1.0 EXECUTIVE SUMMARY

City of Victorville (Client and *user*) retained All Phase Environmental, Inc. (APEI) to conduct a Phase I Environmental Site Assessment (ESA) of the approximately 9.18-acres site located at on the northwest corner of Civic Drive and Seneca Road, in the City of Victorville, in the County of San Bernardino, California, 92394 referred to herein as the "subject property."

In accordance with ASTM E1527-21 this report is presumed to be viable when it is conducted within 180 days prior to the date of acquisition[1] of the subject property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). To comply and qualify for one of the All Appropriate Inquiries *threshold criteria* for satisfying the LLPs to CERCLA liability, their components must be conducted or updated within 180 days of, and prior to, the date of acquisition of the subject property. All other components of all appropriate inquiries must be conducted within one year prior to the date of acquisition of the subject property. Based on this requirement, this report is valid for 180 days after March 7, 2024.

APEI have conducted this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of the subject property. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This report also meets the requirements of All Appropriate Inquiries (AAI) as defined in CERCLA 42, U.S.C. § 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the Landowner Liability Protections (LLPs) to CERCLA liability (42 U.S.C. § 9601 (35)(A) & (B), § 9607(b)(3), § 9607 (q), and § 9607(r)) assuming compliance with other elements of the defense.

ASTM Findings

This assessment has revealed no *recognized environmental conditions, controlled recognized environmental conditions*, *historical recognized environmental conditions*, *de minimis conditions*, or *significant data gaps* in connection with the subject property. Additional investigations are not deemed necessary at this time.

Non-Scope ASTM Findings

APEI have not identified any *business environmental risks* in connection with the subject property.

[1] Under "All Appropriate Inquiries" 40 C.F.R. Part 312, EPA defines "date of acquisition" as the date on which a person or entity acquires title to the subject property.

2.0 INTRODUCTION

2.1 Location and Legal Description

The subject property was an approximately 9.18-acres rectangular site with no street address located on the northwest corner of Civic Drive and Seneca Road, in the City of Victorville, in the County of San Bernardino, California, 92394. Seneca Road delimited the subject property to the south, Civic Drive delimited the subject property to the east, and vacant land delimited the subject property to the west and north. The approximate latitude and longitude near the center of the subject property were 34°30'55.46" north and 117°19'29.26" west, respectively. The subject property was composed of four parcels with the APN numbers 3106-261-15, 3106-261-16, 3106-261-17, and 3106-261-18.

At the time of the subject property reconnaissance on March 7, 2024, the subject property was undeveloped except for some utilities and a concrete enclosure for a pad-mounted transformer but was otherwise unpaved and occupied by vegetation. The *owners* of the subject property were reported to be Brentwood Mortgage 147 LLC. APEI was not provided with a legal description of the subject property.

2.2 Definitions, Contractual Details, Limiting Conditions, and Data Gaps

2.2.1 Definitions

To assist the reader with the interpretation of this report, APEI would like to provide the following definitions of significant ESA terminology as defined by ASTM E1527-21.

Finding

A *finding* identifies features, activities, uses, and conditions that, in the judgment of the environmental professional, may indicate the presence or likely presence of hazardous substances or petroleum products at the subject property. Some *findings*, but not necessarily all *findings*, may be indicative of the presence of *recognized environmental conditions*, *controlled recognized environmental conditions, historical recognized environmental conditions,* or *de minimis conditions*.

Recognized Environmental Condition

A *recognized environmental condition* is defined as, "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely[2] presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

A "material threat" is an obvious condition which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment. An example would be an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage that may cause or contribute to a tank or piping failure resulting in a release to the environment.

Historical Recognized Environmental Condition

A *historical recognized environmental condition* is defined as, "a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A *historical recognized environmental condition* is not a *recognized environmental condition*."

There must be documentation and relevant data that demonstrate that unrestricted use criteria established by the applicable regulatory authority or authorities was met. A past release that qualified as a historical recognized environmental condition may no longer quality as a historical recognized environmental condition if new conditions or information have been identified such as a change in regulatory criteria or previously unidentified or unknown pathway was not previously evaluated.

Controlled Recognized Environmental Condition

A *controlled recognized environmental condition* is defined as, "a *recognized environmental condition* affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

[2] "Likely" is that which is neither certain nor proved, but can be expected or believed to exist by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinion given herein.

A *controlled recognized environmental condition* should be accompanied by documentation such as no further action letters (or similar certifications or approvals) issued by the applicable regulatory authority, or in the case of self-directed actions, documentation and relevant data that satisfy risk-based criteria established by the applicable regulatory authority. When the environmental professional determines that a *controlled recognized environmental condition* exists, this does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the control(s). A past release that previously qualified as a *controlled recognized environmental condition* may no longer be valid if new conditions or changes have occurred such as a change in regulatory criteria, change in subject property use, or a migration pathway was not previously known or evaluated.

De Minimis Condition

A de minimis condition is defined as*, "*a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis condition* is not a *recognized environmental condition* nor a *controlled recognized environmental condition*."

Business Environmental Risk

Business Environmental Risk (*BER*) is defined by ASTM as "a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice (ESA, ASTM E1527-21). Consideration of *BER* issues may involve addressing one or more non-scope considerations such as asbestos, lead-based paint, mold, endangered species, and other issues.

Hazardous Substances

Hazardous substance means "those substances defined as a hazardous substance pursuant to CERCLA 42 U.S.C. § 9601(14), as interpreted by EPA regulations and the courts." There are some substances that non-environmental professionals and others may assume to be hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA through interpretation by EPA regulations and the courts. These substances may include: (1) some substances that occur naturally or through biological digestion (for example, methane), and (2) substances about which human understanding is evolving (for example, per- and polyfluoroalkyl substances, also known as "PFAS"). These and any other "emerging contaminants," where they are not identified as a hazardous substance by CERCLA, as interpreted by EPA regulations and the courts, are not included in the scope of this practice. If and when such emerging contaminants are defined to be a hazardous substance under CERCLA, as interpreted by EPA regulations and the courts, such substances shall be evaluated within the scope of this practice.

2.2.2 Purpose and Scope

A Phase I ESA is intended to provide a brief description of the subject property, its location and surroundings and to identify, to the extent feasible, associated r*ecognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental condition,* and *de minimis conditions* associated with the subject property or surrounding land use and to create a list of the potential human and environmental receptors. The protocol followed for this assessment is in conformance with the requirements of All Appropriate Inquiries as defined in CERCLA 42, U.S.C. 9601(35) (B) and the American Society for Testing and Materials Standard Practice for Environmental Site Assessment for Commercial Real Estate Transactions, ASTM Standard E1527-21. Any exceptions are noted in Section 2.2 – Limiting Conditions and Methodology Used. APEI understands that this ESA will be used by City of Victorville to perform due diligence with respect to environmental conditions at the subject property.

2.2.3 Assumptions, Limitations, Exceptions, Methodology of Assessment

Due care was taken during this investigation, but as documented in Section 4.5.1 of ASTM E1527-21, no environmental site assessment can wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property. An environmental assessment, as any "assessment" work, is eventually the derived judgement of the professional. ASTM E1527-21 also states that performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a subject property, and this practice recognizes reasonable limits of time and cost. Therefore, there is always a potential that certain conditions beyond the ASTM practice may exist on the subject property that could not be identified through the scope of this investigation.

APEI accepts no liability for hidden conditions, variations in composition of materials, and identification of materials not normally identified in sites typical of the subject property. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surface observations. Conditions observed were considered to be representative of areas that were not observed unless otherwise indicated.

APEI has relied on one or more documents developed by other parties and is not liable for any conclusions drawn using these sources if their findings or procedures were erroneous. APEI makes no warranty, guaranty, or certification regarding the quality, accuracy, or reliability of any prior reports reviewed and discussed in this report. APEI expressly disclaims all liability for any errors or omissions contained in any prior reports provided to APEI and discussed in this report. Additionally, the passage of time may result in a change in the environmental characteristics of this subject property and surrounding sites.

The scope of work for this report did not include testing of electrical equipment for the potential presence of polychlorinated biphenyls or the collection of other environmental samples. The scope of work did not include a detailed assessment of natural hazards such as naturally occurring asbestos, arsenic, radon gas or methane gas. The scope of work did not include a detailed assessment of the potential presence of radionuclides, lead in drinking water, lead-based paint, asbestos containing building materials, water intrusion, or mold. The scope of this work did not include an assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, the presence of endangered species or wildlife habitats, wetlands, or the presence of cultural, ecological, or historical resources. The scope of work for this report did not include an assessment of the environmental or regulatory compliance status of the subject property, a review of health and safety practices, an industrial hygiene assessment, or a health-based risk assessment. The scope of work for this report did not include an indoor air quality assessment unrelated to release of hazardous substances or petroleum products into the environment, or a vapor intrusion assessment beyond that required under ASTM 1527-21. Substances not defined as hazardous substances (including those sometimes generally referred to as “emerging contaminants”) were not evaluated unless, or until, such substances are classified by CERCLA as a hazardous substance.

Our professional services have been conducted, our findings obtained, and our recommendations have been prepared in accordance with customary principles and practices in the field of environmental science and engineering. The subject property boundaries, drawings, square footages, and construction dates have been compiled from the best available recorded information and have not been verified by a field survey and may vary from actual conditions. All areas of the subject property were inspected as part of this investigation.

2.2.4 Data Gaps

In accordance with the ASTM standard, an attempt to confirm the history and use of the subject property was conducted from the present back to when the subject property was first developed with any structures or was used for residential, agricultural, commercial, industrial or governmental purposes. Referenced historical documents included all or some of the following: Sanborn fire insurance maps, historical topographic maps, historical city directories, historical aerial photographs, building department records, prior environmental reports, regulatory agency database information, and information from a subject property *owner* representative. These documents were consulted to fill in data gaps dating back to 1932, the first reasonably available information. Aerial photographs with coverage of the subject property were reviewed from the years 1953, 1959, 1968, 1974, 1984, 2005, 2009, 2012, 2016, and 2022. Historical USGS topographic maps of the subject property were reviewed from the years 1932, 1934, 1956, 1968, 1980/1981, 1993, 2012, 2015, 2018, and 2021. Information from the subject property owner dated back approximately 18 years to 2006 with general information dating back even earlier.

Sanborn Fire Insurance Maps with coverage of the subject property were searched but no maps were made for this area. Due to the undeveloped nature of the subject property and its lack of a street address; city directories, building department records, and some regulatory agency records could not be effectively researched. ASTM E1527-21 does not require the environmental professional to undertake a review of recorded land title records or search for environmental liens. This responsibility is placed upon the *user*. It is APEI's understanding that a lender will engage a title company or title professional to undertake a review of reasonably ascertainable recoded land title records and lien records relating to the subject property. Per the scope of work, APEI did not obtain recorded land title records or conduct an environmental lien search.

It is the professional opinion of APEI that there were no significant data gaps with regards to the ability of APEI to identify conditions indicative of releases and threatened releases.

2.2.5 Reliance

This report was prepared for the sole use and benefit of City of Victorville. The information and opinions rendered in this report are for the exclusive use and reliance by City of Victorville. APEI will not distribute or publish this report without the consent of City of Victorville except as required by law and court order. The information and opinions expressed in this report are given in response to a limited assignment by City of Victorville and should be considered and implemented only in respects to that assignment. The services provided by APEI in completing this project have been provided in a manner consistent with normal standards of the profession. This report is not a legal opinion and does not offer warranties or guarantees expressed or implied.

3.0 USER PROVIDED INFORMATION

Information from the *user* was obtained from interviews, emails, and/or the questionnaire presented in Appendix G.

3.1 Title Records

The *user* did not provide title records that documented the chain of historical ownership for the subject property and it was not in the scope of work for APEI to obtain title records.

3.2 Environmental Liens

No environmental liens were found during this investigation and APEI has not received land title records from the *user*. The subject property was not listed in the search of the Federal NPL Liens database. The *user* reported that they were not aware of information indicative of environmental liens, AULs, or governmental notification relating to violations of environmental laws with respect to the subject property. For there to be an environmental lien against the subject property, it must be a suspected, or confirmed, contributor to subsurface contamination. Research conducted for this report did not find any uses that would have contributed to subsurface contamination of the subject property and no regulatory agencies identified it as such.

3.3 Specialized Knowledge

Mr. Tony Camargo, Assistant with the City Manager for the City of Victorville, the *users* of this report, filled out an environmental questionnaire dated March 7, 2024. A copy of this form is provided in Appendix G. Mr. Camargo indicated that a search of recorded land title records or judicial records did not identify any environmental liens filed or recorded against the subject property under federal, tribal, state, or local law or such a search was not undertaken. He marked that a search of recorded land title records or judicial records where appropriate, did not identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the Subject property under federal, tribal, state or local law or such a search was not undertaken. Mr. Camargo had no specialized knowledge or experience related to the subject property or nearby properties. He was not involved in the same line of business as the current or former occupants of the subject property or adjoining sites and had no specialized knowledge of the chemicals and processes used by these types of businesses. Mr. Camargo believed that the purchase price being paid for the subject property reasonably reflected the fair market value of the subject property. Mr. Camargo was not aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional identify conditions indicative of releases or threatened releases. He did not know the past uses of the subject property. He did not know of specific chemicals that are present or once were present at the subject property. Mr. Camargo did not know of spills or other chemical releases that have taken place at the subject property. He was not aware of any environmental cleanups that have taken place at the subject property. Based on his knowledge and experience related to the subject property, he stated that there were no obvious indicators that point to the presence or likely presence of releases at the subject property. The *user's* responses did not include any information indicative of a *recognized environmental condition* in connection with the subject property.

3.4 Valuation Reduction for Environmental Issues

As documented in Appendix G, the *user* reported that to the best of their knowledge, the purchase price or value of the subject property was not significantly less than the purchase price or value of comparable properties.

3.5 Commonly Known or Reasonably Ascertainable Information

As documented in Appendix G, the *user* reported that they were not aware of commonly known or reasonably ascertainable information about the subject property within the local community that was material to *recognized environmental conditions*.

4.0 SITE RECONNAISSANCE

4.1 Subject Property Structures, Roads, and Other Improvements

At the time of the subject property reconnaissance on March 7, 2024, the subject property was undeveloped except for some utilities and a concrete enclosure for a pad-mounted transformer but was otherwise unpaved and occupied by vegetation. The subject property can be accessed from Civic Drive or Seneca Road.

Electricity in the area was supplied by Southern California Edison (SCE) and natural gas was from Southwest Gas. There were no solid waste disposal services at the subject property. Sewer and stormwater services in the area were provided by the city municipal system. The supplier of potable water was City of Victorville Water District. In a report entitled, "*2022 Consumer Confidence Report"* by the City of Victorville Water District dated May 2023, there were no indications that the water provided to the subject property did not meet regulatory standards.

4.2 Current Uses of the subject property

At the time of the subject property reconnaissance on March 7, 2024, the subject property was undeveloped and vacant except for some utilities and a concrete enclosure for a pad-mounted transformer but was otherwise unpaved and occupied by vegetation.

4.3 Current Uses of Adjacent Sites

Current uses of the immediately adjacent sites and their addresses as noted on the buildings or researched on-line are as follows:

- North – Vacant land, no address assigned;
- Northeast – Civic Drive followed by Victorville Motors dealership; 14617 Civic Drive;
- East – Civic Drive followed by the Caposio Buick GMC dealership and Capo Corner Deli; 14555 Civic Drive;
- Southeast – Civic Drive and Seneca Road followed by the Joseph B. Campbell Courthouse; 14455 Civic Drive;
- South – Seneca Road followed by vacant, unpaved, parcels with no addresses assigned, and;
- West – Vacant land, no address assigned.

Based on observations and research, It is unlikely that a recognized environmental condition exists at the subject property because of the current adjacent land use to the west and south. APEI did not detect obvious indications that these adjacent sites store large quantities of hazardous substances, petroleum products, hazardous waste, have USTs, or are involved in a cleanup operation. Past and/or current uses of the adjacent sites to the northeast, east, and southeast utilized hazardous substances or petroleum products that are discussed below in Section 5.3.2.

4.4 Hazardous Substances Connected with Identified Uses

An unaccompanied site reconnaissance of the subject property was conducted on March 7, 2024, by Mr. Doug Kochanowski, Biologist and Senior Environmental Scientist, that included a walk of the subject property to determine the presence of hazardous substances, petroleum products, and environmental conditions. Mr. Kochanowski is an *Environmental Professional* as defined by ASTM E1527-21 and 40 C.F.R. § 312.10(b). All areas of the subject property were inspected as part of this investigation.

There were no signs of hazardous substances or petroleum products being used or stored on the subject property. There was no evidence of spills or releases of any materials noted during the site reconnaissance.

4.5 Unidentified Substance Containers

There were no unidentified substance containers observed on the subject property.

4.6 Storage Tanks

No USTs were noted on the subject property at the time of the subject property reconnaissance. There were no common indicators of USTs such as vent pipes, fill ports, manways, fuel gauges, or dispensers observed. In the regulatory information researched there were no USTs reportedly installed, removed, closed in place, or abandoned at the subject property and no common indicators of closed tanks were observed.

APEI observed no ASTs on the subject property and did not identify any equipment which would require such tanks. Moreover, visual indicators of former site ASTs such as tank cradles, secondary containment structures, and tank pedestals were not observed.

4.7 Hydraulic Equipment

No above or below-grade hydraulic lift systems were observed on the subject property.

4.8 Indications of PCBs

There were no pad-mounted transformers, pole-mounted transformers, ballasts, or hydraulic lift systems located on the subject property.

4.9 Indications of Solid Waste Disposal

There was no evidence observed of buried drums, buried containers, free liquids, odors, unusual depressions, or excavations that would indicate solid waste disposal activity had occurred on the subject property. There was some windblown trash observed on the subject property. This appeared to be innocuous household trash and there were no signs of disposed hazardous substances or petroleum products. No further action is recommended regarding the innocuous trash on the subject property.

Based on surface observations and comparisons with topographic maps, other than typical engineered fill used in foundation construction, it did not appear that a significant amount of fill had been imported onto the subject property.

4.10 Surface Staining

There was no evidence noted of discolored soils, odors, or surface staining on the subject property during the site reconnaissance. There was no evidence of sparse, stressed, or dead vegetation (from other than insufficient water). There was no visual evidence of improper handling or disposal of hazardous chemicals or materials noted on the subject property.

5.0 RECORDS REVIEW

5.1 Physical Setting

5.1.1 Surface Characteristics

According to the U.S. Geological Survey (USGS) topographic map, Victorville California Quadrangle, the finished elevation near the center of the subject property was approximately 2,952 feet above Mean Sea Level (MSL) and the general topography sloped to the east, northeast. The subject property was undeveloped except for some utilities and a concrete enclosure for a pad-mounted transformer but was otherwise unpaved and occupied by vegetation.

5.1.2 Drainage Patterns/Basins

The subject property is in an area designated as "Zone X" on the FEMA Q3 Flood Insurance Rate Map, San Bernardino County, map number 06071C5815H dated August 28, 2008. These areas have been determined to be outside the 0.2% annual chance floodplain.

On March 8, 2024, APEI researched the California Environmental Protection Agency, State Water Resources Control Board, Water Boards *Storm Water Multiple Application & Report Tracking System* (SMARTS) for storm water permits related to construction, industrial, and municipal activities. There were no storm water/NPDES permits identified for the subject property.

There was no industrial or sanitary water discharge from the subject property. Stormwater drainage on the subject property was primarily downward surface percolation. Stormwater from adjacent sites was not expected to enter the subject property under normal conditions. There were no drinking water wells, groundwater monitoring wells, floor drains, clarifiers, sumps, septic system, or french drains noted, or reported to exist, on the subject property.

5.1.3 Wetlands

APEI screened the subject property for the presence of suspect wetlands during the site reconnaissance and by reviewing the U.S. Department of the Interior, Fish and Wildlife Service, *National Wetlands Inventory* online map researched on March 9, 2024, and the most recently available topographic map dated 2021. These sources indicated that the subject property was not in an area mapped as a potential wetlands area and there were no mapped bodies of water indicative of possible wetlands on the subject property. The nearest mapped surface water was the Oro Grande Wash located approximately 0.9 miles southeast of the subject property. During APEI's site reconnaissance, no suspect wetlands areas were observed on the subject property. The Environmental Professional who conducted the subject property reconnaissance is not a specialist trained in wetlands delineation. A wetland delineation was beyond the scope of this assessment. APEI notes that the Wetlands Inventory Map is prepared through the analysis of aerial photography and not by actual ground reconnaissance. It is normally used as a screening method to assess if potential wetland areas exist. No further assessment is recommended.

5.1.4 Geology

According to the *Geologic Map of California* published in 2010 by the California Geological Survey, the subject property is underlain by Pleistocene-Holocene aged marine and nonmarine sedimentary rocks composed of alluvium, lake, playa, and terrace deposits, consolidated and semi-consolidated (Q).

According to the *Web Soil Survey* by the National Resources Conservation Service dated August 30, 2023, the primary soil type of the north side of the subject property is Bryman loamy fine sand. The landform setting for this soil is described as fan remnants with a slope of 2 to 5 percent. This soil is well drained and the depth to the water table is more than 80-inches.

According to the *Web Soil Survey* by the National Resources Conservation Service dated August 30, 2023, the primary soil type of the south side subject property is Cave loam. The landform setting for this soil is described as fan remnants with a slope of 0 to 2 percent. This soil is well drained and the depth to the water table is more than 80-inches.

5.1.5 Hydrogeology

The subject property is located in the Upper Mojave River Groundwater Basin. The water board has designated beneficial uses of groundwater as municipal and domestic supply, agricultural supply, industrial supply, freshwater replenishment and aquaculture. Regional groundwater flow is typically north, northeasterly, parallel with the Mojave River (CRWQCB, 1994).

Hydrogeologic investigations have not been performed on the subject property; therefore, to what extent localized variations in groundwater presence and flow occur on the subject property is unknown. APEI therefore reviewed subsurface data from investigations on a nearby site. ARCO #1891 at 14485 7th Street was located approximately 1,900 feet east of the subject property. In a report dated October 13, 2009, by Stantec Consulting Corporation entitled "*Atlantic Richfield Company Quarterly Status Report, Third Quarter 2009"* shallow groundwater was reported to be at a depth of approximately 76.66 to 79.85 feet below ground surface (bgs). Groundwater flow direction was inferred to be to the north, northwest at a rate of approximately 0.003 feet per foot (ft/ft) however, due to a difference in the surface slope and its distance from the subject property, the groundwater flow at this site may not be consistent with that of the onsite conditions.

Shallow groundwater generally flows in directions subparallel to the ground surface slopes and under the influence of gravity toward points of discharge such as creeks, swamps, drainage swales, or pumped groundwater wells. Based on the surface topography at the subject property that drops to the north, northeast and the proximity of the Oro Grande Wash located east, southeast of the subject property, the presumed groundwater flow direction in the uppermost water-bearing unit across the subject property would be to the east. East is only the presumed groundwater flow direction and only physical testing can accurately state the true groundwater flow direction.

5.1.6 Other Physical Setting Conditions

The investigations of the potential presence of endangered species, threatened species, culturally sensitive areas, or historically significant areas were not included in the scope of this report. Based on the undeveloped nature of the subject property, it is possible that some of these conditions may exist on the subject property. If these conditions were to exist on the subject property, it is noted that they would not constitute a *recognized environmental condition*.

5.2 Historical Records Review

5.2.1 Historical Uses of the Subject Property

Historical information was obtained from aerial photographs (1953, 1959, 1968, 1974, 1984, 2005, 2009, 2012, 2016, and 2022) presented in Appendix C and USGS Topographic maps (1932, 1934, 1956, 1968, 1980/1981, 1993, 2012, 2015, 2018, and 2021) presented in Appendix D. Information from the subject property owner dated back approximately 18 years to 2006 with general information dating back even earlier.

The subject property was undeveloped in the first reasonably available historical documentation dated 1932. Between 1968 and 1974, the northeast side of the subject property was cleared and graded and partially developed with the former Roy Rodgers Museum that extended onto the east adjacent site. Between 1974 and 1984, driveways and paved parking lots were added to the subject property for use by the Roy Rodgers Museum whose building lied partially on the subject property. Between 1984 and 2005, the Roy Rodgers Museum, driveways, and parking lots were all demolished and the subject property was vacant. The subject property had not changed since 2005. It has remained vacant and unpaved except for utilities and a concrete enclosure for a pad-mounted transformer.

There were no past tenants that would be expected to have used significant quantities of hazardous substances or petroleum products and there were no records of such uses. There were no records of spills, releases, or violations from former subject property tenants. There were no historical *recognized environmental conditions* or *controlled recognized environmental conditions* identified in the historical documents reviewed.

The following sections contain more detailed descriptions of the sources used to compile the above historical summary.

5.2.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps with coverage of the subject property area were searched but no maps were made for this area.

5.2.3 Historical Aerial Photographs

The following are descriptions of the historical aerial photographs taken at the subject property and reviewed by APEI. This review has been supplemented by geographic place names and other data obtained in other assessment activities of this ESA. These photographs can be found in Appendix C. Although it may be stated below that there were no obvious signs of the storage or disposal of hazardous substances or petroleum products in these photographs, specific uses, or the presence of materials, may not have been identifiable from the information contained in the photographs. The descriptions below are mainly limited to the subject property, however, information from these maps was used to describe the history of the adjacent sites as discussed below in Section 5.2.8.

1953

In the 1953 aerial photograph, the subject property and adjacent sites all appeared to have been undeveloped, had no obvious use, and was occupied by native vegetation. The surrounding area was undeveloped with no obvious use, was occupied by native vegetation with some clearing and grading visible in the area. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in this photograph.

1959 and 1968

There were no significant differences on the subject property or adjacent sites in the 1959 and 1968 aerial photographs from the 1953 aerial photograph. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in these photographs.

1974

In the 1974 aerial photograph, the southwest side of the subject property was undeveloped, had no obvious use, and was occupied by native vegetation. The northeast side had been cleared and graded and developed with a portion of the Roy Rodgers Museum building that extended onto the east adjacent site. Seneca Road had been graded and paved. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in this photograph.

1984

In the 1984 aerial photograph, the southwest side of the subject property was still undeveloped, had no obvious use, and was occupied by native vegetation. The portion of the Roy Rodgers Museum building on the northeast side was now surrounded by a paved parking lot and a circular paved road ran on the subject property that surrounded the building. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in this photograph.

2005

In the 2005 aerial photograph, the southwest side of the subject property was still undeveloped, had no obvious use, and was occupied by native vegetation. The Roy Rodgers Museum building, parking lot, and paved roads on the northeast side had been removed from the subject property and this area was cleared, vacant, and unpaved. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in this photograph.

2009, 2012, and 2016

There were no significant differences on the subject property in the 2009, 2012, and 2016 aerial photographs from the 2005 aerial photograph. The southwest side remained occupied by native vegetation. The northeast side was still cleared, vacant, and unpaved with vegetation slowing regrowing over the years. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in these photographs.

2022

In the 2022 aerials photograph, the subject property was cleared, vacant, unpaved, and occupied with vegetation as it was observed during the subject property reconnaissance. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in these photographs.

5.2.4 Topographic Maps

Topographic maps from 1932, 1934, 1956, 1968, 1980/1981, 1993, 2012, 2015, 2018, and 2021 are presented in Appendix D. These maps depicted the subject property, adjacent sites, and surrounding areas as vacant, occupied by non-descript structures, or shaded as developed using house omission tint indicating dense urban development. The Roy Rodgers Museum was depicted on part of the subject property in the 1980/1981 and 1993 maps. There were no obvious signs of the storage or disposal of hazardous substances or petroleum products on the subject property in any of the topographic maps.

5.2.5 Previous Subject Property Inspection Reports

The Client did not provide any previous inspection reports or Phase I Environmental Site Assessments for the subject property.

5.2.6 City Directories

Because the subject property has no specific street address, city directories were not researched.

5.2.7 Building Permits

Because the subject property had no address, building permits are not expected to have contained any environmentally significant information and were therefore not researched.

5.2.8 Past Uses of Adjoining Sites

North

Historical sources indicated that the site adjacent to and north of the subject property was undeveloped in 1932. Between 1968 and 1974, the east side of this site was cleared and graded as part of the development of the Roy Rodgers Museum. By 1984, there were paved roads and parking lots on portions of this site. Between 1984 and 2005, all paved surfaces were removed and this site has been unpaved and vacant since.

There were no signs of the storage or disposal of hazardous substances or petroleum products on the north adjacent site in the historical information reviewed. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

Northeast

Historical sources indicated that the site adjacent to and northeast of the subject property, across Civic Drive, was undeveloped in 1932. Between 1968 and 1974, this site was cleared and graded as part of the development of the Roy Rodgers Museum. By 1984, there were paved roads and parking lots on this site. Between 1984 and 2005, this site was redeveloped with the existing auto dealership business.

This site was listed in one or more environmental databases. Specific information regarding hazardous substances or petroleum products on this site is discussed below in Section 5.3.2.

East

Historical sources indicated that the site adjacent to and east of the subject property, across Civic Drive, was undeveloped in 1932. Between 1968 and 1974, this site was cleared and graded. The majority of the Roy Rodgers Museum building was on this site but it also extended onto the subject property. By 1984, there were paved roads and parking lots added to this site. Between 1984 and 1991, this site was redeveloped with the existing auto dealership business.

This site was listed in one or more environmental databases. Specific information regarding hazardous substances or petroleum products on this site is discussed below in Section 5.3.2.

Southeast

Historical sources indicated that the site adjacent to and southeast of the subject property, across Civic Drive and Seneca Road, was undeveloped in 1932. Between 1959 and 1968, portions of this site were cleared and graded and the remainder was occupied by native vegetation. Between 1968 and 1974, portions of the existing government building were construed on the south side of this site. Between 1984 and 1987, the building and parking lots had been developed with the court facilities that currently exist.

This site was listed in one or more environmental databases. Specific information regarding hazardous substances or petroleum products on this site is discussed below in Section 5.3.2.

South

Historical sources indicated that the sites adjacent to and south of the subject property, across Seneca Road, were undeveloped in 1932 and occupied by native vegetation. Between 1968 and 1974, these sites have been cleared and graded as they currently exist.

There were no signs of the storage or disposal of hazardous substances or petroleum products on the south adjacent sites in the historical information reviewed. There were no indications from any historical sources that the subject property has been impacted from these adjacent sites.

West

Historical sources indicated that the site adjacent to and west of the subject property was undeveloped in 1932 and appears to have never been developed. Some squatters were observed on this site in tents and a motorhome during the subject property reconnaissance but otherwise, this site has never been used for any identified purpose.

There were no signs of the storage or disposal of hazardous substances or petroleum products on the west adjacent site in the historical information reviewed. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

5.3 Regulatory Records Review

A Federal, State and Local Radius Profile Report from Environmental Data Resources, Inc. dated March 7, 2024, was reviewed by APEI. The radius report, found in Appendix f, contains records of registered sites surrounding the subject property for the classifications and distances as required by ASTM Practice E1527-21. Descriptions of each database, their source, and publication dates are detailed in this appendix section.

5.3.1 Subject Property Environmental Database Summary

The subject property was not listed in any of the databases searched.

5.3.2 Adjacent Sites Environmental Database Summary

The adjacent sites to the north, south, and west were not listed in any of the databases searched. The adjacent sites to the northeast, east, and southeast were listed in one or more of the environmental databases searched.

Northeast Adjacent Site

Victorville Motors at 14617 Civic Drive was located adjacent to the northeast, across Civic Drive and downgradient of the subject property. This site was listed in the AST, RCRA NonGen/NLR, RCRA-SQG, CERS HAZ WASTE, CERS TANKS, HAZNET, San Bernardino County Permit, and HWTS databases. This site had a 2,000 gallon above ground tank (AST) containing a petroleum compound. This site generated large quantities of hazardous waste and/or petroleum products for off-site disposal or recycling under EPA Generator ID number CAL000292644, CAR000169987, and CAL000466976. Waste categories for this site included ignitable waste, benzene, tetrachloroethene (PCE), and trichloroethylene (TCE). Between 2021 and 2006, this site generated the following wastes for offsite disposal or recycling: off-specification, aged or surplus organics, organic solids, unspecified organic liquid mixture, inorganic solid waste, hydrocarbon solvents (benzene, hexane, stoddard, etc.), unspecified sludge waste, unspecified solvent mixture, aqueous solution with total organic residues less than 10 percent.

Small quantities of liquids with halogenated organic compound wastes were generated in 2010 (60 gallons), 2009 (30 gallons), and 2008 (30 gallons). The EDR report contains a listing of violations that are detailed in the table below.

APEI requested environmental records for this site from the San Bernardino County Fire Protection District, the Certified Unified Program Agency (CUPA) for the subject property area. Records were provide along with a letter dated March 12, 2024, from Christina Rivera, Office Specialist, Office of the Fire Marshal, Hazardous Materials Division. This facility was listed as currently being a large quantity generator of hazardous waste that included 4 to 10 chemicals. There were no inactive permits, no permits to remove or install any USTs, no hazardous materials incidents or compliance response activities, and no site remediation records.

Excerpts from the files provided by the CUPA are presented in Appendix E. The table below contains a summary of these files. All of the files pertained to the tenant, Victorville Motors.

It is unlikely that a *recognized environmental condition* exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location downgradient from the subject property; there were no violations issued at this site that would be

suspected of having impacted the subsurface or the subject property; halogenated solvent waste was limited to small quantities and only between 2008 and 2010; and there were no records of spills, releases, or USTs on this site. No further action is recommended regarding this site.

East Adjacent Site

Soares Acquisions/Greiner Buick Pontiac/Mike Caposio Buick at 14555 Civic Drive was located adjacent to the east, across Civic Drive and downgradient of the subject property. This site was listed in the RCRA NonGen/NLR, RCRA-SQG, HAULERS, CERS HAZ WASTE, CERS TANKS, HWTS, San Bernardino County Permit, CERS, and AST databases. This site had a 1,500 gallon above ground tank (AST) containing a petroleum compound. It is unlikely that a *recognized environmental condition* exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location downgradient from the subject property; there were no violations issued at this site that would be suspected of having impacted the subsurface or the subject property; halogenated solvent waste was limited to a small quantity generated only in 2008; and there were no records of spills, releases, or USTs on this site. No further action is recommended regarding this site.

Southeast Adjacent Site

Victorville Sheriff/Victorville Courthouse/Victorville County Complex at 14455 Civic Drive was located adjacent to the southeast, across Civic Drive and Seneca Road and downgradient of the subject property. This site was listed in the SWEEPS UST, HIST UST, CA FID UST, HWTS, HAZNET, NPDES, San Bernardino County Permit, CIWQS, and CERS databases. This site had two 10,000 gallon USTs containing unleaded gasoline and one 550 gallon UST containing diesel fuel. This site had a stormwater permit. This site generated small quantities of hazardous waste and/or petroleum products for off-site disposal or recycling under EPA Generator ID number CAC001482800. The only waste generated from this site was approximately 50 gallons of tank bottom waste in 1998.

APEI requested environmental records for this site from the San Bernardino County Fire Protection District, the Certified Unified Program Agency (CUPA) for the subject property area. Records were provide along with a letter dated March 12, 2024, from Christina Rivera, Office Specialist, Office of the Fire Marshal, Hazardous Materials Division. This facility was listed as currently being a very small quantity generator of hazardous waste that included 1 to 3 chemicals. This site is an inactive UST permit/facility. This site had a permit to remove two USTs. It was noted that soil samples were taken and no contamination was detected and a No Further Action Letter was issued on August 4, 1999. There were no hazardous materials incidents or compliance response activities, and no site remediation records. Ownership was listed as Victorville Court Holding County Court Complex.

It is unlikely that a *recognized environmental condition* exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location downgradient from the subject property; there were no violations issued at this site that would be suspected of having impacted the subsurface or the subject property; there are no longer USTs on this site; and there were no records of spills or releases on this site. No further action is recommended regarding this site.

5.3.3 Sites Within 0.125 miles of the Subject Property

There were sites other than the three adjacent sites that were listed on multiple databases that were located within 660 feet of the subject property. It is unlikely that a recognized environmental condition exists at the subject property as a result of these sites because none of them were adjacent, drycleaners, historical drycleaners, had USTs, were gasoline stations, or had reported spills or releases. No further action is recommended regarding these sites.

5.3.4 Sites Between 0.125 miles and 0.25 miles of the Subject Property

Victorville County Court at 14855 Civic Drive was located approximately 926-feet north, northeast and downgradient of the subject property. This site was listed in the LUST, Cortese, HIST CORTESE, and CERS databases. This site had one or more petroleum product USTs. This site had a release of gasoline that impacted soil discovered in 1998. Testing and/or remediation have been performed on this site and its status as of 2000 has been closed. It is unlikely that a *recognized environmental condition* exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location downgradient from the subject property; this site no longer stores significant quantities of hazardous materials or petroleum products nor generates hazardous wastes or has USTs; the release had been limited to the soil and is therefore not anticipated to migrate to the subject property; and the site status has been closed with remedial action completed or deemed unnecessary. No further action is recommended regarding this site.

There were other sites on multiple databases that were located between 0.125 and 0.25 miles from the subject property that have a low likelihood of creating a recognized environmental condition at the subject property and no further action is recommended regarding any of these sites because of their distances from the subject property and there were no reports of spills or releases on any of these sites.

5.3.5 Sites Located More than 0.25 miles from the Subject Property

There were multiple sites on several databases that were located more than 0.25-miles from the subject property that have a low likelihood of creating a recognized environmental condition at the subject property and no further action is recommended regarding any of these for the following reasons:

- Their distances from the subject property;
- There were no reports of spills or releases, and/or;
- The releases were not of a magnitude that would be expected to impact the subject property and/or;
- The site statuses had been closed with remedial action completed or deemed unnecessary.

5.3.6 Orphan (Unmapped) Sites

There were no “Orphan” (unmapped) sites identified in the EDR Radius Map Report.

5.3.7 San Bernardino County Department of Public Health

The San Bernardino County Department of Public Health have stated that they do not maintain records of environmental interest, hazardous substances, petroleum products, or USTs. This agency has directed us to the County of San Bernardino Fire Department; whom they have indicated maintain all records for the county.

5.3.8 San Bernardino County Fire Department, Hazardous Materials Division (HMD)

Because the subject property was vacant and had no street address, HMD records could not be effectively searched and were not requested. There are no records expected to exist at this agency that are related to the subject property.

APEI requested to review records for the northeast, east, and southeast adjacent sites from the HMD. Record for all of these sites were provided and are discussed above in Section 5.3.2.

The types of solid waste activities found in this database include landfills, transfer stations, composting sites, in-vessel digestion sites, engineered municipal solid waste conversion facilities, transformation facilities, and closed disposal sites. For each site, the database contains information about the location, land owner, operator, activity type, regulatory and operational status, authorized waste types, local enforcement agency, inspections and enforcement action records. According to the SWIS database searched on March 10, 2024, the subject property and adjacent sites were not listed as solid waste facilities.

5.3.15 Vapor Intrusion

Based on a review of agency records, historical documents, and current site uses, there were no onsite sources identified that had the potential to have created a vapor intrusion issue on the subject property.

There were no offsite properties identified in the database research that had an open release of petroleum hydrocarbons within 528 feet (one-tenth of a mile (0.1-miles)) upgradient, 165-feet crossgradient, or 100 feet downgradient of the subject property. There were no offsite properties identified in the database research that had a documented release of other chemicals, such as VOCs, identified within 1,760-feet (one-third of a mile (⅓-mile)) upgradient, 365-feet crossgradient, or 100 feet downgradient of the subject property.

It should be noted that APEI was not contracted to perform an assessment of the subject property in accordance with ASTM Standard E2600 nor does this assessment meet the requirements of said standard.

6.0 INTERVIEWS AND QUESTIONNAIRES

6.1 Regulatory Agency Representative Interviews

Using information obtained from the Federal, State and Local Radius Profile Report from Environmental Data Resources, Inc. dated March 7, 2024, along with responses to FOIA requests and other documents discussed in Section 5.3, APEI was able to identify conditions indicative of releases and threatened releases without the need to interview regulatory agency representatives.

6.2 Tenant Information

There were no tenants on the subject property at the time of the subject property reconnaissance.

6.3 Owner Information

Mr. Michael Johnson, Manager with Brentwood Mortgage 147 LLC, the subject property *owners*, filled out an environmental questionnaire dated March 19, 2024. A copy of this form is provided in Appendix G. Mr. Johnson indicated that he had firsthand knowledge of the subject property since approximately 2006 and appeared to have had good knowledge of the uses and physical characteristic of the subject property and was deemed to be the key site manager. He indicated that he knew of no significant amounts of hazardous or petroleum products used on the subject property. Mr. Johnson marked that he knew of no current or past environmental liens in association with the subject property. He was not aware of any Activity or Use Limitations (ALUs) such as engineering controls, land use restrictions or institutional controls in place or on file under federal, tribal, state or local law other than limited zoning as described in the Victorville Civic Center Specific Plan. He indicated that he had no knowledge of any Underground Storage Tanks (USTs), Above Ground Storage Tanks (ASTs) or the storage of any hazardous substances or petroleum products on the subject property. Mr. Johnson stated that to the best of his knowledge, there had never been any spills or violations on the subject property in association with hazardous substances or petroleum products.

Mr. Johnson was aware of no soil or groundwater contamination on the subject property or on adjacent sites. He wrote that he was not aware of a reduction in the subject property value due to environmental issues. He was not aware of any issues or reports on the subject property regarding environmental site assessments, asbestos surveys, lead-based paint surveys, mold testing, soil and/or groundwater testing. Mr. Johnson wrote that to the best of his knowledge, which dates back 18 years or more, the subject property had been vacant with no tenants since it was acquired in 2005. He indicated that the historical use was vacant land surrounding the former Roy Rodgers Museum.

7.0 NON-SCOPE SERVICES

7.1 Asbestos

The subject property was undeveloped at the time of the site reconnaissance, therefore, no suspect asbestos containing materials were noted on the subject property.

7.2 Lead-Based Paint

The subject property was undeveloped at the time of the site reconnaissance; therefore, no suspect lead-based paint was noted on the subject property.

7.3 Lead Contamination of Drinking Water

The condition of the drinking water at the subject property is unknown; the subject property was undeveloped at the time of the subject property reconnaissance.

7.4 Radon

Based on the results of the State of California Department of Health Services' 1990 California Statewide Radon Survey, the U.S. Environmental Protection Agency (U.S. EPA) lists San Bernardino County as being in Radon Zone 2. Zone 2 areas have a predicated average indoor radon screening potential of between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L. The level at which the U.S. EPA considers radon levels to be unhealthful is 4.0 pCi/L in residential structures.

There can be extreme variations of indoor radon levels within a local area based upon geologic, soil structure and building characteristics. The EPA recommends testing as the definitive method in determining the radon level within a specific structure. Radon testing was not part of this project's scope of work.

7.5 Urea-Formaldehyde

The subject property was undeveloped at the time of the site reconnaissance; therefore, no suspect urea-formaldehyde containing materials were noted on the subject property.

7.6 Water Intrusion and Mold

The subject property was undeveloped at the time of the site reconnaissance; therefore, no mold or water intrusion issues were observed that could potentially affect indoor air quality.

7.7 Earthquake Induced Landslides, Liquefaction, and Fault Lines

According to the California Earthquake Hazards Zone Application ("EQ Zapp") researched on March 11, 2024, the subject property was not located in an Earthquake Fault Zone. The area of the subject property has not been evaluated for Liquefaction or Earthquake Induced Landslide conditions.

7.8 Methane Conditions

The subject property is in an area surrounded by commercial developments and vacant land. The area around the subject property began to significantly develop in the 1970s.

According to a State of California, California Geologic Energy Management Division (CalGEM) Well Finder search, the subject property is not located within an oil or gas field. There were no oil wells depicted on the subject property, adjacent sites, or within one mile of the subject property.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/23/2023 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.
