of discrepancies: Y / N (N/A)

Project Manager's response: _____

Completed By: Chris Ota Date: 11/9/15.

Lab Request: 362388
Report Date: 11/16/2015
Date Received: 11/09/2015
Client ID: 14387

This laboratory request covers the following listed samples which were analyzed for the parameters indicated on the attached Analytical Result Report. All analyses were conducted using the appropriate methods. Methods accredited by NELAC are indicated on the report. This cover letter is an integral part of the final report.

Sample #	Client Sample ID
362388-001	Grab-001
362388-002	Grab-002
362388-003	Grab-003
362388-004	Grab-004

Thank you for the opportunity to be of service to your company. Please feel free to call if there are any questions regarding this report or if we can be of further service.

Report Review performed by: Dat Phan, QA/QC Scientist

NOTE: Unless notified in writing, all samples will be discarded by appropriate disposal protocol 45 days from date reported.

WASTEWATER ANALYSIS REPORT

Access Business Group, LLC
5600 Beach Blvd
Buena Park, CA 90621

Attention: Tim Hellem

REPORT DATE : 01/21/2019
MONITORING ID : 126700
INSPECTOR : TF
SAMPLE TYPE : Compliance

Your wastewater discharge was sampled and the results are as follows:

LAB NO:
Sample Type: GRAB
Sample Start Date: 12/28/2018 Time: 9:30
Sampling Point: 53-1-435
Sample End Date: 12/28/2018 Time: 9:30
Location: Manhole

Actual Discharge : No Meter Reading

Mass Emmission Rate Flow Base : 44000 GPD Effective : 08/01/2017

Constituents	Compliance Sample	Sample Method	Discharge mg/L	Discharge Lbs/Day	Permit Limit mg/L	Permit Limit Lbs/Day	Over Limit mg/L	Over Limit Lbs/Day	Violation Percent Over	Violation Type
pH (Standard Units)	Y	GRAB	7.23		6.0 - 12.0				0.00	

Please address any questions concerning this report to Jamie Malpede at 714-593-7504 or jmalpede@ocsd.com.

WASTEWATER ANALYSIS REPORT

Access Business Group, LLC
5600 Beach Boulevard
Buena Park, CA 90621

Attention: Tim Hellem

REPORT DATE : 01/04/2021
MONITORING ID : 148596
INSPECTOR : KN
SAMPLE TYPE : Compliance

Your wastewater discharge was sampled and the results are as follows:

LAB NO: 2266975 Sample Type: GRC
Sample Start Date: 12/07/2020 Time: 9:05 Sampling Point: 53-1-435
Sample End Date: 12/07/2020 Time: 9:05 Location: Manhole

Actual Discharge : No Meter Reading

Mass Emmission Rate Flow Base : 44000 GPD Effective : 08/01/2017

Constituents	Compliance Sample	Sample Method	Discharge mg/L	Discharge Lbs/Day	Permit Limit mg/L	Permit Limit Lbs/Day	Over Limit mg/L	Over Limit Lbs/Day	Violation Percent Over	Violation Type
BOD T	Y	GRC	78						0.00	

Your wastewater discharge was sampled and the results are as follows:

LAB NO: Sample Type: GRAB
Sample Start Date: 12/07/2020 Time: 9:03 Sampling Point: 53-1-435
Sample End Date: 12/07/2020 Time: 9:03 Location: Manhole

Actual Discharge : No Meter Reading

Mass Emmission Rate Flow Base : 44000 GPD Effective : 08/01/2017

Constituents	Compliance Sample	Sample Method	Discharge mg/L	Discharge Lbs/Day	Permit Limit mg/L	Permit Limit Lbs/Day	Over Limit mg/L	Over Limit Lbs/Day	Violation Percent Over	Violation Type
pH (Standard Units)	Y	GRAB	8.14		6.0 - 12.0				0.00	

Your wastewater discharge was sampled and the results are as follows:

LAB NO: 2266976 Sample Type: GRC
Sample Start Date: 12/07/2020 Time: 9:05 Sampling Point: 53-1-435
Sample End Date: 12/07/2020 Time: 9:05 Location: Manhole

Actual Discharge : No Meter Reading

ethyl acetate	Y	GRAB	ND		18.0	6.610			0.00	
methylene chloride	Y	GRAB	ND		2.6	0.955			0.00	

Your wastewater discharge was sampled and the results are as follows:

LAB NO: 2489268 Sample Type: GRAB

Sample Start Date: 07/12/2023 Time: 11:45 Sampling Point: 53-1-435

Sample End Date: 07/12/2023 Time: 11:45 Location: Manhole

Actual Discharge : No Meter Reading

Mass Emmission Rate Flow Base : 44000 GPD Effective : 08/01/2017

Constituents	Compliance Sample	Sample Method	Discharge mg/L	Discharge Lbs/Day	Permit Limit mg/L	Permit Limit Lbs/Day	Over Limit mg/L	Over Limit Lbs/Day	Violation Percent Over	Violation Type
acetone	Y	GRAB	0.1760000000		18.0	6.610			0.00	
ethyl acetate	Y	GRAB	ND		18.0	6.610			0.00
