Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	The Site, noted by Assessorn++s Parcel Number 616-020-12-00, is located along the northern side of Palm Avenue, and includes the former VMT Auto Sales property located at 1502 Palm Avenue. The area of investigation is on the southern side of a former salt evaporation pond known as Pond 20, which was formerly used for salt production from the early 1870s until the 1960n++s. As part of a 95-acre n++Salt Pond 20 Restoration Projectn++ (the Project) involving the development of the Salt Pond 20 area into a wetlands mitigation bank,

LAND ADJACENT TO FORMER VMT AUTO SALES (Continued) **S128568500**

an evaluation was performed whereby the floor drain at VMT Auto Sales was identified as an area of concern and sampled with exceedances of diesel noted. As a result, this Voluntary Assistance Program case was opened to oversee the removal of this diesel-impacted soil. The Site is located on sloping land extending from the former VMT Auto Sales property to generally flat-lying land at approximate elevations ranging from 5 to 10 feet above mean sea level. Soil in the general vicinity of the Site consists of a surficial salt crust layer 0.25 foot to 0.5 foot thick, which overlies marine deposits consisting of silty sands and silt with sand. Groundwater was not encountered in hand auger sampling locations HA-5 and HA-6, which were advanced to depths of approximately 6 feet below ground surface (bgs). A 2018 Phase I discusses the advancement of 32 test pits and 12 hand auger borings throughout the Project area, including the VMT floor-drain area, which resulted in the advancement of two hand auger borings within the vicinity of the floor drain outfall. The first boring, HA-5, was advanced at the approximate outfall discharge point, and the second boring, HA-6, a short distance downslope from HA-5. Samples were collected on June 2018 and analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), phenols, Title 22 Metals, organochlorine pesticides (OCPs), and polychlorinated biphenyls (PCBs). Sample analysis indicated an exceedance of TPHd from the HA-5 surface soil sample (HA-5-0.5) with a concentration of 1,244 mg/kg, exceeding its respective Tier I environmental screening level (ESL) 260 mg/kg for a terrestrial habitat. Although there were no additional ESL exceedances, concentrations of metals (including copper, lead, nickel, and zinc), the OCPs 4,4-DDE and 4,4-DDT in HA-5-0.5, and lead in HA-6-0.5 were reported at concentrations exceeding their respective effects range low (ERL) for adverse biological effects; however, they were below screening levels for the synthetic precipitation leaching procedure analyses. Based on these ERL exceedances, soil in the vicinity of the former VMT Auto Sales facility was not considered suitable for on-site reuse in an aquatic environment. A June 2022 Workplan and Community Health and Safety Plan were submitted by WSP USA (WSP) and approved for soil excavation, removal, and verification sampling at the HA-5 and HA-6 areas. On September 15, 2022, excavation activities occurred, resulting in an excavation that was approximately 23 feet long and 5 feet wide with an average depth of 2 feet reaching a maximum depth of 4 feet at sampling location HA-5. Groundwater was not encountered during the excavation. Following excavation activities, 12 verification samples were collected, including eight sidewall samples at 0.5 bgs, with one sample on each end and three on each long side of the excavation. In addition, four floor samples were collected with two in the vicinity of HA-5 at depths of approximately 2 feet and 4 feet bgs, followed by one collected in the center of the excavation and the other at sampling location HA-6, both at 2 feet bgs. The samples were analyzed for DRO, carbon range of C10n++C28, by U.S. EPA Method 8015, total metals (including mercury) by U.S. EPA Methods 6020/7471, and OCPs by U.S. EPA Method 8081. Analysis of the samples indicated the highest remaining diesel concentration of 59 mg/kg in sample FL-3, which was below its respective ESL (Terrestrial Natural Habitat) of 260 mg/kg. Several exceedances of arsenic were noted with a maximum concentration of 4.11 mg/kg in sample SW-5. Per WSP, although arsenic exceeded screening levels, it was below the DTSC established background arsenic level of 12 mg/kg for Southern California soils, and the ERL value of 8.2 mg/kg for adverse

LAND ADJACENT TO FORMER VMT AUTO SALES (Continued) **S128568500**

biological effects. Lead had a maximum remaining concentration of 203 mg/kg in sample SW-3, in addition to five samples exceeding the ERL of 42.7 mg/kg. Per WSP, although lead exceeded screening levels it was below the U.S. EPA regional screening level (RSL) for Composite Worker Soil of 800 mg/kg, and environmental risk medium (ERM) value of 218 mg/kg for adverse biological effects. Other metals, such as cadmium, copper, nickel, silver, and zinc, exceeded their respective ERLs but did not exceed ERMs or RSLs for a construction worker. WSP concluded that the soil removal action was deemed successful in removing site contaminants, and the site can be considered for the planned reuse as a wetlandn++s mitigation bank. Based on the lack of environmental risks, no further action (NFA) is requested for the assessment and mitigation of this Site. DEHQ concurs with the conclusions and request for NFA. Site History: The subject 2.15 acre Site is identified as Assessor s Parcel Numbers 616-021-10-00, 626-192-03-00, & 626-192-04-00 and is located on the end of Florence Street and 13th Street in the City of Imperial Beach. The Site is bounded on the north by Bayshore Bikeway, vacant land, and the Otay River; on the south by two commercial buildings. The Department of Environmental Health (DEH) opened Voluntary Assistance Program (VAP) case #DEH2015-LSAM-000291 at the request of Bikeway Village LLC for oversight of a proposed reuse of two existing warehouses located at 535 Florence Street and 536 13th Street. A vacant 1.15 acre portion of the Site will remain vacant, but will be subject to landscaping improvements with planting of native plants. The 535 Florence Street building, Suites B and C, were previously assessed under DEH oversight under case #H02185-001, due to former plating shop operations. The contaminants of concern were nickel and total chromium. Contaminated areas of concrete, walls, and soil were removed. DEH approved that Suite B, the chemical storage room, was safe for occupancy on January 19, 1989. Suite C received no further action on March 28, 1990; however, due to high levels of both nickel and chrome remaining on the north facing wall, it was closed with conditions. It was reported that continued cleanup of the north wall may jeopardize the structural integrity of the building, so an epoxy coating was painted over the area of concern. Monitoring of the coating was required, and all future tenants and/or owners of the building must be notified of the potential hazard with contact with the wall. A Phase I Environmental Site Assessment was prepared in 2010, and records indicated the vacant portion of the Site was located within a railroad right-of-way from approximately 1904 until the late 1990s. Recommendations were made to conduct shallow soil sampling based on the historical use. A Phase II investigation was conducted in 2010 with eight soil borings advanced in the vicinity of the former railroad alignment. Total Petroleum Hydrocarbons (TPH) was not detected, and various metals were detected at low concentrations and below health risk screening levels. However, Polynuclear Aromatic Hydrocarbons concentrations (PAHs) at two locations (boring B6 and B8) in the northern portion of the Site were found to exceed human health risk screening levels for both commercial and residential use. In May 2011, thirty-six additional soil borings were advanced to a maximum of three feet below ground surface (bgs) to delineate the extent of soil contamination. Based on the additional soil sampling results, the consultant estimated there was approximately 725 cubic yards of shallow soil impacted with PAH concentrations, and approximately 470 cubic yards of that amount exceeds health risk screening levels. A soil management plan was submitted in 2015 to address the PAH impacted soil. At that time there was no mitigation proposed for the reuse of 535 Florence Street building at the Site, as there was no plans to disturb the north wall. No contaminants of concern were identified at the 536 13th Street warehouse. Due to archeological and Native American significance determined in the area where PAH impacts are present, disturbing the impacted soil was not economically feasible. To mitigate the risk of encountering PAH impacted soil, imported clean soil was proposed to be placed on top of both impacted and non-impacted soil through the parcel. The Site grading contractor identified a source of native clean fill to be delivered to the Site from 1810 State Street in downtown San Diego, which was undergoing excavation for a new underground parking garage. The prior uses of the property were for both residential and commercial purposes. The soil was evaluated by the consultant in

IMPERIAL WHEEL LTD (Continued) **S100182231**

accordance with Department of Toxic Substances Control (DTSC) Information Advisory Clean Imported Fill Material , and four native soil samples were collected at 10 feet below adjacent street grades. The samples were analyzed for petroleum hydrocarbons, volatile organic compounds, semi-volatile organic compounds, PCBs, asbestos and heavy metals. All of the samples were non-detect or were below the environmental screening levels (ESLs) for heavy metals for residential use. Eight hundred cubic yards of the native soil was used for capping. A minimum of one foot of the imported soil was placed over the PAH impacted area and was re-compacted. A geotextile fabric material was placed on top of the PAH impacted soil prior to the importing of the cap material. This area will be used only for native landscaping (see attached figure). On September 15, 2016, the consultant notified DEH that the developer and general contractor were notified by the City of Imperial Beach that because on the original plan for the project, four cuts were proposed in the north wall of the 535 Florence Street building, that there would be risk of losing funding for the project. The consultant conducted a visual inspection of the wall and there was no evidence of staining, etching etc. The four proposed cuts were marked out along the wall identified as Cuts #4 through #7. Sampling of the concrete north wall was conducted from the surface to approximately an inch into the material. Four samples from each cut area were obtained by chisels for a total of 16 samples, and were analyzed for Title 22 Metals. Nickel, the contaminant of concern for the north wall, was detected in each of the concrete samples at concentrations ranging from 6.31 mg/kg to 3,390 mg/kg (sample 6W). Five of the samples contained nickel that exceeded its Total Threshold Limit Concentration (TTLC) of 2,000 mg/kg including samples 6C, 6E, 6W, 7C, and 7W. It was determined that the concrete from proposed Cuts 4 and 5 could be disposed of as general construction debris. However, some of the concrete from proposed cuts 6 and 7 would need to be disposed of a hazardous waste when removed. Additional sampling was conducted in October 2016 on cuts 6 and 7 at both 6 feet and 9 feet in order to test the concrete for disposal options. None of the additional samples results exceeded the TTLC of 2,000 mg/kg. However to profile the concrete waste to be disposed of as hazardous waste, solubility testing of select concrete samples was conducted using Soluble Threshold Limit Concentration (STLC) and/or Toxicity Characteristic Leaching Procedure (TCLP). Four of the soluble nickel concentrations exceeded its STLC of 20 mg/l. The results indicated that concrete generated from the entire area of proposed Cut #6 and the lower six feet of Cut #9 would require special handling and disposal when disturbed. During the cutting and handling of the impacted concrete, workers utilized half face respirators with high-efficiency particulate air (HEPA) filters, using wet sawing and drilling techniques into the concrete. Dust suppression measures conducted during the project were successful and no visible dust was observed or noted during the removal and disposal activities. A total of 7.55 tons of concrete were transported to the South Yuma County Landfill under a uniformed hazardous waste manifest. Following completion of work, the remaining concrete block was covered with a new epoxy coating to prior heights of known impacts to ensure any residual metals are contained. A photograph log was submitted that shows images of the soil capping work and the new epoxy coating applied to the north wall of 535 Florence Street in the final report. The consultant has requested that no further action at the Site is

IMPERIAL WHEEL LTD (Continued) **S100182231**

required based on commercial use, and DEH concurs with the consultant s recommendations. However, the conditions that were originally provided with the DEH Closure Letter dated March 28, 1990 for 535 Florence (H02185-001) still apply. Ongoing monitoring of the epoxy coating is required, and all future tenants and/or owners of the building must be notified of the potential hazard with contact with the north wall. If any more modifications to the north wall is proposed for 535 Florence or if any grading will be conducted in the vacant area with the PAH contamination, you will be required to reenter the Voluntary Assistance Program.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Site History:	The Site is a former Shell service station located on the northeast corner of the intersection of Imperial Beach Boulevard and 13th Street in Imperial Beach. The Site is currently a Valero-Branded service station and consists of four dispensers, three underground storage tanks (USTs), and a station building. In March and April 1999, six soil borings were advanced and soil samples were collected and analyzed. Based on the laboratory results, the Department of Environmental Health (DEH) opened case H03167-001 on October 15, 1999. A brief summary of assessment and cleanup activities are presented below: Between 1999 and 2008, six soil borings were advanced, seven hydropunch borings were advanced, and 14 groundwater monitoring wells were installed; On November 30, 1999, three USTs were removed and soil samples were collected and analyzed under the direction of DEH; On December 2, 1999, approximately 875 cubic yards of impacted soil was excavated from the UST cavity and treated offsite; On October 8, 2003, soil vapors were collected and analyzed from four onsite locations; In August 2012, a groundwater extraction remediation event was conducted to remove free product to the extent practicable from MW-1; Between 2006 and 2012, free product was recovered by either hand bailing, passive skimmers, or absorbent socks. Approximately 0.62 gallon of free product was recovered during this timeframe. SOIL Based on the analytical results from soil samples collected during the monitoring well installation, the soil boring advancement, and the UST removal activities, the consultant concludes that the petroleum hydrocarbon impacted soil has been adequately defined. The consultant estimates that approximately 1,543 cubic yards of total petroleum hydrocarbon impacted soil greater than concentrations of 100 milligrams per kilogram remains beneath the Site, most of which exists in the vicinity of SB-1 and B-11 in the southwest corner of the Site. GROUNDWATER The groundwater has been monitored and sampled between September 2000 and April 2013. Groundwater flow is towards the southwest and dissolved plume extends offsite to the west and south, 250 feet and 60 feet, respectively. Free product was detected only in MW-1 at a maximum thickness of 0.11 feet. Free product has not been detected in MW-1 since May 2012. Based on the groundwater samples collected from the Site s monitoring well network as well as the monitoring well network from the nearby 7-Eleven property to the south, the consultant concluded that the dissolved-phase plume is adequately defined, has stable to decreasing concentration trends, and is collapsing to its core. SOIL VAPOR In

IMPERIAL BEACH SHELL (Continued) **S109277048**

October 2003, soil vapors were collected and analyzed from four onsite locations at 6 and 10 feet below ground surface. Based on laboratory results and the SAM Vapor Risk Model, the consultant concluded that vapors do not pose a health risk to the occupants of the onsite building. The calculated risk for benzene was 4.84 x 10-8. A Corrective Action Plan (CAP) dated April 30, 2013 was submitted to DEH. The CAP recommends No Further Action and Case Closure. Based on data obtained throughout the case history, the consultant and Shell Oil Products US, conclude that Site conditions present no significant risk to human health, the environment, and nearby sensitive receptors. DEH concurs with these conclusions.

Claim Number:	17020
Claim Status:	Active
Site History:	The Site is an operating convenience store with three gasoline underground storage tanks (USTs) and two dispenser islands. In August 1993, six soil samples were collected beneath a former dispenser island during product piping upgrade activities. Total petroleum hydrocarbons in the gasoline range (TPH-g) were detected in three shallow samples, with concentrations ranging from 2,470 milligrams per kilogram (mg/kg) to 16,218 mg/kg. Based on the laboratory results, DEH opened case #H20488-001. Groundwater beneath the site does not meet the criteria for beneficial uses due to salinity and total dissolved solids concentrations, and is exempt as a drinking water source. Between 2000 and 2004, eleven groundwater monitoring wells were installed to investigate the extent of contamination. Gasoline-related hydrocarbons and additives, including TPH-g, benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tertiary butyl ether (MTBE), were identified as the principal contaminants of concern (COCs). Liquid-phase hydrocarbons (LPH) were historically present in two site wells. The maximum measured product thickness was 1.04 feet in October 2005. LPH has not been reported in either well since October 2010. In October 2005, an on-site soil vapor risk assessment was conducted. Seven soil vapor probes were installed around the perimeter of the store, and vapor samples were collected at depths of six feet and ten feet below ground surface. No COCs were detected, and the consultant determined that there was no significant health threat posed by the potential migration of benzene vapors from the subsurface. The pre-remediation estimate of the volume of hydrocarbon-impacted soil containing TPH-g concentrations greater than or equal to 100 mg/kg was approximately 4,107 cubic yards, containing 11,622 pounds of hydrocarbons. In October 2006, three remediation wells were installed, and four-hour air sparging (AS) and soil vapor extraction (SVE) tests were conducted in November 2006. A one-month ozone sparge test was also conducted beginning in December 2006. Between September 2012 and June 2013, five ninety-six hour AS/SVE events were conducted which removed approximately 1,665 pounds of the estimated 11,622 pounds of hydrocarbons. During the remediation, the mass removal rate declined from almost 11 pounds per

7-ELEVEN #23982 (Continued) **S104749439**

hour to 0.5 pounds per hour. The consultant concludes that the secondary contaminant source at the site has been removed to the extent practicable. In the 2014 Corrective Action Plan (CAP) and 2015 CAP Addendum prepared for the case, remediation by natural attenuation (RNA) was selected as the remedial alternative for further reducing the residual dissolved benzene and MTBE concentrations. The environmental consultant states that the dissolved-phase hydrocarbon concentrations appear to be stable and/or decreasing. Based on concentration trends, DEH staff estimate that the Maximum Contaminant Level (MCL) for benzene of 1 microgram per liter (g/l) will be reached in approximately 113 years. The consultant estimates that the secondary MCL for MTBE of 5 g/l will be reached within approximately four years. No water supply/production wells were identified by the consultant within a 1,000-foot radius, and the nearest wells were located at least one half-mile from the site. The consultant recommends case closure based on the following: Groundwater beneath the site has no designated beneficial uses and is not considered a suitable or potentially suitable source of drinking water, free product has not been detected at the site since October 2010, and dissolved-phase hydrocarbon concentrations are generally decreasing or stable. The residual benzene, toluene, ethylbenzene, and xylene impacts are limited to the site, generally around the existing tank system. The consultant also concludes that the case meets the State s Low-Threat Underground Storage Tank Case Closure Policy criteria. The required public notifications and comment/review period were completed, and no comments were received. Groundwater monitoring wells and remediation wells associated with the site will be destroyed under permit number DEH2016-LMWP-002264.

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker,

California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005

NAVY REGION SOUTHWEST, COMMANDER (Continued) **1015730583**

Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F026
Waste Description: Wastes (Except Wastewater And Spent Carbon From Hydrogen Chloride Purification) From The Production Of Materials On Equipment Previously Used For The Manufacturing Use (As A Reactant, Chemical Intermediate, Or Component In A Formulating Process) Of Tetra-, Penta-, Or Hexachlorobenzene Under Alkaline Conditions.

Waste Code: F027
Waste Description: Discarded Unused Formulations Containing Tri-, Tetra-, Or Pentachlorophenol Or Discarded Unused Formulations Containing Compounds Derived From These Chlorophenols. (This Listing Does Not Include Formulations Containing Hexachlorophene Synthesized From Prepurified 2,4,5-Trichlorophenol As The Sole Component.)

Waste Code: P001
Waste Description: 2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code: P002
Waste Description: 1-Acetyl-2-Thiourea (Or) Acetamide, N-(Aminothioxomethyl)-

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

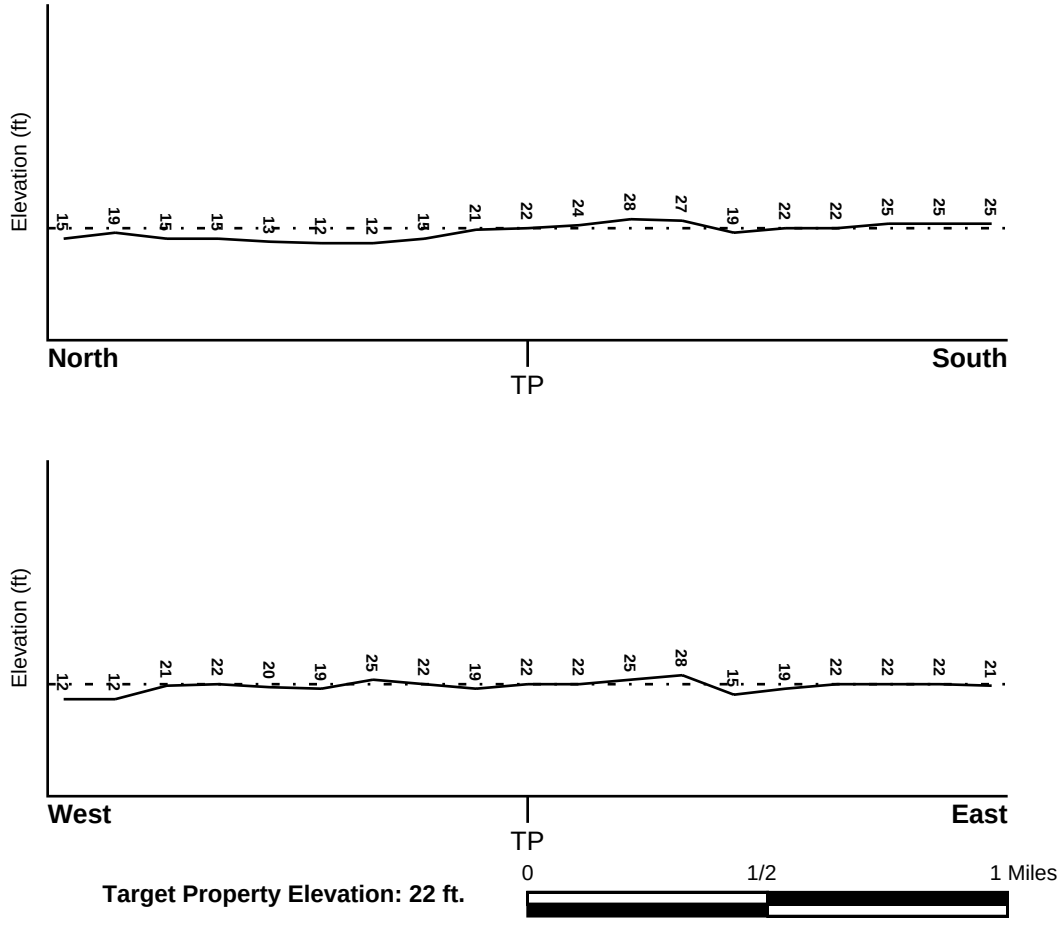
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 22 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

1.0 Introduction

1.1 Project Description

The City of Imperial Beach has received ATP Cycle 6 and SANDAG Transnet funds to construct the Palm Avenue Master Project, between Rainbow Drive and Georgia Street. The Proposed Project includes Class IV bicycle facilities, widened sidewalks, new lighting, median and sidewalk landscape improvements, traffic signal modifications, and storm drain updates, among other components.

Figure 1 - Vicinity Map

1.1.1 Existing Drainage Conditions

Palm Ave is a six-lane arterial roadway lined with landscape medians. Existing drainage includes sheet flow, gutter flow, and several independent storm drain systems, all discharging to Otay River. There is generally a crown along the center of the roadway along Palm Ave. At the western limits of the project near Rainbow Dr, there are open drainage channels paralleling the roadway.

Runoff from the project will discharge to the Otay River near its headwaters discharging to the San Diego Bay. City storm drain systems D, H, K, and P will all receive runoff from the project area, though not all of those systems will be directly affected by the proposed improvements. Where these systems discharge to the Otay River, FEMA floodplain mapping indicates Zone AE, which is considered a Special Flood Hazard Area.

1.1.2 Proposed Drainage Conditions

The intent of the proposed drainage is to closely mimic the existing drainage patterns. The project corridor also includes three open drainage channels paralleling the roadway. There will be no significant diversions of drainage areas.

The project is not expected to adversely impact the floodplain nor require changes to the mapping.

1.2 Objectives

This study is prepared in support of CEQA Environmental Permitting, including addressing the following questions:

Would the Project:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
   i. result in a substantial erosion or siltation on- or off-site;
   ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;
   iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
   iv. impede or redirect flood flows?

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan

2.0 Methodology

2.1 Rational Method Hydrology

Rational Method peak flow rate calculations have been prepared in accordance with Chapter 3 of the San Diego County Hydrology Manual (County Hydrology Manual). Calculations have been prepared for the 50-year and 100-year events. The Rational Method equation is as follows:

$Q=CIA$

Where: Q = peak discharge (cfs)
C = runoff coefficient (unitless)
I = average rainfall intensity (in/hr)
A = drainage area (ac)

2.1.1 Runoff Coefficient (C)

Runoff coefficients for each of the project areas has been determined based on percent impervious and soil type. Percent impervious has been determined based on aerial imagery and engineering judgement. Soil type has been identified using the NRCS Web Soil Survey. The runoff coefficient is then calculated based on the following equation:

$C=0.90*(\%\ Imp) + C_p*(1-\%\ Imp)$

Where: C_p = Pervious Coefficient for Undisturbed Natural Terrain

2.1.2 Rainfall Intensity (I)

Average rainfall intensity is calculated based on Figure 3-2 of the County Hydrology Manual. The 6-hour precipitation (P_6) is determined based on the isopluvial maps in Appendix B of the County Hydrology Manual. The value for P_6 should be within 45% to 65% of P_{24}. The duration is assumed to be equal to the time of concentration (Tc).

Time of Concentration

The time of concentration consists of an initial time of concentration (Ti) and travel time (Tt). The minimum time of concentration is 5 minutes.

$Tc = Ti + Tt$

Ti is approximated using Figure 3-3 of the County Hydrology Manual and is based on FAA equation for shallow uniform flow on runways. The maximum overland flow length for calculating Ti is specified in Table 3-2 of the County Hydrology Manual based on slope and land use.

Tt is calculated based on flow length and velocity. For significant variations in flow type of velocity, multiple Tt values are calculated and added together for the overall Tt. Street gutter flow is estimated based on Figures 3-6 and 3-7 of the County Hydrology Manual. For other urban concentrated conveyance, velocity is determined based on Manning's Equation or other applicable hydraulic calculations.

2.1.3 Drainage Area (A)

Drainage areas are delineated based upon the best available topographic information. When possible, delineations are field verified for accuracy. Subareas have been delineated as needed based on significant points of interest (i.e. existing or proposed infrastructure, project discharge locations, etc.).

2.2 Hydraulic Design

This preliminary report focuses on the hydraulic capacity specifically of the existing storm drain pipes. Compliance with inlet capacity and street conveyance requirements will be determined during final design.

The general intent of this project is to maintain the existing drainage function and improve the function where feasible. Since this is an urban retrofit project, the drainage design is not expected to meet new development standards.

Pipe capacity calculations were performed based on Manning's open channel flow. Full standard step method hydraulic will be performed during final design. At this stage of design, some pipe sized and slopes are assumed, until additional information is acquired. Some capacity calculations are pending offsite hydrologic calculations not included in the scope of this analysis. Offsite pipes which are not a part of the project have been noted as such.

We have also performed CCTV condition assessment of the existing pipes. The condition will be a factor in prioritizing and determining what systems to upgrade as part of this project.

3.0 Results

3.1 Hydrology

Table 1 is a comparison of existing and proposed results for the 100-year peak flow rate calculations. More detailed calculations are included in Appendix C.

4.0 Conclusions

a) The project will not violate water quality standards or waste discharge requirements. The City is subject to the requirements of the Regional Phase I MS4 Permit (Order No. R9-2013-0001, as amended by Order Nos. R9-2015-001 and R9-2015-0100). The City's BMP Design Manual outlines the requirements and how they impact development projects. The project is implementing Green Street measures as part of the overall compliance approach.

b) The project will not decrease groundwater supplies. The project area is near the Pacific Ocean and has very little runoff infiltrating to the ground. The project will improve conditions by adding landscaping and constructing BMPs.

c) The drainage pattern will not be substantially altered with the project improvements. The proposed drainage pattern will closely mimic existing conditions, as shown in the existing and proposed drainage calculations in Table 1.

i. The exit velocities of the outfall pipe will not significantly change from existing to proposed condition. Analysis shows that most pipes have exit velocities over 5 fps. Currently, outfall pipes have rip rap to provide erosion control and flow dissipation.

ii. There is no substantial increase in runoff being generated in this project. Slight increases in impervious areas may occur due to the construction of wider sidewalks, bus platforms, and curb bulb outs. As the project progresses, landscaping and BMPs will be strategically placed to offset the impact of the additional impervious area that may be added.

iii. Based on preliminary analyses, several pipes are not adequately sized, even in the existing condition. To the extent feasible within the budgetary constraints of the project, pipes that are currently undersized will be upsized as part of the improvements. Additional information from field verification and ground surveying will more accurately determine drainage area delineations and resulting flow captured by the systems. The

capacity of each existing storm drain pipe with current available information was analyzed in Table 2.

iv. The project does not impede or redirect flood flow. The proposed improvements will improve drainage conveyance and capture along this corridor.

d) A very small portion of project at the eastern limit is within the FEMA floodplain Zone AE, which is considered a Special Flood Hazard Area.

Although the northwestern limits of the project are adjacent to a Tsunami Hazard Area, the roadway itself is not considered a Tsunami Hazard Area, according to the California Department of Conservation

The project is not in a seiche zone.

e) This project will not conflict with or obstruct implementation of a water quality control plan. There is not an existing groundwater management plan within or near the project.

*The values associated with 0% impervious may be used for direct calculation of the runoff coefficient as described in Section 3.1.2 (representing the pervious runoff coefficient, Cp, for the soil type), or for areas that will remain undisturbed in perpetuity. Justification must be given that the area will remain natural forever (e.g., the area is located in Cleveland National Forest).

Directions for Application:

(1) From precipitation maps determine 6 hr and 24 hr amounts for the selected frequency. These maps are included in the County Hydrology Manual (10, 50, and 100 yr maps included in the Design and Procedure Manual).

(2) Adjust 6 hr precipitation (if necessary) so that it is within the range of 45% to 65% of the 24 hr precipitation (not applicaple to Desert).

(3) Plot 6 hr precipitation on the right side of the chart.

(4) Draw a line through the point parallel to the plotted lines.

(5) This line is the intensity-duration curve for the location being analyzed.

Application Form:

(a) Selected frequency _____ year

(b) P_6 = _____ in., P_{24} = _____, $\frac{P_6}{P_{24}}$ = _____ %(2)

(c) Adjusted P_6(2) = _____ in.

(d) t_x = _____ min.

(e) I = _____ in./hr.

Note: This chart replaces the Intensity-Duration-Frequency curves used since 1965.

Note that the Initial Time of Concentration should be reflective of the general land-use at the upstream end of a drainage basin. A single lot with an area of two or less acres does not have a significant effect where the drainage basin area is 20 to 600 acres.

Table 3-2 provides limits of the length (Maximum Length (L_M)) of sheet flow to be used in hydrology studies. Initial T_i values based on average C values for the Land Use Element are also included. These values can be used in planning and design applications as described below. Exceptions may be approved by the "Regulating Agency" when submitted with a detailed study.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Diego County Area, California
Survey Area Data: Version 20, Aug 30, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

RE: Palm Avenue Complete Multi-Modal Corridor Project – Transportation CEQA Memorandum

---

The purpose of this Transportation CEQA Memorandum is to document the results of the transportation analysis conducted for the Palm Avenue Complete Multi-Modal Corridor Project (the "Project") in the City of Imperial Beach, California. This memorandum evaluates the Project's features against the transportation-related questions presented in Appendix G of the CEQA Guidelines to determine whether the Project would result in a significant transportation-related impact under CEQA.

Project Description

The Palm Avenue Complete Multi-Modal Corridor Project proposes to transform Palm Avenue between Rainbow Drive and Georgia Street into a multimodal complete street corridor that improves safety, accessibility, and visual character. The project will strengthen regional connectivity by linking with surrounding active transportation initiatives, including the Bayshore Bikeway, 9th Street Enhancement Project, and Border to Bayshore project. The general suite of traffic-related improvements proposed along the corridor will include the following:

- Class IV protected bike lanes next to the curb, separated by a concrete 2-foot-wide median within a 3' buffer, where existing public right-of-way allows.
- Provide transit amenities.
- Incorporate on-street parking configuration changes, relocations, and removals at selected locations.
- Realign select intersections to improve operations and safety.
- Widen existing sidewalk to 10' wide where possible.
- Construct curb extensions with directional ramps at all side street crossings.
- Rebuild alley entrances, driveways and curb ramps to be ADA compliant.

All traffic signal modifications will be designed in conformance with California Manual on Uniform Traffic Control Devices (CA MUTCD) standards and in coordination with the City's traffic engineering department

Transportation Impact Analysis

The following addresses the four transportation-related questions from Appendix G of the CEQA Guidelines.

a) Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

No. Based on review of the Palm Avenue Complete Multi-Modal Corridor Project application, the proposed improvements would not conflict with any adopted program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The

project is consistent with several adopted City and regional planning documents, including the City of Imperial Beach Bicycle Master Plan, Local Road Safety Plan (LRSP), and the SANDAG Regional Plan.

The City of Imperial Beach Bicycle Master Plan recommends a Class I Bike Path along State Route 75 (SR-75) west of Rainbow Drive and a Class II Bike Lane along Palm Avenue from Delaware Street to the eastern City limit. A bicycle facility is not recommended in the Bicycle Master Plan along SR-75 from Rainbow Drive to Delaware Street. The Palm Avenue Complete Multi-Modal Corridor Project proposes Class IV Protected Bike Lanes along SR-75/Palm Avenue from Rainbow Drive to eastern City limit. Since the Project is upgrading the bicycle facilities along Palm Avenue in the Bicycle Master Plan to protected bike lanes, the Project would be considered consistent with the Bicycle Master Plan.

The City's Local Road Safety Plan recommended safety-related improvements along Palm Avenue, such as the installation of bicycle crossings at signalized intersections along Palm Avenue, as well as signal upgrades and curb bulb-outs at the intersections of Palm Avenue at 9th Street and Palm Avenue at 13th Street. The Palm Avenue Complete Multi-Modal Corridor Project proposes similar improvements to the LRSP, as noted in the project description. As such, the Project would be considered consistent with the City's LRSP.

The SANDAG 2021 Regional Plan designates Palm Avenue as a Regional Arterial with operational and technology improvements as part of the 2050 Complete Corridor Bike Network and Arterials, as well as a roadway with Local Bus service. It should also be noted that Palm Avenue in the City of Imperial Beach is within a Regional Mobility Hub Area, which are considered communities with a convenient mix of travel choices, safer streets, and supporting amenities that help people get to and from transit services without relying on a car. The Palm Avenue Complete Multi-Modal Corridor Project will provide Class IV Protected Bike Lanes, transit amenities, and improve safety and operations at signalized intersections along Palm Avenue to promote multimodal activity in line with the SANDAG Regional Plan. Therefore, the Project would be considered consistent with the SANDAG Regional Plan.

As noted above, the Project is in compliance with the goals and policies of local and regional guiding transportation plans.

b) Would the project conflict or be inconsistent with CEQA Guidelines §15064.3, subdivision (b)?

No. CEQA Guidelines §15064.3 sets vehicle miles traveled (VMT) as the metric for transportation impacts. For transportation projects, the key question is whether the project would induce additional driving; projects that reduce or do not increase VMT are generally considered less than significant. A qualitative explanation is acceptable when models are unnecessary or the effects are clear.

The Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (Technical Advisory, December 2018) states that "…active transportation projects generally reduce VMT and therefore are presumed to cause a less-than-significant impact on transportation." The Palm Avenue Complete Multi-Modal Corridor Project is a active transportation project, as noted by the improvements in the project description.

As a result, the project would not conflict with §15064.3(b) and would result in a less-than-significant transportation impact under the VMT metric. Any construction-period traffic effects would be temporary and managed through standard measures (i.e. a traffic management plan). If future design changes were to introduce new auto capacity, a project-level induced travel/VMT analysis would be warranted.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

No. The project would not substantially increase hazards due to geometric design features or incompatible uses. The roadway improvements and traffic signal modifications as noted in the project description will be designed to applicable standards. Driveway and alley treatments would be rebuilt to current ADA standards with visibility triangles and marked conflict zones, and intersection geometry may be refined (i.e. tighter curb radii, protected-intersection elements) to lower turning speeds. All improvements will be designed to applicable City standards and the CA MUTCD. With standard construction-period traffic control to manage temporary conditions, the project would not create new geometric or use hazards; therefore, the impact would be less than significant.

d) Would the project result in inadequate emergency access?

No. The project would not result in inadequate emergency access. All improvements occur within the existing Palm Avenue right-of-way and are intended to calm speeds and organize space, not to restrict access. Targeted lane reductions along certain segments, curb extensions, protected bikeways, and median/separator elements would be designed in coordination with the City's fire and emergency services to maintain required California Fire Code clear widths and turning templates at intersections, alleys, and driveways. Curb extension geometry, separator gaps at crossings, and parking management would be laid out to preserve apparatus turning paths and sight lines and traffic signal modifications would be coordinated with emergency responders to maintain existing emergency operations.

During construction, the contractor would implement a Traffic Management Plan to keep emergency routes open, provide flagging or temporary lane control as needed, and maintain continuous access to adjacent properties. With these design commitments and standard construction-phase measures, the project would not create barriers to emergency response or evacuation; therefore, the impact would be less than significant.

Conclusion

The Palm Avenue Complete Multi-Modal Corridor Project implements complete-streets upgrades within existing right-of-way, including protected bikeways, targeted lane reductions along certain segments, wider sidewalks, ADA curb ramps, curb extensions, parking management, and signal enhancements, all designed consistent with the CA MUTCD and coordinated with City traffic engineering and emergency services. The project does not add general-purpose vehicle capacity and includes standard construction-phase traffic management to maintain access.

Accordingly: (a) it implements, and does not conflict with, applicable City and regional circulation policies (less-than-significant/no conflict); (b) it is consistent with CEQA Guidelines §15064.3(b) because it repurposes capacity and would not induce VMT (less-than-significant); (c) it employs recognized safety countermeasures and avoids hazardous geometry or incompatible uses (less-than-significant); and (d) it maintains required clear widths/turning paths and manages work zones to preserve emergency routes (less-than-significant). Therefore, the Project would have a less-than-significant transportation impact.

SUBJECT: ASSEMBLY BILL 52 NOTIFICATION OF THE PROPOSED PALM AVENUE MULTIMODAL CORRIDOR PROJECT LOCATED WITHIN THE CITY OF IMPERIAL BEACH, CALIFORNIA

Dear Mr. Dyche:

Pursuant to California Assembly Bill (AB) 52, the City of Imperial Beach is providing you with notification of the Palm Avenue Multimodal Corridor Project (Project), located between Rainbow Drive and 13th Street in the City of Imperial Beach, San Diego County, California. While the City of Imperial Beach has not yet received a request from your tribe to be notified of specific projects within a designated geographic area, we are reaching out to all groups listed on the California Native American Heritage Commission's Sacred Lands File consultation list in a good faith effort to provide notification of the proposed Project to groups that are traditionally or culturally affiliated with the geographic area of the proposed Project.

PROJECT NAME: Palm Avenue Multimodal Corridor Project
PROJECT NO: Project No. 17736
PROJECT LOCATION: The Project spans approximately 1.75 miles along Palm Avenue, between Rainbow Drive on the west and Georgia Street on the east, in the City of Imperial Beach, San Diego County, California.

PROJECT DESCRIPTION:
The Project is designed to transform Palm Avenue into a safer, more accessible, and visually enhanced multimodal corrdior. The Project is approximately 5,711 linear feet and covers approximately 59.8-acres. The Project is proposing several improvements including establishing Class IV protected bike lanes, widening existing sidewalks, installing shade canopy trees, ornamental lighting, improving median landscape, replacing median vehicle lighting, constructing curb extensions with directional ramps, and rebuilding alley entrances, driveways and curb ramps to be ADA compliant.

The Project falls in Township 18 South, Range 2 West, and Sections 19, 20, and 29 of the Imperial Beach, California U.S. Geological Survey 7.5-minute Quadrangle (Figure 1). The City of Imperial Beach will act as the lead agency under California Environmental Quality Act (CEQA).

Cultural resource identification efforts undertaken for the Project to date include a records search of the Project area obtained from the South Coastal Information Center (SCIC) on April 8, 2025 by Dudek; a cultural resources field survey conducted by Dudek on May 15, 2025; and a review of historical maps and

aerial imagery depicting the Project area. The records search identified one built environment resource, P-37-026582 (Western Company Salt Works), as intersecting the Project area. During the survey, one newly identified historic period site, PA-MM-S-001, was recorded on the surface consisting of a refuse scatter of glass and ceramic fragments. No precontact indigenous archaeological resources were observed during survey,

If you have any comments or concerns regarding tribal cultural resources (as defined in California Public Resources Code section 21074) in relation to the proposed Project, please provide a written request for consultation via email to D. Todd Philips, City of Imperial Beach Community Development Director (tphilips@imperialbeachca.gov). The California Native American tribe has **30 days** of receipt of this notice to request consultation pursuant to California Public Resources Code section 21080.3.1. Please include the name of a designated lead contact person.

If you have any questions, please don't hesitate to contact me.

Sincerely,

D. Todd Philips, Ed.D.

Dear Ms. Osuna:

Pursuant to California Assembly Bill (AB) 52, the City of Imperial Beach is providing you with notification of the Palm Avenue Multimodal Corridor Project (Project), located between Rainbow Drive and 13th Street in the City of Imperial Beach, San Diego County, California. While the City of Imperial Beach has not yet received a request from your tribe to be notified of specific projects within a designated geographic area, we are reaching out to all groups listed on the California Native American Heritage Commission's Sacred Lands File consultation list in a good faith effort to provide notification of the proposed Project to groups that are traditionally or culturally affiliated with the geographic area of the proposed Project.

PROJECT NAME: Palm Avenue Multimodal Corridor Project
PROJECT NO: Project No. 17736
PROJECT LOCATION: The Project spans approximately 1.75 miles along Palm Avenue, between Rainbow Drive on the west and Georgia Street on the east, in the City of Imperial Beach, San Diego County, California.

PROJECT DESCRIPTION:
The Project is designed to transform Palm Avenue into a safer, more accessible, and visually enhanced multimodal corrdior. The Project is approximately 5,711 linear feet and covers approximately 59.8-acres. The Project is proposing several improvements including establishing Class IV protected bike lanes, widening existing sidewalks, installing shade canopy trees, ornamental lighting, improving median landscape, replacing median vehicle lighting, constructing curb extensions with directional ramps, and rebuilding alley entrances, driveways and curb ramps to be ADA compliant.

The Project falls in Township 18 South, Range 2 West, and Sections 19, 20, and 29 of the Imperial Beach, California U.S. Geological Survey 7.5-minute Quadrangle (Figure 1). The City of Imperial Beach will act as the lead agency under California Environmental Quality Act (CEQA).

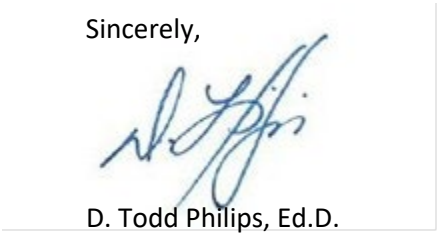
Cultural resource identification efforts undertaken for the Project to date include a records search of the Project area obtained from the South Coastal Information Center (SCIC) on April 8, 2025 by Dudek; a

cultural resources field survey conducted by Dudek on May 15, 2025; and a review of historical maps and aerial imagery depicting the Project area. The records search identified one built environment resource, P-37-026582 (Western Company Salt Works), as intersecting the Project area. During the survey, one newly identified historic period site, PA-MM-S-001, was recorded on the surface consisting of a refuse scatter of glass and ceramic fragments. No precontact indigenous archaeological resources were observed during survey,

If you have any comments or concerns regarding tribal cultural resources (as defined in California Public Resources Code section 21074) in relation to the proposed Project, please provide a written request for consultation via email to D. Todd Philips, City of Imperial Beach Community Development Director (tphilips@imperialbeachca.gov). The California Native American tribe has **30 days** of receipt of this notice to request consultation pursuant to California Public Resources Code section 21080.3.1. Please include the name of a designated lead contact person.

If you have any questions, please don't hesitate to contact me.

Sincerely,



D. Todd Philips, Ed.D.

SUBJECT: ASSEMBLY BILL 52 NOTIFICATION OF THE PROPOSED PALM AVENUE MULTIMODAL CORRIDOR PROJECT LOCATED WITHIN THE CITY OF IMPERIAL BEACH, CALIFORNIA

Dear Mr. Teran:

Pursuant to California Assembly Bill (AB) 52, the City of Imperial Beach is providing you with notification of the Palm Avenue Multimodal Corridor Project (Project), located between Rainbow Drive and 13th Street in the City of Imperial Beach, San Diego County, California. While the City of Imperial Beach has not yet received a request from your tribe to be notified of specific projects within a designated geographic area, we are reaching out to all groups listed on the California Native American Heritage Commission's Sacred Lands File consultation list in a good faith effort to provide notification of the proposed Project to groups that are traditionally or culturally affiliated with the geographic area of the proposed Project.

PROJECT NAME: Palm Avenue Multimodal Corridor Project
PROJECT NO: Project No. 17736
PROJECT LOCATION: The Project spans approximately 1.75 miles along Palm Avenue, between Rainbow Drive on the west and Georgia Street on the east, in the City of Imperial Beach, San Diego County, California.

PROJECT DESCRIPTION:
The Project is designed to transform Palm Avenue into a safer, more accessible, and visually enhanced multimodal corrdior. The Project is approximately 5,711 linear feet and covers approximately 59.8-acres. The Project is proposing several improvements including establishing Class IV protected bike lanes, widening existing sidewalks, installing shade canopy trees, ornamental lighting, improving median landscape, replacing median vehicle lighting, constructing curb extensions with directional ramps, and rebuilding alley entrances, driveways and curb ramps to be ADA compliant.

The Project falls in Township 18 South, Range 2 West, and Sections 19, 20, and 29 of the Imperial Beach, California U.S. Geological Survey 7.5-minute Quadrangle (Figure 1). The City of Imperial Beach will act as the lead agency under California Environmental Quality Act (CEQA).

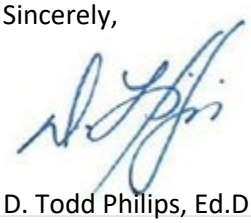
Cultural resource identification efforts undertaken for the Project to date include a records search of the Project area obtained from the South Coastal Information Center (SCIC) on April 8, 2025 by Dudek; a cultural resources field survey conducted by Dudek on May 15, 2025; and a review of historical maps and

aerial imagery depicting the Project area. The records search identified one built environment resource, P-37-026582 (Western Company Salt Works), as intersecting the Project area. During the survey, one newly identified historic period site, PA-MM-S-001, was recorded on the surface consisting of a refuse scatter of glass and ceramic fragments. No precontact indigenous archaeological resources were observed during survey,

If you have any comments or concerns regarding tribal cultural resources (as defined in California Public Resources Code section 21074) in relation to the proposed Project, please provide a written request for consultation via email to D. Todd Philips, City of Imperial Beach Community Development Director (tphilips@imperialbeachca.gov). The California Native American tribe has **30 days** of receipt of this notice to request consultation pursuant to California Public Resources Code section 21080.3.1. Please include the name of a designated lead contact person.

If you have any questions, please don't hesitate to contact me.

Sincerely,



D. Todd Philips, Ed.D.
Community Development Director

Dear Mr. Bunce:

The City of Imperial Beach ("City") has appreciated the opportunity to consult with the Barona Group of the Capitan Grande regarding the proposed Palm Avenue Multi-Modal Corridor Project ("Project"), located in the City of Imperial Beach, California. The City, as lead agency for compliance with the California Environmental Quality Act (CEQA), following a good faith and reasonable effort to consult (as defined in Public Resources Code § 21080.3.1), is formally closing the period of consultation.

Based on review of information provided through the process of consultation, no impacts to known Tribal Cultural Resources (as defined in Public Resources Code § 21074), would occur as a result of Project implementation.

The period of consultation is considered closed as of March 6, 2026. If you have any comments or information to provide, please contact me via email to tphilips@imperialbeachca.gov.

Sincerely,

D. Todd Philips, Ed.D.
Community Development Director
City of Imperial Beach
