Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	Burroughs Electronics developed the subject site with the existing concrete tilt-up building in 1969. Prior to that time the site was vacant and undeveloped. Between 1969 and 1974, Burroughs used the

WESTERN GEAR CORPORATION (FORMER) (Continued) **S111760533**

property to manufacture electronic equipment. In 1974, Western Gear leased the property for the purpose of manufacturing gears and housings for the aerospace industry. Western Gear and its successors continued to manufacture aerospace parts until it closed the facility and vacated the property in February 1995. Prior to vacating the facility all known sources of chemical storage, including aboveground storage tanks (ASTs), underground storage tanks (USTs), chemical pipelines, sumps, clarifiers, etc. were removed or closed in place. From 1995 to 1998 the site was used as a dry goods warehouse by Tyco Toys. In June 1998, Robert. H. Peterson moved into the facility and resumed manufacturing operations. Robert. H. Peterson currently uses the facility to manufacture gas grills and fireplace inserts. The UST Farm area of concern is the last of 5 original areas of concern to complete remediation. Due to the presence of residual VOC concentrations above the residential CHHSLs on the Site and the results of the Human Health Risk Assessment conducted for the former Plating Shop Vapor Degreaser Area of Concern, final closure of the Site required the filing of a deed restriction that will effectively restrict the property to commercial/industrial use.

Quarterly Update:	QUARTERLY UPDATE Quarterly Update Period: January 1, 2024 - March 30, 2024. Permit Renewal Decision: DTSC has reviewed the Permit Renewal Application (Part A and Part B) provided by Ecobat Resources California (formerly Quemetco) related to current operations and post closure monitoring. The Part A and B Application can be accessed above. DTSC is planning to make a draft permit decision by May of 2024. FACILITY DESCRIPTION/HISTORY: The Ecobat Resources California (formerly Quemetco) Facility is on a 15-acre property located in the City of Industry, Los Angeles County. This Facility is a lead battery recycling facility which has operated at this location since 1959.The Facility is located on previously rural land, but is currently in an industrial and residential mixed use area. The Facility includes hazardous waste management units and two post-closure units. The Post-closure units are the closed surface impoundment and former waste pile and these units are subject to post closure monitoring. The Facility recovers lead from automotive batteries, and other lead bearing materials received from off-site; and from slag generated on-site. PERMITTING REGULATORY DESCRIPTION: Closure of the surface impoundment unit was completed on December 13, 1994. DTSC received

QUEMETCO INC (Continued) **S116289558**

the Certification of Closure Report in February 1995, and acknowledged the Closure Certification on June 28, 1995. Post-Closure care was required because the groundwater had been contaminated. On June 10, 1998, a post-closure permit application was requested from the facility. It was submitted on March 24, 2000. The current operating and Post-Closure Permit was finalized by DTSC on September 15, 2005. The Permit was appealed by community groups in the neighborhood in 2005. The revised Permit became effective on December 18, 2007 as mandated by the appeal decision order. A Class 1 permit modification was also approved on November 18, 2010 for the enclosure of the Battery Wrecker Area. In June of 2011 DTSC approved a class I* modification request to replace and relocate 7 tanks. In April of 2015, DTSC approved a class II permit modification request from Quemetco to add a dryer to remove moisture from the crushed battery casings and to replace two tanks.
