

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

SCH #: _____

Project Title: Victorville Police Department and Civic Park Project

Lead Agency: City of Victorville

Contact Name: Travis Clark

Email: TClark@victorvilleca.gov Phone Number: (760) 955-5135

Project Location: Victorville San Bernardino
City *County*

Project Description (Proposed actions, location, and/or consequences).

The proposed project includes the construction of a new 54,892-square-foot, single-story police station with associated landscaping, surface parking, and utility improvements, as well as a new 1,173 square foot, single-story plaza building, a 1,832 stage, and 3.3-acre civic park on a 9.18-acre site located at the northwest corner of Seneca Road and Civic Drive in the City of Victorville. The proposed project would require a Specific Plan Amendment (SPA) to the Civic Center Community Sustainability Specific Plan (Civic Center Specific Plan) to conditionally allow for government uses within the specific plan's Civic Mixed Land Use Category. The intent of the proposed project is to address the City of Victorville's growing public safety needs in response to increasing demand for police services. The existing police station, located at 14200 Amargosa Road, was constructed in 2001 and occupies 15,828 square feet. At the time of construction, the station served a population of 67,854 residents with a staff of 57 sworn officers. However, the City's population has since grown to approximately 140,721, and the number of sworn officers has increased to 103, resulting in space constraints within the existing facility.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The potentially significant impacts that can be reduced to a less than significant level with implementation of recommended mitigation measures include the topics of biological resources, cultural resources, geology and soils, and tribal cultural resources, and transportation and traffic. For the topic of biological resources, implementation of Mitigation Measures BIO-1 through BIO-3 would ensure that impacts related to special-status-species and local ordinances are reduced to a less than significant level. For the topic of cultural resources, potentially significant impacts to archaeological resources would be reduced to less than significant levels with implementation of Mitigation Measure CUL-1 through CUL-4 and adherence to Regulatory Compliance Measure CUL-1. For the topic of geology and soils, potentially significant impacts related to paleontological resources would be reduced to less than significant levels with implementation of Mitigation Measure GEO-1. For the topic of transportation and traffic, potentially significant impacts related to conflicts with the circulation system would be reduced to less than significant levels with implementation of Mitigation Measure TRAN-1. For the topic of tribal cultural resources, potentially significant impacts related to the potential construction-period discovery of previously unidentified human remains, which may be of tribal origin would be reduced to less than significant levels with implementation of Mitigation Measure CUL-1 through CUL-4 and TCR-1 and TCR-2, as well as adherence to Regulatory Compliance Measure CUL-1.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
