Findings and Opinions

Significant Data Gap(s) is defined by the current ASTM Standard E1527 as a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

AEI did not identify significant data gaps which affected our ability to identify RECs.

Recognized Environmental Condition (REC) is defined by the current ASTM Standard E1527 as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the current ASTM Standard E1527 as a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the current ASTM Standard E1527 as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- Based on a review of aerial photographs, the subject property appears to have been historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The routine application of pesticides and fertilizers is not considered a release subject to CERCLA response costs. No evidence of spilling, dumping, emitting, and/or mishandling of pesticides and/or fertilizers was identified, and thus the former agricultural uses do not represent a REC. AEI understands that the subject property is slated for redevelopment for residential and/or other sensitive receptor uses. Although the past agricultural uses do not represent a REC per the ASTM E1527 definition, residual pesticides may remain in shallow soil, which may pose a risk under certain development or land use scenarios.
- A 500-gallon steel tank containing diesel fuel was previously located at the subject property described as an area within the ultimate right of way of San Bernardino Avenue near Tennessee Street addressed as 1000 San Bernardino Avenue. The general location of the former tank is shown on Figure 2, however its former location could not be verified in the field. The tank was removed by Haz Mat Trans, Inc. on March 7, 2006. The objective of Haz Mat's scope of work was to monitor excavated soil, remove and dispose of the 500-gallon UST, and collect a soil sample following the removal of the UST. Haz Mat collected one soil sample beneath the UST, under the direction of Inspector Jackson Crutsinger of the County of San Bernardino Fire Hazardous Materials Division. The soil sample was collected as a grab sample. The sample was submitted to Centrum Analytical Laboratories, Inc., located in Riverside, California. The sample was analyzed for total petroleum hydrocarbons as diesel, (EPA) Method 8015 M (D) and for MTBE and BTEX (EPA) Method 8021 B. Concentrations of Methyl Tert Butyl Ether and Benzene were indicated as non-detectable and concentrations of Volatile Hydrocarbons as diesel were indicated as non-detectable.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-21, of West San Bernardino, Pioneer Avenue, Tennessee Street, Redlands, San Bernardino County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the subject property.

RECOMMENDATIONS

AEI understands that the subject property is under consideration for development. As such, a focused Phase II investigation may be appropriate to evaluate whether residual contaminants associated with historical site activities remain.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-21 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), for the property located at West San Bernardino, Pioneer Avenue, Tennessee Street, Redlands, San Bernardino County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with the most current ASTM E1527 Standard associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by the current ASTM Standard E1527. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under the current ASTM Standard E1527.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. The current ASTM Standard E1527 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the current ASTM Standard E1527.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including historical research, this limiting condition is not expected to alter the overall findings of this assessment.
- A key site manager was not provided during this assessment. Based on information obtained from other sources, including historical research, this limiting condition is not expected to alter the overall findings of this assessment.
- A search of historical city directories was conducted for the subject property utilizing EDR. Based on the nature of historical occupancy as established from other sources, the lack of historical city directory information is not expected to alter the findings of this assessment.
- The San Bernardino County Environmental Health Department was contacted for information on the subject property in order to identify historical tenants/use, property development, and/or hazardous substance/petroleum product handling. Due to the time frame of this assessment, records were not available for review. However, based on the quality of information obtained from other sources including previous reports, this limitation is not expected to significantly alter the findings of this assessment.

1.6 Data Failure and Data Gaps

According to the current ASTM Standard E1527, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to the current ASTM Standard E1527, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to the current ASTM Standard E1527, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant

to the current ASTM Standard E1527, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

The following data failure was identified during the course of this assessment:

Data Failure	As noted in Section 3.0, historical sources were not obtained at five-year intervals dating back to 1940. However, it is assumed that during this time period the subject property would have been agricultural land if not vacant land.
Information/Sources Consulted	Aerial photographs

1.6.2 Significant Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of CCI Redlands LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with CCI Redlands LLC and AEI's contract and Terms and Conditions dated November 7, 2024. The limitation of liability defined in the contracted terms is the aggregate limit of AEI's liability to the client and all relying parties.

2.2 On-Site Utilities

The subject property is currently vacant land or lacks structures. Consequently, there are no on-site heating or cooling systems, or potable water or sewage disposal/treatment services.

2.3 Site and Vicinity Characteristics

The subject property is located in a mixed-use residential and commercial area of Redlands, California. The immediately surrounding properties consist of the following:

Surface waters on the subject property or adjoining sites	There are no surface water bodies on the subject property. The nearest surface water body is the Los Angeles River located approximately 0.9 miles west of the subject property.
Additional Notes	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL RECORDS REVIEW

Reasonably ascertainable standard historical sources as outlined in the current ASTM Standard E1527 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, historical topographic maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1899-1930	Undeveloped land	Topographic maps, aerial photographs
1930-1996	Agricultural land with two small structures in the southeastern portion of the property between at least 1949 and 1989	Aerial photographs, topographic maps
2006-Present	Vacant land	Aerial photographs

Based on a review of aerial photographs, the subject property appears to have been historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The routine application of pesticides and fertilizers is not considered a release subject to CERCLA response costs. No evidence of spilling, dumping, emitting, and/or mishandling of pesticides and/or fertilizers was identified, and thus the former agricultural uses do not represent a REC. AEI understands that the subject property is slated for redevelopment for residential and/or other sensitive receptor uses. Although the past agricultural uses do not represent a REC per the ASTM E1527 definition, residual pesticides may remain in shallow soil, which may pose a risk under certain development or land use scenarios.

A 500-gallon steel tank containing diesel fuel was previously located at the subject property described as an area within the ultimate right of way of San Bernardino Avenue near Tennessee Street addressed as 1000 San Bernardino Avenue. The general location of the former tank is shown on Figure 2, however its former location could not be verified in the field. The tank was removed by Haz Mat Trans, Inc. on March 7, 2006. The objective of Haz Mat's scope of work was to monitor excavated soil, remove and dispose of the 500-gallon UST, and collect a soil sample following the removal of the UST. Haz Mat collected one soil sample beneath the UST, under the direction of Inspector Jackson Crutsinger of the County of San Bernardino Fire Hazardous Materials Division. The soil sample was collected as a grab sample. The sample was submitted to Centrum Analytical Laboratories, Inc., located in Riverside, California. The sample was analyzed for total petroleum hydrocarbons as diesel, (EPA) Method 8015 M (D) and for MTBE and BTEX (EPA) Method 8021 B. Concentrations of Methyl Tert Butyl Ether and Benzene were indicated as non-detectable and concentrations of Volatile Hydrocarbons as diesel were indicated as non-detectable. Additionally, non-RCRA hazardous waste consisting of one 55-gallon drum of soil, one 55-gallon drum of waste oily water and one cubic yard box of waste oil, was removed from the subject property in September 2021. Based on the analytical results of the soil sampling and the removal of the UST and other waste products, this removed UST is not considered a REC.

If available, copies of historical sources are provided in Appendix D.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The minimum search distance from the federal and state environmental records database listings specified in the current ASTM Standard E1527 is included in Section 5.1. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below as well as the total number of sites identified, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion, if any, are identified and further discussed in Section 5.1.

5.2 Vapor Migration

A vapor encroachment condition (VEC) is the presence or likely presence of Chemical(s) of Concern (COC) vapors in the vadose zone of the subject property caused by the release of vapors from contaminated soil and/or groundwater either on or near the subject property.

AEI conducted a limited screening for potential VECs that may affect the subject property. The VEC screening focused on the current and historical usage of the subject property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons.

Determination of AOC

To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by the current ASTM E2600 of 1,760 feet (1/3 mile) from the subject property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology:

Non-petroleum hydrocarbon COCs:

- 1,760 feet in the upgradient direction
- 365 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if Light, Non-Aqueous Phase Liquid, (LNAPL, i.e. floating product) is suspected:

- 528 feet in the upgradient direction
- 165 feet in the cross-gradient direction
- 100 feet in the downgradient direction

Petroleum hydrocarbon COCs if LNAPL is *not* suspected:

- 528 feet in the upgradient direction
- 95 feet in the cross-gradient direction
- 30 feet in the downgradient position

Additional adjustment of the AOC may be conducted based on AEI's professional judgment.

5.3 Per- and Polyfluoroalkyl Substances (PFAS)

As defined in Section 3.2.36 of the current ASTM Standard E1527, hazardous substance means "those substances defined as a hazardous substance pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts." Hazardous substances that are not defined (or not yet defined) as hazardous substances under CERCLA are outside of the scope of the current ASTM Standard E1527.

On July 8, 2024, the Final EPA rule became effective that designates perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as CERCLA hazardous substances. Per the current ASTM Standard E1527, once this rule went into effect, these substances are evaluated within the scope of this standard, and a release or likely release of PFOA and/or PFOS is considered a REC.

Other than PFOA/PFOS, compounds classified as PFAS are not currently classified as hazardous substances under CERCLA, and thus the potential presence of PFAS (other than PFOA/PFOS) is outside of the scope of the current ASTM Standard E1527, and does not constitute a REC at this time. However, the report User should be aware that regulatory criteria and classifications are subject to change.

AEI's research of potential PFAS contamination focuses on the release/likely release of PFOA/PFOS. However, if additional information pertaining to other PFAS is identified, AEI will also assess/discuss these compounds, as deemed applicable/appropriate within the scope of this investigation.

It should be noted that AEI's screening of PFOA/PFOS and other PFAS is based solely on review of the resources cited within this report. Identification, or lack thereof, is not a warranty that PFOA/PFOS or other PFAS contamination is present or absent at a site. Additionally, it should be noted that given the evolving nature of science and regulatory oversight of PFOA/PFOS and other PFAS, additional sources of contamination may exist at the subject property, adjoining sites and/or other nearby sites that were not identified by the limited data and screening tools cited within this report.

5.3.1 PFAS-Related Regulatory Database Listings

As an initial screening tool for potential PFAS contamination, AEI reviewed PFAS-related database listings from EDR.

5.3.2 Potential On-Site PFAS Sources/Concerns

AEI researched the standard historical and regulatory sources cited within this report to determine if a release or likely release of PFOA/PFOS has occurred at the subject property.

A voluntary industry phaseout of PFOA and PFOS was first implemented in the late 1990s and was fully implemented for PFOS by 2002 and PFOA by 2015. Although PFOA and PFOS have been generally phased out since 2015, studies have found that precursor PFAS in wastewater treatment systems may form PFOA and PFOS. As such, even after 2015, the presence of PFAS in wastewater discharges is considered a likely source of PFOA and PFOS contamination.

Potential Source	Yes	No
Past or present industrial operations that potentially included the use of PFAS (if "yes" see *Potential PFAS Sources from Industrial Uses* section/table below)		✔
The use or discharge of AFFF (if "yes" see *Potential Sources of AFFF* section/table below)		✔
Electroplating (1950s-present) NOTE: Electroplating (specifically hard chromium plating) is an industrial activity where PFAS-containing mist suppressants may have been used		✔
Agricultural uses, specifically 1970s-present that included application of biosolids/WWTP sludge that potentially contained PFAS		✔
Wastewater treatment plant (WWTP) (1960s-present)		✔
Landfill operations / waste disposal areas (1960s-present)		✔
Mining / quarrying / oil production		✔
Commercial car wash (1989-2010)		✔

AEI did not identify any obvious potential sources of PFAS contamination originating from on-site operations/sources.

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to the current ASTM Standard E1527 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User Questionnaire was completed by Mr. Qantas Corman, Manager with Citivest (property purchaser). The following table represents information contained therein.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	No
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)).	No

Question	Response/ Comment

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI by Mr. Qantas Corman, Manager with Citivest (property purchaser). A summary of this information follows:

A 500-gallon steel tank containing diesel fuel was previously located at the subject property described as an area within the ultimate right of way of San Bernardino Avenue near Tennessee Street addressed as 1000 San Bernardino Avenue. The general location of the former tank is shown on Figure 2, however its former location could not be verified in the field. The tank was removed by Haz Mat Trans, Inc. on March 7, 2006. The objective of Haz Mat's scope of work was to monitor excavated soil, remove and dispose of the 500-gallon UST, and collect a

soil sample following the removal of the UST. Haz Mat collected one soil sample beneath the UST, under the direction of Inspector Jackson Crutsinger of the County of San Bernardino Fire Hazardous Materials Division. The soil sample was collected as a grab sample. The sample was submitted to Centrum Analytical Laboratories, Inc., located in Riverside, California. The sample was analyzed for total petroleum hydrocarbons as diesel, (EPA) Method 8015 M (D) and for MTBE and BTEX (EPA) Method 8021 B. Concentrations of Methyl Tert Butyl Ether and Benzene were indicated as non-detectable and concentrations of Volatile Hydrocarbons as diesel were indicated as non-detectable.

Non-RCRA hazardous waste consisting of one 55-gallon drum of soil, one 55-gallon drum of waste oily water and one cubic yard box of waste oil, was removed from the subject property in September 2021.

6.4 Environmental Lien and AUL Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is

considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/ No)	Non-PCB Label (Yes/No)
Subsurface	One	Southern California Edison (SCE)	Unknown	No	No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining, or leaks on or around the transformer. Based on the good condition of the equipment, the transformer is not considered evidence of a REC.

7.1.2 Wells

Two irrigation wells were observed on the western portion of the subject property. Based on the nature of use of these wells, they are not considered a REC.

7.2 Adjoining Property Reconnaissance Findings

During the site reconnaissance, AEI did not observe any of the items listed in the above Reconnaissance Findings Summary table.

8.0 NON-ASTM SERVICES

8.1 Asbestos-Containing Building Materials

The subject property is currently vacant land or lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

8.2 Lead-Based Paint

The subject property is currently vacant land or lacks structures. Consequently, AEI did not observe building components likely to contain suspect LBP during the site reconnaissance.

8.3 Naturally-Occurring Radon

Radon is a naturally-occurring, odorless, and invisible radioactive gas. According to the United States EPA, radon is the second leading cause of lung cancer. Natural radon levels vary and are closely related to geologic formations, soils, and foundation construction. Radon may enter buildings through basement sumps or other openings such as cracks and other holes in foundations.

US EPA Map

In 1993 the United States EPA prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map identifies counties of the US with the greatest potential for elevated indoor radon levels based on indoor radon measurement data, geology, soil parameters, and foundation types. The map divides the country into three radon zones based on potential radon accumulation, but is not to be considered predictive of radon accumulation.

The 1993 EPA map identifies the following three radon zones:

- Zone 1 - Highest potential for radon accumulation; average indoor radon levels may be greater than 4 pCi/L
- Zone 2 - Moderate potential for radon accumulation; average indoor radon levels may be between 2 and 4 pCi/L
- Zone 3 - Low potential for radon accumulation; average indoor radon levels may be less than 2 pCi/L

It is important to note that elevated levels of radon can be found in all three zones, and the EPA and other agencies recommend site-specific testing to determine radon levels at a specific property. Therefore, while the map does give an indication of the propensity of radon gas accumulation in structures in a county, elevated radon levels may be found in all three radon zones.

It should also be noted that EPA's 1993 Map of Radon Zones, while useful, was based on limited data collected prior to 1993 and therefore may be supplemented with available state-developed or other data to further understand the radon potential for a specific area.

According to the US EPA, the radon zone level for the County is Zone 2, which has a moderate potential for radon accumulation.

California Department of Health Services Radon Database

According to additional data obtained from California Department of Health Services Radon Database, 97 tests conducted in the subject property zip code (92374) in 2016. All of these tests indicated that radon levels were below the action level of 4.0 pCi/L set forth by the United States EPA.

Radon sampling would be necessary to determine site-specific radon conditions. Radon sampling was not requested as part of this assessment.

8.4 Suspect Mold or Microbial Growth Conditions

The subject property is currently vacant land or lacks structures. Consequently, suspect mold was not addressed as part of this assessment.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2024 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

Quarterly Update: Entered 11/15/07. Teledyne Continental Motors, Battery Products Operations (TBP) is located in Redlands, CA and occupies approximately five acres of land surrounded by 15 acres of vacant land also owned by Teledyne. The TBP facility began operations at this location in 1967. TBP manufactures lead-acid storage batteries for aircraft, emergency lighting systems, and vehicles. TBP handled and stored hazardous materials or wastes on several locations at the facility. Environmental studies at the facility were carried out under two administrative processes; Resource Conservation and

Recovery Act (RCRA) closure and RCRA corrective action. The results of soil, soil gas, and groundwater investigations conducted at the facility were presented in the RCRA Facility Investigation Report and Closure Reports which indicated the presence of chemical residues in different areas of the facility. Three areas required soil remediation prior to RCRA closure. The cleanup of the three areas included excavating soil with chemical residues and disposing the excavated soil at a permitted off-site disposal facility. Approximately 350 cubic yards of soil contaminated with lead and sulfate were excavated from the former evaporation pond and percolation pond. In addition, approximately 10 cubic yards of soil contaminated with lead, solvents (TCE, PCE, and 1,1,1-TCA), and sulfate were excavated from the Old Container Storage Unit. DTSC issued public notice of the proposed RCRA corrective action program cleanup plan for the TBP facility during two public notice periods between May 2000 and August 2000. DTSC required cleanup via excavation of small areas of lead residues at the Acid Scrubber Water Storage Tanks and Waste Water Treatment Plant. An Open House to receive comments on the soil removal plan was held on July 26, 2001. Approximately one cubic yard of soil was excavated and disposed of at an off-site hazardous waste disposal facility. Sampling conducted after excavation indicated that the levels of lead remaining after the excavation are below health-based levels for unrestricted, residential land use. Cleanup goals for soil were 200 milligrams per kilogram (mg/kg) for lead; 0.5 mg/kg for TCE and PCE; 20 mg/kg for 1,1,1-TCA; and 4,250 mg/kg for sulfate. Under DTSC supervision, a groundwater investigation was also conducted to assess groundwater conditions at the facility. Based upon investigation, contamination in the soil did not reach groundwater. Based on the information provided, DTSC considers Teledyne to have taken all necessary actions to remediate the site to unrestricted, residential land use.

Eval Notes: Regional Board staff Mr. Elliott and Ms. Mendoza were escorted through the facility by Mr. Vincent Jermany, Director of Operations. The SWPPP, daily tank inspections, and twice weekly sweeping logs were present. The last daily inspection log was dated 11/5/19 and the sweeping log was dated 10/29/19. The scrap metal roll off bin did not have a lid but Mr. Jermany indicated that a tarp is available to place over the bin when rain is forecast. Cardboard trash bins had lids that were closed. Housekeeping appeared to be well kept. The discharge sampling location was observed and appeared to be clear of trash, debris, and sediment. Mr. Jermany did not appear to be aware of the required Level 2 ERA report due on January 1, 2020. The 2016-17 facility AdHoc average lead concentrations exceeded the NAL and a Level 1 ERA was submitted. The BMP recommendations appeared to be primarily focused on housekeeping improvements. "Use tarping or covered rolloff to cover the outdoor material storage. Increase frequency of sweeping the site with sweeper, in areas located away from air monitors, catch basins and sumps to be inspected monthly. Cleaning will be conducted immediately when significant sediment buildup is observed. Catch basins and sumps will be cleaned annually, at a minimum." The 2018-19 AdHoc reports average lead concentration of 0.30 mg/L exceeded the NAL of 0.262 mg/L. The Level 2 ERA report is due by January 1, 2020.

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Regional Board staff Mr. Elliott and Ms. Mendoza were escorted through the facility by Mr. Vincent Jermany, Director of Operations. The SWPPP, daily tank inspections, and twice weekly sweeping logs were present. The last daily inspection log was dated 11/5/19 and the sweeping log was dated 10/29/19. The scrap metal roll off bin did not have a lid but Mr. Jermany indicated that a tarp is available to place over the bin when rain is forecast. Cardboard trash bins had lids that were closed. Housekeeping appeared to be well kept. The discharge sampling location was observed and appeared to be clear of trash, debris, and sediment. Mr. Jermany did not appear to be aware of the required Level 2 ERA report due on January 1, 2020. The 2016-17 facility AdHoc average lead concentrations exceeded the NAL and a Level 1 ERA was submitted. The BMP recommendations appeared to be primarily focused on housekeeping improvements. "Use tarping or covered rolloff to cover the outdoor material storage. Increase frequency of sweeping the site with sweeper, in areas located away from air monitors, catch basins and sumps to be inspected monthly. Cleaning will be conducted immediately when significant sediment buildup is observed. Catch basins and sumps will be cleaned annually, at a minimum." The 2018-19 AdHoc reports average lead concentration of 0.30 mg/L exceeded the NAL of 0.262 mg/L. The Level 2 ERA report is due by January 1, 2020.

Eval Notes: Regional Board staff Mr. Elliott and Ms. Mendoza were escorted through the facility by Mr. Vincent Jermany, Director of Operations. The SWPPP, daily tank inspections, and twice weekly sweeping logs were present. The last daily inspection log was dated 11/5/19 and the sweeping log was dated 10/29/19. The scrap metal roll off bin did not have a lid but Mr. Jermany indicated that a tarp is available to place over the bin when rain is forecast. Cardboard trash bins had lids that were closed. Housekeeping appeared to be well kept. The discharge sampling location was observed and appeared to be clear of trash, debris, and sediment. Mr. Jermany did not appear to be aware of the required Level 2 ERA report due on January 1, 2020. The 2016-17 facility AdHoc average lead concentrations exceeded the NAL and a Level 1 ERA was submitted. The BMP recommendations appeared to be primarily focused on housekeeping improvements. "Use tarping or covered rolloff to cover the outdoor material storage. Increase frequency of sweeping the site with sweeper, in areas located away from air monitors, catch basins and sumps to be inspected monthly. Cleaning will be conducted immediately when significant sediment buildup is observed. Catch basins and sumps will be cleaned annually, at a minimum." The 2018-19 AdHoc reports average lead concentration of 0.30 mg/L exceeded the NAL of 0.262 mg/L. The Level 2 ERA report is due by January 1, 2020.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

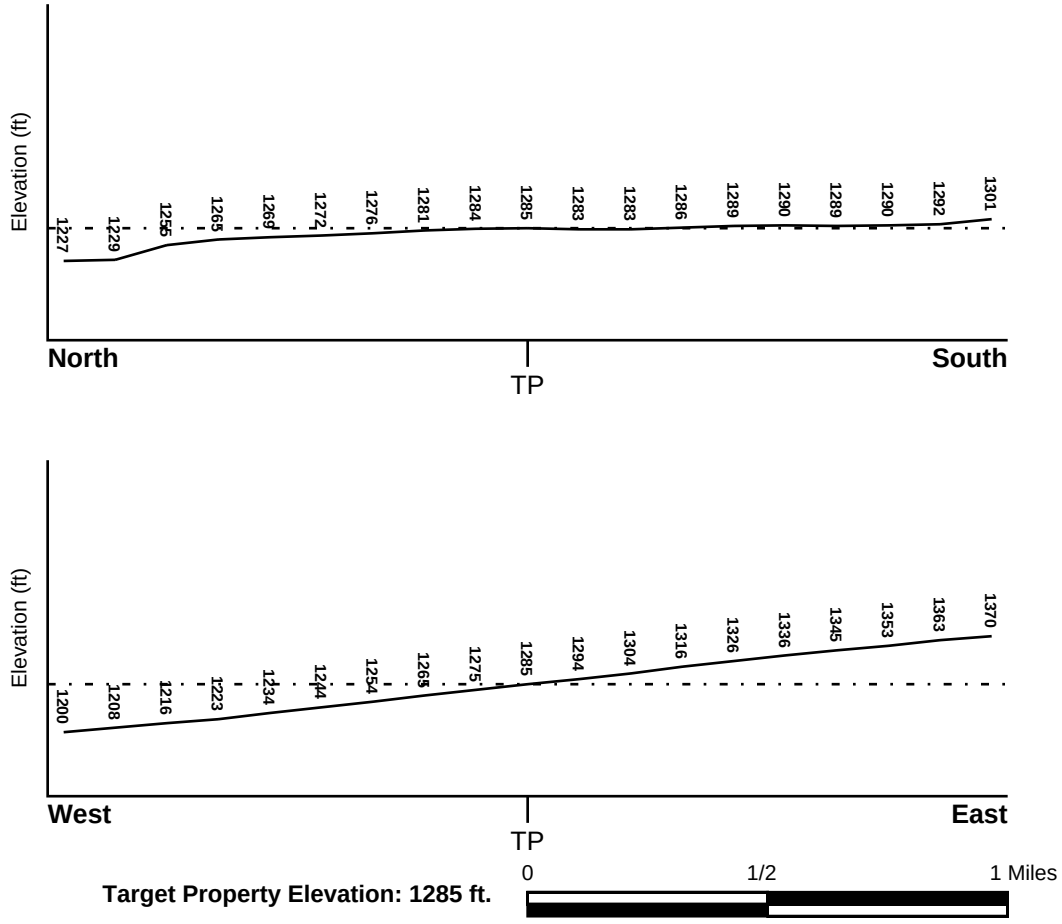

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 1285 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Re; Trojan Groves Option & Sales Agreement Parcels-0167-091-09,10.11. & 12

Dear Greg,

Enclosed are the invoices, work orders and hazardous waste manifests of materials and one under ground 500 gallon tank removed from Trojan Groves properties located at the intersections of Tennessee and San Bernardino and Tennessee and Pioneer in the city of Redlands. These documents should be given to the Optionee and the escrow company so they can be reviewed during the feasibility period provided in the Option Agreement.

Enclosed are the following: Proposal # HCI - 092021-HCI dated 9-20-21, work order 56814, Invoice # 33255 dated 9-24-21, with attached manifests 016033958 and 106033955, work orders # 50759, 50760 dated 3-7-06 ,Invoice #46503 dated 3-23-06 , and attached manifest # 23759189 dated 3-7-06 and a letter misdated 3-16-05 but correctly dated on heading on 2nd page 3-16-06 and in 2nd paragraph first page and attached analysis and manifest# 23759189.

The above information describes a underground 500 gallon steel tank removed from a area within the ultimate right away of San Bernardino Ave near Tennessee and household and commerical containers abandoned on Trojan Groves vacant property. To my knowledge there has never been any hazardous materials stored on Trojan Groves property during Trojan Groves ownership since 1979 with the exception of diesel fuel which was stored in the underground 500 gallon tank.

SUBJECT: UNDERGROUND STORAGE TANK REMOVAL REPORT
TROJEN GROVES
1000 SAN BERNARDINO AVENUE
REDLANDS, CA 92373

Dear Mr. Crutsinger:

Haz Mat Trans, Inc. (Haz Mat) was contracted by Trojen Groves to remove one (1) underground storage tank (UST) at 1000 San Bernardino Avenue, Redlands, California. The objective of this Scope of Work was to monitor excavated soil, remove and dispose of one (1) five hundred gallon diesel tank and collect a soil sample following the removal of the UST, as required under the County of San Bernardino Fire Hazardous Materials Division.

On March 7, 2006, Haz Mat was on site to conduct the excavation and removal of the UST. The excavated soil consisted of native soil. Haz Mat collected one (1) soil sample beneath the UST, under the direction of inspector Jackson Crutsinger of the County of San Bernardino Fire Hazardous Materials Division.

The soil sample was collected as a grab sample. The soil was packed into a laboratory supplied, 4-ounce glass jar, so that no head space remained in the jar. The jar was then capped, sealed, labeled, identified on the chain of custody and stored in a chilled ice chest, pending transport to the laboratory. The sample was then submitted to Centrum Analytical Laboratories, Inc., located in Riverside, California. The sample was analyzed for total petroleum hydrocarbons as diesel, (EPA) Method 8015 M (D) and for MTBE and BTEX (EPA) Method 8021 B.

Concentrations of Methyl Tert Butyl Ether and Benzene were indicated as non-detectable and concentrations of Volatile Hydrocarbons as diesel were indicated as non-detectable. Analytical results are attached.

Haz Mat Trans, Inc. removed 150 gallons of diesel and rinseate from the UST, which was transported to Demenno/Kerdoon in Compton, California. Twenty (20) pounds of dry ice was placed in the tank prior to the UST being removed and transported to American Metal Recycling located in Fontana, California. The manifest and receipts are attached.

If you have any questions or comments regarding this Underground Storage Tank Removal Report, please contact Scott Glassey at **(909) 889-5607**.

Sincerely,

Scott Glassey

RON RUSSELL
ASSOCIATE CONSULTANT

EDUCATION

- BS Chemical Engineering, City University of New York (1977)

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. Russell has experience in Phase I Environmental Site Assessments (ESAs) since 1995 working as a Senior Project Manager with a major geotechnical engineer firm. As a Senior Project Manager, his duties and responsibilities were to provide oversight for Phase I ESAs and project management implementation inclusive of Phase II and remedial actions to achieve clean closure. He has managed several hundred projects. The types of properties for projects included commercial, industrial, refining, chemical processing, and multi-tenant residential.

PROJECT EXPERIENCE

Project experience for Mr. Russell includes:

- **Assessment and remediation, various sites, Exxon Mobil Program, Southern California** – Mr. Russell acted as Senior Project Manager while working for a major geotechnical engineering firm. He conducted and supervised Phase I Environmental Site Assessments and remediation of numerous retail gasoline stations prior to development as strip malls. The Phase I studies were used to identify LUST sites prior to remediation or closure.
- **Assessment and remediation, Miami International Airport, Miami, Florida** – Mr. Russell acted as Senior Project Manager with profit and loss and technical oversight for an assessment and remediation of American Airlines, Terminal C prior to renovation of the baggage handling facility. Some of the issues associated with this project were suspicion of leaked jet fuel below the tarmac at Terminal C. This was confirmed by a Phase I/Phase II Site Assessment. The ensuing remedial action involved installation of subsurface horizontal wells with above ground soil vapor extraction. The site received a clean closure from the fire department and the FAA.
- **Remedial investigation and feasibility study, Redstone Arsenal, Huntsville, Alabama** – Mr. Russell acted as Senior Project Manager responsible for the implementation of technical specifications to safely remove and treat pentaborane utilized by NASA. The primary issue associated with this project was the toxicity and flammability of pentaborane which is lethal at 0.5 ppb. The pentaborane was stored in 100-gallon vessels and distilled yielding elemental boron.
