Subject: Phase I Environmental Site Assessment Update
Dutcher Creek Parcel (APN 117-040-107)
27821 Dutcher Creek Road
Cloverdale, California

Dear Mr. Smith-Ferri:

On behalf of the Dry Creek Rancheria Band of Pomo Indians (Tribe), Environmental Science Associates (ESA) has conducted an update to the 2022 Phase I environmental site assessment prepared for the Dutcher Creek parcel (APN 117-040-107) at 27821 Dutcher Creek Road in Cloverdale, California (subject property).¹ Previous Phase I environmental site assessments were conducted for the subject property in 2018, 2019, and most recently September 2022. The 2022 Phase I environmental site assessment is provided in Appendix A. Since 2022, the subject property has been graded and revegetated as part of the development of the Bi'Du Khaale Community Center and senior housing project located on the adjacent parcel to the west (APN 117-040-106). The purpose of this update is to document changes that have occurred because of development activities since the September 2022 Phase I environmental site assessment and verify no new Recognized Environmental Conditions (RECs) have occurred as a result of the development of the subject property. This update consists of a site inspection, review of regulatory agency records, and interview with a representative of the Tribe.

This update verifies that no RECs as defined by the ASTM 1527-21 standard and the U.S. Environmental Protection Agency (US EPA) All Appropriate Inquiries are present on the subject property.²

Site Reconnaissance

The subject property was inspected on May 9, 2025. As of 2022, the subject property was largely an undeveloped grassy field with a few trees, three small piles of concrete chunks and rock boulders, two small piles of tires, and a few remnants and debris of previous structures as depicted in Figure 1 (August 18, 2024). As shown, the construction of the community center and senior residences was in progress and nearly complete. Since 2022 through early 2025, construction activities associated with the Bi'Du Khaale Community Center and senior housing project were completed, most equipment and materials have been removed, and the open fields have been revegetated, as discussed below.

May 27, 2025
Page 2

Views from the northwest corner adjacent to Kelly Road are shown on Figure 2. This area is where the historical logging truck operations occurred, including maintenance activities. As discussed in the previous Phase I environmental site assessments, previous cleanup operations have removed all the previous structures, underground storage tanks (USTs), and contaminated soil. No indications of stained soil, stressed vegetation, or unusual odors were noted during the inspection. Note that a bioswale has been constructed along Kelly Road to collect, treat, and infiltrate stormwater.

Views from the northeast corner adjacent to Kelly Road are shown in Figure 3; views from the eastern border are shown on Figure 4. This area was previously used mostly to park logging trucks and the Kelly Road control gate was located here. No indications of stained soil, stressed vegetation, or unusual odors were noted during the inspection.

Views from the southeast corner near Dutcher Creek Road are shown on Figure 5. This area was previously used mostly to park logging trucks. This portion of the subject property includes a gravel parking area close to Dutcher Creek Road and a revegetated area further into the subject property. No indications of stained soil, stressed vegetation, or unusual odors were noted during the inspection.

Views from the southern border are shown on Figure 6. This area was previously used mostly to park logging trucks. This portion of the subject property now includes a paved access road from Dutcher Creek Road to the residences and a revegetated area. No indications of stained soil, stressed vegetation, or unusual odors were noted during the inspection.

Views from the southwest corner are shown on Figure 7. This area was previously used for the maintenance and parking of logging trucks. This portion of the subject property now includes a revegetated area and a paved access road from Dutcher Creek Road to the residences. No indications of stained soil, stressed vegetation, or unusual odors were noted during the inspection. Note the bioswale along the paved road along the residences constructed to collect, treat, and infiltrate stormwater.

As shown in Figure 1, drainage flows west to east via a constructed drainage ditch that bisects the subject property. Figure 8 shows the portion of the drainage ditch from the center of the subject property to Dutcher Creek Road. Water in the drainage ditch was flowing and appeared clear. There were no indications of stained soil, stressed vegetation, or unusual odors in the drainage ditch or on adjacent areas. The offsite upslope portion of the drainage ditch just west of the subject property is shown in Figure 9. Flowing water was not observed at the surface and is likely flowing just below the surface materials. This area has been constructed with a bioswale (Figure 9, bottom photograph) and an infiltration gallery (Figure 9, top photograph). No indications of stained soil, stressed vegetation, or unusual odors were observed in the drainage ditch or on adjacent areas.

As identified in Figure 1, there is an area with three small piles of concrete chunks and rock boulders, and two piles of tires. Since 2022, most debris from former structures has been removed, leaving only two small piles of debris. The top photograph in Figure 10 is from the center of the subject property towards the northeast, showing these items of note, concrete and boulders to the right and the tires to the left. The bottom photograph shows the

May 27, 2025
Page 3

pile of tires to the left and some debris to the right. This is considered a de minimus condition because none of the materials are considered to be hazardous materials, the tires can be recycled, and the debris is inert wood and metals that can be disposed of at any non-hazardous waste landfill.

As identified on Figure 1, there is an area with three piles of concrete chunks and boulders, one pile of tires, and two piles of debris. The top photograph in Figure 10 is from the center of the subject property towards the northeast, showing these items of note. The bottom photograph shows the pile of tires to the left and some debris to the right. This is considered a de minimus condition because none of the materials are considered to be hazardous materials, the tires can be recycled, and the debris is inert wood and metals that can be disposed of at any non-hazardous waste landfill.

Closeup views of the piles of concrete chunks and rock boulders are shown on Figure 11. Closeup views of the two small piles of debris are shown in Figure 12. The materials are mostly metal with some wood. These materials are considered a de minimus condition because none of the materials are considered to be hazardous materials, concrete and metal can be recycled, the rock boulders can be reused as is, and the debris can be disposed of at any non-hazardous waste landfill.

Vicinity Survey

ESA conducted a reconnaissance survey of immediately adjoining parcels to observe and assess current uses and conditions. The parcels adjacent to the north and east were previously associated with lumber mill and trucking operations. Figure 1 shows the wood scrap burner teepee. As observed, nothing remains from the former lumber mill and trucking operations and no spills, stained soil, stressed vegetation, unusual odors, or chemical containers were noted in the offsite areas. The area to the south and west is forest and grasslands. No changes to previous conditions were observed and no RECs were observed.

Regulatory Agency Records Update

The previous 2022 Phase I environmental site assessment reviewed and evaluated regulatory agency records regarding RECs, historical RECs, and Controlled RECs in connection with the subject property. ESA checked the State Water Resources Control Board (SWRCB) Geotracker and Department of Toxic Substance Control (DTSC) Envirostor websites to determine if any new listings have occurred and whether they have the potential to affect the subject property. No new listings were noted for the subject property or adjacent properties.

Interviews

Mr. Davis Ferri-Smith described and provided access to subject property. The adjacent parcel to the west has been redeveloped with a senior community center and residences. The subject property was used as an equipment and materials staging area. With the completion of the Bi'Du Khaale Community Center and senior housing projects, almost all the construction equipment and materials have been removed. It is anticipated that when the residences and community center are occupied, small quantities of ordinary residential cleaning supplies will be present. The subject property will remain as open space with no planned use of pesticides.

May 27, 2025
Page 4

Conclusion

The results of this update verify that no RECs have occurred as a result of the development of the subject property and that the conclusions of the previous 2022 Phase I environmental site assessment remain valid. As previously noted, the 2022 Phase I environmental site assessment is included in Appendix A.

We thank you for the opportunity to provide environmental consulting assistance. If you have any questions or would like additional information, please contact us.

Sincerely,

A handwritten signature in black ink that reads "Michael G. Burns". The signature is fluid and cursive, with the first and last names being more prominent.

SECTION 1.0

Executive Summary

Environmental Science Associates (ESA) compiled this executive summary using excerpts from the Phase I environmental site assessment report that follows. This executive summary may not provide all the information necessary to fully characterize the site and gain an understanding of the issues, nor does it detail the Phase I assessment and its findings. ESA does not recommend relying solely on this executive summary.

This Phase I environmental site assessment was conducted on behalf of the Dry Creek Rancheria Band of Pomo Indians (Tribe) for the Kelly-Dutcher Creek parcels in Cloverdale, California. This Phase I assessment was conducted in general accordance with guidance from the American Society of Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21), and 40 Code of Federal Regulations (CFR) Section 312.1, “*Purpose, Applicability, Scope and Disclosure Obligations.*” This Phase I environmental site assessment was conducted to identify Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs) at the subject properties (see Section 2.1 for definitions). The subject property consists of the three parcels shown on **Figure 1, Subject Properties**: the Kelly parcel outlined in blue, the Dutcher Creek parcel outlined in red, and a portion of Kelly Road outlined in yellow.

The Dutcher Creek parcel is vacant and undeveloped except for one septic tank and associated piping to the leach field, and one water supply well. The septic tank and piping are scheduled for removal. The previous trucking operation associated with a nearby lumber mill has been removed and vegetation has grown over the former developed area. No pits, ponds, spills, stained areas, unusual odors, or areas of stressed vegetation were noted. The search of regulatory records indicated that underground storage tanks (USTs), above-ground storage tanks (ASTs) and contaminated soil have been removed from the parcel or biotreated onsite. The regulatory agency issued case closure and a no further action letter indicating that the former trucking operation does not pose a risk to people or the environment. Residual levels of fuel and or motor oil may be present. **The former trucking operations are considered a HREC that would not adversely affect the subject properties or prevent redevelopment activities. However, in our opinion, the Tribe should also consider this parcel to be a business environmental risk because residual contamination and possibly higher levels of contamination in areas not previously sampled may be encountered if the parcel is developed. We recommend the contractor developing the parcel prepare and implement a soil management plan to establish protocols for managing contaminated soil, if encountered.**

The Kelly parcel is vacant and undeveloped except for one empty and disconnected above ground propane tank. The previous residence and two barns have been removed and vegetation has grown over the former developed area. No pits, ponds, spills, stained areas, unusual odors, or areas of stressed vegetation were noted. The search of regulatory records revealed no environmental issues for the Kelly parcel **No RECs were identified relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal.**

The portion of Kelly Road that is part of the proposed project is a dirt road with a gate that can be locked at the eastern end. No other development is on this parcel. One abandoned car is present but has not leaked any fuel or motor oil; this car is scheduled to be removed. **No RECs were identified relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal.**

Two properties located just north of the Dutcher Creek parcel previously had leaking USTs. The USTs were removed along with contaminated soil. The regulatory agency issued case closure and no further action letters indicating that the two sites do not pose a risk to people or the environment. **These two sites are considered HRECs due to their proximity to the Dutcher Creek parcel. However, given that the sites have been cleaned up to the satisfaction of the regulatory agency, these two sites are not anticipated to have adversely affected the subject properties.**

Kelly Road and Dutcher Creek Properties Phase I Environmental Site Assessment 201800723

Figure 1
Subject Properties

SECTION 2.0

Introduction

2.1 Purpose, Standards, and Definitions

On behalf of the Dry Creek Rancheria Band of Pomo Indians, Environmental Science Associates conducted this Phase I environmental site assessment for the Kelly–Dutcher Creek parcels in Cloverdale, California (subject properties) (see **Figure 1, Subject Properties**).

This Phase I assessment was conducted in general accordance with the American Society of Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21) and the U.S. Environmental Protection Agency (EPA) Final Rule regarding Standards and Practices for All Appropriate Inquiries (70 *Federal Register* [FR] 66070, July 1, 2005; 40 Code of Federal Regulations [CFR] Part 312) (AAI Rule). EPA has stated that the ASTM E1527-21 is consistent with the AAI Rule (87 FR 14174, May 13, 2022). Specifically, this final rule amends the AAI Rule at 40 CFR Part 312 to reference ASTM E1527-21 and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the AAI Rule.

The purpose of this Phase I assessment is to enable the parties relying on it to satisfy one or more of the requirements for the innocent landholder defense to liability under the Comprehensive Environmental Response, Compensation, and Liability Act and to evaluate the potential for Recognized Environmental Conditions (RECs) at the subject properties. Three types of RECs are defined by ASTM E1527-21, as listed below. The term *Recognized Environmental Conditions (RECs)* means:

(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

In addition, the ASTM standard defines the two categories cited below.

The term *Historical Recognized Environmental Conditions (HRECs)* means:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

For a past REC to be considered an HREC, it must:

- Have already been remediated (or meet current standards without remediation);
- Not require use restrictions or engineering controls (e.g., cap, subslab depressurization system); and
- Meet current standards.

If the REC has use restrictions or engineering controls, the REC may be designated as a Controlled Recognized Environmental Condition (CREC), as defined below. Unlike HRECs, a CREC will be listed in the conclusions section of the Phase I assessment, along with other RECs. The purpose of this new category is to bring continuing obligations, such as use restrictions, maintenance requirements, and reporting requirements, to the forefront. The term *CREC* means:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.

RECs, HRECs, and CRECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. In addition, business environmental conditions (e.g., subsurface crude oil pipelines) are noted but not considered RECs, HRECs, or CRECs.

The ASTM Standard practice also defines a “business environmental risk” as a risk that can have a material environmental impact on the planned use of a property.

2.2 Scope of Services

The following sections describe ESA's work scope:

- Section 2.0, *Introduction*, discusses the purpose for performing the Phase I assessment; the standards and definitions used for the Phase I assessment; and significant assumptions and limitations.
- Section 3.0, *Site Description*, provides general information concerning the location, description, and current and proposed uses of the subject properties, along with a description of any structures and improvements at the time of ESA's assessment.
- Section 4.0, *Records Review*, includes ESA's review of various databases available from federal, State, and local regulatory agencies regarding hazardous materials use, storage, or disposal within or near the subject properties considered in this assessment. Copies of relevant documents are included in the appendices of this report. Physical setting sources such as topography, soil, and groundwater conditions are described.
- Section 5.0, *Site Reconnaissance*, describes ESA's observations during reconnaissance of the subject properties. The methodology used and limiting conditions are described.
- Section 6.0, *User-Provided Information*, documents information provided by the interviews conducted with the owner or property manager.
- Section 7.0, *Findings and Opinions*, presents ESA's findings and professional opinions regarding the information contained in this report. It provides ESA's conclusions regarding the presence of RECs connected with the subject properties and data gaps, if any, that could affect the recognition of RECs.
- Section 8.0, *Report Authors and Qualifications*, provides the signatures and qualifications of the report authors.
- Section 9.0, *References*, is a summary of the resources used to compile this report that supplement the information provided in the appendices.
- The appendices contain certain pertinent documentation regarding the subject properties. Appendices A and B contain the report of government records search results, as well as historical aerial photographs, historical topographic maps, and city directories. Fire insurance maps were not prepared for this rural property.

2.3 Limitations and Exceptions

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with a property. Conformance of this Phase I assessment with ASTM E1527-21 reduces, but does not eliminate, uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with the subject properties. While ESA has made every effort to discover and interpret available historical and current information on the properties assessed within the time available, some potential always remains for undiscovered contamination to be present. ESA's report is a best-efforts collection and interpretation of available information, and cannot be considered wholly conclusive. This report and the associated work were provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties, expressed or implied. No other warranty is expressed or implied. ASTM E1527-21 is included in this report by reference.

This Phase I assessment is based primarily on historical research, a database review, and a site reconnaissance of accessible areas. This Phase I assessment does not include "non-scope issues" as specified by ASTM E1527-21, such as surveys for the presence of the following items on or in the vicinity of the subject property: asbestos-containing materials, polychlorinated biphenyls (PCBs), radon, effects on indoor air quality, lead-based paint, lead in drinking water, industrial hygiene, health and safety, regulatory compliance, and high-voltage lines.

The conclusions presented are professional opinions based solely upon indicated data described in this report, visual site and vicinity observations, and the interpretation of the available historical information and documents reviewed, as described in this report. Unless ESA has actual knowledge to the contrary, information obtained from interviews or provided to ESA is assumed to be correct and complete. ESA does not assume any liability for information that was misrepresented to ESA by others or for items not visible, accessible, or present on the parcel during the time of the site reconnaissance. The conclusions are intended exclusively for the purpose outlined herein and the site location and project indicated. Any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of the user.

Opinions and recommendations presented herein apply to the site conditions existing at the time of this Phase I assessment and cannot necessarily apply to site changes of which ESA is not aware and has not had the opportunity to evaluate. Changes in the conditions of the subject properties may occur with time due to natural processes or the works of man on the properties or adjacent properties. Changes in applicable standards may also occur as a result of legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond ESA's control. Opinions and judgments expressed herein are based on ESA's understanding and interpretation of current regulatory standards, and should not be construed as legal opinions.

SECTION 3.0

Site Description

3.1 General Setting and Location

The subject properties are located just south of the city limits for the City of Cloverdale, California. The subject properties are almost completely vacant and undeveloped. The southwest portion of the subject properties are hilly and forested; the northeastern portion of the subject properties are relatively flat grassland. The subject properties assessor parcel numbers (APN), acreages, land uses, zonings, and street address information are tabulated below in **Table 3-1**. The parcel boundaries and items of interest are shown on the 2021 aerial photograph on **Figure 1**.

TABLE 3-1
LOCATION AND ZONING

Subject Property Name	APN	Acres	Street Address	Land Use	Assessor Use Code	Use Code Type	Zoning
Kelly	117-040-073	25.85	235 Kelly Road	RR 5	0560 Hardwoods & Chaparral	Agricultural	AR B6 5
Dutcher Creek	117-040-074	20.04	27821 Dutcher Creek Road	RR5	0302 Vacant Industrial Land with Utilities	Commercial	M1 B8
Kelly Road	Portion of 117-040-070	2.29	Kelly Road	RR5	0927 Misc. County Property	Road	Road

NOTES:

RR 5 = Rural Residential District (one dwelling unit per 5 acres)

AR B6 5 = Agriculture and Residential District, B6 = combining district, 6 acre maximum density

M1 B8 = Limited Urban Industrial District, B8 = combining district: Minimum parcel or lot size shall be as specified on the recorded final or parcel map and the parcels or lots shall not be further subdivided. The B8 combining district signifies that the lot has been frozen for one of the following reasons:

1. The property is designated rural residential on the general plan land use map, but is subject to a Williamson Act contract;
2. The property lies within the designated urban service boundary surrounding a city where the county intends to limit urban development until annexation or similar occurrence pursuant to a general plan area policy;
3. The property is subject to a specific plan or area plan policy where the county intends to limit urban development for the reasons set forth in the applicable plan

SOURCE: Permit Sonoma, 2022

3.2 Current and Proposed Land Uses

The subject properties are currently vacant and undeveloped. The Tribe is considering redeveloping the subject properties for residential use.

SECTION 4.0

Records Review

The purpose of the records review is to obtain and examine records that could help to evaluate potential RECs, HRECs, and CRECs in connection with the subject properties. This section documents the database records search and the evaluation of other records, summarizes information provided by the property owners, and describes the physical setting of the subject properties.

4.1 Standard Environmental Record Sources

Federal, State, and local regulatory agencies publish databases of businesses and properties that handle hazardous materials or hazardous waste, including those properties with a known release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. ESA contracted with a commercial database service to perform the government records database search for listings within the appropriate ASTM standard minimum search distance (EnviroSite 2022). A detailed description of the types of information in each database reviewed and the agency responsible for compiling the data is included in the Government Records Report provided as Appendix A, which includes a list of acronyms for the individual databases.

ESA evaluated the listings with regard to the nature of potential chemicals of concern and the extent of known releases. In general, reported or potential releases likely to affect a property would include those located on or within a 1/8-mile radius of the subject properties. ESA also considered additional factors such as chemical properties, regional knowledge of the site vicinity, groundwater flow direction, and available past regulatory documentation as part of the REC evaluation.

4.2 Results of Regulatory Records Search

The records search identified 33 listings at the subject properties or within the ASTM-specified search radius in the surrounding area. However, most of the listings are duplicate listings for the same facility, or for construction projects, general wildfire-susceptible areas, operating facilities that have no records of spills or releases, or for sites that are not upgradient of the subject property and would not be able to adversely affect the subject property. Facilities with no listings for spills or releases are not considered further because they have no records of adversely affecting the subject properties. The remaining one onsite listing and three offsite listings with the potential to have affected the subject properties are discussed below.

The site locations are shown on maps with the Government Records Report in Appendix A. In addition, to augment the regulatory records search, the State Water Resources Control Board (SWRCB) GeoTracker and California Department of Toxic Substances Control (DTSC) EnviroStor websites were accessed to review documents that describe the locations and status of sites with environmental issues. Finally, the Tribe provided documentation for the removal of structures on the subject properties.

Listings at the Subject Properties

A1, Louisiana Pacific Kelly Gate – The Dutcher Creek parcel is listed for the previous land use as a trucking facility for the lumber mill located offsite and further east. All of the structures of the former operations were removed by 1998. Various subsequent investigations and cleanup actions were conducted to remediate contaminated areas. The Regional Water Quality Control Board (RWQCB) closed the case and issued a no further action letter dated July 14, 2011. The issuance of the no further action letter indicates that the regulatory agency concluded that this site does not pose a risk to people or the environment. **The closed case is considered a HREC because the lumber has been removed, associated contamination has been removed, and the overseeing regulatory agency concluded that this site does not pose a risk to people or the environment.**

Listings Outside of the Subject Property

C5, Anderson Valley Equipment – This listing is a leaking underground storage tank (UST) for an equipment rental company located at 28313 Highway 101 about 112 feet north of the subject properties. The UST was removed and cleanup actions were conducted to remediate contaminated areas. The Regional Water Quality Control Board (RWQCB) closed the case and issued a no further action letter dated December 17, 1996. The issuance of the no further action letter indicates that the regulatory agency concluded that this site does not pose a risk to people or the environment. **The closed case is considered a HREC because the UST and associated contamination has been removed, and the overseeing regulatory agency concluded that this site does not pose a risk to people or the environment.**

C7, Jet Trucking – This listing is a leaking underground storage tank (UST) for an equipment rental company located at 28181 Highway 101 about 114 feet north of the subject properties. The USTs were removed and cleanup actions were conducted to remediate contaminated areas. The Regional Water Quality Control Board (RWQCB) closed the case and issued a no further action letter dated November 7, 1995. The issuance of the no further action letter indicates that the regulatory agency concluded that this site does not pose a risk to people or the environment. **The closed case is considered a HREC because the USTs and associated contamination has been removed, and the overseeing regulatory agency concluded that this site does not pose a risk to people or the environment.**

11, United Rentals – This listing is for the equipment rental facility located adjacent to the eastern side of the subject properties at 27775 Dutcher Creek Road. The listing is for operation permits, the storage and use of chemicals, and the presence of above ground storage tanks (ASTs). The listing includes several reporting violations but no listings for spills or releases. **This**

offsite listing is not considered a REC, HREC, or CREC because this site would not be able to affect the subject property.

All of the rest of the listings are for operating permits or site investigations that are not close enough to affect the subject properties.

In summary, none of the above-summarized listings qualify as a REC or CREC. The removal of the lumber mill and associated contamination from the Dutcher Creek parcel is considered a HREC because the contamination has been removed with no further action required by the regulatory agency.

Orphan Sites

Sites not plotted due to poor or inadequate address information are referred to as “orphan sites” or “unmappable properties.” The records search did not identify any orphan sites.

4.3 Other Records Reviewed

ESA accessed websites for the SWRCB (GeoTracker) and Department of Toxic Substance Control (EnviroStor) that track hazardous materials sites. In addition, the regulatory agency records search provides historical aerial photographs, historical topographic maps, and a search of Sanborn insurance maps and city directories for review. The results of the review of these records are discussed below.

Louisiana Pacific Kelly Gate

The SWRCB GeoTracker website listed the Louisiana Pacific Kelly Gate site, which formerly operated on the subject property. The documents on the website were reviewed but were limited to the closure documents and no maps. ESA conducted a file review at the RWQCB in March 22, 2019, to acquire site investigation and cleanup results, along with pre-closure maps. Note the SWRCB locates the property at 27821 Dutcher Creek Road, as opposed to the title search records that locate the property at 28721 Dutcher Creek Road. The results are summarized below.

Site History

Prior to its purchase in 1951 by the Kelly family, the property was owned by Ombaum Livestock Company (SCS, 2006). In the late 1950s, the Cloverdale Sawmill was built approximately one half mile to the east of the subject properties. Between 1951 and 1969, the Dutcher Creek property were used as a checkpoint for trucks carrying logs to the mill on Kelly Road, which at that time continued east directly to the mill. On the Dutcher Creek parcel, various ASTs and USTs were installed and used, and truck maintenance occurred until about 1972.

Masonite purchased the property in 1971. Between approximately 1972 and 1976, Kelly Road was severed at the location of Highway 101 and property use on the Dutcher Creek parcel became limited to truck parking. During Masonite’s ownership, the property was leased to trucking

companies until 1985. Louisiana Pacific purchased the property in 1986. Kelly Gate Associates purchased the property from Louisiana Pacific in 1994 and is the current property owner.

Property Investigation, Cleanup, and Closure

The SWRCB Water Quality Order describing the case investigation, cleanup, and closure identifies the site as the Louisiana Pacific Kelly Gate site (SWRCB, 2011). The forestry operations resulted in soil and groundwater contamination associated with five USTs, an unknown number of ASTs, three waste sumps, equipment washdown pads, chip seal areas, and areas of stained surface soil.

The North Coast RWQCB and the Sonoma County Department of Environmental Health (SoCoDEH) required that the property owners conduct site investigation and remediation beginning in 1992. The site investigation activities included drilling soil borings, analyzing soil samples, and installing and sampling groundwater monitoring wells. Groundwater from an existing 585-foot-deep onsite industrial well with a 20-foot-deep surface sanitary seal was also analyzed.

After conducting soil and groundwater investigation, 18,000 cubic yards of contaminated soil was excavated and bioremediated onsite. Bioremediation of contaminated soil uses microbes in soil, along with added nutrients and water, to biodegrade the contaminants to non-toxic compounds. Following excavation, soil samples were collected from the sidewalls and bottom of the excavations and analyzed to assess the extent of cleanup. In addition, monitoring wells were sampled and analyzed for total petroleum hydrocarbons (TPH) as gasoline, diesel, and motor oil, and benzene, toluene, ethylbenzene, and xylenes (components of fuel).

Based on the analytical results, the State Water Resources Control Board (SWRCB) concluded that the site qualified as a low-threat closure site and issued Order WQ 2011-0010-UST, in 2011, and closed the two cases the RWQCB had opened for the property.

The criteria for closure under the low threat case closure policy is as follows:

- a) The unauthorized release is located within the service area of a public water system;
- b) The unauthorized release consists only of petroleum;
- c) The unauthorized (“primary”) release from the UST system has been stopped;
- d) Free product has been removed to the maximum extent practicable;
- e) A conceptual site model that assesses the nature, extent, and mobility of the release has been developed;
- f) Secondary source has been removed to the extent practicable;
- g) Soil or groundwater has been tested for methyl tert-butyl ether (MTBE) and results reported in accordance with Health and Safety Code section 25296.15; and
- h) Nuisance as defined by Water Code section 13050 does not exist at the site.

Closure under the low threat closure criteria means that that some residual contamination may still be present in soil at the site but at levels the SWRCB has concluded would not pose a risk to people or the environment for the site use at that time, which was industrial. Note that eleven years has passed since site closure and microbial action will have further reduced residual concentrations.

With the investigation, remediation, and closure order, this site is considered a HREC. However, in our opinion, the Tribe should also consider this property to be a business environmental risk because residual contamination and possibly higher levels of contamination in areas not previously sampled may be encountered if the property is developed. We recommend the contractor developing the site prepare and implement a soil management plan to establish protocols for managing contaminated soil, if encountered.

As discussed further below in Section 6, Interviews and user provided information, up to 9 feet of clean fill was subsequently placed over the property, further restricting access to the residual contamination at depth.

Historical Aerial Photographs

Historical aerial photographs are available for the years 1952, 1953, 1956, 1957, 1965, 1968, 1970, 1971, 1973, 1974, 1976, 1977, 1979, 1983, 1987, 1993, 1998, 2005, 2009, 2010, 2012, 2014, 2016, 2018, and 2020, included in **Appendix B** (Envirosite 2021). The 1973, 1976, and aerial photographs are of poor quality, do not show details, and are not discussed below.

In the **1952 and 1953 aerial photographs**, the Dutcher Creek parcel is undeveloped and Kelly Road does not yet exist. One dirt road crosses the Dutcher Creek parcel to the residence on the Kelly parcel. No other development is present on the subject properties. The surrounding area is mostly undeveloped open space with scattered residences and some agriculture. The area just to the north shows three structures with vegetation cleared from the immediately surrounding area. The land use is uncertain. However, the light coloring of the cleared area indicates no heavy spillage of fuels or motor oils.

The **1956 and 1957 aerial photographs** show Kelly Road and the lumber mill facility offsite and north of the subject properties. The trucking and equipment operations are visible on the Dutcher Creek parcel. The uncertain operations on the parcel to the immediate north have ceased as the structures have been removed.

The **1965 and 1966 aerial photographs** show increased development on the Dutcher Creek parcel. Some dark areas suggestive of soil staining are visible along the western portion and in the general center area of the Dutcher Creek parcel. The Kelly parcel has a barn in addition to the residence. The parcel immediately north of the Dutcher Creek parcel has been developed with additional lumber mill associated operations; the wood scrap burner teepee still present on that parcel is visible. The previous alignment of Highway 101 is under construction.

The **1968 aerial photograph** is of poor quality and does not appear to show changes.

The **1970 aerial photograph** is of poor quality but does indicate the construction of Highway 101 along the north side of the subject properties has been completed in an alignment different from the current alignment.

The **1971 through 1979 aerial photographs** show numerous structures on the Dutcher Creek parcel, mostly along the southern fence with the Kelly parcel. The Kelly parcel has three

structures. The parcel north of the Dutcher Creek parcel has a few structures and numerous vehicles and equipment.

The **1983 aerial photograph** is of marginal quality and shows Highway 101 and Dutcher Creek Road in their current alignment. No obvious changes are visible on the subject properties.

The **1987 aerial photograph** is of marginal quality. Kelly Road no longer crosses Highway 101. Most structures and equipment have been removed from the Dutcher Creek parcel. The structures associated with the former residences shown on Figure 1 appear to be the only remaining structures on the subject properties.

The **1993 aerial photograph** is of good quality and verifies all of the structures other than the residences and all of the trucks and equipment have been removed from the Dutcher Creek parcel. Several large soil piles are visible. The records review indicates these were stockpiles of excavated contaminated soil in the process of being bioremediated. The current United Rentals facility is present southeast of the subject properties.

The **1998 aerial photograph** shows the biotreatment of soil has been completed and the piles of treated soil have been graded flat. No other changes are visible and the subject properties are in their current condition.

The **2005 aerial photograph** shows the Dutcher Creek parcel has received the several feet of fill discussed below in the Section 6, *Interviews and User Provided Information*. The vineyards along the south side of the Kelly parcel have been installed. No other changes are visible.

The **2005 aerial photograph** shows the southern portion of the Dutcher Creek parcel has received fill to the parcel's current level. No other changes are visible.

The **2009 through 2020 aerial photographs** show no substantive changes.

Historical Topographic Maps

Historical topographic maps are available for the years 1938, 1943, 1944, 1960, 1968, 2012, 2015, 2018, and 2021, and are included in Appendix B. Note that the location of the present day residence on the subject property is identified with a red box.

The 1938 topographic map shows no structures on the subject properties. The 1943 and 1944 topographic maps shows two structures on the Kelly parcel. The 1960 topographic map shows Kelly Road has been constructed and extends east to the offsite lumber mill located further east of the subject properties. Two structures are present on the Dutcher Creek parcel, consistent with the lumber check in gate and trucking operations. The 2012 through 2021 topographic maps use the more recent topographic map format that shows much less detail. Roads and waterways are depicted but no structures are depicted.

Fire Insurance Maps

Fire insurance maps were designed to assist fire insurance agents in determining the degree of hazard associated with a particular property and therefore show the size, shape, construction, and use of dwellings, commercial buildings, and factories. However, fire insurance maps were not prepared for the subject properties.

City Directories

A city directory search was conducted for the subject and nearby parcels (Envirosite 2022; Geosearch 2019). The city directory search report is provided in Appendix B.

The 235 Kelly Road address does not have any listings. Don Nolan Trucking is listed at 238 Kelly Road and is assumed to be on the Dutcher Creek parcel. Louisiana Pacific Corporation is listed at 100 Kelly Road and is the lumber mill parcel located immediately north of the Dutcher Creek parcel. All other city directory listings are the names of individuals, which does not indicate a particular use of chemicals.

The 27821 Dutcher Creek parcel lists Cooper Trucking. Becky's World Product (1981-1985) and New World Manufacturing (1985-2016) are listed at the adjacent 27627 Dutcher Creek Road property; Assembly Subcontracting (2001-2011), Farmyard Feed (2016), and True Nature Group (2016) are listed at the 27705 Dutcher Creek Road address to the southeast. These listings are all on the south side of a hill separating them from the subject properties, meaning any environmental issues for these adjacent properties would not be able to affect the subject properties. No industrial listings are listed upslope or upgradient of the subject properties.

4.4 Physical Setting

The following sections provide information about the physical setting of the subject properties. Geotechnical information is not a required element of ASTM E1527-21 Phase I assessments and is not included in this Phase I assessment.

Topography and Hydrology. Elevations at the subject properties range from 310 feet above mean sea level on the northeast border of the Dutcher Creek parcel where the drainage channel exit the parcel to 508 feet above mean sea level on the southeast hill on the Kelly parcel. The Kelly parcel has two hills: one on the southeast portion of the parcel and one on the western portion of the parcel. Both drainage to a central drainage, which then flows northeast and bisects the Dutcher Creel parcel. The Dutcher Creek parcel is mostly flat, gently sloping to the northeast.

Soils, Geology, and Hydrology. The hilly portions of the parcel are underlain by Franciscan mélange, a mix of sandstone, shale, conglomerate, chert, greenstone, and greywacke (silty sandstone). The flatter Dutcher Creek parcel is covered with up to 9 feet of fill.

Flood Hazard. The subject properties are not located within the 100-year flood zone (one percent chance of being flooded in any given year).

SECTION 5.0

Site Reconnaissance

5.1 Methodology and Limiting Conditions

Michael Burns, PG, CEG, CHG, from Environmental Science Associates conducted the site reconnaissance on September 2, 2022, to assess existing conditions. Access to the subject property was provided by the Tribe. The subject properties are located on the south corner of the intersection of Dutcher Creek Road and Kelly Road in Cloverdale, California, which both provide access to the subject properties. Weather at the time of the site reconnaissance was sunny. The site conditions discussed below are limited to readily apparent environmental conditions observed. Items of interest are shown on Figure 1, *Subject Properties*.

5.2 General Site Setting

The subject properties consist of the three parcels shown on Figure 1: the Kelly parcel outlined in blue, the Dutcher Creek parcel outlined in red, and a portion of Kelly Road outlined in yellow. The surrounding area is mostly rural with scattered residences, a wine wholesale facility to the north, some vineyards to the south, Highway 101 to the northeast, and a U-Haul rental facility and pet food supply facility to the east. The subject properties are located just south of the city limits for the City of Cloverdale.

5.3 Site Observations

The observations for the subject properties are discussed in the following subsections subdivided by parcel. The observed conditions for the subject properties, along with photographs, are described below and organized by parcel. Overall, the subject properties are vacant. The only developments are the unpaved Kelly Road along the northwest side of the subject properties and one water supply well on the Dutcher Creek parcel.

Kelly Parcel

The Kelly parcel is mostly oak forest with one grassland area with a northeast-flowing ephemeral creek (water only flows during or for a short duration after rain) bisecting the parcel from southwest to northeast. The area around the northeast part of the drainage was previously developed with one a single-wide trailer residence, a septic tank and leachfield, and two wooden barns. All of the structures were removed during the winter of 2020/2021. With the exception of one empty, disconnected propane tank, the Kelly parcel has no structures. No pits, ponds, spills, stained soil, stressed vegetation, unusual odors, or chemical containers were noted. The photographs below shows the area where the structures were previously located. Note vegetation has reclaimed the area.

Access to the Kelly parcel is from Kelly Road on one dirt road along the northeast side of the parcel. The empty, disconnected propane tank is located along the fence on the northeast border of the parcel. The photographs below show both.

The photographs below show the forested area and dry creek.

Dutcher Creek Parcel

The Dutcher Creek parcel was previously part of a trucking operations and maintenance facility associated with the lumber mill offsite and further to the east. Almost all of the structures, materials, and infrastructure have been removed, except for the few items discussed on the pages further below. Photographs showing the general area are provided below. The views are from the south corner of the Dutcher Creek parcel.

As indicated on Figure 1, a residence and garage were previously located along the northwest side of the parcel. All of the structures have been removed, except for a septic tank and associated piping to the leach field, discussed further below. The photographs below show the former residence area. The photographs on the next page show the excavations that expose the septic tank and associated piping. No spills, stained soil, stressed vegetation, unusual odors, or chemical containers were noted. Note that other than the excavations, vegetation has reclaimed the area.

The Tribe excavated several pits to locate and expose the septic tank and leach field, as shown in the photographs below and on the next page. The septic tanks and leach field are scheduled for removal. No ponded liquids, spills, stained soil, stressed vegetation, unusual odors, or chemical containers (other than the septic tank) were noted.

A pile of about 20 tires is located just east of the leach field excavations, as shown in the photograph below. The tires are considered a de minimus condition because the tires can be recycled as non-hazardous waste.

Three pickup truck beds are located along the fence along Kelly Road, north of the former residence. The beds contain discarded lumber that can be recycled. No discolored wood, stained soil, or stressed vegetation was noted.

One water supply well with three storage tanks, pump equipment, a bathtub, and two 55-gallon drums labeled as non-hazardous waste are located along the southwest parcel border, as shown on Figure 1. The drums are assumed to contain soil containerized from when the well was installed. No stained soil, stressed vegetation, unusual odors, or chemical containers were noted, as shown in the photographs below.

The creek that drains the Kelly parcel is routed to a straight drainage channel that bisects the Dutcher Creek parcel, as visible on Figure 1 and shown in the photographs below. One metal culvert pipe is present in the center of the drainage and parcel. Otherwise, no ponded liquid, spills, stained soil, stressed vegetation, unusual odors, chemical containers, or trash were noted. The top photograph is to the northeast and shows a portion of the metal culvert pipe and the wood scrap burner teepee located offsite to the north. The bottom photograph is to the southwest with the Kelly parcel in the distance.

As previously discussed, soil from the recent construction of the wholesale wine distributor building just north of the subject properties was placed along the west side of the Dutcher Creek parcel for later use in developing the subject properties. No spills, stained soil, stressed vegetation, unusual odors, or chemical containers were noted. The soil pile is shown in the photographs below. Note that vegetation covers the pile. As discussed in Section 6.5, *Imported Soil Pile Analytical Results*, chemical testing indicates the imported fill does not have concentrations of any chemicals that exceed regulatory action levels.

The south corner of the Dutcher Creek parcel has a small concrete foundation from a previously removed structure and a pile of about 20 tires. The tires are considered a de minimus condition because the tires can be recycled as non-hazardous waste. Other than the tires, no spills, stained soil, stressed vegetation, unusual odors, or chemical containers were noted in this area.

Kelly Road

The portion of the privately owned dirt Kelly Road adjacent to the Kelly and Dutcher Creek parcels is also part of the proposed project. Other than the road, this parcel has no development. The top photograph shows the entrance gate and looking southwest. The bottom photograph is from the far southwest part of the road and looking northeast. No pits, ponds, spills, stained soil, stressed vegetation, unusual odors, or chemical containers were noted with the exception of the abandoned car, discussed on the next page.

As shown on Figure 1, the abandoned car shown below is present in a turnout on the northwest side of Kelly Road just before the gated entrance. No spills, stained soil, or chemical containers were noted and the presence of the car is not anticipated to affect the subject properties. The car and tires are considered a de minimus condition because both can be recycled. The county is scheduled to remove the car.

Surrounding Area

As previously discussed, the parcel adjacent to the north was previously associated with lumber mill and trucking operations. Other than the wood scrap burner teepee shown below and on Figure 1, nothing remains from the former lumber mill and trucking operations and no spills, stained soil, stressed vegetation, unusual odors, or chemical containers were noted in this offsite area.

5.4 Results of Site Reconnaissance

Other than the dirt Kelly Road and the water supply well, the subject properties are vacant and undeveloped. Some discarded tires are present but are considered a *de minimus* condition because the tires can be recycled. The septic tank and leach field had no soil stains, stressed vegetation, or unusual odors, and are scheduled to be removed. The areas of former residences and lumber facility do not show indications on environmental issues and vegetation has reclaimed those areas. **In summary, no RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal.**

SECTION 6.0

User-Provided Information

The following sections highlight information provided during interviews conducted for the project. Interviews included contacting individuals familiar with the subject properties and knowledgeable of historic and existing conditions relative to hazardous materials. The objective of the interview process is to obtain additional information regarding the history and current uses of the subject parcel. Much of the information acquired has been incorporated into various sections of this report.

6.1 Interview with Tribe and Realtor

Mr. David Smith-Ferri, the Tribe's manager of grants and contracts, provided information and arranged for access. Mr. Smith-Ferri stated that the Tribe is considering developing the property for residential use. The pile of fill on the western portion of the Dutcher Creek parcel was brought over to the parcel from the construction site just to the north. It was tested for chemicals; no chemicals were detected above regulatory action levels. The fill will be used for raising the level of the roads on the subject properties. The Tribe demolished the single-wide trailer, septic tank and two wooden barns on the Kelly parcel during the winter of 2020/2021.

He referred ESA to their realtor, Mr. Phil Wright, for further information. Mr. Wright stated that the parcels would be annexed into the City. Water supply for the project would be from the City's municipal water supply and not the onsite water supply well.

6.2 Interview with Previous Dutcher Creek Parcel Owner

Ms. Linda Taverner of KGA, the previous owner of the Dutcher Creek parcel, was interviewed by telephone on March 24, 2019, and provided additional information by email. Ms. Taverner has been associated with the parcel since its purchase from Louisiana Pacific and has knowledge of its use since many years before that. Ms. Taverner confirmed the ownership sequence, land use, and cleanup, summarized in Section 4.3, *Other Records Reviewed*. In addition, she described the addition of fill across the southern approximately 60 percent of the parcel that occurred after the cleanup actions were complete and the regulatory agency closed the case. The fill was from the construction of the Dry Creek Rancheria parking garage in Geyserville, and from soil and rock debris from a landslide that had covered a portion of a road. The materials consisted of clean soil and rock. The thickness ranged from 9 feet along Dutcher Creek Road to none at the far southwestern border. The purpose was to create a flat surface across what had been a sloping surface. Ms. Taverner stated that the two drums observed next to the water well are associated

with the installation of monitoring wells during the prior site cleanup. Samples from the wells did not detect contaminants; therefore, the waste in the drums would not be hazardous and has been labeled accordingly. The provided information was incorporated into the previously described site reconnaissance.

6.3 Interview with Former Kelly Parcel Caretaker

Ms. Lilian Hargrove was the former caretaker of the Kelly parcel and had lived in the residence on the parcel with her husband for some years. The mobile home residence and associated outbuildings have since been removed. Other than the minor use of workshop chemicals in the former barns, the caretakers did not use any other chemicals other than household cleaners. Fuel for heating and cooking for the residence was provided by an above-ground propane tank, which is still present on the site but is empty and disconnected. There were no underground storage tanks.

6.4 Interview with Former Kelly Parcel Owner

Mr. Joseph Ng, the former owner of the Kelly parcel stated that the parcel was previously used to raise animals, including sheep, cattle, chickens, llamas, and dogs. The only structures on the parcel during his ownership has included the mobile home and two barns. He has no knowledge of any underground storage tanks, above ground storage tanks other than the propane tank, or chemical contamination issues.

6.5 Imported Soil Pile Analytical Results

As previously discussed, soil from the recent construction of the wholesale wine distributor building just north of the subject properties was placed along the west side of the Dutcher Creek parcel for later use in developing the subject properties. Sixteen soil samples were collected and analyzed, composited into 4 composite samples, and tested for the following chemical parameters using the cited analytical test methods (EBA 2020):

- Total petroleum hydrocarbons (TPH) as gasoline, diesel, and motor oil by 8015M
- Volatile organic compounds (VOCs) by 8260B
- Semivolatile VOCs (SVOCs) 8270
- Metals by 6020
- Polychlorinated biphenyls (PCBs) by 8082

The analytical tests did not detect any TPH, VOCs, or SVOCs, above laboratory detection limits. Various metals were detected but all at concentrations consistent with naturally occurring background levels. Therefore, none of the testing results exceed regulatory action levels and the imported fill has unrestricted use.

SECTION 7.0

Findings and Opinions

7.1 Findings and Opinions

The subject property was inspected on September 2, 2022. The following observations and conclusions apply to the site inspection:

- The Kelly parcel is vacant and undeveloped except for one empty and disconnected above ground propane tank. The previous residence and two barns have been removed and vegetation has grown over the former developed area. No pits, ponds, spills, stained areas, unusual odors, or areas of stressed vegetation were noted. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal.**
- The Dutcher Creek parcel is vacant and undeveloped except for one septic tank and associated piping to the leach field, and one water supply well. Facilities associated with the previous trucking operation have been removed and vegetation has grown over the former developed area. No pits, ponds, spills, stained areas, unusual odors, or areas of stressed vegetation were noted. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal.**
- The portion of Kelly Road that is part of the proposed project is a dirt road with a gate that can be locked at the eastern end. No other development is on this parcel. One abandoned car is present but has not leaked any fuel or motor oil; this car is scheduled to be removed. **No RECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal.**

A commercial government records database service searched relevant federal, State, and local regulatory agency lists for listings of the subject property, and for nearby properties within the appropriate ASTM 1527 standard search distances. In addition, regulatory agency websites were checked to provide additional information. Interviews with persons knowledgeable about the subject properties were conducted to provide additional information. The records search and interviews returned the following information:

- The search of regulatory records revealed no environmental issues for the Kelly parcel and Kelly Road. The search of regulatory records provided site investigation, cleanup, and closure information for the former lumber mill-associated trucking operations that formerly occupied the Dutcher Creek parcel. Underground storage tanks (USTs), above-ground storage tanks (ASTs) and contaminated soil have been removed from the parcel.

The regulatory agency issued case closure and a no further action letter indicating that the former trucking operation does not pose a risk to people or the environment. Residual levels of fuel and or motor oil may be present. **The former trucking operations are considered a HREC that would not adversely affect the subject properties or prevent redevelopment activities. However, in our opinion, the Tribe should also consider this parcel to be a business environmental risk because residual contamination and possibly higher levels of contamination in areas not previously sampled may be encountered if the parcel is developed. We recommend the contractor developing the parcel prepare and implement a soil management plan to establish protocols for managing contaminated soil, if encountered.**

- Two offsite properties located just north of the Dutcher Creek parcel previously had leaking USTs. The USTs were removed along with contaminated soil. The regulatory agency issued case closure and no further action letters indicating that the two sites do not pose a risk to people or the environment. **These two sites are considered HRECs due to their proximity to the Dutcher Creek parcel. However, given that the sites have cleaned up to the satisfaction of the regulatory agency, these two sites are not anticipated to have adversely affected the subject properties.**

7.2 Data Gaps

ESA attempted to obtain reasonably ascertainable information regarding the subject properties and the surrounding environs. There were no data gaps identified that could affect the identification of RECs, HRECs, or CRECs.

SECTION 8.0

Report Authors and Qualifications

8.1 Report Authors and Signatures

This section includes qualification statements of the environmental professionals responsible for conducting the Phase I assessment and preparing this report.

Mr. Michael Burns, PG, CEG, CHG, of ESA conducted the data review for the subject property, conducted the site reconnaissance, and prepared the Phase I environmental site assessment report. Mr. Burns has over 30 years of experience in environmental site investigations, characterizations, and assessments, including Phase I environmental site assessments.

The work conducted and the report written by Mr. Burns was reviewed by Mr. Luke Evans. Mr. Evans has over 20 years of experience in environmental site investigations, characterizations, and assessments, including Phase I Environmental Site Assessments.

Mr. Burns and Mr. Evans declare that, to the best of their professional knowledge and belief, they meets the definition of Environmental Professional as defined in 40 CFR §312.10. Mr. Burns has the specific qualifications based on education, training, and experience to assess a parcel of the nature, history, and setting of this parcel. With the assistance of Mr. Evans, he has developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Principal Analyst/Reviewer:

Michael G. Burns, PG #4532, CEG #1846, CHG #280

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History :

Site entered into the LOP on 3/15/16. One 750 gallon waste oil tank was removed on 12/9/16 and one 1,100 diesel tank was removed on 12/14/16. Holes noted in tanks and soil contamination was reported. Site investigation included 6 soil borings and the installation of four monitoring wells. The area of the former waste oil tank was over-excavated at the time of the tank removal. Approximately 469 tons of contaminated soil was properly disposed. Site Management Requirements: Contingency planning is required for worker safety and waste disposal if excavating in area(s) of residual contamination. The Building Department has been notified. Newly proposed water supply wells may require siting and design by a qualified professional engineer or geologist. Sonoma County Permit and Resource Management Department (Permit Sonoma) has been notified. A Soil and Groundwater has been submitted and is on Geotracker. The site meets the Low Threat Closure Policy as follows: All General Criteria are met. Groundwater Specific Criteria is met by criteria 1. Vapor Intrusion to Indoor Air Criteria is met by the exemption as the site is an active fueling facility. Direct Contact and Outdoor Air Exposure Criteria 3a. The above findings were reviewed and concurred with by the LOP Licensed Professional. All monitoring wells have been properly destroyed and all investigative derived wastes have been properly disposed. SITE CLOSED ON 5/21/2021

Longitude :	-123.00903

Site History :

Site entered into the LOP on 3/15/16. One 750 gallon waste oil tank was removed on 12/9/16 and one 1,100 diesel tank was removed on 12/14/16. Holes noted in tanks and soil contamination was reported. Site investigation included 6 soil borings and the installation of four monitoring wells. The area of the former waste oil tank was over-excavated at the time of the tank removal. Approximately 469 tons of contaminated soil was properly disposed. Site Management Requirements: Contingency planning is required for worker safety and waste disposal if excavating in area(s) of residual contamination. The Building Department has been notified. Newly proposed water supply wells may require siting and design by a qualified professional engineer or geologist. Sonoma County Permit and Resource Management Department (Permit Sonoma) has been notified. A Soil and Groundwater has been submitted and is on Geotracker. The site meets the Low Threat Closure Policy as follows: All General Criteria are met. Groundwater Specific Criteria is met by criteria 1. Vapor Intrusion to Indoor Air Criteria is met by the exemption as the site is an active fueling facility. Direct Contact and Outdoor Air Exposure Criteria 3a. The above findings were reviewed and concurred with by the LOP Licensed Professional. All monitoring wells have been properly destroyed and all investigative derived wastes have been properly disposed. SITE CLOSED ON 5/21/2021

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Chemicals

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your EnviroSite account representative for a complimentary site report containing all of the details available.

Chemical Name : Acetylene
CAS Number : 74-86-2
Hazard Type(s) : Fire, Sudden Release of Pressure, Reactivity
Max Daily Amount / Unit : 0-2599 Cubic Feet
Average Daily Amount / Unit : 0-2599 Cubic Feet
Days Onsite : 365
Physical State(s) : Gas, Pure

Chemical Name : Argon, Liquid
CAS Number : 7440-37-1
Hazard Type(s) : Sudden Release of Pressure
Max Daily Amount / Unit : 0-2599 Cubic Feet
Average Daily Amount / Unit : 0-2599 Cubic Feet
Days Onsite : 365
Physical State(s) : Gas, Pure

Chemical Name : Diesel Fuel No. 2
CAS Number : 68476-34-6
Hazard Type(s) : Fire
Max Daily Amount / Unit : 600-1199 Gallons
Average Daily Amount / Unit : 120-599 Gallons
Days Onsite : 365
Physical State(s) : Liquid, Pure

Chemical Name : Ethylene Glycol
CAS Number : 107-21-1
Hazard Type(s) : -
Max Daily Amount / Unit : 60-119 Gallons
Average Daily Amount / Unit : 12-59 Gallons
Days Onsite : 365
Physical State(s) : Liquid, Pure

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

AST - CA (cont.)

Description :

"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Notes :

Returned to compliance on 05/29/2020. Owner/Operator failed to meet one or more of the following spill container requirements: install or maintain spill container which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill container, and is resistant to galvanic corrosion; did not perform tightness test at installation, every 12 months thereafter, or within 30 days after a repair; did not have tested using manufacturer's guidelines, industry codes, engineering standards, or method approved by PE, or was not tested by a certified UST service technician; or failed to maintain testing records for 36 months. Install or repair spill buckets to meet all of the listed requirements, have tightness tested using approved method, by certified UST service technician, and submit documentation to verify compliance. Maintain all testing records for 36 months.

Division : Sonoma County Fire & Emergency Services Department
Program : UST

Violation Date : 2018-06-01

Citation : HSC 6.7 25290.1(d) - California Health and Safety Code, Chapter 6.7,
Section(s) 25290.1(d)

Description : Failure of a UST system installed on or after July 1, 2004 to be designed and constructed with a monitoring system capable of detecting the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment.

Notes : Returned to compliance on 07/31/2018. S3 smart sensor for Clear diesel vent failed to detect high liquid. Repair or replace sensor within 30 days.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description**Source Description :**

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History :

This is an informational file, containing information provided by the California Department of Health Services, Toxic Substances Control Program, in 1990 regarding hazardous waste management at the facility. Regional Water Quality Control Board staff did not take direct action regarding the information except to review the material and informally agree with proposed consent agreement on June 11, 1990.

Site Details

Superfund Site :	MGM BRAKES CLOVERDALE, CA
Street Address :	HWY 101 & SANTANA RD CLOVERDALE, CA 95425

Site Status :

The site's long-term remedy for groundwater included excavation and off-site disposal of polychlorinated biphenyl (PCB)-contaminated soils, demolition of the casting plant, decontamination of PCB-contaminated equipment, source identification, and installation of wells to identify the extent of contamination. EPA later updated the remedy to include monitored natural attenuation and allow deeper contaminated soils to remain in place; previous excavations found removal to be difficult and impractical. Natural attenuation describes a variety of in-place processes that, under favorable conditions, act without human intervention to reduce the mass, toxicity, mobility, volume or concentration of contaminants in groundwater. Demolition of the casting plant finished in 1992. A temporary cap covered the concrete building floor slab until its demolition in 1993. A well system dewatered the area to allow for subsurface soil excavation by transferring groundwater to an on-site treatment plant. Dewatering took place in 1993. Excavation of contaminated soils finished in 1994. EPA could not identify the source of groundwater contamination. The California Regional Water Quality Control Board (RWQCB) has reduced groundwater monitoring requirements as contamination at the site decreases. Monitoring of the natural attenuation remedy is ongoing.

Site Background :

The 5-acre MGM Brakes site is a former aluminum brake manufacturing and casting facility in Cloverdale, California. Facility activities contaminated groundwater and soil with volatile organic compounds (VOCs), including benzene, chlorobenzene, trichloroethylene (TCE) and vinyl chloride. Following construction of the remedy, monitoring is ongoing.

Sub Area Name : N/R
Document Type : National Priority List Delisting Document

Comments :

The U.S. Environmental Protection Agency, Region 9 (EPA), prepared the Final Close Out Report (FCOR) to document the criteria for site completion have been met as all remedial decision documents and response actions have been completed at the site, and the FCOR concludes that no further Superfund response is needed to protect human health and the environment. Based on its review of the FCOR, DTSC conveyed in a December 27, 2018 letter to EPA that it concurred with the proposed deletion of the site from the National Priorities List.

Comments :

The Case Evaluation and Recommendation for Case Closure document provides the site background, summarizes the site characterization, remedial actions, and verification monitoring conducted at the site, and recommends the North Coast Regional Water Quality Control Board close the case. A formal public notice will be issued and there will be a 30-day noticing period. If there are no significant comments, the North Coast Regional Water Quality Control Board will close the case and a remaining enforcement order will be rescinded.

 Area Name : PROJECT WIDE
 Sub Area Name : N/R
 Document Type : Record of Decision w/ESD

Comments :

The U.S. Environmental Protection Agency (EPA) determined that land use restrictions are no longer needed to achieve protectiveness at the Site based on a re-evaluation of potential risks to human health and the environment during the 2013 five-year review. EPA issued the Explanation of Significant Differences (ESD) to remove the requirement for land use restrictions that was identified as part of the Site remedy by a 1995 ESD.

Completed Date : 2016-03-25
 Area Name : PROJECT WIDE
 Sub Area Name : N/R
 Document Type : Land Use Restriction

Comments : The Regional Water Quality Control Board, North Coast Region, entered into a Covenant and Environmental Restrictions on Property with Cloverdale Property LLC, the site owner, which was recorded with Sonoma County.

Comments : EPA provided notification of a change in EPA Remedial Project Manager for the site.

Completed Date : 2012-02-17
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Land Use Restriction - Site Inspection/Visit
Comments : N/R

Completed Date : 2010-11-10
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Land Use Restriction - Site Inspection/Visit

Comments : DTSC visited the Site and observed the surface soils appeared undisturbed, and the Site remains undeveloped, and there was no evidence of any activities prohibited by the Deed Restriction.

Completed Date : 2009-03-26
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Land Use Restriction - Site Inspection/Visit

Comments : The pavement appeared to be in good condition except for some minor cracks due to weed growth. The pavement is a remnant of the old parking lot used as part of the treatment pad. It is not part of an approved cap. The surface soils appeared undisturbed, and the property remains undeveloped There was no evidence of any activities prohibited by the Deed Restriction.

Source Description

Source Description :

DTSC EnviroStor is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Source Description

Source Description :

The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

SLIC REG 1 - CA

Facility Name :	MGM BRAKES ASSEMBLY PLANT
Facility Address :	1184 CLOVERDALE BOULEVARD, SOUTH, CLOVERDALE, CA 95425
County :	Sonoma

Site Details

Status Date :	2009-05-20
Status :	Open - Remediation
Begin Date :	1994-10-17
Global ID :	T0609793349
Region :	REGION 1

Site History : This facility is an active truck brake manufacturing facility. Environmental investigations at the site have determined that solvents were release to the soil , groundwater and surface water at this site. Remediation of the contamination includes groundwater extraction, excavation in source areas and sub slab vapor extraction.

RB Case Number :	1NSO597
Potential Media Affected :	Aquifer used for drinking water supply

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

HIST PWS ENF

Historical Public Water Supply locations with Enforcement Violations

Environmental Protection Agency

(800) 426-4791

List of Safe Drinking Water Information Systems (SDWIS) with enforcement violations that are no longer in current agency list.

NWIS

National Water Information Systems

United States Geological Society

(703) 648-5953

Information on all water resources for the United States. This database contains all current and historical data for the nation.

PWS

Public Water Supply

Environmental Protection Agency

(800) 426-4791

Safe drinking water information Systems

PWS ENF

Public Water Supply locations with Enforcement Violations

Environmental Protection Agency

(800) 426-4791

Safe drinking water information Systems with enforcement violations

WELLS - GAMA - CA

California Groundwater Ambient Monitoring Assessment

State Water Resources Control Board

916-341-5791

Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3

Flood data

Environmental Protection Agency

(202) 566-1667

Q3 Flood Data

HYDROLOGIC UNIT

Hydrologic Unit Maps

USGS

The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI

National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

SSURGO

Detailed Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
Detailed Soil Data Map

STATSGO & MUI

General Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
General Soil Data Map

USGS GEOLOGIC AGE

USGS Digital Data Series DDS
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
USGS Digital Data Series DDS: Geologic Age and Rock Stratigraphic Unit

DAMS - CA

California Dam Inundation Maps
Department of Water Resources
916-845-8275
Dam inundation maps show the maximum extent of damage of a flood wave from a dam failure

OIL & GAS WELLS - CA

Oil and Gas Well Data
State of California Department of Conservation
916-327-1042
Oil and gas well locations and detail for all 6 districts

RADON

National Radon Database
U.S. Environmental Protection Agency
215-814-2469
A study of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

RADON - CA

Radon tested locations in California
California Department of Health Services
(916) 449-5674
A table of long term and short term indoor radon measurements

RADON EPA

RADON EPA
U.S. Environmental Protection Agency
215-814-2469
EPA list of Radon zones

AIRPORT FACILITIES

Airport landing facilities

Federal Aviation Administration

(866) 835-5322

Airport landing facilities

BASINS

Better Assessment Science Integrating point & Non-point Sources

U.S. Environmental Protection Agency

855-246-3642

Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE

Obstacles of interest to aviation users

Federal Aviation Administration

855-379-6518

The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS

National Geographical Data Center

National Geographical Data Center

303-497-6826

List of recent and historic earthquakes and information.

FLOOD DFIRM

National Flood Hazard Layer Database

Federal Emergency Management Agency

The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

Research Summary for City Directory Abstract

Site Location

Kelly Plus Dutcher
235 Kelly Rd
Cloverdale, CA

HIG Project #

2067357

Client Project #

77229

Date Created

08/31/2022

Historical
Information
Gatherers

Conducted For

Envirosite Corporation
2 Corporate Drive, Suite 450
Shelton, CT

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

Publication year, publisher and title

1996 Haines Marin-Sonoma

1991 Haines Marin-Sonoma and North Bay

1986 Haines Marin-Sonoma and North Bay

1981 Haines Marin-Sonoma and North Bay

Abstract Section 1- This section includes the city directory data sorted by address.

100 Kelly Road

1996	LA PACIFIC CORP
1991	LA PACIFIC CORP
1991	LOUISIANA PACIFIC
1986	LOUISIANA PACIFIC

111 Kelly Road

1986	JONES TOM
------	-----------

238 Kelly Road

1996	XXXX
1991	XXXX
1986	XXXX
1981	COON VERNIE R

290 Kelly Road

1996	XXXX
1991	XXXX
1986	XXXX
1981	NOLAN DON TRUCKING

Abstract Section 2: This section includes the city directory data sorted by the year the city directory was published.

1996

100	LA PACIFIC CORP
238	XXXX
290	XXXX

1991

100	LA PACIFIC CORP
100	LOUISIANA PACIFIC
238	XXXX
290	XXXX

1986

100	LOUISIANA PACIFIC
111	JONES TOM
238	XXXX
290	XXXX

1981

238	COON VERNIE R
