PHASE I ENVIRONMENTAL SITE ASSESSMENT

District Property 2, 6 Contiguous Parcels on 8.4 Acres at the Northwest Corner of N. Maple Avenue and W. Foothill Boulevard APNs 0243-142-01 through -06 City of Fontana, San Bernardino County, California 92336

INTRODUCTION

The information presented in this report includes the results of our recent site reconnaissance, a review of pertinent literature, and recent federal, state, and local government agency records. Our field reconnaissance, data gathering and compilation was performed by Mr. Edward Lump, Associate Geologist, with oversight by Dr. Siamak Jafroudi President and Principal Engineer.

SITE DESCRIPTION AND GENERAL INFORMATION

1. The subject property is a predominantly vacant site located at the northwest corner of N. Maple Avenue and W. Foothill Boulevard in the city of Fontana San Bernardino County, California. The site is bounded by Barbee Street to the north; N. Maple Avenue to the east; W. Foothill Boulevard to the south; and a Fontana Unified School District facility to the west. Sidewalks are not present along any street edges bounding the subject property. Chain link fencing delineates the subject site boundary on the three street sides. A site location map is included as Figure 1.

2. The subject site is comprised of six contiguous parcels on 8.4-acres with Assessor Parcel Numbers (APNs) 0243-142-01 through -06. A plan showing recent conditions on the site is included as Figure 2.

3. At the time of our field reconnaissance, the site was vacant land. A mobile classroom trailer and two metal storage bins are located near the north central portion of the subject site. Uniform grasses mantle the subject property, which appeared to have recently been disced. A few scattered trees are located in the southern portion of the subject site. A weathered asphalt drive extends north from a concrete driveway entrance on W. Foothill Boulevard to a widened asphalt paved area in the south-central portion of the subject property, that may have been part of a former parking area. A second concrete driveway entrance was observed off W. Foothill Boulevard near the southwest corner of the site. A billboard is located in the southeastern corner of the subject property. The site slopes gently to the south with existing elevations on the order of 1,315 feet above mean sea level (msl) to 1,305 feet above msl (Google Earth, 2023).

4. Vehicular access to the subject site was made through a locked gate off W. Foothill Boulevard. A second locked gate exists off Barbee Street on the north. A 1-gallon crushed plastic container labeled antifreeze was noted onsite near the gate off Barbee Street. No surface staining was observed. Chain link fencing has been damaged at the northwest corner of the subject site allowing access. Chain link fencing surrounds the subject property. What appeared to be a portion of a buried concrete footing was noted in the southeastern portion of the site, where the former single-family residence historically existed. Tree stumps in the area have started to grow. A small area of debris was observed in the southwest corner of the fence, near the auto body shop to the west. Minor trash was also noted along the boundary with the recovery facility in the southwest portion of the subject site. Two relatively large fragments of concrete pipe were noted against the fence in the northeast corner of the subject property. Minor windblown trash was observed in proximity to the two metal bins and mobile classroom including one rubber tire. Cracked, peeling, and flacking exterior paint of the lower well wall of the

mobile classroom near the rubber tire suggests lead-based paint. Generally, windblow trash was observed along the perimeter fencing and locally within the subject site.

5. No water wells were observed on site during our reconnaissance.

6. Overhead power lines were observed adjacent to the subject property during our site reconnaissance. Overhead lines with one pole mounted transformer were noted along the north side of W. Foothill Boulevard. The transformer was being serviced at the time of our reconnaissance. No damage, ground surface staining, or distressed vegetation was noted to the transformer. No pad mounted transformers were observed. Wooden poles and overhead lines were also observed along the east side of N. Maple Avenue and the north side of Barbee Street.

   An electric billboard mounted on three steel posts was noted in the southeast corner of the subject site. A meter was attached to the southerly post and lines entered the ground. East of the billboard was a metal cabinet labeled "Crown Castle, PS-FNTA-G41-001, 18215 Foothill Blvd. PED, Fontana, CA 92335." Discussion with Crown Castle indicated this box is a power supply for a small cell tower, and not associated with the billboard. No staining or discoloration was observed on the concrete base.

7. Information obtained during this assessment indicated that the subject property and vicinity appeared to have been utilized for agricultural use in the form of groves from at least 1938 to sometime after/during 1953 and before/during 1959. A previous assessment report indicated that the site was used for agriculture from at least 1938 to approximately1953. One residence and barn-type building were noted in the southeastern portion of the subject site, fronting Maple Avenue. In the 1949 aerial photograph, a cluster of three buildings were observed on the south side of the subject site fronting Foothill Boulevard (Route 66). In the southwest corner of the property was one small building also fronting Foothill Boulevard. Also in 1949, property adjacent to the southwest edge of the subject site appeared to be a motel. The 1959 aerial photo depicts the orchard within the site removed and most of the orchards in the vicinity were also removed; however, the onsite buildings remain visible. Sometime during/after 1990 and during/before 1994, buildings within the southeast portion of subject property were removed; however, one small building remained in the southwest corner. Between 2002 and 2023, the subject property was undeveloped land, except for placement of the mobile classroom trailer in the north central portion of the subject site sometime during/after 2012 and during/before 2016. Historical information reviewed during this assessment includes aerial photographs (dating back to 1938), USGS topographical maps (dating back to 1896), and interviews.

8. A 2005 Preliminary Environmental Assessment (PEA) Report for the Proposed Elementary School No. 32 Site (subject site) was prepared by Haley & Aldrich, Inc. (Haley & Aldrich) on behalf of Fontana Unified School District. The PEA was conducted to assess the possibility of residual pesticides present in onsite soil due to historical agricultural activities (orchards) at the subject site from at least 1938 to approximately 1953, the possibility of impacts of lead-based paint present in the soil due to former structures that were built prior to 1977 on the subject property, and possible impacts from an automobile dealership with maintenance facilities located adjacent to the west of the subject site. The PEA included near surface soil sampling and analysis for pesticides and metals, and individual samples for lead, and arsenic. Soil vapor samples were collected along the western site boundary with the former auto dealership and analyzed for volatile organic compounds and gasoline range organics.

   Analytical results of near surface soils reported eight pesticides (4,4'-DDD, 4,4'-DDE, 4,4'-DDT, alpha-chlordane, chlordane, gamma-chlordane, dieldrin, and heptachlor epoxide) were detected above the practical quantitation limit. Comparison and statistical analyses of soil sample results for metals indicate that the metals are within background concentrations. VOCs and gasoline range organics were below the method detection limits.

A screening level human health risk evaluation was conducted following PEA guidance, which concluded that both the total noncarcinogenic hazard index and the cumulative carcinogenic risk are below levels of concern. Results of the PEA support no further sampling and testing activities at the subject site are necessary to assess chemical impacts. Chemical concentrations measured at the subject property do not pose a significant risk to human health and the environment. No remediation or mitigation activities are required to protect public health and the environment from potential exposures to onsite chemical concentration in soil.

On April 25, 2005, DTSC provided a review letter regarding the Haley and Aldrich, Inc. PEA (2005). Based on the information presented in the PEA report, no actual or potential release of hazardous material, or the presence of naturally occurring hazardous material which would pose a threat to human health or the environment under any land use was indicated at the site. Therefore, DTSC concurs that no further environmental investigation or cleanup is required at the site and hereby approves the PEA report. As with any real property, if a previously unidentified release or presence of hazardous material is discovered at the subject site, additional investigation and/or cleanup may be required.

9. No sites were identified in our search of various government agency database records, which appear to have impacted the soils or groundwater beneath the subject site.

10. There was no evidence of drums, above ground tanks, underground tanks, sumps, pits, pools, or lagoons identified within the subject property boundary during our site assessment.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site assessment, and/or action.

- No REC's have been identified within or affecting the subject property.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial.

- No CREC's have been identified within or affecting the subject property.

Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations*, *institutional controls* or *engineering controls*).

- No HREC's have been identified within or affecting the subject property.

We have performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E 1527-21 for the subject property, APNs 0243-142-01 through -06, located at the northwest corner of N. Maple Avenue and W. Foothill Boulevard, in the city of Fontana, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in the section titled data gaps of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property at this time.

SITE CONSIDERATIONS

The items presented below are not considered recognized environmental conditions in accordance with ASTM E 1527-21. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

1. With re-development of any former agricultural property, a certain amount of unknown subsurface conditions may be anticipated. Any discolored soils, noxious odors, buried pipelines or irrigation channels, and/or other buried objects/debris encountered during clearing and grubbing, or future grading and development should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed.

2. It is possible that abandoned water lines will be encountered during demolition, clearing, and grubbing, or rough grading. If these irrigation lines are concrete, they should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed. In the event concrete irrigation lines are encountered, caution should be taken to not crush the lines until it can be ascertained that they do not contain asbestos.

3. It is recommended that all debris and trash observed on the subject site be removed and disposed of in accordance with current local, state and federal disposal regulations.

4. Onsite sewage disposal systems may be present in proximity to the southern portion of the subject property. An effort should be made to discover these systems during demolition. Buried utilities should be followed to locate septic tanks, seepage pits, and/or leach line fields. If encountered, these septic systems should be properly abandoned in accordance with current San Bernardino County guidelines.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

District Property 2, 6 Contiguous Parcels on 8.4 Acres at the Northwest Corner of N. Maple Avenue and W. Foothill Boulevard APNs 0243-142-01 through -06 City of Fontana, San Bernardino County, California 92336

INTRODUCTION

The information presented in this report includes the results of our recent field reconnaissance, a review of various federal, state, and local government agency records, and a review of historic aerial photographs and topographic maps for the site and vicinity. This report includes a summary of our findings, our opinion as to the current environmental condition of the site, and recommendations for additional work, if needed.

Purpose

This assessment was conducted to determine if any recognized environmental conditions exist on the subject site. Recognized environmental conditions are defined by the American Society for Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site.

This assessment is also intended to satisfy the requirement for conducting all appropriate inquiries into the previous ownership and uses of a property for the purposes of meeting the all appropriate inquiries provisions necessary to qualify for certain landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

We have performed this assessment in general conformance with the scope and limitations of the standards set forth in the ASTM Practice E 1527-21, the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312, and (to a lesser extent) ASTM Practice E1527-13.

Involved Parties

This report was prepared by Petra Geosciences, Inc. (Petra), at the request of Fontana Investment 2023, LLC, for their exclusive use. Use of this report or reliance thereon by other parties or projects is not authorized. The report may not be suitable for other parties or other purposes.

SCOPE OF ASSESSMENT

The scope of this assessment included the following:

1. Performing a site reconnaissance to identify the current conditions and land use of the subject site and adjoining properties, during which visual evidence of prior uses of the subject site and adjoining properties were noted. The site reconnaissance included an observation of the site surface and the site perimeter. Representative photographs of our site walk are provided in Appendix A.

2. Researching historical land use of the subject site and vicinity by reviewing available historical aerial photographs, United States Geologic Survey (USGS) topographic maps, fire insurance maps, city directories, and other reasonably ascertainable maps and data (Appendix C).

3. Review Preliminary Title Search document by Ticor Title, dated March 29, 2023, provided by the client (Appendix E).

4. Conducting a search for Environmental Liens and Activities and Use Limitations (AULs) back to 1980 for one of the subject property parcels (Appendix C).

5. Performing a cursory review of local and regional geological conditions as they pertain solely to commenting of recognized environmental conditions for the site.

6. Obtaining and reviewing a search of pertinent federal, state, and local regulatory agency databases concerning environmental conditions on and in the vicinity of the site. As specified in the ASTM and AAI standards, the following databases were searched using, at a minimum, the recommended search radius:

    - Federal National Priority List (NPL) site list,
    - Federal Delisted NPL site list,
    - Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) site list,
    - Federal CERCLIS- No Further Remedial Action Planned (CERC-NFRAP) site list,
    - Federal Resource Conservation and Recovery Act Information (RCRA) Corrective Action Report (CORRACTS) facilities list,
    - Federal RCRA non-CORRACTS Treat, Store and Dispose (RCRA-TSD) facilities list,
    - Federal RCRA generators list,
    - Federal institutional control/engineering control registries,
    - Federal Emergency Response Notification System (ERNS) list,
    - State and tribal lists of hazardous waste sites identified for investigation or remediation including: State- and tribal-equivalent NPL, State, and tribal-equivalent CERCLIS lists,
    - State and tribal landfill and/or solid waste disposal site lists,
    - State and tribal leaking storage tank lists,
    - State and tribal registered storage tank lists,
    - State and tribal institutional control/engineering control registries,
    - State and tribal voluntary cleanup sites, and
    - State and tribal Brownfield sites.

    In the interest of thoroughness, numerous non-ASTM and non-AAI required databases were also searched. These databases are listed and discussed in the database search included within this report (Appendix B).

7. Contacting and interviewing knowledgeable persons, such as property owners, managers, and representatives of local government agencies regarding historical site use and current site conditions, if possible.

8. Evaluating the presence of recognized environmental conditions at the subject site through visual observation and research of reasonably ascertainable records. Recognized environmental conditions may include the presence of hazardous materials, petroleum products, underground storage tanks, above ground storage tanks, drums, chemical containers, polychlorinated biphenyls

(PCB's), liquid or solid wastes, oil wells, and areas indicative of potential contamination including stained soils and/or pavement, stressed vegetation, drains, sumps, pits, ponds, lagoons, odors, and septic systems.

9. Preparing this report presenting the results of our assessment.

10. Non-Scope Items. In addition to those items discussed above, several items outside the scope of ASTM Standard E 1527-21 and AAI will be addressed in this assessment. The non-scope items include:

    a. Cursory visual examination of the site for the potential presence of asbestos containing materials. Please note this is not a survey for these materials.

    b. Cursory visual examination of the site for the potential presence of lead-based paint. Please note this is not a survey for these materials.

Unless listed above, this assessment does not include any testing or sampling of materials (such as an assessment for the potential presence of methane or radon, asbestos or lead-based paints, or the sampling and testing of soil, soil vapor, air, surface water, or groundwater). This assessment does not include evaluating the site for the presence of wetlands, regulatory compliance, or other items beyond the scope of ASTM E 1527-21 or 40 CFR Part 312, nor is it an assessment for vapor intrusion as defined by ASTM E 2600-15.

SITE OVERVIEW

According to the California Department of Conservation, Geologic Energy Management Division (CalGEM) Online Mapping System (2023), the site is located within Township 01 South, Range 05 West, Section 4, San Bernardino Base and Meridian. Site elevations range from approximately 1,315± feet above mean sea level (msl) in the northeast corner of the site, to 1,305± feet above msl in the southeast corner of the subject site (Google Earth, 2023). A site location map is included as Figure 1.

The subject site is comprised of six parcels of approximately 8.4-acres with Assessor Parcel Number (APN) 0243-142-01 through -06. The subject property is an irregularly shaped undeveloped site located at the northwest corner of N. Maple Avenue and W. Foothill Boulevard in the city of Fontana San Bernardino County, California. The site is bounded by Barbee Street to the north with residential development beyond; N. Maple Avenue to the east with residential development beyond; N. Foothill Boulevard to the south with residential development beyond; a motel to the southwest; and All Magic Paint and Body to the northwest. An aerial photograph showing the configuration of the subject property is provided below in Figure A and attached as Figure 2.

Figure A – Property Map (EDR, 2023)

PREVIOUS LAND USE

Information obtained during this assessment indicated that the subject property and vicinity appeared to have been utilized for agricultural use in the form of groves from at least 1938 to sometime after/during 1953 and before/during 1959. A previous assessment report (Hasley and Aldrich, Inc., 2005) indicated that the site was used for agriculture from at least 1938 to approximately1953. One residence and barn-type building were noted in the southeastern portion of the subject site, fronting Maple Avenue. In the 1949 aerial photograph, a cluster of three buildings were observed on the south side of the subject site fronting Foothill Boulevard (Route 66). Haley and Aldrich (2005) identified these buildings as duplexes. In the southwest corner of the property was one small building also fronting Foothill Boulevard. Haley and Aldrich (2005) identified this building as a juice stand. Also in 1949, property adjacent to the southwest edge of the subject site appeared to be a motel.

The 1959 aerial photo depicts the orchard within the site removed and most of the orchards in the vicinity were also removed; however, the onsite buildings remain visible. Residential tract development was noted to the north. What appeared to be low density housing was noted to the west, east and south. By 1966, what appeared to be a car dealership was observed to the west, at the northeast corner of Foothill Boulevard and Locust Avenue. Open space was present between the subject site and the dealership. Residential

development in the vicinity was increasing. By 1977, the dealership had expanded to two buildings and related pavement was against the west edge of the subject property. Most of the subject property remained undeveloped land except for vegetation clearing and possible pavement between the onsite buildings along Foothill Boulevard. Sometime during/after 1985 and before/during 1990, land to the south was developed for multi-family residential purposes.

Sometime during/after 1990 and during/before 1994, buildings within the southeast portion of subject property were removed; however, one small building remained in the southwest corner. Also during this period, multi-family residential developed occurred to the northeast and pavement expanded north on the dealership site to the west. Between 2002 and 2023, the subject property was undeveloped land, except for placement of the mobile classroom trailer in the north central portion of the subject site sometime during/after 2012 and during/before 2016. Historical information reviewed during this assessment includes aerial photographs (dating back to 1938), USGS topographical maps (dating back to 1896), and interviews.

PREVIOUS REPORTS

One previous environmental report for the subject site was provided to Petra for review during this assessment. The Preliminary Environmental Assessment (PEA) Report by Haley and Aldrich, Inc. (dated February 2005) included soil sampling due to historic orchards on the property and former buildings, and soil vapor sampling along the western subject site boundary with the former automotive dealer facility. A summary of this report is provided below.

As a part of this assessment, Petra also reviewed potential environmental concerns associated with facilities in proximity to the subject property via electronic reports, maps, and/or databases. Information from our review is incorporated into this report.

- Haley and Aldrich, Inc., 2005

Executive Summary

This Preliminary Environmental Assessment (PEA) Report for the Proposed Elementary School No. 32 Site (subject site) was prepared by Haley & Aldrich, Inc. (Haley & Aldrich) on behalf of Fontana Unified School District (District) pursuant to the California Education Code which requires that new school sites obtain a "No Further Action" (NFA) determination from the California Environmental Protection Agency Department of Toxic Substances Control (DTSC) prior to proceeding with acquisition and/or construction of a school.

The overall objectives of this PEA are to:

- Evaluate historical information for indications of the past use, storage, disposal, or release of hazardous wastes/substances at the subject site;

- Establish through a field sampling and analysis program the nature of hazardous wastes/substances that may be present in soil at the subject site, their concentrations and general extent; and
- Estimate the potential threat to public health and/or the environment posed by hazardous constituents at the subject site using a conservative residential land-use scenario.

Based upon information developed during the PEA using the DTSC's PEA Guidance Manual (DTSC, 1999), the DTSC will make a decision regarding potential risks posed by the subject site.

The PEA was conducted to assess the possibility of residual pesticides present in the soil due to historical agricultural activities (orchard) at the subject site from at least 1938 to approximately 1953, the possibility of impacts of lead-based paint present in the soil due to former structures that were built prior to 1977 on the subject site, and possible impacts from an automotive dealership with maintenance facilities adjacent to the west of the subject site. Soil sampling was conducted on the approximately 8.5-acre subject site in general accordance with the guidelines provided by the DTSC in *Interim Guidance for the Sampling of Agricultural Fields for Schools (Second Edition)* (DTSC, 2002) and in the PEA Guidance Manual (DTSC, 1999).

The field sampling program was completed in accordance with the Final PEA Technical Memorandum submitted to the DTSC on September 28, 2004.

Field Sampling Program

The scope of the field sampling program is summarized below.

- Seventy (70) soil samples (plus three duplicates) were collected from 35 locations across the approximately 8.5 – acre subject site;
- Eight (8) soil gas samples (including two purge volume test samples) plus one duplicate and one ambient blank were collected from three locations on the subject site biased near the western boundary to assess potential impacts from the adjacent automotive dealership with maintenance facilities;
- Soil samples were collected from the ground surface to approximately 6 inches below ground surface (bgs) and from 2.5 to 3.0 feet bgs;
- Soil gas samples were collected from approximately 5 feet bgs and from 15 feet bgs;
- Six (6) composite soil samples (plus one duplicate) and thirty (30) discrete soil samples (including nine deeper) plus one duplicate were analyzed for organochlorine pesticides (OCPs) by Environmental Protection Agency (EPA) Method 8081A;
- Four (4) discrete soil samples were analyzed for California Code of Regulations (CCR) Title 22 total metals (California Assessment Manual [CAM-17] metals) by EPA Methods 6010B/7471A;
- Six (6) discrete soil samples (including two deeper) plus one duplicate were analyzed for arsenic by EPA Method 6010;
- Ten (10) discrete soil samples (plus one duplicate) were analyzed for lead by EPA Method 6010;
- Eight (8) discrete soil gas samples (including two purge volume test samples) plus one duplicate and one ambient blank were analyzed for volatile organic compounds (VOCs) by EPA Method 8260B; and
- Eight (8) discrete soil gas samples (including two purge volume test samples) plus one duplicate and one ambient blank were analyzed for gasoline range organics by EPA Modified Method 8015B.

Results

Results of the field program indicate:

- Eight OCPs (4,4'-DDD, 4,4'-DDE, 4,4'-DDT, alpha-chlordane, chlordane, gamma-chlordane, dieldrin, and heptachlor epoxide) were detected above the practical quantitation limit;
- Comparison and statistical analyses of soil sample results for metals indicate that the metals are within background concentrations;
- VOCs and gasoline range organics were below the method detection limits; and
- A screening-level human health risk evaluation was conducted following PEA guidance, which concluded that both the total noncarcinogenic hazard index and the cumulative carcinogenic risk are below levels of concern.

Petra: A summary of the maximum concentrations of each OCP analyte detected is listed below:

- *4,4'-DDD was detected in 6 samples at concentrations ranging up to 11 micrograms per kilogram (µg/kg).*
- *4,4'-DDE was detected in 21 samples at concentrations ranging up to 92 µg/kg.*

- *The RSL for Chlordane (technical mixture) is 1.7 mg/kg (1,700 ug/kg).*
- *The RSL for Alpha-chlordane and Gamma-chlordane is 36 mg/kg (36,000 ug/kg).*
- *The RSL for Dieldrin is 0.034 mg/kg (34 ug/kg).*
- *The RSL for heptachlor epoxide is 0.070 mg/kg (70 ug/kg).*

As a result, the detectable levels of OCPs reported in the 2005 report by Haley and Aldrich, Inc. are below the individual RSL for each analyte.

Risk Assessment

Estimates of chemical intake by the receptor are combined with toxicity values to estimate potential adverse noncarcinogenic health hazards and carcinogenic risks. Chemical intakes were initially estimated by assuming that the residential receptors were exposed to the maximum detected concentrations of the chemicals of potential concerns (COPCs) 4'-DDD, 4,4'-DDE, 4,4'-DDT, chlordane, dieldrin, and heptachlor epoxide identified during the PEA (Haley and Aldrich, 2005). These risks are then added together and the result is referred to as the total excess lifetime cancer risk. The level of concern in a PEA for carcinogens is the chemical concentrations that result in a total excess lifetime cancer risk of greater than the risk range of $1x10^{-4}$ (1 in 1,000) to $1x10^{-6}$ (1 in 1,000,000) to residential receptors. The estimated total excess lifetime cancer risk based on potential exposure to maximum concentrations of COPCs is $3x10^{-6}$, which is within the above- noted risk range but greater than the PEA risk level of concern of $1x10^{-6}$. The estimated total excess lifetime cancer risk based on potential exposure to 95 % UCL concentrations of COPCs is $5x10^{-7}$, which is less than the above-noted risk range and below the PEA risk level of concern of $1x10^{-6}$.

Conclusions

Results of the PEA support the following conclusions and recommendations:

- No further sampling and analysis activities are necessary to assess chemical impacts at the subject site;
- Chemical concentrations measured at the subject site do not pose a significant risk to human health and the environment; and
- No remediation or mitigation activities are required to protect public health and the environment from to potential exposures to onsite chemical concentration in soil.

Petra: Based upon the data reviewed in the 2005 PEA on the subject property by Haley and Aldrich and over 17 years passing since completion of the report, which has allowed further decomposition of the OCP residues, Petra concurs with the conclusions presented by the consultant.

- Department of Toxic Substances Control (DTSC), 2005

The Department of Toxic Substances Control (DTSC) has reviewed the Preliminary Endangerment Assessment (PEA), prepared by Haley and Aldrich, Inc, dated February 2005 and received on February 22, 2005. DTSC issued comments on the PEA on March 23, 2005 Revisions to the PEA, addressing the DTSC comments, were submitted on April 19, 2005. The PEA presents data collected during the investigation activities and conclusions based on a risk screening evaluation for the proposed Elementary School Number 32 (Site).

The Site consists of approximately 8.5 acres and is currently vacant. Historically, the Site had been used for agricultural purposes and featured several residential dwellings The Site is bordered by an automotive dealership and maintenance facility, a motel, and residential dwellings. During the course of the investigation, soil and soil gas samples were collected and analyzed for metals, organochlorine pesticides (OCP), volatile organic compounds (VOC).

DTSC has received notice, dated April 12, 2005, indicating that the Fontana Unified School District (FUSD) has complied with all public review and comment requirements set forth in the California Education Code (CEC), section 17213.1, subsection (a)(6)(A), for the site. According to the notice, the FUSD held a public hearing on March 29, 2005 and a public comment period ending on April 11, 2005. No comments were received during the comment period.

Based on the information presented in the PEA report, no actual or potential release of hazardous material, or the presence of naturally occurring hazardous material which would pose a threat to human health or the environment under any land use was indicated at the site. Therefore, DTSC concurs that no further environmental investigation or cleanup is required at the site and hereby approves the PEA report. As with any real property, if a previously unidentified release or presence of hazardous material is discovered at the subject site, additional investigation and/or cleanup may be required.

ENVIRONMENTAL SETTING

The following section provides a cursory overview of the regional and local geologic setting and includes information pertaining to groundwater conditions in the vicinity of the subject site. Geotechnical hazard information (faults, landslides, etc.) is not part of this assessment. This section does not constitute a geotechnical evaluation of the subject property and should not be taken as such.

Geology

Geologically, the site lies within the northern portion of the Peninsular Ranges Geomorphic Province (CGS, 2002). The Peninsular Range Province extends from the tip of Baja California north to the Transverse Ranges Geomorphic Province and is characterized by northwest trending mountain ranges separated by subparallel fault zones. The San Bernardino Mountains, located north of the site, provides the boundary between the Peninsula Range Province and the Transverse Ranges Province. In general, the province is underlain primarily of plutonic rock of the Southern California Batholith. The Peninsular Range Geomorphic Province is generally characterized by alluviated basins and elevated erosion surfaces.

More specifically, published geologic maps of the area indicate that the site and surrounding alluvial areas are underlain by Holocene- and Late Pleistocene-age Young alluvial-fan deposits (Morton, D.M., 2003). This soil is described as unconsolidated cobbly and bouldery alluvial fan deposits of Lytle Creek.

Surface Water

No indication of surface water was observed on the property or in close proximity at the time of our site reconnaissance.

The east portion of the subject property is situated within Flood Insurance Rate Map (FIRMette) 06071C8657H, and the west parcel is located in FIRMette 06071C8656H. Both parcels are mapped within Zone X, defined as an area defined as areas of 0.2 percent annual chance flood; and areas of 1 percent annual chance flood with average depths of less than 1 foot or within drainage areas less than 1 square mile. Figure B below depicts the Flood Insurance Rate Map (FIRM) for the subject site and vicinity. The FIRMette map (Map Revised August 28, 2008) is provided in Appendix B.

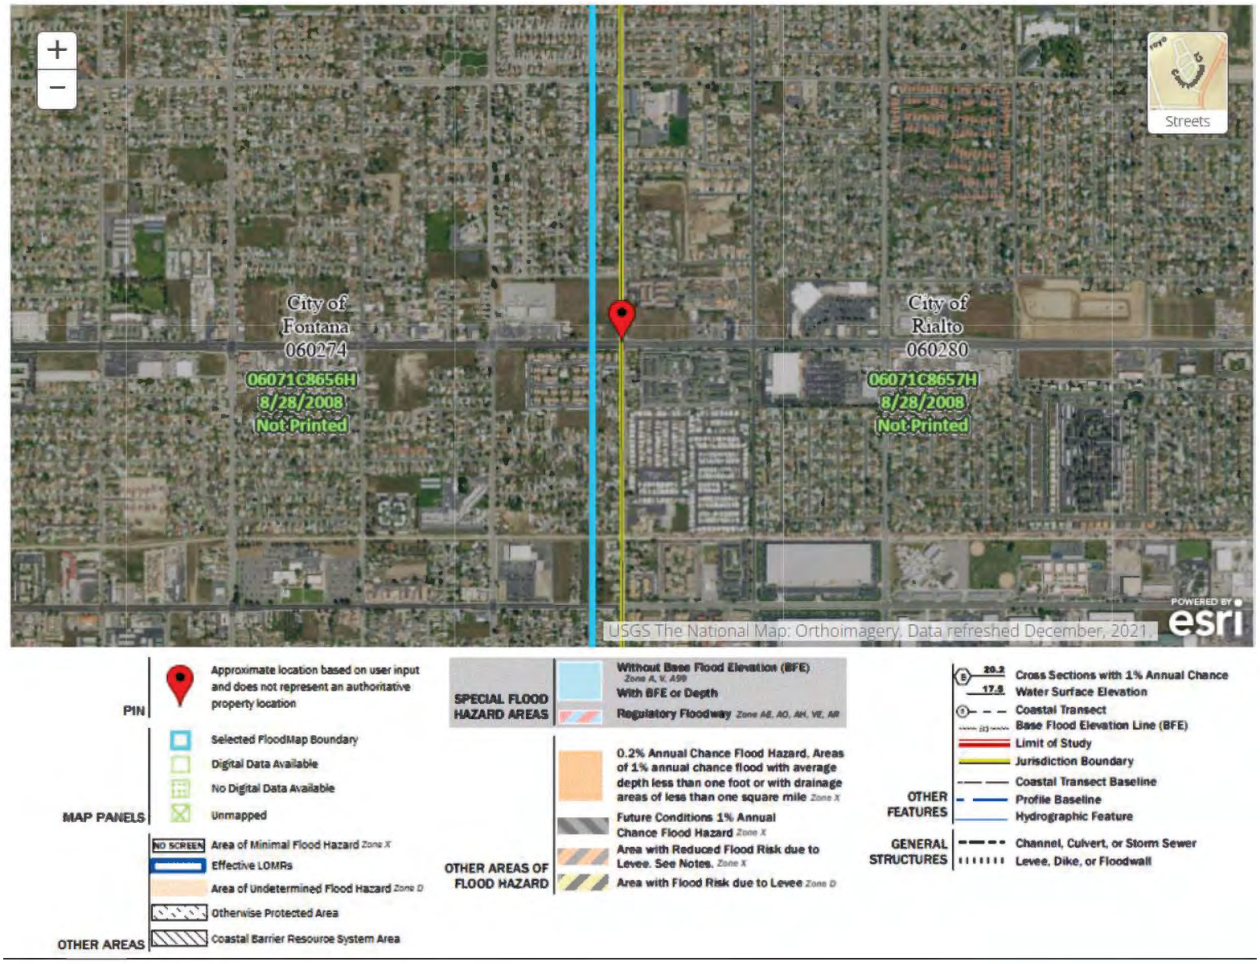

Figure B – Flood Insurance Rate Map (FEMA, 2023)

Groundwater

The site is located within the Upper Santa Ana Valley - Rialto-Colton (8-002.04) Groundwater Basin. No historic groundwater wells are listed within the subject site on the CDWR water data library (CDWR, 2023). Based on our review, the closest mapped well to the subject property (Well ID: 01S05W16C002S) is reported approximately 1 mile to the southwest. In April 1929, this well reported a depth to groundwater of approximately 370 feet below the ground surface (bgs). The next available records, between October 1978 and April 2000, depth to groundwater reportedly ranged from approximately 430 feet bgs to approximately 398 feet bgs, respectively. A second well, mapped approximately 1.1 miles to the northwest (Well ID: 01S05W04D002S), reported groundwater depths ranging from 258 feet bgs in March 1986 to approximately 335 feet bgs in October 2008. In general, groundwater depth varies within the area and though flow direction specifically beneath the subject property is unknown, it is reasonable to estimate flow to follow regional topography to the south/southeast.

RESULTS OF ASSESSMENT

The results of our site reconnaissance and assessment of adjacent sites, agency database review, and historical land use study are presented in the following sections.

Site Observation

Petra conducted a reconnaissance of the subject site on Jun 10, 2023. Representative site photographs are included in Appendix A. Our site observations are summarized below.

1. The subject property is a predominantly vacant site located at the northwest corner of N. Maple Avenue and W. Foothill Boulevard in the city of Fontana San Bernardino County, California. The site is bounded by Barbee Street to the north; N. Maple Avenue to the east; W. Foothill Boulevard to the south; and a Fontana Unified School District facility to the west. Sidewalks are not present along any street edges bounding the subject property. Chain link fencing delineates the subject site boundary on the three street sides. A site location map is included as Figure 1.

2. At the time of our field reconnaissance, the site was vacant land. A mobile classroom trailer and two metal storage bins are located near the north central portion of the subject site. Uniform grasses mantle the subject property, which appeared to have recently been disced. A few scattered trees are located in the southern portion of the subject site. A weathered asphalt drive extends north from a concrete driveway entrance on W. Foothill Boulevard to a widened asphalt paved area in the south-central portion of the subject property, that may have been part of a former parking area. A second concrete driveway entrance was observed off W. Foothill Boulevard near the southwest corner of the site. A billboard is located in the southeastern corner of the subject property. The site slopes gently to the south with existing elevations on the order of 1,315 feet above mean sea level (msl) to 1,305 feet above msl (Google Earth, 2023).

3. Vehicular access to the subject site was made through a locked gate off W. Foothill Boulevard. A second locked gate exists off Barbee Street on the north. A 1-gallon crushed plastic container labeled antifreeze was noted onsite near the gate off Barbee Street. No surface staining was observed. Chain link fencing has been damaged at the northwest corner of the subject site allowing access. Chain link fencing surrounds the subject property. What appeared to be a portion of a buried concrete footing was noted in the southeastern portion of the site, where the former single-family residence historically existed. Tree stumps in the area have started to grow. A small area of debris was observed in the southwest corner of the fence, near the auto body shop to the west. Minor trash was also noted along the boundary with the recovery facility in the southwest portion of the subject site. Two relatively large fragments of concrete pipe were noted against the fence in the northeast corner of the subject property. Minor windblown trash was observed in proximity to the two metal bins and mobile classroom including one rubber tire. Cracked, peeling, and flacking exterior paint of the lower well wall of the mobile classroom near the rubber tire suggests lead-based paint. Generally, windblow trash was observed along the perimeter fencing and locally within the subject site.

4. No water wells were observed on site during our reconnaissance.

5. Overhead power lines were observed adjacent to the subject property during our site reconnaissance. Overhead lines with one pole mounted transformer were noted along the north side of W. Foothill Boulevard. The transformer was being serviced at the time of our reconnaissance. No damage, ground surface staining, or distressed vegetation was noted to the transformer. No pad mounted transformers were observed. Wooden poles and overhead lines were also observed along the east side of N. Maple Avenue and the north side of Barbee Street.

   An electric billboard mounted on three steel posts was noted in the southeast corner of the subject site. A meter was attached to the southerly post and lines entered the ground. East of the billboard was a metal cabinet labeled "Crown Castle, PS-FNTA-G41-001, 18215 Foothill Blvd. PED, Fontana, CA 92335." Discussion with Crown Castle indicated this box is a power supply for a small cell tower, and not associated with the billboard. No staining or discoloration was observed on the concrete base.

6. There was no evidence of drums, above ground tanks, underground tanks, sumps, pits, pools, or lagoons identified within the subject property boundary during our site assessment.

Adjacent Site and Vicinity Observations

The property is situated in an area of residential and commercial land use. Our observations are noted below:

West — To the southwest of the property is a motel. To the west is All Magic Paint and Body, with residential beyond.

East — To the east of the site is N. Maple Avenue, with residential development and a vacant lot beyond.

South — To the south of property is W. Foothill Boulevard, with residential development beyond.

North — To the north of the site is Barbee Street, with residential development beyond.

Government Agency Database Research

A search of federal, state, and local government listings was performed by Environmental Data Resources, Inc. (EDR) for the purposes of this report. The search radius used for all government databases meets or exceeds the standard search distance adopted by ASTM and AAI.

Results of Agency Records Search

A data search of the various government agency records listed in Appendix C revealed one listing for the subject site under the Department of Toxic Substances Control Envirostor / Schools (Envirostor/SCH) database (Elementary School No. 32, Foothill Blvd. / Maple Ave., Fontana, CA 92335). The EDR report shows 31 other listings and 13 addresses within the requested search radii. Four of the listings refer to individuals at residential addresses reported only under the Resource Conservation Recovery Act (RCRA) NonGenerator (RCRA NonGen/NLR) database. Twenty-seven of the listings are mapped within 1,760 feet

(1/3 mile) of the center of the subject property; however, 19 are mapped at a down- or cross-groundwater gradient. Two orphan sites (sites with inadequate address information to be mapped by EDR) were identified during the agency database search. Refer to the EDR Radius Map Report in Appendix C for the search radii completed for this assessment.

The linear distance and groundwater gradient guidelines provided in ASTM E2600-15 (Tier 1 Areas of Concern) are used as a reasonable screening tool for groundwater and vapor migration to identify a recognized environmental condition (REC) associated with the subject site (ASTM, 2015; Buonicore, 2014). For contaminated sources (such as a dry cleaner with a PCE release or a gas station with a leaking underground storage tank releasing BTEX) located up-gradient of the Target Property (TP), the focus would be on those contaminated sites within the AOC distance of 1,760 feet. The AOC search distance in the cross-gradient quadrant is reduced from 1,760 feet to 365 feet and the AOC for contaminated sites down-gradient from the TP is reduced from 1,760 feet to 100 feet.

A brief description of the sites listed in the EDR report, which are of potential concern due to the nature of the listing or their proximity to the site (within the AOC), is provided below:

Site 1 Target Site: Elementary School No. 32, Foothill Blvd. / Maple St., Fontana, CA 92335: This listing is mapped as the Target Property. This site is listed on the DTSC's Envirostor/SCH database. The site type is reported as "school investigation". The alias is reported as "Fontana Unified School District". The property is reported as 8.5 acres. The past use is reported as "agricultural – row crops". The potential chemicals of concern (COC) are listed as "arsenic, chlordane, DDD, DDE, and DDT". The potential media affected is listed as "soil". A technical report was completed on October 6, 2004 and a Preliminary Endangerment Assessment Report was completed on April 24, 2005. The status of the listing is reported as "No Further Action" on April 25, 2005. Based upon the No Further Action status provided by DTSC, this listing does not appear to represent a recognized environmental condition (REC) with regards to the subject property at this time. Additional information is provided below under "*Local Agencies*" and DTSC Envirostor.

Sites B3 – B-9: Sunrise Collision Center/Sunrise Ford & Hyundai/P&B Collision Management/Hamilton Ford/All Magic Auto, 18150 Foothill Blvd., Fontana, CA 92335: These sites are listed less than 1/8-mile west-southwest of and at a lower elevation than the subject site. This currently active facility abuts the northwestern subject property boundary.

Sunrise Collision is reported on the Resource Conservation Recovery Act (RCRA) Non Generator (RCRA NonGen/NLR) database.

Sunrise Ford & Hyundai is listed on the Resource Conservation and Recovery Act, Small Quantity Generator (RCRA-SQG), Facility Index System/ Facility Registry System (FINDS), and Enforcement & Compliance History Information (ECHO) databases. Under RCRA-SQG the handler name is reported as "Rialto Used Autoshop". This site is not identified as a universal waste or a federal universal waste destination. In 1985 this facility was a large quantity generation (LQG). No violations or evaluations actions were found. No pertinent information is provided under FINDS. Under ECHO, this site is identified as an universal waste destination facility and a universal waste indicator but not a federal universal waste

destination facility. This site is reported as an "other automotive mechanical and electrical repair and maintenance" facility. No violations or evaluations actions were found.

In October 2001, this facility was reported under the RCRA Small Quantity Generator (SQG) database. Wastes were listed as 1) ignitable waste, 2) methyl ethyl keytone, and 3) spent nonhalogenated solvents.

Hamilton Ford is reported on the San Bernardino County Fire Department Hazardous Materials Division Permit (San Bern. Co. Permit), Statewide Environmental Evaluation and Planning System (SWEEPS UST), State Facility and Manifest (HAZNET), State Water Resources Control Board's Facility Inventory (CA FID UST), HAZNET, and DTSC's Hazardous Waste Tracking System (HWTS) databases. Under SWEEPS UST, the active date is listed as July 8, 1988. One waste oil underground storage tank was listed. No pertinent information was provided under the CA FID UST database. The San Bern. Co. Permit database reported the permit category as "hazardous waste generator – 51 to 100 employees". The facility status is listed as "inactive" and the permit expiration date is May 31, 2003. P&B Collision Management, LLC was listed under HAZNET for disposal of "unspecified aqueous solution", "unspecified oil-containing waste", and "waste oil and mixed oil" in 2016. Under the HWTS database, this site was reported as an "other automotive mechanical and electrical repair and maintenance" facility. No violations or evaluations actions were found.

All Magic Fontana DBA All Magic Paint and Body is listed under the (RCRA NonGen/NLR) database. The description was reported as "general automotive repair". No notices of violations or evaluation action summary was found at this facility.

All Magic Auto is reported on the San Bern. Co. Permit, CA EPA's Environmental Reporting System for hazardous waste (CERS Haz Waste), and CERS databases. Under CERS Haz Waste, this facility is reported as a "hazardous waste generator". The San Bern. Co. Permit database reported this site as a "conditionally exempt small quantity generator." The permit details "hazardous materials – 1 to 3 chemicals" and that the facility is active. The expiration date is January 31, 2024. Under CERS, this site is described as a "chemical storage facility". Administration violations were reported in 2021.

Based upon the absence of a known spill, leak, or unauthorized release of hazardous materials, these listings do not appear to represent a recognized environmental condition (REC) with regards to the subject property at this time.

Sites A13 and A14: Molina and Sons Trucking, 7935 Dumond Dr., Fontana, CA 92336: These sites are listed less than 1/8-mile north of and at a higher elevation than the subject site. This facility is reported on the RCRA NonGen/NLR, HWTS, and DTSC's Registered Hazardous Waste Transporter (HWT) databases. Under RCRA NonGen/NLR, this facility is described as "not a generator, verified". Transporter and off-site waste receipt is also verified. The hazardous waste summary describes a number different wastes including metals, ignitable, corrosive, and reactive wastes, pesticides, volatile organic compounds (VOCs), poly aromatic hydrocarbon (PAH) compounds, spent halogenated and nonhalogenated solvents, and most spent electroplating fluids that are available for review in EDR's *Radius Report* in Appendix C. Written informal enforcement violations were found. No pertinent information is provided in the HWT database. Under HWTS this facility is described as "general freight truck, local" and "other waste collection".

Based upon this site being solely a transportation facility or hazardous waste generated at another location, and the absence of a known spill, leak, or unauthorized release of hazardous materials, these listings do not appear to represent a recognized environmental condition (REC) with regards to the subject property at this time.

Sites D16 – D25: Thrifty Oil, ARCO/ Speedway #4350/ P&M Service Station/ Sav-Mor Service Station/ ARCO Facility #9704, Tesoro USA #63334/ Tesoro Refining & Marketing Company, 18083 Foothill Blvd., Fontana, CA 92335: These sites are listed less than 1/8-mile (735± feet) west of and at a lower elevation than the subject site. This address, located at the southwest corner of Foothill Blvd. and Locust Ave., is the location of the only leaking underground storage tank (LUST) case within a 1-mile radius of the subject property. This address is also reported on multiple regulatory agency databases, which can be reviewed in EDR's *Radius Report* in Appendix C. This address is considered located at a cross groundwater gradient from the subject property.

The LUST case was reported in October 1998. The potential media affected was reported as "soil". The potential contaminant of concern (COC) was listed as "gasoline". The local oversight agency was listed as San Bernardino County. The status is reported as "Completed-Case Closed" as of August 14, 2000. Under the Sweeps UST database, 9 underground storage tanks (USTs) have been active since February 1988. The San Bern. Co. Permit database verified permits for the USTs.

Based upon the status of the LUST case being reported as "Completed-Case Closed" by the local oversight agency (San Bernardino County) with soil only reported as the impacted media, this site being at a cross groundwater gradient from the subject property, and groundwater being at a depth exceeding 200 feet bgs, this facility does not appear to represent a recognized environmental condition (REC) with regards to the subject property at this time. Furthermore, the AOC search distance in the cross-gradient quadrant is 365 feet.

All other site listings in the EDR report do not currently appear to represent a recognized environmental condition with regards to the subject site, due to the nature of the listings (school site assessments, non-generators, etc.), the oversight agency having granted No Further Action, the site being outside the AOC from the subject site, their distance from the subject site and/or depth to contamination.

Orphan Sites

Orphan sites are those that the database search was not able to locate due to lack of complete address information. Two orphan sites are listed in the EDR report. One listing, TOSCO/UNOCAL #1995 (101 Foothill Blvd., Rialto, CA) is reported on the LUST database. The case type is listed as "soil only". The substance is listed as "gasoline". The case status is reported as "Case Closed" on August 6, 1999. The second orphan listing is SCE-Flanco (southwest corner of Orange Way and Jupiter St., Fontana, CA) is listed in the DTSC's Envirostor and Voluntary Cleanup Program Properties (VCP) databases. This site was previously used as an electric generation substation. Based upon the reported status of "Case Closed" under regulatory oversight, the orphan sites do not appear to represent a recognized environmental condition (REC) with regards to the subject property at this time.

Local Agencies

Petra reviewed information held by the agencies listed below during the course of this assessment.

San Bernardino County Fire Department

The San Bernardino County Fire Department Hazardous Materials Division maintains records related to hazardous materials business and management plans, hazardous waste generation and onsite treatment, aboveground petroleum storage, underground storage tanks, and California Accidental Release Program facilities in San Bernardino County. Records held by this agency were accessed by EDR during the government database search. No listings for the subject site were reported by EDR.

California Regional Water Quality Control Board

The California Regional Water Quality Control Board-Santa Ana Region 8 (RWQCB) maintains records of leaking underground storage tank sites and groundwater cleanups for sites in the Santa Ana Region. Records held by the RWQCB were accessed by EDR during the government database search. No listings for the subject site were reported by EDR.

GeoTracker

The GeoTracker website maintains a record of environmental data for regulated facilities in California. No database listings for the subject site were reported on GeoTracker. The memorandum documenting this inquiry is included in Appendix B.

- GeoTracker PFAS Map

  Per- and polyfluoroalkyl substances (PHAS) is a large family of emerging contaminants with over 2,000 fluorinated chemicals. The persistence and mobility of some PFAS, combined with decades of widespread use in industrial processes, certain types of firefighting foams, and consumer products, have resulted in their being present in environmental media at trace levels across the globe. Toxicological studies have raised concerns regarding the bioaccumulative nature and potential health concerns of some PFAS. As a result, our understanding of PFAS and the risks they may pose is rapidly evolving (ITRC, 2022).

  Since the 1950s, many products commonly used by consumers and industry have been manufactured with or from PFAS, as the unique physical and chemical properties of PFAS impart oil, water, stain, and soil repellency, chemical and thermal stability, and/or friction reduction to a range of products. These products have applications in many industries, including the aerospace, semiconductor, medical, automotive, construction, electronics, and aviation industries, as well as in consumer products (such as carpets, clothing, furniture, outdoor equipment, food packaging), and firefighting applications (ITRC, 2022).

  Effective February 25, 2022, for purposes of Proposition 65, the Office of Environmental Health Hazard Assessment (OEHHA) added perfluorooctanoic acid (PFOA) to the list of chemicals known to the State of California to cause cancer. On September 6, 2022, the US EPA issued a notice of proposed rulemaking to designate perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund).

  Petra reviewed the interactive map of sites where water wells have analytical test data for the suite identified as per- and polyfluoroalkyl (PFAS), which include PHOA and PFOS. No wells were mapped in proximity to the subject property. The closest up-gradient water well, located approximately 1.8 miles north-northwest of the subject site, is mapped near Alder Avenue and W. Reconnaissance Parkway. Results for 12 different PFAS, including PFOA and PFOS, were reported as less than 1.7 nanograms per liter (ng/L) or non-detect in November 2019. May 2023 US EPA Regional Screening Levels (RSLs)

for tap water list PFOA at 0.06 micrograms per liter (µg/L) and PFOS at 0.04 µg/L (or 60 ng/L and 40 ng/L, respectively). No Maximum Contaminant Level (MCL) is provided. As such, non-detect concentrations, or the detection limit of PFOA and PFOS in groundwater, over 200 feet below the ground surface in the subject site area, are well below the RSLs for tap water.

A second public water well, CA3610038_018_018 (Rialto Well 05), is mapped approximately 1.4 miles northeast of the subject property. Results for 12 different PFAS, including PFOA and PFOS, were reported as less than 2 ng/L to 6.5 ng/L or non-detect in January 2022. May 2023 US EPA Regional Screening Levels (RSLs) for tap water list PFOA at 0.06 micrograms per liter (µg/L) and PFOS at 0.04 µg/L (or 60 ng/L and 40 ng/L, respectively). No Maximum Contaminant Level (MCL) is provided. As such, detected concentrations, or the detection limit of PFOA and PFOS in groundwater, over 200 feet below the ground surface in the subject site area, are well below the RSLs for tap water.

California Department of Conservation, Geologic Energy Management Division (CalGEM)

According to the California Department of Conservation, Geologic Energy Management Division (CalGEM), there are no active or abandoned oil, or gas wells located on the subject site. Further, there were no indications of any such wells found during our reconnaissance of the subject site. A copy of this map is included in Appendix B.

California Department of Conservation

The California Department of Conservation, Division of Mine Reclamation's "Mines Online" interactive map was queried regarding mines in proximity to the subject property. The map depicted no mines within the subject property or within one mile of the subject property. The memorandum documenting this inquiry is included in Appendix B.

Department of Toxic Substances Control

The online database EnviroStor (DTSC, 2023), which provides records on LUSTs, SLICs, Priority cleanup sites and states sites, is maintained by the Department of Toxic Substances Control (DTSC). No database listings for the subject site were reported on EnviroStor. The memorandum documenting this inquiry is included in Appendix B.

Department of Toxic Substances Control – Land Use Covenants

Petra reviewed the DTSC's Permitting Land Use Covenants Web App for land use covenants (LUCs) affecting the subject property. None were found for the subject property. The memorandum documenting this inquiry is included in Appendix B.

National Pipeline Mapping System

Petra reviewed the National Pipeline Mapping System (NPMS, 2023) public viewer website for gas transmission pipelines and hazardous liquid trunklines on or close to the subject property. Due to security purposes, close-up map views are not available. According to the information reviewed, a hazardous liquid pipeline (petroleum) appears to be located in W. Linden Avenue, 1 block east of the subject property. A gas transmission line is mapped approximately 4 blocks to the south in W. Merrell Avenue. A copy of this map is included in Appendix B.

Vapor Migration

Standards presented in ASTM E1527-21 considers the assessment of vapor migration similar to that of groundwater contamination. As a result, Petra reviewed documentation regarding surrounding sites near the subject property with known soil and groundwater contamination to preliminarily evaluate potential areas of concern for vapor migration/encroachment onto the subject property. An area of concern typically includes active or abandoned gas stations and dry cleaners, industrial facilities, and hazardous waste disposal and landfill facilities with known or suspected soil and/or groundwater contamination.

For vapor encroachment to represent a potential for vapor intrusion to structures within the subject property, vapors must have a pathway to create an indoor air quality condition (i.e., Recognized Environmental Condition). As a result, vapor encroachment from an offsite release onto the subject property does not immediately equate to vapor intrusion into existing or proposed structures within the subject property, and cannot be ascertained without additional field work.

In the absence of specific criteria within ASTM Standard E1527-21, Petra considered the linear distance and groundwater gradient guidelines provided in ASTM E2600-15 (Tier 1 Areas of Concern) as a reasonable screening tool for vapor migration to identify a recognized environmental condition (REC) associated with the subject site (ASTM, 2015; Buonicore, 2014). Petra reviewed a 2005 PEA report for the subject property by Haley and Aldrich, Inc. (dated February), which included VOC and gasoline range organics soil vapor testing along the west edge of the subject property. Analysis reported non-detect levels at a depth of 5 and 15 feet below the ground surface. As a result, no surrounding sites have been identified during this assessment which would represent a concern in regard to vapor encroachment on to the subject site at this time.

Petra also reviewed the USEPA's default residential Vapor Intrusion Screening Levels (VISLs) for PFOA and PFOS. We found that these chemicals "are not considered sufficiently volatile and hazardous to pose inhalation risk via vapor from a soil or groundwater source". Although very low levels of PFOA and PFOS were detected in public wells up gradient (1.8± miles) and cross gradient (1.4± miles) from the subject property, groundwater is over 200 feet below the ground surface in proximity to the subject property. PHOA and PFOS vapor encroachment is not considered a likely risk to the subject property.

Evaluation of Records Search Results

In summary, no sites were identified in our search of various government agency database records, which may have significantly adversely impacted soils or groundwater beneath the subject site at this time.

Results of Aerial Photo Analysis

Although aerial photographs can often be a valuable source of information in the assessment of historical land usage, it should be understood that information extrapolated from photographic images is strictly interpretation and not necessarily fact. For this reason, it may not be appropriate to draw conclusions regarding previous site activities based solely upon aerial photograph analysis.

In order to provide a complete assessment of historical land usage on and in the vicinity of the subject site, aerial photographs with coverage of the subject site and vicinity were obtained from EDR and viewed by a representative of this firm. Photographs from the years 1938, 1949, 1953, 1959, 1966, 1977, 1985, 1990, 1994, 2002, 2005, 2009, 2012, 2016, and 2020 were provided by EDR. Also, aerial photographs (i.e., Google Earth®) from 2020 through 2023 have been reviewed for this assessment and noted no significant changes to the subject property. A summary of the information obtained during the aerial photograph review follows. Copies of the aerial photographs obtained from EDR are included in Appendix C.

1938, 1949, 1953, 1959, and 1966 Photographs

In photographs from 1938, 1949, and 1953, the subject site is developed as a part of an orchard, which extends to the west. In 1938, the subject site is surrounded by orchards with scattered buildings offsite to the north, west, south, and east. One residence with detached garage or barn is observed in the southeast portion of the subject site. Improved W. Foothill Boulevard (aka Route 66) is observed along the south boundary of the subject property. A dirt road is noted along the east boundary. A thick row of what appears to be non-orchard trees bounds the subject sit on the north.

By 1949, a cluster of three buildings are noted fronting Route 66 in the eastern half of the subject site. Additionally, one small rectangular building with L-shaped (concrete?) drive is visible in the southwest corner of the subject property. Orchard trees have been removed and surface soil is exposed in an area directly west of the southwest corner of the subject property. One long rectangular building is observed on the west side and a small rectangular building is noted in the center of this disturbed area. Increased residences and/or farm type buildings are present in the vicinity to the east and south. What appears to be a gasoline station is present west of the subject property, at the northeast corner of Route 66 and Locust Avenue.

No readily detectable changes to the subject property were observed in the 1953 black and white aerial photograph. Grove trees west of the southwest portion of the subject site have been removed to Locust Avenue. Two buildings are visible at the northeast corner of Route 66 and Locust Avenue; however, it is

difficult to identify either of the buildings as a gas station. A small building is also present near the southwest corner of the intersection, set back from Route 66 by non-orchard trees.

By 1959, the orchard has been removed from the subject property and immediately surrounding land. The residence and two building areas along the south property boundary remain visible. An improved road (N. Maple Avenue) is visible along the east site boundary and Barbee Street is noted along the north boundary. Residential tract homes are developed on land north of Barbee Street. Vacant land with two building clusters is observed east of N. Maple Avenue. To the south across Route 66 is a mixture of vacant land, residential and some farming activity (possibly small orchard trees). To the west, one building and detached awning at the southwest corner of Locust Avenue and Route 66 appear to be a gasoline station. Two buildings at the northeast corner are not likely to be related to a gasoline station. In the site vicinity, agricultural development is decreasing and residential development increasing.

The aerial photograph from 1966 depict similar surface conditions within the subject property as 1959; however, the building at the southwest corner of the subject site appears to have been replaced by smaller structures, possibly bins or trucks. Uniform groundcover mantles the vacant portions of the subject site. Development at the northeast corner of Locust Avenue and Route 66 appears to no longer be a gas station. Many vehicles are noted parked near the two buildings at the intersection (auto sales lot?).

1977, 1985, and 1990 Photographs

In the 1977 black and white aerial photograph, what appears to be a fenced enclosure with exposed surface soil encompasses the two building clusters located on the south edge of the subject property. The residence fronting N. Maple Avenue remains visible. The remainder of the subject property is vacant land covered with uniform vegetation. Two relatively large rectangular buildings and a large parking lot are noted at the northeast corner of Route 66 and Locust Avenue (similar to conditions observed during our site walk). A gasoline station remains at the southwest corner.

The 1985 infrared aerial photograph depicts minimal changes to the subject property, except north expansion of a fenced enclosure including the eastern building fronting W. Foothill Boulevard. Two rectangular buildings are now present with some sort of stockpiled material(s). The 1990 photograph more clearly shows the materials to consist of small bins, shed, and/or tractor trailers and trees. Asphalt pavement is now readily detectible in the south half of this enclosure. The remainder of the subject property remains vacant.

1994, 2002, and 2005 Photographs

In the 1994 photograph, all buildings have been removed from the subject site. Uniform vegetation covers the surface of the vacant property, except for vegetation management around the site perimeter and central area. A paved vehicle storage area behind (north) the two commercial buildings offsite to the west has expanded. Single family residences to the east have been replaced by multi-family development. The vacant subject property is covered with uniform vegetation in the 2002 photograph. The vehicle storage area offsite to the west has expanded to the north, approaching Barbee Street. A billboard is observed near W. Foothill Boulevard sometime after/during 2002 and after/during 2005 to the present day. Similar surface conditions are observed within the subject property in the 2005 color photograph.

2009, 2012, 2016, and 2020 Photographs

In these photographs, no buildings are observed within the subject property, except a mobile trailer classroom observed in the north central portion of the subject site after/during 2009 and before/during 2012. The driveway to former buildings in the south-central portion of the site is visible from 2012 to 2020. Natural vegetation density within the subject site remains uniform throughout this period.

Google Earth Imagery 2020 to 2023

Petra also reviewed historic aerial photographs on Goggle Earth™ from April 2020 to May 2023. In May 2023, vegetation within the subject property appears to have been recently disced. These photographs depicted similar site conditions to the property to that described above and observed within the subject site during our site walk.

Historical USGS Topographic Maps

Petra reviewed the historical USGS topographic maps of the site and vicinity provided by EDR which included Target Quad's: dated 1896, 1898, 1901, 1942, 1943, 1953/1954, 1954, 1966/1967, 1973, 1975, 1980, 2012, 2015, and 2018. An improved road, Route 66 (aka Foothill Boulevard) is visible along the southern boundary of the subject property starting in the 1896 map. No land use or buildings are shown for the subject site or immediately surrounding lands on any of the Historical Topographic Maps dated 1896 through 1901. One small building is noted on the 1942 map on the south-central edge of the subject site. Also on the 1942 map, the subject property and vicinity is depicted with groves. In the 1943 map, one small building is shown in the southwest and southeast corner of the subject site. The 1953/1954 map depicts 4 small buildings within the southeastern portion of the subject site, except the building in the southwest corner is not shown. Groves remain s onsite and on land to the north, east, and south. Residential tract homes are noted north of the site in the 1966/1967 map. Groves are not depicted on the map or vicinity. In

addition, Route 66 has been relabeled as Foothill Boulevard. Four commercial buildings are shown offsite to the west in the 1973 map. Minimal grove areas are shown on this map; however, to the east, beyond Linden Avenue, agricultural activity is common. No obvious changes to the subject property were noted in the maps from 1975 to 2018. These maps generally support observations made from the aerial photographs reviewed. Copies of the maps reviewed are provided in Appendix C.

Environmental Lien and Activity and Use Limitations Search 1980

Environmental Liens and Activity and Use Limitations (AULs) indicate restrictions on a property, which may represent a recognized environmental condition for the property. One of the subject properties San Bernardino County Assessor Parcel Number (APN) 0243-142-04-0000 was utilized in this search.

As authorized by the client, An Environmental Liens and AUL Search dating back to 1980 was conducted by EDR as part of this assessment using the above APN. The EDR Environmental Lien and AUL Search 1980 Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information filed between 1980 and the date of the report (June 1, 2023);
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- search for environmental encumbering instrument(s) filed between 1980 and the date of this report;
- provide a copy of any environmental encumbrance(s); and
- provide a copy of the current deed when available.

Public records of San Bernardino County, California were searched from January 1, 1980 to June 1, 2023, and no other deeds vesting title in the subject property were found or recorded during the period searched. Research sources included the San Bernardino County Recorder’s Office and the San Bernardino County Assessor’s Office. Judicial records were not searched. Based upon available information evaluated by the title search professional, the jurisdiction does not require a search of judicial records in order to identify environmental liens.

The results from this search indicated that there were no recorded Environmental Liens or AULs listed for the APN, which is a part of the subject property. The current grant deed, recorded June 2, 2005, includes the five additional APN's which comprise the subject site. A complete Environmental Liens and AUL Search 1980 report is provided in Appendix C. A summary is provided in the table below.

Historic Chain of Title From 1980

Assessor Parcel Number	Grantor	Grantee	Recorded Date
0243-142-04	John Cheng, et al.	Fontana Unified School District	6-2-2005
	Foothill Evergreen, Ltd.	John Cheng, et al.	9-23-1994
	Sue Upton Stanford	Foothill Evergreen, Ltd.	5-3-1990
	Genevieve S. Smith & James D. Smith	Sue Upton Stanford	8-5-1977

A copy of the lien and AUL search reports are provided in Appendix C.

Fire Insurance Maps and City Directories

Fire Insurance Maps provide information on structure locations and operations, which were present at the time of the survey. These maps were completed for most major cities and metropolitan areas, dating from 1867, and provide information into past usage of buildings and how commercial and industrial zoning has changed over time. Sanborn™ Fire Insurance maps were requested for this study. EDR reports that the subject site is "unmapped property" on fire insurance maps. The memorandum documenting this inquiry is included in Appendix C.

City Directory

City Directories provide information for a specific address at a specific time. A search of city directories from 1922 to 2020 was conducted by EDR for this assessment. The search was conducted for the target streets (Maple Ave. and Foothill Blvd.) and adjoining streets (Barbee St.). Overall, induvial names were listed at addresses on Barbee St. and Maple Avenue.

In 1965, Jack Hudson International Trucks was listed directly west of the subject property, at 18150 Foothill Blvd./St. Also listed at that address Hamilton Ford, Fontana Motors Leasing, Fontana ROP Diesel, Shafers Radiator and Muffler Shop, and Rialto Unified School District in 1990. Between 1991 and 2017, multiple automotive sales and repair businesses were reported at this address. In 2020, Magic Auto Group, South Bay Autos, All Magic Fontana, Inc., and Tagimms, Inc. are listed at this adjacent address.

At 18202 Foothill Blvd./St., Mountain View Motel was listed as the occupant of the small parcel directly west of the southwest corner of the subject property in 1955 to 1965, and Mountain View Rest Home in 1970. In 1990 to 1996 this address was reported as Mount Peak Residential Care Home. Provisional Education Services, Inc., Safe Harbor occupied the address in 2000. In 2005 and 2010, the Agape House was listed at this address.

Maple Hill Apartments reportedly occupied the property at 18215 Foothill Blvd. from 1996 to 2020, which is located across Foothill Boulevard from the subject property. From 1990 to 1995 this property was called Springtime Apartments.

495 Maple Ave. was listed as Maple Gardens Apartments from 1995 to 2020, which is located east of the northeastern portion of the subject site.

No listings were found for the subject property. Adjoining properties were first listed in 1941. No surrounding listings, which would indicate a potential concern for the subject site based on the name of the listing, was included in the EDR city directory image report. A copy of this search is presented in Appendix C.

EDR Property Tax Map Report

EDR's Property Tax Map report indicated there was no coverage for the subject parcel numbers. A copy of the EDR report is provided in Appendix C.

Building Permits

Building Permit data provides information to identify current and/or former operations and structures/features which may represent a recognized environmental condition for the subject site. A search of City of Fontana Department of Building and Safety building permits was conducted by EDR from 1987 to 2023 for this assessment. San Bernardino County Land Use, Building and Safety building permits were also search from 1970 to 2023. City of Rialto Building and Safety permits were also searched from 1981 to 2022.

There were no permits found for the target property and no permits found for the adjoining property, which would indicate a potential recognized environmental condition (REC). A copy of this search is presented in Appendix C.

City of Fontana Building Department records from 1992 were reported for the subject property in the Haley and Aldrich (2005) PEA report. Information is summarized below.

- Application for a building permit to demolish two duplexes, haul away the onsite debris and the abandoned septic system at 18260 Foothill Boulevard (APN 0243-14-204).
- Application for alteration of dilapidated single-family residence identified on historical preservation listing at 18230 Foothill Boulevard (APN 0243-14-206).
- Determination of Historical Preservation Commission to permit the demolition of structures on 18230 Foothill Boulevard except juice stand, which was to be removed by the City of Fontana and preserved.
- Application for alteration of a single-family residence which the Historical Preservation Commission wants to put through the Certification of Appropriateness process at 8066 Maple Avenue (APN 0243-14-202).

Interviews

Petra provided an Owner Questionnaire to Mr. Nolan Leggio, Director of Forward Planning with Diversified Pacific Communities. Mr. Leggio forwarded the Questionnaire to Mr. Matthew Strother, Executive Director with Fontana Unified School District (FUSD) regarding his knowledge of the subject site. As of the date of this report, Petra has not received the Property Owner Interview Questionnaire. A copy of the blank Owner Questionnaire is provided in Appendix D.

The owner did provide a previous Preliminary Site Assessment Report by Haley and Aldrich, Inc. (dated February 18, 2005), which is reviewed above in the *Previous Reports* section.

User / Client Knowledge

In compliance with AAI, Petra provided a User / Client Questionnaire to Mr. Nolan Leggio, Director of Forward Planning with Diversified Pacific Communities. The Questionnaire was completed by Mr. Jason Holt, Project Manager with Diversified Pacific Communities regarding his knowledge of the subject site. Mr. Holt noted that the Phase I ESA was required as a part of the investigation into residential development. A summary of the questions and response is provided below.

1. Mr. Holt indicated he does have reports for this project.
2. Mr. Holt indicated that there are no current restrictions regarding Petra contacting local agencies regarding the subject property.

3. According to Mr. Holt, he is not aware of any environmental clean-up liens against the property that are filed or recorded under federal, tribal, state of local law. He did not respond to the question whether he will be conducting a search of environmental cleanup liens against the property that are filed or recorded in a registry. Mr. Holt did not indicate that Petra is to complete this task. Mr. Strother noted that a preliminary title report was conducted by Ticor Title Company of California. (*Petra: a copy was provided by Mr. Leggio.*)

   According to Mr. Holt, he is not aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place on or for the site, and/or have been filed or that environmental cleanup liens against the property that are filed or recorded under federal, tribal, state of local law. He did not respond whether he will be conducting a search of AULs against the property that are filed or recorded in a registry. Mr. Strother did not request Petra to complete this task.

4. According to Mr. Holt, he does not have specialized knowledge or experience related to the property or nearby properties.

5. Mr. Holt indicated that the purchase price for the land is fair market value.

6. Mr. Holt indicated that he is not aware of past uses of the subject property.

7. Mr. Holt indicated that he is not aware of chemical spills that have occurred on the subject property or environmental cleanups that have taken place on the property or on adjacent properties.

8. According to Mr. Holt, he is not aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of hazardous materials/chemical releases or threatened releases.

9. According to Mr. Holt, he is not aware of any specific chemicals present currently or previously on the site.

10. According to Mr. Holt, he does not know of any obvious indicators that point to the presence or likely presence of contamination at the property.

Mr. Holt did not sign or date the questionnaire. A copy of the complete client questionnaire is provided in Appendix D.

Additionally, Mr. Leggio provided a title report for the subject property by Ticor Title of California (dated March 29, 2023). The preliminary report indicated the title of said estate or interest at the date hereof is vested in Fontana Unified School District. The legal description referred to 6 parcels for the subject property. A copy of this report is provided in Appendix E.

Data Failures and Data Gaps

In the event that data gaps are identified, the Environmental Professional (EP) will endeavor to comment on the significance of those data gaps. However, the EP cannot, and does not warrant or guarantee that no significant events, releases, or conditions arose, during periods such as data gaps.

Petra reviewed several sources for historical information regarding the subject site. These sources included a government agency database search, a city directory search, a review of historical aerial photographs and historical USGS topographic maps, and interviews. Some of the gaps between the aerial photographs (1938 to 1949) and the USGS topographic maps exceeded 10 years and fire insurance maps covering the target property were not found. The property owner, Fontana Unified School District, did not return the Property Owner Interview Questionnaire as of the date of this report. This is considered a data gap. The owner did, however, provide a PEA report of the subject property by Haley and Aldrich, Inc. (dated February 18, 2005). The PEA reported laboratory tests of OCP and metals residue results from throughout the subject property and soil vapor analysis of VOCs along the west site boundary. Results are provided above in the *Previous Report* section.

Data gaps exist in the historic information reviewed. These gaps are due to the limited records and resources available, which are reasonably ascertainable and practically reviewable in the local area. However, it is our opinion that if additional historical information were to become available, it is not likely to change the conclusions or recommendations of this assessment.

DISCUSSION OF POTENTIAL ENVIRONMENTAL CONCERNS

The following discussions of potential environmental concerns are presented to inform the client as to the existence, or lack thereof, of recognized environmental conditions present on the subject site.

Regulatory Actions

Based upon a thorough search of available federal, state, and local records, no known current regulatory action is pending with respect to the subject property.

Adjacent and Nearby Properties

A Superfund site exists in the industrial area of Rialto north of the subject property. The site, identified as "Rockets, Fireworks, and Flares" included soil and groundwater contamination. Groundwater contamination has spread to the south and east as shown on Figure C below. The site contains three operable units. Based upon known groundwater conditions, the plume does not underly the subject property nor does

it encroach into the immediate vicinity of the subject property. It is not anticipated that the known plume poses an impact to groundwater beneath the subject property at this time.

No information has been obtained during this assessment which would indicate the presence of recognized environmental conditions adjacent to the subject site that are considered likely to pose a significant impact to soils or groundwater beneath the subject site at this time.

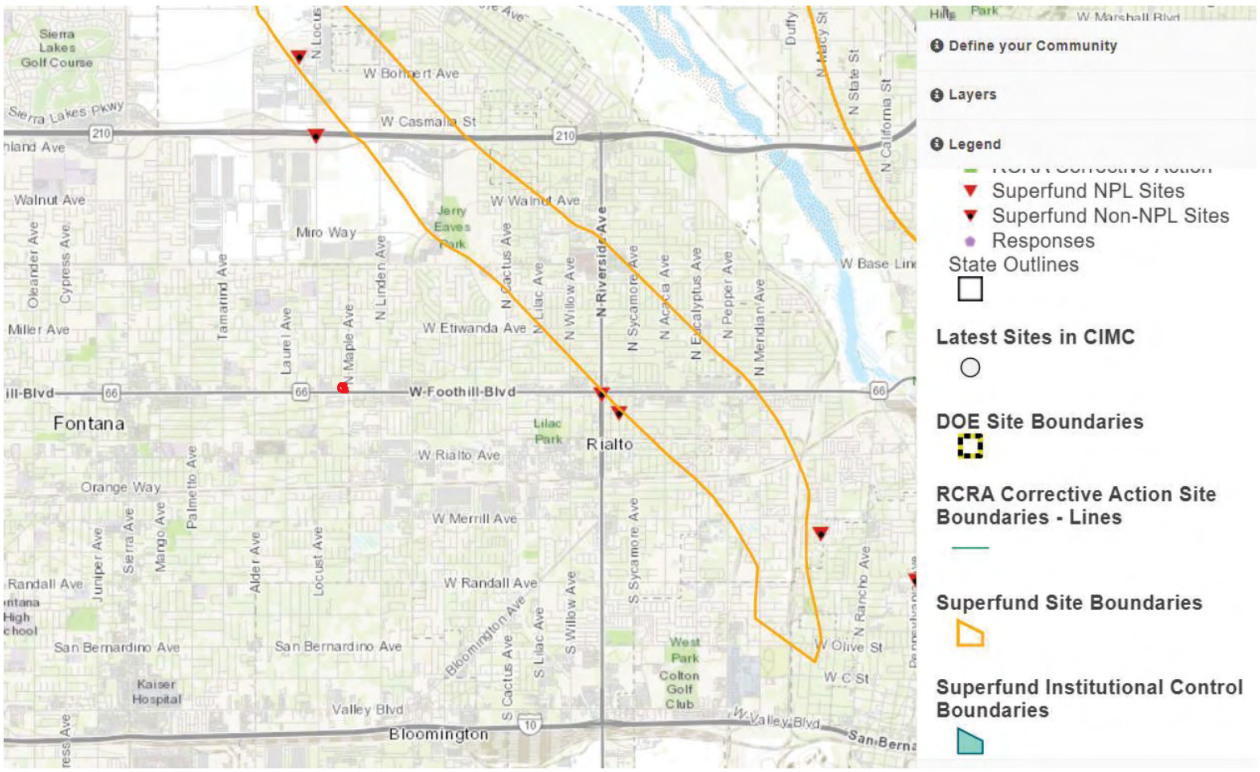

Figure C – Groundwater Plume Map (USEPA, 2023)

Polychlorinated Biphenyls (PCB's)

Polychlorinated biphenyls (PCB's) are historically linked to electrical equipment, such as capacitors and transformers, due to their physical and chemical characteristics. PCB's, persistent in the environment, are known to accumulate in organisms and the food chain.

Any electrical equipment (i.e., transformers, capacitors, and fluorescent light fittings) containing dielectric insulating fluids or coolants, manufactured prior to 1976, should be considered to potentially contain PCB's. PCB's may also be found in older lubricating oils, cutting oils, hydraulic fluids, paints, sealants, and flame retardants (UNEP, 2002).

At this time, buildings which were known to have occupied the southern portion of the subject property, are no longer present. One pole-mounted transformer was observed outside the chain link fencing along Foothill Boulevard. The transformer was being serviced during our site walk, hindering close observation; however, visually, the transformer appeared to be in good condition and there were no readily detectable signs of surface staining around the base of the wooden pole. No information has been obtained during this assessment which would indicate the existing or past presence of Polychlorinated Biphenyls (PCB's) at the site. A PCB survey, however, was not conducted at the subject property as part of this assessment.

Underground Storage Tanks

No information has been obtained during this assessment, which would indicate fuel underground storage tanks (UST's) to be located on the subject site currently nor are UST's reported to have been located on site in the past. Further, no surface indications of UST's were observed on the subject site during the site reconnaissance.

Above Ground Storage Tanks

No information has been obtained during this assessment, which would indicate above ground fuel storage tanks (AST's) are located on the subject site currently, nor are ASTs reported to have been located on the site in the past.

Stormwater/Wastewater Discharge

At this time, stormwater/wastewater discharge from the site appears to be limited to surface water runoff. It is anticipated that precipitation falling on the site would infiltrate site soils. Water which does not infiltrate site soils would be expected to flow off of the site following the surface topography.

Pesticide and Herbicide Residue

Based on available information obtained during this assessment, there were readily detectable signs of orchards within the subject property, which were observed in aerial photographs to occupy the site and vicinity from at least 1938 to sometime during/after 1953 and before/during 1959. There were no subsequent signs shown in readily available historical aerial photographs or historical topographic maps to indicate the property was used after 1959 for any agricultural purposes. The historical use of restricted agricultural chemicals on orchard trees in accordance with application guidelines does not necessarily lead to elevation levels of these chemicals in soil. Typically, elevated soil residue levels are associated with mixing, storage, and spill areas.

A PEA report (Haley and Aldrich, Inc., 2005) was completed on the subject property, which was proposed as an elementary school site at the time. Seventy near surface soil samples were collected from 35 locations within the subject site and analyzed for organochlorine pesticides from depths of 0 to ½ foot, 2.5 feet, and 3 feet below the ground surface. Six samples were also analyzed for arsenic and ten samples were analyzed for lead. The following organochlorine pesticide (OCP) residues were detected in soil samples at a concentration above the method detection limit: 4,4'-DDD, 4,4'-DDE, 4,4'- DDT, chlordane, alpha-chlordane, gamma-chlordane, dieldrin, and heptachlor epoxide. Additional information is provided above in the *Previous Reports* section of this report.

Petra: The USEPA Regional Screening Levels (RSLs) for residential land use [dated May 2023] were compared to the reported detectable concentrations of OCPs. As a result, the detectable levels of OCPs reported in the 2005 report by Haley and Aldrich, Inc. are below the individual RSL for each analyte.

Comparison and statistical analyses of soil sample results indicate that the metals, including arsenic and lead, are within background concentrations. The consultant concluded that pesticide and herbicide residues do not appear to represent a recognized environmental condition with regards to the subject site.

Estimates of chemical intake by the receptor are combined with toxicity values to estimate potential adverse noncarcinogenic health hazards and carcinogenic risks. Chemical intakes were initially estimated by assuming that the residential receptors were exposed to the maximum detected concentrations of the chemicals of potential concerns (COPCs) 4'-DDD, 4,4'-DDE, 4,4'-DDT, chlordane, dieldrin, and heptachlor epoxide identified during the PEA (Haley and Aldrich, 2005). These risks are then added together and the result is referred to as the total excess lifetime cancer risk. The level of concern in a PEA for carcinogens is the chemical concentrations that result in a total excess lifetime cancer risk of greater than the risk range of $1x10^{-4}$ (1 in 1,000) to $1x10^{-6}$ (1 in 1,000,000) to residential receptors. The estimated total excess lifetime cancer risk based on potential exposure to maximum concentrations of COPCs is $3x10^{-6}$, which is within the above- noted risk range but greater than the PEA risk level of concern of $1x10^{-6}$. The estimated total excess lifetime cancer risk based on potential exposure to 95 % UCL concentrations of COPCs is $5x10^{-7}$, which is less than the above-noted risk range and below the PEA risk level of concern of $1x10^{-6}$.

Based upon this data, the consultant concluded the following:

- No further sampling and analysis activities are necessary to assess chemical impacts at the subject site;
- Chemical concentrations measured at the subject site do not pose a significant risk to human health and the environment; and
- No remediation or mitigation activities are required to protect public health and the environment from to potential exposures to onsite chemical concentration in soil.

DTSC provided a review letter (dated April 25, 2005) of the PEA. DTSC concluded that, based on the information presented in the PEA report, no actual or potential release of hazardous material, or the presence of naturally occurring hazardous material which would pose a threat to human health or the environment under any land use was indicated at the site. Therefore, DTSC concurs that no further environmental investigation or cleanup is required at the site and hereby approves the PEA report.

Petra: Based upon the data reviewed in the 2005 PEA on the subject property by Haley and Aldrich and over 17 years passing since completion of the report, which has allowed further decomposition of the OCP residues, Petra concurs with the conclusions presented by the consultant.

Based upon DTSC approval of the Haley and Aldrich, Inc. 2005 report, OCPs do not appear to represent a recognized environmental condition to the subject property at this time.

Asbestos-Containing Materials

Buildings, which were known to have occupied the southern portion of the subject property, are no longer present. Although an asphalt drive and a very small parking area were observed within the property, concrete building slabs were not observed. A mobile classroom trailer and two metal bins were observed in the north central portion of the subject site. No potential asbestos-containing materials (ACMs) were observed on the site during our recent site reconnaissance and no information was found which indicated the use, storage, or disposal of asbestos-containing materials on the site. An ACM survey, however, was not conducted at the subject property as part of this assessment.

Lead-Based Paints

At this time buildings, which were known to have occupied the southern portion of the subject property, are no longer present. A mobile classroom trailer and two metal bins were observed in the north central portion of the subject site. Flacking, peeling, and cracking exterior paint was observed on the lower edge of the west facing wall of the trailer. Based solely upon visual observation, this paint may contain lead.

No other potential lead-based paint (LBP) materials were observed on the site during our recent site reconnaissance and no information was found which indicated the use, storage, or disposal of lead-based paint materials on the site. A LBP survey, however, was not conducted at the subject property as part of this assessment. Prior to removal of the trailer from the subject property, Petra recommends that a lead survey be conducted to assess whether lead-based paint residues exist within near-surface soils surrounding the mobile classroom trailer.

Landfills

The EDR Radius Report does not list any known landfills within the search radius conducted for this assessment. Therefore, landfills do not appear to represent a recognized environmental condition with regards to the subject site.

Water Supplies

No water wells were observed on the subject site. There were no signs observed by Petra during our recent site reconnaissance indicating water is supplied to the subject property.

Waste Generation and Storage

Waste generation and storage was not observed onsite during our site reconnaissance. One relatively large pile of trash was noted in the southwest corner of the subject property. Minimal wind-blown debris was observed within the subject property. It is recommended that the debris be removed and disposed of, in accordance with current regulations.

CONCLUSIONS

General Site Information

1. The subject property is a predominantly vacant site located at the northwest corner of N. Maple Avenue and W. Foothill Boulevard in the city of Fontana San Bernardino County, California. The site is bounded by Barbee Street to the north; N. Maple Avenue to the east; W. Foothill Boulevard to the south; and a Fontana Unified School District facility to the west. Sidewalks are not present along any street edges bounding the subject property. Chain link fencing delineates the subject site boundary on the three street sides. A site location map is included as Figure 1.

2. The subject site is comprised of six contiguous parcels on 8.4-acres with Assessor Parcel Numbers (APNs) 0243-142-01 through -06. A plan showing recent conditions on the site is included as Figure 2.

3. At the time of our field reconnaissance, the site was vacant land. A mobile classroom trailer and two metal storage bins are located near the north central portion of the subject site. Uniform grasses mantle the subject property, which appeared to have recently been disced. A few scattered trees are located in the southern portion of the subject site. A weathered asphalt drive extends north from a concrete driveway entrance on W. Foothill Boulevard to a widened asphalt paved area in the south-central portion of the subject property, that may have been part of a former parking area. A second concrete driveway entrance was observed off W. Foothill Boulevard near the southwest corner of the site. A billboard is located in the southeastern corner of the subject property. The site slopes gently to the south with existing elevations on the order of 1,315 feet above mean sea level (msl) to 1,305 feet above msl (Google Earth, 2023).

4. Vehicular access to the subject site was made through a locked gate off W. Foothill Boulevard. A second locked gate exists off Barbee Street on the north. A 1-gallon crushed plastic container labeled antifreeze was noted onsite near the gate off Barbee Street. No surface staining was observed. Chain

link fencing has been damaged at the northwest corner of the subject site allowing access. Chain link fencing surrounds the subject property. What appeared to be a portion of a buried concrete footing was noted in the southeastern portion of the site, where the former single-family residence historically existed. Tree stumps in the area have started to grow. A small area of debris was observed in the southwest corner of the fence, near the auto body shop to the west. Minor trash was also noted along the boundary with the recovery facility in the southwest portion of the subject site. Two relatively large fragments of concrete pipe were noted against the fence in the northeast corner of the subject property. Minor windblown trash was observed in proximity to the two metal bins and mobile classroom including one rubber tire. Cracked, peeling, and flacking exterior paint of the lower well wall of the mobile classroom near the rubber tire suggests lead-based paint. Generally, windblow trash was observed along the perimeter fencing and locally within the subject site.

5. No water wells were observed on site during our reconnaissance.

6. Overhead power lines were observed adjacent to the subject property during our site reconnaissance. Overhead lines with one pole mounted transformer were noted along the north side of W. Foothill Boulevard. The transformer was being serviced at the time of our reconnaissance. No damage, ground surface staining, or distressed vegetation was noted to the transformer. No pad mounted transformers were observed. Wooden poles and overhead lines were also observed along the east side of N. Maple Avenue and the north side of Barbee Street.

   An electric billboard mounted on three steel posts was noted in the southeast corner of the subject site. A meter was attached to the southerly post and lines entered the ground. East of the billboard was a metal cabinet labeled "Crown Castle, PS-FNTA-G41-001, 18215 Foothill Blvd. PED, Fontana, CA 92335." Discussion with Crown Castle indicated this box is a power supply for a small cell tower, and not associated with the billboard. No staining or discoloration was observed on the concrete base.

7. Information obtained during this assessment indicated that the subject property and vicinity appeared to have been utilized for agricultural use in the form of groves from at least 1938 to sometime after/during 1953 and before/during 1959. A previous assessment report indicated that the site was used for agriculture from at least 1938 to approximately1953. One residence and barn-type building were noted in the southeastern portion of the subject site, fronting Maple Avenue. In the 1949 aerial photograph, a cluster of three buildings were observed on the south side of the subject site fronting Foothill Boulevard (Route 66). In the southwest corner of the property was one small building also fronting Foothill Boulevard. Also in 1949, property adjacent to the southwest edge of the subject site appeared to be a motel. The 1959 aerial photo depicts the orchard within the site removed and most of the orchards in the vicinity were also removed; however, the onsite buildings remain visible. Sometime during/after 1990 and during/before 1994, buildings within the southeast portion of subject property were removed; however, one small building remained in the southwest corner. Between 2002 and 2023, the subject property was undeveloped land, except for placement of the mobile classroom trailer in the north central portion of the subject site sometime during/after 2012 and during/before 2016. Historical information reviewed during this assessment includes aerial photographs (dating back to 1938), USGS topographical maps (dating back to 1896), and interviews.

8. A 2005 Preliminary Environmental Assessment (PEA) Report for the Proposed Elementary School No. 32 Site (subject site) was prepared by Haley & Aldrich, Inc. (Haley & Aldrich) on behalf of Fontana Unified School District. The PEA was conducted to assess the possibility of residual pesticides present in onsite soil due to historical agricultural activities (orchards) at the subject site from at least 1938 to approximately 1953, the possibility of impacts of lead-based paint present in the soil due to former structures that were built prior to 1977 on the subject property, and possible impacts from an automobile

dealership with maintenance facilities located adjacent to the west of the subject site. The PEA included near surface soil sampling and analysis for pesticides and metals, and individual samples for lead, and arsenic. Soil vapor samples were collected along the western site boundary with the former auto dealership and analyzed for volatile organic compounds and gasoline range organics.

Analytical results of near surface soils reported eight pesticides (4,4'-DDD, 4,4'-DDE, 4,4'-DDT, alpha-chlordane, chlordane, gamma-chlordane, dieldrin, and heptachlor epoxide) were detected above the practical quantitation limit. Comparison and statistical analyses of soil sample results for metals indicate that the metals are within background concentrations. VOCs and gasoline range organics were below the method detection limits.

A screening level human health risk evaluation was conducted following PEA guidance, which concluded that both the total noncarcinogenic hazard index and the cumulative carcinogenic risk are below levels of concern. Results of the PEA support no further sampling and testing activities at the subject site are necessary to assess chemical impacts. Chemical concentrations measured at the subject property do not pose a significant risk to human health and the environment. No remediation or mitigation activities are required to protect public health and the environment from potential exposures to onsite chemical concentration in soil.

On April 25, 2005, DTSC provided a review letter regarding the Haley and Aldrich, Inc. PEA (2005). Based on the information presented in the PEA report, no actual or potential release of hazardous material, or the presence of naturally occurring hazardous material which would pose a threat to human health or the environment under any land use was indicated at the site. Therefore, DTSC concurs that no further environmental investigation or cleanup is required at the site and hereby approves the PEA report. As with any real property, if a previously unidentified release or presence of hazardous material is discovered at the subject site, additional investigation and/or cleanup may be required.

9. No sites were identified in our search of various government agency database records, which appear to have impacted the soils or groundwater beneath the subject site.

10. There was no evidence of drums, above ground tanks, underground tanks, sumps, pits, pools, or lagoons identified within the subject property boundary during our site assessment.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site assessment, and/or action.

- No REC's have been identified within or affecting the subject property.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the

applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial.

- No CREC's have been identified within or affecting the subject property.

Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-21 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations*, *institutional controls* or *engineering controls*).

- No HREC's have been identified within or affecting the subject property.

We have performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E 1527-21 for the subject property, APNs 243-142-01 through -06, located at the northwest corner of N. Maple Avenue and W. Foothill Boulevard, in the City of Fontana, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in the section titled data gaps of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property at this time.

SITE CONSIDERATIONS

The items presented below are not considered recognized environmental conditions in accordance with ASTM E 1527-21. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

1. With re-development of any former agricultural property, a certain amount of unknown subsurface conditions may be anticipated. Any discolored soils, noxious odors, buried pipelines or irrigation channels, and/or other buried objects/debris encountered during clearing and grubbing, or future grading and development should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed.

2. It is possible that abandoned water lines will be encountered during demolition, clearing, and grubbing, or rough grading. If these irrigation lines are concrete, they should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions and provide recommendations if needed. In the event concrete irrigation lines are encountered, caution should be taken to not crush the lines until it can be ascertained that they do not contain asbestos.

3. It is recommended that all debris and trash observed on the subject site be removed and disposed of in accordance with current local, state and federal disposal regulations.

4. Onsite sewage disposal systems may be present in proximity to the southern portion of the subject property. If encountered during demolition, buried utilities should be followed to locate septic tanks, seepage pits, and/or leach line fields. If encountered, these septic systems should be properly abandoned in accordance with current San Bernardino County guidelines.

LIMITATIONS

This assessment is based upon the project as described and the environmental data obtained from the field reconnaissance and research performed as outlined in this report. This report has not been prepared for use by parties or projects other than those named or described in this report, additional studies may be required.

Since our assessment is based upon a review of available data and visual assessment of the site, without any invasive study, the conclusions presented herein are professional opinions. These opinions have been derived in accordance with current standards of practice, and no warranty is expressed or implied.

This firm's evaluation of previous reports and/or subconsultant reports focuses on the completeness of the information presented in the document, in accordance with applicable rules and regulations, and does not include the establishment of data sufficiency or accuracy.

QUALIFICATIONS

Resumes for the staff who contributed to this report are presented in Appendix F.

“We the undersigned declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. Site History

Perchlorate contamination was first detected in groundwater in the Rialto, Colton and Chino Subbasins in 1997. At that time, the California Department of Health Services (DHS) Action Level (AL) for perchlorate in drinking water was 18 parts per billion (ppb). Two wells had perchlorate levels exceeding 18 ppb and were shut down. In January 2002, the DHS lowered the AL to 4 ppb. In response to the reduced AL for perchlorate, the local water purveyors in the Rialto, Colton and Chino Groundwater Subbasins restricted or eliminated the use of additional production wells with perchlorate concentrations that exceeded 4 ppb. Between 1997 and the present, various suspected perchlorate dischargers have been identified. For more up to date information on enforcement actions, see our website at www.waterboards.ca.gov

Welcome to the GeoTracker PFAS Map
• Icons represent individual sampling points (i.e. soil boring, groundwater monitoring well, drinking water well, etc.) or a site location with Per- and Polyfluoroalkyl Substances (PFAS) analytical data. Sites currently under investigation will not appear on the Map until analytical results are finalized and submitted electronically by the Responsible Parties via GeoTracker's Electronic Submittal of Information (ESI) Portal, and after it's accepted by a Regional Water Quality Control Board.
• Drinking Water Well PFAS data includes municipal drinking water systems. Data is received into the Groundwater Ambient Monitoring and Assessment (GAMA) Program's Groundwater Information System database from the Division of Drinking Water on a quarterly basis.
• The map is frequently updated and presents PFAS analytical data as it is accepted into the database by the Regional Water Quality Control Boards.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 2 RCRA-SQG sites within approximately 1 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal

Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/23/2023 has revealed that there are 4 ENVIROSTOR sites within approximately 1 of the target property.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Target Property Map:	12015969 FONTANA, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

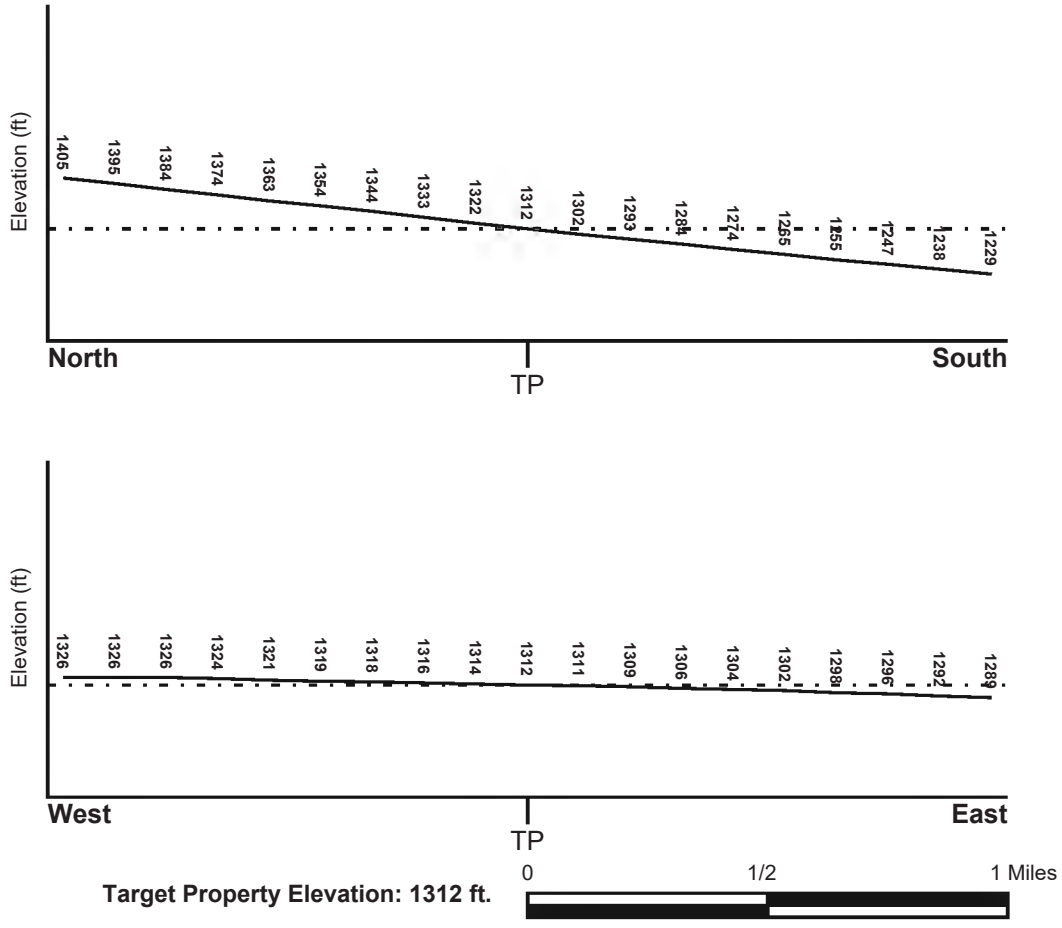

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.
